
D. LOW-INCOME USAGE REDUCTION PROGRAM ("LIURP")

Q. OCA witness Colton recommends that the Company add a new incremental component to its LIURP through which the Company will provide LIURP energy conservation measures to confirmed low-income customers as part of the process of converting those customers to natural gas. (OCA St. No. 4, pp. 4-5.) Do you agree with this recommendation?

A. No. As I explained previously, Mr. Colton's proposed screening process is unjustified and unnecessary. The Company has determined that approximately 1.6% of the 2021 natural gas conversions were confirmed low-income customers as of March 2022. Furthermore, if Mr. Colton's recommendation is adopted, the "incremental component" of the LIURP would circumvent one of the key criteria for enrollment in LIURP, which is 12 months of usage that meets program thresholds. Since conversion customers are converting from an alternate fuel source, the Company would not have pre-weatherization usage data available, which prevents consistent and accurate reporting of LIURP results when filing regulatory reports and complying with USECP requirements. Thus, this recommendation should be denied because the measures needing to be evaluated will be lacking critical data to prove program effectiveness.

Q. Mr. Colton also suggests that UGI Gas expand its LIURP spending by $1.425 million per year, so that the Company can serve 231 additional confirmed low-income customers per year. (OCA St. No. 4, pp. 6, 41-43.) Mr. Colton further claims that his LIURP funding proposal is appropriate to address in this base rate case instead of the Commission's review of the Company's USECP. (OCA St. No. 4, p. 43.) Do you agree with Mr. Colton's recommendations?

A. No. LIURP is an effective program and has been recognized as such by the Commission. However, it is inappropriate to increase the amount of LIURP funding, which was approved by the Commission in UGI Gas's current USECP, in this rate case proceeding. First, I am advised by counsel that the OCA's proposal does not comply with 52 Pa. Code § 58.4(c), which sets forth the factors to be considered when revising a utility's LIURP funding. In fact, none of the parties in this proceeding have testified to any of those factors, which are:

- The number of eligible (high usage) customers that could be provided cost-effective usage reduction services.
- The number of customer dwellings that have already received, or are not otherwise in need of, usage reduction services.
- Expected customer participation rates for eligible customers.
- The total expense of providing usage reduction services, including costs of program measures, conservation education expenses and prorated expenses for program administration.

- A plan for providing program services within a reasonable period of time, with consideration given to the contractor capacity necessary for provision of services and the impact on utility rates.

Critically, Section 58.4(c) of the Commission's regulations does not list rate case impacts or changes to the customer charge as factors for revising LIURP budgets. Therefore, the OCA's proposal should be rejected by the Commission and addressed in the context of the Company's next USECP proceeding, where a needs assessment would be completed to help determine the appropriate budgeting levels for LIURP.

Additionally, Mr. Colton has not demonstrated how OCA's requested percentage increase in LIURP funding ties to the proposed increase in rates for residential customers. Mr. Colton has not supported his fundamental premise that an increase in base rates proportionally increases the need for LIURP. Furthermore, the Company's proposed base rate increase has no impact on the qualifying criteria for participation in the Company's LIURP, such as meeting certain usage thresholds or residing in properties suitable for weatherization.

Furthermore, Mr. Colton is making spending recommendations based on annual LIURP spending of $2.1 million. However, the Company already has an approved USECP with an approximate $3.7 million annual LIURP budget, so his recommendation to increase spending by $1.425 million is already within budgetary guidelines. In addition to the 10 current gas CBO LIURP contractors that UGI Gas utilizes, the Company recently expanded its LIURP contractor network by adding 5 new Building Performance Institute ("BPI") weatherization contractors. This 50% increase over the Company's current LIURP vendor network demonstrates that UGI Gas is making a strong effort to utilize the available LIURP budget. In fact, through the first 3 months of calendar year 2022, LIURP spending has been $995,452, which represents a 170% year over year increase from Q1 2021.

Q. Does CAUSE-PA witness Geller make any recommendations concerning the Company's LIURP?

A. Yes. Mr. Geller recommends that UGI Gas: (1) reduce its LIURP minimum usage threshold for households at or below 150% of the FPL; and (2) at a minimum, increase its annual LIURP budget by a percentage at least equal to the average residential bill impact of any approved residential rate increase. (CAUSE-PA St. No. 1, pp. 27-29.) As alleged support for his recommendations, Mr. Geller states that "[d]espite the value of UGI's LIURP and its impressive results, UGI's LIURP is not operating at a rate sufficient to fulfill the estimated need for comprehensive usage reduction services within a reasonable amount of time." (CAUSE-PA St. No. 1, p. 26.)

Q. Do you agree with Mr. Geller's recommendations for the Company's LIURP?

A. No. As stated above in response to Mr. Colton, it is not appropriate to increase LIURP funding through this proceeding. The Company is already adhering to the Commission-approved LIURP minimum usage thresholds and annual budgets set forth in the Company's USECP.

Q. Does CEO witness Brady recommend any modifications to the Company's LIURP?

A. Yes. He recommends that the annual LIURP funding be increased by $750,000 effective upon the date new base rates take effect. (CEO St. No. 1, p. 8.) Mr. Brady argues that the

$750,000 funding recommendation was derived based on an additional 100 LIURP jobs per year, which would be a "good target . . . across the Company's territory." (CEO St. No. 1, p. 9.) In discovery, Mr. Brady clarified that he derived his $750,000 figure based on an "approximate job cost" of $7,500 "derived from Appendix A of the Company's 2020-2025 USECP." (*See* UGI Gas Exhibit DVA-3R.) Specifically, he took the total projected budget for the Company's three former divisions and then divided that total projected budget by the total projected participation levels.

Q. Do you agree with Mr. Brady's recommendation?

A. No. As previously stated in my testimony on the LIURP funding in response to both OCA and CAUSE-PA, it is improper to increase LIURP funding through this proceeding. The Company is already adhering to the annual budgets set forth in its Commission-approved USECP.

E. OPERATION SHARE

Q. Does CAUSE-PA witness Geller make any recommendations for the Company's Operation Share?

A. Yes. He recommends that UGI Gas: (1) increase the maximum grant amount for customers at or below 150% FPL; and (2) increase its annual Operation Share contribution by an amount that is at least proportional to its residential rate increase. (CAUSE-PA St. No. 1, pp. 30-32.) As alleged support, Mr. Geller contends that "[d]espite the availability of additional Operation Share funds and the increase in the number of grants award, UGI low income customers still experienced a disproportionate increase in termination rates."

23917095v1

(CAUSE-PA St. No. 1, p. 30.) Mr. Geller believes his recommendation will help address the increase in low-income termination rates. (CAUSE-PA St. No. 1, p. 30.)

Q. Do you agree with Mr. Geller's recommendation?

A. No. As shown below in Chart 2, the Company started to increase its annual direct funding prior to COVID-19 from what it traditionally made available to support Operation Share in addition to employee and customer contributions that help fund the program. In 2019, the Company increased direct funding for UGI Gas from $104,500 to $584,500 annually or greater than 500%, and UGI Gas continues to contribute at the increased funding level. This also does not account for the one-time incremental $2,000,000 added to the program during 2021/2022, as part of the UGI Gas 2020 Base Rate Case settlement. Increasing the maximum grant amount for customers as proposed by Mr. Geller will reduce the number of customers being able to take advantage of the program's funding due to the proposed higher grant levels. In addition, it is important to note the newly introduced federal programs and increased funding for existing federal programs, such as Emergency Rental Assistance Program ("ERAP") and Pennsylvania Homeowner Assistance Fund ("PAHAF"), and LIHEAP, all of which support low-income customers in addition to the Company's CAP, which are described in more detail further on in my testimony.

Q. Similarly, CEO witness Brady recommends that UGI Gas increase donations to Operation Share by $1 million (CEO St. No. 1, pp. 11-12.) Please respond.

A. Mr. Brady clarified in discovery that his proposal is for UGI Gas to make a one-time increase in donations to Operation Share of $1 million, as opposed to the Company increasing donations to Operation Share by $1 million annually. (*See* UGI Gas Exhibit DVA-4R.) With that clarification and in response to Mr. Geller's request to increase funding to Operation Share, the Company believes that adequate funding is already provided by the Company to Operation Share. The Company also believes that the Commission does not have the authority to mandate funds to a 501(C)(3) tax charitable organization which are not recovered through the ratemaking process. For these reasons, the parties' recommendation for additional funding should be rejected.

Q. Do you have any additional concerns regarding Mr. Geller's and Mr. Brady's Operation Share recommendation?

A. Yes, the Company's donations to Operation Share are made through a charitable organization that allows the payments to receive a tax deduction. These donations are made voluntarily and are not mandated by the Commission. The voluntary nature of these donations allows the Company to retain the tax advantaged nature of the organization. Contributions made as a result of the Commission's acceptance of Mr. Geller and Mr. Brady's recommendations would not be voluntary and may cause the contribution to lose their tax-advantaged status, requiring the Company to pay taxes on the contributions. Therefore, acceptance of their funding recommendation likely would come at an unanticipated cost. Similarly, if the Commission were to mandate the expenditure, the Company would be entitled to recover the Operation Share Donations from its customers, again coming at an additional cost to customers, and potentially come at another added cost because they likely would lose their tax-deductible status because they are no longer voluntary. Today, the Company's donations are voluntary, tax deductible, and not recovered through the ratemaking process.

F. USE OF COMMUNITY-BASED ORGANIZATIONS

Q. CEO witness Brady recommends that UGI Gas be directed to continue using CBOs in the administration and implementation of its Universal Service Programs. (CEO St. No. 1, pp. 10-1.) Please respond.

A. The Company recognizes the benefits of CBOs in increasing cross-Universal Service Program participation and utility referrals. As set forth in the Company's Commission-approved USECP, UGI Gas will continue using CBOs in the administration and implementation of its Universal Service Programs assuming CBOs fulfill contract obligations as agreed to between CBO and Company. Thus, there is no reason for the Commission to issue such a declaration in this base rate proceeding.

IV. IMPACT OF THE COMPANY'S PROPOSALS ON LOW-INCOME CUSTOMERS

A. BASE RATE INCREASE

Q. CAUSE-PA witness Geller contends that UGI Gas's existing Universal Service Programs do not adequately address the affordability gap for economically vulnerable customers and that the rate increase will make it more difficult for low-income customers to maintain safe energy services to their home. (CAUSE-PA St. No. 1, p. 5.) Do you agree?

A. No. I believe that the Company's Universal Service Programs are well-designed and have been successfully assisting low-income customers. Additionally, external programs to support payment troubled customers are also available. These federally funded programs include ERAP, PAHAF, and LIHEAP. Some of these programs, such as ERAP and PAHAF, are newly available and can help support customers, as can increased funding for LIHEAP. The Company actively promotes these external programs to customers in addition to the Universal Service Programs, as shown in UGI Gas Exhibit DVA-2R.

Q. Relatedly, Mr. Geller claims that the proposed rate increase will lead to corresponding increases in payment-related terminations and uncollectible expenses. (CAUSE-PA St. No. 1, pp. 9-13.) Do you agree?

A. No. In addition to the Company's increased funding for low-income customers through Operation Share, there are externally funded programs that have either increased funding to help customers in need (such as LIHEAP) or have been newly made available to customers that qualify through ERAP and PAHAF. For example, Chart 2 shows the increase in Operation Share grants provided to customers over the period of FY2019-FY2022 to date. Additionally, Chart 3 shows the significant funding increases in LIHEAP dollars available to Pennsylvania residents, and Chart 4 shows the impact in increased funding that UGI Gas's customers have benefited from to help with their energy costs.

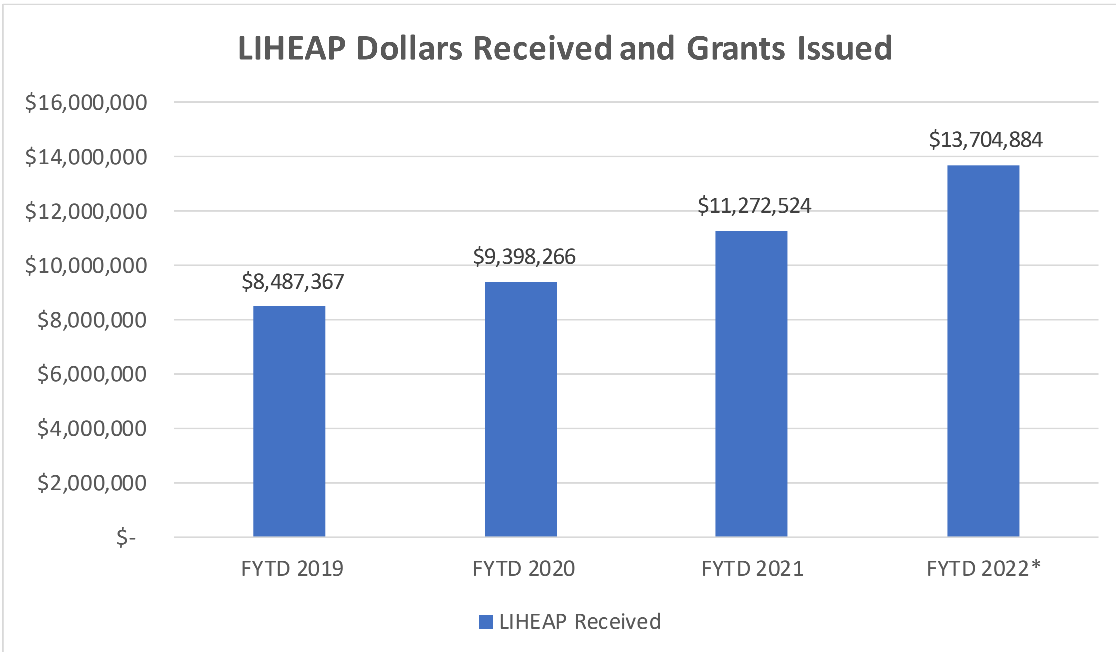
Chart 4[3]

UGI Gas LIHEAP Customer Grants Awarded



*FYTD April 30, 2022

Q. Mr. Geller contends that customers enrolled in CAP who pay based on an average bill are not insulated from the financial impact of the proposed base rate increase, but even customers who pay based on percentage of income ("PIP") or minimum bill will produce increased CAP costs due to the proposed base rate increase. (CAUSE-PA St. No. 1, pp. 18-21.) Please respond.

[3] The source of Chart 4 is https://liheappm.acf.hhs.gov – the LIHEAP Performance Management Site for 2017-18, 2018-19, 2019-20, 2020-21. Program year 2021-22 is based on the LIHEAP State report at https://www.dhs.pa.gov/Services/Assistance/Documents/Heating%20Assistance_LIHEAP/2022%20LIHEAP%20State%20Plan_FINAL%20Approved.pdf

A. UGI Gas witnesses Ms. Heppenstall (UGI Gas St. No. 10-R) and Mr. Taylor (UGI Gas St. No. 11-R) explain in detail why the Company's proposed residential monthly customer charge is reasonable. In addition to their testimony, it is important to recognize that, in large part, low-income residential customers are either: (1) shielded from the impact of the increase to the residential monthly customer charge; or (2) not unreasonably burdened by a rate increase that increases a fixed charge versus a volumetric charge. Moreover, depending on their usage, low-income residential customers can benefit from a higher customer charge, as shown in the rebuttal testimony of Mr. Taylor (UGI Gas St. No. 11-R).

In addition, the Company has shown growth in CAP enrollments over the past few years, as shown in Chart 1 above. I would also like to note that although Mr. Geller states that the Company's CAP Participation Rate is below average when compared to other NGDCs, he fails to provide a full frame of reference of the data and external impacts that have caused a slight decrease in UGI Gas's CAP counts. To start, Mr. Geller states that UGI Gas has dropped from a CAP participation rate of 35% in 2020 to 28% in 2021. My Chart 1 above shows that the Company's CAP participation rate is much higher than Mr. Geller claims, in part because it includes CAP participants for the former UGI Central rate district.

Moreover, CAP participation levels dropped in 2021 as a result of the Commission's requirement to restart the CAP recertification process for the first time since the Commission's March 2020 Emergency COVID-19 Order. As I explained previously, the Company undertook significant efforts to contact CAP customers about recertifying. Mr. Geller's data also does not show how other NGDCs performed in 2021 who were also required to recertify their CAP customers. Also, TABLE 3: CAP Participation Rate in Mr. Geller's direct testimony does not show the full subset of data as reported to the Commission in the annual Universal Service Programs & Collection Performance Reports. It is important to note that the Company has increased its CAP participation from December 2018 to through December of 2020 by 31% and with the impacts described from COVID-19, still see an increase in CAP participation from December 2018 through March 2022 by 13%. All other utilities published from December of 2018 through December of 2020 had a loss of CAP customers with the exception of PGW who saw an 8% increase in customer counts. This data shows again that the Company's efforts have increased participation at a greater rate than other NGDCs.

Q. Mr. Geller also recommends that UGI Gas be required to implement the reduced maximum energy burden standards proposed in the Company's petition to modify its USECP as a condition to approval of any rate increase in this proceeding. (CAUSE-PA St. No. 1, p. 22.) Please respond.

A. The Company has formally filed and complied with the Commission's requirement to implement a reduced maximum energy burden standard. This proposal is the subject of another Commission proceeding at Docket No. P-2020-3019196 and was not consolidated with this base rate case proceeding. Therefore, it is imprudent to introduce that separate proposal here or make the base rate increase conditional on that proposal.

Q. CEO witness Brady contends that even though he does not take a position on whether the proposed base rate increase should be granted, he believes that granting the

proposed base rate increase will call into question whether the Company's Universal Service Programs are adequately funded. (CEO St. No. 1, pp. 5-6.) Please respond.

A. Mr. Brady fails to present evidence on what the "adequate" level of funding should be for the Company's Universal Service Programs under the proposed base rate increase. Moreover, as I previously explained, LIURP funding should not be changed through this base rate case, and even if it were, the other parties fail to address the Commission's factors for determining the appropriate levels of USECP funding. Additionally, the Company proactively increased funding in FY2019 for its Operation Share grants by increasing the annual funding by more than two hundred percent (200%). Specifically, the annual funding for Operation Share increased from $104,500 to $584,500. For these reasons, and based on the Commission-approved budgets in the Company's USECP, UGI Gas's Universal Service Programs are adequately funded.

B. RESIDENTIAL CUSTOMER CHARGE

Q. Do any of the other parties oppose the Company's proposed increase to its residential customer charge, citing purported adverse impacts on low-income customers?

A. Yes. As noted above, OCA witness Colton, CAUSE-PA witness Geller, and CEO witness Brady take that position.

Q. Could you please summarize OCA witness Colton's position?

A. Mr. Colton alleges that low-income customers would be disproportionately affected by the proposed increase. (OCA St. No. 4, p. 6.) He also claims that "at least 86% of UGI's estimated low-income customers are not paying a percentage of income-based CAP bill and, thus, are not insulated from the effects of the proposed increase in UGI's fixed monthly customer charge." (OCA St. No. 4, p. 8.) Relatedly, Mr. Colton asserts that CAP enrollees whose bills are based on average bills, which he maintains are more than half the Company's CAP participants, will be negatively affected by the increased customer charge. (OCA St. No. 4, pp. 8-9.)

Q. Is Mr. Colton correct that low-income customers would be disproportionately affected by the proposed increase in the residential customer charge or the Company's WNA proposal?

A. No, as explained by Mr. Taylor in UGI Gas St. No. 11-R, Mr. Colton's claim is without merit. In fact, Mr. Taylor demonstrates that the Company's proposed customer charge lowers the average bill for low-income and CAP customers. Also as explained by Mr. Taylor, the Company's proposed WNA mechanism will not adversely affect low-income customers. Accordingly, Mr. Colton's concerns are unfounded, and likewise, his basis for suggesting that an increase in LIURP funding is necessary as a result of the WNA is not appropriate.

Q. Mr. Colton also asserts that a very small percentage of low-income customers (7%) is protected against the proposed increase in the customer charge by participating in CAP. (OCA St. No. 4, p. 9.) Do you agree?

A. No. The Company's pending energy burden filing, if approved, will shift even more CAP participants from average bill to percent of income. Specifically, in that filing, the Company projects a 17% reduction to CAP customers on average bill, thus leaving only 38% of CAP customers on average bill. Moreover, the Company continues to promote and expand its CAP, as shown in UGI Gas Exhibit DVA-2R, which will continue to provide growth and expansion of CAP. Additionally, UGI Gas Exhibit DVA-5R sets forth data on the average consumption of low-income residential customers versus non-low-income residential customers. This data demonstrates that the Company's low-income customers do have a higher average use per customer, which establishes that a higher customer charge will generally benefit low-income customers.

Q. Do you agree with Mr. Colton that the increased customer charge "standing alone" will remove 95.4% of the total value of federal fuel assistance being delivered to low-income customers (OCA St. No. 4, pp. 9-10)?

A. No. Mr. Colton's portrayal that certain assistance dollars are somehow absorbed by the customer charge is inaccurate. Mr. Colton also incorrectly represents the number of customers that have received LIHEAP funding where Mr. Colton assumed that all 153,437 low-income customers on page 9, line 18 of his direct testimony received Federal Fuel assistance funding. This is simply incorrect. Also, as discussed by UGI Gas witness Mr. Taylor in his rebuttal testimony (UGI Gas St. No. 11-R), given low-income customers have higher usage, a higher customer charge is more beneficial than adding the increase into the volumetric charge for these customers. Mr. Colton's statement should be given no consideration.

Q. Mr. Colton also claims that UGI Gas has not considered how the proposed customer charge increase affects the cost-effectiveness of residential energy efficiency and conservation ("EE&C") measures. (OCA St. No. 4, p. 10.) Please respond.

A. Mr. Colton does not view the Company's rate design proposal correctly in the context of EE&C measures. When a customer is undertaking EE&C measures, the incremental cost of such measures must be measured against the incremental savings per unit of lower consumption. As the Company has proposed, the variable unit cost for residential customers will move up from $4.1104/Mcf to $4.9996/Mcf, thus the cost-effectiveness of any measures being considered by customers will actually increase when energy conservation measures are undertaken. Mr. Colton's claim is incorrect. (*See* UGI Gas Exhibit E, page 2 of 7.)

Q. CAUSE-PA witness Geller also opposes the Company's proposed residential customer charge and recommends that any rate increase be applied to the volumetric charge only. (CAUSE-PA St. No. 1, pp. 32-35.) Why does he disagree with the Company's proposal?

A. Mr. Geller claims that the proposed increase in the residential customer charge will adversely affect low-income customers and the Company's LIURP. (CAUSE-PA St. No. 1, pp. 32-35.)

Q. Similar to CAUSE-PA witness Geller, CEO witness Brady opposes any increase to the monthly customer charge. (CEO St. No. 1, pp. 4-6, 6-7, 12.) Why does he disagree with the Company's proposal?

A. Mr. Brady believes that the proposed increase to the residential customer charge will affect a customer's ability to conserve energy and that changes to funding for LIURP and other Universal Service Programs can help mitigate that effect. (CEO St. No. 1, pp. 4-6.) He also cites a statement by former Commissioner James Cawley in National Fuel Gas Distribution Corporation's ("National Fuel") 2006 base rate case as alleged support for his position. (CEO St. No. 1, pp. 6-7.)

Q. Do you agree with CAUSE-PA witness Geller and CEO witness Brady?

A. No. I would note the following: (1) Commissioner Cawley's statement was made at the outset of the National Fuel rate case regarding issues he asked the parties to address in the proceeding; it does not reflect a ruling on any specific customer charge proposal or the impact of any particular customer charge on conservation; (2) National Fuel requested a very substantial increase in the residential customer charge, i.e., $12 to $20.42 (or a 70% increase), a far greater percentage increase than that requested by UGI Gas in this proceeding; and (3) the customer charge issue in that case was part of larger rate design issues, in particular the use of declining block rates, which may discourage conservation (the large proposed increase in the customer charge was designed to reduce reliance on declining block rates). The Company does not have a declining block rate structure in Pennsylvania for residential customers. Therefore, Mr. Brady's reliance on Commissioner Cawley's 2006 statement is irrelevant to this proceeding.

Other UGI Gas witnesses, including Ms. Heppenstall (UGI Gas St. No. 10-R) and Mr. Taylor (UGI Gas St. No. 11-R), explain in detail why the Company's proposed residential monthly customer charge is just and reasonable. Further, as I explained previously, it is important to recognize that, in large part, low-income residential customers are either: (1) shielded from the impact of the increase to the residential monthly customer charge, or (2) not unreasonably burdened by a rate increase that increases a fixed charge versus a volumetric charge. And, depending on their usage, low-income residential customers can benefit from a higher customer charge as shown in the rebuttal testimony of Mr. Taylor (UGI Gas St. No. 11-R).

More specifically, CAP customers have the safety net of paying on a percentage of income basis and, in the lower income brackets, a minimum bill. In each instance, the customer is unaffected by the change in the fixed customer charge. A CAP customer would only be affected where the CAP customer pays an average monthly bill that is less than the percentage of income payment. In that situation, the customer's exposure is capped by the percentage of income payment or, in the case of high usage CAP customers, movement of more dollars into the customer charge might even benefit them. Moreover, as I noted earlier in my rebuttal testimony, the Company's pending Energy Burden filing is expected to reduce the number of CAP customers on average bill.

For non-CAP low-income customers, the impact of the higher monthly customer charge is mitigated by the fact that low-income customers generally average higher usage than the general residential customer population and, therefore, would suffer a greater impact if the Company had proposed a higher volumetric charge and a lower customer charge, as shown in UGI Gas Exhibit DVA-5R.

C. LATE FEES AND RECONNECTION FEES

Q. CAUSE-PA witness Geller asserts that the Company should no longer assess late fees and reconnection fees on low-income customers because, according to him, they unfairly penalize low-income customers that are unable to afford their bills. (CAUSE-PA St. No. 1, pp. 6, 37.) Please respond.

Q. I partially agree with Mr. Geller's position. To clarify, confirmed low-income customers who receive LIHEAP crisis grants or who are on CAP are not assessed late fees by the Company. The Company does assess reconnection fees to customers in order to best address the direct cost incurred by the Company when it sends personnel out to reconnect a customer's service. These fees do serve to facilitate customer engagement in order to prevent a disconnect from occurring in the first place. Mr. Geller does not address the cost impacts to the Company of not charging reconnect fees wherein the anticipated number of reconnections would increase. Moreover, as explained in UGI Gas witness Epler's rebuttal testimony (UGI Gas St. No. 8-R), to the extent the Commission would adopt Mr. Geller's recommendation, an adjustment to the Company's overall revenue requirement in this case would be required. Therefore, I maintain that Mr. Geller's recommendation should be denied.

V. ECONOMIC IMPACT OF COVID-19 ON LOW-INCOME CUSTOMERS

Q. OCA witness Colton recommends that the Company extend its "COVID responses" until the Company's next base rate case. (OCA St. No. 4, pp. 33-36.) What are those "COVID responses" referenced by Mr. Colton?

A. He recommends that the Company: (1) "commit to continuing to offer the extended payment plans as identified in the April 2021 Order in Docket M-2020-0319244"; (2) "reinstate its waiver of residential deposits for existing customers"; (3) "reinstate its expanded hardship grant income eligibility, along with its expanded maximum hardship grant"; and (4) "make an additional $1.0 million non-rate recoverable contribution to its hardship fund on an additional one-time basis." (OCA St. No. 4, p. 36.)

Q. What support does Mr. Colton provide for this recommendation?

A. Mr. Colton notes that although residential arrears have begun to decline in recent months, they have not returned to pre-COVID levels. Total dollars of residential arrearages and total dollars of arrearages aged 90-days old or older have declined in 2021 relative to 2020, but they remain higher than in 2019. Mr. Colton is recommending that the COVID-19 responses that UGI Gas had previously agreed to extend through the end of 2021 be continued until UGI Gas's next base rate case. In particular, he recommends the following:

- UGI Gas commit to continuing to offer the extended payment plans as identified in the Commission's April 2021 Order in Docket M-2020-0319244;
- UGI Gas reinstate its waiver of residential deposits for existing customers. The COVID-19 related payment difficulties of residential customers are not indicators of long-term payment risks. And the imposition of a cash security deposit remains an impediment to customers retiring the arrears that they have already incurred;
- UGI Gas reinstate its expanded hardship grant income eligibility, along with its expanded maximum hardship grant; and
- UGI Gas make an additional $1.0 million non-rate recoverable contribution to its hardship fund on an additional one-time basis.

Q. Do you agree with his recommendation?

A. No. The Company has complied with the Commission's emergency orders during COVID-19 and, in fact, added additional voluntary programs, such as the Emergency Relief Program as part of its 2020 base rate case at Docket Nos. R-2019-3015162, *et al*. I have also noted in my testimony the additional funding mechanisms that are available to customers who continue to struggle to pay their bills, along with the Company's efforts to continue expanding its USECP programs. Furthermore, bad debt continues to rise, and extending these provisions as Mr. Colton proposes would exacerbate that problem to the detriment of all ratepayers.

Q. Mr. Colton recommends that in a future rate case once the "economic crisis associated with the COVID-19 health pandemic has been reasonably resolved," the appropriate inter-class allocation of universal service costs should be addressed so that all customer classes are allocated those costs. (OCA St. No. 4, pp. 6, 43-47.) Please respond.

A. As Mr. Colton has indicated that he is not making any proposals as a part of this proceeding, the Company reserves its rights to respond to any reallocation proposal as a part of a future proceeding where this issue is raised for Commission resolution. However, I want to make it clear that to the extent Mr. Colton's testimony is, or could be, construed as a proposal to reallocate universal costs as a part of this proceeding, the Company opposes this proposal and submits that the OCA has not carried its burden of proof with respect to this proposal.

VI. <u>CONLUSION</u>

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

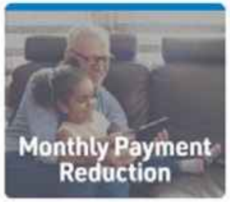
Customer Assistance Programs to Help with Your Bill

As always, UGI offers many programs to assist customers in managing their energy costs and saving money. UGI is committed to helping customers who make a sincere effort to pay their bills. Our representatives can assist you by providing the information on a variety of energy assistance programs, making referrals to local agencies, applying for a grant from various fuel funds or establishing payment arrangements or an extension.

Existing assistance programs include:

Low-Income Home Energy Assistance Program (LIHEAP) offers FREE energy assistance grants for income-qualified customers. You do not have to have an unpaid bill to receive these grants.



Customer Assistance Program (CAP) offers a personalized monthly payment based on income, average bill, and past due debt forgiveness with on-time monthly payments. The difference between the CAP payment and actual usage bill may also be forgiven.

Operation Share Energy Fund is a community-based program that is funded by voluntary donations from UGI employees, UGI customers and concerned citizens. This fund provides energy assistance grants to qualified customers who experience difficultly paying their heating bills.

Contact UGI

UGI customers who are not eligible for low-income and fixed-income assistance but are experiencing trouble managing their energy costs should still consider contacting our Customer Care Center Monday through Friday from 8AM to 5PM at 800-276-2722. Our representatives can individually assist you and your family with additional options that may be available based on your account.

TOGETHER WE CAN DO MORE > COVID-19 BUSINESS RESOURCES

Due to the COVID- 19 pandemic, many non-essential businesses have been closed until further notice. UGI understands that your business relies on its operation to maintain payroll, insurance, and utilities to name a few. Because of that, we're working with legislators, local Chambers of Commerce, and building associations to identify and communicate programs available to help business customers.

In addition, the UGI Business support team has been working diligently to gather information we know our business customers need. The information is from a variety of sources, and as you know, this content changes frequently. We recommend checking with your accountant, financial institution or one of the organizations referenced below if you have questions or concerns about the available assistance programs offered as a result of the Corona Aid, Relief and Economic Security (CARES) Act.

Support Agencies

- U.S. Small Business Administration
- SBA Local Assistance Agency Finder
- Chamber of Commerce:
  - PA Chamber COVID-19 information
  - Local Chamber Listing
- U.S. Senator Bob Casey Website
- U.S. Senator Pat Toomey Website
- U.S. Treasury
- PA Public Utility Commission COVID-19 information
- PA Department of Community & Economic Development

Contact UGI

Our Representatives are available Monday through Friday from 8AM - 5PM at 800-276-2722.

Coronavirus Aid, Relief and Economic Security (CARES) Act & Financial Assistance for Business

Economic Injury Disaster Loans (EIDL)

- Advance on loan up to $10,000
- Program provides working capital of up to $2 million; funds available within three days of successful application
- No need to repay the loan
- Economic Injury Disaster Emergency Loan Advance Website

Small Business Administration Debt Relief

- Provides a reprieve to small businesses as they overcome challenges created by the current health crisis
- SBA will pay principal and interest of new 7(a) loans issued prior to September 27, 2020
- SBA will pay principal and interest of current 7(a) loans for period of six months
- SBA Debt Relief Website

Small Business Administration Express Bridge

- Small businesses with an existing relationship with an SBA Express Lender may access up to $25,000 with less paperwork
- Businesses waiting for Economic Injury Disaster Loan disbursement may qualify for this loan
- Loan will be repaid in full or in part by proceeds from EIDL loan
- SBA Express Bridge Loans Website

Additional Tax-Related Help

- New Employee Retention Tax Credit is for employers who are closed, partially closed, or experiencing significant revenue losses as a result of COVID-19. Employers who receive a Paycheck Protection Program (PPP) loan are not eligible for the tax credit. Available for private employers, including non-profits, meeting specific eligibility criteria.
- Deferral of Payroll Taxes
- Expanded Unemployment Insurance
- Immediate Tax Credits for FFCRA Leave

Save Small Business Fund

- Provides $5,000 in short-term relief
- Employer criteria includes:
  - Between 3 and 20 Employees
  - Operating in one of a select group of economically vulnerable zip codes
  - Has been harmed financially by the COVID-19 pandemic
- Save Small Business Fund Website

Paycheck Protection Program (PPP)

- Provides loan forgiveness for retaining employees by temporarily expanding the traditional SBA 7(a) loan program
- For employer that has 500 workers or less (hospitality or food service employee count is per location)
- No collateral required
- Loans up to 250% of employer's average monthly payroll costs, with $10 million cap
- Loans will be forgiven if the employer maintains its workforce for the covered period February 15, 2020 to June 30, 2020
- Paycheck Protection Program Website

Large Commercial and Industrial Accounts

Commercial or industrial businesses with a rate category of DS, LFD, XD or IS that are experiencing financial strain as a direct result of COVID-19 should contact our Large Customer Billing group at LCBgroup@ugi.com or 866-615-0571 to discuss available payment options.

Major Accounts customers can access billing and meter worksheets, invoices, usage history, etc. on **UGI's Transportation Customer Portal**.

Subject: “COVID-19 Virus Response: UGI Utilities is Here for You”

Audience: All Customer Classes

Delivered: 328,922

Energy to do more®

During the coronavirus (COVID-19) emergency, UGI remains committed to providing safe and reliable natural gas service to you 24 hours a day, 7 days a week.

We know that the daily changes brought on by COVID-19 present significant challenges to our customers and the communities we serve, but **our teams are ready and standing by to help in any way we can.**

First, we continue to closely monitor the situation. The health, safety, and productivity of our employees, customers and stakeholders is our top priority. Our efforts are focused on maintaining a safe and productive operation that continues to meet the needs of our customers. We would like you to know that significant steps we have taken to manage this situation include:

- Ensuring that essential personnel are in position and able to respond to our customers.
- Initiating an expanded work-from-home policy and communication system connectivity for most of our office employees.
- Implementing field operating safety measures to assure that all utility work can be completed in a safe manner for both our employees and customers. These measures include 'social distancing' protocols, use of additional personal protective equipment (PPE), and vehicle disinfecting stations.
- Developing and using prescreening questions for any work involving contact between field staff and customers.
- Suspending service disconnections for nonpayment until further notice.

UGI will review developments associated with the COVID-19 virus and will respond to changing circumstances as appropriate. We urge customers with specific questions to call 800-276-2722 to speak with a UGI customer service representative.

In the meantime, we are hopeful that you, your family, friends, colleagues, and communities remain safe and healthy.

Subject: “Important Message Re: Your Natural Gas Service Installation at %%Service Address Full Street%%”

Audience: Prospective Customers Converting to Natural Gas Who Have Signed Contracts But No Meter Set Yet

Delivered: 473

Energy to do more®

Dear Gerald Stephens,

In an effort to do our part to help prevent the further spread of COVID-19 and at the direction of Pennsylvania Governor Tom Wolf, UGI has temporarily suspended all non-emergency construction work. This suspension includes the construction work to connect homes and businesses to the natural gas main nearby. Please disregard this email if construction has already been completed at your property.

If you feel that the service connection to your home or business would be considered an emergency, i.e., no heating source available at your property, please respond to me at rmyers@ugi.com as soon as possible, and I will work with our Regional Operations Directors to request waivers from the Governor’s office in order for the work to be completed.

As the situation around COVID-19 evolves, UGI Utilities will continue to review the developments associated with the virus and will respond to changing circumstances as appropriate. For updates to the UGI COVID-19 Response Plan, please visit our website. UGI Utilities urges you to direct specific questions to our agents at 800-276-2722.

We thank you for your patience and understanding and look forward to serving you as a UGI natural gas customer in the near future.

Sincerely,

Ron Myers
UGI Representative

Energy to do more

During the coronavirus (COVID-19) emergency, UGI remains committed to providing safe and reliable natural gas service to you 24 hours a day, 7 days a week.

UGI continues to provide reliable service to you while utilizing field operating safety measures such as 'social distancing', use of additional personal protective equipment (PPE), and vehicle disinfecting stations.

To further aid our customers during what is likely a disruptive time, UGI continues to suspend service disconnections for nonpayment.

Additionally, for all customers, UGI will provide a bill credit for any late payment charges billed on or after March 25th, 2020 until further notice. A bill credit for the amount of the late payment charge will be applied on your next billing statement.

If you are having trouble paying your bill, there are options available from UGI's customer care programs such as budget billing to help with averaging your bill evenly over the year. UGI's Customer Care Team is also available to answer your questions and concerns at 800-276-2722. Please follow the links below to learn more.

Energy to do more®

To UGI's Valued Major Account Customers:

During these trying times, UGI would like to take this opportunity to remind you of our continued commitment to providing safe and reliable service 24 hours a day, 7 days a week. Specifically, for our Major Account customers, we wanted to highlight some important notes, resources and reminders:

- Information regarding UGI's overall business continuity plan and FAQs pertaining to COVID-19 can be found here: https://www.ugi.com/covid-19-response-plan
- UGI's Transportation Customer Portal provides customers access to billing and meter worksheets, invoices, usage history, etc. and can be found here: http://www.ugi.com/transportation
- UGI has temporarily ceased shut-off activity and is waiving late payment charges (a credit will be applied on your next billing statement) until further notice.
- **UGI reminds all customers to continue to work closely with their suppliers to balance deliveries with usage.**
- **UGI encourages you to keep an open line of communication with us on any significant changes to your use of natural gas.**
  - UGI's Large Customer Billing team is fully dedicated to our Key Accounts Customer base. We're closely monitoring the LCBgroup@ugi.com inbox daily. Additionally, the team is responding to voicemails left at 866 615 0571 (to be returned within 24-48 business hours). Further, the LCB team can assist with setting up auto-payment options.
  - As an additional resource, please route non-billing related updates or questions to your local Relationship Manager:

thank you!

Recently, there has been so much uncertainty in our lives. **One thing that remains certain is how grateful we are to have you as a customer.** We want you to know that we truly appreciate the opportunity to meet your energy needs – whether it's keeping your home warm and comfortable, drying your seemingly endless loads of laundry or warming your hand-washing water – **all of us at UGI are thankful for you.**

If you've reached out to our Customer Care Team and shared your story, **thank you.** If you've helped your neighbors through a donation to our Operation Share Energy Fund, **thank you.** If you've paid your recent energy bill, **thank you.** If you've called 811 before starting a landscaping project, **thank you.**

And to our customers, friends and neighbors on the front lines of the COVID-19 pandemic going to work every day to help the rest of us in any capacity, **a special thank you**, we truly appreciate your selflessness, courage and dedication during this crisis.

Finally, if there is anything we can do to support you, please contact us at 800-276-2722 or visit our website for resources to assist you during this time. Now, and always, we are here for you.

Sincerely,

Your Friends in Customer Care at UGI Utilities

Subject: "Important Message Re: Your Natural Gas Service Installation at %%Service Address Full Street%%"

Audience: Prospective Customers Converting to Natural Gas Who Have Signed Contracts But No Meter Set Yet

Delivered: 417

Dear Mark Leiss,

We hope this message finds you and yours safe and well! I'm writing to provide an update about construction to connect your property to the natural gas main nearby. As mentioned in my prior message, UGI suspended all non-emergency construction work to keep our customers, employees and communities safe, as directed by Governor Tom Wolf. As a result, we have developed a significant backlog of new construction work. We have been carefully monitoring guidelines provided by the Federal and Commonwealth Governments and have begun to prepare for when construction activities can resume. There are several challenges to overcome, including securing permits from local municipal offices, many of which were also closed. Please know that we are eager to serve you and are working very hard to schedule your installation as soon as possible. I, or another representative from UGI, will be reaching out to you as soon as we have details to share about your specific project.

If construction has already been completed at your property, please disregard this message with our apologies.

We appreciate your patience and look forward to serving you in the near future! Thank you again for choosing UGI Utilities.

Sincerely,

Ron Myers
UGI Representative

Join Us for a Free Webinar on Assistance Programs

Our representatives will be holding a live webinar on **May 6th from 1pm to 2pm** where they will provide information on a variety of energy assistance programs. There will be a question and answer segment following the presentation. Register to attend and submit your questions.

As a result of the coronavirus (COVID-19) emergency,UGI provided $60,000 of financial support to local food banks serving communities in its service area to assist them in meeting the increased need. These donations are part of an initiative conducted by the various companies that are part of UGI Corporation to provide support to the many communities they serve.

