Mr. Anton R. Hummer
Controller and Principal Accounting Officer
UGI Utilities, Inc. – Gas Division
1 UGI Drive
Denver, PA 17517

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant in service. The results of our study at September 30, 2022 are presented in the attached report labelled as UGI Gas Exhibit C (Future).

The results of our study at September 30, 2021 are presented in our report titled "Depreciation Study- Calculated Annual Depreciation Accruals Related to Gas Plant at September 30, 2021". This report is identified for purposes of this filing as UGI Gas Exhibit C (Historic). The results of our study at September 30, 2023 are presented in our report titled "Depreciation Study- Calculated Annual Depreciation Accruals Related to Gas Plant at September 30, 2023". This report is identified for purposes of this filing as UGI Gas Exhibit C (Fully Projected Future). The same methods, procedures and estimates are used in all three exhibits and test years.

The attached report sets forth a description of the methods and procedures upon which the studies were based, the estimates of survivor curves and the calculated annual depreciation rates at September 30, 2022.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PART I. INTRODUCTION

UGI UTILITIES, INC. - GAS DIVISION
DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study conducted for UGI Utilities, Inc. - Gas Division to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of gas plant at September 30, 2022.

The depreciation accrual rates and amounts presented herein are based on estimated survivor curves and on methods and procedures set forth in previous orders approved by the Pennsylvania Public Utility Commission. The estimated survivor curves presented herein were based on the results of a service life study incorporating statistical analyses of data through 2017 for the consolidated UGI gas company. The consolidated gas company includes the former UGI Penn Natural Gas Company (UGI PNG, now UGI North), UGI Central Penn Gas Company (UGI CPG, now UGI Central) and UGI Utilities, Inc. – Gas Division (UGI Gas, now UGI South).

BASIS OF STUDY

Depreciation and Amortization

Depreciation, as defined in the Uniform System of Accounts, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

The calculation of annual and accrued depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. These subjects are discussed in the sections which follow.
For most plant accounts, depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, the average service life (ASL) procedure for plant installed prior to 1982 and the equal life group (ELG) procedure for 1982 and subsequent vintages. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of gas property. For certain general plant accounts, the amortization amounts, annual and accrued, were based on the age of the vintage and the selected amortization period.

Survivor curves were used to reflect the expected dispersion of retirements, thus providing a consistent method of estimating service lives and depreciation for mass property. Iowa type curves were used to depict the estimated survivor curves. For life span groups, the estimate of life characteristics is consistent because the calculated lives of the units within a group are obtained by employing a single probable retirement date for the entire group.

Service Life Estimates

The method of estimating service life consisted of compiling the service life history of the plant accounts, subaccounts or depreciable groups, reducing this history to trends through the use of acceptable actuarial techniques, and forecasting the trend of survivors for each depreciable group on the basis of interpretations of past trends and consideration of Company plans for the future. The combination of the historical trend and the estimated future trend yielded a complete pattern of life characteristics from which the average service life was derived.

The Company's service life estimates used in the depreciation calculation incorporated historical data compiled through 2017 from the property records of the Company. Such data included plant additions, retirements, transfers and other activity. Generally, retirement data for the years 1960 through 2017 were used in the actuarial life table computations which were the primary statistical support of the service life estimates.

A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirement was obtained through field trips conducted during the course of the service life study. Discussions with operating and management personnel also provided information regarding plans for the future which was incorporated in the interpretation and extrapolation of the statistical analyses.

AMORTIZATION OF NET SALVAGE

Inasmuch as this report relates primarily to Pennsylvania rate regulation practices, under which experienced costs of negative net salvage are amortized after their occurrence, no adjustments for expected salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of experienced and estimated net salvage recorded October 1, 2017 through September 30, 2022 over a five-year period.

PART II. ESTIMATION OF SURVIVOR CURVES

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

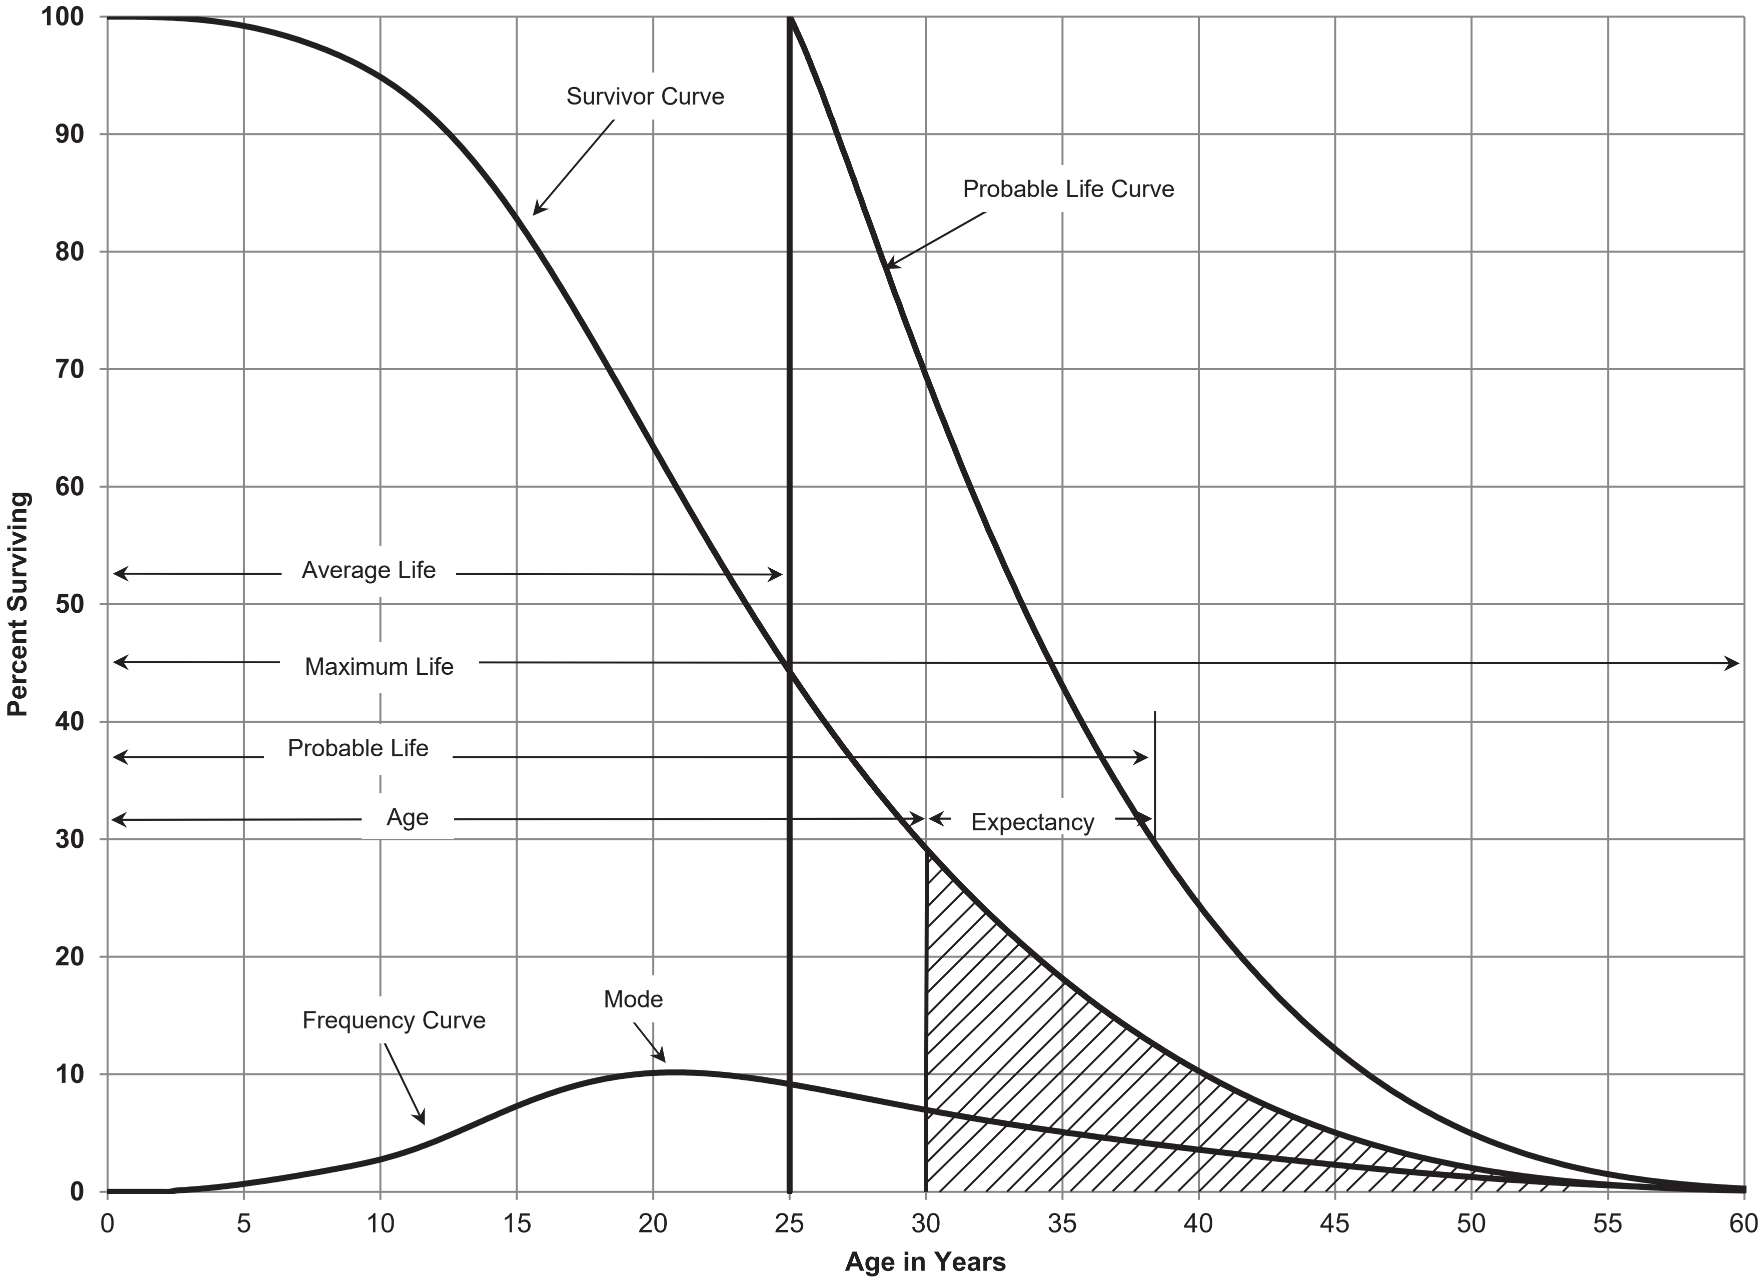

FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES

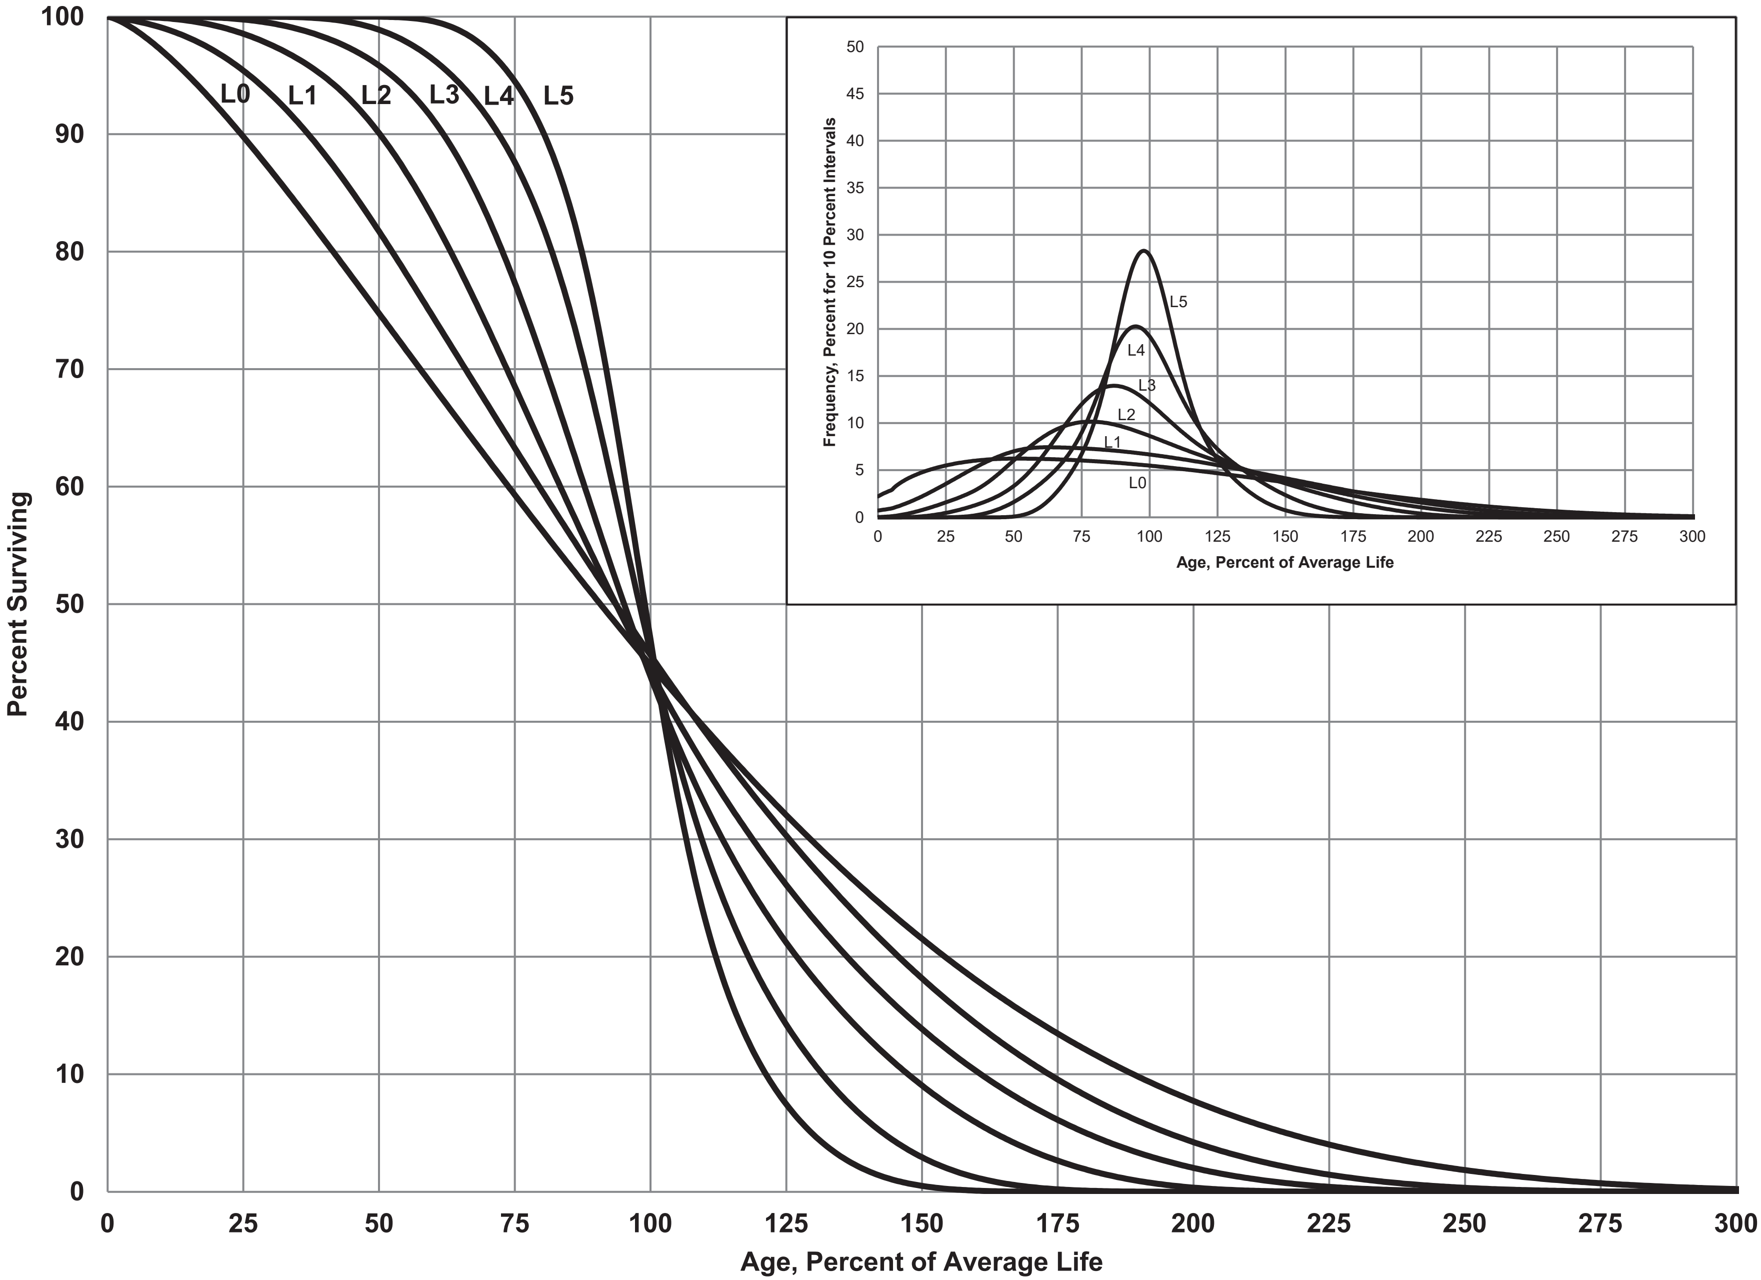

FIGURE 2. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

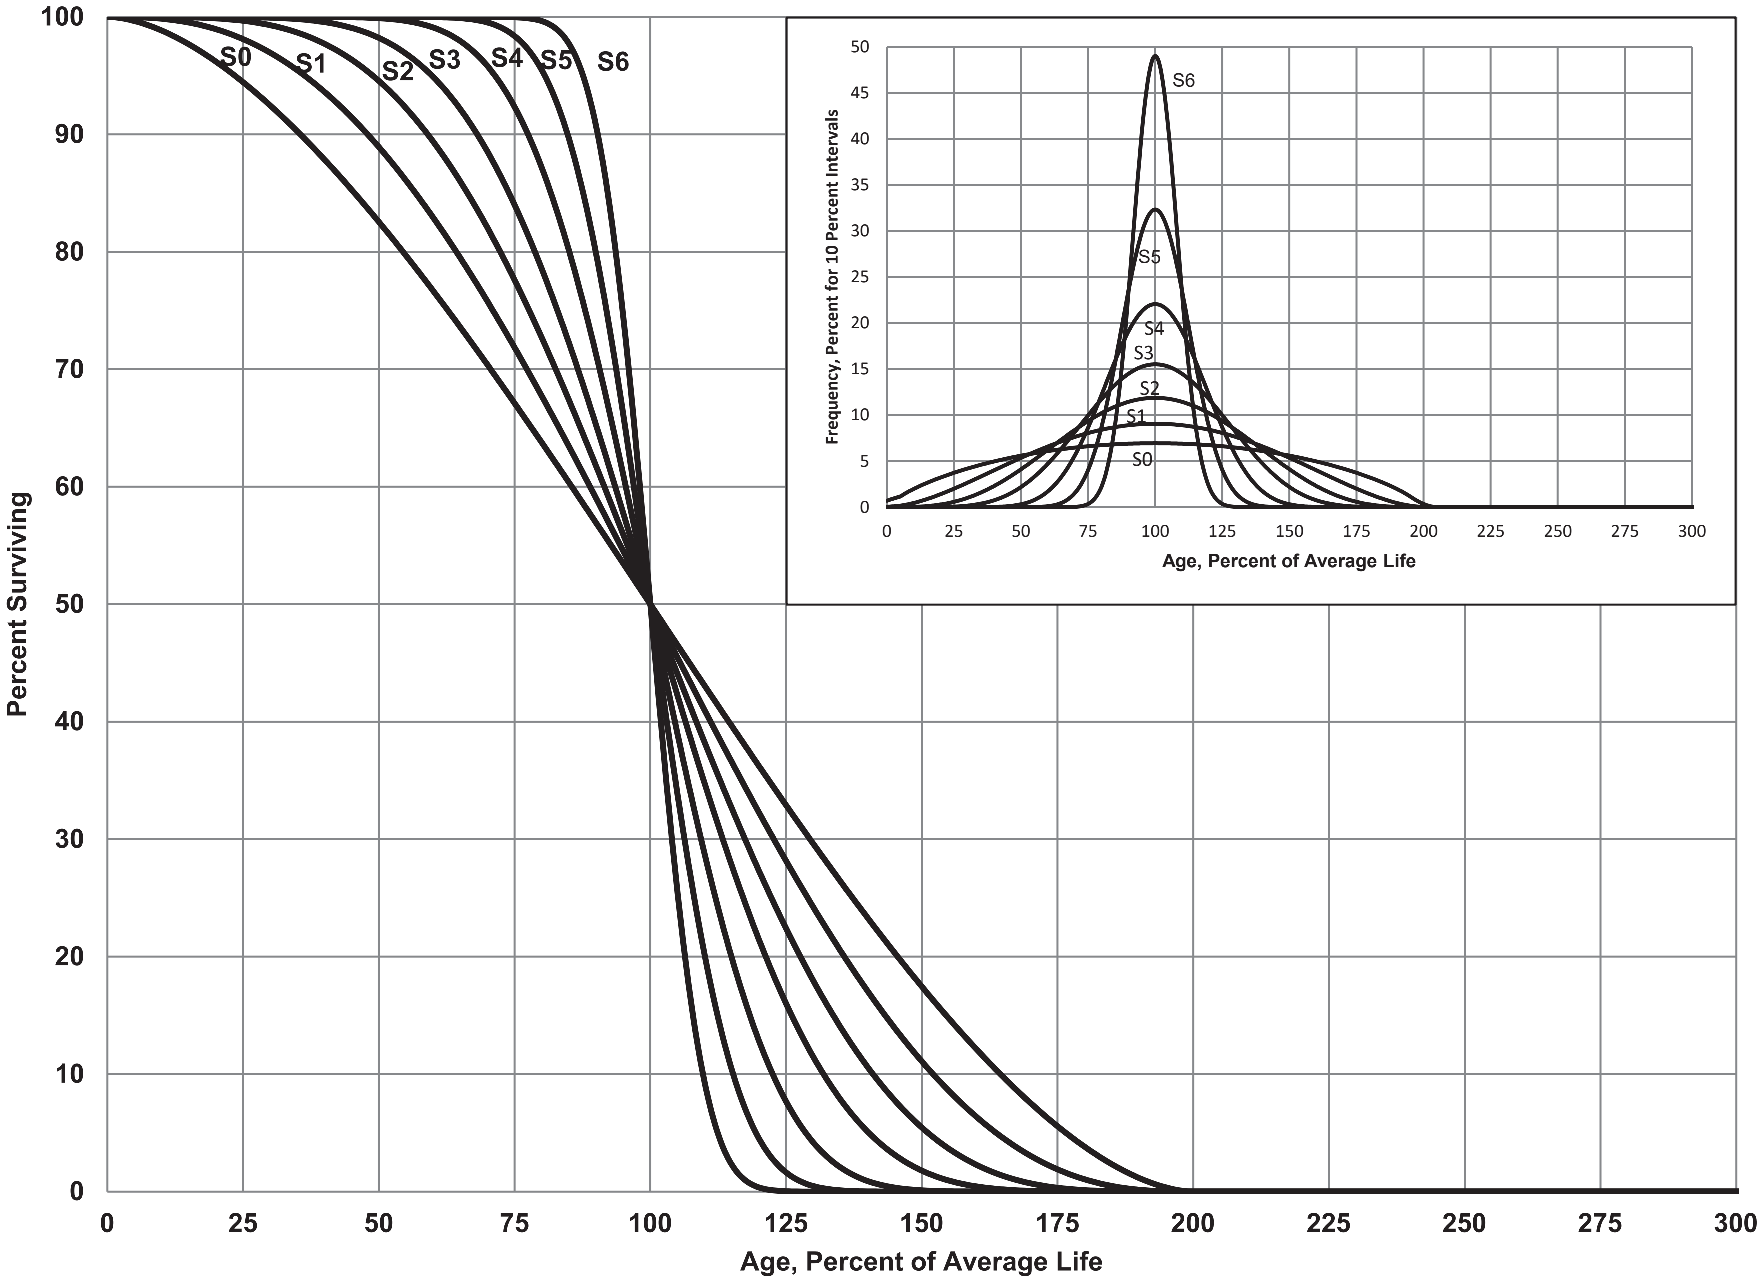

FIGURE 3. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES

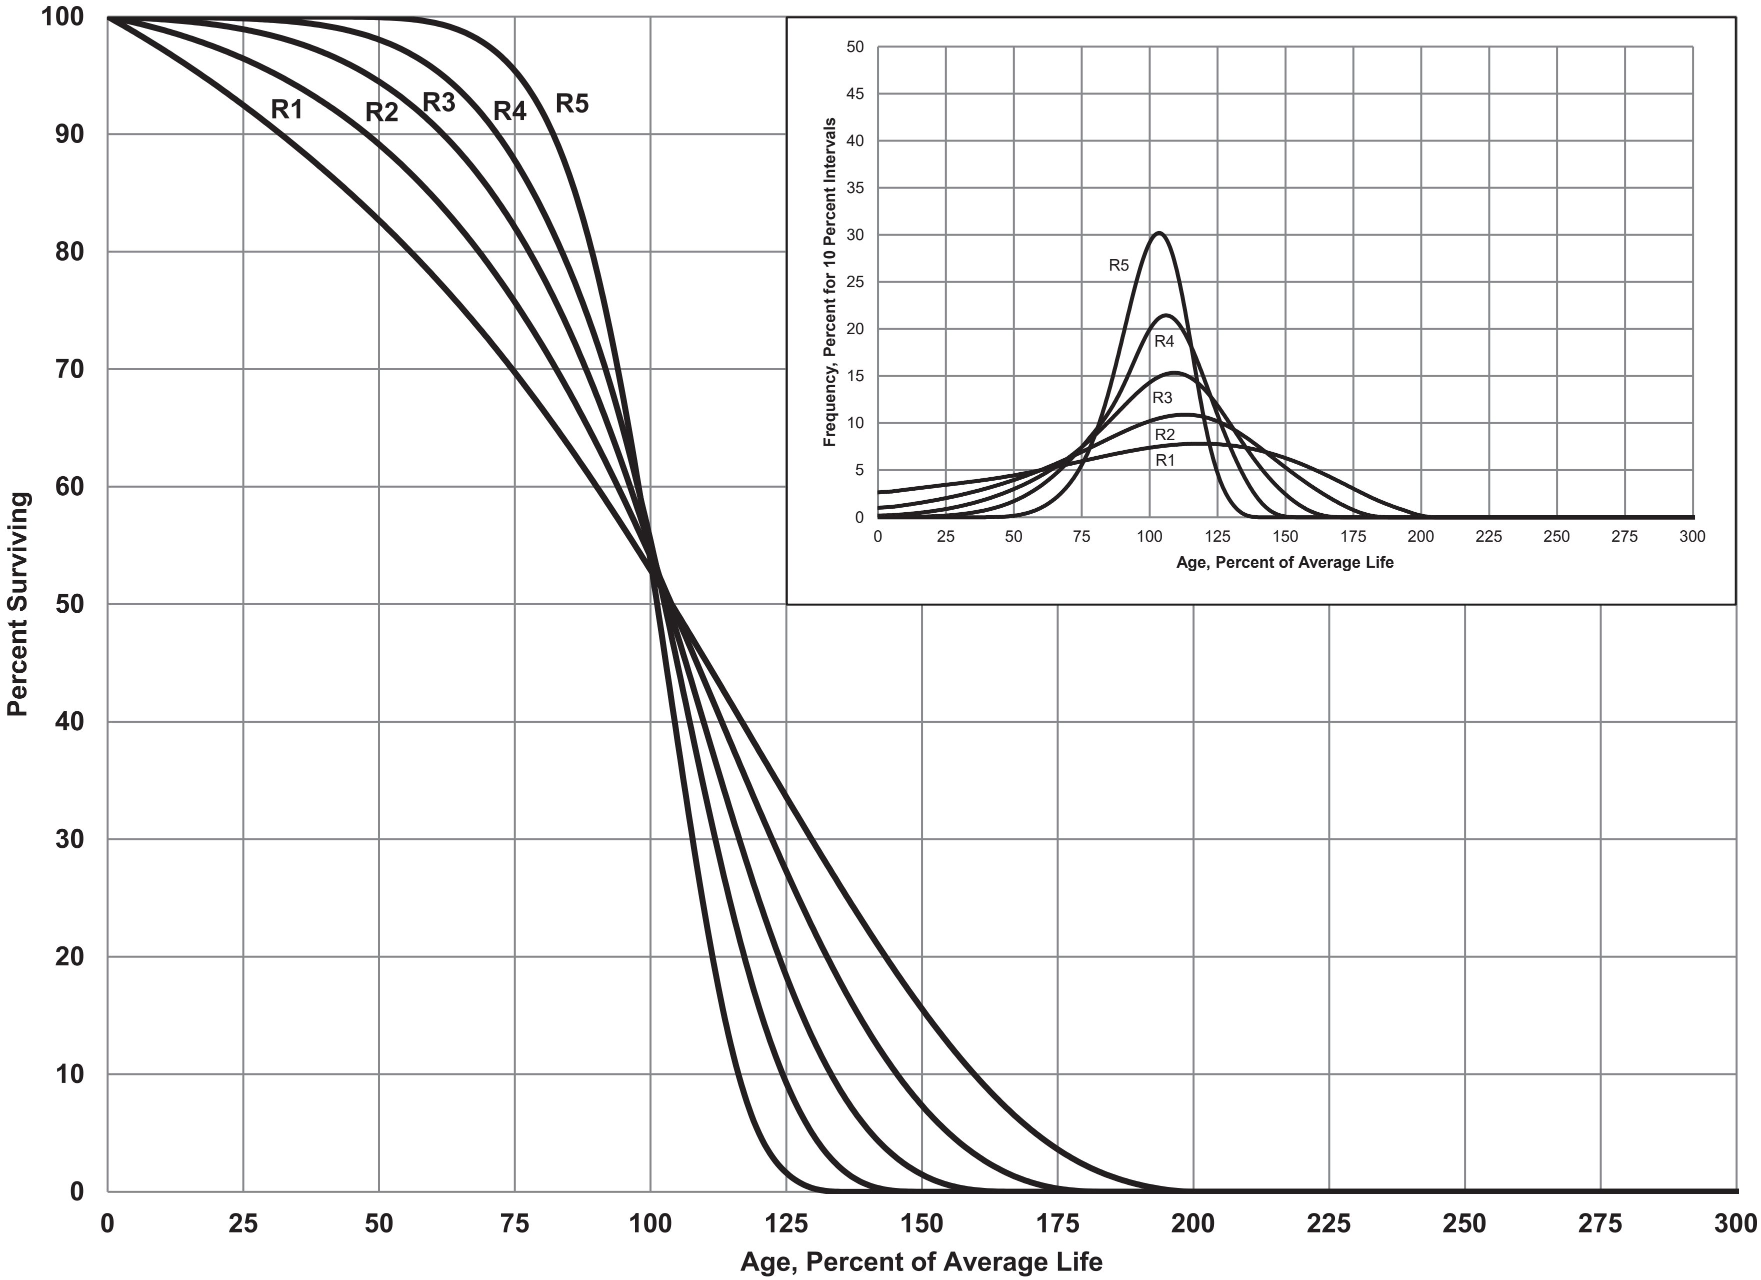

FIGURE 4. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

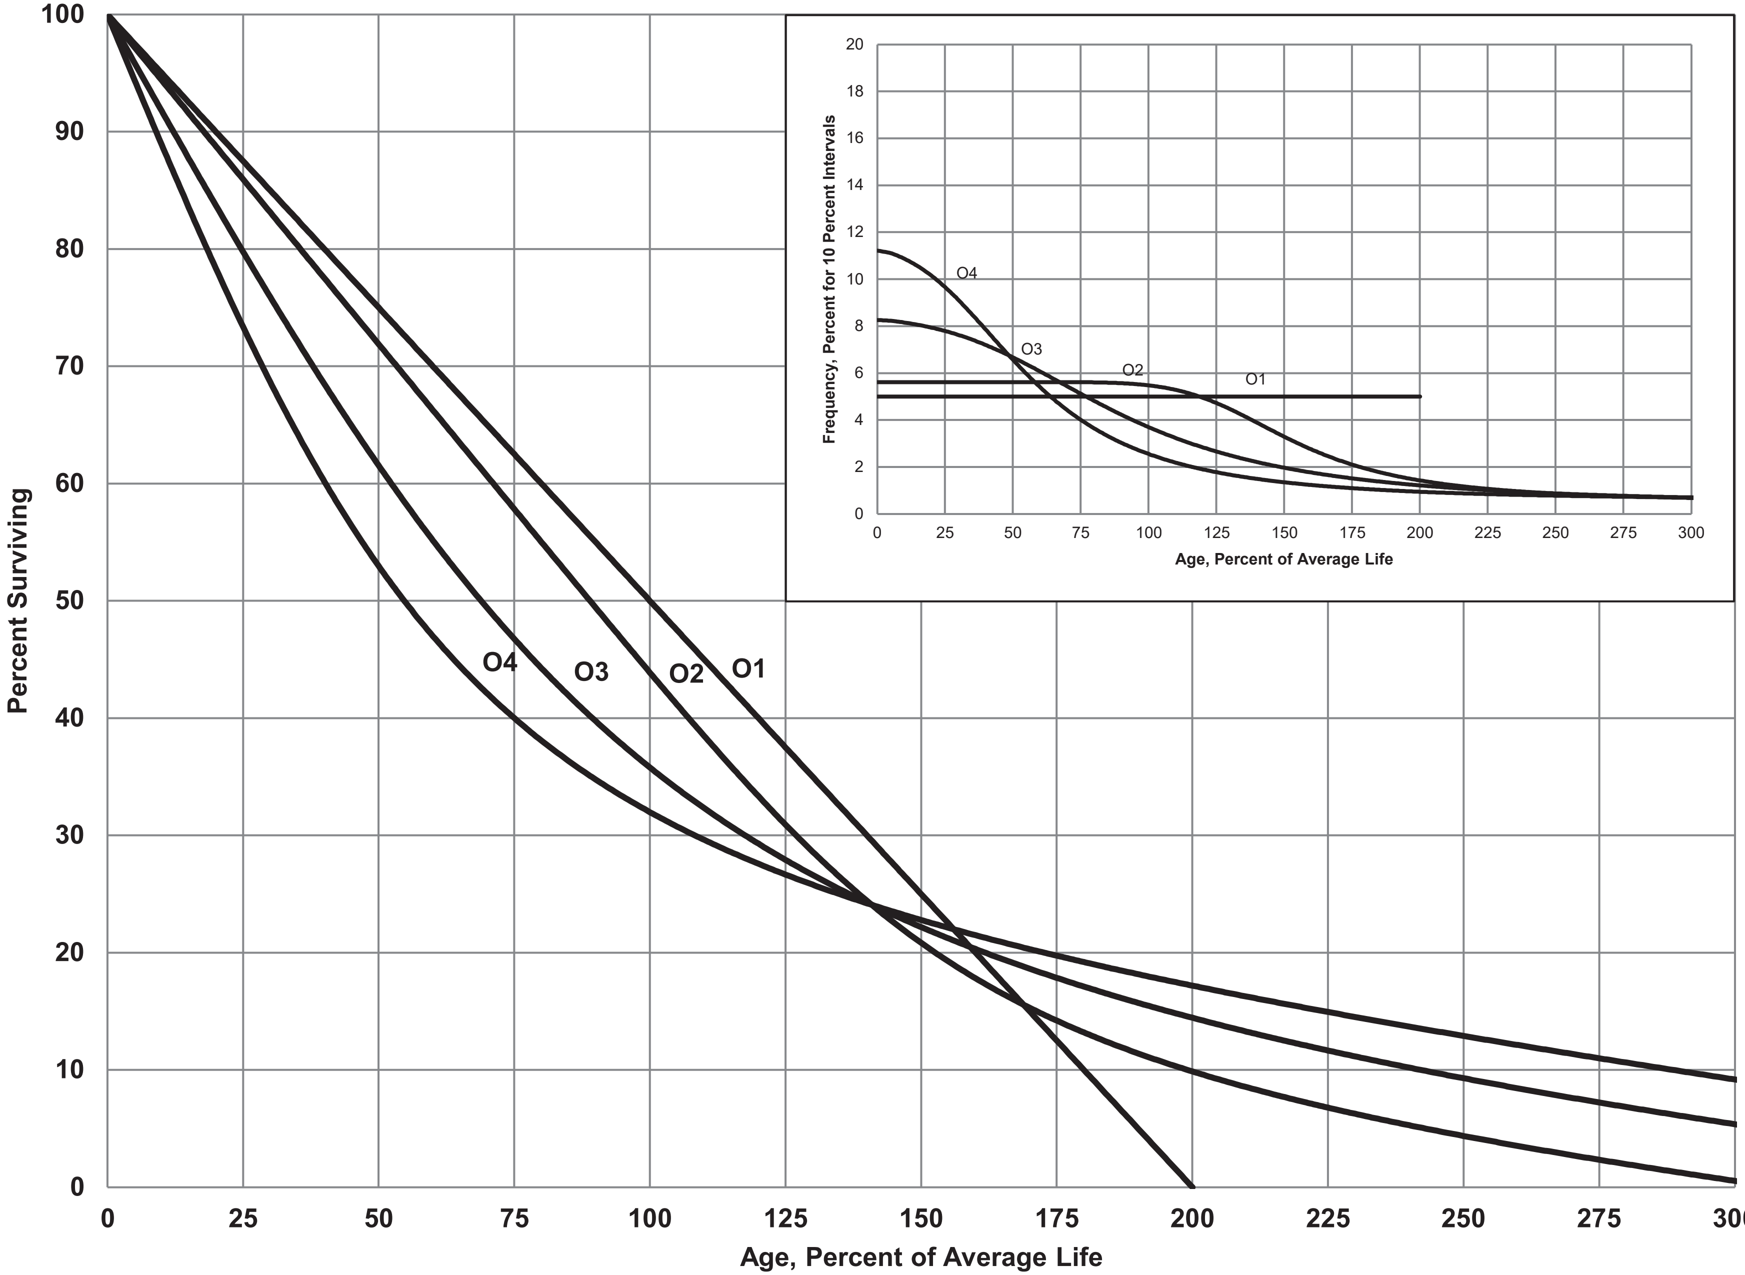

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

The property group used to illustrate the retirement rate method is observed for the experience band 2013-2022 for which there were placements during the years 2008-2022. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2008 were retired in 2013. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2013 retirements of 2008 installations and ending with the 2022 retirements of the 2017 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

$$10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.$$

[a] Transfer Affecting Exposures at Beginning of Year

[b] Transfer Affecting Exposures at End of Year

[c] Sale with Continued Use

Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2013 through 2022 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2018 are calculated in the following manner:

Exposures at age 0	= amount of addition	= $750,000
Exposures at age ½	= $750,000 - $ 8,000	= $742,000
Exposures at age 1½	= $742,000 - $18,000	= $724,000
Exposures at age 2½	= $724,000 - $20,000 - $19,000	= $685,000
Exposures at age 3½	= $685,000 - $22,000	= $663,000

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT

2021									1,080[a]	1,069	6,579	½-1½
2022										1,220[a]	7,490	0-½
Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780	

[a]Additions during the year

For the entire experience band 2013-2022, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15				
Exposures at age 4½	=	3,789,000				
Retirements from age 4½ to 5½	=	143,000				
Retirement Ratio	=	143,000	÷	3,789,000	=	0.0377
Survivor Ratio	=	1.000	-	0.0377	=	0.9623
Percent surviving at age 5½	=	(88.15)	x	(0.9623)	=	84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE

12.5	323	44	0.1362	0.8638	48.90
13.5	167	26	0.1557	0.8443	42.24
					35.66
Total	44,780	1,606			

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

Field Trips.

In order to be familiar with the operation of the Company and observe representative portions of the plant, field trips have been conducted periodically. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during these field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

During the extensive period of years our firm has been conducting depreciation studies for the Company, the field trips have resulted in numerous reviews of the Company's operating areas. The following is a list of the locations visited during the most recent trips:

August 16, 2018

- Lancaster Service Center
- Main Replacement Project on Conestoga St., Lancaster, PA
- Main Replacement Project on W. Frederick St., Lancaster, PA
- Fruitville City Gate Station
- Lititz Metering Station
- Lebanon Service Center
- Lebanon District Regulating Station
- Ono City Gate Station
- Bern Church Meter Station
- Leesport City Gate Station
- Temple City Gate Station
- Reading (Morgantown Road) Service Center

August 15, 2018

- Stroudsburg Operations Center
- Stroudsburg Measuring Station
- Delaware Water Gap M&R Station
- Bangor City Gate Station
- Mount Bethel Metering Station
- Main Replacement Project on Main Street, Easton, PA

August 15, 2018, cont.

Hellertown City Gate Station
Bethlehem (a.k.a., Lehigh Valley) Service Center

January 25, 2017

Judgment

The survivor curve estimates were based on judgment which considered a number of factors. The primary factors were the statistical analyses of data; current Company policies and outlook as determined during the field trips and other conversations with management; and the survivor curve estimates from previous studies of this company and other gas companies.

The current consolidated gas company service life study is based on data through 2017. For a majority of the mass plant accounts and subaccounts for which survivor curves were estimated, the statistical analyses resulted in good to excellent indications of the survivor patterns experienced. Generally, the information external to the statistics led to no significant departure from the indicated survivor curves for the following accounts:

375 Structures and Improvements
376 Mains - Primarily Steel
376 Mains - Cast Iron
378 Measuring and Regulating Station Equipment -General
379 Measuring and Regulating Station Equipment -City Gate
380 Services
381 Meters
385 Industrial Measuring and Regulating Station Equipment
387 Other Equipment
390 Structures and Improvements
396 Power Operated Equipment

Account 380, Services, is one of the largest depreciable groups and is used to illustrate the manner in which the study was conducted for the groups in the preceding list. Aged retirement and other plant accounting data were compiled for the years 1951 through 2017. These data were coded in the course of the Company's normal recordkeeping according to plant account or property group, type of transaction, year in which the transaction took place, and year in which the gas plant was placed in service. The data were analyzed by the retirement rate method of life analysis. The survivor curve chart for the account is presented on page VI-69 and the life table for the experience band plotted on the chart immediately follows it.

The survivor curve estimate for this account for the consolidated gas company is the Iowa 46-S1. The survivor curve estimates for the three legacy companies were: 1) UGI Gas: 46-S0.5; 2) PNG: 47-R3 for plastic services and 48-R1 for steel and other services; 3) CPG: 40--R1.5. The service line typically consists of a length of steel or plastic pipe. Steel was predominantly used until the mid-1960's, after which copper and plastic inserts became more predominant. Direct buried plastic pipe began to displace steel and the inserts in the 1980's. Currently, the investment in plastic services represents over 90 percent of the total account balance.

During the 1970's, the rates of service line retirements increased causing the service life to significantly decrease. More recent retirement history indicates a decrease in the retirement levels expressed as a percent of the beginning plant balance. Discussions with operating and management personnel disclosed several reasons for the historical changes. Prior to 1970, the retirement of inactive services often was delayed due to operating practices in effect at that time. The effect of urban renewal in the

Company's service area during the 1970's caused substantially greater retirements at earlier ages, but this cause of retirement has not been as important in the more recent past. Services are often replaced in connection with a main replacement project since it is economic to do so even if the services are in reasonably good condition and not at the end of their physical life. The company during the past five years has significantly increased the miles of cast iron and bare steel main that are replaced annually. Based on the company's most recent plan as set forth in the Long-Term Infrastructure Improvement Plan (LTIIP), the accelerated replacement of cast iron mains will occur over a 15-year period ending in 2027. The accelerated replacement of bare steel mains will occur over a 30-year period ending in 2041. For steel services, the principal cause of retirement continues to be deterioration and the impact of the cast iron and bare steel main replacement program as steel service will be replaced in connection with the cast iron and bare steel main replacement. Steel services also will be retired when the company moves meters located indoors to outside the customer's home. The company plans to move all indoor meters, not located in a historic district, to the outside within the next 15 years. This program will also cause increased meter and meter set retirements in other related accounts such as Accounts 381-384.

The 46-S1 survivor curve estimated for Account 380, Services, also is estimated for Accounts 382, Meter Installations; 383, House Regulators; 384, House Regulator Installations; and 386, Other Property on Customers' Premises. The use of the estimate developed for Account 380, Services, for other property on customers' premises is based on the similar nature of the facilities in these groups. The use of the services estimate for the remaining accounts is based on management's intent to retire these facilities concurrently with the future retirements of service lines.

The third largest depreciable group is Account 376.1, Mains - Primarily Steel. The survivor curve estimate for this account is the Iowa 73-R2.5. In recent years, the rates of retirements of mains have been redistributed, with lesser retirement ratios during earlier age intervals and greater ratios during older age intervals after age 35. This has resulted in a somewhat different indication of the survivor curve during the recent past and for the future. Discussions with operating and management personnel indicated that corrosion control programs, including the use of plastic for smaller size mains, is the most probable cause of fewer early retirements. In addition, highway and urban renewal projects have caused relatively few retirements in the Company's service area in recent years. Increased rates of retirement at older ages are anticipated in conjunction with leak detection programs and street improvements. That is, older mains with a history of leaks will be replaced as municipalities perform street improvements in order to avoid the high cost of repair or replacement when repaving is required. In addition, the company typically will replace service lines in connection with the main replacement. As previously mentioned, the company has in the past five years or so significantly accelerated the rate at which bare steel mains are being replaced. Bare steel and cast iron mains were primarily installed up through 1960. The company has plans to replace all bare steel mains by 2041.

Typical service lives for mains of used by other gas companies range from 55 to 80 years. The Iowa 73-R2.5 survivor curve is within the range and is a reasonable interpretation of the significant portion of the stub survivor curve through age 65 and reflects the outlook of management.

The interim survivor curve estimate for Account 376.2, Mains – Cast Iron is the Iowa 65-R1. The 65-R1 survivor curve was based on the results of the life analysis for the experience band 1960-2017. The 65-year average service life estimate is consistent with management's expectations and estimates used by other gas companies. An estimated probable retirement date, or truncation date, was used for this account as well. The estimated probable retirement date (i.e., September 30, 2027) coincides with the date the company plans to complete its replacement of cast iron mains.

Similar studies were performed for the remaining significant mass plant accounts. The results of the statistical analyses are presented in account sequence in this report, beginning on page VI-2. The major structures included in Account 390.1, Structures and Improvements, were separated from the smaller structures for purposes of the study. The major structures group consists of twelve structures or office complexes of significant size and of a nature that the life span procedure is appropriate. The life spans assigned to the major structures were typically 45 to 75 years from the date of major installation and varied within this range based on individual circumstances such as size, condition, type of construction, location, and management's plans. Continued use is planned for most of the major structures, although the Lebanon and Lancaster service centers may be consolidated into neighboring service centers in the near term.

The Iowa 80-R1.5 interim survivor curve was judged appropriate for the major structures based on the 1942-2017 interim retirement experience, our observations of the buildings, consideration of the facilities which will be retired during the estimated life spans, and a review of the interim survivor curves derived for similar structures of other gas companies.

Generally, the survivor curve estimates for the remainder of the accounts, which comprise a minor portion of the total depreciable original cost, were based on judgments which considered the nature of the plant and equipment, reviews of available historical retirement data, and a general knowledge of the service lives for similar equipment in other gas companies.

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

Group Depreciation Procedures

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally, the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes that portion of the property which experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve. This procedure eliminates the need to base depreciation on average lives, inasmuch as each group is equivalent to a unit having a single life. The full costs of short-lived units are accrued during their lives, leaving no deferral of accruals required to be added to the annual costs associated with long-lived units. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accrual rates as of September 30, 2022, the estimated book depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the vintages calculated by the average service life procedure and for the vintages calculated by the equal life group procedure follow. The detailed calculations are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future whole life depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life\ Expectancy}{Average\ Service\ Life}.$$

Equal Life Group Procedure

In the equal life group procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the composite remaining life for the surviving original cost of that vintage. The composite remaining life is derived by compositing the individual equal life group remaining lives in accordance with the following equation:

$$\textit{Composite Remaining Life} \ - \ \frac{(\frac{\textit{Book Cost}}{\textit{Life}} \, x \ \textit{Remaining Life})}{\frac{\textit{Book Cost}}{\textit{Life}}}$$

The book costs and lives of the several equal life groups which are summed in the foregoing equation are defined by the estimated future survivor curve.

Inasmuch as book cost divided by life equals the whole life annual accrual, the foregoing equation reduces to the following form:

$$\textit{Composite Remaining LIfe} \ = \ \frac{\sum \textit{Whole Life Future Accruals}}{\sum \textit{Whole Life Annual Accruals}}$$

or

$$\textit{Composite Remaining Life} \ = \ \frac{\sum \textit{Book Cost} \ - \ \textit{Calc. Reserve}}{\sum \textit{Whole Life Annual Accrual}}.$$

The annual accrual rate for each account is equal to the sum of the remaining life annual accruals for all vintages divided by the account's total original cost. The account's "composite remaining life" is calculated by dividing the sum of the future book accruals for all vintages by the sum of the remaining life annual accruals for all vintages.

The calculated accrued depreciation in the equal life group procedure also represents that portion of depreciable cost which will not be allocated to expense through future accruals. However, the calculation is based at the equal life group level rather than the vintage group level and does not require the use of averages. The equal life group accrued depreciation ratio is calculated as follows:

$$Ratio = \frac{Remaining\ Life}{Average\ Service\ Life}.$$

Inasmuch as service life minus remaining life equals age, when averages are not employed, the foregoing equation reduces to:

$$Ratio = \frac{Age}{Service\ Life}.$$

The table on the following page illustrates the procedure for calculating straight line equal life group accrued depreciation, using an Iowa 10-L2.5 survivor curve and a September 30, 2022 calculation date.

In the table, each equal life group is defined by the age interval shown in columns 1 and 2, which identify the ages at which the first and last retirement of each group occur. The group's designated life, shown in column 3, is the midpoint of the interval. In the calculation, the equal life groups of each vintage are arranged such that the midpoint of each one-year age interval coincides with the calculation date, e.g., September 30, in this case. This enables the calculation of annual accruals which are centered on, or as of, the same date as the calculation of accrued depreciation.

The retirement during each age interval, shown in column 4, is the size of each equal life group. It is derived from the Iowa 10-L2.5 survivor curve and is the difference between the percents surviving (not shown) at the beginning and end of the age interval.

TOTAL			100.00000						

Each equal life group's whole life annual accrual, shown in column 5, equals the group's size (column 4) divided by its life (column 3), except that for the first age interval, the annual accrual is set equal to the group's size.

Columns 6 through 10 show the derivation of the whole life annual factor and accrued factor for each vintage based on the data developed in the first five columns. The year installed is shown in column 6. For all vintages other than the first and last year (2022 and 1994), the summation of annual accruals for each year installed, shown in column 7, is calculated by adding one-half of the group annual accrual (column 5) for that vintage's current age interval plus the group annual accruals for all succeeding age intervals. For example, the figure 11.78901572523 for 2019 equals one-half of 0.25324000000 plus all of the succeeding figures in column 5. Only one-half of the annual accrual for the vintage's current age interval group is included in the summation because the equal life group for that interval expires at the midpoint of the current year.

The summation of annual accruals (column 7) for installations during 2022 is calculated on the basis of an in-service date at the midpoint of the first nine months, i.e., four and one-half months prior to September 30. Since the overall calculation is centered on September 30, 2022, the accrual for 2022 installations (during the first nine months) represents only 0.875 of one year, 0.375 of a year prior to September 30 plus one-half year following September 30. For this reason, the first figure in column 7, for vintage 2022, equals the group annual accrual for 2022 plus 0.875 of the group annual accruals for each of the subsequent years.

The average percent surviving, derived from the Iowa 10-L2.5 survivor curve, is shown in column 8 for each age interval. The annual factor, shown in column 9, is the result of dividing the summation of annual accruals (column 7) by the average percent surviving (column 8).

The accrued depreciation factor, shown in column 10, equals the annual factor multiplied by the age of the group at September 30, 2022.

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization, as defined in the Uniform System of Accounts, is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization periods and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is appropriate for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable gas plant in service. The accounts and their amortization periods are as follows:

Account		Amortization Period, Years
391,	Office Furniture and Equipment	
	Furniture	20
	Equipment	10
	Computer Equipment	5
	Software	10
393,	Stores Equipment	20
394,	Tools, Shop and Garage Equipment	20
395,	Laboratory Equipment	20
397,	Communication Equipment	10
398,	Miscellaneous Equipment	15

For the purpose of calculating annual amortization amounts at September 30, 2022, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

AMORTIZATION OF NET SALVAGE

Experienced salvage is incorporated in the results of the study, as it was reported on the Company's books and records for the period October 1, 2017 through September 30, 2021, and as estimated for the twelve months ended September 30, 2022. The five-year amortization calculations are shown in Table 4.

Net salvage experienced during the five-year period is presented in this manner to determine the amount of negative net salvage to be amortized for book purposes. In developing the amount to be amortized, the data for the accounts which experienced positive net salvage have been netted with those for accounts which experienced negative net salvage.

In order to be consistent with this manner of recognizing salvage, no adjustments for salvage were made to the annual accruals and accrued depreciation calculated for each individual account. Also, there were no exclusions from the 2018 through 2022 experienced and estimated net salvage amounts that were used to determine the five-year net salvage amortization amount for each account.

PART V. RESULTS OF STUDY

PART V. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages V-4 through V-13 summarize the results of the depreciation study at September 30, 2022 for the consolidated UGI gas company. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve at September 30, 2022, future book accruals, and calculated annual accrual amount and rate. Table 2 presents the bringforward of the book reserve to September 30, 2022. Table 3 sets forth the calculation of the depreciation accruals for the twelve months ended September 30, 2022. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2018 through 2022.

DESCRIPTION OF DETAILED TABULATIONS

Supporting statistical data for the estimates of average service lives and survivor curves, the annual depreciation calculations, and salvage and cost of removal for the years 2018-2022 are presented in three sections.

The section beginning on page VI-1 sets forth, for each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. A cumulative summary, by year installed, for gas plant and the supporting data for the original cost depreciation calculations are presented in the section beginning on page VII-1. The tabulations of experienced and estimated net salvage by year by account for the five-year period, 2018-2022, are presented in the section beginning on page VIII-1.

In Part VI, the survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the type curve designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. In cases where only a segment of the estimated curve is used in the depreciation calculation, the numeral used for identification purposes is not a designation of the average life of the group. The titles of the charts indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which the retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The tables of the calculated annual depreciation related to original cost are presented in Part VII and indicate the estimated average survivor curves used in the calculations. The tables set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life expectancy and the calculated annual accrual.

Detailed tabulations setting forth the cost of removal and salvage amounts, by plant account for each year, are presented beginning on page VIII-2. The total salvage and removal costs, by year, were used to calculate the five-year net salvage amortization presented in Table 4 in Part V.

Mr. Anton R. Hummer
Controller and Principal Accounting Officer
UGI Utilities, Inc. – Gas Division
1 UGI Drive
Denver, PA 17517

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant at September 30, 2021 for the consolidated UGI gas company. Summaries of the original cost, annual accruals and the book depreciation reserve are presented in Tables 1 and 2 of the attached report.

A description of the methods and procedures upon which the study was based is set forth in a companion report, UGI Gas Exhibit C (Future), "Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant at September 30, 2022".

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PART I. INTRODUCTION

UGI UTILITIES, INC. – GAS DIVISION
DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study for UGI Utilities, Inc. – Gas Division to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of gas plant at September 30, 2021.

BASIS OF STUDY

Depreciation

The annual depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, the average service life (ASL) procedure for plant installed prior to 1982 and the equal life group procedure (ELG) for 1982 and subsequent vintages. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of gas property.

Service Life Estimates

The service life and survivor curve estimates used for the calculation of depreciation at September 30, 2021, are set forth in Table 1 and are based on data through 2017 for the consolidated UGI gas company. The service life estimates are the same estimates as submitted to the Pennsylvania Public Utility Commission (PA PUC) in the most recent service life study report in January 2019 as part of the gas base rate case filing.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accruals at September 30, 2021, the book reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the average service life procedure are presented in Exhibit C (Future). The detailed calculations at September 30, 2021, are set forth in Part III of this report.

Amortization of Net Salvage

In accordance with Pennsylvania rate regulation practice, under which experienced costs of negative net salvage are amortized after their occurrence, no adjustments for expected net salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of experienced net salvage over a five-year period.

PART II. RESULTS OF STUDY

PART II. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 and 2 presented on pages II-3 through II-7 summarize the results of the depreciation study as of September 30, 2021 for the consolidated UGI gas company. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of September 30, 2021, future book accruals, and calculated annual accrual amount and rate. Table 2 presents the annual amortization of experienced net salvage based on the period 2017 through 2021.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

Supporting data for the original cost depreciation calculations in account sequence are presented in Part III of this report. The tables indicate the estimated survivor curves used in the calculations and set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life, and calculated remaining life accrual.

Detailed tabulations setting forth the experienced cost of removal and salvage amounts by year and account are presented in Part IV of this report. The net salvage amounts are carried forward to Table 2 which presents the five-year amortization.

Attention: Mr. Paul J. Szykman
Chief Regulatory Officer

Ladies and Gentlemen:

Pursuant to your request, we have prepared a cost of service allocation study based on pro forma revenue requirements for the twelve months ended September 30, 2023, for UGI Utilities, Inc. – Gas Division.

The attached report presents the results of the study, as well as supporting schedules which set forth the detailed allocation calculations. Schedule A, on page 5, presents a comparison of the cost of service by service classification with the revenues produced by each classification under present and proposed rates.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PART I. INTRODUCTION

PART II. COST OF SERVICE BY SERVICE CLASSIFICATION

PART I. INTRODUCTION

UGI UTILITIES, INC. – GAS DIVISION

COST OF SERVICE ALLOCATION STUDY
AS OF SEPTEMBER 30, 2023

PART I. INTRODUCTION

PLAN OF REPORT

The report sets forth the results of the cost of service allocation study prepared for UGI Utilities, Inc. – Gas Division, based on the twelve months ended September 30, 2023 (FPFTY). Part I, Introduction, includes statements with respect to the basis of the study, the procedures employed, and a summary of the results of the study. Part II, Cost of Service by Service Classification, presents the detailed schedules of the allocation of costs to service classifications, the bases for the allocations, and the development of certain customer and demand costs.

BASIS OF THE STUDY

The purpose of the study was to allocate costs of UGI Gas Division to the several customer classifications based on considerations of quantity of gas consumed; sales and transportation; demand characteristics; and costs associated with metering, billing, and accounting. The allocation study was based on recognized procedures for allocating costs to customer classifications in proportion to each classification's use of the facilities, commodity, and services which entail the total cost of providing gas service.

ALLOCATION PROCEDURES

The allocation study was based on the Average and Extra Demand Method for allocating costs to service classifications. The method is identified as the "Average and

Excess Demand Method" in "Gas Rate Fundamentals," (published in 1987 by the American Gas Association's Rate Committee) in which it is described. The three basic categories of cost responsibility are commodity, capacity, and customer costs. In the Average and Extra Demand Method, the capacity costs are allocated to service classifications on a combined basis of average use and use above average at peak demands. The following presents a brief discussion of costs and the manner in which they were allocated.

Commodity Costs are the costs that tend to vary with the quantity of gas used. Commodity costs in this study include production plant expenses and associated costs. Commodity costs were allocated to service classifications on the basis of average daily sales volumes.

Capacity Costs are costs associated with meeting the peak demands of the system. Capacity costs attributable to sales and transportation service include Distribution expenses and capital costs not associated with the customer costs category. The capacity costs were allocated to service classifications on a combined basis of average use and extra demand (demand in excess of average use). For presentation purposes, the commodity and capacity costs are combined into the volumetric function for each classification.

Customer Costs are costs associated with serving customers regardless of their usage or demand characteristics. Customer costs include the expenses and capital costs related to meters, regulators, and services and expenses related to meter reading and billing. The customer costs were allocated to service classifications on the bases of the number of meters, services and customers.

The allocation of costs to service classifications and the bases for the allocations are presented in Part II, Cost of Service by Service Classification.

RESULTS OF STUDY

The data summarized in Schedule A, "Comparison of Cost of Service with Revenues Under Present and Proposed Rates by Service Classification for the Twelve Months Ended September 30, 2023," constitute the principal results of the allocation study. Schedules B through F in Part II of the report present the details of the allocation of costs of service, including the return based on the allocated measure of value, by service classification as well as the bases for the allocation factors. Schedule G presents the development of customer costs per bill by service classification. Schedule H presents a cost analysis of the LFD and XD Service demand charges.

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTORS 1 and 1A. ALLOCATION OF COSTS WHICH VARY DIRECTLY WITH PGC AND CHOICE SALES.

Factors are based on the pro forma average daily PGC sales volumes for each service classification.

Service Classification	Pro Forma Average Daily PGC Volumes (Mcf)	Allocation Factor 1	PGC and Choice Volumes (Mcf)	Allocation Factor 1A
(1)	(2)	(3)		
Volumetric Costs				
Rate R	124,315	0.7176	142,485	0.6257
Rate N	48,925	0.2824	85,232	0.3743
Rate DS		-		
Rate LFD		-		
Rate XD	-	-		
Interruptible	-	-		
Total	173,240	1.0000	227,717	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTORS 2 . ALLOCATION OF COMPRESSOR STATION FUEL.

Factors are based on the pro forma average daily throughput volumes for each service classification.

Service Classification	Pro Forma Average Daily Throughput Volumes (Mcf)	Allocation Factor 2
(1)	(2)	(3)
Volumetric Costs		
Rate R	142,485	0.1529
Rate N	85,232	0.0914

Firm Service Load Factor	0.4210		0.5790		

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH TRANSMISSION AND LARGE DISTRIBUTION MAINS.

Factors are based on the weighting of the factors derived from average daily throughput volumes volumes and from maximum day extra capacity demand for each service classification, as follows:

	Average Daily Throughput			Maximum Day Extra Demand		
Service Classification	MCF/Day	Allocation Factor	Weighted Factor*	Allocation Factor 3A	Weighted Factor*	Allocation Factor 4
(1)	(2)	(3)	(4)=(3)x 0.4210	(5)	(6)=(5)x 0.5790	(7)=(4)+(6)
Volumetric Costs						
Rate R	142,485	0.3973	0.1673	0.5203	0.3012	0.4685
Rate N	85,232	0.2376	0.1000	0.3554	0.2058	0.3058
Rate DS	26,335	0.0734	0.0309	0.0723	0.0419	0.0728
Rate LFD	64,765	0.1806	0.0760	0.0520	0.0301	0.1061
Rate XD Firm		-	-	-	-	-
Interruptible**	39,847	0.1111	0.0468		-	0.0468
Total	358,664	1.0000	0.4210	1.0000	0.5790	1.0000

* The weighting of the factors is based on the system load factor for firm service. See Factor 3.
** Excludes XD-I volumes for customers who are 100% interruptible.

FACTOR 4A. ALLOCATION OF COSTS ASSOCIATED WITH LOAD DISPATCHING AND M&R STATION EQUIPMENT.

Factors are based on the weighting of the factors derived from average daily throughput volumes and from maximum day extra capacity demand for each service classification, as follows:

		Average Daily Throughput		Maximum Day Extra Demand		
Service Classification	Throughput	Allocation Factor 2	Weighted Factor	Allocation Factor 3	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3)x 0.4410	(5)	(6)=(5)x 0.5590	(7)=(4)+(6)
Volumetric						
Rate R	142,485	0.1529	0.0675	0.4141	0.2315	0.2990
Rate N	85,232	0.0914	0.0403	0.2830	0.1582	0.1985
Rate DS	26,335	0.0282	0.0124	0.0576	0.0322	0.0446

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 15. ALLOCATION OF RETURN AND TAXES.

Factors are based on the result of allocating the original cost measure of value, as presented on the following pages.

Service Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 917,142,710	0.2894
Rate N	550,606,371	0.1737
Rate DS	128,939,874	0.0407
Rate LFD	187,663,895	0.0592
Rate XD Firm	111,244,603	0.0351
Interruptible	82,046,084	0.0259
Customer Costs		
Rate R	963,932,480	0.3042
Rate N	186,924,574	0.0590
Rate DS	18,199,962	0.0057
Rate LFD	13,156,321	0.0042
Rate XD Firm	2,516,808	0.0008
Interruptible	6,649,297	0.0021
Total	$ 3,169,022,979	1.0000

FACTOR 16. ALLOCATION OF REGULATORY COMMISSION EXPENSES, ASSESSMENTS AND OTHER REVENUES.

Factors are based on the allocated cost of service excluding those items being allocated.

Service Classification	Total Cost of Service	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 224,272,166	0.3026
Rate N	101,913,123	0.1375
Rate DS	24,423,486	0.0330
Rate LFD	35,299,124	0.0476
Rate XD Firm	26,745,681	0.0361
Interruptible	14,835,600	0.0200
Customer Costs		
Rate R	247,987,947	0.3346
Rate N	46,535,163	0.0628
Rate DS	8,550,153	0.0115
Rate LFD	6,238,666	0.0084
Rate XD Firm	1,293,606	0.0017
Interruptible	3,104,152	0.0042
Total	$ 741,198,866	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 17. ALLOCATION OF OPERATION AND MAINTENANCE EXPENSES ASSOCIATED WITH LARGE MAINS.

Factors are based on the allocation of rate base for large and directly assigned mains.

Service Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 540,680,086	0.4290
Rate N	352,913,491	0.2799
Rate DS	84,016,030	0.0666
Rate LFD	122,446,440	0.0971
Rate XD Firm	106,646,558	0.0846
Interruptible	54,011,944	0.0428
Total	$ 1,260,714,549	1.0000

FACTOR 18. ALLOCATION OF RATE BASE ASSOCIATED WITH M&R STATION EQUIPMENT AND OTHER DISTRIBUTION ASSETS.

Factors are based on the composite allocation of all mains.

Service Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 834,761,469	0.4420
Rate N	544,866,718	0.2885
Rate DS	129,713,201	0.0687
Rate LFD	189,046,301	0.1001
Rate XD Firm	106,646,558	0.0565
Interruptible	83,388,697	0.0442
Total	$ 1,888,422,944	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 19. ALLOCATION OF UNCOLLECTIBLE ACCOUNTS.

Factors are based on history of net write-offs by class.

Service Classification	3-Yr. Average of Net Write-offs	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	$ 10,714,163	0.9251
Rate N	749,312	0.0647
Rate DS	8,837	0.0008
Rate LFD	19,905	0.0017
Rate XD Firm	64,418	0.0056
Interruptible	24,812	0.0021
Total	$ 11,581,448	1.0000

FACTOR 20. ALLOCATION OF PENALTY REVENUE.

Factors are based on an analysis of penalty revenue, by class.

Service Classification	Penalty Revenue	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	$ 2,313,287	0.4737
Rate N	1,885,751	0.3861
Rate DS	240,168	0.0492
Rate LFD	264,015	0.0541
Rate XD Firm	91,116	0.0187
Interruptible	89,186	0.0183
Total	$ 4,883,522	1.0000

FACTOR 21. ALLOCATION OF CUSTOMER DEPOSITS.

Factors are based on an analysis of customer deposits for 2021, by class.

Service Classification	2021 Customer Deposits	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	$ 4,510,000	0.2384
Rate N	12,829,000	0.6781
Rate DS	895,000	0.0473
Rate LFD	549,000	0.0290
Rate XD Firm	8,000	0.0004
Interruptible	129,000	0.0068
Total	$ 18,920,000	1.0000

UGI UTILITIES, INC. - GAS DIVISION

NOTICE

This tariff makes increases to existing rates (see page 2).

LIST OF CHANGES MADE BY THIS SUPPLEMENT
(Page Numbers Refer to Official Tariff)

Rider I – Distribution System Improvement Charge (DSIC), Pg. 63

- The DSIC rate is increased.

LIST OF CHANGES MADE BY THIS SUPPLEMENT - Continued
(Page Numbers Refer to Official Tariff)

Rate N – General Service – Non-Residential, Page 89.
- The Distribution Charge has been increased and the Customer Charge has been revised. These changes have been phased-in per the Commission’s Order.

Rate NT – General Service – Non-Residential Transportation, Page 90.
- The Distribution Charge has been increased and the Customer Charge has been revised. These changes have been phased-in per the Commission’s Order.

Rate GBM – Gas Beyond The Mains (Piped Propane Service), Page 92.
- The Distribution Charge has been increased and the Customer Charge has been revised in concert with the same change to Rate N/NT. These changes have been phased-in per the Commission’s Order.

Rate DS – Delivery Service, Pages 94-95.
- The Distribution Charge has been increased and the Customer Charge has been revised. These changes have been phased-in per the Commission’s Order.
- Clarifying language addressing the Minimum Monthly Bill has been added. Also, the term Maximum Daily Quantity (“MDQ”) has been defined.

Rate LFD – Large Firm Delivery Service, Page 99.
- Availability language has been modified to remove extraneous language.

Choice Supplier Tariff

Cover Page
- Updated to reflect Supplement Number, Notice language, Issue and Effective dates.

Rule 4, Choice Supplier Obligations, Page 115.
- Subsection 4.12 – The residential and commercial Purchase of Receivable rates have been updated as a result of the change to the Merchant Function Charge.

Rule 10, Rate AG – Aggregation Service, Page 127.
- Failure to Comply with an OFO or DFD penalty charge language has been clarified for application.

DEFINITIONS – GENERAL

Alternate Fuel:	Any fuel other than natural gas.
Applicant:	Any person, corporation or other entity that (i) desires from the Company natural gas or any other service provided for in this Tariff at a specific location, (ii) complies completely with all Company requirements for obtaining natural gas or any other service provided for in this Tariff, (iii) has filed and is awaiting Company approval of its application for service, and (iv) is not yet lawfully receiving from the Company any service provided for in this Tariff at such location.
Authorized Payment Agent:	An agent expressly authorized by Company to accept payments from Customers on behalf of Company.
Automated Meter Reading (“AMR”):	Metering using technologies that automatically read and collect data from metering devices and transfer that data to a central database for billing and other purposes and does not include a Remote Meter Reading Device. All meter readings by an AMR shall be deemed actual readings.
BTU (British Thermal Unit):	The amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit. **(C)**
Ccf:	100 cubic feet of gas. This is a measure of gas usage.
CFH:	Cubic feet per hour.
CCFD:	One Hundred Cubic feet per day.
Chapter 56:	The PUC regulations that govern metering, billing and collections for residential gas and electricity service.
City Gate:	A point of interconnection between the Company’s facilities and third party source of supply.
Combined Billing:	The aggregation of the billing determinants of two or more meters of the same Customer at the same location for billing purposes. This applies to only contiguous properties with the same billing/meter read date.
Consolidated Billing:	The aggregation of two or more Customer bills to one bill from different service locations or the same service location for ease of Customer receiving one bill for multiple service locations instead of receiving multiple bills. Each meter will be billed under the applicable Tariff rate and will not be considered combined billing. Customer will be required to pay Company to perform such transactions.
Commodity:	The gas delivered to a Customer during the billing month.
Company:	UGI Utilities, Inc. – Gas Division

(C) Indicates Change

DEFINITIONS – GENERAL (Continued)

Commercial Customer:	A Customer who is not classified as an Industrial Customer or a Residential Customer.
Creditworthiness:	An assessment of an Applicant's or Customer's ability to meet bill payment obligations for utility service.
Critical Day:	Any day, determined by company in its sole discretion, when variations in supply or demand could jeopardize the safety or reliability of Company's Gas Service.
Customer:	Any person, corporation or other entity lawfully in receipt of gas service, aggregation and balancing services or interconnection coordination services from the Company under this Tariff.
Customer Charge:	A monthly charge.
Daily Flow Directive ("DFD"):	An order issued by the Company to address system management, including actions necessary to comply with statutory directives and obligations. DFDs will be communicated to affected Customers or NGSs via e-mail if the Customer or NGSs prefer to receive notice in this manner and provide a valid e-mail address, or if no such preference is expressed, either electronically, by telephone, by facsimile, through the use of the media or by an alternate mutually agreed upon method between the Company and the Customer or NGS. Customers and NGSs must provide the Company with a 24-hour contact for DFDs.
Discontinuance of Service:	The cessation of service with the consent of Customer.
Distribution Charges:	Charges to recover the costs the Company incurs to provide the services necessary to deliver natural gas to a Customer from the point of receipt into the Company's distribution system.
Dth ("Dekatherm"):	A measure of the heat content value of gas. Gas usage is determined by multiplying the MCF used by the heat content value of the gas.
Extension Applicant:	Any person, corporation or other entity, whether or not currently receiving from the Company any service provided for in this Tariff, who desires from the Company an extension or expansion of facilities under Section 5 of this Tariff and who complies with all Company requirements for obtaining an extension or expansion of facilities as provided for in this Tariff.
Gas or Natural Gas:	A flammable gas meeting PUC heating value and purity requirements that may include natural gas, synthetic natural gas, propane, landfill gas and any and all natural gas substitutes.
Gas Service:	The furnishing of gas by the Company at the point of delivery regardless of whether the Customer makes any use of the gas.

DEFINITIONS – GENERAL (Continued)

Gas Supply or Commodity Charge:	Charges by an NGS or Supplier of Last Resort to recover the cost of procuring natural gas and delivering it to the Company's facilities for redelivery to Customers.
Industrial Customer:	A Customer engaged in the process which creates or changes raw materials or unfinished materials into another form or product.
Interruptible Service:	Natural gas services that can be temporarily discontinued under terms and conditions specified by Tariff or contract.
MCF:	1,000 cubic feet of gas. This is a measure of gas usage.
Natural Gas Supplier ("NGS"):	Any person, corporation or other entity that has received a license from the PUC to supply natural gas supply services to Customers in the Company's service territory and that has met the additional criteria established by the Company to permit it to provide natural gas supply service to Customers.
Non-Critical Day:	Any day determined by Company not to be a Critical Day
Non-Residential Applicant:	An Applicant not classified as a Residential Applicant.
Non-Residential Customer:	A Customer not classified as a Residential Customer, including a Commercial Customer and an Industrial Customer.
Occupant:	A natural person who resides in the premises to which gas service is provided.
Operational Flow Order ("OFO"):	A directive issued by the Company that is reasonably necessary to alleviate conditions that threaten the operational integrity of the Company's system on a critical day, including actions necessary to comply with statutory directives and obligations. OFOs will be communicated as soon as reasonably practical to affected Customers or NGSs via e-mail if the Customer or NGSs prefer to receive notice in this manner and provide a valid e-mail address, or if no such preference is expressed, either electronically, by telephone, by facsimile, through the use of the media or by an alternate mutually agreed upon method between the Company and the Customer or NGS. Customers and NGSs must provide the Company with a 24-hour contact for OFOs.
Point of Delivery:	The outlet of company facilities; usually the meter or regulator outlet.
Price to Compare:	The dollar amount charged by the Company, used by Customers to compare prices and potential savings with other Natural Gas Suppliers.
PUC:	The Pennsylvania Public Utility Commission.

DEFINITIONS – GENERAL (Continued)

Remote Meter Reading Device: A device which by electrical impulse or otherwise transmits readings from a meter, usually located within a residence, to a more accessible location outside a residence. The term does not include AMR and devices that permit direct interrogation of the meter.

Residential Applicant: An Applicant who is (1) a natural person at least 18 years of age not currently receiving service who applies for residential service, or (2) an adult Occupant whose name appears on the mortgage, deed or lease of the property for which the residential utility service is requested. The term shall not include (1) a Residential Customer who seeks to transfer service within the Company's service territory, or (2) a Residential Customer who, within 30 days after Termination or Discontinuance of Service, seeks to have service reconnected at the same location or transferred to another location within the Company's service territory.

Residential Customer: A Customer who is either (1) a natural person at least 18 years of age in whose name a residential account is listed and who is primarily responsible for payment of bills rendered for the service, or (2) any adult Occupant whose name appears on the mortgage, deed or lease of the property for which residential service is requested. A Residential Customer shall be further defined to include a Customer receiving the Company's gas service to a single-family dwelling or building, through one meter to four or fewer dwelling units in a multi-family dwelling, or premises used as a single family dwelling and for one or more business uses, provided the proprietor of the business resides in the single family dwelling, and the business uses less than fifty percent of the anticipated gas usage served through a single meter. Service will be supplied only where the Company's facilities are suitable to the service desired. A Residential Customer shall remain a Customer after Discontinuance of Service or Termination of Service until the final bill for service is past due. The term includes a person who, within 30 days after Termination or Discontinuance of Service, seeks to have service reconnected at the same location o transferred to another location within the Company's service territory.

Supplier of Last Resort: The Company or another entity that provides natural gas supply services to Customers that do not elect another supplier or choose to be served by the supplier of last resort, Customers that are refused service from another natural gas supplier, or Customers whose natural gas supplier fails to deliver the required gas supplies. Currently, the Company is the supplier of last resort for all Customers under the terms of this Tariff. Each Customer may only have one supplier of last resort with one exception: The Company shall be under no obligation and shall have no duty to serve as Supplier of Last Resort to any Rate DS, IS, LFD, or XD customers.

DEFINITIONS – GENERAL (Continued)

Tariff:	The rates, rules, and regulations set forth herein, as may be amended, modified or superseded from time to time. The Tariff is on file with the PUC and available on the Company's website.
Termination of Service:	The cessation of service, whether temporary or permanent, without the consent of Customer.
Unauthorized Use of Service:	Unreasonable interference or diversion of service, including meter tampering (any act which affects the proper registration of service through a meter), by-passing unmetered service that flows through a device connected between a service line and customer-owned facilities and unauthorized service restoral.
User Without Contract:	A natural person who takes or accepts gas service without the knowledge or approval of the Company, other than the Unauthorized Use of Service as defined above.

RULES AND REGULATIONS

1. THE GAS SERVICE TARIFF

1.1 Agreements. No agent or employee of the Company has authority to make any promise, agreement or representation not consistent with this Tariff.

1.2 Waiver of Rights. The failure by the Company to enforce any of the terms of this Tariff shall not be deemed a waiver of its right to enforce any of the terms of this Tariff.

1.3 Filing and Posting. A copy of this Tariff is on file with the PUC and is available on Company's website at https://www.ugi.com/tariffs **(C)**

1.4 Application of Rates: The rates named in this Tariff are based upon supply to one Customer through one meter at the same or contiguous property. Each service to a different location and/or of a different rate classification shall be billed as a separate Customer. Customers who take service at two or more locations on the same or contiguous property under the same rate schedule may, by request, have their use of gas combined for billing purposes; Customers electing to take advantage of this rule shall pay the cost of all additional service connections required unless, in the Company's sole judgment, the Company's investment in such connections is warranted by the revenue anticipated from the service to be supplied. The Company will provide Customers with a written explanation regarding its analysis of the arrangement's economics. Customers may not pool together for purposes of qualifying for a rate schedule.

1.5 Liability and Legal Remedies: The Customer will indemnify, defend and hold harmless the Company against all claims, demands, costs or expenses for loss, damage, or injury to person or property in any manner either directly or indirectly connected with or growing out of the supply or use of gas service by the Customer at or on the Customer's side of the point of delivery. Neither the Company nor the Customer will be liable to each other for any act or omission caused either directly or indirectly by strikes, labor troubles, accidents, litigation, federal, state or municipal laws or interference, or other causes not a result of each party's own negligence or intentional misconduct.

(C) Indicates Change

RULES AND REGULATIONS

2. CONTRACT FOR GAS SERVICE

2.1 Application for Service. Every Applicant for Gas Service must apply through the Company. Non-Residential Applicants may be required to sign a contract for service consistent with this Tariff.

2.2 Right to Reject. The Company may limit the amount and character of service it will supply. It may reject applications where service is not available, or which might affect service to existing Customers, or for other good and sufficient reasons at the Company's sole discretion.

2.3 Facilities and System Access. Each Customer with a Daily Firm Requirement ("DFR"), Maximum Daily Quantity ("MDQ"), or peak usage capability of 1,000 MCF per **(C)** day or greater shall provide the Company with the opportunity to review plans for the development of all gas facilities to the Customer's premises (including pipelines, mains, service lines and appurtenances), in order to assure safety and reliability, as follows:

(a) If the Customer proposes to acquire, construct or contract for the use of service of gas facilities ("Customer gas facilities"), the Customer will provide advance notice to the Company in writing, at least sixty (60) days in advance of the earlier of the effective date of a contract or commencement date for construction of Customer gas facilities.

(b) The Customer agrees to submit all design and construction specifications and drawings to the Company in advance of construction, which demonstrate compliance with all applicable requirements as to gas main and service construction and pipeline safety. If the Company determines that Customer gas facilities will encroach upon or interconnect with Company facilities, serve common gas utilization equipment with Company facilities or are in the immediate vicinity of Company facilities such that the safety of Company facilities may be adversely affected thereby, the Company shall have the right to approve the design and location of such Customer gas facilities. The Company shall act upon its right to approve such Customer gas facilities within ninety (90) days after the later of submission of all design and construction specifications and drawings to the Company, or Customer notification required under Rule 2.3(a), provided however, if the Company fails to respond in writing within the ninety (90) day time period the Customer may move forward with its project. Customer gas facilities will be deemed to encroach upon the Company's facilities when they would interfere with or prevent the Company from accessing, maintaining or operating its facilities or when the Customer gas facilities would be configured or located in a manner that would cause safety or reliability concerns with respect to the Company's facilities.

(c) If the full sixty (60) day notice required in Rule 2.3(a) is not given by the Customer then the Customer shall be deemed to have granted the Company full authority to discontinue service upon discovery of any safety or reliability concerns. The Company will provide 24 hours' notice unless there are reliability or safety issues that must be addressed immediately. The Company shall not be liable for any costs or damages caused by such service discontinuance.

(C) Indicates Change

RULES AND REGULATIONS

2. CONTRACT FOR GAS SERVICE - Continued

2.4 Selection of Rate Schedules. When the characteristics of usage or service conditions of an Applicant or Customer are such that more than one rate schedule is available, the Applicant or Customer shall select the schedule to be applied. Upon request, the Company will assist to a reasonable extent in selecting the most advantageous schedule. For Customers changing schedules, the Company will bill the Customer under the selected rate beginning with the date of the next scheduled meter reading following notification of the selected rate. When service under a Demand Charge rate commences prior to the installation of equipment for determining the Customer's demand, the Customer's demand for billing purposes will be estimated by the Company.

2.5 Use of Gas. The use of gas shall only be for the purpose and in the places identified by the customer in applying for service. The gas supplied by the Company shall not be resold without the express written permission of the Company. In the event that the Customer uses the gas in an improper or unsafe manner, in violation of this Tariff or any applicable federal, state or municipal laws or codes, the Company may immediately terminate service as described in the Service Discontinuation and Termination section of this Tariff. In the event that any loss is sustained as a result of Customer's improper or illegal use of the gas, the Customer agrees to indemnify, defend and hold harmless Company. The Company will not supply gas for any additional equipment, or any increased usage for any Customer, unless request was filed with the Company prior to the connection or increased usage. The Company reserves the right to limit or discontinue Gas Service or charge Customer upgrade installation charges in order to provide additional Gas Service. Customer is responsible for any loss of Gas Service to other Customers caused by failure to register.

2.6 Distribution System Bypass. Unless otherwise provided by contract, if any Customer or potential Customer of the Company bypasses the Company for all or a portion of their Natural Gas Service needs then the Company thereafter shall have no obligation to serve or maintain the gas supply or physical capacity necessary to serve the Bypass portion of such Customer load, provided, however, that the Company will continue to serve the un-bypassed portion of a bypassing Customer's load consistent with the terms of any existing service agreement and will negotiate new service agreements to continue service so-long as the anticipated revenues justify any costs of providing the service. In addition, to the extent that such Customer returns from a total bypass, the Company shall serve such Customer as a new Customer and shall have the right to charge a negotiated rate for continued, subsequent or standby service that, at a maximum, is established solely by competitive market conditions, which shall reflect the costs of the Customer's alternatives.

2.7 Conditions Under Which Service Will Be Rendered From Transmission or Gathering Lines. The Company does not undertake or hold itself out to serve Customers from its transmission or gathering lines. Applications for service therefore may, at the election of the Company, be accepted where the lines are being operated in a manner which will permit gas to be served to the Applicant without interference with its operations. Applicants, if accepted by the Company, must agree to comply with the Rules and Regulations of the Company and more particularly the following rules applicable to this type of service:

RULES AND REGULATIONS

2. CONTRACT FOR GAS SERVICE - Continued

(a) Applicants agrees that service is only offered with the understanding that the Company's line from which gas is to be supplied is not permanent and that service to the Applicant is subject to temporary or absolute change or discontinuance at the sole discretion of the Company, which may at any time remove, repair, or change the use or manner of operating said line.

(b) Applicants agrees that the Company may at any time cancel service upon thirty (30) days' written notice to the Applicant and Applicant agrees that upon receipt of such notice of cancellation to promptly discontinue service within the said thirty (30) day period, and such cancellation and termination of service shall not be construed as an abandonment of service to such Customer within the meaning of the Pennsylvania Public Utility Code.

(c) The Applicant agrees to accept the gas at the varying pressures at which the line is operated from time to time and Applicant understands that such pressure is not governed by regulators but it is high and low and the Applicant expressly assumes the duty of regulating the flow of the pressure of gas delivered to him and he assumes all risks from variation in pressure, defects in pipe, connections and appliances, from the escape and leakage of gas, from the sticking of valves and regulators and from the burning of gas on his premises and from like causes incident to the use of gas.

(d) The Company shall not be liable for any deficiency in the supply of gas caused by the use of compressing stations, breakage of lines, variations in pressure, discontinuance of service or any other causes.

(e) The Company shall not be liable for any damage arising out of this agreement or the service supplied thereto.

(f) Service shall be at the sole risk of the Customer.

2.8 Government Identification to Establish Service. The Company will accept any current form of government-issued identification, including identification issued by a foreign government, to establish service. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

3. GUARANTEE OF PAYMENT

3.1 Deposits for Non-Residential Accounts. A cash deposit may be required from a Non-Residential Applicant to secure payment of bills for regulated distribution service. In addition, the Company may require a deposit, letter of credit or other adequate assurance of payment, or any combination thereof, from a Non-Residential Customer if the Non-Residential Customer has been delinquent in payment of any bill in the preceding twelve (12) months or the Company otherwise has reasonable grounds to require security for payment of bills. The deposit shall not be more than the bill for regulated distribution service for the estimated usage for one average monthly billing period plus that for the highest billing period within the most recent twelve (12) months with a minimum fifty dollars ($50.00) deposit.

3.2 Additional Security from Large Volume Customers.

(a) Whether or not the Company could otherwise require security for payment, the Company may require a deposit, letter of credit, other adequate assurance of payment, or any combination thereof, to the extent the Customer seeks any combination of delivery or retail service for volumes in excess of 3,000 MCF per month. Such security may be established for an amount as determined by the Company.

(b) In addition, the Company may take one or more of the following actions:

(1) With the agreement of the Customer, reduce the meter reading and billing period to less than one month, require payment in no less than three calendar days from billing.

(2) Require payment by certified check or wire transfer; and

(3) Impose other procedures reasonably designed to reduce potential exposure to credit risk.

(c) The Company may, in its discretion, specify the manner in which security and payments shall be credited and applied to past due or current bills or to replenish security.

3.3 Deposits for Residential Accounts. The Company may require a cash deposit from a Residential Applicant or Residential Customer to secure payment of bills for regulated distribution service based upon the following:

(a) A Residential Applicant or Residential Customer whose service was terminated for any of the following reasons:

(1) Nonpayment of an undisputed delinquent account.

(2) Failure to complete payment of a deposit, providing a guarantee or establish credit.

(3) Failure to permit access to meters, service connections or other property of Company for the purposes of replacement, maintenance, repair, or meter reading.

(4) Unauthorized Use of Service on or about the affected dwelling.

(5) Failure to comply with the material terms of a payment arrangement.

(6) Fraud or material misrepresentation of identity for the purposes of obtaining utility service.

(7) Tampering with meters, including, but not limited to, bypassing a meter or removal of an automatic meter reading device or other Company equipment.

RULES AND REGULATIONS

3. GUARANTEE OF PAYMENT - Continued

(8) Violating tariff provisions on file with the PUC so as to endanger the safety of a person or the integrity of the Company's delivery system.

(b) Any Residential Applicant who is unable to establish creditworthiness to the satisfaction of Company through the use of a generally accepted credit scoring methodology which employs standards for using the methodology that falls within the range of general industry practice and specifically assesses the risk of utility bill payment.

(c) A Residential Customer who fails to comply with the material terms or condition of a settlement or payment arrangement.

(d) A Residential Customer who has been delinquent in the payment of two (2) consecutive bills, or three (3) or more bills within the preceding twelve (12) months.

(e) The Company has established separate credit procedures and standards for Residential Applicants and Residential Customers who are victims with a protection from abuse order or for whom there is a court order from a court of competent jurisdiction in this Commonwealth, which provides clear evidence of domestic violence against the Residential Applicant or Residential Customer. These procedures shall be publicly posted on the Company's website and maintained on file in each of the business offices of the Company and made available, upon request, for inspection by members of the public.

3.4. Amount of Deposit for Residential Accounts. For Residential Applicants, the amount of the cash deposit shall not be more than 1/6 of a Residential Applicant's estimated annual bill, with such estimated annual bill determined at the time the deposit is required. In lieu of a cash deposit from a Residential Applicant, the Company may accept a written third-party guaranty on behalf of the Residential Applicant, provided that the guarantor establishes credit with the Company under Section 3.3 and the terms of the written guaranty are approved in writing by the Company, with such approval not to be unreasonably withheld. For Residential Customers, the amount of the cash deposit shall not be more than the estimated charges for service based on the Residential Customer's prior consumption for the period equal to one average billing period plus one average month, not to exceed two (2) months. Deposit amounts for Residential Applicants and Residential Customers may include Natural Gas Supplier charges where such Supplier is a participant in the Company's Purchase of Receivables Program.

3.5 Payment Period for Deposits.

(a) Any Non-Residential Applicant seeking to establish service at a new or different service location or seeking to reconnect service at the same service location previously terminated or discontinued, shall pay the required deposit in full prior to the provision of service.

(b) Any Residential Applicant or Residential Customer seeking to establish service at a new or different location or seeking to reconnect service at the same service location previously terminated or discontinued shall pay the required deposit in full within 90 days. A Residential Applicant or Residential Customer may elect to pay the required deposit in three installments as follows: 50% of the required deposit billed upon the establishment or reconnection of service, within

RULES AND REGULATIONS

3. GUARANTEE OF PAYMENT - Continued

25% of the required deposit to be billed by the Company 30 days after the establishment or reconnection of service and the remaining 25% billed 60 days after the establishment or reconnection of service. Nothing shall preclude the Residential Applicant or Residential Customer from electing to pay the deposit in full before or on the due date.

(c) Any Customer receiving service from the Company shall pay the required deposit in full on or before the due date. A Residential Customer may elect to pay the required deposit in three installments as follows: 50% of the required deposit billed upon the determination by the Company under Section 3.3(c) or (d) above that the deposit is required, with 25% to be billed by the Company 30 days after the determination and the remaining 25% billed 60 days after the determination.

3.6 Deposit Hold Period for Residential Accounts. A timely payment history is established for a Residential Customer when the Residential Customer has paid in full and on time for twelve (12) consecutive months. Company may hold a deposit on a Residential Customer's account until a timely payment history is established (the "Deposit Hold Period"). At the end of the Deposit Hold Period Company shall credit the deposit, plus accrued interest, to the Residential Customer's account. Deposits credited after the end of the Deposit Hold Period shall first be applied to any past due amounts. If service is terminated or discontinued before the end of the Deposit Hold Period, Company shall deduct any outstanding balance from the deposit and return any positive balance to the Residential Customer within sixty (60) days.

3.7 Refund Provision Non-Residential Customers. Deposits secured from Non-Residential Customers will be refunded when the Customer discontinues service and has no unpaid bills or at Company's sole discretion.

3.8 Adjustments. The amount of the deposit may be adjusted when there is a change in consumption that will significantly change the amount of the deposit as computed in Rule 3.1 and 3.4.

3.9 Interest on Deposits. Deposits from all Customers shall bear interest computed at the simple annual interest rate determined by the Secretary of Revenue for interest on underpayment of tax under Section 806 of the Act of April 19, 1929 (P.L. 343, No. 176), known as The Fiscal Code which will be credited annually to the Customer's deposit or account. The interest rate in effect when the deposit is required to be paid shall remain in effect until the later of the date the deposit is refunded or credited or December 31 of each year. On January 1 of each year, the new interest rate for that year will apply to the deposit. Deposits shall cease to bear interest upon termination or discontinuance of the service covered by the deposit.

3.10 Prior Debts.

(a) Non-Residential Accounts. As a condition of furnishing, transferring or reconnecting service to a Non-Residential Applicant or Non-Residential Customer, the Company may require payment of any outstanding balance on any account for which the Non-Residential Applicant or Non-Residential Customer is legally responsible.

RULES AND REGULATIONS

3. GUARANTEE OF PAYMENT - Continued

(b) Residential Accounts. As a condition of furnishing, transferring or reconnecting service to a Residential Applicant or Residential Customer, the Company may require payment of any outstanding balance which accrued within the past four years on any account for which the Residential Applicant or Residential Customer is legally responsible. The foregoing four-year limitation shall not apply if the outstanding balance includes past due amounts that the Company was not aware of due to Unauthorized Use of Service, fraud or theft; in which case, the Company may require payment of all such past due amounts without regard to the four-year limitation. The Company may render a make-up bill to a Residential Customer for previously unbilled service which accrued within the past four (4) years resulting from billing error, meter failure, leakage that could not reasonably have been detected or loss of service. If the make-up bill exceeds the otherwise normal estimated bill for the billing period during which the make-up bill is issued by at least 50% or at least $50, whichever is greater, the Company shall, at the option of the Customer, amortize the bill at least as long as: (1) the period during which the excess amount accrued; or (2) necessary so that the quantity of service billed in any one billing period is not greater than the normal estimated quantity for that period plus 50%.

(c) The Company may utilize all means of determining an Applicant's or Customer's liability for any outstanding balances, including, but not limited to, the following: (1) use of Company records that contain confidential information previously provided to the Company, (2) information contained on a valid mortgage, lease or deed, (3) other information contained in the Company's records that indicate that the Applicant was an adult Occupant during the time the balances accrued, (4) use of commercially available consumer credit reporting service, (5) use of commercially available skip tracing software that contains records of names and addresses, and (6) use of information contained in credit reporting data utilized by the Company.

RULES AND REGULATIONS

4. SERVICE - SUPPLY FACILITIES

4.1 Facilities Ownership. Unless otherwise mutually agreed in writing that particular facilities are owned by the Customer, and except as provided in Sections 4.3 below, the Company will own and maintain any facilities required for the supply of Gas Service up to the outlet side of its metering equipment, including but not limited to, any mains, service lines, meters, regulators, connections or other equipment. All such equipment shall remain the exclusive property of the Company.

4.2 Facilities Location. The location of the Company's facilities shall in all cases be determined by the Company. The Customer shall provide, without charge, a suitable place for the meters, regulators or other equipment of the Company. The Customer is responsible to provide the connection point to the Customer's fuel line at a location adjacent to the terminus of Company facilities and where the connections are not concealed. Such service line, meter and connection locations shall be accessible to the Company's employees for the safe installation, operation, inspection and maintenance of the facilities and shall be, at all times, readily accessible, and if inside, free of excessive temperature variations, with ample passageway, and whether inside or outside, free of obstacles, and unsafe and hazardous conditions and, if not accessible, the Company has ability to charge the Customer to move facilities to a location acceptable to the Company. The owner of a premises receiving or capable of receiving natural gas service from Company shall be deemed to consent to the location of Company facilities on the premises.

4.3 Customer Convenience Valve. Company may, in its sole discretion, install a valve on the outlet side of its metering facilities which shall be owned by the owner of the premises ("Customer Convenience Valve"), and the owner of the premises may, under such conditions as may reasonably be established by Company, operate the Customer Convenience Valve after it is connected to the premise's fuel lines.

4.4 Fuel Line Designation. When two or more meters are installed on one premises, such as an office building or an apartment house, they shall be grouped at one common place accessible for reading and testing. In such an installation, each fuel line pipe shall bear a tag showing the apartment or area served, supplied by and maintained by the Customer. In cases where it is not possible to group meters at one accessible place, they shall be located as directed by the Company.

4.5 Facilities Relocation.

(a) Changes in location of mains, service lines, meters, regulators, connections or other equipment for the accommodation of the Customer shall be done by the Company, unless otherwise mutually agreed, at the expense of the Customer. This provision includes the relocation of facilities by the Company where obstructions limit Company access to its facilities.

RULES AND REGULATIONS

4. SERVICE - SUPPLY FACILITIES - Continued

(b) Ancillary Fuel Line Work. The Company may, in its sole discretion, when relocating its facilities, make reasonable modifications or additions to the fuel lines of a premises receiving or capable of receiving gas service for the limited purpose of connecting such fuel lines to Company's relocated facilities, and the owner of the premises shall thereafter own and have responsibility for such modified fuel lines. If Company relocates its facilities solely for its convenience or to comply with regulatory requirements it shall pay the costs of relocating or extending the fuel line; otherwise, unless otherwise agreed by Company, the person requesting or requiring the relocation shall be responsible for payment.

4.6 Right of Removal. The Company shall have the right to remove its facilities from the premises of the Customer or, where appropriate, abandon facilities in place, at any time after the termination of service, whatever may have been the reason for such termination.

4.7 Non-Standard Service. The Customer may be required to pay the cost of any special installation necessary to meet Customer's requirements for Gas Service at non-standard conditions.

4.8 Protection of Company Facilities. The Company may condition its provision or continued provision of Gas Service to a Customer on: (a) installation by Customer of equipment, such as check valves or regulation equipment, downstream from Company-owned facilities reasonably necessary to protect Company facilities or service levels, or (b) the installation by Company of equipment, such as valves designed to limit the flow of gas to levels Customer is permitted to receive, reasonable necessary to protect Company facilities or service levels. Unless otherwise agreed to by the Company, the Customer shall be responsible for the costs of such facilities required under this Section 4.8.

4.9 Excess Flow Valves. The Customer may be required to pay the cost of installation of an excess flow valve, upon a Customer's request for an excess flow valve, for a service location that had not been scheduled by the Company for a service line replacement or a new service line prior to the Customer's request for the installation of an excess flow valve.

RULES AND REGULATIONS

5. EXTENSION REGULATION

5.1 Obligation to Extend or Expand. **(C)**

(a) Under the rules set forth below and under normal conditions of construction and installation, upon written application, the Company will extend or expand its facilities within its service territory, provided that (a) the requested extension or expansion will not adversely affect the availability or deliverability of gas supply to existing customers and (b) the Company's investment in facilities is warranted by the Annual Base Revenue to be derived from the extension. The costs of extending or expanding facilities beyond the Company’s Allowable Investment Amount shall be paid by the Extension Applicant as a contribution. Extension contributions may be excused, in whole or in part, in accordance with Rule 5.1(b). Upon request, the Company will provide Customers with a written explanation and reasonable detail of the cost-benefit analysis used in clause (b) above including estimated project costs, the Company’s maximum allowable investment, and the Company’s Annual Base Revenues. In addition, the Company will provide the Customer with a written timetable for the anticipated construction of the upgrade and written notice of completion.

(b) No contribution amount shall be required for an extension of facilities if all of the following conditions, as determined by the Company, are met:

(1) Service location is directly accessible from an existing or proposed (non-high pressure) Company main that would be extended up to one hundred fifty (150) feet;

(2) Service length is one hundred fifty (150) feet or less;

(3) Customer will utilize gas service as their primary heating source and be served under Rates R, RT, N or NT;

(4) Construction does not cross third party non-public property, private right-of-way or complex obstruction (stream, culvert, excessive hillside, etc.)and does not present any abnormal or unusual construction conditions or require unusual permitting requirements.

(5) Extensions not meeting all of the above conditions (1) through (4) shall have the Company’s Allowable Investment Amount determined upon incremental investment amounts required beyond those permitted by the construction conditions stated above.