"The COVID-19 crisis continues to evolve and it is clearly having a financial impact on millions of Pennsylvanians," Joe Arthur, Executive Director of the Central Pennsylvania Food Bank, said. "Over the past week, some of our partner agencies have already reported triple the amount of clients. Life-sustaining donations like the one provided by UGI will help us feed these families in need and help us provide 120,000 additional meals during this time. We are very grateful for UGI's support." UGI provided donations to the following food banks assisting residents in in communities within the Company's service territory:

- The Central Pennsylvania Food Bank received $20,000. The Central Pennsylvania Food Bank works to reduce hunger in 27 counties across central Pennsylvania.
- The Commission on Economic Opportunity received $15,000 in support of the Weinberg Northeast Regional Food Bank. The Food Bank serves Lackawanna, Luzerne, Susquehanna, and Wyoming Counties.
- The Community Action Committee of the Lehigh Valley received $10,000 in support of the Second Harvest Food Bank of the Lehigh Valley and Northeast Pennsylvania. Second Harvest Food Bank serves 200 agencies in Carbon, Lehigh, Monroe, Northampton, Pike, and Wayne Counties.
- Helping Harvest received $10,000. Helping Harvest distributes food to more than 300 charitable food program partners in Berks and Schuylkill Counties.
- The Second Harvest Food Bank of Northwest Pennsylvania received $5,000. Second Harvest serves 11 counties in northwest Pennsylvania.

We Are Here for You. If you are unable make a payment, please call our office to discuss your options. Audience: LIHEAP Supplemental $100 Grant Recipients

Delivered: 1,999

Energy to do more®

Dear Joseph,

On May 18, 2020, the LIHEAP program re-opened and additional Crisis funding was made available due to the COVID-19 pandemic.

Your Account Qualified for a $100 Supplemental LIHEAP Benefit

UGI has received a supplemental amount of $100 in LIHEAP Crisis funding which has been applied to your account as of May 27, 2020. This $100 supplemental benefit counts towards your maximum Crisis benefit amount.

Even with this automatic grant from the Department of Human Services you may be eligible for an additional $100 or more in Crisis Grant from LIHEAP. If you received a delinquent notice since April 9, 2020 and have not reached the $800 Crisis Grant maximum, UGI will automatically request the additional amount from the Department of Human Services on your behalf, and automatically apply it to your UGI account upon receipt.

Have Questions? We're Here to Help!

Please reach out to us at 800-UGI-WARM. Customer Service Representatives are available Monday through Friday from 8:00am until 5:00pm.

Thank you for the opportunity to continue to serve you.

Dear Erik Hansen,

We know the last year has been both stressful and challenging. We continue to be committed to making things easier for our customers. That's why we're pleased to announce we're now accepting applications for the UGI Emergency Relief Program, to help those having a difficult time paying their energy bills as a result of the COVID-19 Pandemic. This program has received approval from the Pennsylvania Public Utility Commission (PUC). Enroll now!

Note: If you participated in the 2020 Emergency Relief Program and continue to experience difficulties paying your bill, you are still able to apply now!

What is the UGI Emergency Relief Program?

The program consists of two components to help qualifying customers with their outstanding energy bills during the COVID-19 Pandemic:

- **Installment Plan**
  Enrollment in this plan will allow you to spread your outstanding UGI balance over a period of time. This will provide extra time to catch up on your outstanding balance.
- **Grant**
  A one-time grant of up to $400 for amounts billed for service after March 2020 is available to customers who are eligible.

UGI will not terminate your service if you follow program guidelines and make payments on or before each month's due date.

How do I qualify for the UGI Emergency Relief Program?

- You, or someone in your household received unemployment benefits on or after March 13, 2020; or
- You, or a member of your household, are eligible for or have received the maximum for the Federal COVID-19 Relief Check (Federal CARES Act Economic Impact Payment) benefit in 2020 or 2021

How do I pre-enroll in the UGI Emergency Relief Program?

There are two ways to enroll:

- Enroll Online Today
  Complete our short online application form .
- **Call** 800-276-2722
  Our Customer Service Representatives are available Monday through Friday from 8:00 am to 5:00 pm and will be able to assist you with enrolling in the program. *(Si prefiere recibir esta información en español, favor de llamarnos.)*

When you enroll, please reference your account number **421003313630** with a service address of 9 Darte Ave Fl 1 in Carbondale.

Thank you for allowing us the opportunity to serve you!

UGI Customer Service Team

COVID-19 RESPONSE PLAN | GAS SAFETY | ELECTRIC SAFETY

Energy to do more®

ERP Phase 2 Pre-Enroll - Direct Mail – February 2021

Audience: Residential Natural Gas & Electric Customers

Dear (Business Partner),

We know the last year has been both stressful and challenging. We continue to be committed to making things easier for our customers. That's why we're pleased to announce Phase 2 of the UGI Emergency Relief Program, to help those having a difficult time paying their energy bills as a result of the COVID-19 Pandemic. This program is currently pending approval with the Pennsylvania Public Utility Commission (PUC). We expect the program to be approved late Winter 2021. UGI is urging qualified customers to pre-enroll now!

Note: If you participated in Phase 1 of the Emergency Relief Program and continue to experience difficulties paying your bill, you are still able to pre-enroll for Phase 2!

What is the UGI Emergency Relief Program?
The program consists of two components to help qualifying customers with their outstanding energy bills during the COVID-19 Pandemic:

Installment Plan
Enrollment in this plan will allow you to spread your outstanding UGI balance over a period of time. This will allow extra time to catch up on your outstanding balance.

Grant
A one-time grant of up to $400 for amounts billed for service after March 2020 is available to customers who are eligible.

UGI will not terminate your service if you follow program guidelines and make payments on or before each month's due date. Since the program will not be implemented until early Spring 2021, customers are **encouraged to continue making reasonable monthly payments** until the plan begins to help keep your account balance and future payments more manageable.

Continued on back

How do I qualify for the Emergency Relief Program?

- You, or someone in your household, filed for or received unemployment benefits on or after March 13, 2020; or
- You, or a member of your household, are eligible for or have received the maximum for the Federal COVID-19 Relief Check (Federal CARES Act Economic Impact Payment) benefit in 2020 or 2021

How do I pre-enroll in the UGI Emergency Relief Program?

There are two ways to pre-enroll:

- **Online at www.ugi.com/reliefnow**
  Complete our short pre-enrollment form. We will contact you after the program is approved and applications are being accepted.
- **Call (800) 276-2722**
  Our Customer Service Representatives are available Monday through Friday from 8:00 am to 5:00 pm and will be able to assist you with pre-enrolling in the program. *(Si prefiere recibir esta información en español, favor de llamarnos.)*

Thank you for allowing us the opportunity to serve you!

March 2021 - Current

Emergency Rental Assistance Program Solicitations March 2021 – Customized Email

Audience: Renters

Energy to do more®

Dear Chris Bormann,

We know the last few months have been both stressful and challenging. We're committed to making things easier for our customers. You may qualify for the Emergency Rental Assistance Program. (If you're not a renter, please visit www.ugi.com/reliefnow to learn about other assistance that may be available to you.)

The United States Treasury recently approved this program to assist renters that are struggling financially due to the COVID-19 pandemic. **Benefits include assistance with utility accounts (electric, natural gas), water bills and rent.** Utility and rent incurred from March 2020 through present will be considered.

How do I qualify for the Emergency Rental Assistance Program?

- One or more individuals in your household has qualified for unemployment benefits, or experienced a reduction in household income, incurred significant costs, or experienced other financial hardship due, directly or indirectly, to the pandemic
- One or more individuals demonstrate a risk of experiencing homelessness or housing instability, which may include a past due utility or rent notice or eviction notice, unsafe or unhealthy living conditions, or any other evidence of such risk
- The household income does not exceed 80% of the median income for Lackawanna County; income is based on total income for calendar year 2020, or confirmation of monthly income at the time of application

Learn More **about qualifications for benefits available in Lackawanna County**

How do I enroll in the Emergency Rental Assistance Program?

Each county has a different application process, and benefits may vary by county. Lackawanna County is accepting only paper applications at this time. Residents of Lackawanna County can download the paper application and review eligibility requirements using the link below.

- Apply Online

When you apply, please reference your UGI account number **411005848782** with a service address of 629 Moltke Ave in Scranton.

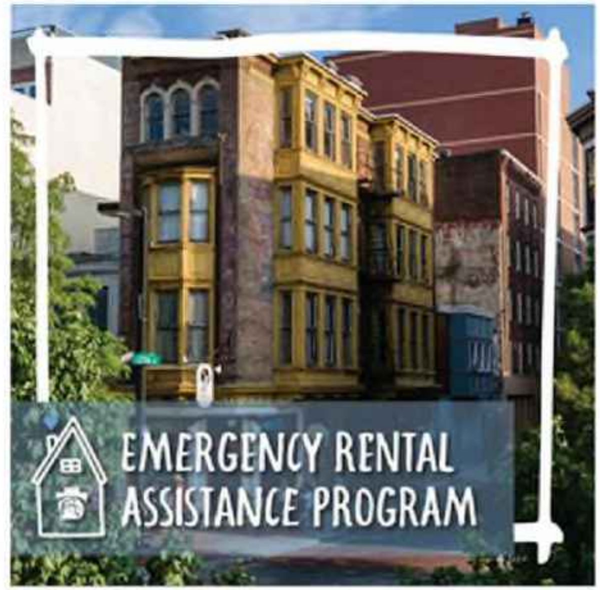
ERAP Email Message to Landlords

- Sent 8/4/2021
- Email audience = 20 landlords



Dear Landlord,

We wanted to remind you that CARES Act funding for the Emergency Rental Assistance Program is still available and can benefit both you and your tenants.

The Emergency Rental Assistance Program (ERAP) has been open for a few months, yet many eligible customers have not yet applied. **Benefits include assistance with utility accounts (electric, natural gas), water bills and rent.** Utility and rent incurred from March 2020 through present will be considered.

LEARN MORE ABOUT ERAP

If you or your tenant apply for ERAP to help with UGI bills, please be sure their UGI account number and service address is referenced on the application. If you or your tenant applies for benefits to pay UGI bills, please be sure to contact us at 800-276-2722 so we can note your account accordingly.

Rent and Utility Help is Available

Have you lost a job or income because of COVID-19? CARES Act funds are available through the Emergency Rental Assistance Program* (ERAP).

ERAP help is available if:

- You are experiencing a financial hardship due to COVID-19;
- You are experiencing housing instability or may lose your home;

AND

- You meet income thresholds specific to your county

**ERAP is a national program funded as a result of the CARES Act. UGI does not administer this program. Complete program information is available through the PA Department of Human Services website.*

Don't wait - apply today!

If you apply for benefits to pay your UGI bill, please reference UGI account number **411006705817** with a service address of 448 N 4th St Unit 2 in Sunbury and contact UGI at 800-276-2722 to alert us that you are applying so we can note your account accordingly.

Behind in utility bills?

UGI Energy to do more®

Don't wait—contact our Customer Care Team from 8 a.m. to 5 p.m., Monday through Friday, at (800) 276-2722 to learn how we can help you!

Payment Arrangements
Available to applicable customers with a past due balance, regardless of income.

Customer Assistance Programs
A two-member household can earn up to $670 a week and still qualify for programs like Operation Share and the Low Income Usage Reduction Program. If your income has changed due to COVID, and you haven't talked with us since that time, you may now be able to get help with your utility bills.

Stimulus-Related Programs (administered at the county level)
Programs like the Emergency Rental Assistance Program and the Mortgage Utility Assistance Program are constantly being enhanced and implemented. For information about these programs visit **www.ugi.com/together**. You can also visit the Department of Human Services website at **https://www.dhs.pa.gov/Services/Assistance/Pages/default** or call UGI at **(800) 276-2722** to learn more.

*If you work for a small business, or own a small business, be sure to visit **www.ugi.com/together** and click Business Resources to learn about assistance available through the Small Business Administration.*

¿Está atrasado con las facturas de servicios públicos?

UGI Energy to do more®

¡No espere más! Comuníquese con nuestro Equipo de Atención al Cliente de 8 a. m. a 5 p. m., de lunes a viernes, al (800) 276-2722 para saber cómo podemos ayudarlo.

Acuerdos de Pago
Disponibles para clientes que cumplen los requisitos con un saldo vencido, independientemente de sus ingresos.

Programas de Asistencia al Cliente
Un hogar de dos miembros puede ganar hasta $670 por semana y aun así calificar para programas como Operation Share y el Programa de reducción de consumo para hogares de bajos recursos. Si sus ingresos han cambiado debido a la COVID-19 y no ha hablado con nosotros desde ese momento, es posible que ahora pueda obtener ayuda con sus facturas de servicios públicos.

Programas Relacionados con los Estímulos Económicos (administrados a nivel del condado)
Programas como el Programa de asistencia para alquileres de emergencia y el Programa de asistencia para servicios públicos e hipotecas se están mejorando e implementando constantemente. Para obtener información sobre estos programas, visite **www.ugi.com/together**. También puede visitar el sitio web del Departamento de Servicios Humanos en **https://www.dhs.pa.gov/services/assistance** o llamar a UGI al **(800) 276-2722** para obtener más información.

*Si trabaja para un pequeño negocio o es propietario de un pequeño negocio, asegúrese de visitar **www.ugi.com/together** y haga clic en "Business Resources" (Recursos Empresariales) para obtener más información sobre la asistencia disponible a través de la Agencia Federal de Pequeños Negocios.*

Dear %%=Propercase(Name)=%%,

LIHEAP, a federally funded heating grant program, has additional money available that may help you pay winter heating bills. Each year LIHEAP funds go unspent because eligible households do not apply. Our records indicate that you received a LIHEAP grant during the 2020-21 heating season on account **%%[var @Account set @Account = [Contract Account Number]]%% %%=FormatNumber(@Account)=%%** with a service address of %%[var @Address set @Address = [Street Address]]%% %%=Propercase(@Address)=%% in %%=Propercase(City)=%% and therefore you may qualify for additional funds through LIHEAP CRISIS. The CRISIS fund offers a grant up to $800 for customers who are in jeopardy of losing their heat.

Based on receipt of your 2020-21 LIHEAP grant, UGI Utilities Inc. may be able to apply for LIHEAP CRISIS on your behalf. If eligible, UGI will submit your account to receive CRISIS funding that will be applied towards your past due balance.

We need to hear from you so you do not miss out on the additional funding!

- **Call us at** 800-UGI-WARM (800-844-9276) and select Option 1 then Option 1 Monday through Friday, from 8 am to 5 pm; OR
- **Email us at** CARES@ugi.com – be sure to provide the name on your UGI account, your UGI account number, and that you agree that UGI should pursue additional LIHEAP funding for you

If you DO NOT want UGI to submit your account to receive the additional 2020-21 LIHEAP CRISIS funds you do not need to take any action at this time.

Best Regards,

UGI Customer Outreach Team

LIHEAP – Email March 2021

Audience: 11,314 CAP No LIHEAP

Based on information in our system, your household income may qualify for LIHEAP but we've noticed you have not yet had any LIHEAP payments applied to your account since the start of the heating season on October 1, 2020. If you've completed the LIHEAP application already, great! You're one step closer to receiving $200 (or more*) towards your winter heating bills.

If you haven't completed the form or applied online, we would like to assist you to make this process as simple as possible. **The program close has been extended until April 30, 2021 so act now!**

Click the button below to apply through COMPASS, the state website to help you receive LIHEAP funding.

APPLY FOR LIHEAP THROUGH COMPASS

About LIHEAP

The Low Income Home Energy Assistance Program (LIHEAP) is a federally funded program that helps pay heating bills through energy assistance grants*. The grants do not need to be paid back. Grants are applied directly to your utility account. You can apply online through the Pennsylvania state's COMPASS website.

View this short video to learn more about all of the benefits available through COMPASS.

Income Guidelines

Household Members	Annual Income	Monthly Income	Weekly Income
1	$19,140	$1,595	$368
2	$25,860	$2,155	$497
3	$32,580	$2,715	$627
4	$39,300	$3,275	$756

For additional person, add $6,720 per person annual income, $560/person monthly income or $129/weekly income.

*Minimim LIHEAP CASH grant is $200, with $1,000 maximum.

More Savings Could Be Available Through LIURP

Are your energy bills high even though your thermostat is set at a low temperature? The UGI Low Income Usage Reduction Program (LIURP) offers free weatherization measures to qualified low-income residential heating customers in order to limit heat loss and provide long-term energy savings. These energy savings measures may include window and baseboard caulking, door and window weather-stripping, attic and sidewall insulation, duct and pipe insulation, ventilation, water conservation devices, furnace inspections and energy education. Inactive Accounts – LIHEAP Additional Funds – Opt In August 2021

Email Audience: 323 Direct Mail Audience: 76

Energy to do more®

Dear Dallas Ware,

LIHEAP, a federally funded heating grant program, has additional money available that may help you pay winter heating bills. Each year LIHEAP funds go unspent because eligible households do not apply. Our records indicate that you received a LIHEAP grant during the 2020-21 heating season on UGI account **411003247391** with a service address of 582 W Louther St in Carlisle and therefore you may qualify for additional funds through LIHEAP CRISIS. The CRISIS fund offers a grant up to $1,200 for customers who are in jeopardy of losing their heat or have lost their heat due to service termination.

Based on receipt of your 2020-21 LIHEAP grant, UGI Utilities Inc. may be able to apply for LIHEAP CRISIS on your behalf. If eligible, UGI will submit your account to receive CRISIS funding that will be applied towards your past due balance. Funds will be applied in November 2021.

We need to hear from you before September 13, 2021* so you do not miss out on the additional funding!

- Call us at 800-UGI-WARM (800-844-9276) and select Option 1 then Option 1 Monday through Friday, from 8 am to 5 pm; OR
- Email CARES@ugi.com - copy and paste the information in green into the body of the email you send us: "Yes, I want UGI to pursue additional LIHEAP funds for my UGI account # **411003247391**. The name on my UGI account is Dallas Ware"; OR
- **Text LIHEAP2021 to 84484**

*Replying to us through any of the methods listed above means you are opting in to receive the funds.

If you DO NOT want UGI to submit your account to receive the additional 2020-21 LIHEAP CRISIS funds you do not need to take any action at this time.

CAP Solicitation – June 2020 – Packet

June 15, 2020

«BP_NAME»
«Mailing_Address»
«Mailing_CitySTZIP»

Dear «BP_NAME»,

Our records indicate you have, in the past, received a LIHEAP grant. Based on this information, you are invited to take advantage of UGI's Customer Assistance Program ("CAP") which will assist you in managing your monthly energy bills. Enrolling in the program is free and has no impact on your credit score.

The amount you owe UGI as of June 15, 2020 for Account Number «Contract_Acct» is $«Total_Amount_Due». Enrolling in the CAP program means this amount is "frozen" and UGI will allow you to pay a lower monthly payment. For each month you make a CAP-Enrolled Monthly Payment on time, a portion of the $«Total_Amount_Due» now will be forgiven over 36 months.

Take Advantage Now!

- Complete the UGI Customer Assistance Program CAP Application, included on the following page
- Send the completed application to the Community-Based Organization for your area – this address is on the "CAP Application Agency" page
- Put the pages in this order: CAP Application Agency page on top, completed CAP application next
- Fold the packet of papers so the address is showing on the window envelope that is included in this packet

We're Here to Help

If you have questions please call us at (800) 276-2722, Monday through Friday, from 8 AM to 5 PM.

Thank you for being a customer of UGI.

Sincerely,

UGI Customer Care Team

CAP Application Agency page

- **Place the completed CAP Application underneath this page, with the address on this page facing outward**
- **With this page facing you, fold this part away from you, so you cannot read these words**
- **Fold the bottom section, with the address, so the words are showing**
- **Place the pages in the window envelope, making sure the Agency name and address is viewable through the window**
- **Attach a stamp to the envelope and mail the packet to the Agency listed**

CAP Solicitation – July/August 2021

- Audience: 2,221 customers that received LIHEAP grants but not enrolled in CAP
- Customer had to contact UGI to opt out
- Included CAP rules

July 9, 2021

SHAQUANA MCCORVEY
1135 LLOYD ST FL 2
SCRANTON PA 18508-2105

Dear SHAQUANA MCCORVEY,

Our records indicate you have, in the past, received a LIHEAP grant. Based on this information, you have been enrolled automatically in our Customer Assistance Program ("CAP") which will take effect on your next bill. You have been enrolled in the CAP Program in order to assist you in managing your monthly energy bills. Enrollment in the program is free and has no impact on your credit score.

We have included the Customer Assistance Program Rules to address any questions you may have and what is expected of you now that you are enrolled in CAP.

If you do not want to take advantage of the CAP program, or if you feel you received this offer in error, please call (800) UGI WARM and select prompt 1. **If you do not reply before August 2, 2021 your enrollment will be reflected on your next bill.**

Your Proposed Monthly Payment as a CAP-Enrolled Customer is $25.00

Please note you must pay the CAP-Enrolled Monthly Payment on time, each month, in order to remain enrolled in the CAP program. If your account remains in good standing (paid on time) each month, any past due debt you had prior to enrolling in CAP will be forgiven in equal credits over 36 months.

Thank you for being a customer of UGI.

Sincerely,

UGI Customer Care Team

CAP Recertification – October 2021 – Direct Mail

Total Audience: 3,509
(Email sent to customers with email, as “watch mail” message)

October 27, 2021

MICHAEL MOWERY
111 N ORCHARD ST
BERWICK PA 18603-3502

Customer Number 411003883245

**************** FINAL CAP RECERTIFICATION WARNING ****************

Dear CAP Customer,

An obligation of the Customer Assistance Program (CAP) is to recertify annually. Recertification is the process that requires a CAP customer to provide verification of income and household occupants to confirm they are still eligible for the program.

If you have not already submitted your updated application with proof of income and identification, you need to do the following BEFORE NOVEMBER 25, 2021:

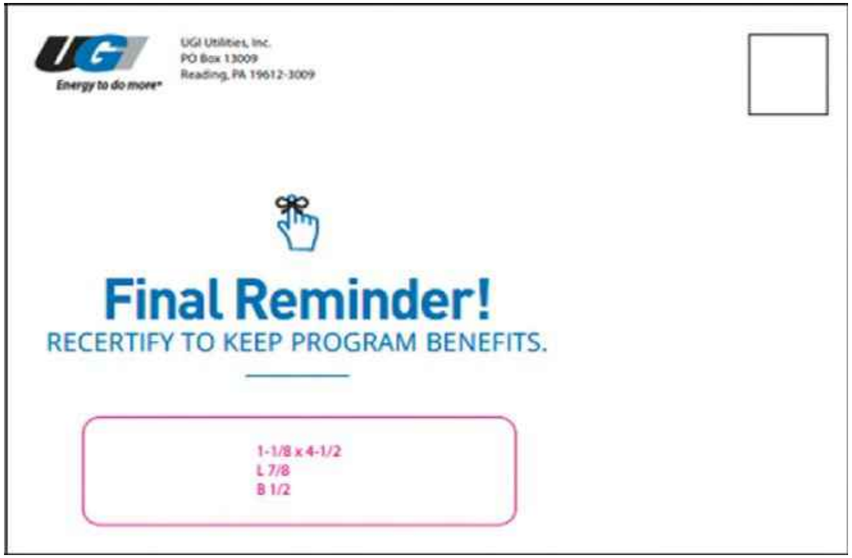
- Complete the enclosed CAP application including proof of income and proof of identification
- Submit the Application, proof of income and proof of identification to:
  AGAPE
  19 EAST 7TH STREET
  BLOOMSBURG PA 17815
  Phone: (570) 317-2210

Failure to recertify will result in your account being removed from CAP and your full balance will be due immediately.

If you have any questions, contact our Customer Care Team at (800) 276-2722; our representatives are available Monday through Friday, from 8 AM to 5 PM .

Sincerely,

Customer Outreach Department



Energy to do more®

CAP Recertification – October 2021 - Email

Audience: 2,550 out of 3,509 customers needing to recertify

- “Watch mail” email sent to customers that needed to recertify
- Separate USPS direct mail sent with CAP application and agency information

Dear CAP Customer,

Our records show you have not completed the recertification process that will allow you to continue to participate in the Customer Assistance Program (CAP).

Please check your mailbox over the next few days. Your CAP application and instructions covering how to recertify were mailed earlier today.

What does recertification mean? To recertify you need to complete an updated CAP application, and include proof of identification and proof of income. Then, the application with proof of identity and proof of income is submitted to the agency listed below:

UGI Account Number: %%[var @Account set @Account = [Contract Account Number]]%% %%=FormatNumber(@Account)=%%

**%%=Uppercase(Name)=%%
%%[var @Address set @Address = [Street Address]]%%
%%=Uppercase(@Address)=%%
%%=Uppercase(City)=%%**

If you've recently sent the updated CAP application, proof of identity and proof of income to the agency listed above, then you can disregard this message.

If you have any questions please contact our Customer Care Team at 800-276-2722. The Customer Care Team is available Monday through Friday from 8 am to 5 pm.

COVID-19 Related Community Based Organization Communication Efforts

Energy to do more®

March 6 – Email

Audience: CAP Community Based Organizations Related to COVID

3/6/2020

Good Afternoon,

We continue to closely monitor the evolving situation related to the 2019 Coronavirus and adapt our processes when necessary and plan accordingly. With the safety of our CBO's, staff, and customers being our highest priority we would like to encourage you and your staff to limit all CAP paperwork to mail and contact over phone. For example: if a customer forgets to sign the consent and release form please just call them and get their consent over the phone and put your signature on the page and a small note that you signed but received consent over the phone.

This is precautionary advice just based on our concerns on everyone's health and safety. As of today, there are two confirmed cases of the Coronavirus in Pennsylvania; one in Delaware County and one in Wayne County. While the risk of contracting the Coronavirus is low and there are no specific travel restrictions at this time, we do know the number of confirmed cases continue to grow in the US and it would be best to limit travel and contact whenever possible.

Thank you,

March 18 – Email

Audience: CAP Community Based Organizations Related to COVID

Good afternoon all,

Hope all is well and everyone is safe and healthy. We have been receiving a few emails from agencies regarding closures due to the pandemic. Can you please respond to this email with answers to the following questions. If you have any additional information or concerns please let us know.

1. Is/did your agency close completely?
2. Will any staff be available for customers remotely?
3. Will you continue taking applications?
4. Are customers aware of how or who to contact to get assistance?
5. What tasks (if any) have you ceased performing? (past due phone calls, recertifications, etc)
6. Is there anyone from your agency who we may contact for urgent situations?

March 21 – Email

Audience: Direct Response to an Agency

Hi [redacted]

We have told others that had concerns that they can stop working the past due calls if they wish. We know that phone calls bring in a significant amount of income for the agencies so if you would like to work them and just make them a "courtesy" call we are also fine with that. UGI is not shutting off at this time, but these phone calls could also lead a conversation into seeking LIHEAP once it opens back up in May or referring for a special circumstance OpShare grant.

Let me know if you have any other questions

Thanks,

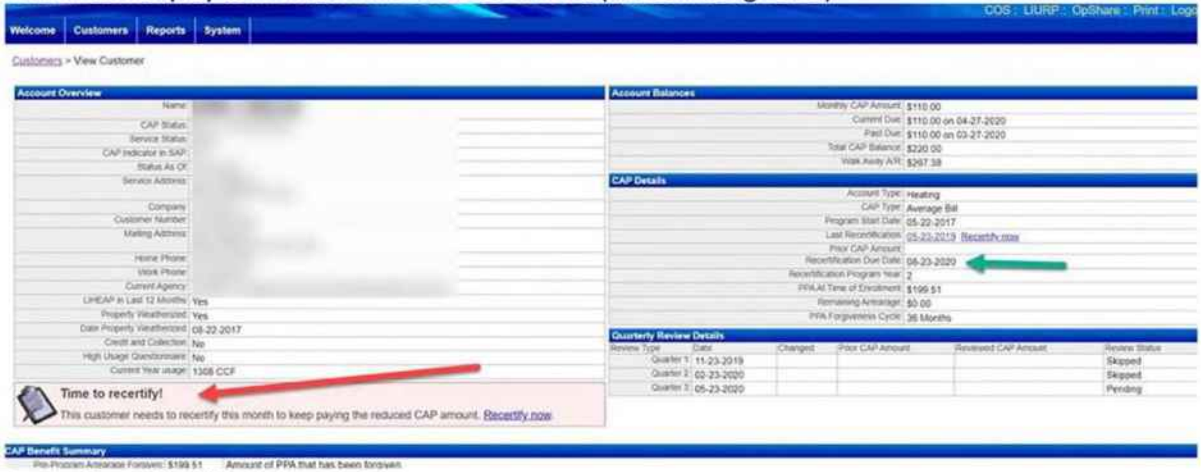
April 17 – Email

Audience: CAP Community Based Organizations Related to COVID

Hello Everyone,

Due to COVID-19 we understand the challenges it may have/be causing to get all documents and applications in for a customer's recertification on time. so we have made a change to push all recertifications due dates out 3 months. **The task on recert reminders are now triggered off of the recertification due date**. if you can continue to work the recertifications we ask you to do so, but if you are unable, we are hoping this 3 month extension will help during this time.

Green arrow: recertification due date
Red arrow: display issue that will soon be corrected (this can be ignored)



Stay safe and healthy everyone!

Thank you,

Energy to do more®

May 6 – Email

Audience: CAP Community Based Organizations Related to COVID

Subject: Agency COVID-19 Check-in Summary

Good afternoon all,

Attached is a summary of some takeaways discussed during our conference call yesterday. Please free to let us know if you have any questions.
We hope that you and your families are staying safe and healthy during these trying times ☺ We appreciate all that you do!

Thank you,

Below are some takeaways from all agencies:

- Most agencies are waiting for governor to lift COVID-19 restrictions in order to retu office and have applied Payroll Protection Program for the time being
- Safety plan in place before re-entering customer homes
  - Making sure that customers stay in a separate room while staff is working
  - Possibility of E-signature for consent of weatherization
  - Providing surveys before visiting customers homes

For the time being UGI will allow:

- Jobs to be entered as closed, no measures to be partially compensated for in progress jobs and can be re-opened later to complete after inspection is completed
- Mid-year reviews to be extended or may not be issued this year, thus going into 3rd quarter reviews
- On temporary basis, health and safety measures can be increased $250 for both renters and homeowners
- UGI will compensate for additional mileage if needed during COVID-19. Multiple vehicles may be needed therefore mileage for each vehicle will be paid
- In addition to compensating $5 (up to 5) per contact attempt that does not result in a completed intake (withdraw, rejected) jobs, UGI will compensate $10 (up to 5) for each contact attempt you make on potential jobs in an effort to keep the customer engaged during this pandemic until you are able to visit their home. These contact attempts must be tracked on a separate spreadsheet and emailed to LIURP team titled "Administrative Contacts".

UGI Gas Exhibit DVA-3R

UGI Utilities, Inc. – Gas Division
Docket No. R-2021-3030218

INTERROGATORIES, REQUESTS FOR PRODUCTION OF
DOCUMENTS AND REQUESTS FOR ADMISSION ON CEO – SET I

2) Reference CEO Statement No. 1, page 9. Please explain how Mr. Brady derived the "rounded LIURP job cost of $7,500 per job" and provide all Documents relied upon by Mr. Brady in deriving that amount.

RESPONSE: The $7,500 is an approximate job cost derived from Appendix A of the Company's 2020-2025 USECP. The 'Projected Budget' for the three gas divisions were added and then divided by the total 'Projected Participation Levels' for those divisions.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 1-SR

Surrebuttal Testimony of
Christopher R. Brown

Topics Addressed: ***Pro Se*** **Complainants and Public Input Hearings**

Dated: May 27, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Christopher R. Brown. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 1, on January 28, 2022, and my rebuttal testimony, UGI Gas Statement No. 1-R, on May 17, 2022.

Q. What is the purpose of your surrebuttal testimony?

A. My testimony responds to certain portions of the rebuttal testimony of Office of Consumer Advocate ("OCA") witness Roger D. Colton (OCA St. No. 4-R).

Q. Are you sponsoring any exhibits as part of your surrebuttal testimony?

A. No.

II. *PRO SE* COMPLAINANTS AND PUBLIC INPUT HEARINGS

Q. In your rebuttal testimony, you addressed the testimony of *pro se* complainants at the public input hearings. Did any other party witness address that testimony in rebuttal?

A. Yes. OCA witness Colton's rebuttal testimony (OCA St. No. 4-R) responded to the testimony of Lisa Musser and Ruth Weaver, both of whom testified at the 1:00 PM session of the public input hearings on April 13, 2022.

Q. Do you have any general observations about Mr. Colton's rebuttal testimony?

A. Yes. Mr. Colton states that the testimony of Ms. Musser and Ms. Weaver purportedly "affirms," "supports," and "expands" on his direct testimony. (OCA St. No. 4-R, pp. 2, 5.)

Q. What response did Mr. Colton have to Ms. Musser's public input hearing testimony?

A. Mr. Colton observes how Ms. Musser raised concerns about her natural gas bill increasing despite allegedly decreasing her natural gas consumption. (OCA St. No. 4-R, p. 2.) Mr. Colton then cites the U.S. Department of Energy's ("DOE") October 2021 "Short Term Energy Outlook," as support for the natural gas heating costs increasing during the winter of 2021-2022. (OCA St. No. 4-R, pp. 2-3.) Despite "many, if not most, analysts expect[ing] that fly-up in price to be a short-term anomaly," Mr. Colton believes other factors may keep natural gas commodity prices higher. (OCA St. No. 4-R, p. 3.) Therefore, according to Mr. Colton, "Ms. Musser's concerns about the impact of adding an increase in distribution rates on top of these other price increases are well-founded." (OCA St. No. 4-R, p. 3.) Lastly, Mr. Colton points to Ms. Musser's testimony as support for concerns being "applicable to those households who may have income sufficiently high to be no longer income-eligible for universal service programs such as CAP and LIHEAP, but is sufficiently low to be unable to afford their UGI Gas bill." (OCA St. No. 4-R, pp. 3-4.)

Q. What response did Mr. Colton have to Ms. Weaver's testimony?

A. Mr. Colton similarly notes Ms. Weaver's concerns about the proposed increase for the residential customer charge and how she is ineligible for the Company's customer assistance programs. (OCA St. No. 4-R, pp. 5-6.)

Q. Would you please respond to Mr. Colton's arguments?

A. First, as I stated in my direct testimony (UGI Gas St. No. 1), the proposed customer charge, and resulting bill impact to residential customers, is fair and reasonable because it supports the Company's ongoing need to support the provision of safe and reliable service to customers. (UGI Gas St. No. 1 at 7.) Moreover, the proposed customer charge compares favorably to other customers in Pennsylvania on a total bill basis. (*Id.*) While Mr. Colton fails to acknowledge it, the Company is making substantial distribution system investments needed to replace aging infrastructure on an accelerated basis, as well as upgrade and modernize distribution system segments – all needed to support system safety and reliability. (*Id.* at 8.) In terms of cost causality, the proposed customer charge reasonably reflects cost-of-service principles, while considering gradualism of rate design. (*Id.* at 7-8.)

Second, the residential customer charge is the optimum recovery method for Rate R/RT customers' direct customer costs. As explained in the rebuttal testimony of UGI Gas witness Heppenstall, "[t]he schedule in Exhibit D-R shows that the Company can justify customer charges for Rate R/RT customers of $27.79 per month and $46.26 [per month] for Rate N/NT customers, using only direct customer costs." (UGI Gas St. No. 10-R at 10.) Those "justifiable levels are higher than the customer charges proposed by the Company of $19.95 for Rate R/RT and $30.00 for Rate N/NT." (*Id.*) Mr. Colton continues to propose that a substantial portion of the direct customer costs for Rate R/RT be recovered through the Company's volumetric charges. However, as UGI Gas witness Taylor explained, the Company's proposed increase in the residential customer charge will actually lower the average bill for low-income and CAP customers. (UGI Gas St. No. 11-R at 33.)

Third, the natural gas commodity charges on UGI Gas's natural gas bills are not at issue in this proceeding. For non-shopping customers, the Company's Purchased Gas Cost ("PGC") rates and gas procurement practices are the subject of its separate annual proceeding pursuant to Section 1307(f) of the Public Utility Code. For shopping customers, the rates they pay for competitive natural gas service are subject to the terms and conditions set forth in the contracts with their natural gas suppliers, and the Commission does not regulate those rates. This proceeding is solely focused on whether the Company's proposed increase in distribution base rates is just and reasonable and should be approved.

Fourth, I disagree with Mr. Colton's conclusion that the proposed base rate increase will unfairly burden non-low-income customers. If the rate increase causes an increase in the number of payment-troubled customers, the Company would solicit those customers for participation in CAP, or the customer could contact the Company on their own. There are also programs other than CAP that assist customers facing temporary difficulty paying their utility bills, such as the hardship grants offered by Operation Share, and federal crisis grants offered by LIHEAP. As such, the Company maintains its Operation Share program, which can provide grants to certain customers outside of the income requirements of CAP or LIHEAP. The Company also voluntarily implemented an Energy Efficiency and Conservation ("EE&C") Plan, so that its customers and the Commonwealth as a whole would benefit from measures that reduce the consumption of natural gas. I would encourage any customers who do not qualify for CAP or LIHEAP to see if the Company's EE&C programs can help them implement measures that reduce their natural gas consumption and, by extension, their natural gas service bills.

Q. Mr. Colton claims that the testimony of Ms. Musser and Ms. Weaver "provide[s] compelling personal real-life examples of the need for the Commission to adopt each recommendation set forth in [his] Direct Testimony." (OCA St. No. 4-R, p. 7.) Do you agree?

A. No. As explained in the rebuttal testimony of UGI Gas witness Epler (UGI Gas St. No. 8-R at 17-20)[1], Heppenstall (UGI Gas St. No. 10-R at 10)[2], Taylor (UGI Gas St. No. 11-R at 8-10, 24-27, 29-34)[3], and Adamo (UGI Gas St. No. 12-R at 3-31, 42-45, 48-50), Mr. Colton's proposals should be rejected. Nothing in the testimony of Ms. Musser and Ms. Weaver or in Mr. Colton's rebuttal testimony changes the Company's position on Mr. Colton's recommendations.

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does.

1 Ms. Epler's rebuttal testimony details the support needed to justify the Company's proposed customer charge in this proceeding.

2 Ms. Heppenstall's rebuttal explains that the Company's cost of service study supports a higher residential customer charge than the Company is proposing in this case.

3 Mr. Taylor's rebuttal explains the benefits that the Weather Normalization Adjustment ("WNA") and budget billing provides customers, demonstrates that the proposed customer charge comports with the concept of gradualism, and does not negatively impact conservation.

UGI Utilities, Inc. – Gas Division

Statement No. 1-RJ

Rejoinder Testimony of Christopher R. Brown

Topics Addressed: **Management Performance**
NRG Issues
Issues Impacting Competitive Customers

Dated: June 1, 2022

23980501v1

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Christopher R. Brown. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 1, on January 28, 2022. I also submitted my rebuttal testimony, UGI Gas Statement No. 1-R, on May 17, 2022.

Q. What is the purpose of your rejoinder testimony?

A. My testimony responds to certain portions of the surrebuttal testimony and exhibits of: (1) Bureau of Investigation and Enforcement ("I&E") witness Anthony Spadaccio (I&E St. No. 2-SR); (2) Office of Consumer Advocate ("OCA") witness Jerome D. Mierzwa (OCA St. No. 3-SR); (3) Office of Small Business Advocate ("OSBA") witness Robert D. Knecht (OSBA St. No. 1-S); and (4) NRG Energy, Inc. ("NRG") witness Christopher Reyes (NRG St. No. 1-SR).

II. OVERVIEW OF COMPANY'S CASE

Q. Do any positions taken by other parties in their witnesses' surrebuttal testimony change the Company's positions?

A. No. The Company's position on revenue requirement, rate design, low-income issues, and other issues remain unchanged from UGI Gas's rebuttal testimony.

III. MANAGEMENT PERFORMANCE

Q. Do any parties provide surrebuttal testimony on the management performance adjustment proposed by the Company?

A. Yes, I&E witness Spadaccio and OCA witness Garrett both provide surrebuttal testimony continuing to argue that the Commission should not adopt a management performance adder for UGI Gas. For the most part, their arguments repeat claims they made in direct testimony and which I have already provided a response. However, I&E's testimony does raise new arguments that I will address.

Q. On page 38 of his surrebuttal testimony, Mr. Spadaccio argues that the Commission should not consider ratepayer funded initiatives in granting a management performance adjustment. Do you agree?

A. No, I do not. And, more importantly, it is clear that the Commission does not agree with Mr. Spadaccio's interpretation. As referenced by Mr. Spadaccio, the programs identified by the Commission in its 2018 UGI Electric Rate Case Order are programs funded by ratepayers. Mr. Spadaccio has not and cannot point to any statutory language or Commission order stating that the management performance adjustment may only be permitted where the utility has shown that no ratepayer funds were used. Further, Mr. Spadaccio wrongly insists that programs considered in support of the management performance adjustment must "reduce costs to benefit ratepayers." (I&E St. No. 2-SR, p. 38.) Nothing in 66 Pa C.S. §523 requires a showing of cost reductions to ratepayers. Lacking support for his claims, Mr. Spadaccio's arguments must be rejected.

Q. Mr. Spadaccio argues that the Company's reliance on the 2018 UGI Electric Rate Case determination on management performance shows that UGI Gas should only receive a 5 basis point adjustment rather than the full 20 basis point adjustment. (I&E St. No. 2-SR, p. 37). What is the Company's response?

A. The Commission maintains discretion on any level of management performance adjustment and should consider the fact-specific elements of each case in making such adjustments. In this case, the Company has identified numerous reasons for awarding a management performance adjustment, including several which were not included in the UGI Electric case referenced by Mr. Spadaccio. It is also worth noting that Mr. Spadaccio's own testimony shows how he recognizes that his outright rejection of the management performance adjustment is inconsistent with Commission precedent. Mr. Spadaccio actually notes several instances in which the Commission has approved management performance adjustments. (*See* I&E St. No. 2-SR at 36). Moreover, he states "it is nonsensical to support the idea that since ratepayers fund the initiatives and accomplishments Mr. Brown mentions, ratepayers should then in turn fund a higher equity return for UGI Gas' investors." (I&E St. No. 2-SR at 35.) Despite Mr. Spadaccio's belief, the Commission has awarded basis points under these circumstances and the Company believes that it is logical for the Commission to do so here.