(6) These modified extension provisions shall not be applied to customers along existing GET Gas designated mains nor be permitted as a method to extend existing GET Gas mains where GET Gas surcharge payments remain in effect. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

5. EXTENSION REGULATION - Continued

(C)

5.2 General

(a) Annual Base Revenue. As used in this Section 5, the Annual Base Revenue is the anticipated annual base rate revenue from the extension or expansion, as determined by the Company, less the cost of fuel included in base rates. Where gas is used as a supplemental source of fuel for peak heating purposes, anticipated base revenues from such use shall be excluded from Annual Base Revenue.

(b) Allowable Investment Amount. The Company's Allowable Investment Amount shall be the Annual Base Revenue divided by a predetermined rate of return.

(c) Estimates and non-standard costs. Cost estimates used by the Company may be based on construction and installation conditions anticipated for the extension, including, but not limited to, the cost of installation and construction: non-street surface restoration, such as replacement or repair of sidewalks, driveways, landscaping or sod; street opening and restoration terms and fees; and any other local government fees required for the installation. The Company may determine cost estimates based on average experienced unit costs.

(d) Surface Restoration. The Company will restore the street surface in accordance with applicable local government regulations and provide rough backfilling of the installation trench from the curb to the meter. The Extension Applicant will be required to perform or pay the Company's cost of non-street surface restoration.

(e) Standard conditions of construction in a residential development, commercial park and industrial park include trenching provided by the developer.

5.3 Residential and Small Commercial Gas Service. For Gas Service to individually metered, single dwelling units, the Company will install required service facilities, including, as applicable, a meter, regulator, service-supply pipe and supply-main, provided the costs in excess of the Allowable Investment Amount shall be paid by the Extension Applicant.

5.4 Commercial and Industrial Gas Service (including apartment buildings and multi-unit housing)

(C) Indicates Change

RULES AND REGULATIONS

5. EXTENSION REGULATION –Continued

(a) For commercial and industrial Gas Service costing up to $10,000 from which the Company in its sole judgment anticipates long-term, continuous usage at projected volumes, the Company will install, required service facilities, including, as applicable, a meter, regulator, service-supply pipe and supply-main, provided that the costs in excess of the Allowable Investment amount shall be paid by the Extension Applicant.

(b) The Company may condition its agreement to extend or expand its facilities upon satisfactory long-term and short-term usage commitments and any other terms and conditions of service as are mutually agreeable to the Company and the Extension Applicant. A contribution may be required up to the amount of the Company's total investment in the extension.

5.5 Contributions and Refunds

Except as otherwise described herein, when a contribution is required by the Company, the terms and conditions of refunds and or future payments that may be required of the Extension Applicant will be governed by the service agreement between the Company and the Extension Applicant. The terms of any refund due to the Extension Applicant shall be defined in the service agreement and shall be limited to a maximum refund of the amount of the original contribution (no interest) and shall be limited to the five-year period immediately following completion of this extension.

5.6 Taxes on Contributions for Construction & Customer Advances.

Any contribution, advance or other like amounts received from the Extension Applicant which shall constitute taxable income as defined by the Internal Revenue Service, will have the income taxes recorded in a deferred account for inclusion in rate base in a future rate case proceeding. Such income taxes associated with a contribution or advance will not be included as part of the contribution or advance charged to the Extension Applicant.

5.7 Daily Metering.

The Company reserves the right as a condition of service under non-residential Tariff rate schedules to install, at the Customer’s expense, remote read devices for the purposes of monitoring and/or billing Customer volumes, at every single meter or multimeter location served under such rate schedules. The Customer shall at all times, at the discretion of the Company, maintain, at its expense, a suitable telecommunication and electric lines to the device which will allow the Company unlimited remote access to the remote read device. If the Customer fails to maintain a suitable telecommunication connection and electric lines to the device, the Company reserves the right to install and maintain telecommunication and, as applicable, electric lines to serve the remote read device and charge the Customer accordingly.

Standard access to daily usage information shall be provided by the Company to the Customer, or Customer's agent, at no additional charge in a form and manner as specified by the Company. Custom reports, access to historical data beyond one month and/or multiple user access may be provided on an as-available basis by the Company for an additional fee.

RULES AND REGULATIONS

5. EXTENSION REGULATION –Continued

5.8 – Pilot Growth Extension Tariff ("GET Gas") Rider

5.8.1 Availability and Purpose. In lieu of the extension rules set forth in Rules 5.1-5.7, the following GET Gas tariff rules may apply. These GET Gas tariff rules will be applied to eligible customers as part of a ten-year pilot program ending November 4, 2024, unless suspended or terminated earlier pursuant to Rule 5.8.4 or Commission order. **(C)**

The GET Gas pilot program is designed to test new tariff rules to facilitate the extension of natural gas service to the general class of residential homes and non-residential buildings, not currently receiving natural gas distribution service, which:

(a) are in an Unserved Area (a small group or pocket of customers in a neighborhood location in close proximity to an existing main) or an Underserved Area (a significant portion of a general community or town location or municipality where the Company has identified significant potential for natural gas service demand and existing natural gas facilities are located within a reasonable distance);

(b) are reasonably expected over time to reach target customer saturation levels which will produce revenues, including GET Gas Rider charges, that will support required investments and not unduly burden existing customers; and

(c) otherwise meet the applicable requirement conditions of the GET Gas program.

Under the GET Gas Program, the Company may designate Company facilities extended to an applicant or applicants, as "GET Gas Facilities" and will assess an incremental GET Gas Rider charge amount related to the recovery of GET Gas amounts, as determined on a general class basis, from the class of customers who may connect to these GET Gas facilities during an initial twelve-year period.

5.8.2 Designation. Subject to the funding limitations set forth in Rule 5.8.5, Company may apply the GET Gas program tariff rules to service extension requests which exceed a cost of $15,000 from an Underserved Area or an Unserved Area reasonably designated by Company, where:

(a) there is, in the Company's sole discretion, a reasonable prospect that (i) fifty percent (50%) or more of existing residential homes along the GET Gas project facility extension route or area will convert their primary heating source to natural gas and directly connect to the GET Gas facilities within 12 years ("GET Gas Customers"); and

(b) the estimated total investment for each GET Gas Customer to be connected does not exceed $10,000 (inclusive of any projected commercial customers).

(C) Indicates Change

RULES AND REGULATIONS

5. EXTENSION REGULATION – Continued

5.8.3 Get Gas Rider. Customers receiving service by connections to Company facilities designated by Company as GET Gas pursuant to Rule 5.8.2 within an initial twelve years following installation, and which receive service under Rate Schedules R, RT, N or NT, shall be required to pay GET Gas Rider charges listed below as part of distribution service for a period of ten years, beginning from the first date the meter is set. GET Gas Rider charges will not be considered Basic Natural Gas Service Charges during the Pilot Period. Non-residential customers subject to the GET Gas Rider charge, as determined by the Company in its sole discretion, may not avoid the charge by electing an alternate rate schedule. In lieu of paying the monthly GET Gas Rider charges, Customers may elect at any time to pay a lump sum upfront payment equal to the remaining principal portion of the GET Gas surcharge. The lump sum upfront payment made by Non-Residential Customers shall be based on anticipated annual customer usage, as determined by the Company in its sole discretion.

GET Gas Rider Rate effective October 11, 2019: **(C)**
<u>Rate Schedules R and RT:</u> $29.00 monthly charge
<u>Rate Schedules N and NT:</u> $20.03 monthly charge plus $1.87 per Mcf for all usage.

However, the GET Gas Rider Rate for customers accepted by the Company before October 29, 2019 at the following rates shall remain unchanged: **(C)**
<u>Rate Schedules R and RT:</u> $21.75 monthly charge
<u>Rate Schedules N and NT:</u> $13.08 monthly charge plus $1.07 per Mcf for all usage.

5.8.4 Limitations. If the differential between Average Residential Annual Natural Gas Costs per MMBtu and Average Residential Annual Heating Oil Costs per MMBtu drops and remains below $10.00 per MMBtu for two consecutive quarters (with such calculations performed for the quarters ending March, June, September and December), the Company will evaluate whether to continue to invest in new GET Gas facilities based on market specifics at that time, except that the Company will continue to invest in (a) service connections to GET Gas Facilities that are already installed or (b) GET Gas projects that are currently underway or have been committed to by the Company.

For purpose of the above limitation:

Average Residential Annual Heating Oil Costs per MMBtu = (twelve-month future period average of NYMEX "HO" Contract) plus (delivery variable); and

Average Residential Annual Natural Gas Costs per MMBtu = (All applicable Rate R volumetric rates and riders) plus (All applicable Rate R monthly charges, excluding the monthly GET Gas Rider, divided by the current average annual residential volumes)

Company also reserves the right to temporarily close or to terminate the program at its discretion for good cause.

5.8.5 Funding. Funding for this pilot GET Gas tariff program shall be limited to an annual average level not to exceed $15 million for the duration of the ten-year pilot term ending November 4, 2024, absent Commission approval to exceed this amount. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

6. CUSTOMER'S RESPONSIBILITY FOR COMPANY'S PROPERTY

6.1 Maintenance of Company Equipment. Company shall own and maintain Company facilities through the Point of Delivery but shall not be required to install or maintain any pipes, appurtenances or equipment beyond that point, unless specifically provided for in writing.

6.2 Access to Premises. The authorized agents and/or employees of the Company shall have free access at all reasonable times to the premises of the Customer for the purpose of reading meters and disconnecting service, for installing, testing, inspecting, repairing, adjusting or removing any Company property. Authorized agents of the Company shall have immediate access to any premises whenever they believe an unsafe or hazardous condition exists.

6.3 Protection by Customer. The Customer shall be responsible at Customers expense for the protection of the Company's property on his premises and shall not permit any unauthorized person to do any work on such property. In the event of damage or destruction of Company's facilities on Customer's property, the Customer shall pay the costs of repairs, replacement, and/or related costs.

6.4 Tampering and Theft of Service

(a) Tampering. In the event the Company's meter or other equipment is tampered or interfered with, the Customer shall pay the amount which the Company may estimate is due for service used but not registered on the Company's meter, and for any repairs or replacements required, as well as for costs of inspections, investigations, and protective installations. Such tampering will be grounds for immediate termination of service without notice as specified in the Termination of Service and Disconnection section of this Tariff.

(b) Theft of service occurs when a person obtains gas, by deception, tampering with Company facilities or other means designed to avoid payment for gas provided by Company. Persons who obtain gas through such means may be subject to civil suit and/or criminal prosecution. If theft of service occurs, the Company may immediately terminate service to the location receiving the unauthorized service.

(1) Before service will be restored to the affected location, the Customer must pay (1) for all gas consumed during the period of unauthorized usage, (2) any delinquent gas service balance, including late fees, (3) reconnection fees, (4) a security deposit, and (5) the costs associated with damage to the Company's meters or equipment.

(2) In the event that the theft of service is referred for criminal prosecution, the Company may deny gas service until the case is concluded and any restitution ordered is paid.

RULES AND REGULATIONS

6. CUSTOMER'S RESPONSIBILITY FOR COMPANY'S PROPERTY - Continued

6.5 Continuity of Service. The Company will endeavor at all times to provide reasonable and continuous service to the Customer. The sole liability of the Company for failure to furnish a sufficient supply of gas or for failure to transport Customer's gas shall be limited to an amount equal to the Customer's proportionate monthly Customer charge for the period of time during which a Gas Service failure occurs during which a supply failure occurs. In no event shall the Company be liable for direct, extraordinary, special, or consequential damages arising in any manner whatsoever as a result of supply failure.

6.6 Notification of Construction. It will be the Customer's responsibility to notify the Company and any applicable federal, state or local agencies (i.e., Pennsylvania's One Call System, Inc.) prior to digging or before any construction occurs on the Customer's property that may impair or prevent access by the Company to its service line or any other equipment located on the Customer's property.

6.7 Gas Leaks. It is the responsibility of the Customer to exercise all due care in the detection of defects, leaks, or other dangerous developments incident to the handling of gas. The Customer agrees to immediately inform Company of any gas leaks and in the event of any resulting loss thereof, failure to do so may result in an evidentiary finding of contributory or comparative negligence on the part of the Customer.

6.8 Suspension of Service. For the purpose of making repairs to the mains or other parts of its system, the Company may suspend service for such periods as may in its sole judgment be necessary.

6.9 Company's Right to Inspect. Piping, fixtures and appliances on Customer's premises must be installed at the expense of the Customer or owner of the property. The Company shall have the right, but shall not be obligated, to examine the Customer's installation and appliances at the time service is first supplied or at any later time. If at any time the installation or appliance is found defective or unsafe, service may be refused or discontinued until Customer has the condition corrected. The Company's inspection, or failure to inspect or reject, shall not render the Company liable or responsible for any loss or damage, resulting from defects or inadequacies in the installation, piping, or appliances, or from violation of the Company rules, or from accidents which may occur upon the premises of the Customer.

RULES AND REGULATIONS

7. METER READING

7.1 Definition of a Cubic Foot. A cubic foot shall be the amount of gas that occupies a volume of one cubic foot at an absolute pressure of 14.73 pounds per square inch and a temperature of 60° Fahrenheit. To determine the volume at conditions other than standard pressures of gas delivered, factors such as those for pressure, temperature, specific gravity, caloric value, and deviation from the laws of ideal gases may be applied.

7.2 Method of Measurement. Gas usage shall be measured by Company owned meters.

7.3 Pressure Correction. At the Customer's request, the Company may allow delivery at an elevated pressure that exceeds the standard pressure of seven-inches water column (7" W.C.). In situations where delivery pressure is two pounds per square inch or greater, the Company may choose to use a fixed factor to account for the higher energy content of the higher pressure gas, whereby the metered volume is multiplied by the pressure factor to determine the correct energy consumed. In cases where the Company agrees to provide delivery service at such an elevated pressure without a fixed factor, a supplemental device will be installed at the Customer's expense to correct the meter reading for pressure and temperature, the cost of which shall be estimated, inclusive of overhead amounts, however, the Company and Customer may negotiate cost responsibility for installation of pressure mechanisms upon mutual agreement. The Company may reject a Customer's request for non-standard service at elevated pressure for system operational reasons, where the Customer does not agree to pay the cost for non-standard service, where applicable, under Rules 4.7, 5.3 or 5.4(a), or for any other reason that the Company may determine at its sole discretion.

7.4 Heating Value Correction. Where direct sources of natural gas, renewable natural gas, synthetic natural gas or other natural gas substituted or blended supplies delivered into the Company's distribution system may vary in heating value content (BTUs per cubic foot), the Company may apply a heating value correction factor to metered usage to adjust for heating values that differ from the Company's applicable annual system wide average value (determined excluding direct sources where heating correction is being applied). This heating correction factor will apply when heating value differences exceed a 2% difference at the customer location. This factor may be adjusted monthly. This tariff provision only applies to decreased heating value content gas entering the Company's system. **(C)**

7.5 Meter Tests. The Company may, from time to time and at its expense, inspect and test its meters. The Customer has the right to have the Company test the meter in service at the Customer's premises, and, upon written request, the Company will, as applicable, remove, seal and test the meter in accordance with the Gas Service Regulations of the Pennsylvania Public Utility Commission ("Regulations") or secure an in-person meter reading to confirm the accuracy of an automatic meter reading device when a customer disconnects service or a new service request is received. Together with the written request for a meter test, the Customer shall deposit with the Company the meter testing fee specified by the Regulations. If the meter tests within the accuracy limits specified by the Regulations, the meter shall be deemed for all purposes to have registered accurately. In such case, no billing adjustment shall be made, and the meter testing fee deposited with the Company shall be credited to the Company. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

7. METER READING (Continued)

7.6 Adjustment for Meter Error. If any meter becomes defective or fails to test accurately, an adjustment will be made to the Customer's bill in accordance with the Regulations and the meter testing fee deposited with the Company shall be refunded to the Customer. **(C)**

7.7 Meter Test Fees. The Company may assess the following service charges: **(C)**

Meter Size:	0 - 500 CFH	$10.00
	501 - 1500 CFH	$20.00
	Over - 1500 CFH	$30.00

(C) Indicates Change

RULES AND REGULATIONS

8. BILLING AND PAYMENT

8.1 Billing Month. Bills are rendered monthly. The Company normally reads meters monthly. However, at its option, the Company may read meters once every two months. In instances where meters are read every two months, the first month's bill will be based on an estimate of the consumption for the first month of the bi-monthly period. Bills are due when rendered and shall be considered as received by the Customer when left at, or mailed to, the address where service is rendered, or such other address as designated by the Customer. A billing month is the period upon which a Customer's monthly charges and consumption are computed and for which a bill is rendered. For Residential Customers, the billing month is a period of not less than 26 or greater than 35 days. An initial bill for a new Residential Customer may be less than 26 days or greater than 35 days; provided however, if an initial bill exceeds 60 days the Residential Customer shall be given the opportunity to amortize the amount over a period equal to the period covered by the initial bill without penalty. A final bill due to the discontinuance may be less than 26 days or greater than 35 days but may never exceed 42 days. In cases involving termination, a final bill may be less than 26 days. In addition, bills for less than 26 days or more than 35 days shall be permitted if they result from rebilling initiated by the Company or Customer dispute to correct a billing problem. Bills for less than 26 days or more than 35 days shall be permitted if they result from a meter reading route change initiated by the Company.

8.2 Estimated Consumption. When the Company is unable to obtain an actual meter reading because of inability to gain access to the meter, or because of extreme weather conditions, emergencies, equipment failures, work stoppages or any other circumstances, the Company will render appropriately marked estimated bills.

8.3 Application of a Rate Schedule. The Company will compute bills under the rate schedule selected by and for which the customer qualifies. In the event the customer does not select a Rate Schedule, the Company may discontinue service or place the Customer on a rate schedule for which the Customer qualifies.

8.4 Budget Billing. Residential Heating Customers may elect an optional billing procedure which averages the estimated Company regulated service costs over a revolving twelve (12) month Budget Billing plan. These Customers will be billed for the use of gas during the next eleven (11) months beginning with whatever month that they select. Company will review the Budget Billing amount on the fourth (4th), seventh (7th) and tenth (10th) months annually adjusting upward or downward the Budget Billing amount based on actual charges to date and projected charges to the end of the twelve (12) month Budget Billing. The twelfth bill will be for usage for the month, with an adjustment for the difference between payments made and actual charges for gas service for the prior eleven (11) months, inclusive. At the conclusion of the budget billing year, any resulting reconciliation amount exceeding $100 may be amortized over a twelve (12) month period upon Residential Heating Customer request.

The optional twelve (12) month Budget Billing plan, as described above, is available to Commercial and Industrial Heating Customers provided that at least seventy-five (75) percent of the Customer's total gas consumption is for space heating. If a Customer has an unpaid balance equal to the amount of two (2) Budget Bill Plan bills, billing under this plan may be terminated by the Company.

8.5 Payment Due Date. The due date for payment of Residential Customers' bills shall not be less than twenty (20) days from the date of mailing and fifteen (15) days for a Non-Residential Customer's bill with the exception that bills to the Commonwealth of Pennsylvania, the Government of the United States, or any of their

RULES AND REGULATIONS

8. BILLING AND PAYMENT - Continued

agencies, and elementary and secondary schools shall be due fifteen (15) days after the date of mailing unless otherwise extended to thirty (30) days by mutual agreement. For all billings, if the due date for payment should fall on a Saturday, Sunday, bank holiday or any other day when the offices of the Company where payments are regularly received are not open to the general public, the due date shall be extended to the next business day. Failure to receive a bill will not release the Customer from payment obligations.

8.6 Date of Payment for Residential Customers. For payments by mail, the effective date of payment shall be the date of the postmark. For payments by mail which are not postmarked or postmarked clearly, the effective date of payment shall be one day prior to receipt. For payments made through electronic transmission, the effective date of payment shall be the date of actual receipt of payment by the Company. For payments made at a branch office or an Authorized Payment Agent, the effective date of payment shall be the date of actual receipt of payment at that location.

8.7 Late Payment Charge. Late Payment Charges will be applied as follows to the balance due which is not paid by the due date including amounts billed by the Company on behalf of natural gas suppliers other than the Company. Residential Customers will be charged a late payment charge of one and one half (1 1/2) percent per month on the balance due not paid by the due date; provided that, for a Residential Customer’s payment by mail, the Company shall not impose a late payment charge unless payment is received more than 5 days after the due date. Non-Residential Customers will be charged five (5) percent per month on the balance due not paid by the due date and an additional one and one half (1 1/2) percent per month for each month thereafter.

8.8 Return Check Service Charge. The Company may impose a service charge of the greater of thirty-five dollars ($35.00) or maximum allowed by Commonwealth of Pennsylvania for each check received in payment of bill(s) which is dishonored and returned by the bank upon which it is drawn. The Company may require a Customer to tender non-electronic payment after the Customer tenders two (2) consecutive electronic payments that are subsequently dishonored, revoked, canceled or otherwise not authorized.

8.9 Due Date Extension Program. Residential Customers meeting the qualification requirements of the Due Date Extension Program shall, upon written application, have the due date for payment of bills for service to their personal residence extended. To qualify, Applicants must submit proof that their sole source of support, and that of others in their household, is derived from a permanent fixed income plan, issuing monthly checks. Under the program, the due date for payment on a bill normally falling due between the sixth day of the month and the twentieth day of the month shall be extended to the first working day after the twentieth of the month. The due date for payment on a bill normally falling due between the twenty-first day of the month and the fifth day of the following month, shall be extended to the first working day after the fifth day of the latter month.

8.10 Application of Payments for Rates RT and NT. Where Company renders a bill for natural gas supply service on behalf of a Choice Supplier and a partial payment received, the partial payment shall first be applied to pre-retail access Company balances and then to post-retail access balances. In the event a customer has a pre-retail access Company balance, partial payment shall be applied in the following order of priority:

RULES AND REGULATIONS

8. BILLING AND PAYMENT - Continued

1. First to outstanding pre-retail access Company balances, or the installation amount on a payment arrangement with the Company on this balance; then to
2. Current regulated Company charges; then to
3. Choice Supplier supply charges; then to
4. Non-Basic Service charges; then to
5. Hardship Energy Fund contributions.

In the event a Customer develops a post-retail access balance, partial payment shall first be applied to the pre-retail access Company balances in the order of priority specified above. Thereafter, partial payment shall be Company applied in the following order of priority:

1. First to outstanding post-retail access Company Balances, or the installat amount on a payment arrangement with the Company on this balance; then to
2. Current regulated Company charges; then to
3. Choice Supplier service charges; then to
4. Non-Basic service charges; then to
5. Hardship Energy Fund contributions.

Where Company renders a budget bill on behalf of a Choice Supplier for Natural Gas Supply service, partial payments shall be applied on a pro rata basis after outstanding pre-retail access balances and post retail access balances have been paid in accordance with the orders of priority specified above. For purposes of this Section, pre-retail access balances means outstanding account balances incurred prior to Customer transferring to Rate RT and NT.

For purposes of this Section, post-retail access balances means outstanding account balances incurred after Customer transfers to Rate RT and NT.

8.11 Joint Billing. Joint Billing provides Customers with one combined account and a combined invoice that displays charges for both their gas and electric service and pertains to Customers that are the same class as described below and receive both gas service from the Company and electric service from UGI Utilities, Inc. – Electric Division ("UGI-ED") at the same premises. Eligible Customers shall be Residential Customers receiving service under Rate Schedules R and RT who are also Residential Customers of UGI-ED receiving electric distribution service under UGI-ED Rate Schedules R, and Commercial and Industrial Customers receiving service under Rate Schedules N and NT who are also Commercial and Industrial Customers of UGI-ED receiving electric distribution service under UGI-ED Rate Schedules GS1, GS4, and GS5, unless they elect otherwise in writing or through mutual agreement with Company. Eligible Customers shall be combined into a single Customer account for service received from the Company and UGI-ED and shall receive combined bills separately listing charges from each company. The Company and UGI-ED shall, for such combined accounts, and subject to applicable statutory and regulatory requirements, establish a reasonable hierarchy of categories for the posting of partial payments to such joint accounts, and within each such category payments shall first be posted, as applicable, to UGI-ED or Electric Generation Supplier charges before being posted to UGI Gas Division or Natural Gas Suppler charges.

RULES AND REGULATIONS

8. BILLING AND PAYMENT - Continued

8.12 Payment Refunds. Refunds due customers greater than two dollars ($2) shall be mailed to the Customer. Refunds less than two dollars ($2) may be picked up at the office within sixty (60) days. After sixty (60) days, the refund shall be applied to Operation Share.

8.13 Unless otherwise stated in this Section 8, Billing and Payment, all billing and payment provisions of this section apply to Customers served under all Company rate schedules, including Rate Schedules RT and NT where a Customer's Choice Supplier also participates in the Company's Purchase of Receivables ("POR") program.

RULES AND REGULATIONS

9. TERMINATION AND DISCONTINUANCE OF SERVICE

9.1 (a) Termination of Service. The Company may terminate service on reasonable notice and remove its equipment in case of Customer's (i) nonpayment of an undisputed delinquent account, (ii) failure to complete payment of a deposit, provide a guarantee of payment or establish credit, (iii) failure to permit access to meters, service connections or other property for the purpose of replacement, maintenance, repair or meter reading, (iv) failure to comply with the material terms of a payment arrangement, or (v) violation of tariff Rules and Regulations. The Company may terminate service promptly and without notice for Customer's (i) Unauthorized Use of Service delivered on or about the affected dwelling or premises, (ii) fraud or material misrepresentation of the Customer's identify for the purpose of obtaining service, (iii) abuse of or tampering with the meters, connections or other equipment of the Company, (iv) violating tariff Rules and Regulations which endanger the safety of a person or the integrity of the Company's distribution system, (v) tendering payment for reconnection of service that is subsequently dishonored, revoked, canceled or otherwise not authorized and which has not been cured or otherwise made in full payment within three business days of the Company's notice, or (vi) after receiving termination notice from the Company, tendering payment which is subsequently dishonored under 13 Pa. C.S. § 3502, or, in the case of an electronic payment, that is subsequently dishonored, revoked, canceled or otherwise not authorized and which has not been cured or otherwise made in full payment within three business days of the Company's notice. Prior to restoration of service terminated for any of the foregoing reasons, the Company may require a payment in advance of all arrearages, applicable deposit, and a reconnect charge of seventy-three dollars ($73).

(b) For Residential Customers,in the context of service termination during the period of December 1 through March 31,the Company will use financial information from the Customer provided within the most recent twelve (12) month period to determine if a customer exceeds the 250% federal poverty level threshold. The Company will not require customer information to verify income if the customer has established income verification through receipt of LIHEAP within the past twelve (12) months or if the customer is currently participating in CAP. The Company will accept the following as verification of household income in determining whether an account under Chapter 56 is protected from termination during the period of December 1 through March 31: (i) recent pay stubs or W-2 forms, (ii) access card or statement from Department of Public Welfare ("DPW"), (iii) if a source of income is rental income, then a verified copy of rent receipt(s), (iv) if the Residential Customer receives social security payments, pension payments, disability payments, Supplemental Security Income (SSI) payments, or any other source of fixed income with direct deposit, then a copy of bank statement or benefit letter, (v) child support and/or alimony support verification letter, (vi) if the Residential Customer receives payments from unemployment benefits or workers' compensation, then a copy of the determination letter or check stub, (vii) previous year's income tax statement, (viii) a filed 1099 form showing any interest income, annuity or dividends, and (ix) a verification letter from DPW of any approved cash or crisis grant applicable to the current heating season. **(C)**

9.2 Discontinuance of Service. Any Customer who is about to vacate any premises supplied with gas service or wishes to have service discontinued for any reason shall give at least seven (7) days written notice to the Company and any non-Customer Occupant of the premises to which service is being supplied, specifying the date on which it is desired that service be discontinued. If a Residential Customer requests a Discontinuance of Service at the Residential Customer's residence, and the Residential Customer and the members of the Residential Customer's household are the only Occupants, the Company may discontinue service without additional notice to the affected premise.

(C) Indicates Change

RULES AND REGULATIONS

9. TERMINATION AND DISCONTINUANCE OF SERVICE - Continued

If a Customer (other than a landlord ratepayer) requests a Discontinuance of Service at a dwelling other than the Customer’s residence or at a single meter, multi-family residence, whether or not the Customer’s residence, the Customer must state in writing (under penalty of law) that the premises are unoccupied. If the premises are occupied, the Customer's written notice requesting Discontinuance of Service must be endorsed by all affected Occupants. If the foregoing conditions are not met, the Company may discontinue service at the affected premises upon notice to the affected premises in accordance with Chapter 56. The Customer shall be liable for gas consumed until transfer of the account or the meter shut off. When Discontinuance of Service by Customer is for a period of less than twelve (12) months, the Company may require a payment of customer charges for each month the service has been discontinued in order to have the service restored.

9.3 If service to any Non-Residential Customer is terminated for the reasons set forth in Sections 9.1 (Termination of Service) or discontinued in accordance with 9.2 (Discontinuance of Service) hereof, the Company shall not be under any obligation to resume service to the same Customer at the same premises within twelve months unless it shall receive payment of an amount equal to the minimum bill for each month of the intervening period.

9.4 Reconnect Charge. If service to a Customer is discontinued at the request of the Customer, the Company shall not be under any obligation to resume service to such customer, at the same premises, within twelve (12) months from the date service was discontinued, unless they shall first receive a reconnection charge of Seventy-Three Dollars ($73.00). In addition, if the Customer’s service was discontinued at the Customer’s request, a payment of the applicable minimum charge for each month that service was discontinued shall be required. A Customer at the same premise who requests seasonal service and has gas shut off and turned on within twelve-month period shall be billed an amount equal to the minimum charge under the applicable rate for each month service was shut off up to the twelve-month period.

RULES AND REGULATIONS

10. RIDER A

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge is applicable to the net monthly rates and minimum charges contained in this Tariff. The surcharge shown below will be recomputed when a tax rate used in the calculation changes and/or the Company implements a change in rates.

The recomputation of the surcharge will be submitted to the PUC within 10 days after the occurrence of a reason for surcharge recomputation shown above. If the recomputed surcharge is less than the one in effect the Company will, and if more may, submit a tariff or supplement to reflect such recomputed surcharge, the effective date of which shall be 10 days after the filing.

Rider A - State Tax Adjustment Surcharge is 0.01% **(I)**

This Rider applies to Rates R, RT, GL, N, NT, GBM, DS, and LFD.

(I) Indicates Increase

RULES AND REGULATIONS

11. RIDER B

SECTION 1307(F) PURCHASED GAS COSTS

Provisions for Recovery of Purchased Gas Costs

Rates for each MCF (1,000 cubic feet) of gas supplied under Rate Schedules R, N, and GL of this Tariff shall include purchased gas costs, calculated in the manner set forth below, pursuant to Section 1307(f) of the Public Utility Code. Such rates for gas service shall be increased or decreased, from time to time, as provided by Section 1307(f) of the Public Utility Code and the PUC's regulations, to reflect changes in the level of recovery of purchased gas costs.

Computation of Purchased Gas Costs per MCF

Purchased gas costs shall be computed to the nearest one-hundredth cent (0.01¢) per MCF in accordance with the formula set forth below:

$$PGC = \frac{(C-E)}{(S)}$$

Projected purchased gas costs, so computed, shall be included in rates charged to Customers for gas service pursuant to the rate schedules identified above for consecutive twelve-month periods. The amount of purchased gas costs per Mcf will vary, if appropriate, based upon annual filings pursuant to Section 1307(f) of the Public Utility Code and such supplemental filings as may be required or be appropriate under Section 1307(f) or the PUC's Regulations adopted pursuant thereto.

In the event a Natural Gas Supplier discontinues service or defaults before its contract with the Customer expires, any costs incurred by the Company during the period between the Natural Gas Supplier's discontinuance of service or default and the first day of the Customer's next regular billing cycle which cannot be recovered from the Natural Gas Supplier shall be considered a Purchased Gas Cost.

Definitions

In computing purchased gas costs pursuant to the formula above, the following definitions shall apply:

"PGC" - Purchased Gas Cost determined to the nearest one-hundredth cent (0.01¢) per Mcf to be included in rates for gas supplied under the rate schedules identified above.

"Purchased Gas" - The volume of gas purchased by the Company that is delivered to the Company's Customers, plus such portion of the Company's used and unaccounted-for gas, including, but not limited to, natural gas, synthetic gas, liquefied natural gas, and natural gas substitute, including liquefied propane and naphtha.

"C" - The current cost of gas ("C-Factor") determined as follows: (a) for all types of purchased gas, project the cost for each purchase (adjusted for net current gas stored) for the projected period when rates will be in effect plus (b) the arithmetical sum of (1) the projected book value of noncurrent gas at the beginning of the computation year minus (2) the projected book value of noncurrent gas at the end of the computation year.

RULES AND REGULATIONS

11. RIDER B - Continued

SECTION 1307(F) PURCHASED GAS COSTS

As applicable, to the extent such charges are not directly paid, Purchased Gas Costs shall include credits related to the use of PGC capacity by transportation customers where the Customer or NGS utilizes Company assigned or released pipeline capacity. In addition, revenues related to balancing services provided pursuant to Sections 22.2 and 22.4; Rate NNS; Rate MBS; capacity or commodity gas sales made pursuant to Customer elections under the Retail Standby Rider; Unauthorized Overrun; OFO, DFD and NGS penalty charges and bundled city gas sales made to NGSs shall be credited to the PGC. Such credits shall be reduced annually by the Economic Benefit Peaking Supply (EBPS Credit)reductions calculated pursuant to Rule 22A.6 of the Rules and Regulations. **(C)**

"E" - Experienced net overcollection or undercollection of purchased gas costs ("E-Factor"). Such net overcollection or undercollection statement shall begin with the month following the last month which was included in the previous overcollection or undercollection calculation reflected in rates. Each over-under collection statement shall also provide for refund or recovery of amounts necessary to adjust for over or underrecoveries of E factor amounts under the previous 1307(f)rate.

Interest shall be computed monthly at the rate provided for in Section 1307(f)(5) of the Public Utility Code from the month that the over or undercollection occurs to the effective month such overcollection is refunded or such undercollection is recouped.

Additionally, supplier refunds will be included in the calculation of "E" with interest added at the annual rate of six percent (6%) calculated in accordance with the foregoing procedure, beginning with the month such refund is received by the Company.

Computation and Application of the E-Factor

The E-Factor shall be computed to the nearest one-hundredth cent (0.01¢) per Mcf in accordance with the formula set forth below:

$$\text{E-Factor} = (-E/S)$$

Each E-Factor so computed shall be applied to customer's bill for a one (1) year period during the Computation Year.

"S" - Projected MCF of gas to be billed to Customers during the projected period when rates will be in effect.

(C) Indicates Change

RULES AND REGULATIONS

11. RIDER B - Continued

SECTION 1307(F) PURCHASED GAS COSTS

Revenue Sharing Incentive Mechanism: The PGC rate determined in this section may be adjusted to reflect the operation of a Revenue Sharing Incentive Mechanism as defined hereafter.

Off-system Sales: If and when the Company makes an off-system sale of natural gas, either in the Company's market area or upstream of the Company's market area with or without the use of PGC assets, the net revenues from the sale shall be shared by both the Company and the Company's retail customers served pursuant to this section of the tariff. The net revenues of the sale shall mean the total revenues from the sale of gas to a third party, less (1) the sum of the cost of natural gas, transportation commodity charges, and fuel retainage, if the sale or exchange is made upstream of the Company's market area or (2) the average city gate commodity cost of all gas purchased and flowing on the first of the month, including the natural gas, transportation commodity, and fuel, if such sale is made at the Company's city gate or in the Company's market area. The sharing of such net revenues shall be allocated in accordance with the Revenue Sharing Allocation procedure in this section.

Exchanges of Natural Gas: If and when the Company and a third party agree to make a location exchange of natural gas in which both parties receive like quantities of gas, with no adverse economic effect on the Company's Customers, any revenues received by the Company for performing this service shall be shared by the Company and the Company's retail Customers served pursuant to this section of the Tariff. Any revenues received from the exchange of natural gas, either upstream of the Company's city gate, or at the Company's city gate, shall be allocated in accordance with the Revenue Sharing Allocation procedure in this Section.

Capacity Release on Interstate Pipelines: Capacity release revenue generated by administrative releases to third parties that fill the Company's storage shall be credited 100% to PGC customers. Other revenue received by the company for off system Capacity Release of interstate pipeline capacity will be credited in accordance with the Revenue Sharing Allocation procedure in this Section.

Storage Asset Management: If and when the Company has a third party manage gas supply assets paid for by the PGC, any revenues received from the third party ("Asset Management Fees") shall be allocated in accordance with the Revenue Sharing Allocation procedure in this Section.

Revenue Sharing Allocation: Effective December 1, 2012, through November 30, 2026 the sum of the revenues derived from all Off-System Sales, Exchanges of Natural Gas, Capacity Release on interstate pipelines and Storage Asset Management, will be allocated 75% to the retail customers served and 25% to the Company. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

11. RIDER B - Continued

SECTION 1307(F) PURCHASED GAS COSTS

The amount retained by the Company will be an incentive to pursue additional sales and will be treated below the line for ratemaking purposes. For purposes of calculating this margin, the cost of gas will be equal to the monthly average commodity cost of gas plus variable transportation costs to deliver the gas to the off-system customer. The monthly average commodity cost of gas shall be defined as the monthly average commodity cost of gas purchases for all supplies scheduled at the beginning of the month; provided, however, that if an additional unscheduled purchase is made during the month specifically for an off-system sale, such purchase shall be considered to be the gas used to make the off-system sale and the commodity cost of such purchase will be assigned to off-system sales up to the volume of the purchase.

Filing with the PUC: Audit, Rectification

The Company's annual reconciliation statement shall be submitted to the Commission by May 1 of each year, or such other time as the PUC may prescribe.

Quarterly Adjustments

When making the December 1, March 1, June 1 and September 1 quarterly C-factor adjustments, the Company will refund or recover all actual and projected incremental over or under collections from December 1 through November 30 over either remaining PGC year sales volumes or annual PGC year sales volumes. Any quarterly PGC rate change on December 1, March 1 and June 1 will be capped at 25% of the then-current PGC rate, with any amounts above this cap being brought forward for inclusion in the calculation of subsequent quarterly C-factor adjustments. Any quarterly PGC rate change on September 1 will be capped at 15% of the then-current PGC rate, with any amounts above this cap being brought forward for inclusion in the calculation of subsequent quarterly C-factor adjustments.

Rider B – Purchased Gas Cost (Mcf)

Annual C-Factor	$ 5.9486	**(I)**
Annual E-Factor	$ 0.3281	**(I)**
Total Purchased Gas Cost	$ 6.2767	**(I)**

(I) Indicates Increase

RULES AND REGULATIONS

12. RIDER C

EXTENDED TCJA TEMPORARY SURCHARGE

Prior to October 11, 2019:

To implement the effects of the Tax Cuts and Jobs Act (TCJA), on March 15, 2018 the Pennsylvania Public Utility Commission (Commission) issued a Temporary Rates Order at Docket No. M-2018-2641242 directing the utility to file its current base rates and riders as temporary rates, pursuant to Section 1310(d) of the Public Utility Code. 66 Pa. C.S. § 1310(d). Subsequently, on May 17, 2018, the Commission entered an Order superseding the March 15, 2018 Temporary Rates Order directing the utility to establish temporary rates as follows:

A negative surcharge of -4.71%, -2.87%, and -6.34% for the former South, North, and Central Rate Districts, respectively will apply as a credit for intrastate service to all customer bills rendered on and after July 1, 2018. This negative surcharge will be distributed equally among the utility's various customer classes, exclusive of STAS and automatic adjustment clause revenues. **(C)**

This negative surcharge will be reconciled at the end of each calendar year (or fiscal year if not on a calendar year basis) and will remain in place until the utility files and the Commission approves new base rates for the utility pursuant to Section 1308(d) that include the effects of the TCJA tax rate changes.

Interest on over or under collections shall be computed monthly at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) from the month that the over or under collection occurs to the mid-point of the recovery period.

Upon determination that the negative surcharge, if left unchanged, would result in a material over or under collection, the Company may file with the Commission, on at least 10 days' notice, for an interim revision of the TCJA Temporary Surcharge.

The TCJA Temporary Surcharge will be filed with the Commission by December 1 of each year to become effective the following January 1.

On and after October 11, 2019: **(C)**

Effective October 11, 2019, the negative surcharge shall be extended ("Extended TCJA Temporary Surcharge") and recalculated only for the purposes of reflecting (a) a credit to customer bills representing the tax benefits of the TCJA for the period January 1, 2018 through June 30, 2018, plus applicable interest computed monthly at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) from the month that the TCJA benefit occurred to the mid-point of the refund period for these amounts and (b) within 30 days thereafter, a final reconciliation of any over or under collection of the negative surcharge existing for the period through October 11, 2020.

(C) Indicates Change

RULES AND REGULATIONS

12. RIDER C - Continued

EXTENDED TCJA TEMPORARY SURCHARGE

The Extended TCJA Temporary Surcharge shall be a negative surcharge of -4.72% which will apply as a credit for intrastate service to all customer bills rendered on and after October 11, 2019. This negative surcharge will be distributed equally among the utility's various customer classes, exclusive of STAS and automatic adjustment clause revenues.

The Extended TCJA Temporary Surcharge shall expire October 31, 2020.

Following the expiration date of October 31, 2020, the Extended TCJA Temporary Surcharge shall be reconciled, with interest on the net over or under collection as of November 1, 2020 equivalent to one year (mid-point of return period to mid-point of reconciliation period) being applied at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.).

On and After November 1, 2020: Extended TCJA Temporary Surcharge

The Extended TCJA Temporary Surcharge shall be 0.00%.

On and After January 1, 2021: Extended TCJA Temporary Surcharge Reconciliation

The Extended TCJA Temporary Surcharge reconciliation shall be -1.23% and shall expire October 10, 2021.

On and After September 9, 2021: Extended TCJA Temporary Surcharge Reconciliation **(C)**

The Extended TCJA Temporary Surcharge reconciliation shall be 0.00% **(I)**

(C) Indicates Change (I) Indicates Increase

RULES AND REGULATIONS

13. RIDER D

MERCHANT FUNCTION CHARGE

Applicability and Purpose

This Rider shall be applied to rates for each MCF (1,000 cubic feet) of gas supplied under Rate Schedules R and N of this Tariff and shall be reflected in the Price to Compare. The Rider is equal to the fixed percentage, established by the PUC in Company's last general base rate proceeding, of purchased gas costs which are expected to be uncollectible, and shall not be reconciled to reflect actual results. Rider D is intended to make Company's Price to Compare more comparable to the gas supply service prices offered of other Natural Gas Suppliers that presumably reflect anticipated uncollectible expenses.

Rider D Charge

Rider D charges shall be equal to 2.17% for Residential PGC Customers and 0.28% **(I)** for Non-Residential PGC Customers of Rider B (Purchased Gas Costs).

The collection of the Rider D charges will be summarized by Rate Schedule sub-accounts in the Gas Operating Revenue FERC Account No. 480000 for Rate R and 481000 for Rates N. The associated costs are recorded in FERC Account Nos. 904001 and 904002.

(I) Indicates Increase

RULES AND REGULATIONS

14. Rider E

GAS PROCUREMENT CHARGE

Applicability

This non-reconcilable Rider shall be applied to rates for each Mcf (1,000 cubic feet) of gas supplied under Rate Schedules R and N of this Tariff and shall be reflected in the Price to Compare. Rider E shall be a volumetric charge as described below and shall remain in effect until reviewed and updated in the Company's next base rate case.

Rider E, or Gas Procurement Charge ("GPC"), recovers costs associated with gas procurement that were unbundled from base rates. The GPC rate is calculated by dividing total unbundled gas procurement costs by the sales volumes for the 12 months ending September 30, 2018, for Rate R and N.

Rider E Charge

Rates: R and N: $ 0.0660 per Mcf

RULES AND REGULATIONS

15. PRICE TO COMPARE

The Price to Compare ("PTC") is composed of the Annual C-Factor, Annual E-Factor, Gas Procurement Charge and Merchant Function Charge. The PTC rate will change whenever any components of the PTC change. The current PTC rate is detailed below:

Price to Compare

	Rate R (CCF)	Rate N (MCF)	
Annual C-Factor	$ 0.59486	$ 5.9486	**(I)**
Annual E-Factor	$ 0.03281	$ 0.3281	**(I)**
Gas Procurement Charge	$ 0.00660	$ 0.0660	
Merchant Function Charge	$ 0.01362	$ 0.0176	**(I)**
Total Price to Compare	$ 0.64789	$ 6.3603	**(I)**

(I) Indicates Increase

RULES AND REGULATIONS

16. RIDER F

UNIVERSAL SERVICE PROGRAM

APPLICABILITY AND PURPOSE

This Rider shall be applicable to all residential customers except customers in the Company's Customer Assistance Program ("CAP"). This Rider has been established to recover costs related to the Company's Universal Service and Conservation Programs, excluding internal administrative costs.

RATE

In addition to the charges provided in this tariff, an amount shall be added to the otherwise applicable charge for each MCF of sales volumes or distribution volumes distributed by the Company to customers receiving service under Rate Schedules R and RT.

The USP rate: $0.3562/Mcf **(D)**

CALCULATION OF RATE

The Rider USP rate shall be calculated to recover costs for the following programs: Low Income Usage Reduction Program (LIURP); Customer Assistance Program (CAP); Hardship Funds; and any other replacement or Commission-mandated Universal Service Program or low-income program that is implemented during the period that the Rider is in effect.

LIURP costs will be calculated based on the projected number of Level 1 income homes to be weatherized. Hardship Fund costs will be calculated on the projected level of an allocated share of administrative funds incurred by the UGI Operation Share Energy Fund.

CAP costs will be calculated to include
1) the projected CAP credit
2) projected CAP customer application and administrative costs; and
3) projected CAP pre-program arrearage forgiveness.

CAP Credit shall be defined as the difference between the total calculated Rate R bill, excluding Rider USP and CAP customer GET Gas charges, and the CAP bill and an adjustment for unearned credit amounts based upon the current discounts at normalized annual volumes of the then-current CAP participants and the projected CAP Credit for projected customer additions to CAP during the period that the CAP Rider rate will be in effect at the average discount of current CAP participants at normalized annual volumes.

(D) Indicates Decrease

RULES AND REGULATIONS

16. RIDER F - Continued

UNIVERSAL SERVICE PROGRAM

QUARTERLY ADJUSTMENT

Any time that the Company makes a change in base rates or PGC rate affecting residential customers, the Company shall recalculate the Rider USP rate pursuant to the calculation described above to reflect the Company's current data for the components used in the USP rate calculation. The Company shall file the updated rate with the PUC to be effective one (1) day after filing.

ANNUAL RECONCILIATION **(C)**

On or before November 1 of each year, the Company shall file with the PUC data showing the reconciliation of actual revenues received under this Rider and actual recoverable costs incurred for the preceding twelve months ended September. The resulting over/undercollection (plus interest calculated at 6% annually) will be reflected in the CAP quarterly rate adjustment to be effective December 1. Actual recoverable costs shall reflect actual CAP costs, actual application costs, actual pre-program arrearage forgiveness, actual LIURP and actual Hardship Administrative costs. Actual recoverable CAP credit costs and pre-program arrearage forgiveness shall be based upon actual CAP credits granted and pre-program arrearage forgiveness granted less a 9.2% adjustment for amounts granted to participants in excess of 27,287 (the number of CAP enrollees as of September 30, 2020). The 9.2% adjustment related to CAP credits and pre-program arrearage forgiveness will be based on the following:

For each reconciliation period, the average annual CAP credit per participant will be determined by dividing the total actual CAP credits granted during the reconciliation period by the average monthly number of participants receiving CAP credits during the reconciliation period. The average monthly number of participants receiving CAP credits exceeding the number of CAP enrollees as of September 30, 2020 will be multiplied by the average annual CAP credit granted per participant and then multiplied by 0.0920 in order to determine the amount of the CAP Credits which will not be recovered through Rider USP.

For each reconciliation period, the average pre-program arrearage forgiveness per participant will be determined by dividing the total actual pre-program arrearage forgiven during the reconciliation period by the number of participants receiving pre-program arrearage forgiveness. The number of participants receiving pre-program arrearage forgiveness exceeding 27,287 will be multiplied by the average pre-program arrearage forgiveness per participant and then multiplied by 0.0920 in order to determine the amount of the pre-program arrearage forgiveness which will not be recovered through Rider USP.

(C) Indicates Change

RULES AND REGULATIONS

17. RIDER G

ENERGY EFFICIENCY AND CONSERVATION RIDER

Applicability and Purpose

The Energy Efficiency and Conservation Rider (“EEC Rider”) shall recover costs related to the Company’s Energy Efficiency and Conservation Plan (“EECP”). The EEC Rider shall be computed separately for each of the following four customer classes:

1. Residential customers served under Rate Schedules R/RT,
2. Non-Residential customers served under Rate Schedules N/NT,
3. Non-Residential customers served under Rate Schedule DS, and
4. Non-Residential customers served under Rate Schedule LFD.

EEC Rider Rate:

Rate R/RT	$0.2077/Mcf	**(I)**
Rate N/NT	$0.0204/Mcf	**(I)**
Rate DS	$0.0556/Mcf	**(D)**
Rate LFD	$0.0316/Mcf	**(I)**

The EEC Rider shall be subject to the State Tax Adjustment Surcharge.

Calculation

The EEC Rider shall be determined as follows:

1. Costs to be recovered shall include Company incurred costs to implement its Commission approved EECP during each plan year (October 1st through September 30th) (Plan Year), including all costs incurred to develop and administer the Company’s EECP.
2. The Residential EEC Rider shall be calculated in accordance with the formula below and shall be rounded to the fourth decimal:

Residential EEC Rider = (Cr / Sr) – (Er / Sr) where

Cr = Projected Residential EECP Costs.

Sr = Projected Residential Class Sales.

Er = Net over or under collection of the Residential EEC Rider resulting from the difference between the EEC Rider revenues received and the EECP costs incurred.

(I) Indicates Increase **(D) Indicates Decrease**

RULES AND REGULATIONS

17. RIDER G - Continued

ENERGY EFFICIENCY AND CONSERVATION RIDER

3. The Non-Residential EEC Rider shall be calculated in accordance with the formula below and shall be rounded to the fourth decimal:

Non-Residential EEC Rider = (Cn / Sn) – (En / Sn) where

Cn = Projected Non-Residential EECP Costs.

Sn = Projected Non-Residential Class Sales.

En = Net over or under collection of the Non-Residential EEC Rider resulting from the difference between the EEC Rider revenues received and the EECP costs incurred.

4. The Residential and Non-Residential EEC Riders will be updated annually and will be filed with the Commission on one day’s notice to be effective December 1 of each year. The Company reserves the right to make an interim reconciliation filing to adjust the EEC Riders.

5. Any over or under collection at the end of the plan period shall be recovered or refunded either through a subsequent EECP approved by the Commission or through continuation of the EEC Riders until full recovery or refunding has occurred.

RULES AND REGULATIONS

18. RIDER H

TECHNOLOGY AND ECONOMIC DEVELOPMENT RIDER

Availability. The Technology and Economic Development Rider("TED") is a negotiated rider available in the entire territory to Customers served by the Company which the Company determines, in its sole discretion, has prospective additional gas usage applicable to service under Tariff Rate Schedules N, NT, DS or LFD at the time of execution or renewal of a Service Agreement. The Rider TED is established for the purpose of adjusting the customer's overall distribution charge to address project specific or competitive issues to gain access to and expand use of natural gas within the Commonwealth of Pennsylvania. The negotiated Rider TED may be either a surcharge or credit depending on project specific customer and Company economic requirements, such that the overall economics must meet the requirements of Section 5.1 of this Tariff. Rider TED will be utilized to support the expansion of new technologies such as combined heat and power and natural gas vehicles, develop brownfields, and support economic development in Pennsylvania by facilitating business retention and attraction as well as other gas distribution system expansion activities.

General Terms. The Customer must execute a Rider TED service agreement.

RULES AND REGULATIONS

19. Rider I

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of 3.96% will apply. **(I)**

19.A.1 Purpose. To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Company with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

19.A.2 Eligible Property.

The DSIC-eligible property will consist of the following:

- Piping, Couplings, Valves, Excess Flow Valves, Risers - Distribution & Transmission. (374, 376, 365, 367)
- Measuring & Regulator Stations – Distribution & Transmission (375, 378, 379, 366, 369, 370)
- Gas Service Lines and Insulated and Non-Insulated Fittings (378, 380)
- Meters, Meter Bars, Meter Installations (381, 382)
- House Regulators & Installations (383, 384)
- Industrial & Farm Tap Measuring & Regulator Station Equipment (385, 386)
- Miscellaneous Equipment and Material– Distribution & Transmission (387, 371)
- Equipment – Electronic Systems & Software (391)
- Vehicles, Power Equipment, Tools, Shop & Garage Equipment (392, 394, 396)
- Unreimbursed costs related to highway relocation projects where a natural gas distribution company or city natural gas distribution operation must relocate its facilities.
- Gathering lines (332)
- Storage lines (353)
- Other related capitalized costs.

19.A.3 Computation of the DSIC. The DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three-month periods ending one month prior to the effective date of each DSIC update.

(I) Indicates Increase

RULES AND REGULATIONS

19. Rider I - Continued

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

Thus, changes in the DSIC rate will occur as follows:

Effective Date of Change	Date to which DSIC-Eligible Plant Additions Reflected
April 1	December 1 through February 28
July 1	March 1 through May 31
October 1	June 1 through August 31
January 1	September 1 through November 30

19.A.4 Determination of Fixed Costs. The fixed costs of eligible distribution system improvements will consist of depreciation and pre-tax return, calculated as follows:

1. Depreciation: The depreciation expense shall be calculated by applying the annual accrual rates employed in the Company's most recent base rate case for the plant accounts in which each retirement unit of DSIC-eligible property is recorded to the original cost of DSIC-eligible property.
2. Pre-Tax Return: The pre-tax return shall be calculated using the statutory state and federal income tax rates, the Utility's actual capital structure and actual cost rates for long-term debt and preferred stock as of the last day for the three-month period ending one month prior to the effective date of the DSIC and subsequent updates. The cost of equity will be the equity return rate approved in the last fully litigated base rate proceeding for which a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years shall have elapsed between the entry of such a final order and the effective date of the DSIC, then the equity return rate used in the calculation will be the equity return rate calculated by the Commission in the most recent Quarterly Report on the Earnings of the Jurisdictional Utilities released by the Commission.

19.A.5 Application of DSIC. The DSIC will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for distribution service under the otherwise applicable rates and charges, excluding amounts billed for the State Tax Adjustment Surcharge (STAS). To calculate the DSIC, one-fourth of the annual fixed costs associated with all property eligible for cost recovery under the DSIC will be divided by the projected revenue for distribution service (including all applicable clauses and riders) for the quarterly period during which the charge will be collected, exclusive of STAS.

Formula: The formula for the calculation of the DSIC is as follows:

$$DSIC - \frac{(DSI*PTRR) + Dep + e}{PQR}$$

Where:

DSI = Original cost of eligible distribution system improvement projects net of accrued depreciation.

PTRR = Pre-tax return rate applicable to DSIC-eligible property.

Dep = Depreciation expenses related to DSIC-eligible property.

e = Amount calculated under the annual reconciliation feature or Commission audit, as described below.

RULES AND REGULATIONS

19. Rider I - Continued

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

PQR = Projected quarterly revenues for distribution service (including all applicable clauses and riders) from existing customers plus netted revenue from any customers which will be gained or lost by the beginning of the applicable service period.

Revenues will be determined as one-fourth (1/4) of projected annual revenues as determined in accordance with 19.A.7.5.

19.A.6 Quarterly Updates. Supporting data for each quarterly update will be filed with the Commission and served upon the Commission's Bureau of Audits, Bureau of Investigation and Enforcement, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the update.

19.A.7 Customer Safeguards.

1. Cap: The DSIC is capped at 5.0% of the amount billed to customers for distribution service (including all applicable clauses and riders) as determined on an annualized basis.
2. Audit/Reconciliation: The DSIC is subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. § 1350, et seq., shall be credited to customer accounts. The DSIC is subject to annual reconciliation based on a reconciliation period consisting of the twelve months ending December 31 of each year or the Company may elect to subject the DSIC to quarterly reconciliation but only upon request and approval by the Commission. The revenue received under the DSIC for the reconciliation period will be compared to the Company's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one-year period commencing on April 1 of each year, or in the next quarter if permitted by the Commission. If DSIC revenues exceed DSIC-eligible costs, such over-collections will be refunded with interest. Interest on over-collections and credits will be calculated at the residential mortgage lending specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. § 101, et seq.) and will be refunded in the same manner as an over-collection. The Company is not permitted to accrue interest on under collections.
3. New Base Rates: The DSIC will be reset to zero upon application of new base rates to customer billings that provide for prospective recovery of the annual costs that had previously been recovered under the DSIC. Thereafter, only the fixed costs of new eligible plant additions that have not previously been reflected in the Company's rates or rate base will be reflected in the quarterly updates of the DSIC.
4. Customer Notice: Customers shall be notified of changes in the DSIC by including appropriate information on the first bill they receive following any change. An explanatory bill insert shall be included with the first billing
5. All Customer Classes: The DSIC shall be applied equally to all customer classes, except that the Company may reduce or eliminate the Rider DSIC to any customer with competitive alternatives who are paying flexed or discounted rates and customers having negotiated contracts with the Company, if it is reasonably necessary to do so.

RULES AND REGULATIONS

19. Rider I - Continued

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

6. Earnings Reports: The DSIC will also be reset to zero, if, in any quarter, data filed with the Commission in the Company’s then most recent Annual or Quarterly Earnings reports show that the Company would earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the DSIC as described in the pre-tax return section. The Company shall file a tariff supplement implementing the reset to zero due to overearning on one-days’ notice and such supplement shall be filed simultaneously with the filing of the most recent Annual or Quarterly Earnings reports indicating that the Company has earned a rate of return that would exceed the allowable rate of return used to calculate its fixed costs.

7. Residual E-Factor Recovery Upon Reset to Zero: The Company shall file with the Commission interim rate revisions to resolve the residual over/under collection or E-factor amount after the DSIC rate has been reset to zero. The Company can collect or credit the residual over/under collection balance when the DSIC rate is reset to zero. The utility shall refund any overcollection to customers and is entitled to recover any undercollections as set forth in Section 19.A.7.2. Once the Company determines the specific amount of the residual over or under collection amount after the DSIC rate is reset to zero, the Company shall file a tariff supplement with supporting data to address that residual amount. The tariff supplement shall be served upon the Commission’s Bureau of Investigation and Enforcement, the Bureau of Audits, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the supplement.

RULES AND REGULATIONS

20. Rider J

GAS DELIVERY ENHANCEMENT RIDER

Applicability and Purpose:
The Gas Delivery Enhancement Rider ("GDE") shall provide a mechanism to recover the portion of temporary mobile sources of gas supply and interstate pipeline demand charge enhancements (collectively "GDE Charges") that are incurred to achieve least-cost timely solutions to system reinforcement needs or for pipeline integrity management activities for customers taking service under Rate Schedules:(1) DS and (2) LFD. The allocation of GDE Charges to each of the foregoing Rate Classes will be established by the Company's annual Purchased Gas Cost Proceeding.

GDE Rider Rate:
Rate DS $0.0062 per Mcf (all volumes) **(I)**
Rate LFD $0.0062 per Mcf (all volumes) **(I)**

The GDE Rider shall be subject to the State Tax Adjustment Surcharge.

Calculation of Rate:
The GDE Rider shall be calculated in accordance with the formula below and shall be rounded to the fourth decimal:

$$\text{GDE Rider} = (F + De + Ca + EN)/(Mcf)$$

F = Fixed costs for physical infrastructure required to provide mobile sources of gas supply

DE = Demand enhancement charges

Ca = A commodity adder equal to the difference between the indexed price of natural gas for the affected portion of the service territory and the contracted price of alternative fuel that is used in lieu of natural gas during the system reinforcement.

EN = Net over or under collection of the GDE Rider resulting from the difference between the GDE Rider revenues received and the GDE Rider costs incurred.

Mcf = 1,000 cubic feet of gas supplied under Rate Schedules DS and LFD.

Annual Reconciliation:
In accordance with cost determinations in the Company's annual Purchased Gas Cost filings, GDE Rider costs and revenues will be reconciled on an annual basis that coincides with the Company's Purchased Gas Cost year for the period December 1 through November 30 and will be filed with the Commission on one day's notice to be effective December 1 of each year. Any over or under collection at the end of the period above shall be recovered or refunded through continuation of the GDE Rider until full recovery or refund has occurred.

(I) Indicates Increase

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING

21.1 Company's Right To Reduce or Curtail Service. An emergency exists whenever the aggregate demand for firm service on the Company's system, or confined segment of the system, exceeds or threatens to exceed the gas supply or capacity that is actually and lawfully available to the Company to meet the demands, and the actual or threatened excess creates an immediate threat to the Company's system operating integrity with respect to Priority 1 Customers. In the event of a natural gas emergency, the Company shall have the right to impose a mandatory reduction or curtailment on any Customer's use of gas.

(a) Prior to taking any action under section 21.2 to curtail Customer usage, provided sufficient time exists as determined by the Company in its sole judgement, the Company shall use reasonable efforts and methods to: (1) interrupt all interruptible services, (2) issue Operational Flow Orders or Daily Flow Directives and, (3) call for voluntary usage reductions by any or all Customers.

(b) In planning for natural gas emergency situations, the Company shall make reasonable efforts to make contractual or informal arrangements with Customers and others which would allow the Company to obtain supplies or implement usage reductions in an effort to avoid or mitigate any emergency action pursuant to subsections 21.2 or 21.3 requiring firm service reductions. In making such arrangements, the Company may enter into specific negotiated terms, conditions and rates with any Customer or entity where a clear benefit exists to the Company for the management or avoidance of an emergency. Related costs, if any, may be included as gas costs for recovery under Section 11 of this Tariff.

21.2 Priority-Based Curtailments. In the event of an emergency, where the Company has mandated priority-based curtailments, the available gas supplies to the Company shall be prorated, if practicable, among Customers and NGSs according to the priorities set forth below, listed in descending order. Customers in a higher priority category shall not be curtailed until all Customers falling into a lower priority category have been curtailed to plant protection use levels, unless operational circumstances or physical limitations warrant a different result. Additionally, where only a partial restriction of a category is required, implementation shall be pro rata to the extent practical under the circumstances. Whenever possible, as determined by the Company in its sole discretion, allocation actions shall be limited to confined geographic or operational portions of the Company's system where the emergency exists.

(a) Priority 1. Service for residential and firm critical commercial essential human needs use.

(b) Priority 2. Firm service not included in Priority 1, which for purpose of curtailment shall be prioritized in the following subcategories:

(1) Firm small commercial and industrial service for plant protection under Rates N, NT, and DS.

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING – Continued

(2) Firm large commercial and industrial service for plant protection under Rates LFD and XD.

(3) Firm commercial and industrial service under Rates N, NT, DS, LFD and XD, to the extent actual gas deliveries are being made to the Company's system on behalf of the Customer; all except for plant protection. **(C)**

21.3 Mandatory Reductions. In the event of an emergency under subsection 21.1, the Company may require each commercial and industrial retail and transportation Customer that is not a Priority 1 Customer to reduce its consumption of gas. In requiring mandatory reductions, the gas supplies available to the Company may be allocated to Customers in accordance with the priorities of use specified in subsection 21.2.

(1) The reduction required shall be determined by the Company without regard to priorities of use, as necessary to minimize the potential threat to public health and safety.
(2) The mandatory reduction shall be for a period specified by the Company and may be until further notice. The Company may change a Customer’s authorized usage, upon notice, at any time during an emergency.
(3) Mandatory reductions shall be for a maximum duration of five (5) consecutive business days, unless extended by PUC order.
(4) Except as provided in 21.3(5), the minimum authorized usage may not be lower than the minimum usage of firm service necessary for plant protection use.
(5) When all other service has been curtailed except for Priority 1 service and the Company continues to be unable to meet Priority 1 requirements, the Company shall exercise its judgment as to any further curtailment that may be necessary and shall utilize measures designed to minimize harm to Customers if curtailments to plant protection use are found to be necessary.
(6) Consistent with its responsibility to maintain system integrity at all times, the Company shall provide periodic status updates and restore service as soon as practicable to any gas-fired electric generation facility that is deemed critical to electric system reliability by the electrical system’s control area operator.
(7) Transportation Customers and NGSs are required to deliver, or cause to be delivered, natural gas supplies to the Company’s system during an emergency, regardless of any mandatory gas consumption reductions imposed by the Company on such transportation Customers or NGSs’ Customers. Such natural gas delivery may be required up to the Customer’s or NGS’s applicable DFR, MDQ, DDR or otherwise specified daily delivery quantity as determined by the Company in its discretion.

(C) Indicates Change

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING - Continued

21.4 Notice of Restriction or Curtailment

(a) Notice of any restriction or curtailment shall be made to affected Customers or NGSs via methods and mediums most reasonably expected to accomplish such notice; these may include, but are not limited to: telephone, facsimile, website, or electronic data exchange. If necessary, the Company will make notice through the media in order to communicate specific requests to large groups of Customer categories that are affected, including any relevant geographic limitations.

(b) It is the Customer's or NGS's responsibility to provide the Company with appropriate contact information, and to keep such information updated, in order to assure timely and efficient notices can be provided.

(c) The Company shall endeavor to provide the maximum notice time possible in the event of any notice of restriction or curtailment.

(d) The Company shall provide specific restriction or curtailment notices stating gas usage reduction percentages, absolute usage allowances or other reduction actions. In addition, the Company shall specify compliance timelines and restriction or curtailment durations as appropriate for the circumstance.

21.5 Emergency Allocation. The Company reserves the sole right to authorize exemptions in cases of verified Customer emergency situations affecting health and welfare.

21.6 Definitions

(a) Residential Use - Gas usage in a residential dwelling or unit for space heating, air conditioning, cooking, water heating, or other domestic purposes; all residential Customers served under Rates R, RT, and GL and apartments served under Rate N, NT, and GL, or subsequent rates classified by the Company as residential.

(b) Firm Service – Natural gas service offered by the Company to Customers under Tariffs or contracts that anticipate no interruptions. Such schedules are Rate R, RT, GL, N, NT, DS, LFD, and XD or subsequent firm rate schedules.

(c) Commercial Use – Gas usage by Customers engaged primarily in the sale of goods or services including consumption by office buildings, institutions and government agencies, and classified as commercial class for Company accounting purposes. Commercial Customers are served under Rates GL, N, NT, DS, LFD, XD, and IS or subsequent rates classified by the Company as commercial.

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING – Continued

(d) Essential Human Needs Use - Gas usage into any building where persons normally dwell, including residences, apartment houses, dormitories, hotels, hospitals and nursing homes.

(e) Industrial Use - Gas usage by Customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power and classified as industrial for Company accounting purposes. Industrial Customers are served under Rates GL, N, NT, DS, LFD, XD, and IS, or subsequent rates classified by the Company as Industrial.

(f) Plant Protection Use - Minimum usage of natural gas required to prevent physical harm to an industrial or commercial consumer’s plant facilities or danger to plant personnel at the facility when the protection cannot be afforded through the use of an alternate fuel. Plant protection uses include usage necessary for the protection of the material in process as would otherwise be destroyed, but does not include deliveries required to maintain production.

21.7 Limitation of Liability.

In the event of any limitation of service or curtailment, the Company may restrict, curtail or discontinue service in accordance with this Section 21, or PUC order, without incurring any penalty or liability for any loss, injury or expense that may be sustained by the Customer except when the restriction or discontinuation of service is a result of the Company’s willful or wanton misconduct.

21.8 Appropriation Liability.

(a) The Company may appropriate natural gas and/or pipeline capacity pursuant to this Section 21, a PUC policy statement, directive or order, or an emergency order issued by the Governor of Pennsylvania.

(b) The Company shall compensate the Customer or the Customer’s NGS for the cost of appropriated gas supplies. The compensation, in the aggregate, shall equal but not exceed, the greater of:

(1) the city gate cost of the appropriated natural gas including all transportation charges up to the Company’s city gate; or,

(2) the reasonable cost actually paid by the Customer or the Customer’s NGS for delivered substitute energy, as documented by the Customer or the Customer’s NGS and presented as evidence to the Company. Such compensation may be a later delivery of in-kind gas service at the sole discretion of the affected Customer or NGS.

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING - Continued

21.9 Discontinuance of Service.

The Company may discontinue service at its sole discretion, without notice, for the duration of an emergency, to any Customer that continues to take gas in violation of any rules, notice of limitation or curtailment provided for under this Section 21.

21.10 Penalties for Unauthorized Takes.

(a) The Company may, in its sole discretion, issue penalties for any unauthorized taking of gas to any Customer failing to comply with any restriction or curtailment made under this Section 21.

(b) The penalty for unauthorized takes associated with this section shall be equivalent to those for a Critical Day in Section 22.4 General Terms for Delivery Service For Rate Schedules DS, LFD, XD, and IS - Maximum Daily Excess Balancing Charge. Payment of penalties under this section shall be in addition to any liability for direct or indirect damages resulting from Customer’s or Customer’s NGS failure to comply.

(c) The Customer shall be liable to the Company for any costs incurred in taking action to discontinue service in accordance with actions taken under subsection 21.9.

RULES AND REGULATIONS

22A. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
Effective November 1, 2020 (C)

22A.1 Application of Rates

(a) Applicable Rates: DS, LFD, XD and IS.

(b) Notification of Delivery; Nomination Procedures. Customer shall notify the Company of any and all gas deliveries to the Company's system, including, but not limited to, the provision of nomination, revised nomination and scheduling information, in accordance with the Company's *Nomination Procedure*, as may be amended from time to time, and made available on the Company’s Gas Management Website (“Nomination Procedure”). The quantity of gas received on behalf of the Customer shall be determined by allocation or other method by the Company if required in its sole discretion. It is the Customer's responsibility to arrange that any necessary billing information be provided to the Company and/or delivery gas source.

(c) Nominating Agents. A Customer shall notify the Company of its designated nominating agent (“Agent”) for purposes of nominating the volumes of natural gas to be delivered to the Company’s system on the Customer’s behalf in accordance with the Nomination Procedures. Customer shall notify Company, on a form designated by the Company in the Nomination Procedures, of the responsibilities of the Agent, and shall provide Company with the Agent’s valid e-mail address and valid 24-hour contact information. Customer shall remain liable for all charges and penalties notwithstanding Customer’s designation and use of an Agent in accordance with the provisions herein.

(d) Penalties for Customer’s Default. Customers failing to provide nomination, billing, scheduling, agent, supplier and/or other required information to the Company or pipeline(s)in accordance with the provisions of the Tariff, or otherwise failing to comply with the Company's *Nomination Procedure*, shall be subject to applicable imbalance charges and, in addition, be charged an Administrative Scheduling Fee in an amount no greater than $1,000 per day for every day such required information is delayed. If a Customer default of these provisions occurs and is occurring for a period of 90 days, the Company may impose retail or standby rates on the Customer’s account beginning the first day after such 90-day period through and until such time as the Company deems the Customer default to have been resolved.

(e) Sequencing for Billing. Unless otherwise agreed by the Company and the Customer, customer-owned gas delivered under the transportation rate schedules shall be sequenced for billing as the first gas through the meter, and gas purchased under the Retail and Standby Rider shall be sequenced for billing purposes as the last gas through the meter. Gas billed under firm rate schedules shall be billed prior to gas billed under interruptible rate schedules. In lieu of otherwise specified tariff provisions, where the Company and Customer agree, Company shall use pipeline metering facilities for measuring and billing total deliveries to the Customer's facility.

(C) Indicates Change

RULES AND REGULATIONS

22A. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

(f) Payment of Charges, Penalties. The Customer shall pay the Company for any and all additional charges incurred on the Customer's behalf or resulting from the Customer's actions or inactions which the Company can demonstrate arise out of the provision of transportation service including, but not limited to, pipeline transportation and service charges. Any such charge, penalty or obligation imposed by a pipeline transporter or supplier as result of balancing of gas delivered to the Customer shall be paid by the Customer in addition to otherwise applicable charges.

(g) The Billing Pool Agent is required to notify Company at least ten days prior to dropping a Customer from a Billing Pool. If adequate advance notice is not provided, the Company reserves the right to not drop the Customer from the Billing Pool.

(h) Billing Pools. One or more transportation Customers may join together in pooled transactions for the purchase and delivery of gas. The Company may allocate among all such customers the volumes of gas or imbalances for purposes of determining responsibility for charges, rates, penalties or other obligations imposed by the Company, or in connection with operation of the pool. A Supplier to a Billing Pool must notify the Company prior to initiating gas deliveries. A Customer is required to submit in writing a request for entry into a Billing Pool.

(1) Each Billing Pool shall appoint an Agent who will coordinate nomination, billing, reconciliation, allocation and any other necessary communication between the Billing Pool and the Company.

(2) All members of a Billing Pool shall be of like balancing service election. The Company may restrict formation or operation of any Billing Pool in order to meet like balancing service election or pipeline imposed eligibility requirements.

(3) Automated Meter Reading. The Company has the right as a condition of being a pool member, to install, at the Customer’s expense, automated meter reading (“AMR”) equipment for the purposes of daily collection or monitoring, and billing Customer volumes at each related service meter. Where AMR equipment is installed, the Customer shall maintain, at its expense, unless otherwise directed by the Company, a dedicated phone connection and electric service to the AMR equipment which will allow the Company unlimited remote access to the AMR device at all times. Failure to maintain a required phone and/or electric service may result in Customer being removed from a Billing Pool and being placed on a rate schedule not requiring daily measurement capability.

(4) Service under Rate NNS is required by, and shall be individually billed to, any and all members of a Billing Pool except when all pool members are monitored on a daily basis through the use of Company owned AMR equipment at all meter locations. Additionally, service under Rate MBS is required by, and shall be individually billed to, any and all members of a Billing Pool when the billing month for each pool member does not end on the same calendar date; Billing Pools having all customers monitored and billed through the use of Company owned AMR equipment at all meter locations shall be exempt from this requirement.

(C) Indicates Change

RULES AND REGULATIONS

22A. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued

(i) Recognition of Supplies. Volumes transported on behalf of the Customer will be recognized in the Customer's current billing month based on nominated or scheduled volumes information and may be adjusted after notification is received from the pipeline supplier(s) of the volumes transported on behalf of the Customer. Volumes scheduled shall be determined on the basis of best available actual or confirmed pipeline and/or Company information at the time of billing.

(j) Unless otherwise negotiated under Rate XD, the Company shall retain for Company use gas, and lost and unaccounted for gas, 1.0% of the total volume of gas delivered into its system for the Customer's account. **(D)**

22A.2 Balancing and No-Notice Service.

(a) Each Customer shall use best efforts to balance purchases, deliveries and receipts of gas at all times. Except as specified in 22.1(f), for the purposes of balancing excess deliveries and shortfalls and purchasing services under Rates NNS and MBS, Billing Pools may be treated as a single entity. Subject to the terms and conditions set forth below, the Company shall provide no-notice and monthly balancing services under Rate Schedules NNS and MBS. Service under Rate Schedules NNS and MBS is available only for inadvertent fluctuations, limited by the terms and conditions of each Rate Schedule, and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided. In the event the Customer fails to use best efforts to balance deliveries and receipts, or otherwise misuses no-notice or balancing services as determined by the Company in its sole discretion, Section 22.4 shall apply for the period of such default or misuse.

(b) Daily Balancing. The Company shall allow Customer's daily demand to inadvertently vary from daily scheduled deliveries by +/-4.5% without imposing Daily Balancing Charges, provided the total daily quantity taken does not exceed Customer's Daily Firm Requirement, MDQ or otherwise specified contract demand limit. Daily imbalances in excess of the +/-4.5% tolerance, unless otherwise provided by service elected under Rate NNS, shall be assessed a Maximum Daily Excess Balancing Charge in accordance with Section 22.4 under Critical Day and Non-Critical Day criteria unless otherwise specified in Customer's contract, in addition to the charges specified in Rates DS, LFD, XD and IS, on all such quantities.

(c) Imbalance Resolution. Customer's monthly imbalances will be calculated at the end of each billing period to determine if any overdelivery (excess) or underdelivery (shortfall) condition exists for volumes scheduled versus volumes metered. If the Customer is determined to be in an imbalance condition, and has not elected service under Rate MBS or has exceeded the 10% imbalance allowance provided under Rate MBS, then the Company shall sell and the Customer shall buy, subject to the 5 percent limitation under Rate MBS, any shortfall amount according to the following cash-out pricing:

(D) Indicates Decrease

RULES AND REGULATIONS

22A. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

Shortfall Percent	Cash-Out Price
Up to 5%	Shortfall Monthly Index(“SMI”)
Greater than 5%, but not greater than 15%	SMI x 1.1
Greater than 15%, but not greater than 25%	SMI x 1.3
Greater than 25%	SMI x 1.5

Likewise, the Customer shall sell, and the Company shall buy any excess amount according to the following cash-out pricing:

Excess Percent	Cash-Out Price
Up to 5%	Excess Monthly Index (“EMI”)
Greater than 5%, but not greater than 15%	EMI x 0.9
Greater than 15%, but not greater than 25%	EMI x 0.7
Greater than 25%	EMI x 0.5

The SMI (Shortfall Monthly Index) shall be the average of the published *Gas Daily* Midpoint index prices corresponding to the Customer’s Delivery Region during the Customer’s billing month as listed below:

Delivery Region	**Index**
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The EMI (Excess Monthly Index) shall be the average of the published *Gas Daily* Midpoint index prices corresponding to the Customer’s Delivery Region during the Customer’s billing month as listed below:

Delivery Region	**Index**
North	Tennessee, zone 4-300 leg
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22A. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

Customer Delivery Region shall be assigned to each Customer in accordance with Customer's delivery location within the Company's distribution system.

The SMI and EMI are applicable to the above tables only for inadvertent monthly imbalances. The HMI (Highest Monthly Index) or the LMI (Lowest Monthly Index) as defined below shall apply respectively to shortfall and excess conditions in those situations where intentional imbalances are involved.

The HMI shall be calculated as the highest of the published *Gas Daily* Absolute index prices for the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	**Index**
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The LMI shall be calculated as the lowest published *Gas Daily* Absolute prices for the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	**Index**
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22A. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

(d) The Company may extend the balancing period for gas volumes and may increase volumes eligible for balancing in its discretion, but only if it determines that such action is consistent with its obligations to other customers.

(e) Supply Transfers. In order to facilitate Monthly balancing related to inadvertent imbalances in Company's sole discretion, the Company shall allow Supply Transfers among Customers and Billing Pools, Customers-to-Billing Pools and Billing Pools-to-Customers at a fee of $125 per transaction, provided however: (1) such transfer is requested prior to the end of the billing month for both the transferee and the transferor, (2) such transfer is physically possible given pipeline interconnection and delivery point limitations which require transfers to be between parties located on the same segment of the Company's distribution system, and system supplies, and reliability are not adversely affected.

(f) Competitive Volume Customers. In the case of Customers or applicants seeking service for facilities with a design volume capability allowing for direct connection to transmission or gathering lines for bypass of Company facilities, Company shall have the right to establish daily and monthly balancing tolerances at levels other than those specified in subsections (b) and (c) of this Section 22.2 to reflect specific operational limitations or to protect the interests of other Customers, as determined by the Company in its sole discretion. Additionally, the Company may establish special nomination rules, imbalance resolution rules and communication protocols that reflect the Customer's or applicant's commercial alternatives, and which are consistent with its obligations to other Customers.

22A.3 Service Agreement and General.

(a) Limitation on Liability.

(1) The Company shall not be liable for curtailment of service under Rates DS, LFD, XD and IS, or loss of the Customer's gas as a result of any steps taken to comply with any law, regulation or order of any governmental agency with jurisdiction to regulate, allocate or control gas supplies or the rendition of service hereunder, and regardless of any defect in such law, regulation or order.

(2) Gas transported and delivered by the Company to the Customer hereunder shall be and remain the property of the Customer. The Customer shall be responsible for maintaining all insurance it deems necessary to protect its property interest in such gas before, during and after receipt by the Company.

(3) The Company shall not be liable for any loss to the Customer arising from or out of service hereunder, including loss of gas in the possession of the Company or any other cause, except gross or willful negligence of the Company's own employees or agents. The Company reserves the right to commingle gas of the Customer with other supplies.

(C) Indicates Change

RULES AND REGULATIONS

22A. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

(b) Warranty, indemnity and special provisions. The receipt of service constitutes Customer's agreement to the following representations and warranties, together with related provisions in the service agreement:

(1) clear and marketable title to the Customer's gas;
(2) delivery points, pressure, quality and other specifications acceptable to gas transmission pipeline(s) and the Company;
(3) eligibility of the Customer for service;
(4) existence of lawful authority for sale, transportation and delivery;
(5) agreement to pay all excise, sales, use, gross receipts, or other taxes (other than income taxes), all tariff charges and all penalties, charges, fees for transportation, balancing etc., associated with delivered gas, which may be levied upon or incurred by the Company at any time;
(6) agreement to indemnify and hold the Company harmless from breach of representations or warranties, and any liability associated with Customer's gas while on the Company's system.

Copy of Gas Purchase Agreements, Other Documents. When requested by the Company, the Customer shall provide the Company with a copy of Customer's gas purchase contract and any related transportation, marketing and brokerage contracts, or, in lieu of providing such contracts, certify pertinent information as required by the Company, and, in order to meet state or federal requirements, provide a sworn affidavit setting forth the Customer's cost of gas for the period requested by the Company. The Company shall endeavor to protect the confidentiality of information provided by the customer in accordance with this provision. The Company will provide such information to third parties only when required to do so by law, regulation or order and in such case, will attempt to maintain confidentiality to the extent possible.

22A.4 Maximum Daily Excess Balancing Charge

The Daily Excess Balancing Charge that occurs on Critical Days shall be as follows:

The charge for exceeding daily balancing limits shall be ten times the highest price as published in *Gas Daily* on the table “Daily Price Survey.” For each delivery region as listed in the table below. This rate shall not be lower than the maximum penalty charge for unauthorized daily overruns as provided for in the FERC-approved gas tariffs of the interstate pipelines which deliver gas into Pennsylvania.

(C) Indicates Change

RULES AND REGULATIONS

22A. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

Delivery Region	Index
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.
Central	The higher of 1) Transco, zone 6 non-N.Y. or 2) Transco, Leidy Line receipts plus the applicable transportation costs from Transco Zone 6 to Zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The Daily Excess Balancing Charge that occurs on Non-Critical Days shall be as follows:

Daily Imbalance Percent	Penalty
Up to 15%	GDI
Greater than 15%, but not greater than 30%	GDI x 2
Greater than 30%, but not greater than 45%	GDI x 3
Greater than 45%, but not greater than 60%	GDI x 4
Greater than 60%	GDI x 5
Intentional imbalances	GDI x 5

The GDI (Gas Daily Index) shall be equal to the difference in price between the highest published *Gas Daily* index price and the lowest published *Gas Daily* index price for the Customer's Delivery Region as listed below but shall not be lower than $0.25/Mcf.

Delivery Region	Highest Index Price	Lowest Index Price
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.	Tennessee, zone 4- 300 leg
Central	Transco zone 6, non-N.Y.	Transco, Leidy line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22A. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

The Company shall not charge any Maximum Daily Excess Balancing Charges if the Customer's Excess Daily Imbalance is anticipated to benefit the distribution systems daily balancing position as determined by Company in its sole discretion.

22A.5 Operational Flow Orders and Daily Flow Directives

The Company has the right to issue Operational Flow Orders and Daily Flow Directives at any time. Failure to comply with any OFO or DFD shall result in a penalty charge of Twenty-Five ($25) per Mcf or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater.

22A.6 Cost of Assigned Capacity.

In addition to applicable interstate pipeline demand charges, the associated demand charges to customers, or their NGS, served under Rates DS and LFD, and who utilize assigned PGC capacity, will include 100% and 50% pro rata allocation of annual Peaking Supply service demand costs, respectively. The associated demand charges will be reduced by a pro rata share of the Economic Benefit of Peaking Supply (EBPS Credit). The EBPS Credit shall mean a pro rata share of (a) the value of Peaking Supply utilized in off system sales transactions and included in the PGC share of the Revenue Sharing Incentive Mechanism revenues, plus (b) the Commodity Price Differential, which shall be, as measured for the date of Peaking Supply delivery, the aggregate difference, if positive, between the Gas Daily price applicable to the zone of delivery (i.e., Texas Eastern M3 for deliveries in the South and West Delivery Regions with the exception of deliveries from Mt. Bethel and Transco Z6 NNY for deliveries made in the North and Central Delivery Regions and deliveries from Mt. Bethel) and the actual price paid for actual Peaking Supply deliveries into the UGI distribution system. The EBPS Credit shall be applied in the calculation of associated demand charges in the second billing month after the credit has accrued (e.g., December accrued credits will be used to reduce the February associated demand charges) and shall not, on an annual basis, exceed the annual incremental demand charges for Peaking Services charged to Rate DS and LFD customers, or their NGS, as described above.

(C) Indicates Change

RULES AND REGULATIONS

23. GENERAL TERMS FOR INTERCONNECTION COORDINATION SERVICES FOR CONNECTING ENTITIES

Any entity with actual or potential sources of gas supply connected to Company facilities (Connecting Entity) shall be obligated to enter into an agreement with the Company (Coordination Agreement) addressing, to the extent applicable: (1) the duties and obligations of the parties with respect to their respective facilities, (2) measurement of deliveries of gas, (3) gas quality standards, (4) nomination requirements, (5) permitted variations in supply deliveries and imbalance resolution and (6) other operational issues raised by the nature of the supply source connection

RATE R

GENERAL SERVICE – RESIDENTIAL

AVAILABILITY

This rate applies to all Residential Customers in the entire gas service territory of the Company and available at one location, for the total requirements of any residential Customer. Residential Customers are customers receiving the Company's gas service to a single-family dwelling or building, or through one meter to four or fewer units in a multi-family dwelling or premises used as a single family.

MONTHLY RATE TABLE

Customer Charge: $14.60 per customer effective through Sept. 30, 2021 **(C)**
$15.31 per customer effective Oct. 1, 2021 – Sept. 30, 2022 **(C, I)**
$14.60 per customer effective on and after Oct. 1, 2022 **(C, D)**

Plus Distribution Charge:
$0.37861/Ccf effective through December 31, 2020 **(C)**
$0.39464/Ccf effective January 1, 2021 – June 30, 2021 **(C, I)**
$0.41104/Ccf effective on and after July 1, 2021 **(C, I)**

Plus SURCHARGES and RIDERS
- Rider A – State Tax Adjustment Surcharge
- Rider B – Section 1307 (f) Purchased Gas Cost
- Rider C – Extended TCJA Temporary Surcharge
- Rider D – Merchant Function
- Rider E – Gas Procurement Charge
- Rider F – Universal Service Program
- Rider G – Energy Efficiency and Conservation
- Rider I – Distribution System Improvement Charge

MINIMUM CHARGE

Customer Charge as set forth above.

MINIMUM BILL PROVISION

If natural gas service is discontinued at the request of the Customer, the Company shall not be under any obligation to resume service to the same Customer at the same premise within twelve months unless it shall receive an amount equal to the minimum charge for each month up to a maximum of twelve months of the intervening period.

Customer at the same premise who requires seasonal service and has gas shut off and turned on within twelve-month period billed in an amount equal to the minimum charge under the applicable rate for each month service was shut off up to the 12-month intervening period.

PAYMENT

In accordance with Section 8.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

GENERAL SERVICE – RESIDENTIAL TRANSPORTATION

PAYMENT

In accordance with Section 8.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

RULES AND REGULATIONS

Where a Customer is returned to the Company or an alternate Supplier of Last Resort prior to the next regular meter reading date, due to the Licensed Choice Natural Gas Supplier's non-performance, Customer will receive service from Company or alternate Supplier of Last Resort for the remainder of the billing month at the contract rate between the Customer and Choice Supplier. Customer must provide evidence of the applicable contract rate, if requested by Company, to receive the contract rate price. As of the next regular meter read date, Customer will be transferred to Rate R, unless enrolled as a Rate RT customer by another Choice Supplier, effective as of the next regular meter read date.

GENERAL TERMS

Company Use and Unaccounted For gas shall be retained in accordance with Section 5, Operational Requirements, paragraph 5.1, Daily Delivery Requirements, of the Gas Choice Supplier Tariff.

RATE GL

GENERAL SERVICE - GAS LIGHT SERVICE

AVAILABILITY

This service is available for street, highway, driveway or other lighting or sign illumination, where measurement by meter of the gas consumed is not practicable or economical. As used herein, "light" means a single lamp or sign having one (1) gas-flow orifice and one (1) or more mantles, and of a type approved by the Company.

MONTHLY RATE TABLE

Distribution Charge:
$0.37861/Ccf effective through December 31, 2020 **(C)**
$0.39464/Ccf effective January 1, 2021 – June 30, 2021 **(C, I)**
$0.41104/Ccf effective on and after July 1, 2021 **(C, I)**

Plus

SURCHARGES and RIDERS

Rider A - State Tax Adjustment Surcharge
Rider B – Section 1307(f) Purchased Gas Cost
Rider C – Extended TCJA Temporary Surcharge
Rider I – Distribution System Improvement Charge

Monthly usage is assumed to be 1.8 Mcf, however, for larger consumption input fixtures, the Company reserves the right to modify

BILLS DUE

All bills for continuing service are due each month when rendered, and the final due date stated on the bill shall be no less than fifteen (15) days from the date of presentation. Upon discontinuance of service, bills are due and payable upon presentation.

PAYMENT

In accordance with Section 8 of this Tariff.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

SPECIAL TERMS AND CONDITIONS

Gas will be supplied to lights furnished, erected and maintained by the customer only when equipped with regulators and such devices as the Company considers necessary for turning lights on and off for maintenance and safety purposes.

(I) Indicates Increase (C) Indicates Change

RATE N

GENERAL SERVICE – NON-RESIDENTIAL

AVAILABILITY

This Rate applies in the entire territory served by the Company and is available to all Non-Residential Customers, using gas for any purpose including gas purchased by another public utility for resale. Service will be supplied only where the Company's facilities and the available quantity of gas are suitable to the service desired. Rate N service may not be applied to supplement or back up any transportation service.

MONTHLY RATE TABLE
Customer Charge: $23.50 per customer effective through Sept. 30, 2021 **(C)**
$24.75 per customer effective Oct. 1, 2021 – Sept. 30, 2022 **(C, I)**
$23.50 per customer effective on and after Oct. 1, 2022 **(C, D)**
Plus Distribution Charge: **(C, I)**

	Former South/Central Districts	Former North District
Effective through December 31, 2020	$3.5177/Mcf	$3.1559/Mcf

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

RULES AND REGULATIONS

Where a Customer is returned to the Company or an alternate Supplier of Last Resort prior to the next regular meter reading date, due to the Licensed Choice Natural Gas Supplier's non-performance, Customer will receive service from Company or alternate Supplier of Last Resort for the remainder of the billing month at the contract rate between the Customer and Choice Supplier. Customer must provide evidence of the applicable contract rate, if requested by Company, to receive the contract rate price. As of the next regular meter read date, Customer will be transferred to Rate N, unless enrolled as a Rate NT customer by another Choice Supplier, effective as of the next regular meter read date.

GENERAL TERMS

Company Use and Unaccounted For gas shall be retained in accordance with Section 5, Operational Requirements, paragraph 5.1, Daily Delivery Requirements, of the Gas Choice Supplier Tariff.

RATE DS

DELIVERY SERVICE

AVAILABILITY

This service applies in the entire territory served by the Company. Firm Delivery Service shall be provided for all volumes supplied by the Customer for which the Company has available on system delivery capacity, subject to Section 21 - Gas Emergency Planning provisions of the Company's tariff, applicable rules and regulations of the PUC and any other governmental mandates.

The Customer must execute a Service Agreement for not less than (1) one year. The contract shall continue in force for consecutive (1) year periods unless cancelled by the Customer upon ninety (90) days written notice to Company prior to the expiration of a contract term.

Gas service in excess of volumes delivered by the Customer shall only be provided in accordance with applicable delivery service balancing provisions or in accordance with optionally elected and approved balancing or standby services.

Service under Rate DS is subject to the terms set forth under Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

MONTHLY RATE TABLE

The charge for each monthly billing period shall be the sum of the Customer Charge, the Capacity Charge if applicable, and the Distribution Charge as described below. The following are maximum rates.

Customer Charge: $260.00 per month effective through Sept. 30, 2021
(C)
$263.24 per month effective Oct. 1, 2021 – Sept. 30, 2022 **(C, I)**
$260.00 per month effective on and after Oct. 1, 2022 **(C, D)**

Plus Capacity Charge: The Company's unitized weighted average cost of firm transportation capacity per elected MDQ.

Plus Maximum Distribution Charge: **(C, I)**

	Former South/Central Districts	Former North District
Effective through Dec. 31, 2020	$2.9550/Mcf	$2.1335/Mcf

RATE NNS

NO-NOTICE SERVICE

AVAILABILITY

This Rate is available upon request to any Customer served on Rate DS, LFD, XD or IS who, after review and acceptance of such request by Company, has entered into a service agreement with Company for service under Rate NNS. The term of the service agreement shall be concurrent with that of the Customer's underlying Delivery Service Schedule.

Service under this Rate is available for inadvertent fluctuations only and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided.

Service to large volume users, such as electric generation facilities, may be limited as determined by the Company. Service under Rate NNS is subject to the terms and conditions set forth under Section 22 General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

TERMS AND CONDITIONS **(C)**

Customers shall elect a specific level of no-notice service under this Rate. Such election shall be made through the specification of a No-Notice Allowance ("NNA"), in MCF per day, of an amount no less than by 10.0% (former South Rate District) and 2.5% (former North and Central Rate Districts)and no greater than 100% of Customer's Daily Firm Requirement, Maximum Daily Quantity or otherwise specified daily contract limit. After November 1, 2020, the minimum election of NNA in MCF per day shall be no less than 4.5% and no greater than 100% of Customer’s Daily Firm Requirement, Maximum Daily Quantity or otherwise specified daily contract limit. The elected NNA shall be effective for a fixed period equal to the lesser of one year or the remaining balance of the Customer's service agreement or, a lesser time period mutually agreeable to both the Customer and the Company. In no instance shall a NNA be effective for a period of less than one month. Rate NNS service elections in excess of 10.0% (former South Rate District) and 2.5% (former North & Central Rate Districts), or after November 1, 2020, 4.5%, are interruptible.

No-notice service shall be provided under this Rate whereby the Company shall forward or bank no-notice supplies to the Customer on a daily basis in such amounts necessary to balance the Customer's daily deliveries with the Customer's daily consumption. Forwarded amounts shall be limited in amount by the lesser of the sum of the Customer's daily nomination plus elected NNA or, the Customer's DFR, MDQ or otherwise specified contract limit except as allowed. Banked amounts shall be limited to an amount no greater than the Customer's NNA election.

Customer electing an NNA shall be billed for no-notice service according to that specific level of service.

Volumes in excess of the daily limits shall be subject to Daily Excess Imbalance Charges as set forth in Section 22.4 General Terms For Delivery Service for Rate Schedules DS, LFD, XD and IS on all such excess quantities, in addition to the charges specified in the Customer's Delivery Service Schedule.

(C) Indicates Change

RATE NNS - Continued

NO-NOTICE SERVICE

EXCESS REQUIREMENT OPTION

The Excess Requirement Option is available on an interruptible basis to any delivery service Customer served under Rates XD, LFD. This Option shall extend the no-notice provisions of Rate NNS, on solely a best efforts basis, during periods where Customer's daily requirements exceed transportation contract service limits.

Customer must nominate a Daily Excess Requirement ("DER") under this Option in an amount no less than 5 Mcf per day and no greater than 25% of Customer's DFR or otherwise specified contract limit. On days where service under the Excess Requirement Option is required, Customer will have the right, subject to the terms and conditions set forth herein, to take gas in excess of Customer's DFR or otherwise specified contract limit provided such excess is no greater than the nominated DER amount.

Service taken in excess of the sum of Customer's DFR and DER on any day shall be considered Excess Take or Unauthorized Overrun as determined by Customer's Delivery Service Schedule and service agreement.

Unauthorized gas forwarded or returned to the Company by the Customer shall be considered imbalance gas and shall be subject to either the balancing provisions set forth under Section 22.2 of General Terms for Delivery Service for Rate Schedules DS, LFD, XD and IS or the Customer's otherwise applicable transportation balancing service.

MONTHLY RATE TABLE (Basic NNS Service)

$0.0244 per Mcf **(C)**

or, if applicable $0.4880 per Mcf per day of elected NNA **(C)**

plus

MONTHLY RATE TABLE (Excess Requirement Option)

$4.50 per Mcf per day of elected DER.

(C) Indicates Change

RATE MBS

MONTHLY BALANCING SERVICE

AVAILABILITY

This Rate is available upon request to any Customer served on Rate DS, LFD, XD or IS who, after review and acceptance of such request by Company, has entered into a Service Agreement with Company for service under Rate MBS. The term of the Service Agreement shall be concurrent with that of the Customer's underlying Rate Schedule.

Service under Rate MBS is available for inadvertent fluctuations only, limited to an amount not to exceed 10% of the customer's total scheduled deliveries for the month, and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided. Service under Rate MBS is subject to the terms set forth in Section 22 General Terms For Delivery Service for Rate Schedules DS, LFD, XD, and IS.

Rate MBS is available as a monthly banking service for Customer transportation deliveries. Service under Rate MBS allows Customer transportation imbalances (metered volumes less total scheduled nominations) which are within 10% of Customer's total scheduled nominations for the month to be carried forward in the Customer's MBS Account ("Balance Account") for redelivery of excesses or receipt of shortfalls in subsequent months.

TERMS AND CONDITIONS

Balance Account Operation. To the extent Customer's total deliveries exceed Customer's total consumption at the end of a Billing Month, the excess volumes shall be added to the Customer's Balance Account. To the extent Customer's total consumption exceeds Customer's total deliveries at the end of a Billing Month, the shortfall volumes shall be subtracted from the Customer's Balance Account.

Balance Account Limits. At no time, as calculated at the end of a Billing Month, shall a Customer exceed a Balance Account excess or shortfall balance greater than 10% of the Customer's total scheduled deliveries for the month, as determined by the Company in its sole discretion. Any such imbalance on the Customer's Balance Account shall result in an immediate zeroing of the Balance Account balance. Effective November 1, 2020, any such imbalance over 10% (excess or shortfall) shall **(C)** be subject to the Cash-in/Cash-out pricing set forth in Section 22A.2 for monthly imbalance volumes in excess of 5%, with the remaining imbalance volumes to be carried over into the calculation of the Customer’s imbalance volumes for the following month.

The Company, in its sole discretion, may zero out the Customer's Balance Account at the end of any Billing Month by purchasing or selling such net imbalance volumes in the Customer's Balance Account at the prevailing month's Cash-In/Cash-Out pricing at set forth in Section 22.2, provided such zero out may occur only if necessitated by operational needs of the Company or as a result of a requirement of an applicable interstate pipeline.

Rate LFD	$0.0160/Mcf x Monthly Billed Volumes	**(I)**
Rate XD	$0.0165/Mcf x Monthly Billed Volumes	**(I)**

The Company will update the average monthly imbalance utilized in the development of Rate MBS charges annually with the actual average monthly imbalance for the 12-month period ending September to determine the new Rate MBS charges effective December 1 each year. The Company shall include the new Rate MBS charges as part of its annual PGC compliance filing.

(I) Indicates Increase

RATE LFD

LARGE FIRM DELIVERY SERVICE

AVAILABILITY

This Rate applies in the entire territory served by the Company. It is available to any Customer who executes a Service Agreement with the Company for an on system Daily Firm Requirement (DFR), as agreed to by Customer and Company in said agreement, for not less than fifty (50) MCF of gas per day of firm service. Volumes delivered under this Rate shall be metered separately from service under any of the Company's other rates, except as provided for in Rates IS, NNS, and MBS. In lieu of separate metering, the Company may accept contractual commitments specifying minimum volumes of service under Rate LFD.

Service will be provided by the Company where the Customer provides suitable gas delivered to a Company authorized receipt point, as determined by the Company in its sole discretion, provided Company has available on-system and/or pipeline capacity available in such quantities to meet Customer requirements. The Company shall be under no obligation to maintain on-system facilities required for service beyond the term of an executed service agreement.

Unless otherwise agreed by the Customer and Company, the Customer must enter into a Service Agreement for a minimum term of two (2) years. The Service Agreement shall continue in force for consecutive two (2) year periods unless cancelled by Customer upon one (1) year written notice to the Company prior to the expiration of the then current Service Agreement term. The Customer shall remain liable for minimum bill requirements for the length of the Service Agreement under this Rate, including applicable penalties, in the event the Customer defaults on its Service Agreement before the end of its term.

Delivery Service shall be provided for all volumes provided by the Customer for which the Company has available delivery capacity, subject to the curtailment provisions of the Company's Tariff, applicable rules and regulations of the PUC and any other governmental mandates. **(C)**

Gas service in excess of volumes delivered by the Customer shall only be provided in accordance with applicable balancing provisions or in accordance with optionally elected and approved balancing or standby services.

The DFR shall be the Company's contracted maximum firm delivery obligation to the Customer on any day and shall be no less than fifty (50) MCF. Service in excess of the DFR is interruptible in accordance with the terms of Rate IS.

Service under Rate LFD is subject to the terms set forth under Section 22 - General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

(C) Indicates Change

RATE LFD - Continued

LARGE FIRM DELIVERY SERVICE

MINIMUM BILL

Monthly: The Minimum Monthly Bill shall be the Customer Charge, Demand Charge and Charge for Other Transportation.

Annual: The Minimum Annual Bill shall be based on the Customer maintaining a 0.50 annual load factor and shall be due and payable with the bill for the 12th month in the contract year. The Customer's actual load factor shall be determined by dividing the total volume of gas taken during the contract year (including volumes taken under the Retail and Standby Rider, the Cash-Out provisions of Section 22.2) by the sum of the Daily Firm Requirements for the contract year. If the actual load factor is less than 0.50, then, in addition to payment for actual usage, the Customer shall pay a Minimum Annual Bill charge equal to the product of: (1) the difference between 0.50 and the actual load factor, (2) the sum of the Customer's Daily Firm Requirements for the contract year, and (3) the average delivery charge paid by the Customer over the previous 12-month period, as calculated by the Company. If the Customer's actual load factor is greater than or equal to 0.50, no Minimum Annual Bill charge will be required.

CHARGE FOR OTHER TRANSPORTATION

If the Customer chooses to use the Company as agent in regard to transportation service by others, any costs calculated by or billed to the Company, with regard to such agency, shall be billed to the customer by the Company and may include an applicable administrative fee as agreed by the Customer and Company.

CHARGE FOR UNAUTHORIZED OVERRUN

Whenever it is necessary to restrict gas supplied under this Rate, the Company will provide due notice of such restriction. If a Customer, after having received due notice of restriction, shall take gas in excess of the amount made available by such notice, then the Customer shall be billed for such excess gas at the rate of Twenty-Seven Dollars and Fifty Cents ($27.50) per MCF, or the charge be calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater, plus the charge specified in the monthly rate table. Customer shall indemnify Company from any claims by third parties resulting from Customer's unauthorized overrun.

SERVICE UNDER OTHER RATES

Volumes purchased under the Retail and Standby Rider or under the Cash-Out provisions of Section 22.2 or taken under Rate NNS shall be included for the purposes of determining Excess Take Charge and Unauthorized Overrun gas.

RATE XD

EXTENDED LARGE FIRM DELIVERY SERVICE

AVAILABILITY

This Rate applies in the entire territory served by the Company on request of a Customer which the Company determines, in its sole discretion, has a prospective gas volume usage of at least 200,000 MCF per year at the time of execution or renewal of a Service Agreement.

Service will be provided by the Company where the Customer provides suitable gas delivered to a Company authorized receipt point, as determined by the Company in its sole discretion, provided Company has available on-system and/or pipeline capacity available in such quantities to meet Customer's requirements. The Company shall be under no obligation to maintain facilities required for service beyond the term of an executed Service Agreement.

Unless otherwise agreed to by the Customer and the Company, the Customer must enter into a service agreement for a minimum term of three (3) years. For a Customer requesting firm service, the Service Agreement shall specify an initial Daily Firm Requirement (DFR). The Customer shall remain liable for minimum bill requirements for the length of the Service Agreement under this Rate, including applicable penalties, in the event the Customer defaults on its Service Agreement before the end of its term.

For Customers requesting firm service, Delivery Service shall be provided for all volumes provided by the Customer for which the Company has available delivery up to DFR, subject to the Section 21 – Gas Emergency Planning provisions of the Company's tariff, applicable rules and regulations of the PUC and any other governmental mandates.

Service in excess of volumes delivered by the Customer shall only be provided in accordance with applicable balancing provisions or in accordance with optionally elected and approved balancing or standby services.

The DFR shall be the Company's contracted maximum firm delivery obligation to the Customer on any day. Service in excess of the DFR is interruptible and will be provided under terms and conditions identical to those set forth under Rate Schedule IS.

Service under Rate XD is subject to the terms set forth under Section 22 - General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

RATE XD -Continued

EXTENDED LARGE FIRM DELIVERY SERVICE

CHARGE FOR UNAUTHORIZED OVERRUN

Whenever it is necessary to restrict gas supplied under this Rate, the Company will provide due notice of such restrictions. If a Customer, after having received due notice of a restriction, shall take gas in excess of the amount made available by such notice, then the Customer shall be billed for such excess gas at the rate of Twenty-Seven Dollars and Fifty Cents ($27.50) per MCF, or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing, whichever is greater, plus the charge specified in the monthly rate table. Customer shall indemnify Company from any claims by third parties resulting from Customer's unauthorized overrun.

Volumes purchased under the Retail and Standby Rider or under the Cash-Out provisions of Section 22.2 or taken under Rate NNS shall be included for the purpose of determining Unauthorized Overrun gas.

PAYMENT

In accordance with Section 8 of this Tariff.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

RATE R/S

RETAIL AND STANDBY RIDER

AVAILABILITY

Retail and Standby services are available under the Retail and Standby Rider to any Customer receiving service under Rate Schedules DS, LFD, XD and IS. Service shall be supplied only where the Company's facilities are suitable and available for the service desired. Service is subject to curtailment under Tariff Rule No. 21, Emergency Gas Planning.

Retail and Standby services under this schedule may be provided on a firm and/or interruptible basis. Subject to the Company's sole discretion, services shall be provided only if, and to the extent, sufficient Company and/or Customer provided capacity exists for the transportation of available gas supplies. Unless otherwise agreed by the Company and Customer, the Customer must enter into a service agreement for a minimum term of one (1) year with monthly payments for service taken.

The Company may provide capacity, supply or a bundled service, retail or standby, to the Customer under this rate schedule as per one or more of the following:
For Customers having upstream capacity rights: Company shall provide, or stand ready to provide, gas supplies to the Customer in such amounts and at such delivery or receipt points as necessary to meet Customers' contract requirements, as specified on a daily, monthly, seasonal or annual basis.

For Customers providing, selling or forwarding gas supplies to the Company for redelivery to Customer: Company shall provide, or stand ready to provide, pipeline and/or system capacity to deliver such gas supplies to the Customer.

For Customers requiring bundled sales service: Company shall provide, or stand ready to provide, the necessary pipeline and/or system capacity, and gas supplies necessary to provide gas service to the Customer at the Customers' metered location.

Where applicable, Customer must nominate standby service requirements by specifying a Nominated Standby Requirement (NSR) in MCF and a Daily Standby Requirement (DSR) in MCF per day of amounts equal to the Customer's total and daily standby supply requirements. Unless otherwise agreed by the Company and Customer, the firm or interruptible DSR shall be equal to the NSR divided by the number of days in the standby period.

Customers served under firm Rate Schedules DS, LFD, XD and IS may take firm retail and/or standby service under this rate schedule in any amount up to their available Daily Firm Requirement (DFR) or otherwise specified contract limit. All other terms and conditions of service as specified in Customer's Rate Schedules DS, LFD and XD and/or contract shall continue to apply.

Capacity and/or supply utilization under this rate schedule shall be on an as available basis for customers requesting retail and/or standby services. Subject to the Company's sole discretion, other incrementally obtained capacity and/or supply shall be assigned according to a Customer request queue or otherwise specified auction procedure. When necessary, such request queue or auction procedure shall be established in accordance with the terms outlined in the Company's *Nomination Procedure*.

The Company, upon notice to the Customer, may specify minimum levels of retail and/or standby nominations required for service under this rate schedule.

RATE R/S - Continued

RETAIL AND STANDBY RIDER

Service under Rate R/S is subject to the terms set forth in Section 22.2.

MONTHLY RATE TABLE

The charge for each Billing Month shall be the sum of the Customer Charge

Plus
The Capacity/Reservation Charge corresponding to the Customer's service election,

Plus
The Commodity Charge as shown below,

Plus
Administrative Service Fee: $75 per month.

Capacity/Reservation Charge:

Firm Retail Option: The applicable market price for available upstream capacity, plus the applicable charge for available system capacity, less any capacity charges paid under the Customer's applicable Rate Schedule, but in no case less than zero.

Firm Standby Option: The applicable Firm Standby Reservation Charge per MCF of DSR and/or per MCF of NSR.

a) The Firm Standby Reservation Charge shall be equal to the sum of the monthly contract demand rates charge by the Company's interstate pipeline suppliers divided by the sum of the daily contract demands.
b) The Firm Standby Reservation Charge shall be subject to increase or decrease whenever any of the Company's interstate pipeline suppliers make changes in their contract demand rates. Any change in the Standby Rate shall become effective on the first day of the month following the date on which the change in pipeline contract demand rate becomes effective.
c) The Firm Standby Reservation Charge revenues will be credited to the PGC.

Interruptible Standby Option: The applicable interruptible standby reservation charge per MCF of DSR and/or per MCF of NSR.

Plus

Commodity Charge: The distribution charge applicable under the Customer's Rate Schedule plus the applicable commodity cost, which shall be the identifiable additional cost of supply necessary to serve the Customer's usage, plus any applicable reservation cost of supply.

RATE R/S - Continued

RETAIL AND STANDBY RIDER

The minimum monthly bill under this rate schedule shall be the sum of the Customer and Capacity/Reservation Charges plus any commodity reservation costs per MCF of NSR.

SURCHARGES

Rider C – Extended TCJA Temporary Surcharge
Rider I – Distribution System Improvement Charge

Any charges or penalties imposed by pipeline suppliers as a result of usage under this rider shall, at the Company's sole discretion, be allocated to Customers according to each Customer's contractual obligation or be assigned to the Customer responsible for the incurrence of the charges or penalties.

PAYMENT

In accordance with Section 8 of this Tariff.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

RATE IS

INTERRUPTIBLE SERVICE

AVAILABILITY

This Rate applies in the entire territory served by the Company. It is available to any commercial or industrial Customer using gas for any purpose when Customer has executed a Service Agreement with a term of at least one (1) year for use of gas under the terms of this Tariff.

Service under this Rate shall only be provided when, in the Company's sole discretion, sufficient system capacity is available.

Unless otherwise agreed by both Customer and Company, service under Rate IS is available only to Customer loads with documented installed capability to consume an alternate fuel, and the Customer must enter into a Service Agreement for a minimum term of one (1) year with monthly payments for service taken. The Customer shall remain liable for minimum bill requirements for the length of the Service Agreement under this Rate, including applicable penalties, in the event the Customer defaults on its Service Agreement before the end of its term.

The Customer and Company agree that a Manual Interruptible (MI) Customer must demonstrate that they have the capability of consuming at least 5,000 MCF of gas during April through October ("Off Peak Period"). For all Automatic Temperature Control ("ATC") Customers, the Customer shall install and operate equipment to transfer the fuel source of its interruptible equipment from natural gas to an alternate fuel at a predetermined temperature setting as determined annually by the Company.

The Company shall verify, prior to commencement of service for new Customers that the customer load being served qualifies under these provisions. The Company shall be permitted to inspect the facilities and piping at the premises of the Customer from time to time to confirm that the load being served so qualifies. The Company, at its discretion, may require such separate metering and piping and elimination of any cross-connection to non-qualifying end use equipment as may be necessary to enforce these provisions and to ensure the interruption of service hereunder during periods of restricted service. It is the Customer's responsibility to ensure qualifying alternate fuel capability is maintained in good working order as Company shall maintain no obligation for service during periods of interruption. If the Customer fails to meet any of the applicable conditions listed below, as determined by the Company in its sole discretion, the Company may discontinue service or transfer the Customer to the otherwise applicable firm or standby rate schedule, provided sufficient on-system capacity is available:

1) ability to maintain qualified alternate fuel facilities
2) 24-hour notification capability
3) maintain operable ATC equipment

Service will be provided by the Company where the Customer provides suitable gas delivered to a Company authorized contract receipt point, as determined by the Company in its sole discretion and only when in the opinion of the Company there are sufficient facilities and gas supply. The Company maintains sole discretion to determine the appropriate allocation of gas to Customers.

RATE IS - Continued

INTERRUPTIBLE SERVICE

Gas service in excess of volumes delivered by the Customer shall be provided only in accordance with applicable balancing provisions or in accordance with optionally elected and approved balancing or standby services.

INTERRUPTION NOTIFICATION

MI Customers agree to maintain a twenty-four hour capability to receive notification of interruptions by the Company. When notified by the Company, the MI customer must discontinue use of natural gas for the Rate IS account until notification of Company to resume use of natural gas under Rate IS. Except in an emergency circumstance, the Company will provide reasonable notice of any interruption at least two hours prior, or upon written request of the Customer, if agreed by Company, of up to six hours.

ATC Customers agree to maintain equipment required to automatically switch fuels from natural gas to Customer's alternate fuel and from alternate fuel back to natural gas based on outside temperatures, as determined solely by the Company and noticed annually to the Customer. The ATC equipment shall meet specifications as provided by the Company and shall be in working order at all times from November through March of each year.

The Company reserves the right to periodically verify MI and ATC Customer's alternate fuel as well as to verify the proper operation of ATC equipment.

MONTHLY RATE TABLE

Customer Charge: Charge as negotiated between the Customer and the Company.

Plus,

Distribution Charge:
Charge as negotiated between the Customer and Company based upon the alternate fuels that the Customer has the economic capability of consuming, inclusive of related business factors.

MINIMUM ANNUAL BILL

For ATC Customers: Shall be as negotiated by the Customer and Company but shall be no less than the product of five hundred (500) MCF times the distribution rate in effect on the first day of the Service Agreement or subsequent anniversary date if renewed Service Agreement.

For MI Customers: Shall be as negotiated by the Customer and Company but shall be no less than five thousand (5,000) MCF of natural gas in Off Peak Period times the distribution rate in effect on the first day of the Service Agreement or subsequent anniversary date if renewed Service Agreement.

RATE IS - Continued

INTERRUPTIBLE SERVICE

Unless the Company otherwise agrees, the Minimum Annual Bill shall be calculated at the end of any Service Agreement period, anniversary, or termination of service in accordance with terms of the Service Agreement. Volumes of natural gas taken under Standby Service during the Service Agreement period shall be credited to the Minimum Annual Bill volumes.

SURCHARGES and RIDERS

Rider C – Extended TCJA Temporary Surcharge
Rider I – Distribution System Improvement Charge

PAYMENT

In accordance with Section 8 of this Tariff.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

CHARGE FOR UNAUTHORIZED OVERRUN

Whenever it is necessary to restrict gas supplied under this Rate, the Company will provide due notice of such restriction. If a Customer, after having received due notice of restriction, shall take gas in excess of the amount made available by such notice, then Customer shall be billed for such excess gas at the rate of Fifty Dollars ($50.00) per MCF, or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater, plus the charge specified in the monthly rate table. Customer shall indemnify Company from any claims by third parties resulting from Customer's unauthorized overrun.

Gas delivered under the Rate IS or purchased under the Cash-Out provisions of Section 22.2 or the Retail and Standby Rider or taken under Rate NNS shall be included in the determination of Unauthorized Overrun gas.

RETAINAGE RATE

Company Use and Unaccounted For gas shall be retained in accordance with Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, AND IS, paragraph 22.1(j).

NOTICE

This supplement makes decreases and changes to existing rates(see page 2).

RULES AND REGULATIONS

1. THE CHOICE SUPPLIER TARIFF

1.1 Filing and Inspection. A copy of this Choice Supplier Tariff (Sections 1 – 11) (hereinafter "Supplier Tariff"), which includes the Charges and Rules and Regulations under which the Company will supply Aggregation Service to Company approved Natural Gas Suppliers (Choice Suppliers) serving customers under Rate Schedules RT and NT, is on file with the Pennsylvania Public Utility Commission and is available on the Company's website https://www.ugi.com/tariffs. **(C)**

1.2 Application. The provisions of the Supplier Tariff apply to all Choice Suppliers serving customers under Rate Schedules RT and NT.

1.3 Statement by Agents. No representative has authority to modify a Supplier Tariff rule or provision, or to bind the Company by any contrary promise or representation.

1.4 Rules and Regulations. The Rules and Regulations, as part of this Supplier Tariff, are a part of every Aggregation Agreement entered into by the Company pursuant to this Supplier.

1.5 Purpose of Tariff. This Supplier Tariff sets forth the basic requirements for interactions and coordination between the Company in its role as a Natural Gas Distribution Company (NGDC) and Choice Suppliers, and includes rules necessary for maintaining the delivery of gas to customers served under Rate Schedules RT and NT.

(C) Indicates Change

RULES AND REGULATIONS

2. CHOICE SUPPLIER QUALIFICATION

2.1 Service under this Tariff is contingent upon the Choice Supplier completing the Company's Choice Supplier Application Form to Serve Choice Customers (Application) and Company's approval of such Application. Choice Supplier shall include with its returned Application, payment of a non-refundable Enrollment Fee of five hundred dollars ($500). In the event the Choice Supplier submits an incomplete application, the Company shall provide written notice to the Choice Supplier of the Application's deficiencies. An incomplete Application will not be processed by the Company until it is fully completed by the Choice Supplier and received by the Company. Failure to submit a fully completed Application within thirty (30) calendar days following notice that the Application was incomplete will result in a rejection of the Application.

2.2 Choice Supplier must meet all pipeline credit standards and prove it is qualified by the pipeline to receive an assignment, release or transfer of pipeline capacity.

2.3 Processing of Application. The Company shall promptly process each Application and notify the Choice Supplier of the results of Company's review of such Application. If the Company rejects an application, the Company will provide a reason.

2.4 Approval of Application. Upon approval of Choice Supplier's Application, Company shall execute the duplicate originals of the Aggregation Agreement tendered by the Choice Supplier and return one copy to the Choice Supplier.

2.5 Supplemental Evaluations. Company may require additional periodic credit evaluations to ensure ongoing financial fitness as set forth in Section 8 of this Tariff. The Choice Supplier will be assessed a $250 fee for all credit evaluations performed by Company. The evaluation will be based on standard credit factors such as previous Choice Supplier's customer service record, Dun & Bradstreet or similar financial and credit ratings, trade references, bank information, unused line of credit, and financial information. Company shall have sole discretion to determine creditworthiness based on the above criteria but will not deny creditworthiness without reasonable cause.

2.6 A qualified Choice Supplier may opt to participate in the Purchase of Receivables ("POR") program offered by the Company by entering into a Purchase of Receivables Agreement. Upon approval of a Purchase of Receivables Agreement, the Company shall execute the duplicate originals of the Purchase of Receivables Agreement tendered by the Choice Supplier and return one copy to the Choice Supplier. A copy of the POR Agreement may be found on the Company's Energy Management website.

RULES AND REGULATIONS

3. CUSTOMER LIST

3.1 Customer Choice List. Company will maintain a list of Rate R, RT, N, and NT customers that have authorized the release of their information in a secure portion of a Web Site accessible to Choice suppliers in compliance with the requirements of Rule 3.2. When authorized by the customer, this list shall also include account number, address, rate code and / or historical usage.

3.2 Customer List Confidentiality. Such list shall only be accessible by Choice Suppliers that have executed a Confidentiality Agreement and are otherwise qualified to serve Rate RT and NT customers under this Tariff.

RULES AND REGULATIONS

4. CHOICE SUPPLIER OBLIGATIONS

4.1 Unless otherwise authorized by Company, Choice Suppliers must comply with the provisions of Section 7 of the Choice Supplier Tariff.

4.2 A Choice Supplier must provide and maintain a bond or other financial guarantee in a form and amount as set forth in Section 8 that is acceptable to Company and/or other PUC-approved Supplier of Last Resort.

4.3 A Choice Supplier must acquire or agree to acquire an adequate supply of natural gas to serve Choice Supplier’s Aggregation Pool and make or cause to be made arrangements by which such gas supplies can be transported to Company’s city gates, as directed by Company. Such supplies must be ranked on the transporting pipeline at the pipeline’s highest Predetermined Allocation ranking.

4.4 A Choice Supplier must enter into an Aggregation Agreement to serve Choice customers under Rate Schedules RT and NT.

4.5 A Choice Supplier must comply with Company system reliability requirements, including Daily Flow Directives (DFDs), Operational Flow Orders (OFOs), and notice requirements.

4.6 A Choice Supplier must comply with applicable communications standards, including approved internet based Electronic Data Interchange (EDI) procedures.

4.7 A Choice Supplier must cooperate with Company in the preparation of an annual reliability plan presented to the PUC.

4.8 A Choice Supplier must acquire and maintain a PUC license.

4.9 A Choice Supplier (including their nominating agents, if applicable) who nominates gas for delivery to the Company’s system must have and maintain Internet access. The Choice Supplier shall also provide Company with a valid email address and 24-hour contact information.

4.10 The Company’s provision of Aggregation Service is contingent upon the Choice Supplier paying all amounts billed to it by the Company in a timely manner.

4.11 Failure to comply with all Choice Supplier Obligations will result in the Company disqualifying the Choice Supplier from serving customers under Rate Schedules RT and NT. In the event the Company disqualifies a Choice Supplier, the Choice Supplier may appeal the disqualification to the PUC. If the PUC does not reverse the disqualification within 45 days, the Choice Supplier will be disqualified at the end of the 45-day period and its customers will be returned to sales service or switched to another Choice Supplier. Any Company disqualification will be on a non-discriminatory basis.

RULES AND REGULATIONS

4. CHOICE SUPPLIER OBLIGATIONS

4.12 If a Choice Supplier elects to participate in the Company's POR Program, the Choice Supplier must enter into a POR Agreement for the rate classes that it serves that will be included in the POR. The elected Rate Classes shall be one of the following: (1) RT only, (2) NT only, or (3) RT and NT. All receivables associated with basic natural gas supply services in the specific rate class, subject to the rate class elections made above, must be sold by the participating Supplier to the Utility. For the purposes of this provision, the phrase "basic natural gas supply services" shall include charges directly related to the physical delivery of natural gas to a retail customer but shall not include charges for "carbon-neutral" products, appliance maintenance service, energy efficiency services, termination or cancellation fees, security deposits or other products or services not directly related to the physical delivery of natural gas to a retail customers. Customer accounts that are billed for non-basic natural gas supply services will not be eligible for UGI's POR program. All of the NGS' customer accounts within the elected Rate Classes (subject to the volumetric limits contained in section 5.4) must be POR eligible accounts, with the exception of customers that purchase carbon-neutral products. NGSs may choose to use UGI consolidated billing for Non-POR eligible customers who are purchasing bundled "carbon-neutral" product offerings. The termination and reconnection provisions of Chapters 14 and 56 of the Public Utility Code and PUC regulations shall not be applicable to unpaid NGS charges for non-POR eligible accounts on consolidated billing. NGSs will be responsible for collecting unpaid NGS charges on non-POR eligible accounts on consolidated billing. UGI shall support rate-ready billing, and all NGS rates must conform to supported rate designs. For Purchased Customer Accounts, Company shall pay Choice Supplier an amount equal to 97.69% for residential amounts billed **(C)**
(inclusive of associated sales taxes) and 99.58% of non-residential amounts **(C)**
billed (also inclusive of taxes). Customer participation for NT shall be subject to Volumetric Eligibility pursuant to Section 5.4.

4.13 All existing customers of Choice Suppliers who elect to participate in the Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier and Company that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

All new customers enrolling with Choice Suppliers who are participating in Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier prior to enrollment, and by Company upon enrollment, that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

(C) Indicates Change

RULES AND REGULATIONS

5. OPERATIONAL REQUIREMENTS

5.1 Daily Delivery Requirements. The Company will communicate to each Choice Supplier a Daily Delivery Requirement (DDR). The DDR will be the required amount of gas to be delivered for the indicated date for each Choice Supplier's pool of customers served under Rate Schedules RT and NT and may specify the required points of delivery. The DDR includes a volume of gas that the Company will retain for Company use gas, and lost and unaccounted for gas, equal to 1.0% of total volume of gas delivered into its system for the Customer's account. Choice Suppliers who fail to deliver their DDR will be subject to penalties and imbalance charges as outlined in Rate AG. **(D)**

5.2 Daily Flow Directive. An order issued by the Company to address system management issues including actions necessary to comply with statutory directives and obligations. DFDs will be communicated to affected Customers or NGSs via e-mail if the Customer or NGSs prefer to receive notice in this manner and provide a valid e-mail address, or if no such preference is expressed, either electronically, by telephone, through the use of the media or by an alternate mutually agreed upon method between the Company and the Customer or NGS. DFD notices shall include an explanation of the cause of the DFD. Customers and NGSs must provide the Company with a 24-hour contact for DFDs. Failure to comply with a DFD may result in the Customer or NGS being assessed the penalty charge set forth in Section 22.4 of the Company's Gas Service Tariff.

5.3 Operational Flow Orders. A directive issued by the Company that is reasonably necessary to alleviate conditions that threaten the operational integrity of the Company's system, including actions necessary to comply with statutory directives and obligations OFOs will be communicated as soon as reasonably practical to affected Customers or NGSs via e-mail if the Customer or NGSs prefer to receive notice in this manner and provide a valid e-mail address, or if no such preference is expressed, either electronically, by telephone, through the use of the media or by an alternate mutually agreed upon method between the Company and the Customer or NGS. OFO notices shall include an explanation of the cause of the DFD. Customers and NGSs must provide the Company with a 24-hour contact for OFOs. Failure to comply with an OFO may result in the Customer or NGS being assessed the penalty charge set forth in Section 22.4 of the Company's Gas Service Tariff.

5.4 POR Volumetric Eligibility Requirements for Rate NT. All Rate NT Customers with annual usage of 1,000 Mcf or less will be eligible for inclusion into a POR program.

(D) Indicates Decrease

RULES AND REGULATIONS

6. BILLING AND PAYMENT

6.1 Billing Period. On or before the 15th of a month, Company shall send each Choice Supplier an invoice reflecting all charges incurred by the Choice Supplier for the prior calendar month activities. Such invoice may include charges related to adjustments for prior periods.

6.2 Payment. Payments will be due 10 days following issuance of the invoice. Choice Supplier shall make payment to the Company of such invoiced amount by wire transfer to the bank and account specified on the invoice. If the invoiced amount is less than $1,000, payment can be made by check, payable to the Company. Unpaid balances shall accrue interest at the rate of 1.5 percent per month. Unpaid balances may result in the Company accessing the financial security posted by the Choice Supplier and / or the Choice Supplier being disqualified from providing Aggregation Service.

6.3 Billing Dispute. If Choice Supplier asserts a good faith billing dispute, the Choice Supplier shall inform the Company in writing of such dispute and pay the undisputed amount. The disputed amount shall accrue interest at the effective prime rate of interest as published under "Money Rates" by "The Wall Street Journal", or the maximum contract rate permitted by law, whichever is less. The Choice Supplier and the Company shall endeavor to resolve any disputes promptly and the amount determined to be properly invoiced, plus accrued interest on such amount shall be paid to the Company within fifteen (15) days following such resolution. Unpaid amounts not subject to dispute shall accrue interest at the rate specified in 6.2.

6.4 Licensed Supplier Budget Billing. The Company will bill all budget billing amounts calculated and provided by the Licensed Supplier. The Company will not determine a Licensed Supplier's budget bill charge unless the account is being billed under the POR program.

RULES AND REGULATIONS

7. NOMINATION PROCEDURE

7.1 Customer Choice Nomination Procedure. The Nomination Procedure specifies requirements for nominating, scheduling, balancing, and communicating information relating to Choice Supplier's gas deliveries for customers served under Rates RT and NT.

7.2 Contact Persons. A list of Company contact persons will be posted on the Company's Web Site, located at https://ugi.outsystemsenterprise.com/UGIContacts_FO/, or its successor, along with their department affiliation, email address, and telephone number.

7.3 Mandatory Assignment. As used in this tariff the term "Firm Commodity Supply Alternative" shall mean a Company purchase of natural gas, delivered directly to its distribution system or at points along Company pipeline capacity routes (Commodity Delivery Points), constituting a component of Company's PGC supply portfolio and an alternative to pipeline capacity contracts upstream of the Commodity Delivery Points or other firm sources of PGC supply. Firm Commodity Supply Alternative contractual arrangements may require the payment of demand charges or minimum take requirements. Except as provided below, Choice supplier shall be required to accept releases of Company pipeline capacity combined with bundled city gate sales and, as applicable, peaking sales of gas from Company and sales of gas associated with Firm Commodity Supply Alternative arrangements, in accordance with the following assignments:

A monthly release of interstate pipeline capacity or allocation of Firm Commodity Supply Alternative in an amount equal to forty-three percent (43%) of the Peak **(C)** Day Delivery Requirement ("PDDR") of the Choice Customers served by the Choice Supplier during the month shall be released or allocated at a price equal to the projected weighted average demand cost of all PGC capacity, storage, peaking and Firm Commodity Supply Alternative assets, divided by .283. Effective November 1, **(C)** 2020, to the extent the full Firm Commodity Supply Alternative is not fully nominated by Choice Supplier to satisfy its DDR, the remaining daily quantity may be nominated to a non-Choice transportation customer or pool of non-Choice transportation customers.

The Company shall also provide Choice Suppliers with a must-take Monthly Bundled Sale Quantity ("MBSQ") during each winter month of November through March, and the Choice Supplier would be permitted to nominate and purchase gas at the Company's city gates throughout each winter month, subject to the Maximum Daily Quantity ("MDQ") limits, up to the MBSQ. The MDQ equals twenty-one percent(21%) **(C)** of the PDDR of the Choice Customers served by the Choice Supplier during the month multiplied by the percentage shown on the Company's Energy Management website under the heading Maximum Daily Bundled Sale Percentages. The minimum daily quantity is zero. Choice Suppliers are required to nominate to the Company a daily quantity for bundled sales no later than 2:00 P.M. Eastern Prevailing Time on each Intercontinental Exchange ("ICE") trading day for deliveries applicable to the ICE flow dates. If no nomination is received, the nomination quantity would default to zero. The Company reserves the right to issue Operational Flow Orders ("OFO") that can modify the daily bundled sale MDQ or require certain levels of deliveries from the released firm transportation contracts. These OFOs would be issued for operational reasons only. MBSQs would be based on the Company's storage withdrawal plan, to be updated annually, and communicated as a percentage of each Choice Supplier's pre-month normalized

(C) Indicates Change

RULES AND REGULATIONS

7. NOMINATION PROCEDURE - CONTINUED

delivery requirements, which will be shown on the Company's Energy Management website under the heading Must-Take Monthly Bundled Sale Percentages.

If the full MBSQ is not nominated and purchased by the end of each such winter month, the shortfall ("Bundled Sale Cash-In quantity") would be purchased by the PGC ("Bundled Sale Cash-In amount") as follows:

a. The DDR Variation Percentage is the sum of the actual DDRs experienced by a Choice Supplier divided by the sum of the pre-month average DDRs that was used to calculate the MBSQ, converted to a percentage. For any month where the DDR Variation Percentage is greater than ninety percent (90%), the Bundled Sale Cash-In amount would equal (1) the product of (a) 0.90 times the lowest absolute low for the Texas Eastern, M-2 receipts index price as published in Platts' Gas Daily for the applicable month of flow minus (b) the summer index price used for bundled sales (the "Bundled Sale Cash-In index") times (2) the Bundled Sale Cash-In quantity. If the resulting amount is positive, it would be credited to the Choice Supplier, or if negative, would be billed to the Choice Supplier.

b. In recognition of the effects of extreme warm weather conditions, shortfall amounts would be purchased as follows under such conditions:

   i. For any month where (a) the DDR Variation Percentage is less than or equal to ninety percent(90%) and (b) the Bundled Sale Cash-In quantity is less than or equal to the MBSQ minus the product of the DDR Variation Percentage times the MBSQ, then the Bundled Sale Cash-In amount would equal (1) the First of the Month Price called "Columbia Gas Transmission Corp., Appalachia" as published in Platts' Gas Daily Price Guide ("Inside FERC") for the month subsequent to the applicable month in which the Bundled Sale Cash-In quantity was created minus the summer index price used for bundled sales (the "Alternate Bundled Sale Cash-In Index") times (2) the Bundled Sale Cash-In quantity. If the resulting amount is positive, it would be credited to the Choice Supplier, or if negative, would be billed to the Choice Supplier.

   ii. For any month where (a) the DDR Variation Percentage is less than or equal to ninety percent (90%) and (b) the Bundled Sale Cash-In quantity is greater than the MBSQ minus the product of the DDR Variation Percentage times the MBSQ, then the Bundled Sale Cash-In amount would equal (1) the Alternate Bundled Sale Cash-In Index, as defined in Section 7.3.b.i, times the DDR Variation Percentage times the MBSQ plus(2) the Bundled Sale Cash-In Index, as defined in Section 7.3.a,times the difference of the Bundled Sale Cash-In quantity minus the product of the DDR Variation Percentage times the MBSQ. If the resulting amount is positive, it would be credited to the Choice Supplier, or if negative, would be billed to the Choice Supplier.

RULES AND REGULATIONS

7. NOMINATION PROCEDURE - CONTINUED

In addition to the bundled sales described above, Choice Suppliers shall be required to purchase from Company a separate bundled sale on peak days ("Peaking Sale") equal to an amount up to thirty-six percent (36%) of the PDDR of the Choice **(C)** Customers served by the Choice Supplier during the month. The Peaking Sale would be made on winter days when the Choice Supplier's DDR exceeds the sum of the released firm capacity and the MDQ associated with the bundled sale. The Peaking Sale quantity would be the difference of the Choice Supplier's DDR minus the sum of the released firm capacity and the MDQ associated with the bundled sale. The Peaking Sale price would be based on the commodity cost of the Company's peaking services. If weather conditions cause the Choice Supplier's DDR to exceed the Choice Supplier's PDDR, the Choice Supplier would be responsible for arranging for supplies to meet the additional delivery requirements for its Choice Customers.

Also in addition to the bundled sales described above, to the extent Company's design cold PGC supply portfolio includes Firm Commodity Supply Alternative contractual arrangements containing minimum take requirements, Choice Supplier shall also be required to make monthly purchases of natural gas from Company in an amount and at the commodity price Company would have been required to pay under the Firm Commodity Supply Alternative contractual arrangements had the Choice Customers projected to be served by the Choice Supplier during the month received PGC service. To the extent Company's design cold PGC supply portfolio includes Firm Commodity Supply Alternative contractual arrangements not containing minimum take requirements, Choice Supplier may elect on a month-to-month basis to make monthly bundled city gate purchases of natural gas from Company in an amount and at the commodity price Company would have been required to pay had the Choice Customers projected to be served by the Choice Supplier during the month received PGC service, provided, however, that nothing in this section shall preclude the Company from issuing OFOs requiring additional purchases of natural gas in accordance with the provisions of Section 5.3 of this tariff.

7.4 Capacity Recall. All capacity assigned, released or transferred by Company is subject to recall, or in the event:

a. A Choice Supplier is disqualified as an approved Choice Supplier on Company's system; or

b. The amount of capacity assigned, release or otherwise transferred is no longer required to serve the Choice Supplier's Pool; or

c. The Choice Supplier fails to comply with Section 4 of this tariff (Supplier Obligations) and the capacity is required by the Company or PUC approved Supplier of Last Resort to meet its firm commitments; or

d. The capacity is needed to protect the Company's gas distribution system integrity or meet the Company's public utility obligations.

(C) Indicates Change

RULES AND REGULATIONS

7. NOMINATION PROCEDURE - CONTINUED

7.5 Agents. A Choice Supplier may have one or more agents who perform one or more supply obligations under this Supplier Tariff. In the event such an agent or agents are utilized, Choice Supplier shall notify Company of the responsibilities of the Agent and shall provide Company with the Agent's valid e-mail address, 24-hour contact, and phone number for contact purpose. Choice Suppliers using Agents shall remain liable for all charges and penalties.

7.6 Determination of Capacity Assignment Quantities. Assignments, releases or transfers of upstream pipeline firm transportation capacity made pursuant to Section 7.3 shall be made on the basis of and in accordance with the supply portfolio held by Company at the time of assignment and the composition of the Choice Supplier's Pool. Each month the Company will evaluate and adjust the capacity releases quantity made to the Choice Supplier from time to time, as required.

7.7 City Gate Receipt Points. For nomination purposes, all transportation volumes received on behalf of customers served under Rates RT and NT shall be nominated to the Company's City Gate receipt points. Company reserves the right to specify delivery receipt points.

7.8 Daily Nominations. Choice Suppliers serving Rate RT and NT customers shall submit daily nominations equal to the DDR, consistent with the Company's requirements.

7.9 Third Party Supply Nominations - Customer Consent. All Company Choice Customers must provide consent to any Choice Supplier nominating on their behalf. Enrollments by Choice Suppliers are deemed to constitute that the customer has provided such consent. For transportation customers served under Rates RT and NT the Choice Supplier must maintain and produce upon request by Company evidence of customer consent within one business day notice.

RULES AND REGULATIONS

8. FINANCIAL SECURITY

8.1 Financial Security. A Choice Supplier shall provide financial security to ensure that Company and/or other PUC-approved Supplier of Last Resort is able to receive, without undue delay, funds or other forms of remuneration sufficient to meet the financial consequences of a Choice Supplier's failure to perform its natural gas supply delivery service obligations hereunder. Company may also use such forms of financial security to satisfy in part or in whole a Choice Supplier's obligation to pay the penalties authorized by this Supplier Tariff. The amount and the form of the security, if not mutually agreed upon by the Company and the Choice Supplier, shall be based on the criteria established under 52 Pa. Code § 62.111(c) and as set forth in this Section 8.

8.2 Amount of Financial Security. A Choice Supplier seeking to be licensed to provide service on the Company's system shall be required to provide 1) a minimum surety level of $50,000 or 2), if higher, the sum of the surety level requirements calculated on a customer basis equal to (i)$60.00 per customer for residential customers; and ii)$94.24/Dth times the Design Day Requirement (in Dth) for Choice Supplier's pool of non-residential customers. This security level shall be subject to adjustments as provided in Section 8.5. Provided, however, the Company reserves its right to file to change that methodology after the effective date of new rates established in the proceeding if the security levels prove inadequate.

8.3 Forms of Financial Security. For purposes of satisfying the amount of financial security determined under Section 8.2 hereof, the Choice Supplier shall provide financial security in one or more of the following manners, in a form reasonably acceptable to the Company and/or other PUC-approved Supplier of Last Resort, and shall reimburse Company for attorneys' fees and all related external costs incurred by Company in implementing and enforcing the form of financial security provided by Choice Supplier:

(a) cash;

(b) performance bond;

(c) irrevocable letter of credit;

(d) guarantee from a third party;

(e) call options satisfying the requirements of Section 8.4 hereof;

(f) in the case of Choice Suppliers with annual operating revenues of less than $1 million; real or personal property placed in escrow or other arrangement that would make the property readily available to Company in the event of the Choice Supplier's non-performance or entering into bankruptcy, provided that the Choice Supplier (i) provides a verified statement, certified by a third party report, showing that the Choice Supplier has clear title to the property and that the property has not been pledged as collateral, or otherwise encumbered in regard to any other legal or financial transaction; (ii) provides a current appraisal report of the market value of the property; and (iii) grant the Company, upon request, a security interest in such property in a form acceptable to Company;

(g) accounts receivable pledged or assigned to the Company pursuant to a Company PUC-approved POR program satisfying the requirements of Section 8.6 hereof; or

RULES AND REGULATIONS

8. FINANCIAL SECURITY – CONTINUED

(h) another form of financial security mutually acceptable to Company and Choice Supplier.

8.4 Call Option Requirements. A Choice Supplier may meet some or all of its financial security obligations determined under Section 8.2 hereof by providing to Company or paying the Company to procure a Call Option for a volume equal to the monthly Design Day Requirements of the Choice Supplier's customers served under Rate Schedules RT and NT. Unless otherwise authorized by Company, the Call Option must have a strike price equal to or less than the Choice Supplier's contract price(s) with its customers served under Rate Schedules RT and NT. The Call Option shall allow Choice Supplier or Company to call on a volume equal to the Choice Supplier's Design Day Requirement on each and every day the Call Option is in place such that the exercise on any day does not preclude or impact the ability to exercise the option on a subsequent day. Call Options shall be subject to the following requirements:

(a) If procured by Choice Supplier, the Call Option must enable Company to exercise the Call Option in the event of non-performance by the Choice Supplier without obtaining the prior consent of Choice Supplier;

(b) If procured by Choice Supplier, the Call Option may be exercised by it for any reason, including economic reasons, on any day when Company and/or other PUC-approved supplier of last resort does not need to exercise it because of Choice Supplier's failure to perform its natural gas supply delivery service obligations hereunder;

(c) Company shall specify the period over which the Call Option may be exercised;

(d) The Call Option may be a direct NYMEX instrument, or it may be obtained indirectly from a third party. If the Call Option is a direct NYMEX instrument, the Choice Supplier shall assign the applicable capacity to Company. If the Call Option is obtained indirectly from a third party, then the transaction point shall be at a Company-approved city gate receipt point; and

(e) Choice Supplier shall be responsible for the cost of the Call Option.

8.5 Adjustments to Financial Security Level. From time to time, the Company shall review the financial security provided by a Choice Supplier and determine whether any adjustments are required consistent with the formula under Section 8.2 hereof. The Company shall use the following factors to determine whether any such adjustments are required:

(a) A change in the Choice Supplier's recent operating history on Company's system or on other NGDS systems has materially affected Company system operation or reliability. A change that could materially affect the Company system or reliability may occur when the Choice Supplier fails to deliver natural gas supply sufficient to meet its customers' needs on 5 separate occasions within a 30-day period or fails to comply with Company Operational Flow Orders as defined at 52 Pa. Code § 69.11.

RULES AND REGULATIONS

8. FINANCIAL SECURITY - CONTINUED

(b) A significant change in the number of customers served, in the volume of gas delivered, or in the unit price of natural gas or a change in the class of customers being served by the Choice Supplier. A change over a consecutive 30-day period of 25% in the number of customers served, in the volume of gas delivered or in the average unit price of natural gas would represent a significant change.

(c) A change in the Choice Supplier's credit reports that materially affects the Choice Supplier's creditworthiness. A Choice Supplier's creditworthiness could be materially affected when two of the following credit rating companies change the Choice Supplier's credit rating: Dun & Bradstreet, Standard & Poor's Rating Services, Inc., TransUnion LLC, EQUIFAX Inc., Experian Information Solutions, Inc.

(d) A change in operational or financial circumstances that materially affects the Choice Suppliers' creditworthiness. A Choice Supplier's creditworthiness could be materially affected when two of the following investment rating companies change the Choice Supplier's rating of its issued securities from an investment grade or good rating to a speculative or moderate credit risk rating, and vice versa: Standard and Poor's Rating Services, Inc., Moody's Investment Services, Inc., Fitch, Inc., A.M. Best Company, Inc. and DBRS, Inc.

8.6 <u>POR Requirements</u>. A Choice Supplier may meet part or all of its financial security obligations determined under Section 8.2 hereof utilizing the accounts receivable pledged or assigned to the Company pursuant to a Company PUC-approved POR program, provided that Choice Supplier executes a Security Agreement which, among other things: (a) grants Company a first priority security interest in the accounts payable to Choice Supplier for the purchased receivables; and (b) grants Company an immediate right of set off against any account payable to Choice Supplier for any obligation owed by Choice Supplier to Company.

To reflect the variability in the amounts owed by Company to Choice Supplier for purchased receivables given seasonal variations in customer loads, the amount of this form of security will be determined pursuant to the following formula: (The average daily Mcf volume of gas delivered by the Choice Supplier during the lowest 30 day period of volume during the past 12 months for accounts enrolled in the POR program) times (the lowest rate per Mcf charged by the Choice Supplier during the past 12 months) times (the number of days between the purchase of and payment for a Choice Supplier's receivables).

8.7 <u>Notice</u>. If the Company determines, based on the criteria in Section 8.5 hereof, that an adjustment in the amount or type of security that a Choice Supplier must provide is warranted, the Company shall provide notice of its determination to the Choice Supplier in writing. The Choice Supplier shall comply with the Company's determination no later than 5 business days after the date the Choice Supplier was served with notice of the Company's determination. If the Choice Supplier disagrees with the Company's determination, the Choice Supplier may file a dispute with the Company, and the Company and the Choice Supplier must attempt to resolve the dispute within 30 days after the date that the Company was notified of the dispute.

RULES AND REGULATIONS

9. ENROLLMENT OF CUSTOMERS INTO RATE SCHEDULES RT AND NT

9.1 To be served under Rate Schedules RT and NT, a Customer must be enrolled by the Choice Supplier elected by the Customer. Such enrollment by the Choice Supplier must be provided in an electronic file to the Company via an approved internet-based EDI transaction. The requirement filed shall include:

a. The customer’s name;
b. The customer’s address;
c. The customer’s Company account number;
d. The specific transaction;
e. The elected billing option.

9.2 Company Confirmation. Company will electronically confirm receipt of the enrollment information and within one (1) business day and subsequently provide an electronic validation of the Choice Supplier’s transmitted information.

9.3 Determination of Gas Flow Date. For enrollments received on or before the 15^{th} of any calendar month, the customer will be switched to Rate Schedule RT and NT, where the customer does not respond within 5 days from the Company’s mailing of a letter confirming the election to be served by the Choice Supplier, on the Customer’s regularly scheduled meter reading date in the calendar month immediately following the month the enrollment information was received. For enrollments received after the 15^{th} of any calendar month, the customer will be switched to Rate Schedule RT and NT, where the customer does not respond within 5 days from the Company’s mailing of a letter confirming the election to be served by the Choice Supplier, on the Customer’s regularly scheduled meter reading date in the second calendar month following the month the enrollment information was received.

RULES AND REGULATIONS

10. RATE AG - AGGREGATION SERVICE

AVAILABILITY

Rate AG - Aggregation Service (AG Service) is available to and required for an approved Natural Gas Supplier (Choice Supplier) licensed by the PUC to provide natural gas supply service to customers who qualify to receive service under Rate RT (General Service - Residential Transportation) or Rate NT (General Service - Non-residential Transportation)(hereinafter a Choice Supplier).

AGGREGATION SERVICE

A Choice Supplier qualified to receive Rate AG Aggregation Service shall aggregate the load of customers served under Rates RT and NT customers in an Aggregation Pool. Such Aggregation Pool is limited to customers served under Rates RT and NT.

ASSIGNMENT OF COMPANY PIPELINE CAPACITY

Company has the right to require the Choice Supplier to accept a release, assignment or transfer of Company pipeline capacity on a recallable basis. The minimum such assignment shall be is one (1) Dth per day per pipeline path.

RATE TABLE

Balancing Fee for Choice Supplier ($/MCF) – As posted.

(Total Cost of Pipeline Assets Retained by Company for System Balancing - Balancing Related PGC Credits) divided by (Projected Annual Sales and Transportation Volumes Utilizing the Assets, as projected in each annual 1307(f) filing). This rate will be posted on Company's Delivery Service Web Site or its successor and will be updated as required.

Pipeline Capacity and Bundled Sales:
Choice Supplier shall be responsible for applicable charges pursuant to Section 7.

RULES AND REGULATIONS

10. RATE AG - AGGREGATION SERVICE - CONTINUED

PENALTIES

Failure to Deliver DDR:
The difference in price between the highest published index price for the Texas Eastern, M-3 and the lowest published index price for Texas Eastern, M-2 as published in *Platts' Gas Daily* on the table "Daily Price Survey" corresponding to the date the failure to deliver occurred, plus the applicable transportation charges from Texas Eastern M-2 to M-3, but shall not be lower than $0.25/per Dth, applied to the difference between the DDR and the delivered volumes, plus all incremental costs incurred by Company as a result of the failure to deliver the DDR.

The Company may not charge for delivering in excess or under of the DDR if the overdelivery or underdelivery is anticipated to benefit the distribution system's daily balancing position as determined by Company in its sole discretion.

Failure to Comply with an OFO or DFD: **(C)**
The Company has the right to issue Operational Flow Orders and Daily Flow Directives at any time. Failure to comply with any OFO or DFD shall result in a penalty charge of Fifty Dollars ($50) per Dth or the highest of the charges calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge for any delivery region, whichever is greater.

NOTICE

A Choice Supplier must provide Company, or any PUC-authorized alternative Supplier of Last Resort and its Rate RT and NT Customer(s) with ninety (90) days advance written notice of its intention to exit the market. In the event a Choice Supplier discontinues service or exits the market before its contract for natural gas supply service to a Rate RT and NT Customer expires and such Customer returns to its Supplier of Last Resort, Choice Supplier shall provide all contract billing data required by Company or other PUC-approved Supplier of Last Resort to render bills to Choice Supplier's customers for the period between Choice Supplier's default or exit from the market and the customer's next meter reading date.

BALANCING

Company will balance the daily difference, if any, between the anticipated Customer use, as communicated through the DDR, and the actual usage of Choice Supplier's customers. For this service, the Choice Supplier shall pay to Company the applicable Balancing Fees shown in this rate schedule, per MCF of Aggregation Pool usage, as measured at the meter.

(C) Indicates Change

RULES AND REGULATIONS

10. RATE AG - AGGREGATION SERVICE – CONTINUED

RECONCILIATION

Company shall calculate the difference between the actual deliveries of each Choice Supplier's Aggregation Pool, and the usage of each such Aggregation Pool. The Company shall adjust future DDRs to account for any usage differences between forecasted weather and actual weather. Where actual meter reads cannot be obtained, the Company will estimate usage and such estimate shall be deemed actual usage. At the time a Choice Supplier no longer has any Choice Customers enrolled, the cumulative difference between delivered volumes and usage of the Choice Supplier's Aggregation Pool shall be cashed out at Company's average cost of gas purchased for the most recent 12 months. The average cost of gas shall be calculated as the product of the total commodity cost of gas purchases including transportation and fuel used and accounted for the most recent 12 months, divided by tariff sales for the same 12-month period.

NATURAL GAS SUPPLY PLANS

Choice Supplier shall cooperate with Company in the preparation of such reliability plans required under Section 1317 of the Public Utility Code, and shall provide all reasonable information related to gas deliverability assets under its control required by Company including providing copies of pipeline capacity contracts or delivered supply contracts, or, in lieu of providing such contracts, warrant pertinent information as required by the Company or any regulatory authority. Choice Supplier shall also enter into any necessary contractual arrangements, or make any required regulatory filings, to ensure that contracts and assets under its control, which are relied upon in Company's reliability plan, are available to Company or PUC-authorized supplier of last resort in accordance with Choice Supplier's obligations under its Aggregation Agreement and this Tariff.

COMPLIANCE WITH THE PENNSYLVANIA PUBLIC UTILITY COMMISSION REQUIREMENTS

Choice Supplier shall at all times comply with all applicable PUC requirements and regulations.

UGI UTILITIES, INC.- GAS DIVISION

11. AGGREGATION AGREEMENT

FOR RATE SCHEDULES RT and NT

(Pro Forma)

This Aggregation Agreement for Rate Schedules RT and NT ("Aggregation Agreement") is made and entered into this _______ day of ______________, 20___, by and between UGI Utilities, Inc. – Gas Division, a Pennsylvania Corporation ("Company"), and __________________, a _________________________ ("Choice Supplier").

WHEREAS, Company is a Pennsylvania public utility that, amongst other things, provides intrastate transportation service to Rate RT and NT customers located within its certificated service territory; and

WHEREAS, Choice Supplier is engaged in the business of selling natural gas supply services, and desires to market such services to Rate RT and NT customers located within Company's certificated service territory; and

WHEREAS, pursuant to the terms and conditions set forth in this Aggregation Agreement, Company is willing to receive natural gas supplies at specified points of interconnection situated between Company's facilities and the facilities of one or more interstate natural gas pipeline companies to serve the aggregated load of Rate RT and NT customers served by Choice Supplier, and to provide other services to facilitate the provision by Choice Supplier of natural gas supply services to customers; and

WHEREAS, pursuant to the terms and conditions set forth in this Aggregation Agreement, Choice Supplier is willing to deliver natural gas supplies for receipt by Company for subsequent transportation and redelivery at specified end-use customer locations, and to acquire aggregation services from Company.

NOW, THEREFORE, intending to be legally bound hereby, Company and Choice Supplier agree as follows:

ARTICLE I. DEFINITIONS

For the purposes of this Aggregation Agreement, in addition to any definitions set forth in Company's Gas Service Tariff and *Nomination Procedure*, which are hereby incorporated herein by reference, the following definitions apply:

1. **Aggregation Service** means services provided by Company to Choice Supplier to facilitate the delivery of gas supplies to customers receiving service under Rates RT and NT.

2. **Balancing** means services provided by Company to cover differences between a Choice Supplier's Daily Delivery Requirement and the actual usage of the Choice Supplier's Aggregation Pool.

3. **Customer** means a recipient of service under Rate Schedules RT and NT that contracts for natural gas supply service from a Choice Supplier.

4. **Daily Delivery Requirement (DDR)** means the daily quantities of natural gas supplies a Choice Supplier is required to deliver for an Aggregation Pool, as forecasted and communicated by Company, and may specify the required points of delivery. Such forecast shall be calculated to include volumes needed for end-use requirements, prior imbalances and Company use and unaccounted for gas.

5. **Delivery Point** means a point specified by Company where Choice Supplier may deliver natural gas supplies for subsequent redelivery by Company to Choice Marketer's Rate RT and NT customers.

6. **Rate Ready Billing** is the method of billing used by the Company to calculate the natural gas supply services provided by the Choice Supplier. Under this method, the Company uses actual meter readings obtained by the Company, or estimated consumption when the Company is unable to obtain an actual meter reading, and billing rate information provided by the Choice Supplier to calculate the bill.

7. **Transportation** means a service provided by Company on its facilities that enables gas owned by others to be received into, moved through, and delivered out of facilities owned, leased, or operated and controlled by Company.

8. **Upstream Capacity Assignment, Release or Transfer** means the process to provide access to interstate pipeline capacity and storage contracts owned by Company to Choice Supplier pursuant to Company's tariff and any applicable regulatory rules.

ARTICLE II. TERM

This Aggregation Agreement shall become effective on _________________ and shall remain in effect, unless terminated pursuant to Section 6.1 hereof, or by either party by providing ninety (90) days' prior written notice, for so long as Choice Supplier is qualified to receive Rate AG service from Company. In the event this Aggregation Agreement expires or terminates, Company shall have no obligation, as between Choice Supplier and Company, to accept any natural gas supplies tendered by Choice Supplier for receipt into Company's facilities, and Choice Supplier's payment and financial obligations shall continue until fully discharged.

ARTICLE III. CHOICE SUPPLIER'S OBLIGATIONS

1. **Compliance**. Choice Supplier agrees that it shall comply with all of the applicable terms and conditions of Company's Gas Service Tariff and Company's Supplier Tariff, both of which are hereby incorporated by reference.

2. **Creditworthiness**. Choice Supplier shall establish, and maintain throughout the term of this Aggregation Agreement, and thereafter until all of Choice Supplier's payment obligations incurred under this Aggregation Agreement have been fully discharged, a satisfactory Financial Security status with Company. To enable the Company to determine credit status, Choice Supplier will provide to the Company the following: 1) relevant financial information to determine creditworthiness; 2) appropriate trade and banking references; and 3) written consent for Company to conduct a credit investigation. In addition, Choice Supplier shall comply with the Financial Security provisions of Company's Supplier Tariff, and may, based on Choice Supplier's credit standing with Company, be required to provide financial security in excess of the minimum amounts specified therein.

3. **Standards of Conduct**. Choice Supplier shall abide by all standards of conduct and other legal requirements applicable to Choice Supplier's line of business, including but not limited to the standard of conduct applicable to Choice Suppliers set forth in rules and regulations established by regulatory bodies having jurisdiction over Choice Supplier's activities, and other applicable law.

4. **Payments**. Choice Supplier will remit payment for all services within 10 days after receipt of Company invoice. A late payment charge of 1.50% per month will be applied to all outstanding balances as of the due date.

5. **Customer List**. Choice Supplier shall execute an Electronic Trading Partner Agreement and will keep confidential any customer information acquired either directly or indirectly from Company and use such information solely for the purpose of offering natural gas supply service to Rate RT and NT customers. In the event the Company determines the Choice Supplier impermissibly released customer information to another party, in addition to all available remedies, Company may, at its option, immediately cancel this Aggregation Agreement.

ARTICLE IV. COMPANY'S OBLIGATIONS

1. **DDR**. Company shall provide Choice Supplier with its DDR for each Gas Day. Company shall accept receipt of all gas volumes up to the DDR. Company shall have the right to accept, but shall in no instance be required to accept, an Over-delivery by Choice Supplier. The acceptance of such over delivery shall not constitute any waiver of any provisions of the Company’s Gas Service Tariff or *Nomination Procedure*.

2. **Monthly Statement**. Company shall bill Choice Supplier by the 15th of each month for services provided by Company during the preceding month and other amounts due to Company.

3. **Enrollment Notification.** Company shall generate and send a letter to all customers enrolled by a Choice Supplier indicating the supplier selected and the date service from the Choice Supplier is scheduled to commence. All customers enrolled by

the 15th of each month will be transferred to their respective Choice Supplier effective with their next calendar meter read if customer does not respond within five (5) days following confirmation to challenge the enrollment. Company shall send an electronic message confirming the selection to the Choice Supplier.

4. **Rate AG.** Company shall provide all of the other aggregation services applicable to Choice Supplier specified in the Rate AG provisions of its tariff.

ARTICLE V. BILLING SERVICE

5.1 **Standard Billing Service**. Company shall bill Choice Supplier's Rate RT and NT customers for natural gas supply services provided by Choice Supplier on a rate-ready basis unless (a) a Choice Supplier not participating in the Company's POR program elects to provide a separate bill for its charges or (b) a Choice Supplier's customer elects to receive a separate bill for such services from its Choice Supplier. Choice Supplier must provide all billing rate information no later than fifteen (15) days prior to the effective date of such rate. Company will input all requests for new plans within a reasonable time frame based on the number of requests received.

5.2 **Standard Billing Charges**. Choice Supplier shall pay to Company the following fees for billing services:

Billing Fee $0.25/Bill.

Billing Adjustment Fee

Affecting One (1) Month - $3.10/Revised Bill

Affecting More than One (1) Month - $3.60/Revised Bill

5.3 **Negotiated Billing Service**. In the event a Choice Supplier wants Company to provide a billing service other than the Standard Billing Service, such service shall be negotiated between Company and Choice Supplier.

5.4 **Choice Supplier Budget Billing.** The Company will bill all budget billing amounts calculated and provided by the Choice Supplier unless the account is being billed under the POR program, in which case the Company will provide budget billing to the customer. The Company will not determine or reconcile a Licensed Supplier's budget bill charge if the Licensed Supplier is not participating in the Company's POR program.

ARTICLE VI. REMEDIES

6.1. **Termination Upon Default**. In addition to other rights a party may have under this Aggregation Agreement, if either party fails to perform an obligation, or breaches any representation or warranty ("Defaulting Party") under this Agreement, then the other party (Non-Defaulting Party") shall have the right to terminate this Agreement by providing prior written notice thereof to the Defaulting Party. Termination pursuant to this Article shall be without waiver of any additional remedy, whether at law or in equity, to which the party not in default otherwise may be entitled for breach of this Agreement.

6.2. **Limitation of Liability**. Except as expressly permitted under this Agreement and Company's Gas Service Tariff, neither party shall be entitled to recover incidental, consequential or punitive damages, or lost profits, for any breach by the other party of an obligation, representation or warranty under this Agreement, provided such limitation shall not apply to willful or grossly negligent misconduct on the part of the Defaulting Party.

ARTICLE VII. REPRESENTATIONS, WARRANTIES AND INDEMNIFICATION

Choice Supplier warrants that 1) it shall have good title to all natural gas tendered for receipt by Company hereunder, or is authorized by the owner of such gas to tender it for delivery to Company, and 2) such gas will be free and clear of all liens, encumbrances, and claims whatsoever. Choice Supplier shall fully indemnify

Company, and save it harmless from all suits, actions, debts, accounts, damages, costs, losses and expenses arising from or out of a breach of such warranties.

ARTICLE VIII. LIMITATION OF THIRD PARTY RIGHTS

This Agreement is entered into solely for the benefit of the Company and the Choice Supplier and is not intended and should not be deemed to vest any rights, privileges or interests of any kind or nature to any third party, including, but not limited to the Customers that comprise Choice Supplier's Pool under this Agreement.

ARTICLE IX. SUCCESSION AND ASSIGNMENT

This Agreement shall be binding upon and inure to the benefit of the successors and assigns of the respective parties hereto. However, no assignment of this Agreement, in whole or in part, will be made without the prior written approval of the non-assigning party. The written consent to assignment shall not be unreasonably withheld.

ARTICLE X. APPLICABLE LAW AND REGULATIONS

This Agreement shall be construed under the laws of the State of Pennsylvania and shall be subject to all valid applicable State, Federal and local laws, rules, orders, and regulations. Nothing herein shall be construed as divesting or attempting to divest any regulatory body of any of its rights, jurisdiction, powers or authority conferred by law.

ARTICLE XI. NOTICES AND CORRESPONDENCE

Written notice and correspondence to Company shall be addressed as follows:

UGI Utilities, Inc. – Gas Division

1 UGI Drive

Denver, PA 17517

Attention: Manager, Tariff & Supplier Administration

Email: EDI-GAS@UGI.COM

Written notices and correspondence to Choice Supplier shall be addressed as follows:

Name

Address

Attention:________________

Telephone:

Email:

Either party may change its address for receiving notices effective upon receipt, by written notice to the other party.

ARTICLE XII. MISCELLANEOUS

12.1 No modification of the terms and provisions of this Agreement shall be or become effective except by execution of written contracts or by modification of Company's Gas Service Tariff.

12.2. No waiver by any party of any one of more defaults by any other party of any provisions of this Agreement shall operate or be construed as a waiver of any subsequent or previous default or default, whether of a like or a different character.

12.3. In the event any tax or assessment is imposed, directly or indirectly, upon the gas tendered to, or received by Company for redelivery, Choice Supplier agrees to bear the amount of such tax or assessment. In the event that Company is required to pay such tax, Choice Supplier agrees to reimburse Company for such payment.

12.4. The subject heading of the articles of this Agreement are inserted for the purpose of convenient reference and are not intended to be a part of the Agreement nor considered in any interpretation of the same.

12.5. In the event of a conflict between the provisions of this Agreement and Company's Gas Service Tariff, the provisions of Company's Gas Service Tariff shall govern.

IN WITNESS WHEREOF, the parties hereto executed this Agreement on the day and year first above written.

NOTICE

This tariff makes Increases/Decreases/Changes to existing rates (see page 2-2(b)).

LIST OF CHANGES MADE BY THIS SUPPLEMENT
(Page Numbers Refer to Official Tariff)

Cover Page
- Updated to reflect Supplement Number, Notice language, Issue and Effective dates.

Table of Contents, Pages 3-4.
- Updated for all Tariff revisions detailed below.

Description of Territory, Pages 5-19.
- Description of Territories has been revised from the former South, North and Central rate districts to a consolidated rate district presentation.
- Pages 19(a) and 19(b) have been added as a pagination change and intentionally left blank.

Rule 5, Extension Regulation, Page 35.
- Subsection 5.1(b)(1) language has been modified to replace the "Company's Allowable Investment Amount" with the "Customer contribution amount".

Rule 10, Rider A, State Tax Adjustment Surcharge, Page 48.
- The State Tax Adjustment Surcharge rate has been reset to 0.00%.
- Rate GBM, which no longer exists, was removed from the applicable list of rates.

Rule 11, Rider B, Section 1307(f) Purchased Gas Costs, Page 50.
- Reference to 22A.6 has been renumbered as 22.6.

Rule 12, Rider C, Extended TCJA Temporary Surcharge, Pages 53-54.
- Rider C, Extended TCJA Temporary Surcharge has ended and has been removed and replaced with Rider C, Weather Normalization Adjustment.

Rule 13, Rider D, Merchant Function Charge, Page 55.
- The rate has increased for Residential PGC Customers to 2.27% and for Non-Residential PGC Customers to 0.44%.

Rule 15, Price to Compare, Page 57.
- The Price to Compare has changed as a result of the change to the Merchant Function Charge.

Rule 16, Rider F, Universal Service Program, Page 59.
- Annual Reconciliation – the CAP credit bad debt offset language has been updated and will be applied where CAP enrollment exceeds CAP enrollees as of September 30, 2022.

Rule 19, Distribution System Improvement Charge, Page 63.
- The rate has been reset to 0.00%.

Rule 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS, Pages 81(a)-81(i)
- Section 22.A has been renumbered Section 22. All references to 22.A have been renumbered to 22.
- These pages have been repaginated. Previous pages 81(a)-81(i)have been renumbered as 73-81 which were previously intentionally left blank.

Rate R – General Service – Residential, Page 85.
- The Customer Charge and Distribution Charge have been increased.
- Rider C Extended TCJA Temporary Surcharge has ended and has been replaced with Rider C Weather Normalization Adjustment.

RULES AND REGULATIONS

5. EXTENSION REGULATION

5.1 Obligation to Extend or Expand.

(a) Under the rules set forth below and under normal conditions of construction and installation, upon written application, the Company will extend or expand its facilities within its service territory, provided that (a) the requested extension or expansion will not adversely affect the availability or deliverability of gas supply to existing customers and (b) the Company's investment in facilities is warranted by the Annual Base Revenue to be derived from the extension. The costs of extending or expanding facilities beyond the Company’s Allowable Investment Amount shall be paid by the Extension Applicant as a contribution. Extension contributions may be excused, in whole or in part, in accordance with Rule 5.1(b). Upon request, the Company will provide Customers with a written explanation and reasonable detail of the cost-benefit analysis used in clause (b) above including estimated project costs, the Company’s maximum allowable investment, and the Company’s Annual Base Revenues. In addition, the Company will provide the Customer with a written timetable for the anticipated construction of the upgrade and written notice of completion.

(b) No contribution amount shall be required for an extension of facilities if all of the following conditions, as determined by the Company, are met:

(1) Service location is directly accessible from an existing or proposed (non-high pressure) Company main that would be extended up to one hundred fifty (150) feet;

(2) Service length is one hundred fifty (150) feet or less;

(3) Customer will utilize gas service as their primary heating source and be served under Rates R, RT, N or NT;

(4) Construction does not cross third party non-public property, private right-of-way or complex obstruction (stream, culvert, excessive hillside, etc.)and does not present any abnormal or unusual construction conditions or require unusual permitting requirements.

(5) Extensions not meeting all of the above conditions (1) through (4) shall have the Customer contribution amount determined upon incremental investment amount **(C)** required beyond those permitted by the construction conditions stated above.

(6) These modified extension provisions shall not be applied to customers along existing GET Gas designated mains nor be permitted as a method to extend existing GET Gas mains where GET Gas surcharge payments remain in effect.

(C) Indicates Change

RULES AND REGULATIONS

10. RIDER A

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge is applicable to the net monthly rates and minimum charges contained in this Tariff. The surcharge shown below will be recomputed when a tax rate used in the calculation changes and/or the Company implements a change in rates.

The recomputation of the surcharge will be submitted to the PUC within 10 days after the occurrence of a reason for surcharge recomputation shown above. If the recomputed surcharge is less than the one in effect the Company will, and if more may, submit a tariff or supplement to reflect such recomputed surcharge, the effective date of which shall be 10 days after the filing.

Rider A - State Tax Adjustment Surcharge is 0.00% **(D)**

This Rider applies to Rates R, RT, GL, N, NT, DS, and LFD. **(C)**

(D) Indicates Decrease **(C) Indicates Change**

RULES AND REGULATIONS

11. RIDER B - Continued

SECTION 1307(F) PURCHASED GAS COSTS

As applicable, to the extent such charges are not directly paid, Purchased Gas Costs shall include credits related to the use of PGC capacity by transportation customers where the Customer or NGS utilizes Company assigned or released pipeline capacity. In addition, revenues related to balancing services provided pursuant to Sections 22.2 and 22.4; Rate NNS; Rate MBS; capacity or commodity gas sales made pursuant to Customer elections under the Retail Standby Rider; Unauthorized Overrun; OFO, DFD and NGS penalty charges and bundled city gas sales made to NGSs shall be credited to the PGC. Such credits shall be reduced annually by the Economic Benefit Peaking Supply (EBPS Credit)reductions calculated pursuant to Rule 22.6 of the Rules and Regulations. **(C)**

"E" - Experienced net overcollection or undercollection of purchased gas costs ("E-Factor"). Such net overcollection or undercollection statement shall begin with the month following the last month which was included in the previous overcollection or undercollection calculation reflected in rates. Each over-under collection statement shall also provide for refund or recovery of amounts necessary to adjust for over or underrecoveries of E factor amounts under the previous 1307(f)rate.

Interest shall be computed monthly at the rate provided for in Section 1307(f)(5) of the Public Utility Code from the month that the over or undercollection occurs to the effective month such overcollection is refunded or such undercollection is recouped.

Additionally, supplier refunds will be included in the calculation of "E" with interest added at the annual rate of six percent (6%) calculated in accordance with the foregoing procedure, beginning with the month such refund is received by the Company.

Computation and Application of the E-Factor

The E-Factor shall be computed to the nearest one-hundredth cent (0.01¢) per Mcf in accordance with the formula set forth below:

E-Factor = (-E/S)

Each E-Factor so computed shall be applied to customer's bill for a one (1) year period during the Computation Year.

"S" - Projected MCF of gas to be billed to Customers during the projected period when rates will be in effect.

(C) Indicates Change

RULES AND REGULATIONS

12. Rider C

WEATHER NORMALIZATION ADJUSTMENT **(C)**

Applicability and Purpose:
A Weather Normalization Adjustment ("WNA") shall be applied to bills of Residential and Non-Residential customers under Rate Schedules R, RT, N and NT, for any bills rendered during the heating season October through May.

WNA is a distribution charge adjustment and is considered a basic service charge.

Calculated WNA amounts shall be subject to Rider A – State Tax Adjustment Surcharge and Rider I – Distribution System Improvement Charge. No additional riders or surcharges will be applied to the calculated WNA.

Calculation of Adjustment Amount:
The WNA will be applied to October through May billing cycles and shall be calculated on a customer account specific basis in accordance with the formula below:

WNBC = BLMC + [(NHDD / AHDD) x (AMC-BLMC)]
WNAC = WNBC – AMC
WNA = WNAC x Distribution Charge

(a) Weather Normalized Billing Ccfs("WNBC") will be calculated as the Base Load Monthly Ccfs ("BLMC") added to the product of the Normal Heating Degree Days ("NHDD") divided by the Actual Heating Degree Days ("AHDD") and the Actual Monthly Ccfs ("AMC") less the BLMC. Weather Normalized Billing Ccfs (WNBC) will only be calculated if the AMC exceeds the BLMC. WNA will not be applicable for the billing period if AMC is less than the BLMC.

(b) BLMC shall be established for each customer using the customer's actual average daily consumption from the billing system, measured in Ccfs, using bills with read dates of June 21st thru September 20th over a thirty-six-month period multiplied by the number of days in the billing period. The average daily base load is recalculated monthly using the most recent thirty-six months of bill history. If less than twelve months of bill history is available for the premise, an average base load for the related customer class will be applied.

(c) AMC shall be measured for each customer and billing cycle and will be inclusive of any heating value corrections.

(d) NHDD shall be applied on a Delivery Region specific basis as determined by the customer's geographical location and, for any given day within a billing period, shall be based upon the Delivery Region's 15-year average for the given day. NHDD shall be updated every 5 years using the methodology established in the Company's general rate case proceeding at R-2021-3030218 with the next scheduled update of the NHDD to be effective on October 1, 2025, and thereafter every five years.

(C) Indicates Change

RULES AND REGULATIONS

12. Rider C - Continued

WEATHER NORMALIZATION ADJUSTMENT **(C)**

(e) AHDD shall be the actual experienced heating degree days during the billing cycle for the customer's assigned Delivery Region, as determined by the customer's geographical location. A Delivery Region's AHDD shall be based upon experienced actual Gas Day temperatures as reported by the National Oceanic and Atmospheric Administration (NOAA) for weather stations located within that Delivery Region pursuant to the application of the Company's established Delivery Region calculation methodology.

(f) The period for which both NHDD and AHDD will be measured for each billing period used for the WNA calculation will be based on the starting day of the customer's billing cycle minus one day through last day of billing cycle minus one day. If AHDD is unavailable for any day(s) during that period, the respective NHDD for the same day(s) will also be excluded from the calculation, thereby excluding any days missing AHDD from the WNBC calculation.

(g) AMC will be subtracted from the WNBC to compute the Weather Normalized Adjustment Ccfs ("WNAC").

(h) The WNAC shall then be multiplied by the applicable Rate Schedule Distribution Charge based on service rendered to compute the WNA amount that will be charged or credited to each Residential and Non-Residential customer served under Rate Schedules R, RT, N and NT.

(i) In the event a customer's bill needs to be canceled and rebilled at any time, the WNA will be recalculated using the most recently available data for the billing period. In some cases, updates in data used in the calculation, may result in a different WNA for the billing period. Bills requiring manual processing shall not have WNA applied.

(j) The Company will file a report detailing weather normalization information with the Commission annually by December 1st for the preceding twelve-month period ending September 30th.

(C) Indicates Change

RULES AND REGULATIONS

13. RIDER D

MERCHANT FUNCTION CHARGE

Applicability and Purpose

This Rider shall be applied to rates for each MCF (1,000 cubic feet) of gas supplied under Rate Schedules R and N of this Tariff and shall be reflected in the Price to Compare. The Rider is equal to the fixed percentage, established by the PUC in Company’s last general base rate proceeding, of purchased gas costs which are expected to be uncollectible, and shall not be reconciled to reflect actual results. Rider D is intended to make Company’s Price to Compare more comparable to the gas supply service prices offered of other Natural Gas Suppliers that presumably reflect anticipated uncollectible expenses.

Rider D Charge

Rider D charges shall be equal to 2.27% for Residential PGC Customers and 0.44% Non-Residential PGC Customers of Rider B (Purchased Gas Costs). **(I)**

The collection of the Rider D charges will be summarized by Rate Schedule sub-accounts in the Gas Operating Revenue FERC Account No. 480000 for Rate R and 481000 for Rates N. The associated costs are recorded in FERC Account Nos. 904001 and 904002.

(I) Indicates Increase

RULES AND REGULATIONS

15. PRICE TO COMPARE

The Price to Compare ("PTC") is composed of the Annual C-Factor, Annual E-Factor, Gas Procurement Charge and Merchant Function Charge. The PTC rate will change whenever any components of the PTC change. The current PTC rate is detailed below:

Price to Compare

	Rate R (CCF)	**Rate N (MCF)**	
Annual C-Factor	$ 0.59486	$ 5.9486	
Annual E-Factor	$ 0.03281	$ 0.3281	
Gas Procurement Charge	$ 0.00660	$ 0.0660	
Merchant Function Charge	$ 0.01425	$ 0.0276	**(I)**
Total Price to Compare	$ 0.64852	$ 6.3703	**(I)**

(I) Indicates Increase

RULES AND REGULATIONS

16. RIDER F - Continued

UNIVERSAL SERVICE PROGRAM

QUARTERLY ADJUSTMENT

Any time that the Company makes a change in base rates or PGC rate affecting residential customers, the Company shall recalculate the Rider USP rate pursuant to the calculation described above to reflect the Company's current data for the components used in the USP rate calculation. The Company shall file the updated rate with the PUC to be effective one (1) day after filing.

ANNUAL RECONCILIATION **(C)**

On or before November 1 of each year, the Company shall file with the PUC data showing the reconciliation of actual revenues received under this Rider and actual recoverable costs incurred for the preceding twelve months ended September. The resulting over/undercollection (plus interest calculated at 6% annually) will be reflected in the CAP quarterly rate adjustment to be effective December 1. Actual recoverable costs shall reflect actual CAP costs, actual application costs, actual pre-program arrearage forgiveness, actual LIURP and actual Hardship Administrative costs. Actual recoverable CAP credit costs and pre-program arrearage forgiveness shall be based upon actual CAP credits granted and pre-program arrearage forgiveness granted less a 9.2% adjustment for amounts granted to participants in excess of the number of CAP enrollees as of September 30, 2022. The 9.2% adjustment related to CAP credits and pre-program arrearage forgiveness will be based on the following:

For each reconciliation period, the average annual CAP credit per participant will be determined by dividing the total actual CAP credits granted during the reconciliation period by the average monthly number of participants receiving CAP credits during the reconciliation period. The average monthly number of participants receiving CAP credits exceeding the number of CAP enrollees as of September 30, 2022 will be multiplied by the average annual CAP credit granted per participant and then multiplied by 0.0920 in order to determine the amount of the CAP Credits which will not be recovered through Rider USP.

For each reconciliation period, the average pre-program arrearage forgiveness per participant will be determined by dividing the total actual pre-program arrearage forgiven during the reconciliation period by the number of participants receiving pre-program arrearage forgiveness. The number of participants receiving pre-program arrearage forgiveness exceeding the number of CAP enrollees as of September 30, 2022 will be multiplied by the average pre-program arrearage forgiveness per participant and then multiplied by 0.0920 in order to determine the amount of the pre-program arrearage forgiveness which will not be recovered through Rider USP.

(C) Indicates Change

RULES AND REGULATIONS

19. Rider I

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of 0.00% will apply. **(D)**

19.A.1 Purpose. To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Company with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

19.A.2 Eligible Property.

The DSIC-eligible property will consist of the following:

- Piping, Couplings, Valves, Excess Flow Valves, Risers - Distribution & Transmission. (374, 376, 365, 367)
- Measuring & Regulator Stations – Distribution & Transmission (375, 378, 379, 366, 369, 370)
- Gas Service Lines and Insulated and Non-Insulated Fittings (378, 380)
- Meters, Meter Bars, Meter Installations (381, 382)
- House Regulators & Installations (383, 384)
- Industrial & Farm Tap Measuring & Regulator Station Equipment (385, 386)
- Miscellaneous Equipment and Material– Distribution & Transmission (387, 371)
- Equipment – Electronic Systems & Software (391)
- Vehicles, Power Equipment, Tools, Shop & Garage Equipment (392, 394, 396)
- Unreimbursed costs related to highway relocation projects where a natural gas distribution company or city natural gas distribution operation must relocate its facilities.
- Gathering lines (332)
- Storage lines (353)
- Other related capitalized costs.

19.A.3 Computation of the DSIC. The DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three-month periods ending one month prior to the effective date of each DSIC update.

(D) Indicates Decrease

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS (C)
Effective November 1, 2020

22.1 Application of Rates **(C)**

(a) Applicable Rates: DS, LFD, XD and IS.

(b) Notification of Delivery; Nomination Procedures. Customer shall notify the Company of any and all gas deliveries to the Company's system, including, but not limited to, the provision of nomination, revised nomination and scheduling information, in accordance with the Company's *Nomination Procedure*, as may be amended from time to time, and made available on the Company's Gas Management Website ("Nomination Procedure"). The quantity of gas received on behalf of the Customer shall be determined by allocation or other method by the Company if required in its sole discretion. It is the Customer's responsibility to arrange that any necessary billing information be provided to the Company and/or delivery gas source.

(c) Nominating Agents. A Customer shall notify the Company of its designated nominating agent ("Agent") for purposes of nominating the volumes of natural gas to be delivered to the Company's system on the Customer's behalf in accordance with the Nomination Procedures. Customer shall notify Company, on a form designated by the Company in the Nomination Procedures, of the responsibilities of the Agent, and shall provide Company with the Agent's valid e-mail address and valid 24-hour contact information. Customer shall remain liable for all charges and penalties notwithstanding Customer's designation and use of an Agent in accordance with the provisions herein.

(d) Penalties for Customer's Default. Customers failing to provide nomination, billing, scheduling, agent, supplier and/or other required information to the Company or pipeline(s)in accordance with the provisions of the Tariff, or otherwise failing to comply with the Company's *Nomination Procedure*, shall be subject to applicable imbalance charges and, in addition, be charged an Administrative Scheduling Fee in an amount no greater than $1,000 per day for every day such required information is delayed. If a Customer default of these provisions occurs and is occurring for a period of 90 days, the Company may impose retail or standby rates on the Customer's account beginning the first day after such 90-day period through and until such time as the Company deems the Customer default to have been resolved.

(e) Sequencing for Billing. Unless otherwise agreed by the Company and the Customer, customer-owned gas delivered under the transportation rate schedules shall be sequenced for billing as the first gas through the meter, and gas purchased under the Retail and Standby Rider shall be sequenced for billing purposes as the last gas through the meter. Gas billed under firm rate schedules shall be billed prior to gas billed under interruptible rate schedules. In lieu of otherwise specified tariff provisions, where the Company and Customer agree, Company shall use pipeline metering facilities for measuring and billing total deliveries to the Customer's facility.

(C)Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued **(C)**

(f) Payment of Charges, Penalties. The Customer shall pay the Company for any and all additional charges incurred on the Customer's behalf or resulting from the Customer's actions or inactions which the Company can demonstrate arise out of the provision of transportation service including, but not limited to, pipeline transportation and service charges. Any such charge, penalty or obligation imposed by a pipeline transporter or supplier as result of balancing of gas delivered to the Customer shall be paid by the Customer in addition to otherwise applicable charges.

(g) The Billing Pool Agent is required to notify Company at least ten days prior to dropping a Customer from a Billing Pool. If adequate advance notice is not provided, the Company reserves the right to not drop the Customer from the Billing Pool.

(h) Billing Pools. One or more transportation Customers may join together in pooled transactions for the purchase and delivery of gas. The Company may allocate among all such customers the volumes of gas or imbalances for purposes of determining responsibility for charges, rates, penalties or other obligations imposed by the Company, or in connection with operation of the pool. A Supplier to a Billing Pool must notify the Company prior to initiating gas deliveries. A Customer is required to submit in writing a request for entry into a Billing Pool.

(1) Each Billing Pool shall appoint an Agent who will coordinate nomination, billing, reconciliation, allocation and any other necessary communication between the Billing Pool and the Company.

(2) All members of a Billing Pool shall be of like balancing service election. The Company may restrict formation or operation of any Billing Pool in order to meet like balancing service election or pipeline imposed eligibility requirements.

(3) Automated Meter Reading. The Company has the right as a condition of being a pool member, to install, at the Customer's expense, automated meter reading ("AMR") equipment for the purposes of daily collection or monitoring, and billing Customer volumes at each related service meter. Where AMR equipment is installed, the Customer shall maintain, at its expense, unless otherwise directed by the Company, a dedicated phone connection and electric service to the AMR equipment which will allow the Company unlimited remote access to the AMR device at all times. Failure to maintain a required phone and/or electric service may result in Customer being removed from a Billing Pool and being placed on a rate schedule not requiring daily measurement capability.

(4) Service under Rate NNS is required by, and shall be individually billed to, any and all members of a Billing Pool except when all pool members are monitored on a daily basis through the use of Company owned AMR equipment at all meter locations. Additionally, service under Rate MBS is required by, and shall be individually billed to, any and all members of a Billing Pool when the billing month for each pool member does not end on the same calendar date; Billing Pools having all customers monitored and billed through the use of Company owned AMR equipment at all meter locations shall be exempt from this requirement.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued **(C)**

(i) Recognition of Supplies. Volumes transported on behalf of the Customer will be recognized in the Customer's current billing month based on nominated or scheduled volumes information and may be adjusted after notification is received from the pipeline supplier(s) of the volumes transported on behalf of the Customer. Volumes scheduled shall be determined on the basis of best available actual or confirmed pipeline and/or Company information at the time of billing.

(j) Unless otherwise negotiated under Rate XD, the Company shall retain for Company use gas, and lost and unaccounted for gas, 1.0% of the total volume of gas delivered into its system for the Customer's account.

22.2 Balancing and No-Notice Service. **(C)**

(a) Each Customer shall use best efforts to balance purchases, deliveries and receipts of gas at all times. Except as specified in 22.1(f), for the purposes of balancing excess deliveries and shortfalls and purchasing services under Rates NNS and MBS, Billing Pools may be treated as a single entity. Subject to the terms and conditions set forth below, the Company shall provide no-notice and monthly balancing services under Rate Schedules NNS and MBS. Service under Rate Schedules NNS and MBS is available only for inadvertent fluctuations, limited by the terms and conditions of each Rate Schedule, and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided. In the event the Customer fails to use best efforts to balance deliveries and receipts, or otherwise misuses no-notice or balancing services as determined by the Company in its sole discretion, Section 22.4 shall apply for the period of such default or misuse.

(b) Daily Balancing. The Company shall allow Customer's daily demand to inadvertently vary from daily scheduled deliveries by +/-4.5% without imposing Daily Balancing Charges, provided the total daily quantity taken does not exceed Customer's Daily Firm Requirement, MDQ or otherwise specified contract demand limit. Daily imbalances in excess of the +/-4.5% tolerance, unless otherwise provided by service elected under Rate NNS, shall be assessed a Maximum Daily Excess Balancing Charge in accordance with Section 22.4 under Critical Day and Non-Critical Day criteria unless otherwise specified in Customer's contract, in addition to the charges specified in Rates DS, LFD, XD and IS, on all such quantities.

(c) Imbalance Resolution. Customer's monthly imbalances will be calculated at the end of each billing period to determine if any overdelivery (excess) or underdelivery (shortfall) condition exists for volumes scheduled versus volumes metered. If the Customer is determined to be in an imbalance condition, and has not elected service under Rate MBS or has exceeded the 10% imbalance allowance provided under Rate MBS, then the Company shall sell and the Customer shall buy, subject to the 5 percent limitation under Rate MBS, any shortfall amount according to the following cash-out pricing:

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued **(C)**

Shortfall Percent	Cash-Out Price
Up to 5%	Shortfall Monthly Index(“SMI”)
Greater than 5%, but not greater than 15%	SMI x 1.1
Greater than 15%, but not greater than 25%	SMI x 1.3
Greater than 25%	SMI x 1.5

Likewise, the Customer shall sell, and the Company shall buy any excess amount according to the following cash-out pricing:

Excess Percent	Cash-Out Price
Up to 5%	Excess Monthly Index (“EMI”)
Greater than 5%, but not greater than 15%	EMI x 0.9
Greater than 15%, but not greater than 25%	EMI x 0.7
Greater than 25%	EMI x 0.5

The SMI (Shortfall Monthly Index) shall be the average of the published *Gas Daily* Midpoint index prices corresponding to the Customer’s Delivery Region during the Customer’s billing month as listed below:

Delivery Region	Index
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The EMI (Excess Monthly Index) shall be the average of the published *Gas Daily* Midpoint index prices corresponding to the Customer’s Delivery Region during the Customer’s billing month as listed below:

Delivery Region	Index
North	Tennessee, zone 4-300 leg
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

Customer Delivery Region shall be assigned to each Customer in accordance with Customer's delivery location within the Company's distribution system.

The SMI and EMI are applicable to the above tables only for inadvertent monthly imbalances. The HMI (Highest Monthly Index) or the LMI (Lowest Monthly Index) as defined below shall apply respectively to shortfall and excess conditions in those situations where intentional imbalances are involved.

The HMI shall be calculated as the highest of the published *Gas Daily* Absolute index prices for the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	Index
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The LMI shall be calculated as the lowest published *Gas Daily* Absolute prices for the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	Index
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C)Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued **(C)**

(d) The Company may extend the balancing period for gas volumes and may increase volumes eligible for balancing in its discretion, but only if it determines that such action is consistent with its obligations to other customers.

(e) Supply Transfers. In order to facilitate Monthly balancing related to inadvertent imbalances in Company’s sole discretion, the Company shall allow Supply Transfers among Customers and Billing Pools, Customers-to-Billing Pools and Billing Pools-to-Customers at a fee of $125 per transaction, provided however: (1) such transfer is requested prior to the end of the billing month for both the transferee and the transferor, (2) such transfer is physically possible given pipeline interconnection and delivery point limitations which require transfers to be between parties located on the same segment of the Company’s distribution system, and system supplies, and reliability are not adversely affected.

(f) Competitive Volume Customers. In the case of Customers or applicants seeking service for facilities with a design volume capability allowing for direct connection to transmission or gathering lines for bypass of Company facilities, Company shall have the right to establish daily and monthly balancing tolerances at levels other than those specified in subsections (b) and (c) of this Section 22.2 to reflect specific operational limitations or to protect the interests of other Customers, as determined by the Company in its sole discretion. Additionally, the Company may establish special nomination rules, imbalance resolution rules and communication protocols that reflect the Customer’s or applicant’s commercial alternatives, and which are consistent with its obligations to other Customers.

22.3 Service Agreement and General. **(C)**

(a) Limitation on Liability.

(1) The Company shall not be liable for curtailment of service under Rates DS, LFD, XD and IS, or loss of the Customer's gas as a result of any steps taken to comply with any law, regulation or order of any governmental agency with jurisdiction to regulate, allocate or control gas supplies or the rendition of service hereunder, and regardless of any defect in such law, regulation or order.

(2) Gas transported and delivered by the Company to the Customer hereunder shall be and remain the property of the Customer. The Customer shall be responsible for maintaining all insurance it deems necessary to protect its property interest in such gas before, during and after receipt by the Company.

(3) The Company shall not be liable for any loss to the Customer arising from or out of service hereunder, including loss of gas in the possession of the Company or any other cause, except gross or willful negligence of the Company's own employees or agents. The Company reserves the right to commingle gas of the Customer with other supplies.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

(b) Warranty, indemnity and special provisions. The receipt of service constitutes Customer's agreement to the following representations and warranties, together with related provisions in the service agreement:

(1) clear and marketable title to the Customer's gas;
(2) delivery points, pressure, quality and other specifications acceptable to gas transmission pipeline(s) and the Company;
(3) eligibility of the Customer for service;
(4) existence of lawful authority for sale, transportation and delivery;
(5) agreement to pay all excise, sales, use, gross receipts, or other taxes (other than income taxes), all tariff charges and all penalties, charges, fees for transportation, balancing etc., associated with delivered gas, which may be levied upon or incurred by the Company at any time;
(6) agreement to indemnify and hold the Company harmless from breach of representations or warranties, and any liability associated with Customer's gas while on the Company's system.

Copy of Gas Purchase Agreements, Other Documents. When requested by the Company, the Customer shall provide the Company with a copy of Customer's gas purchase contract and any related transportation, marketing and brokerage contracts, or, in lieu of providing such contracts, certify pertinent information as required by the Company, and, in order to meet state or federal requirements, provide a sworn affidavit setting forth the Customer's cost of gas for the period requested by the Company. The Company shall endeavor to protect the confidentiality of information provided by the customer in accordance with this provision. The Company will provide such information to third parties only when required to do so by law, regulation or order and in such case, will attempt to maintain confidentiality to the extent possible.

22.4 Maximum Daily Excess Balancing Charge **(C)**

The Daily Excess Balancing Charge that occurs on Critical Days shall be as follows:

The charge for exceeding daily balancing limits shall be ten times the highest price as published in *Gas Daily* on the table “Daily Price Survey.” For each delivery region as listed in the table below. This rate shall not be lower than the maximum penalty charge for unauthorized daily overruns as provided for in the FERC-approved gas tariffs of the interstate pipelines which deliver gas into Pennsylvania.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued (C)

Delivery Region	**Index**
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.
Central	The higher of 1) Transco, zone 6 non-N.Y. or 2) Transco, Leidy Line receipts plus the applicable transportation costs from Transco Zone 6 to Zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The Daily Excess Balancing Charge that occurs on Non-Critical Days shall be as follows:

Daily Imbalance Percent	Penalty
Up to 15%	GDI
Greater than 15%, but not greater than 30%	GDI x 2
Greater than 30%, but not greater than 45%	GDI x 3
Greater than 45%, but not greater than 60%	GDI x 4
Greater than 60%	GDI x 5
Intentional imbalances	GDI x 5

The GDI (Gas Daily Index) shall be equal to the difference in price between the highest published *Gas Daily* index price and the lowest published *Gas Daily* index price for the Customer’s Delivery Region as listed below but shall not be lower than $0.25/Mcf.

Delivery Region	**Highest Index Price**	**Lowest Index Price**
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.	Tennessee, zone 4- 300 leg

South	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS Effective November 1, 2020 – Continued **(C)**

The Company shall not charge any Maximum Daily Excess Balancing Charges if the Customer's Excess Daily Imbalance is anticipated to benefit the distribution systems daily balancing position as determined by Company in its sole discretion.

22.5 Operational Flow Orders and Daily Flow Directives **(C)**

The Company has the right to issue Operational Flow Orders and Daily Flow Directives at any time. Failure to comply with any OFO or DFD shall result in a penalty charge of Twenty-Five ($25) per Mcf or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater.

22.6 Cost of Assigned Capacity. **(C)**

In addition to applicable interstate pipeline demand charges, the associated demand charges to customers, or their NGS, served under Rates DS and LFD, and who utilize assigned PGC capacity, will include 100% and 50% pro rata allocation of annual Peaking Supply service demand costs, respectively. The associated demand charges will be reduced by a pro rata share of the Economic Benefit of Peaking Supply (EBPS Credit). The EBPS Credit shall mean a pro rata share of (a) the value of Peaking Supply utilized in off system sales transactions and included in the PGC share of the Revenue Sharing Incentive Mechanism revenues, plus (b) the Commodity Price Differential, which shall be, as measured for the date of Peaking Supply delivery, the aggregate difference, if positive, between the Gas Daily price applicable to the zone of delivery (i.e., Texas Eastern M3 for deliveries in the South and West Delivery Regions with the exception of deliveries from Mt. Bethel and Transco Z6 NNY for deliveries made in the North and Central Delivery Regions and deliveries from Mt. Bethel) and the actual price paid for actual Peaking Supply deliveries into the UGI distribution system. The EBPS Credit shall be applied in the calculation of associated demand charges in the second billing month after the credit has accrued (e.g., December accrued credits will be used to reduce the February associated demand charges) and shall not, on an annual basis, exceed the annual incremental demand charges for Peaking Services charged to Rate DS and LFD customers, or their NGS, as described above.

RATE DS

DELIVERY SERVICE

AVAILABILITY

This service applies in the entire territory served by the Company. Firm Delivery Service shall be provided for all volumes supplied by the Customer for which the Company has available on system delivery capacity, subject to Section 21 - Gas Emergency Planning provisions of the Company's tariff, applicable rules and regulations of the PUC and any other governmental mandates.

The Customer must execute a Service Agreement for not less than (1) one year. The contract shall continue in force for consecutive (1) year periods unless cancelled by the Customer upon ninety (90) days written notice to Company prior to the expiration of a contract term.

Gas service in excess of volumes delivered by the Customer shall only be provided in accordance with applicable delivery service balancing provisions or in accordance with optionally elected and approved balancing or standby services.

Service under Rate DS is subject to the terms set forth under Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

MONTHLY RATE TABLE

The charge for each monthly billing period shall be the sum of the Customer Charge, the Capacity Charge if applicable, and the Distribution Charge as described below. The following are maximum rates.

Customer Charge: $260.00 per month

Plus Capacity Charge: The Company's unitized weighted average cost of firm transportation capacity per elected MDQ.

RATE NNS

NO-NOTICE SERVICE

AVAILABILITY

This Rate is available upon request to any Customer served on Rate DS, LFD, XD or IS who, after review and acceptance of such request by Company, has entered into a service agreement with Company for service under Rate NNS. The term of the service agreement shall be concurrent with that of the Customer's underlying Delivery Service Schedule.

Service under this Rate is available for inadvertent fluctuations only and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided.

Service to large volume users, such as electric generation facilities, may be limited as determined by the Company. Service under Rate NNS is subject to the terms and conditions set forth under Section 22 General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

TERMS AND CONDITIONS **(C)**

Customers shall elect a specific level of no-notice service under this Rate. Such election shall be made through the specification of a No-Notice Allowance ("NNA"), in MCF per day, of an amount no less than 4.5% and no greater than 100% of Customer's Daily Firm Requirement, Maximum Daily Quantity or otherwise specified daily contract limit. The elected NNA shall be effective for a fixed period equal to the lesser of one year or the remaining balance of the Customer's service agreement or, a lesser time period mutually agreeable to both the Customer and the Company. In no instance shall a NNA be effective for a period of less than one month. Rate NNS service elections in excess of 4.5%, are interruptible.

No-notice service shall be provided under this Rate whereby the Company shall forward or bank no-notice supplies to the Customer on a daily basis in such amounts necessary to balance the Customer's daily deliveries with the Customer's daily consumption. Forwarded amounts shall be limited in amount by the lesser of the sum of the Customer's daily nomination plus elected NNA or, the Customer's DFR, MDQ or otherwise specified contract limit except as allowed. Banked amounts shall be limited to an amount no greater than the Customer's NNA election.

Customer electing an NNA shall be billed for no-notice service according to that specific level of service.

Volumes in excess of the daily limits shall be subject to Daily Excess Imbalance Charges as set forth in Section 22.4 General Terms For Delivery Service for Rate Schedules DS, LFD, XD and IS on all such excess quantities, in addition to the charges specified in the Customer's Delivery Service Schedule.

(C) Indicates Change

RATE NNS - Continued

NO-NOTICE SERVICE

EXCESS REQUIREMENT OPTION

The Excess Requirement Option is available on an interruptible basis to any delivery service Customer served under Rates XD, LFD. This Option shall extend the no-notice provisions of Rate NNS, on solely a best efforts basis, during periods where Customer's daily requirements exceed transportation contract service limits.

Customer must nominate a Daily Excess Requirement ("DER") under this Option in an amount no less than 5 Mcf per day and no greater than 25% of Customer's DFR or otherwise specified contract limit. On days where service under the Excess Requirement Option is required, Customer will have the right, subject to the terms and conditions set forth herein, to take gas in excess of Customer's DFR or otherwise specified contract limit provided such excess is no greater than the nominated DER amount.

Service taken in excess of the sum of Customer's DFR and DER on any day shall be considered Excess Take or Unauthorized Overrun as determined by Customer's Delivery Service Schedule and service agreement.

Unauthorized gas forwarded or returned to the Company by the Customer shall be considered imbalance gas and shall be subject to either the balancing provisions set forth under Section 22.2 of General Terms for Delivery Service for Rate Schedules DS, LFD, XD and IS or the Customer's otherwise applicable transportation balancing service.

MONTHLY RATE TABLE (Basic NNS Service)

$0.1860 per Mcf per day of elected NNA **(C,I)**

plus

MONTHLY RATE TABLE (Excess Requirement Option)

$4.50 per Mcf per day of elected DER.

RATE MBS

MONTHLY BALANCING SERVICE

AVAILABILITY

This Rate is available upon request to any Customer served on Rate DS, LFD, XD or IS who, after review and acceptance of such request by Company, has entered into a Service Agreement with Company for service under Rate MBS. The term of the Service Agreement shall be concurrent with that of the Customer's underlying Rate Schedule.

Service under Rate MBS is available for inadvertent fluctuations only, limited to an amount not to exceed 10% of the customer's total scheduled deliveries for the month, and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided. Service under Rate MBS is subject to the terms set forth in Section 22 General Terms For Delivery Service for Rate Schedules DS, LFD, XD, and IS.

Rate MBS is available as a monthly banking service for Customer transportation deliveries. Service under Rate MBS allows Customer transportation imbalances (metered volumes less total scheduled nominations) which are within 10% of Customer's total scheduled nominations for the month to be carried forward in the Customer's MBS Account ("Balance Account") for redelivery of excesses or receipt of shortfalls in subsequent months.

TERMS AND CONDITIONS

Balance Account Operation. To the extent Customer's total deliveries exceed Customer's total consumption at the end of a Billing Month, the excess volumes shall be added to the Customer's Balance Account. To the extent Customer's total consumption exceeds Customer's total deliveries at the end of a Billing Month, the shortfall volumes shall be subtracted from the Customer's Balance Account.

Balance Account Limits. At no time, as calculated at the end of a Billing Month, shall a Customer exceed a Balance Account excess or shortfall balance greater than 10% of the Customer's total scheduled deliveries for the month, as determined by the Company in its sole discretion. Any such imbalance over 10% (excess or shortfall) shall be subject to the Cash-in/Cash-out pricing set forth in Section 22.2 for monthly imbalance volumes in excess of 5%, with the remaining imbalance volumes to be carried over into the calculation of the Customer’s imbalance volumes for the following month. **(C)**

The Company, in its sole discretion, may zero out the Customer's Balance Account at the end of any Billing Month by purchasing or selling such net imbalance volumes in the Customer's Balance Account at the prevailing month's Cash-In/Cash-Out pricing at set forth in Section 22.2, provided such zero out may occur only if necessitated by operational needs of the Company or as a result of a requirement of an applicable interstate pipeline.

Rider A - State Tax Adjustment Surcharge
Rider G – Energy Efficiency and Conservation
Rider H – Technology and Economic Development
Rider I - Distribution System Improvement Charge
Rider J – Gas Delivery Enhancement Rider

RETAINAGE RATE

Company Use and Unaccounted For gas shall be retained in accordance with Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, AND IS, paragraph 22.1(j).