IV. NRG ISSUES

A. STANDARDS OF CONDUCT

Q. Do you have any initial response regarding Mr. Reyes's surrebuttal testimony on the Standards of Conduct?

A. Yes, I do. Mr. Reyes repeats many of the arguments raised in his direct testimony, but he does not provide any new facts or allegations suggesting that UGI Gas has done anything improper that should be remedied by the Commission in this proceeding. Importantly, Mr. Reyes admits that he has no specific allegations when he states that his concerns in this proceeding are driven "solely by the fact that UGI has an affiliated supplier competing in the retail market…" (NRG St. 1-SR, pp. 3-4.) However, the existence of an affiliate is simply not a basis for further investigation by the Commission.

Q. Mr. Reyes states that shared employees "raises a concern about the optics" that the Commission should address. (NRG St. No. 1-SR, p. 4.) What is your response?

A. Section 62.142(a)(13) of the Commission's specifically allows shared employees and provides only that "employees who have responsibility for operating the distribution system, including natural gas delivery or billing and metering, as well as those responsible for marketing and customer service, may not be shared." 52 Pa. Code § 62.142(a)(13). UGI Gas does not share any employees that have responsibility for operating the distribution system, gas deliveries, billing, metering, marketing or customer service. To the extent that the "optics" Mr. Reyes is concerned about are the sharing of any employees at all, his interpretation of the Standards of Conduct is incorrect and is not a basis for further Commission investigation.

Q. Mr. Reyes discusses the Commission's audit findings and asserts that its findings support the greater scrutiny requested by NRG in this proceeding. (NRG St. No. 1-SR, p. 6.) Do you agree?

A. No, just the opposite is true. The findings made in the audit show that the Commission is already reviewing broad compliance by the Company in all affiliate business transactions to ensure proper cost allocations and prevent competitive market distortions. I note that Mr. Reyes is mistaken in his testimony where he claims that there is no verification that UGI Gas has undertaken the measures identified in the audit. As I stated in my rebuttal testimony, the Company submits annual status update reports demonstrating its compliance with its Audit Implementation Plan approved in the 2018 Management Efficiency Audit[1], the most recent of which was filed in December 2021, and which have provided the Commission with numerous opportunities to verify that UGI Gas has complied with the audit requirements. Without any fact-based allegations, there is no basis for the Commission to conclude that its existing monitoring activities are insufficient.

B. AUTOMATION OF SUPPLIER NOTIFICATIONS

Q. What claims does Mr. Reyes make regarding the need for automated supplier notifications for weekend deliveries on the UGI Gas system?

A. Mr. Reyes asserts three specific claims in his surrebuttal testimony that he believes supports his claim that UGI Gas should adopt an automated process for notifying suppliers of what he describes as "utility cuts" over the weekend. Specifically, Mr. Reyes argues

[1] See Docket Nos. D-2018-3002234, D-2018-3002235 and D-2018-3002236.

that this is necessary to safeguard the system, that it is standard industry practice to send notifications seven days per week, and that the Company may impose punitive penalties associated with these cuts. (NRG St. No. 1-SR, p. 9.)

Q. Has Mr. Reyes identified any issue that would require the Company to further "safeguard" the UGI Gas distribution system?

A. No. It is important to understand for clarity that UGI Gas maintains broad monitoring, contingency, communication, and emergency planning, which are focused on the identification, assessment, and response to any situation which might be necessary to safeguard the UGI Gas distribution system. UGI Gas maintains the ability to issue Operational Flow Orders to all suppliers on its system on a 24/7/365 basis. Mr. Reyes's concerns here are not of that nature. In fact, when UGI Gas reviewed this issue, it was unable to find any instance where weekend cuts were initiated by the utility or where they, even remotely, required action to safeguard the UGI Gas distribution system.

Q. Mr. Reyes claims that "it is standard industry practice for utilities to alert entities when a nomination is not confirmed" and "[e]very other utility with which [he] transact[s] sends notifications seven days per week." (NRG St. No. 1-SR, p. 9.) What is your response?

A. UGI Gas is not aware of any other utilities that undertake this activity, but in response to a discovery question, Mr. Reyes only mentions "Keyspan New York"[2] as a utility that

2 I believe Mr. Reyes means KeySpan Gas East Corporation d/b/a National Grid. I will hereinafter refer to the utility as "KeySpan."

manually makes cuts and sends automated emails. (*See* UGI Gas Exhibit CRB-1RJ, a copy of NRG's discovery response UGI-NRG-I-9.) I am personally unaware of the details of KeySpan process, and Mr. Reyes did not provide any details as part of his response to Company discovery. Accordingly, the Company is unable to evaluate if such similar process is appropriate or workable for the Company. However, given Mr. Reyes only identified one utility – KeySpan – I can only conclude that Mr. Reyes's assertion of this being an industry standard practice is not supported. Therefore, the Commission should not direct UGI Gas to adopt a solution for a problem that has not been substantiated based on the facts presented in this case.

Q. Mr. Reyes expresses concern about penalties. (NRG St. No. 1-SR, pp. 9-10.) Please respond.

A. UGI Gas is not aware of any penalties that it has assessed based on utility cuts. Further, Mr. Reyes did not identify in testimony or discovery any penalties or costs NRG has incurred as a result of cuts on the UGI Gas system. The Commission should not rely on the unsubstantiated specter of penalties as the basis for adopting a potentially costly modification to the Company's system.

Q. Mr. Reyes states that the nomination deadline on Fridays is unrelated to weekend cut notifications. (NRG St. No. 1-SR, p. 9.) How do you respond?

A. Mr. Reyes is seeking the same courtesy notification (described in my rebuttal, UGI Gas St. No. 1-R at 25) of mismatches between supplier nominations to UGI Gas as compared to nominations made on the interstate pipelines, that UGI Gas provides during the normal weekday courtesy process. If NRG can provide ongoing timely nominations, as they do on occasion, UGI Gas can provide the level of service Mr. Reyes is seeking and discussed in my rebuttal testimony. (*Id*.) In his surrebuttal, Mr. Reyes mentions that his company is often still waiting for information from their suppliers at 2 p.m. on Fridays at the UGI Gas nomination deadline. This again appears to be an issue between NRG and their suppliers, that Mr. Reyes is, inappropriately, looking for UGI Gas to solve. Moreover, as I stated in my rebuttal, the Company is unaware of: (1) any other suppliers with this concern; (2) any weekend cuts occurring due to a mismatch between supplier nominations; and (3) the frequency upon which NRG's alleged problem has occurred. (UGI Gas St. No. 1-R at 23-24.)

Q. Do you have any final comments on Mr. Reyes's proposal regarding weekend utility cuts?

A. Yes. Mr. Reyes initially focuses his testimony on automated notifications, but later indicates that the Company's weekend schedulers should be providing the notifications in manual form. The Company is unable to formulate a solution to a problem which Mr. Reyes has been unable to articulate with clear instances of occurrence, a clear functional definition from a system perspective that could support an automated solution, or a clear indication as to if it is truly a process that can be achieved by modification to manual processes.

C. WEIGHTED AVERAGE COST OF DELIVERED GAS

Q. In his surrebuttal testimony, Mr. Reyes asks the Company to show the impact of each pipeline rate case along with a 12-month forward estimate of the rate change. (NRG St. No. 1-SR, p. 10.) Is it possible to calculate that impact with any reasonable degree of accuracy?

A. No, it is not. Taking the recent Columbia Gas Transmission ("Columbia") rate case at Docket No. RP20-1060 as an example, that pipeline implemented its as-filed rates on February 1, 2021. If UGI Gas provided a 12-month forward projection of WACOD impacts, it would have overstated the impacts because the settlement rates went into effect on November 1, 2021, only 9 months later. Even once the settlement rates went into effect, within the following 7 months, the WACOD was updated for Columbia's modernization tracker increase, other surcharges that increase annually, and the WACOD will be lowered in the coming months to reflect the refund that was received by UGI Gas from Columbia in April 2022. And, these are the adjustments for just one of the pipelines that impact the WACOD. Further, in addition to the pipeline adjustments, the WACOD is also adjusted monthly for changing delivery requirements from participating customers and suppliers. While Mr. Reyes's request may sound simple, a 12-month projection provided by the Company could ultimately be significantly different from the WACOD at the end of that period and could be confusing to some suppliers.

Q. Mr. Reyes claims that NRG is not requesting UGI Gas to undertake any work beyond what it is already doing on the WACOD. (NRG St. No. 1-SR, p. 11.) Please respond.

A. Based on the description Mr. Reyes includes in his surrebuttal testimony, I believe that

UGI Gas is already providing information of the type that NRG seeks. In the spring of 2022, UGI Gas adopted a new process for providing WACOD updates that included specific explanations of new adjustments incorporated each month, and the period over which the adjustment will be reflected when that information is known. Based on Mr. Reyes's surrebuttal testimony, I believe that this generally satisfies the information that he is requesting in this case.

V. ISSUES IMPACTING COMPETITIVE CUSTOMERS

A. CAPACITY ASSIGNMENT

Q. OCA witness Mierzwa disagrees with the Company's procedures for capacity releases of Columbia to Rate XD customers. Mr. Mierzwa claims in his surrebuttal testimony that the Company's current methodology provides an unreasonable and discriminatory discount to these customers. (OCA St. 3-SR, pp. 16-17.) What is your response?

A. Mr. Mierzwa's claims are not substantiated by the facts. All of the customers that currently receive a release of capacity on Columbia have been receiving that capacity for many years. For the vast majority of the years that those customers received the Columbia capacity, they were customers of the legacy UGI Gas, then UGI South. Grandfathering these customers into the integrated utility with their existing service arrangements, including their Columbia capacity release volumes, is not discriminatory, particularly where the customers pay UGI Gas for the entire cost of the capacity released at the price that UGI Gas pays to the pipeline. Additionally, the price difference that Mr. Mierzwa focuses on between the Columbia capacity and the WACOD is driven largely by the recent increase in pipeline Section 4 proceedings at the Federal Energy Regulatory Commission.

Q. Mr. Mierzwa acknowledges that it is possible his modifications would result in subsequent reductions in base rate revenues from the Rate XD class. (OCA St. No. 3SR, p. 17.) Why is the loss of Rate XD revenues harmful to all customers?

A. Based on the Company's cost allocation study, as a customer class, the Rate XD customers pay significantly above the cost to serve them. This directly benefits all other customer classes, and particularly the Rate R/RT customers, because that is the customer class that is the farthest below its cost of service (see UGI Gas Exhibit D, Schedule B page 1 of 1). If the Company were to lose any of its Rate XD customers, or the revenue associated with those customers, it would need to recover the costs being paid by those Rate XD customers from other customer classes. However, Mr. Mierzwa does not propose any solution for recovering the lost revenues associated with his proposal on a timely basis as part of this case.

Q. Mr. Mierzwa also states that under his proposal, transportation customers that do not accept an assignment of capacity would bear some responsibility for the capacity cost and distribution charge discounts granted to Rate XD customers. (OCA St. No. 3SR, p. 17.) How do you respond?

A. I believe Mr. Mierzwa is mistaken. I do not see how transportation customers, who do not take a capacity assignment from the Company, would be affected by the change proposed by Mr. Mierzwa. As I understand it, under his proposal, only those customers who take capacity from the Company would be impacted by changing what Rate XD customers pay for the Columbia capacity that they are assigned, not those customers who procure their own capacity from the open market.

Q. Mr. Mierzwa claims that your concerns about the loss of these Rate XD customers should be disregarded because you have not provided evidence that there are location options available to these customers where the cost of gas would be comparable to their current service costs. (OCA St. No. 3-SR, p. 18.) Do you agree with Mr. Mierzwa?

A. No. First, it is important to acknowledge that the Commission has long recognized that customers with competitive alternatives are at risk of departing the system and that there is value to all customers in engaging in negotiations to retain them where it is cost effective to do so.[3] Further, I note that Mr. Mierzwa's testimony fails to recognize that these customers have competitive supply alternatives that are regularly assessed by UGI Gas during contract renegotiations. Thus, while relocation is certainly one possibility, it is not the only way that these customers might cease (or reduce) taking gas service from the Company.

Second, these customers are large, sophisticated customers that purchase gas supply in the competitive market. They could avoid the UGI Gas system entirely by directly interconnecting with Columbia's pipeline at any point in the surrounding area. Or, if they were given sufficient incentive to relocate their operations due to the increase in gas costs, they could search for a location outside of Pennsylvania, or even outside the United States.

---

3 *See, e.g., Petition of Columbia Gas of Pennsylvania, Inc. for Approval of a Distribution System Improvement Charge*, Docket No. P-2012-2338282 (Order entered May 22, 2014) at pp. 57-58.

Some locations may even provide large employers with incentives for relocating.

Third, the Company's competitively situated customers were already considered at risk of leaving the UGI Gas system if the Company does not negotiate an agreeable price for distribution service. In addition, these customers are currently experiencing other intense economic pressures. While Mr. Mierzwa believes that his adjustment, alone, would not provide a sufficient basis for relocation, (OCA St. No. 3-SR, p. 18), his modification will not occur in a vacuum, and he makes no effort to consider the cost of alternative supplies available to these customers and the price threshold where those other alternatives become the most cost-effective option. Mr. Mierzwa provides no analysis showing that with his adjustment, UGI Gas would still be the most competitive supply alternative. Therefore, his proposal should be rejected.

Q. Are there any other likely outcomes that Mr. Mierzwa fails to consider?

A. Yes. Mr. Mierzwa fails to consider that these customers have negotiated rates, and that the Company is already seeking the maximum rates it can obtain when contracts are renegotiated. Therefore, assuming that the increase associated with the WACOD was even an acceptable and sustainable price compared to other supply alternatives, it is very likely that if these customers were required to pay more for capacity, they would simply negotiate to pay less in base rates.

Q. Do you have any further observations about Mr. Mierzwa's proposal?

A. Yes, I do. To the extent that the Commission were inclined to adopt Mr. Mierzwa's proposal that UGI Gas migrate Rate XD customers receiving Columbia capacity releases to the WACOD, it should do so on the condition that the renegotiated contracts be at least revenue neutral from a Company standpoint. If the Commission decides to adopt Mr. Mierzwa's proposal without ensuring that his proposal is only applied to contracts in a way that would be revenue neutral, then the Commission should reduce the Rate XD revenue reflected in this case by the $3.1 million identified by Mr. Mierzwa in his testimony and reallocate the cost of recovery of that $3.1 million to the Rate R/RT customer class.

B. RATE INCREASE ALLOCATION TO RATE CLASSES XD AND IS

Q. In your rebuttal testimony you addressed an issue raised by Mr. Knecht relating to the cost allocation for Rates XD and IS. Did Mr. Knecht respond to your testimony?

A. Yes, OSBA witness Knecht raises two further points in continuing to advance his position that the Company should not adjust the cost allocation for Rate XD and Rate IS customers to reflect the zeroing out of the revenues associated with the Company's Distribution System Improvement Charge ("DSIC") for those customer classes. (OSBA St. No. 1-SR, pp. 6-7.)

Q. Mr. Knecht claims that the Company determines, as part of its negotiations with competitively situated customers that they "can afford to experience rate increases associated with the DSIC." (OSBA St. No. 1-SR, p. 7.) Is this accurate?

A. No, it is not. UGI Gas does not determine what its competitive customers can or cannot pay. Instead, the Company negotiates based on competitive alternatives available to the customer. In its negotiations, the Company attempts to apply the DSIC to these customer classes, consistent with the Commission's determination in its original DSIC proceedings.

Some customers agree through the course of the negotiations to pay the DSIC, and where they do the Company applies the DSIC on a going forward basis.

Q. Mr. Knecht asserts that the Company only applies the DSIC so long as the revenues flow to UGI Gas shareholders. (OSBA St. No. 1-SR, p. 7.) Please respond.

A. As evidenced by the increase in revenues that the Company has reflected in previous rate cases for Rate XD and Rate IS, Mr. Knecht's claim is incorrect. If the Company's Rate XD and Rate IS revenues were flat from rate case to rate case, and only increased between rate cases as a result of the DSIC charges, Mr. Knecht's position may have some merit. However, the increase in Rate XD and Rate IS revenues across the Company's past several rate cases demonstrates that the Company has produced a benefit for all other customer classes on the UGI Gas system. This benefit is a result of successful negotiations with these competitive customers, which work to sweep any possible DISC revenues into base contracts and is not one sided to benefit shareholders.

Q. Mr. Knecht claims that the Commission should not adopt a rate decrease associated with the DSIC revenue adjustment because it is "unusual" for the Commission to adopt rate decreases for certain classes where other classes are experiencing a significant increase. (OSBA St. No. 1-SR, p. 6.) Do you agree?

A. I do not know if it is "unusual" for the Commission to adopt rate decreases for certain classes, and Mr. Knecht provided no support for his overly broad conclusion. However, even assuming Mr. Knecht were correct, this is the unusual situation where it makes sense to do so. Mr. Knecht's argument is rooted in a general assumption about cost allocation, but his adjustment relates to specific revenues that will, for the FPFTY, be zero. When rates go into effect, UGI Gas must set the DSIC rate at zero. During the course of the FPFTY, the DSIC rate will continue to stay at zero until the Company has reached its plant additions for the FPFTY. Incorporating the revenues generated by Rate XD and Rate IS customers in the FTY that will not occur in the FPFTY, which is what Mr. Knecht proposes, will allocate $2 million more costs to these customers than they will generate. The Company will have no ability to recover that $2 million, and therefore Mr. Knecht's methodology will purposefully deprive UGI Gas of $2 million of revenue.

Q. Did any other witness address this portion of your rebuttal testimony?

A. Yes. Mr. Mierzwa addresses the portion of my testimony discussing Rate IS customers on pages 26 through 27 of his surrebuttal testimony. Mr. Mierzwa states that in my rebuttal testimony I "imply that it is unreasonable to ever propose an increase for Rate IS customers with competitive options." (OCA St. No. 3-SR, p. 27.)

I said nothing of the sort in my rebuttal testimony. In fact, Mr. Mierzwa uses my own exhibit to show that the Company has increased the revenues associated with these customers over time, which is exactly what I said in my testimony.

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

UGI Gas Exhibit CRB-1RJ

Responses of NRG Energy, Inc. to the Interrogatories of UGI Utilities, Inc. – Gas Division, Set I in Docket No. R-2021-3030218

Request: UGI – NRG I-9: Reference NRG Statement No. 1, pages 12-13. Please identify any and all utilities of which NRG is aware that have the automatic process requested by NRG. Please provide any details about the automated programs provided by other utilities.

Response:

An example of a utility that has an automatic notification process is Keyspan New York. Confirmations and cuts are manually made for firm and non-firm nominations, and emails are automatically generated by the system. NRG's emphasis is not on automated programming, which would alleviate the need for human involvement. Rather, NRG is seeking the same level of service that is provided by the utility during the week. The goal is to receive information on a timely basis when NRG has the ability to respond and remedy any issues. Waiting until the next business day (or two business day later, as shown in Attachment 6 provided in response to UGI-NRG-I-6) continues to put NRG at risk of penalty as it is at the discretion of the utility, interstate pipeline and third party wholesale supplier all agreeing to a retroactive nomination change when the issue could have been remedied in real time. NRG desires to ensure compliance with its obligations to UGI and to avoid contributing to any potential operational issues on UGI's system.

Response provided by: Christopher Reyes

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 2-RJ

Rejoinder Testimony of
Tracy A. Hazenstab

Topics Addressed:	**Updates to Case**
	Payroll Expense
	Pennsylvania Act 40

Dated: June 1, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Tracy A. Hazenstab. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 2, on January 28, 2022. I also submitted my rebuttal testimony, UGI Gas Statement No. 2-R, on May 17, 2022.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony responds to certain portions of the following surrebuttal testimony submitted by the Bureau of Investigation and Enforcement ("I&E") and the Office of Consumer Advocate ("OCA"): I&E Statement No. 1-SR, the surrebuttal testimony of Zachari Walker; I&E Statement No. 3-SR, the surrebuttal testimony of Brain J. LaTorre; and OCA Statement No. 1SR, the surrebuttal testimony of Dante Mugrace.

Q. If you do not address specific aspects of the other parties' surrebuttal testimony that responded to your rebuttal testimony, does that mean you agree with the other party?

A. No. Unless otherwise specifically noted in my rejoinder testimony, UGI Gas maintains its rebuttal position in response to each adjustment raised by the other parties.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. Yes. UGI Gas Exhibit A – Fully Projected (REJOINDER).

II. UPDATES TO CASE

Q. Since the filing of your rebuttal testimony, has the Company identified any additional components of its filing that should be updated?

A. Yes. The Company has revised the presentation of the plant in service adjustment on Schedule C-2. In UGI Gas Exhibit A – Fully Projected (REBUTTAL), the net plant in service decrease of $671,000 was included in the ProForma Adjustment Column 4 on Schedule C-2, Page 5, Line 40. In UGI Gas Exhibit A – Fully Projected (REJOINDER), this adjustment was reallocated into the appropriate fiscal years. The year-end plant balance for the year ended September 30, 2022 was reduced by $700,000 and the year-end plant balance for the year ended September 30, 2023 was increased by $29,000, which net to the $671,000 decrease discussed in the rebuttal testimony of Vicky A. Schappell (UGI Gas St. No. 5-R). Additionally, the fiscal year total additions on Schedule C-2, Page 7, Line 40 were adjusted by the same amounts. These updates did not revise the revenue requirement, net plant in service, or total rate base on Schedule A-1, which aligns with the Schedule A-1 included in UGI Gas Exhibit A – Fully Projected (REBUTTAL).

III. PAYROLL EXPENSE – I&E VACANCY RATE

Q. Did any of the other parties address your acceptance of the OCA's recommended adjustment to remove budgeted positions from the Company's claimed headcount to calculate payroll expense?

A. Yes. I&E witness Mr. Walker responds further to this adjustment. I&E St. No. 1-SR at 20-21. While he agrees with the Company's acceptance of OCA's adjustment, Mr. Walker recommended the application of an additional 1.59% vacancy rate, which would reduce the Company's updated payroll expense claim by an additional $1,307,568 on top of the

OCA's $779,000 adjustment that the Company accepted, thereby reducing the Company's payroll expense by a combined $2,086,568. I&E St. No. 1-SR at 21. This would reduce the Company's payroll expense allowance from $82,237,000 to $80,929,432.

Q. Did Mr. Walker respond to your rebuttal testimony regarding how the vacancy rate proposed in his direct testimony was biased due to the impacts of COVID-19 on the Company's ability to hire new employees during Fiscal Year ("FY") 2020?

A. Yes. He accepts my recommendation to remove FY 2020 from the calculation of a vacancy rate, and specifically accepts my "assertion that 2020 did heavily weight the average vacancy rate." I&E St. No. 1-SR at 20. He further recognized that "extraordinary hiring circumstances" evidenced by actual employee count occurred during FY 2020. I&E St. No. 1-SR at 20. As such, he removes the inconsistent data associated with FY 2020 and lowered his proposed vacancy rate. I&E St. No. 1-SR at 21.

Q. Does the Company agree with Mr. Walker's proposed vacancy rate, as revised in his surrebuttal testimony?

A. The Company agrees that Mr. Walker's removal of FY 2020 data from this calculation was warranted due to the extraordinary hiring circumstances imposed by the COVID-19 pandemic. This data was not reflective of a vacancy rate calculated based on normal operating conditions.

However, Mr. Walker's proposal to then have his 1.59% vacancy rate additive to the proposed removal of 17 positions by the OCA (I&E St. No. 1-SR at 20-21) is not reasonable and should be rejected. Mr. Walker's proposal would result in double-counting.

OCA's removal of 17 budgeted positions already addresses a number of positions covered by Mr. Walker's proposed adjustment. The impact of I&E's modified adjustment would essentially remove an additional 27 positions from the Company's budget, for a total of 44 positions. If permitted, I&E's removal of 27 positions *in addition to* OCA's adjustment to remove 17 positions would result in a vacancy adjustment that is actually closer to the originally proposed I&E vacancy adjustment of 2.74% (or 47 positions) rather than an adjustment based on 27 positions. I&E St. No. 1-SR at 20-21. If Mr. Walker's recommendation is adopted, it should be adjusted to account for the 17 positions already removed, and thus reflect only the net of 10 (27 - 17) additional positions. However, the Company continues to believe no further adjustment is required beyond that which the Company has made in rebuttal testimony.

IV. <u>PENNSYLVANIA ACT 40</u>

Q. Does OCA witness Mr. Mugrace continue to assert in his surrebuttal testimony that the Company has not complied with the requirements of Pennsylvania Act 40 ("Act 40") of 2016?

A. Yes, he does.

Q. Do any of the statements by Mr. Mugrace in his surrebuttal testimony warrant further response?

A. While the Company fully responded to all the arguments raised by Mr. Mugrace in his direct testimony, I need to correct a misstatement by Mr. Mugrace in his surrebuttal testimony. He testifies that "While Ms. Hazenstab stated that 50% of the CTA is related to 'rate base eligible' infrastructure and has demonstrated that the Company has utilized these dollars for such, the Company simple omits how the other 50% of the differential is to be used for general corporate purposes." OCA St. No. 1-SR at 34.

Mr. Mugrace seems to ignore my rebuttal testimony. I clearly stated that "50% of the amount calculated in this proceeding will in fact be used for general corporate purposes, as that term is understood." UGI Gas St. No. 2-R at 21. In addition, I provided concrete examples of how the hypothetically calculated 50% of the Consolidated Tax Adjustment ("CTA") amount would be used for the purpose of providing public utility service, despite the difficulty of tracing it to specific projects. UGI Gas St. No. 2-R at 21.

Q. Do you have any response to Mr. Mugrace's assertion that the Commission "does not have to rely on whether any IRS violation exists" in considering his proposal to use 50% of the Act 40 calculation to offset the Company's claims in this case?

A. Yes. To the extent that Mr. Mugrace is suggesting that the Commission would accept a ratemaking adjustment that could result in a violation of IRS tax normalization requirements, this suggestion fails to acknowledge the materiality of the IRS normalization requirements and the serious cash consequences to the Company and ratepayers if those violations were lost as explained in my rebuttal (UGI Gas St. No. 2-R at 25). Mr. Mugrace's position is unreasonable and should be rejected.

V. <u>CONCLUSION</u>

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 3-RJ

Rejoinder Testimony of
Vivian K. Ressler

Topics Addressed: **Operating Expense Adjustments**

Dated: June 1, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Vivian K. Ressler. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 3, on January 28, 2022. I also submitted my rebuttal testimony, UGI Gas Statement No. 3-R, on May 17, 2022.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony briefly responds to certain portions of the following surrebuttal testimony submitted by the Bureau of Investigation and Enforcement ("I&E") and the Office of Consumer Advocate ("OCA"): I&E Statement No. 1-SR, the surrebuttal testimony of Zachari Walker; OCA Statement No. 1SR, the surrebuttal testimony of Dante Mugrace; and OCA Statement No. 3SR, the surrebuttal testimony of Jerome D. Mierzwa.

More specifically, my rejoinder addresses I&E witness Mr. Walker's surrebuttal testimony regarding the Company's proposal to continue to defer incremental COVID-19 uncollectibles expense, and also to recover increased uncollectibles due to rising inflation rates. In addition, I respond to OCA witness Mr. Mugrace's surrebuttal testimony regarding (a) the Company's claim to recover incentive compensation expense, and (b) the OCA's proposed adjustment pension expense. Finally, I respond to OCA witness Mr. Mierzwa's surrebuttal testimony regarding manufactured gas plant remediation expense.

23968926v9

Q. If you do not address specific aspects of the other parties' surrebuttal testimony that responded to your rebuttal testimony, does that mean you agree with the other party?

A. No. Unless otherwise specifically noted in my rejoinder testimony, UGI Gas maintains its rebuttal position in response to each adjustment raised by the other parties.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. Yes, I am sponsoring UGI Gas Exhibit VKR-1RJ.

II. UNCOLLECTIBLES ACCOUNTS EXPENSE

Q. Do any of the other parties' surrebuttal testimony address the Company's proposal to continue to defer COVID-19 related incremental uncollectibles expense?

A. Yes. I&E witness Mr. Walker continues to dispute the Company's proposal. He claims that "[i]n the current COVID-19 climate higher uncollectible accounts expense is the new normal and will be so for an undetermined amount of time moving forward." I&E St. No. 1-SR at 9. Mr. Walker further claims that in future base rate cases, the routine uncollectible percentage will be developed based on an average of three years of historic data, which will ensure higher amounts will be recovered. I&E St. No. 1-SR at 9. Mr. Walker also continues to rely upon the language of the 2020 Gas Base Rate Case Settlement to assert the settlement does not allow for continued deferral. I&E St. No. 1-SR at 10.

Q. Does Mr. Walker also address the Company's further regulatory asset treatment to uncollectible accounts expense due to an increase in the commodity cost of gas driven by current inflationary factors?

A. Yes. Mr. Walker also opposes this proposal. I&E St. No. 1-SR at 10. He argues there is no basis to allow the Company to accrue increases in uncollectible accounts expense due to inflationary factors. I&E St. No. 1-SR at 10. He also asserts that these increases in costs due to inflation are "transient changes," i.e., that they will only last for a short period of time. I&E St. No. 1-SR at 10.

Q. Does the Company agree with Mr. Walker?

A. No. The Company has fully justified its proposals, as explained in my rebuttal testimony. In addition, the Company has detailed the significant increases in inflation that are currently being experienced. In his rejoinder testimony (UGI Gas Statement No. 6-RJ), Mr. Moul explains that inflation reached a 40-year high of 6.6% in March 2020. This high was exceeded in March of 2022, when the rate reached 8.5%. UGI Gas St. No. 6-R at 6. However, there are two specific points raised by Mr. Walker that warrant further response.

Q. What are those two points?

A. First, Mr. Walker's surrebuttal testimony regarding the COVID-19 pandemic is contradictory. Second, Mr. Walker's continued reliance upon the 2020 Gas Base Rate Case Settlement as precedent is inconsistent with practice before the Commission.

Q. Please respond to Mr. Walker's assertion that in the current COVID-19 climate higher uncollectible costs is "the new normal." I&E St. No. 1-SR at 9.

A. Mr. Walker contradicts himself regarding the impacts of the COVID-19 pandemic. On the one hand, to attempt to reject the Company's proposal to continue to defer incremental

COVID-19 uncollectibles expense, Mr. Walker asserts that increased uncollectibles costs are the new normal. On the other hand, however, Mr. Walker calls increases in inflationary factors due to the COVID-19 pandemic "transient." The impacts of the COVID-19 pandemic on this expense cannot both be "the new normal" and "transient." Mr. Walker's attempt to have it both ways should be rejected.

Q. Please respond to Mr. Walker's continued reliance on the 2020 Gas Base Rate Case Settlement.

A. In addition to the fact that he incorrectly reads the language of the settlement, as described in my rebuttal testimony (UGI Gas St. No. 3-R at 58), Mr. Walker ignores the fact that the settlement specifically acknowledges that it reflects a compromise of competing positions, and that the terms and conditions of the settlement were (a) limited to the facts of the specific case and (b) the product of compromise for the sole purpose of settling the case.

Essentially, Mr. Walker references the prior settlement as if it were binding precedent despite clear language to the contrary. This is inconsistent with practice before the Commission and should be given no weight.

Q. Does Mr. Walker take a position regarding the proposed amortization period that should be used if the Commission decides to allow continued deferral of COVID-19 related uncollectibles expense?

A. Yes. Mr. Walker opposes the Company's proposed 3-year amortization period. I&E St. No. 1-SR at 11. While he agrees with the Company's proposal that amortization should occur without interest, he argues that the actual recovery period should not be assigned until the actual amount is known and verifiable. I&E St. No. 1-SR at 11.

Q. Does the Company agree with Mr. Walker's argument that the Commission should wait to assign an amortization period until the actual amount of incremental uncollectibles expense is known and verifiable?

A. If the Company is authorized to continue to defer any annual uncollectible accounts expense in excess of $18.0 million (or such amount that is built into its rate as approved by the Commission as part of this proceeding) per year and to recover any excess without interest, as proposed in my rebuttal testimony (UGI Gas St. No. 3-R at 59-60), the Company would be willing to wait until its next base rate proceeding to assign an amortization period for recovery.

III. <u>INCENTIVE COMPENSATION</u>

Q. Do any of the other parties' surrebuttal testimony continue to oppose the Company's claimed incentive compensation expense?

A. Yes. OCA witness Mr. Mugrace continues to oppose the Company's claim for recovery of incentive compensation expenses. OCA St. No. 1SR at 1-16. Mr. Mugrace raises a variety of arguments in response to my rebuttal testimony, none of which have any merit.

Q. Does Mr. Mugrace, at any point, address the fact that the Company's incentive compensation is a component of its overall compensation program to attract and retain qualified employees?

A. No, he does not. In fact, Mr. Mugrace fails to acknowledge that his continued attempts to evaluate individual aspects of the Company's incentive compensation program in isolation run afoul of prior Commission orders, *i.e.*, the *PPL Electric 2012 Order*[1] and the *UGI Electric 2018 Order*.[2] As explained in my rebuttal testimony, those orders made clear that incentive compensation programs must be evaluated "as a whole," when determining whether the plan includes goals which benefit customers. UGI Gas St. No. 3-R at 28

Q. Is the incentive compensation program at issue in this proceeding the same as the incentive compensation program that was approved in the *UGI Electric 2018 Order*?

A. Yes. While certain details of the programs have changed since 2018, the substance of the programs has not materially changed. See the table below for a comparison of the programs included in the current case and in the UGI Electric 2018 case.

Plan	Approved for Recovery in 2018 Electric Case	Included in the 2022 Gas Case Claim
Management Incentive Plan	Yes	Yes
Executive Bonus Plan	Yes	Yes
Restricted Stock Awards	Yes	Yes
Stock Options	Yes	Yes

Q. Has the Commission recently re-affirmed the analysis of incentive compensation programs from the *PPL Electric 2012 Order* and the *UGI Electric 2018 Order*?

[1] *Pa. PUC v. PPL Electric Utilities Corp.*, Docket No. R-2012-2290597, at p. 26 (Final Order entered December 28, 2012).

[2] *Pa. PUC, et al. v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058, at p. 73-74 (Order entered Oct. 25, 2018).

A. Yes. In a decision in the recent *Aqua 2021 Order,*[3] the Commission once again affirmed that a utility is permitted to recover the costs of its incentive compensation program, including stock based compensation, when the program is linked with benefits to customers and improved operational efficiency. Moreover, the Commission agreed with the Administrative Law Judge in the Aqua case, who noted in the Recommended Decision that incentive compensation is a key element of overall payment packages to attract and keep a skilled workforce.[4]

As explained in my rebuttal testimony (UGI Gas St. No. 3-R at 22-35) UGI Gas's incentive compensation program, as a whole, is linked to performance and operational objectives, including safety, cost control and the satisfaction of compliance initiatives. Moreover, it is an essential part of attracting and retaining qualified employees to provide safe and reliable natural gas service to the Company's customers.

Q. Are there any further new arguments raised by Mr. Mugrace in his surrebuttal testimony regarding the Company's claimed incentive compensation expense that you wish to address?

A. Yes, there are two new arguments that Mr. Mugrace attempts to raise in his surrebuttal testimony that warrant further response. First, Mr. Mugrace's acknowledges that the Company's incentive compensation does include safety and reliability, customer service and customer satisfaction goals (OCA St. No. 1SR at 13), but continues to oppose recovery on the basis that no specific dollar amounts for these goals were provided. Second, Mr.

[3] *Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. v. Pa PUC, et al.*, Docket Nos. R-2021-3027385 and R-2021-3027386, et al. (Opinion and Order entered May 16, 2022).
[4] *Aqua 2021 Order*, pp. 100-101.

Mugrace incorrectly suggests that the Company's claimed expense was based upon information he was not provided during discovery or as a part of my rebuttal testimony.

Q. Please respond to Mr. Mugrace's specific claim that recovery of the Company's incentive compensation programs should not be allowed because he was unable to evaluate dollar amounts associated with safety and reliability, customer service and customer satisfaction performance goals. OCA St. No. 1SR at 13.

A. This argument is nothing more than an even narrower version of the argument previously rejected in the various Commission orders I cited above. Now, instead of trying to target specific plans that are part of the Company's overall incentive compensation program, Mr. Mugrace is attempting to target specific dollar amounts within specific plans. This logic should not be credited. This argument simply embodies his failure to support the need for more granularity in the review of these claims than the arguments previously rejected by the Commission in the *PPL Electric 2012 Order*, the *UGI Electric 2018 Order*, and the *Aqua 2021 Order*. Therefore, it should be rejected for the same reasons I described above and in my rebuttal testimony. UGI Gas St. No. 3-R at 21-37.

Q. Please respond to Mr. Mugrace's claims that he was not provided one of the exhibits attached to your rebuttal testimony.

A. Mr. Mugrace's claim that UGI Gas Exhibit VKR-7R was not attached to my rebuttal testimony is incorrect. OCA St. No. 1SR at 9-10. This exhibit was a public exhibit only (although Mr. Mugrace seems to incorrectly believe it was confidential) that was included in the PDF packet for the public version of my rebuttal testimony. Although OCA served an errata to Mr. Mugrace's surrebuttal testimony on June 1, 2022, that removed one reference to this assertion from page 11, the errata does not remove the other incorrect references on pages 9-10.

Q. Mr. Mugrace also claims that the information the Company used to support its UGI Corporate Allocation is "new information which was not provided in discovery." OCA St. No. 1SR at 9-10, 13. Do you agree with this statement?

A. Again, unfortunately, Mr. Mugrace is simply incorrect. Mr. Mugrace references the Company's response to OCA-III-1 and OCA-VII-13. The Company's responses to each of these discovery requests are being provided as UGI Gas Exhibit VKR-1RJ; however, the attachments to these discovery responses will be omitted obviate the need for HIGHLY CONFIDENTIAL designations.

Q. What does Mr. Mugrace claim with respect to the OCA-III-1 discovery request and response?

A. With respect to OCA-III-1, he claims that he "asked for information related to Incentive Bonuses and confidential information." OCA St. No. 1SR at 9.

Q. What does OCA-III-1 request?

A. It asks that the Company "[p]lease provide all confidential documents and related exhibits referenced in the filing related to Compensation Benchmarking and Incentive Bonuses." UGI Gas Exhibit VKR-1RJ, page 1.

Q. Why is the specific language of this request important?

A. As a part of this case, the Company included a salary & wage increase claim based upon various compensation benchmark analyses. This increase was explained in the direct testimony of UGI Gas witness Mr. Christopher R. Brown. UGI Gas St. No. 1 at 26-29.

Importantly, Mr. Mugrace testified regarding these adjustments in his direct testimony. Indeed, he specifically addressed Mr. Brown's direct testimony regarding the development of the proposed salary and wage adjustments <u>and makes reference to</u> the documents provided in response to OCA-III-1 (e.g., data provided by the American Gas Association). OCA St. No. 1 at 17-18. It is not reasonable for Mr. Mugrace to assert, as he does, that this request was related to an aspect of the Company's claim other than certain proposed salary and wage adjustments.

Q. What does Mr. Mugrace claim with respect to the OCA-VII-13 discovery request and response?

A. Mr. Mugrace claims that this request "asked for information related to incentive compensation." OCA St. No. 1SR at 9.

Q. What does OCA-VII-13 actually request?

A. It asks "Has the Company included any Stock Compensation expenses in its development of the revenue requirement increase? If so, please identify and show where these costs are recorded and accounted for." UGI Gas Exhibit VKR-1RJ, page 2. In response to this request, the Company provided a breakdown of the costs included, and identified where in the initial filing all stock compensation expenses were recorded in the revenue requirement.

Q. Why is this distinction important?

A. If Mr. Mugrace wanted to review specific documents related to other aspects of the Company's claim for incentive compensation expense, he could have, and should have, asked for them. Again, it is not reasonable for Mr. Mugrace to assert, as he does, that he was not provided certain information in discovery despite the fact that he simply did not ask for it.

Furthermore, if Mr. Mugrace was dissatisfied with information provided to him, he could have asked follow-up questions in discovery for additional information. It appears that Mr. Mugrace had ample opportunity to ask follow-up questions, but simply did not do so; the response to OCA-III-1 was served on March 25, 2022 and the response to OCA-VII-13 was served on March 28, 2022, whereas the OCA's direct testimony was not served until April 20, 2022.

IV. PENSION EXPENSE

Q. Does OCA witness Mr. Mugrace continue to propose an adjustment to the Company's pension benefits expense?

A. Yes. Mr. Mugrace continues to propose the same pension adjustment in his rebuttal testimony (OCA St. No. 1SR, Schedule SR-DM-17, Line 18) that he proposed in his direct testimony (OCA St. No. 1, Schedule DM-17, Line 18).

Q. Does the Company agree with Mr. Mugrace's proposed adjustment for pension?

A. No.

Q. Why does the Company not agree with Mr. Mugrace's proposed adjustment for pension?

A. The Company does not agree with Mr. Mugrace's adjustment for several reasons. Most importantly, Mr. Mugrace does not base his adjustment on pension cash contributions, which are the basis for the Company's claim (as explained in my rebuttal testimony) UGI Gas St. No. 3R at 16. Secondly, the Company does not believe that it is appropriate to normalize its claim amount.

Q. On what did Mr. Mugrace base his proposed adjustment?

A. As explained in my rebuttal testimony (UGI Gas St. No. 3R at 16-17), Mr. Mugrace based his adjustment on the difference between generally accepted accounting principles ("GAAP") pension expense and pension cash contributions.