PAYMENT

In accordance with Section 8 of this Tariff.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

EXCESS TAKE CHARGE

Except as provided in the Company's *Nomination Procedure*, for authorized usage on any day in excess of the Daily Firm Requirement there will be a charge of $6.00 per MCF in addition to the charges specified in the rate table.

(C) Indicates Change (I) Indicates Increase

RATE XD -Continued

EXTENDED LARGE FIRM DELIVERY SERVICE

MONTHLY RATE TABLE

The charge for each monthly billing period shall be negotiable and shall be the sum of the Customer Charge, Distribution Charge, Demand Charge if applicable, and the Minimum Annual Bill as described below.

The following are maximum rates.
Customer Charge: Charge as determined by negotiation.

Plus
Maximum Demand Charge: Charge as determined by negotiation.

Plus
Maximum Average Delivery Charge: $1.2386/Mcf **(I)**

Plus
SURCHARGES and RIDERS **(C)**

Rider I – Distribution System Improvement Charge

RETAINAGE RATE

Unless otherwise agreed between the Customer and the Company, Company Use and Unaccounted For gas shall be retained in accordance with Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS, paragraph 22.1(j)

MINIMUM BILL

Minimum Bill Volumes and terms shall be defined in the Service Agreement and determined by negotiation.

CHARGE FOR OTHER TRANSPORTATION

If the Customer chooses to use the Company as agent in regard to transportation service by others, any costs calculated by or billed to the Company, with regard to such agency, shall be billed to the Customer by the Company and may include an applicable administrative fee as agreed by the Customer and Company.

(C)Indicates Change (I) Indicates Increase

RATE R/S - Continued

RETAIL AND STANDBY RIDER

The minimum monthly bill under this rate schedule shall be the sum of the Customer and Capacity/Reservation Charges plus any commodity reservation costs per MCF of NSR.

SURCHARGES **(C)**

Rider I – Distribution System Improvement Charge

Any charges or penalties imposed by pipeline suppliers as a result of usage under this rider shall, at the Company's sole discretion, be allocated to Customers according to each Customer's contractual obligation or be assigned to the Customer responsible for the incurrence of the charges or penalties.

PAYMENT

In accordance with Section 8 of this Tariff.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

(C)Indicates Change

RATE IS - Continued

INTERRUPTIBLE SERVICE

Unless the Company otherwise agrees, the Minimum Annual Bill shall be calculated at the end of any Service Agreement period, anniversary, or termination of service in accordance with terms of the Service Agreement. Volumes of natural gas taken under Standby Service during the Service Agreement period shall be credited to the Minimum Annual Bill volumes.

SURCHARGES and RIDERS **(C)**

Rider I – Distribution System Improvement Charge

PAYMENT

In accordance with Section 8 of this Tariff.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

CHARGE FOR UNAUTHORIZED OVERRUN

Whenever it is necessary to restrict gas supplied under this Rate, the Company will provide due notice of such restriction. If a Customer, after having received due notice of restriction, shall take gas in excess of the amount made available by such notice, then Customer shall be billed for such excess gas at the rate of Fifty Dollars ($50.00) per MCF, or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater, plus the charge specified in the monthly rate table. Customer shall indemnify Company from any claims by third parties resulting from Customer's unauthorized overrun.

Gas delivered under the Rate IS or purchased under the Cash-Out provisions of Section 22.2 or the Retail and Standby Rider or taken under Rate NNS shall be included in the determination of Unauthorized Overrun gas.

RETAINAGE RATE

Company Use and Unaccounted For gas shall be retained in accordance with Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, AND IS, paragraph 22.1(j).

NOTICE

This supplement makes changes to existing rates(see page 2).

RULES AND REGULATIONS

4. CHOICE SUPPLIER OBLIGATIONS

4.12 If a Choice Supplier elects to participate in the Company's POR Program, the Choice Supplier must enter into a POR Agreement for the rate classes that it serves that will be included in the POR. The elected Rate Classes shall be one of the following: (1) RT only, (2) NT only, or (3) RT and NT. All receivables associated with basic natural gas supply services in the specific rate class, subject to the rate class elections made above, must be sold by the participating Supplier to the Utility. For the purposes of this provision, the phrase "basic natural gas supply services" shall include charges directly related to the physical delivery of natural gas to a retail customer but shall not include charges for "carbon-neutral" products, appliance maintenance service, energy efficiency services, termination or cancellation fees, security deposits or other products or services not directly related to the physical delivery of natural gas to a retail customers. Customer accounts that are billed for non-basic natural gas supply services will not be eligible for UGI's POR program. All of the NGS' customer accounts within the elected Rate Classes (subject to the volumetric limits contained in section 5.4) must be POR eligible accounts, with the exception of customers that purchase carbon-neutral products. NGSs may choose to use UGI consolidated billing for Non-POR eligible customers who are purchasing bundled "carbon-neutral" product offerings. The termination and reconnection provisions of Chapters 14 and 56 of the Public Utility Code and PUC regulations shall not be applicable to unpaid NGS charges for non-POR eligible accounts on consolidated billing. NGSs will be responsible for collecting unpaid NGS charges on non-POR eligible accounts on consolidated billing. UGI shall support rate-ready billing, and all NGS rates must conform to supported rate designs. For Purchased Customer Accounts, Company shall pay Choice Supplier an amount equal to 97.59% for residential amounts billed **(C)** (inclusive of associated sales taxes) and 99.42% of non-residential amounts **(C)** billed (also inclusive of taxes). Customer participation for NT shall be subject to Volumetric Eligibility pursuant to Section 5.4.

4.13 All existing customers of Choice Suppliers who elect to participate in the Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier and Company that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

All new customers enrolling with Choice Suppliers who are participating in Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier prior to enrollment, and by Company upon enrollment, that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

(C) Indicates Change

RULES AND REGULATIONS

7. NOMINATION PROCEDURE

7.1 Customer Choice Nomination Procedure. The Nomination Procedure specifies requirements for nominating, scheduling, balancing, and communicating information relating to Choice Supplier’s gas deliveries for customers served under Rates RT and NT.

7.2 Contact Persons. A list of Company contact persons will be posted on the Company’s Web Site, located at https://ugi.outsystemsenterprise.com/UGIContacts_FO/, or its successor, along with their department affiliation, email address, and telephone number.

7.3 Mandatory Assignment. As used in this tariff the term “Firm Commodity Supply Alternative” shall mean a Company purchase of natural gas, delivered directly to its distribution system or at points along Company pipeline capacity routes (Commodity Delivery Points), constituting a component of Company’s PGC supply portfolio and an alternative to pipeline capacity contracts upstream of the Commodity Delivery Points or other firm sources of PGC supply. Firm Commodity Supply Alternative contractual arrangements may require the payment of demand charges or minimum take requirements. Except as provided below, Choice Supplier **(C)** shall be required to accept releases of Company pipeline capacity combined with bundled city gate sales and, as applicable, peaking sales of gas from Company and sales of gas associated with Firm Commodity Supply Alternative arrangements, in accordance with the following assignments:

A monthly release of interstate pipeline capacity or allocation of Firm Commodity Supply Alternative in an amount equal to forty-three percent (43%) of the Peak Day Delivery Requirement (“PDDR”) of the Choice Customers served by the Choice Supplier during the month shall be released or allocated at a price equal to the projected weighted average demand cost of all PGC capacity, storage, peaking and Firm Commodity Supply Alternative assets, divided by .283. Effective November 1, 2020, to the extent the full Firm Commodity Supply Alternative is not fully nominated by Choice Supplier to satisfy its DDR, the remaining daily quantity may be nominated to a non-Choice transportation customer or pool of non-Choice transportation customers.

The Company shall also provide Choice Suppliers with a must-take Monthly Bundled Sale Quantity (“MBSQ”) during each winter month of November through March, and the Choice Supplier would be permitted to nominate and purchase gas at the Company’s city gates throughout each winter month, subject to the Maximum Daily Quantity (“MDQ”) limits, up to the MBSQ. The MDQ equals twenty-one percent(21%) of the PDDR of the Choice Customers served by the Choice Supplier during the month multiplied by the percentage shown on the Company’s Energy Management website. The minimum daily quantity is zero. Choice Suppliers are required to **(C)** nominate to the Company a daily quantity for bundled sales no later than 2:00 P.M. Eastern Prevailing Time on each Intercontinental Exchange (“ICE”) trading day for deliveries applicable to the ICE flow dates. If no nomination is received, the nomination quantity would default to zero. The Company reserves the right to issue Operational Flow Orders (“OFO”) that can modify the daily bundled sale MDQ or require certain levels of deliveries from the released firm transportation contracts. These OFOs would be issued for operational reasons only. MBSQs would be based on the Company’s storage withdrawal plan, to be updated annually, and communicated as a percentage of each Choice Supplier’s pre-month normalized

(C) Indicates Change

RULES AND REGULATIONS

7. NOMINATION PROCEDURE - CONTINUED

delivery requirements, which will be shown on the Company's Energy Management website. **(C)**

If the full MBSQ is not nominated and purchased by the end of each such winter month, the shortfall ("Bundled Sale Cash-In quantity") would be purchased by the PGC ("Bundled Sale Cash-In amount") as follows:

a. The DDR Variation Percentage is the sum of the actual DDRs experienced by a Choice Supplier divided by the sum of the pre-month average DDRs that was used to calculate the MBSQ, converted to a percentage. For any month where the DDR Variation Percentage is greater than ninety percent (90%), the Bundled Sale Cash-In amount would equal (1) the product of (a) 0.90 times the lowest absolute low for the Texas Eastern, M-2 receipts index price as published in Platts' Gas Daily for the applicable month of flow minus (b) the summer index price used for bundled sales (the "Bundled Sale Cash-In index") times (2) the Bundled Sale Cash-In quantity. If the resulting amount is positive, it would be credited to the Choice Supplier, or if negative, would be billed to the Choice Supplier.

b. In recognition of the effects of extreme warm weather conditions, shortfall amounts would be purchased as follows under such conditions:

   i. For any month where (a) the DDR Variation Percentage is less than or equal to ninety percent(90%) and (b) the Bundled Sale Cash-In quantity is less than or equal to the MBSQ minus the product of the DDR Variation Percentage times the MBSQ, then the Bundled Sale Cash-In amount would equal (1) the First of the Month Price called "Columbia Gas Transmission Corp., Appalachia" as published in Platts' Gas Daily Price Guide ("Inside FERC") for the month subsequent to the applicable month in which the Bundled Sale Cash-In quantity was created minus the summer index price used for bundled sales (the "Alternate Bundled Sale Cash-In Index") times (2) the Bundled Sale Cash-In quantity. If the resulting amount is positive, it would be credited to the Choice Supplier, or if negative, would be billed to the Choice Supplier.

   ii. For any month where (a) the DDR Variation Percentage is less than or equal to ninety percent (90%) and (b) the Bundled Sale Cash-In quantity is greater than the MBSQ minus the product of the DDR Variation Percentage times the MBSQ, then the Bundled Sale Cash-In amount would equal (1) the Alternate Bundled Sale Cash-In Index, as defined in Section 7.3.b.i, times the DDR Variation Percentage times the MBSQ plus(2) the Bundled Sale Cash-In Index, as defined in Section 7.3.a,times the difference of the Bundled Sale Cash-In quantity minus the product of the DDR Variation Percentage times the MBSQ. If the resulting amount is positive, it would be credited to the Choice Supplier, or if negative, would be billed to the Choice Supplier.

RULES AND REGULATIONS

9. ENROLLMENT OF CUSTOMERS INTO RATE SCHEDULES RT AND NT

9.1 To be served under Rate Schedules RT and NT, a Customer must be enrolled by the Choice Supplier elected by the Customer. Such enrollment by the Choice Supplier must be provided in an electronic file to the Company via an approved internet-based EDI transaction. The requirement filed shall include:

a. The customer's name;
b. The customer's address;
c. The customer's Company account number;
d. The specific transaction;
e. The elected billing option.

9.2 Company Confirmation. Company will electronically confirm receipt of the enrollment information and within one (1) business day and subsequently provide an electronic validation of the Choice Supplier's transmitted information.

9.3 Determination of Gas Flow Date. For enrollments received and processed on or **(C)** before the 15th of any calendar month, the customer will be switched to Rate Schedule RT and NT, where the customer does not respond within 5 days from the Company's mailing of a letter confirming the election to be served by the Choice Supplier, on the Customer's regularly scheduled meter reading date in the calendar month immediately following the month the enrollment information was received and processed. For enrollments received and processed after the 15th **(C)** of any calendar month, the customer will be switched to Rate Schedule RT and NT, where the customer does not respond within 5 days from the Company's mailing of a letter confirming the election to be served by the Choice Supplier, on the Customer's regularly scheduled meter reading date in the second calendar month following the month the enrollment information was received and processed. **(C)**

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 1-R

Rebuttal Testimony of
Christopher R. Brown

Topics Addressed:	**Overview of Company's Rebuttal Case** **Impact of Inflation on Company's Costs** **Management Performance** **Average Bill Comparison** **NRG Issues** **Heat Content Adjustment Programming Cost** **Issues Impacting Competitive Customers** ***Pro Se* Complainants and Public Input Hearings**

Dated: May 17, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Christopher R. Brown. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 1, on January 28, 2022.

Q. What is the purpose of your rebuttal testimony?

A. My testimony responds to certain portions of the direct testimony and exhibits of: (1) Bureau of Investigation and Enforcement ("I&E") witnesses Anthony Spadaccio (I&E St. No. 2) and Ethan H. Cline (I&E St. No. 4); (2) Office of Consumer Advocate ("OCA") witnesses Dante Mugrace (OCA St. No. 1), David J. Garrett (OCA St. No. 2), Jerome D. Mierzwa (OCA St. No. 3), and Roger D. Colton (OCA St. No. 4); (3) Office of Small Business Advocate ("OSBA") witness Robert D. Knecht (OSBA St. No. 1); (4) NRG Energy, Inc. ("NRG") witness Christopher Reyes (NRG St. No. 1). I also respond to witnesses who testified during the April 13, 2022 Public Input Hearings.

Q. Are you sponsoring any exhibits as part of your rebuttal testimony?

A. Yes, I am sponsoring UGI Gas Exhibits CRB-1R and CRB-2R.

II. OVERVIEW OF COMPANY'S REBUTTAL CASE

Q. Would you please provide a summary of the Company's rebuttal testimony?

A. The Company's rebuttal testimony responds to each of the individual issues raised by the opposing parties. In some limited instances, the Company has agreed with the opposing party positions. However, for the most part, the other parties' arguments are factually wrong, reflect a misapplication or rejection of basic ratemaking principles, conflict with long-standing Pennsylvania Public Utility Commission ("Commission") precedent, or all of the above.

Q. Please describe the positions taken by other parties in response to UGI Gas's proposed revenue increase.

A. UGI Gas requested an $82.7 million increase in annual operating revenues, although the Company's most recent data and updates within rebuttal now justify an increase of $87.6 million. By comparison, I&E proposed a revenue increase of $18,072,000, and OCA proposed a revenue decrease of ($38,673,989). OSBA does not undertake an analysis to support a revenue requirement in Mr. Knecht's direct testimony.

Q. Are the revenue requirement amounts proposed by I&E and OCA reasonable?

A. No. I&E's and OCA's proposals simply do not reflect the facts or sound application of fundamental ratemaking principles. Further, the revenue requirements offered by I&E and OCA would significantly hinder the Company's ability to provide safe and reliable service to customers. UGI Gas will invest approximately $795 million during the future test year ("FTY") and the fully projected future test year ("FPFTY") in infrastructure and business systems to ensure that its service is safe, reliable, and customer-focused. Therefore, either the limited rate increase (as proposed by I&E) or the significant rate decrease (as proposed by OCA) would not support core functions of UGI Gas as a natural gas utility, the many jobs supported by the Company's capital program, or the positive economic impacts associated with the Company's work.

Q. How did the parties reach their lower revenue requirement recommendations?

The biggest differences in the revenue requirement recommendations are driven by: (1) unreasonable adjustments to the return on equity and capital structure; (2) reductions to budgeted plant in service investments made in error or lacking sound basis; (3) invalid adjustments to projected revenues; (4) improper adjustments to projected operating expenses; and (5) adjustments to the Company's cash working capital claim, which rely on flawed operating expense adjustments. Many of their witnesses' recommendations are founded on significant deviations from the standard ratemaking principles historically applied by the Commission. All of the I&E and OCA recommendations are fully addressed by the Company's witnesses in their rebuttal testimony.

III. IMPACT OF INFLATION ON THE COMPANY'S CASE

Q. Are there any economic conditions impacting the Company's operations that have changed since the base rate case filing was made in January?

A. Yes. In particular, inflation has significantly increased in recent months, and continues to do so. The material impacts of this inflation must be called out here as an important matter. The consumer price index ("CPI") jumped 8.5% in March 2022 from 12 months earlier, the sharpest year-over-year increase in over 40 years (since 1981).[1] Just recently, the April 2022 inflation numbers were reported to be 8.3%. As a result, the Company is proposing several key inflation-related adjustments in its rebuttal case and highlighting the impacts in key areas where adjustment could be made but the Company has chosen not to do so.

Q. Please identify the inflation related adjustments included as part of the Company's rebuttal position that impact the overall claim in this case.

A. The Company has seen escalating costs due to increased inflationary and other economic factors affecting the Company's operations. Specifically, the cost of future issuances of long-term debt will result in higher interest rates than the data from January 2022 that was reflected in the filed case, as further discussed by Paul R. Moul in his rebuttal testimony (UGI Gas St. No. 6-R). Additionally, Timothy J. Angstadt (UGI Gas St. No. 9-R) will discuss and quantify the FPFTY claim impacts of increased contractor costs that the Company is now experiencing based on recent request for proposal responses and contract negotiations that occurred after the January filing. The impact of these two adjustments on the Company's updated revenue requirement claim is approximately $7.1 million.

Q. Are there any other adjustments that you are making related to the current amount of inflation in the economy?

A. No, but I would like to note that as discussed in my direct testimony, the Company is experiencing increased turnover in its employee ranks, and the increasing inflation has caused the Company to continue to look at additional ways to address the impacts to our

[1] https://www.bls.gov/news.release/cpi.nr0.htm

employees. As a result, since the time of the original filing in this case, the Company is preparing an enhanced merit increase program to be rolled out later this year.

Q. Please describe the enhanced merit increase program that is being considered by the Company and why it was developed.

A. The Company reviewed unemployment rates, inflation impacts including the CPI, as well as nationwide pay trends.[2] The national pay increase surveys indicate that average salary increases are near five percent annually, substantially higher than the three percent budgeted merit increase that the Company has in its FY23 budget. The Company has developed a proposal to increase the targeted merit increase amount to five percent annually, or a total increase of two percent over the current budgeted levels of three percent. The increase would impact employees other than those who are covered by collective bargaining agreements. This two percent increase equates to an additional $960,000 to the Company's FPFTY anticipated operating expenses (after the removal of 17 positions from the Company's budget as proposed by OCA Witness Mugrace, and further discussed in the rebuttal testimony of Tracy Hazenstab (UGI Statement No. 2-R)).

Q. Is the Company increasing its as filed claim for the $960,000 related to this anticipated change?

A. No. The Company is not including this as an adjustment in its overall rebuttal testimony updates and revenue requirement calculation. However, to the extent the Commission decides that any salary and wages adjustments are warranted, the Company requests that

[2] The World at Work salary budget survey, Pearl Meyer survey, and Mercer's Global Comp Planning Report.

the Commission consider the additional $960,000 in merit increase expenditures as an offset to any further downward salary and wage adjustments in this case.

Q. Do you have any further thoughts on the impact of inflation on the Company's operations?

A. Inflation has broad and pervasive impacts on the Company's operations and is expected to touch almost every daily activity that UGI Gas undertakes. However, the Company is not proposing numerous specific adjustments for the anticipated increased operating expenses related to inflation, other than those noted above. I believe the Commission should consider the overall economic climate and these inflationary pressures on the cost of goods and services that the Company procures as part of providing safe and reliable service when deciding the merits of the Company's requested base rate increase. Additionally, the Commission should be aware that the Company's exposure to inflationary forces outside the areas it has quantified above represents increased financial risk for the Company and further supports the Company's claimed cost of equity, as discussed in Mr. Moul's rebuttal testimony.

IV. MANAGEMENT PERFORMANCE

Q. Do any parties oppose the Company's proposed 20 basis point adjustment to the equity return for management effectiveness?

A. Yes. I&E and OCA both recommend no adjustment to the equity return to recognize the Company's management effectiveness.

Q. Please summarize I&E's reasons for rejecting the proposed management effectiveness adjustment.

A. On page 48 of I&E Statement No. 2, Mr. Spadaccio claims that the management performance items detailed in my direct testimony "fall within the categories of reliability, customer satisfaction, and safety, which are required of every public utility company under 66 Pa. C.S.A. § 1501." (I&E St. No. 2 at 48). Mr. Spadaccio also claims that public utility companies should not be rewarded in any fashion for goodwill through additional basis points in a rate case. Specifically, he states "if the Company is effective at controlling operating and maintenance costs, those savings should flow through to ratepayers and/or investors." (*Id*.)

Q. Please summarize OCA's basis for rejecting the proposed management effectiveness adjustment.

A. On page 70 of OCA Statement No. 2, Mr. Garrett similarly rejects any return on equity ("ROE") related to management performance. He calls the 0.2% ROE management adjustment a "premium." However, he provides no support that the Commission considers management performance-related ROE amounts to be premiums. While he alleges that the 0.2% portion of the ROE is arbitrary and unsupported, he offers no testimony to counter the Management Effectiveness and Performance section in my direct testimony (UGI Gas St. No. 1), which supports and justifies the 0.2% adjustment. Instead, he focuses on a prior Commission decision to justify his conclusory position. Specifically, Mr. Garrett testifies that the Commission rejected a management performance adjustment in a recent UGI Gas case. He states:

> In the last rate case for the UGI Gas division, UGI Gas proposed a 25-basis point premium for management effectiveness. The Commission found that 'such an upward adjustment is contrary to the public interest.' The Company's management performance claim in this case encompasses activities commenced as early as 2010 or projected to occur well past the end of the FPFTY. Similarly, communications tools implemented by UGI in 2015 and 2018 came several years after introduction by another Exelon affiliate.

(OCA St. No 2 at 70-71.)

Q. Do you have any initial response to this quoted testimony from Mr. Garrett?

A. There are several problems with this part of Mr. Garrett's testimony. First, the Commission case he cites to does not involve UGI Gas. He cites to a PECO Energy Company ("PECO") case at Docket No. R-2020-3018929, wherein PECO sought a 25-basis point adjustment to its ROE. While he calls it a UGI Gas case in his citation, he is referring to a PECO case. That is evidenced in the above quote where he claims that communication tools were implemented several years after introduction by another Exelon affiliate. Exelon and PECO are affiliates. UGI Gas and Exelon are related in no way and are not affiliates. Moreover, while Mr. Garrett claims that the Commission found that PECO's request for a management performance based adder was contrary to the public interest (based on his above quoted language), neither the Commission nor the administrative law judge made that conclusion in the PECO case and instead drew a conclusion that was limited to the facts of the case. Mr. Garrett's testimony quoted above is incorrect and misleading and should be wholly rejected.

Q. Do you have a response to I&E's and OCA's contention that the Company should not benefit from management performance items because they relate to the Company's regulatory obligation to provide safe and reliable service?

A. Yes. First, it appears that I&E and OCA simply disagree with Pennsylvania law, and in particular the provisions of 66 Pa. C.S. § 523, which gives the Commission specific authority to consider management performance in setting base rates including, in the case of Natural Gas Distribution Companies ("NGDCs"), "[a]ction or failure to act to encourage development of cost-effective energy supply alternatives" as well as "other relevant and material evidence of efficiency, effectiveness and adequacy of service." While the witnesses from I&E and OCA are certainly correct that reliability, customer satisfaction, and safety are all critical elements of UGI Gas's provision of utility service to customers, it is clear that Pennsylvania law allows the Commission to consider the Company's exceptional performance in those areas.

Q. Has the Commission recently exercised its authority under Section 523 of the Public Utility Code?

A. Yes, the Commission recently awarded a management incentive addition to UGI Utilities, Inc. – Electric Division's ("UGI Electric's") cost of equity in UGI Electric's base rate case at Docket No. R-2017-2640058. In that proceeding the Commission stated:

> [W]e are persuaded by the arguments of UGI that its management performance related to its implementation of a voluntary LTIIP, a fully voluntary EE&C Plan, programs focusing on enhancing customer satisfaction, and initiatives related to workforce safety and training is laudable and warrants consideration as a factor in our final cost of equity allowance. The unrebutted record evidence indicates that UGI has been consistently recognized for high customer satisfaction. Additionally, UGI has consistently exceeded its benchmark service reliability metrics …

Opinion and Order entered Oct. 4, 2018 at 114.

Q. Does UGI Gas have many of the same types of programs and attributes as those identified in the Commission's Order related to UGI Electric?

A. Yes, it does. UGI Gas has filed a voluntary Long-Term Infrastructure Improvement Plan ("LTIIP") and a voluntary Energy Efficiency and Conservation ("EE&C") Plan. The Company has undertaken a variety of programs to improve customer service and increase the safety of its employees and the public. And, like UGI Electric, UGI Gas has exceptional customer satisfaction performance, including placing first or second in customer satisfaction in J.D. Power awards over multiple years. The accomplishments highlighted in my direct testimony are the kind that this Commission has considered in the recent past as indicating a management performance adder is appropriate.

Q. I&E and OCA assert that the accomplishments you have identified do not justify a management performance adder. Please respond.

A. Both I&E and OCA are simply wrong in concluding that the many Company initiatives outlined on pages 30-39 of my direct testimony, supporting the proposed management efficiency adjustment, are the minimum actions required to provide safe and reliable service under 66 Pa.C.S. §1501. As the Commission recognized in the above-quoted passage from the UGI Electric 2018 base rate case, the implementation of an LTIIP and EE&C Plan are not the minimum actions. Instead, they are voluntary actions that provide important public benefits, such as significantly improving public safety, advancing energy conservation, and promoting the more efficient use of energy, including encouraging combined heat and power installations in the Commonwealth. Another example of the Company's voluntary effort to improve is its adoption of UNITE. UGI Gas's extensive UNITE initiatives, which are designed to provide the Company's employees with the advanced tools needed to support key customer service and operational initiatives and enhance future performance, cannot reasonably be considered the minimum actions necessary to meet the standards of 66 Pa. C.S. § 1501.

Q. Do you agree with the suggestion that the Company's programs are merely meeting its bare minimum obligations under the Public Utility Code?

A. No, I do not. There is ample evidence that the Company is constantly exploring and implementing innovative solutions to improve safety, benefit customers, and support the goals of the Commission and the Commonwealth. For instance, UGI Gas has recently been actively engaged in developing the Renewable Natural Gas ("RNG") market in Pennsylvania. This market offers significant local environmental and economic benefits, as well as increases the sources of supply available on the UGI Gas system and thereby increases competition and improves the Company's resiliency. UGI Gas is the first Pennsylvania NGDC that has received Commission approval to incorporate RNG into its supply portfolio, and it is doing so in an innovative way that allows its customers to benefit from this new on-system source of supply while maintaining cost effectiveness. This is just one example of a comprehensive effort by UGI Gas that is not compelled by 66 Pa. C.S. § 1501 but brings many benefits to customers and the Commonwealth. In addition, UGI Gas's implementation of the many enhanced safety initiatives outlined in my direct testimony go far beyond what would reasonably be considered the minimum actions necessary to meet the standards of 66 Pa. C.S. §1501. Moreover, while still pending before the Commission at Docket No. P-2020-3019196, the Company has filed to voluntarily modify the percent-of-income payments under its CAP program to lower levels in an attempt to make natural gas service more affordable to these low-income customers. The Company also worked to incorporate an Emergency Relief Program in its last base rate case which was focused on enhancing customer assistance during the COVID pandemic.

Q. Is there any other critical flaw with OCA's and I&E's contention that the actions you have identified are necessary to meet the standards of 66 Pa. C.S. § 1501?

A. Yes, there is a significant error with I&E's and OCA's characterization of these actions and achievements as being necessary minimums. Most if not all of these are voluntary efforts undertaken by the Company. It is illogical to conclude that a utility such as UGI Gas, which consistently exceeds the required actions as a regulated public utility and has shown a tremendous commitment to embracing voluntary programs that target improvements across the spectrum of its operations, is merely meeting its minimum service requirements in Pennsylvania under 66 Pa. C.S. § 1501.

Q. Do you have any further comments on the claims made by I&E and OCA that the Company has merely shown performance that meets the Company's basic obligations?

A. It is patently illogical that UGI Gas's exceptional customer satisfaction performance, as demonstrated by the J.D. Power awards, shows only minimally acceptable performance pursuant to 66 Pa. C.S. § 1501. The Company has been recognized for many years as a leader in customer satisfaction amongst its peers. That, by definition, is an indication of performance that vastly exceeds the minimum threshold claimed by I&E and OCA.

Moreover, I&E does not believe that UGI Gas should be entitled to any management performance adder related to its diversity and inclusion efforts, which extend beyond hiring practices and vendor procurement (*i.e.*, policies set forth in 52 Pa. Code § 69.803), or even be permitted to recover some costs associated with those efforts. My direct testimony detailed these efforts, including the Company's Belonging, Inclusion, Diversity, and Equity ("BIDE") initiative, Black Organization Leadership and Development ("BOLD") group, Women's Impact Network ("WIN") and the Veteran Employee Team ("VET"). None of these initiatives are required by Commission regulation, and they create a positive working environment for all individuals. Additionally, UGI Gas's management performance initiatives that extend beyond regulatory obligations include the Company's environmental stewardship, sustainability, and community engagement commitments detailed on pages 32-35 of my direct testimony.

Q. Do you have any final thoughts on the operation of Section 523 of the Public Utility Code?

A. Yes. The provisions of 66 Pa. C.S. § 523 provide the Commission with an important tool to incent utilities to achieve enhanced levels of performance and to implement voluntary programs needed to both provide important benefits to customers and advance important public policy goals. In my view, it is critically important for the Commission to carefully consider and reward superior performance to encourage and maintain high levels of performance to the benefit of ratepayers and the Commonwealth as a whole. As I have demonstrated, UGI Gas certainly meets the required standard.

V. <u>AVERAGE BILL COMPARISON</u>

Q. In his direct testimony, does I&E witness Ethan H. Cline criticize the Company's average bill impact analysis associated with the proposed rate increase?

A. Yes. Mr. Cline takes issue with my testimony wherein I stated that this case will produce lower average customer bills than those paid by customers in 2008. (*See* UGI Gas St. No. 1 at 7.) According to Mr. Cline, the reason why UGI Gas claims that the average bill impact, under the currently proposed rate increase, is lower than the average bills from 2008 is that UGI Gas is including purchased gas costs ("PGC") in its analysis. (I&E St. No. 4 at 24). It is Mr. Cline's position that the PGC costs were higher in 2008 than they are currently and UGI Gas has no control over PGC costs and therefore cannot take credit for the cost difference due to lower PGC costs. Mr. Cline also states that PGC costs do not change because of a rate case. (*Id*. at 24-25.)

Q. Why is the total average bill a relevant metric for consideration?

A. The analysis performed was a bill comparison focused on customer affordability. From a customer affordability perspective, it is not logical to do a partial bill comparison because that is not how customers experience a gas bill. The Company's comparison of historic total customer bills provides a data point showing that the customer's bill as a result of this case will still be within the range of their historic experience.

Q. Do you agree with Mr. Cline's statement that UGI Gas has no control over the gas costs paid by UGI Gas customers?

A. No, I do not. As explained in the Company's annual 1307(f) PGC cases, the Company implements a procurement policy designed to procure natural gas and capacity at the least-cost for PGC customers and to promote price stability. UGI Gas utilizes a supply optimization model and a load duration analysis to plan and manage natural gas demand and supply balances, and uses hedging tools to reduce price volatility to its customers. UGI Gas also considers bidding on released capacity or releasing its own capacity when doing so aligns with its procurement needs and provides economic benefits to its customers. Additionally, the Company flows credits to its PGC customers from short-term off-system capacity releases, storage asset management agreements, and off-system sales pursuant to a revenue sharing mechanism in the Company's Gas Service Tariff. These measures demonstrate that UGI Gas undertakes extensive activities to ensure the lowest possible gas prices for its customers while being positioned to meet peak winter day demand.

Q. Are there any other items in Mr. Cline's testimony that you would like to address?

A. Yes, Mr. Cline identified that I had inadvertently excluded National Fuel Gas Distribution Corporation ("National Fuel") from the average bill comparison chart included in my direct testimony. I agree with Mr. Cline that if the Company performs a comparison to other Pennsylvania NGDCs' average bills in the future, it should include National Fuel. However, this oversight does not substantially change the analysis that UGI Gas's projected average bill is comparable to our peer companies in Pennsylvania.

VI. NRG ISSUES

A. STANDARDS OF CONDUCT

Q. Do you have any initial comments regarding Mr. Reyes's testimony on the Standards of Conduct?

A. Yes, I do. UGI Gas is committed to its compliance with the Commission's Standards of Conduct at 52 Pa. Code § 62.142, and the Company shows that commitment through annual training, internal audits, regular meetings, and process reviews by senior management and Company executives that I will describe in greater detail in this section of my testimony. Further, Mr. Reyes does not make any specific fact-based allegations in his testimony that relate to the Standards of Conduct. He only offers speculation. UGI Gas is fully compliant with the Standards of Conduct and is already subject to the audit authority of the Commission. There is simply no action required by the Commission as a result of Mr. Reyes's testimony.

Q. On pages 5-6 of his testimony, NRG witness Reyes expresses that he is concerned about UGI Gas's compliance with the Standards of Conduct related to employees who have switched positions between UGI Gas and UGI Energy Services, Inc. ("UGIES"). What is your response?

A. Mr. Reyes's concerns are unfounded. UGI Corp. prepares and provides extensive training regarding the importance of adhering to the Standards of Conduct when interacting with all market participants, including affiliates and employees of affiliates. This training ensures that employees understand the legal requirements and that no sharing of prohibited information occurs.

Q. On pages 8-9 of his testimony, Mr. Reyes states that UGI did not indicate how frequently its training materials are provided to employees or whether UGI Gas audits the practices of employees to ensure compliance. What is your response?

A. UGI Gas conducts annual training of its employees on the Standards of Conduct. This training is mandatory for employees that may engage with suppliers, undertake market activities, or have access to competitively sensitive data. UGI Gas monitors employee participation in this training to ensure that all such Company employees are trained on the Standards of Conduct. For employees to be considered trained, they must pass a test related to the training every year.

Q. On page 5 of his direct testimony, Mr. Reyes states that he has "personally observed employees migrating back and forth between UGI and UGIES." Do you wish to comment?

A. Yes. UGI Gas and UGIES do not share any employees as defined in 52 Pa. Code § 62.142(a)(13). However, when UGI Gas employees perform general administration or support services to UGIES, the costs are allocated in accordance with Commission approved affiliate interest agreements and a cost allocation manual (in accordance with 52 Pa. Code § 62.142(a)(9)). While Mr. Reyes did not identify any specific employees which he claimed were shared in his testimony, in discovery he did identify three management employees from UGIES that were previously UGI Gas employees. These three individuals have extensive training and experience relating to the Commission's Standards of Conduct and are trained every year. Moreover, UGI Corp. and its subsidiaries use an open, public, and competitive hiring process. The fact that there are employment applications from affiliate employees is not surprising, given the geographic limitations for many of the positions for which these entities are hiring. As long as employees are thoroughly trained in the Standards of Conduct and those Standards are followed, nothing prohibits an employee leaving UGI Gas to work for UGIES or vice versa. In fact, over the last three years, UGI Gas only had a total of 13 employees leave UGI Gas to take positions with UGIES, out of a total of approximately 1,700 employees of UGI Gas.

Q. Mr. Reyes recommends that the Commission direct UGI Gas to provide a full accounting to the Bureau of Technical Utility Services, within 60 days of a final order in this proceeding, of all employees, along with their titles and job descriptions, who migrate back and forth between UGI Gas and UGIES, along with documentation of how their salaries are allocated. Do you agree with his recommendation?

A. No, I do not. As I mentioned previously, the Company maintains adequate training and controls in place to assure compliance. Further, there is no allocation of salaries between the two companies. The only allocations associated with UGI Gas and UGIES are those related to services provided by UGI Corp. to its subsidiaries, or other costs that are allocated after the specific review by and approval of affiliate interest agreements by the Commission, in accordance with the Public Utility Code.

Q. Mr. Reyes recommends that the Commission direct the Bureau of Audits to examine UGI Gas's compliance with cost allocation, accounting, and record keeping requirements relating to UGIES. Do you agree?

A. No, I do not agree with Mr. Reyes's recommendation. UGI Gas fully complies with all cost allocation, accounting, and record-keeping requirements, and is subject to regular audits by the Bureau of Audits that, among other things, address affiliate relations and cost allocations. Specifically, in its most recent Focused Management and Operations Audit issued in October 2019, the Bureau of Audits made five findings and recommendations in these areas to improve the Company's tracking of affiliate costs and timekeeping for services rendered to affiliates. In its Implementation Plan, the Company accepted all but one of the recommendations and findings (the exception being related to updating affiliate interest agreements) and put into place a timetable for accomplishing those goals. In connection with the audit, UGI Gas submits annual status update reports and has indicated in those reports that it fully implemented the Bureau of Audits' recommendations that the Company had accepted. The most recent of these annual reports was filed with the Commission on December 15, 2021. Regarding the one finding the Company rejected related to updating its affiliate interest agreements, the Company noted that it had recently received re-approval of those agreements in its merger proceeding at Docket No. A-2018-3000381, which was approved one year earlier.

Q. Mr. Reyes recommends that the Commission direct UGI Gas to periodically conduct an internal audit that is designed to review compliance with the Standards of Conduct and report to the Office of Competitive Market Oversight ("OCMO") on a quarterly basis all measures it has taken and how it has handled any departures from the requirements. What is your response?

A. I do not agree with Mr. Reyes's recommendation. In addition to the periodic audits from federal and state regulators that UGI Gas is subject to, the Company has conducted an internal audit of its practices to ensure compliance with the Standards of Conduct and continues to monitor its operations for any issues or practices that may need to be modified in order to avoid a reportable incident. The Company also has robust internal training and encourages employees to use a variety of internal reporting resources, including an anonymous ethics hotline, if they identify any possible violations or reportable incidents. To the extent a reportable incident is discovered as part of its internal process, UGI Gas would certainly take any and all steps required to ensure that it complies with state and federal regulations. Again, this proposal by Mr. Reyes would utilize limited Company and OCMO resources where there is no evidence that these actions are needed, especially since the Company already has adequate practices and controls in place to monitor compliance.

Q. Do you have anything else you wish to add regarding the recommendations of Mr. Reyes on the Standards of Conduct?

A. Yes, I do. In his testimony, Mr. Reyes raises the specter of very serious allegations regarding UGI Gas's compliance with the Standards of Conduct but provides not one single piece of evidence to support his assertions. To the extent that Mr. Reyes believes there is a violation of the Standards of Conduct, the Commission's regulations provide him with the dispute resolution process set forth in 62 Pa. Code § 62.142(b). This procedure provides for a dispute resolution process that requires the natural gas supplier ("NGS") to inform the Company of its concerns so that they can be resolved between the parties without Commission intervention. If the parties are unable to resolve the dispute, the matter is referred to the Office of Administrative Law Judge for mediation, and then, if those efforts are unsuccessful, the affected party may file a formal complaint with the Commission. As UGI Gas has received no formal notice from NRG pursuant to 62 Pa. Code § 62.142(b), which would begin the dispute resolution process established by the Commission's regulations, NRG should not be permitted to disrupt this base rate proceeding with unfounded allegations concerning UGI Gas's behavior with its affiliate.

B. AUBURN GATHERING STATION

Q. On page 10 of his testimony, Mr. Reyes states that he is concerned about UGIES undertaking "risk-free" projects to acquire assets and then selling them to UGI Gas because several of UGI Gas's recent supply expansion activities, including the Auburn Gathering System, have been met by UGIES. How do you respond?

A. Mr. Reyes is mistaken about the nature of the Auburn transaction. Specifically, UGI Gas pursued the Auburn lease at the behest of a customer that requested the ability to expand its supply options to include Tennessee Gas Pipeline Company. To provide the service requested by the customer, UGI Gas needed to lease capacity on the Auburn pipeline. The cost of this transaction is entirely assigned to the customer. Further, UGI Gas fully explained and disclosed the nature of this project in its filing at Docket No. G-2021-3028753, which was approved by the Commission on November 22, 2021.

Q. On pages 10-11 of this testimony, Mr. Reyes suggests that there are instances where information concerning the capability of UGI Gas's system is only known to UGI and UGIES. He specifically points to capacity related to Sunbury as an example of this. What is your response?

A. As the Company stated in its 2019 Gas Base Rate case at Docket No. R-2018-3006814, where the issue of delivery rules on Sunbury was raised by certain suppliers, Sunbury was a publicly noticed open season that was certificated by the Federal Energy Regulatory Commission ("FERC") at Docket No. CP15-525. The subsequent rules relating to delivery on Sunbury were developed through a collaborative process that determined delivery requirements and acceptable substitutes based on the hydraulic and supply characteristics of each geographic segment of the UGI Gas system. The entirety of this process was transparent and prioritized the interests of the Company's customers, by increasing their sources of supply and ability to purchase from a wider variety of supply sources to enhance the competitive marketplace. As was the situation in the 2019 Gas Base Rate case, there is no basis here for claiming that the delivery rules and capacity on the Sunbury system were the product of anything other than a logical application of hydraulic modeling and delivery needs for the UGI Gas system.

Q. Mr. Reyes recommends that the Commission should direct UGI Gas to provide information to NGSs that outlines the full capabilities of its delivery system. (NRG St. No. 1 at 3.) What is your response?

A. The Commission does not need to make such a directive, because UGI Gas readily offers the information NRG is seeking to suppliers on its system. All of the available interconnections on the UGI Gas system for suppliers are identified on the Company's Energy Management Website ("EMW"). In addition, system flexibility is offered to suppliers in the form of ranges for delivery points, by UGI delivery region for suppliers to deliver to certain customer pools. UGI Gas has regularly scheduled supplier collaboratives to review its system demands, address any new or changed circumstances, and provide suppliers with an opportunity to ask the Company questions or seek additional information or insight into the Company's distribution system and delivery regions. These meetings provide suppliers ample opportunity to request, or inquire about, the information Mr. Reyes seeks. As a result, Mr. Reyes's recommendation on this point is unnecessary. UGI Gas has provided delivery rule information consistently to all suppliers and will continue to do so through its EMW, supplier collaboratives, and other means as necessary.

C. AUTOMATION OF SUPPLIERS NOTIFICATIONS

Q. On pages 11-12 of his testimony, Mr. Reyes states that NRG is experiencing ongoing operational issues regarding lack of timely notifications of utility cuts, which occur when a nomination made by an NGS needs to be corrected over the weekend. What is a "utility cut"?

A. UGI Gas is not familiar with this term. However, according to Mr. Reyes, a "utility cut" is "a mismatch in nominated supply between the interstate pipeline and the receiving utility resulting in a failure to meet the required obligation to the utility." (*See* UGI Gas Exhibit CRB-1R.) According to Mr. Reyes a "utility cut" can be initiated by either an interstate pipeline or a utility where supplier nominations do not match interstate delivery information.

Q. Do you agree with Mr. Reyes that these events pose a problem on the UGI Gas system?

A. No, I do not agree. Mr. Reyes provides no evidence regarding the specific operational issues he claims that NRG is experiencing, and he cannot itemize the dates or frequency with which NRG has experienced this issue on UGI Gas's system or the magnitude of the impact in either volumes or dollars to NRG. (*See* UGI Gas Exhibit CRB- 1R.) I am also personally unaware of any instances where UGI Gas has cut supply over a weekend due to a mismatch between nominations provided by a natural gas supplier, like NRG. Further, UGI Gas is not aware of any other suppliers who have concerns similar to those raised by the testimony of Mr. Reyes.

Q. Mr. Reyes recommends that UGI Gas be directed to implement automated programming for these notifications or implement weekend staffing. Do you agree?

A. No, I do not agree. First, I am not sure if automated programming can be reasonably accomplished to compare and analyze supplier nominations on the UGI Gas EMW and the various interstate pipelines and interconnects that provide service to UGI Gas. Mr. Reyes proposes a solution that, if workable, would likely have a very significant operational cost to UGI Gas without evidence that there is an issue to address. Further, I do not believe that UGI Gas should be the party responsible for finding a solution to Mr. Reyes's concerns, if there is such a problem to be solved. Based on a review of the discovery responses provided by NRG on this topic, the primary issue appears to be related to a lack of communication between NRG and its third-party suppliers over weekends. UGI Gas is not a party to those transactions. Finally, NRG fails to show that the issue represents a significant problem that threatens the Company's ability to provide service to customers or has widespread impacts that harm the competitive market. Without such evidence, the Commission should not direct UGI Gas to implement a likely expensive solution to an unproven problem with unknown benefits.

Q. Do you have any other comments relating to this topic?

A. Yes, I do. Based on Mr. Reyes's definition, a "utility cut" may include a mismatch between a supplier's submitted volumes and the pipeline nominations identified on the Electronic Bulletin Board. As a courtesy to suppliers, UGI Gas regularly reviews nominations to help ensure that entries submitted by suppliers align with pipeline nominations, and the Company identifies obvious data entry errors that could potentially subject a supplier to a nomination mismatch. To provide this feedback to suppliers for their weekend nominations, the deadline for Saturday, Sunday, and Monday nominations is on Friday at 2:00 p.m. A review of the Company's records indicates that NRG regularly fails to meet this deadline for its Sunday and Monday nominations. As a result, UGI Gas employees do not have sufficient time during normal business hours to review NRG nominations for Sunday and Monday and provide courtesy notice of errors by NRG or their third party suppliers. Prior to asking the Commission to direct UGI Gas to undertake a likely expensive solution to a problem that may exist only for NRG, NRG should first show that it is in compliance with the weekend nomination deadlines.

D. WEIGHTED AVERAGE COST OF DELIVERED GAS

Q. On pages 13-14 of his testimony, Mr. Reyes states the Weighted Average Cost of Delivered Gas ("WACOD") does not show the individual impacts of a specific rate case. How do you respond?

A. Mr. Reyes' claim is somewhat misleading. The Company does identify when FERC rate changes, including the impacts of Natural Gas Act Section 4 rate proceedings, are first included in the WACOD. The Company also identifies when any adjustments are made to reflect the final rates, as well as refunds associated with final rates that are lower than the filed rates charged during the interim period. While the Company does not separately itemize FERC rate impacts in the overall calculation of the WACOD or show an individual Section 4 proceeding's particular impact on a monthly basis over time (as Mr. Reyes's testimony suggests), this is because the WACOD calculation includes many moving parts, and teasing out the effects of a single FERC proceeding would require the Company to keep and update numerous individual WACOD files that would contain no longer valid or applicable pipeline rates, and calculate the WACOD to track each separate component of data.

Q. Mr. Reyes recommends that UGI Gas be required to include more detailed information concerning the effect of pipeline rate changes on its Electronic Bulletin Board or through other means, including providing the information by electronic mail to suppliers. (NRG St. No. 1 at 15.) Do you agree?

A. No. NRG is a sophisticated entity, and Mr. Reyes admits that NRG monitors and participates in FERC proceedings on behalf of its customers. (*See* UGI Gas Exhibit CRB-2R.) As a result, NRG should be fully capable of assessing, with a reasonable degree of certainty, the impacts of various FERC proceedings on its cost of transportation service it relies upon in serving its customers. Further, the process currently utilized by UGI Gas is applied consistently to all impacted customers and suppliers, and therefore does not have a discriminatory impact on NRG as compared to other suppliers.

Q. Mr. Reyes also recommends that the Economic Benefit of Peaking Service ("EBPS") and LFD gross up be removed from the LFD WACOD rates. (NRG St. No. 1 at 15-16). Do you agree?

A. No, I do not. The WACOD is a mechanism that is intended to fully reflect the costs of providing the transportation program to the customers who utilize it. Therefore, the EBPS and LFD costs are appropriately incorporated into the WACOD. While Mr. Reyes proposes that UGI Gas direct bill these charges to shopping customers, any modifications, and specifically any efforts to separately identify on customer bills the costs of or credits associated with the transportation service offered by the Company, will cause the Company to incur additional and unnecessary programming costs to change the bill format in order to accommodate new information.

VII. <u>HEAT CONTENT ADJUSTMENT PROGRAMMING COSTS</u>

Q. Please describe the Company's heat content adjustment factor.

A. On May 26, 2021, UGI Gas filed a tariff supplement at Docket No. R-2021-3026078 seeking to add a heat content adjustment factor to customer bills. This adjustment factor ensures that the inclusion of gas with a lower British Thermal Unit ("BTU") content on the UGI Gas system does not adversely impact UGI Gas customers when such gas is metered on a volumetric (per CCF or MCF) basis. This adjustment factor was made necessary by the anticipated impacts of RNG that has been and will be added to the UGI Gas system in coming years. The heat content adjustment factor recognizes that RNG that enters the UGI Gas system will have a heat content, measured in British Thermal Units ("BTU"), around 970 BTUs. This heat content is at the lower end of the allowable heat content identified in the Company's gas quality specifications. Without the heat content adjustment factor, customers receiving significant amounts of RNG will require a greater volume of gas to achieve the same heating output as traditionally sourced gas (e.g., from interstate pipelines), which would result in higher metered volumes and higher bills. The Commission approved the heat content adjustment factor tariff supplement on August 5, 2021.

Q. What concern did OSBA raise in regard to the Company's heat content adjustment factor?

A. Mr. Knecht identifies that OSBA intends to contest the budgeted cost for information system rate base associated with the heat content adjustment factor. (OSBA St. No. 1 at 25.)

Q. What costs were associated with the project identified by Mr. Knecht.

A. The Company identified $2.0 million in costs, which were the budgeted itemized internal costs associated with necessary programming to reconfigure the Company's billing system to calculate the heat content adjustment factor and apply it to customer bills.

Q. **Do you believe that these costs should be disallowed?**

A. No, I do not. At a minimum, I believe that Mr. Knecht would agree that: (1) the heat content adjustment factor is the appropriate response to the presence of lower BTU gas on the UGI Gas system; and (2) the failure to implement such an adjustment factor could cause economic harm to customers receiving significant quantities of lower BTU gas.

Q. How are IT projects like the heat content adjustment programming costs budgeted?

A. These costs were incurred by Company employees undertaking standard tasks associated with their employment. Specifically, IT projects are given individual budgets and then are tracked internally on a project basis. However, as the resources being used to accomplish many of these projects are internal full-time IT employees, any hours that were budgeted for a particular project but ultimately not needed are reallocated to other necessary IT projects. And that, indeed, is exactly what happened with regard to the heat content adjustment factor IT project. The $2 million identified by Mr. Knecht reflects the total budget for the three phases of the project. The first phase of the project came in significantly under its anticipated budget and ahead of schedule, and ultimately only used $662,319 of internal IT resources and no external resources, rather than the originally budgeted $1,101,182. As a result, the remaining project budget for phase one was allocated to other IT projects that could be addressed once the resources allocated to the heat content adjustment factor became available. The second and third phases of this project, which allow for a system-wide rollout of the adjustment factor and optimization of the functionality to wrap up the project, are similarly anticipated to be under budget, with any remaining budget then going to other IT projects that were identified and put in the queue after the heat content adjustment factor. The IT costs identified for the heat content adjustment factor are appropriately included in the Company's overall claim, as they are a necessary measure to protect customers from any disproportionate impact that may occur from the changing supply resources on the UGI Gas system and fully utilize internal Company resources.

VIII. ISSUES IMPACTING COMPETITIVE CUSTOMERS

A. CAPACITY ASSIGNMENT

Q. OCA witness Mierzwa disagrees with the Company's proposal to continue existing procedures for capacity releases to Rate XD customers in the former UGI South Rate District. (OCA St. No. 3, at 42-43.) Why does he oppose the existing capacity assignment procedures for capacity releases to Rate XD customers?

A. Currently, in the former UGI South Rate District, "Rate XD customers are assigned Columbia Gas Transmission ("TCO") firm transportation ("FT") pipeline capacity and are assessed the same rates UGI Gas is charged for that capacity by TCO." (OCA St. No. 3 at 43.) According to Mr. Mierzwa, this existing procedure is unreasonable because "TCO capacity released to Rate XD customers in the former South District is among the Company's lowest cost capacity resources," and Rate XD customers should not have preferential access to the Company's lowest cost capacity resources while PGC and Choice transportation customers are held responsible for the costs associated with the Company's higher cost capacity resources." (OCA St. No. 3 at 43.)

Q. What is Mr. Mierzwa's recommendation?

A. He recommends that "Rate XD customers…continue to be assigned TCO capacity until their current service contracts expire, at which time Rate XD customers should be assessed the same charges for released capacity that are assessed to Rate LFD customers." (OCA St. No. 3 at 43.)

Q. Do you agree with this recommendation?

A. No. I disagree with Mr. Mierzwa's recommendation. The cost of UGI Gas's interstate pipeline capacity, including on TCO, has been increasing due to recent Section 4 proceedings at FERC. Further increasing capacity charges for Rate XD customers that have historically received TCO capacity (all of whom have competitive alternatives) may result in these customers terminating service from UGI Gas or, perhaps more likely, demanding a reduction to the base distribution charges they currently pay.

Q. Please provide a brief history of the Company's capacity release program and describe how the Company determines which capacity is to be used in calculating the rates for large transportation customers.

A. The Company's current capacity release program dates from before the settlement of the Company's 1995 base rate proceeding at Docket No. R-00953297 ("1995 Settlement"), which was approved by Commission Order entered August 21, 1995 ("1995 Order"). Pursuant to the 1995 Settlement, the Company was permitted to continue assigning Rate XD customers up to 50,241 Dth of Columbia/Columbia Gulf Capacity and provide a credit to the PGC for the cost of that capacity. *See* 1995 Order ¶ 18. The 1995 Settlement provided that for capacity released to Rate LFD customers, the PGC would be credited an amount equal to the quantity of firm capacity provided to Rate LFD customers multiplied by the weighted average cost of firm transportation on all pipelines serving the Company, exclusive of capacity assigned to Rate XD customers. *See* 1995 Order ¶ 20. The capacity charges for Rate XD and LFD customers, at that time, did not include the cost of storage capacity or peaking capacity. Subsequently, the capacity charges were incorporated into the Company's tariff and its service agreements with large transportation customers. The 1995 Settlement precluded any challenge to the capacity charges for Rate XD and LFD customers until the next base rate proceeding.

In the Company's 2016 base rate proceeding at Docket No. R-2015-2518438, the capacity release program was again proposed, unchanged from the one approved in the 1995 Settlement, and no party challenged the program in testimony. The Commission-approved settlement ("2016 Settlement") provided that, unless specifically enumerated, the Company's tariff filing was approved as proposed. 2016 Settlement ¶ 16. Currently, nearly all of the 50,241 Dth of Columbia capacity has been subscribed to, and no new Rate XD customers are eligible for a release of this capacity at Columbia maximum tariff rates without an existing customer lowering its election to make the capacity available.[3] Current and new Rate LFD customers may elect to receive a capacity release of firm transportation capacity from the Company based on the capacity charge formula agreed to in the 1995 and 2016 base rate proceedings. For Rate XD customers, this methodology has remained unchanged for more than 25 years and its continuation has been relied upon by both the XD customers and the Company alike for contract renegotiation purposes and supply sourcing as well.

Q. Do you agree with Mr. Mierzwa's recommendation to charge Rate XD customers the cost of WACOD plus 50% of peaking demand charges upon the expiration of their service agreements?

A. No. Rate XD customers are considered competitive customers due to their access to alternative fuel sources or their ability to bypass utility service and connect directly to an

[3] Because of the fluctuating thermal to volumetric conversion between Dekatherms and million cubic feet, the Columbia capacity is not fully subscribed; however, there is insufficient capacity to subscribe additional XD customers.

interstate pipeline or their ability to move operations to other facilities located outside the UGI Gas service territory. For this reason, they pay negotiated rates. Any increase in costs to these customers increases the likelihood that they will leave utility service, or conversely will have an offsetting decrease in their negotiated distribution rate due to the increase in their pipeline capacity rate. If a significant number of large transportation customers stopped taking distribution service from the utility, the Company could be required to seek base rate relief based on lost revenues from these very large customers, thus resulting in increased distribution rates to the remaining customers. Additionally, these XD customers employ thousands of people who also live within the Company's service territory. Many of these employees are UGI Gas customers themselves (at their primary residence), so to the extent that these XD customers may move their business operations to other locations outside the UGI Gas service territory (due to higher energy costs as proposed by Mr. Mierzwa), there could be additional economic implications to UGI Gas's customer base and anticipated future revenue streams beyond the potential loss of XD customer revenue. Accordingly, Mr. Mierzwa's proposal should not be adopted.

B. RATE INCREASE ALLOCATION TO RATE CLASSES XD AND IS

Q. In addition to Mr. Mierzwa's proposal, where there any other positions advanced that would impact competitively situated customers?

A. Yes, OSBA witness Knecht proposes to move $2 million of the proposed rate increase for Rate N/NT to the Rate XD and Rate IS customer groups.

Q. Do you agree with this adjustment?

A. No, I do not agree with this adjustment. Mr. Knecht correctly notes that the dollars he has identified as rate reductions reflected by the Company for Rates XD and IS merely reflect the reset of the DSIC rate back to zero. (OSBA St. No. 1 at 15). Mr. Knecht also acknowledges that these customers are paying negotiated rates. (*Id.*) Finally, Mr. Knecht acknowledges that these customers are paying significantly above the system average under current rates. (OSBA St. No. 1, Table RDK-4). Mr. Knecht's own facts do not support his proposed allocation.

Q. Why should Mr. Knecht's proposed adjustment to Rates XD and IS be rejected?

A. The customers paying Rates XD and IS are competitively situated customers with negotiated rates, as I described in the prior section of my testimony regarding capacity assignments. This means they have options that could either allow them to bypass the UGI Gas system or they may move their operations outside the Company's service territory and, overall, are very sensitive to contract terms. The fact that these customers have negotiated contracts limits the Company's ability to increase their rates between negotiation periods. Said differently, Mr. Knecht's proposal could not be translated into costs borne by the customers in the customer class he has identified, because the majority of the customers in these two rate classes will not have contracts that are renegotiated in the FPFTY as many are under multi-year contract terms.

Q. Why is it inappropriate to impute the reduction associated with the DSIC onto the base contract rates paid by Rate XD and IS?

A. The Commission has recognized that for competitively situated customers, such as the Rate XD and IS customers, the Company may not be able to apply the DSIC charge.

Specifically, the Commission stated in *Petition of Columbia Gas of Pennsylvania, Inc. for Approval of a Distribution System Improvement Charge*, Docket P-2012-2338282, p. 57 (Order entered May 22, 2014):

> In our *Final Implementation Order*, we stated that "utilities should have the flexibility to *not* apply the DSIC surcharge to customers with competitive alternatives and customers having negotiated contracts from the utility." *Final Implementation Order* at 46 (emphasis in original). We also acknowledged the reality of a public utility's contractual relationship with competitive customers in stating that, "[w]here the customer negotiated rates based on competitive alternatives, it would be contrary to the contract terms and counterproductive in the long term to add costs that may induce the customer to leave the system and provide no support for infrastructure costs." We then indicated that, accordingly, the DSIC "need not be applied" to competitive customers. *Final Implementation Order* at 46. As such, our Order provided public utilities, like Columbia, with the discretion to not apply the DSIC to competitive customers.

The Commission referenced the Columbia Order in making a similar determination that UGI Gas may reduce or eliminate the DSIC for competitively situated customers. Despite this language, UGI Gas has successfully negotiated for some customers on Rates XD and IS to pay the DSIC. and the benefit of that goes directly to other customer classes given the reconciling nature of the DSIC. The Company will collect approximately $2 million of DSIC contribution from competitively situated customers in the FTY. Contributions by Rate XD and IS customers to DSIC revenue requirement amounts result in overall lower amounts needing to be collected from all other customers.

Q. In its negotiations with competitively situated customers, does the Company account for the general upward trend in rates?

A. Yes. Given today's high prices for alternate fuels, for many of these customers, when contracts are renegotiated, UGI Gas must look to price the contract based on the customer's other firm rate alternatives, such as Rate LFD. Thus, when Rate LFD moves up due to the impacts of a rate case, future contract negotiations are often subject to the same upward pressure. In this way, while Rate XD and IS are not directly impacted by rate cases, the contracts do ultimately reflect the same considerations raised by OSBA in this proceeding. This includes the Company's efforts to apply the DSIC to more competitively situated customers. A wholesale update to negotiated contracts in order to update rates to reflect a DSIC roll-in, as Mr. Knecht advocates, will spotlight the "renegotiation" of these contracts with this competitive group and lead to: (a) some customers looking to renegotiate base contract rates mid-term for competitive cost changes on their side; (b) a much larger number of these customers needing to be exempt from DSIC charges altogether under the allowed competitive exclusion provisions of the DSIC; and (c) a reduced ability to finesse the rate negotiations which serve to maximize the revenue contributions these customers make to the system, to the benefit of all customers. In total, there would be significant risk that revenues would actually be lower from Rate XD and Rate IS customers as a result of adopting Mr. Knecht's recommendation.

Q. Does the Company have any other demonstration on how it has been able to maximize the revenues from these competitively negotiated Rate XD and IS contracts, which then benefit all other customers?

A. Yes. As shown below, in review of data from the Company's base rate case filings in 2019, 2020 and now 2022, the Company has been able to consistently increase Rate XD and Rate IS revenues over the past several years. See the respective UGI Gas Exhibit E – Proof of Revenue from each filing. The following table shows the total combined revenue contributions from these two customer classes in each of the last three rate cases:

Table 1:

	Revenues from Rates XD and IS
2019	$48,404,813
2020	$53,298,458
2022	$60,710,158

Table 1 demonstrates the Company's successful efforts, which serve to otherwise lower the revenue contribution required from all other customer rate classes.

IX. _*PRO SE*_ <u>COMPLAINANTS AND PUBLIC INPUT HEARINGS</u>

Q. Were there public input hearings conducted in this proceeding?

A. Yes. On April 13, 2022, the Company participated in two telephonic public input hearings, which were publicly noticed and conducted by the presiding Office of Administrative Law Judges at 1:00 pm and 6:00 pm. In total, six individuals testified on the record during the 1:00 pm session, and three individuals testified on the record during the 6:00 pm session.

Q. Did any current Company employees participate in the public input hearings?

A. Yes. William Corcoran, a UGI Gas field worker, testified on behalf of the International Brotherhood of Electrical Workers ("IBEW") Local 1602 in Lancaster, Pennsylvania during the 1:00 pm session. Also, Christopher Cortright, a warehouse employee of the UGI Lehigh Valley office, testified on behalf of IBEW Local 1456 during the 6:00 pm session.

Q. What questions did Mr. Corcoran raise during the public input hearing?

A. Initially, Mr. Corcoran asked how UGI Gas's proposed revenue increase in this proceeding will help the Company earn a fair rate of return on investments. He also wanted to understand what investments were involved. (Transcript for 1:00 pm Session at 27-28.)

Q. Can you respond to Mr. Corcoran's questions?

A. Yes. The Company's case includes an adjustment for the rate of return ("ROR"), which is applied to the overall calculation of base rates. As detailed in the direct testimony of UGI Gas witness Paul R. Moul (UGI Gas St. No. 6), the Company needs to earn a ROR that covers the Company's interest and dividend payments to investors who have equity in the Company. The ROR also needs to allow the Company to attract new shareholder investments by compensating these investors for the risk undertaken when investing in UGI Gas. These shareholder investments allow the Company to raise the capital needed to install and replace components of its natural gas distribution system, as well as other capital investments, thereby maintaining safe and reliable service to customers.

Q. What training concerns did Messrs. Corcoran and Cortright raise during the public input hearing?

A. Mr. Corcoran stated that UGI Gas's infrastructure replacement programs should only be performed by UGI Gas employees. (Transcript for 1:00 pm Session at 28-29.) Mr. Cortright expressed a desire for comprehensive curriculum training. (Transcript for 6:00 pm Session at 23.)

Q. Please respond to the concerns relating to training.

A. UGI Gas has a rigorous training process focused on safety and requires all employees and contractors to be sufficiently trained. Safety training for employees and contractors is overseen by the UGI Safety and Training group. Safety training is tracked, including training attendance and expiration of operator qualifications ("OQ"). UGI Gas administers the OQ program making sure their employees maintain qualifications specific to their job duties per federal regulations (42 C.F.R. § 192(N)). UGI Gas's Emergency Responders, Duty Supervisors, and Senior Supervisors receive extensive training on many critical field activities on a regular basis. In addition, there is onboarding emergency response training for all field employees. Further, since 2016, the Company has participated in the Northeast Gas Association's Enhanced Operator Qualification Program. The Enhanced OQ Program includes the development of critical thinking skills through its online knowledge training supplemented by the Company's hands-on classroom training for required skills specific to Company procedures. The Company's OQ Program currently includes 138 Covered Tasks, which comply with the requirements set forth in 49 C.F.R. 192, Subpart N.

In addition, the Company's safety training program is being modified to maximize the use of the state-of-the-art training center, which has recently become fully functional for training purposes. This new facility will provide an even better and more hands-on opportunity for field crews to hone their skills and improve their use of safe practices.

Q. What concerns did Mr. Corcoran and Mr. Cortright raise regarding the Company's use of contractors?

A. Mr. Corcoran feels that UGI Gas is using too many contractors to do work that traditionally was performed by Company employees. (Transcript for 1:00 pm Session at 28.) Both Mr. Corcoran and Mr. Cortright expressed concerns that reliance on contractors hinders the ability of UGI Gas employees to learn in the field. (*Id.*; Transcript for 6:00 pm Session at 23.)

Q. Please respond to concerns relating to the use of contractors.

A. The Company uses a mix of contractor and employee resources because the volume of work that is currently being done exceeds UGI Gas's ability to hire and utilize only Company employees. A decade ago, before the Company commenced its accelerated main replacement program, there was less need for supplemental resources. However, to replace 70 miles of aged main per year, as well as meet all of the other standard utility field operations, the Company needed to expand its field crews and do so at a rapid pace. The only way to accomplish that was through the addition of more contractor crews. Further, contractor resources are often a prudent option, since there is some seasonality to the volume of work being done. Contractor numbers can be added during times where there is a larger workload and reduced during slower times of the year. However, employee crews continue to be a vital part of the Company's operations, and the new training center will create a better, safer, and more effective environment to get all field crews the kind of hands-on experience they need to perform optimally in the field.

Q. What concern did Mr. Corcoran raise in regard to the tools and technology that UGI Gas's field workers utilize in the field?

A. Mr. Corcoran claimed that the Company's "in-field technology" is outdated. (Transcript for 1:00 pm Session at 28.)

Q. Please describe the Company's use of new technology.

A. UGI Gas has been very active in working toward upgrading its technology and incorporating new and improved technology, including through its UNITE program efforts. In some instances, the first step to incorporating new technology required the Company to first adopt new computer systems that would be compatible with and provide more functionality for field crews. The UNITE program has focused on making many of these changes over recent years. As a result, field crews have been and will continue to be provided with modern technology that will make them more efficient and improve the Company's record keeping.

Q. Did any current *pro se* complainants participate in the public input hearings?

A. Yes. Two of the *pro se* complainants testified on the record during the hearings: Paula Mercuri and Annette Miraglia. They along with Lisa Musser, Sabatini Monatesti, and Kirsten Andersen, who are UGI Gas customers but did not file complaints against the rate case, testified at the public input hearings about the significance of the increase and how it would affect customers. The Company strives to strike a balance between increasing rates to its customers and undertaking the very costly infrastructure repair and replacement programs, safety initiatives and IT system upgrades that allow it to meet and exceed its obligations under 66 Pa.C.S. § 1501. The Company also has and continues to incorporate a variety of programs targeted at assisting lower income customers in both paying current bills and reducing future bills through conservation efforts.

Q. What testimony was placed on the record regarding the Company's proposed Weather Normalization Adjustment ("WNA")?

A. During the 1:00 pm Session, Mr. Corcoran and Ruth Weaver discussed the WNA proposal. Mr. Corcoran asked that the Company fully explain the mechanism to customers with understandable examples. (Transcript from 1:00 pm Session at 29.) Ms. Weaver expressed concerns that the WNA would increase summer bills. (*Id.* at 46.)

Q. Please respond to the concerns about the WNA.

A. UGI Gas witness John D. Taylor discusses the Company's plans regarding WNA-related customer education/outreach in his rebuttal testimony, UGI Gas St. No. 11-R. Regarding Ms. Weaver's claim, the WNA mechanism applies in the months of October through May. If weather is colder than normal during those months, the Company will issue a bill credit to customers. If weather is warmer than normal during those months, a surcharge will be applied to the bill. The WNA will not impact summer bills unless the customer elects to participate in the Company's budget billing program, in which case any impacts from WNA would be averaged over the 12 monthly bills per year consistent with the rules of the budget billing program.

Q. Please summarize the public input hearing testimony of Eric Epstein.

A. Mr. Epstein claimed that the Company's use of the DSIC and the associated LTIIP initiatives represent poor corporate planning on UGI Gas's behalf. Mr. Epstein appears to believe that the Company should have been replacing its distribution system components prior to when the DSIC was implemented. (Transcript from 6:00 pm Session at 39.) Mr. Epstein also stated that he does not support the rate increase. (*Id.*) He also recommended that the Commission adopt a new method for reviewing rate cases, using what he terms an "aggregate impact statement." (*Id.* at 40.) In other words, the Commission should not review rate increases in isolation. According to Mr. Epstein, the Commission should consider all expenses, including inflation, for all utility customers when approving rates. He also recommended that utility companies be placed on Commission-issued budget plans when they demonstrate poor management performance. (*Id.* at 41.)

Q. Please respond to Mr. Epstein's claims regarding planning.

A. UGI Gas, along with the vast majority of the natural gas and electric utilities in Pennsylvania, is engaged in the accelerated replacement of infrastructure. Providing NGDCs and Electric Distribution Companies ("EDCs") the incentive to undertake these systemwide replacements on an accelerated basis is exactly why Act 11 was adopted and the fundamental reason why the DSIC mechanism was extended to NGDCs and EDCs. Mr. Epstein provides no facts regarding what historical management practices or decisions he believes were poorly implemented.

Q. Please respond to Mr. Epstein's recommendation that no revenue increase be granted.

A. Mr. Epstein's recommendation to deny the Company's revenue increase would significantly hamper the Company's ability to continue replacing infrastructure on an accelerated basis, a result which should be avoided. The replacement of aging main is critical to the continued ability of UGI Gas to provide safe and reliable service to customers.

Q. Do you agree with Mr. Epstein's proposal that the Commission prepare "aggregate impact statements" during utility rate cases?

A. No. First, Mr. Epstein's proposal is not clear on how the Commission would apply his recommendation. Second, this recommendation would be a rejection of the basic and fundamental principles of ratemaking, including the requirement that utilities receive a return of and on plant placed in service for public use. Mr. Epstein's approach would link a utility's ability to recover its costs to the increase in other costs and services, including increases in unregulated costs outside of the Commission's jurisdiction, instead of looking at whether the activities of the utility are just, reasonable, and necessary for service to the public. For customers struggling with affordability, the Company's Universal Service Programs are designed to assist qualifying customers. Mr. Epstein's recommendation should be rejected as it is unlawful.

Q. Please respond to Mr. Epstein's recommendation that the Commission should place public utilities on budget plans if they demonstrate poor management performance.

A. This proposal is fundamentally unnecessary. Rate cases provide the Commission the opportunity to review and approve the details of a utility's rates, including all relevant costs that will be imposed on customers and the performance of management. The Commission, at its discretion, may disallow costs that are not used to serve the public or that were imprudent. Further, through the LTIIP, the Commission has the opportunity to review and approve the major infrastructure activities planned by utilities on both a forward looking and annual basis to ensure that utility resources are being appropriately dispatched. The Commission already has clear legal authority to consider management performance in the establishment of rates, and also has the authority to regularly audit utility operations. As such, this recommendation by Mr. Epstein is unnecessary and should be rejected.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

UGI Gas Exhibit CRB-1R

Responses of NRG Energy, Inc. to the Interrogatories of UGI Utilities, Inc. – Gas Division, Set I in Docket No. R-2021-3030218

Request: UGI – NRG I-6: Reference NRG Statement No. 1, page 11, line 21.

a) Please define the term "utility cut."

b) Please identify who initiates the "utility cut".

c) Please explain why the "utility cut" occurs.

d) For the last three years, please identify all instances on the UGI Gas system where NRG has experienced a "utility cut." For each instance identified by NRG, please include the following: date, whether the cut occurred on a weekend, the number of volumes impacted, and any penalties incurred by NRG.

Response:

a) A utility cut is a mismatch in nominated supply between the interstate pipeline and the receiving utility resulting in a failure to meet the required obligation to the utility.

b) A utility cut can be initiated by either the interstate pipeline for various reasons or by a utility if the supplier's nominations do not match the interstate delivery information (contract numbers, volumes, delivery points, etc.).

c) The supply nomination process involves a robust third-party market, with several entities exchanging information outside the control and/or knowledge of the NGS. For example, the Interstate schedulers exchange delivery points and transportation contract numbers. These numbers are passed between parties and there can be instances when a transposition occurs. Additionally, an interstate pipeline may experience constraints or operational issues that result in utility cuts.

d) NRG does not maintain a record of utility cuts by utility. Historically, NRG has worked with the utility and been granted the ability to have retroactive nominations executed to mitigate any potential impacts. The purpose of the retroactive nomination is to eliminate the penalty risk posed by such a reduction that exists under the tariff. If NRG has timely notification of any non-compliance with the required delivery obligation, it has the ability real time to adjust and ensure that it is in a compliance with its delivery obligation. Absent real time notification, NRG is at risk of violating requirements and of being penalized if the utility, interstate pipeline and supplier will not all agree on a retroactive nomination.

UGI maintains a log listing of UGI Utilities Nomination Confirmation Issues, which are sent to suppliers via email to timely identify any nomination issues. Below is a screenshot of the email notifications received by NRG since September of 2021, which do not include a single weekend notification.

UGI Gas Exhibit CRB-2R

Responses of NRG Energy, Inc. to the Interrogatories of UGI Utilities, Inc. – Gas Division, Set I in Docket No. R-2021-3030218

Request: UGI – NRG I-12: Reference NRG Statement No. 1, page 13, lines 2-3.

a) What impact does an individual pipeline rate case have on NRG or its customers?

b) Does NRG participate in FERC proceedings on behalf of its customers? If so, please describe the nature of the participation.

Response:

a) Please see Mr. Reyes' Direct Testimony at page 14, lines 2-12.

b) Yes. NRG monitors and participates in individual FERC proceedings that impact NRG and its customers. This participation includes attending hearings, reviewing material and participating in settlement negotiations.

Response provided by: Christopher Reyes

Dated: May 2, 2022

CONFIDENTIAL VERSION

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et. al

UGI Utilities, Inc. – Gas Division

Statement No. 2-R

Rebuttal Testimony of
Tracy A. Hazenstab

Topics Addressed:	**Revenue Requirements Updates** **Response To Adjustments To Operating Revenues And Expenses** **Interest Synchronization** **Compliance With PA Act 40 Of 2016**

Dated: May 17, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Tracy A. Hazenstab. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 2, on January 28, 2022.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony provides updates to certain components of the Company's revenue requirement, based on the information provided during the discovery phase of this proceeding and additional information affecting the Company's cost of serving its customers. In addition, my testimony responds to certain portions of the following direct testimony submitted by the Bureau of Investigation and Enforcement ("I&E") and the Office of Consumer Advocate ("OCA"): I&E Statement No. 1, the direct testimony of Zachari Walker; I&E Statement No. 3, the direct testimony of Brain J. LaTorre; and OCA Statement No. 1, the direct testimony of Dante Mugrace.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. As discussed below, I am sponsoring the Company's final accounting exhibit, "UGI Gas Exhibit A - Fully Projected (REBUTTAL)," which reflects all the corrections and updates to the Company's claim to date.

Q. Please provide an overview of the other parties' revenue requirement adjustments.

A. I&E recommended a revenue requirement of $1,094,441,000, which represents an increase of $18,072,000 to I&E's adjusted present rate revenues of $1,076,369,000, which is a decrease of $64,670,000 to UGI Gas's revenue requirement of $82,742,000. I&E St. No. 1 at 3. I&E's recommended revenue requirement includes a net decrease of $4,850,000 to UGI Gas's claimed operating expense (the decrease is the net of non-purchase gas cost expenses less purchased gas cost expense), a total reduction of $835,000 to cash working capital, a total reduction of $137,649,000 to plant in service, a total increase of $14,648,202 to present rate revenue, the use of the capital structure proposed by the Company, and a return on equity of 9.92%.

OCA recommended a revenue requirement decrease of $38,674,000, which is $121,416,000 lower than UGI's proposed revenue requirement increase of $82,742,000. OCA St. No. 1 at 4. OCA's recommended revenue requirement includes a total reduction of $33,940,000 to operating expenses, a total reduction of $81,724,283 to rate base, a hypothetical common equity ratio of 50%, and a return on equity of 8.50%.

Q. Does the Company agree with the distribution revenue requirement proposed by the other parties?

A. No. As explained throughout this testimony and the other rebuttal testimony forming UGI Gas's rebuttal position, with the exception of certain updates to the Company's revised filing and the acceptance of some relatively minor operating expense and rate base adjustments, the Company believes that the various revenue, expense, and rate base adjustments proposed by the opposing parties are not reasonable and therefore should be rejected.

II. <u>UPDATES AND CORRECTIONS TO THE COMPANY'S CLAIM</u>

Q. Since the filing of your direct testimony, has the Company identified any components of its filing that should be updated?

A. Yes, during the discovery phase of this proceeding, the Company identified parts of its initial filing that required revision. These include the following updates, some of which have already been accepted by OCA or I&E in their direct testimony:

- <u>OSHA/Emergency Temporary Standard ("ETS") Compliance Costs</u>: In its response to discovery question OCA-III-25, the Company acknowledged that it is withdrawing the majority of its claim associated with this mandate. Because the Company did incur $52,934 in costs related to legal advice and a subscription to vaccine tracking software, the Company proposes to defer and amortize these costs over a one-year period. This adjustment, in the amount of $1,830,000 is further outlined in the rebuttal testimony of Vivian K. Ressler (UGI Gas Statement No. 3-R). In addition, a revised Schedule D-13 is provided as an exhibit to my rebuttal testimony.

- <u>Depreciation Expense for Enterprise Resource Planning System</u>: The Company identified that its initial claim did not include an adjustment to allocate to its affiliates a portion of depreciation expense on this shared IT asset. This adjustment of $524,000 reduces the depreciation expense shown on Schedule D-21 and is discussed further in the rebuttal of Ms. Ressler (UGI Statement No. 3-R).

- <u>PA and Local Use Tax</u>: In its response to OCA-III-18, the Company identified that the initial filing erroneously included **[BEGIN CONFIDENTIAL]** $77,000 **[END CONFIDENTIAL]** of taxes related to Maryland and West Virginia. A revised Schedule D-31 reflects this adjustment, which is discussed in further detail in my rebuttal testimony (Section IV.F below).

- <u>Depreciation on Allowance for Funds Used During Construction ("AFUDC") Regulatory Asset</u>: In its response to discovery question I&E-RB-42, the Company stated that it inadvertently reflected a 5-year amortization for this asset instead of a 40-year amortization in Book VIII, Page II-3. The difference between annual depreciation expense at a 40-year life vs. a 5-year life is $230,792. This adjustment for $230,792 is reflected in Schedule D-21. Additionally, a corresponding decrease of $461,673 was made to the accumulated depreciation on Schedule C-3. These adjustments are further outlined in the rebuttal testimony of Vivian K. Ressler (UGI Gas Statement No. 3-R).

- Salary and Wage Adjustment for Cybersecurity Positions: As explained in the Company's response and Attachment to OCA-III-12, the Company is reflecting an increase of $87,323 to its cybersecurity salary and wage adjustment in its original filing. A revised Schedule D-9 is provided as an exhibit to my rebuttal testimony.

- Interest on Customer Deposits: The Company accepts I&E's recommended adjustment to reduce the interest expense on customer deposits in the amount of $324,000. This adjustment is discussed further in my rebuttal testimony (Section III.B below). A corrected Schedule D-15 is provided as an exhibit to my rebuttal testimony to reflect this adjustment.

- Embedded Cost of Long-Term Debt: The Company is revising the interest rate on three debt issuances to be issued in the future test year ("FTY") and the fully projected future test year ("FPFTY"). The interest rate for note #12 is increasing from 3.687% to 4.744%. Interest on note #13 is increasing from 1.410% to 4.003%, and the interest on note #14 is increasing from 3.791% to 4.744%. These adjustments are discussed further in the rebuttal testimony of Paul R. Moul (UGI Gas Statement No. 6-R). In addition, a revised Schedule B-6 (Cost of Debt) and Schedule B-7 (Rate of Return) are provided to represent these increases.

- Plant in Service: As explained in the rebuttal testimony of Vicky A. Schappell (UGI Gas Statement No. 5-R) and the Company's response in I&E-RB-4-D (Supplemental), the Company is reducing its plant in-service amount for the FTY by $699,849 and increasing its plant in-service amount for the FPFTY by $28,964. This adjustment is reflected on a revised Schedule C-2. Additionally, a corresponding decrease of $19,260 for the FPFTY was made to the accumulated depreciation on Schedule C-3. The accumulated depreciation adjustment is further explained in the rebuttal testimony of Vivian K. Ressler (UGI Gas Statement No. 3-R).

- Gas Inventory Balance: The Company is updating the period over which its average Gas Inventory balance is calculated within its lead/lag study to reflect the use of the 13-month average balance as of April 2022, which results in a net increase in rate base of $7,281,000. This adjustment is discussed further in the rebuttal testimony of Vivian K. Ressler (UGI Gas St. No. 3-R). In addition, a revised Schedule C-5 is provided as an exhibit to my rebuttal testimony to reflect this adjustment.

- Customer Deposit Balance: The Company is updating the period over which its average Customer Deposit balance is calculated within its lead/lag study to reflect the use of the 13-month average balance as of April 2022, which resulted in a net increase in rate base of $166,000. This adjustment is discussed further in the rebuttal testimony of Vivian K. Ressler (UGI Gas St. No. 3-R). In addition, a revised Schedule C-7 is provided as an exhibit to my rebuttal testimony to reflect this adjustment.

- Materials and Supply Balance: The Company is updating the period over which its average Materials & Supplies balance is calculated within its lead/lag study to reflect the use of the 13-month average balance as of April 2022, which resulted in a net increase in rate base of $852,000. This adjustment is discussed further in the rebuttal testimony of Vivian K. Ressler (UGI Gas St. No. 3-R). In addition, a revised Schedule C-8 is provided as an exhibit to my rebuttal testimony to reflect this adjustment.

- Accumulated Deferred Income Tax ("ADIT"): The Company recalculated its ADIT based upon the accumulated depreciation revisions discussed above. A net increase of $85,000 is shown on Schedule C-6 and discussed in further detail in the rebuttal testimony of Vivian K. Ressler (UGI Gas St. No. 3-R).

- Payroll Expense: The Company accepts OCA's adjustment to reduce headcount by 17 employees, as discussed in Section IV.C of my rebuttal. This headcount reduction results in a $779,000 decrease to payroll expense as shown in Schedule D-18, which is provided as an exhibit to my testimony.

- Employee Benefits Expense: Based on the Company's headcount adjustment, a corresponding decrease to benefits expense will be made to decrease the expense by $95,000, as discussed in the rebuttal testimony of Vivian K. Ressler (UGI Gas St. No. 3-R). In addition, Schedule D-18 is provided as an exhibit to my rebuttal testimony to reflect this adjustment.

- Inflation Adjustment for Outside Contractors: The Company is increasing its claim for additional inflation-related costs to its expenses for outside contractor labor. The increase of $2,692,000 is discussed in the rebuttal of Timothy J. Angstadt (UGI Gas St. No. 9-R) and is shown in Schedule D-18, which is provided as an exhibit to my rebuttal testimony.

Each of these updates to the Company's rate base and operating expenses is reflected in UGI Gas Exhibit A – Fully Projected (REBUTTAL), which is the Company's final accounting exhibit.

Q. Since the filing of your direct testimony, has the Company identified any revenue components of its filing that should be updated?

A. Yes, the Company also identified the following revenue item that requires revision for the FPFTY ending September 30, 2023:

- Company Share of Off-System Sales Revenue: In its response to discovery question I&E-RS-27, the Company identified that it inadvertently included $1,003,000 of miscellaneous revenue for the company share portion of off-system sales that should be reflected below the line for ratemaking purposes. This adjustment is reflected in a revised Schedule D-5.

As with the updates to the Company's costs, this revision to the Company's revenues is reflected in UGI Gas Exhibit A – Fully Projected (REBUTTAL).

Q. Based upon the adjustment analyses conducted by the Company, what do you conclude?

A. As set forth in the Company's final accounting exhibit, "UGI Gas Exhibit A - Fully Projected (REBUTTAL)," the overall effect of the updates and corrections to the Company's claim is that the Company has supported a revenue increase of $87,619,000 (as compared to the as-filed claim of $82,742,000) using the Company's proposed capital structure, revised weighted average cost of debt, and proposed return on equity of 11.20%. While the Company is not requesting that the Pennsylvania Public Utility Commission ("Commission") authorize an increase greater than its as-filed amount, any adjustments proposed by the parties should be applied to the $87,619,000, which is the revenue increase supported by the evidence presented in this case.

III. <u>OPERATING REVENUE ADJUSTMENTS</u>

A. FORFEITED DISCOUNTS, MISCELLANEOUS REVENUES AND RENT FROM GAS PROPERTIES

Q. Do any of the other parties recommend adjustments to the Company's present rate revenues associated with Forfeited Discounts, Miscellaneous Revenues, and Rent from Gas Properties?

A. Yes. OCA witness Mr. Mugrace proposes that the present rate revenues associated with Forfeited Discounts, Miscellaneous Revenues, and Rent from Gas Properties be normalized over a 3-year period of 2021-2023. OCA St. No. 1 at 13. Mr. Mugrace's proposed adjustment uses the balance of revenues shown by the Company for the historic test year ("HTY"), FTY and FPFTY, and would increase present rate revenues by $413,667. OCA St. No. 1 at 13; *see also* OCA Schedule DM-4.

Additionally, the Company would like to correct the FTY revenue shown on page 13 of Mr. Mugrace's testimony. For the FTY, Mr. Mugrace states that the Forfeited Discounts, Miscellaneous Revenues and Rent from Gas Properties totals $19,181,000. However, as shown in UGI Gas Exhibit A – Future, Schedule D-1, Line 3, the FTY revenue is $10,181,000.

Q. Please summarize the basis for OCA witness Mr. Mugrace's proposed adjustment.

A. Mr. Mugrace states that he is "of the opinion that these types of revenues do fluctuate and change from year to year, and it is appropriate to normalize these revenues, including forecasted revenues, prospectively." OCA St. No. 1 at 13.

Q. Does the Company agree with Mr. Mugrace's proposed adjustment to present rate revenues?

A. No, for two reasons.

Q. What are those two reasons?

A. First, as stated in the Company's responses to discovery requests I&E-RS-25, I&E-RS-26 and I&E-RS-27, the Company prepared the FTY and FPFTY revenue projections based on monthly three-year averages of historical data for each revenue category. Adding additional averaging of revenue as Mr. Mugrace is suggesting is unnecessary.

Second, as mentioned in Section II of my rebuttal testimony and noted in the Company's response to discovery request I&E-RS-27, the Company is adjusting its miscellaneous revenue in the FPFTY downward by $1,003,000 to $9,284,000 to remove the Company's share of off-system sales. Mr. Mugrace's analysis did not include this correction, which was accepted by I&E witness Ethan H. Cline (I&E St. No. 4 at 22). By way of comparison, removing the company share revenue erroneously included in the FTY and HTY would decrease the miscellaneous revenue to $9,178,000 and $10,254,000 respectively.

IV. OPERATING EXPENSE ADJUSTMENTS

A. RATE CASE EXPENSE

Q. What did the Company propose regarding rate case expense?

A. The Company proposed to recover rate case expenses totaling $1,055,000 normalized over a one-year period.

Q. Was this proposal contested by any of the parties?

A. Yes. I&E witness Mr. LaTorre recommends that a 20-month normalization period be used to calculate the Company's rate case expense claim in this case. I&E St. No. 3 at 4. This adjustment would reduce the Company's rate case expense claim by $422,000. I&E St. No. 3 at 4. Mr. LaTorre asserts that the Company's historic filing frequency, based on its last three base rate cases, is 20 months on average. I&E St. No. 3 at 5. He further cites prior Commission orders in *Emporium Water 2015*,[1] *City of DuBois Water 2017*,[2] *Columbia Gas 2020*,[3] and *PECO Gas 2021*[4] to argue that actual historical filing frequency is more reliable than a Company's projected filing of a future rate case. I&E St. No. 3 at 6-7.

OCA witness Mr. Mugrace similarly recommends that the Commission reduce the Company's claimed rate case expense. OCA St. No. 1 at 38-39. He argues that a 2-year normalization period should be used, which would reduce the Company's claim by $527,000.

Q. Does the Company agree with the adjustments proposed by I&E and the OCA?

A. No, it does not.

Q. Please explain why a 20-month normalization period, as proposed by I&E, and a 2-year normalization period, as proposed by OCA, are both improper.

A. The frequency of UGI Gas's past base rate cases is not a predictor of the frequency of future base rate cases. In particular, the time frame between the Company's most recent base rate proceeding at Docket No. R-2019-3015162 and the current one was subject to a one-year settlement stay-out clause that prohibited the Company from making a base rate filing earlier than January 2, 2022, effectively adding one year to the period when the

[1] *Pa. PUC v. Emporium Water Company*, Docket No. R-2014-2402324, pp. 47-50 (Order Entered Jan. 28, 2015).

[2] *Pa. PUC v. City of DuBois – Bureau of Water*, Docket No. R-2016-2554150, pp. 65-66 (Order Entered March 28, 2017); *Pa. PUC v. City of DuBois – Bureau of Water*, Docket No. R-2016-2554150, p. 13 (Order Entered May 18, 2017).

[3] *Pa. PUC v. Columbia Gas*, Docket No. R-2020-3018835, pp. 78-79 (Order Entered Feb. 19, 2021).

[4] *Pa. PUC v. PECO Energy Company – Gas Division*, Docket No. R-2020-3018929, pp. 117-119 (Non-Proprietary Order Entered June 22, 2021).

Company could not make a filing. Removing that 1-year period would reduce the normalization period proposed by I&E and would result in a 16- month normalization period [(12 months + 12 months + 24 months)/3 = 16 months]. Mr. Mugrace's recommendation is not supported by any particular rationale and should be rejected outright.

Moreover, the Company's expectation that it will file another base rate case in one year is based upon an assessment of future capital requirements, continued information system improvements through the UNITE project, and the cost of other improvements as detailed in the Company's second Long-Term Infrastructure Improvement Plan ("LTIIP") filing.[5] At the same time, all of the Company's operating expenses are subject to inflation, and the revenue requirements for plant additions that are not Distribution System Improvement Charge ("DSIC")-eligible will cause further pressure to file a rate case within one year after the rates in this case become effective. By way of further explanation, the Company is implementing a significantly accelerated replacement and betterment program as detailed in its Second LTIIP. This accelerated spend, in conjunction with other capital requirements and operating expenses, support a one-year rate case cycle and a one-year normalization of rate case expenses.

Other factors supporting the Company's one-year normalization period include rising inflation, capital cost rates and higher risks associated with a rate of return that will reflect and be supportive of the Company's financial and risk profile, as explained in the rebuttal testimony of Paul R. Moul (UGI Gas St. No. 6-R). Additionally, the possibility of

[5] See Petition of UGI Utilities, Inc. – Gas Division for Approval of its Second Long Term Infrastructure Improvement Plan, Docket No. P-2019-3012337 (Opinion and Order entered Dec. 19, 2019).

reaching the current 5 percent DSIC cap after the new rates established in this case become effective can be a factor that influences more frequent rate case filings. Thus, to the extent that the Company is subject to a DSIC maximum rate of 5 percent, the Company's earnings will suffer from attrition due to the DSIC cap. Such an occurrence can be a deciding factor in the relative frequency of rate case filings. Therefore, the Company's claimed rate case expense and associated normalization period are reasonable and should be adopted.

Q. Are there any other reasons why the Commission should differentiate between the facts presented in the aforementioned rate proceedings and this case?

A. I am advised by counsel that I&E's reliance on *Emporium Water 2015*, *City of DuBois Water 2017*, disregards the fact that its exclusive reliance upon historic rate case filing frequency was rejected by the Commission in *Pa. PUC v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058 (Order entered Oct. 25, 2018) ("*UGI Electric 2018*"). Moreover, I am further advised by counsel that I&E ignores the fact that in *Columbia Gas 2020*, none of the parties filed exceptions on this issue and that Columbia specifically did not take exception to many issues in recognition of the unique circumstances posed by the COVID-19 pandemic. As such, both *Columbia Gas 2020* and *PECO Gas 2021* (which relies on the Commission's determination in *Columbia Gas 2020*) are distinguishable from the instant case. It is my understanding that UGI Gas will further address I&E's reliance on these cases in its briefs.

B. INTEREST ON CUSTOMER DEPOSITS

Q. Did any of the other parties propose adjustments to the Company's claimed expenses associated with the interest it is required to pay on customer deposits that it holds in compliance with its tariff?

A. Yes. I&E witness Mr. Walker disputed the Company's claimed revenues associated with interest on customer deposits. I&E St. No. 1 at 16. He argues that the Company's claimed interest rate of 4.5% is speculative and that the current interest rate of 3.0% should be used in the calculation.

Q. Please summarize the basis for Mr. Walker's proposed adjustment.

A. Mr. Walker based his adjustment upon the Pennsylvania Secretary of Revenue's current interest rate for Title 72 taxes for 2021 and 2022, which is 3%. I&E St. No. 1 at 16. He further claims that although this rate may be revised by the Pennsylvania Department of Revenue in December 2022 the 4.5% rate as of today is speculative. I&E St. No. 1 at 16.

Q. Does the Company agree with Mr. Walker's proposed adjustment?

A. Yes. As noted in Section II of my rebuttal, a corrected Schedule D-15 is provided in Exhibit A – FPFTY (REBUTTAL).

C. PAYROLL EXPENSE

Q. Did any of the other parties propose adjustments to the Company's claimed Payroll Expense for the FPFTY?

A. Yes. Both I&E witness Mr. Walker and OCA witness Mr. Mugrace propose adjustments to this expense category.

Q. Please summarize the adjustment proposed by I&E witness Mr. Walker.

A. I&E witness Mr. Walker proposed a reduction of $2,251,676 to the Company's claim. I&E St. No. 1 at 18. He calculated this adjustment using a 2.74% average vacancy rate, which he based on the actual monthly vacancies by budgeted positions for each month of FY 2019, 2020 and 2021 and then averaged the fiscal year averages. I&E St. No. 1 at 19-20. Mr. Walker further asserts that his proposed adjustment is reasonable because the COVID-19 pandemic may continue to present the Company with challenges in filling all budgeted positions. I&E St. No. 1 at 20.

Q. Please summarize the adjustment proposed by OCA witness Mr. Mugrace.

A. Mr. Mugrace generally accepted the Company's projected employee headcount, but proposed to reduce the Company's Payroll Expense by $779,368 to exclude 17 open positions relating to replacement for which candidates have yet been identified. OCA St. No. 1 at 20-21. Mr. Mugrace argues that these positions may or may not be filled in FY 2023 and, therefore are speculative. OCA St. No. 1 at 20-21. He also asserts that the Company's response to OCA-III-7 indicates that the Company anticipates hiring these positions based on the labor market and other factors. OCA St. No. 1 at 21.

Q. Does the Company agree with either adjustment proposed by I&E or OCA?

A. Yes. The Company accepts Mr. Mugrace's adjustment of $779,368 to payroll expense. However, the Company believes that Mr. Walker's adjustment is biased because it is heavily weighted by the COVID-19 year of 2019. If an average is used, it should be based on the monthly averages of FY19 and FY21. COVID-19 substantially impacted hiring during FY20 and should not be included to calculate a vacancy rate under normal conditions for ratemaking purposes. Removing the impact of FY20 would bring the vacancy rate down to 1.59%. Additionally, neither party denied these positions on merit or their necessity to provide safe and reliable service.

D. EMPLOYEE BENEFITS – HEADCOUNT

Q. Do any of the other parties propose an adjustment to the Company's claimed Employee Benefits expense?

A. Yes. I&E witness Mr. Walker proposes a reduction to the Company's Employee Benefits expense based upon his proposed vacancy adjustment. I&E St. No. 1 at 21-22. The impact of his adjustment would be a reduction to this expense of $606,006. I&E St. No. 1 at 21-22. OCA witness Mr. Mugrace is proposing to normalize the Company's medical and dental costs over FY 2021-2023. Mr. Mugrace states that this normalization takes into account his recommended reduction in headcount. OCA. St. No. 1 at 50.

Q. Does the Company agree with either I&E's or OCA's proposed adjustment to Employee Benefits based upon their adjustments to projected employee headcount?

A. No. The Company disagrees with I&E's adjustment, which is derivative of its proposed adjustment to the Company's projected employee headcount for the FPFTY. However, as explained in the testimony of UGI Gas witness Ms. Ressler (UGI Gas St. No. 3-R), the Company is adjusting its benefits expense based on the OCA Witness's headcount adjustment. Additionally, Ms. Ressler responds to Mr. Mugrace's proposal to normalize medical and dental costs.

E. PAYROLL TAX

Q. Do any of the other parties propose an adjustment to the Company's claimed Payroll Tax expense?

A. Yes. OCA witness Mr. Mugrace similarly recommends a reduction of $438,185 to the Company's claim, which is based upon his adjustment to the Company's projected employee headcount and certain Incentive Compensation adjustments[6] that are reflected in the Company's payroll rates. OCA St. No. 1 at 53.

Q. Does the Company agree with either I&E's or OCA's proposed adjustment to Payroll Tax Expense?

A. Yes, with some qualifications. As noted previously, the Company agrees with Mr. Mugrace's position to reduce payroll expense by $779,000, which lowers payroll tax expense by $57,000. However, the Company disagrees with the remaining $381,185 of Mr. Mugrace's adjustment as it is derivative of his proposed adjustment to Incentive Compensation, which the Company does not accept. This position is further explained in the rebuttal of Ms. Ressler (UGI Gas St. No. 3-R).

---

[6] UGI Gas witness Ms. Ressler addresses Mr. Mugrace's proposed Incentive Compensation adjustments in her rebuttal testimony, UGI Gas St. No. 3-R.

F. STATE AND LOCAL TAX EXPENSE

Q. Did any of the other parties propose an adjustment to the Company's claim for Pennsylvania State and Local tax expense.

A. Yes. OCA witness Mr. Mugrace proposed to reduce the Company's claim by **[BEGIN CONFIDENTIAL]** $77,000 **[END CONFIDENTIAL]** OCA St. No. 1 at 53. Mr. Mugrace asserts that the Company's response and Attachment to OCA-III-18(2) shows that the Company overstated its claim by this amount.

Q. Does the Company agree with OCA's proposed adjustment to this expense?

A. Yes. As mentioned in Section II of my rebuttal, a revised Schedule D-31 is provided in Exhibit A – FPFTY (REBUTTAL).

G. CASH WORKING CAPITAL

Q. What was the Company's claim for cashing working capital ("CWC") in its initial filing?

A. The Company claimed $62,148,000 in CWC in its filing.

Q. Has the Company identified any adjustments to its initial CWC claim?

A. The Company is adjusting its CWC claim to $61,697,000 based upon the adjustments explained in Section II of my rebuttal and their impact to operations and maintenance ("O&M") expenses and interest payment components in the CWC.

Q. Did any party propose any adjustments to the Company's original CWC claim?

A. Yes. I&E witness Mr. Walker recommends reducing the CWC claim to $61,313,000, which is a reduction of $835,000. I&E St. No. 1 at 24. This reduction is based on the O&M expense adjustments recommended by I&E. I&E St. No. 1 at 25. OCA witness Mr. Mugrace similarly proposed to decrease by $587,278 the Company's CWC claim to reflect his recommended adjustments to operating and maintenance expenses. OCA St. No. 1 at 10-11.

Q. Does the Company agree with either I&E's or OCA's CWC adjustments?

A. The Company disagrees with their adjustments to the extent that the Company disagrees with their underlying expense or tax adjustments.

Q. Please provide more detail on why the Company does not agree with the CWC adjustments proposed by I&E and OCA.

A. As previously stated, both I&E's and OCA's CWC adjustments are based solely on their respective recommended expense adjustments. As explained earlier in my testimony summarizing adjustments that the Company is making in rebuttal, consistent with the Company's response in discovery, I agree with Mr. Walker's proposal to reduce the CWC claim by $34,000 due to the reduction of interest expense on customer deposits in the Company's initial claim. However, I do not agree with all of Mr. Walker's additional adjustment, which impacts the CWC in the amount of $801,000. Mr. Walker's allowance for O&M expense in his CWC analysis represents a downward adjustment in the amount of $964,000 of this balance (inclusive of the $34,000 above). The Company also rejects the payroll adjustment from I&E as well as the purchase gas adjustment. Mr. Walker proposed adjustments to Other Expenses in the CWC claim, including O&M reductions totaling $6,338,328 ($6,662,328 of total Other Expenses - $324,000 of Interest on Customer Deposits)[7], which the Company rejects, except for a portion of the OSHA/ETS Compliance cost adjustments related to the costs incurred by the Company for legal advice and vaccine tracking software. Mr. Walker's adjustment to CWC also includes a revenue lag adjustment which the Company rejects, except for the $1,003,000 correction of miscellaneous revenue to reduce present rate revenue. I&E St. No. 1 at 27. Finally, Mr. Walker's interest payment component includes a rate base adjustment that includes a reduction to rate base, which the Company rejects, as discussed in Ms. Ressler's testimony (UGI Gas Statement No. 3-R).

I do not agree with the majority of Mr. Mugrace's O&M expense adjustments in the amount of $33,940,000 (OCA Schedule DM-4), which reduces the CWC claim in the amount of $587,278. As discussed previously in my testimony, the Company accepts his payroll expense adjustment of $779,368, a portion of his employee benefits adjustment in the amount of $95,000, and a portion of OCA's payroll tax adjustment in the amount of $57,000. His adjustments to Other Expenses include reductions totaling $33,008,632, which the Company rejects. OCA Schedule DM-4.

Mr. Mugrace's interest payment component includes a rate base adjustment that includes a reduction to net plant in service in the amount of $85,681,967 (OCA Schedule DM-5) that the Company rejects, as discussed in Ms. Ressler's rebuttal testimony (UGI Gas St. No. 3-R), as well as a capital structure based on a 50% long term debt ratio which the Company also rejects, as discussed in UGI Gas witness Paul R. Moul's rebuttal

[7] Mr. Walker's adjustments to Other Expenses appear in his table titled "Other Expenses" on p. 26 of his direct testimony. I&E St. No. 1 at 26.

testimony (UGI Gas St. No. 6-R). The tax payment component reflects the overall impact of all the adjustments and a reduced revenue requirement which reduces income taxes.

V. INTEREST SYNCHRONIZATION ADJUSTMENT TO INCOME TAX EXPENSE

Q. What was the Company's original claim for income tax expense in this proceeding?

A. The Company's claim for income tax expense in this proceeding was $63,348,000 as reported on Schedule D-33 of UGI Gas Exhibit A (FPFTY). Income taxes are calculated using the procedures normally followed by the Commission, including the use of debt interest synchronization, the normalization method for accelerated depreciation used in the calculation of Federal income taxes, and the flow through of accelerated depreciation benefits for state tax purposes. The Company's claimed interest expense deduction was $56,726,000 based on a rate base of $3,169,023,000 multiplied by the weighted cost of debt of 1.79 % (44.91 % x 3.98 %) UGI Gas Exhibit A (FPFTY), Schedule B-7.

Q. Did any party challenge the Company's claim?

A. Yes. OCA witness Mr. Mugrace recommends an interest expense deduction of $61,437,244 based upon OCA's recommended adjustments to rate base and capital structure. OCA St. No. 1 at 54.

Q. Do you agree with Mr. Mugrace's proposed adjustment?

A. No. I note that UGI Gas witness Mr. Moul responds specifically to the OCA's proposed, capital structure, cost of equity and overall rate of return in his rebuttal testimony (UGI Gas St. No. 6-R). For the reasons fully identified in Mr. Moul's rebuttal testimony, OCA witness David J. Garrett's adjustments (in OCA St. No. 2) to the Company's actual capital structure and cost of equity should be rejected and so should Mr. Mugrace's adoption of that recommendation in OCA's revenue requirement model. In addition, Mr. Mugrace proposed adjustments to the Company's filed rate base, which decrease the rate base balance by $81,724,823 to $3,087,298,717. *See* OCA Schedule DM-3. These rate base adjustments are discussed in the rebuttal testimonies of UGI Gas witnesses Vivian K. Ressler (UGI Gas St. No. 3-R) and Vicky A. Schappell (UGI Gas St. No. 5-R).

Q. Are there other adjustments made by the Company as part of its Rebuttal Case?

A. As discussed earlier, the Company has reflected an adjustment to the average cost of long-term debt, which increases the rate from 3.98% to 4.30%. In addition, the Company has increased its rate base claim by $7,573,000 to $3,176,596,000. These adjustments increase the interest deduction by $4,582,000 to $61,308,000 (based on a rate base of $3,176,596,000 multiplied by the weighted cost of debt of 1.93% (44.91% x 4.30%) UGI Gas Exhibit A – Fully Projected Future (REBUTTAL), Schedule B-7. The interest increase of $4,582,000 decreases the state and federal income taxes by $41,000 and $77,000, respectively.

VI. COMPLIANCE WITH PENNSYLVANIA ACT 40 OF 2016

Q. Did your direct testimony include a discussion of the requirements of Pennsylvania Act 40 of 2017 ("PA Act 40" or "Act 40")?

A. Yes, it did.

Q. Did any other parties address the PA Act 40 requirements?

A. Yes, in OCA Statement No. 1, Mr. Mugrace addresses the PA Act 40 requirements. While Mr. Mugrace accepts the Company's satisfaction of Act 40's requirement that 50% of the hypothetical Consolidated Tax Adjustment ("CTA")is being used to support reliability or infrastructure related to the rate-base eligible capital investment, he argues that the Company has not demonstrated the remaining 50% is being used for "general corporate purposes." OCA St. No. 1 at 56-57. Mr. Mugrace asserts that "general corporate purposes" means to provide regulated utility service in Pennsylvania, which requires that this amount be used as a source of non-investor-supplied funding for utility working capital and to reduce rate base. OCA St. No. 1 at 57. He also claims that UGI Gas has not identified how this amount will be used to benefit rate payers. OCA St. No. 1 at 57. As such, he recommends that the Company's rate base be reduced by $1.27 million. OCA St. No. 1 at 58; *see also* OCA Schedule DM-3.

Q. Does Mr. Mugrace define the term "general corporate purposes?

A. Mr. Mugrace states that the term "general corporate purposes" would include uses such as "supporting capital expenditures necessary to execute utility business plans, paying off debt, funding construction projects, paying dividends, paying for maintenance and operating expenses, investing in utility plant in Pennsylvania, and providing a source of working capital." OCA St. No. 1 at 57.

Q. To be clear, is the Company using 50% of the amount calculated pursuant to Act 40 for these purposes?

A. Yes. 50% of the amount calculated in this proceeding will in fact be used for general corporate purposes, as that term is understood.

Q. Can you provide any examples of categories of projects that this amount will be used to support?

A. Yes. While it is not practical to trace a hypothetical amount to specific projects, 50% of the Act 40 amount will be used to pay for general operating expenses of the Company. As shown in UGI Gas Exhibit A – FPFTY, Schedule B-4, the Company's total budgeted O&M expense is $625,766,000. These expenses will be used to the benefit of ratepayers, including $2.177 million in meter reading expenses, $28.149 million for the maintenance of mains, and $35.342 million for various customer service expenses. Therefore, UGI Gas spends over 50% of the hypothetical CTA on general expenditures that are specifically for the purpose of providing utility service to ratepayers.

Q. Are there any other reasons why Mr. Mugrace's claims lack merit?

A. Yes. PA Act 40 added 66 Pa. C.S. §1301.1 to the Public Utility Code, which provides, in pertinent part:

> (b) Revenue use -- If a differential accrues to a public utility resulting from applying the ratemaking methods employed by the commission prior to the effective date of subsection (a) for ratemaking purposes, the differential shall be used as follows:
>
> > (1) fifty percent to support reliability or infrastructure related to the rate-base eligible capital investment as determined by the commission; and
> >
> > (2) fifty percent for general corporate purposes.

I am advised by counsel that the application of statutory construction rules to this language does not support Mr. Mugrace's interpretation of this language, and that utilities need only show that their capital expenditures, and expenditure on other general corporate purposes, exceed fifty percent of the differential in tax expense resulting from Act 40. In the case of UGI Gas, both its capital expenditure and general corporate purpose expense exceed the fifty percent thresholds referenced in 66 Pa. C.S. §1301(b) by wide margins and therefore the Company has made the necessary showing that its use of the differential satisfies the plain language of Section 1301.1(b). Thus, UGI Gas is fully entitled to recover tax expense in the manner authorized by Act 40 without reduction. As quantified in my direct testimony, the impact of the 50% to be used for "general corporate purposes" is $1.825 million.

Q. Has the Commission previously determined that UGI has satisfied the showing required by PA Act 40 by producing similar evidence that it has in this case.

A. Yes. In the 2018 UGI Utilities, Inc. – Electric Division ("UGI Electric") base rate case, Docket No. R-2017-2640058, the Commission specifically concluded that UGI Electric satisfied Act 40 by making the same presentation it has made in this case.

Consistent with the language of Section 1301.1, the Commission determined that UGI Electric had properly complied with the requirements of Act 40 by showing that the Company's *pro forma* capital additions for reliability or infrastructure projects in the FTY and FPFTY exceeded 50% of the amount of what would have been the CTA, and that the Company's general corporate purpose expense would also exceed 50% of the tax benefit resulting from the elimination of the CTA.

Q. Was the Commission's determination in that case affirmed on appeal?

A. Yes. In *McCloskey v. Pa. PUC*, 225 A.3d 192 (Pa. Cmwlth. 2020), the Commonwealth Court affirmed the Commission's determination in the UGI Electric base rate case.

Q. In this case, has the Company provided additional evidence regarding its compliance with Act 40, specifically with the requirement that 50% of the hypothetical CTA be used for general corporate purposes?

A. Yes. The testimony presented by the Company in its direct testimony in this case is similar to the testimony that was accepted by the presiding Administrative Law Judges and the Commission in the Company's 2018 Electric Division rate case. In summary, the O&M budget for general corporate purposes far exceeds 50% of the tax benefit resulting from the elimination of the CTA.

Q. Based on his faulty assumption that 50% of the hypothetical CTA is not used for general corporate purposes, Mr. Mugrace recommends an adjustment to the Company's rate base of $1.277 million. How do you respond to his adjustment?

A. Mr. Mugrace's adjustment should be rejected because, as I explained, UGI Gas has complied with Act 40's requirements to use 50% of the hypothetical CTA for general corporate purposes. Although Mr. Mugrace is attempting to frame his adjustment as an adjustment to rate base, rather than as an adjustment to tax expense, the adjustment is still based on the incorrect theory that UGI Gas has not complied with the requirements of 66 Pa. C.S. §1301(b), and therefore it should be rejected.

Q. Do you have any additional concerns regarding the use of a CTA offset to rate base?

A. While it is unclear that placing the CTA as a deduction to rate base would result in a tax normalization violation, the IRS has taken the position on both sides of the issue, thereby raising the risk of an adverse IRS ruling on the issues. Adopting Mr. Mugrace's adjustment therefore potentially jeopardizes the loss of $628.595 million of ADIT to the detriment of our customers and adversely impacts the cash position of the Company, as those taxes may become due immediately. That risk clearly overwhelms the minor benefit for customers that would result from Mr. Mugrace's adjustment for tax benefits that are not the result of UGI Utilities' activities but rather the activities of the Company's non-regulated affiliates.

VII. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

CONFIDENTIAL VERSION

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 3-R

Rebuttal Testimony of
Vivian K. Ressler

Topics Addressed:	**Updates And Corrections To Initial Filing** **Response To Rate Base Adjustments** **Response To Operating Expense Adjustments** **Miscellaneous**

Dated: May 17, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Vivian K. Ressler. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 3, on January 28, 2022.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony provides updates to certain rate base and operating expense components of the Company's filing, based on the information provided during the discovery phase of this proceeding. In addition, my testimony responds to certain portions of the following direct testimony submitted by the Pennsylvania Public Utility Commission's ("Commission") Bureau of Investigation and Enforcement ("I&E") and the Office of Consumer Advocate ("OCA"): I&E Statement No. 1, the direct testimony of Zachari Walker; I&E Statement No. 3, the direct testimony of Brian J. LaTorre; I&E Statement No. 5, the direct testimony of Esyan A. Sakaya; and OCA Statement No. 1, the direct testimony of Dante Mugrace. Finally, my direct testimony introduces a miscellaneous revenue matter which is further discussed within the rebuttal testimony of UGI Gas witness Constance E. Heppenstall (UGI Gas St. No. 10-R).

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring UGI Gas Exhibits VKR-1R through 11R. These exhibits include CONFIDENTIAL UGI Gas Exhibits VKR-5R, 6R and 8R.

II. UPDATES AND CORRECTIONS TO THE COMPANY'S CLAIM

Q. Since the filing of your direct testimony, has the Company identified any rate base components of its filing that should be updated?

A. Yes, during the discovery phase of this proceeding, the Company identified parts of its initial filing that required revision. These include the following:

- The Company has updated the period over which its average Gas Inventory balance is calculated (UGI Gas Exhibit A - Fully Projected (REBUTTAL), Schedule C-5) to reflect the use of the 13-month average balance as of April 2022, which resulted in a net increase in rate base of $7,281,000;
- The Company has updated the period over which its average Customer Deposit balance is calculated (UGI Gas Exhibit A - Fully Projected (REBUTTAL), Schedule C-7) to reflect the use of the 13-month average balance as of April 2022, which resulted in a net increase in rate base of $166,000;
- The Company has updated the period over which its average Materials & Supplies balance is calculated (UGI Gas Exhibit A - Fully Projected (REBUTTAL), Schedule C-8) to reflect the use of the 13-month average balance as of April 2022, which resulted in a net increase in rate base of $852,000; and
- In connection with the update to Plant in Service which is discussed in the rebuttal testimony of UGI Gas witness Vicky A. Schappell (UGI Gas St. No. 5-R) and the depreciation expense adjustments discussed directly below, the Company has reduced its accumulated depreciation balance by $481,000 and has increased its accumulated deferred income taxes ("ADIT") balance by $85,000. These adjustments result in a $396,000 increase to rate base.

Each of these updates to the Company's rate base is reflected in UGI Gas Exhibit A (REBUTTAL), which is the Company's final accounting exhibit. UGI Gas witness Ms. Tracy A. Hazenstab sponsors this exhibit as a part of her rebuttal testimony (UGI Gas St. No. 2-R).

Q. Since the filing of your direct testimony, has the Company identified any operating expense components of its filing that should be updated?

A. Yes, as with the aforementioned rate base items, in addition to items discussed by Company witness Christopher R. Brown in UGI Gas Statement No. 1-R and Company witness Tracy A. Hazenstab in UGI Gas Statement No. 2-R, the Company also identified the following operating expense items that required revision for the FPFTY:

- The Company has reduced the employee headcount claim reflected in its claim by 17 positions, or roughly 1%, as discussed within the rebuttal testimony of UGI Gas witness Tracy A. Hazenstab (UGI Gas St. No. 2-R). In connection with this adjustment, the Company also reduced its claim for medical and dental costs by 1%, or $95,065. See further discussion of this adjustment in Section F below.

- The Company has reduced its claim for United States Department of Labor's Office of Safety and Health Administration ("OSHA") / Emergency Temporary Standard ("ETS") Compliance costs, which results in a decrease of $1,830,000 to operating expenses. As indicated within my response to discovery request OCA-III-25, the Company is reducing substantially all of its original claim of $1,883,000 associated with costs for complying the Federal Mandate for vaccination and testing requirements. However, the Company is maintaining the portion of its claim for recovery of certain costs in the amount of $52,934 that were incurred in preparation for compliance with this mandate prior to it being overturned by the Supreme Court of the United States. See further discussion of these maintained costs in Section H below.

- The Company has reduced its claim for depreciation expense upon identifying the following:

  a) that certain allocations to affiliates for depreciation expense on a shared IT asset were mistakenly excluded from its rate claim ($524,000);

  b) that depreciation was claimed for a certain asset at an inappropriate rate, indicated within my response to discovery request I&E-RE-42 ($231,000); and

  c) that certain assets were incorrectly included in or excluded from plant in service in the claim, as discussed in the rebuttal testimony of UGI Gas witness Vicky A. Schappell (UGI Gas St. No. 5-R) ($18,000).

  These depreciation expense adjustments collectively result in a decrease to operating expense of $773,000. Please see details at UGI Gas Exhibit VKR-1R.

As with the updates to the Company's rate base, each of these revisions to the Company's operating expenses are reflected in UGI Gas Exhibit A (REBUTTAL).

III. <u>RATE BASE ADJUSTMENTS</u>

A. UTILITY PLANT IN SERVICE

Q. Do any of the other parties propose adjustments to the Company's claimed utility plant in service as of the future test year ending September 30, 2022 ("FTY") and/or the FPFTY?

A. Yes. Both I&E and OCA propose adjustments to the Company's claim.

Q. Does the Company agree with the adjustments proposed by I&E and OCA?

A. No. In her rebuttal testimony, UGI Gas witness Ms. Vicky A. Schappell (UGI Gas St. No. 5-R) fully explains and rebuts the adjustments advanced by I&E and OCA to the Company's claimed utility plant in service for the FTY and FPFTY. As Ms. Schappell demonstrates, the adjustments proposed by the OCA and I&E witnesses are neither reasonable nor appropriate. Therefore, as I fully explain below, the derivative adjustments to other aspects of the Company's rate base and its operating expenses advanced by I&E and OCA should also be rejected.

B. ACCUMULATED DEPRECIATION

Q. Do any of the other parties propose an adjustment to the Company's claim for accumulated depreciation?

A. Yes. I&E witness Mr. Sakaya recommends that the Company's claim for accumulated depreciation be increased by $16,196,000 (*i.e.*, from $1,318,560,000 to $1,334,756,000).

I&E St. No. 5 at 15, and as revised in Mr. Sakaya's response to discovery response UGI to I&E-II-1. Mr. Sakaya's proposed adjustment is based upon his recommended adjustment to the Company's claimed FTY and FPFTY plant in service. I&E St. No. 5 at 15.

OCA witness Mr. Mugrace similarly accepts the Company's development of its claimed accumulated depreciation balance, but recommends that the Company's claim for accumulated depreciation be decreased by $4,516,613. OCA St. No. 1 at 10; *see also* OCA Schedule DM-6. Mr. Mugrace explains that his proposed adjustment is based upon his proposed adjustments to the Company's utility plant in service claim. OCA St. No. 1 at 10.

Q. Does the Company agree with either of the adjustments proposed by I&E or OCA?

A. No. The Company disagrees with both of these proposed adjustments, which are derivative of I&E's and OCA's proposed adjustments to UGI Gas's utility plant in service claim, for the reasons explained in UGI Gas witness Ms. Schappell's rebuttal testimony (UGI Gas St. No. 5-R).

Q. Does the Company have an update to its claim for accumulated depreciation based upon its proposed adjustment to plant in service?

A. Yes. Based upon the adjustment to plant in service explained by Ms. Schappell (UGI Gas St. No. 5-R) and the depreciation expense adjustment set forth below, the Company has reduced its accumulated depreciation balance by $480,933. See the details of this calculation in UGI Gas Exhibit VKR-1R.

C. ACCUMULATED DEFERRED INCOME TAXES ("ADIT")

Q. Do any of the other parties propose an adjustment to the Company's ADIT claim?

A. Yes. OCA witness Mr. Mugrace recommends a reduction to the Company's ADIT claim of $1,304,944. OCA St. No. 1 at 12; *see also* OCA Schedule DM-8. Mr. Mugrace's adjustment is derived from his proposal to decrease the Company's claim for utility plant in service. OCA St. No. 1 at 12.

Q. Does the Company agree with the adjustment to ADIT that is proposed by OCA?

A. No. The Company disagrees with this adjustment, which is derivative of OCA's proposed adjustment to the Company's utility plant in service claim, for the reasons explained in UGI Gas witness Ms. Schappell's rebuttal testimony (UGI Gas St. No. 5-R).

Q. Does the Company have an update to its claim for ADIT based upon its proposed adjustment to plant in service?

A. Yes. In connection with the update to Plant in Service, which is discussed in the rebuttal testimony of UGI Gas witness Vicky A. Schappell (UGI Gas St. No. 5-R), and the adjustment to Accumulated Depreciation discussed above, the Company has increased its accumulated deferred income taxes ("ADIT") balance by $85,000. See detail of this calculation at UGI Gas Exhibit VKR-1R.

IV. OPERATING EXPENSE ADJUSTMENTS

A. ENVIRONMENTAL REMEDIATION EXPENSE

Q. Do any of the other parties propose an adjustment to the Company's environmental remediation expense claim?

A. Yes. I&E witness Mr. LaTorre and OCA witness Mr. Mugrace each propose adjustments to the Company's claimed environmental remediation expense. I address each of these adjustments in turn, below.

Q. Please summarize I&E witness Mr. LaTorre's adjustment to the Company's environmental remediation expense claim.

A. While Mr. LaTorre accepts the amount claimed for unrecovered environmental remediation expense amortization for Fiscal Year ("FY") 2019 and prior years, he makes two recommendations associated with the Company's claim.

First, Mr. LaTorre recommends that the Company be required to provide a full line-by-line account of yearly amortizations of unrecovered expense in its next base rate case. I&E St. No. 3 at 9. In support of this recommendation, Mr. LaTorre argues that all environmental remediation costs incurred prior to FY 2019 will be extinguished by the time the rates established in the Company's next base rate case go into effect. I&E St. No. 3 at 9-10. He further states that amortization of these amounts should have begun on October 1, 2019 pursuant to the UGI Gas 2019 Base Rate Case Order[1] and the UGI Gas 2020 Base Rate Case Order.[2] I&E St. No. 3 at 10.

[1] *Pa. PUC v. UGI Utilities, Inc. – Gas Division*, Docket No. R-2018-3006814 (Order Entered Sept. 19, 2019) ("UGI Gas 2019 Base Rate Case Order").

[2] *Pa. PUC v. UGI Utilities, Inc. – Gas Division*, Docket No. R-2019-3015162 (Order Entered Oct. 8, 2020) ("UGI Gas 2020 Base Rate Case Order").

Second, Mr. LaTorre disagrees with the Company's proposed 1-year amortization period for 2020 and 2021 unrecovered environmental remediation expense. I&E St. No. 3 at 12. He instead recommends that a 5-year amortization period should be used, and, as a result, the Company's claim should be decreased by $1,861,600. I&E St. No. 3 at 12-13.

Q. Does the Company agree with Mr. LaTorre's first recommendation that the Company be required to provide a full line-by-line account of yearly amortizations of unrecovered expense in its next base rate case?

A. Yes.

Q. Is Mr. LaTorre correct that all environmental remediation costs incurred prior to FY 2019 will be extinguished by the time the rates established in the Company's next base rate case go into effect?

A. This cannot be determined at this time. To be clear, the Company appropriately commenced the amortization of these amounts consistent with the UGI Gas 2019 Base Rate Case Order and the UGI Gas 2020 Base Rate Case Order. As shown in UGI Gas Exhibit VKR-2R, the Company began amortizing these amounts in October 2019 and will complete amortization of these amounts in September 2024. Depending on the timing of the Company's next base rate case, the rates associated with this next rate case may be effective before September 2024. Please note that it is the Company's position that it likely will file a new base rate case within one year of the filing of this one, as discussed in Ms. Hazenstab's testimony.

Q. Have you prepared an exhibit to help explain how the Company has amortized under-recovered environmental remediation expense incurred prior to FY 2019?

A. Yes. UGI Gas Exhibit VKR-2R is a schedule that provides, for each under-recovered environmental cost as of September 30, 2021, the amount, the period of amortization, the beginning and ending month for that amortization, the total amortization by fiscal year, and the unrecovered balance as of September 30, 2022. Additionally, the Company will provide a similar schedule in the next rate case filing to assist with the reconciliation of environmental remediation expenses.

Q. Does the Company agree with Mr. LaTorre's second recommendation that a 5-year amortization period should be used for under-recovered environmental remediation expense incurred during FY 2020 and 2021?

A. No.

Q. Please explain.

A. The Company selected a one-year amortization period for unrecovered FY 2020 and FY 2021 costs because it anticipates that it will file for another base rate increase within the next year. I would also note that the time period over which these costs were incurred was the two-year period ending September 30, 2020, and September 30, 2021. As such, there is a serious mismatch between the period in which the costs were incurred and when Mr. LaTorre's 5-year amortization period would allow them to be recovered.

Moreover, Mr. LaTorre's references to the UGI Gas 2019 Base Rate Case Order and the UGI Gas 2020 Base Rate Case Order are misplaced. In fact, each order merely refers to the settlement provision applicable in each case. Thus, the agreement to use a five-year amortization period in either of these prior cases has no bearing on the correct amortization to apply in this proceeding. Additionally, the settlement of a base rate proceeding should have no persuasive value in determining the correct amortization period in this case. As stated in Paragraph 81 of the Joint Petition for Approval of Settlement of All Issues in the UGI Gas Base Rate Proceeding:

> The Joint Petitioners acknowledge that the Settlement reflects a compromise of competing positions and does not necessarily reflect any Joint Petitioner's position with respect to any issues raised in this proceeding. The terms and conditions of the Settlement are limited to the facts of this specific case and are the product of compromise for the sole purpose of settling this case . . . .

Paragraph 63 of the Joint Petition for Approval Settlement of All Issues in the UGI Gas 2020 Base Rate Proceeding includes identical language.

Q. Do you have any further observations regarding Mr. LaTorre's proposal to use a 5-year amortization period for this expense?

A. Yes. Mr. LaTorre also appears to be proposing that the Company be forced to delay the recovery of these necessary environmental remediation costs. However, the mechanism by which UGI Gas will recover these costs does not permit UGI Gas to recover interest associated with such a delay in recovery. Therefore, Mr. LaTorre's proposal to delay the Company's recovery costs would unfairly frustrate the Company's ability to timely recover the full amount of these expenses. As shown at UGI Gas Exhibit VKR-2R, the Company will have total unrecovered environmental remediation costs of $6,361,000 by September 30, 2022 (the expected date at which the revised rates requested in this case would go into effect), of which $3,241,000 relates to spending prior to FY 2019. This is a substantial balance for the Company to carry without any carrying charge recovery on that balance.

Q. Are there any protections for ratepayers should the Company over-recover its environmental remediation costs?

A. Yes. The Company's balancing mechanism protects ratepayers in the event those costs are over-amortized due to the length of time between rate cases by creating a regulatory liability that the Company would need to pass back in a future case.

Q. Please summarize OCA witness Mr. Mugrace's adjustments to the Company's environmental remediation expense claim.

A. Similar to I&E witness Mr. LaTorre, OCA witness Mr. Mugrace recommends that the Company's under-recovered environmental remediation expense should be amortized over a 5-year period. OCA St. No. 1 at 37-38. Mr. Mugrace asserts that this amortization period is consistent with other environmental adjustments, and is appropriate given ongoing cash expenditures and the Company's annual rate case filings. OCA St. No. 1 at 37-38.

Q. Does the Company agree with Mr. Mugrace's proposal to amortize under-recovered environmental remediation expense over a 5-year period?

A. No. In addition to the reasons that the Company opposes I&E's proposed 5-year amortization period, Mr. Mugrace's additional arguments should also be rejected. As indicated above, the current 5-year amortization periods for the under-recoveries of costs in the period prior to FY 2019 and during FY 2019 are the results of agreements in prior cases and have no bearing on the correct amortization to apply in this proceeding for the FY 2020 and FY 2021 under-recoveries. The Company continues to incur expenditures for environmental remediation and, for each year since 2019, has spent more than it recovered in rates, thereby adding to its regulatory asset under-recovery each year. Further delay in recovery results in additional mismatch between the periods in which the costs incurred and the period of recovery. Given the Company's recent history of frequent rate case filings, it is most appropriate to allow the Company to recover these costs currently so that they are not a lingering issue for future rate proceedings. As indicated above, if the Company did over-recover, a regulatory liability would be established and any over-recovered amount would be refunded to ratepayers in a future rate proceeding.

Q. Does Mr. Mugrace propose an additional adjustment to the Company's claimed environmental remediation expense?

A. Yes. While Mr. Mugrace accepts the Company's five-year actual and projected spending for environmental remediation expense, he recommends that the Company use a five-year average instead of a three-year average to normalize its projected spending. OCA St. No. 1 at 15-16. Mr. Mugrace argues that this adjustment is necessary in order to be consistent with other environmental remediation expense adjustments. OCA St. No. 1 at 15-16. As such, he recommends a reduction of $43,733 in the Company's projected environmental remediation expense. OCA St. No. 1 at 16.

Q. Does the Company agree with this proposed adjustment?

A. No. As discussed above, the Company's environmental costs are fully reconcilable. Because they are reconcilable, it is illogical to attempt to minimize the amount of annual recovery. Mr. Mugrace fails to take into consideration that the other environmental adjustments relate to the period over which past under-recovered costs are recovered in rates. This calculation of a normalized annual recovery amount for future costs is an entirely different matter from the amortization of prior period costs and thus there is no logical reason that the periods used should be consistent.

B. OUTSIDE CONTRACTOR EXPENSES

Q. Do any of the parties propose an adjustment to the Company's expense claim associated with outside contractors?

A. Yes. OCA witness Mr. Mugrace recommends that the Company's outside contractors' expense amounts associated with Distribution Operations and Maintenance expense, Customer Accounts expense, and Administrative and General ("A&G") expenses be normalized using a 3-year period of 2020-2022. OCA St. No. 1 at 28-29 (proposing normalization adjustment for Distribution Operations and Maintenance expense), at 31-32 (proposing normalization adjustment for Customer Accounts expense), and at 48-49 (proposing normalization adjustment for A&G expense). Mr. Mugrace's proposal would decrease the Company's Distribution Operations and Maintenance expense by $2,114,000 (OCA St. No. 1 at 29; OCA Schedule DM-12), decrease the Company's Customer Accounts expense by $9,000 (OCA St. No. 1 at 32; OCA Schedule DM-13), and decrease the Company's A&G expense account by $23,000 (OCA St. No. 1 at 48-49; OCA Schedule DM-17).

Q. Does the Company agree with this adjustment?

A. No.

Q. Please explain why Mr. Mugrace's proposal to normalize outside contractors' expense over the 3-year period of 2020-2022 should be rejected.

A. The Company renegotiates its contracts with outside contractors approximately every three to four years. The 2020 and 2021 costs for outside contractors were based on pricing from the 2018 negotiation, while the FPFTY costs will be based on the pricing from the 2022 negotiation (this new pricing has become or will be effective in FY 2022). Therefore, it is not appropriate to use prior periods for outside contractor costs for the FPFTY, as these costs are based on entirely different and outdated contracts and the new contract costs are known and measurable. Based on these updated contracts, the Company has proposed an adjustment to increase its claim for outside contractor labor by $2,692,000, as discussed in the rebuttal testimony of UGI Gas witness Timothy J. Angstadt (UGI Gas St. No. 9-R). Mr. Angstadt also discusses the Company's contracting process and the recent contract renegotiation results at length within his rebuttal testimony.

Q. Is there any other reason that Mr. Mugrace's proposal to normalize outside contractors' expense should be rejected?

A. Mr. Mugrace's adjustment proposes a normalization period for outside contractor expenses using the years 2020 - 2022. As shown at UGI Gas Exhibit VKR-3R, the period that he selected for normalization of outside contractor expense results in the lowest amount of allowed expense of the three normalization periods available (2019 – 2021; 2020 – 2022 and 2021 – 2023). As also shown at UGI Gas Exhibit VKR-3R, at other places within his testimony, Mr. Mugrace selects different normalization periods, without explanation. As such, his method has the appearance of being wholly arbitrary. For this reason and the other reasons cited herein, Mr. Mugrace's adjustment to Outside Contractor Expenses should be rejected.

C. PENSION BENEFITS EXPENSE

Q. Do any of the other parties propose adjustments to the Company's claimed Pension Expense?

A. Yes. OCA witness Mr. Mugrace recommends "normalizing the pension expense over a three-year period 2019-2021." OCA St. No. 1 at 41. Mr. Mugrace argues that "[t]his adjustment reduces the cash contribution and the proposed adjustment from $8,388,000 to $2,429,133, a difference of $5,958,667." OCA St. No. 1 at 41; *see also* OCA Schedule DM-17.

Q. Does the Company agree with Mr. Mugrace's proposed adjustment?

A. No.

Q. Before explaining why the Company disagrees with this proposed adjustment, do you have any initial observations about Mr. Mugrace's proposal in light of the Company's actual cash contributions from FY 2019 through FY 2021?

A. Yes. I note that even if the Commission were to accept Mr. Mugrace's proposal to use a 3-year normalization period to adjust the Company's claim, if the Company's actual cash contributions (i.e., the basis for its claim) are normalized, it actually <u>increases</u> the

Company's claim from \$5.501 million to \$5.765 million. While I am not suggesting that normalization of the Company's actual cash contributions should be done in this case, and specifically explain below why normalization of pension expense based on prior period experience is not proper, I would only note that normalizing the Company's actual cash contributions over a 3-year period would <u>increase</u> its claim by \$0.264 million.

Q. Are there other reasons why you disagree with Mr. Mugrace's proposed adjustment?

A. Yes. Mr. Mugrace's adjustment to the Company's claimed pension expense should be rejected by the Commission for three additional reasons. First, Mr. Mugrace's adjustment results from an apparent misunderstanding of the basis for the Company's claim to recover pension <u>cost</u>, which is its cash contribution to the pension fund. Second, his adjustment is inconsistent with established ratemaking practice in Pennsylvania, which allows public utilities to claim expense based on the cash contribution to their pension funds. Third, Mr. Mugrace's proposed normalization period (*i.e.*, 2019-2021) is arbitrary and inconsistent with his proposed normalization periods regarding other categories of expenses (as shown at UGI Gas Exhibit VKR-3R).

Q. Please explain why it appears that Mr. Mugrace misunderstands the basis for the Company's claim.

A. The Company made its claim based on the portion of total plan cash contributions that related to UGI Gas. Mr. Mugrace's adjustment appears to be predicated on a normalized amount of the <u>difference</u> between GAAP pension expense (per the Company's budget) and pension cash contributions properly based on a recent actuarial report. If accepted, his adjustment would result in a claim which is based on neither GAAP expense nor cash contributions and is not connected to the Company's cost for providing pension benefits.

Q. Have you prepared an exhibit that helps to explain the basis for the Company's claim?

A. Yes. UGI Gas Exhibit VKR-4R shows how the Company calculated its claim. Within Schedule D-14 to Exhibit A – Revenue Requirement (Fully Projected) in the initial filing, the Company calculated an adjustment of $8,388,000 to adjust from the pension income in the budget of -$2,887,000 to the claimed cash contribution of $5,501,000. It may have been more clear had the Company shown two separate adjustments – the first to eliminate the $2,887,000 of income in the budget and the second to record the claimed cash contribution of $5,501,000. This two-adjustment methodology is shown at UGI Gas Exhibit VKR-4R. However, both methodologies result from using the same amount of the actuary-determined $5,501,000 cash contribution claim within the Company's revenue requirement claim.

Q. Why is it relevant that the Company's claim for pension cost is based on cash contribution, not on pension expense?

A. UGI Gas, consistent with other utilities within the state of Pennsylvania, has consistently based its pension cost on an actuary-determined cash contribution. If the Company were to change its method of recovery from period to period, it ultimately would not recover an appropriate amount of cost over the life of the pension plan. Therefore, Mr. Mugrace's recommendation to modify the Company's method of recovery should be rejected as inappropriate.

Q. Please comment on Mr. Mugrace's assertion that his recommended adjustment normalizes pension expense and reduces the cash contribution (OCA St. No. 1 at 41).

A. The Company's claim is based on the cash contributions that relate to UGI Gas. Mr. Mugrace normalizes the difference between cash and GAAP determined expense using historical figures. The Company's claim is based on current actuarially-determine cash contributions to the pension fund. Therefore, Mr. Mugrace's assertion that his recommendation normalizes pension expense is simply not based on up to date information or the full amount of the current cash contribution amount.

Mr. Mugrace's assertion that his recommended adjustment reduces the Company's cash contribution is also not true. The Company contributes to its pension plan based on the cash contribution as calculated annually by its third-party actuarial firm. If the Company accepted Mr. Mugrace's adjustment, its actual cash contribution would not change.

Q. You also testified that Mr. Mugrace's adjustment is inconsistent with established ratemaking practice in Pennsylvania. Please explain.

A. I am advised by counsel that, where a utility's claim to recover pension cost is based upon its actual cash contributions to the pension fund, it is generally inappropriate for those actual cash contributions to be normalized. It is my understanding that UGI Gas will further address this legal issue in its briefs.

Q. How is Mr. Mugrace's adjustment arbitrary and inconsistent with his other proposed adjustments that use a 3-year normalization period?

A. As shown at UGI Gas Exhibit VKR-3R, Mr. Mugrace selected different normalization periods for various adjustments. For the pension adjustment that he recommended, he selected a normalization period of 2019 – 2021, which results in the lowest possible claim of any potential selected three-year normalization period. The fact that Mr. Mugrace's selected period is inconsistent from adjustment to adjustment raises the question about whether his selected normalization period is arbitrary.

D. CORPORATE ALLOCATION OF ENVIRONMENTAL, SOCIAL AND GOVERNANCE ("ESG") COSTS AND COMPANY MEMBERSHIP COSTS

Q. Do any parties propose an adjustment to the Company's claim to recover certain costs incurred by UGI Corporation, which have been allocated to UGI Gas?

A. Yes. In addition to certain incentive compensation expenses allocated to UGI Gas (discussed below), OCA witness Mr. Mugrace identifies **[BEGIN CONFIDENTIAL]** $492,660 in costs at UGI Corporation (of which $115,094 is allocated to UGI Utilities, Inc. – Gas Division and included in the revenue requirement claim). These costs represent consulting costs and membership dues associated with Environmental, Social and Governance ("ESG"). **[END CONFIDENTIAL]**. Mr. Mugrace asserts these costs "do not support the safe, reliable and adequate service requirement of utility service but rather the costs are akin to sponsorships and civic related activities" and recommends that the costs be disallowed. OCA St. No. 1 at 51. Specifically, he claims that these costs are solely designed to maximize corporate profits for UGI Corporation's shareholders and advocating environmental goals. OCA St. No. 1 at 50-51.

Q. Does the Company agree with Mr. Mugrace's proposal to disallow these costs?

A. No.

Q. Please explain why not.

A. Initially, Mr. Mugrace's characterization that ESG costs are driving corporate profits at the expense of ratepayers is not grounded in evidence. His characterization is simply wrong. Also, I take issue with Mr. Mugrace claims that the Company's environmental stewardship activities are self-serving. Those efforts are important to the investor community, which secures the future success of this Company and enables the continued provision of safe and reliable service to customers by funding capital investment.

ESG is a "hot topic" in the investment community. Investors are interested in a Company's ESG strategy and often request this information prior to investing in a Company's stock. The New York Stock Exchange (on which the stock of UGI Corporation is traded) has developed an ESG Resource Center website for its members and investors. UGI Corporation has published three annual reports on ESG, and the most recent (2020) of which was rated at AA by rating agency MSCI ("Morgan Stanley Capital International"). UGI Corporation plans to issue its fourth ESG report in May 2022. In response to investor demand for ESG information, on March 21, 2022, the United States Securities and Exchange Commission ("SEC") proposed enhanced and standardized climate-related disclosures from its registrants. A portion of the $115,094 will be used to prepare for and/or comply with this SEC proposal. More specifically to Mr. Mugrace's proposal, a failure to align with shareholders' ESG expectations can lead to an increased cost of capital.

Q. How do the ratepayers of UGI Gas benefit from the ESG activities of UGI Corporation?

A. UGI Corporation's ESG activities are focused on environmental sustainability, social policies that promote diversity and inclusion, and governance of the Company to ensure that it has a clear purpose and strategic direction. While shareholders do benefit from these activities, ratepayers also benefit because strong policies in this area allow the Company to access capital markets to obtain the capital that is necessary to fund its replacement and betterment program (which leads to greater safety and reliability). ESG activities focus on the collection of needed environmental, social and governance data in an efficient manner, which limits the cost of this activity and lowers the overall expense passed along to ratepayers. Additionally, a focus on diversity and inclusion allows the Company to attract and retain quality employees who are essential to providing safe, efficient, and reliable natural gas service to ratepayers.

E. INCENTIVE COMPENSATION EXPENSE

Q. Do any of the other parties propose an adjustment to the Company's claim to recover the costs of certain of its incentive compensation plans?

A. Yes. OCA witness Mr. Mugrace proposes adjustments to several aspects of the Company's incentive compensation, which taken together would **[BEGIN CONFIDENTIAL]** decrease the Company's proposed total Incentive Compensation costs by $11,129,787 (*i.e.*, "the UGI Utilities portion of $4,916,000 and that which was allocated from UGI Corporation of $6,213,0000"). OCA St. No. 1 at 46. **[END CONFIDENTIAL]**

Q. Does the Company agree with Mr. Mugrace's proposed adjustment?

A. No. None of the reasons offered by Mr. Mugrace to disallow recovery of the Company's incentive compensation programs should be accepted. As explained below, the Company's incentive compensation is a component of its overall compensation program designed by management to offer a competitive package to attract and retain qualified employees. If the Company were to eliminate incentive compensation, it would need to increase another component of compensation in order to remain competitive in the employment market.

However, as an initial matter, I note that Mr. Mugrace appears to incorrectly assume that the Company's O&M expense claim includes incentive compensation costs associated with its UNITE Management Incentive Plan.

Q. Please explain.

A. Mr. Mugrace references documents provided in response to I&E discovery requests as CONFIDENTIAL Attachments I&E-RE-17.3 and I&E-RE-17.4, which describe the Company's UNITE Project Milestone Incentive Plan, and argues that the incentive compensation costs contemplated by this plan are not included in the incentive compensation expense costs shown in response to I&E-RE-17.2. OCA St. No. 1 at 44-45. **[BEGIN CONFIDENTIAL]** He subsequently recommends that the UNITE Management Incentive Plan budgeted amount of $2,603,000 be disallowed. **[END CONFIDENTIAL]**

However, the Company's expense claim in this case does not include any amounts associated with the UNITE Project Milestone Incentive Plan. Rather, these costs are capitalized and included in its rate base claim as part of the cost of the Asset Data Collection phase of the UNITE project. Within discovery request I&E-RE-17, I&E requested that the Company provide information about the actual expenses incurred for incentive compensation from FY 2019 – FY 2021, as well as claimed expenses by incentive type for FTY and the FPFTY. Within this same discovery request, I&E requested a copy of the UGI UNITE Incentive Compensation Plan. The Company provided responses to both of these requests. However, within the response at Attachment I&E-RE-17.1, the Company clearly indicated that the UNITE project bonuses were charged to capital and there were no expense dollars for FY 2019 – FY 2021 for this program. Additionally, the detail in Attachment I&E-RE-17.2 (which details the incentive compensation by program for the FTY and FPFTY expense claim) indicates no amounts labeled as "UNITE". Contrary to Mr. Mugrace's testimony, there are no expense amounts associated with the UNITE Project Milestone Incentive Plan and his understanding of the UGI Management Incentive Plan is simply incorrect. Therefore, his proposed disallowance of **[BEGIN CONFIDENTIAL]** $2,603,000 **[END CONFIDENTIAL]** should be rejected.

Q. For the sake of clarity, please provide a breakdown of UGI Gas's incentive compensation amounts that are included in its O&M expenses claim in this case.

A. Please see CONFIDENTIAL UGI Gas Exhibit VKR-5R for a detail of the incentive compensation amounts that are included in the Company's O&M expenses claim in this case. This detail agrees to a similar schedule provided as Attachment I&E-RE-17.2, as part of the discovery request process, with the following exceptions: (1) **[BEGIN CONFIDENTIAL]** $431,000 **[END CONFIDENTIAL]** of deferred compensation (under the Supplemental Executive Retirement Plan) is excluded from CONFIDENTIAL UGI Gas Exhibit VKR-5R because, upon further consideration, the Company does not believe that the amount associated with this plan is appropriately defined as incentive compensation. See further discussion of deferred compensation below; (2) $51,000 of incremental incentive bonus on the Compensation Benchmarking Adjustment (from Schedule D-9 within UGI Gas Exhibit A – Fully Projected) is added to CONFIDENTIAL UGI Gas Exhibit VKR-5R; and (3) addition of $38,000 of incentive bonus on TSA Security Directive Positions (from Schedule D-9 within UGI Gas Exhibit A – Fully Projected) is added to CONFIDENTIAL UGI Gas Exhibit VKR-5R.

1. UGI Corporation Allocation.

Q. Please summarize Mr. Mugrace's proposed disallowance of the Company's proposed total Incentive Compensation expenses associated with the Company's Corporate Allocation expenses.

A. As explained above, Mr. Mugrace proposes to disallow **[BEGIN CONFIDENTIAL]** $6,213,000 **[END CONFIDENTIAL]** in incentive compensation expense that was allocated to UGI Gas from UGI Corporation. OCA St. No. 1 at 47-48. Mr. Mugrace argues that "[t]here are a lot of variables for receipt of the incentive compensation and based upon the timing of the payout the costs are not known and measurable." OCA St. 1 at 48.

More specifically, Mr. Mugrace asserts that this amount should be disallowed because **[BEGIN CONFIDENTIAL]** the costs are associated with the UNITE ADC project and are to be paid out no later than April 30, 2023. OCA No. St. 1 at 47-48. He further claims that the costs are uncertain and speculative because they are budgeted at an expected 100% payout, despite the fact that payout amounts and timing are discretionary. OCA St. No. 1 at 47-48 **[END CONFIDENTIAL]**

Q. Does the Company agree with Mr. Mugrace's proposal to disallow these costs?

A. No, it does not.

Q. Please explain.

A. As described above, the UNITE bonus program document which Mr. Mugrace reviewed is in no way connected to the bonuses which are allocated to UGI Gas via the Corporate allocation. Therefore, Mr. Mugrace's arguments as it relates to this particular program are not relevant.

As shown at CONFIDENTIAL UGI Gas Exhibit VKR-5R, the actual costs allocated to UGI Gas for UGI Corporation incentive compensation include: (1) incentive compensation of **[BEGIN CONFIDENTIAL]** $2,185,000; **[END CONFIDENTIAL]** (2) stock options and restricted stock awards to employees of **[BEGIN CONFIDENTIAL]** $3,472,000; **[END CONFIDENTIAL]** and (3) **[BEGIN CONFIDENTIAL]** $555,000 **[END CONFIDENTIAL]** of equity compensation for directors.

The incentive compensation is awarded to UGI Corporation employees and executives based on performance under plans which establish financial and non-financial targets. For non-executive employees, the non-financial target is related to safety. For executives, the non-financial targets relate to safety and diversity. See copies of the fact sheets showing the plan criteria for the FY 2022 UGI Corporation plans at

CONFIDENTIAL UGI Gas Exhibit VKR-6R. Page 1 represents the non-executive plan and Page 2 represents the executive plan. Certain financial target amounts are redacted for confidentiality purposes.

Stock options and restricted stock awards are provided to employees based on employment agreements and/or based on management's discretion. The overall compensation policies and programs for executives are established by the Compensation and Management Development Committee of the Board of Directors of UGI Corporation. The program is designed to attract and retain talented and experienced executives and to reward them for leadership excellence.

Directors are provided with long-term equity awards in accordance with the director compensation program overseen by the Corporate Governance Committee and the Board of Directors as a whole. The Board of Directors uses market comparables to assess appropriate compensation for non-employee directors. Further details of the director compensation program can be found in the annual proxy statement of UGI Corporation, an excerpt of which is included at UGI Gas Exhibit VKR-7R.

The Company believes these plans are like in kind with executive and director compensation plans that the Commission has consistently allowed to be recovered in base rates for decades. Resulting from satisfying a combination of financial and non-financial targets, these plans have been determined to be necessary to retain and attract executives at the levels provided under the plans. Without the plans, and the incentives that they provide, the Company could lose the executives or be required to simply increase their base salaries to compensate for the loss of the plan. Similarly, UGI Corporation Directors are provided with competitive compensation to assure the appointment and retention of qualified Directors to help guide the Company.

2. UGI Gas Utility Incentive Compensation

Q. Please summarize Mr. Mugrace's proposed adjustments associated with UGI Gas's claimed incentive compensation costs incurred at the utility Company.

A. Mr. Mugrace begins by breaking down the incentive compensation costs associated with the compensation of UGI Gas employees and executives. OCA St. No. 1 at 46-47. He describes the (a) UGI Gas Management Incentive Plan ("MIP"), (b) Executive Bonus Plan, (c) Performance Restricted Stock Awards, (d) Stock Options, and (e) Supplemental Executive Retirement Plan ("SERP"), which comprise the Company's claimed incentive compensation costs of **[BEGIN CONFIDENTIAL]** $4,915,000. **[END CONFIDNETIAL]** OCA St. No. 1 at 46-47. A summary of claimed costs associated with each part of the Company's incentive compensation costs is set forth at CONFIDENTIAL UGI Gas Exhibit VKR-5R.

Mr. Mugrace recommends that the costs of each aspect of the Company's incentive compensation program be disallowed. OCA St. No. 1 at 47-48.

Q. Does the Company agree with Mr. Mugrace's proposed adjustment?

A. No, it does not. Below, I will explain why each aspect of the Company's incentive compensation program is properly recoverable. As an initial matter, however, Mr. Mugrace's attempt to evaluate individual aspects of the Company's incentive compensation program in isolation should be rejected.

Q. Why should the Commission reject Mr. Mugrace's attempt to evaluate individual aspects of the Company's incentive compensation program in isolation?

A. The Commission has previously rejected proposed adjustments to other utilities' claims for incentive compensation, including stock-based compensation. In PPL Electric Utilities Corp.'s ("PPL Electric") 2012 base rate proceeding, witnesses on behalf of I&E and the OCA recommended disallowance of half of PPL Electric's performance compensation expense claim, thereby requiring shareholders to share equally in the cost of its performance compensation plan. The Commission also rejected that proposal by stating:

> We find that, because PPL's incentive compensation plan is reasonable, prudently incurred, and is not excessive in amount, PPL is permitted full recovery of this expense. PPL correctly notes that many of the cases the OCA and I&E rely on are distinguishable from this case because, in those cases there was not adequate evidence that the incentive compensation expense was reasonable or that there was a benefit to ratepayers. Our decision to allow this incentive compensation expense is consistent with our prior decisions approving incentive compensation programs that are focused on improving operational effectiveness.

Pa. PUC v. PPL Electric Utilities Corp., Docket No. R-2012-2290597, at p. 26 (Final Order entered December 28, 2012) (internal citations omitted).

The Commission again made clear in the 2018 UGI Electric base rate proceeding that incentive compensation programs must be evaluated "as a whole," when determining whether the plan includes goals which benefit customers. *Pa. PUC, et al. v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058, at p. 73-74 (Order entered Oct. 25, 2018). Breaking apart the Company's incentive compensation program into individual components inappropriately tries to single out individual aspects of the Company's total incentive compensation program, when, as a whole, the program clearly contains "both financial and operating metrics and goals which benefit customers," consistent with the Commission's order in 2018 UGI Electric base rate proceeding. *Id.*, at p. 74.

In addition, even assuming Mr. Mugrace's narrow view was proper, I disagree with his claim that the Company's ratepayers do not benefit from the achievement of the financial goals that comprise the Executive Bonus Plan, Performance Restricted Stock Awards, and Stock Options. The Company must have access to capital in order to invest in the infrastructure necessary to provide safe and reliable natural gas service to its ratepayers. The achievement of financial goals makes investment in the Company's stock an attractive option to investors, thereby allowing access to this necessary capital. Therefore, it is appropriate for ratepayers to bear the cost of these incentive compensation programs, just as they bear other costs of the Company from which they directly or indirectly benefit.

Finally, these programs also work in conjunction with other incentive compensation programs, as well as base compensation, to incentivize and retain its talented workforce. The Company's stock options and stock awards typically become exercisable three years after being awarded, and become void when an employee leaves the Company. Therefore, the stock options and stock award grants serve as an incentive to retain employees, thereby reducing transition costs. All else being equal, if the Company were to not offer these stock compensation awards, alternative incentive compensation or base compensation (e.g., salary) would be necessary to allow the Company to retain its workforce in a competitive job market.

Q. Do you have any further observations regarding why OCA's proposed adjustments regarding the Company's incentive compensation claim should be rejected?

A. Yes. Importantly, OCA witness Mr. Mugrace has not argued that UGI Gas's method of compensating its employees, as a whole, is unreasonable. Rather, the evidence of record demonstrates that UGI Gas attempts to compensate its employees consistent with industry standards and in a reasonable manner that permits the Company to attract and retain qualified employees, which is necessary in order to provide safe and reliable service to its customers. Mr. Mugrace's attempts to single out one specific aspect of the Company's overall compensation program—where the evidence otherwise demonstrates the overall program is reasonable—is improper and should be rejected.

Q. Please respond to Mr. Mugrace's assertion that the receipt and timing of the receipt of incentive compensation payouts are not known and measurable.

A. Mr. Mugrace proposes a test for the recovery of this expense that would be impossible to meet for any utility that seeks to recover projected incentive compensation expense for the FPFTY, because incentive compensation is paid out based upon the satisfaction of performance standards during the FPFTY. His proposal is not the test for the recovery of an expense and should be rejected.

Furthermore, regardless of Mr. Mugrace's assertion to the contrary, it is reasonably certain that the Company's incentive compensation program, as a whole, is necessary to attract and retain qualified employees. Adopting the test proposed by Mr. Mugrace would undermine UGI Gas's ability to attract and retain qualified employees, who are necessary in order to provide safe and reliable service to its customers.

a. UGI Gas MIP.

Q. Turning to the individual components of the Company's incentive compensation costs, please summarize Mr. Mugrace's proposed adjustment associated with the Company's MIP.

A. Mr. Mugrace proposes to disallow **[BEGIN CONFIDENTIAL]** $2,603,000 **[END CONFIDENTIAL]** in costs associated with the Company's MIP. OCA St. No. 1 at 47; OCA Schedule DM-17.

Q. Is Mr. Mugrace correct that the [BEGIN CONFIDENTIAL] $2,603,000 [END CONFIDENTIAL] that he proposes to be disallowed is solely associated with the "UNITE Management Incentive Plan Budget" as is suggested on page 47 of his testimony?

A. No. The UNITE incentive program is unrelated to the **[BEGIN CONFIDENTIAL]** $2,603,000 **[END CONFIDENTIAL]** for the Management Incentive Program. As explained above, the Company has no O&M expense claim associated with the UNITE incentive program.

Q. Please describe the Company's MIP.

A. The UGI Management Incentive Plan is an annual incentive program for which regular, full-time employees at career levels between M1 – M6 and between P2 – P5 are eligible (this includes most salaried employees that are below the executive level). The goals included in the plan span a wide range of areas, including financial performance, safety, reliability, customer satisfaction, business growth, sustainability, and capital deployment.

A copy of the FY 2022 plan document is provided CONFIDENTIAL UGI Gas Exhibit VKR-8R. Certain financial criteria have been redacted for heightened confidentiality purposes.

Q. Do the safety, reliability, customer satisfaction, business growth, sustainability, and capital deployment goals included in the MIP benefit ratepayers?

A. Yes. Ratepayers benefit directly when the Company provides safe and reliable natural gas service and when its customer service is responsive to customer needs. Additionally, business growth spreads the Company's costs over more customers, limiting the cost borne by each individual ratepayer. Ratepayers benefit from sustainability, as these efforts ensure that the Company is well positioned to be able to provide natural gas in the future, in an ecologically responsible manner. Finally, ratepayers benefit from capital deployment as this capital is deployed to replace aging infrastructure with more modern infrastructure, thereby increasing the safety and reliability of the Company's natural gas distribution system.

b. Executive Bonus Plan, Performance Restricted Stock Awards, Stock Options and SERP.

Q. Mr. Mugrace also recommends that the Commission disallow recovery of the Company's Executive Bonus Plan, Performance Restricted Stock Awards, Stock Options and SERP. OCA St. No. 1 at 48. Please summarize the basis for his recommended adjustment.

A. Mr. Mugrace recommends that the **[BEGIN CONFIDENTIAL]** $2,312,000 (*i.e.*, $714,000 + $766,000 + $401,000 + $431,000) **[END CONFIDENTIAL]** associated with each of these incentive compensation programs should be disallowed for two reasons. First, Mr. Mugrace asserts that "these are related to Executive Compensation currently employed by the Company and executives who have retired from the Company, and I believe that these costs do not provide benefits to customers in the area of customer service, customer satisfaction, customer engagement or safety and reliability issues." OCA St. No. 1 at 48. Second, he cites the Company's response to I&E-RE-18, and argues that "these costs are linked to future stock prices and stock price assumptions" and that he "do[es] not see any ratepayer benefit related to these [plans]." OCA St. 1 at No. 48.

Q. Does the Company agree with Mr. Mugrace's proposed disallowance?

A. No. Mr. Mugrace misunderstands how each of these programs benefits ratepayers and plays an essential role in the Company's ability to provide the compensation necessary to attract and retain qualified employees that provide safe, efficient and reliable natural gas service. In addition, as I previously stated in my testimony regarding Mr. Mugrace's improper attempts to single out specific aspects of the Company's overall compensation strategy for disallowance, there are additional specific reasons why it is reasonable and appropriate for the Company to recover the costs of the Executive Bonus Plan, Performance Restricted Stock Awards, Stock Options and SERP.

Q. Please describe the Company's Executive Bonus Plan.

A. The UGI Utilities Executive bonus plan applies to executives of the UGI Utilities business, and rewards these executives for meeting financial, safety and diversity goals. This plan is similar to the UGI Corporate Executive bonus plan described above, with the exception of the fact that this plan's financial goal is related specifically to the EBIT (Earnings Before Income Taxes) of UGI Utilities. See a copy of the fact sheet for this plan at CONFIDENTIAL UGI Gas Exhibit VKR-6R, page 3.

Q. Please explain how the non-financial performance metrics included in the Company's Executive Bonus Plan benefit the Company's ratepayers.

A. Ratepayers specifically benefit from the safety performance plan metric, as the provision of safe, reliable gas service is at the core of the UGI Utilities commitment to its ratepayers. The diversity initiative incentives the Company's leadership to consider diversity in its hiring practices, allowing the Company and its ratepayers to benefit from diverse viewpoints. This incentive is consistent with the Commission's "*Diversity at Major Jurisdictional Utility Companies—Statement of Policy*." *See* 52 Pa. Code §§ 69.801-69.809.

Q. Please describe the Company's Performance Restricted Stock Awards and Stock Options plans.

A. Similar to the equity compensation plans at UGI Corporation, restricted stock awards and stock options are awarded to key employees of UGI Utilities based on employment contracts and on management's discretion. Awards are granted to employees and typically have a vesting period of three years.

Q. How do the Company's Performance Restricted Stock Awards and Stock Options benefit ratepayers?

A. Stock awards and stock options benefit ratepayers by incentivizing key employees to maintain tenure with the Company through the vesting period. Equity compensation is a key component of compensation, particularly at the executive level. If the Company were to eliminate its equity compensation, it would need to increase base pay by at least the same amount in order to remain competitive in the employment market for talented executive-level employees. Ratepayers benefit from a stable group of Company executives who are motivated to advance the Company's mission.

Q. Please describe the Company's SERP.

A. The Company's SERP plan is designed to provide a retirement benefit for executive-level employees who are not eligible to receive the full typical Company contribution within its pension or 401(k) program. Current (not retired) executives who earn more than the cap for the regular pension or 401(k) plan are eligible for the SERP.

Q. Why should the Commission also reject Mr. Mugrace's recommended disallowance of the costs of the Company's SERP?

A. As indicated above, after further review of the specifics of the SERP plan, the Company does not believe that it is appropriately categorized as an "incentive" plan. As described above, it is designed to provide a normal level of retirement benefit and it has no goals or criteria to be met (as is typical for an incentive program). A SERP is a typical benefit of an executive benefit package, and the Company includes this benefit for its executives in order to be competitive for talent at that level. The SERP works together with other portions of the Company's pay and benefits program to provide a complete compensation package. If the SERP were excluded, the Company would need to increase base salary or other compensation in order to remain competitive for talented executives. The Company's SERP has existed for many years and has not previously been challenged in its rate proceedings.

Q. Does Mr. Mugrace recommend any other adjustments related to incentive compensation?

A. Yes, in addition to those adjustments discussed above, Mr. Mugrace recommends the following additional adjustments to eliminate the incentive compensation portion of certain compensation adjustments included in the Company's expense claim:

1. He recommends disallowance of the $38,000 incentive compensation portion of the Company's proposal to add 5 positions for TSA compliant directives be denied. OCA St. No. 1 at 26; and
2. He recommends disallowance of the $51,000 incentive compensation portion of the Company's Compensation Benchmark adjustment. OCA St. No. 1 at 24-25.

In both cases, Mr. Mugrace does not deny the Company's claim for the compensation adjustment. In fact, in the case of the TSA directive, he specifically states that he accepts the Company's proposal to add the 5 positions. However, he argues that the incentive compensation portion of these adjustments should be disallowed as he has not seen evidence of goals, performance matrices and objectives that need to be achieved before payout and also that it is too soon to determine if employees will achieve such goals. OCA St. No. 1 at 24-26.

Q. Does the Company agree with these proposed adjustments?

A. No. For both the Compensation Benchmark incentive compensation adjustment and the TSA directive incentive compensation adjustment, the related employees would be eligible for the MIP plan described above. As shown in CONFIDENTIAL UGI Gas Exhibit VKR-8R, the Company has clear performance goals and objectives for this plan. Of course, the Company cannot yet know the final outcome of the performance goals for the FY 2023 period, because the Company's case is based on a FPFTY. However, based on past performance, the Company believes that it is reasonable to assume that these goals will be achieved in order to earn a payout on the incentive compensation plan.

F. EMPLOYEE BENEFITS EXPENSE – MEDICAL AND DENTAL COSTS

Q. Do any of the other parties oppose the Company's claim to recover Employee Benefits expenses associated with medical and dental costs?

A. Yes. OCA witness Mr. Mugrace recommends that the Company's claim be reduced by $1,037,034, based upon his recommended reductions to employee headcount and his recommendation that medical and dental costs be normalized over a 3-year period from 2021-2023. OCA St. No. 1 at 50. Mr. Mugrace asserts that it is not reasonable for the Company to rely upon national surveys to project these costs, because national surveys are subject to interpretation and can result in changes based upon which provider prepares them. OCA St. No. 1 at 49. In addition, Mr. Mugrace argues that a post COVID-19 hybrid work environment may reduce employee costs because it can increase employee quality of life and provide "for less stressful day-to-day situations if carefully monitored." OCA St.

No. 1 at 49-50. He also believes that the Company has a marketplace where it may explore more affordable healthcare options. OCA St. No. 1 at 49-50.

Q. Does the Company agree with this proposed adjustment?

A. No. None of the reasons advanced by Mr. Mugrace demonstrates that his adjustment is reasonable or appropriate.

Q. Please respond to Mr. Mugrace's claim that it is not reasonable for the Company to rely upon national surveys to project medical and dental costs of its employees.

A. To clarify, the Company relied upon the analysis provided by its insurance broker, based on a national survey, but then tailored specifically to UGI's covered population (using geography and demographics). The broker indicated that the Pennsylvania healthcare costs tend to be overall in line with the national average, while healthcare costs in bordering states (such as New York, New Jersey, West Virginia and Ohio) are higher than the costs in Pennsylvania. The broker also indicated that UGI's population is slightly older than average, which was also factored into the specific increase that the broker recommended for UGI. UGI Gas's reliance on the analysis provided by its insurance broker is a normal business practice, and Mr. Mugrace provides no basis whatsoever to call into question the analysis of the broker.

Q. Should the Commission rely upon Mr. Mugrace's claim that a post COVID-19 hybrid work environment increases employee quality of life, which may allow the Company to explore more affordable healthcare options?

A. No. Mr. Mugrace was asked to provide any study, report, review evaluation or analysis of whether UGI Gas has switched to a hybrid workplace or reduced employee costs by switching to a hybrid workplace, and he indicated he had prepared no such studies in his response to UGI Gas-OCA-I-17. Similarly, Mr. Mugrace further indicated in his response to UGI Gas-OCA-I-17 that he has not prepared any study, report, review evaluation or analysis of the savings UGI Gas could gain by switching to a hybrid workplace, including savings related to his claim that the Company could refinance health care options. Essentially, Mr. Mugrace has offered no basis for his assertions. Therefore, they should be disregarded.

Q. Has the Company included any adjustment to its initial medical and dental costs within its rebuttal claim?

A. Yes. Based on the headcount adjustment that the Company has reflected within its rebuttal claim which reduces overall headcount by 17 positions (or 1%), the Company has reflected a similar 1% reduction to its medical and dental costs, which adjustment amounts to $95,065. See a calculation of this adjustment at UGI Gas Exhibit VKR-9R.

G. EMPLOYEE ACTIVITIES EXPENSE

Q. Do any of the other parties oppose the Company's claim for expenses related to Employee Activities?

A. Yes. I&E witness Mr. Walker recommends that the Company's claim be reduced by $370,291. I&E St. No. 1 at 6. He bases his adjustment on the FY 2019 expense, which inflates to the FPFTY using the average of Consumer Price Index ("CPI") inflation factors for FY 2022. I&E St. No. 1 at 6. Mr. Walker argues that it is "impossible" to know if employees will attend an optional Company picnic in 2023, as we are still in the midst of the COVID-19 pandemic. I&E St. No. 1 at 6. In addition, he asserts that, even if all employees attended, the $123 per employee cost is not prudent. I&E St. No. 1 at 6.

OCA witness Mr. Mugrace also proposes an adjustment to the Company's Employee Activities Expense claim. Mr. Mugrace asserts that the entire expensed amount of $588,226 should be disallowed. OCA St. No. 1 at 43. Mr. Mugrace argues that these expenses do not provide any benefits to ratepayers. OCA St. No. 1 at 43.

Q. Does the Company agree with either I&E's or OCA's proposed adjustments to its claim for Employee Activities expense?

A. No.

Q. Please explain why I&E witness Mr. Walker's proposed adjustment should be rejected.

A. In asserting his adjustment, Mr. Walker assumes that he knows how employees will respond to an opportunity to attend a Company picnic or other activities. He also indicates that a cost of $123 per employee is not "prudent".

As described within the testimony of Christopher R. Brown (UGI Gas Statement No. 1, page 27, line 14 through page 28, line 8), the Company has experienced an increase in voluntary turnover in a tight labor market. Given this situation and the overall tight labor market, the Company believes that it is prudent to spend a relatively modest amount of money on activities that can increase employee job satisfaction and thereby can increase employee retention. This investment is insignificant compared to the cost of recruiting and training a replacement employee.

Q. Why should the Commission reject OCA witness Mr. Mugrace's proposal to disallow the Company's claimed Employee Activities expense entirely?

A. The Company's proposed cost is for a reasonable level of normal employee activities designed to allow opportunities for employees to develop relationships with one another and to recognize service tenure. A reasonable calendar of activities designed to reward and incentivize employees is important to employee retention. As mentioned above, the Company has experienced an increase in voluntary turnover in a tight labor market. Given this situation, it would not be prudent for the Company to eliminate programs that contribute to the retention of qualified personnel who are responsible for the provision of safe, reliable natural gas service. When the Company experiences turnover, it loses valuable experience and then must invest time and money to recruit and train replacement employees. Therefore, the Company believes that its investment in a reasonable level of employee activities is worthwhile to create an environment conducive to employee satisfaction.

H. OSHA/ETS COMPLIANCE EXPENSE

Q. Do any of the other parties propose adjustments related to the Company's claim to recover costs associated with OSHA/ ETS compliance?

A. Both I&E and OCA propose adjustments to this aspect of the Company's claim.

Q. Has the Company already indicated that it will be withdrawing a portion of the costs originally included in this claim?

A. Yes. As noted by both I&E and OCA, the Company indicated in response to discovery request OCA-III-25 that it is withdrawing the majority of its initial claim because the Supreme Court of the United States overturned the federal vaccination and testing mandates for businesses that have over 100 employees. However, the Company is still claiming $52,934 of its already incurred costs and is requesting to amortize these costs over a one-year period. These costs were incurred by the Company to obtain legal advice related to complying with the mandate (in advance of the Supreme Court's decision), and to subscribe to a vaccine tracking software.

Q. Please explain I&E's proposed adjustment to the $52,934 in costs that the Company is continuing to claim associated with OSHA/ETS compliance.

A. I&E witness Mr. LaTorre accepts that these COVID-19 related costs were already incurred by the Company, but recommends that the Company's claim to recover these costs be amortized over a 20-month period, which he asserts is consistent with his proposed rate case filing frequency used to calculated rate case expense. I&E St. No. 3 at 14-15. His proposal would reduce the Company's claim by $21,174.

Q. Does the Company agree with I&E's proposed adjustment based upon the use of a 20-month amortization period?

A. No. This adjustment is proposed by I&E based upon its use of a 20-month period to normalize the Company's rate case expense. UGI Gas witness Ms. Hazenstab addresses and refutes I&E's proposed rate case expense adjustment in her rebuttal testimony (UGI Gas St. No. 2-R). I&E's proposed adjustment to OSHA/ETS compliance costs should be rejected for the same reasons.

Q. Please explain OCA's proposed adjustment to the $52,934 in costs that the Company is continuing to claim associated with OSHA/ETS compliance.

A. OCA recommends that all of these costs be disallowed. OCA St. No. 1 at 39-40. OCA witness Mr. Mugrace asserts that because "the Federal Mandate has not passed, these legal costs are moot, and ratepayers should not be required to absorb these costs." OCA St. No. 1 at 40.

Q. Does the Company agree with OCA's proposal to disallow these costs?

A. No. I am advised by counsel that the test for whether costs are recoverable is evaluating whether they were reasonably and prudently incurred at the time they were incurred, not whether the costs are deemed "moot" based on facts and circumstances that developed after the costs were incurred. The Company sought legal advice on a rather unusual legal issue and obtained software in an attempt to comply with an imminently applicable federal law. While hindsight regarding the fact that the mandate was ultimately overturned may be 20/20, these costs were reasonably and prudently incurred at the time they were incurred and should be recovered.

I. ADVERTISING EXPENSE

Q. Do any of the other parties propose adjustments to the Company's claimed advertising expense in this case?

A. Yes. I&E witness Mr. Walker and OCA witness Mr. Mugrace each oppose the Company's claimed amounts associated with "Other Advertising Programs." I&E St. No. 1 at 12-13; OCA St. No. 1 at 36. In addition, Mr. Mugrace also opposes the Company's claimed amount for "Conservation Advertising." OCA St. No. 1 at 35-36.

Q. Please summarize I&E's and OCA's recommended adjustments to the costs claimed for Other Advertising Programs.

A. Both I&E witness Mr. Walker and OCA witness Mr. Mugrace recommend that the claimed $885,178 associated with Other Advertising Programs be disallowed. I&E St. No. 1 at 12-13; OCA St. No. 1 at 35-36. Mr. Walker asserts that the Other Advertising Programs only promote the Company's image and not the benefits of domestic natural gas. He cites several examples of sponsorships undertaken by the Company. I&E St. No. 1 at 12-13; I&E Exhibit No. 1, Schedule 5. OCA similarly asserts these costs are not related to institutional or instructional advertising that benefits customers, but are associated with the Company's branding, recognition and role as a good corporate citizen. OCA St. No. 1 at 35-36.

Q. Does the Company agree with I&E's and OCA's recommendation that the Commission disallow recovery of the costs associated with the Company's Other Advertising Programs?

A. No. Other Advertising Programs consist primarily of costs for sponsorships, building meetings / trade shows, and branded promotional items. While the examples provided by the Company and included as I&E Exhibit No. 1, Schedule 5 demonstrate only the appearance of the Company's logo on sponsored event signage, they are not able to pictorially convey the opportunities that are afforded to Company personnel by virtue of sponsoring events. Event sponsorship typically comes with tickets to the related event, which allows Company personnel to attend. Attending such events allows the Company to raise awareness of natural gas as an option, and to develop relationships and discuss the benefits of natural gas with other attendees.

These sponsorships are key to attracting additional customers and these additional customers reduce the overall revenue requirement that is borne by each individual customer.

Q. Please summarize OCA's recommended adjustment to the costs claimed for Conservation Advertising.

A. OCA witness Mr. Mugrace proposes to normalize these costs over the 3-year period of 2020-2022, which would reduce the Company's claim by $193,114. OCA St. No. 1 at 36. Mr. Mugrace asserts that normalization is appropriate because "[t]he Company did not record any costs to this account in FY 2019," "the costs incurred in FY 2020 and FY 2021 reflect a normal level of costs for this category" and "[t]he Company has not justified the 70% increase over the FY 2022 and FY 2023 balance." OCA St. No. 1 at 36.

Q. Do you agree with Mr. Mugrace's proposed reduction to the Company's claimed Conservation Advertising expense?

A. No.

Q. As an initial matter, is Mr. Mugrace correct that the Company did not record any costs to this account in FY 2019?

A. No. As shown at Attachment OCA-III-25 (within Book I in the Company's initial filing), the Company spent $603,642 on Conservation of Energy advertising in FY 2019.

Q. Please respond to his assertion that the costs incurred in FY 2020 and FY 2021 reflect a normal level of costs for this expense category.

A. The Company's advertising program for FY 2020 was impacted by the COVID-19 pandemic, as the Company almost completely eliminated its advertising in the third and fourth quarters of FY 2020 (March – September 2020) due to the uncertainty introduced by the pandemic. The Company's spending continued to be curtailed in FY 2021. Therefore, FY 2020 and FY 2021 are not reflective of a normal level of costs for conservation advertising.

Q. Please explain why the Company's claimed costs for FY 2022 and FY 2023 are justified.

A. As indicated in response to I&E-RE-31, the Company is resuming normal activities in print and digital channel advertising related to conservation-related efforts, which help customers reduce energy consumption.

Q. Are there any further reasons why the Commission should reject Mr. Mugrace's proposal to use a 3-year normalization period of 2020-2022 with respect to Conservation Advertising?

A. Yes. As indicated above in response to previous adjustments, Mr. Mugrace appears to be cherry-picking normalization periods to minimize the Company's allowed claim. As shown at UGI Gas Exhibit VKR-3R, Mr. Mugrace selected different periods for different adjustments. In the case of conservation advertising, the period selected included the year that was most impacted by the COVID-19 pandemic (2020), but excluded the prior year when conservation advertising costs were higher (2019).

J. SPONSORSHIPS EXPENSE

Q. Did any of the parties propose an adjustment regarding the Company's proposed Sponsorships expense?

A. Yes. OCA witness Mr. Mugrace recommended the Company's sponsorship costs associated with Coats for Kids, American Red Cross, Sound the Alarm, Honor Roll, United Way Day of Caring and other social programs be disallowed. OCA St. 1 at 43-44. Mr. Mugrace argued that these costs do not benefit ratepayers, and mainly benefit the Company by contributing to its good corporate citizenship. OCA St. 1 at 44. Mr. Mugrace's recommendation would reduce the Company's expense claim by $424,000. OCA St. 1 at 44; OCA Schedule DM-17.

Q. Does the Company agree with Mr. Mugrace's recommendation that the costs associated with the Company's Sponsorship and participation in programs such as Coats for Kids, American Red Cross, Sound the Alarm, Honor Roll, United Way Day of Caring be disallowed?

A. No, it does not.

Q. Please explain why the Commission should reject Mr. Mugrace's adjustment.

A. Sponsorship programs such as those described above, are essential to maintaining ties in the communities where the Company provides service. These opportunities ensure that the Company's potential customer base remains aware of the Company and the services it provides, and they serve as an attraction for potential customers and potential employees.

Additionally, this adjustment proposed by Mr. Mugrace is duplicative of his adjustment related to Other Advertising Programs discussed in section I above. Mr. Mugrace recommended the Other Advertising Programs adjustment based on information provided by the Company in Attachment III-A-25 (within Book I to the original filing), which provides details of expenditures for advertising by major media and by certain categories of advertising as required for this standard filing requirement. Within this schedule, sponsorships are included within the Other Advertising Programs category. This schedule provides details of all advertising, which includes amounts in several different FERC accounts.

Separately, the Company provided a detail of Miscellaneous General Expenses (which is FERC account 930.2) at Attachment III-A-28.1 in response to a separate standard filing. Of the sponsorship advertising summarized in Attachment III-A-25, $389,774 is included within FERC account 930.2. Therefore, this portion of Mr. Mugrace's adjustment should be rejected solely because it is duplicative of his earlier adjustment to Other Advertising Programs.

K. MEMBERSHIP DUES EXPENSE

Q. Do any of the other parties oppose the Company's claim for recovery of certain membership dues?

A. Yes. I&E witness Mr. Walker proposes to disallow $153,998 in membership dues from the Company's claim, which he asserts are related to membership in organizations that are not necessary to the Company's provision of safe and reliable gas service. I&E St. No. 1 at 14-15. OCA witness Mr. Mugrace similarly proposes to disallow $540,192 in membership dues from the Company's claim, which he also asserts are related to membership in organizations that are not necessary to the Company's provision of safe and reliable gas service. OCA St. No. 1 at 42-43.

Q. Before you respond to these proposed adjustments, do you have any clarifications of information previously provided regarding Company Memberships at Attachment SDR-RR-30 (which provided Memberships by organization for the FPFTY) and at Attachment I&E-RE-20(A) (which provided Memberships by organization for 2019 – 2022)?

A. Yes. One of the organizations on both of these listings was identified as Cyber Resilient Energy Delivery Consortium, but should have been identified as Capital Region Economic Development Company (both organizations share the acronym of "CREDC", and Company personnel initially misinterpreted these identical acronyms). The amount included in the FPFTY claim for this membership is $30,480. Because this is an organization similar to other economic development organizations opposed by I&E witness Mr. Walker, the Company will assume that this $30,480 amount is also disallowed by I&E witness Mr. Walker, and will respond to his proposed adjustment as if it were a total of $184,478 ($153,998 + $30,480). OCA witness Mr. Mugrace disallowed this membership, and the Company will assume that he continues to do so with the clarified identification.

Q. Please identify and describe the membership dues that both I&E and OCA propose to disallow, and the additional membership dues that only OCA proposes to disallow.

A. The following table indicates the membership dues that are opposed by I&E and by OCA. Note that OCA opposes all memberships that are listed in this table, while I&E opposes only those in the first section of this table:

Membership Costs Denied by I&E Witness Mr. Walker:	
Allentown Economic Development Corporation	$ 5,148
Capital Region Economic Development Company	30,480
Economic Development Company of Lancaster County	32,964
Lebanon Valley Economic Development Corporation	8,244
Lehigh Valley Economic Development Corporation	21,636
Northeastern Pennsylvania Alliance	1,704
Penn's Northeast	5,664
Pennsylvania Chamber of Business & Industry	66,521
Pennsylvania Economy League	12,117
Total Opposed by I&E	$ 184,478
Additional Membership Costs Denied by OCA Witness Mr. Mugrace:	
Association for Material Protection and Performance	1,932
Energy Association of Pennsylvania	145,058
Energy Solutions Center	6,225
Focus Central Pennsylvania	3,096
Natural Gas Supply Collaborative	20,000
Natural Gas Vehicles of America	26,753
Society of Gas Operators	1,863
The Coalition for Renewable Natural Gas	29,000
Other Organizations under $1,500	11,724
Total Opposed by OCA	$ 430,129

Q. Does the Company agree with the adjustments proposed by I&E and OCA?

A. No.

Q. Please explain why it is appropriate for the Company to recover its membership dues associated with the above referenced organizations opposed by both I&E and OCA.

A. The membership fees opposed by I&E witness Mr. Walker are related to economic development corporations, the PA Chamber of Business & Industry, and the PA Economy League. The Company's membership in these organizations allows it to grow its customer base, primarily by attracting new industrial and commercial customers. These organizations work primarily with large commercial companies who are making site selections, and the Company's active involvement in these organizations allows it to proactively work with these targets, promoting the benefits of natural gas for their energy needs and encouraging them to select sites that are located in close proximity to existing gas mains. Without membership and active involvement in these organizations, the Company would experience less commercial growth, resulting in higher costs passed along to ratepayers (including its residential customers).

Q. Please explain why it is appropriate for the Company to recover its membership dues associated with above referenced organizations opposed only by OCA.

A. These organizations have a variety of purposes, including the promotion of safe operating practices, advocating for renewable natural gas resources, growing the use of natural gas, and the sharing of information among utilities. UGI Gas's membership in these organizations allows the Company to benefit from the resources provided by these various organizations, receiving information about safety and reliability, as well as growth within natural gas and renewables, all of which benefit ratepayers.

The following contains information about the purpose of each individually listed organization, as provided on the organization's website and an explanation of how participation benefits ratepayers:

1) Association for Material Protection and Performance ("AMPP") – AMPP represents the largest global community of corrosion and protective coatings professionals. Its members are dedicated to advancing technical and practical expertise in corrosion prevention and control. AMPP provides members with the knowledge and resources to ensure high performance materials are used to build and maintain sustainable infrastructure.
   a. The Company's membership in AMPP benefits ratepayers and furthers the provision of safe and reliable service because the Company learns about techniques to prevent pipe corrosion, thereby making its distribution system safer.
2) Energy Association of Pennsylvania ("EAP") – EAP is well-established as the voice of Pennsylvania's electric and natural gas utilities. EAP helps its members better serve their customers by acting as a clearinghouse for information on best practices within the industries. The Association also serves an educational function by sponsoring conferences emphasizing safety topics on electric and natural gas operations and consumer service issues that are attended by employees of member companies, out-of-state utilities, and government agencies.

a. The Company's membership in EAP benefits ratepayers because the Company learns about best practices in utility customer service and safety, which influence its own practices, policies and procedures.

3) Energy Solutions Center ("ESC") – ESC promotes the deployment of energy efficient natural gas solutions by developing innovative partnerships between energy utilities, equipment vendors and manufacturers, and energy customers.

a. The Company's membership in ESC benefits ratepayers because the Company gathers information about energy efficiency, which it is able to pass along to ratepayers to assist them in conserving energy.

4) Focus Central Pennsylvania – Focus Central Pennsylvania provides a centralized location for current information on available properties, market data, labor data and much more.

a. The Company's membership in Focus Central Pennsylvania benefits ratepayers because the Company is able to obtain market information for its service territory, allowing it to benchmark its labor standards and also to be informed about available properties, which might lead to future development opportunities. These opportunities for growth ultimately reduce the cost borne by each individual ratepayer.

5) Natural Gas Supply Collaborative ("NGSC") – NGSC is a voluntary collaborative of natural gas purchasers that are promoting safe and responsible practices for natural gas supply.

a. The Company's membership in NGSC benefits ratepayers because it informs the Company about best practices in safe natural gas supply.

6) Natural Gas Vehicles of America – Natural Gas Vehicles of America's purpose is to create a profitable, sustainable and growing market for compressed natural gas (CNG) and liquefied natural gas (LNG)-powered vehicles.
   a. The Company's membership in Natural Gas Vehicles of America benefits ratepayers because it allows the Company to explore options for expanding the use of natural gas for powering vehicles, leading to growth opportunities which ultimately reduce the cost borne by each individual ratepayer.
7) Society of Gas Operators – The Society of Gas Operators is an Industry group focusing on the sharing of information and topics relevant to Gas Operations. Membership is predominantly from gas companies and suppliers in the North East United States.
   a. The Company's membership in the Society of Gas Operators benefits ratepayers because it allows the Company to learn about best practices in gas operations from its peers in the same geographic region.
8) Coalition for Renewable Natural Gas ("RNG Coalition") – RNG Coalition advocates for sustainable development, deployment and utilization of renewable natural gas so that present and future generations will have access to domestic, renewable, clean fuel and energy.
   a. The Company's membership in the RNG Coalition benefits ratepayers because it informs the Company about renewable natural gas options, allowing natural gas to remain a sustainable option for many future years.

Q. Are there any further reasons why the Commission should specifically reject Mr. Mugrace's proposed reduction of $540,912 to this expense category?

A. Yes. Mr. Mugrace's calculation of his proposed adjustment is not sound. He specifically indicates that he is allowing the (1) American Gas Association - $621,015 (less $23,599 related to Lobbying) and (2) Northeast Gas Association - $55,000 for a total of $652,416. The Company's claim is for $1,082,546. The claim amount is based on the information in the Company's original filing at Attachment SDR-RR-30, which shows a total membership cost of $1,115,404, but indicates within footnotes that $32,858 is related to lobbying costs and is excluded from the Company's claim ($23,599 for American Gas Association and $9,259 for Energy Association of Pennsylvania). Therefore, Mr. Mugrace's adjustment should have been for $430,130 ($1,082,546 total Company claim less $652,416 allowed by Mr. Mugrace for American Gas Association and Northeast Gas Association).

L. DEPRECIATION EXPENSE

Q. Do any of the other parties propose an adjustment to the Company's claimed depreciation expense?

A. Yes. I&E witness Mr. Sakaya recommends that the Company's claimed depreciation expense be decreased by $3,666,000, based upon I&E's proposed adjustments to utility plant in service at the end of the FTY and FPFTY. I&E St. No. 5 at 16. OCA witness Mr. Mugrace similarly recommends that the Company's claimed depreciation expense be decreased by $4,517,363 associated with OCA's proposed adjustments to utility plant in service.[3]

Q. Does the Company agree with either I&E's or OCA's proposed adjustment to depreciation expense?

A. No. The Company disagrees with these adjustments, which are derivative of I&E's and OCA's proposed adjustment to the Company's utility plant in service claim. The proposed utility plant in service adjustments should be rejected for the reasons explained in UGI Gas witness Ms. Schappell's rebuttal testimony (UGI Gas St. No. 5-R).

Q. Does the Company have an update to its claimed for depreciation expense based upon its proposed adjustment to plant in service?

A. Yes. The Company has reduced its claim for depreciation expense upon identifying certain assets that were incorrectly included in or excluded from plant in service in the claim, as discussed in the rebuttal testimony of UGI Gas witness Vicky A. Schappell (UGI Gas St. No. 5-R). This results in a reduction to depreciation expense of $18,000. In addition, the Company identified (1) that certain allocations were mistakenly excluded from its rate claim, which results in a further reduction of depreciation expense of $524,000, and (2) that depreciation was claimed for a certain asset at an inappropriate rate, indicated within my response to discovery request I&E-RE-42, which results in a further reduction of depreciation expense of $231,000. These depreciation expense adjustments collectively result in a decrease to operating expense of $773,000. *See* UGI Gas Exhibit VKR-1R.

---

[3] Mr. Mugrace specifically accepts the Company's proposed service lives and depreciation rates. OCA St. No. 1 at 52.

V. UNCOLLECTIBLES ACCOUNTS EXPENSE

Q. Do any of the other parties oppose the Company's proposal to continue to defer COVID-19 related incremental uncollectibles expense?

A. Yes. I&E witness Mr. Walker disagrees with the Company's proposal to continue tracking incremental uncollectibles expense related to COVID-19 in future years. I&E St. No. 1 at 9-10. Mr. Walker argues that COVID-related uncollectibles are included in the Company's forward-looking routine uncollectibles expense, and that continued deferral past the effective date of new rates established in this case would result in redundant recovery. I&E St. No. 1 at 11. He further argues that in the settlement approved by the 2020 Base Rate Case Order the Company agreed to not continue accumulating COVID-19 related costs beyond the effective date of new rates established in this proceeding. I&E St. No. 1 at 11.

Q. Does the Company agree with Mr. Walker's proposal?

A. No.

Q. Please respond to his claim that continued deferral of incremental uncollectibles expense would result in redundant recovery.

A. The Company would not continue to recover incremental uncollectible expense above the existing $12.81 million cap after the implementation of its new rates. Rather, the Company believes that it is appropriate to defer for future recovery costs in excess of the uncollectible accounts amount ultimately approved in its new rates. This methodology would not result in redundant recovery because this expense in excess of the amount approved for base rate recovery would be recovered only once (within the amount deferred).

Q. Please respond to Mr. Walker's claim that in the settlement approved by the 2020 Base Rate Case Order, the Company agreed to not continue accumulating COVID-19 related costs beyond the effective date of new rates established in this proceeding.

A. The Company's proposal is not inconsistent with the settlement language, contrary to Mr. Walker's claim. The Company did not relinquish its right to request an extension of the period referenced in Mr. Walker's testimony. Importantly, and consistent with the Commission's March 13, 2020 Emergency Order at Docket No. M-2020-3019244, Secretarial Letter dated May 13, 2020 and the Commission's October 8, 2020 Order, the Company had in place a moratorium on all terminations through October 2020 and restrictions on certain terminations through April 1, 2021. The Company also offered extended payment arrangements to customers through September 30, 2021 at the direction of the Commission that extend up to 5 years. The Company has continued to experience higher than normal delinquency rates on the COVID related payment arrangements as shown in the responses to discovery requests OCA-II-40 and OCA-II-41, which are respectively attached to my testimony as UGI Gas Exhibits VKR-10R and 11R. The customers on these arrangements continue to carry balances that are higher than they were prior to the Commission's March 13, 2020 Emergency Order. Additionally, the increase in the commodity cost of gas driven by current inflationary factors will likely cause the Company to incur additional incremental expenses above those embedded in rates.

Q. Please explain how the Company plans to defer and amortize incremental uncollectible costs.

A. As agreed to in the settlement approved by the 2020 Base Rate Case Order, the Company will amortize the regulatory asset balance of $1.503 million for uncollectibles that accrued prior to October 1, 2021 over the 10-year period beginning with the effective date of rates established in this proceeding, for purposes of accounting and future ratemaking. In addition, also pursuant to the settlement approved by the 2020 Base Rate Case Order, the Company will defer as a regulatory asset balance the amount that accrues for uncollectibles (above the $12.8 million built into current rates) beginning October 1, 2021 and ending September 30, 2022 (FY 2022). Furthermore, the Company will amortize this FY 2022 regulatory asset over the 10-year period beginning with the effective date of rates established in the Company's next base rate proceeding for purposes of accounting and future ratemaking,

Q. Is the Company proposing any further regulatory asset treatment to uncollectible accounts expense as a part of its rebuttal case?

A. Yes. Due to the increase in the commodity cost of gas driven by current inflationary factors, the Company proposes to defer any annual uncollectible accounts expense in excess of $18.0 million (or such amount that is built into its rate as approved by the Commission as part of this proceeding) beginning with the fiscal year beginning October 1, 2022 and ending September 30, 2023 (FY 2023) and continuing for annual periods thereafter until the effective date of the Company's next base rate filing. The Company further proposes that it be permitted to recover for ratemaking purposes such deferred amounts in the Company's next general rate proceeding over an amortization period of 3 years, without interest.

Q. What is the basis for the $18.0 million?

A. The $18.0 million represents the uncollectible accounts expense built into the Company's rate claim within its rebuttal case. See Schedule D-1, Uncollectible Expense, line 11 of UGI Gas Exhibit A (REBUTTAL), which is sponsored by UGI Gas witness Ms. Tracy A. Hazenstab as a part of her rebuttal testimony (UGI Gas St. No. 2-R). This amount will be adjusted to reflect the amount of uncollectible accounts expense built into the Company's final rates as approved by the Commission as part of this proceeding.

Q. What has been the level of increase in the Purchase Gas Cost rate since September 30, 2021?

A. The Purchase Gas Cost rate is 22.4% percent higher than it was at September 30, 2021, and the Company anticipates that the rate will continue to increase into the foreseeable future.

VI. MISCELLANEOUS

Q. **Is the Company making any changes to its allocation of reconnections fees included in its miscellaneous revenues?**

A. Yes. UGI Gas witness Ms. Heppenstall (UGI Gas St. No. 10-R) explains that the Company is updating its allocation by rate class for reconnection fees as of the 12-months ending January 31, 2022, in accordance with the Company's response to OCA-I-42, which I prepared. Ms. Heppenstall's rebuttal details the specific reconnection fees revenues and how they are being allocated pursuant to Attachment OCA-I-42, which appears as UGI Gas Exhibit CEH-1R.

VII. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 5-R

Rebuttal Testimony of
Vicky A. Schappell

Topics Addressed: **Responses To Adjustments To Utility Plant In Service**

Dated: May 17, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Vicky A. Schappell. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 5, on January 28, 2022.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to certain portions of the following direct testimony submitted by the Pennsylvania Public Utility Commission's ("Commission") Bureau of Investigation and Enforcement ("I&E") and the Office of Consumer Advocate ("OCA"): I&E Statement No. 5, the direct testimony of Esyan A. Sakaya; and OCA Statement No. 1, the direct testimony of Dante Mugrace.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring UGI Gas Exhibits VAS-1R through VAS-4R. UGI Gas Exhibit VAS-1R is CONFIDENTIAL.

II. UTILITY PLANT IN SERVICE

Q. Did any parties propose adjustments to the Company's claimed utility plant in service in their direct testimony?

A. Yes. OCA witness Mr. Dante Mugrace and I&E witness Mr. Esyan A. Sakaya both recommended adjustments to the Company's claimed plant in service for the future test year ending September 30, 2022 ("FTY") and the fully projected future test year ending September 30, 2023 ("FPFTY").

A. OCA WITNESS MUGRACE PLANT IN SERVICE ADJUSTMENT

Q. Mr. Mugrace claims that certain capital projects budgeted for the FTY and FPFTY, as listed on pages 8-9 of OCA St. No. 1, should be disallowed. Do you agree?

A. No. OCA witness Mr. Mugrace recommends that certain capital projects budgeted during the FTY and the FPFTY be eliminated from the Company's claim as noted in his testimony. OCA St. No. 1 at 9. Mr. Mugrace asserts that the projects he recommends be eliminated from the FTY and FPFTY will not be completed and placed into service until after the end of the FPFTY. OCA St. No. 1 at 7-9. As support for his adjustment, Mr. Mugrace cites the Company's response to I&E-RB-4-D, which shows the Company's plant in service budgeted by account for the FTY and FPFTY, as well as all projects to be placed into service during these periods (with estimated in service dates). OCA St. No. 1 at 7. He then asserts that the confidential response to this discovery request "shows that for a number of projects the estimated completion date will be beyond the FPFTY period ending December 31, 2023." OCA St. No. 1 at 7. Mr. Mugrace next lists the projects included in the Fiscal Year ("FY") 2022 budget (i.e., the FTY) and the projects included in the FY 2023 budget (i.e., the FPFTY) that he claims will be placed into service beyond the end of the FPFTY.

OCA St. No. 1 at 8-9. Based on this assertion, he recommends the removal of these projects from the Company's claimed plant in service totaling $85,681,967 (a decrease for the FTY of $27,785,189 and decrease for the FPFTY of $57,896,778).

Q. Does the Company agree with Mr. Mugrace's proposed adjustment to decrease its FTY and FPFTY plant in service balances?

A. No, it does not agree.

Q. Is Mr. Mugrace correct that the Company's FPFTY is the "period ending December 31, 2023" (OCA St. No. 1 at 7)?

A. No, he is not. The Company's FPFTY is the fiscal year ending September 30, 2023.

Q. Is Mr. Mugrace correct that the projects listed on pages 8-9 of his direct testimony will be placed into service after the end of the FPFTY?

A. In large part, yes. However, Mr. Mugrace misunderstands the Company's response to I&E-RB-4-D and how nearly all of these budgeted projects for FY 2022 and FY 2023 were already excluded from the projected plant in service for the FTY and the FPFTY. Thus, $84,981,121 of Mr. Mugrace's proposed exclusion of $85,681,967 in capital additions is not appropriate as they were *never included in the Company's filed claim*.

Q. Have you prepared an exhibit that depicts how projects identified by Mr. Mugrace were already accounted for by the Company, and therefore not included in its claimed plant in service?

A. Yes. Attached to my testimony is CONFIDENTIAL UGI Gas Exhibit VAS-1R. The exhibit shows the specific budgeted spending projects that were excluded from the total plant in service claimed in the case. CONFIDENTIAL UGI Gas Exhibit VAS-1R shows that total plant in service was already reduced by $84,981,121 because those projects are scheduled to be placed into service post-FPFTY.

Q. Did the Company also provide a discovery response explaining that the projects identified by Mr. Mugrace for disallowance were not included in the Company's claim?

A. Yes. Originally, the Company served discovery response I&E-RB-4-D on the parties on February 28, 2022. That response provided construction budget amounts by account for the FTY and FPFTY along with estimated project completion dates. The response then rolled forward the spending to include the total plant in service additions for both the FTY and FPFTY. The in-service adjustments in Attachment I&E-RB-4 included the open construction work in progress ("CWIP") that was expected to go into service during the FTY and FPFTY along with excluding the projects that were not expected to be in service by the end of the FPFTY.

Q. After reviewing Mr. Mugrace's direct testimony, how did the Company address the remaining small amount of plant in service adjustments ($700,846) which were warranted?

A. On May 4, 2022, the Company submitted I&E-RB-4-D (Supplemental Response) to show these adjustments. Specifically, the Company proposed to reduce the FTY total plant in service by $700,846 as the Company inadvertently included these post-FPFTY projects.

Q. Did I&E-RB-4-D (Supplemental Response) include any other corrections?

A. Yes. The Company also added two projects which were inadvertently excluded from the FPFTY claim. These two projects total $29,961. Also, the Company corrected the in-service date for one project.

Q. What is the impact of the Company's correction to the FY 2022 and FY 2023 plant in service balances on its claimed rate base in this proceeding?

A. The Company's correction decreases rate base by $670,885. The corresponding depreciation adjustment is included in UGI Gas Exhibit VKR-1R and is sponsored by UGI Gas witness Ms. Vivian K. Ressler as part of her rebuttal testimony (UGI Gas St. No. 3-R). In addition, this adjustment is detailed in UGI Gas Exhibit A (REBUTTAL), which is the Company's final accounting exhibit and is sponsored by UGI Gas witness Ms. Tracy A. Hazenstab as a part of her rebuttal testimony (UGI Gas St. No. 2-R). This correction appears on Schedule C-2.

B. RESPONSE TO I&E WITNESS SAKAYA'S PLANT IN SERVICE ADJUSTMENT

Q. Please summarize how Mr. Sakaya calculated his plant in service adjustments.

A. Mr. Sakaya recommends a total reduction of $137,649,000 to the Company's plant in service claim. I&E St. No. 5 at 5. According to Mr. Sakaya, the Company did not place all of its claimed projected plant in service in its past two rate cases by the end of the FPFTY of those cases. I&E St. No. 5 at 5. Thus, he claims that UGI Gas is receiving a return on plant that was not placed into service. I&E St. No. 5 at 5.

Mr. Sakaya reviewed the plant projected to be placed into service during the FPFTYs for the 2019 Gas Base Rate Case (i.e., FY 2020) and the 2020 Gas Base Rate Case (i.e., FY 2021). He calculated the percent differences between the estimated Gas Plant and estimated Common Plant (as-filed in the Company's 2019 and 2020 Gas Base Rate Cases) against what he claims are the Company's actual plant additions for the FPFTYs in each case. He then applies these percentages to the Company's projected Gas and Common Plant in service during the FTY and FPFTY used in this case (i.e., the years ending September 30, 2022, and September 30, 2023) to arrive at his recommended reductions to the Company's projected total plant in service. I&E St. No. 5 at 10-12.

Q. Does the Company agree with Mr. Sakaya's proposed adjustments to Gas and Common Plant in Service for the FTY and the FPFTY in this case?

A. No. Mr. Sakaya's proposed adjustment should be rejected for three overarching reasons, which I will summarize here and explain in greater detail below.

First, the proper comparison to determine the Company's performance is budgeted plant additions versus actual plant additions, as I described in my direct testimony (UGI Gas St. No. 5). This comparison is commonly used for ratemaking purposes in Pennsylvania, and this comparison generally takes into account data from a 3-year or 5-year period, as discussed below. Mr. Sakaya's analysis does not follow this practice. He instead makes a plant comparison using only 2 years of data, which were impacted by

COVID-19. As a result, he creates an adjustment that is based on an abnormal, non-recurring period of time.

Second, even if it were reasonable to use 2 years of data as Mr. Sakaya has done, there are other problems with the methodology he used to calculate his historical plant comparison. As explained in greater detail below, to calculate his comparison of plant projections to plant actuals, he begins with the projected Gas Plant and Common Plant as-filed in the Company's 2019 and 2020 Gas Base Rate Cases, unadjusted for party adjustments made in those cases or the compromise that was ultimately reflected in the resulting black box settlements. He then fails to use actual plant additions during those years and instead uses a figure that is reduced by the Company's retirements to calculate what he considers to be the Company's plant additions for the FPFTYs in each case.