Q. Why is it important that the Company bases its claim on cash contributions?

A. The Commission has approved recovery of pension cost based on cash contributions within UGI Gas's rate proceedings and within the rate proceedings of most other utilities within Pennsylvania for many years.[5] Moreover, if the Company were to "mix and match" its method of recovering its pension cost between GAAP pension expense and cash

[5] *See, e.g.*, *Pa. PUC, et al. v. Metropolitan Edison Company*, Docket No. R-00922314, et al., 1993 Pa. PUC LEXIS 41, at *81-82 (Opinion and Order dated Jan. 21, 1993) ("The OTS correctly noted that pension expense should be treated on a cash only basis. Therefore, the FASB 87 calculation is rejected."); *Pa. PUC, et al v. West Penn Power Company*, Docket Nos. R-0901609, et al., 1990 Pa. PUC LEXIS 142, at *95-96 (Opinion and Order dated Dec. 13, 1990) ("We agree with the OTS that pension expense should be treated on a "cash only" basis. As pointed out in the OTS filings on this issue, WPP's pension is currently overfunded, and IRS regulations will allow no tax deductible contributions for 1990. It is the contributions that WPP will actually make to the pension fund during the test year…which is the relevant amount in considering the allowable expense for ratemaking purposes."); *Pa. PUC v. Phila. Suburban Water Co.*, Docket No. R-891270, 1989 Pa. PUC LEXIS 213, at *54-61 (Opinion and Order dated Dec. 29, 1989).

contributions, the Company would not recover an appropriate amount of costs over the life of the plan.

Q. What issues did Mr. Mugrace raise in his surrebuttal testimony related to the Company's pension claim?

A. Mr. Mugrace takes issue with the Company's claim to recover pension costs based upon its actual cash contributions to the pension fund. OCA St. No. 1SR at 27-28. He claims that the Company has not provided information explaining the variability of recorded pension expense (for GAAP purposes) or the variability of the Company's cash contributions to the fund. OCA St. No. 1SR at 28. Although he acknowledges that the Company based its cash contributions upon the recommendations of its actuarial firm, and that the Company's claim is consistent with GAAP and historical ratemaking practice, he asserts that it is necessary to average out contributions made in prior years to contributions made during current years because "solely relying on current actually-determined cash contributions to the pension fund can result in costs that may be too high *or* too low for the new regulatory period when new rates are set." OCA St. No. 1SR at 28.

Q. Please explain why GAAP pension expense and cash contributions vary from year to year.

A. Pension expense under GAAP is calculated annually based on a complex actuarial valuation that includes forward looking estimates (such as discount rate and return on assets) which depend on point in time market conditions.

The Company's cash contributions are calculated annually by its actuary in accordance with the Company's pension funding policy. The cash contributions are designed to approximate the cost of expected benefits only and are more stable than GAAP expense because certain market-based assumptions are excluded from the calculation and other market based assumptions (such as the discount rate) are based on 24 month averages.

Q. Why does the Company believe that it should include the most current cash contribution amount in its claim, rather than a normalized amount as proposed by Mr. Mugrace?

A. The Company believes that it is more appropriate to use the most current actuarially-determined cash contribution amount within its claim, rather than a normalized amount, because it reflects the most up-to-date estimate of expected pension cost. The Commission has repeatedly approved this approach, as noted above.

However, as indicated in my rebuttal testimony (UGI Gas St. No. 3R at 15-16), if the Company were to normalize its actual cash contributions, it would increase the Company's claim from $5.501 million to $5.765 million. The Company has not normalized its recovered costs associated with the pension plan in the past, and believes consistency is appropriate, as this would avoid the issues with "mixing and matching" what costs are recovered through rates that I discussed above.

V. MANUFACTURED GAS PLANT REMEDIATION EXPENSE

Q. Do any of the other parties' raise new issues with respect to the recoverability of the Company's claimed environmental remediation expense associated with manufactured gas plants ("MGPs")?

A. Yes. OCA witness Mr. Mierzwa raises the new argument that "[i]t would be more appropriate to deny UGI Gas recovery of these costs since MGPs are not currently used and useful in the provision of utility service" as a part of his surrebuttal testimony responding to the rebuttal testimony of UGI Gas witness Ms. Heppenstall. OCA St. No. 3SR at 6.

Q. Does the Company agree with Mr. Mierzwa's new argument?

A. No, for three reasons. First, as I previously noted, this is a disallowance proposal raised by Mr. Mierzwa (and the OCA) for the first time in their surrebuttal testimony. More importantly, however, this position directly contradicts the recommendations of OCA witness Mr. Mugrace with respect to the Company's proposal to recover the environmental remediation costs associated with MGP sites. Mr. Mugrace clearly testified that he was "accepting the Company's five years of actual and projected spending" for these costs, but made an alternative recommendation regarding the appropriate period for recovery. OCA No. St. 1 at 15-16. If the OCA was going to propose total disallowance of these costs, they should have done and could have done so in their direct testimony.

Second, the Company has recovered the costs of MGP remediation in all litigated and settled rate cases since the mid-1990s through the costs of removal, or, more recently, through a balancing mechanism that addresses any over- or under-recovery of such remediation costs. I discussed this mechanism in my rebuttal testimony (UGI Gas St. No. 3-R at 11). While the Company recognizes that the MGPs were retired years ago, the costs at issue are properly recovered in accordance with the Uniform System of Accounts as costs incurred in connection with sites that were used to provide safe, efficient and reliable public utility service.

Third, even if it were appropriate for Mr. Mierzwa to raise this argument for the first time in his surrebuttal testimony (and it is not), his claim that MGP sites are no longer used and useful is not completely accurate. The Company utilizes several MGP sites as office space and for purposes of storing materials. For example, eight operations centers are on former MGP sites (Shamokin, Bloomsburg, Renovo, Lancaster, Clearfield, Oxford, Hazleton, and Lebanon), eight additional former MGP sites are used for equipment and/or materials storage (Ashland, Lehighton, Allentown, Reading, Steelton, Bethlehem, Edwardsville, and Huntingdon), and two former MGP sites are used for regulator stations (Manheim and Boyertown).

VI. <u>CONCLUSION</u>

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 5-RJ

Rejoinder Testimony of
Vicky A. Schappell

Topics Addressed: Utility Plant In Service

Dated: June 1, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Vicky A. Schappell. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 5, on January 28, 2022. I also submitted my rebuttal testimony, UGI Gas Statement No. 5-R, on May 17, 2022.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony responds to certain portions of the surrebuttal testimony submitted by the Bureau of Investigation and Enforcement ("I&E") witness Esyan Sakaya, I&E Statement No. 5-SR.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. Yes, I am sponsoring UGI Gas Exhibit VAS-1RJ.

II. UTILITY PLANT IN SERVICE

Q. Does Mr. Sakaya modify his methodology in response to your rebuttal testimony?

A. No, he does not. Despite the numerous methodological errors undermining the credibility of his recommendation that I identified in my rebuttal testimony, Mr. Sakaya does not make any corrections. Described simply, Mr. Sakaya's methodology is incorrect at every step of his process, and as a result his disallowance is neither reasonable nor logical.

Q. Mr. Sakaya states that his analysis is a "variance analysis" and suggests that therefore his methodology is grounded in accounting principles. Do you have any response to this?

A. Yes. A variance analysis is an accounting methodology that compares predicted and actual outcomes. Mr. Sakaya states that variance in accounting is the difference between a forecasted amount and the actual amount (Forecast – Actual = Variance). However, Mr. Sakaya did not perform a true variance analysis, because he mixes and matches the amounts used in his calculations.

In essence, Mr. Sakaya calculates the variance between the projected total plant in service balance (i.e., the wrong starting point) and subtracts the actual plant in service balance to calculate a gas plant shortfall. But, Mr. Sakaya then mixes different amounts together, and subtracts this gas plant shortfall from estimated gas plant additions, before calculating his variance percentage or installation success rate. Each step of this calculation is explained in my rebuttal testimony (UGI Gas Statement No. 5-R at 14-15) and further shown in UGI Gas Exhibit VKR-4R (*see* "Walk-Through of Mr. Sakaya's Calculation"). This method used by Mr. Sakaya is not the appropriate way to calculate a variance percentage.

While I believe the Commission should reject Mr. Sakaya's method and use of a variance analysis for the reasons stated above and in my rebuttal testimony, to correctly conduct a variance analysis one should simply divide actual plant additions (i.e., what plant was added) by budgeted plant additions (i.e., what plant was forecasted to be added). Then, one would multiply the total by 100 to turn it into a percentage (Actual / Forecast) x 100.

This is the method used by the Company in the "Corrected Walk-Through of Mr. Sakaya's Calculation" in UGI Gas Exhibit VAS-4R lines 13-15 to calculate an installation success rate or variance percentage. These corrections further demonstrate that Mr. Sakaya's method is unreliable and that the appropriate comparison is budgeted vs. actual plant additions, as submitted by the Company.

Q. Is Mr. Sakaya's methodology otherwise unreliable?

A. Yes. It contains two other fatal flaws that make it unreliable. His success rate for Gas Plant is limited to a two year analysis – the FPFTY data from the 2019 Gas Base Rate Case (i.e., FY 2020) and the 2020 Gas Base Rate Case (i.e., FY 2021). The use of only two years of data is too short to provide a reliable average variance.

Second, and perhaps more critically, Mr. Sakaya's only two data points are outliers. The 2019 Gas Base Rate Case FPFTY includes data from October 1, 2019 through September 30, 2020, with COVID-19 causing significant impacts for nearly half of that test year. The 2020 Gas Base Rate Case FPFTY includes data from October 1, 2020 through September 30, 2021, during which time the Company's operations were returning to normal since the inception of the COVID-19 pandemic. Mr. Sakaya's methodology relies exclusively on two years of anomalous data.

On the other hand, the Company has demonstrated that over a 3- or 5-year period of time, it has a documented history of meeting its budgeted capital project additions. Specifically, over a 3-year period that excludes anomalous data caused by the COVID-19 pandemic, the Company placed an average of 102.3% of its budgeted plant additions into service (UGI Gas Exhibit VAS-2R); over a 5-year period that accounts for both normal operating conditions and the years impacted by the COVID-19 pandemic, the Company placed an average of 98.0% of budgeted plant additions into service.

Q. On page 14 of his testimony, Mr. Sakaya claims that it is proper to adjust for retirements because "if plant is not placed into service, retirements will not occur." Is this accurate?

A. No, it is not accurate. UGI Gas regularly has retirement projects that do not have additions associated with them and Mr. Sakaya's claim incorrectly links these separate Company activities without any evidence, or knowledge of the Company's operations. It is important to note that these are separate activities and, therefore, should receive separate rate treatment. Moreover, Plant additions should not be lowered to reflect retirements, because retirements are already reflected in rates through a separate downward plant adjustment and related accumulated depreciation and negative salvage adjustments. Mr. Sakaya's methodology thus double counts the Company's retirements. Even if the Commission were to ignore all of the other flaws in his methodology, this flaw alone incorrectly results in his methodology overstating the disallowance by $131.3 million (*see* UGI Gas Statement No. 5-R at 19 and UGI Gas Exhibit VAS-4R, line 20) or approximately 85% of his adjustment.

Q. What other flaws are produced by Mr. Sakaya's use of test years rather than budgets?

A. Another reason Mr. Sakaya's insistence on the use of test years is not appropriate is because utilities may not have annual rate cases. However, Mr. Sakaya's methodology only looks at test years, which would require annual base rate cases to occur. Mr. Sakaya's methodology would result in the rejection of the most recent data in favor of stale data that may not result in an accurate forecast of the Company's operations.

Q. Mr. Sakaya states that the Commission should use the FPFTY projections from past cases because the amounts cannot be changed. Is this accurate?

A. No, it is not. It is not even accurate within the case itself, and it is another example of an error in Mr. Sakaya's methodology. Mr. Sakaya refuses to adjust his calculations for the known adjustments made in the Company's rebuttal testimony in the two proceedings he relies on. I&E St. No. 5-SR at 13. Yet, Mr. Sakaya accepted my updates on plant additions as part of this case.

More importantly, the Company must make adjustments to its project lists on an annual basis based on operational needs. As explained in my rebuttal testimony, the Company's history of placing 98% of budgeted plant additions into service takes into account the movement of projects from one year to the next and the impact of bringing future year projects into an earlier year. UGI Gas St. No. 5-R at 21-22. As an additional example, the Company's Distribution Integrity Management Plan ("DIMP") requires that UGI Gas evaluate its project lists and update them on at least an annual basis to ensure that the Company is addressing the riskiest assets on its system. Mr. Sakaya proposes that the Commission use a process for ratemaking that fails to acknowledge the dynamic process the Company uses for operating its system.

Q. Mr. Sakaya discusses the implications of a black box settlement on pages 15 and 16 of his testimony. Do you have any response?

A. Yes, I do. First, I am advised by counsel that Mr. Sakaya's insistence on using settled case outcomes for precedential value is improper. However, to the extent that the Commission decides to consider Mr. Sakaya's comments on the use of the DSIC trigger point that has been articulated in the Company's settlements, Mr. Sakaya is, again, entirely incorrect in his claims. The DSIC-eligible plant threshold included in the Commission-approved settlement for the 2019 Gas Base Rate Case was based on the net total plant balances projected for the FPFTY used in that case (i.e., FY 2020), in the amount of $2,875,056,000.[1] However, Mr. Sakaya fails to recognize that DSIC-eligible plant threshold included in the Commission-approved settlement for the 2020 Gas Base Rate Case was based on the net total plant balances projected for the **FTY** used in that case (i.e., FY 2020), in the amount of $2,875,056,000.[2] If one compares the projected total net plant balances included in each of the last two UGI Gas base rate case settlements to the actual plant additions made during the applicable period of FY 2020—as Mr. Sakaya suggested would reinforce his position—it would actually produce a completed plant additions number of 102.7%, as shown in UGI Gas Exhibit VAS-1RJ. This further demonstrates the flaws in Mr. Sakaya's methodology.

Q. Please respond to Mr. Sakaya's surrebuttal testimony on inflation.

---

[1] *Pa. PUC, et al. v. UGI Utilities, Inc. – Gas Division,* Docket No. R-2018-3006814, et al., at p. 7 (Opinion and Order entered Oct. 4, 2019).

[2] *Pa. PUC, et al. v. UGI Utilities, Inc. – Gas Division,* Docket No. R-2019-3015162, et al., at Ordering Paragraph 27 (Opinion and Order entered Oct. 8, 2020); *see also Pa. PUC, et al. v. UGI Utilities, Inc. – Gas Division,* Docket No. R-2019-3015162, et al., at p. 26 (Recommended Decision dated Aug. 29, 2020) ("As of the effective date of rates in this proceeding, UGI Gas will continue to be eligible to include plant additions in the Distribution System Improvement Charge ('DSIC') once the Company's total net plant balances reach a level of $2,875,056,000; as established in the UGI Gas 2019 Base Rate Case.")

A. Mr. Sakaya appears to have misunderstood the nature of my rebuttal testimony comments on inflation. However, his testimony supports my point. My rebuttal testimony indicated that the impact of the increased contractor costs discussed by UGI Gas witness Mr. Angstadt (UGI Gas St. No. 9-R) will make it even more likely that the Company will meet or exceed its plant addition budget in the FPFTY when compared to past years, because the Company's as-filed FPFTY had not factored in the significant impacts of inflation on its plant additions. My rebuttal testimony did not update the FPFTY for the new contractor costs, and I instead argued that the fact that the Company will incur these higher contractor costs should be taken as further evidence that Mr. Sakaya's disallowance is incorrect as calculated in his direct testimony. *See* UGI Gas St. No. 5-R at 10-13.

Q. Mr. Sakaya states that if inflation was a factor in past cases, "it would have caused the Company to exceed its rate case projection…" (I&E St. No. 5-SR, p. 12.) What is your response?

A. I fully agree with Mr. Sakaya's point here. However, as Mr. Angstadt states in his rebuttal testimony, the impact of inflation on the Company construction contracts was low because contractor pricing was fixed during the period of 2019-2021 and inflationary pressures were low during the same time. Moreover, Mr. Sakaya fails to consider the impact of increased contract costs on the FPFTY plant additions in his calculation, even after I specifically identified the known contractor pricing increases for the FPFTY.

III. <u>CONCLUSION</u>

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 6 - RJ

Rejoinder Testimony of
Paul R. Moul, Managing Consultant
P. Moul & Associates, Inc.

Topics Addressed:	**Cost of Capital** **Capital Structure** **Rate of Return**

Dated: June 1, 2022

REJOINDER TESTIMONY OF PAUL R. MOUL

Q. Please state your name, occupation and business address.

A. My name is Paul R. Moul and I am Managing Consultant at the firm P. Moul & Associates. My business address is 251 Hopkins Road, Haddonfield, NJ 08033-3062.

Q. Mr. Moul, have you previously submitted direct and rebuttal testimony in this proceeding?

A. Yes. My direct testimony, UGI Gas Statement No. 6, was submitted with the Company's case-in-chief on January 28, 2022 and my rebuttal testimony, UGI Gas Statement No. 6-R, was submitted on May 17, 2022.

Q. What is the purpose of your rejoinder testimony?

A. UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company") has requested that I respond to the surrebuttal testimony presented by Mr. Anthony Spadaccio, a witness appearing on behalf of the Bureau of Investigation and Enforcement ("I&E"), and Mr. David J. Garrett, a witness appearing on behalf of the Office of Consumer Advocate ("OCA"). If I fail to address each and every issue in the surrebuttal testimony of Mr. Garrett and Mr. Spadaccio, it does not imply agreement with those issues.

Q. Based on your review of the surrebuttal testimony of Mr. Spadaccio and Mr. Garrett, do you propose any change in your recommended return for UGI Gas in this proceeding?

A. No. There was nothing contained in the surrebuttal testimony of Messrs. Spadaccio and Garrett that changes my position that UGI Gas is entitled to an 11.20% rate of return on common equity. The proposals of Messrs. Spadaccio and Garrett of 9.92% and 8.50%, respectively, are entirely too low by reference to returns set by the Commission in recent rate cases and Distribution Service Improvement Charge

("DSIC") proceedings that I describe in my rebuttal testimony. Mr. Spadaccio's argument that the DSIC rate is merely a benchmark to identify "overearning" and that it provides an incentive for investment in infrastructure replacement and betterment is misplaced. The actual collection of revenues from the DSIC can only occur if earnings are below the DSIC rate. And it makes no sense that once DSIC assets enter the rate base that they should earn a lower return when they enter rate base, which seems to be Mr. Spadaccio's position because his 9.92% equity return is well below the current 10.20% DSIC rate for gas utilities. Although the Commission has stated that the DSIC return is not company specific and is determined on a quarterly basis (see page 178 of Aqua Order Entered May 16, 2022 in Docket No. R-2021-3027385), it does provide an overall benchmark to gauge the reasonableness of the proposed return. Moreover, referencing the DSIC return when setting the cost of equity in a base rate case would not promote an over-earnings status that would preclude its use (see page 13 of Mr. Spadaccio's Surrebuttal testimony). This situation is unlikely because base rates are adjusted periodically through the rate case process that provides only an opportunity to experience a fair return. Between rate cases, investment and expense change and there is no true up available to reconcile for those variations. This would occur with or without a DSIC return.

Q. At pages 9-10 of his surrebuttal testimony, Mr. Spadaccio discusses the relative weight that should be assigned to the DCF. Please respond.

A. His discussion as to the weight that should be given DCF is somewhat difficult to follow. As near as I can tell, he proposes that the CAPM should only be used as a comparison to DCF, but not as additional input. As I understand it, Mr. Spadaccio is essentially arguing for exclusive weight to DCF. This position is contrary to the

Commission's recent Aqua Order Entered May 16, 2022 in Docket No. R-2021-3027385), in which the Commission determined that it is appropriate to use the DCF and CAPM methodologies in a rising interest rate market. While Mr. Spadaccio seems troubled by alternative models, including CAPM, there are many assumptions associated with the specification of the DCF. These are:

- The form of the model. A choice must be made whether to employ the continuous or discrete form of the model.
- Whether a finite or infinite form of the model realistically represents investor's horizon.
- Whether compounding of the quarterly dividend should be employed.
- The timing of the dividend payments regarding the interval from the ex-dividend date and the stock measurement date needs to be addressed.
- A choice is necessary relative to a representative price that would reasonably represent the rate effective period, e.g., 12-month average, 6-month average, 13-week average, spot, etc.
- Assumptions concerning the structure of returns which under the DCF assumes that the price-earnings multiple, dividend payout ratio, and earned return will be constant.
- Whether single or multiple growth rates better reflect investor expectations.
- Choices concerning the use of historical or forecast growth rates.
- From a historical perspective, whether 10-years, 5-years, or some other historical period is representative of investor expectations.
- Choice among variables to measure growth, e.g., earnings per share, dividends per share, book value per share, cash flow per share, retention growth, price growth, etc.
- Choice of investor influencing growth rates that are available from I/B/E/S First Call, Zacks, Morningstar and Value Line.
- Whether the growth rate if measured by the formula "b x r" should be modified for external growth, i.e., "sv."
- The potential misspecification of the rate of return applicable to book value when taken directly from DCF if the market price diverges from book value.

Many of the assumptions, especially the constant price-earnings multiple, constant payout rate, and constant earned return, are particularly unrealistic. My point is that all models have their strengths and weaknesses, and it is important to rely on more than one model in determining the cost of common equity.

Q. At page 10 of his surrebuttal, Mr. Spadaccio specifically cites to the Aqua order. What arguments does he present there?

A. Mr. Spadaccio laments the Aqua Order for departing from long standing practice of stating the cost of equity in terms of the DCF. He fails to acknowledge that the Commission expressed the view that the DCF is slow to react to a rising interest rate/inflation rate environment.

Q. On pages 14-15 of his surrebuttal testimony, Mr. Spadaccio criticizes you for making specific exclusions to his DCF calculations. Please respond.

A. There is just no way that the DCF returns that I listed on page 12 of my rebuttal testimony can play any role in the determination of the equity return in this case. Mr. Spadaccio claims that the removal of the return for Chesapeake Utilities and ONE Gas only serves to inflate the DCF result. But an 8.65% DCF return for Chesapeake Utilities and 8.02% for ONE Gas cannot be useful to determine a fair return in this case. We know that 8.65% and 8.02% is too low based upon the other rate case decisions I report in my rebuttal testimony.

Q. At pages 11-14 of his surrebuttal, Mr. Spadaccio provided a lengthy discussion of the DSIC return and its relevance, or lack thereof, to base rate cases. Please respond.

A. Mr. Spadaccio goes to some length discussing the Quarterly Earnings Report. He acknowledges that the Commission awarded an equity return in the Aqua case that was above the DSIC quarterly rate for water utilities. This is not the first instance that the Commission has done so. In a variety of cases, the Commission has set the ROE near or above the DSIC rate. Two electric utility rate case decisions prove this point. In the UGI Electric rate case at Docket No. R-2017-2640058, the Commission set the rate of return on common equity at 9.85% when the DSIC return was 9.65% for electric utilities. In the PPL Electric Utilities rate case at Docket No. R-2012-2290597, the Commission set the return on equity at 10.40% when the DSIC return was 10.20% for electric utilities. Further, in the PECO Energy - Gas Division rate case decision, the Commission set the Company's equity return at 10.24% at a time when the DSIC return for gas utilities was 10.20% (Docket No. M-2021-3025288). Finally, the Commission set the return for Aqua Pennsylvania at 10.00% when the DSIC return for water companies was 9.80%. This long series of returns in base rate cases support returns higher than the prevailing DSIC return.

Q. At page 38 of his surrebuttal, Mr. Spadaccio compares the ROE request by UGI Gas to returns requested by other gas utilities. Please respond.

A. He observes that the Company's request in this case exceeds returns requested in other jurisdictions. These comparisons are invalid. Those returns relate to other cases filed prior to March 10, 2022. Most of the evidence that supported those requests predated the upward spike of inflation and interest rates that are reflected in the Company's request here.

Q. At page 22 of his surrebuttal testimony, Mr. Spadaccio claims that his use of spot stock prices in his DCF calculation and his use of analysis forecasts contain the most up-to-date projection of inflation. Do you agree?

A. No. Mr. Spadaccio used a spot price as of February 25, 2022 and March 1, 2022. These dates predate the acceleration of inflation that occurred in March and April 2022. So, just as the Commission noted in the Aqua case, the DCF lags investor concerns regarding inflation and higher interest rates. After all, the FOMC's actions to increase the Fed Funds rates occurred on March 16, 2022 and May 4, 2022, after Mr. Spadaccio measured his stock prices.

Q. Do you agree with Mr. Spadaccio where he states on page 12 of his surrebuttal testimony that the DSIC mechanism serves to lower a utility's risk? Mr. Garrett also makes the same argument at page 12 of his surrebuttal. Do you agree?

A. No. I explain on page 13 of my direct testimony why this is not correct.

Q. At page 21 of his surrebuttal testimony, Mr. Spadaccio asserts that financial institutions, such as banks, lend money based on actual book values. Has he offered any support for this assertion?

A. No. Banks lend money to utilities, including UGI Utilities, Inc., based on their ability to service that debt, including repayment. It is only based upon its future cash flows and the ability to permanently refinance short-term borrowings that banks extend credit to utilities. Mr. Spadaccio's argument has no merit.

Q. At pages 21-22 of I&E Statement No. 2-SR, Mr. Spadaccio claims that the market capitalization of a utility does not offer support for my leverage adjustment. Please respond.

A. Mr. Spadaccio cites to the Value Line reports where those amounts are related to the market value of equity and excludes debt. However, the Yahoo! Finance reports show that the "Enterprise Value" of a utility includes both its debt capital as well the market value of equity. This supports the fact that investors are well aware of the market value of a utility's total capitalization, including both debt and equity.

Q. On page 25 of his surrebuttal testimony, Mr. Spadaccio claims that less weight should be given to more distant forecasts because they are less reliable. Please respond.

A. I find his observations to conflict with his use of five-year projections of earnings growth in his DCF analysis. If reliance upon five-year projections, whatever their reliability, is okay for DCF purposes, then there is no reason to discount any of the projections of Treasury yields when looking for the appropriate risk-free rate of return in the CAPM.

Q. At pages 26-29 of his surrebuttal testimony, Mr. Spadaccio seems to imply that the evidence you used to support the size adjustment in the CAPM is not specific to utility stocks. Is this correct?

A. No. Mr. Spadaccio states on page 28 that the Fama/French study is not specific to utility stocks. But what Mr. Spadaccio has not acknowledged is that utility stock performance was used in the Fama/French study that makes the size adjustment relevant to utilities, and appropriate to consider in this case. Furthermore, the article by Annie Wong was deficient because it attempted to correlate betas with size. As Fama/French subsequently established, beta is not the correct measure to identify returns associated with the relative size of a company, either utility or non-regulated. Beta measures systematic risk, and the size of a company is an unsystematic risk. In addition, the size adjustment to the CAPM has been embraced by Federal Energy Regulatory Commission ("FERC").[1]

Q. What issues were contained in the surrebuttal testimony of OCA witness Garrett that require a response?

A. Mr. Garrett has addressed the following issues: capital structure, the DCF growth rate, results of the CAPM, leverage adjustment, and management performance.

Q. Has Mr. Garrett presented any new evidence that would justify departure from

[1] *See, e.g.*, Association of Businesses Advocating Tariff Equity, 171 FERC ¶61,154 (May 21, 2020).

the Commission's well-established practice of using Company's actual capital structure if it is reasonable?

A. No. At page 5 of his surrebuttal testimony, Mr. Garrett claims that he is not aware of a specific Commission policy on capital structure. In fact, the Company's FPFTY capital structure complies with the Commission's policy that supports the actual capital structure. The Commission has recently reiterated its position in the Order Entered May 16, 2022 in Docket No. R-2021-3027385, citing earlier orders in PPL Electric Utilities (2012), Columbia Gas Pennsylvania (2021), and PECO Energy-Gas Division (2021). Mr. Garrett says that the average debt ratio of my Gas Group supports his hypothetical capital structure ratios. Regardless, the range of capital structure ratios is the controlling factor that should be used to determine whether the Company's actual ratios are reasonable. The indicated debt ratios are 30.0% to 60.2% in 2020. Moreover, the Value Line forecasts show a range of 39.5% to 60.0% common equity for 2025-27. With this range, the Company's actual 55.12% common equity ratio for the FPFTY is reasonable and should be accepted in this case.

Q. Mr. Garrett suggests (see page 14 of OCA Statement No. 2-SR) that witnesses representing utility companies are inclined to use interest rate forecasts as a means to boost the risk-free rate of return in the CAPM. Please respond.

A. As a preliminary matter, interest rates and indeed all capital cost rates are influenced by investor expectations associated with future inflation. It has been reported recently that inflation has reached a 40-year high of 8.5% in March 2022 (the April rate was 8.3%). These inflation rates have not been seen since 1982. Future capital costs will be influenced by this fact and hence interest rate forecasts must be considered. It is necessary to understand the fundamentals surrounding those forecasts before making the blanket statement that the witnesses representing utility companies are inclined to use them in an attempt to increase the CAPM result. I do not dispute that in a low interest rate environment that forecasts of future interest rates generally trend toward higher rates than current rates. With the Fed Funds rate now moving above zero, there is little room for lower interest rates, at a time of increasing inflation. Likewise, during periods of high interest rates, which we have not seen for a long period, forecasts would trend toward lower rates. So the absolute level of interest rates must be considered when assessing the validity of the forecasts.

Q. Mr. Garrett further disputes your position regarding the Value Line betas and the market risk premium. Please respond.

A. On page 14 of his surrebuttal, Mr. Garrett disputes my adjustment to the Value Line betas. Notably, I have used the Value Line betas as a foundation just like all witnesses. I merely reflected the difference in financial risk attributed to the market value of the capitalization and book value of the capitalization. As to his arguments involving the equity risk premium (“ERP”) on page 15 of his surrebuttal, there is no support for the notion that the current ERP must be lower than the historical ERP because the historical data is widely employed in the investment and academic publications to provide a foundation for comparative performance. Moreover, I specifically analyzed the historical data in light of current and prospective interest rates. I incorporated the basic fact that risk premiums increase with lower interest rates and they decrease with higher rates. Mr. Garrett has failed to incorporate this reality in his analysis. Furthermore, I only used the historical data for one-half of my risk premium analysis. I also gave equal weight to forecasts in developing a risk premium that reflects investor-expectations of their required returns.

Q. At pages 17-18 of his surrebuttal, Mr. Garrett further opposes the Company's proposal for recognition of management performance. Mr. Spadaccio also opposes any recognition of the Company's management performance at pages 34-39 of his surrebuttal (I&E Statement No. 2-SR). Please respond.

A. Mr. Spadaccio asserts that recognition management performance is "nonsensical" in that higher equity returns should not occur for management initiatives that are funded by ratepayers. Mr. Spadaccio does acknowledge that the legislature authorized this approach and that the Commission has followed it. The Commission has a long history of recognizing management performance (either positively or negatively) in rate case decisions. If the Commission were to abandon its constructive ratesetting approaches, such as recognition of management performance, then its ranking by RRA would surely suffer.

Q. Does this conclude your rejoinder testimony?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 8-RJ

Rejoinder Testimony of
Sherry A. Epler

Topics Addressed: **Test Year Sales and Revenues**
Revenue Allocation and Rate Design

Dated: June 1, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Sherry A. Epler. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 8, on January 28, 2022, and my rebuttal testimony, UGI Gas Statement No. 8-R, on May 17, 2022.

Q. What is the purpose of your rejoinder testimony?

A. My rebuttal testimony responds to certain portions of the following direct testimony submitted by the Bureau of Investigation and Enforcement ("I&E"), the Office of Small Business Advocate ("OSBA"), and the Office of Consumer Advocate ("OCA"): (1) I&E Statement No. 4-SR, the surrebuttal testimony of Ethan H. Cline; (2) OSBA Statement No. 1-SR, the surrebuttal testimony of Robert D. Knecht; and (3) OCA Statement No. 3SR, the surrebuttal testimony of Jerome D. Mierzwa.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. No.

II. TEST YEAR SALES AND REVENUE

Q. In your rebuttal testimony, you noted how I&E witness Cline claimed he was using a 15-year regression analysis to develop his recommended usage per Rate R/RT hearing

customer, but in actuality, his workpapers revealed he was using a 5-year plus 1 month regression analysis. (UGI Gas St. No. 8-R at 10.) Does Mr. Cline agree with you in his surrebuttal testimony?

A. Yes. Mr. Cline acknowledges that his use of the 5-year and 1-month analysis was in error. (I&E St. No. 4-R at 21-22.)

Q. Despite this error, does Mr. Cline continue disagree with the Company's claimed present rate revenue for the fully projected future test year ("FPFTY")?

A. Yes. He has now presented the results of a 15-year regression within his surrebuttal testimony and quantified related updated sales and revenue adjustments. Specifically, Mr. Cline updates his recommendation, such that he now proposes the use of a projected average use per Rate R/RT heating customer for the FPFTY ending September 30, 2023, of approximately 90.0968 Mcf per year. (I&E St. No. 4-R at 21-23.) He then flows through his updated projection of average use per Rate R/RT heating customer to overall projected gas volumes, Rate R/RT present rate revenues, and surcharges. (I&E St. No. 4-R at 23-25.) Mr. Cline's suggested revised adjustment increases present rate revenue by $5,532,841. (*See* I&E Ex. No. 4-SR, Sch. 3, line 6.)

Q. Does the Company agree with Mr. Cline's revised 15-year analysis and his stated adjustment?

A. No. Mr. Cline's revised analysis remains flawed in terms of not meeting the criteria required for statistical significance, as discussed in detail in my rebuttal testimony (UGI Gas St. No. 8-R at 10-12), and should be rejected accordingly.

Q. Does Mr. Cline concede in his surrebuttal testimony that his regression analysis does not meet the criteria for statistical significance?

A. Yes. Mr. Cline applies the same criteria the Company utilizes to assess the statistical significance of his regression output, namely a review of the regression output P-values for the regression variables. (I&E St. No. 4-SR at 25.) On page 25 of his surrebuttal, he states that "[a]s shown on I&E Exhibit No. 4-SR, Schedule 2, all of the P-values, <u>except for X Variable 3</u> are below the 0.05 threshold." (I&E St. No. 4-SR at 25) (emphasis added). As I explained in my rebuttal testimony, "a well-established standard is that a P-value less than 0.05 means that the value is statistically significant, whereas a P-value greater than 0.05 means that the value is not statistically significant." (UGI Gas St. No. 8-R at 11.)

Notably, Mr. Cline does not dispute that his analysis contains a statistically insignificant variable. (I&E St. No. 4-SR at 25-26.) He also notes that his analysis is not statistically significant "according to the Company." (I&E St. No. 4-SR at 26.) However, the Company's approach of utilization of the P-values to determine statistical significance is not one that was made up by the Company. Rather, it is rooted in proper statistical analysis, as explained in my rebuttal testimony (see UGI Gas St. No. 8-R at 11-12). Thus, by Mr. Cline's own admission and in accordance with proper statistical analysis, Mr. Cline's 15-year approach – which lacks statistical significance – must be disregarded.

Q. If he has conceded that his regression analysis is not statistically sound, why does Mr. Cline continue to believe that a 15-year time period is appropriate for his residential heating use per customer regression analysis?

A. Mr. Cline claims that "statistical significance" should "not be the only factor in determining whether a use per customer adjustment is reasonable." (I&E St. No. 4-SR at 26.) Further, he asserts that "conditions that determine use per customer change over time and should no longer be considered representative of current trends." (*Id.*) Mr. Cline also then suggests that "a 50-year regression analysis would likely produce a result that is "statistically significant," but it is not reasonable to assume that data and usage trends from the 1960's, 1970's, and 1980's is indicative of customer usage patterns in 2022 and 2023." (*Id.*) I note that Mr. Cline does not provide any other factors that should be considered in evaluating the company's regression analysis.

Q. Do you agree with Mr. Cline's position?

A. No. The Company proposes an 18-year regression analysis, whose variables are all, indisputably, statistically sound. In contrast, I&E has proposed a corrected 15-year regression analysis, whose variables Mr. Cline admits are not all statistically sound. We are talking about a difference of 3 years between the Company's regression analysis and I&E's regression analysis, not decades. From my perspective, the Commission should rely on the Company's 18-year regression analysis, which no parties dispute as being statistically sound, as opposed to I&E's corrected 15-year regression analysis, whose own sponsoring witness concedes as being not statistically sound.

Furthermore, the Company has not suggested the use of a 50-year regression analysis or the use of data and usage trends stretching back to the 1960's, 1970's, and 1980's. Mr. Cline also provides no evidence that a 50-year regression analysis would produce a statistically significant result for the determination of residential heating use per customer. His testimony amounts to pure speculation about what a 50-year regression analysis would or would not show.

In the end, no reliable evidence or statistical principle supports the Commission accepting Mr. Cline's proposed 15-year time period – which does not demonstrate statistical significance – in lieu of the Company's 18-year analysis – which does demonstrate statistical significance. (*See* UGI Gas St. No. 8-R at 11-12.) Accordingly, Mr. Cline's recommended adjustment must be rejected.

Q. How did Mr. Cline address your rebuttal testimony demonstrating that I&E has been inconsistent in the number of years used in its regression analyses in prior cases, specifically using a 5-year and 1-month period in UGI Gas's 2022 base rate case, a 15-year period in UGI Gas's 2020 base rate case, and a 10-year period in UGI Gas's 2019 base rate case (UGI Gas. St. No. 8-R at 12)?

A. Mr. Cline states that "[t]he time periods selected by I&E were based upon the specific circumstances of each case." (I&E St. No. 4-SR at 22.)

Q. Does he elaborate or explain what those "specific circumstances" were?

A. No. He provides no clarification. Further, I can discern no "specific circumstances" in those cases that would require the use of varying periods for the regression analyses. However, one such reason would be if the selected period did not produce statistically sound results in that year's base rate case, so I&E had to select a different time period. The problem here is that I&E's selected period in this year's case does not produce statistically sound results, as I explained previously and as conceded by Mr. Cline. Thus, no reliable evidence or well-established principles of statistics support I&E's corrected 15-year regression analysis.

III. REVENUE ALLOCATION AND RATE DESIGN

A. REVENUE ALLOCATION AND RATE UNIFICATION

Q. OSBA witness Knecht points out an inconsistency in your testimony where you appear to be advocating a revenue allocation of both 2.0 times the system average increase for Rate R/RT and also 1.43 times the system average increase for Rate R/RT. (OSBA St. No. 1, pp. 7-8.) How do you respond?

A. Mr. Knecht is correct to highlight the discrepancy in my rebuttal testimony. To correct this discrepancy, lines 10-18 on page 14 of my rebuttal testimony should be struck.

Q. What is the Company's position on revenue allocation?

A. As noted in my direct testimony, the Company has goals of moving all classes of customers toward the system average return as part of its revenue allocation and also maintains a goal of achieving rate uniformity for Rate N/NT and Rate DS across the former UGI rate districts. To develop the full revenue allocation, the following principles should apply:

1. In continued attempt to unify Rate DS, the Rate DS revenue allocation should be determined by applying a revenue increase of 2.0 times the system average to the Rate DS former North Rate District rates.
2. Next, Rate DS for the former South and Central Rate Districts would be established by either (a) moving the Rate DS distribution charge for the former South and Central Rate Districts up to an equivalent unit rate to that of the Rate DS former North Rate District distribution unit rate (i.e., where the unit rate in step 1 above

for Rate DS former North Rate District is now above the current $2.9730/Mcf unit rate for the Rate DS former South and Central Rate Districts), or (b) leaving the current distribution unit rate unchanged (i.e., where the unit rate in step 1 above for Rate DS former North Rate District is still below the current $2.9730/Mcf unit rate for the Rate DS former South and Central Rate Districts).

3. Once the total net Rate DS change is determined from the summation of steps 1 and 2 above (inclusive of related DSIC roll-in revenues), the remaining revenue to be allocated to all other classes can be determined.
4. The remaining revenue increase determined in step 3 should then be allocated to Rate R/RT, Rate N/NT, and Rate LFD in a manner which would produce equivalent progress on a relative rate of return basis toward the system average return. This remaining increase would be inclusive of the DSIC roll-in amounts related to Rates XD and IS, in accordance with the rationale supporting this roll-in as found in the rebuttal and rejoinder testimony of Mr. Brown (see UGI Gas St. Nos. 1-R and 1-RJ).
5. As part of the final determination of Rate N/NT, the revenue allocation to this class should be apportioned in a manner which unifies the Rate N/NT former North Rate District with the former South and Central Rate Districts. Given the modest difference existing, this is readily accomplished in this proceeding.

The above revenue allocation determination includes elements of both gradualism (2.0 times system average return limits) as well as equitable impact (Rate R/RT, Rate N/NT, and Rate LFD all moving the same relative movement toward system average return).

B. RATE DESIGN - BALANCING CHARGES

Q. Does OCA witness Mierzwa recommend any changes to the Company's balancing service charges?

A. Yes. Despite Mr. Mierzwa now "no longer pursu[ing] the allocation of storage demand charges to Rate NNS" as a result of the Company's rebuttal (see OCA St. No. 3SR at 14), Mr. Mierzwa continues to claim that Rate MBS charges should be inclusive of pipeline storage capacity and demand costs at a level equivalent to the 5% maximum balancing tolerance which is permitted under Rate MBS service. (*See* OCA St. No. 3SR at 14-15.) This 5% is in contrast to the Company's *actual* storage use of 2.5737%, on which the Company's Rate MBS rate was designed. (*See* UGI Gas Exhibit SAE-8.) As alleged support, Mr. Mierzwa contends that, "Customers should be charged for the level of service they are entitled to and, therefore, it is appropriate to design the MBS rate based on the 5% percent tolerance." (OCA St. No. 3SR at 15.) Further, Mr. Mierzwa provides the following example:

> [C]ustomers under Rates LFD and XD are charged for the maximum daily quantity of service they are entitled to. These charges are not reduced if a customer does not utilize their maximum daily service entitlement. Similarly, PGC customers are charged for interstate pipeline capacity costs based on their expected design day demands, not their actual demands.

(OCA St. No. 3SR at 15.)

However, Mr. Mierzwa's example is flawed.

Q. Why is Mr. Mierzwa's example flawed?

A. While customers under Rates LFD and XD are charged based on their maximum daily quantity, and Purchased Gas Cost ("PGC") customers are charged for interstate pipeline capacity costs based on expected design day demands, both of these customer groups have direct access to assets and (by either capacity release or holding capacity directly). Thus, all these Rate LFD and XD customers, and the PGC, are able to utilize those assets when they are not needed to generate revenues which offset the costs of the capacity. This allows these customer groups to offset the fixed costs they pay related to their peak service capacity requirements.

By contrast, Rate MBS customers do not have direct access, and are not able to be provided direct access, to the storage assets backing up Rate MBS and cannot sell these assets for use by others into the market to generate revenues to offset Rate MBS charges. If Rate MBS customers were given storage capacity equivalent to their 5% tolerance, then Mr. Mierzwa's argument would have merit, as customers would then be able to sell that capacity to the market when they are not utilizing it and retain the benefit. However, because Rate MBS is provided by a shared set of storage assets with the PGC customers, it is the PGC that gets the use of unused storage assets which back up Rate MBS service, and it is the PGC that gets to monetize and retain the value of storage when it is not needed for system balancing.

For example, the Company regularly enters into Storage Asset Management Agreements with third parties. Those third parties pay for the right to manage those storage assets. The revenues from these arrangements are then subject to the PGC sharing mechanism and provide a credit to PGC customers and a sharing to the Company as an incentive to maximize related revenues. Rate MBS customers receive no form of credit against their costs for these Storage Asset Management arrangements. Because the PGC is monetizing the value of the storage capacity that is not required by the Rate MBS customers, in this case the capacity represented by the difference between 5% "permitted use" and the 2.5737% "actual use," Rate MBS customers should only be assigned costs representative of their actual use, as the Company has proposed in its Rate MBS rate design. This approach represents a fair allocation of storage costs between Rate MBS customers and other storage users.

Thus, Mr. Mierzwa's recommendation should not be adopted. However, if the Commission were to adopt Mr. Mierzwa's suggested 5% storage cost allocation for Rate MBS, it would then likewise need to direct that a sharing of the revenues generated by the use of these assets (when not being used by Rate MBS customers) be returned to the Rate MBS customer group.

IV. <u>CONCLUSION</u>

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

23980667v1

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 9-RJ

Rejoinder Testimony of
Timothy J. Angstadt

Topics Addressed: Leak Reductions

Dated: June 1, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Timothy J. Angstadt. My business address is One UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 9, on January 28, 2022. I also submitted my rebuttal testimony, UGI Gas Statement No. 9-R, on May 17, 2022.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony responds to certain portions of the following surrebuttal testimony submitted by the Bureau of Investigation and Enforcement ("I&E"): I&E Statement No. 6-SR, the surrebuttal testimony of Jessalynn Heydenreich.

II. LEAK REDUCTIONS

Q. In her rejoinder testimony, Ms. Heydenreich states that the small increase in new leaks identified in 2021 over 2020 may indicate that the riskiest pipeline in the Company's pipeline system has not been replaced. (I&E St. No. 6-SR, p. 4.) Do you agree with her?

A. No, I do not. Ms. Heydenreich acknowledges in her testimony that the Company's pipeline assets are ranked annually through the Distribution Integrity Management Plan ("DIMP"), and that this process identifies the riskiest pipes for replacement. (I&E St. No. 6-SR, p. 4.) UGI Gas reviews its DIMP and risk ranking process with Gas Safety on a regular basis to ensure that its process is effectively identifying and reducing risk on the UGI Gas system. Further, as I noted in my rebuttal testimony, the Company does not use leak metrics alone to identify pipelines for main replacement and Ms. Heydenreich's concerns are already addressed within the Company's risk management process.

III. <u>CONCLUSION</u>

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 10-RJ

Rejoinder Testimony of
Constance E. Heppenstall

Topics Addressed: **Cost of Service Allocation**

Date: June 1, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Constance E. Heppenstall. My business address is 1010 Adams Avenue, Audubon, Pennsylvania.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted direct testimony, UGI Gas Statement No. 10, on January 28, 2022, and rebuttal testimony, UGI Gas Statement No. 10-R on May 17, 2022

Q. What is the purpose of your surrebuttal testimony?

A. The purpose of my rejoinder testimony is to discuss the surrebuttal testimonies of: (1) Robert D. Knecht, submitted on behalf of the Office of Small Business Advocate ("OSBA"); and (2) Jerome D. Mierzwa, submitted on behalf of the Office of Consumer Advocate ("OCA").

SURREBUTTAL TESTIMONY OF ROBERT D. KNECHT

Q. Mr. Knecht rejects the allocation of manufactured gas plant ("MGP") remediation expenses, forfeited discounts, and other miscellaneous revenues based on sales volumes. (OSBA St. No. 1-S at 2-3.) Do you agree?

A. No. First, Mr. Knecht's focus on the past (stating that Manufactured Gas Plants were used under a different regulatory scheme and benefitted all customers) and his attempt to characterize remediation costs as an environmental tax are unsupported by any evidence. His surrebuttal testimony serves to distract from the fact that these assets historically served residential and small commercial customers and would do the same today if they were in operation. As such, these remediation expenses relate to the provision of safe and reliable service for residential and small commercial customers and should be allocated and included in the Company's Purchased Gas Cost ("PGC") calculation.

Second, as explained on pages 7-8 of my rebuttal testimony, these costs should be allocated in the same manner as they would be had the asset been in service, or based on Factor 1, which allocates costs to Rate R and Rate N customers based on firm service. These costs should not be allocated to all classes of customers as recommended by Mr. Knecht.

Q. Mr. Knecht rightly points out that the labor allocation was not updated within the sub-functionalization of Account 874. (OSBA St. No. 1-S at 3-4.) What is the effect on the cost of service in correcting this?

A. The allocation to the residential class changes by $73,909 or 0.015%, which is de minimis.

Q. Mr. Knecht also disagrees with OCA witness Mierzwa and the Company's revised allocation of reconnection revenues based on actual revenue by customer class, as he maintains that these revenues be allocated based on the cost for those reconnections. (OSBA St. No. 1-S at 4.) How do you respond?

A. In his surrebuttal testimony, Mr. Knecht simply references his rebuttal testimony as support for his position regarding Mr. Mierzwa's change in the allocation of reconnection revenues. (OSBA St. No. 1-S at 4.) As stated on pages 8-9 of my rebuttal testimony, I agree with Mr. Mierzwa's allocation, which is based on the actual revenues received by class, as the revenue should be allocated or credited to the class that contributed the revenue.

<u>SURREBUTTAL TESTIMONY OF JEROME D. MIERZWA</u>

Q. Mr. Mierzwa points to the Columbia Gas decision at Docket Nos. R-2020-3018835, *et al.* ("Columbia Gas Decision") in which the Pennsylvania Public Utility Commission ("Commission") approved the use of the Peak and Average ("P&A") method of

allocation. (OCA St. No. 3SR at 3.) Please discuss.

A. In citing the Columbia Gas Decision, Mr. Mierzwa neglects to mention that none of the parties in that case presented a cost of service study using the Average and Excess Method ("A&E Method), which is the cost allocation method recommended by the Company in this case. Therefore, the Commission could not adopt the A&E Method in the Columbia Gas Decision.

Q. In addition, Mr. Mierzwa states that in the PECO Energy Company – Gas Division rate case ("PECO Gas") Docket Nos. R-2020-3018929, *et al.*, the Commission found that the appropriate cost of service method for a natural gas distribution company should be determined on a case-by-case basis. (OCA St. No. 3SR at 3.) Please discuss.

A. Mr. Mierzwa is correct in his reading of the PECO Gas case. However, as stated on page 3 of my rebuttal testimony, there is precedent to using the A&E Method in UGI Gas's base rate cases. The Commission also approved the A&E methodology for a predecessor of UGI Gas in the PPL Gas Utilities Corporation ("PPL Gas") (subsequently UGI Central Penn Gas, Inc. and now part of UGI Gas) base rate case at Docket No. R-00061398 (referred to herein as the "PPL Gas Case"). Mr. Mierzwa's quote from the PECO Gas rate case provides no basis for the Commission to renounce the methodology utilized in UGI Gas's prior base rate cases. In fact, the Commission values consistency in the cost of service methodology utilized by a public utility in its base rate cases.[1] In addition, as stated in my rebuttal testimony, the P&A method of allocation implicitly double counts average demand and is not appropriate to use in this case. (UGI Gas St. No. 10-R at 3-5.)

[1] *See Pa. PUC v. PPL Elec. Utils. Corp.*, Docket Nos. R-2012-2290597, *et al.*, p. 113 (Order entered Dec. 28, 2012) (rejecting OCA's proposed cost of service methodology because, among other reasons, "PPL's proposed COSS in the instant proceeding is virtually identical to the COSS approved in 2020").

Q. In addition, Mr. Mierzwa quotes the PECO Gas order's statement that "PECO's distribution mains system garners considerable weight in the balance of mains costs" and points to his analysis that for UGI Gas, only approximately 10% of distribution mains costs are associated with meeting peak demand requirements. (OCA St. No. 3SR at 7.) Do you agree with his assessment?

A. In this statement, he relies on the calculation presented in his direct testimony purportedly showing that only 10% of mains costs are associated with meeting peak demands. (OCA St. No. 3SR at 7 n.18) (citing OCA St. No. 3 at 23). His analysis compares the cost differential between a 2-inch main and a 4-inch main, assuming that the 2-inch main is needed for average usage and the upsize to a 4-inch main is needed for peak usage. This analysis is flawed for two reasons. One, his calculation of 10% for peak demand only includes analysis for mains from 2-inch to 4-inch, whereas the Company has mains up to 12 inches in diameter, which are much more costly to install than a 4-inch line. Two, he assumes that the 2-inch line is only sized and used for average demand, where much of the 2-inch line's capacity would be used for peak demand.

Q. Mr. Mierzwa states on page 4 of his surrebuttal testimony that "assigning no peak demand related costs to interruptible customers is inconsistent with the use of A&E method in *Gas Rate Fundamentals*". (OCA St. No. 3SR at 4.) Do you agree?

A. No, I do not. On page 228 of *Gas Rate Fundamentals*, Fourth Edition, in the section titled "Peak Day Requirements," the text clearly states that "[w]here interruptible sales are included in the sendout data, these loads must be eliminated" in determining the peak day requirements.

Q. Mr. Mierzwa also refers to Mr. Paul Herbert's rebuttal testimony and workpapers in UGI Gas's 2020 base rate case at Docket No. R-2019-3015162 as proof that Gannett Fleming recommends that the Interruptible class should be assigned peak day demand. (OCA St. No. 3SR at 4-5.) Please discuss.

A. On page 11 of Mr. Herbert's rebuttal testimony, UGI Gas Statement No. 8-R, (which is attached as UGI Gas Exhibit CEH-1RJ), he assessed the <u>hypothetical</u> effect of moving some Interruptible customers to firm service and assigning peak day demand to this class. However, this exercise was clearly only a hypothetical calculation. The assignment of any peak day demand to the Interruptible class was rejected by the Company in the 2020 base rate case, contrary to what Mr. Mierzwa has implied in his testimony.

Q. Mr. Mierzwa also stands by his assertion that the Company's A&E method equates to using a peak allocation. (OCA St. No. 3SR at 5.) Do you agree?

A. No, A&E method differs by 3.37%. (UGI Gas St. No. 10-R at 7.) As stated in my rebuttal, "the difference between a pure peak allocator (of 0.5022) and my A&E factor (of 0.4685) is 3.37% less for Rate R under my A&E method versus a pure peak allocator." (UGI Gas St. No. 10-R at 5-6.) Accordingly, Mr. Mierzwa is wrong in concluding that the A&E Method is identical to a pure peak allocator. (UGI Gas St. No. 10-R at 6.)

Q. Mr. Mierzwa has revised his position regarding the recovery of costs related to manufactured gas plant remediation stating that it would be appropriate to deny UGI Gas recovery of these costs. Please discuss.

A. In Mr. Mierzwa's direct testimony, he recommends that the costs related to manufactured gas plant remediation be allocated based on Factor 12, a composite factor based on total operation and maintenance costs. Now, in surrebuttal, he states it would be appropriate that these costs be denied, and not recovered in base rates. Please refer to UGI Gas Statement No. 3-RJ, the rejoinder testimony of Vivian Ressler regarding this issue.

Q. Finally, Mr. Mierzwa, on page 30 of his surrebuttal testimony, shows a summary comparing OCA's study and the Company's Cost of Service Study. Do you have any comments on Mr. Mierzwa's summary?

A. Despite Mr. Mierzwa's differences regarding the Company's cost of service methodology, OCA's position regarding the cost to serve the Residential class is only $6,082,058 ($471,011,760 - $464,929,702) or 1.29% different than the Company's position. Thus, given the minor difference between the cost of service methodologies' results for the Residential customer class, I do not see any compelling reason for the Company to switch from the A&E method, which UGI Gas has consistently used for many years, to the P&A method proposed by Mr. Mierzwa.

Q. Does that conclude your rejoinder testimony?

A. Yes, it does.

Rebuttal Testimony of
Paul R. Herbert

Topics Addressed: Cost of Service Allocation

Date: June 19, 2020

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION
DOCKET NO. R-2019-3015162

RE: UGI Utilities, Inc. – Gas Division

REBUTTAL TESTIMONY OF PAUL R. HERBERT

Q. Please state your name and business address.

A. My name is Paul R. Herbert. My business address is 207 Senate Avenue, Camp Hill, Pennsylvania.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 8, on January 28, 2020.

Q. What is the purpose of your rebuttal testimony?

A. My testimony responds to certain portions of the following direct testimony: Office of Consumer Advocate ("OCA") Statement No. 4, the direct testimony of Jerome D. Mierzwa; Office of Small Business Advocate ("OSBA") Statement No. 1, the direct testimony of Robert D. Knecht; and Bureau of Investigation and Enforcement ("I&E") witness Statement No. 5, the direct testimony of Esyan Sakaya. Specifically, I will be addressing cost of service allocation issues.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. UGI Gas Exhibit PRH-1R is attached.

<u>OCA Statement No. 4 – Jerome D. Mierzwa</u>

Q. Beginning on page 9 of OCA Statement No. 4, Mr. Mierzwa states that the Average and Excess (A&E) method you used in your cost of service allocation study (UGI Gas Exhibit D) does not produce a reasonable allocation of mains costs on the UGI system. Further, Mr. Mierzwa states on pages 21 and 22 that the Peak and Average ("P&A") method is the preferred method and that the Commission has provided guidance as to the appropriate cost allocations for natural gas distribution companies. Why did you use the A&E method?

A. The Commission's most recent decision and guidance in a fully litigated gas case approved my study and methodology using the A&E method. It was submitted in 2006 for the PPL Gas Utilities Corporation (subsequently UGI Central Penn Gas, Inc. and now part of UGI Gas) base rate case at Docket No. R-00061398. In my PPL Gas cost allocation study, I weighted the average use 40% and excess capacity 60%, based on the system load factor in a manner similar to the A&E method used in my Cost of Service Study (COSS, also referred to by Mr. Knecht as a Cost of Service Allocation Study or CSAS) for UGI Gas in this case. It is unclear why Mr. Mierzwa relies on gas cases from the early 1990's and ignores the most recent Commission decision and guidance concerning cost allocation methods.

Q. Why has the Commission preferred the A&E method over the P&A method?

A. The P&A method places too much weight on average use. In fact, the P&A method double counts the average demand because it uses average demand twice, *i.e.*, once in the calculation of average demand and again in the calculation of peak demand. This is evident because peak demand figures include the entire demand, including average use. Mr. Mierzwa's P&A allocator therefore double-counts average use and places little emphasis on the peak demands of customers that UGI must design its system to meet. The A&E method used in my study properly weights the portion of the system on average demands and the portion of the system on the excess capacity of peak demands.

Q. Please illustrate how the P&A method is flawed.

A. Take, for example, a system that has a peak day demand of 1000 units and an average day demand of 400 units. The peak and average method will give equal weight to the average demand of 400 units per day and to the peak day demand of 1000 units. But the 400 average day units are also included in the 1000 peak day units, so the average is counted twice. In the A&E method, however, the 400 average day units and the amount <u>over the average</u> of 600 units (excess capacity) are weighted based on the system load factor so that the average day demand is not double counted. The P&A method erroneously uses 1400 units (400 average and 1000 peak) as a basis for allocation rather than the actual 1000 peak day units used in the A&E method. Stated another way, my average and excess method would allocate 40 per cent of costs to average demand and 60% to peak demand; Mr. Mierzwa's method would allocate 57 per cent to average demand ((400 + 400) / 1400) and 43 percent to peak demand. It makes no sense, in my view, to allocate 57 per cent of costs based average demand on a system an average demand of 40 per cent, yet this is precisely the result achieved under Mr. Mierzwa's analysis.

Q. Your cost of service study, presented in UGI Gas Exhibit D, allocates the cost of mains based on the A&E method after assigning the cost of mains directly attributable to the XD-Firm and XD-I customers. Did Mr. Mierzwa object to that approach?

A. No. Although he did not mention or comment on the Company's approach to directly assign the cost of mains to the XD-F and XD-I customers, his workpapers submitted in Excel format clearly show that he uses the same costs directly assigned to the XD customers as presented in the Company's study.

Q. How did you allocate mains to the other classes?

A. I used the A&E method with no excess capacity allocated to the interruptible service class.

Q. Why did you conclude that no excess capacity allocated to interruptible customers was appropriate?

A. As explained in my direct testimony, interruptible service customers can be interrupted during periods of peak demand and UGI Gas's mains are designed to only meet the peak day requirements of firm service customers. Thus, the excess amount is zero.

Q. Did Mr. Mierzwa acknowledge that it is appropriate to allocate mains to the interruptible class as you did in Exhibit D?

A. No, to the contrary. His P&A study suggests his disagreement with my approach for the Interruptible customers. In his Peak and Average study, he uses the average day requirement for his Peak day portion of his allocation factor in addition to including the average usage in his average day component, further demonstrating the double counting of the average day usage. By using average day in his peak day component however, he agrees that there is no <u>extra</u> capacity assigned to the Rate IS class.

In my A&E study, I account for the average day usage once by using only the average day requirement for the IS class with no extra capacity.

Q. Have you considered an alternative to the allocation of mains to the IS class?

A. Yes. Please refer to my rebuttal testimony addressing Mr. Knecht, where I explain how my COSS (or CSAS) results would change if the portion of the IS customers which could be provided firm service were so moved into a firm class.

Q. Mr. Mierzwa claims that the use of your A&E method that weights the average and excess demands based on the system peak day equates to using a peak allocator. Do you agree?

A. No, I do not. Mr. Mierzwa's assertion that my A&E allocation is identical to a pure peak allocator is simply wrong. Table 3 on page 13 of his testimony clearly demonstrates that my A&E method does <u>not</u> produce the same result as a pure peak allocation. For example, the difference between a pure peak allocator and my A&E factor is 3.44% less for Rate R. When allocating over $1.5 billion in rate base for mains, this is a significant difference in result.

My A&E allocation is weighted based on a firm 2.5 peak day factor which results in a weighting of 39.6% for average day usage and 60.4% for extra capacity. The approximate 40/60 weighting is the same weighting used in my A&E cost of service study from the 2006 PPL Gas Utilities case, which was accepted by the Commission. Mr. Mierzwa's rejection of my A&E cost allocation, because he believes that it is a pure peak allocation, is unfounded.

Q. Did Mr. Mierzwa have other allocation revisions to your study?

A. Yes. He proposes revisions to the allocation of manufactured gas plant ("MGP") remediation expenses, customer deposits and other miscellaneous revenues.

Q. Do you agree with his revision to customer deposits?

A. Yes. At the time of filing the rate case, the customer deposits by rate class for the historic test year was not readily available, so the customer deposits for 2018 were used for Factor 21. During discovery, customer deposits for 2019 became available and the updated factor is reflected in my revised cost allocation study in UGI Gas Exhibit No. PRH-1R.

Q. Do you agree with Mr. Mierzwa's revision to the allocation of reconnection fees included in miscellaneous revenues?

A. Yes. During discovery, actual reconnection fee revenues by rate class for a recent twelve-month period was provided in response to OCA-VI-17. Based on this information, I calculated a new Factor 5A which allocates the FPFTY reconnection fee revenues as a credit to the allocated cost of service. This revision is also reflected in UGI Gas Exhibit PRH-1R.

Q. What does your UGI Gas Exhibit PRH-1R show?

A. I will discuss all the revisions reflected in UGI Gas Exhibit PRH-1R, which revises my original Exhibit D, in my rebuttal of Mr. Knecht.

Q. Do you agree with Mr. Mierzwa's revision to the allocation of expenses associated with manufactured gas plant remediation.

A. No, I do not. The remediation expenses relate to manufactured gas plants ("MGPs") which have been long retired and no longer produce gas supply. However, if these MGPs were still in operation, the gas produced and the associated costs would be included in the Company's Purchased Gas Cost ("PGC") calculation related to core market residential and small firm service. This is because, historically, the MGPs were overwhelmingly used to provide gas supply to residential and small commercial customers, rather than industrial customers. This historic use is fully described in the rebuttal testimony of Joseph

Kopalek, UGI Gas Statement No. 5-R. Therefore, it is appropriate to allocate remediation costs associated with the past provision of service to PGC customers to PGC customers.

Q. What do you conclude with respect to Mr. Mierzwa's cost allocation study?

A. Mr. Mierzwa's allocation of mains investment using the P&A method, which double counts the average demand, is unreasonable and inconsistent with the Commission's last fully litigated natural gas base rate case in *PPL Gas Utilities*. The Commission should use the Company's studies as a guide for revenue distribution in this case. As discussed above, his other allocation factors for the MGPs and the IS rate class are also inappropriate.

<u>OSBA Statement No. 1 - Robert D. Knecht</u>

Q. Please summarize OSBA witness Robert D. Knecht's recommendations concerning your COSSs.

A. Mr. Knecht (a) concludes that the Company's cost of service allocation study (CSAS) in Exhibit D is consistent with Commission precedent and sound cost allocation practices, (b) recommends separating the Rate XD-I customers from the Rate IS class, (c) recommends converting all Rate IS customers to firm service, and (d) proposes revisions to the allocation of certain cost items in the study.

Q. Mr. Knecht comments on pages 30 and 31 of his testimony regarding the

Company's methods for allocating the largest items in the CSAS, namely mains, meters and services. Please respond.

A. Mr. Knecht concludes that the Company's approach using the A&E demand allocator and incorporating the direct assignment of mains to XD customers is consistent with past practice and Commission precedent. He also accepts the Company's direct assignment approach for the allocation of meters and services which reflects the Company's more detailed analysis of deriving the actual cost by rate class.

Q. On page 31 or his testimony, Mr. Knecht recommends one change to the Company's CSAS methodology. Please explain.

A. Mr. Knecht recommends that the XD-I customers that receive interruptible service, should be included with the XD-Firm classification as they are more similar to the XD class than the rest of the Rate IS customers. I included the XD-I customers with the Rate IS class in Exhibit D because the XD-I revenue is included with the Rate IS class in the Company's revenue exhibit. However, I acknowledge the benefit and logic to Mr. Knecht's recommendation and I have moved the XD-I customers and their associated revenue into the XD-Firm class in my revised CSAS in UGI Gas Exhibit PRH-1R.

Q. What volumes did you use for the XD-I class?

A. In my original CSAS study in Exhibit D, I used an annual volume of 40,793,694 mcf for the XD-I customers. When preparing UGI Gas Exhibit PRH-1R, I discovered that volume was in error. The correct annual volume for XD-I customers is 42,584,155 mcf.

Q. Did you consider any other changes to the allocation of costs to the remaining Rate IS customer classification?

A. Yes, I did. In order to address the interruptible class issues raised by Mr. Knecht, I conducted an analysis using my revised CSAS in UGI Gas Exhibit PRH-1R that evaluated the hypothetical impact of moving 105 of the 371 Rate IS customers to firm service (those customers not requiring any distribution investment to provide firm service, or the maximum viable subset of Mr. Knecht's proposal). The analysis of the factors involved in actually migrating these Rate IS customers to firm service is further explained in the rebuttal testimony of Mr. Stoyko, in UGI Gas Statement No. 11-R, as is the Company's basis for rejecting Mr. Knecht's proposal. My analysis of the impact of migrating the 105 customers from Rate IS to firm service showed that doing so would have a nominal effect on the overall CSAS. Specifically, the proposal would increase the cost of service to the Rate IS class as a whole by $1.035 million, or from $13,840,769 to $14,875,200. As I noted previously, the Company does not agree with Mr. Knecht's proposal, and therefore UGI Gas Exhibit PRH-1R does not reflect his proposal.

Q. How did you conduct your analysis for the 105 Rate IS customers?

A. The Company identified, for each customer, their maximum daily quantity ("MDQ") and I reflected the extra capacity amount for these customers in the revised CSAS to assess the impact of Mr. Knecht's proposal.

Q. Please address the other minor changes that Mr. Knecht proposes to the allocation of certain cost items. Do you agree that the rounding mechanism in your CSAS model is problematic?

A. No, I do not. Any rounding in the allocation factors in my study is done to the nearest $1/100^{th}$ of one percent. The CSAS is used as a guide as to the approximate cost responsibility of each class. It is not necessary to achieve accuracy better than $1/100^{th}$ of a percent as a material difference would not result.

Q. Please explain Mr. Knecht's proposed revision for allocating meter costs.

A. In the last case, Mr. Knecht revised my meter allocation factor to reflect the Company's projected investment in telemetry equipment to provide daily readings for Rates DS, LFD, XD and IS customers. I agreed with his revision and I continued to reflect this allocation in the current case in Factor 6. However, the response to OCA-VI-3 indicates that such telemetry costs are included in Account 398, Miscellaneous Equipment rather than the meter accounts 381 and 385. My revised CSAS in UGI Gas Exhibit PRH-1R reflects this correction, by allocating the telemetry costs in Account 398 to the DS, LFD, XD and IS customers based on the number of customers and revising Factor 6 to exclude the telemetry equipment.

Q. On page 32 of OSBA Statement No. 1, Mr. Knecht recommends that the costs for remediating manufactured gas plant sites should be allocated to all rate classes (using Factor 2), not just Rate R and Rate N. Do you agree?

A. No, I do not, at least not the way he allocates such costs. In the last case, in order to eliminate the issue, I did not oppose his revision to remediation costs (using Factor 2 in my rebuttal exhibit) but only to the rate base portion of such costs, because it represented only a very small part of rate base. I continued to use Factor 2 for the rate base portion in this case but consistently used Factor 1 (allocation to Rates R and N only) for the O&M remediation costs. The O&M costs represent the current costs of remediation and, as described previously in discussing OCA's proposal regarding MGP costs, it is appropriate for these costs to be borne by the customer classes that historically were the overwhelming beneficiaries of their use, which were Rates R and N. As noted in response to Mr. Mierzwa's recommendation, this historic use is fully described in the rebuttal testimony of Joseph Kopalek, UGI Gas Statement No. 5-R.

Rates DS, LFD, XD and IS did not benefit from these production assets. Mr. Knecht's use of Factor 2, which allocates over 75% of remediation costs based on volumes to the Rate DS, LFD, XD and IS classes is unreasonable and distorts the results of his study.

Q. Mr. Knecht also proposes revisions to customer deposits and reconnection fees. Do you agree?

A. Yes. As indicated in my rebuttal testimony of Mr. Mierzwa, I have reflected these revisions in UGI Gas Exhibit PRH-1R.

Q. On page 33 of OSBA Statement No. 1, on Table IEc-2, Mr. Knecht makes a comparison of his CSAS rate of return by class with the results of your Exhibit D CSAS. Please comment.

A. The comparison of the studies shows only a relatively small difference in the rates of return under present rates by class, with the exception of Rates XD and IS. The larger variance for Rate XD is due to Mr. Knecht's study that allocates an unreasonable amount of remediation costs to the XD class as discussed above. The variance in Rate IS reflects that Mr. Knecht treats all Rate IS customers as firm, which has not been adopted by the Company as discussed above. The Table below compares rates of return under present rates of my original Exhibit D, with my revised CSAS in UGI Gas Exhibit PRH-1R, and also with the studies of OSBA and OCA.

Rate Class	Exhibit D	Exh. PRH-1R	OSBA-RDK w/ Firm IS	OCA Stmnt No.4
Rate R	3.23%	3.26%	3.49%	3.67%
Rate N	7.77%	7.76%	8.04%	8.65%
Rate DS	11.37%	11.38%	11.51%	11.31%
Rate LFD	12.90%	11.70%	12.75%	8.18%
Rate XD	12.86%	13.28%	8.93%	10.55%
Rate IS	16.55%	17.06%	12.53%	9.22%
Total	5.95%	5.95%	5.95%	5.95%

Q. What do you conclude regarding the above Table?

A. The rates of return for Rates R, N and DS are similar. The differences for Rates

LFD, XD and IS have been explained above. The important conclusion is that for all the studies submitted in this case, Rate R is significantly below the average rate of return and all other classes are significantly above the average rate of return. Any proposed revenue distribution approved in this case should recognize this fact. Under the Company's proposed rates, Rate R continues to be below the average rate of return while all other classes are above it.

<u>I&E Statement No. 5 – Esyan Sakaya</u>

Q. Please respond to the cost of service issues addressed in I&E witness Esyan Sakaya's Statement No. 5.

A. Mr. Sakaya does not oppose the Company's CSAS study. He only addresses the customer cost analysis and the recommended customer charges.

Q. What are his issues with respect to the customer cost analysis?

A. He recommends the removal of Account 912.1 Energy Efficiency and Conservation (EEC) program costs and to reflect forfeited discounts as a credit to customer costs.

Q. Do you agree with his revisions?

A. No, I do not. In fairness to Mr. Sakaya, the line item on my customer cost analysis (Schedule G of Exhibit D), is mis-labeled. The $244,334 expense that Mr. Sakaya is referring to is actually Account 908/912, Service Representatives, which is the cost for Company employees to handle customer account inquiries for Rate DS, LFD, XD and IS customer classes. Refer to Schedule E, page 2 of 4, on page 11 of Exhibit D under Sales Expenses, which shows the allocation of Account 908/912, Service Representatives to the customer component for Rate DS, LFD, XD, and IS classes. EEC program costs are also shown on the same page 11 of Exhibit D for Account 910.1, and are properly allocated to volumetric rate classes, based on the revenue received for EEC charges. As a result of this correction, his revision is not necessary or appropriate.

Q. Please explain why you oppose Mr. Sakaya's revision to reflect forfeited discounts as a credit to customer costs.

A. Mr. Sakaya's customer cost analysis is a <u>direct</u> cost analysis. Forfeited discounts, as a credit to customer costs, would be considered an <u>indirect</u> cost (credit). My fully-allocated customer cost analysis at the top of Schedule G of Exhibit D, properly reflects all <u>direct and indirect</u> customer costs, including the credit for forfeited discounts. The remaining part of Schedule G shows my direct cost analysis which excludes indirect costs and forfeited discount credits.

The purpose of preparing a direct customer cost analysis in support of customer charges is to determine the total monthly customer costs for customers that pay their bill on time. A proper direct customer cost should not be reduced for customers that do not pay their bill on time. In order to have proper guidance for the development of customer charges, the total direct customer costs should be considered without adjustments for indirect costs.

Q. How do your direct customer costs compare with Mr. Sakaya's direct customer costs?

A. Even with Mr. Sakaya's adjustments, his customer costs shown below for Rate R are within 99% of my Rate R customer costs and are identical for Rate N. His customer costs for the remaining classes are all within 96% of my customer costs.

Rate Class	Company Direct Costs per bill	I&E Direct Costs per bill
Rate R	$26.22	$26.05
Rate N	$42.74	$42.74
Rate DS	$226.54	$218.22
Rate LFD	$374.96	$366.64
Rate XD Firm	$834.75	$826.42
Interruptible	$309.19	$300.87

Q. Do the customer costs shown above fully support the proposed Rate R and Rate N customer charges proposed by the Company in this case?

A. Yes, they do. The Company proposed monthly customer charges of $19.95 for Rate R and $30.00 for Rate N. Both of these rates are substantially below the customer costs shown above.

Q. Does that conclude your rebuttal testimony?

A. Yes, it does.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 11-RJ

Rejoinder Testimony of
John D. Taylor, Managing Partner
Atrium Economics, LLC

Topics Addressed: **Weather Normalization Adjustment**
Residential Customer Charge

Dated: June 1, 2022

Table of Contents

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is John D. Taylor, and I am employed by Atrium Economics, LLC ("Atrium") as a Managing Partner. My business address is 10 Hospital Center Commons, Suite 400 Hilton Head Island, SC 29926.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 11, on January 28, 2022. I also submitted rebuttal testimony, UGI Gas Statement No. 11-R, on May 17, 2022.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony responds to surrebuttal testimony of other parties relating to the Company's proposed Weather Normalization Adjustment ("WNA") mechanism and the proposed Residential Customer Charge. The surrebuttal testimonies of other parties addressed are as follows:

- Bureau of Investigation and Enforcement ("I&E") Statement No. 4-SR - surrebuttal testimony of Ethan H. Cline ("I&E witness Cline")
- Office of Consumer Advocate ("OCA") Statement No. 3SR - surrebuttal testimony of Jerome D. Mierzwa ("OCA witness Mierzwa")
- Office of Consumer Advocate ("OCA") Statement No. 4SR - surrebuttal testimony of Roger D. Colton ("OCA witness Colton")
- The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1-SR – surrebuttal testimony of Harry S. Geller ("CAUSE-PA witness Geller")

23980555v1

I. WEATHER NORMALIZATION ADJUSTMENT

Q. Please summarize OCA witness Mierzwa's surrebuttal testimony relating to the alleged appropriateness of a WNA deadband.

A. Mr. Mierzwa points to Columbia Gas of Pennsylvania, Inc.'s ("Columbia") 2020 base rate case, in which the Commission adopted the provision in the administrative law judge's Recommended Decision, which rationalized a deadband was reasonable "because it allowed for a range of what is considered normal weather."[1] Mr. Mierzwa then states that usage is affected by additional variables other than just temperature as support for a WNA deadband. (OCA St. No. 3SR at 19-20.)

Q. How does the fact that gas usage varies due to additional variables other than weather impact the appropriateness of a WNA deadband?

A. Mr. Mierzwa believes that since usage can vary due to wind and cloud cover that a deadband should be implemented. (OCA St. No. 3SR at 20.) However, these conditions should have no bearing on when a WNA mechanism is applied or is not applied, as these conditions exist at all times, including times when weather would be both within and outside a designated deadband. These factors do not stop with a deadband, and to rationalize that a deadband is appropriate as a result of these factors is errant logic.

Q. How do you respond to I&E witness Cline's request to implement a 3% deadband (I&E St. No. 4-SR at 2-5)?

[1] OCA Statement No. 3SR at 19.

A. Similar to Mr. Mierzwa, Mr. Cline cites the Columbia 2020 base rate case order, where the Commission determined a deadband provides "for a range of what is considered 'normal' weather in which the Company's Commission-approved rates would be applied without adjustment."[2] The quote cited by Mr. Cline starts with the following sentence, "The ALJ reasoned that without an extraordinary set of circumstances, there is no need for Columbia to reconcile day-to-day temperature variations that are part of normal business."[3] While Mr. Cline believes the conclusion that a deadband creates a range of "normal" weather still applies whether the adjustment is applied daily or monthly, I strongly disagree. The WNA uses the difference between actual and normal HDDs across a billing month, approximately 30 days. The Company's proposed WNA mechanism is not reconciling day-to-day temperature variations; it reconciles the difference between total normal HDDs used to set rates and total actual HDDs across a billing month. This is an important distinction since any variations in usage due to other variables (or a broader definition of normal weather) are averaged across the month and not incorporated in the day-to-day reconciliations that OCA and I&E are envisioning.

Q. Can you please summarize OCA witness Colton's surrebuttal testimony connecting the arrears for low-income customers with the proposed WNA mechanism?

A. Mr. Colton states that the WNA mechanism does not support low-income customers during winter months when there are more low-income customers in arrears, and they are deeper (higher percentage of income) in arrears.[4] He states that "the fact that on average, over

[2] I&E Statement No. 4-SR at 3-4.
[3] Docket No. R-2020-3018835, Order entered February 19, 2021, pp. 264-265.
[4] OCA Statement No. 4SR at 7.

multiple years, bills will be somewhat the same does not address the adverse impacts on low-income customers by taking bills that are likely already unaffordable and making them more so."[5] Finally, Mr. Colton states in his surrebuttal testimony, "To cite my conclusion without addressing the underlying data and discussion presented throughout my testimony does not serve to 'rebut' the data presented."[6]

Q. Does Mr. Colton provide evidence that the proposed WNA mechanism will disproportionately affect low-income customers?

A. No. Mr. Colton's conclusions presented in his surrebuttal testimony are that the WNA will increase bills in some winter months making these bills more unaffordable and that low-income customers are more sensitive to month-to-month variations and benefit from decreases in these variations, which can be achieved through budget billing. While the data presented in his direct testimony shows the seasonality of arrears, no data shows what impact the WNA will have on arrears for low-income customers.

Q. What conclusions can be drawn about the impact of the proposed WNA mechanism on low-income customers?

A. While Mr. Colton is correct that residential customers pay in arrears and that budget billing creates some bill stability, his conclusion that the WNA adversely impacts low-income customers is unsupported. The Company is happy Mr. Colton supports and cites benefits from the budget billing program, particularly for low-income customers who benefit from

[5] OCA Statement No. 4SR at 8.
[6] OCA Statement No. 4SR at 8.

lower month-to-month variations. In addition and complementary to budget billing, the proposed WNA mechanism will create more month-to-month bill stability, as each month's actual weather is considered. The fact there is a seasonality in the age and volume of arrears only shows that winter heating season bills lead to a higher volume of arrears. Protecting customers from colder-than-normal winter heating seasons is a benefit resulting from implementing the WNA mechanism, not an adverse impact on low-income customers, as expressed by Mr. Colton.

II. RESIDENTIAL CUSTOMER CHARGE

Q. Does OCA witness Mierzwa address the evidence you provided on the Residential customer charge?

A. No. In fact, when responding to Company witness Epler's testimony, Mr. Mierzwa still claims that, "UGI Gas' proposed customer charge reflects an increase of 37%. While on average UGI Gas' overall rate design may provide for gradualism, it would not provide for gradualism for customers with lower usage levels."[7] I provided evidence in rebuttal that states, "A customer who only uses 3 Mcf a month would only see a $2.27 difference in their bill under the $19.95 customer charge, representing a 6.93% difference, which meets the threshold of gradualism for this low use customer."[8] Further, Mr. Mierzwa does not address any evidence I presented relating to the impact of the proposed Residential customer charge on conservation. He simply claims that my testimony is similar to UGI Gas witness Heppenstall and UGI Gas witness Epler and previously addressed.

[7] OCA Statement No. 3SR at 11.
[8] UGI Gas Statement No. 11-R at 29-30.

Q. Did CAUSE-PA witness Geller mischaracterize your position on the impact and connection between the proposed Residential customer charge and energy conservation?

A. Yes. Mr. Geller's surrebuttal includes the following question, "How do you respond to UGI witness Taylor's argument that attempting to achieve residential bill reduction through energy efficiency measures is 'not an efficient use of our resources as a society' because it does not reduce the costs incurred by the utility?"[9] This, however, was not a point I made in my rebuttal testimony. I never stated nor is it my position that "attempting to achieve residential bill reduction through energy efficiency measures is not an efficient use of our resources as a society." While this misrepresentation may have allowed Mr. Geller to make additional points on the benefits of the Low Income Usage Reduction Program ("LIURP"), it does not address statements made in my rebuttal testimony.

Q. What is your position on the connection between the proposed Residential customer charge and conservation and energy efficiency?

A. Investing in energy efficiency measures to reduce residential energy bills is an appropriate goal that results in societal benefits. My rebuttal testimony and my position are that artificially setting customer charges lower than the fixed cost to serve to increase energy efficiency is not an appropriate regulatory approach and results in inefficient use of societal resources.

> "Although the consumer spent time and resources to "save" money, it does not reduce the costs incurred by the utility to provide service, i.e., any bill savings under a lower customer charge would exceed the actual savings of the resources

[9] CAUSE-PA Statement No. 1-SR at 18.

> used to provide service. Those costs are simply charged to some other customer or reduce the earnings of the utility. This is a zero-sum game; the gain to one customer by reducing how much they pay for fixed costs is the loss of either another customer or the utility itself."[10]

Energy efficiency measures reduce a customer's use of natural gas, saving money for that customer and society as less natural gas is consumed. However, this does not result in lower distribution costs for the provision of distribution service. Regardless, the fact remains that under the proposed Residential customer charge, 81.5% of a Residential customer's bill would be volumetric and provide for customer benefits from the reduction of usage achieved through energy efficiency. The amount of the customer charge also has not impact on the savings made from conserving on gas consumption.

Q. What is OCA witness Colton's position relating to the impact of the proposed Residential customer charge on low-income customers?

A. Mr. Colton attempts to make a connection between income and usage to support its claim that an increase in the Residential customer charge will adversely impact low-income customers who use less natural gas. Mr. Colton cites the 2015 U.S. Energy Information Association Residential Energy Consumption Survey ("EIA Survey") to demonstrate that low-income customers typically utilize less natural gas than high-income customers.

Q. How do you respond to Mr. Colton providing summary statistics relating to the Residential Energy Survey ("RECS") data?

[10] UGI Gas Statement No. 11-R at 31.

A. The use of data from the RECS survey should not trump the use of actual data provided by the Company. As such, the Commission should utilize the actual data provided by the Company related to the level of usage among low-income customers rather than a general region-wide survey. While high-level tables for the RECS survey may provide averages across regions, it does not accurately depict the accuracy of the survey results nor the percentage of low-income customers that may exhibit usage levels closer to moderate- and higher-income households.