Third, Mr. Sakaya's criticisms of the Company's budgeting process are without merit, and do not provide a basis for supporting his disallowance.

Fourth, the basic premise for Mr. Sakaya's adjustment, i.e., that, because the Company placed into service less than 100% of the plant it projected to add during the FPFTYs in the 2019 Gas Base Rate Case and 2020 Gas Base Rate Case, the Company was "allowed …to receive a return on plant not placed into service that established rates in those cases" (I&E St. No. 5 at 5), is incorrect.

1. The Use Of A 2-Year Comparison.

Q. What is the basis for using a 3-year to 5-year comparison period, rather than the 2-year comparison advanced by Mr. Sakaya?

A. The comparison of budgeted versus actual plant additions is a common comparison that is regularly used in base rate cases before the Commission. For example, I am advised by counsel that this 3-year to 5-year period was utilized by a utility to justify its projections or by other parties to propose an adjustment to those projections in each of the following recent base rate proceedings:

- *Pa. PUC et al. v. Columbia Gas of Pennsylvania, Inc.*, Docket Nos. R-2020-3018835, et al., at pp. 57-58 (Opinion and Order entered Feb. 19, 2021) (describing the OCA witness's use of 3 years of net plant additions data to propose adjustment to utility's rate base claim);

- *Pa. PUC v. UGI Utilities, Inc. – Gas Division*, Docket No. R-2019-3015162 – In testimony, OCA proposed to adjust plant additions based on a 4-year average comparison of budgeted capital expenditures to actual plant additions, and the utility justified its plant additions based on a 3-year average comparison of budgeted plant additions to actual plant additions.

- *Pa. PUC v. UGI Utilities, Inc. – Gas Division*, Docket No. R-2018-3006814 – In testimony, I&E proposed to adjust plant additions based on a 3-year average comparison of budgeted capital spending to actual capital spending, and the utility justified its plant additions based on a 5-year average comparison of budgeted plant additions to actual plant additions.

Importantly, none of these proceedings involve the use of a two-year period to propose an adjustment to, or justify, a utility's claimed plant additions.

Q. Is there further support for the use of a 3-year or 5-year comparison of budgeted versus actual plant additions in the Commission's regulations?

A. Yes. 52 Pa. Code § 53.53, Exhibit A requires a utility to provide data over either a 3-year or 5-year period to assess the reasonableness of its claimed measure of value in rate cases. According to Section 53.53, Exhibit A, the utility is required to do the following with its rate case filings:

> Provide a schedule showing the measures of value and the rates of return at the original cost and trended original cost measures of value at the spot, **three-year and five-year average price levels**. All claims made on this exhibit should be cross-referenced to appropriate exhibits.

This provision of the regulation makes no reference to a 2-year average, such as the one used by Mr. Sakaya.

Q. Do you have additional concerns with Mr. Sakaya's exclusive use of 2-years of data (i.e., initial filing data from the 2019 and 2020 Gas Base Rate Cases)?

A. Yes. Mr. Sakaya's proposal to rely exclusively on FY 2020 and FY 2021 (i.e., the FPFTYs used in the 2019 and 2020 Gas Base Rate Cases, respectively) is unreasonable because of the impacts of the COVID-19 pandemic upon the Company's operations during this time. UGI Gas stopped all non-emergency work that required personnel to be outside their homes for a six-week period beginning in mid-March 2020 and ending on May 4, 2020. As discussed in Timothy J. Angstadt's direct testimony (UGI Gas St. No. 9), the Company then began a ramp-up process as it restarted is construction program, focusing on work that did not involve customer contact. UGI Gas forecasted an increase in its planned capital projects for 2022 due to construction activities that took longer to complete in 2021 because of COVID-19 impacts on the Company's operations. Specifically, UGI Gas had a number of projects that were slightly delayed in the process of completing construction, having a final inspection and then being placed in service for accounting purposes. It is not reasonable to rely exclusively upon the FY 2020 and FY 2021 periods because they are not reflective of the Company's normal operations. Mr. Sakaya's adjustment asks the Commission to set rates in this proceeding based upon abnormal operating conditions, which is contrary to well-recognized ratemaking principles.

Q. Did the Company's initial filing in this case acknowledge the Company's performance in placing capital projects into service during the COVID-19 pandemic?

A. Yes. Both my direct testimony and UGI Gas Exhibit VAS-2 compared the Company's budgeted plant additions to actual plant additions over the last five years, including FY 2020 and FY 2021. UGI Gas Exhibit VAS-2 demonstrated that, accounting for both normal operations during FYs 2017, 2018 and 2019, and abnormal operations during FYs 2020 and 2021, the Company placed 98.0% of budgeted plant additions into service. This close correlation between budgeted and actual plant placed in service over the past five years, including two years impacted by the COVID-19 pandemic, further supports the Company's claimed level of plant in service.

Q. What is the impact of using actual plant placed into service in the last three years of normal operating experience before the COVID-19 pandemic?

A. As shown in UGI Gas Exhibit VAS-2R, the Company placed an average of 102.3% of its budgeted plant additions into service from FY 2017-2019. This demonstrates that during normal historical operating conditions, the Company has a documented history of meeting its budgeted capital project additions.

Q. Does Mr. Sakaya attempt to address the fact that using only FY 2020 and FY 2021 data will result in an understatement of the Company's ability to timely place budgeted FTY and FPFTY plant into service?

A. Yes. He argues that "supply chain difficulties, hiring difficulties, and availability of outside contractors that have been an outcome of the COVID-19 pandemic will persist through the FTY and FPFTY" used in this case. I&E St. No. 5 at 14.

Q. Please respond.

A. Mr. Sakaya provides no basis for these assertions. In fact, these issues have mostly been resolved, as discussed in Mr. Angstadt's direct testimony (UGI Gas St. No. 9). More importantly, however, Mr. Sakaya's claim only takes into account the impacts of "supply chain difficulties, hiring difficulties, and availability of outside contractors" on the Company's completion rate, and does not account for how these issues increase the Company's capital costs.

Q. Please explain how supply chain difficulties, hiring difficulties, and availability of outside contractors have increased and are anticipated to increase the Company's capital costs during the FTY and FPFTY.

A. The inflationary pressure of securing raw materials and the cost of logistics have risen and are now being reflected in the new 2022 contracts that resulted from the 2022 RFP process described in detail in Mr. Angstadt's rebuttal testimony (UGI Gas St. No. 9-R). As described by Mr. Angstadt, while UGI Gas had been successful in holding rates steady for a majority of the pipeline construction contractors from 2018-2021, the new contracts executed as a result of the 2022 RFP reflect current market conditions. The inflationary increases in the contractor prices are not included in the FTY and FPFTY budgeted plant additions because they were not known at the time of preparing the budget. Now the impact of these agreements on the Company's construction costs are reasonably known and measurable.

Q. Please explain how the increased capital costs associated with the new contracts will increase costs for the FTY and FPFTY.

A. The Company summarized the cost increases for the pipeline construction contracts based on the unit cost for capital related to contractor costs for pipeline construction and restoration. The average increase for the capital component of pipeline construction contracts is 17.6% and 27.6% for capital restoration costs. As a result, capital costs are estimated to increase $19.7 million in the FY 2022 and $37.8 million in FY 2023.

Q. Have you prepared a schedule showing the impact on the Company's capital construction program from the increased contractor costs?

A. Yes. Attached to my testimony is UGI Gas Exhibit VAS-3R. The exhibit shows the new business and replacement and betterment costs by charge type in the budget that will be impacted by the new pipeline construction costs. The Company prorated the FY 2022 capital budget since the new contract took effect during the fiscal year. UGI Gas Exhibit VAS-3R multiplies the total contractor costs and restoration costs by the respective percentage increases to calculate the total increase in costs.

Q. Is the Company increasing its projected FTY and FPFTY plant in service additions to reflect the increased capital costs from the new contracts?

A. No. The Company has not increased its claim for plant additions in this case based on the new contracts. We believe, however, that completion of the identified projects for the FTY and FPFTY will result in higher plant costs than those reflected in the Company's direct case. Even if the Commission adopted the 98% completion rate based on the Company's 5-year average and applied it to the Company's plant claim, the FTY and FPFTY cost increases will more than offset any adjustment based on that percentage. Finally, should the Commission accept some portion of Mr. Sakaya's adjustment, the increased costs should be used to offset Mr. Sakaya's proposed reduction in plant additions. *See* UGI Gas Exhibit VAS-4R, line 24 (showing the impact of contractor costs adjustments on Mr. Sakaya's corrected methodology).

Q. Ms. Schappell, did the Company prepare a comparison of budgeted versus actual plant additions, consistent with general ratemaking practice before the Commission, as a part of this proceeding?

A. Yes, as explained in my direct testimony and shown in UGI Gas Exhibit VAS-2, the Company placed 98.0% of budgeted plant additions into service over a 5-year period from FY 2017 through FY 2021. Moreover, as shown in UGI Gas Exhibit VAS-2R, when the Commission considers the Company's historical performance during the 3-year period prior to the COVID-19 pandemic (i.e., FY 2017-2019), the Company placed 102.3% of budgeted plant additions into service. These exhibits and my direct testimony and rebuttal are consistent with generally accepted ratemaking practices and procedures that use 3 to 5 years of data to assess the reasonableness of a utility's projections. These exhibits and my testimony also fully demonstrate that the Company's projected additions for the FTY and FPFTY in this case are reasonable.

On the other hand, Mr. Sakaya's exclusive reliance on 2-years of data, where both years were impacted by abnormal operating conditions due to the COVID-19 pandemic, departs from generally accepted ratemaking practices and procedures, recent cases, and 52 Pa. Code § 53.53. Therefore, it should be rejected by the Commission.

2. Methodology For Calculating Percentage-Based Adjustments.

Q. Please explain the three steps in Mr. Sakaya's calculation of his proposed gas plant installation success rate.

A. I will provide an explanation of Mr. Sakaya's calculation of his asserted gas plant installation success rates. As Mr. Sakaya uses the same method throughout his analysis, I will focus on his analysis for the FPFTY from the 2019 Gas Base Rate Case filing (i.e., FY 2020) as an example. A breakdown of each step of this calculation is as follows:

<u>STEP 1: GAS PLANT 2019 FPFTY</u>

- Mr. Sakaya starts by reciting the Company's estimated Gas Plant as stated in its initial 2019 Gas Base Rate Case filing (filed on January 28, 2019). Mr. Sakaya stated that the Company's initial 2019 Gas Base Rate Case filing projected a total Gas Plant amount of $3,726,871,339 by the end of the FPFTY in that case (i.e., September 30, 2020). He compared this initial estimate against the actual total Gas Plant as of September 30, 2020, which amounted to $3,665,079,106, which he calculated to be a $<u>61,795,233</u> shortfall for Gas Plant.

<u>STEP 2: GAS PLANT ADDITIONS 2019 FPFTY</u>

- Next, Mr. Sakaya recited the Company's Gas Plant Additions as stated in the Company's initial 2019 Gas Base Rate Case filing (filed on January 28, 2019). He states that in its 2019 Gas Rate Case, the Company projected to place in service Gas Plant Additions of $317,833,525 by September 30, 2020. Instead of comparing this against actual plant additions for the FPFTY ending September 30, 2020, Mr. Sakaya created his own calculated Gas Plant Additions. To calculate his plant additions that the Company placed in service for the FPFTY ending September 30, 2020, Mr. Sakaya took the $317,833,525 projection and subtracted the $61,795,233 shortfall (for Gas Plant detailed above) to get his calculated Gas Plant Additions of $256,038,292 for the FPFTY ending September 30, 2020.

STEP 3: GAS PLANT INSTALLATION SUCCESS RATE 2019 FPFTY

- To calculate how successfully the Company performed against its estimates in the 2019 Gas Base Rate Case for Gas Plant placed in service, Mr. Sakaya took his calculated Gas Plant Additions of $256,038,292 for the FPFTY ending September 30, 2020, and divided it by the Company's originally estimated Gas Plant Additions of $317,833,525 (stated in Step 1). This resulted in his 80.56% success rate for Plant Additions for the FPFTY ending September 30, 2020.

UGI Gas Exhibit VAS-4R sets forth the numbers used in each step of Mr. Sakaya's calculations, consistent with the discussion above.

Q. After calculating his proposed Gas and Common Plant installation success rates for FY 2020 and FY 2021, as described above, how did Mr. Sakaya apply these success rates to the Company's case?

A. After calculating his installation success rates, Mr. Sakaya took these percentages, and averaged them, producing an average installation success rate of 83.69% for Gas Plant and an average installation success rate of 67.67% for Common Plant. Mr. Sakaya then applied the average to the Company's projected Gas and Common Plant in service amount for the FPFTY in this case to arrive at his total proposed $137,649,000 plant in service disallowance.

Q. Do Mr. Sakaya's calculations of proposed Gas and Common Plant installation success rates for FY 2020 and FY 2021 lack merit?

A. Yes. As an initial matter, Mr. Sakaya offers no proof to demonstrate that the Company's comparison of actual capital additions to budgeted capital additions was incorrect. Moreover, his alternative calculation is not supported by sound accounting principles.

Q. What do you believe are the specific problems associated with Mr. Sakaya's calculations?

A. As explained below: (1) Mr. Sakaya's method uses an improper starting point for measuring the Company's proposed plant additions in the 2019 and 2020 Gas Base Rate Cases; (2) Mr. Sakaya's proposed calculation of plant additions are not based on actual plant additions (contained in the Company's accounting records) but rather a figure that is derived from subtracting retirements from the Company's actual plant additions; and (3) Mr. Sakaya's breakout of Gas Plant and Common Plant is inconsistent with the Company's budgeting process and work streams.

Q. Please explain your assertion that Mr. Sakaya's proposed calculation of plant additions are not based on the actual plant in service figures ultimately proposed by the Company in the 2019 and 2020 Gas Base Rate Cases.

A. Instead of comparing the most relevant figures, i.e., Actual and Budgeted Plant Additions as provided in the Company's initial filing in this case, Mr. Sakaya begins his analysis with the projected plant in service figures as stated in the initial 2019 and 2020 Gas Base Rate Case filings. Importantly, those initial estimates were revised during the course of both cases as a part of the Company's rebuttal presentation, a fact that Mr. Sakaya does not acknowledge.

- In the 2019 Gas Base Rate Case, the Company reduced its initially filed total plant in service for the FPFTY used in that case from $3,950,991,000 (*see* Docket No. R-2018-3006814, Book V, UGI Gas Exhibit A (Fully Projected), Schedule C-2, page 5) to $3,946,337,000 (*see* Docket No. R-2018-3006814, UGI Gas Exhibit A - FPFTY (Rebuttal), Schedule C-2, page 5). This amounts to a 0.1% reduction to total projected plant in service.

- In the 2020 Gas Base Rate Case, the Company reduced its initially filed total plant in service for the FPFTY used in that case from $4,324,364,000 (*see* Docket No. R-2019-3015162, Book V, UGI Gas Exhibit A (Fully Projected), Schedule C-2, page 5) to $4,286,292,000 (*see* Docket No. R-2019-3015162, UGI Gas Exhibit A - FPFTY (Rebuttal), Schedule C-2, page 5), as explained in the rebuttal testimony submitted by Vivian Ressler (i.e., UGI Gas Statement 3-R in that case). This amounts to a 0.9% reduction to total projected plant in service.

Moreover, Mr. Sakaya's reliance on the original projections presented in the initial 2020 Gas Base Rate Case filing disregard the fact that those amounts were calculated before the COVID-19 pandemic took hold. The Company lowered its original projections during that case as a result of the COVID-19 pandemic, as set forth above and as explained in the rebuttal testimonies of UGI Gas witnesses Mr. Brown and Ms. Ressler (UGI Gas Statements 1-R and 3-R in that case). In this regard, his comparison starts from the wrong place.

Q. Please explain why Mr. Sakaya's claimed plant in service figures are not actual plant in service figures.

A. As stated previously, Mr. Sakaya did not use actual Plant Addition figures as documented by the Company pursuant to acceptable accounting standards. As described in Step 2 of each of the calculations summarized above, Mr. Sakaya took the Company's initial projection for Gas/Common **Plant In Service** for the FPFTY in each of the prior base rate cases, and subtracted the shortfall he calculated using the difference between Company's initial projection for total Gas/Common **Plant Additions** for the FPFTY in each of the prior base rate cases and actual Gas/Common **Plant Additions** for the same period. This calculation combines two comparisons (i.e., his calculated shortfall based on Gas/Common **Plant Additions**, is subtracted from initially projected total Gas/Common **Plant In Service**), instead of consistently comparing the Company's projected Gas/Common **Additions** to its actual Gas/Common **Additions**. Where the initially projected total Gas/Common **Plant In Service** includes the effect of retirements, the calculated shortfall based on Gas/Common **Plant Additions** does not.[1] In this regard, Mr. Sakaya's calculations are an inconsistent combination of apples and oranges, instead of only apples.

Accordingly, Mr. Sakaya's methodology misleadingly makes it look like the Company has been less successful at installing Plant in Service than it truly was. His calculations and conclusions regarding the Company's Plant in Service success rates over FY 2020 and FY 2021 are flawed.

Q. Please explain how Mr. Sakaya's calculation does not properly consider the impact of projected and actual retirements during FY 2020 and FY 2021.

A. Mr. Sakaya's method improperly includes retirements in his proposed average percentage to be applied to Gas and Common Plant placed in service. However, factoring in retirements to the basis for his adjustment disregards the fact that retirements have a zero-net change to net plant in service or rate base. The impact of retirements must be included

[1] UGI Gas Exhibit A (Fully Projected), Schedule C-2 of the Company's initial filing in this case, and in the 2019 and 2020 Gas Base Rate Cases, shows the impact of retirements on projected total plant in service. The Company's total plant in service for the FPFTY starts with the FTY-ending balance of plant in service, adds to this amount projected FPFTY additions, and then subtracts projected FPFTY retirements.

in both the projected and actual plant additions, as well as projected and actual accumulated depreciation.

Q. What impact does Mr. Sakaya's failure to properly account for retirements have on his proposed adjustment?

A. The failure to properly account for retirements understates the Company's plant additions by $131.1 million dollars. *See* UGI Gas Exhibit VAS-4R, line 20. Mr. Sakaya's use of retirements to reduce plant additions further undermines the already improper calculations.

Q. You also testified that Mr. Sakaya's breakout of Gas Plant and Common Plant additions is improper. Please explain.

A. The Company does not budget this way and does not have work streams divided in this manner. The Company's claim is based on total additions, and it is reasonable to review the Company's Plant in Service success in that manner. Mr. Sakaya's breakout of Gas Plant and Common Plant additions is not consistent with the Company's operations or accounting, and in concert with his misuse of retirements in his methodology, results in an overstatement of his proposed adjustment by $51.1 million. *See* UGI Gas Exhibit VAS-4R, line 22.

Q. Have you quantified the impact of the incorrect factors incorporated in Mr. Sakaya's methodology?

A. Yes, I have. While I believe the Commission should reject Mr. Sakaya's methodology for the reasons stated above, if the Commission were to use the methodology recommended by Mr. Sakaya, it must correct the flaws in his methodology. I have done so in UGI Gas Exhibit VAS-4R.

Walking through these corrections, I first compared the initial projection for Gas/Common Plant additions for the FPFTY in each of the prior base rate cases to the actual plant additions for the same period. I then divided the actual plant additions ($687,447,330) (*see* UGI Gas Exhibit VAS-4R, line 14) by the initial projections in the FPFTY ($762,892,037) (*see* UGI Gas Exhibit VAS-4R, line 13), to calculate the installation success rate for total Gas/Common plant additions of 85.6% and 94.1% for the 2019 and 2020 Gas Base Rate case, respectively. *See* UGI Gas Exhibit VAS-4R, line 15. Mr. Sakaya calculated installation success rates of 79.4% and 82.0% in I&E Exhibit No. 5, Schedule 4, at 1 and 2. *See* UGI Gas Exhibit VAS-4R, line 6. Mr. Sakaya applied his installation success rate percentages separately, when they should be applied collectively to calculate the installation success rate percentages in total. *See* UGI Gas Exhibit VAS-4R, line 15 (2 Year Total Plant).

Correcting his methodology reduces Mr. Sakaya's proposed disallowance by $51,114,231 (*see* UGI Gas Exhibit VAS-4R, line 22), from a disallowance of $137,649,000 (*see* UGI Gas Exhibit VAS-4R, line 12) for plant in service to a disallowance of $86,535,029 (*see* UGI Gas Exhibit VAS-4R, line 21).

Q. Do you have any further comments on Mr. Sakaya's methodology?

A. Yes. The data I have presented indicates that the Commission must conclude that not only is Mr. Sakaya's outcome incorrectly calculated, but it is not logical or appropriate. Even using the corrected version of Mr. Sakaya's methodology provided in UGI Gas Exhibit

VAS-4R, the methodology takes an average over a two-year period where there were significant and anomalous operational impacts. The outcome of this methodology would produce a result that is significantly lower than the experienced HTY in this case. The outcome of this methodology also provides no acknowledgement or adjustment for either the further recovery experienced by the Company in its post-COVID operations moving back to normal performance or the significant impacts of inflation on the Company's anticipated future costs. There is no logical basis for the Commission to adopt a success rate for plant in service that is lower than the 94.1% shown in UGI Gas Exhibit VAS-4R. And, in fact, I have shown numerous reasons that the Commission should conclude that no adjustment is needed to the Company's plant in service claim in this proceeding.

3. Budgeting Criticism.

Q. Mr. Sakaya argues that the Company's percent of budgeted plant completed is not a valid comparison on page 13 of his direct testimony. Do you agree?

A. No. UGI Gas undertakes an annual process to review its budgets and to adjust them as needed to reflect operating conditions and changed circumstances. Over the 5-year period of FY 2017 through 2021, the Company on average placed 98.0% of its budgeted plant additions into service. This percentage takes into account the movement of projects from one year to the next and the impact of bringing future year projects into an earlier year. For example, the Company budgeted an increase of approximately $56 million over its planned capital spending for FY 2021. A significant portion of this increase was due to the 2020 construction activities that were delayed and or/rescheduled when the Company temporarily halted non-essential emergency work from mid-March to early May due to the COVID-19 pandemic. This is an example of the need to reflect current operating conditions and changed circumstances during the annual budget process. Mr. Sakaya's criticism of the Company's budgeting process does not provide a basis for his disallowance.

4. Return On Plant Placed Into Service.

Q. Does Mr. Sakaya make any further arguments regarding the the Company's claimed gas and common plant in service during the FTY and FPFTY based on his calculations detailed above?

A. Yes, Mr. Sakaya asserts that the Company did not place into service all the plant it projected to place into service during the FPFTYs of the 2019 Base Rate Case and the 2020 Base Rate Case. I&E St. No. 5 at 5. He further argues that "[s]ince rates in those cases were based upon the plant at the end of the FPFTY, this allowed the Company to receive a return on plant not placed into service that established rates in those cases." I&E St. No. 5 at 5.

Q. Do you agree with Mr. Sakaya's claim?

A. No. Mr. Sakaya is incorrect in his assertion that the Company has received a return on plant that was not placed into service but was included in base rates. As previously stated, Mr. Sakaya's analysis focuses on the Company's projections included in the initial filings of both cases. As explained in detail above, both the 2019 and 2020 Gas Base Rate Cases included updates during the course of the proceeding that impacted plant in service. However, the most critical flaw in Mr. Sakaya's claim is that the rates produced in both of those prior proceedings were the subject of black box settlements. Therefore, the Company earned a return based upon the rates approved as a part of each settlement, ***not*** upon the proposed rates initially filed in each case. It is simply incorrect for Mr. Sakaya to assert that the Company earned a return in each of those cases based upon the projected additions included in each initial filing.

III. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

REBUTTAL TESTIMONY OF PAUL R. MOUL

INTRODUCTION

Q. Please state your name, occupation and business address.

A. My name is Paul Ronald Moul. My business address is 251 Hopkins Road, Haddonfield, New Jersey 08033-3062. I am Managing Consultant at the firm P. Moul & Associates, an independent financial and regulatory consulting firm.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division. ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 6, on January 28, 2022.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to the direct testimony submitted by David J. Garrett, a witness appearing on behalf of the Office of Consumer Advocate ("OCA"), and Anthony Spadaccio, a witness appearing on behalf of the Bureau of Investigation and Enforcement ("I&E").

Q. What are the key aspects of the rate of return issue that the Pennsylvania Public Utility Commission ("Commission") should consider when deciding this issue in this case?

A. The issues involve the Company's cost of equity, the capital structure and the cost of debt. Mr. Spadaccio has accepted the Company's proposed capital structure ratios. Mr. Garrett has opposed the actual capital structure, and instead proposed a hypothetical capital structure. All the witnesses have accepted the embedded cost of debt for UGI Gas. As I will detail below, the increase in interest rates that occurred after the Company's original filing requires an update of the cost of debt for UGI Gas.

In each instance, the equity returns proposed by the opposing witnesses are entirely too low to reflect the risks of UGI Gas and the prospective cost of equity. Aside from technical issues that I will discuss later in my rebuttal testimony, the Commission should take into consideration a rate of return that will reflect and be supportive of the Company's financial and risk profile. As I explain below, the opposing parties' recommendations fail to adequately consider this point and thereby understate the required cost of common equity in this proceeding.

Q. Please summarize the key points of your rebuttal testimony.

A. My key points are:

- o Capital Structure Ratios – Mr. Garrett's use of a hypothetical capital structure, rather than the Company's projected actual capital structure for the FPFTY, is improper and contrary to standard practice in Pennsylvania.
- o Cost of Debt – The embedded cost of debt for the FPFTY has been adjusted to reflect higher interest rates.
- o Comparable Companies – Mr. Spadaccio has made erroneous deletions from my gas company barometer group by eliminating New Jersey Resources and Southwest Gas. Mr. Garrett accepts my group.
- o Discounted Cash Flow ("DCF") – A variety of DCF results are clearly too low to provide a reliable measure of the cost of equity. This can be traced to the formulaic approach taken by Mr. Spadaccio in applying this model (see page 21 of I&E Statement No. 2). In addition, Mr. Garrett fails to adequately reflect investor expectations of growth that are specific to the natural gas companies included in his proxy group.
- o DCF Leverage Adjustment – Mr. Spadaccio has not refuted the accuracy of the Company's leverage adjustments to the DCF and beta component of the Capital Asset Pricing Model ("CAPM"). Mr. Garrett claims that my leverage adjustment is "incorrect" (see page 47 of OCA Statement No. 3). But he has not shown that the capital structure ratios and calculations of the leverage adjustment are in any way incorrect.
- o CAPM – A reasonable application of the CAPM mandates using 30-year

Treasury bond yields, leverage adjusted betas, and size adjustment and indicates an equity cost rate that is well above 11% in this case. Indeed, Mr. Spadaccio has proposed a 12.13% CAPM result in this case.

- Additional methods should also be considered when establishing the cost of equity for UGI Gas. This is especially important because FOMC policy and inflation in the last few months indicates a higher cost of equity and that both witnesses have chosen not to even mention this in their testimony.

Q. How should the rate of return set by the Commission support the Company's financial profile?

A. The Commission should set the Company's return on equity at a level that will attract investment in the Company to ensure the Company's financial ability to render safe and reliable service. Applying this principle, the Commission should reject the proposals by Messrs. Spadaccio and Garrett to cut the Company's return on common equity to 9.92% and 8.50%, respectively. Equity returns of this magnitude would be viewed by investors as unsupportive of the Company's financial condition. While Mr. Spadaccio's proposed return on equity borders on a reasonable one, Mr. Garrett's proposed return is completely unreasonable because it is much too low to allow UGI Gas to achieve the level of returns that meet investors' expectations. Indeed, Mr. Garrett actually claims that the UGI Gas cost of equity is just 7.0%, but he increases it to 8.5%. Even Mr. Garrett recognizes that setting the ROE at his calculated 7.0% "could have the undesirable effect of notably increasing the Company's risk profile," so he arbitrarily increases his recommendation to 8.5% (see OCA Statement No. 2, page 7). However, he provides no explanation why 8.5% would be reasonable now when the Commission approved 9.86% in the Columbia rate case in early 2021 and 10.24% in the PECO gas rate case also in 2021, in the midst of the COVID-19 Pandemic ("Pandemic"). Afterward, there has been dramatic increases in inflation and interest rates, prompting the Federal Open Market Committee ("FOMC") to increase the federal funds rate to combat inflation. This fact has not even been mentioned in either of their testimony. Further, acceptance of Mr. Garrett's approach would ultimately lead to even lower ROEs in the future since the 8.5% is simply a process to reduce ROEs based on his gradualism approach to ratchet downward the ROE. Rather, based on the factors listed below, and for technical reasons set forth later in my rebuttal testimony, the Commission should adopt a substantially higher ROE.

Q. How does Mr. Garrett's 7.0% cost of equity proposal compare to other recognized returns?

A. Mr. Garrett determined that the DCF cost of equity is 6.7% and the CAPM cost of equity is 7.2%. These returns compare to the 10.00% DCF return and 10.88% CAPM return established in the Commission's Quarterly Earnings report for the same group of companies considered by Mr. Garrett. And as mentioned, the Commission awarded 10.24% in the PECO case last Fall. This comparison establishes that Mr. Garrett's position is unreasonable.

Q. Are there additional issues that the Commission should consider when setting the Company's return?

A. Yes. The investment community would be very concerned if the Commission were to adopt the position of the OCA in this case. If it were to do so, investors would see Pennsylvania regulation as less supportive of the Company at a time of high levels of capital investment and increasing capital cost rates. Over the next five years, UGI Utilities, Inc. expects capital expenditures to be $1.960 billion. If the Commission were to follow the proposal of reducing ROEs as proposed by the OCA, Pennsylvania's regulatory support would certainly be viewed by investors as being reduced, particularly in the context of rising capital costs due to inflation. The return on equity used by the Commission to set rates embodies in a single numerical value a clear signal of regulatory support for the financial strength of the utilities that it regulates. Although cost allocations, rate design issues, and regulatory policies relative to the cost of service are important considerations, the opportunity to achieve a reasonable return on equity represents a direct signal to the investment community of regulatory support (or lack thereof) for the utility's financial strength. In a single figure, the return on equity utilized to set rates provides a common and widely understood benchmark that can be compared from one company to another and is the basis by which returns on all financial assets (stocks – both utility and non-regulated, bonds, money market instruments, and so forth) can be measured. So, while varying degrees of sophistication are required to interpret the meaning of specific Commission policies on technical matters, the return on equity figure is universally understood and communicates to investors the types of returns that they can reasonably expect from an investment in utilities operating in Pennsylvania.

Q. How does the cost of equity proposal by Mr. Garrett compare to the utility returns recently authorized by the Commission?

A. Technical disputes about methodology and data aside, the cost of equity proposed by Mr. Garrett is simply not representative of the returns that the Commission has been awarding. Indeed, the Commission established a 9.85% equity return for the Electric Division rate case for UGI Utilities, Inc. at Docket No. R-2017-2640058. Since that time, the Commission granted equity returns of 9.54% for Citizens' Electric Company at Docket No. R-2019-3008212, 9.31% for Wellsboro Electric Company at Docket No. R-2019-3008208, 9.73% for Valley Energy at Docket No. R-2019-3008209, 9.86% for Columbia Gas of Pennsylvania at Docket No. R-2020-3018835, and 10.24% for the Gas Division of PECO Energy at Docket No. R-2020-3018929. Moreover, for purposes of setting the Distribution System Improvement Charge ("DSIC"), the Commission has set a 10.20% equity return for gas utilities at Docket No. M-2021-3030045 (adopted at the Public Meeting held January 13, 2022). In the DSIC proceedings, DSIC recoveries are reconciled and therefore the 10.20%

is guaranteed. In a base rate case such as this, a higher equity return is required because that return provides only an opportunity and not a guarantee for the natural gas utilities.

The rate of return on common equity of 8.50% proposed by Mr. Garrett is seriously deficient and will not provide UGI Gas with the opportunity to earn its investor required cost of capital for the fully projected future test year ending September 30, 2023 ("FPFTY"). As explained below, this is not the time for the Commission to be reducing the Company's authorized return when there is a compelling need for capital investment to rehabilitate aging infrastructure.

Q. Should the Commission consider the future trend in capital costs when deciding the return on equity in this case?

A. Yes. Unlike Mr. Garrett, who takes a backward view of interest rates, accommodative policy by the FOMC has ended and higher interest rates have occurred and will continue in the future. Current FOMC policy will produce even higher interest rates prospectively that should be incorporated into the cost of equity now. Indeed, higher inflation expectations are a contributing factor that points to higher interest rates. Higher inflation today is revealed by a 5.9% increase in social security payments announced on October 13, 2021, the largest one-year increase in nearly four decades. The annual inflation rate in March 2022 was 8.5%, the highest rate since December 1981. After the FOMC ended its bond buying program (i.e., quantitative easing) in March 2022, it now plans to run off its $9 trillion asset portfolio, which will further boost interest rates. Moreover, the first of several Fed Funds increases occurred on March 16, 2022 with an increase of 0.25% and an additional 0.50% increase occurred on May 4, 2022. A 50 basis point increase in the Fed Funds rate has not occurred since 2000. Additional increases are expected in 2022 and 2023. Higher interest rates clearly point to higher capital costs prospectively. A forward-looking assessment of the capital markets is especially relevant here because the Company's rates will be based on a FPFTY. The yield on 10-year Treasury bonds moved above the 3% level on May 2, 2022, the first time since late 2018. By April 2022, the yield on 30-year Treasury bonds moved to 2.81%, or an increase of 1.14% (or 68%) since December 2020. Likewise, the yield on A-rated public utility bonds has increased to 4.32% in April 2022 from 2.77% in December 2020 – a 1.55 basis point (or 56%) increase. Higher interest rates clearly point to higher capital costs prospectively. I will describe the forecasts of interest rates and the trend below.

Q. Is there additional evidence that suggests that the cost of capital has been increasing?

A. Yes. To gain a consensus view of future interest rates, I tabulated the forecasts of yields on 10-year Treasury notes published by a variety of well recognized and investor-influencing sources. I chose the 10-year Treasury note because it is available on a consistent basis across all sources. The comparisons are:

	2023	2024	2025	2026	2027	Change in Basis Points
Blue Chip	2.40%	2.80%	3.10%	3.20%	3.20%	80
EIA	1.36%	1.57%	1.80%	2.03%	2.25%	89
CBO	2.03%	2.29%	2.57%	2.79%	2.98%	95

The universal consensus is that interest rates will increase in the future. The rising level of interest rates represents one key factor that adds to the risk of common equity. It is apparent that the trough in interest rates has passed and the forecasts show interest rates will continue to rise in the future. The Commission should take the forecast trend toward higher interest rates into account when it sets the cost of equity for UGI Gas. Mr. Garrett's testimony considers only a 30-day historical average of 30-year Treasury bond yields ended April 5, 2022. There, he concludes the historical average of 2.40% is appropriate in his view. We know that the yield today is above 2.40% and forecast to go higher with high inflation and forecasted fed funds increases. As such, his cost of equity analysis is defective because he has not taken into account the general consensus that interest rates will increase in the future from current levels. It is therefore indicated that a higher authorized return is warranted in the face of higher expected interest rates.

Q. Has the stock market reacted to the changes in interest rates?

A. Yes. The stock market entered "correction" territory in 2022. Overall market sentiment is revealed by investor expected volatility, which provides an overall assessment of the risk that prevails in the equity market. The risk associated with common stock investments is revealed by the volatility of the stock market measured by the Chicago Board Options Exchange ("CBOE") VIX. The CBOE VIX is based on real-time prices of options on the S&P 500 Index and is designed to reflect investors' consensus view of future (30-day) expected stock market volatility. It is well-established that greater volatility indicates higher risk, which, all else equal, translates into a higher cost of equity. It is widely accepted that high readings for the CBOE VIX are often accompanied by bearish sentiment and a low CBOE VIX is associated with bullish sentiment. The trading pattern of the CBOE VIX is typically inverse to the level of stock prices. That is to say, the CBOE VIX increases when stock prices are falling, and the CBOE VIX declines when stock prices rise. This situation is sometimes associated with increases in the cost of equity when the CBOE VIX increases and vis-a-versa. For 2022 to date, the CBOE VIX was 27.64. This compares with the CBOE VIX of 19.78 in 2019 prior to the beginning of the financial consequences of the Pandemic. We can see that the CBOE VIX spiked upward with the beginning of the Pandemic. Since the Company's last rate case, the CBOE VIX has been:

Year	Average VIX
2019	19.78
2020	48.61
2021	25.41
2022 YTD	27.64

While volatility in the stock market has subsided since the beginning of the Pandemic in 2020, it continues to significantly exceed pre-Pandemic levels. The current level of risk associated with common stocks, as revealed by the higher CBOE VIX in 2022, warrants a higher equity return at this time because the higher stock market volatility signifies higher risk that requires higher returns in compensation for the higher risk. Hence, the risk for common equity, which translates into the cost of equity, does not support a low equity return as suggested by Mr. Garrett.

Q. How is the remainder of your testimony organized?

A. I will cover the issues of (i) capital structure, (ii) cost of debt, (iii) the composition of the proxy (i.e., barometer) group, (iv) the weight to be given to the DCF method, (v) the DCF growth rate, (vi) the leverage adjustment to the DCF and CAPM methods, (vii) the CAPM method, (viii) the Risk Premium analysis, (ix) Comparable Earnings, and (x) management performance as part of the return on equity consideration.

CAPITAL STRUCTURE RATIOS

Q. Is there a difference in the proposed capital structure ratios utilized by the rate of return witnesses in this case?

A. Yes. Mr. Garrett is alone in advocating a hypothetical capital structure for UGI Gas. Mr. Spadaccio has accepted the Company's proposed capital structure, as it falls within the range of capital structures of the proxy group. Mr. Garrett's position is clearly contrary to long-standing Commission policy concerning capital structure ratios, most recently articulated in the Gas Division rate case of PECO Energy at Docket No. R-2020-3018929 (Order entered June 22, 2021). In the Commission’s Columbia decision at Docket No. R-2020-3018835 (Order entered February 19, 2021), the Commission accepted Columbia’s equity ratio of 54.19% (Columbia Order, p. 118). In the Commission’s PECO decision, Docket No. R-2020-3018929, (Order entered June 22, 2021), the Commission accepted PECO’s equity ratio of 53.38% common equity. The Commission’s long-standing policy is to accept the Company's actual capital structure for the FPFTY as long as it is within the range of the capital structures employed by the barometer group companies. In a UGI case, the Commission observed that generally hypothetical capital structure ratios usurp the prerogative of management unless it can be demonstrated that management has acted imprudently and the resulting actual capital structure ratios are atypical (1984 Pa. PUC LEXIS 61, *85, 58 Pa. PUC 155, 187 (Pa. P.U.C. January 26, 1984)). Essentially, the Commission will accept a utility's actual capital structure ratios as long as they are reasonable. This is the case for UGI Gas.

Q. What capital structure ratios do Mr. Garrett propose?

A. Mr. Garrett proposes a hypothetical capital structure for UGI Gas without ever demonstrating that the Company's proposed capital structure is unreasonable. Rather, his proposed capital structure merely lowers the Company's revenue requirements.

In reaching his conclusion on capital structure ratios, Mr. Garrett examined (i) the debt ratios of the companies in his proxy group, as well as the Parent Company of UGI Gas, and (ii) the debt ratios of thousands of other companies, which this position is inconsistent with his rejection of the Comparable Earnings approach to measuring the cost of equity.

His approach essentially involves the use of a hypothetical capital structure that violates Commission precedent on the use of the actual capital structure. Under the facts of this case, the use of the UGI Gas actual capital structure ratios comports with Commission precedent.

Q. Is there any basis to deviate from the Company's actual capital structure to set the rate of return in this case?

A. No. As Mr. Spadaccio explained (see page 11 of I&E Statement No. 2), the Company's actual capital structure ratios (including the 55.12% common equity ratio) falls within the range of the proxy group. This is sufficient to meet the Commission's standard that makes the actual UGI Gas capital structure appropriate in this case.

Rather than altering the Company's actual capital structure, Mr. Garrett might have been led to a different conclusion if he had considered the common equity ratios utilized by the Commission in recent rate case decisions. Indeed, in its Order Entered on October 25, 2018 in Docket No. R-2017-2640058, the Commission adopted a 54.02% common equity ratio for the Electric Division of UGI Utilities. Furthermore, the Commission accepted a 54.19% common equity ratio in the Columbia Gas of Pennsylvania rate case at Docket No. R-2020-3018835 (Order entered February 19, 2021) and 53.38% common equity ratio for the Gas Division of PECO Energy at Docket No. R-2020-3018929 (Order entered June 22, 2021). Each of these common equity ratios are well above the 50% hypothetical common equity ratio proposed by Mr. Garrett. As such, the Company's proposed common equity ratio of 55.12% is entirely reasonable based on prior Commission action. Hence, the Company's actual common equity ratio conforms with Commission policy, i.e., that the actual, not hypothetical, common equity ratio should be employed.

Q. Does Mr. Garrett provide clear justification for rejecting the Company's actual capital structure and substituting a different capital structure?

A. No. In addition to his proxy group comparisons, Mr. Garrett also performs a "quantitative analysis" that he says supports a 50% debt ratio with a 7.62% cost of equity calculation (see Exhibit DJG-17). There are a variety of deficiencies with his analysis. First, a 7.62% cost of equity is clearly outside the range of reasonable returns for reasons I explained previously. Second, Mr. Garrett never established that his analysis is applicable for UGI Gas in the FPFTY. I have verified the reasonableness of the Company's common equity ratio by considering the historical capital structure ratios for the Gas Group and analysts' forecasts, which influence investor expectations. Historically, the Gas Group has had a 51.5% common equity ratio (see page 5 of UGI Gas Exhibit B). I have also compared the

Company's proposed common equity ratio to that of the Gas Group based upon forecast data widely available to investors from Value Line. Those ratios are**:**

Company	2025-2027
Atmos Energy Corp.	60.0%
Chesapeake Utilities Corp.	60.0%
New Jersey Resources Corp.	42.5%
NiSource Inc.	41.5%
Northwest Natural Holding Company	55.5%
ONE Gas, Inc.	48.0%
South Jersey Industries, Inc.	39.5%
Southwest Gas Holdings, Inc.	51.5%
Spire, Inc.	45.0%
Range:	
High	60.0%
Low	39.5%

Source: The Value Line Investment Survey,

This shows that UGI Gas has a common equity ratio for the FPFTY that is within this range and that its actual capital structure has adequate support.

Q. Does Mr. Garrett's consideration of the Parent Company capital structure play any role in this case?

A. No. Mr. Garrett's consideration of the Company's parent capital structure is also without merit. UGI Corp's capital structure results from its profile of ownership of nonregulated international and domestic propane and domestic midstream business, and regulated utility businesses. As UGI Utilities represents only roughly 25 percent of its profile, UGI Corp's capital structure should not be considered for ratemaking purposes in this case. Moreover, UGI Utilities does not rely on UGI Corporation for its credit profile as it is rated independently by Moody's and Fitch. Excluding consideration of the parent capital structure in this case would be consistent with the Commission's policy in other cases for many years.

COST OF DEBT

Q. Have you updated the Company's cost of debt?

A. Page 3 of Schedule 6 of UGI Gas Exhibit B (Updated), which is attached, provides the Company's cost of debt updated for the FPFTY. It reflects the higher forecast interest rates on the new issues of Senior Notes that will be issued in May, July and October 2022. As shown on page 3 of Schedule 6 UGI Gas Exhibit B (Updated), the embedded cost of long-term debt is 4.30% for the FPFTY. This change increased the embedded cost of debt by 0.32% (4.30% - 3.98%) from my direct testimony. This update produces an overall rate of return of 8.10% ((4.30% x .4488) + 6.17%)). Company witness Hazenstab has adjusted the revenue requirements for this change.[1]

COST OF COMMON EQUITY - DISCOUNTED CASH FLOW (DCF)

Q. The DCF model has been used by Mr. Spadaccio, Mr. Garrett and you as one method to measure the cost of equity. What is your position concerning the usefulness of the DCF method?

A. While the results of a DCF analysis should certainly be given weight, the use of more than one method provides a superior foundation for the cost of equity determination. Since all cost of equity methods contain certain unrealistic and overly restrictive assumptions, the use of more than one method will capture the multiplicity of factors that motivate investors to commit capital to an enterprise (i.e., current income, capital appreciation, preservation of capital, level of risk bearing). The simplified DCF model makes the assumption that there is a single constant growth rate, there is a constant dividend payout ratio, that price–earnings multiples do not change, and that the price of stock, earnings per share, dividends

[1] The Company has previously adjusted its interest rates on long-term debt in its rebuttal testimony to reflect changing market conditions. In its 2021 Electric Base Rate Case proceeding at Docket No. R-2021-3023618, UGI Electric lowered its interest rate, which had the effect of reducing its overall rate of return in that proceeding. UGI Electric St. No. 5-R, p. 9.

per share, and book value per share all have the same growth rate. We know from experience that those assumptions are not realistic because the stock market reveals performance that is very different from the assumptions of the DCF.[2] The use of multiple methods provides a more comprehensive and reliable basis to establish a reasonable equity return for AP. The Commission has acknowledged the usefulness of other methods, such as CAPM and Risk Premium, as a check on the reasonableness of the DCF return.

Indeed, the influence of other methods must have an impact on the Commission's attitude toward the DCF model because the Commission's selection of the rate of return on equity for use in the DSIC is usually set well above the cost of equity indicated by the DCF model alone. For example, in the Quarterly Earnings Report at Docket No. M-2021-3028488, the Commission set the DSIC return at 10.20% for the Gas Companies, while the DCF returns were 10.15% using current stock prices and 9.86% using 52-week average stock prices. It is clear that the Commission has been guided by the results of other models and other factors aside from DCF when setting the DSIC return. As an apparent check on the reasonableness of the DCF result, the CAPM result was 10.88% for the Gas Company Barometer Group as calculated in the Commission's Quarterly Earnings Report dated September 30, 2021 (Docket No. M-2021-3030045). Indeed, the CAPM and RP methods directly reflect the effect of rising interest rates and are an important indicator of higher equity cost rates. Mr. Spadaccio claims that the DSIC returns that are established in the Quarterly Earnings Report, among other considerations, is designed to reduce regulatory lag and is not a substitute for base rate cases. The DSIC rate is similar to the rate of return on common equity set in base rate cases. This is because the DSIC rate is calculated from the same two models of the cost of equity, i.e., DCF and CAPM, that Mr. Spadaccio used in his direct testimony, and that all of the same risk attributes are contained in those two

[2] The growth rate variables shown on Schedules 8 and 9 of UGI Gas Exhibit B shows that the assumption associated with the simplified DCF model are not reasonable.

models in both proceedings.

Q. What form of the DCF model has been employed in this case?

A. The constant growth form of the DCF model has been used by Mr. Spadaccio, Mr. Garrett, and me.

Q. Do the DCF results proposed by Mr. Spadaccio provide a reasonable representation of the cost of equity?

A. Not in my opinion. I&E Witness Spadaccio concludes that the DCF cost of equity is 9.92% and the CAPM cost rate is 12.13% (I&E Statement No. 2, pages 22 and 25). The Commission has stated that it would consider other methods when other methods showed that the DCF method understated the cost of equity. (Columbia Order, pp. 121 and 131.) It should be noted that I&E's DCF result in this case is also too low for several reasons. First, there have been significant increases in interest rates and inflation since the Columbia decision in the midst of the Pandemic, indicating a higher cost of equity today. Second, I&E's own CAPM result of 12.13% illustrates its DCF result is too low, in contrast to the lower CAPM return in the Columbia case.

The principal purpose of assembling a barometer group is to avoid relying on data for a single company that may not be representative and to thereby smooth out any abnormalities. That said, when some of the DCF results for companies in the barometer group are unreasonable on their face, the reliability of the method being used, or the witness' application of that method, must be questioned. As indicated below, DCF results used by Mr. Spadaccio fall into that category:

Company	Average: 52 wk & Spot Yield	+	Growth	=	Total
Chesapeake Utilities	1.67%	+	6.98%	=	8.65%
ONE Gas	3.39%	+	4.63%	=	8.02%

It is a fundamental tenet of finance that the cost of equity must be higher than the cost of debt by a meaningful margin to compensate for the higher risk associated with a common equity investment. Yet, each of the companies listed above have DCF returns calculated by Mr. Spadaccio that fail to provide a sufficient spread over the yield of 4.32% on A-rated public utility bonds for April 2022. As I have demonstrated in my direct testimony (UGI Gas Statement No. 6, pages 40-41), the spread between the cost of debt and cost of equity should be 6.75% in this market environment. As such, none of the returns listed above can come close to meeting this standard.

DCF GROWTH RATE

Q. As to the DCF growth component, what financial variables should be given greatest weight when assessing investor expectations?

A. The theory of the DCF holds that (i) the value of a firm's equity (i.e., share price) will grow at the same rate as earnings per share with a constant P-E ratio, and (ii) dividend growth will equal earnings growth with a constant payout ratio. Therefore, to properly reflect investor expectations within the limitations of the DCF model, earnings per share growth, which is the basis for the capital gains yield and the source of dividend payments, must be given greatest weight. The reason that earnings per share growth is the primary determinant of investor expectations rests with the fact that the capital gains yield (i.e., price appreciation) will track earnings growth with a constant price earnings multiple (a key assumption of the DCF model). It is also important to recognize that analysts' earnings growth rate forecasts significantly influence investor growth expectations. It is for this reason that GDP growth rates submitted by Mr. Garrett are an inappropriate representation of investor growth rate expectations. Moreover, it is instructive to note that Professor Myron Gordon, the foremost proponent of the DCF model in public utility rate cases, has established that the best measure of growth for use in the DCF model are forecasts of earnings per share growth.[3] In Mr. Spadaccio's DCF analysis, he determines the dividend yield by using spot and 52-week stock prices for each company, citing sources in late February or early March, but it is not clear what spot dates were used. (I&E Exhibit No. 2, Schedule 4.)

Q. Please summarize the DCF growth rate analysis performed by Mr. Spadaccio.

A. As shown on page 21 of I&E St. No. 1, Mr. Spadaccio proposes a growth rate of 6.53% based on his review of analysts' projected earnings growth rates. This growth rate is only slightly below the 6.75% growth rate that I determined. Referring to Mr. Spadaccio's growth rates, the 4.63% growth rate for ONE Gas appears to be anomalous. The range of growth rates for other companies is 5.80% to 7.33%. The reason for the low ONE Gas growth rate is a low Yahoo growth rate of 2.90% and no growth rate from Morningstar. Exclusion of ONE Gas growth rate as an anomaly would raise the average growth rate from 6.53% to 6.84%. If he had removed the unduly low growth rate for ONE Gas, his group average growth rate would have been 6.84%, thereby producing a 10.23% (3.39% + 6.84%) DCF return, when excluding the ONE Gas dividend yield as well.

Q. In his testimony, Mr. Garrett does not assemble any growth rates that are specific to his proxy group of gas companies. Does this follow the traditional approach for applying the DCF model?

A. No. The testimony does not follow the normal, or typical processes, for applying the DCF model long used by the Commission and others for determining the return on equity. While Mr. Garrett acknowledges that various sources exist for company-specific growth rates, he

[3] "Choice Among Methods of Estimating Share Yield," The Journal of Portfolio Management, Spring 1989 by Gordon, Gordon & Gould. "We have compared the accuracy of four methods for estimating the growth component of the discounted cash flow yield on a share: past growth rate in earnings (KEGR), past growth rate in dividends (KDGR), past retention growth rate (KBRG), and forecasts of growth by security analysts (KFRG)…we have three observations to make. First, the superior performance by KFRG should come as no surprise. All four estimates of growth rely upon past data, but in the case of KFRG a larger body of past data is used, filtered through a group of security analysts who adjust for abnormalities that are not considered relevant for future growth."

does not present them in his testimony. His approach to looking at GDP growth is certainly alien to all DCF analysis that is familiar to the Commission. On this basis alone, the DCF analysis submitted by Mr. Garrett in this case should be dismissed. I say this because, as I previously explained, Myron Gordon established that analysts' forecast of earnings growth are the correct input for the DCF for each member of the proxy group.

Q. What DCF growth rate did Mr. Garrett actually use in his DCF?

A. The most obvious problem with Mr. Garrett's testimony concerns his development of the growth rate to be used in the DCF model for determining the ROE. In this regard, he advances the proposition that the growth rate for a utility can never exceed the long-term gross domestic product ("GDP") of the country. To the contrary, gas utilities are in a long-term growth phase due to the adoption of 20-to-30-year plans for accelerated replacement of mains and services. As I have explained in my direct testimony, companies, including utilities, can cycle through the growth phases. While Mr. Garrett lists other lower criteria for determining the long-term growth rate, he states in his testimony that he is being "charitable" by using his long-term estimate of GDP growth of 3.8%, OCA Statement No. 2, page 42. This growth rate is well below analysts' projections of earnings growth used by Mr. Spadaccio and me, and it produces a nonsensical DCF cost rate of 6.7%.

Mr. Garrett attempts to downplay the growth phase argument by arguing that growth in rate base due to replacement of aging infrastructure is not growth (OCA Statement No. 2, page 38). The fallacy of his argument rests with replacement of utility plant at the end of its life occurs at much higher costs than those same facilities installed 20, 30 or 40 years ago. This can only be accomplished today by raising extensive amounts of new capital including equity capital. Attraction of new-capital can only be accomplished with supportive regulation, including a reasonable ROE. His argument that analysts' earnings forecasts are not long term are belied by the long-term life of utility plant. Further, his contention that utilities overinvest in rate base to get excessive returns are refuted by the Commission's review and authorization of Long-Term Infrastructure Improvement Plans that are designed to both encourage and monitor such investments.

It seems obvious that imposing a noncompetitive return on replacement of utility facilities by understating the growth rate in the DCF violates the regulatory compact. Utilities accept an obligation to provide reliable and safe service under all situations in exchange for the opportunity to earn a fair return on capital employed. Reducing the ROE during the replacement of aging infrastructure would be counter-productive and place UGI Gas at a disadvantage to other utilities in raising the capital it needs to undertake the replacements. Had he used my growth rate of 6.75% or Mr. Spadaccio's growth rate of 6.53% (or as revised to 6.84%), he would have then produced a DCF return of 9.77% return with the quarterly form of the DCF with my growth rate, or 9.54% (or 9.86% as revised) with Mr. Spadaccio's growth rate. This shows that his DCF return is completely inadequate for the reasons explained above.

Q. Do the DCF growth rates proposed by Mr. Garrett provide a reasonable input in the cost of equity analysis using the DCF model?

A. No. Witness Garrett states that "awarded ROE's are often based primarily on a comparison with other awarded ROEs around the country," but he offers no support for or citation for this conclusion. (OCA Statement No. 2, page 16.) In contrast, the ROE in the Columbia case in 2021 was based specifically on the I&E DCF using analysts' projections of earnings to determine the DCF growth rate. Finally, Mr. Garrett admits that many utility analysts, as well as public utility comimssions, use financial analysts' projected growth rates in estimating the ROE. Yet, he offers no evidence that any commission has accepted his calculation of the growth rate. (OCA Statement No. 2, page 42.)

Mr. Garrett indicates that his method for analyzing the growth rate component rests on: (i) nominal GDP, (ii) real GDP, (iii) inflation, and (iv) the risk-free rate. There are many problems with his approach. First, the combination of the real GDP growth and inflation equals nominal GDP, i.e. (1.018) * (1.020) = (1.0380 -1) = 3.8%. Hence, two of his input variables are double counted when he separately considers nominal GDP growth. Second, the risk-free rate provides no guide of the growth that a company can realize in its earnings. Earnings growth occurs through revenue growth, net of: O&M, depreciation, taxes, and interest. None of these factors are addressed with the risk-free rate of return. Third, Mr. Garrett is essentially developing a generic growth rate that would apply to any, or all, companies, whether they are regulated or non-regulated companies. However, each company has a unique company-specific growth rate. His approach is simply incompatible with the basic concept of the DCF, where future cash flows for each company are systematically related to one another by a constant growth rate that represents a basic tenant of the single-stage DCF. It is also incompatible with the use of the growth rates of a comparable barometer group of companies to meet the requirement that a utility is to be permitted to earn a return equal to comparable companies. The DCF equation is P = D / (k-g). Mr. Garrett's growth rate does not fit within this equation.

LEVERAGE ADJUSTMENT

Q. Please respond to Mr. Spadaccio's criticism of your leverage adjustment.

A. Mr. Spadaccio offers three reasons for not making a leverage adjustment. First, Mr. Spadaccio notes that the credit rating agencies assess financial risk in terms of a company's booked debt obligations in their analysis of the creditworthiness of a company (see I&E Statement No. 2, page 38). I agree. But this has nothing to do with my leverage adjustment. The credit rating agencies do not measure the market required cost of equity for a company. The credit rating agencies are only concerned with the interests of lenders. They are judging risk associated with a company's ability to make timely payments of principal and interest. Hence, they are not concerned with the cost of equity or how it is applied in the rate-setting context. While Mr. Spadaccio's observation is correct, it has no relevance to my leverage adjustment.

Q. Second, Mr. Spadaccio also questions your leverage adjustment by reference to prior Commission orders. Please comment.

A. Mr. Spadaccio points to several decisions where the Commission declined to make a leverage adjustment (see I&E Statement No. 2, page 39). The fact that the Commission declined to use the leverage adjustment in the Aqua Pennsylvania case cited by Mr. Spadaccio does not invalidate its use. Notably, the Commission did not repudiate the leverage adjustment in the Aqua case, but instead arrived at an 11.00% return on equity for Aqua by including a separate return increment for management performance. Just like an increment for management performance is not recognized in all rate cases, so too the Commission seems to be taking a similar approach to the leverage adjustment. As to the City of Lancaster decision, the situation there was quite different than the leverage adjustment that I propose in this case. Lancaster proposed a leverage adjustment to the cost of equity measured with the Hamada formula and applied it to the DCF result, the Risk Premium result, and the CAPM. While the Hamada formula plays a role in the CAPM, it is not applicable to the DCF or the Risk Premium measures of the cost of equity. Hence, this distinguishes the City of Lancaster approach to the leverage adjustment from mine in this case. As to the UGI – Electric Division case, there the Commission granted a management performance increment rather than a leverage adjustment when arriving at a 9.85% equity return. And for Columbia, the company accepted the ALJs determination of the allowed return, which was 9.86%. Thus, Columbia chose not to argue the leverage adjustment in Exceptions to the Commission. However, based upon the current inputs to the DCF that indicated a low result, the Commission should now consider using the leverage adjustment, just as it did previously when the DCF was suggesting unusual results. In the PECO - gas rate case, the Commission arrived at a 10.24% return without the leverage adjustment, because that return was already deemed to be on the higher side and no additional adjustment was warranted.

Q. Third, Mr. Spadaccio argues that investors base their decisions on the book value debt and equity ratios for regulated utilities. Please respond.

A. Mr. Spadaccio contends that information presented to investors (see page 41 of I&E Statement No. 2), such as that included in the Value Line reports, argues against my leverage adjustment because investors base their investment decisions on book value. However, the Value Line reports clearly show the market capitalization of each company in his barometer group. This means that investors are well aware of the market capitalization of the gas utility stocks that Mr. Spadaccio relies upon for his analysis of the cost of equity. More importantly, I fundamentally disagree that investors base their decisions on book values. To the contrary, it is the future cash flows that investors expect to realize that determines the price they are willing to pay for a share of common equity. Stated differently, investors are concerned with the return that will be earned on the dollars they invest (i.e., their market price) and not some accounting value of little relevance to them. The financial risk associated with the book value capital structure is different from the market value of the capitalization. I clearly demonstrate this point on Schedule 10 of UGI Gas Exhibit B. Hence, the observation of Mr. Spadaccio is misplaced because I have clearly shown the difference in financial risk and that risk difference must be taken into account when arriving at an equity return that is applicable to the weighted average cost of capital using book value weights.

Q. Mr. Garrett criticized the leverage adjustment that you propose to account for the divergence of market capitalization and book value capitalization. Please comment.

A. At pages 44-48 of OCA Statement No. 2, Mr. Garrett never really refutes my leverage adjustment. Indeed, he says that I misapplied the Hamada formula leverage adjustment approach. First, in the DCF approach, I did not use the Hamada formula, but rather I used the Modigliani & Miller approach. Second, at page 47 of OCA Statement No. 2, Mr. Garrett claims that the Hamada formula generates an unlevered beta of 0.53. But what I have shown is that the correct unlevered beta is 0.54 (see page 40 of UGI Gas Statement No. 7). The reason for the difference is that I correctly use the market capitalization for my calculation, including the market value of debt, and Mr. Garrett did not because he used the book value capital structure ratios of UGI Gas. Indeed, there, Mr. Garrett used the actual capital structure ratios of UGI Gas, rather than the hypothetical ratios he proposes which is an inconsistent analysis.

COST OF COMMON EQUITY - CAPITAL ASSET PRICING MODEL

Q. Do you have concerns regarding Mr. Spadaccio's and Mr. Garrett's applications of the CAPM?

A. Yes. Mr. Spadaccio's CAPM analysis understates the cost of equity for a number of reasons: (i) his use of the yield on 10-year Treasury notes, (ii) his failure to use leveraged adjusted betas, and (iii) his failure to make a size adjustment. Mr. Garrett uses an inappropriate 30-day average yield on 30-year Treasury bonds, a beta that is not leverage adjusted, an unrealistic market risk premium, and ignores the size adjustment. He therefore proposes a totally unrealistic 7.2% CAPM result This compares with my CAPM of 13.55%, Mr. Spadaccio's CAPM of 12.13%, and the Quarterly Earnings Report CAPM of 10.88%. With regard to Mr. Spadaccio's CAPM analysis, which produces a 12.13% cost rate, it can be argued that he has understated the risk-free rate. On Schedule 8 of I&E Exhibit 2, he uses a projected 10-year treasury note yield from Blue Chip in December 2021 and February 2022, producing a 2.35% risk-free rate. Recently the actual 10-year treasury bond has been yielding around 3.0%, with many Fed funds rate increases forthcoming.

Q. How does the use of the yield on 10-year Treasury notes compare with yields on longer-term Treasury bonds?

A. The Blue Chip report dated April 29, 2022 shows this comparison. For the first quarter of 2022, the gap was 0.31% (2.25% - 1.94%) between the yields on 30-year and 10-year Treasury obligations. For the period 2023-2027, that gap is projected at 0.50% (3.4% -

2.9%) according to the December 1, 2021 Blue Chip. This shows a systematic understatement of Mr. Spadaccio's CAPM returns. This understatement can be traced to extraordinary monetary policy actions taken by the FOMC to deal with the recession that followed the onset of the Pandemic. Shorter-term rates, such as 10-year notes, respond more to the policy initiatives of monetary officials, while long-term rates, such as 30-year bonds, are more a reflection of investor sentiment of their required returns. For this reason, long-term rates, such as those revealed by 30-year Treasury bonds, should be used to measure the risk-free rate of return. Accordingly, use of 30-year Treasury bond projected yields would increase his CAPM result. Use of shorter-term rates, such as Mr. Spadaccio's 10-year Treasury Notes yields, are more susceptible to Fed policy actions.

Q. How has Mr. Spadaccio understated the risk-free rate of return?

A. The support for his risk-free rate of return is shown on his Schedule 8 of I&E Exhibit No. 2. There, he incorrectly gives the same weight to the yield on 10-year Treasury notes for the second quarter of 2022 as he does for the entire five-year period from 2023 through 2027. This approach leads to a seriously understated risk-free rate of return. Even if 10-year rates are used, it is necessary to correct the weights assigned to the forecast data presented by Mr. Spadaccio. I have revised his forecast below, based upon Blue Chip. Moreover, Blue Chip provides higher yields on Treasury obligations as the forecasts are extended into the future.

The resulting risk-free rate of return is 2.8% using the yield on 10-year Treasury Notes and 3.3% using the yield on 30-year Treasury Bonds.

Year	10-Year Treasury Yield	30-Year Treasury Yield
2022	2.1%	2.4%
2023	2.4%	2.9%
2024	2.8%	3.3%
2025	3.1%	3.6%
2026	3.2%	3.7%
2027	3.2%	3.7%
Average	2.8%	3.3%

Q. How should these results be used in the CAPM?

A. The risk-free rate of return should be calculated with the data that I present above. The size adjustment of 1.02% must also be incorporated into the CAPM. I have corrected Mr. Spadaccio's CAPM as indicated below using those inputs and the forecast yield on 10-year Treasury bond shown above:

	Rf	+	*β*	(	*Rm*	-	*Rf*	) +	*size*	=	*K*
Gas Group	2.80%	+	0.84	(	13.99%	-	2.80%	) +	1.14%	=	13.34%

Q. Mr. Spadaccio questions the need to adjust the CAPM results for size differences. Please comment.

A. As a preliminary matter, it is noteworthy that CAPM provides compensation solely for systematic risk, and that the size of the Gas Group must be considered separately. As I indicated with the data presented on Schedules 2, 3 and 4 of UGI Gas Exhibit B, the gas utilities are small as they are just 16% of the size of the electric and gas utilities that comprise the S&P Public Utilities. Indeed, recent Federal Energy Regulatory Commission ("FERC") orders specifically prescribe an adjustment to the CAPM due to the size of an enterprise.[4] Mr. Spadaccio's arguments revolve around the purported distinction between

[4] *See, e.g.*, Association of Businesses Advocating Tariff Equity, 171 FERC ¶61,154 (May 21, 2020).

regulated utilities and unregulated industrial companies (see page 45 of I&E Statement No. 2). However, the Wong article that he relies upon was authored twenty (20) years ago, and employed data going back into the 1960s. Enormous changes have occurred in the industry since the 1960s that have fundamentally changed the utility business. The Wong article also noted that betas for the non-regulated companies were larger than the betas of the utilities. This, however, is not a revelation, because utilities continue to have lower betas than many other companies. This fact does not invalidate the additional risk associated with small size.

The Wong article further concludes that size cannot be explained in terms of beta. Again, this should not be a surprise. Beta is not the tool that should be employed to make that determination. Indeed, beta is a measure of systematic risk and it does not provide the means to identify the return necessary to compensate for the additional risk of small size. In contrast, the famous Fama/French study (see "The Cross-Section of Expected Stock Returns," The Journal of Finance, June 1992) identified size as a separate factor that helps explain returns.

Q. How does size affect the financial performance of a small company?

A. Examples of the financial consequences of external factors that can influence the financial performance of a small company include loss of a large customer and the effect of unexpected changes in expense.

Q. In the recent Gas Division rate case for PECO Energy (Docket No. R-2020-3018929), the Commission declined to make a size adjustment to the CAPM. Should the size adjustment be considered here?

A. Yes. In that case, the ALJs and Commission concluded the adjustment for size was not necessary in utility rate regulation. In this case, it is worthy to note that the beta measure of systematic risk does not account for the additional risk associated with small size, either for a non-regulated firm or a public utility. In addition, the studies that I have relied upon for the size adjustment utilized market-wide evidence that included public utilities. Likewise, the FERC has incorporated the size adjustment into its CAPM analysis. For these reasons, the Commission should revisit the propriety of including a size adjustment here.

Q. At pages 62-64 of OCA Statement No. 2, Mr. Garrett also challenges the adjustment that you made to the results of the CAPM for the size of the Gas Group. Please respond.

A. A size adjustment is necessary because the financial impact of changes in specific dollar amounts of revenues and costs have a magnified influence on a small company because there are fewer dollars over which those revenues or costs can be spread.

Q. Mr. Garrett has also performed a CAPM calculation in addition to his DCF analysis. Are the results of his CAPM useful in setting the Company's equity return in this case?

A. No. There are a variety of problems with Mr. Garrett's CAPM approach that makes it not useful in this case. He makes CAPM calculations that produce results of 7.2%, which on its face is simply not credible. This is shown by the Commission's Quarterly Earnings Report that produces a CAPM return of 10.88% for the Gas Company barometer Group that exceeded substantially the DCF return. First, Mr. Garrett uses a backward looking 2.40% yield on 30-year Treasury bonds. A 30-day historical average period is not compatible with the Commission's use of forecast Treasury yields (see UGI Utilities, Inc. - Electric Division at Docket No. R-2017-2640058, Order Entered October 25, 2018). Second, the 5.5% equity risk premium ("ERP") selected by Mr. Garrett is completely off the mark. The principal departure from the normal input is in his calculation of the ERP. He rejects the use of both historic ERPs and projected ERPs calculated based on projected market returns. Instead, he reviews “Expert Surveys” and his own calculations. He then uses the 2021 survey conducted by IESE Business School, indicating that it provides the highest ERP of 5.5 %. There is no evidence that investors use this source of the ERP in their CAPM calculations. Furthermore, the implied total market return using Mr. Garrett's final inputs is just 7.90% (2.40% + 5.5%), which is clearly incompatible with actual stock market returns of 18.40% in 2020, 28.71% in 2021, and 12.33% on average for the past 96 years (1926-2021).

COST OF COMMON EQUITY - RISK PREMIUM ANALYSIS

Q. Do you believe the Risk Premium method provides significant evidence of the cost of equity?

A. Yes. In my opinion, the Risk Premium results should be given serious consideration. The Risk Premium method is straight-forward, understandable and has intuitive appeal because it is based on a company's own borrowing rate. The utility's borrowing rate provides the foundation for its cost of equity, which must be higher than the cost of debt in recognition of the higher risk of equity (see UGI Gas Statement No. 6, pages 38-41). So, while Mr. Spadaccio and Mr. Garrett decline to use the Risk Premium approach to measure the Company's cost of equity, it is an approach that provides a direct and complete reflection of a utility's risk and return because it considers additional factors not reflected in the beta measure of systematic risk. It is particularly useful when investors expect changes in the cost of debt prospectively, which is currently the expectation of investors, as I have explained above and in UGI Gas Statement No. 6, pages 39-40. Indeed, the Risk Premium approach provides for direct reflection of prospective interest rates in the model and therefore should be given weight in determining the equity cost rate in this case.

Q. Please respond to Mr. Garrett’s criticisms of your Risk Premium approach.

A. While Mr. Garrett declines to use the Risk Premium approach to measure the Company's cost of equity, it is an approach that provides a direct and complete reflection of a utility's risk and return because it considers additional factors not reflected in the beta measure of systematic risk. In fact, it is precisely because investors consider the results of other methods that they too should be used in addition to the DCF in the development of the cost of equity in this proceeding. As I explained in my direct testimony, we are facing the prospect of increasing interest rates for the future and the market has increased yields on debt instruments. I incorporated the trend toward higher interest rates when I developed my Risk Premium cost of equity of 10.50% (3.75% interest rate on A-rated public utility bonds + 6.75% equity risk premium). The recent increase in interest rates would support a higher rate today.

Q. What does Mr. Spadaccio say about your Risk Premium analysis?

A. Mr. Spadaccio makes the unfounded assertion that the Risk Premium and CAPM methods should only be used as a comparison to the results of the DCF method because they do not carry over from the investment decision-making process to the utility rate setting process (see page 18 of OCA Statement No. 2). In fact, it is precisely because investors consider the results of other methods that they too should be used in addition to the DCF in the development of the cost of equity in this proceeding. Mr. Spadaccio's assertion that the Risk Premium method does not measure the current cost of equity as directly as the DCF is similarly without foundation. As I explained in my direct testimony and earlier in this rebuttal testimony, we are facing the prospect of increasing interest rates for the future. I incorporated the trend toward higher interest rates when I developed my Risk Premium cost of equity of 10.50%. Hence, my Risk Premium cost rate is fully responsive to changing market fundamentals and the credit quality of the Gas Group.

COST OF COMMON EQUITY - COMPARABLE EARNINGS APPROACH

Q. Please respond to the criticism of the Comparable Earnings approach.

A. The underlying premise of the Comparable Earnings method is that regulation should emulate results obtained by firms operating in competitive markets and that a utility must be given an opportunity cost of capital equal to that which could be earned if one invested in firms of comparable risk. For non-regulated firms, the cost of capital concept is used to determine whether the expected marginal returns on new projects will be greater than the cost of capital, i.e., the cost of capital provides the hurdle rate at which new projects can be justified, and therefore undertaken. Further, given the 10-year time frame (i.e., five years historical and five years projected) considered by my study, it is unlikely that the earned returns of non-regulated firms would diverge significantly from their cost of capital.

The Comparable Earnings approach satisfies the comparability standard established in the *Hope* case. In addition, the financial community has expressed the view that the regulatory process must consider the returns that are being achieved in the non-regulated sector to ensure that regulated companies can compete effectively in the capital markets. Moreover, in a 1994 study that addressed the ROE issue, John Olson (then with Merrill Lynch) established that ROEs from non-regulated companies provide better assessment of investor requirements than those available for regulated utilities.[5]

MANAGEMENT PERFORMANCE

Q. Both Mr. Spadaccio and Mr. Garrett oppose any recognition for management performance in the determination of the return on equity. Mr. Spadaccio and Mr. Garrett assert that UGI Gas has only done what it is required to by law. How do you respond?

A. As I stated in my direct testimony, I believe UGI Gas has performed in an exemplary manner, as explained by UGI Gas Witness Brown, and that performance should be recognized in this case. Mr. Spadaccio simply disagrees, without addressing any of the items highlighted by Mr. Brown as examples of UGI Gas's excellent performance. Mr. Garrett's position regarding management performance is that the models of the cost of equity already incorporate management effectiveness. In each case, neither Mr. Spadaccio nor Mr. Garrett has shown that UGI Gas is not entitled to some form of management performance recognition by the Commission. Mr. Brown's testimony has established that

[5] "Natural Gas: The Case for ROE Reform," John E. Olson First Vice President, Merrill Lynch & Co., October 11, 1994.

the Company's management performance warrants recognition by the Commission.

Q. Mr. Garrett also criticizes your addition of a management performance adjustment, arguing that you have proposed such an adjustment in each rate case in Pennsylvania since 2015. Please comment.

A. Mr. Garrett misperceives my role with respect to management performance adjustments to equity. As I have made clear in this case, and in each of the cases identified by Mr. Garrett, I do not make an independent assessment of management performance of each utility. Other company witnesses, such as Mr. Brown in this case, present evidence in support of management performance. Mr. Brown discusses this issue further in his rebuttal testimony.

FIRM-SPECIFIC BUSINESS RISK

Q. Is Mr. Garrett's position correct that investors should not be compensated for business risk because use of a diversified portfolio eliminates business risk. OCA St No.2, p. 65.

A. No. He is incorect to argue that "[n]either [DCF or CAPM] model includes an input for business risks due to the well- known truth that investors do not expect a return for such risks." (OCA Statement No. 2, page 66.) It is well accepted that higher returns are expected from more-risky businesses. Stated another way, companies with higher returns are associated with the more-risky members of the barometer group and lower returns go with the less risky ones. Through diversification, the barometer group has an average risk profile. This is important because a business risk adjustment is necessary for the higher risks of UGI Gas as compared to the barometer group companies as a whole. With higher business risk, a company, including utilities, would offset higher business risk with a lower debt ratio.

SUMMARY

Q. Please summarize your rebuttal testimony.

A. It is my opinion that the equity allowances proposed by Mr. Spadaccio and Mr. Garrett understate the cost of common equity for UGI Gas. This is particularly true for Mr. Garrett's proposal. In an environment of prospectively higher interest rates and Company-specific risk factors, an opportunity to earn a cost of equity of 11.20% is reasonable for UGI Gas.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

UGI Gas Exhibit B

Schedule 6, Pages 3 and 4

(UPDATED)

UGI Utilities, Inc.
Calculation of the Embedded Cost of Long-Term Debt
Estimated at September 30, 2023

Series	Date of Maturity	Principal Amount Outstanding ($000)	Percent to Total	Effective Cost Rate [1]	Weighted Cost Rate

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 8-R

Rebuttal Testimony of
Sherry A. Epler

Topics Addressed:	**Test Year Sales and Revenues** **Revenue Allocation and Rate Design** **Tariff Charges**

Dated: May 17, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Sherry A. Epler. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 8, on January 28, 2022.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to certain portions of the following direct testimony submitted by the Bureau of Investigation and Enforcement ("I&E"), the Office of Consumer Advocate ("OCA"), the Office of Small Business Advocate ("OSBA"), the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"), and the Commission on Economic Opportunity ("CEO"): (1) I&E Statement No. 4, the direct testimony of Ethan H. Cline; (2) OCA Statement No. 3, the direct testimony of Jerome D. Mierzwa; (3) OCA Statement No. 4, the direct testimony of Roger D. Colton; (4) OSBA Statement No. 1, the direct testimony of Robert D. Knecht; (5) CAUSE-PA Statement No. 1, the direct testimony of Harry S. Geller; and (6) CEO Statement No. 1, the direct testimony of Eugene M. Brady.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring UGI Gas Exhibits SAE-1R through SAE-4R.

II. TEST YEAR SALES AND REVENUE

Q. I&E witness Cline disagrees with the Company's claimed present rate revenue for the fully projected future test year ("FPFTY"). (I&E St. No. 4, pp. 6-22.) Please summarize his overall recommended adjustment and the reasons Mr. Cline is supporting it.

A. Mr. Cline believes the Company's present rate revenue in the FPFTY has been understated and recommends two adjustments: (1) an adjustment concerning the rate class R/RT heating customer usage decline reflected in the FPFTY, which, according to him, was projected beyond the end of the FPFTY; and (2) an adjustment related to the overall regression analysis performed by UGI Gas to project usage per R/RT heating customer to determine sales volumes. Therefore, he recommends that present rate revenues be increased as outlined in detail below.

Q. As to his first adjustment related to the projected Rate Class R/RT heating customer usage decline, could you please explain his disagreement with the Company's position?

A. Yes. Mr. Cline asserts that "the Company's analysis projects residential heating customer usage declines through March 2024, which is six months beyond the FPFTY." (I&E St. No. 4, p. 9.) With the Company's use of a "mid-year convention" to capture the full annualized impacts related to customer conservation activities through September 30, 2023, Mr. Cline believes that UGI Gas "inappropriately misaligns data for determination of a revenue requirement and affords the Company a greater revenue increase than is appropriate for its FPFTY claim." (I&E St. No. 4, pp. 9-11.) According to Mr. Cline, "a customer's installation of a high efficiency heating system in February or March will not produce lower gas sales until a full year after the end of the FPFTY." (I&E St. No. 4, pp. 11-12.) Therefore, he recommends that the average usage per R/RT customer be increased by 0.1307 Mcf per customer per year, which results in an increase of gas volumes of 77,061 Mcf and present distribution rate usage revenues by $316,752. (I&E St. No. 4, pp. 12-13.) He also observes that there would be corresponding increases in purchased gas revenues and expenses of $413,399 and impacts on the projected surcharge revenue. (I&E St. No. 4, p. 14.)

Q. Do you agree with Mr. Cline's position on the projected Rate R/RT residential heating customer usage decline?

A. No. Contrary to Mr. Cline's assertions, the Company's method does not incorporate post-FPFTY usage decline. Rather, it assesses the impact of customer usage reducing measures that are already in place prior to the end of the FPFTY, and simply annualizes that impact to reflect end of FPFTY conditions. Without this adjustment, Rate R/RT usage per customer would not be appropriately annualized in accordance with permitted adjustments that allow end-of-FPTFY conditions to be included for ratemaking.

Specifically, the Company applied a mid-point convention to evaluate its monthly residential use per customer regression results in order to capture the full annualized impacts related to customer conservation activities through the FPFTY end (*i.e.*, September 30, 2023). Because September 30, 2023 is the middle of the annual period ending March 31, 2024, the Company must project monthly use through the end of March 31, 2024 to develop an annualized value for use per customer. Thus, the sum of monthly use values for the 12-month period ending March 31, 2024, would represent the annualized rate of use for those customers existing only "as of" September 30, 2023. In discovery, the Company provided I&E with a detailed explanation on the use of a mid-point convention to capture the impacts of appliance replacements over time in a manner which would properly annualize residential use per customer. (*See* UGI Gas Exhibit SAE-1R.)

By comparison, if the Company utilized the sum of monthly regression results for the 12-months ending September 30, 2023, as Mr. Cline suggests, the impact of residential customer conservation measures - such as furnace replacements completed during the summer of 2023, or more specifically those made prior to the end of the FPFPTY that are in place but not yet measured via observed and billed usage would not be appropriately annualized and would not reflect end of FPFTY conditions. In effect, Mr. Cline's recommendation would reflect the mid-point of the FPFTY and produce a projection that is for those customers existing "as of" March 30, 2023, and not the end of the FPFTY. This approach would overstate the residential usage per customer at the end of the FPFTY because annualized use per customer is continuing to decline throughout the year. In using a "fully projected" future test year method that assesses use per customer impacts through September 30, 2023 for equipment and measures installed as of that date, the Company has appropriately applied an analysis, which measures the impacts related to the installations, but only for installations during the FPFTY period and not beyond; a known and measurable approach that is appropriate for ratemaking. Based on the foregoing, Mr. Cline's adjustment to present rate revenues related to Rate R/RT heating customer usage decline should be rejected.

Q. As to Mr. Cline's second adjustment, what are his reasons for opposing the Company's regression analysis?

A. Mr. Cline disagrees with UGI Gas's use of 18 years of data to project the 87.8 Mcf annual usage for the R/RT heating customers. (I&E St. No. 4, p. 15.) According to Mr. Cline, "older usage data is less indicative of recent trends," and "it is not reasonable to allow less significant older data from a time period when the service territory was not as saturated with usage reducing appliances to influence the results of the projection of future usage." (I&E St. No. 4, pp. 15-16.) He also observes that a 15-year time period was used in prior UGI Gas base rate cases. (I&E St. No. 4, pp. 16-18.) Therefore, Mr. Cline recommends a 15-year time period from October 2006 through September 2021 for the residential usage per customer regression analysis. (I&E St. No. 4, p. 16.) His recommendation would increase the projected average usage per R/RT customer for the FPFTY to approximately 90.2576 Mcf, increase gas volumes by 1,440,867 Mcf, and increase present rate usage revenue by $5,922,539. (I&E St. No. 4, pp. 19-20.) It also would increase purchased gas revenue and expenses by $7,729,631 and impact the projected surcharge revenue. (I&E St. No. 4, pp. 20-21.) Finally, Mr. Cline notes that if the Commission accepts this second adjustment, concerning the regression analysis time period, then his first adjustment would not be added in separately because it is already a part of the regression analysis adjustment. (I&E St. No. 4, p. 15.)

Q. Do you agree with Mr. Cline's proposed adjustment concerning the Company's regression analysis?

A. No. Mr. Cline makes several assertions in support, including: (1) a 15-year time period is consistent with the reasons UGI Gas described for utilizing a multi-year regression period; (2) the 15-year time period is consistent with the time period used for the Company's weather normalization adjustment; (3) the Company has supported the use of 15-year time period for its regression analysis in its previous cases; and (3) his belief that usage and temperature data older than 15 years is not representative of recent usage trends on which to base the usage projection. *See* I&E Statement No. 4, page 16.

While I do agree that Mr. Cline is attempting to be consistent with the reasons the Company described for utilizing a multi-period regression, I do not agree with his other points. Specifically, while Mr. Cline notes that his recommendation to use a 15-year time period is consistent with the time period used for the Company's weather normalization adjustment, the determination of these two variables, weather and use per customer, need to be evaluated individually. The key goal in such evaluation is to determine which methodology supports the most accurate determination of each separately for use in ratemaking. For example, if new appliance technology were revealed tomorrow that doubled furnace efficiency and decreased appliance use by half, use per customer would be most appropriately assessed based on the rate of consumer adoption of such technology. If it could be adopted "overnight," projected heating use per customer for the FPFTY period would be cut in half (and the Company's use of a 15-year regression to determine trends would no longer hold accurate). This change in use per customer would not impact on how normal weather is defined because the technology would not be changing weather. While this example is admittedly extreme to demonstrate the point, in the end, the Company would still be utilizing a 15-year period for determining normal weather until it determined another driving need to modify that approach; it would not then say as a result of the new furnace efficiencies that normal weather now should be redefined.

Thus, while one variable (use per customer) may be dependent on the other (heating degree days) for quantification, the reverse is not true (heating degree days are not dependent on use per customer). Thus, the two factors require independent assessment which can then be utilized to support proper ratemaking design, claims and conclusion.

As to Mr. Cline's next point that the Company has supported the use of 15 years before, that was a result of the Company acknowledging data availability as a limiting factor at the time of that individual case. Specifically, in UGI Gas's 2019 rate case, the Company used 15 years of data in its Rate R/RT residential use per customer analysis due to the fact that, at that time, the 15-year period represented the historical time period for which the Company had common data across all three of the former UGI Gas utility rate districts: UGI South Rate District, UGI North Rate District, and UGI Central Rate District. October 2003 was the beginning of that dataset and, thus, the Company used "all available" historical data at that time. In fact, the use of non-common data, or differing periods by rate district, would have resulted in skewed results and, therefore, could not be used.

In UGI Gas's 2020 rate case, the Company extended that 15-year period for an additional year of data which was collected since the time of the 2019 case, thus forming the use of a 16-year analysis of residential heating use in that case. UGI Gas has now done the same update in this current UGI Gas 2022 rate case to extend the dataset for an additional two additional years to September 30, 2021, for a total data set of "all available" data - now 18 years. This approach follows the Company's historical attempt to use all available data to perform Rate R/RT residential use per customer regressions in an effort to smooth out transient aberrations that may occur year-to-year for various reasons and best capture long-term trends influencing use per customer. Therefore, the same "all available" approach has been used by the Company in the past several base rate cases, as summarized below.

Case	Regression Time Period	Rate R/RT Source Data Used
2022 UGI Gas	18 years	All available common years across former rate districts; October 2003 forward
2020 UGI Gas	16 years	All available common years across former rate districts; October 2003 forward
2019 UGI Gas merger	15 years	All available common years across former rate districts; October 2003 forward

In summary, Mr. Cline claims that the Company is changing its methodology for Rate R/RT where it supported the use of a 15-year regression in previous cases. However, as explained above, the Company has only expanded the dataset used in the analysis to comport with the Company's view that the use of "all available" data is most appropriate for ratemaking purposes in forecasting residential use per customer trends, for reasons as noted above. The Company has remained consistent in looking to use all available historic data in the regression analyses through its recent base rate case filings as demonstrated in the above table.

Lastly, Mr. Cline supports a 15-year period based on his belief that usage and temperature data older than 15 years is not representative of recent usage trends on which to base the usage projection as they represent “stale data.” *See* I&E Statement No. 4, page 19. The Company is not aware of a regulatory “stale” standard that is appropriate for ratemaking and thus does not agree with Mr. Cline’s assertion. In review of UGI Gas Exhibit SAE-3(a), the “stale data” apparently is related to a downward trend in usage during the time period Mr. Cline suggests be excluded. However, UGI Gas Exhibit SAE-3(a) also contains several trends which are upward in magnitude, specifically, in the 2010-2011, 2012-2013 and 2016-2018 time periods. However, Mr. Cline does not call these out as periods which may also be stale and requiring exclusion in similar fashion to the downward trend he has excluded (he certainly could have said anything beyond 5 years is stale data as readily as beyond 15.) Indeed, it is the Company’s view that a longer period of time serves to balance short term variability in long term trends, as demonstrated through the years shown in UGI Gas Exhibit SAE-3(a), and supports the use of larger data periods. In short, Mr. Cline’s approach appears only intended to establish a result which would increase Rate R/RT residential heating use per customer and should be rejected.

Q. Has UGI Gas utilized data for a period of 18 years or greater in the past based on “all available” data?

A. Yes. In UGI Gas’ 2016 rate case, UGI Gas (former South Rate District) based its Rate R/RT residential heating use per customer regression on a period of nearly 21 years of data.

At that time, it represented all available data. *See* Docket No. R-2015-2518438. I would note as well that the residential use per customer regression analyses presented by the Company have always been reviewed for, and have maintained, statistical significance. Statistical significance is discussed in more detail below.

Q. Have you discovered any other problems with Mr. Cline's recommended 15-year approach?

A. Yes. In response to Company's discovery, I&E provided the workpapers in support of its claimed 15-year approach: R-2021-3020218 (UGI Gas BRC) I&E Exhibit No 4 Sch 3 FINAL.xlsx. Upon review however, on the tab labeled "15-yr regrn results," the "SUMMARY OUTPUT" of the regression that Mr. Cline bases his recommended adjustment upon is clearly one based on 61 monthly observation points, or a period of just 5 years and 1 month. See line 8 "Observations" value of 61 (months). Thus, I am not certain if Mr. Cline intended to use a 15-year approach as stated in his testimony, or a 5 year and 1 month approach, as found within his workpapers. If the former, Mr. Cline has not provided supporting evidence to his adjustments. If the latter, Mr. Cline has provided support, but his support demonstrates it should not be considered in lieu of the Company's analysis.

Q. Why should the support provided by Mr. Cline's workpapers not be considered in lieu of the Company's analysis?

A. Mr. Cline's regression does not demonstrate statistical significance for all regression variables. In the field of statistics, P-value is a measure of statistical significance and has been summarized as follows:

> Statistical significance, calculated as a P-value, is another statistical method of evaluating the possible role of chance. The P-value measures the likelihood that one would see the observed association even in the absence of a true association. The lower the P-value, the less likely the observed result is due to chance alone. In other words, as the P-value gets smaller and smaller, the data is less and less consistent with the "null hypothesis": the hypothesis that there is no association between the factor and the outcome.
>
> Traditionally, P-values are termed "statistically significant" when they are less than 5 percent ($P < 0.05$) and confidence intervals (or "level of confidence") are set at 95%. A confidence interval provides more information for evaluating an epidemiology study than a P-value. A confidence interval provides information about the precision of the estimate of the association and how well other estimates of the association would be supported by the data.[1]

Therefore, a well-established standard is that a P-value less than 0.05 means that the value is statistically significant, whereas a P-value greater than 0.05 means that the value is not statistically significant. Relevant here, a review of the P-value results of Mr. Cline's regression equation variables shows the following:

Variable	*P-value*
Intercept	1.16327E-07
X Variable 1	0.197751367
X Variable 2	2.07643E-17
X Variable 3	0.99328517

In the above table, the "X Variable 1" equates to the variable of "Lagged Monthly Heating Degree Days", "X Variable 2" equates to the variable of "Monthly Heating Degree Days," and "X Variable 3 equates to the variable of "Weighted Time Trend". See UGI Gas SDR-

[1] *Magistrini v. One Hour Martinizing Dry Cleaning*, 180 F. Supp. 2d 584, 592 (D.N.J. 2002), *affirmed*, 68 Fed. Appx. 356 (3d Cir. 2003).

RR-10 and SDR-RR-11 for detailed explanations and use of these variables. Given that the P-values for both "X Variable 1" (Lagged Monthly Heating Degree Days) and "X Variable 3" (Weighted Time Trend) exceed a value of 0.05, this regression cannot be deemed to be statistically significant and must therefore be rejected for consideration. Comparatively, a review of the P-value results of the regression equation variables for the Company's 18-year regression, as found in UGI Gas Book II, Attachment SDR-RR-11(a), page 9 of 9, shows the following:

Variable	*P-value*
Intercept	7.99903E-21
X Variable 1	0.00029753
X Variable 2	2.5251E-103
X Variable 3	0.048641189

Here, all P-values in the Company's regression analysis are below a value of 0.05, thus demonstrating the Company's approach as being statistically significant for the determination of Rate R/RT residential heating use per customer.

Q. Has I&E maintained a similar consistent approach to use per customer methodology in prior UGI Gas rate cases?

A. No. I&E's methodology for determining use per customer has varied in UGI Gas's most recent rate cases. In this case, I&E claims to base its position on a 15-year period but then provides workpapers showing that it is relying on a 5-year and 1-month period. In the 2020 UGI Gas base rate case, I&E proposed to use 15 years of data, and I&E proposed using a 10-year regression period during the Company's 2019 base rate case.

III. REVENUE ALLOCATION AND RATE DESIGN

A. REVENUE ALLOCATION

Q. OCA witness Mierzwa contends that the Company's proposed revenue allocation is not reasonable because it should be based instead on the OCA's cost of service study. (OCA St. No. 3, pp. 32-33.) Do you agree?

A. No. As explained in UGI Gas witness Heppenstall's rebuttal testimony (UGI Gas St. No. 10-R), Mr. Mierzwa's criticisms of the Company's cost of service study should not be adopted by the Commission. Therefore, because the Commission should reject the OCA's cost of service study, the Commission should likewise reject the OCA's proposed revenue allocation based on such cost of service. Mr. Mierzwa did not provide a revenue allocation based on the Company's cost of service for direct comparable assessment.

Q. OSBA witness Knecht also disagrees with the Company's proposed revenue allocation. (OSBA St. No. 1, pp. 15-16.) Why?

A Mr. Knecht provides two reasons. First, he "disagree[s] that rate decreases should be assigned to the Rate XD and Rate IS classes" because "[t]hese customers are subject to negotiated rates, which have already been accepted by the customers." (OSBA St. No. 1, p. 15.) Therefore, he "propose[s] to set the rate increases for those customer classes at zero and (implicitly or explicitly) roll the current [Distribution Service Improvement Charge ("DSIC")] revenues into the regular rates." (OSBA St. No. 1, p. 15.) Second, under his alternative cost of service study, he believes that the Company's proposed revenue allocation to the Rate N/NT class is "inequitable" because "it would result in relatively small progress toward cost-based rates compared to the other classes." (OSBA St. No. 1, p. 15.) As such, he recommends modifying "the Company's proposed revenue allocation by (a) setting the rate increase for the R/RT class at 1.5 times the system average increase (1.5 x 12.6% = 18.9%), and (b) set the increases for the N/NT, DS and LFD classes to produce equivalent progress toward cost-based rates." (OSBA St. No. 1, p. 15.)

Q. Do you agree with Mr. Knecht?

A. No, I do not. In his rebuttal testimony, Mr. Brown explains why the Commission should reject Mr. Knecht's recommendation to set rate increases for Rates XD and IS at zero (UGI Gas St. No. 1-R). Thus, the Company's revenue allocation for Rates XD and IS should be adopted as filed by the Company.

In addition, the Company continues to believe that an increase for the Rate R/RT customer class of 2.0 times the system average increase is appropriate, just, and reasonable. The Company has consistently utilized this standard in its rate cases as it does address the ratemaking principle of gradualism. An increase of 2.0 times the system average increase is further supported as appropriate for Rate R/RT in this case in order to move the only class demonstrating lower than system average returns closer to paying a system average rate of return; a demonstration of equity across all rate classes. Thereafter, setting the increases for the Rate N/NT, DS, and LFD classes to produce equivalent progress toward cost-based rates as Mr. Knecht recommends is agreeable to the Company.

B. RATE DESIGN

1. RATE UNIFICATION

Q. Do any of the parties oppose the Company's proposal to unify the rates for Rate N/NT and Rate DS customers?

A. Yes. OSBA witness Knecht opposes the Company's proposal, arguing that unifying Rate DS and Rate N/NT will require a very large rate increase for former UGI Gas North Rate District customers. (OSBA St. No. 1, pp. 19-20.) Therefore, he recommends that the rate increase for those customers be no more than 1.5 times the system average increase. (OSBA St. No. 1, pp. 20-21.)

Q. Do you agree with Mr. Knecht?

A. No. As noted in my direct testimony, the Company has now proposed to unify the rates for these customers since the Company's 2019 base rate case filing. This is the Company's third attempt to unify these rates, and by not doing so now, Rate DS customers in the former South and Central Rate Districts will continue to support an intra-class subsidy for the Rate DS customers in the former North Rate District, and all Rate DS customers will still not be treated equally as a total class. The Company believes such intra-class subsidies are no longer appropriate and should be removed as part of establishing final rates in this proceeding. Specifically, as related to Rate N/NT unification, the differential in distribution commodity rates is now relatively narrow in magnitude at just \$0.36/Mcf under present rates. (*See* UGI Gas Exhibit E, page 3 of 7.) Therefore, the differing impacts of final rates for former North versus former South/Central Rate District customers should not be deemed a material barrier to final unification; if needed to achieve Rate N/NT unification, the Company would advocate a small reduction in the proposed Rate N/NT customer charge.

As related to Rate DS unification, if the Commission does not permit full harmonization as proposed by the Company, the Commission should permit former North

Rate District Rate DS rates to be increased by 2.0 times the system average increase in this proceeding. Mr. Knecht recently testified in Columbia Gas of Pennsylvania, Inc.'s ("Columbia") 2021 rate case (Docket No. R-2021-3024396) that "[t]he increase to the Large General Service is a little below 2.0 times the system average increase (which is also a rule-of-thumb for rate gradualism)." (*See* UGI Gas Exhibit SAE-2R, p. 25 of 40.) He also criticized Columbia's proposed revenue allocation because, among other reasons, "it [would] take many rate proceedings to move rates into line with allocated cost if the 1.5 times system average factor is applied." (*See* UGI Gas Exhibit SAE-2R, p. 24 of 40.) Here, consistent with Mr. Knecht's testimony in Columbia's 2021 rate case, UGI Gas is using the "rule-of-thumb for rate gradualism" of 2.0 times the system average increase and is trying to avoid "many rate proceedings" to unify the Rate DS rates, given that this is the Company's third attempt to unify these rates.

For these reasons, the Commission should also then explicitly authorize the Company to implement final Rate DS unification with a rate change to be effective October 1, 2023, or approximately one year from the date of effective rates in this proceeding, such that UGI Gas has a defined and final pathway to fully unified rates as part of the outcome of this rate case proceeding. In total, this approach will have allowed a full 5-year period (2018 through 2023) for Rate DS harmonization to occur; an approach that is fully consistent with the ratemaking principle of gradualism.

2. RESIDENTIAL CUSTOMER CHARGE

Q. Do any of the parties disagree with the Company's proposal to increase the residential customer charge from $14.60 to $19.95?

A. Yes. OCA, CEO, and CAUSE-PA disagree with the Company's proposed increase for the residential customer charge. (OCA St. No. 3, pp. 4, 36-38; OCA St. No. 4, pp. 4, 11; CEO St. No. 1, pp. 32-35; CAUSE-PA St. No. 1, pp. 4-6, 6-7, 12.)

Q. Could you please summarize OCA's position?

A. OCA witness Mierzwa recommends that the Commission deny the Company's proposal and, instead, increase the residential customer charge no higher than $16.00. (OCA St. No. 3, pp. 4, 36-38.) He claims that the Company's proposal: (1) is out of line with the residential customer charges of other natural gas distribution companies ("NGDCs") in Pennsylvania; (2) violates the principle of gradualism; and (3) is inconsistent with the Commission's goal of fostering energy conservation. (OCA St. No. 3, pp. 36-38.) Mr. Mierzwa also asserts that a higher customer charge "may counter the EE&C Plan's effectiveness, as it limits the amount of potential bill savings through the reduction of variable charges, which may in turn, discourage ratepayers from implementing energy conservation measures." (OCA St. No. 3, pp. 37-38.) Relatedly, OCA witness Colton recommends that the residential customer charge proposed by Mr. Mierzwa be approved. (OCA St. No. 4, pp. 4, 11.)

Q. Do you agree with Mr. Mierzwa?

A. No. First, a strict comparison of the customer charges between utilities, on its own, is not appropriate in determining whether the customer charge that UGI Gas has proposed here is just and reasonable. Such an approach assumes that the customer component of cost of service is the same for all NGDCs in the Commonwealth, and there is no evidence to support this conclusion. Also, the relative level of customer charges can impact the frequency of base rate filings, which are the only way to change customer charges. As an example, National Fuel Gas Distribution Corporation ("National Fuel") has not had a base rate case for more than 20 years, which is certainly reflected in its lower customer charge. Moreover, UGI Gas and Columbia have had recent base rate proceedings, due in large part to their active main replacement programs. Therefore, it is not surprising that these two utilities would have higher customer charges that are reflective of the supporting cost of service analyses.

Here, UGI Gas's proposed customer charge is fully supported by its cost of service study, which shows that an even higher customer charge is appropriate. For Rate R/RT, UGI Gas Exhibit D, Schedule G, pages 1-2, show a fully-allocated customer cost per bill of $33.29 and a direct customer cost per bill of $27.47. The Company's direct costs per bill are greater than the customer charges proposed by the Company in this case. In other words, the Company's proposed customer charges are fully supported by its costs. The direct customer costs for service to residential customers are well in excess of the Company's proposed customer charge of $19.95 per month at $27.47 per month, as shown in UGI Gas Exhibit D, Schedule G, page 2 of 2. I would also note that OSBA witness Knecht performed his own cost of service analysis, which likewise supports the Company's proposed $19.95 customer charge for Rate R/RT. Specifically, he testified that his "CSAS simulation at the UGI Gas proposed rates" shows that "the full customer component of residential class costs is about $33 per customer per month." (OSBA St. No. 1, p. 22.) This means that the Company must then recover the remaining portion of those direct customer costs above $19.95 per month, which are still fixed costs, on a volumetric basis rather than through a fixed customer charge. The mathematical result of this mismatch between cost structure and rate structure is that lower-than-average use residential customers are inherently subsidized by higher-than-average use residential customers. By comparison, Mr. Mierzwa provides no cost of service support for his residential customer charge maximum of $16.00 per month.