Q. Does this conclude your rejoinder testimony?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2021-3030218, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 12-RJ

Rejoinder Testimony of
Daniel V. Adamo

Topics Addressed: **Universal Service Programs**

Dated: June 1, 2022

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Daniel V. Adamo. My current business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes, I previously submitted my written rebuttal testimony and exhibits, UGI Gas Statement No. 12-R, on May 17, 2022.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. Yes, attached to my rejoinder testimony is UGI Gas Exhibit DVA-1RJ.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony responds to portions of the surrebuttal testimony of Roger D. Colton, submitted on behalf of the Office of Consumer Advocate ("OCA") (OCA St. No. 4SR).

Q. Do you have any overall comments regarding the scope of your rejoinder testimony?

A. Yes. My rejoinder testimony is limited to addressing certain new arguments raised by OCA witness Colton in his surrebuttal testimony, which was submitted on May 27, 2022. To the extent I do not address an argument by Mr. Colton, it should not be interpreted as my agreement with his position.

II. UNIVERSAL SERVICE PROGRAMS

Q. OCA witness Colton continues to argue that it is appropriate to establish his proposed "measurable outcome objectives" for the Company's Universal Service Programs in this base rate case as opposed to UGI Gas's Universal Service and Energy Conservation Plan ("USECP"). (OCA St. No. 4SR at 24-41.) Why does he believe that a rate case is the appropriate proceeding to establish his proposed outcome objectives?

A. According to Mr. Colton: "A rate case is the time and place to determine how the Commission will measure the effectiveness and efficiency of the use of ratepayer dollars. Decisions on how to achieve the objective will be left to the utility (subject to review through the USECP process). My decision to leave proposing solutions to the PUC process designed to consider such solutions was intentional." (OCA St. No. 4SR at 35.)

Q. Do you agree with his argument that this is the appropriate time and place to establish these objectives for the Company's Universal Service Programs?

A. Absolutely not. First, I am advised by counsel that the Commission's regulations set forth the goals for natural gas distribution companies' ("NGDCs") USECPs, requirements on the USECPs' contents, and processes for the review, approval, and ongoing evaluation of the NGDCs' USECPs. *See* 52 Pa. Code § 62.1, *et seq.* In fact, the Commission's regulations specify that "[t]he Commission will determine if the NGDC meets the goals of universal service and energy conservation programs," which includes "ensur[ing] universal service and energy conservation programs are operated in cost-effective and efficient manner." 52 Pa. Code § 62.3(a), (b)(4). Mr. Colton's claim that this rate case is actually the time and place to make that determination is incorrect, contrasts with the Commission's regulations, and is inconsistent with the Commission precedent that I identified in my rebuttal testimony, where the Commission declared that "all aspects" of Universal Service programs should be addressed in utilities' individual USECP proceedings, as opposed to base rate cases (see UGI Gas St. No. 12-R at 10.).

Second, it is unclear whether Mr. Colton proposes to apply these outcome objectives to the Company's existing USECP (which covers the five-year period of January 1, 2020, through December 31, 2025), the Company's next USECP to be filed in 2025, or both. Regardless of which, Mr. Colton fails to recognize the issues with proposing these outcome objectives in a base rate case as opposed to the USECP proceeding.

Indeed, to the extent that Mr. Colton expects that these outcome objectives be applied to the Company's existing USECP, UGI Gas's existing USECP was designed to achieve the goals and objectives set forth in the USECP within budget. Mr. Colton has presented no evidence that the Company can reasonably achieve his proposed outcome objectives under its existing USECP in a cost-effective and efficient manner. Indeed, Mr. Colton's outcome objectives were neither factored into the Company's design of the USECP, nor proposed by the OCA in its Comments on the Commission-approved USECP. Therefore, the Commission should not evaluate the performance of the existing USECP under Mr. Colton's proposed outcome objectives in this base rate case proceeding.

On the other hand, to the extent that Mr. Colton wants these outcome objectives to be applied to the Company's next USECP that will be filed in 2025, it still does not make sense to propose these outcome objectives in this base rate case. Essentially, Mr. Colton's recommendation would boil down to establishing three "objectives" for the Company's

USECP in the Company's 2022 base rate case, but then kicking the proverbial can down the road to UGI Gas's next USECP filing in 2025 to figure out how the Company can or will achieve those objectives. This misalignment in the establishment of goals and the designing of an USECP that can achieve those goals is precisely why Mr. Colton's recommendations are best left for the Company's USECP proceeding. Indeed, Mr. Colton fails to explain what happens if the USECP cannot be designed within budget in 2025 to achieve these "measurable outcome objectives" he proposes to be established in 2022. Moreover, I am aware of no Commission process by which the Commission establishes objectives for a utility's programs: (1) <u>three years</u> before the utility designs and proposes those programs; and (2) without any formal analysis of whether those objectives are reasonably achievable by the utility within its budget.

Q. Mr. Colton asserts that you "ha[ve] the review process backwards" because "UGI Gas should be asking what can be done differently or more effectively in order to improve the outcomes." (OCA St. No. 4SR at 37.) Has the Company been continually evaluating its USECP program performance and determining what improvements can be made?

A. Yes. The Company continually monitors and evaluates USECP program performance. For instance, on a quarterly basis, the Company evaluates LIURP performance and has discussions with its Community Based Organizations ("CBOs") and LIURP contractors regarding actual performance versus projected performance, spending forecasts, areas of success, and challenges with the program. Regarding the CAP, the Company has been performing outreach to those who have failed to recertify in an attempt to get them back into the program if still eligible. Also, the Company solicits customers who have received Low-Income Home Energy Assistance Program grants but are not yet enrolled in CAP. Additionally, the Company facilitates Universal Service Advisory Committee meetings semi-annually with numerous stakeholders in attendance. During these meetings, the Company reviews current year USECP performance and solicits feedback from attendees regarding potential areas of improvement. Finally, the Company participates in industry meetings to discuss various challenges peer utilities are facing and suggestions for improvement, of which many topics and brainstorming sessions are related to USECP performance. As a result of these efforts, the Company continues to make year over year progress with its USECP performance, as described throughout my rebuttal testimony (UGI Gas St. No. 12-R).

The bottom line is that the Company has been doing exactly what Mr. Colton says UGI Gas should do in the quoted passage—"asking what can be done differently or more effectively in order to improve the outcomes." Even in the absence of his proposed "measurable outcome objectives," the Company will continue to do so. Therefore, Mr. Colton's proposed objectives, even if properly raised in this base rate case, are unnecessary.

Q. Is Mr. Colton correct that you oppose "the creation of *any* measurable objectives by which to measure UGI Gas performance" (OCA St. No. 4SR at 32.)

A. No. That is not an accurate statement. I oppose the "measurable objectives" proposed by Mr. Colton in this base rate case for the reasons outlined in my rebuttal and rejoinder testimony. However, I support establishing metrics by which to evaluate the Company's Universal Service Programs' performance, so long as those metrics are fair, reasonable, well-designed, and properly established in the Company's USECP proceeding or in a general Commission rulemaking proceeding. I do not believe Mr. Colton's proposed metrics meet any of those characteristics.

Q. Mr. Colton also asserts that your objections to the establishment of his outcome objectives is "inconsistent" with UGI Gas witness Brown's rebuttal testimony about the impacts of inflation on the Company, because, according to Mr. Colton, the Company wants to address the impacts of inflation on the Company now but wait to address the impact of inflation on low-income customers until its next USECP in 2025. (OCA St. No. 4SR at 28-29.) Would you please respond?

A. As stated in my rebuttal testimony, the Company continually tries to promote internal and external programs to maximize customer participation, which ultimately reduces financial burdens on the participating customers. Most notable is the Company's current Energy Burden filing pending approval at the Commission.

Q. Mr. Colton also continues to argue in his surrebuttal testimony that "[t]he customer satisfaction of UGI Gas customers does not support an adder to the Company's equity return for exemplary management," arguing, among other things, that the Company's reliance on "external customer satisfaction surveys." (OCA St. No. 4SR at 19-20.) Please respond.

A. The Company utilizes a number of resources to gauge customer service performance and customer satisfaction, such as Verint (formerly known as Foresee), which has a sample size five times larger than that represented in the statistics cited by Mr. Colton. UGI Gas also utilizes a J.D. Power Gas Utility Residential Customer Satisfaction Study(SM) to measure satisfaction across six factors: billing and payment, corporate citizenship, price, communications, customer service, and safety and reliability. The Company has received high marks on its customer service from these independent and very well-regarded analytical services. See UGI Gas Exhibit DVA-1RJ to see the results of JD Power and Cogent Syndicated Utility Trusted Brand & Customer Engagement™: Residential study by Escalent.

It is also important to note that the Commission's customer service performance report for 2021 has not been released yet. The data set forth in that report would be more current and truly show the impacts from COVID-19 on overall customer service performance metrics on all natural gas distribution companies. However, such data is not currently available, and Mr. Colton does not present any alternative data in his surrebuttal testimony on the Company's customer service performance in 2021. Thus, the more current, reliable, and independent third-party studies relied upon by the Company should be utilized instead of the data cited by Mr. Colton.

Q. Mr. Colton also tries to defend his claim that the increased residential customer charge will remove 95.4% of federal fuel assistance being delivered to UGI Gas's low-income customers, by asserting that he made no assumption that all 153,437 low-income customers received federal fuel assistance funding. (OCA St. No. 4SR at 21.) Would you please respond?

A. Mr. Colton misses my point. In his direct testimony, he asserted that "[t]he total increase in unavoidable fixed charges to the UGI Gas low-income population is thus $9,850,655

($64.20 x 153,437)." (OCA St. No. 4 at 9.) He then compared that dollar figure to the "total of $10,325,947 in LIHEAP grants in 2021." (*Id.* at 9-10.) From that comparison, he asserted that "[t]he increased customer charge standing alone, in other words, will remove 95.4% of the total value of federal fuel assistance being delivered to low-income customers." (*Id.* at 10.) Therefore, I responded in rebuttal that his point is flawed because, among other reasons, it is based on a false assumption that all of the 153,437 low-income customers receive LIHEAP grants.

Now, in his surrebuttal testimony, Mr. Colton asserts that he made no such assumption. However, without such an assumption, albeit erroneous, there cannot be a valid comparison between the estimated increase in customer charges for the low-income population and the total LIHEAP grants awarded. Effectively, Mr. Colton is taking a figure derived based on the total low-income population (*i.e.*, his projected increase in customer charges for the low-income population) and comparing it to a figure that is limited to a select portion of the low-income population (*i.e.*, the total LIHEAP grants awarded in 2021). Indeed, not every low-income customer received LIHEAP grants in 2021. Therefore, a proper analysis would be to investigate how the proposed increase in the residential customer charge would affect the low-income customers who actually received LIHEAP grants in 2021.

Here, 23,819 low-income customers received LIHEAP grants in 2021. Therefore, if the Company's proposed increase in the residential customer charge results in an additional $64.20 per low-income customer on an annual basis, then the total increase for the LIHEAP grant recipients would be $1,529,180 (*i.e.*, $64.20 x 23,819 = $1,529,180), which is substantially less than the $9,850,655 "total increase" in customer charges for low-income customers calculated by Mr. Colton. Thus, the Commission should reject Mr. Colton's claim that 95.4% of federal fuel assistance to low-income customers would be offset by the proposed increase in the residential customer charge.

III. CONLUSION

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

Stronger Community and Communication Skills are Building Utility Trust

JUNE 25, 2019

32 Utilities Named Most Trusted Brands

Community Support and Communications Effectiveness increase Americans' trust in their utility. According to customers, utilities are earning trust by encouraging employee volunteering, listening to community feedback and making consumers more aware of local support and charitable giving. Customers were also happier with the information utilities communicated and the mediums used to deliver those communications. These and other findings are from the 2019 Cogent Syndicated Utility Trusted Brand & Customer Engagement™: Residential report from Escalent, a top human behavior and analytics firm.

The study's composite Brand Trust index score increased 1 point to 688 (on a 1,000-point scale) this year. Among the six components included in the Brand Trust index, Community Support and Communications Effectiveness increased the most. Building Brand Trust provides a positive return on investment for the industry as customers increasingly rely on utilities to provide energy innovation and are more likely to support higher rates for that innovation. Moreover, the study shows that as public trust grows, utilities become much more credible than state governments and regulators to lead industry innovation and progress.

"The nation's best utilities are trusted energy advisers whose consumers value their opinions and recommendations," said Chris Oberle, senior vice president at Escalent. "Industry regulators who are looking to shape the future of energy need to encourage the utilities they regulate to focus on building brand trust. Otherwise, our research finds that innovations in clean energy, EV expansion, consumption management, and digital services are going to languish on low consumer demand for utility-developed offerings."

Of the 140 utilities included in the Utility Trusted Brand & Customer Engagement: Residential study, 14 significantly improved on Brand Trust and 14 significantly declined, creating a 214-point gap between the highest and lowest utility score.

Below is Escalent's list of 2019 Most Trusted Utility Brands. Congratulations to the 32 utilities that have shown industry leadership and scored highest on the study's overall Brand Trust index among their peers.

2019 Most Trusted Brands		
Combination Utilities	**Electric Utilities**	**Natural Gas Utilities**
DTE Energy	OUC	TECO Peoples Gas
Black Hills Energy – Midwest	Georgia Power	Piedmont Natural Gas
Con Edison	SMUD	NW Natural

About Utility Trusted Brand & Customer Engagement™: Residential

Escalent conducted surveys among 62,122 residential electric, natural gas and combination utility customers of the 140 largest US utility companies (based on residential customer counts). The sample design uses a combination of quotas and weighting based on US census data to ensure a demographically balanced sample of each evaluated utility's customers based on age, gender, income, race and ethnicity. Utilities within the same region and of the same type (e.g., electric-only providers) are given equal weight in order to balance the influence of each utility's customers on survey results. Escalent will supply the exact wording of any survey question upon request.

Trust in Utilities Reaches All-Time High During COVID-19

JUNE 23, 2020

44 Utilities named Most Trusted Brands

Customer trust in utilities has hit a historic high due to the industry's effective response to the COVID-19 pandemic. This year, the Cogent Syndicated Brand Trust Index posts a record high score of 696 (on a 1,000-point scale), with 44 utilities being named the 2020 Most Trusted Brands, having scored highest on the Brand Trust Index among the 140 utilities surveyed. These and other findings are from the 2020 Cogent Syndicated Utility Trusted Brand & Customer Engagement™: Residential study from Escalent, a top human behavior and analytics firm.

The Brand Trust Index is a composite score of utility performance on customer focus, community support, communications effectiveness, reliable quality, environmental dedication and reputation. Although customer trust in utilities had been increasing before the pandemic, the industry's effective response to COVID-19 accelerated this trend. Customers rate the industry a very high 7.20 (on a 10-point scale) when asked how responsibly their utility responded to the COVID-19 crisis. The more responsive a utility was to COVID-19, the more trust customers place in them. And half of utility customers "strongly agree" their utility responded well to the pandemic.

"It is clear from our research the utility industry has done a fantastic job supporting customers through the pandemic. This has won utilities the trust and goodwill of their customers," said Chris Oberle, senior vice president at Escalent. "The utility industry is used to handling crises and quickly provided customer support. Awareness of utility COVID-19 efforts was supported by higher communications recall, the high quality of customer service interactions, and providing more value-added recommendations during service."

Escalent would like to congratulate the 2020 Most Trusted Utility Brands that have supported their customers through an unprecedented crisis and have built goodwill and leadership in their communities.

Brand Trust Spikes as Utilities Spend More on Communication

JUNE 24, 2021

Escalent Names 38 Utilities 2021 Most Trusted Brands

Customer trust in utility companies spiked to the highest score ever on the Escalent utility Brand Trust Index (706 on a 1,000-point scale) due to spending roughly 16% more to communicate about product options, environmental efforts, and how they partnered with customers on shared priorities during the pandemic. The communications were well received by utility customers, as the Communications Effectiveness metric posted the highest average score (738) among the six factors that compose Brand Trust. This information is part of the 2021 Cogent Syndicated Utility Trusted Brand & Customer Engagement™: Residential study from Escalent, a top human behavior and analytics advisory firm.

escalent®

reputation. Among these six factors, Customer Focus has increased the most during the year (13 points) followed by Company Reputation (12 points) and Community Support (11 points).

"Starting active conversations with customers on how their utility can partner with and support them throughout the challenges faced this past year has strongly positioned utilities as trusted energy advisers and great corporate citizens," said Chris Oberle, senior vice president at Escalent. "Our research shows that nearly all utilities provide great service levels, but an elite group has been able to build trusted brands that empower customers with valuable offerings and value-added information. The most trusted utility brands include utilities that are making a positive impact on their customers, communities and financials."

Key findings from the study include:

- Customers with high brand trust use an average of nine enhanced utility offerings compared with only four for customers with low trust levels.
- Two in three (62%) of those with high brand trust use utility digital options.
- High brand trust increases customer acceptance of utility rate changes by 23%.
- Customer trust is built over time, as new customers give lower Brand Trust scores than those who've been customers longer.

- The utility industry should focus on low-income customers ($25K or less annual household income), as they post lower Brand Trust scores than customers with higher income levels.
- High brand trust minimizes the negative-perception impacts from outage, safety and other critical events, while increasing customer advocacy and loyalty.

Escalent congratulates the 2021 Most Trusted Brands among utilities. These 38 utilities have developed industry-leading customer trust levels.

New Mexico Gas Company	Natural Gas	702

About Utility Trusted Brand & Customer Engagement™: Residential

Escalent conducted surveys among 76,656 residential electric, natural gas and combination utility customers of the 140 largest US utility companies (based on residential customer counts). The sample design uses a combination of quotas and weighting based on US census data to ensure a demographically balanced sample of each evaluated utility's customers based on age, gender, income, race and ethnicity. Utilities within the same region and of the same type (e.g., electric-only providers) are given equal weight to balance the influence of each utility's customers on survey results. The Brand Trust index score is a composite based upon consumer ratings across six factors. Escalent will supply the exact wording of any survey question upon request.

DIRECT TESTIMONY OF

DANTE MUGRACE

ON BEHALF OF THE

COMMONWEALTH OF PENNSYLVANIA

OFFICE OF CONSUMER ADVOCATE

April 20, 2022

<u>HIGHLY CONFIDENTIAL VERSION</u>

TABLE OF CONTENTS

I. STATEMENT OF QUALIFICATIONS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dante Mugrace. My business address is 22 Brooks Avenue, Gaithersburg, MD 20877.

Q. WHAT IS YOUR PRESENT OCCUPATION?

A. I am a Senior Consultant with the Economic and Management Consulting Firm of PCMG and Associates, LLC. (PCMG). In my capacity as a Senior Consultant, I am responsible for evaluating and examining rate and rate related proceedings before various governmental entities, preparing expert testimony, recommending revenue requirements, as well as offering opinions on economic policy, policy issues and methodologies used to set a value on a utility's rate base and cost of service components of revenue requirement.

Q. PLEASE SUMMARIZE YOUR PROFESSIONAL EXPERIENCE.

A. PCMG is an association of experts in utility regulation and policy, economics, accounting and finance. PCMG's members have over 75 years of collective experience providing assistance to counsel and expert testimony regarding the regulation of electric, gas, water and wastewater utilities that operate under local, state and federal jurisdictions. PCMG focuses on areas regarding revenue requirement, cost of service, rate design, cost of capital and rate of return. Prior to my association with PCMG, I was employed as a Senior Consultant with the consulting firm of Snavely King Majoros and Associates (SKM) from 2013 to 2015, in the same capacity as PCMG. Prior to SKM, I was employed by the New Jersey Board of Public Utilities (NJBPU) from 1983 to my retirement in 2011. During my tenure at the NJBPU, I held various Accounting, Rate Analyst, Supervisory and Management Positions. My last position was Bureau Chief of Rates in the Agency's Water Division (Bureau Chief of Rates). I held this position for nearly 10 years. My resume is attached as Appendix A.

Q. WHAT EXPERIENCE DO YOU HAVE IN THE AREA OF UTILITY RATE SETTING PROCEEDINGS AND OTHER UTILITY MATTERS?

A. In my capacity as Bureau Chief of Rates at NJBPU, I was responsible for overseeing the rate process regarding administrative, financial, and managerial functions of the Rates

Bureau. My primary duties were to ensure that the jurisdictional utilities had sufficient revenues to cover their operating expenses, the ability to earn a reasonable rate of return on plant investments, and to ensure that the provision of safe, adequate and proper service at reasonable rates was met. During my time at the NJBPU, I was involved in hundreds of rate and rate related proceedings. In my capacity as a Senior Consultant previously with SKM and now with PCMG, I have been and am currently involved in rate and rate related proceedings before the Commissions in the Commonwealth of Massachusetts and Pennsylvania, and the States of Maine, Maryland, New Jersey, New York, North Dakota, and Ohio. I was involved in the Generic Proceedings to Establish Parameters for the Next Generation Performance Based Rate Plans before the Alberta Utilities Commission. I was involved in transmission formula rate plans before the Federal Energy Regulatory Commission (FERC) regarding the PECO Energy Company on behalf of the Pennsylvania OCA and the Rockland Electric Company on behalf of the NJ Division of Rate Counsel.

Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. I hold a Master of Business Administration (MBA) degree with a concentration in Strategic Management from Pace University-Lubin School of Business in New York, New York. I hold a Master of Public Administration (MPA) degree from Kean University in Union, New Jersey. I hold a Bachelor of Science (BS) degree in Accounting from Saint Peter's University in Jersey City, New Jersey.

II. PURPOSE OF TESTIMONY

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am testifying on behalf of the Pennsylvania Office of the Consumer Advocate (OCA).

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to calculate and to make a recommendation regarding the UGI Utilities, Inc. – Gas Division's (UGI or Company) base rate case proceeding, that was filed with the Pennsylvania Public Utility Commission (PAPUC or Commission) on

January 28, 2022.[1] My recommendation includes the setting of the Company's Rate Base Valuation, and Pro Forma Operating Income at Present Rates for the Fully Projected Future Test Year Period Ending September 30, 2023. The Company requested an overall increase in rates for its gas distribution service of approximately $82.7 million or 7.80% above current operating revenues of approximately $1.063 billion. The Company provides Gas Distribution service to about 672,000 customers located in the counties of Berks, Bucks, Carbon, Chester, Cumberland, Dauphin, Franklin, Lancaster, Lebanon, Lehigh, Luzerne, Monroe, Montgomery, Northampton, Schuylkill and York. The Company's last base rate case proceeding was approved by the Commission on August 29, 2020 in Docket No. R-2019-3015162. Included in my recommended position on Rate Base Valuation and Operating Income, I am also incorporating the recommendations of OCA witness Mr. David Garrett with respect to the overall rate of return, OCA witness Mr. Jerome Mierzwa on any rate design adjustments, and OCA witness Mr. Roger Colton on Universal Service adjustments.

III. REVENUE REQUIREMENT ISSUES

A. SUMMARY

Q. WHAT REVENUE DEFICIENCIES OR ADJUSTMENTS ARE YOU RECOMMENDING?

A. Based upon the use of the Company's proposed fully projected future test year ending September 30, 2023, I have the following recommendations:

- My recommended Rate Base balance is $3,087,298,717, which is $81,724,283 lower than the Company's proposed Rate Base balance of $3,169,023,000.
- My overall Rate of Return based upon OCA witness Garrett's recommendation is 6.24%, which includes a Common Equity component of 8.50% and a Common Equity Ratio of 50.00%.

[1] UGI Utilities, Inc. – Gas Division is a wholly owned subsidiary of UGI Corporation. UGI Corporation has two operating divisions, the Gas Division and the Electric Division, both which are regulated by the PAPUC.

- My recommended Operating Revenue at Present Rates is computed at $1,063,137,667, which is $413,667 higher than the Company's Present Rate Revenue of $1,062,724,000.[2]
- My recommended total Operating Expenses at Present Rates is $795,924,424, which is $32,576,576 lower than the Company's proposed Operating Expenses at Present Rates of $828,501,000.
- My recommended Federal Income Tax at Present Rates is $37,748,730.
- My recommended State Income Tax at Present Rates is $9,769,753.
- Overall, I recommend a revenue requirement decrease of $38,673,989, which is $121,416,259 lower than the Company's proposed revenue requirement increase of $82,742,000.

Q. WHAT EFFECT DOES MR. GARRETT'S REMOVAL OF MR. MOUL'S MANAGEMENT PERFORMANCE PREMIUM OF 0.20% HAVE ON THE COMPANY'S REVENUE REQUIREMENT?

A. The effect of removing the 0.20% Management Performance Premium from the Company's Cost of Equity would be to reduce the Company's filed 11.20% Equity Cost Rate to 11.00%. Incorporating this into the overall rate of return would result in an ROR of 7.85% instead of the Company's proposed 7.96%. The revenue requirement impact would be a reduction of about $4.984 million. (Rate Base of $3.169 billion times the rate of return of 7.85% equals $248.768 million, or a reduction from the Company's proposed income requirement of $252.254 million of $3.385 million multiplied by the gross revenue factor of 1.429864 equals $4.984 million.

Q. WHAT EFFECT DOES MR. GARRETT'S REMOVAL OF MR. MOUL'S LEVERAGE ADJUSTMENT OF .95% HAVE ON THE COMPANY'S REVENUE REQUIREMENT?

A. The effect of removing the .95% Leverage Adjustment from the Company's filed 11.20% Equity Cost Rate would equal an Equity Cost Rate of 10.25%. Incorporating this into the overall rate of return would result in a ROR of 7.44% instead of the Company's proposed 7.96%. The revenue requirement impact would be a reduction of

[2] Any differences between Company Operating Revenues at Present Rates in its filing and my Schedules are due to rounding.

about $23.562 million. (Rate Base of $3.169 billion times the rate of return of 7.44% equals $235.775 million, which is a reduction from the Company's proposed income requirement of $252.254 million of $16.478 million multiplied by the gross revenue factor of 1.429864 equals $23.562 million.)

Q. WHAT EFFECT DOES MR. GARRETT'S CAPITAL STRUCTURE HAVE ON THE COMPANY'S OVERALL REVENUE REQUIREMENT INCREASE?

A. Based upon Mr. Garrett's overall recommended capital structure, the return requirement proposed by the Company would go down from $252.254 million to $197.747 million, a decrease of $54.507 million. Including the Revenue Conversion Factor of 1.429864 would calculate to a $77.937 million revenue requirement decrease from the Company's proposed revenue requirement of $82.742 million, or an increase of $4.804 million.

Q. WHAT RATE BASE COMPONENTS ARE YOU ACCEPTING IN THIS PROCEEDING?

A. I am accepting the Company's balances related to Gas Inventory, Customer Deposits, and Materials and Supplies, which are shown on my Schedule DM-3.

B. RATE BASE (Measures of Value)

1. <u>GAS Plant in Service (GPIS)</u>

Q. WHAT HAS THE COMPANY PROPOSED REGARDING ITS GAS PLANT IN SERVICE?

A. The Company has proposed a GPIS balance of $5,042,025,000[3] for the fully projected future test year for the twelve months ending September 30, 2023. (Company Schedule C-1 and C-2). Company witness Ms. Tracy Hazenstab developed this balance by starting with the Historical Test Year (HTY) period ending September 30, 2021 and included pro forma adjustments through the Future Test Year (FTY) period September 30, 2022. To that balance, the Company included pro forma adjustments through the Fully Projected Future Test Year (FPFTY) period ending September 30, 2023. The FPFTY information

---

[3] Differences between the Company's balance and my balance are due to rounding.

was derived from the Company's operating and capital budgets for the 12-month period ending September 30, 2023. (Statement No. 2 at 4).

Included in that balance are plant additions that the Company expects to place in service during the FPFTY period ending September 30, 2023, of which the amount of $398,404,000 are for plant additions through the FTY ending September 30, 2022, and an additional $476,632,000 through the FPFTY period ending September 30, 2023. The total proposed plant additions sum up to $875,036,000. (Company Schedule C-2).

Q. HOW DID THE COMPANY DEVELOP ITS CAPITAL INVESTMENT TO PRODUCE THE TOTAL PROPOSED PLANT ADDITIONS OF $ 875,036,000 AS OF SEPTEMBER 30, 2023?

A. Company witness Ms. Vicky Schappell stated that the categories of plant additions are related to (1) replacement and betterment infrastructure; (2) new business; (3) information technology; (4) other capital spending and; (5) removal and salvage. (Statement No. 5 at 3). Ms. Schappell stated that the determination of projects that are included in the capital budgets are based upon a risk-based prioritization process. This process is more fully explained in Ms. Schappell's testimony Statement No. 3 at page 3.[4]

Q. HOW HAVE THE COMPANY'S ACTUAL CAPITAL ADDITIONS COMPARED TO BUDGETED CAPITAL ADDITIONS IN THE PAST?

A. According to Ms. Schappell, over the past five years, the Company's total budgeted capital additions produced a variance of $34,081,000 which equates to 98% of the Company's plant additions of its budget, or a 2% variance between budgeted and actual plant placed in service. (Statement No. 5 at 8).

Q. WHAT COSTS ARE INCLUDED IN THE COMPANY'S GPIS BALANCE RELATED TO THE COMMISSION APPROVED LONG-TERM INFRASTRUCTURE IMPROVEMENT PLAN (LTIIP)?

A. As noted in response to OCA-III-2, the Company has included approximately $266,908,000 of LTIIP expenditures[5] through the FTY ending September 30, 2022, and an additional $275,002,000 through the FPFTY ending September 30, 2023. Company

---

[4] The Company identifies Major Projects as projects greater than $15 million which require Board approval. OCA-Set III-2.

[5] Included in this balance are plant additions related to the Company's DIMP and TIMP categories. OCA-Set III-2.

witness Mr. Angstadt stated that through the LTIIP, the Company has been identifying and repairing, improving or replacing its distribution infrastructure on an accelerated basis, which has resulted in removing more than 463 miles of mains over the seven-year period (2014-2020) including cast iron mains and total bare steel/wrought iron mains. Through December 31, 2021, the Company has removed 76 miles of mains. (Statement No. 9 at 8).

Q. WHAT LEVEL OF CAPITAL COSTS HAS THE COMPANY PROJECTED TO BE PLACED IN SERVICE RELATED TO ITS REPLACEMENT AND BETTERMENT PLANT ADDITIONS?

A. Mr. Angstadt stated that for fiscal year 2022 the Company has budgeted $281,400,000 of plant additions, and for fiscal year 2023 the Company has budgeted $305,800,000 of plant additions. (Statement No. 9 at 11).

Q. DID THE COMPANY PROPOSE ANY ADJUSTMENTS SUBSEQUENT TO THE FILING OF THIS RATE CASE WITH RESPECT TO THE COMPANY'S PROPOSED GPIS BALANCE OF $5,042,025,000?

A. In response to OCA-X-2, I asked the Company whether any costs have changed from the as filed petition with respect to capital additions in the FTY and in the FPFTY period. The Company responded that at this point there have been no changes in the forecasted FTY plant additions and FPFTY plant additions. The Company does not anticipate a material variance to the FTY and FPFTY capital additions. To the extent operating conditions and circumstances change, such as the need to reprioritize projects or adjust anticipated in-service dates and potential increase in contractor costs impact the Company's projects for the FTY and the FPFTY, it will update its projections as needed.

Q. DO YOU HAVE ANY OTHER CONCERNS REGARDING THE COMPANY'S PROJECTED TIMELINE OF THESE IN-SERVICE DATES?

A. Yes. In response to I&E-RB-4-D, the Company provided its construction budget by plant account for the Future and the Fully projected test years, as well as all projects to be completed in the Future Test Year and the Fully projected test year by plant account and their estimated completion dates. The confidential response shows that for a number of projects the estimated completion date will be beyond the FPFTY period ending December 31, 2023. These projects are as follows: **(Begin Confidential)**

Budget Group	Description	Completion Date	FY 2022 Budget
• 09O	16^{th} & Battery PO02	Sept. 2024	$500,156
• 09O	Penn & Cherry 30358	Sept. 2024	$49,871
• 09O	Knox Ave. Station	Feb. 2024	$18,134
• 12O	Hobbie TL Replace.	Dec. 2025	$1,002,045
• 12O	Lessport Phase 2	Sept. 2024	$179,821
• 12O	Hazle Township Blvd.	June 2024	$119,632
• 12O	Hill Rd. High Press. Exp.	Sept. 2024	$836
• 12O	County Welfare Rd.	July 2024	$302
• 12O	3000 BLK Rich Hill Rd	March 2024	$26
• 12O	Penn Cherry Sta. Reloc	Sept. 2024	$1
• 145	UNITE EAM	Sept. 2025	$25,320,125
• 41M	Primrose Ally Main	Jan. 2024	$394,547
• 45M	Lehigh River Cross.	May 2024	$199,693
Total FY 2022 Budget Projects			**$27,785,189**
			FY 2023 Budget
• 09O	16^{th} & Battery PO02	Sept. 2024	$4,113
• 09O	Penn & Cherry 30358	Sept. 2024	$410
• 09O	Knox Ave. Station	Feb. 2024	$149
• 12O	5100 BLK Main White.	Sept. 2024	$1,508,721
• 12O	Hobbie TL Replace.	Dec. 2025	$8,245
• 12O	Lessport Phase 2	Sept. 2024	$2,983
• 12O	Hazle Township Blvd.	June 2024	$997
• 12O	Hill Road High Press.	Sept. 2024	$844
• 12O	County Welfare Rd.	July 2024	$304
• 12O	3000 BLK Rich Hill Rd.	Mar. 2024	$26
• 145	UNITE ADC	Sept. 2025	$8,425,085
• 145	UNITE EAM	Sept. 2025	$41,640,121
• 41M	Primrose Alley Main	Jan. 2024	$3,009

- 44M Southern Hymil Line Sept. 2024 $6,301,771

Total FY 2023 Budget Projects **$57,896,778**

Total FY 2022 and FY 2023 Budget Projects **$85,681,967**

Q. WHAT IS YOUR TOTAL RECOMMENDED ADJUSTMENT TO THE COMPANY'S GPIS BALANCE ?

A. Based upon the above, I am recommending that these FY 2022 and FY 2023 budget projects be removed from the Company's GPIS balance as the estimated completion dates are beyond the Company's FPFTY period ending December 31, 2023. These projects are listed as Gas Division Projects. Out of the total budgeted project balance of $85,681,967, $10,296,636 are accounted for under the Company's Distribution Plant and $75,385,331 are accounted for under General Plant – UNITE **(End Confidential).** My adjustments are shown on my Schedule DM-5.

2. Accumulated Depreciation

Q. WHAT HAS THE COMPANY CALCULATED WITH RESPECT TO ITS ACCUMULATED DEPRECIATION?

A. The Company computed an Accumulated Depreciation balance in the amount of $1,318,560,000 as shown on Company Schedule C-3. Company witness Ms. Vivian Ressler stated that the Company started with an Accumulated Depreciation balance as of September 30, 2021 and added budgeted levels of depreciation expense for the FTY to produce an Accumulated Depreciation balance of $1,229,399,000 (Company Schedule C-3). For the FPFTY period, the Company calculated the associated plant retirements and a provision for net salvage to arrive at the Accumulated Depreciation balance of $1,318,560,000. The amount of the net salvage value was calculated using a five-year amortization schedule in accordance with Commission precedent. (Statement No. 3 at 7-8).

Q. WHAT IS YOUR RECOMMENDATION?

A. I am accepting the Company's calculation with respect to the development of the Accumulated Depreciation balance. My adjustment is related to my recommended removal of certain projects and baseline capital additions as I identified in my GPIS section of my testimony. As I removed certain projects and baseline capital additions, I made the associated adjustment to the Accumulated Depreciation balance. The Company utilized a composite rate of 2.06% related to distribution plant (Weidmayer Schedule II-3 to II-5), and a composite depreciation rate 5.71% to General Plant. Using my recommended Distribution Plant disallowance of $10,296,636 and a Depreciation Rate of 2.06%, I calculate an adjustment of $212,111. Using my recommended General Plant disallowance of $75,385,331 and Depreciation Rate of 5.71, I calculate an adjustment of $4,304,502. This results in an overall adjustment of $4,516,613 to my Accumulated Depreciation Expense balance. My recommendation is shown on my Schedule DM-6.

4. <u>Working Capital</u>

Q. WHAT DID THE COMPANY PROPOSED RELATED TO ITS CASH WORKING CAPITAL (CWC)?

A. The Company has proposed a CWC balance of $62,148,000 as shown on Company Schedule C-4. Ms. Ressler stated that the CWC is the capital requirement arising from the difference between the lag in the receipt of revenue for rendering service and the lag in payment of cash expenses incurred to provide that service (Statement No. 3 at 9). The Company calculated an average daily expense balance of $1.843 million and multiplied that amount by the Net (Lead) Lag days of 28.41 to arrive at a balance of $51,365,000. The Company then added Interest Payments of ($4,667,000), Tax Payments Lag calculations of $4,402,000 and Prepaid Expenses of $10,047,000 to arrive at the CWC balance of $62,148,000. (Company Schedule C-4).

Q. DO YOU HAVE ANY ADJUSTMENTS OR CHANGES IN THE METHODOLOGY USED BY THE COMPANY TO CALCULATE ITS CWC?

A. No. I am accepting the Company's CWC methodology. My adjustments are related to the adjustments that I recommend for O&M Expenses, and other adjustments used to develop the CWC balance.

Q. WHAT ARE YOUR ADJUSTMENTS WITH RESPECT TO THE COMPANY'S CWC BALANCE?

A. I adjusted the Company's Cash Working Capital to incorporate my adjustments to my recommended O&M Expenses which flow through to the Cash Working Capital document.

My recommended balance is $61,561,127, or an adjustment of $587,278 to the Company's CWC balance and is shown on my Schedule DM-7.

6. <u>Accumulated Deferred Income Taxes (ADIT)</u>

Q. WHAT DID THE COMPANY PROPOSE WITH RESPECT TO ITS ACCUMULATED DEFERRED INCOME TAXES (ADIT)?

A. The Company proposed a balance in its ADIT in the amount of $628,510,000 as shown on Company Schedule C-6. Company witness Ms. Nicole McKinney stated that this balance reflects the difference between the accelerated tax depreciation and straight-line depreciation on test year plant balances, net of offsets associated with Contributions in Aid of Construction. (Statement No. 7 at 7). This balance was further reduced by the state regulatory liability associated with UGI's Gas repairs tax method. As the state tax consequence of accelerated depreciation is flowed through, there is no associated ADIT balance. (Statement No. 7 at 7).

Q. HAS THE COMPANY REDUCED THE RATE BASE BALANCE BASED UPON THE UNAMORTIZED EXCESS DEFERRED FEDERAL INCOME TAXES (EDFIT)?

A. Ms. McKinney stated that the Company has reduced its Rate Base by the unamortized EDFIT, which is incorporated in the ADIT balance shown on Schedule C-6. (Statement No. 7 at 7). Ms. McKinney stated that the EDFIT adjustment as a result of the 2017 Tax Cuts and Jobs Act (TCJA) that would be amortized and flowed back to ratepayers in its FPFTY is included in the overall federal deferred tax expense calculated under the Company's Federal Income Tax calculation shown on Company Schedule D-33. The total amortization was approximately $4.3 million calculated using the Average Rate Assumption Method (ARAM) as required by tax normalization rules. (Statement No. 7 at 6).

Q. PLEASE EXPLAIN THE COMPANY'S REPAIRS TAX METHOD?

A. Ms. McKinney stated that the Company adopted a tax accounting method to expense as repairs certain items capitalized for book purposes in accordance with federal tax regulations.[6] The Company normalized its federal income tax expense claim, inclusive of the repairs tax deduction. The difference between the accelerated tax depreciation and book depreciation in the calculation of federal tax expense created an ADIT. The Company chose to flow through the repairs tax benefits over the tax useful lives of the assets generating the tax deduction. The state ADIT balance associated with the repairs tax deduction is classified as a regulatory liability, representing the repairs tax benefit that ratepayers have not yet received. (Statement No. 7 at 8). The Company reduced its rate base by the sum of the federal ADIT balance and the state repair regulatory liability. (Statement No. 7 at 8).

Q. WHAT ADJUSTMENTS DO YOU HAVE RELATED TO THE COMPANY'S ADIT BALANCE, THE EDFIT BALANCE AND THE STATE REPAIRS BALANCE?

A. I do not have any adjustments with respect to the Company's ADIT, EDFIT and State Repairs balances or the methodologies utilized to calculate these balances. My adjustments reflect my recommended removal of certain projects that I addressed in my GPIS testimony section.

Q. WHAT IS YOUR TOTAL ADJUSTMENT RELATED TO THE COMPANY'S OVERALL ADIT BALANCE?

A. I utilized my recommended balance of the Accumulated Depreciation adjustment of $4,516,613 and multiplied that amount by the Company's Deferred Tax rate of 28.8921% as shown on Company Schedule D-35. This produces an adjustment of $1,304,944. This is shown on my schedule DM-8.

C. OPERATING INCOME

1. <u>Operating Revenues</u>

Q. WHAT HAS THE COMPANY PROPOSED AS ITS OPERATING REVENUE AT PRESENT RATES AND PROPOSED RATES?

[6] The Company previously utilized this method in is prior rate case in Docket No. R-2019-3015162.

A. As shown on Company Schedule D-1, the Company calculated Operating Revenues at Present Rates of $1,062,724,000 and Revenues at Proposed Rates of $1,145,466,000. The difference represents the revenue increase of $82,742,000 or an increase of 7.78%.

Q. WHAT ADJUSTMENTS DID THE COMPANY MAKE TO DERIVE ITS PRESENT OPERATING REVENUES UNDER THE FPFTY PERIOD?

A. Company witness Ms. Tracy Hazenstab stated that the Revenues at Present Rates were determined by adjusting the budgeted revenues to reflect the anticipated change in the number of customers, the projected change in existing customer usage, the roll-in of revenues from the Distribution System Improvement Charge (DSIC) and other pro-forma annualizing and normalizing ratemaking adjustments. (Statement No. 2 at 12). The net effect of these adjustments is detailed on Schedule D-5. Company witness Ms. Sherry Epler stated that a 15-year normal heating degree day period was used to develop the sales and revenue forecasts. (Statement No. 8 at 7). Ms. Epler stated that a 15-year period is consistent with the methodology used for calculating normal heating degree days in previous UGI base rate cases. (Statement No. 8 at 7).

Q. DID THE COMPANY UPDATE ITS OPERATING REVENUE SUBSEQUENT TO THE INITIAL FILING?

A. No, the Company did not update its Operating Revenue subsequent to the initial filing.

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S PRESENT RATE REVENUE?

A. With respect to the Company's Forfeited Discounts, Miscellaneous Revenues, and Rent from Gas Properties, I am recommending normalizing these revenues using a three-year period 2021-2023. I utilized the balance of these revenues as shown on Company Exhibit Schedule D-2 for the HTY 2021, ($11,634,000) Schedule D-2 for the FTY 2022 ($19,181,000) and Schedule D-2 for the FPFTY ($10,287,000). These balances average out to $10,700,667, or an increase of $413,667. I am of the opinion that these types of revenues do fluctuate and change from year to year, and it is appropriate to normalize these revenues, including forecasted revenues, prospectively. My adjustments are shown on my Schedule DM-4.

2. OPERATION AND MAINTENANCE EXPENSES

Q. HOW DID THE COMPANY DEVELOP ITS OPERATING EXPENSES PRESENTED FOR RECOVERY IN THIS RATE PROCEEDING?

A. According to Ms. Hazenstab, the Operating and Maintenance expenses are developed based upon the review of trends, monthly expenditure patterns, and new or changed programs. Employee levels are reviewed, and appropriate staffing levels are set for the upcoming fiscal year. Allocated expenses from shared administrative and general functions within UGI and from other affiliated companies providing shared services to UGI Gas are used to develop the budgeted Statement of Operations. (Statement No. 2 at 8). Allocated expenses in the Statement of Operations included functions such as accounting, rates, gas supply, human resources, information systems, payroll, and remittance processing, which are performed in accordance with PUC-approved methods of allocation and affiliated interest arrangements or agreements. (Statement No. 2 at 8). Ms. Hazenstab stated that the Operating Budget is in accordance with Act 11 of 2012, which provides for the establishment of an Operating Budget for an additional fiscal year in the future or the FPFTY. (Statement No. 2 at 9). UGI Gas incurs costs for services provided by UGI Corp. and other affiliated companies, as well as allocated and assigned costs between UGI Electric and UGI Gas. The allocations are made by using a methodology applicable to the cost, or if no one methodology is specific to the cost, by using a formula referred to as the Modified Wisconsin Formula (MWF), or another reasonable allocation methodology. (Statement No. 2 at 9-10). The budget information is the starting point for the Company's claims and is adjusted as appropriate to reflect new information gained since the completion of the budgeted process and through application of other appropriate principles. (Statement No. 2 at 10).

Q. WHAT LEVEL OF OPERATING EXPENSES HAS THE COMPANY PROPOSED TO RECOVER IN THIS PROCEEDING UNDER ITS FPFTY TEST PERIOD?

A. As shown on Company Schedule D-1, the Company has proposed to recover $690,669,000 of Operating Expenses for the FPFTY period.[7] Ms. Hazenstab stated that these Operating Expenses reflect a normal, ongoing level of operations and are based upon the budgeted

[7] Excludes Depreciation Expense, Taxes other than Income and Income Taxes.

level of expenses. The budgeted data by FERC account was adjusted in accordance with Commission precedent and generally accepted ratemaking principles. (Statement No. 2 at 15).

a. <u>Gas Production</u>

Q. WHAT DID THE COMPANY PROPOSE REGARDING ITS GAS PRODUCTION EXPENSES?

A. The Company proposed a Gas Production Expense balance of $997,000 as shown on Company Schedules D-2 and D-3. The Company began with a balance of $14,000 and added $983,000. Company witness Ms. Ressler stated that this increase of $983,000 was for Environmental Remediation Expenses (Adjustment #1) related to UGI Gas's obligations to conduct remediation activities under a Consent Order Agreement (COA) with the PA Department of Environmental Protection (DEP).(Statement No. 3 at 16-17).

Q. HOW DID THE COMPANY CALCULATE THE ADJUSTMENT OF $983,000?

A. Ms. Ressler normalized the recovery of the Environmental Remediation expense by averaging out the last three years of cash expenses for remediation under the COA (2019-2021), $5.171 million of which represents the amount that the Company anticipates it will spend in the FPFTY period. The difference between the annual amount of $5.171 million and the budgeted amount of $4.188 million or $983,000 is the increase proposed to be recovered. (Statement No. 3 at 17).

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S GAS PRODUCTION EXPENSE?

A. In response to I&E-RE-44 **(Begin Highly Confidential)** the Company provided the balances for the Environmental Remediation (Adjustment #1) for the fiscal years 2017 and 2018. These costs were $6,009,000 in 2017 and $4,115,000 in 2018. The Company stated that its basis for using a three-year average was to eliminate high and low spending and approximate an average year of spending. I am accepting the Company's five years of actual and projected spending. I recommend the Company use a five-year average instead of a three-year average to be consistent with its other environmental adjustments (#2 Company Schedule D-8 and in response to I&E-RE-44), particularly since Adjustment #2 was approved by the Commission in the Company's Gas Rate Case Settlement in Docket No. R-2019-3015162. **(End Highly Confidential).** I believe that consistency among the various Environmental Adjustments periods is appropriate as it further normalizes these costs. Given the ongoing annual cash expenditures and the Company's annual rate case filings, it is appropriate to normalize these costs over a longer period of time. My recommended five-year average adjusts the Company's balance from $983,000 to $939,600 (rounded to $940,000) which is an adjustment of $43,733 and is shown on my Schedule DM-9.

Q. HAS THE COMPANY PROPOSED AN ADJUSTMENT TO ITS ENVIRONMENTAL EXPENDITURES #2?

A. No. Ms. Ressler's testimony (Statement No. 3 at 18) explained that the Company did not make an adjustment to its Remediation Expense – MGP expenses in this proceeding. The Company stated that in the 2020 Base Rate Case, the Company was authorized to amortize $8.103 million of under-recovered MGP expenses over a five-year period or $1.621 million per year for under-recovered MGP expenses for the periods prior to September 30, 2018. In the 2020 Base Rate Case, the Company was authorized to amortize an additional $1.219 million over a five-year period or $0.24 million per year for under-recovered MGP expenses for Fiscal Year 2019. The Company budgeted this same amount (Company Schedule D-8 line 11) for expense purposes, and as such, no adjustment is needed for this item.

b. <u>Gas Supply Production</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS GAS SUPPLY PRODUCTION EXPENSE?

A. Company witness Ms. Hazenstab stated that the Company has increased its Gas Supply Production costs by $38,877,000 for the FPFTY period. This adjustment is designed to increase purchased gas cost expense by the same amount of the gas cost revenue adjustments. The Company recovers its purchased gas costs on a dollar for dollar basis with no profit through an automatic adjustment clause mechanism pursuant to Section 1307(f) of the Public Utility Code. The increase in purchased gas costs equals the increase in the gas cost revenue (Statement No. 2 at 16). This adjustment has no effect on net operating income.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I have no adjustments to the Company's Gas Supply Production costs of $38,877,000 and am accepting this adjustment. This is shown on my Schedule DM-10.

c. <u>Company Overall Salary & Wages (S&W) Increase</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS SALARY AND WAGES INCREASE?

A. The Company proposed a budgeted year balance of $79,358,000 related to Salary and Wages for the FPFTY period as shown on Company Schedule D-7. The Company made a positive adjustment of $2.385 million to the Budgeted Year that can be broken down into three parts: (1) $1,148,000 for salary increases and $51,000 for incremental bonus compensation for a total of $1,199,000. This adjustment aligns salaries for specific positions with relevant industry pay-scales. (Statement No. 2 at 18 and Schedule D-9); (2) $643,000 for twenty unbudgeted positions for field operations which are needed for succession planning (Statement No. 2 at 18 and Schedule D-17) and; (3) $543,000 for five new positions to implement Transportation Security Administration (TSA) Directives, including $38,000 related to incentive bonuses. (Statement No. 2 at 18 and Schedule D-9). The total payroll as distributed was calculated at $82,929,000. (Schedule D-7).

Q. HOW DID THE COMPANY DEVELOP ITS PROPOSED PRO-FORMA S&W INCREASE OF $82,929,000?

A. The Company adjusted the balance of $81,743,000 shown on Company Schedule D-7 by adding $1,186,000 of additional S&W expenses to arrive at a balance of $82,929,000. The Company calculated the $1,186,000 of additional S&W expenses by applying a 3.00% salary increase to its Union Employees (effective 6/1/2023), its Non-Union Employees (effective 4/1/2023) and its Exempt Employees (effective 12/1/2022). The Company then allocated 67% of Union Employees to the Operating Expense category, 50% to the Non-Exempt Employees and 17% to the Exempt Employees. (Company Schedule D-7). The total S&W expense proposed in this proceeding is therefore $82,929,000 as shown on Company Schedule D-7.

Q. HOW DID THE COMPANY DEVELOP ITS S&W ADJUSTMENTS AND WHAT INFORMATION DID THE COMPANY USE?

A. According to Mr. Brown, the Company made these adjustments as a result of recent compensation benchmarking review activities that focused on how UGI may continue to remain productive in an increasingly competitive labor market. Mr. Brown stated that the Company continues its efforts to attract, recruit, train and retain those professional, technical and field-qualified personnel and resources necessary to implement, operate and maintain a safe and reliable natural gas distribution system for all customers. (Statement No. 1 at 26).

Q. WHAT COMPENSATION BENCHMARKS HAS THE COMPANY PROPOSED IN THIS CASE?

A. Mr. Brown relied on data provided by the American Gas Association (AGA) and has begun to implement salary adjustments based upon this study. The planned adjustments affect 990 employees and will result in about $1.2 million of incremental costs to be applied to the Company's operating expense for UGI in the FPFTY. (Statement No. 1 at 27).

Q. WHAT DID MR. BROWN ADDRESS AS TO THE NEED FOR THE COMPENSATION ADJUSTMENTS?

A. Mr. Brown stated that the Company has experienced an increase in voluntary employee turnover as the available labor market has become constrained and increasingly competitive. This is particularly true for roles that require experienced employees. (Statement No. 1 at 27). More employees, including those with years of regulatory experience are moving on to other opportunities outside of UGI. The Company has encountered difficulties finding internal interest for certain critical exempt positions. The purpose of implementing these compensation benchmarks is to retain existing experienced employees and compete for qualified employees in order to fill needed roles in a very competitive job market. (Statement No. 1 at 28). The Company provided a breakdown of the Compensation Benchmark adjustments on Table 7 page 28 of Statement No. 1.

Q. DID THE COMPANY INCLUDE ANY INCENTIVE COMPENSATION IN ITS FPFTY PERIOD?

A. Yes. In SDR-RR-27, the Company included $11,129,787 of Incentive Compensation for the FPFTY period.

Q. HOW DID THE COMPANY DEVELOP ITS $11,129,787 INCENTIVE COMPENSATION BALANCE?

A. In response to Confidential I&E-RE-17 the Company broke the development of the $11,129,787 of Incentive Compensation. The following is a breakdown:

(Begin Confidential)

UGI Utilities:

Management Incentive Plan	$2,603,000
Executive Bonus	$ 714,000
Restricted Stock Awards	$ 766,000
Stock Options	$ 401,000
Deferred Compensation (SERP)[8]	$ 433,000
Total at UGI Utilities – Gas	**$4,916,000**

Allocated from UGI Corporation:

Incentive Compensation[9]	$1,364,000
Stock Options/Restricted Stock Awards	$2,319,000
Directors' Equity Compensation	$ 555,000
Shared Executive – Incentive Compensation	$ 512,000
Stock Options and Restricted Stock Awards	$1,153,000
Incentive Compensation[10]	$ 309,000
Total allocated from UGI Corp. – Gas	**$6,213,000**
Grand Total	**$11,129,787**

(End Confidential)

Q. DID THE COMPANY PROVIDE A SET OF GOALS AND PERFORMANCE METRICS SUPPORTING ITS $11,129,787 INCENTIVE COMPENSATION BALANCE?

---

[8]**(Begin Confidential)** SERP refers to Supplemental Executive Retirement Plan (**End Confidential)**
[9] **(Begin Confidential)** Represents Indirect Allocation via MWF **(End Confidential)**
[10] **(Begin Confidential**) Represents direct Costs to Utilities **(End Confidential)**

A. Yes. In response to I&E-RE-17 (Confidential), Attachment 17.3, and 17.4 the Company provided goals related to the Company's UNITE Incentive Compensation Plan. A more detailed review and description of the UNITE Incentive Compensation Plan is discussed under Administrative & General Expense section of my testimony. My adjustments to the Company's UNITE Incentive Compensation plan are also discussed under the Administrative & General Expense section of my testimony.

Q. HOW MANY ADDITIONAL EMPLOYEES HAS THE COMPANY PROPOSED TO INCLUDE IN ITS FILING?

A. As identified in response to OCA-Set III-7, the Company projected 64 additional employees through the FY 2023 (the end of the test year).

Q. PLEASE DESCRIBE THE ADDITIONAL EMPLOYEES THE COMPANY HAS PROPOSED IN ITS FILING?

A. In response to OCA-Set III-7 the Company has proposed 64 additional hires through FY 2023. 20 of those hires relate to the Company's succession planning for Operations (Company Schedule D-17), and 5 of those hires relate to the Company's Cybersecurity (TSA Security Directives Company Schedule D-9). These 25 hires have been approved in the Company's budget. The Company also included 5 additional hires that are either for Succession Planning or for Training. 17 of the hires are for replacements in which 17 candidates have been identified. The remaining 17 open positions also relate to replacement, but candidates have not been identified. The Company stated that the goal is to fill the open positions by 60 days past the approved requisition; however, filling the positions can take longer depending on the labor market at the time of the fill and other factors. (OCA-III-5). In response to OCA-III-12, the Company provided an update to the Cybersecurity positions. The Company stated that these employees are anticipated to start in April 2022. For this reason, Company plans to further update the salary levels to reflect an increase of $87,323 over the as-filed salary level of $505,000.

Q. WHAT ARE YOUR ADJUSTMENTS TO THE COMPANY'S EMPLOYEE PROJECTIONS?

A. I am accepting the Company's level of employees except for the 17 open positions that relate to replacement and for which candidates have not been identified. I am recommending removing the funding for these 17 positions as I believe these positions may or may not be filled during the FY 2023 and are speculative at best. As indicated in response to OCA-III-7, the Company only anticipates these hires depending on the labor market and other factors. My adjustment of $779,368 is calculated by using the average employee salary of $45,845 which I calculated by taking the Company's total payroll shown on Attachment I&E-RE-5-A of $77,358,000 and dividing that number by the number of total employee count of 1,731 as of the FPFTY period ending September 30, 2023. I then took the average salary of $45,845 and multiplied that amount by anticipated hires of 17 employees to arrive at my adjustment of $779,368. This is shown on my Schedule DM-11, which is carried over to Schedule DM-4.

Q. WHAT IS YOUR ADJUSTMENT TO THE COMPANY'S S&W INCREASE RELATED TO INCENTIVE COMPENSATION COSTS?

A. My adjustment is to the level of Incentive Compensation related to the Company's UNITE Incentive Compensation Plan. As more fully explained under my Administrative & General Expenses, and as addressed above, I am removing **(Begin Confidential)** $2,312,000 of expenses related to Executive Bonus, Restricted Stock Awards, Stock Options and Deferred Compensation SERP. In response to OCA-XI (Confidential), the Company provided information related to payout dates, notification dates and weighted targets for each plan and to ascertain whether these targets and goals benefit customers. The Management Incentive Plan and executive bonuses for the fiscal year ending September 30 are paid out no later than the following December 31, and recipients are notified of their earned amounts approximately two week prior to the payout. For the Stock Awards, the employees have 10 years from the grant date to exercise an option and at least one tranche of a three-year award vests in January each year and the participants receive award letters at the time of grant that outlines the terms of the award including the vest date which would indicate payment date if the award met the target. Regarding the Deferred Compensation the Company stated that it can vary based upon specific elections made and all executives have a six-month wait period from time of retirement to receive any benefits from the SERP or SSP. In response to I&E-RE-17.3 (Confidential) the Company stated that the timeline and goals for each phase are established and will continue to be refined to ensure successful transition of streamlined processes and systems going forward. **(End Confidential)**

Q. IS ANY OF THIS INCENTIVE COMPENSATION RELATED TO THE UNITE INITIATIVE?

A. No. According to the response to OCA-XI-1 (**Begin Confidential**), only the Asset Data Collection (ADC) project has incentive compensation as this plan is designed for those employees who are dedicated to the ADC project of which is expected to go into service for UGI Gas in January 2023. (**End Confidential**).

Q. WHAT IS THE IMPACT OF YOUR ADJUSTMENTS TO THE COMPANY'S PROPOSED S&W INCREASE?

A. My adjustments to open positions and incentive compensation for the Management Incentive Plan at UGI Utilities – Gas portion, total $5,694,368.

Q. HAVE YOU ALLOCATED YOUR ADJUSTMENTS TO THE COMPANY'S S&W INCREASE BY ACCOUNT CATEGORIES?

A. Yes. My Schedule DM-11 shows the allocation by account categories that I performed to adjust the Company's S&W adjustment. I've also addressed this allocation to my adjustments for each of the Company's Operating Expenses below.

d. <u>Distribution Operations and Maintenance Expense</u>

Q. WHAT DID THE COMPANY PROPOSE WITH RESPECT TO ITS DISTRIBUTION EXPENSES – OPERATIONS AND MAINTENANCE?

A. The Company has proposed a Distribution Expense of $84,369,000 for the budget year ending 9/30/2023. To that balance, the Company made the following adjustments; (1) Salaries and Wages - $611,000; (2) Compensation Benchmark - $1,318,900; (3) Cybersecurity personnel - $591,000; (4) Succession Planning personnel - $767,000 and; (5) $565,000 for Annual Capacity Lease Charge. The total proforma balance for

Distribution Operations and Maintenance expenses for the FPFTY period is $88,222,000[11], an adjustment of $3,853,000. This is shown on Company Schedule D-2 and D-3.

Q. ARE THERE ANY OTHER SPECIFIC ADJUSTMENTS YOU MADE TO THE COMPANY'S DISTRIBUTION OPERATION AND MAINTENANCE EXPENSE?

A. Yes. I made an adjustment to the Company's Outside Contractors expenses and services as identified in response to OCA-III-33. This will be explained further in my discussions under Distribution Operations and Maintenance Expenses.

1. <u>Salary and Wages (Schedule D-6 and 7) - $611,000</u>

Q. WHAT HAS THE COMPANY PROPOSED RELATED TO ITS SALARY AND WAGES (S&W) FOR ITS DISTRIBUTION EXPENSE?

A. The Company has proposed $611,000 of additional S&W expense. This balance reflects a 3.00% wage increase for unionized, exempt and non-exempt employees to reflect the end of the FPFTY operating conditions and annualizes payroll expense among the various cost accounts. (Statement No. 2 at 17).

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S S&W EXPENSE?

A. I am accepting the Company's proposed merit increases of $416,000 and $195,000 related to Operations and Maintenance expense labor, respectively.

2. <u>Compensation Benchmark – (Schedule D-9) $1,318,900</u>

Q. WHAT HAS THE COMPANY PROPOSED RELATED TO ITS COMPENSATION BENCHMARK?

A. The Company has proposed an overall Compensation Benchmark adjustment of $1,318,900, which is allocated to the Distribution Expense category. ($1,148,000 benchmark adjustment, $51,000 Incremental Incentive bonus and $120,000 in benefits). The balance of $1,318,900 was calculated by taking the benchmark data from the AGA that affect 990 employees and making adjustments to several categories of employment

[11] Differences due to rounding

resulting in an increase of $1,148,000 (Statement No. 1 at 27 and Company Schedule D-9). As previously described, the Company initiated the Compensation Benchmark adjustment in response to a competitive labor market and the need to retain, attract and maintain experienced employees. (Statement No. 1 at 28). The Company reviewed salary data provided by AGA by position and then compared current individual employee compensation levels to the AGA midpoint by role, or other survey data where a job match could not be identified utilizing AGA data. Compensation targets were then identified based upon years of service in order to determine which specific employees warranted adjustments. (Statement No. 1 at 29). Table 7 on page 28 of Statement No. 1 shows the number of employees affected by the compensation adjustments by functional department and includes operating expenses and incentive compensation adjustments based upon the employees' predetermined time allocation. The Company stated that increases are planned to be phase-in beginning early 2022 and are expected to be completed by September 2022 (Statement No. 1 at 29).

Q. ARE THE COMPANY'S COMPENSATION BENCHMARK ADJUSTMENT RELATED TO BASE SALARY ADJUSTMENTS?

A. Yes, according to the response to OCA-III-13, Mr. Brown stated that the adjustment of $1,148,000 is related to non-exempt and exempt positions and was initiated to address the Company's inability to fill critical positions, retain existing experienced employees and compete for qualified employees in order to fill needed roles in a very competitive job market. (Statement No. 1 at 28).

Q. WHAT IS YOUR ADJUSTMENT TO THE COMPANY'S COMPENSATION BENCHMARK PROPOSAL?

A. My adjustment is related to the Incentive Compensation of $51,000 included as part of its Compensation Benchmark. I am recommending that the Incentive Compensation costs of $51,000 be removed from the Company's S&W expenses. Typically, incentive compensation and bonuses are linked to goals, performance matrices, and objectives that need to be met before the incentive compensation is paid out to employees. I do not see any evidence that shows performance goals are being or will be met. The Company has stated that these specific employees under the Compensation Benchmark adjustment will be eligible for an incentive bonus in FY 2023 (I&E-RE-13). I believe this is too far in advance to state whether these employees will actually achieve goals performance matrices or objectives (which the Company has not identified).

3. <u>Cybersecurity – Additional Employees – (Schedule D-9) $591,000</u>

Q. WHAT HAS THE COMPANY PROVIDED WITH RESPECT TO ITS COSTS RELATED TO CYBERSECURITY?

A. The Company proposed an approximate $591,000 expense adjustment related to the hiring of 5 cybersecurity positions at $101,000 per employee, with benefits of $48,510 and incentive bonuses of $38,000. This is shown on Company Schedule D-9. Mr. Brown stated that these 5 additional employee would be hired in direct response to the TSA cybersecurity directives which were issued in May and July 2021 to protect against the impact of malicious cyber intrusions affecting the nation's pipelines. (Statement No. 1 at 29). Mr. Brown stated that the directive included about 90 specific required actions to be applied to information and operational technology systems. The Company has identified that 5 additional full-time employees are required to support these new TSA cybersecurity directive requirements and these employees will be needed for the administration and management of the new cybersecurity procedures and for the supervisory control and data acquisition system (SCADA) environment as cyber professionals will monitor threats and protect the isolated SCADA network. (Statement No. 1 at 29). The 5 positions are being added at the identified median salary plus employment benefits. Mr. Brown stated that the Company's proposed staffing aligns with other utilities that are taking the same approach to satisfy the TSA requirements. (Statement No. 1 at 30). In response to OCA-III-12 the Company provided an update to the hiring status. Three of the positions are expected to start employment during April 2022, and two of the positions are anticipated to start in October 2022.

Q. DID THE COMPANY UPDATE THE WAGE ADJUSTMENT SUBSEQUENT TO THE FILING OF THIS CASE?

A. Yes. The Company identified increases to the beginning salaries from $505,000 to $585,300, and an increase to incentive bonuses from $38,000 to $45,000, or an increase of about $87,000. The Company stated that it will reflect this increase as part of its claim in this case at the appropriate time. (OCA-III-12).

Q. HAVE OTHER UTILITIES TAKEN THE SAME APPROACH OF ADDING EMPLOYEES TO SATISFY THE TSA CYBERSECURITY DIRECTIVES?

A. According to the response to OCA-VII-12, the Company stated that all utilities are subject to the new TSA cybersecurity directives and will need to dedicate the resources required to meet the incremental standards. The Company stated that it is aware that a vast majority of local distribution company respondents were planning resource additions to meet the TSA directives.

Q. WHAT IS YOUR RECOMMENDATION?

A. I am accepting the Company's proposal related to the 5 positions for TSA compliant directives. My only adjustment is to the removal of the as filed $38,000 of incentive bonus. I believe incentive bonuses are linked to goals, performance matrices and objectives that are needed to be achieved before the payout to employees. I have not seen any evidence of the goals, performance matrices or objectives related to the incentive bonuses. The Company has stated that these employees will be eligible for an incentive bonus in FY 2023 (I&E-RE-13). I believe this is too far in advance to state whether these employees will actually achieve goals performance matrices or objectives (which the Company has not identified).

4. <u>Succession Planning – (Schedule D-17) $767,000</u>

Q. WHAT HAS THE COMPANY PROPOSED RELATED TO SUCCESSION PLANNING?

A. The Company is proposing to include 20 additional employees in 2023 related to Succession Planning for Operations to address staffing needs. This is comprised of $643,000 of salary and $124,000 of employee benefits, which are shown on Company Schedule D-17. Company witness, Mr. Timothy Angstadt, stated that the need for the additional 20 employees is due to forecasted retirements and attrition of newer employees, and, given these challenges, the Company requires an aggressive and multifaceted approach so that the Company can continue to accomplish fieldwork critical to the safety and reliability of its operations, including meeting planned replacement goals pursuant to the Company's LTIIP. (Statement No. 9 at 16).

Q. WHAT TYPES OF EMPLOYEES ARE THE COMPANY PROPOSING TO HIRE?

A. Mr. Angstadt stated that the Company is proposing to hire gas mechanics, field technicians, equipment operators, laborers, meter readers and contract inspectors, as well as, clerical, supervisory and leadership staff to support these roles. The majority of these employees will be union. (Statement No. 9 at 17).

Q. WHAT HAS BEEN THE TURNOVER OF EMPLOYEES AT THE COMPANY?

A. According to Mr. Angstadt, the Company has seen significant turnover of apprentice level employees who remain at the Company for less than 5 years. Mr. Angstadt stated that over 100 employees with 5 years of experience or less have left the Company, and 27 employees with more than 5 years of experience voluntarily left the Company. (Statement No. 9 at 19). While the Company has consistently replaced these apprentice level employees the ongoing loss of apprentice level employees has created a growing gap of experience between the number of apprentice employees and those that have 5 years or more of experience. (Statement No, 9 at 19).

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I reviewed the response to OCA-III-7 and based upon the response, the Company has an approved budget to add the 20 additional employees related to Succession Planning, and these employees are expected to be hired in June 2022. I am accepting the Company's addition of 20 employees at an aggregate base salary of $643,000. With respect to Employee Benefits, I am capping the expense at 10% of salary which is what the Company has proposed under its Adjustment 1 – Compensation Benchmark (Schedule D-9) and Adjustment 2 – Cybersecurity (Schedule D-9). The average employee salary is $643,000 divided by 20 equals $32,150. The Company calculated benefits by dividing $124,000 by 20 to equal $6,200. $6,200 divided by $32,150 equals 19.28%. Capping the employee benefits at 10% calculates to $3,215 per employee, and $64,300 when multiplied by 20 employees. In response to OCA-III-17, the Company stated that $6,200 represented the portion of the average benefit cost remaining in OPEX, with the remaining cost allocated to capital spending. The $9,702 of employee benefits was the baseline used for the benefit costs on the new positions. I am not sure why these category of employees' benefits are higher than those under the Compensation Benchmark employees and the cybersecurity employees. My adjustment is shown on my Schedule DM-12.

5. <u>Auburn Annual Capacity Lease Charge – (Schedule D-15) $565,000</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS ANNUAL CAPACITY LEASE CHARGE?

A. Ms. Hazenstab stated that the balance of $565,000 related to the Annual Capacity Lease Charge is to recover unbudgeted rent expense associated with the Auburn Capacity Lease Agreement approved by the Commission in Docket No. G-2021-3028753 on November 22, 2021. Ms. Hazenstab stated that this amount pertains to an agreement to lease additional capacity for a Rate XD customer (Proctor and Gamble Paper and Products Company) and will be directly assigned to the customer in the Company's cost of service study. (Statement No. 2 at 26). Ms. Hazenstab stated that the capacity lease will expand available sources of reliable and competitively priced supplies for the Company and its customers. The Company anticipated the capacity lease becoming available on July 1, 2022. (Statement No. 2 at 24-25).

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am accepting the Company's balance of $565,000. This is shown on my Schedule DM-12.

Q. WHAT OTHER ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S DISTRIBUTION OPERATION AND MAINTENANCE EXPENSES?

A. In response to OCA-Set-III-33, I asked the Company to provide information related to its outside contractor expenses and the services provided. These are accounted for in Administrative and General Expenses, Customer Account Operations Expenses and Distribution Expenses. Based upon the response, I am recommending normalizing the Company's outside contractor expenses under each of the Company's operating expense accounts. As shown in OCA-Set-III-33, the Company provided a breakdown of its outside contractors' expenses for the periods 2019 through the FPFTY. These costs are mainly related to contractor labor categorized as other, restoration, pipeline and traffic removal. The Company proposed a total Outside Contractor Expense balance for the FPFTY period for Distribution Expenses of $20.286 million. I am recommending normalizing these costs by averaging out the expenses over a three- year period (2020-2022) resulting in a decrease of $2.114 million. I believe that these types of costs do fluctuate over time because they are outside the control of the Company, they are volatile in nature and are unpredictable. There is no discernable trend that shows a gradual or incremental increase in these expenses over time.

Q. WHAT ARE YOUR TOTAL DISTRIBUTION EXPENSE ADJUSTMENTS?

A. As shown on my Schedule DM-12, my overall adjustment to the Company's Distribution Expenses is a reduction of $2,268,008 and my balance is $85,954,277 from the Company's proposed forecasted expense balance of $88,222,285.

e. Customer Accounts Expense

Q. WHAT HAS THE COMPANY PROPOSED RELATED TO ITS CUSTOMER ACCOUNTS EXPENSE?

A. As shown on Company Schedule D-2, the Company proposed a Budgeted balance for the year ending 9/30/2023 in the amount of $40,541,000. To that amount the Company included the following: (1) Salaries and Wages of $216,000; (2) Emergency Relief Program (ERP) of $92,000; (3) Unrecovered Interest on Customer Deposits of $972,000 and; (4) Universal Service Expenses of $548,000. These adjustments brings the total Customer Accounts Expense to $42,370,000 for the pro forma period ending 9/30/2023. I will discuss each of these 4 adjustments below:

1. Salary and Wages (Schedule D-6 and 7) - $216,000

Q. WHAT HAS THE COMPANY PROPOSED RELATED TO ITS SALARY AND WAGES?

A. The Company proposed total adjustments to its Salary and Wages of $216,000. This balance reflects a 3.00% wage increase for unionized, exempt and non-exempt employees to reflect the end of the FPFTY operating conditions and annualizes payroll expense among the various cost accounts.

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S SALARY AND WAGE EXPENSE ADJUSTMENT?

A. As I indicated previously in my Distribution Expense category, I am accepting the Company's 3% wage increase of $216,000.

2. <u>Emergency Relief Program (Schedule D-12) $92,000</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS EMERGENCY RELIEF PROGRAM (ERP)?

A. As shown on Schedule D-12, the Company proposed an Emergency Relief Program cost of $92,000. The Company has proposed to amortize the balance of $922,000 over a ten-year period. Ms. Ressler stated that this balance reflects the recovery of costs associated with the temporary Emergency Relief Program in response to the COVID-19 Pandemic, which was implemented to aid customers who were unable to fully pay their utility bills. (Statement No. 3 at 21). Ms. Ressler stated that the cost of the program included implementation expenses and direct billing credits and that the program was approved within the settlement agreement in the Company's 2020 Gas Base Rate Case in Docket No. R-2019-3015162. The 10-year period was pursuant to the Commission Order approving the settlement in the 2020 Gas Base Rate Case. (Statement No. 3 at 21).

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am accepting the $92,000 balance and the 10-year amortization, as this was approved by the Commission in the 2020 rate case (ordering paragraph 17-19) OCA-Set III-24.

3. <u>Unrecovered Interest on Customer Deposits (Schedule D-15) $972,000</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS UNRECOVERED INTEREST ON CUSTOMER DEPOSITS?

A. As shown on Company Schedule D-15, the Company proposed to recover $972,000 of unrecovered interest on customer deposits. Ms. Hazenstab stated that the Company is required to pay interest on customer deposits that it holds in accordance with its tariff requirements. This cost has not been reflected in the Company's operating budget. The Company has utilized a 4.50% interest rate to calculate this balance anticipated for the FPFTY period. The balance is currently calculated to be $21.6 million. (Statement No. 2 at 21).

Q. WHAT ADJUSTMENTS DO YOU HAVE REGARDING THE COMPANY'S UNRECOVERED INTEREST ON CUSTOMER DEPOSITS?

A. After a review of the documents, I am accepting the Company's balance of $972,000.

4. <u>Universal Service Program (USP) Expenses (Schedule D-16) $548,000</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS UNIVERSAL SERVICE EXPENSES?

A. The Company has calculated a Universal Service Expense of $548,000 as shown on Company Schedule D-16. Ms. Hazenstab stated that this adjustment normalized the amount of USP expense recovered through the Company's USP Rider based upon the level of Universal Service Rider charge effective at the time of the Company's filing. (Statement No. 2 at 22). This expense recovered costs of the Company's Customer Assistance Program (CAP) Credits, Pre-Program Arrearages, third party administrator expenses, LIURP expense and administrative costs associated with its Project Share program. As the USP Rider is a fully reconcilable rider, the USP adjustment assured that expenses related to the existing rider are aligned with revenues and that no impact related to USP flows through the revenue requirement calculation. (Statement No. 2 at 22-23).

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S UNIVERSAL SERVICE EXPENSES?

A. After a review of the documents and discovery responses, I do not have any changes to the Company's proposal. I am accepting the Company Universal Service Expense balance.

Q. WHAT OTHER ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S CUSTOMER ACCOUNTS EXPENSE?

A. As I normalized the Company's Outside Services under Distribution Expenses, I am normalizing the Company's Outside Contractor Expenses under Customer Accounts Expense to be consistent across all accounts. In response to OCA-Set III-33, the Company provided a breakdown of its Outside Contractors Expenses for the periods 2019 through the FPFTY. These costs are mainly related to contractor labor and specifically the categories of other, restoration, pipeline and traffic removal. The Company proposed a total Outside Contractor Expense balance for the FPFTY period of $54,000. Normalizing these costs by averaging out the expenses over a three- year period (2020-2022) results in a decrease of $9,000. These types of costs do fluctuate over time because they are outside the control of the Company, they are volatile in nature and are unpredictable. There is no discernable trend that shows a gradual or incremental increase in these expenses over time.

Q. WHAT ARE YOUR TOTAL ADJUSTMENTS TO THE COMPANY'S CUSTOMER ACCOUNTS EXPENSE?

A. My total adjustment to the Company's Customer Accounts Expense is $42,360,200 which is $9,000 lower than the Company's pro forma balance of $42,369,000. This is shown on my Schedule DM-13.

f. <u>Uncollectible Accounts Expense (Schedule D-11) $17,958,000</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. The Company has proposed a total balance to its Uncollectible Accounts Expense of $17,958,000. (Company Schedule D-1). The Company began with a balance of $14,419,000 and added $2,026,000 of additional uncollectible expense based upon its 2023 budgeted uncollectible balance of $15.4 million[12] and its pro forma Present Rate Revenue uncollectible balance of $17.426 million (Present Rate Revenue of $1,058,040,000 times a three-year average uncollectible balance of 1.647%). The Company then made an adjustment of $150,000 related to the amortization of the regulatory asset balance of $1.503[13] million for COVID-19 Pandemic costs over a ten-year amortization period in accordance with the Commission Order dated October 8, 2020, R-2019-3015162. (Company Schedule D-11). (Statement No. 3 at 20). This reflects the excess of

---

[12] The Company calculated the $15.4 million based upon a 1.5% estimated uncollectible rate. See response to OCA-VII-1.

[13] Includes $896,000 and $607,000 in 2021 and 2022, respectively, which was recorded as a regulatory asset associated with COVID-19.

uncollectible expenses incurred over the established threshold of $12.810 million per year over a ten-year period effective at the beginning of the FPFTY period. (Statement No. 3 at 20).

Q. WHAT OTHER ADJUSTMENTS DID THE COMPANY MAKE TO ITS UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. The Company included an additional Uncollectible Accounts Expense by taking the proposed revenue requirement increase of $82.742 million and multiplying that amount by the three-year average Uncollectible Accounts ratio of 1.647% to arrive at a balance of $1.363 million. (Company Schedule D-2).

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am accepting the Company's three-year average ratio or uncollectible of 1.647%, and the regulatory asset balance of $1.503 million amortized over 10-years, which was approved by the Commission in the Company's 2020 rate case. My adjustment is related to my recommended revenue requirement decrease of $38,673,989 which is shown on my Operating Income Schedule DM-4.

Q. WHAT IS YOUR TOTAL RECOMMENDED BALANCE RELATED TO THE COMPANY'S UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. My total adjustment is a reduction of $1,980,742 and is shown on my Schedule DM-4.

g. <u>Customer Information & Services Expense</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS CUSTOMER INFORMATION & SERVICE EXPENSE?

A. The Company proposed a balance of Customer Information & Services Expenses of $13.864 million as shown on Company Schedule D-2. The Company began with a balance of $10.368 million and added an adjustment to Salaries and Wages of $16,000 and Energy Efficiency & Conservation costs of $3.480 million to arrive at a balance of $13,864,000. I will address these two adjustments below.

1. <u>Salary and Wages (Schedule D-6 and 7) - $16,000</u>

Q. WHAT HAS THE COMPANY PROPOSED RELATED TO ITS SALARY AND WAGES?

A. As shown on Company Schedule D-7, the Company proposed an increase of $16,000. This increase reflects a 3.00% wage increase for unionized, exempt and non-exempt employees to address the end of the FPFTY operating conditions and annualizes payroll expense among the various cost accounts.

Q. WHAT ADJUSTMENTS DO YOU HAVE WITH RESPECT TO THE COMPANY'S PROPOSED $16,000 SALARY & WAGE INCREASE?

A. As I indicated previously in my testimony, I am accepting the Company's 3% wage increase of $16,000.

2. <u>Energy Efficiency & Conservation (Schedule D-19) $3,480,000</u>

Q. WHAT HAS THE COMPANY PROPOSED REGARDING ENERGY EFFICIENCY & CONSERVATION (EE&C)?

A. Ms. Hazenstab stated that the EE&C aligns the amount of EE&C expense with the EE&C Rider charges effective at the time of the Company's filing in this matter. (Statement No. 2 at 23). The EE&C Rider recovers the Labor and Administrative, Prescriptive Program, Retrofit Program, New Construction Program, Custom Program, Legal and Consulting, Combined Heat and Power, and other costs associated with the Company's EE&C program (Statement No. 2 at 23). The $3.480 million increase aligns with the Company's current EE&C charge, and as it is fully reconcilable, the EE&C adjustment assures that the expenses related to the existing rider are aligned with revenues and that no impact related to EE&C flows through to the revenue requirement calculation. (Statement No. 2 at 23).

Q. WHAT IS YOUR ADJUSTMENT?

A. In response to OCA-VII-6, I asked the Company for a breakdown of the program costs of $9.239 million and the adjusted program costs of $12.719 million. The Company provided a breakdown of these costs in I&E-RE-51. The administrative costs represents an average of 6.84% to total program costs over a five-year period (2019-2023). Based upon the information I am accepting the Company's adjustment of $3,480,000.

Q. WHAT IS YOUR TOTAL ADJUSTMENT TO THE COMPANY'S CUSTOMER SERVICE AND INFORMATION?

A. As shown on my Schedule DM-15, I am accepting the Company's Customer Information balance of $13,864,000.

h. <u>Sales Expense</u>

Q. WHAT DID THE COMPANY PROPOSE RELATED TO ITS SALES EXPENSE?

A. The Company proposed a total Sales expense of $1,738,000 as shown on Company Schedule D-2. The only adjustment to this expense is related to Salary and Wages of $13,000 as shown on Company Schedule D-7.

1. <u>Salary and Wages (Schedule D-6 and 7) $13,000</u>

Q. HOW DID THE COMPANY DEVELOP ITS SALARY AND WAGE ADJUSTMENT OF $13,000 RELATED TO SALES EXPENSE?

A. As more fully explained previously in my testimony, this balance reflects a 3.00% wage increase for unionized, exempt and non-exempt employees to reflect the end of the FPFTY operating conditions and annualizes payroll expense among the various cost accounts. (Statement No. 2 at 17).

Q. WHAT ADJUSTMENTS DO YOU HAVE REGARDING THE COMPANY'S $13,000 ADJUSTMENT TO SALARY & WAGES?

A. As I indicated previously in my testimony, I am accepting the Company's 3% wage increase of $16,000.

Q. WHAT OTHER ADJUSTMENTS HAVE YOU MADE RELATED TO SALES EXPENSE?

A. I have two adjustments. My first adjustment is related to the Company's Advertising Expenses balance of $1,901,541 shown on Company's Schedule 53.53 Attachment III-25. Included in the Company's proposed Advertising balance are costs of $885,178 related to Other Advertising Expense for Print/Digital, Radio, TV, Bill Insert and Other (mass media, website and branded giveaways). In response to I&E-RE-31, the Company provided a breakdown of these costs. These costs related to Sponsorships, Trade Shows, Branded Promotions, Customer Service Promotions and Miscellaneous Advertising. I am recommending that these costs be removed as they are not related to any useful advertising expense or institutional or instructional advertising which benefits customers. I believe these types of costs and Advertising expenses are pitched toward Company branding, recognition, and being good corporate citizens. My second adjustment is related to Conservation Advertising of $659,827. In response to I&E-RE-31, the Company stated that the variance between the HTY and FPFTY resulted from the resumption of normal activities in print and digital channel advertising related to Conservation of Energy which help customers reduce energy consumption. The Company proposed a FPFTY period balance of $659,827 (Attachment III-25). These costs increased over 70% from the FY 2021. I am normalizing these costs over three-years to arrive at a balance reduction of $193,114, or a normalized balance of $466,713. The Company did not record any costs to this account in FY 2019 and recorded $382,884 for FY 2020 and $376,148 in FY 2021. In my opinion, the costs incurred in FY 2020 and FY 2021 reflect a normal level of costs for this category. The Company has not justified the 70% increase over the FY 2022 and FY 2023 balance, and therefore, a normalized level is appropriate. My adjustments are shown on my Schedule DM-16.

i. <u>Administrative & General (A&G) Operations and Maintenance Expense</u>

Q. WHAT HAS THE COMPANY PROPOSED RELATED TO ITS ADMINISTRATIVE & GENERAL EXPENSES?

A. The Company proposed a beginning balance of its A&G Expenses of $116.044 million and added $12.313 million of adjustments to arrive at a FPFTY balance of $128.357 million. The Company proposed six specific adjustments. These adjustments are broken down as follows: (1) Salary and Wages $330,000; (2) Environmental Adjustments $2,327,000; (3) Rate Case Expenses $55,000; (4) OSHA-ETS Compliance Costs of $1,692,000 and one-time cost of $191,000; (5) Benefits Adjustments $8,387,000 and; (6) Other Adjustments - Injury and Damages of ($670,000). I will discuss each of these adjustments below:

1. <u>Salary and Wages (Schedule D-6 & 7) $330,000</u>

Q. HOW DID THE COMPANY DEVELOP ITS ADJUSTMENT TO ITS SALARY & WAGES OF $330,000?

A. The Company adjusted its salaries and wages to reflect end of FPFTY operating conditions. The adjustment annualized payroll expense and it is distributed among the various costs accounts. (Statement No. 2 at 17). The Company increased its A&G operation salaries by $309,000 and its maintenance salaries by $21,000. These increases represent a 3.00% wage increase for unionized, exempt and non-exempt employees to reflect the end of the FPFTY operating conditions and to annualize payroll expense among the various cost accounts.

Q. WHAT ADJUSTMENTS DO YOU HAVE REGARDING THE COMPANY'S BALANCE OF $3,172,000?

A. As I indicated previously in my testimony, I am accepting the Company's 3% wage increase of to reflect an adjustment of $330,000.

2. <u>Environmental Adjustments #3 (Schedule D-8) $2,327,000</u>

Q. WHAT HAS THE COMPANY INCLUDED REGARDING ENVIRONMENTAL ADJUSTMENTS?

A. The Company has included an adjustment of $2,327,000 related to the Company's under-recovery of its manufactured gas plant (MGP) remediation expense incurred since the last rate case by comparing the actual Fiscal Year 2020 and 2021 remediation costs with the normalized level authorized in the 2019 and 2020 base rate cases, respectively. (Statement No. 3 at 18). The Company proposed the $2,327,000 be recovered over a one-year amortization period through Fiscal Year 2023. In response to Confidential I&E-RE-44 **(Begin Highly Confidential),** the Company stated that the one-year amortization period was chosen because the Company believes it is a reasonable period between rate cases. **(End Highly Confidential)**.

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I am recommending this adjustment be amortized over a five-year period consistent with how the Company's other Environmental Adjustments (Adjustment No. 2 Company Schedule D-8) are being amortized. I believe that consistency among the various Environmental Adjustments periods is appropriate as it further normalizes these costs.

Given the ongoing annual cash expenditures and the Company's annual rate case filings, it is appropriate to normalize these costs over a longer period of time.

3. Rate Case Expenses (Schedule D-10) $55,000

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO RATE CASE EXPENSES?

A. The Company has proposed a total rate case expense of $1,055,000. The Company began by included a budgeted amount related to rate case expenses of $1,000,000 and added a pro-forma adjustment of $55,000 to arrive at a rate case balance of $1,055,000.

Q. WHAT ADJUSTMENTS DO YOU HAVE REGARDING THE COMPANY'S $1,055,000 RATE CASE EXPENSE RECOVERY?

A. The first adjustment that I am recommending is to the amortization period the Company is proposing. I believe that these costs should not be amortized over a one-year period, but instead they should be normalized, and they should be based upon the Company's actual prior rate case expense filings. As shown in response to OCA-III-16 the Company has filed the following base rate case proceedings, including this instant proceeding, along with the associated actual rate case expenses incurred in those proceedings:

R-2021-3030218	$1,055,000
R-2019-3015162	$1,050,932
R-2018-3006814	$ 859,194
R-2016-2580030	$ 576,127
R-2015-2518438	$1,077,315
R-2010-2214415	$ 643,687
Total	$5,262,255

Q. HOW DOES THE COMMISSION ACCOUNT FOR RATE CASE EXPENSES?

A. First, the Commission routinely normalizes, not amortizes rate case expense. It then looks to the historical filing frequency to determine the proper normalization period. I am extending the rate case normalization period to a 2-year normalization period, based upon the Company's historical rate case filings. The earliest rate case was filed in January 2010 and the most recent rate case was filed in January 2022, a twelve-year period. During those periods the Company filed Historical rate case filings calculate to an average time span of 2 years. A 2-year normalization period would result in an annual recovery balance of \$527,500, (\$1,055,000 / 2 years) a reduction of \$527,500 from the Company proposed balance of \$1,055,000. My adjustment is shown on my Schedule DM-17. Line 28.

4. OSHA Emergency Temporary Standard (ETS) Compliance Costs (Schedule D-13) \$1,883,000

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO OSHA ETS COMPLIANCE COSTS?

A. As shown on Company Schedule D-13, the Company proposed ongoing costs related to tracking and testing with respect to COVID-19 and to remaining in compliance with the recently issued Federal requirement. (Statement No. 3 at 24). Ms. Ressler stated that the Company is prepared to comply with President Biden's COVID-19 action plan and the Department of Labor OSHA Emergency Temporary Standard requirements related to vaccination and test mandates. The Company proposed recovery of \$1.692 million which included a subscription for software to track vaccination status and the costs to perform COVID-19 testing, and a one-time cost of \$191,000 related to communication and legal advice (Company Schedule D-13). The Company proposed to recover these costs over a one-year period. Ms. Ressler stated that depending on the outcome of the Federal Mandate, the Company can reassess to determine whether this figure should be further adjusted or if a regulatory asset should be created. (Statement No. 3 at 25).

Q. WHAT ADJUSTMENTS DO YOU HAVE REGARDING THE COMPANY'S OSHA ETS COMPLIANCE COSTS?

A. In response to OCA-III-25, the Company stated that since it finalized its preparation of the revenue requirement claim, the U.S. Supreme Court overturned the Federal Mandate for vaccination and testing requirements, and since it is likely that there will not be a similar mandate passed the Company has withdrawn substantially all of its claim, but for certain costs incurred with legal advice in the amount of \$52,934. The Company stated that it will maintain its claim to amortize this \$52,934 cost over a one-year period. I am recommending removing all of the legal advice and communications costs including the amount the Company has incurred to date of $52,934. Given that the Federal Mandate has not passed, these legal costs are moot, and ratepayers should not be required to absorb these costs. My adjustment is shown on my Schedule DM-17 Line 33.

5. <u>Benefits Adjustments (Schedule D-14) $8,388,000</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS BENEFITS ADJUSTMENTS?

A. The Company has proposed a Benefits adjustment of $8,388,000 as shown on Company Schedule D-14. Company witness Ms. Ressler stated that the adjustment related to Pension Expense reflects the adjustment from budgeted pension expense for cash to be contributed to the plan in the FPFTY. This was based on generally accepted accounting principles (GAAP) requirements to reflect service and non-service costs based upon assumptions. (Statement No. 3 at 21). Ms. Ressler stated that consistent with prior ratemaking practices, the Company claims pension costs within its rates on a cash basis. The adjustment is calculated using total cash contributions (per the Company's most recent actuarial report). It is then reduced to reflect only the portion attributable to UGI Gas, and then further reduced to reflect the portion of pension that is capitalized. The cash pension expense of $5.501 million is compared to the budgeted pension income of $2.887 million resulting in an adjustment of $8.388 million. (Statement No. 3 at 21-22). As stated in response to Confidential OCA-III-22 **(Begin Confidential)** the total cash contributions of $11,364,000 are determined by the Company's actuarial firm and since contributions are calculated only one year in advance, the Company assumed that contributions will be consistent from FY 22 to FY 23. **(End Confidential).**

Q. WHAT ADJUSTMENTS DO YOU HAVE?

A. I reviewed the response to OCA-VII-3, which shows the Pension Expense and Cash Contributions for the periods September 30, 2018 through September 30, 2022. The Company's pension expense shows variability from a high expense of $6.417 million to a budgeted income balance of $2.887 million, while the cash contributions attributable to UGI Gas have been fairly stable and consistent during the same years. Given this variability and the fact that pension plans can vary considerably over time depending on changes in the estimated costs, I am recommending normalizing the pension expense over a three-year period 2019-2021. This adjustment reduces the cash contribution and the proposed adjustment from $8,388,000 to $2,429,133, a difference of $5,958,667. My adjustment is shown on my Schedule DM-17.

6. <u>Other Adjustments Injury & Damages (I&D) (Schedule D-15) $670,000</u>

Q. WHAT HAS THE COMPANY PROPOSED WITH REGARD TO OTHER ADJUSTMENTS?

A. The Company has proposed an adjustment to its I&D of $670,000. The Company calculated a three-year average of I&D costs for the periods 2019-2021 and normalized these costs to arrive at a decrease of $670,000, from the Company budgeted balance of $2.023 million. This is shown on Company Schedule D-15.

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S I&D ADJUSTMENT?

A. No. I am accepting the Company's adjustment of $670,000 relating to I&D.

Q. ARE THERE ANY OTHER ADJUSTMENTS THAT THE COMPANY INCLUDED IN ITS A&G EXPENSES?

A. Yes.

Q. WHAT OTHER ADJUSTMENTS DID THE COMPANY INCLUDE?

A. The Company has the following adjustments related to the Company's A&G Expenses:

- Company Membership adjustments of $1,115,404 (SDR-RR-30)
- Employee Activity of $588,226 (I&E-RE-24)
- Sponsorships of $424,000 **–** (I&E-RE-22)
- Corporate allocation costs adjustment of (**Begin Confidential)** $6,213,000 **(End Confidential)** in OCA-III-15, and I&E-RE-17 (Confidential)

- UGI Incentive Compensation of **(Begin Confidential)** $2,312,000 Stock Awards, Executive Bonus, Restricted Stock Awards, Stock Options, and Deferred Compensation (SERP) **(End Confidential).** See response to Confidential I&E-RE-17.
- Management Incentive Plan – (**Begin Confidential)** ($2,603,000 **(End Confidential)**. See Confidential I&E-RE-17.
- Outside Contractors of $1,383,000 - (OCA-III-33)
- Employee Benefits of $9,506,494 – Account 926 – (I&E-RE-28)
- Employee Social and Corporate Governance (**Begin Confidential)** ($115,094) **(End Confidential) Highly Confidential** OCA-X-1

Q. WHAT HAS THE COMPANY INCLUDED REGARDING MEMBERSHIP COSTS?

A. In response to I&E-RE-20 and Attachment SDR-RR-30, the Company has included approximately $1.1 million of Company Membership fees for the FY 2023. These costs include various fees related to Economic Development, Gas Associations, Consortiums, Collaboratives, Alliances, Economic Leagues, and other organizations.

Q. WHAT ADJUSTMENT DO YOU HAVE WITH RESPECT TO THE COMPANY'S MEMBERSHIP COSTS?

A. I reviewed the response to I&E-RE-20 and Attachment SDR-RR-30 and determined that certain of these membership costs relate to organizations, chambers of commerce, alliances, economic development, and other consortiums that in my opinion do not benefit Company ratepayers or relate to the provision of safe and reliable gas utility service. 66 Pa.C.S. Section 1316.1 regarding the recovery of club dues states that "no public utility may charge to its customers as a permissible operating expense for ratemaking purposes membership fees, dues or charges to fraternal, social or sports club or organizations." Certain of these membership dues mainly benefit the Company by contributing to its ability to be a good corporate citizen, providing advocacy on policy issues before State and Governmental agencies, and aiding in civic related initiatives. I am recommending that only the following Membership Fees be included in the Company's A&G Expense categories: (1) American Gas Association - $621,015 (less $23,599 related to Lobbying)[14] and: (2) Northeast Gas Association - $55,000 for a total of $652,416, a reduction of $540,912 from the Company's balance of $1,115,404. The remaining Membership Fees, in my opinion do not comport to costs associated with Company memberships that provide benefits to the ratepayers of UGI-Gas that relate to safety, reliability and adequacy of service. My adjustment is shown on my Schedule D-17 as a reduction of $540,912.

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO EMPLOYEE ACTIVITIES?

A. The Company has proposed to include costs related to Employee activities of $588,276 as shown in response to I&E-RE-24. These costs relate to Company picnic, Service Awards, Annual Holiday breakfast, and Other activities.

Q. WHAT ARE YOUR ADJUSTMENTS TO THE COMPANY'S EMPLOYEE ACTIVITIES?

A. I believe that these costs should be removed for ratemaking purposes. In my opinion, these costs do not provide any benefits to ratepayers. I do not believe that ratepayers should pay for costs related to non-utility expenses and for special activities outside the employees' normal business working hours, nor for costs related to flowers and cards. As I stated previously under Membership Fees, ratepayers do not receive any benefit related to safe, reliable and adequate utility service for these expenses. My adjustment is a reduction of $588,226 as shown on my Schedule DM-17.

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO ITS SPONSORSHIPS?

A. In response to I&E-RE-22 the Company provide a schedule that shows a breakdown of Sponsorships and Members of $424,000. This balance is also shown on Attachment III-A-28.1. These costs reflect payments to Costs for Kids, American Red Cross, Sound the Alarm, Honor Roll, United Way Day of Caring and other social and sponsoring events.

Q. WHAT ARE YOUR ADJUSTMENTS TO THE COMPANY'S SPONSORSHIPS?

[14] The Company also included $9,259 of Lobbying activities in Energy Association of Pennsylvania.

A. I am of the opinion that these costs do not provide any benefit to ratepayers in the form of safe, reliable and adequate utility service, and therefore, these costs should be removed from the Company revenue requirement proposal. These costs, mainly benefit the Company as stated above by contributing to its good corporate citizenship. My adjustment of $424,000 is shown on my Schedule DM-17.

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO CORPORATE ALLOCATION COSTS?

A. In response to Confidential I&E-RE-17, the Company proposed total Corporate Allocation Costs of **(Begin Confidential)** $6,213,000. These costs relate to allocated costs from UGI Corporation for (1) Incentive Compensation of $1,364,000; (2) Stock Compensation and Restricted Stock Awards of $3,319,000; (3) Directors' Equity Compensation of $555,000; (4) Shared Executives Incentive Compensation of $512,000; (5) Stock Options and Restricted Stock Awards of $1,153,000 and; (6) Direct Cost to Utilities – Incentive Compensation of $309,000. **(End Confidential).**

Q. HAS THE COMPANY PROVIDE ANY DOCUMENTATION OR SUPPORT TO DESCRIBE WHAT THE COMPANY ENTITLES AS ITS UNITE INCENTIVE COMPENSATION PLAN?

A. Yes. In response to I&E-RE-17.3 (Confidential), **(Begin Confidential)** the Company provided a document that describes the Company's Incentive Plan. The Company refers to its UNITE incentive compensation plan as the "Project Milestone Incentive Plan" (Project Milestone). The Project Milestone is designed to recognize, and reward dedicated and committed Project Team members who meet or exceed the goals, expectations, and timelines created for the EAM phase of UNITE. Payout will be determined based upon progress levels achieved versus baseline objectives and key project milestones. Payout is achieved based upon completion of critical project milestones that are met within 2 weeks of the planned target delivery date. A more detailed description is shown on Confidential Attachment I&E-RE-17.3. The UNITE Milestone Incentive Compensation Plan has a weight of 100% with a goal of UNITE ADC Project Execution, with a 90% of phase deliveries delivered within 2 weeks of planned Phase end date given no risk to Go-Live. In response to I&E-RE-17.4, the Company provided its UNITE Enterprise Asset Management (EAM) and Asset Data Collection (ADC) Project document and Incentive Plan for Project

Leadership Roles and Core Team Roles. The Company stated that the purpose of this Incentive Plan is to recognize and reward the dedicated and committed Program Team Members whose primary work focus will be working on multiple discrete projects under the Program and meeting the goals, expectations and timelines set forth to ensure successful outcomes. A more detailed description is shown on Confidential Attachment I&E-RE-17.4. The goal of the plan is to reward effective performance in three areas: project budget, project scope, and project execution. These three areas are weighted as follows: 25% is weighed to Project Cost Management with <105% of budget; 25% is related to Scope Management with <7% from target baseline; and 50% for Project Execution with 90% of phase deliverables delivered within 2 weeks of planned Phase end date, given no risk to Go-Live. In responses to OCA-XI-I (Confidential) – the Company stated that the incentive compensation costs do not include incentive compensation related to the UNITE compensation and all incentive compensation as these are capitalized and not included in expenses. Therefore, it is my understanding that the Incentive Compensation costs shown in the response to I&E-RE-17.2 do not include expenses related to the UNITE Initiative and do not affect all other incentive compensation. These costs are for the Company's Asset Data Collection (ADC) project, which is expected to go into service for UGI Gas in January 2023. **(End Confidential).**

Q. WHAT ARE YOUR ADJUSTMENTS TO THE COMPANY'S CORPORATE ALLOCATION OF (BEGIN CONFIDENTIAL) $6,213,000? (END CONFIDENTIAL)

A. I am recommending removal of these costs from rates. According to the response to OCA-Set XI-1 (**Begin Confidential)** these costs are budgeted at an expected 100% payout. The anticipated payout date for the UNITE ADC is no later than April 30, 2023, with an expected notification date of two weeks prior. I believe these costs are uncertain and speculative because in response to I&E-RE-17.4, the Company indicated that the incentive will be paid once the Executive Committee reviews the effectiveness of the project and this will determine the timing of incentive payout. The incentive will not be paid immediately at the project conclusion, but it will be paid no later than the conclusion of the ADC project -defined Gas Hypercare period. Compensation will be prorated based on the time contributed to each milestone deliverable and subject to the discretion of the UGI

Leadership. **(End Confidential).** There are a lot of variables for receipt of the incentive compensation and based upon the timing of the payout the costs are not known and measurable.

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO UGI MANAGEMENT INCENTIVE COMPENSATION?

A. As shown on Confidential Attachment I&E-RE-17.2 the Company proposed a total Management Incentive Plan cost of **(Begin Confidential)** $4,916,000 broken down by the following: (1) Management Incentive Plan of $2,603,000; (2) Executive Bonuses of $714,000; (3) Restricted Stock Awards of $766,000; (4) Stock Options of $401,000 and: (5) Deferred Compensation Supplemental Executive Retirement Plan of $431,000. These costs total $2,312,000. **(End Confidential).**

Q. DID THE COMPANY PROVIDE ANY DOCUMENTATION TO SUPPORT THE LEVEL OF ITS MANAGEMENT INCENTIVE PLAN?

A. Yes, in response to I&E-RE-18, the Company provided a detailed explanation of how these budgeted amounts were calculated. The Company calculated total Incentive Compensation of $11,129,787 which is broken down by the total UGI Utilities portion of **(Begin Confidential)** of $4,916,000 and that which was allocated from UGI Corporation of $6,213,000 (See I&E-RE 17.2). **(End Confidential).**

Q. PLEASE BRIEFLY DESCRIBE EACH OF THE COMPANY'S INCENTIVE COMPENSATION COSTS INCLUDED IN THE FILING?

A. The budget for the Management Incentive Plan of **(Begin Confidential)** $2,603,000 **(End Confidential)** was calculated for eligible employees using their salaries, position grade, and payout percentage assuming 100% payout per the UGI Utilities Inc. Management Incentive Plan and allocated using their payroll O&M and capital split. The budget for the Executive Bonus Plan of **(Begin Confidential)** $714,000 **(End Confidential)** was calculated for eligible employees using their salary and payout per UGI Utilities Executive Annual Bonus Plan assuming a 100% payout. The Performance Restricted Stock Awards of **(Begin Confidential)** of $766,000 **(End Confidential)** in part, were budgeted using a Monte-Carlo simulation prepared by Willis Towers Watson. The equity portion is set at grant date and amortized equally over three-years. Expense is accelerated for awards that are subject to retirement eligibility provisions. Assumptions are made about future stock prices to estimated marked to market expense/credits. For awards not yet granted, stock price assumptions and historical data are used to calculate an assumed Monte-Carlo valuation and the split of the expense between the equity and liability portions is assumed based upon historical data. The budgeted expense related to Stock Options of **(Begin Confidential)** $401,000 **(End Confidential)** is based in part upon a combination of those awards that have already been granted and those not yet granted. The full cost of the award (calculated using a black-scholes formula) is amortized over a 3-year period. The award is front loaded for those retirement-eligible employees over the first six months from the award date. Finally the Supplement Executive Retirement Plan (SERP) of **(Begin Confidential)** $431,000 **(End Confidential)** is made up in part from a calculation of two plans: the Defined Benefits SERP and the Defined Contribution SERP. The participants in the Defined Benefits SERP are also participants in the Company's pension plan, therefore the annual benefit calculation is an actuarial one done by Willis Towers Watson. For the Defined Contribution SERP, the budget is prepared by doing a calculation of what would be the executive's SERP Benefits for the following fiscal year based upon the executive's current salary plus a 3% merit increase.

Q. DID THE COMPANY PROVIDE RESULTS RELATED TO THE UNITE MANAGEMENT INCENTIVE PLAN BUDGET OF (BEGIN CONFIDENTIAL) $2,603,000 (END CONFIDENTIAL)?

A. In response to Confidential OCA-XI-I, I asked the Company to provide the expected notification dates, pay out dates, dollar amounts of each UNITE goal and whether the targeted goals and performance metrics were met. As stated earlier in my testimony, the only incentive compensation that is included in the expenses is (**Begin Confidential**) for the ADC project which is expected to go into service in January 2023 (**End Confidential**).

Q. WHAT ARE YOUR ADJUSTMENTS?

A. As indicated previously under my adjustments to the Company's Corporate Allocation expenses of (**Begin Confidential)** of $6,213,000,(**End Confidential)** I am recommending removal of these costs from rates. According to the response to OCA-Set XI-1 (**Begin Confidential)** these costs are budgeted at an expected 100% payout. The anticipated payout date for the UNITE ADC is no later than April 30, 2023 with an expected notification date of two weeks prior. I believe these costs are uncertain and speculative because in response to I&E-RE-17.4, , the Company indicated that the incentive will be paid once the Executive Committee reviews the effectiveness of the project and this will determine the timing of incentive payout. The incentive will not be paid immediately at the project conclusion, it will be paid but no later than the conclusion of the ADC project - defined Gas Hypercare period. Compensation will be prorated based on the time contributed to each milestone deliverable and subject to the discretion of the UGI Leadership. **(End Confidential).** There are a lot of variables for receipt of the incentive compensation and based upon the timing of the payout the costs are not known and measurable.

Q. WHAT ARE YOUR ADJUSTMENTS TO THE COMPANY'S INCENTIVE COMPENSATION OF (BEGIN CONFIDENTIAL) $2,312,000 (END CONFIDENTIAL)?

A. These costs should not be included in the Company's projected expenses, as these are related to Executive Compensation currently employed by the Company and executives who have retired from the Company, and I believe that these costs do not provide benefits to customers in the area of customer service, customer satisfaction, customer engagement or safety and reliability issues. As indicated in response to I&E-RE-18, these costs are linked to future stock prices and stock price assumptions. I do not see any ratepayer benefit related to these Executive Bonus Plans, Performance Restricted Stock Awards, or payments to Executive Retirement Plans for those Executives who have retired.

Q. WHAT ARE YOUR OTHER ADJUSTMENTS WITH RESPECT TO THE COMPANY'S A&G EXPENSES?

A. As I normalized the Company's Outside Contractors Expenses under Distribution and Customer Accounts Expense, I am normalizing these costs under the Company's A&G Expenses, to be consistent in my normalization. The Company proposed an Outside Contractor Expense of $1.383 million under the FPFTY period in response to OCA-Set III-33. The Company provided a breakdown of its Outside Contractors Expenses for the periods 2019 through the FPFTY. These costs are mainly related to contractor labor and specifically for the categories of other, restoration, pipeline and traffic removal.

Normalizing these costs by averaging out the expenses over a three-year period (2020-2022) results in a decrease of about $23,000. These types of costs do fluctuate over time because they are outside the control of the Company, they are volatile in nature and are unpredictable.

Q. WHAT IS YOUR NEXT ADJUSTMENT TO THE COMPANY'S A&G EXPENSES?

A. My final adjustment to the Company's A&G Expenses is related to the Company's Employee Benefits costs for which the Company has proposed a balance of $9,506,494 (net of capitalized costs of 40%). These costs are accounted for in Account No. 926.

Q. WHAT REASONS DID THE COMPANY PROVIDE WITH RESPECT TO ITS ADJUSTMENTS TO EMPLOYEE BENEFITS INCLUDING MEDICAL AND DENTAL PLAN COSTS?

A. The Company stated that it budgeted these Dental costs using three-months of data (Oct-Dec) of prior year budget to reflect calendar year enrollment and the remaining nine-months (Jan-Sept) of budget were calculated using four-months of claim costs as well as a 7% increase provided by its broker Willis Towers Watson (WTW) taken from a national medical/Rx carrier survey, and a 2% expected increase in enrollment for the FPFTY. (I&E-RE-28). The Company budgeted using similar methods for Medical costs and utilized an 8% increase to factor in medical claims costs, and an additional 8% increase added on top of other budget increases to account for higher head count and expected higher costs in part due to elective medical procedures, which were deferred during the COVID-19 pandemic timeframe.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL AND ADJUSTMENTS TO ITS MEDICAL AND DENTAL PLAN COSTS?

A. I am not in agreement with the Company's reliance upon national surveys, as these results can vary, are subject to interpretation, and can result in changes based upon which provider is preparing the surveys. I understand that medical and dental costs are increasing over time, however, situations have changed with respect to medical costs and medical coverages. In a Post-COVID-19 environment, some companies have switched to a hybrid workplace, allowing more employees to work remotely which may provide for reduced employee costs. Teleworking or telecommuting can reduce stress on employees that need to balance work/family life, and in turn can increase the quality of life. By reducing commute time and costs, employees can become more engaged in their work by providing for less stressful day-to-day situations if carefully monitored. I believe there is a marketplace for the Company to explore more affordable options for health care based on savings gained from moving to these hybrid workplace models and there are varying opinions on health policy that can affect the cost of coverage. In addition, the Company has included a 7% increase, and a 2% increase for Dental costs, which may not be realized. The same holds true for Medical costs adjustment of 8% and an additional 8% for expected higher costs which also may not be realized.

Q. WHAT ARE YOU RECOMMENDING?

A. I am recommending normalizing the Company's Medical and Dental costs over the FY 2021-2023 period, which when averaged out reduces the costs from $9,506,494 to $8,469,460, a reduction of $1,037,034. This also takes into consideration my recommended reduction of employee count (open positions) in the FPFTY period. The Company has not prepared its claims for Medical and Dental costs based primarily on anticipated eligible participants and the information is not available for the FTY and FPFTY periods. (I&E-RE-28). The Company booked $6.796 million of Medical and Dental costs in FY 2020 and $9.506 million of Medical and Dental costs in FY 2023, an increase of almost 40%. Normalizing these costs over three periods results in an increase of $1.673 million over FY 2020, a 25% increase.

Q. WHAT IS YOUR FINAL ADJUSTMENT RELATED TO THE COMPANY'S A&G EXPENSES?

A. My final adjustment is related to the Company's Breakdown of Corporate Allocation in response to I&E-RE-3 Attachment 3.2 – Corporate Allocation. In Attachment OCA-X-1 (Highly Confidential) the Company provided a breakdown for Professional Expenses **(Begin Confidential)** at the cost center level at UGI Corporation. In reviewing this response I identified costs related to Environmental, Social and Governance (ESG) costs amounting to $453,900 (Cost Center 436) and for Company Membership dues amounting to $38,760. (Cost Center 436). These costs relate to the corporate social goals of maximizing profits on behalf of the corporation's shareholders and advocating a certain set of environmental goals. The costs also related to the Company's support for certain social movements along with the diversity, equity and inclusion movement. **(End Confidential)** I believe these costs should not be recovered from ratepayers as they do not support the safe, reliable and adequate service requirement of utility service but rather the costs are akin to sponsorships and civic related activities. These costs should be borne by the Company shareholders. **(Begin Confidential)** The allocated costs to the UGI-Gas Division using the Company's allocation factors of 25.76% and 90.69% (Attachment I&E-RE-3.2) equal a balance of ($453,900 times 25.76% times 90.69%) $106,039. For the Membership dues of $38,760 the allocation to the UGI-Gas Division is $9,055. The total adjustment is $115,094. **(End Confidential).**

Q. WHAT IS YOUR OVERALL ADJUSTMENT TO THE COMPANY'S A&G EXPENSE?

A. My overall adjustment to the Company's A&G Expenses is a reduction of $22,747,366 shown on my Schedule DM-17.

3. <u>DEPRECIATION EXPENSE</u>

Q. WHAT DID THE COMPANY PROPOSE WITH RESPECT TO ITS DEPRECIATION EXPENSE?

A. The Company proposed a Depreciation Expense of $125.537 million as shown on Company Schedule D-2 and Schedule D-21. The Company began with the annual depreciation for gas distribution plant and common plant as budgeted during the 9/30/2023 period and allocated a portion of the common plant to the gas division of $127.823 million. The Company annualized budgeted FPFTY depreciation expense to calculate an entire year's worth of depreciation on plant in service as of the end of the FY 2023. The Company made adjustments to charges to Clearing Accounts of $8.371 million and the Company made an adjustment to Net Salvage Amortization of $6.083 million to arrive at a balance of $125.537 million. (Company Schedule D-21). The Company's claim for depreciation expense is based on a straight line remaining life method of depreciation. (Statement No. 4 at 12). The Company's claim for depreciation is in connection with the Company's submission of its annual depreciation report which is approved each March by the Commission. (Statement No. 4 at 14).

Q. WHAT ARE YOUR RECOMMENDATIONS RELATED TO THE COMPANY'S DEPRECIATION EXPENSE?

A. I am accepting the Company's service lives and depreciation rates. My adjustments relate to my disallowance of a certain plant that was included in the Company's GPIS balance.

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S NEGATIVE NET SALVAGE VALUE BALANCE?

A. No.

Q. WHAT ARE YOUR ADJUSTMENTS TO THE COMPANY'S DEPRECIATION EXPENSE?

A. Since I removed certain projects from the Company's FY 2022 and FY 2023 plant additions, I am removing the associated Depreciation Expense. Using the Company's composite rate of depreciation for Distribution Plant of 2.06% and General Plant of 5.710%, my adjustments are $212,111 and $4,304,502, respectively, for a total adjustment of $4,517,363. [15]

Q. DO YOU HAVE ANY OTHER ADJUSTMENTS TO THE COMPANY'S DEPRECIATION EXPENSE?

A. No.

4. TAXES OTHER THAN INCOME

Q. WHAT HAS THE COMPANY PROPOSED WITH RESPECT TO TAXES OTHER THAN INCOME TAXES?

A. The Company proposed total Taxes Other than Income in the amount of $13.658 million as shown on Company Schedule D-2 and Schedule D-31. The Company included taxes associated with payroll taxes, PURTA taxes, PA & Local Use taxes, and the PUC assessment.

[15] Any differences are due to rounding.

Q. WHAT ARE YOUR ADJUSTMENTS AND YOUR RECOMMENDED LEVEL OF TAXES OTHER THAN INCOME TAXES?

A. I am accepting the Company's methodology in the calculation of its Taxes Other Than Income. I am making adjustments to the Company's Payroll Taxes that reflect my recommended S&W balance, which includes my adjustments to the Company's open positions and my adjustments to the Company's various Incentive Compensation costs. I removed costs associated with certain Incentive Compensation adjustments, which are reflected in the Company's payroll rates accordingly. My adjustment is a reduction of $515,314 from the Company's proposed balance of $13,658,307 or $13,142,993.

Q. WHAT IS YOUR OTHER ADJUSTMENT TO TAXES OTHER THAN INCOME?

A. I adjusted the Company's PA & Local taxes in response to OCA-Set III-18, in which the Company overstated its claim in the amount **(Begin Confidential)** of approximately $77,000. (**End Confidential)** (Attachment OCA-III 18(2)).

5. INCOME TAXES

Q. WHAT DID THE COMPANY CALCULATE WITH RESPECT TO ITS INCOME TAXES?

A. The Company proposed total Income Taxes of $63.348 million, of which $15.523 million is related to the State Income Taxes and $47.824 million is related to the Federal Income Taxes as shown on Company Schedule D-33.

Q. WHAT OTHER ADJUSTMENTS DID THE COMPANY MAKE TO COMPUTE ITS INCOME TAX EXPENSE?

A. According to Ms. McKinney, the Company included the use of debt interest synchronization, the normalization method for accelerated depreciation and the flow-through of accelerated depreciation benefits for state tax purposes. (Statement No. 7 at 5). The Company continued to flow through the repairs tax benefit over the tax useful lives of the asset that generate the tax benefit which is generally 20 years. (Statement No. 7 at 5).

Q. DID THE COMPANY INCLUDE ADJUSTMENTS RELATED TO THE EXCESS DEFERRED FEDERAL INCOME TAXES AS A RESULT OF THE 2017 TAX CUTS AND JOBS ACT (TCJA)?

A. Yes. Company witness Ms. McKinney stated that the Excess Deferred Federal Income Taxes (EDFIT) has been calculated, amortized and flowed-back to ratepayers in the FPFTY period. The amount of the EDFIT has been calculated at $17.702 million (Company Schedule D-33 line 25) and the total amortization is approximately $4.3 million using the average rate assumption method (ARAM) as required by tax normalization rules. (Statement No. 7 at 6).

Q. DO YOU HAVE ANY ADJUSTMENTS TO THE COMPANY'S METHODOLOGY WITH RESPECT TO THE CALCULATION OF THE COMPANY'S INCOME TAXES?

A. No I am accepting the Company's methodology. My adjustments reflect the recommended changes of Rate Base and Operating Income.

Q. WHAT ARE YOUR RECOMMENDED FEDERAL INCOME TAXES AND RECOMMENDED STATE INCOME TAXES AT PRESENT RATE REVENUE?

A. My recommended Federal Income Taxes is $37,748,730. My recommended State Income Taxes is $9,769,753

Q. WHAT IS YOUR ADJUSTMENT RELATED TO THE COMPANY'S INTEREST EXPENSE CALCULATION?

A. Using my recommended Rate Base Balance of $3.087 billion and Mr. Garrett's recommended Long-Term Debt Ratio of 50% and cost of debt of 1.990%, my recommended Interest Expense is $61,437,244.

Q. WHAT IS YOUR TOTAL INCOME TAX EXPENSE AT PRESENT RATE REVENUE?

A. My total Income Tax Expense at Present Rate Revenue is $47,518,483. The additional revenue requirement adjustment is factored into Gross Revenue Conversion Factor shown on my Schedule DM-1.

D. Act 40 Requirements (Act 40 of 2016)

Q. WHAT ARE THE ACT 40 REQUIREMENTS?

A. Act 40 took effect on August 11, 2016, and among other things, it eliminated the consolidated tax savings adjustment. Prior to Act 40, the Company would have been required to adjust its revenue increase request downward to reflect tax savings associated with filing taxes as part of a parent or holding company. This practice recognized that the Company's ratepayers only paid through rates those taxes that the Company actually paid. Act 40 requires the Company to continue its performance of the consolidated tax savings calculation and provide that consolidated tax savings differential as part of its rate case filing. In part, Act 40 states:

> If an expense or investment is allowed to be included in a public utility's rates for ratemaking purposes, the related income tax deductions and credits shall also be included in the computation of current or deferred income tax expense to reduce rates. If an expense or investment is not allowed to be included in a public utility's rates, the related income tax deductions and credits, including tax losses of the public utility's parent or affiliated companies, shall not be included in the computation of income tax expense to reduce rates. The deferred income taxes used to determine the rate base of a public utility for ratemaking purposes shall be based solely on the tax deductions and credits received by the public utility and shall not include any deductions or credits generated by the expenses or investments of a public utility's parent or any affiliated entity. The income tax expense shall be computed using the statutory income tax rates.

Act 40 further states:

> REVENUE USE- If a differential accrues to a public utility resulting from applying the ratemaking methods employed by the commission prior to the effective date of subsection (a) for ratemaking purposes, the differential shall be used as follows:
>
> (1) Fifty percent to support reliability or infrastructure related to the rate-base eligible capital investment as determined by the commission; and
> (2) Fifty percent for general corporate purposes.

As a result, ratepayers now pay taxes in excess of those taxes that the Company actually pays, and the revenue use requirement specifies how those additional revenues are to be applied. Section 1301.1 (b) requires the Company to use 50% of that differential for reliability or infrastructure related capital investment and the remaining 50% for general corporate purposes.

Q. HAS THE COMPANY CALCULATED A CONSOLIDATED TAX EXPENSE ADJUSTMENT (CTA)?

A. According to Ms. McKinney, the Company has not calculated a CTA, because such an adjustment is no longer authorized under Section 1301.1 to the Public Utility Code, which eliminated the need to show a consolidated tax adjustment for ratemaking purposes. Section 1301 (b) required a public utility to demonstrate that it shall use at least 50 percent of what would have been a consolidate tax adjustment under the prior law to Act 40 for reliability or infrastructure related capital investments and the other 50 percent shall be used for general corporate purposes. (Statement No. 7 at 9).

Q. HAS THE COMPANY SATISFIED THE FIRST REQUIREMENT UNDER ACT 40 – 50% OF THE DIFFERENTIAL SPENT ON INFRASTRUCTURE REPLACEMENT?

A. Yes. As explained by Ms. Hazenstab, and as further discussed by Company witness Ms. Schappell, the Company's pro-forma capital additions for reliability or infrastructure projects for the FTY are $289 million and for the FPFTY are $311 million, which are greater than the 50% the Company calculated with respect to its consolidated tax savings of $2.553 million (Statement No. 2 at 26). (OCA-Set III-20).

Q. WHAT IS UGI'S PROPOSAL FOR THE OTHER 50% OF THE DIFFERENTIAL, WHICH SECTION 1301.1(b)(2) STATES MUST BE USED FOR "GENERAL CORPORATE PURPOSES"?

A. According to Ms. Hazenstab, the Company claimed that its general corporate purpose expense exceeded the 50% of the tax benefit that resulted from the elimination of the consolidated tax adjustment (Statement No. 2 at 27). Ms. Hazenstab stated that the Company's operating budget of more than $760 million in operating expenditures would be used to render gas distribution service. 50% of the consolidated tax adjustment would equate to only $1.825 million $1.277 million, plus the gross up of 1.429864 equals $1.825 million. (OCA-III-20).

Q. WHAT DO YOU CONCLUDE REGARDING THE 50% OF THE DIFFERENTIAL THAT ACT 40 REQUIRES TO BE USED FOR "GENERAL CORPORATE PURPOSES"?

A. UGI does not appear to propose a specific treatment for the other 50% of the differential, which Section 1301.1(b)(2) states must be used for "general corporate purposes." In response to OCA-III-20, I asked the Company to show how the 50% of the consolidated tax savings has been used for general corporate purposes. The Company responded that its operating expenses of more than $760 million exceed the Company's calculation of the 50% level of the adjustment related to general corporate purposes. UGI has identified no specific way in which that 50% of the differential would be used to benefit Pennsylvania ratepayers. One might conclude from this that UGI basically intends to use that money for the benefit of its stockholders, and not apply it in any manner to provide a quantifiable ratepayer benefit or in a manner that directly benefits service to Pennsylvania customers.

Q. WHAT DOES "GENERAL CORPORATE PURPOSES" AS USED IN ACT 40 MEAN?

A. Because UGI is a regulated utility in Pennsylvania, its "general corporate purpose" is to provide regulated utility service in the Commonwealth of Pennsylvania. While the term "general corporate purposes" is rather vague, general corporate purposes would typically include uses for such "differential" revenues as supporting capital expenditures necessary to execute utility business plans, paying off debt, funding construction projects, paying dividends, paying for maintenance and operating expenses, investing in utility plant in Pennsylvania, and providing a source of working capital. Many of these uses for "general corporate purposes" would have a quantifiable benefit to Pennsylvania ratepayers. As I read the entirety of Act 40, the "revenue use differential" addressed in the Act for "general corporate purposes" should mean public utility purposes and uses that result in having some identifiable and quantifiable benefit to Pennsylvania and UGI ratepayers, rather than just resulting in a windfall of $1.277 million annually to UGI's shareholders or affiliates.

Q. WHAT SPECIFIC RECOMMENDATION DO YOU HAVE IN THE CURRENT UGI GAS RATE CASE FOR APPLYING THE 50% OF THE "REVENUE USE" DIFFERENTIAL THAT ACT 40 REQUIRES TO BE FOR "GENERAL CORPORATE PURPOSES"?

A. I have reflected the 50% differential for general corporate purposes as a source of non-investor-supplied funding for utility working capital. I have reduced the Company's Rate Base balance by $1.277 million as shown on my Schedule DM-3.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

SUMMARY SCHEDULE

DIRECT TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

April 20, 2022

TABLE OF CONTENTS

APPENDICES

LIST OF EXHIBITS

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is David J. Garrett. My business address is 101 Park Avenue, Suite 1125, Oklahoma Company, Oklahoma 73102.

Q. By whom are you employed and in what capacity?

A. I am the managing member of Resolve Utility Consulting, LLC. I am an independent consultant specializing in public utility regulation.

Q. Please summarize your educational background and professional experience.

A. I received a B.B.A. degree with a major in Finance, an M.B.A. degree, and a J.D. degree from the University of Oklahoma. I worked in private legal practice for several years before working as assistant general counsel at the Oklahoma Corporation Commission in 2011. At the Oklahoma