A more correct categorization of the Company's proposed customer charge is that it will produce a more appropriate recovery of the cost to serve lower use customers. By not moving the customer charge toward an amount that is reflective of direct customer cost, higher use customers will continue to subsidize lower use customers. As discussed in the rebuttal testimony of Mr. Adamo (UGI Gas St. No. 12-R), low-income customers are, on average, higher use customers. Thus, an increase in customer charge both better aligns cost recovery with cost causation and also serves to reduce the burden on low-income customers. As to the issue of encouraging conservation, even with the Company's as-proposed $19.95 customer charge, the Company's Rate R/RT volumetric charges will be required to increase under the Company's $82.7 million proposed increase. Moreover, the other volumetric charges, such as the purchased gas cost rate, are unaffected. Thus, under the Company's proposal as shown in UGI Gas Exhibit E, page 2 of 7, the incentive for customer conservation would be increased under proposed rates ($4.9996/Mcf) when compared to that incentive at current rates ($4.1104/Mcf), as the customer will continue to save on the volumetric portion of their bill.

In addressing the issue of gradualism, it is important to note that the concept of gradualism should be applied to the <u>overall</u> distribution rate increase impacting the total bill and not individual sub-components of the rate design. For example, if a customer's monthly customer charge increased by $5 but then the other distribution charges were decreased by $5 in total, there would be no net impact on the customer's bill. Therefore, separate consideration of gradualism for changes to the customer charge and the other distribution charges is not appropriate. Instead, gradualism should be used to evaluate the rate increase's total overall bill impact on the distribution charges. Thus, Mr. Mierzwa's focus on the concept of gradualism applying to a subset of bill charges is misplaced.

Q. CAUSE-PA witness Geller also opposes the Company's proposed residential customer charge and recommends that any rate increase be applied to the volumetric charge only. (CAUSE-PA St. No. 1, pp. 32-35.) Why does he disagree with the Company's proposal?

A. Mr. Geller claims that the proposed increase in the residential customer charge will adversely affect low-income customers and the Company's Low-Income Usage Reduction Program ("LIURP"). (CAUSE-PA St. No. 1, pp. 32-35.)

Q. Similar to CAUSE-PA witness Geller, CEO witness Brady opposes any increase to the monthly customer charge. (CEO St. No. 1, pp. 4-6, 6-7, 12.) Why does he disagree with the Company's proposal?

A. Mr. Brady believes that the proposed increase to the residential customer charge will affect a customer's ability to conserve and that changes to funding for LIURP and other universal service programs can help mitigate that effect. (CEO St. No. 1, pp. 4-6.) He also cites a statement by former Commissioner James Cawley in National Fuel's 2006 base rate case as alleged support for his position. (CEO St. No. 1, pp. 6-7.)

Q. Do you agree with CAUSE-PA witness Geller and CEO witness Brady?

A. No. As explained in the rebuttal testimony of UGI Gas witness Heppenstall (UGI Gas St. No. 10-R), UGI Gas witness Taylor (UGI Gas St. No. 11-R), and UGI Gas witness Adamo (UGI Gas St. No. 12-R), their criticisms of the Company's proposed increase for the residential customer charge lack merit. Therefore, I maintain that the Company's proposed increase for the residential customer charge should be approved.

Q. Do you agree with OCA witness Mierzwa that his recommended customer charge of $16 should be scaled back if the Company is not awarded the fully requested increase in this case?

A. No. As explained above, the Company's proposed customer charge of $19.95 is fully supported by the both the Company's cost of service study as well as the one provided by OSBA. These fixed costs will not change in any material amount as a result of the ultimate revenue increase approved in this case. Thus, even if a lower amount were approved and Mr. Mierzwa's $16 customer charge were adopted, the customer charge should not be further scaled back.

3. BALANCING CHARGES

Q. Does OCA witness Mierzwa recommend any changes to the Company's balancing service charges?

A. Yes. Mr. Mierzwa disagrees with the Company's proposal to decrease the current charge for Rate NNS from $0.4880 per Mcf/day of elected No-Notice Allowance ("NNA") to $0.1860 per Mcf/day of elected NNA. (OCA St. No. 3, pp. 39-40.) He also disputes the

Company's proposed balancing charges for Rate MBS, which are based on an anticipated average transportation customer monthly imbalance of 2.5737%. (OCA St. No. 3, pp. 40-42.)

Q. Please summarize Mr. Mierzwa's position regarding the Company's proposed change to Rate NNS's balancing charge.

A. Mr. Mierzwa contends that Purchased Gas Cost ("PGC") and "non-Choice transportation customers should receive a contribution toward the fixed costs associated with the storage assets utilized to provide service under Rate NNS" because they "are currently responsible for all of the demand charges associated with the interstate pipeline storage resources utilized to provide Rate NNS." (OCA St. No. 3, p. 40.) For these reasons, Mr. Mierzwa recommends that the storage trip cost be adjusted to include the demand charges associated with providing service under Rate NNS on a 100% load factor basis. (OCA St. No. 3, p. 40.) Doing so would increase the storage trip cost to $1.425 per Mcf and increase the charge for Rate NNS service to $1.9960 per Mcf/day of elected NNA (*i.e.*, an increase of $1.81 per Mcf/day of elected NNA from the Company's proposed charge of $0.1860 per Mcf/day of elected NNA, and an increase of $1.508 per Mcf/day of elected NNA from the Company's current charge of $0.4880 per Mcf/day of elected NNA). (OCA St. No. 3, p. 40.)

Q. Do you agree with Mr. Mierzwa's position on the Rate NNS balancing charge?

A. No, I do not. Non-choice transportation customers pay for their use of interstate pipeline storage resources through both Rates NNS *and* Rate MBS. In particular, Rate NNS accommodates daily imbalance variances, while Rate MBS accommodates carrying the net imbalance from one month into the next without the need to cash-in/out, or bring the balance to zero, at month end. Of important note, the same storage assets are used to provide both these services in aggregate. Thus, one must look at the full contributions non-choice transportation customers make to the cost of interstate pipeline storage resources by considering revenues paid under both Rate NNS and Rate MBS and determine if any underpayment for these services is being made by non-choice transportation customers. In his review of Rate NNS charges, Mr. Mierzwa has not performed any assessment of how much the same non-Choice transportation customers will already pay towards the cost of the demand and capacity costs of storage resources as being Rate MBS subscribers under the Company's proposal. Thus, he has not considered if Rate MBS payments already pay for the demand and capacity costs at a sufficient level, which would then require no additional contribution to these fixed costs for the provision of Rate NNS service. The Company has only assigned true incremental variable storage costs for injection and withdraw costs to Rate NNS under proposed rates and believes Mr. Mierzwa should do the same.

Q. Have you performed such an assessment of storage utilization and cost allocation for Rate NNS and Rate MBS subscribers, which demonstrates no fixed storage and demand costs should be allocated to Rate NNS?

A. Yes. Because Rate MBS subscribing customers are allocated storage demand and capacity costs for storage under the Company's proposed Rate MBS, it is appropriate to quantify how much demand and capacity these customers are paying for currently. The average monthly Rate MBS revenue is $112,084 for the 12-month period ending September 2021. (*See* UGI Gas Exhibit SAE-3R, a copy of Attachment OCA-I-8(d), which the Company provided in discovery and contains actual MBS revenues by month for the period.) Also, as noted on UGI Gas Exhibit SAE-9, line 1, the weighted average 100% load factor unit cost for storage demand and capacity is $1.292/Mcf. Thus, by division, it can then be determined that non-Choice transportation customers are paying for 86,752 Mcf ($112,084/$1.292) of storage demand and capacity by virtue of their Rate MBS payments. Again, this capacity is the same capacity utilized to provide both Rate MBS service as well as Rate NNS service. Therefore, if the daily utilization of Rate NNS's balancing service does not exceed 86,752 Mcf, then any additional allocation of storage demand and capacity costs to Rate NNS, as Mr. Mierzwa is proposing, is inappropriate and unsupported based on cost causation principles.

Here, no additional cost assignment of storage demand and capacity costs is appropriate because Rate NNS service only requires the use of 33,772 Mcf of the 86,752 Mcf. Specifically, Rate NNS customers' average daily metered use is 216,053 Mcf. (*See* UGI Gas Exhibit SAE-4R, a copy of Attachment OCA-I-9, page 3 of 3, which the Company provided in discovery.) Rate NNS customers also have an actual usage reduction on weekday versus weekend days of 15% per UGI Gas Exhibit SAE-8, Weekend Load Reduction Factor ("WELF") value. Solving for the average weekday and weekend usage levels using the 15% reduction factor, it can be determined that average weekday use is 225,702 Mcf per day and average weekend use is 191,930 Mcf per day. In proof, 5 days multiplied by 225,702 Mcf per day plus 2 days multiplied by 191,930 Mcf per day and then all divided by 7 days equals 216,053 Mcf per day on average. As such, Rate NNS customers require 33,772 Mcf (*i.e.*, average weekend usage of 225,702 Mcf minus average weekday usage of 191,930 Mcf) of storage demand and capacity in order to accommodate weekend versus weekday balancing variances. As these same customers are already paying for 86,752 Mcf of capacity under Rate MBS, and because providing these same customers with Rate NNS service only requires the use of 33,772 Mcf of that total 86,752 Mcf, no additional cost assignment of storage demand and capacity costs is appropriate. Rate NNS need only pick up the incremental storage commodity injection/withdrawal round trip costs – as the Company has proposed for Rate NNS. (*See* UGI Gas Exhibit SAE-8.) Thus, Mr. Mierzwa's proposal to assign additional storage demand and capacity costs to Rate NNS is not supported, and his recommendation should be rejected by the Commission.

Q. Please summarize Mr. Mierzwa's position regarding the Company's proposed Rate MBS balancing charges.

A. Mr. Mierzwa alleges that the Company's proposed Rate MBS balancing charges "are not reasonable" because instead of being "based on an anticipated average transportation customer monthly imbalance of 2.5737 percent," they should be "based on a transportation monthly imbalance of to [sic] 5 percent to reflect the additional 5 percent monthly imbalance tolerance provided under Rate MBS." (OCA St. No. 3, pp. 41-42.) He then presents the proposed Rate MBS charges in OCA Schedule JDM-3.

Q. Do you agree with Mr. Mierzwa's position on the Rate MBS balancing charges?

A. No. Mr. Mierzwa fails to recognize that the 2.5737 percent imbalance on which the Rate MBS calculation update is based is not an "anticipated" average transportation customer monthly imbalance. Rather, as noted in footnote 2 to that value on UGI Gas Exhibit SAE-9, the 2.5737 percent imbalance is based on the "[a]verage monthly imbalance percentage include[ing] all non-Choice transportation customers electing MBS" and the "[a]verage monthly imbalance percentage based on historical data for the period Nov 2020 through Oct 2021." As a result, the Company's proposed updates to Rate MBS are based on actual use, whereas Mr. Mierzwa's proposes to assign a full 5 percent allocation to Rate MBS subscribers based on the maximum amount a Rate MBS customer could utilize. Such an approach is not appropriate when the best available data of "actual" utilization is readily available. Moreover, by crediting all Rate MBS revenues to the PGC, Mr. Mierzwa's proposal would give PGC customers a windfall of additional revenue and create an unjust cross-subsidy.

Q. Has the Company used actual data for Rate MBS calculations historically?

A. Yes. The Company has historically utilized actual data from the 12-month period ending prior to the rate case filing when developing a cost allocation for Rate MBS. The benefits of having that actual data available to perform precise Rate MBS calculation updates based on actual use should be recognized by Mr. Mierzwa in lieu of advocating for a 5% maximum based on a hypothetical use. Thus, Mr. Mierzwa's proposed updates to Rate MBS should be rejected by the Commission in favor of the Company's more accurate cost allocation method.

4. PROPORTIONATE SCALE-BACK OF RATE INCREASE

Q. If the Commission awards less than the Company's proposed base rate increase, both OCA witness Mierzwa and OSBA witness Knecht suggest a proportionate scale-back

of the rate increase. (OCA St. No. 3, p. 35; OSBA St. No. 1, pp. 16-17, 20-21, 23.) How do you respond?

A. If the Commission grants less than the requested increase (termed a "scale back"), then the increases by classes as proposed by the Company should be adjusted proportionate across all classes. Once allocations are determined for each class, the scale-back should then be applied to adjust only the distribution charge portion of the Company's proposed rates as, under both the Company's and OSBA's cost allocation methodologies, the Company's as-proposed customer charges are fully supported.

IV. TARIFF CHARGES

Q. CAUSE-PA witness Geller recommends that UGI Gas no longer assess late fees and reconnection fees to low-income customers because, according to him, they unfairly penalize low-income customers that are unable to afford their bills. (CAUSE-PA St. No. 1, pp. 6, 37.) How would his proposal affect the test year revenue?

A. The reasons why Mr. Geller's recommendation is not appropriate to adopt are discussed in the rebuttal testimony of UGI Gas witness Adamo (UGI Gas St. No. 12-R), and Mr. Adamo specifically explains how the Company does not assess late fees to confirmed low-income customers who receive LIHEAP or are on CAP. He also explains that reconnection fees address the costs incurred when UGI Gas dispatches personnel to restore service.

However, should the Commission adopt Mr. Geller's recommendation regarding reconnection fees, FPFTY present rate revenues would need to be adjusted downward by the related revenues. Pursuant to the FY21 reconnection data provided in the table below, the resulting adjustment would lower FPFTY margin revenues by $0.275 million for

Reconnection Fees. This reduction would commensurately add to the Company's requested increase by a like amount.

Number of Reconnections By Month in 2021	**CLI**	**Total Reconnection Fees**
January	0	$0
February	1	$73
March	5	$365
April	54	$3,942
May	733	$53,509
June	951	$69,423
July	485	$35,405
August	360	$26,280
September	430	$31,390
October	289	$21,097
November	381	$27,813
December	82	$5,986
Total	***3,771***	***$275,283***

V. <u>CONCLUSION</u>

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

UGI Gas Exhibit SAE-1R

UGI Utilities, Inc. - Gas Division
Docket No. R-2021-3030218
UGI Gas 2022 Base Rate Case
Responses to I&E (RS-12-D thru RS-16-D)
Delivered on March 15, 2022

I&E-RS-14-D

Request:

Reference UGI SDR-RR-11(a) page 8 as of September 2023 showing 87.9625 Mcf labeled “FY 23”.

A. Does the 87.9625 Mcf represent the normal annualized usage of a customer on September 30, 2023, or some other point in time?

B. Does the 87.9625 Mcf represent the average normal annualized usage for the twelve months ending March 31, 2023, or some other period of time?

Response:

A. The normal annualized usage of a customer as of September 30, 2023 is 87.8138 Mcf, and is noted as “Fully Projected Future Test Year Annualized FY 23” in the last column shown on page 8 of UGI SDR-RR-11(a). The value of 87.9625 Mcf represents the normalized annualized usage as of March 31, 2023. By way of further response, for the end of any specific month listed in the first column of the referenced page 8, the normalized annualized usage for such month can be determined by summing the 6 months of “1 Month UPC” data up to such specific month and the 6 months following such specific month; this represents the use of a mid-period convention in determining UPC.

This projection of data is needed in order to properly annualize customer usage for conditions existing at the end of the FPFTY for all customers in the residential class. Specifically, in order to establish use per customer as of the end of the FPFTY, or as of September 30, 2023, the company utilized a mid-period convention in order to capture the full annualized impacts related to customer conservation activities through that date. As September 30, 2023, is the middle of the annual period ending March 31, 2024, the projected annualized value for use per customer for that 12-month period would represent the annualized rate of use for those customers existing as of September 30, 2023.

A single customer example will help demonstrate this mid-point convention use in calculating usage per customer. For example, assume the 12-month history of an individual customer’s actual gas usage for a twelve month period ending on September 30, 2023, totals 85 Mcf and is reflective of the customer’s usage of their then-existing 80% efficient heating equipment during the 2022-2023 heating season (the season

UGI Utilities, Inc. - Gas Division

UGI Gas 2022 Base Rate Case
Responses to I&E (RS-12-D thru RS-16-D)
Delivered on March 15, 2022

I&E-RS-14-D (Continued)

ending March of 2023). If that customer installs a new, 95% efficient heating system in July of 2023, the customer's annual projected usage will drop to 71.5 Mcf per year as of the day the new system is installed in July. (85 Mcf use x 0.80 old furnace efficiency = 68 Mcf heat requirement; 68 Mcf heat requirement/0.95 new furnace efficiency = 71.5 Mcf use) The Company's method captures this new, lower usage resulting from an installation prior to the end of the FPFTY and is appropriate to include in an annualization.

B. Yes. Please see the response to A, above.

Delivered on March 15, 2022

I&E-RS-16-D

Request:

Reference UGI SDR-RR-11(a) pages 5-8 where the Company utilized 19 years (2003-2021) of heating degree and usage data.

A. Explain if utilizing 19 years of actual data produces more statistically accurate projection than using a shorter time-period.

B. If yes, provide all statistical or mathematical analysis that shows that utilizing 19 years of actual data produces more statistically accurate projection than using a shorter time- period.

C. If it does not produce more statistically accurate results, explain why the Company selected 19 years of data.

D. Does the Company believe that utilizing a shorter and more recent time period such as five or ten years also produces a statistically accurate projection? If not, explain why not.

Response:

A. The Company evaluated statistical significance of its approach by review of the regression result p-values. In short, the resulting p-values, which are less than 0.05 as shown on UGI Gas SDR-RR-11(a) page 9, demonstrate statistical significance. A general understanding of p-value significance can be found on the statistical website article referenced here:

https://blog.minitab.com/en/understanding-statistics/what-can-you-say-when-your-p-value-is-greater-than-005 . Based on this reference article, analyses fall into "statistically significant" or "not statistically significant", but such analyses are not appropriately utilized to claim one analysis "more statistically accurate" than another. Additionally, the Company has not evaluated all potential time period options for statistical significance (i.e., 17 years, 16 years, 15 years, 14 years, etc.) but rather has relied upon an approach of using a data set which contains all historically available data. Historically this approach has consistently resulted in statistical significant output.

UGI Utilities, Inc. - Gas Division
Docket No. R-2021-3030218
UGI Gas 2022 Base Rate Case
Responses to I&E (RS-12-D thru RS-16-D)
Delivered on March 15, 2022

I&E-RS-16-D (Continued)

By way of further response, the Company included 18 years (FY 04-FY 21) in UGI SDR-RR-11(a). In the UGI Gas rate case two years ago, the Company used 16 years of data in its analysis. At that time, that 16-year period represented the time period for which the Company had common data across all three of the former UGI gas utility rate districts: UGI South Rate District, UGI North Rate District, and UGI Central Rate District. October 2003 was the beginning of that dataset and thus the Company used all available historical data. (The use of non-common data, or differing periods by rate district, would result in different weighting that would skew results and thus could not be used.) The Company has now extended that 16-year period for the additional two years of data which has been collected since that time and has appended those additional years to the data set used two years ago in forming the 18-year analysis period for this case.

DIRECT TESTIMONY OF ROBERT D. KNECHT

1. Witness Identification and Summary of Conclusions

Q. Mr. Knecht, please state your name and briefly describe your qualifications.

A. My name is Robert D. Knecht. I am a Principal of Industrial Economics, Incorporated ("IEc"), a consulting firm located at 2067 Massachusetts Avenue, Cambridge, MA 02140. I specialize in the economic analysis of basic industries. As a large part of my consulting practice, I have prepared analyses and expert testimony in the field of regulatory economics on a variety of topics. I obtained a B.S. degree in Economics from the Massachusetts Institute of Technology in 1978, and a M.S. degree in Management from the Sloan School of Management at M.I.T. in 1982, with concentrations in applied economics and finance. I am appearing in this proceeding on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"). My résumé and a listing of the expert testimony that I have filed in utility regulatory proceedings during the past five years are attached in Exhibit IEc-1.

I submitted testimony in the base rates proceedings involving Columbia Gas of Pennsylvania, Inc. ("Columbia" or "the Company") in 2008 (Docket No. R-2008-2011621), 2010 (Docket No. R-2009-2149262), 2011 (Docket No. R-2010-2215623), 2012/2013 (Docket No. R-2012-2321748), 2014 (Docket No. R-2014-2406274), 2015 (Docket No. R-2015-2488056), 2016 (Docket No. R-2016-2529660), 2018 (Docket No. R-2018-2647577) and 2020 (Docket No. R-2020-3024296). I also submitted testimony in a variety of Section 1307(f) and other proceedings involving the Company over the past decade.

Q. Please describe your assignment in this matter.

A. The OSBA requested that I review the Company's filing in this proceeding to evaluate whether the rates proposed for small business customers are consistent with sound economics and regulatory principles. My analysis focuses primarily on issues of cost allocation, revenue allocation and rate design. If I have not addressed a particular issue, it cannot be inferred that I agree with Columbia's proposal for that topic.

Q. Please provide some background regarding the Company's filing, in the context of recent base rates proceedings.

A. Columbia submitted base rates filings in 2008, 2010, 2011, 2012, 2014, 2015, 2016, 2018, 2020 and now 2021. Prior to 2008, Columbia had not filed a base rates case since 1995. This steady flow of rate cases has generally been prompted by the Company's mains and services replacement program, undertaken over the past decade. A summary of the base rates filing amounts and settlement rate increases is shown in Table IEc-1 below.

Table IEc-1
Recent Columbia Base Rate Increase Cases

Docket No.	Test Year Ending	Proposed Increase ($mm)	Award Amount ($mm)	Award Percent
R-2008-2011621	Sep-2008	$58.9	$41.5	71%
R-2009-2149262	Sep-2010	$32.3	$12.0	37%
R-2010-2215623	Sep-2011	$37.8	$17.0	45%
R-2012-2321748	Jun-2014	$77.3	$55.3	72%
R-2014-2406274	Dec-2015	$54.1	$32.5	60%
R-2015-2468056	Dec-2016	$46.2	$28.0	61%
R-2016-2529660	Dec-2017	$55.3	$35.0	63%
R-2018-2647577	Dec-2019	$46.8	$26.0	56%
R-2020-3017206	Dec-2021	$100.4	$63.5	63%
Total		**$509.1**	**$310.8**	**61%**
R-2021-3024296	Dec-2021	$98.3	--	--

Note that Columbia's relatively large increase in the R-2012-2321748 proceeding was due in part to the switch to using a fully forecasted future test year approach, thereby incorporating nearly three full years of (mostly forecast) capital expenditures in the mains replacement program since the prior base rates case. Recognizing that change, it is apparent that the Company's cost requirements have accelerated, with relatively large proposed increases in both 2020 and the current case.

With its proposed increase, Columbia appears to now have the dubious distinction of having the highest residential and small commercial base rates among large natural gas distribution companies ("NGDCs") in the Commonwealth).[1]

Q. Is there an end in sight for these regular large base rate increases?

A. While I have not tracked down the Company's intermediate term financial forecast at this writing, it does not appear so.[2]

The Company has generally cited to aggressive replacement of obsolescent and unsafe equipment as the primary driver for the ten base rates cases of the past thirteen years, which has resulted in enormous rate increases. Over that period, the Company reports that it has installed 1,583 miles of pipe, of which 1,151 represent priority pipe replacements. As percentages of its 7,656 miles of system pipe, these represent 21 percent and 15 percent respectively.[3] Total expenditures over that period for mains was about $1.4 billion.

Despite this massive capital spend, the Company appears to report that nearly 40 percent of its gas distribution mains either require priority replacement or are nearing the end of their useful lives.[4] Measured as a percent of system mains, this includes 15 percent of mains that are cast iron or bare steel that are currently deemed to be priority replacement and are recognized in the Company's current Long-Term Infrastructure Improvement Plan ("LTIIP"). In addition, in this proceeding, the Company indicates that an additional 8 percent of its total mains are "pre-1982 plastic" and 16 percent are "pre-1971 coated" pipe, both of which are deemed to be nearing the end of their useful life and will be incorporated into the Company's next LTIIP. Moreover, even within the current LTIIP, Columbia forecasts an accelerating rate of service line replacements.[5]

---

[1] See RDK WP1, "Rate Comp" worksheet.

[2] I understand that the response to OSBA-I-1 was inadvertently not timely posted to the Company's "Box" site for responses.

[3] Columbia Statement No. 1 at 14, OSBA-I-2, OSBA-I-3, RDK WP2.

[4] OSBA-I-2.

[5] *Id.*

The cost for this enormous physical replacement requirement is compounded by the rapidly increasing cost per mile to replace mains, reflecting a variety of factors not least of which is the burgeoning demand for qualified contractors from all Pennsylvania NGDCs. Between 2007 and 2020, the cost to replace a mile of pipe has increased at an average annual rate of about 9.5 percent, far in excess of consumer price inflation.[6] Over that period, the cost per mile has essentially tripled.

Q. Will the Company be able to fully recover its allowed return of and on this massive capital spend over the longer term?

A. I do not know. We all recognize that there are growing societal and political concerns regarding the burning of fossil fuels, and there is concomitant increasing pressure for electrification, not only in transportation but in home heating. For the past fifteen years, the Company's cost competitiveness has been rescued by the hydraulic fracturing boom and the resulting decline in natural gas commodity prices. It is most unlikely that will happen again, given the low current market commodity prices and the financial pressures on drillers. If Columbia's distribution rates continue to grow at the historical rate, heating alternatives (heat pumps, mini-splits) will become more economically attractive to customers. And, of course, there is the potential for increased regulation of CO_2 emissions for both gas consumers and gas producers, both of which could further increase the cost of gas.

In this light, it is somewhat surprising that the Company does not make longer term financial forecasts to evaluate these issues. The Company reports that it has no detailed financial forecast longer than five years.[7]

Q. What are the implications of these trends for the current rate proceeding?

A. Given the lack of a long-term financial forecast, I do not believe that the Company has demonstrated that its overall capital spending plan is prudent. While I cannot comment on the legal issues, I believe the Commission should advise Columbia that future capital expenditures have not been shown to be part of a demonstrably prudent long term investment

[6] RDK WP2 "Main" worksheet.

[7] OSBA-I-1.

plan, and that they can be subjected to *ex post* prudence reviews should they become stranded. At a minimum, I believe the Commission should require Columbia to demonstrate that it has a long-term viable business as part of its next LTIIP filing.

Q. Do you have any preliminary general comments regarding cost allocation and rate design in this proceeding?

A. I do. In the Company's last base rates proceeding at Docket No. R-2020-3017206, the Commission approved the use of a "peak-and-average" ("P&A") method for mains cost allocation, and the Commission accepted the Company's position with respect to negotiated rate revenues from its "flex" rate customers.[8] For the current proceeding, these decisions have three significant impacts.

First, the costs allocated to the regular rate larger industrial customers in the Rate LDS class are roughly double the revenues currently recovered from that class, a shortfall of some $20 million. Moving rates reasonably into line with allocated cost for this class cannot be achieved in a single proceeding, and thus much of this shortfall must be borne by other classes. Moreover, this class can reasonably expect significant rate increases on top of the system average base rate increases discussed above.

Second, the costs allocated to negotiated "flex" rate customers are nearly 10 times higher than the revenues generated by these customers, under the negotiated rate agreements that were generally approved by the Commission in the last base rates case. This results in a shortfall of $30 million, none of which can be recovered from the flex rate customers due to the negotiated contract rates. This shortfall must therefore be reassigned to the other rate classes, including the regular rate LDS customers.

Third, because no mains costs are classified as customer-related, the customer portion of allocated costs is materially lower than that presented in previous cost evaluations. This change reduces the potential for cost-based customer charge increases, particularly for non-residential rate classes.

[8] Opinion and Order, Pennsylvania Public Utility Commission, Docket No. R-2020-3017206, Order Entered February 19, 2021, pages 211-218 and 240-241.

2. Review of Columbia's Non-Residential Rate Classes

Q. Before getting into the details of your analysis, please summarize the rate classes under which businesses take service from Columbia.

A. Columbia's tariff has a number of schedules under which non-residential customers take service. These tariff schedules are generally distinguished by size of customer (as measured by annual throughput) and type of service. Service types include the following:

- Sales service, in which customers procure both gas supplies and distribution service from Columbia;
- Retail transportation "Choice" service, in which smaller customers can purchase gas supply from NGSs and purchase both bundled load balancing services and distribution services from Columbia;
- Transportation service, in which larger non-residential customers purchase gas supplies from NGSs, purchase load balancing services as needed from Columbia and/or their NGSs, and purchase distribution service from Columbia.

For cost allocation purposes, Columbia aggregates these disparate rate classes into rate class groups.

In total, the non-residential rate classes represent about 58 percent of Columbia's total throughput, or about 47 million of Columbia's total 82 million Dth in the test year. Customer size varies widely, ranging from small businesses that consume less than 10 Dth per year to very large industrial customers with individual loads exceeding 2.5 million Dth per year.

The following are the non-residential rate class groups specified by Columbia for its cost allocation analysis. Because the Company's abbreviations for the rate class groups are somewhat contradictory, I include descriptive names for these groups.

SGSS/SCD/SGDS ("Small General" or "SGS"): This group consists of three tariff schedules: Small General Sales Service ("SGSS"), Small Commercial Distribution ("SCD"), and Small General Distribution Service ("SGDS"). To reflect the range of costs associated with serving these diverse classes, Columbia has adopted differentiated customer and commodity charges for customers in this group of classes, split between customers with annual consumption above and below 644 Dth. Maximum annual throughput for this class is 6,440 Dth/year. Consistent with recent past practice, the Company separates these two groups for both cost allocation and rate design purposes. For simplicity, I refer to the customers with annual consumption below 644 Dth as "SGS1," and the larger customers as "SGS2."

Within these two rate class groups, SGSS is sales service, SCD is retail "Choice" transportation service and SGDS is regular transportation service.

In the SGS1 group, about 69 percent of the load is to sales customers, implying a shopping rate of 31 percent, which is materially higher than the residential shopping rate of 21 percent. The average SGS1 customer size is about 185 Dth per year, which is a little more than double the size of the average residential customer. Of the shopping customers in this group, about two-thirds of the load is in the Choice program. Overall, this class represents about 12 percent of the Company's non-residential throughput.

In the SGS2 group, about 43 percent of the load relate to sales customers, with the majority of SGS2 shopping customers using traditional transportation service. The average SGS2 customer size is 1,584 Dth/year, which is about 9 times the size of the average SGS1 customer. Overall, this class represents 19 percent of the Company's non-residential throughput.

SDS/LGSS ("Medium General"): This rate class group includes both sales and transportation service customers, taking service under Rate Schedules LGSS (sales service) and Small Distribution Service ("SDS") (transportation service). Columbia's "Small" designation for the transportation customers in this tariff category is misleading, since the *minimum* throughput is 6,440 Dth per year, matching the *maximum* size requirement for the Small General customers. The maximum annual throughput for this class is 54,000 Dth per year, with an average annual customer throughput of about 15,600 Dth. This rate class group (excluding the flex rate customers) represents about 16 percent of non-residential throughput.

LDS/LGSS ("Large General"): This class includes the larger sales customers in the LGSS class along with the transportation service customers taking service under Rate Schedule Large Distribution Service ("LDS"). Minimum throughput is 54,000 Dth per year, matching the Medium General Service upper limit. A significant share of the volume for this rate class is included in the "Flex" rate class category for cost allocation, revenue allocation and rate design purposes.

MDS ("Mainline"): Customers in this rate class group take service under Rate Schedule Main Line Distribution Service ("MDS").[9] To be eligible for this service, customers must have annual throughput over 27,400 Dth *and* be directly connected to an interstate pipeline (Class I), *or* have a minimum annual demand of 214,600 Dth *and* be located within two miles of an interstate pipeline interconnection (Class II). Because these customers require very little in the way of distribution facilities, and because Columbia reports that they are credible "bypass" threats, Columbia uses different cost allocation and rate design methods for this rate class group.

Consistent with recent practice, the Company does not treat large general sales service ("LGSS") customers as a separate rate class for cost allocation purposes, and it includes those customers with transportation customers of comparable size. As I testified in the last several proceedings, I agree with this approach. Sales customers taking service under Rate LGSS are free to switch to the comparable transportation service schedule, and, generally, vice versa. Thus, it is reasonable that the distribution rates for all customers of a similar size be the same, so as to avoid distorting the decision to shop. Since the distribution rates are the same, there is no need to separately allocate costs. Moreover, the total load associated with Rate LGSS is relatively small.

Finally, I note that the tariffs for the Company's larger rate classes allow for discounted, negotiated "flex" rates, for customers who have the potential to economically use an alternative fuel or bypass the distribution system to interstate pipelines or local supply. Rates for these customers are therefore set based on market conditions rather than utility cost to

[9] Columbia's tariff includes a Main Line Sales Service schedule, but no customers currently take service under that schedule.

serve. To allow the Company to set regular tariff rates based on allocated cost, the customers who currently have flexed rates are segregated into a separate class for cost allocation purposes.

3. <u>Flex Rate Customers</u>

Q. Please summarize the economic and regulatory issues surrounding Columbia's "flex rate" customers.

A. In general, regular specific tariff rates are set based on allocated cost of service and other rate design criteria, and these tariff charges apply to all customers within the rate class. However, under certain conditions, it can be beneficial to all parties to allow the utility to negotiate rate discounts from the regular tariff rates to retain customers who have lower-cost competitive options. These options include alternative fuel, pipeline bypass, and in the bizarre case of western Pennsylvania, "gas-on-gas competition" from other natural gas distribution companies ("NGDCs").[10] The specific criteria where negotiated discounts are in the interests of all ratepayers are:

- Negotiated rates exceed the incremental cost of providing service to the customer. Thus, for example, if Columbia needs to upgrade its distribution system to continue to provide service to a flex rate customer, the tariff rates must be sufficient to justify that expenditure.

- In the case of alternative fuel competition, negotiated tariff rates plus the cost of gas should be set at the full delivered cost of the alternative fuel plus the customer's costs of conversion.

- In the case of pipeline bypass, negotiated tariff rates are justified only if there is a credible engineering plan for how the customer could physically bypass the NGDC. If that criterion is met, the negotiated tariff rate plus the cost of gas should be set at the customer's full cost for bypassing the NGDC and taking service directly from

[10] NGDCs do not "compete" for customers in overlapping service territories on the basis of cost or service. They have historically "competed" on the basis of which NGDC can offer the largest rate discount to those customers who have options and pass the cost for those discounts on to captive customers who do not have options.

the pipeline. This cost necessarily includes obtaining the necessary permits to allow for such bypass.

- In the case of NGDC "competition," the Commission has determined that where customers are served in overlapping NGDC service territories, the minimum flex rate that can be charged is the lowest regular tariff rate of the NGDCs serving the customer's location.[11]

Q. Please summarize the positions of the parties and results of the last base rates proceeding regarding flex rates.

A. Columbia Gas argued that its then current revenues for flex rate customers reasonably represented the maximum revenues that the Company could earn from those customers given competitive conditions. The Company therefore argued that those rates were reasonable, and that no portion of the rate increase could be assigned to those customers.

I argued that the Company failed to demonstrate that some of the claimed flex rates were justified, and that the revenue assigned to flex rate customers should include an additional $4.4 million in present rates and $3.3 million as a contribution to the proposed increase.[12]

No other witness challenged the magnitude of the Company's flex rate discounts.[13] Mr. Ethan H. Cline, representing the Commission's Bureau of Investigation and Enforcement ("I&E"), recommended that the Company be required in the future to update a competitive alternative analysis for any customer that had not had its alternative fuel source verified for a period of ten years.

[11] *Opinion and Order,* Pennsylvania Public Utility Commission, Docket Nos. P-2011-2277868 and I-2012-2320323, Order Entered May 4, 2017, page 52. To my knowledge, there has not been a firm resolution as to how the lowest applicable tariff rate should be defined. See *Opinion and Order,* Pennsylvania Public Utility Commission, Docket Nos. P-2011-2277868 and I-2012-2320323, Order Entered June 13, 2019.

[12] OSBA Statement No. 1-S at 5, Docket No. R-2020-3018835.

[13] CAUSE-PA appears to have argued that flex rate customers should be required to contribute to the recovery of universal service costs.

In the Recommended Decision, Administrative Law Judge ("ALJ") Katrina L. Dunderdale implicitly rejected my recommendation without analysis or comment. ALJ Dunderdale recommended that the I&E proposal for decennial competitive alternative analyses be approved.

OSBA took no exception to ALJ Dunderdale's recommendation in this respect, and the Commission accepted the ALJ's recommendations.

Q. Are there any material differences in the current case?

A. No. In the last case, Columbia had 29 flex rate customers with some 14.1 million Dth in annual throughput. Those values have declined modestly to 23 customers and 11.7 million Dth, which at least indicates that the Company is not encouraging its larger customers to negotiate rate discounts.

Q. Did the Company file the competitive analysis recommended by I&E and approved by the Commission?

A. The Company indicates that it has already conducted a competitive review for every flex rate customer within the past ten years, and thus no competitive review is required.[14]

Q. Have you conducted a detailed review as to whether the Company has set its flex rates consistent with the principles that you outlined above?

A. No. After carefully reviewing the positions of the parties and the decisions of the ALJ and the Commission in the last proceeding (just four months ago), I determined that there was little purpose to raising this issue again in this proceeding.

Q. What are the implications of the flex rates for the Company's revenue requirement in this proceeding?

A. Based on the cost allocation method approved by the Commission in the last case, the costs allocated to the 23 flex rate customers come to $32.9 million, which is nearly ten times the current negotiated rate revenues of $3.4 million. The $29.5 million shortfall must therefore be recovered from the other rate classes.

[14] OSBA-I-8.

4. <u>Cost Allocation</u>

Q. What is the purpose of a utility's allocated cost of service study ("ACOSS")?

A. The primary criterion for setting regulated utility rates is the cost incurred by the utility for providing the service.[15] To assign costs to specific customers, utilities aggregate customers into rate classes, within which the customers have similar load sizes, seasonal consumption, peak demand patterns, and other characteristics. An ACOSS is an analytical tool with which the utility's total cost (or "revenue requirement") is allocated among each of the rate classes. These allocated costs are then used as a key input in determining the total revenues that the utility plans to recover from each rate class through tariff rates.

In using the results from an ACOSS to develop class revenue requirements, utilities and regulatory authorities usually have a longer-term goal of moving the revenue recovered from each class as close as possible to the costs allocated to that class. That is, in each proceeding, regulators try to move class revenues more into line with cost-based rates. Thus, rate classes whose revenues substantially exceed allocated costs are assigned either relatively low rate increases or rate decreases. Rate classes whose revenues are well below allocated costs are assigned larger rate increases than those classes whose revenues are only slightly below allocated costs.

In addition to class revenue requirement issues, an ACOSS can provide useful cost information regarding the specific nature of utility tariff charges. In particular, an ACOSS provides a cost basis for the relative magnitude of the various individual tariff charges, including the customer charge, demand charges and commodity charges.

Q. How does an ACOSS assign costs to the various rate classes?

A. The underlying principle of an ACOSS is that costs are assigned to the rate classes that *cause* the utility to incur those costs. This principle of cost causation is both equitable and economically efficient. It is equitable because costs are borne by those customers who cause them. It is economically efficient because the price signal for consumption from a particular

---

[15] The Commonwealth Court affirmed this basic principle, referring to cost of service as the "polestar" criterion. <u>Lloyd v. Pennsylvania Public Utility Commission</u>, 904 A.2d 1010, 1020 (Pa. Cmwlth. 2006).

rate class is reasonably consistent with the cost incurred by the utility to provide the service. In that way, the consumer receives the correct price signal for determining whether he should purchase more or less of the utility service. In effect, the consumer balances the value that he receives from the purchase of that service against the utility's cost of providing the service.

Q. What is the Company's approach to cost allocation in this proceeding?

A. With its filing, the Company presented three detailed cost allocation studies, in Exhibit 111 Schedules 1, 2 and 3. The Company's cost allocation analysis is supported by Mr. Chad Notestone, Columbia Statement No. 11.

Q. Why does the Company present three different cost allocation studies?

A. Some old habits die hard.

The Company has consistently submitted two alternative ACOSS models in its base rates filings stretching back to at least 2008, with a third version that is an average of the two. The models differ only in how mains plant costs are classified and allocated.

The "CD" model classifies and allocates mains costs using a "minimum system" method, in which costs are segregated into a "customer component" and a "demand component." The customer component of costs is derived based on the cost of installing the minimum size pipe throughout the current distribution system, and those costs are allocated based on number of customers. The minimum system construct is designed to reflect the economies of scale of serving and interconnecting larger customers. The remaining costs are deemed to be demand-related. These costs are allocated based on a measure of class peak demand (usually "design day" demand for NGDCs), to reflect the fact that each main must be sized to be able to meet the peak demands of downstream customers under extreme weather condiditons. In the past, the Company would segregate its mains by operating pressure, and then would both classify and allocate those costs separately based on the loads served through those systems. As explained by Mr. Notestone, the Company is no longer segregating costs by operating pressure.[16]

The Company's "P&A" model allocates all mains costs based on a 50/50 weighting of average demand (which is arithmetically equivalent to annual throughput) and design day peak demand. Advocates for this method argue that there are no scale economies to attaching and serving larger customers, and that a portion of mains costs are causally related to annual throughput. Heretofore, the Company's P&A ACOSS model would, like the CD model, segregate mains costs by operating pressure for classification and allocation.

The Company's "AVG" model is a simple average of these two methods. It should be recognized that the Company's two methods produce enormously divergent results.

In the Company's last base rates case, however, Pennsylvania Office of Consumer Advocate ("OCA") Mr. Jerome D. Mierzwa generally argued that (a) the results of the CD method were irrelevant to cost causation, and (b) segregating mains costs by operating pressure was not appropriate (except for mains operating at transmission pressure). The Commission approved Mr. Mierzwa's approach. The Company indicates that it now conceptually agrees with Mr. Mierzwa that there is no need to segregate mains by operating pressure, although Mr. Notestone argues that this change is justified by the Company's mains replacement program which allows smaller customers to be served from higher pressure plastic pipe.

As I indicated earlier, mains costs allocated to the MDS class are not affected by these alternative allocation methods. MDS customers are either attached directly to the interstate pipeline system or are in close physical proximity. The cost for the mains used to supply these customers are directly assigned to that class, and thus are the same in all ACOSS model simulations.

The Company indicates that it generally relies on the P&A ACOSS for revenue allocation and rate design in this proceeding, although the Company appears to believe that the results of the CD ACOSS have some relevance.

[16] Columbia Statement No. 11 at 8.

Q. What approach do you take for cost allocation in this proceeding?

A. While I disagree with the Commission's findings regarding mains cost allocation in the last case, I accept the method employed by the Company in its P&A ACOSS for reasons of Commission precedent. Litigating this issue annually (or biennially) serves no useful purpose. The issue at hand is to incorporate the implications of that decision into rates as quickly as is practicable, subject to the constraints of rate gradualism.

As a practical matter, I replicated the results of the Company's P&A ACOSS in my own version of the ACOSS. Because the Company's method generally appears to be consistent with that used in the last case, and because that method was approved by the Commission just four months ago, I did not conduct a detailed review of the methods or the supporting allocation factors. I accept the Company's P&A ACOSS for the purposes of revenue allocation and rate design in this proceeding. My working version of this model is attached as RDK WP2, which includes supporting revenue allocation analyses. Table IEc-2 below summarizes the results of that ACOSS model for the various rate classes.

Table IEc-2
Summary Results of Columbia Gas P&A ACOSS at Present Rates ($000)

	Current Rate Revenues*	Rate of Return	Present Rates Subsidy	Subsidy Percent
Residential	$362,965	6.5%	$31,074	8.6%
SGS1	$ 40,308	5.6%	$ 1,248	3.1%
SGS2	$ 44,457	5.9%	$ 2,826	6.4%
Medium General	$ 26,637	4.9%	($623)	-2.3%
Large General	$ 19,696	0.9%	($12,324)	-62.6%
MDS	$ 1,109	157.5%	$1,026	92.6%
Flex	$ 3,392	-4.4%	($23,229)	-684.8%
Total	**$498,564**	**5.2%**	--	--

A positive cross-subsidy value indicates that the class over-recovers costs at current rates; a negative value indicates that the class receives a subsidy.

* Excludes allocated other revenues.

Source: RDK WP2

Q. Have you made any further calculations regarding cost allocation?

A. Yes. As shown in Table IEc-2, the subsidies provided to the flex rate customer group at current rates dwarf the class' current revenues and represent by far the largest revenue shortfall of any rate class group. Flex customer revenues amount only to about $3.4 million, whereas costs allocated to that customer group are $26.6 million and present rates and $32.9 million at proposed rates.

However, as I explained earlier, the Company claims that the current rate revenues represent the maximum amount that can be earned from these customers. Thus, the $23.2 million shortfall from this class, plus this class' share of the proposed rate increase, must be recovered from the other rate classes. To provide useful cost allocation results for revenue allocation, I reallocated this shortfall to the other rate classes. Because the costs allocated to the flex rate customers are dominated by mains plant, it can reasonably be inferred that the unrecovered costs are mains-related.[17] I therefore reallocated the flex rate shortfall to the other rate classes using the P&A mains allocation factor. The ACOSS results with this reallocation are shown in Table IEc-3 below:

[17] Mains represent over 90 percent of the utility plant assigned to the flex rate customer group. See RDK WP2.

Table IEc-3
Summary Results of Columbia Gas P&A ACOSS at Present Rates ($000)
With Flex Rate Shortfall Reallocated

	Current Rate Revenues*	Subsidy	Subsidy Percent
Residential	$362,964	$17,863	4.9%
SGS1	$ 40,308	($ 937)	-2.3%
SGS2	$ 44,457	($ 287)	-0.6%
Medium General	$ 26,637	($2,763)	-10.4%
Large General	$ 19,696	($14,901)	-75.7%
MDS	$ 1,109	$1,025	92.5%
Flex	$ 3,392	--	--
Total	**$498,564**	--	--

A positive cross-subsidy value indicates that the class over-recovers costs at current rates; a negative value indicates that the class receives a subsidy.

* Excludes allocated other revenues.

Source: RDK WP2

Table IEc-3 indicates that the Residential class is modestly over-recovering costs, the small to medium general service classes moderately under-recover costs, and the large general service class substantially under-recovers allocated cost.[18] In particular, note that the subsidy to the Large General (Rate LDS) customer class represents more than 75 percent of current rate revenues. Thus, to move revenues in line with costs for that class, a rate increase of 75 percent plus the effect of the general base rates increase would need to be imposed.

[18] As I indicated earlier, the MDS class consists of large customers located in close proximity to interstate pipelines, and mains costs are directly assigned to these customers. These customers have historically provided a cross-subsidy to the other classes, generally because rate decreases have not been applied to reduce rates to allocated. The Company proposes to continue this practice in this proceeding, by assigning a zero increase to the class.

5. Revenue Allocation

Q. What is revenue allocation?

A. Revenue allocation is the assignment of the dollar net increase or decrease to each of the Company's rate classes in a base rates proceeding. In contrast, *rate design* determines how the allocated revenue is recovered from individual ratepayers within each class. From a cost recovery standpoint, revenue allocation addresses *inter-class* cross-subsidization issues, while rate design addresses *intra-class* cross-subsidization issues.

Q. What are the primary economic and regulatory criteria for revenue allocation?

A. In general, allocated cost is the primary criterion used by regulators in the revenue allocation process. Most utilities and regulators adopt a policy in a base rates proceeding of attempting to move revenues more into line with allocated costs by varying the magnitude of the rate increases for the individual classes. However, regulators also subject the rate increases to other non-cost criteria of ratemaking. Of the traditional rate design criteria, the most common non-cost considerations in the revenue allocation process are:

- the *gradualism* principle (or avoidance of "rate shock"), in which large rate increases for individual customers or classes of customers are avoided; and
- the *value of service* principle, which is often used to mitigate rate increases for customers or customer classes with relatively elastic demand. [19]

Using these criteria, the utility will develop a proposal for assigning the increase in the revenue requirement among the classes that reflects both cost and non-cost considerations. With this proposal, the ACOSS can be simulated at both present and proposed rates to evaluate the magnitude of "progress" has been made toward the policy of achieving cost-based rates.

---

[19] See, for example, Principles of Public Utility Rates, Second Edition, Bonbright, Danielsen, Kamerschen, 1988, pages 383 to 387. The criteria in this text apply to the overall development of a utility rate structure. The criteria that I discuss in this testimony are those that apply to the revenue allocation portion of the process, which is only one aspect of the overall development of utility rates.

Q. Please summarize the process used by Columbia for its proposed revenue allocation in this proceeding.

A. Mr. Notestone indicates that the Company's goal is to move class revenues more into line with allocated costs. He also indicates that the results of the alternative ACOSS models provide a "zone of reasonableness" for that evaluation, and that the Company gave "primary consideration" to the P&A ACOSS method (explicitly approved by the Commission just four months ago). Mr. Notestone also indicates that the Company set an upper limit for base rate increases at 1.5 times the proposed system average increase of 19.9 percent, or 29.9 percent. As a measure of progress toward cost-based rates, Mr. Notestone indicates that the Company relies on the indexed rate of return metric at present and proposed rates.

Q. Please comment on the Company's use of the indexed rate of return metric for evaluating progress toward cost-based rates.

A. The indexed rate of return metric is derived as the ratio of the class rate of return on rate base to the systemwide average return on rate base. Thus, for example, if a rate class is earning 2 percent on rate base at current rates and the system average is 5 percent, the indexed rate of return metric is 2.0/5.0 = 0.4. The metric correctly indicates that this class is under-recovering costs. As a measure of progress, however, the indexed rate of return metric overstates progress toward cost-based rates, and it can falsely show progress when none exists. For example, the indexed rate of return metric will show that an across-the-board rate increase results in progress toward cost-based rates, when in fact such an increase necessarily produces zero progress toward cost-based rates.[20] As such, the indexed rate of return metric should not be used to measure progress toward cost-based rates.

The Commission has recently addressed this concern. In an order involving the City of Bethlehem – Water Department, the Commission concluded:

> "As noted by the OSBA, the proper yardstick for measuring the degree of movement toward cost of service is the change in the absolute level of class subsidies at present and proposed rates."[21]

---

[20] See RDK WP2 "Indexed RoR" worksheet for a numerical example demonstrating this result.

[21] *Pennsylvania Public Utility Commission v. City of Bethlehem -- Water Department*, Docket No. R-2020-3020256,

I have therefore relied on the dollar value of subsidies at present and proposed rates in evaluating the progress toward cost-based rates for revenue allocation in this proceeding. In so doing, however, I note that this metric can also be misleading.

As a general rule, if a rate class that is under-recovering costs at present rates is assigned an above-average system increase, the revenues for that class are moving more into line with allocated cost. However, the subsidy metric used by the Commission may indicate that the class subsidy in dollar terms is increasing, even if a class that is currently receiving a subsidy is assigned an above-average increase.[22] That is, the subsidy to the class in question may increase in dollar terms, even if it is decreasing as a percentage of base rates.

Thus, for this proceeding, I considered both dollar value of cross subsidies and the revenue-cost ("R-C") ratio metric. The "R-C" metric represents (unsurprisingly) the ratio of class revenues to class allocated costs, and thus implicitly recognizes the subsidy as a percentage of the class revenue requirement.

Q. Please summarize the Company's revenue allocation proposal in this proceeding, using these metrics.

A. Table IEc-4 below shows the Company's revenue allocation proposal. The first three columns show the Company's proposed percentage increase, compared to the present-rates dollar subsidy and R-C metrics. In general, the Company's revenue allocation proposal is directionally reasonable, in that classes that currently receive a subsidy, and which have a R-C ratio below 100 percent, are assigned above-average increases.[23] In particular, excluding MDS and Flex rate classes, the Residential class is currently providing a subsidy to the other classes, and it is assigned a below-average rate increase. The regular non-residential classes are receiving a subsidy, and are assigned above average increases.

Order entered April 15, 2021, at 36.

[22] See RDK WP2, "Indexed RoR" worksheet.

[23] The MDS class is assigned a zero increase, consistent with past practice. For the reasons discussed earlier,

The two right-hand-side columns show the dollar subsidy and R-C ratios at proposed rates. I have shaded the cells where the metric shows progress toward cost-based rates.

Table IEc-4
Columbia Gas Revenue Allocation Proposal

		Current Rates		**CPA Proposed Rates**	
	Increase %	**Subsidy**	**R-C Ratio**	**Subsidy**	**R-C Ratio**
Residential	18.6%	17,863	106.3%	21,942	105.4%
SGS1	21.0%	((37)	96.3%	(1,327)	97.3%
SGS2	20.5%	(287)	96.3%	(1,662)	97.0%
Med Gen'l (SDS/LGSS)	26.3%	(2,763)	87.7%	(2,716)	92.5%
Lg Gen's (LDS/LGSS)	29.9%	(14,901)	55.0%	(17,243)	59.7%
MDS	0.0%	1,025	1310.5%	1,007	1095.0%
Flex	0.4%	--	NM	--	NM
Total	**19.7%**	**--**	**100.0%**	**--**	**100.0%**

A positive cross-subsidy value indicates that the class over-recovers costs at current rates; a negative value indicates that the class receives a subsidy.

Subsidies and R/C ratios are calculated after reallocation of Flex rate customer shortfall.

Source: RDK WP2

As shown in Table IEc-4, the dollar value of cross-subsidies actually increase under the Company's proposal for most rate classes, despite the fact that the Company's revenue allocation proposal is directionally reasonable. When subsidies are measured on a percentage basis using the R-C ratio metric, the Company's revenue allocation proposal shows progress toward cost-based rates for all classes except the Flex rate customers.

Q. Do you agree with the Company's revenue allocation?

A. The Company's proposal is not obviously unreasonable. I evaluated numerous scenarios in an attempt to develop a balanced approach that would result in a decrease in the dollar value of subsidies, as mandated by the Commission in *City of Bethlehem*. However, these scenarios involved rate increases for the Large General and Medium General service classes that substantially exceeded increases that could reasonably be assigned within the bounds of rate gradualism.

However, I do recommend that the Commission consider a modification to the Company's proposal, in order to achieve more progress toward cost-based rates and to reasonably reflect its cost allocation decision in the last base rates case.

As shown in Table IEc-4, the dollar cross-subsidy to the Large General Service (LDS/LGSS) class actually increases by more than $2 million under the Company's proposal, while the R-C ratio implies only very small progress toward cost-based rates. This lack of progress is effectively caused by the Company's constraint of a 1.5 times system average increase as an upper bound for rate gradualism. While I acknowledge that the 1.5 factor is often used in Pennsylvania, the specific circumstances in this case suggest that a higher upper bound may be appropriate, for a couple of reasons. First, because the cost recovery for Large General service is so extremely low that it will take many rate proceedings to move rates into line with allocated cost if the 1.5 times system average factor is applied. As shown in Table IEc-4 above, progress toward cost-based rates for this class is minimal at best, and it will be further reduced if the overall rate increase is scaled back. Perpetuating the cross-subsidy to this class is not consistent with ratemaking principles, and it is not consistent with the Commission's decision on cost allocation. Second, the distribution rates for this class measured on a per-Dth basis are quite low. On a per-Dth basis, the Company's proposed increase for the Residential class is $1.95 per Dth, for SGS1 it is $1.49 per Dth, and for Large General it is $0.53 per Dth. Thus, while the percentage impact is large, the cost per Dth is relatively modest.

I therefore recommend that the Commission consider shifting $1.8 million from the Residential class increase to the Large General Service class. In addition to the need to move Large General Service rates more into line with allocated cost, I observe that the Company's proposal resulted in less progress toward cost-based rates than for the other classes, as measured by the R-C ratio.[24] The results of that proposal are shown in Table IEc-5 below.

[24] See RDK WP2.

The increase to the Large General Service is a little below 2.0 times the system average increase (which is also a rule-of-thumb for rate gradualism). On a per-Dth basis, the increase to the LDS class would be approximately $0.69 per Dth, still well below the unit cost increases to the Residential and SGS rate classes. As shown in Table IEc-5, this proposal will result in at least modest progress toward cost-based rats for the Large General Service rate class using the R-C ratio metric.

Table IEc-5
RDK Alternative Revenue Allocation Proposal

		Current Rates		CPA Proposed Rates	
	Increase %	**Subsidy**	**R-C Ratio**	**Subsidy**	**R-C Ratio**
Residential	18.1%	17,863	106.3%	20,142	104.9%
SGS1	21.0%	((37)	96.3%	(1,327)	97.3%
SGS2	20.5%	(287)	96.3%	(1,662)	97.0%
Med Gen'l (SDS/LGSS)	26.3%	(2,763)	87.7%	(2,716)	92.5%
Lg Gen's (LDS/LGSS)	39.9%	(14,901)	55.0%	(15,443)	63.9%
MDS	0.0%	1,025	1310.5%	1,007	1095.0%
Flex	0.4%	--	NM	--	NM
Total	**19.7%**	**--**	**100.0%**	**--**	**100.0%**

A positive cross-subsidy value indicates that the class over-recovers costs at current rates; a negative value indicates that the class receives a subsidy.

Subsidies and R/C ratios are calculated after reallocation of Flex rate customer shortfall.

Source: RDK WP2

6. **<u>Rate Design Issues</u>**

Q. Please describe the tariff structure for the SGSS, SCD and SGDS rate classes.

A. Base rate tariff charges for these three classes currently consist of a bifurcated monthly customer charge and a bifurcated commodity charge, both split between customers with annual consumption above and below 644 Dth. Within each size category, SGSS and SCD customers pay the same commodity charge, while SGDS customers pay a slightly lower commodity charge reflecting the fact that the Company does not incur gas storage working capital costs for regular transportation customers. The basic distribution rate tariff structure is shown in Table IEc-6 below.

In addition, the SGSS sales customers are subject to PGC, GPC, MFC and Rider CC charges. Rate SCD Choice and Rate SGDS transportation customers are subject to certain PGC charges (related to load balancing), and the Rider CC charge.

Q. How does Columbia propose to implement its rate increase for these classes?

A. Columbia's proposed increases for the base rates components of Small General Service classes are shown in Table IEc-6 below.[25] The Company has essentially proposed to assign class-average increases to both the customer charge and the commodity charge for each class. In effect, the Company proposes no change to rate design for these classes.

Table IEc-6
Columbia Proposed Small General Service Base Rate Design

	Current Rate	Proposed Rate	Percent Increase
Rates SGSS and SCD			
Customer Charge < 644Dth/year	$26.00	$31.50	21.2%
>644 Dth/year	$55.00	$66.00	20.0%
Commodity Charge <644 Dth/year	$5.3932	$6.5197	20.9%
>644 Dth/year	$4.5596	$5.4799	20.2%
Rate SGDS			
Customer Charge < 644Dth/year	$26.00	$31.50	21.2%
>644 Dth/year	$55.00	$66.00	20.0%
Commodity Charge <644 Dth/year	$5.2843	$6.4348	21.8%
>644 Dth/year	$4.4514	$5.3949	21.2%

[25] Table Iec-6 shows the Company's proposed rate design as detailed in Exhibit 103 Schedule 7, which appears to be consistent with the proposed revenues reported in the Company's ACOSSs. These values do not appear to be consistent with the testimony of Columbia witness Melissa J. Bell (Statement No. 3) at pages 36-37.

Q. What approach do you recommend for setting rates for these classes?

A. For small and medium general service classes, I generally advocate setting the customer charge at or only modestly below the customer-related costs for the smaller customers within each class, subject to rate gradualism constraints. Columbia Gas appears to agree with this approach. Mr. Notestone indicates, *"In essence, customer-related costs that bear no relationship to customer gas consumption patterns should be recovered through the fixed portion of the rate design, i.e. the monthly customer charge."*[26] The commodity charge is then adjusted to produce the appropriate revenue requirement.

The Commission's decision regarding the appropriate cost allocation methodology has an impact on the cost basis for the customer charge, particularly for the non-residential rate classes. In the past, when some portion of mains were seen as having a customer component to costs, I included those costs in my derivation of the cost basis for non-residential customer charges. In the P&A ACOSS method, no mains costs are classified as customer-related, which reduces the cost basis for the customer charge. As detailed below, this cost allocation change constrains the magnitude of the customer charge increase for some non-residential rate classes. While Columbia may continue to believe that mains have a customer cost component for rate design purposes, the Commission does not.

Q. How do you determine the cost basis for the customer charge?

A. I begin with my replicated version of the Company's P&A ACOSS model, which separately tracks customer-related costs. In developing the cost basis for the customer charge, I take a relatively simple approach to the problem, in that I include all costs that are allocated on a customer basis in the ACOSS model. I recognize that some experts, and at least some Commission precedent, support the exclusion of certain "indirect" customer-related costs from this calculation, particularly for residential customers. Nevertheless, I follow the basic principle that the rates should follow the costs. If customer charges are set below the allocated customer cost, then larger customers will subsidize smaller customers, as measured by the logic of the ACOSS. While subsidizing smaller customers may have a public policy

[26] Columbia Statement No. 11 at 21.

rationale for the residential class, I see no particular advantage to such an intra-class cross-subsidy for the non-residential classes.

In making the calculations, I *excluded* uncollectibles costs from customer-related costs. Uncollectibles costs are essentially a fee on customers who pay their bills to compensate the utility for those customers who do not. As these costs are essentially a tax, I deem it reasonable to recover these costs with volumetric charges within the small business classes. This approach is conceptually similar to the Company's treatment of universal service costs within the Residential class.

This analysis is detailed in RDK WP2, in the "Customer" worksheet.

Q. What are the implications of your analysis for the SGS/SGDS customer class customer charges?

A. As detailed in RDK WP2, my customer cost analysis shows that the SGS1 customer cost is just under $37, which is moderately above the Company's proposed increase to $31.50. As a check, I compared the Company's proposed charge with those of other Pennsylvania NGDCs in Table IEc-7 below.

For SGS2, however, my analysis shows a customer cost of $57.19, which is only slightly above the current customer charge of $55.00, and below the Company's proposed $66.00 charge. Based on the cost analysis, I therefore recommend that any increase to the SGS2 customer charge be no more than $2 at proposed rates, and it should be scaled back with any reduction in the class revenue requirement. A zero increase for this customer charge would also be reasonable.

Q. How does the Company's proposed customer charge for the SGS1 customers compare to the practices of other Pennsylvania NGDCs?

A. Table IEc-7 below presents the customer charges. As shown, Columbia's customer charges for small commercial customers are among the highest in the Commonwealth. Of course, since Columbia's overall rates for small commercial customers are also among (or at) the highest in the Commonwealth, this finding is not surprising.

Table IEc-7 Non-Residential Customer Charges: Pennsylvania NGDCs	
	$/month
National Fuel Gas Dist'n C&PA (< 250 mcf)	$19.89
Peoples Natural Gas SGS (< 500 mcf)	$20.00
UGI Gas N/NT	$23.50
PGW GS-C	$24.00
Columbia Gas SGSS/SCD/SGDS (Current)	**$26.00**
PECO Gas GC	$28.55
Columbia Gas SGSS/SCD/SGDS (Proposed)	**$31.50**
Peoples Gas (TWP) SGS (<500 mcf)	$40.00
Sources: RDK WP1 "Rate Comp" worksheet.	

In light of this comparison across NGDCs, I conclude that the Company's proposal for the customer charge for the SGS1 class is not unreasonable, despite being below allocated cost.

Q. Did you review the proposed customer charge for any other rate classes?

A. I reviewed the Medium General (SDS/LGSS) class customer charge. My cost analysis shows a customer-related cost of $233 per month, compared to the current customer charge of $265 and a proposed charge of $335. Based on the cost analysis, I recommend that no increase be assigned to the SDS/LGSS customer charge in this proceeding.

Q. Does this conclude your direct testimony?

A. Yes, it does.

EXHIBIT IEc-1

RÉSUMÉ AND EXPERT TESTIMONY LIST

FOR

ROBERT D. KNECHT

ROBERT D. KNECHT PRINCIPAL

Overview

Mr. Knecht has more than 35 years of practical economic consulting experience, focusing on the energy, utility, metals and mining industries. For the past 25 years, Mr. Knecht's practice has primarily involved providing analysis, consulting support and expert testimony in regulatory matters, primarily involving electric and natural gas utilities. Mr. Knecht's work includes many aspects of utility regulation, including industry restructuring, cost unbundling, cost allocation, rate design, rate of return, customer contributions, energy efficiency programs, smart metering programs, treatment of stranded costs and utility revenue requirement issues. He has worked for state advocacy agencies, industrial customer groups, law firms, regulatory agencies, government agencies and utilities, in both the United States and Canada. He has provided expert testimony in more than one hundred separate utility proceedings.

In addition to his work with regulated utilities, Mr. Knecht has consulted on international industry restructuring studies, prepared economic policy analyses, participated in a variety of litigation matters involving economic damages, and developed energy industry forecasting models.

Education

Master of Science, Management (Applied Economics and Finance), Sloan School of Management, M.I.T.

Bachelor of Science, Economics, Massachusetts Institute of Technology

Select Project Experience

For more than twenty years, Mr. Knecht has provided consulting services, analysis and expert testimony before the Pennsylvania Public Utility Commission on all manner of regulatory proceedings to the **PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE**. In addition to expert testimony, Mr. Knecht has assisted OSBA with the development of public policy positions, litigation strategy, and longer term strategy.

For the **INDUSTRIAL GAS USERS ASSOCIATION**, Mr. Knecht provided consulting and expert witness services in a generic cost allocation proceeding involving Gaz Métro before the Régie de l'énergie in Québec.

For the **NEW BRUNSWICK PUBLIC INTERVENER,** Mr. Knecht provides consulting and expert witness services in a variety of regulatory proceeding before the New Brunswick Energy and Utilities Board involving New Brunswick Power, Enbridge Gas New Brunswick, and petroleum products. Mr. Knecht has addressed issues of load forecasting, costs forecasting, cost of capital, allocation of corporate overhead costs, utility cost allocation, revenue allocation, market-based rate design, cost-based rate design, and rate decoupling.

For **L'ASSOCIATION QUÉBÉCOISE DES CONSOMMATEURS INDUSTRIELS D'ÉLECTRICITÉ (AQCIE) AND LE CONSEIL DE L'INDUSTRIE FORESTIÈRE DU QUÉBEC (CIFQ)**, Mr. Knecht provided analysis, consulting advice and expert testimony before the Régie de l'énergie in regulatory matters involving Hydro Québec Distribution and TransÉnergie. This work includes revenue requirement, power purchasing, cost allocation, treatment of cross-subsidies, and rate design.

For the **INDEPENDENT POWER PRODUCERS SOCIETY OF ALBERTA**, Mr. Knecht provided consulting advice, analysis and expert testimony before the Alberta Energy and Utilities Board in a series of proceedings involving the restructuring of the electric utility industry, the unbundling of rates, and the development of transmission rates.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 9-R

Rebuttal Testimony of
Timothy J. Angstadt

PROPRIETARY VERSION

Topics Addressed:	**Increased Operating Costs** **Restoration Costs** **Leak Reductions**

Dated May 17, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Timothy J. Angstadt. My business address is One UGI Center, Wilkes Barre, Pennsylvania 18711.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 9, on January 28, 2022.

Q. What is the purpose of your testimony?

A. My rebuttal testimony responds to the direct testimony submitted by the Bureau of Investigation and Enforcement ("I&E"): I&E Statement No. 6, the direct testimony of Jessalynn Heydenreich. I also address the results from three recent request for proposals ("RFPs") that will increase the Company's operating costs for the FPFTY.

Q. Are you sponsoring any exhibits in this proceeding?

A. Yes, I am sponsoring UGI Gas Exhibits TJA-1R and TJA-2R.

II. INCREASED OPERATING COSTS

Q. Have there been any changed circumstances since the filing of your direct testimony that impact this case?

A. Yes, UGI Gas received the results from three RFPs for pipeline construction and maintenance, restoration, and traffic control services contained within a Master Pipeline Construction Agreement ("MPCA"), Master Restoration Services Agreement ("MRSA"), and the Master Pipeline Support Services Agreement ("MPSSA") (collectively the "2022 RFP"). The results of the 2022 RFP reflect the significant impact of inflation on all parts of the Company's operations, both on contractor costs that affect pipeline replacement and restoration activities and on activities that drive operations and maintenance expense.

Q. Please describe the Company's use of contractors for its main replacement and other maintenance activities.

A. UGI Gas utilizes contractor resources to perform construction and maintenance activities on the natural gas distribution system, including main and service line replacement, valve inspections, leak repairs, spotting facilities, corrosion mitigation, traffic control, sidewalk and roadway restoration, and others.

Q. How are contractors selected to perform work at UGI Gas?

A. UGI Gas utilizes a competitive bid process, typically on a three-year cycle, and awards blanket style construction agreements to multiple incumbent and incremental contractors who bid on each region. The contracts are awarded based on key factors of price, capability, and safety record. Using this process, UGI Gas was successful in maintaining consistent costs for a majority of the pipeline construction contractors from 2018 until the most recent RFP in the spring of 2022, with only nominal increases where price adjustments did occur.

Q. Please describe the 2022 RFP process.

A. UGI Gas typically uses three-year contract terms for its blanket construction contractors, although in the most recent cycle the Company extended the existing contracts for the MPCA through February 2022 in order to provide for a more robust bid process, address confusing contract items, and adopt a start date for new contracts of March 1, which aligns better with the construction season. The table below shows the critical dates for the three RFPs impacting contractor costs in this proceeding:

Table 1. Critical Dates For 2022 RFP

Category	Contract	RFP Issued	Contract Effective	Contract Expiration
Pipeline/Construction	MPCA	11/3/2021	3/1/2022	2/28/2025
Restoration	MRSA	12/3/2021	4/1/2022	3/1/2025
Traffic Control	MPSSA	9/17/2021	4/1/2022	11/1/2025

Q. Please describe the results of the 2022 RFP.

A. The results of the 2022 RFP reflect significant price increases across the range of services provided by the bidders. As intended, UGI Gas was successful in attracting several additional contractor bids throughout the various bid regions established within these contracts. On average, the count of regional contractor bids increased by over twenty percent when compared to the 2018 RFP, indicating a competitive market.

Q. What is driving the increase in prices reflected in the RFP results?

A. As discussed in Mr. Brown's rebuttal testimony, UGI Gas St. No. 1-R, inflationary pressures are impacting all elements of UGI Gas's operations. As specific to construction, the pipeline construction labor market is constrained, and the region is experiencing extremely low unemployment rates. To secure skilled labor, contractors must pay higher labor rates, and those higher rates are passed on to UGI Gas. In addition, the inflationary impacts to materials, equipment and supplies are also reflected in the bids received by the Company in response to its RFP.

Q. How do these results impact the Company's proposed cost for main replacement and other maintenance activities?

A. The Company will see both its main replacement and maintenance related capital and expense costs increase substantially as a result of the new contracts. UGI Gas witness Vicky A. Schappell (UGI Gas St. No. 5-R) addresses the anticipated increase in capital costs in her rebuttal testimony. For the FPFTY, for example, the increase in capital costs is anticipated to be $37.8 million above the amount presented by the Company when it filed this case.

Q. Have you quantified the impact of the increased contractor costs on expenses for the FPFTY?

A. Yes, the Company has quantified the impact of the increased contractor costs on its expense claim. Attached to my testimony is UGI Gas Exhibit TJA-1R. This exhibit provides the Company's response to OCA-III-33, which indicates that UGI Gas's original budget for outside contractor expense in this case for the FPFTY was $21.723 million. UGI Gas Exhibit TJA-2R shows the impact of incorporating the increased contractor costs received by the Company in the 2022 RFP, which increases outside contractor expense by $2.692 million in the FPFTY to a total of $24.416 million.

III. RESTORATION COSTS

Q. Please summarize the direct testimony of I&E witness Jessalynn Heydenreich regarding UGI Gas's costs for replacing mains.

A. Ms. Heydenreich's testimony focuses on the cost increase associated with the Company's main replacement program, and specifically the increase in restoration costs. Ms. Heydenreich states that between 2017 and 2021, UGI Gas's restoration costs increased from $159,350 per mile to $355,354 per mile, or a 123% increase. (I&E Statement No. 6 at 7 and 9.) Ms. Heydenreich asserts that if UGI Gas spent less dollars on restoration, the Company could replace additional miles of main each year. (*Id.* at 11.)

Q. What costs are included as restoration costs?

A. Restoration costs encompass both temporary and permanent restoration activities as well as all contractor labor and materials required to complete a restoration project. The Company uses a variety of different restoration types depending on permit requirements, the location, and use of the area being restored. For permanent restoration, the project options include: (1) grass (seeding and grading); (2) rail-trail; (3) macadam; (4) mill and overlay; (5) concrete; and (6) flowable fill. The overall cost of restoration for an individual project is impacted by many variables, including main size and location, complexity of the project (which impacts duration and may require temporary restoration activities), and local ordinances dictating the scope of restoration activities. This is a non-exhaustive list of variables that impact the cost of restoration on individual projects.

Q. Do you agree with Ms. Heydenreich that restoration costs have increased?

A. Yes. Restoration costs involved with replacing and retiring natural gas mains have increased steadily over the life of the Company's accelerated main replacement program articulated in its Long-Term Infrastructure Improvement Plan ("LTIIP"), which was filed in 2013.[1] UGI Gas has taken many active steps aimed at controlling restoration costs where it is possible to do so. However, there are a number of operational reasons for the increase in restoration costs and many of these are unavoidable. In addition, significant recent economic impacts have also increased restoration costs, as I will describe in my testimony, and these are anticipated to continue in throughout the FTY and FPFTY. I also note that while restoration costs have increased, the Company has successfully met or exceeded its annual mileage replacement goals as specified in its LTIIP.

Q. What factors have caused restoration costs to increase?

A. There are several operational factors that have caused restoration costs to increase. Main size, geographic location, and the type of project all affect the amount of restoration costs. Many of the Company's cast iron systems originate in dense urban areas and expand throughout cities to less densely populated areas. Since the majority of cast iron main replacement involves replacing low-pressure cast iron with medium pressure plastic piping, cast iron replacement tends to occur by replacing the outer portions of the system first and working toward the point of origin.[2] This allows the medium pressure supply points to progress more deeply into the distribution system, while the natural gas supply to

[1] The Company's Initial LTIIP consisted of Docket No. P-2013-2398833 (for the former UGI South Rate District), Docket No. P-2013-2397056 (for the former UGI North Rate District), and Docket No. P-2013-2398835 (for the former Central Rate District) and addressed the period January 1, 2014 through December 31, 2019.

[2] Historically, the UGI Gas system was constructed with cast iron mains that connected to manufactured gas plants in or near cities, with the largest diameter pipes being those closest to the plant.

the shrinking low-pressure system is maintained. With only a few years remaining in UGI Gas's cast iron replacement program, the remaining cast iron projects are now in dense urban areas, consist of large diameter mains, and are located within busy, major roadways that will require extensive excavation and restoration. All other factors being equal, by the very nature of the Company's cast iron main replacement program, the final years of cast iron main replacement would cause the cost of restoration per mile to increase.

Q. What other factors contribute to the increased cost of restoration?

A. Two major economic factors impacting the recent acceleration of restoration costs are inflation and the increased cost of labor in the current market, which I have previously described. Contractor costs for restoration activities, which are included in the overall cost of restoration work, have increased in recent years amid the tightening labor market and despite the Company's efforts to expand its pool of qualified contractors to increase competition when UGI Gas requests bids for work. In addition, recently adopted requirements from federal, state and local governments, affecting everything from reduced daily operating hours to increased paving requirements, ultimately are reflected in additional costs associated with restoration.

Q. What steps has the Company taken to address rising restoration costs?

A. UGI Gas has employed many steps during its accelerated main replacement program that are targeted at lowering restoration costs. These include coordinating replacement efforts with other street projects and using trenchless construction techniques where appropriate. In addition, the Company has in many instances challenged municipal requirements that would otherwise add to the Company's restoration costs. As an example, the Company has selectively used litigation to challenge permit fees and excessive restoration requirements. Specifically, the Company has filed legal challenges to ordinances in Lancaster, Reading, and Scranton among other jurisdictions. The Company has also met with the Gas Safety Division to collaborate on identifying the most effective means of minimizing and reducing restoration costs.

Q. How has the Company worked to manage increases to restoration costs?

A. UGI Gas has begun to utilize select pipeline contractors to perform restoration activities. Utilizing the same contractor resources for multiple components of a single project is anticipated to reduce costs and time taken for mobilization and demobilization, which is particularly important in locations where municipalities have implemented operating time restrictions. Further, combining these activities may deliver several improvements, including limiting temporary restoration and repairs, expediting permanent restoration, and improving restoration efficiency as some resources, including traffic control, may be shared with pipeline crews on select projects.

Q. Ms. Heydenreich includes estimates for UGI Gas's total restoration costs per mile for 2022 and 2023. (I&E St. No. 6 at 10-11.) Do you agree with her estimates?

A. No. I do not agree with the methodology Ms. Heydenreich uses to arrive at her estimates, and I am informed by counsel that this methodology has not been adopted by the Commission. However, I do agree that restoration costs have been rising and that it is important for UGI Gas and other utilities to continue to make efforts to control or reduce restoration costs where it is feasible to do so.

Q. Do you agree with Ms. Heydenreich that increasing restoration costs have negatively affected replacement rates (I&E St. No. 6 at 11-12)?

A. No, I do not. The Company has continued to replace the anticipated miles of main that it has projected in its LTIIPs and has even gained further acceleration since it began its LTIIP main replacement activities in 2014, reaching an all-time high of 91 miles of main replaced in 2021. Therefore, I do not agree that the Company's rate of replacement has been negatively affected by the increasing costs associated with restoration. In addition, and contrary to Ms. Heydenreich's testimony, if UGI Gas were to spend less on restoration, it would not directly translate into additional miles of main replacement, because UGI Gas is currently utilizing all available engineering, planning, construction, and inspection resources fully to accomplish its current main replacement metrics. I specifically disagree with Ms. Heydenreich's contention that her projected increase in restoration costs in the FPFTY will result in a "23% decrease" in main replacement compared to the HTY. The HTY represented a banner year for main replacement miles that greatly exceeded the Company's planned replacements. Actual replacement miles are expected to vary on a year-to-year basis given the many differing factors which influence these projects, as I have discussed above. However, the mileage reflected in the FPFTY aligns with the projections included in the Company's Commission approved Second LTIIP[3] and its overall strategy for accelerated replacement of cast iron and bare steel mains. Specifically, the Company

[3] See *Petition of UGI Utilities, Inc. – Gas Division for Approval of its Second Long-Term Infrastructure Improvement Plan*, Docket No. P-2019-3012337 (Order entered Dec. 19, 2019).

remains on target to complete all cast iron and bare steel replacement activities on or before the time periods established in UGI Gas's Initial LTIIP filed in 2013.

Q. What recommendation does Ms. Heydenreich make for reducing future restoration costs?

A. Ms. Heydenreich recommends that UGI Gas continue coordinating replacement projects with other street projects and utilizing trenchless technology where feasible. Additionally, she requests that UGI Gas perform and submit annual audit reports to the Safety Division regarding restoration costs for the ten largest projects in the prior three years. The report should identify "costs incurred in excess of the Pennsylvania Department of Transportation restoration standards including: paving, shoulders, sidewalks, etc., and permitting fees." (I&E St. No. 6 at 12.)

Q. Do you agree with this recommendation?

A. Yes, I do. As I stated previously, UGI Gas intends to continue its efforts to control restoration costs by coordinating projects where it can and using technology that will reduce restoration activities, as well as taking other actions that may reduce cost increases associated with restoration. Further, the Company will prepare and submit an annual report to the Gas Safety Division on March 1 identifying its ten most expensive restoration projects per year over the past three years with the cost breakdowns identified by Ms. Heydenreich.

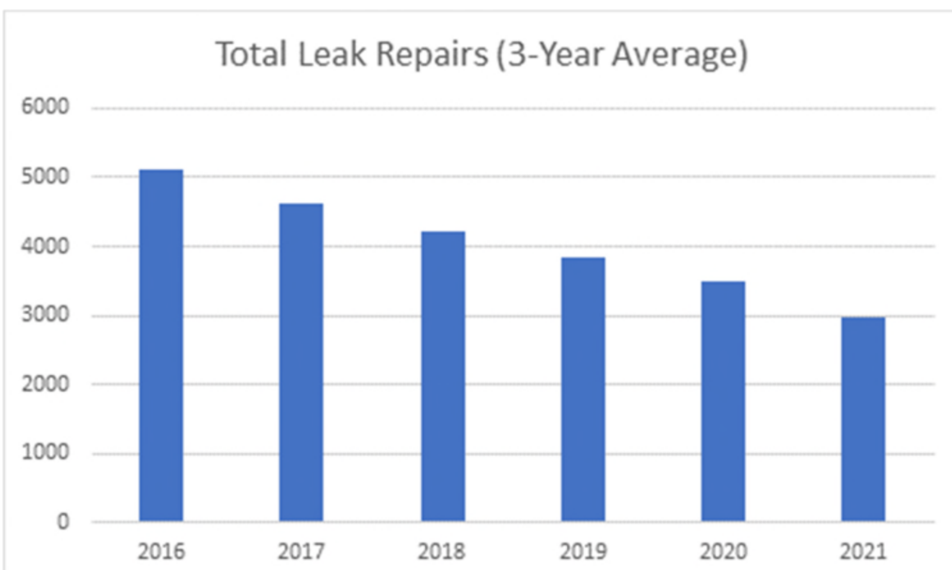
IV. LEAK REDUCTIONS

Q. Ms. Heydenreich states that between 2020 and 2021, UGI Gas experienced a small increase in the total number of leaks. (I&E St. No. 6 at 13.) Can you explain why leaks increased between 2020 and 2021?

A. Leak survey cycles are not consistent across all asset types, with some assets surveyed on three-, four-, or five-year intervals. Since some assets have higher leak rates than others and UGI Gas's entire inventory of assets are not surveyed annually, some volatility of total annual leaks found or repaired is expected. To mitigate the volatility introduced by varied leak survey cycles, UGI Gas often views leak trends on a three-year average basis, with the results shown in Figure 1. This summary clearly indicates the favorable impact of UGI Gas's accelerated main replacement program on system leakage.

[BEGIN CONFIDENTIAL]

Figure 1. Total Leak Repairs Using 3-Year Average



[END CONFIDENTIAL]

23912323v2

Q. Based on the small increase identified by I&E, Ms. Heydenreich recommends that UGI Gas perform and present to I&E Pipeline Safety a root cause analysis to determine why leaks did not decrease despite the Company's accelerated main replacement program and to ensure that main replacement activities represent a prudent investment. (I&E St. No. 6 at 13-14.) What is the Company's response to this proposal?

A. UGI Gas continuously reviews its leak data and assesses changes in its data to ensure that it is proactively identifying potential areas of concerns and investing capital in the areas of greatest risk, and annually conducts a Distribution Integrity Management Plan ("DIMP") audit that is presented to PUC safety personnel for review and discussion. However, it is reasonable to anticipate some variation in leak data based on operational impacts to the system such as colder than normal weather, line strikes, etc. Although active and historical leakage are considered as elements within an asset's risk profile, total risk is utilized to prioritize assets for replacement. This risk-based asset replacement methodology may not prioritize the most leak-prone assets, and when combined with the leak survey-induced volatility described above, UGI Gas does not believe the modest increase in leaks from 2020 to 2021 requires additional analysis. However, UGI Gas is certainly willing to meet with PUC safety personnel to discuss the detailed leak survey results and trends and address any questions or recommendations that PUC safety personnel may have.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 10-R

Rebuttal Testimony of
Constance E. Heppenstall

Topics Addressed:	**Cost of Service Study** **Customer Charges**

Date: May 17, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Constance E. Heppenstall. My business address is 1010 Adams Avenue, Audubon, Pennsylvania.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 10, on January 28, 2022.

Q. What is the purpose of your rebuttal testimony?

A. My testimony responds to certain portions of the following direct testimony: Office of Consumer Advocate ("OCA") Statement No. 3, the direct testimony of Jerome D. Mierzwa, and Office of Small Business Advocate ("OSBA") Statement No. 1, the direct testimony of Robert D. Knecht. I also reference the direct testimonies of Commission on Economic Opportunity ("CEO") Witness Eugene M. Brady (CEO Statement No, 1), Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Harry S. Geller (CAUSE-PA St. No. 1) and OCA Witness Roger D. Colton (OCA St. No. 4) regarding the Company's proposed increase to the customer charge.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. UGI Gas Exhibit D-R, Cost of Service Allocation Study as of September 30, 2023, and UGI Gas Exhibit CEH-1R are attached.

Q. What changes were made to the cost of service study provided in UGI Gas Exhibit D-R?

A. The study was updated to include a revised split of costs in FERC Account 874. It was explained in response to discovery request OCA-I-24 that the costs in FERC Account 874 were incorrectly allocated 51.93% to mains and 48.07% to services. The correct allocation is 55.08% to mains and 44.92% to services. In addition, the study was updated to reflect the revised allocation of costs identified as related to manufactured gas plant remediation found in Accounts 923 and 930 based on Factor 1, as described in my rebuttal of Mr. Mierzwa's direct testimony below. The study also breaks out reconnection charges from Other Miscellaneous Revenues and allocates them pursuant to a new Factor 22, which is based on the reconnection fee revenues by class for the twelve months ended January 31, 2022, and allocates forfeited discounts pursuant to a new Factor 23, which is based on actual forfeited discounts by class for the twelve months ended January 31, 2022. Finally, the study incorporates Mr. Knecht's revised design day demand for Rate R/RT and N/NT customers. (OSBA St. No. 1 at 12-13.)

II. <u>COST OF SERVICE STUDY</u>

<u>OCA Statement No. 3 – Jerome D. Mierzwa</u>

Q. Beginning on page 10 of OCA Statement No. 3, Mr. Mierzwa states that the Average and Excess ("A&E") method you used in your cost of service allocation study (UGI Gas Exhibit D) does not produce a reasonable allocation of mains costs on the UGI system. Why did you use the A&E method?

A. As discussed below, the A&E method I utilized has been generally accepted by the

Pennsylvania Public Utility Commission ("Commission") for a number of years. The Commission's most recent decision and guidance in a fully litigated gas rate case approved a methodology using this A&E method in the PECO Energy Company ("PECO") Gas Rate Case at Docket No. R-2020-3018929 ("PECO Gas Rate Case Order").[1] In addition, the cost of service study utilizing the A&E method, submitted by our firm in 2006 for the PPL Gas Utilities Corporation ("PPL Gas") (subsequently UGI Central Penn Gas, Inc. and now part of UGI Gas) base rate case at Docket No. R-00061398, was also approved by the Commission (referred to herein as the "PPL Gas Case").[2] In the PPL Gas Case cost allocation study, PPL Gas weighted the average use 40% and excess capacity 60%, based on the system load factor in a manner similar to the A&E method used in my Cost of Service Study ("COSS") for UGI Gas in this case.

Q. What is the basis for your decision to use the A&E method over the Peak and Average ("P&A") method utilized by OCA?

A. The P&A method places too much weight on average use. In fact, the P&A method double counts the average demand because it uses average demand twice, *i.e.*, once in the calculation of average demand and again in the calculation of peak demand. This is evident because peak demand figures include the entire demand, including average use. Mr. Mierzwa's P&A allocator, therefore, double-counts average use and places little emphasis on the peak demands of customers that UGI Gas must design its system to meet. The A&E method used in my study properly weights the portion of the system on average demands

[1] *Pa. Pub. Util. Comm'n v. PECO Energy Co. – Gas Division*, Docket No. R-2020-3018929 (June 22, 2021); *see also Pa. Pub. Util. Comm'n v. Phila. Gas Works*, Docket No. R-00061931 (Sept. 28, 2007).

[2] *Pa. Pub. Util. Comm'n v. PPL Gas Util. Corp.*, Docket No. R-00061398 (Feb. 8, 2007).

and the portion of the system on the excess capacity of peak demands.

Q. Has the P&A method been approved in other cases before the Commission?

A. Yes, it is my understanding that the Commission in the past accepted the P&A method. However, more recently, it has chosen to use the A&E methodology where one party has proposed to use the P&A methodology (as is the case in this proceeding). In addition, in the PECO Gas Rate Case Order discussed above, the Commission affirmed the use of the A&E methodology in the following statement:

> Moreover, we are also persuaded by PECO's argument regarding the implicit double counting of average demand in the P&A methodology. Again, the A&E methodology allocates mains costs based, in part, on average demand and, in part, on the portion of peak demand that exceeds average demand. Alternatively, mains costs are allocated under the P&A methodology based, in part, on average demand and, in part, on the total peak demand. Consequently, average demand is included in the average demand component and in the peak demand component, which includes average demand. Accordingly, due to residential customers having temperature-sensitive demand and corresponding low-load factors, double-counting average demand understates the residential cost of service while overstating the cost of service of more efficient gas users. PECO R. Exc. at 21-22; PECO M.B. at 101. Based on the above, we find that the Company's proposed A&E methodology is more reflective of an accurate representation of PECO's mains distribution system.

PECO Gas Rate Case Order at 229-30.

Q. Please illustrate how the P&A method is flawed.

A. Take, for example, a system that has a peak day demand of 1,000 units and an average day demand of 400 units. The peak and average method will give equal weight to the average demand of 400 units per day and to the peak day demand of 1,000 units. But, the 400 average day units are also included in the 1,000 peak day units, so the average is counted twice. In the A&E method, however, the 400 average day units and the amount <u>over the</u>

average of 600 units (excess capacity) are weighted based on the system load factor so that the average day demand is not double counted. The P&A method erroneously uses 1,400 units (400 average and 1,000 peak day units) as a basis for allocation, rather than the actual 1,000 peak day units used in the A&E method. Stated another way, my A&E method would allocate 42.1% percent of costs to average demand and 57.9% to peak demand. By contrast, Mr. Mierzwa's P&A method would allocate 57% to average demand ((400 + 400) / 1400) and 43% to peak demand. It makes no sense, in my view, to allocate 57% of costs based on average demand when the same average demand represents only 42.1% of the overall capacity of the mains needed on a peak day, yet this is precisely the result achieved under Mr. Mierzwa's analysis.

Q. Your cost of service study, presented in UGI Gas Exhibit D, allocates the cost of mains based on the A&E method after assigning the cost of mains directly attributable to the XD-Firm and XD-I customers. Did Mr. Mierzwa object to the direct assignment approach?

A. No. Although he did not mention or comment on the Company's approach to directly assign the cost of mains to the XD-F and XD-I customers, his workpapers submitted in Excel format clearly show that he uses the same costs directly assigned to the XD customers as presented in the Company's study.

Q. How did you allocate mains to the other classes?

A. I used the A&E method with no excess capacity allocated to the interruptible service class.

Q. Why did you conclude that no excess capacity allocated to interruptible customers was appropriate?

A. As explained in my direct testimony, interruptible service customers can be interrupted during periods of peak demand, and UGI Gas's mains are designed to only meet the peak day requirements of firm service customers. Thus, the excess amount is zero.

Q. Did Mr. Mierzwa acknowledge that it is appropriate to allocate mains to the interruptible class as you did in Exhibit D?

A. No, to the contrary, he disagrees with my approach for the interruptible customers. In his P&A study, Mr. Mierzwa uses: (1) the average day requirement for the peak day portion of his allocation factor; and (2) the average usage in his average day component. This further demonstrates the double counting of the average day usage. By using average day in his peak day component, however, he agrees that there is no extra capacity assigned to the Rate IS class.

My A&E study accounts for the average day usage once by using only the average day requirement for the IS class with no extra capacity.

Q. Mr. Mierzwa claims that your A&E method, which weights the average and excess demands based on the system peak day, equates to using a peak allocator. Do you agree?

A. No, I do not. Mr. Mierzwa's assertion that my A&E allocation is identical to a pure peak allocator is simply wrong. Table 3 on page 13 of his testimony clearly demonstrates that my A&E method does not produce the same result as a pure peak allocation. For example, the difference between a pure peak allocator (of 0.5022) and my A&E factor (of 0.4685) is 3.37% less for Rate R under my A&E method versus a pure peak allocator. (OCA St. No. 3 at 13.) When allocating over $1.8 billion in rate base for mains, a 3% change in allocation will result in a $54,000,000 difference in the allocation of rate base, which is significant.

My A&E allocation is weighted based on a firm 2.4 peak day factor, which results in a weighting of 42.1% for average day usage and 57.9% for extra capacity. The approximate 40/60 weighting is the same weighting used in the Company's A&E cost of service study from the 2006 PPL Gas case, which was accepted by the Commission. Mr. Mierzwa's rejection of my A&E cost allocation, because he believes that it is a pure peak allocation, is unfounded.

Q. Did Mr. Mierzwa make other allocation revisions to your study?

A. Yes. He proposed revisions to the allocation of manufactured gas plant ("MGP") remediation expenses, forfeited discounts, and other miscellaneous revenues. (OCA St. No. 3 at 27.)

Q. Do you agree with Mr. Mierzwa's revision to the allocation of expenses associated with MGP remediation.

A. No, I do not. The remediation expenses relate to MGPs, which have been long retired and no longer produce gas supply. However, if these MGPs were still in operation, the gas produced, and the associated costs would be included in the Company's Purchased Gas Cost ("PGC") calculation related to core market residential and small firm service. This is because, historically, the MGPs were overwhelmingly used to provide gas supply to residential and small commercial customers, rather than industrial customers. Therefore, it is appropriate to allocate remediation costs associated with the past provision of service to PGC customers to PGC customers. In fact, during discovery in response to OCA-I-31, additional costs related to MGPs were identified. In Exhibit D-R, I broke these costs out separately and allocated them based on Factor 1.

Q. Do you agree with Mr. Mierzwa's revision to forfeited discounts?

A. Yes. During discovery, actual forfeited discounts by rate class for a recent twelve-month period was provided in discovery in response to OCA-I-18. Based on this information, I calculated a new Factor 23, which allocates the FPFTY forfeited discounts by class based on the information in response to OCA-I-18. This revision is reflected in UGI Gas Exhibit D-R.

Q. Do you agree with Mr. Mierzwa's revision to the allocation of reconnection fees included in miscellaneous revenues?

A. Yes. During discovery, the Company provided actual reconnection fee revenues by rate class for a recent twelve-month period in the response to interrogatory OCA-I-42.[3] A copy of that discovery response is attached to my testimony as UGI Gas Exhibit CEH-1R. As such, I calculated a new Factor 22, which allocates the FPFTY reconnection fee based on the information set forth in UGI Gas Exhibit CEH-1R. This revision is also reflected in

[3] The amount of reconnection fees was erroneously included in Other Miscellaneous revenues in the originally-filed cost of service study and allocated pursuant to Factor 16. Specifically, the line item for Reconnection Fees (to be allocated pursuant to Factor 6C) was $0.0 in the original cost of service study. The amount of reconnection fees in the revised cost of service study are the same as filed, but broken out separately. Reconnections fee costs are being allocated based on the information provided in discovery in Attachment OCA-I-42.

UGI Gas Exhibit D-R.

Q. What do you conclude with respect to Mr. Mierzwa's cost allocation study?

A. Mr. Mierzwa's allocation of mains investment using the P&A method, which double counts the average demand, is unreasonable and inconsistent with the Commission's last fully litigated natural gas base rate case. The Commission should use the Company's studies as a guide for revenue distribution in this case. As discussed above, his other allocation factors for the MGP costs and the IS rate class are also inappropriate.

<u>OSBA Statement No. 1 – Robert Knecht</u>

Q. Does Mr. Knecht generally agree with the Company's cost of service study?

A. Yes, Mr. Knecht acknowledges that the cost of service methodology used in the filing aligns with the methodology used in the Company's prior rate cases. However, he does recommend a change in the calculation of design day demands for the Rate R/RT and Rate N/NT classes that are used in the study. After reviewing Mr. Knecht's recommendation, the Company finds it to be acceptable. Exhibit D-R reflects this change, which is detailed below.

	As Filed Peak Day MCF	Revised Peak Day MCF	Difference
Residential	649,604	691,772	42,168
N	431,709	389,541	-42,168
DS	96,848	96,848	0
LFD	115,419	115,419	0
XD - Firm	821,122	821,122	0

III. CUSTOMER CHARGES

Q. Please discuss the parties' positions related to the Company's increases to the customer charges.

A. OSBA witness Knecht does not object to a $30.00 per month customer charge for Rate N/NT as the rate is cost based. However, OCA witness Colton, OCA witness Mierzwa, CEO witness Brady, and CAUSE-PA witness Geller all oppose the increase to the customer charge for Rate R/RT customers.

Q. Do you recommend that the Company increase its customer charges under proposed rates?

A. Yes. Schedule G of the cost of service study calculates the customer costs per bill by service classification. The schedule in Exhibit D-R shows that the Company can justify customer charges for Rate R/RT customers of $27.79 per month and $46.26 for Rate N/NT customers, using only direct customer costs. The level would be higher if all customer costs were included. These justifiable levels are higher rates than the customer charges proposed by the Company of $19.95 for Rate R/RT and $30.00 for Rate N/NT. As none of the parties contested the calculation of customer costs per bill, which is based on recovering direct customer costs through the customer charge, the proposed increases to the customer charges should be approved.

Q. Does that conclude your rebuttal testimony?

A. Yes, it does.

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTORS 1 and 1A. ALLOCATION OF COSTS WHICH VARY DIRECTLY WITH PGC AND CHOICE SALES.

Factors are based on the pro forma average daily PGC sales volumes for each service classification.

Service Classification	Pro Forma Average Daily PGC Volumes (Mcf)	Allocation Factor 1	PGC and Choice Volumes (Mcf)	Allocation Factor 1A
(1)	(2)	(3)		
Volumetric Costs				
Rate R	124,315	0.7176	142,485	0.6257
Rate N	48,925	0.2824	85,232	0.3743
Rate DS		-		
Rate LFD		-		
Rate XD	-	-		
Interruptible	-	-		
Total	173,240	1.0000	227,717	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTORS 2 . ALLOCATION OF COMPRESSOR STATION FUEL.

Factors are based on the pro forma average daily throughput volumes for each service classification.

Service Classification	Pro Forma Average Daily Throughput Volumes (Mcf)	Allocation Factor 2
(1)	(2)	(3)
Volumetric Costs		
Rate R	142,485	0.1529
Rate N	85,232	0.0914
Rate DS	26,335	0.0282
Rate LFD	64,765	0.0694
Rate XD Firm	571,442	0.6127
Interruptible	42,334	0.0454
Total	932,593	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTORS 3 and 3A. CALCULATION OF MAXIMUM DAY EXTRA DEMAND FACTORS.

Factors are based on the maximum day extra demand throughput for each classification.

Service Classification	Pro Forma Average Daily Throughput Volumes (Mcf)	Peak Day Capacity (Mcf)	Extra Capacity (Mcf)	Allocation Factor 3	Allocation Factor 3A
(1)	(2)	(3)	(4)=(3)-(2)	(5)	(6)
Volumetric Costs					
Rate R	142,485	691,772	549,287	0.4486	0.5635
Rate N	85,232	389,541	304,309	0.2485	0.3122
Rate DS	26,335	96,848	70,513	0.0576	0.0723
Rate LFD	64,765	115,419	50,654	0.0414	0.0520
Subtotal	318,817	1,293,580	974,763	0.7961	1.0000
Rate XD Firm	571,442	821,122	249,680	0.2039	-
Total	890,259	2,114,702	1,224,443	1.0000	1.0000
Firm Service Load Factor	0.4210		0.5790		

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH TRANSMISSION AND LARGE DISTRIBUTION MAINS.

Factors are based on the weighting of the factors derived from average daily throughput volumes volumes and from maximum day extra capacity demand for each service classification, as follows:

	Average Daily Throughput			Maximum Day Extra Demand		
Service Classification	MCF/Day	Allocation Factor	Weighted Factor*	Allocation Factor 3A	Weighted Factor*	Allocation Factor 4
(1)	(2)	(3)	(4)=(3)x 0.4210	(5)	(6)=(5)x 0.5790	(7)=(4)+(6)
Volumetric Costs						
Rate R	142,485	0.3973	0.1673	0.5635	0.3262	0.4935
Rate N	85,232	0.2376	0.1000	0.3122	0.1808	0.2808
Rate DS	26,335	0.0734	0.0309	0.0723	0.0419	0.0728
Rate LFD	64,765	0.1806	0.0760	0.0520	0.0301	0.1061
Rate XD Firm		-	-	-	-	-
Interruptible**	39,847	0.1111	0.0468		-	0.0468
Total	358,664	1.0000	0.4210	1.0000	0.5790	1.0000

* The weighting of the factors is based on the system load factor for firm service. See Factor 3.
** Excludes XD-I volumes for customers who are 100% interruptible.

FACTOR 4A. ALLOCATION OF COSTS ASSOCIATED WITH LOAD DISPATCHING AND M&R STATION EQUIPMENT.

Factors are based on the weighting of the factors derived from average daily throughput volumes and from maximum day extra capacity demand for each service classification, as follows:

		Average Daily Throughput		Maximum Day Extra Demand		
Service Classification	Throughput	Allocation Factor 2	Weighted Factor	Allocation Factor 3	Weighted Factor	Allocation Factor
(1)	(2)	(3)	(4)=(3)x 0.4410	(5)	(6)=(5)x 0.5590	(7)=(4)+(6)
Volumetric						
Rate R	142,485	0.1529	0.0675	0.4486	0.2508	0.3183
Rate N	85,232	0.0914	0.0403	0.2485	0.1389	0.1792
Rate DS	26,335	0.0282	0.0124	0.0576	0.0322	0.0446
Rate LFD	64,765	0.0694	0.0306	0.0414	0.0231	0.0537
Rate XD-Firm	571,442	0.6127	0.2702	0.2039	0.1140	0.3842
Interruptible	42,334	0.0454	0.0200	-	-	0.0200
Total	932,593	1.0000	0.4410	1.0000	0.5590	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 5. NOT USED IN THIS ALLOCATION.

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 6. ALLOCATION OF COSTS ASSOCIATED WITH ACCOUNTS 381 and 385.

Factors are based on the cost of meters by class included in Accounts 381 and 385, Meters and M&R Equipment.

Service Classification	Meter Costs SDR-COS-7	Allocation Factor
(1)		(1)
Customer Costs		
Rate R	$ 75,859,636	0.4258
Rate N	78,928,022	0.4431
Rate DS	10,405,903	0.0584
Rate LFD	7,783,898	0.0437
Rate XD-Firm	1,404,538	0.0079
Interruptible	3,754,266	0.0211
Total	$ 178,136,264	1.0000

FACTOR 6A. ALLOCATION OF COSTS ASSOCIATED WITH HOUSE REGULATORS

Factors are based on the number of weighted house regulators for customers served.

Service Classification	Number of Regulators	Factor	Weighted Regulators	Allocation Factor
(1)	(2)	(3)	(4)	(5)
Customer				
Rate R	616,132	1.00	616,132	0.8790
Rate N	70,125	1.21	84,851	0.1210
Total	686,257		700,983	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 6B. ALLOCATION OF COSTS ASSOCIATED WITH INDUSTRIAL MEASURING AND REGULATING EQUIPMENT.

Factors are based on the cost of Meters and M&R equipment by class included in Accounts 381 and 385.

Service Classification	Cost of Meters & M&R Equipment	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate DS	$ 10,405,903	0.4456
Rate LFD	7,783,898	0.3334
Rate XD - Firm	1,404,538	0.0602
Interruptible	3,754,266	0.1608
Total	$ 23,348,605	1.0000

FACTOR 6C. ALLOCATION OF COSTS ASSOCIATED WITH SERVICES.

Factors are based on the cost of services by class included in Account 380, Service Lines.

Service Classification	Cost of Service Lines SDR-COS-6	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	$ 1,141,965,038	0.8718
Rate N	157,264,701	0.1201

Rate LFD	3,245,947	0.0025
Rate XD - Firm	402,109	0.0003
Interruptible	1,670,210	0.0013
Total	$ 1,309,763,212	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 7. ALLOCATION OF COSTS ASSOCIATED WITH CUSTOMER ACCOUNTING AND METER READING.

Factors are based on the number of customers for each classification, as follows.

Service Classification	Number of Customers	Allocation Factor 7	Allocation Factor 7A
(1)	(2)	(3)	(4)
Customer Costs			
Rate R	616,132	0.8947	
Rate N	70,125	0.1018	
Rate DS	1,392	0.0020	0.5769
Rate LFD	602	0.0009	0.2495
Rate XD Firm	56	0.0001	0.0232
Interruptible	363	0.0005	0.1504
Total	688,670	1.0000	1.0000

FACTOR 8. ALLOCATION OF COSTS ASSOCIATED WITH SALES EXPENSES.

Factors are based on the number of Rate R and Rate N customers.

Service Classification	Number of Customers	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	616,132	0.8978
Rate N	70,125	0.1022
Total	686,257	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 9 (DA). ALLOCATION OF CUSTOMER ASSISTANCE EXPENSES.

These costs are directly assigned to the Residential Classification.

Service Classification	Allocation Factor

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 10. ALLOCATION OF DISTRIBUTION OPERATION OTHER EXPENSES AND RENT.

Factors are based on distribution operation expenses other than those being allocated

Service Classification	Operation Expenses	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 7,162,515	0.1888
Rate N	4,066,104	0.1072
Rate DS	1,045,861	0.0276
Rate LFD	1,475,450	0.0389
Rate XD Firm	2,347,881	0.0619
Interruptible	634,553	0.0167
Customer Costs		
Rate R	15,798,827	0.4164
Rate N	4,484,957	0.1182
Rate DS	416,872	0.0110
Rate LFD	304,448	0.0080
Rate XD Firm	52,729	0.0014
Interruptible	148,409	0.0039
Total	$ 37,938,606	1.0000

FACTOR 11. ALLOCATION OF DISTRIBUTION MAINTENANCE OTHER EXPENSES.

Factors are based on distribution maintenance expenses other than those being allocated

Service Classification	Maintenance Expenses	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 14,363,506	0.3771
Rate N	8,164,150	0.2143
Rate DS	2,109,995	0.0554
Rate LFD	3,038,765	0.0798

Rate XD Firm	285,383	0.0075
Interruptible	763,057	0.0200
Total	$ 38,092,505	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 12. ALLOCATION OF ADMINISTRATIVE AND GENERAL EXPENSES.

Factors are based on the allocation of operation and maintenance expenses.

Service Classification (1)	Operation & Maintenance Expenses (2)	Allocation Factor (3)
Volumetric Costs		
Rate R	$ 58,569,126	0.3586
Rate N	14,629,664	0.0896
Rate DS	4,017,934	0.0246
Rate LFD	5,724,826	0.0351
Rate XD Firm	6,401,934	0.0392
Interruptible	2,162,015	0.0132
Customer Costs		
Rate R	56,004,797	0.3429
Rate N	9,214,100	0.0564
Rate DS	2,926,548	0.0179
Rate LFD	2,132,347	0.0131
Rate XD Firm	469,409	0.0029
Interruptible	1,063,709	0.0065
Total	$ 163,316,408	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 13. ALLOCATION OF LABOR RELATED TAXES AND BENEFITS.

Factors are based on the allocation of total operation and maintenance direct labor expense to service classifications as shown on the following page.

Service Classification	Total Labor Expense	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 18,312,249	0.2226
Rate N	7,867,569	0.0957
Rate DS	2,061,897	0.0251
Rate LFD	2,939,373	0.0358
Rate XD Firm	3,594,917	0.0437
Interruptible	1,229,259	0.0150
Customer Costs		
Rate R	34,118,262	0.4151
Rate N	6,908,762	0.0841
Rate DS	2,308,634	0.0281
Rate LFD	1,706,775	0.0208
Rate XD Firm	317,757	0.0039
Interruptible	829,294	0.0101
Total	$ 82,194,748	1.0000

FACTOR 14. ALLOCATION OF ORGANIZATION, FRANCHISES AND CONSENTS, MISCELLANEOUS INTANGIBLE PLANT AND OTHER RATE BASE ELEMENTS.

Factors are based on the allocation of the original cost less depreciation excluding the items being allocated, as follows:

Service Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$1,148,435,746	0.3024
Rate N	605,368,694	0.1595
Rate DS	154,068,783	0.0406
Rate LFD	224,236,709	0.0591
Rate XD Firm	132,940,846	0.0350
Interruptible	98,011,819	0.0258
Customer Costs		
Rate R	1,159,977,329	0.3055
Rate N	224,664,245	0.0592
Rate DS	21,838,658	0.0058
Rate LFD	15,830,903	0.0042
Rate XD Firm	3,018,638	0.0008
Interruptible	7,966,806	0.0021
Total	$3,796,359,176	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 15. ALLOCATION OF RETURN AND TAXES.

Factors are based on the result of allocating the original cost measure of value, as presented on the following pages.

Service Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 958,730,325	0.3024
Rate N	505,307,272	0.1595
Rate DS	128,598,637	0.0406
Rate LFD	187,160,695	0.0591
Rate XD Firm	110,984,157	0.0350
Interruptible	81,826,312	0.0258
Customer Costs		
Rate R	968,326,817	0.3056
Rate N	187,525,890	0.0592
Rate DS	18,200,333	0.0057
Rate LFD	13,196,255	0.0042
Rate XD Firm	2,516,808	0.0008
Interruptible	6,649,483	0.0021
Total	$ 3,169,022,984	1.0000

FACTOR 16. ALLOCATION OF REGULATORY COMMISSION EXPENSES, ASSESSMENTS AND OTHER REVENUES.

Factors are based on the allocated cost of service excluding those items being allocated.

Service Classification	Total Cost of Service	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 231,286,751	0.3131
Rate N	93,469,244	0.1265
Rate DS	23,875,932	0.0323
Rate LFD	34,530,032	0.0467
Rate XD Firm	26,135,267	0.0354
Interruptible	14,487,058	0.0196
Customer Costs		
Rate R	249,526,932	0.3377
Rate N	46,677,279	0.0632
Rate DS	8,409,864	0.0114
Rate LFD	6,150,426	0.0083
Rate XD Firm	1,269,887	0.0017
Interruptible	3,053,181	0.0041
Total	$ 738,871,852	1.0000

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 17. ALLOCATION OF OPERATION AND MAINTENANCE EXPENSES ASSOCIATED WITH LARGE MAINS.

Factors are based on the allocation of rate base for large and directly assigned mains.

Service Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 569,531,745	0.4519
Rate N	324,061,832	0.2570
Rate DS	84,016,030	0.0666
Rate LFD	122,446,440	0.0971
Rate XD Firm	106,646,558	0.0846
Interruptible	54,011,944	0.0428
Total	$ 1,260,714,549	1.0000

FACTOR 18. ALLOCATION OF RATE BASE ASSOCIATED WITH M&R STATION EQUIPMENT AND OTHER DISTRIBUTION ASSETS.

Factors are based on the composite allocation of all mains.

Service Classification	Original Cost Less Depreciation	Allocation Factor
(1)	(2)	(3)
Volumetric Costs		
Rate R	$ 879,305,838	0.4656
Rate N	500,322,349	0.2649
Rate DS	129,713,201	0.0687
Rate LFD	189,046,301	0.1001
Rate XD Firm	106,646,558	0.0565
Interruptible	83,388,697	0.0442
Total	$ 1,888,422,944	1.0000

UGI UTILITIES, INC. - GAS DIVISION

FACTORS FOR ALLOCATING COST OF SERVICE TO SERVICE CLASSIFICATIONS

FACTOR 19. ALLOCATION OF UNCOLLECTIBLE ACCOUNTS.

Factors are based on history of net write-offs by class.

Service Classification	3-Yr. Average of Net Write-offs	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	$ 10,714,163	0.9251
Rate N	749,312	0.0647
Rate DS	8,837	0.0008
Rate LFD	19,905	0.0017
Rate XD Firm	64,418	0.0056
Interruptible	24,812	0.0021
Total	$ 11,581,448	1.0000

FACTOR 20. ALLOCATION OF PENALTY REVENUE.

Factors are based on an analysis of penalty revenue, by class.

Service Classification	Penalty Revenue	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	$ 2,313,287	0.4737
Rate N	1,885,751	0.3861
Rate DS	240,168	0.0492
Rate LFD	264,015	0.0541
Rate XD Firm	91,116	0.0187
Interruptible	89,186	0.0183
Total	$ 4,883,522	1.0000

FACTOR 21. ALLOCATION OF CUSTOMER DEPOSITS.

Factors are based on an analysis of customer deposits for 2021, by class.

Service Classification	2021 Customer Deposits	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	$ 4,510,000	0.2384
Rate N	12,829,000	0.6781
Rate DS	895,000	0.0473
Rate LFD	549,000	0.0290
Rate XD Firm	8,000	0.0004
Interruptible	129,000	0.0068
Total	$ 18,920,000	1.0000

FACTOR 22. ALLOCATION OF RECONNECTION FEES

Factors are based on an analysis of reconnection fees from February 1, 2021 thru January 31, 2022

Service Classification	Reconnection Fees	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	$ 1,314,284	0.9801
Rate N	26,748	0.0199
Rate DS	-	-
Rate LFD	-	-
Rate XD Firm	-	-
Interruptible	-	-
Total	$ 1,341,032	1.0000

FACTOR 23. ALLOCATION OF FORFEITED DISCOUNTS

Factors are based on an analysis of forfeited discounts from February 1, 2021 thru January 31, 2022

Service Classification	Forfeited Discounts	Allocation Factor
(1)	(2)	(3)
Customer Costs		
Rate R	$ 2,778,458	0.5294
Rate N	1,779,387	0.3391
Rate DS	226,702	0.0432
Rate LFD	258,963	0.0493
Rate XD Firm	110,534	0.0211
Interruptible	93,796	0.0179
Total	$ 5,247,840	1.0000

UGI Utilities, Inc. – Gas Division

Statement No. 11-R

Rebuttal Testimony of
John D. Taylor, Managing Partner
Atrium Economics, LLC

Topics Addressed: **Weather Normalization Rider**
Residential Customer Charge

Dated: May 17, 2022

Table of Contents

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is John D. Taylor, and I am employed by Atrium Economics, LLC ("Atrium") as a Managing Partner. My business address is 10 Hospital Center Commons, Suite 400 Hilton Head Island, SC 29926.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 11, on January 28, 2022.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to certain portions of the direct testimony submitted by other parties relating to the Company's proposed Weather Normalization Adjustment ("WNA") mechanism and impact on low-income customers resulting from the proposed Residential Customer Charge. The direct testimony of the other parties addressed are as follows:

- Bureau of Investigation and Enforcement ("I&E") Statement No. 4 - direct testimony of Ethan H. Cline ("I&E witness Cline");
- Office of Consumer Advocate ("OCA") Statement No. 4 - direct testimony of Roger D. Colton ("OCA witness Colton");
- Office of Consumer Advocate ("OCA") Statement No. 3 - direct testimony of Jerome D. Mierzwa ("OCA witness Mierzwa");
- The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1 – direct testimony of Harry S. Geller ("CAUSE-PA witness Geller"); and

- Office of Small Business Advocate ("OSBA") Statement No. 1 – direct testimony of Robert D. Knecht ("OSBA witness Knecht").

II. APPLICATION AND APPROPRIATENESS OF A DEADBAND

Q. Can you please provide a brief description of the use of the term "deadband" in the context of WNA riders?

A. A deadband sets a range in which the application of a WNA is not applied. If actual weather is different than normal weather, but the percentage difference between the actual heating degree days ("AHDD") and the normal heating degree days ("NHDD") is below the deadband threshold, then no WNA adjustment is applied. As such, some weather variability flows to customer bills and is seen in the associated utility distribution revenues.

Q. Please summarize the other parties' positions concerning the application of a deadband.

A. I&E witness Cline states that the WNA mechanism proposed by UGI Gas is different than that approved by the Pennsylvania Public Utility Commission ("Commission") for Columbia Gas of Pennsylvania, Inc. ("Columbia") since Columbia's WNA mechanism contains a three percent deadband. I&E witness Cline recommends that the UGI Gas WNA be approved if a three percent deadband is included.[1] Moreover, OCA witness Mierzwa states that the Commission should reject the proposed WNA mechanism, but if approved, it should include a 3 percent deadband. Specifically, he states, "If not rejected, there should be a 3% deadband included like the pilot WNA Rider utilized by Columbia Gas of

[1] I&E Statement No. 4 at 4-5.

Pennsylvania."[2] OCA Witness Mierzwa states that "a 3 percent deadband should be adopted to help ensure that the assessment of the WNA is limited to changes in usage attributable to variations in temperature."[3]

Q. Do you agree that the proposed WNA mechanism should only be approved with a three percent deadband?

A. No, I do not. Their recommendation to include a three percent deadband is misplaced and not fully supported with evidence. I&E witness Cline cites the Commission's decision in Columbia's 2020 base rate case at Docket No. R-2020-3018835, stating the Commission determined that "without an extraordinary set of circumstances, there is no need for Columbia to reconcile day-to-day temperature variations that are part of normal business."[4] UGI Gas's WNA mechanism does not reconcile weather on a day-to-day basis. Instead, it uses the difference between actual weather and normal weather across a full billing month time period, which includes, on average, approximately 30 days of weather. Further, Mr. Cline states, "Without the deadband customer rates could be subject to constant adjustment for normal weather variations in every billing cycle."[5] However, the proposed WNA mechanism only adjusts bills across the billing cycle during the months of October through May. Further, the primary intent of a WNA mechanism *is* to adjust for differences measured against normal weather. While these differences may sometimes be very small, so will the resulting impact on the customer's bill. However, it is essential to note that these adjustments will be consistent in application in all situations when actual weather

[2] OCA Statement No. 3 at 4.
[3] OCA Statement No. 3 at 54.
[4] Docket No. R-2020-5 3018835, Order entered February 19, 2021, pp. 264-265.
[5] I&E Statement No. 4 at 4.

varies from a defined normal heating degree day value. As indicated in my direct testimony, this approach is clearer and more understandable to customers than a deadband approach, which then injects an additional level of complexity for the Company's administration, training, and communication related to the WNA as well as to understanding the mechanics of WNA operation for customers. The Company's view is that establishing a WNA that is most clear and understandable to customers – with no deadband – is preferred to one that injects added complexity that would encumber customer education and understanding. For this reason, the Commission should reject the application of a deadband in approving the Company's WNA proposal.

Q. OCA Witness Mierzwa states that other weather variables impact the variations in usage. (OCA Statement No. 3 at 53-54.) Should a WNA mechanism, such as the one proposed by UGI Gas, adjust usage for these other variables?

A. No. Mr. Mierzwa states that other weather variables, such as variations due to average daily temperature, wind speed, and variations that can be introduced by using multiple weather stations for each delivery region, can impact usage.[6] He then concludes that a three percent deadband should be adopted to help ensure that the WNA is limited to changes in usage attributable to variations in temperature.[7] However, UGI Gas's base distribution rates and Commission-approved revenue levels are developed using normal temperature-based weather assumptions, and the proposed WNA mechanism adjusts customer bills for the difference between the actual weather and normal weather on the

[6] OCA Statement No. 3 at 53-54

[7] OCA Statement No. 3 at 53-54. Mr. Mierzwa claims that UGI Gas's WNA does not account for variations due to average daily temperature, wind speed, and variations that can be introduced by using multiple weather stations for each delivery region.

same temperature basis. While it is true that usage can be impacted by other weather factors such as humidity, wind speed, precipitation, cloud cover, etc., these factors have not been historically utilized to establish UGI Gas's base distribution rates. Temperature is the only weather variable utilized. Thus, the Company's approach in basing the operation of the WNA on temperature variation results in the WNA mechanism being established on the same temperature basis as UGI Gas's base distribution rates. The inclusion of a deadband to "ensure that the assessment of the WNA is limited to changes in usage attributable to variations in temperature"[8] is not necessary. The WNA adjusts the difference between normal weather and actual weather, measured by the difference between NHDDs and AHDDs. Introducing a deadband results in a mechanism that does not fully account for weather-related temperature variations. Moreover, other weather variables that Mr. Mierzwa calls out, such as wind speed, do not go away once a 3% level is exceeded. Thus, his argument that a 3% deadband is needed to "ensure that the assessment of the WNA is limited to changes in usage attributable to variations in temperature" is based on a false premise and should be given no weight.

Q. Are WNAs with a deadband as effective as WNAs without a deadband in accounting for variations in usage due to differences in normal and actual weather?

A. No. A three percent deadband means that a portion of revenue variation due to weather remains unaddressed. Thus, the goal of the WNA (i.e., to match customers' bills and revenue recovery with expected usage under normal temperature weather) is not fully realized. The deadband misrepresents the effect of temperature variations in weather. For

[8] OCA Statement No. 3 at 54.

example, under the application of a three percent deadband, if a billing cycle is 2.9 percent colder than normal, no adjustment will be made.

Q. Is Mr. Cline correct when he states that "UGI provided no evidence or support that would show how or why a departure from the Commission's previous ruling in Columbia regarding the deadband should not be followed" (I&E Statement No. 4 at 5)? [9]

A. No. On page 11 of my direct testimony (UGI Gas Statement No. 11), I explained why UGI Gas's proposed WNA mechanism did not include a deadband. Specifically, my direct testimony provided two primary rationales for not including a deadband: (1) the application of a deadband adds unnecessary complexity to the rider, which is a concern for customer communication and education; and (2) the WNA's intended goal is to stabilize billings and distribution revenues from readily identified weather-related variances, not just some of those variances.[10]

Q. Are there additional considerations the Commission should make with regard to the application of a deadband to the Company's WNA from a ratemaking policy perspective?

A. Yes, customers prefer the consistent application of rates and riders, and complexity can lower customer understanding and acceptance. One of Bonbright's '*Criteria of a Sound Rate Structure*' directly relates to this: "The related, practical attributes of simplicity, certainty, convenience of payment, economy in collection, understandability, public

[9] I&E Statement No. 4 at 5.
[10] UGI Gas Statement No. 1 at 11.

acceptability, and feasibility of application."[11] Having a mechanism turn on and off based on a 0.1% difference in weather – between 3.0% and 3.1% – adds additional complexity and inconsistency that provides no improvements to the application of the mechanism and, therefore, should be avoided.

Q. Do all WNA and decoupling mechanisms contain deadbands?

A. No. As I stated in my direct testimony, research conducted in November 2021 indicated that approved and proposed decoupling mechanisms exist in 40 states in the U.S. and the District of Columbia.[12] While not all mechanisms were reviewed in detail, those in place for the utilities included in the Gas Group (the peer group) used to inform the Company's recommended Return on Equity were examined to gain insights into the use of deadbands. Out of the 26 utilities with a WNA or decoupling mechanism, only four rely on deadbands; thus, over 80% of WNA mechanisms currently in place do not have deadband requirements. Those with deadbands include: (1) Columbia at 3%; (2) South Jersey Gas Company at 0.5%; (3) Elizabethtown Gas Company at 0.5%; and (4) Spire Mississippi, Inc. which applies a dollar threshold based on the regulatory asset or liability (as the mechanism is not real-time focused). I also note that South Jersey and Elizabethtown Gas are affiliates and both subsidiaries of South Jersey Industries.

Q. How should the Commission weigh the arguments relating to including a deadband?

[11] Principles of Public Utility Rates, Second Edition, Page 384 James C. Bonbright, Albert L. Danielson, David R. Kamerschen, Public Utility Reports, Inc., 1988.
[12] UGI Gas Statement No. 11 at 19-20.

A. The Company believes a WNA mechanism without a deadband is best for customer understanding, as it results in the consistent and true application of the mechanism. While there is variation in the impact of weather on usage, those variations are what the WNA aims to remedy. Introducing a deadband moves away from reducing the variation in customer bills and the Company's distribution revenues due to weather. If the Commission seeks to introduce additional variability into the WNA mechanism by including a deadband, I recommend looking at Philadelphia Gas Works' ("PGW") WNA clause, which contains a 1% deadband,[13] to provide the least amount of weather-related variability to customer bills.

III. IMPACT ON LOW-INCOME CUSTOMERS

Q. What statements do OCA witnesses Mierzwa and Colton make regarding the impacts of the proposed WNA mechanism on low-income customers?

A. In the concluding remarks to Part 2, "Proposed Weather Normalization Adjustment Clause," of OCA witness Colton's direct testimony, he refers to a disproportionate adverse impact on low-income customers.[14] OCA witness Mierzwa cites OCA witness Mr. Roger Colton twice and states, "As discussed by OCA witness Mr. Roger Colton, the WNA will disproportionately and adversely affect low-income customers."[15]

Q. Are these statements supported by testimony provided by OCA witness Colton?

---

[13] Philadelphia Gas Works Gas Service Tariff, Supplement No. 148 to Gas Service Tariff – Pa P.U.C. No 2, Weather Normalization Adjustment Clause, pp. 149-150.

[14] OCA Statement No. 4 at 15.

[15] OCA Statement No. 3 at 47-48. OCA uses this statement to respond to the Commission required Consideration 6 "Please explain how the WNA impacts customer incentives to employ efficiency measures and distributed energy resources" and Consideration 7, "Please explain how the WNA impacts low-income customers and support consumer assistance programs."

A. No. OCA witness Colton merely provides testimony on the benefits of budget billing, stating, "Budget Billing has the effect of being able to address the volatility in bill payment that arises as a result of variations in cold weather monthly heating bills. The Budget Billing program would play that role in a much more efficient and effective fashion than would the WNA."[16] He also suggests an expansion of the UGI Gas Low-Income Usage Reduction Program ("LIURP") to assist customers.[17] However, contrary to his statements and those of OCA Witness Mierzwa, the OCA provides no evidence of the "disproportionate adverse impact" of the proposed WNA mechanism on low-income customers. (OCA Statement No. 4 at 12.)

Q. Did the Company propose eliminating budget billing and only relying on the WNA mechanism to reduce bill volatility?

A. No. Budget billing is still an offering provided by UGI Gas and is not being proposed to be replaced by the WNA mechanism. Budget billing and a WNA mechanism are not mutually exclusive as both can exist and support customers by reducing bill volatility.

Q. Is budget billing a better way to protect low-income customers from bill volatility?

A. No. Budget billing provides a levelized monthly payment allowing a customer to spread annual bills calculated based on actual weather in relatively equal installments over 11 months, with the last month being a true-up month. Budget bills are recalculated every three months to ensure that the customer does not experience a substantial over or under-collection of revenue and require a larger end-of-year true-up. However, budget billing

[16] OCA Statement No. 4 at 14-15.
[17] OCA Statement No. 4 at 15.

does not address the difference between actual weather and normal weather, as the customer remains obligated for payments that ultimately reconcile to the actual weather billing amounts. Thus, budget billing is not comparable to WNA, which stabilizes the distribution charges of the bill regardless of weather variances and creates a more stable total bill on an annual basis. Moreover, customers certainly can elect to participate in, or remain in, the budget billing program after the WNA is implemented. With both WNA and budget billing, a customer can maximize bill stability and minimize month-to-month bill variances. After the WNA mechanism is approved, a customer on budget billing will see lower levels of change during these three-month reviews and lower annual reconciliations because the WNA will adjust winter heating season bills for the difference between actual and normal weather. Thus, the WNA would increase bill stability for these customers, which presumably is why they chose budget billing options in the first place. In summary, implementing the proposed WNA mechanism for customers on budget billing plans is beneficial for these customers who seek more bill stability.

Q. What conclusions are made by CAUSE-PA witness Geller with respect to the proposed WNA mechanism's impact on low-income customers?

A. CAUSE-PA witness Geller concludes that "UGI's proposed WNA shifts the risk of changing weather patterns from the utility to the consumer and prevents low-income customers from realizing bill savings due to warming trends."[18] Mr. Geller states, "Any risk of increased bills due to colder than normal winters is outweighed by the increasing

[18] CAUSE-PA Statement No. 1 at 5.

frequency of warmer winters."[19] As such, CAUSE-PA recommends that the Commission reject UGI Gas's proposed WNA mechanism.

Q. What evidence was provided by CAUSE-PA witness Geller that customer bills benefit more greatly from a higher frequency of warmer winters than colder winters?

A. CAUSE-PA witness Geller cites a discovery response provided by UGI Gas to OCA, which shows that over the last three years (2019, 2020, and 2021), the weather in UGI Gas's service territory was 3%, 9%, and 9% warmer than normal, respectively.[20]

Q. Are warmer-than-normal winters more common than colder-than-normal winters?

A. If the period of review is narrowly limited to the last three winters, then yes, warmer-than-normal winters are more common, as pointed out by CAUSE-PA. However, conclusions on the frequency of colder-than-normal and warmer-than-normal winters based on only three years of data are erroneous. For example, if you extend the review to winters from 2004-2021 – 18 years of data – the higher prevalence of winters is those that are colder-than-normal. Table 1 below shows that 10 of the last 18 winters were colder-than-normal.

[19] CAUSE-PA Statement No. 1 at 37.
[20] CAUSE-PA Statement No. 1 at 36 citing UGI Gas's response to OCA-VI-3.

Table 1 – 2004-2021 Heating Degree Days (October – May)

Fiscal Year	Actual HDD	Normal HDD	Variance to Normal HDD	
2004	5,640	5,439	4%	Colder
2005	5,791	5,439	6%	Colder
2006	5,256	5,439	3%	Warmer
2007	5,486	5,439	1%	Colder
2008	5,458	5,439	0%	Colder
2009	5,797	5,439	7%	Colder
2010	5,343	5,439	2%	Warmer
2011	5,796	5,439	7%	Colder
2012	4,614	5,439	15%	Warmer
2013	5,483	5,439	1%	Colder
2014	6,132	5,439	13%	Colder
2015	5,923	5,439	9%	Colder
2016	4,847	5,439	11%	Warmer
2017	4,913	5,439	10%	Warmer
2018	5,475	5,439	1%	Colder
2019	5,345	5,439	2%	Warmer
2020	4,990	5,439	8%	Warmer
2021	4,991	5,439	8%	Warmer
		Count	10	Colder
		Count	8	Warmer

Q. What insights are provided by the data presented in Table 1 when evaluating the appropriateness of UGI Gas's proposed WNA mechanism?

A. Some winters are colder-than-normal and some warmer-than-normal, but on average, the actual HDDs will be close to the normal HDDs across multiple years. This can be seen in the actual application of Columbia's WNA for the implementation years of 2013 through 2020; as presented in their 2020 base rate case filing and summarized in Table 2.[21]

[21] Columbia Gas of Pennsylvania, Inc. Docket Nos. R-2020-3018835 Direct M. J. Bell Statement No. 3 at 18. Accessible at https://www.puc.pa.gov/pcdocs/1661259.pdf.

Table 2 – 2013-2020 Columbia's WNA Net Adjustments

Columbia's Winter Seatson	Net WNA Adjustment (millions)
2013/2014 Season	-9.36
2014/2015 Season	-10.98
2015/2016 Season	11.52
2016/2017 Season	13.9
2017/2018 Season	-6.1
2018/2019 Season	-3.7
2019/2020 Season	2.45
2013 - 2020	-2.27

This illustrates a fundamental principle and benefit of WNA mechanisms; they work in a reciprocal manner; where customer bills are protected during colder-than-normal weather (2013/2014, 2014/2015, 2017/2018, 2018/2019) and utility revenues during warmer-than-normal weather (2015/2016, 2016/2017, 2019/2020). Yet, they on average over time result in symmetry and neutrality between customers costs and revenue collection.

Q. Is there additional evidence that should be weighed in considering the trade-offs for customers between colder than normal or warmer than normal winters?

A. Yes, the function of the WNA mechanism is not to transfer risk or set up a mechanism that benefits the utility more often than its customers. Weather is not normal every year, so the rates developed using normal weather result in differences between the expected customer bills and UGI Gas revenues and the actual customer bills and UGI Gas revenues. As stated in my direct testimony, Commission Chairman Gladys Brown Dutrieuille has stated that "[t]he Weather Normalization Adjustment works bi-directionally to insulate customers from high bills during the extremely cold months, while also limiting the decline in revenue for [the utility] during unseasonably warm heating months."[22] She also "encourage[d] other natural gas distribution companies in the Commonwealth to consider utilization of weather decoupling distribution charge mechanisms."[23]

Q. What is the impact on low-income customers enrolled in the Company's Customer Assistance Program ("CAP") if the Commission approves the proposed WNA mechanism?

A. Under the proposed WNA mechanism, CAP customers who pay an "average bill" amount will see lower bill variability for distribution costs. This is due to the calculation of their average bill reflecting the implementation of the WNA mechanism; which reduces actual bill variability that would otherwise impact the "average bill" calculation due to non-normal weather. CAP customers who are currently paying a percent-of-income based bill will see no impact. UGI Gas reviews CAP customers quarterly to ascertain if the average bill or the percent-of-income results in the lowest bill and, as necessary, migrates customers to their most beneficial option. The proposed WNA mechanism increases average bill stability, decreasing customers' movement between average bill and percent-of-income during these quarterly reviews. Ultimately this increases bill stability for all CAP customers.

[23] *Id.*

IV. RESPONSE TO OCA'S CRITIQUE OF THE WNA MECHANISM

Q. Outside of the conclusory statements relating to the impact on low-income customers, does the OCA provide additional testimony on the proposed WNA mechanism?

A. Yes. OCA witness Mierzwa provides several critiques of the proposed mechanism, ultimately recommending that the Commission reject the proposal or, if approved, include a deadband. OCA witness Mierzwa's critique and proposed denial of the WNA are based on the following reasons:

- The proposed WNA mechanism embodies a take-or-pay pricing policy.
- The proposed WNA mechanism inappropriately adjusts rates without considering other changes in total revenues and costs.
- The proposed WNA mechanism is biased to the Company's benefit during colder-than-normal billing periods.
- UGI Gas has not demonstrated that its current system of rates and charges result in inadequate revenue stability, and does not decrease the frequency of rate case filings by UGI Gas."[24]

Q. Why does OCA Witness Mierzwa believe the WNA mechanism results in a take-or-pay billing feature?

A. Mr. Mierzwa believes that "[u]nder the proposed WNA mechanism, consumers would pay for distribution service they do and do not receive," so "[n]o matter how much distribution service is actually purchased by UGI Gas's Residential customers, ultimately, under the proposed WNA mechanism, those customers would pay for a normalized level of service whether they take delivery or not."[25] He then concludes the WNA converts "a volumetric rate into rates that yield a given revenue, regardless of the amount of service purchased," which he believes "converts the Company's volumetric rate into a take-or-pay billing

[24] OCA Statement No. 3 at 50.
[25] OCA Statement No. 3 at 50.

feature."[26] Under Mr. Mierzwa's perspective, minimum bills, customer charges, and demand charges would all represent take-or-pay billing features. These are all accepted rate structures used across North America and within Pennsylvania. Mr. Mierzwa errs in his conclusions that the level of distribution service received is related to the amount of volumetric usage paid for by customers.

Q. Does the amount of distribution service provided to customers change with the weather and with the total volumetric charges paid for by customers for this distribution service?

A. No. Contrary to Mr. Mierzwa's perspective, while customers pay more as they consume more natural gas (the commodity), they are not provided with additional distribution services as they consume more, nor do they receive less distribution services when they consume less. UGI Gas's distribution rates are used to recover UGI Gas's approved revenue requirement associated with UGI Gas's distribution system that stands ready to provide service to customers. While UGI's cost structure is largely fixed and does not vary with the amount of gas consumed by customers; the rates for recovery of these fixed costs are set on a volumetric basis as part of currently approved rate design. Volumetric rates match customers' contributions to these fixed costs via rate calculations that assume normal weather. When the weather is colder than normal, UGI Gas's customers use more gas (the commodity) but do not purchase more distribution service. They do not get more metering, capacity, main footage, service lines, billing, and customer service; they get the same level of distribution service. When the weather is warmer than normal, UGI Gas's

[26] OCA Statement No. 3 at 51.

customers use less gas (the commodity), but they do not purchase less distribution services. Under UGI Gas's current rate structures, customers will be billed more when it is colder-than-normal and less when it is warmer-than-normal, but there will be no change in the amount of distribution service provided to these customers.

Q. What is a take-or-pay billing feature, and does the WNA mechanism result in a take-or-pay billing feature?

A. A take-or-pay billing feature or contract feature is when a supplier of a product requires the customer to take a certain portion of the product, and if the customer does not take that portion, then the customer still pays some amount to the supplier (for the unused portion). UGI Gas's proposed WNA mechanism and the WNA mechanism in place for Columbia, PGW, and dozens of other utilities do not represent a take-or-pay billing feature. Nor do customer charges, demand charges, or minimum bills represent take-or-pay billing features. All of these rate structures and the proposed WNA mechanism are used to match the nature of the service being provided; that it is fixed and does not vary with usage, to the recovery of these costs form customers. In contrast to the OCA's mischaracterization, the WNA mechanism recognizes that the level of distribution service provided does not vary with weather and is paid for more consistently under a WNA regardless of whether a customer's gas usage increases or decreases due to colder or warmer than normal weather. Take-or-pay contracts are used to ensure the customer bears the full quantity risk if the customer's demand is lower than expected, moving this risk from supplier to customer. In contrast, the WNA mechanism creates symmetry between the customers and UGI Gas, where customers are protected from high bills during colder winter months while limiting the decline in UGI Gas's revenue during warm winter months. It is not a transfer of risk but rather a symmetry: using normal weather set the level of rates and ensuring customer bills and revenues reflect normal weather. Lastly, using Mr. Mierzwa's perspective, that the amount of distribution service provided varies with weather, a WNA is equally as much a "take-and-not-pay" construct as it would be a "take-or-pay" construct. Thus, Mr. Mierzwa's "take-or-pay" argument is both incorrect in application to a WNA and one-sided in an effort to distort the factual operation of the WNA.

Q. OCA witness Mierzwa concludes that the proposed WNA mechanism automatically adjusts revenues between rate cases without considering other changes in total revenues and costs.[27] Is this a reasonable critique of WNA mechanisms?

A. No, it is misplaced. The appropriate level of revenues and customer bills are set as a result of rate cases, and the proposed WNA mechanism adjusts actual revenues and customer bills to account for the difference between normal weather and actual weather, in order to better align what occurs in future years with what was set during the rate case. A mechanism that adjusts both costs and revenues between rate cases is a formula rate plan, and these mechanisms impact the normalized revenue allowed for recovery by the utility from their customers. The proposed WNA mechanism is not of this type. It only limits the variations between normal weather and actual weather on customers' bills and the utility's distribution revenues. It does not set a new level of allowed revenues.

[27] OCA Statement No. 3 at 50-51.

Q. Mr. Mierzwa asserts that a gas utility's "O&M expenses would tend to increase as demand increase under colder-than-normal weather and tend to decline as demand decreases under warmer-than-normal weather."[28] What evidence is provided to support this conjecture?

A. The OCA provides no evidence of this relationship or the magnitude of weather's influence on a gas distribution utility's level of O&M expenses. The fact remains that UGI Gas's recoverable annual revenue requirement is set during base rate proceedings and is not subject true-ups or adjustments based on the O&M requirements of each month of the year. UGI Gas's recoverable annual revenue requirement is set to be recovered through volumetric rates under the assumption of normal weather. The proposed WNA mechanism finishes this logic; whereby actual revenues collected reflect normal weather; reducing the risks of differences between actual and normal weather for both UGI Gas and its customers.

Q. What calculation does OCA witness Mierzwa present to support his claim that the WNA is biased to the Company's benefit during colder-than-normal billing periods?

A. Mr. Mierzwa presents a hypothetical weather normalization adjustment for a utility customer under two different assumed levels of temperature sensitivity. One with a hypothetical temperature-sensitive usage at 0.02 Mcf per HDD and another with temperature-sensitive usage at 0.025 Mcf per HDD. Using these assumptions, he arrives at two different weather normalized billing volumes: (1) 22 Mcf under the 0.025 Mcf per HDD assumption; and (2) 18 Mcf under the 0.02 Mcf per HDD assumption. He then

[28] OCA Statement No. 3 at 51.

concludes that this difference results in a benefit to the Company during colder-than-normal billing periods.

Q. What is the underlying assumption used to develop Mr. Mierzwa's hypothetical adjustment, and is this a reasonable assumption to rely upon?

A. Mr. Mierzwa relies on his assumption that "[t]he usage of customers per HDD increases as HDD increase."[29] However, the relationship between HDDs and temperature-sensitive usage is more nuanced than Mr. Mierzwa's depiction and as such, his oversimplified assumption should not be relied upon. Over certain months across certain temperatures, there may be an increase in temperature-sensitive usage per HDD as HDDs rise. Still, for other months across different temperatures, there may be no increase in temperature-sensitive usage per HDD as temperatures rise. Typically, during the first cold snap, customers respond by setting thermostats at higher heating set points. Therefore, the first high level of HDDs during the season can have a higher use per HDD. As the winter progresses, customers tend to adjust their thermostats to a more even level of heating, so that the coldest months see more stable temperature-sensitive usage per HDD. In some instances, schools and businesses close during extremely cold weather, and their consumption drops significantly; resulting in negative relationship between temperature-sensitive usage per HDD and increases in HDDs.

Q. Has UGI Gas analyzed how customers' temperature sensitive usage changes as HDDs increase?

[29] OCA Statement No. 3 at 53.

A. Yes. Over the last three years UGI Gas's residential customers' temperature sensitive usage per a HDD is 0.0136 mcf per HDD across the coldest months of January and February; those closest aligned with Mr. Mierzwa's hypothetical example. Based on regression results from the last 15 years of data, a 25 percent increase in heating degree days would result in only a 1% increase in temperature sensitive usage per a HDD; moving from 0.0136 mcf per HDD to 0.0137 mcf per HDD. This is in stark contrast with the hypothetical example provided by Mr. Mierzwa. First, Mr. Mierzwa uses a temperature-sensitive usage at 0.02 Mcf per HDD; 47% higher than the actual temperature sensitive usage per a HDD of 0.0136 Mcf. Second, Mr. Mierzwa's hypothetical comparison shows a 25% increase in temperature sensitive usage per a HDD; moving from 0.020 to 0.025 Mcf per HDD; vastly different than the 1% difference supported by the actual review of UGI Gas's customer behavior. Mr. Mierzwa's hypothetical example is far from reality and should not be relied upon to inform an opinion on the appropriateness of the proposed WNA mechanism.

Q. Have you updated OCA witness Mierzwa's hypothetical example with this actual data?

A. Yes. I relied on the same calculations presented by Mr. Mierzwa but replaced his two hypothetical temperature sensitive usage per a HDD of 0.02 Mcf and 0.025 with the actual data of 0.0136 Mcf and 0.0137. Using the same assumed HDDs of 800 and 1,000 as relied upon by Mr. Mierzwa results in no change to the Weather Normalized Billing Ccfs. A customer with a temperature sensitive usage per a HDD of 0.0136 Mcf under a 800 HDD month and with a temperature sensitive usage per a HDD of 0.0137 Mcf under a 1000 HDD would have the same level of Weather Normalized Billing Ccfs. In other words, the impact of reflecting more realistic assumption based on UGI Gas's actual data shows that Mr. Mierzwa's conclusion that the WNA is biased in the Company's favor when weather is colder-than-normal is unfounded.

Q. Has Mr. Mierzwa provided evidence to support his speculation that the Base Load Monthly Ccfs ("BLMC") "of Residential customers could have changed significantly as a result of the pandemic and customers could be assessed charges for these changes in usage."[30]?

A. Mr. Mierzwa did not provide any evidence to support this claim. However, UGI Gas collected this information, presented in Table 3 below. This table shows the trend in the Daily Baseload Usage per Customer over the last 16 years for residential customers. The last two columns of this table provide the annual change for the 3-year average and 1 year average. The 3-year annual change and 1-year annual change from 2019 to 2020 was 0.000 and 0.003, respectively. For 2020-2021 the 3-year annual change and 1-year annual change was 0.001 and 0.000 The majority of pre-pandemic years contain annual changes that are higher than those occurring between 2019 and 2020.

[30] OCA Statement No. 3 at 53.

Table 3 – 2006- 2021 Daily Baseload Usage per Customer (June – August)

	Length of Period		Annual Change	
	3 Year Avg	1 Year Avg	3 Year Avg	1 Year Avg
Sep-06	0.054	0.053		
Sep-07	0.052	0.052	(0.002)	(0.001)
Sep-08	0.052	0.051	(0.000)	(0.001)
Sep-09	0.052	0.053	0.000	0.002
Sep-10	0.051	0.049	(0.001)	(0.004)
Sep-11	0.052	0.053	0.001	0.003
Sep-12	0.050	0.049	(0.001)	(0.004)
Sep-13	0.052	0.054	0.002	0.006
Sep-14	0.050	0.048	(0.001)	(0.006)
Sep-15	0.052	0.054	0.002	0.006
Sep-16	0.051	0.051	(0.001)	(0.003)
Sep-17	0.051	0.047	(0.000)	(0.004)
Sep-18	0.048	0.044	(0.003)	(0.003)
Sep-19	0.045	0.045	(0.002)	0.000
Sep-20	0.045	0.047	0.000	0.003
Sep-21	0.046	0.047	0.001	(0.000)

Q. Does the evidence provided in Table 3 above show significant changes in Daily Baseload Usage per Customer in recent years?

A. The tables indicate that the Daily Baseload Usage per Customer varies every year, and the three-year average provides a smoothing effect on this annual variance. Further, the change from a pre-pandemic three-year average Daily Baseload Usage per Customer of 0.045 Mcf to a current three-year average of 0.046 Mcf is not a "significant change," as Mr. Mierzwa speculates, and is far below the changes that have occurred annually over the last sixteen years.

Q. In your direct testimony, you address each of the 14 considerations outlined in the Commission's Statements of Policy on alternative ratemaking.[31] Does OCA witness Mierzwa also address these 14 considerations?

A. Yes. OCA witness Mierzwa provides the OCA's position on each of the responses to the 14 Considerations contained in my direct testimony. There are a few items worth noting in the OCA's responses to these Considerations. OCA's responses to Considerations 1, 8, and 9 state that the WNA mechanism is biased in the Company's favor during colder-than-normal months. As I explained previously, Mr. Mierzwa's claim of alleged bias is unfounded and, therefore, the OCA's responses to Considerations 1, 8, and 9 should be disregarded. For Considerations 2 through 5 and 11, the OCA either agrees with UGI Gas's comments or provides clarifications to ensure completeness; however, these are not sources of disagreement. OCA's responses to Considerations 6 and 7 point to the testimony of OCA witness Colton purportedly showing that the WNA will disproportionately and adversely affect low-income customers. This critique is also addressed above in my testimony, where I show that Mr. Colton only provides testimony on the benefits of budget billing but no evidence to support conclusions that the WNA will adversely affect low-income customers. After reviewing these Considerations, we are left with Considerations 10, 12, 13, and 14- for additional response.

For Consideration 10, the OCA states, "A reduction to the frequency of rate case filings would be a benefit of an alternative ratemaking mechanism. The WNA does not provide this benefit."[32] There is no standard or requirement that utilities must reduce the frequency of rate case filing to receive approval of a WNA. Neither Columbia nor PGW

[31] 52 Pa. Code § 69.3302.
[32] OCA Statement No. 3 at 48.

had this standard applied to them when they received approval for their WNAs. Moreover, not all alternative ratemaking proposals can impact every consideration; the mechanisms approved by the Commission for Columbia and PGW also do not have an impact on regulatory lag. Finally, as an alternative ratemaking proposal, WNA is not a mechanism which is intended to reduce the frequency of rate case filings. Comparably, an alternative ratemaking proposal which would propose, say, full formula rates, could possibly reduce the frequency of rate case filings. As I noted above, UGI Gas has not made that type of proposal in this proceeding.

For Consideration 12, the OCA states, "The WNA does not include appropriate consumer protections and should be rejected for the reasons subsequently discussed in my testimony."[33] The WNA mechanism insulates customers from high bills during colder-than-normal months, while also limiting a decline in distribution revenues for UGI Gas during warmer-than-normal months. In particular, WNA bills will be otherwise lower than non-WNA bills during colder than normal periods. These cold periods are the most sensitive to customers since they stand to create the largest burden to customers. Thus, inherent in the application of a WNA is this "consumer protection" against the burdens cold weather bills can produce. There are no further consumer protections required, as this is a balance in risk and reward sharing between UGI Gas and UGI Gas's customers.

For Consideration 13, the OCA states, "UGI has not provided any evidence to indicate that the WNA will be understandable to customers."[34] UGI Gas's proposed WNA mechanism is similar to that implemented by Columbia, PGW, and other utilities across the United States. UGI Gas's proposed WNA mechanism adjusts current billings on a

[33] OCA Statement No. 3 at 49.
[34] OCA Statement No. 3 at 50.

monthly billing basis as the bill is being calculated and issued, helping with customer understanding. Additional details on customer education efforts and approaches are provided in Section V below in this testimony.

Lastly, for Consideration 14, the OCA states, "The WNA does not provide an incentive to increase the safety and reliability of the UGI Gas System." As stated in my direct testimony, the proposed WNA will help minimize the volatility of the recovery of UGI Gas's cost of service, inclusive of investments and costs to continue enhancing the safety and reliability of its system. The stabilization of cash flows allows a utility to focus more acutely on operational items under its direct control, as Chairman Gladys Brown Dutrieuille determined upon review of Columbia's WNA, when she stated, "This decoupling of uncontrollable weather from revenues stabilizes Columbia's cashflow, and in turn, allows Columbia to more acutely focus on operational items within its control; namely infrastructure upgrades and repairs."[35]

Q. Is the Company and OCA in agreement that the proposed WNA does not negatively impact energy efficiency programs?

A. It appears so. The OCA's response to Consideration 5: Please explain how the WNA limits or eliminates 9 disincentives for the promotion of efficiency programs was, "OCA: The WNA does not limit or eliminate incentives for the promotion of efficiency programs."[36] UGI Gas's response in my direct testimony was the following: "The proposed WNA only addresses variations due to weather. The WNA does not negatively impact energy efficiency programs.

[35] *Pa. PUC v. Columbia Gas of Pa., Inc.*, Docket Nos. R-2018-2647577, *et al.* (Statement of Chairman Brown Dutrieuille dated Dec. 6, 2018).
[36] OCA Statement No. 3 at 47.

Moreover, UGI Gas maintains a robust Energy Efficiency & Conservation ("EE&C") program, which it has voluntarily implemented for its customers and will use to continue promoting energy efficiency measures."[37] The benefit of the Company's proposed WNA mechanism is that Customers will continue to benefit from their energy conservation efforts, as the actual usage on each customer's bill is utilized to calculate the WNA adjustment, and that usage level will reflect the conservation behaviors of each customer.

V. CUSTOMER EDUCATION AND OUTREACH

Q. What plans does the Company have to help facilitate customer understanding and acceptance of the WNA mechanism?

A. The Company is working to develop a communication plan designed to educate customers about the WNA mechanism. Upon approval of WNA, and subject to final WNA design, the Company will finalize these plans. The Company will also provide notice to customers as was noted in response (a)(10) of the Section 53.52 Filing Requirements as found in UGI Gas Book I of this rate case proceeding. In addition to the notification of WNA approval, the Company plans to provide a billing insert with WNA FAQs that will also be posted to and available on the Company's website. The Company is also planning on including an article on WNA in its customer newsletter following the approval of the WNA. Changes are also planned to be made to the printed bill the customers receive. When a WNA is applied to a bill, it will appear as a separate line item within the current charges section of a bill and an additional message on the bottom of the bill will indicate that the bill has been adjusted to reduce the impact of either colder or warmer than normal weather. An

[37] UGI Gas Statement No. 11 at 16.

additional term will be added to the back of bill to provide a plain-language definition of the WNA. Preparations are also under to way to ensure that all call center representatives are trained on the WNA and have the necessary tools available to them to walk a customer through how a WNA amount on a bill was calculated. Following implementation of the WNA mechanism and planned communication activities, the Company will continue to monitor customer feedback, and modify its communication plan accordingly to best support the needs of customers in their understanding of the WNA mechanism.

VI. RESPONSE TO OSBA POSITION

Q. What conclusions does OSBA witness Knecht make with respect to the proposed WNA mechanisms?

A. OSBA witness Knecht states, "I am advised by counsel that OSBA intends to contest this proposal as not just and reasonable on the grounds that the substantial risk reduction benefits to the Company and the rate instability implications for customers associated with this mechanism are not reasonably reflected in the allowed return on capital claim in this proceeding."[38]

Q. What is your response to the position presented by the OSBA?

A. First, a point of clarification, the sentence quoted above in OSBA witness Knecht's testimony contains the statement, "...the rate instability implications for customers associated with this mechanism…" This statement is incorrect as the WNA mechanism increases bill stability by removing the impact of total usage due to weather and does not

[38] OSBA Statement No. 1 at 24.

change the rates charged. As stated in my direct testimony and supported by Company witness Paul R. Moul, "the utilities included in his Gas Group (the peer group) already have tariff mechanisms for stabilization of revenues due to variation in weather, either through similar WNA mechanisms as that proposed by UGI Gas or through full revenue decoupling mechanisms."[39]

VII. PROPOSED RESIDENTIAL CUSTOMER CHARGE

Q. How is the issue of gradualism related to the appropriateness of the monthly residential customer charge level?

A. OCA witness Mierzwa would like us to believe that the only charge for gas service is the customer charge and that an increase of $14.60 to $19.95 – representing a 37 percent increase is out of alignment with gradualism.[40] When looking at concepts of gradualism, it is necessary to review the entire bill of a customer not just a single component because customers pay their entire bill, not only single rate components. Only customers with zero usage would see a 37% difference between a customer charge of $14.60 and $19.95; most customers would see a much lower difference given any revenues not recovered in the customer charge must be recovered in the volumetric energy charge. Mr. Mierzwa is recommending a customer charge of $16.00. Moving the customer charge from $19.95 to $16.00 will result in a corresponding increase in the variable per Mcf distribution charge; in this instance, moving the proposed Mcf charge of $4.9996 (with $19.95) to $5.5612 (with $16.00). A customer who only uses 3 Mcf a month would only see a $2.27 difference

[39] UGI Gas Statement No. 11 at 20-21.
[40] OCA Statement No. 3 at 35.

in their bill under the $19.95 customer charge, representing a 6.93% difference, which meets the threshold of gradualism for this low use customer.

Q. How do you respond to OCA witness Mierzwa's claim that a lower customer charge is more consistent with energy conservation and efficiency goals?

A. Mr. Mierzwa provides no basis or support for his conclusion. He makes claims based on price elasticity (how consumers respond to changes in prices) with no basis as to why he believes they will respond in the manner he believes nor why his preferred response is best. In their discussions, these arguments suffer from an unreasonably narrow definition of conservation and look to value only this singular consideration in rate design recommendations. Secondly, Mr. Mierzwa overgeneralizes his premises when reaching conclusions. Mr. Mierzwa's premise is that a higher percentage of cost recovery in a fixed charge leads to less conservation, and thus the increase in a customer charge will result in less conservation. In short, he introduces two overgeneralizations: (1) he assumes the only reason for conservation is price signals, and (2) he assumes that customers will respond to a change of this degree (i.e., a change of $5.35 monthly) without consideration of total bill impact.

Q. What definition of conservation should be utilized in the context of setting distribution rates?

A. Conservation is the act of preserving, guarding, and protecting wise use. In this case, it is the wise use of distribution facility resources. The issue under consideration is much broader than simply a concept of reducing usage; where numerous principles and considerations must be made as to the correct level of fixed monthly customer charge. Certain costs of operating a distribution utility are incurred regardless of the level of gas consumed; they are incurred simply to attach a customer and meet their peak demands. By charging customers on a variable basis for these fixed costs, customers can spend time and resources on reducing their bills; however, this does not reduce the costs incurred by the utility. This is not an efficient use of our resources as a society. Although the consumer spent time and resources to "save" money, it does not reduce the costs incurred by the utility to provide service, *i.e.*, any bill savings under a lower customer charge would exceed the actual savings of the resources used to provide service. Those costs are simply charged to some other customer or reduce the earnings of the utility. This is a zero-sum game; the gain to one customer by reducing how much they pay for fixed costs is the loss of either another customer or the utility itself.

Q. How do utility consumers respond to price signals and changes in rates?

A. They respond in very complicated and inconsistent ways. First, any reduction in usage is not just a function of price signals. Energy efficiency gains and reduction in usage to date are based on a several items, including, but not limited to, capital investment in appliances (partially due to rebate and tax policies and federal efficiency mandates), the thermal envelope of housing, fuel switching, and other societal/cultural responses that will not go away with the customer charge increase. Second, the conclusion that a change from $14.60 to $19.95 will reduce consumers' desire to reduce usage is based on an incorrect interpretation of price elasticity. Utility customers have mixed abilities to respond to prices based on numerous contributing factors, including heating fuel, ambient temperatures, alternative fuel options, family size, access to capital, etc. They also have mixed desires to respond to prices, given that they face plenty of competing concerns and may choose not to spend time and effort on managing their energy use. A paper by the Electric Power Research Institute ("EPRI") provides clarifying insight into the complexity of price elasticity for utility service.

> Consumers may be practically capable of responding to price changes, but do not do so for a number of reasons. First and most importantly, as demonstrated above, the lack of exhibited price response could be because the consumer has not been subject to a price change that exceeds its price threshold. Electricity price changes are generally limited to single digit amounts at any one time to protect consumers from the consequences. As a result, the price changes that are implemented do not meet the response threshold requirement. But, when faced with a large price change, they may indeed exhibit a response because it exceeds the threshold.[41]

This quote clearly states that single digit price changes may not reach the response threshold to elicit changes in usage. EPRI states why this would be the case for some consumers.

> Additionally, many consumers may treat electricity as a necessity, for which there is no apparent substitute, at least in the near-term. Therefore their consumption is driven primarily by other factors, such as income, weather, and lifestyle. Still others may simply be unwilling to devote time and effort to managing electricity usage closely, even though they are aware that opportunities to respond are available and that the net savings are tangible. Others may pay so little attention to electricity consumption and bills that they do not realize that a price change has occurred.[42]

Q. Do you agree with OCA witness Colton's determination that the proposed customer charge, "disproportionately and adversely affects low-income customers"?[43]

---

[41] Electric Power Research Institute. 2008. *Price Elasticity of Demand for Electricity: A Primer and Synthesis*, p. 14.
[42] Electric Power Research Institute. 2008. *Price Elasticity of Demand for Electricity: A Primer and Synthesis,* p. 14.
[43] OCA Statement No. 4 at 6.

A. No. For the reasons explained in response to OCA witness Mierzwa, Mr. Colton's argument that the proposed increase in the customer charge will discourage energy efficiency and conservation is without merit. Moreover, the Company's proposal lowers the average bill for low income and CAP customers.

Q. Have you analyzed the difference between the OCA recommended $16.00 monthly residential customer charge and the Company's proposed $19.95 a month charge on low-income customers?

A. Yes, I have. For illustrative purposes, I have used two scenarios: (1) the OCA recommended customer charge of $16.00[44]; and (2) the Company's proposed residential customer charge of $19.95. Moving the customer charge from $19.95 to $16.00 at proposed rates will result in a corresponding increase to the variable per Mcf distribution charge. For example, assuming the Company's proposed residential revenue target, a customer charge of $19.95 will result in a distribution charge of charge of $4.9996 as opposed to the $5.5612 under a $16.00 monthly customer charge. Table 4 below provides monthly and annual bill differences between the two alternative customer charges. This table shows an annual decrease of $11.63 for the average CAP customer and an annual decrease of $10.38 for the average low-income customer.

---

[44] OCA Statement No. 3 at 38.

Table 4 – Annual Bill Impact of Customer Charge

CAP Participant Usage					
		Total Monthly Bill		Difference	
Month	Monthly Usage	$16.00	$19.95	Total	Percentage
OCT-20	7.43	$57.31	$57.09	($0.22)	0%
NOV-20	13.75	$92.49	$88.72	($3.77)	-4%
DEC-20	19.15	$122.52	$115.71	($6.81)	-6%
JAN-21	20.74	$131.33	$123.63	($7.70)	-6%
FEB-21	17.45	$113.07	$107.21	($5.85)	-5%
MAR-21	10.01	$71.66	$69.99	($1.67)	-2%
APR-21	5.97	$49.20	$49.80	$0.60	1%
MAY-21	3.08	$33.10	$35.33	$2.22	7%
JUN-21	1.87	$26.41	$29.31	$2.90	11%
JUL-21	1.67	$25.31	$28.32	$3.01	12%
AUG-21	1.72	$25.58	$28.56	$2.98	12%
SEP-21	2.26	$28.57	$31.25	$2.68	9%
Total	**105.11**	**$776.55**	**$764.92**	**($11.63)**	**-1%**

Low-Income Customer Usage					
		Total Monthly Bill		Difference	
Month	Monthly Usage	$16.00	$19.95	Total	Percentage
OCT-20	7.26	$56.38	$56.26	($0.13)	0%
NOV-20	13.47	$90.91	$87.29	($3.61)	-4%
DEC-20	18.78	$120.45	$113.85	($6.60)	-5%
JAN-21	20.35	$129.17	$121.69	($7.48)	-6%
FEB-21	17.15	$111.37	$105.69	($5.68)	-5%
MAR-21	9.77	$70.31	$68.77	($1.53)	-2%
APR-21	5.78	$48.16	$48.86	$0.70	1%
MAY-21	3.02	$32.80	$35.05	$2.25	7%
JUN-21	1.80	$26.01	$28.95	$2.94	11%
JUL-21	1.63	$25.04	$28.08	$3.04	12%
AUG-21	1.68	$25.36	$28.37	$3.00	12%
SEP-21	2.20	$28.23	$30.95	$2.71	10%
Total	**102.89**	**$764.19**	**$753.81**	**($10.38)**	**-1%**

Thus, OCA's concerns about the impact of the Company's proposed customer charge are misplaced.

Q. Does this conclude your testimony?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 12-R

Rebuttal Testimony of
Daniel V. Adamo

Topics Addressed:	**Universal Service Programs**
	Impact of the Company's Proposals on Low-Income Customers
	Economic Impact of COVID-19 on Low-Income Customers

Dated: May 17, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Daniel V. Adamo. My current business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. By whom and in what capacity are you employed?

A. I am employed by UGI Utilities, Inc. (“UGI”), as Vice President – Customer Relations. UGI is a wholly-owned subsidiary of UGI Corporation (“UGI Corp.”). UGI has two operating divisions, the Gas Division (“UGI Gas” or the “Company”) and the Electric Division (“UGI Electric”), each of which is a public utility regulated by the Pennsylvania Public Utility Commission (“Commission” or “PUC”).

Q. Please briefly describe your responsibilities in that capacity.

A. In this position, I am responsible for managing all marketing, sales, community relations, communications, and the customer information center for UGI, as well as the customer accounting, credit and collections, customer outreach, and compliance departments. In this role, I oversee regulatory compliance with Chapter 14 of the Public Utility Code, 66 Pa. C.S. §§ 1401, *et seq.*, related consumer regulations, including Chapter 56 of the Pennsylvania Code, 52 Pa. Code § 56.1, et seq., and compliance with generally applicable consumer protection, collection, consumer bankruptcy regulations, and the administration of all Universal Service Programs.

Q. What is your educational and professional background?

A. I graduated from Lehigh University in 1998 with a B.S. in Mechanical Engineering. I started my employment with UGI in 1998. My full resume is attached as UGI Gas Exhibit DVA-1R.

Q. Have you been involved in other proceedings before the Commission?

A. Yes. I testified on behalf of UGI Gas in its purchased gas cost filings in 2008 and 2009 as well as the Company's petition for approval of the Growth Extension Tariff ("GET Gas") Program in 2013. I also testified on behalf of UGI Gas in its 2019 Base Rate Case proceeding at Docket No. R-2018-3006814 and its 2020 Base Rate Case proceeding at Docket No. R-2019-3015162. Further, I testified on behalf of UGI Electric in its 2021 Base Rate Case proceeding at Docket No. R-2021-3023618. Please see UGI Exhibit DVA-1R for a complete listing of the proceedings in which I testified and their docket numbers.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Gas?

A. No, I did not.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring UGI Gas Exhibit Nos. DVA-1R through DVA-6R.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to the direct testimony of other party witnesses regarding: (1) the programs offered under the Company's Universal Service and Energy Conservation

Plan ("USECP"); (2) the impact of the Company's proposals in this proceeding on low-income customers; and (3) the economic impact of coronavirus disease 2019 ("COVID-19") on low-income customers, and the Company's efforts in response thereto.

Specifically, I respond to portions of the direct testimony of Roger D. Colton, submitted on behalf of the Office of Consumer Advocate ("OCA") (OCA St. No. 4), the direct testimony of Harry S. Geller, submitted on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") (CAUSE-PA St. No. 1), and the direct testimony of Eugene M. Brady, submitted on behalf of the Commission on Economic Opportunity ("CEO") (CEO St. No. 1).

II. UGI GAS HAS SHOWN ITS COMMITMENT TO HELPING ITS CUSTOMERS WHILE MAINTAINING A HIGH LEVEL OF CUSTOMER SERVICE

Q. Please describe UGI Gas's approach to providing support to its customers.

A. UGI Gas is committed to providing support to all of its customers, and particularly to customers experiencing a financial hardship. The Company does this through a variety of programs and voluntary initiatives, and it has made tremendous strides in recent years in the number of low-income and payment troubled customers that it has been able to assist. Although there is always room for improvement, the Company has continued to improve its processes, and works collaboratively with low-income advocates to identify the changing needs impacting its service territory. One example that shows the Company's commitment to helping its customers was in its response to COVID-19.

Q. Please describe the Company's response to COVID-19.

A. UGI Gas quickly recognized that all customer classes would be impacted from the COVID-19 pandemic. As described in the direct testimony of Christopher R. Brown (UGI Gas St. No. 1), the Company developed comprehensive communications plans for reaching customers to inform and educate them about programs and Company actions. Further, the Company ceased service terminations on March 13, 2020, stopped removing customers from its Customer Assistance Program ("CAP") for failure to recertify on March 18, 2020, and voluntarily began waiving all late payment charges on March 24, 2020. The Company increased its Operation Share donations by $500,000 per year beginning FY19, expanded eligibility under its Operation Share grant program to 250% of the federal poverty limit ("FPL"), and increased the maximum grant size from $400 to $600. Finally, the Company implemented a matching program for employee donations to food banks and donated more than $450,000 to local food banks.

Q. What programs did the Company implement in its last base rate case to respond to COVID-19?

A. As part of its last base rate case, the Company adopted a robust and first of its kind COVID-19 Emergency Relief Program ("ERP"). This program provided benefits including billing relief and/or payment relief for customers who needed temporary relief measures during the pendency of the COVID-19 pandemic, as well as for a limited period following the termination of the PUC Emergency Order period, and was available to both qualifying residential and small business customers. The program's benefits for residential customers included: suspension of collection efforts; a onetime credit (up to $400) in an amount equal to 25% of the customer's applicable balance as of the ERP Enrollment Termination Date; automatic CAP screening at the end of the program; and a deferred payment arrangement that is as long or longer than the term provided in the Commission's regulations if an arrearage exists at the end of the program and the customer is not CAP-eligible. In addition, the Company provided an additional $2.0 million in funding for the Operation Share program, including $1.0 million of non-rate recoverable funding. This increased the available funds for Operation Share by approximately 300%.

It is critical to note that in developing these programs, the Company worked collaboratively with the same parties and witnesses participating in this proceeding in order to quickly provide more support to the Company's customers and to adopt some of the first robust utility COVID-19 relief programs.

Q. Has the Company undertaken any further efforts since its last rate case?

A. Yes. Since the conclusion of the last rate case, the Company also filed its "Petition of UGI Utilities, Inc. – Gas Division For Expedited Approvals: (1) To Implement Phase II Of Its COVID-19 ERP; (2) To Implement Further Voluntary, Temporary Modifications To Its Universal Service And Energy Conservation Plan; And (3) For Accounting And Regulatory Approvals Associated With The Costs To Implement Phase II Of The COVID-19 ERP" at Docket No. P-2021-3023839 ("UGI Gas Phase II Petition"). Therein, the Company proposed to implement "Phase II" of the COVID-19 ERP implemented in the 2020 Gas Base Rate Case, and proposed to voluntarily continue the implementation of the temporary modifications to its existing USECP to continue the expanded assistance and protection commitments approved in 2020 Gas Base Rate Case Order. The proposed benefits to residential customers of the “Phase II” ERP included, suspension of collection efforts through April 30, 2021, the availability of $1 million in one-time bill credits to be used to offset residential arrears, and the automatic screening of all customers enrolled in the ERP for CAP and Operation Share eligibility. However, the Commission did not approve the “Phase II” ERP.

Since the onset of the COVID-19 pandemic, the Company has taken a number of steps (many of which were voluntary) to expand assistance to customers that may have been impacted.

Q. Were customers able to access these relief programs?

A. Yes. Mr. Brown provides metrics related to the additional customers UGI Gas was able to assist through its relief programs in pages 13 through 15 of his testimony.

Q. Do you have any ability to quantify how many customers experiencing a temporary financial crisis due to COVID-19 were able to take advantage of the Company’s assistance programs?

A. Yes, to some extent we can identify trends showing that the Company’s programs provided benefits to many customers that had previously not been using low-income assistance programs. For instance, in the early part of the pandemic, many customers suddenly found themselves with no or a significantly reduced income and therefore could qualify for CAP. As a result, CAP enrollment increased by 16% from FY 2019 to FY 2021. The Company recently began its efforts to recertify CAP customers. Of the first 4,049 customers the Company attempted to recertify in October 2021, only 16% of the customers recertified.

In January 2022, the Company began the recertification process for another group of 3,939 customers, and only 17% of those customers recertified. This is exactly what should be expected based on the circumstances surrounding the COVID-19 impact where customers temporarily needed assistance to successfully manage a financial crisis.

It is worth noting here, however, that when comparing the pre-COVID data to the most recent data, the Company's CAP current enrollment (May 2022) continues to exceed pre-COVID levels (September 2019) and is expected to grow as we approach the 2022-2023 winter heating season. This shows that the Company has continued to expand the number of customers it can assist.

Q. Do you have any concluding thoughts on the impacts of COVID-19 on the Company's customer assistance programs?

A. Yes, I do. Many of the recommendations made by the other parties' witnesses in this proceeding either ask the Commission to compel UGI Gas to repeat the voluntary actions it took in response to the unanticipated and unprecedented impacts of COVID-19 on Pennsylvania, even when doing so could have negative tax consequences, as I will describe in Section II.E of my rebuttal testimony. The Commission should recognize in considering these issues that the voluntary actions taken by the Company in response to COVID-19 need not be continued in light of the transition back to pre-COVID-19 employment rates and the increase in other state and federal programs, as I will describe later in this testimony.

Q. Do you agree with Mr. Colton statement that the Company's " customer satisfaction does not support an upward adjustment in the return on equity" (OCA St. No. 4, p. 49)?

A: No, I do not. Mr. Colton selects a few of the many metrics presented by the PUC Customer Service Performance Report 2020. The metrics identified have a very narrow band of separation between utilities survey results. He also does not provide a comprehensive review of all metrics at which the Company does excel or is in the higher percentage. For example, as shown in table below, customers are very satisfied with the Company's automated phone system, which has shown steady improvement over the three years. Further, the "Satisfaction with Ease of Reaching the Company" shows minimal difference in bands of results among the NGDC peers in 2020 (92%-93%).

Table 1A
NGDC Survey Results 2018-2020

Company	Satisfaction with Ease of Reaching the Company*			Satisfaction with Using NGDC's Automated Phone System*		
	2018	2019	2020	2018	2019	2020
Columbia	90%	92%	93%	87%	81%	86%
Peoples	89%	90%	92%	84%	87%	85%
Peoples-Equitable	88%	89%	N/A	84%	82%	N/A
NFG	93%	92%	93%	N/A	N/A	N/A
PGW	88%	89%	92%	85%	82%	90%
UGI-Gas	89%	91%	92%	82%	86%	88%
UGI Penn Natural	88%	89%	**	82%	82%	**
Average	**89%**	**90%**	**92%**	**84%**	**83%**	**87%**

*Percent of consumers who answered either "very satisfied" or "somewhat satisfied" when asked how satisfied they were with this aspect of their recent contact with the NGDC.

Other metrics that show strong performance are "Call Center Representative's Courtesy" and "Call Center Representative's Knowledge." Again, while there are minor variations in the percentages among the NGDCs, the Company's performance remains at a very high level.

Table 4
Consumer Ratings of NGDC Representatives 2018-2020

Company	Call Center Representative's Courtesy*			Call Center Representative's Knowledge*		
	2018	2019	2020	2018	2019	2020
Columbia	96%	97%	97%	94%	97%	95%
Peoples	96%	96%	97%	94%	96%	94%
Peoples-Equitable	97%	94%	N/A	95%	94%	N/A
NFG	96%	96%	97%	95%	93%	96%
PGW	93%	94%	96%	92%	93%	94%
UGI-Gas	95%	94%	97%	93%	92%	95%
UGI Penn Natural	94%	95%	**	92%	94%	**
Average	**95%**	**95%**	**97%**	**94%**	**94%**	**95%**

*Percent of consumers who described the company representative as either "very courteous" or "somewhat courteous" and "very knowledgeable" or "somewhat knowledgeable" when asked about their perception of these aspects of the call center representative.

Lastly, I would like to note that the Company's performance regarding customer satisfaction is very high as based on the Company's performance in JD Power East Large Residential Gas Utility. UGI Gas maintained the second highest score from 2015 through 2021, with the Company being number one in 2014. The Company was among 35 utility companies nationwide recognized as "Easiest to do Business With" in the 2021 and 2022 Cogent Syndicated Utility Trusted Brand & Customer Engagement™: Residential study by Escalent, a leading human behavior and analytics firm.

III. UNIVERSAL SERVICE PROGRAMS

Q. Do you have any overall observations about the other parties' direct testimony and proposals concerning the Company's Universal Service Programs?

A. Yes. Under the expedited schedule of a base rate proceeding, there simply is not enough time to fully investigate and evaluate parties' proposals related to the Company's Universal Service Programs, let alone drastic and unprecedented ones, like Mr. Colton's proposed "outcome objectives," which have not been imposed on any other natural gas distribution company ("NGDC") in Pennsylvania. Without any advance notice of his concerns and recommendations, there is simply inadequate time during a base rate case to properly develop all of the issues raised by Mr. Colton and then come to a rational conclusion on the merits other than to conclude they require more study and should only be applied, if ever, after the parties have had adequate time to debate them. As such, the proper time to propose changes to a utility's USECP is within the context of the utility's USECP proceeding, not a base rate case. In fact, the Commission has recognized that "all aspects" of Universal Service Programs should be addressed in utilities' individual USECP proceedings, as opposed to base rate cases.[1] Accordingly, for this reason alone, the Commission should reject the substantial changes to the Company's Universal Service Programs proposed by the other parties in this base rate proceeding. The Company would add that to the extent Universal Service Program proposals could have wider applicability to other public utilities as well, the proper forum should be a Commission-directed rulemaking.

---

A. CUSTOMER ASSISTANCE PROGRAM ("CAP")

Q. Does CAUSE-PA witness Geller recommend any changes to the Company's CAP?

A. Yes. He recommends that UGI Gas take other steps to improve its CAP participation rate, which are: (1) simplifying enrollment in CAP for non-CAP Low-Income Heating Energy Assistance Program ("LIHEAP") recipients; (2) referring all customers that call seeking a payment arrangement to apply for CAP and other Universal Service Programs and actively assisting with enrollment; and (3) conducting outreach to all customers who have been removed from CAP for failure to recertify income since the expiration of the Commission's Emergency COVID-19 Order. (CAUSE-PA St. No. 1, pp. 22-26.)

Q. Do you agree with Mr. Geller's recommendations?

A. No. As I discuss in more detail below, the Company already works on each of the issues raised by Mr. Geller as part of its focus to maintain or increase CAP enrollments. Specifically, as to simplifying enrollment in CAP for non-CAP LIHEAP recipients, when a non-CAP customer calls the Customer Contact Center and has received LIHEAP, a Customer Care Representative ("CCR") is directed to inquire if the customer would like to enroll in CAP. Upon affirmative customer response, the CCR has the ability to directly collect verbal income information from the customer and then enroll the customer into CAP based on the self-reported income and occupancy details at the time of the call. This simplified enrollment approach is available and in use today by the Company. As to Mr. Geller's next point that the Company should refer all customers that call seeking a payment arrangement to apply for CAP and other Universal Service Programs, and actively assist with enrollment, the Company's processes address that today. As an example, for material provided to assist a CCR in CAP enrollment, the CCR utilizes the job aid shown below:

Assistance Programs at a Glance

CAP (Customer Assistance Program)

What is it?	"CAP is a low-income program that would change the amount you pay per month to the lowest amount possible. It would be based off either your household income or the monthly average, whichever is the lowest. And as you pay your CAP amount each month, UGI will place a credit towards your true balance to help pay it off."
Eligibility	• Income level 1 (below 150% of Federal Poverty Level) • Residential premise • Gas and/or Electric (can be one or both)
Accounts Not Eligible	• Has an alternate supplier • Landlord/tenant account (L/T) • Meter is foreign load (FORL)
Ways to Enroll	• Rep can send application through COS • If rcvd LIHEAP grant within the last 12months, Credit representative can enroll over the phone ○ If reports zero income or has high usage, will need to complete paper application

Here specifically, the CCR is able to directly send a CAP application to the customer through the Company's Customer Outreach System ("COS"). Lastly, Mr. Geller requests that the Company pursue conducting outreach to all customers who have been removed from CAP for failure to recertify income since the expiration of the Commission's Emergency COVID-19 Order. As described in Section II.B below, the Company has been performing active outreach to these customers since the Emergency COVID-19 Order was lifted by the Commission.

Q. Does Mr. Geller acknowledge these CAP enrollment simplifications and recertification outreach efforts in his testimony?

A. No. He does not.

Q. Did OCA witness Mr. Colton make any observations regarding the Company's CAP?

A. Yes. According to Mr. Colton, UGI Gas has enrolled only a fraction of its Confirmed Low Income ("CLI") customers in CAP. (OCA St. No. 4, p. 7.)

Q. Do you believe Mr. Colton's analysis has provided a complete picture of CLI customers' enrollment in CAP?

A. No. Despite the Company's solicitation efforts, not all eligible customers enroll in CAP. There are various reasons why potentially eligible customers do not complete CAP applications, even considering the simplified enrollment process described above. Among these reasons, some customers do not meet the CAP guidelines outlined in the Company's USECP (e.g., theft of service, utility service in landlord's name, etc.) or fail to verify income eligibility for CAP.

B. OCA'S PROPOSED UNIVERSAL SERVICE PERFORMANCE OBJECTIVES

Q. Mr. Colton recommends that the Commission establish three "measurable outcome objectives that UGI Gas should seek to accomplish with respect to CAP." (OCA St. No. 4, pp. 5, 25-26, 32.) What are those three outcome objectives?

A. As summarized on pages 5 and 25 of Mr. Colton's direct testimony, the three outcome objectives are the following:

1. UGI Gas should achieve a confirmed low-income identification rate, as a percentage of estimated low-income customers, no less than the confirmed low-income identification rate of Pennsylvania natural gas utilities as a whole (excluding UGI Gas);

2. UGI Gas should achieve a CAP participation rate, as a percentage of confirmed low-income customers, no less than the CAP participation rate of Pennsylvania natural gas utilities as a whole (excluding UGI Gas); and

3. UGI Gas should achieve a CAP default rate as a percentage of participants in the lowest poverty level range that is no more than the CAP default rate in that poverty level range for Pennsylvania natural gas utilities as a whole.

Mr. Colton also recommends that the Commission determine that it will use these outcome objectives to review the adequacy of UGI Gas's performance in future base rate cases and that the Commission not tie any penalties or rewards to UGI Gas's performance relative to the outcome objectives in this case. (OCA St. No. 4, pp. 5, 26, 32.) However, Mr. Colton reserved his right to propose penalties related to these outcome performance objectives. He states: "While I would reserve the right to propose a system of penalties (for poor performance as measured by a continuing failure to meet the stated performance objectives) or rewards (for superior performance as measured by exceeding the performance objectives) in a future rate case…" OCA St. No. 4 at 26.

Q. What initial concerns do you have with Mr. Colton's proposals?

A. First, Mr. Colton is effectively attempting to promulgate and impose upon UGI Gas new regulatory standards related to the Company's CAP outside of a Commission-initiated rulemaking. No statutes, regulations, policy statements, or Commission orders require or support the three outcome objectives that Mr. Colton is attempting to impose upon UGI Gas in this case. And, if adopted, as part of this proceeding, these outcome objectives would only apply to UGI Gas. If that happens, UGI Gas would be subject to regulatory standards different than those applied to every other NGDC in Pennsylvania. However, all NGDCs in Pennsylvania should be evaluated under the same regulatory standards. Therefore, Mr. Colton's proposal should be raised, if at all, within the context of a statewide rulemaking proceeding which would permit participation from all stakeholders.

Second, the "rewards" and "penalties" referenced by Mr. Colton appear to be related to the Company's allowed return on equity ("ROE"), given that on page 32 of his testimony he recommends the Company's proposed ROE be evaluated in this case based on his outcome objectives. Mr. Colton fails to recognize that he cannot, either in this proceeding or the future, "propose a system of penalties . . . or rewards" based on the three outcome objectives. Such a system would constitute performance-based rates, a form of alternative ratemaking that the Commission can only approve upon "<u>an application by a utility in a base rate proceeding</u>." 66 Pa. C.S. § 1330(b)(1) (emphasis added). Therefore, only UGI Gas could propose performance-based rates in a future base rate case; such alternative ratemaking mechanisms cannot be forced onto the Company by the OCA. Thus, the Commission should reject any suggestion by Mr. Colton that his proposed outcome objectives can and should form the basis of performance-based rates in the future.

Q. What additional concerns do you have with Mr. Colton's proposed performance objectives?

A. As to the overall desired results of increasing confirmed low-income identification rates, increasing CAP participation rates, and lowering CAP default rates, the Company's programs and procedures already target these low-income objectives today. Also, the Company tracks relevant data on its CAP performance and reports such data in its annual

Universal Service Reports. However, the Commission has not developed Universal Service regulations, performance standards, or metrics that NGDCs must meet as compared to other NGDCs. Therefore, it is unreasonable for OCA to be permitted to do so in this proceeding.

As to the specifics of Mr. Colton's recommendations, they do not recognize that: (1) CAP data for other NGDCs differs from the Company's, given their distinctive customer populations, demographics, and service territories and, therefore, should not be used to develop performance standards; (2) his proposed objectives and the anticipated results are largely out of the Company's control, such as an applicant undertaking necessary steps to follow through and actually sign up for CAP or a customer completing the recertification process to stay enrolled in the CAP program; and (3) additional actions which may influence customer behavior requires the deployment of additional and targeted resources, and Mr. Colton has not outlined any specific measures, anticipated budget amounts which may be spent, or the appropriate cost recovery thereof. Although Mr. Colton wants to dismiss the efforts made by the Company to identify confirmed low-income customers, enroll confirmed low-income customers in CAP, and reduce the CAP default rate, those efforts are real and substantial and should factor into any recommendations made with respect to CAP.

Furthermore, in focusing only on his preferred outcomes, Mr. Colton fails to offer any solutions to achieve those outcomes or any substantive analysis supporting that those outcomes are achievable in the Company's service territory. The Company believes Mr. Colton could be more constructive to identify actions which have proven effective in achieving his preferred results. For example, if Mr. Colton is aware of a particularly successful approach which is being utilized by other NGDCs to identify CLI customers, or to have CLI customers enroll in CAP or to reduce CAP defaults, the Company would welcome discussions which detail how these approaches may or may not transfer well to the UGI Gas service territory and its CAP.

Indeed, among other Company initiatives, UGI Gas has provided Universal Service Program information, including CAP benefits, to customers on a regular basis over the last several years as outlined in UGI Gas Exhibit DVA-2R (UGI Gas's response to OCA-II-46 and Attachment OCA-II-46-d). In addition to bi-annual direct, targeted campaigns to customers who may qualify for Universal Service Programs, the Company has program information on its website, in its "on hold" messaging, in customer newsletters, and in handouts provided by Community Based Organizations ("CBOs").

Also, the Company's CCRs offer information about Universal Service Programs to customers during billing calls. As noted above, if a customer has received LIHEAP but is not enrolled in CAP, the CCR is able to directly enroll the customer in CAP (with the customer's approval) without the customer needing to provide income data to a CBO. In other situations, customers only need to take action to provide household income and occupant details and proof to the CBO for CAP enrollment. Furthermore, in each targeted CAP solicitation, the Company provides clear communication of the CBO name and address, as well as information the customer needs to provide for enrollment. The Company has even provided pre-populated CAP applications to customers.

Q. What is the basis of Mr. Colton's Objective 1 regarding CLI Customer Identification Rate?

A. According to Mr. Colton, the Company should be confirming the income status of more Estimated Low Income ("ELI") customers to increase the number of CLI customers. As support for his claim, Mr. Colton compared UGI Gas to other Pennsylvania NGDCs in Table 5 of his direct testimony. (*Id.* at 26.) Mr. Colton pulled this data from the Commission's 2020 Report on Universal Service Programs & Collection's Performance ("2020 Report"). He divided the number of CLI customers by the number of ELI customers. He calculated a percentage for how many ELI customers have been identified as being CLI by NGDC.

Q. Do you believe that this analysis properly demonstrates the Company's success in confirming the income status of its ELI customers?

A. No. First, it needs to be recognized that the number of ELI customers in the Company's service territory is based upon census data analyzed by Penn State University, which is then provided to the Commission. As such, the census data provided to the Company does not provide any level of information at a customer-specific level; it is only a total for the estimated population. In order to identify an ELI customer within the Company's service territory and move that customer to a CLI category, the Company needs to have engagement – either with the customer directly or through a state agency – which obtains income information from the customer and assesses low-income status. While a master detailed list of all customers and incomes within the UGI Gas service territory would be useful in assigning CLI status to customer accounts, the privacy and protection of customers' personal information is an overriding concern. Thus, how well the Company, or any other utility, assigns CLI status to customer accounts depends on its success in gathering this information directly from customers. Mr. Colton's analysis does not go far enough to paint a true picture. Upon review of multiple years of data between 2018 and 2020 – and not just one year as Mr. Colton has done – the following analysis, shown in Tables 1-3, demonstrates that the Company has made considerable improvement in its efforts to identify CLI customers as compared to its total ELI customer base.

Table 1

	2018 CLI Customers	2019 CLI Customers	2020 CLI Customer
Columbia	67,590	67,582	68,078
NFG	30,661	32,282	35,241
PECO Gas	25,704	24,977	26,216
Peoples	104,976	109,303	108,540
PGW	149,217	147,014	133,785
UGI	56,760	64,042	77,553

Table 1 contains the number of CLI customers between 2018 and 2020 as appearing in the Commission's 2020 Report.

Table 2

	2018 ELI Customers	2019 ELI Customers	2020 ELI Customers
Columbia	99,925	97,268	96,648
NFG	59,009	60,947	59,860
PECO Gas	74,121	74,914	80,638
Peoples	131,652	143,228	152,309
PGW	206,533	197,855	195,215
UGI	138,102	132,611	151,918

Table 2 contains that number of ELI customers during the same period as appearing in the 2020 Report.

Table 3

	2018 Percent CLI of Total ELI	2019 Percent CLI of Total ELI	2020 Percent of CLI of Total ELI	Improvement over 3 years
Columbia	67.64%	69.48%	70.44%	4%
NFG	51.96%	52.97%	58.87%	13%
PECO Gas	34.68%	33.34%	32.51%	-6%
Peoples	79.74%	76.31%	71.26%	-11%
PGW	72.25%	74.30%	68.53%	-5%
UGI	41.10%	48.29%	51.05%	24%

Table 3 divides Table 1 data by Table 2 data in order to calculate how many customers the Company has identified as CLI as a percentage of the total ELI population. In reviewing this comparison, UGI Gas has increased its percentage of CLI customers relative to the overall ELI population in the Company's service territory by 24 percent from 2018 to 2020, which is a significant improvement. In fact, the Company's performance over this timeframe exceeds any other NGDC in this area. Moreover, when viewing for data through January 2022 against the base of 2021 ELI population (as 2022 data is not yet available), the 24 percent noted above has been increased to 29 percent, further demonstrating the Company's strong performance. As such, Mr. Colton's desired Objective 1 is not the "snapshot" standard that should be used by the Commission to evaluate performance, because a broader review is needed. When that broader view is undertaken, the Company's efforts have been producing substantial results.

Q. What is the basis for Mr. Colton proposing his Objective 2 regarding CAP Participation Rate?

A. According to Mr. Colton, UGI Gas should be increasing CAP participation rates among CLI customers to a level more comparable to the average of its natural gas utility peers in Pennsylvania. (OCA St. No. 4, pp. 26-32.)

Q. Do you agree that Mr. Colton's analysis is an accurate representation of the Company's performance in this area?

A. No. Here again, Mr. Colton's "snapshot" approach does not paint a full picture. Chart 1, which is set forth later in my rebuttal testimony, shows the Company's progress and success in increasing CAP participation levels for the period December 2018 through March 2022. As can be seen from this data, the Company has materially improved CAP participation rates from just four years ago. Thus, Mr. Colton's proposed Objective 2 is not the correct standard by which the Company's performance should be measured.

Q. What is the purpose of Mr. Colton proposing his Objective 3 regarding CAP Default Rate?

A. According to Mr. Colton, between 2018 and 2019, UGI Gas's CAP Default Rate (for customers below 50% of the FPL) was one of the highest in Pennsylvania. It is important to note the overall trends, as shown in response to OCA-II-16 as provided in UGI Gas Exhibit DVA-6R, which demonstrate four key reasons for CAP exits. Customers are moving to a new residence, failing to recertify, choosing a payment arrangement, and/or failing to pay. From October 2017 through March 2020, the average monthly CAP exits as a percent of total CAP exits for the following categories were: (1) moving - 72% of total exits or 280 CAP Customers; (2) failure to recertify - 5% or 23 CAP Customers; (3) non-payment - 9% or 46 customers; and (4) opted for payment arrangement – 2% or 10 customers. There were then no CAP exits for the COVID pandemic period of April 2020 through April 2021 for categories (2) and (3). Subsequently, the same statistics for the time period of May 2021 to December 2021 were: (1) moving - 42% of total exits or 317 CAP Customers; (2) failure to recertify - 28% or 373 CAP Customers; (3) non-payment - 3% or 23 customers; and (4) opted for payment arrangement – 15% or 115 customers.

Notable trends included the increase in CAP failure to recertify post COVID-19 even with significant outreach efforts. Another notable change in trends was the increasing amount of CAP customers opting for COVID-19 payment arrangements versus historical. Mr. Colton's comment that these numbers are unacceptable does not account for the true reason behind the change nor does it factor in the historical trends, which showed the rates of customers' failure to recertify and failure to pay were low. Historically, the most common reason for CAP exits was customers moving. From October 2017 through March 2020, 23 customers per month, on average, exited the CAP program due to failure to recertify. This is approximately 0.098% of the total CAP population in 2019. For the same period, CAP exits due to non-payment was on average 46 customers per month or 0.2% of the total CAP population in 2019.

Moreover, Mr. Colton does not recognize that the apparent decrease in CAP enrollments in 2022 is misleading. Due to COVID-19 restrictions, CAP enrollments were elevated in 2020 and much of 2021. And, because the CAP recertification process was on hold, the annual attrition and renewal process typically experienced was not reflected in the 2020 and 2021 CAP enrollment data. In fact, much of the decrease in CAP enrollments from 2021 to 2022 was the result of the CAP recertification process, specifically the Commission's mandate in July 2021 that utilities begin recertification efforts that had been on hold due to COVID-19.

As part of the recertification process, UGI Gas sent an initial Recertification Reminder Letter, a second Recertification Anniversary Letter, and a Final Letter. Further, each CBO was tasked with reminding customers that recertification was required.

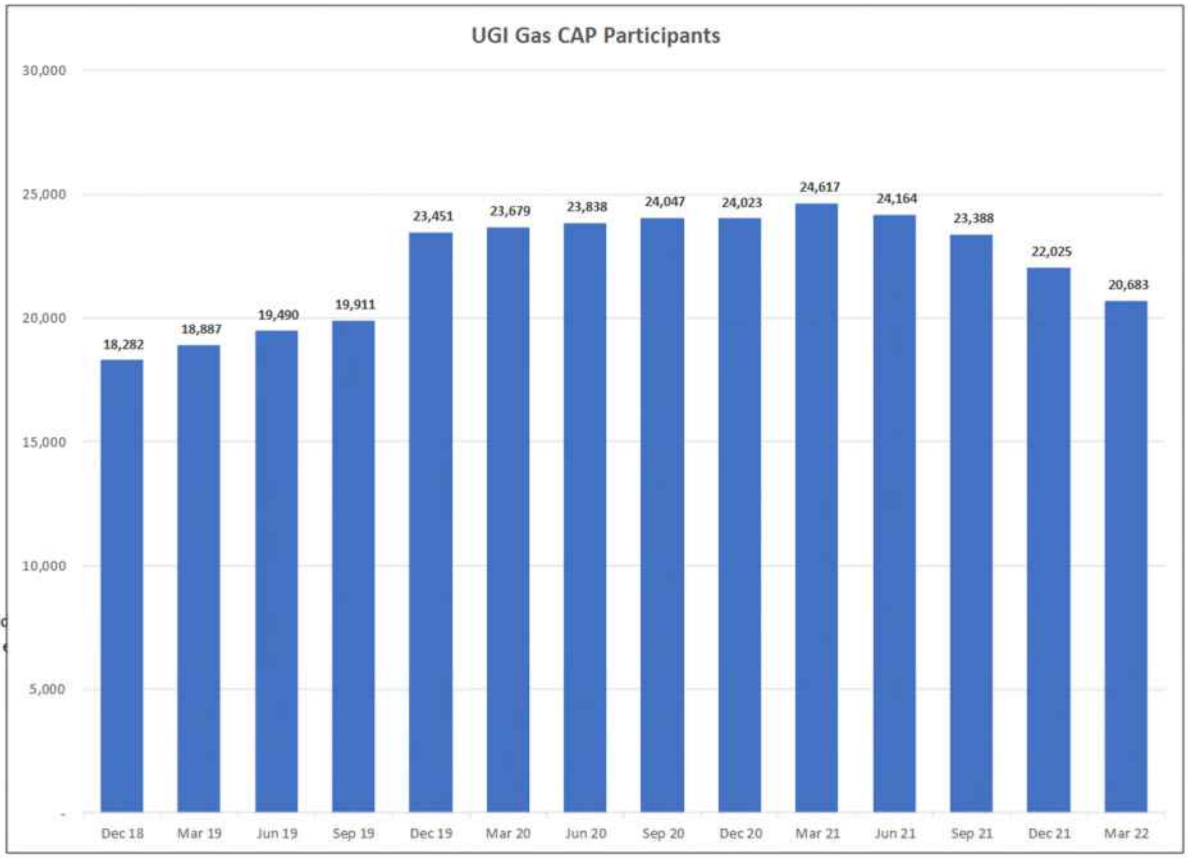
In October 2021, the Company sent the recertification communications to approximately 4,049 customers that needed to recertify. Notably, the Final Letter's envelope stated that the CAP program benefits would be lost if no action was taken. For customers with an email on file, the Company also sent them an email stating that recertification steps needed to be taken and asking them to watch their mail for information about how to recertify. To make the recertification process easier for the customer, this email included CBO-specific information as well as the customer's account number.

Of those 4,049 customers, only 16% of the customers recertified. The other 84% of the 4,049 customers failed to recertify and were removed from CAP. In January 2022, the Company began the recertification process for another group of 3,939 customers. The process was the same as outlined previously for the October 2021 recertification communications. Of those 3,939 customers, only 17% recertified. The other 83% of the 3,939 customers did not recertify and were removed from CAP.

For these reasons, the decrease in CAP enrollment in 2022 appears elevated when comparing 2019, 2020, and 2021 data. However, when comparing the pre-COVID data to the most recent data, the Company's CAP current enrollment (May 2022) continues to exceed pre-COVID levels (September 2019) and is likely to grow as we approach the 2022-2023 winter heating season. Chart 1 shows the steady growth in CAP participation through the Company's efforts, but also highlights the impact of the Commission's Emergency

COVID-19 Order, which negated the normal attrition experienced during non-COVID-19 periods and resumption of the required recertifications.

<u>Chart 1</u>



UGI began conducting WARM events and semi-annual CAP enrollment campaigns in Fall of 2019. The Emergency Order was in effect from March 2020 through June 2021, which halted customers having to recertify to remain in CAP. Recertification began in July of 2021, which caused the decrease in CAP participants and offsets CAP enrollment additions occuring July 2021 through present.

Q. Mr. Colton also claims that these outcome objectives are "appropriate" to address in this base rate case instead of the Commission's review of the Company's USECP. (OCA St. No. 4, pp. 32-33.) Do you agree?

A. No. The Company's USECP is a Commission-approved plan where issues relating to the Universal Service Programs' design, budgets, and marketing are addressed. As explained previously, it is inappropriate to alter the USECP's objectives in this proceeding.

Moreover, such changes necessarily affect the approved program design, budgets, and marketing in the Company's current USECP. Additionally, the Commission already has reporting regulations in place to evaluate NGDCs' performance across multiple uniform reporting measures, which include Universal Service Programs & Collections Performance, Customer Service Performance Reports, and Rate Comparison reports to name a few.

Moreover, the Company should not be evaluated based on metrics that did not exist prior to this base rate case. Mr. Colton claims on page 32 of his direct testimony that the Company's failure to achieve these objectives demonstrates, at the very least, that the Company's proposed return on equity should not be approved. It is short sighted for Mr. Colton to evaluate the Company's performance based on non-existing criteria and to disregard other performance measures as well as COVID-19's impact on the recertification of CAP customers after the Commission's emergency moratorium. The Company has taken a number of steps pre- and post-COVID to support low-income customers. For example, UGI Gas Exhibit DVA-2R shows a significant number of communications that were partnered up with the Company's WARM initiative.

The WARM initiative[2] kicked off in October 2019, in recognition of growing arrears within the low-income sector. One of the most significant benefits shown was a great ability for the Company's WARM team to assist customers with completing the required documents for various Universal Service Programs. In December 2019, the

[2] The WARM initiative consists of Company employees from multiple discipline departments, with the focus of hosting events at UGI offices and partnering with CBOs to provide in-person support to help answer customer questions and offer guidance on enrollment in multiple low-income programs. UGI Gas programs and resources include funds available through LIHEAP, CAP, Operation Share, the Customer Assistance and Referral Evaluation Services ("CARES") program, and LIURP.

WARM team implemented the first round of WARM activities to increase CAP enrollments based on prospective CAP customers identified in the Company's Customer Information System. Although COVID-19 has impacted in-person events, the Company continues to inform low-income customers through multiple multi-media avenues which include the semi-annual CAP enrollments. Additionally, the Company voluntarily implemented a phase 1 of its ERP that allowed customers who received federal COVID-19 stimulus grants or impacted by COVID-19 to receive a one-time grant and extended payment arrangement. The Company proposed an ERP phase 2 of this program but did not receive a majority ruling from the Commission to implement a program extension. These efforts show the Company's focus and effort to maximize enrollments in current customer programs and creative new programs to help those in need.

C. LOW-INCOME SCREENING FOR NATURAL GAS CONVERSIONS

Q. OCA witness Colton recommends that the Company be required to screen customers whom it assists with conversions to natural gas, to see if they are confirmed low-income customers and to enroll them in CAP where appropriate. (OCA St. No. 4, pp. 4, 15-20.) Do you agree with this recommendation?

A. No. First and foremost, Mr. Colton makes this recommendation in reliance on the data that the Company provided in the response and Attachment to OCA-V-9. As stated in the Company's response to OCA-V-9: "The Company does not track household mobility. Therefore, the Company is only able to query the original customers who are active in the Customer Information System ("CIS") and remain at the converted premise. The detailed data is not available prior to 2004."

The data provided in Attachment OCA-V-9 shows that on average over the 18-year period contained therein (2004-2021) approximately 49 customers, which currently reside at the conversion addresses presented, are currently confirmed low income. Additionally, on average during that period, approximately 24 customers, who live at the addresses that were converted to natural gas over that 18-year period, are currently on CAP. Based on (1) these figures, (2) these customers converting to natural gas at some point over the past 18 years, and (3) a small amount of the customers at these conversion sites being low income, Mr. Colton recommends that when new customers seek to convert to natural gas, UGI Gas screen them to determine income status. (*Id.* at 20.)

Based on the foregoing, I do not believe Mr. Colton's recommendation is necessary. Currently, when processing a natural gas conversion, the Company performs a credit check to verify the customer's identity; the Company does not collect income and household occupant information during that process. Nor is the Company required to do so by regulation. Were the Company to undertake this new obligation, as proposed by Mr. Colton, UGI Gas's CIS would require significant programming to track and store income and occupant information for prospective customers. The Company has determined that only approximately 1.6% of the 2021 natural gas conversions (i.e., the 85 customers reported on Attachment OCA-V-9) were confirmed low-income customers as of March 2022.

In addition to this very small number of potential low-income converting customers, the Company on average receives approximately 9,000 natural gas conversion leads annually, all of which would need to be screened under Mr. Colton's recommendation. In addition to the cost to enhance the CIS so that it can track and store this data for prospective customers, the Company believes Mr. Colton's recommendation would be ineffective when compared to the efforts described above to solicit new CAP participants post-conversion. Additionally, Mr. Colton fails to present any substantive evidence that justifies residential customers bearing the costs of these proposed changes, which would, at most, benefit a very small number of potential low-income converting customers.
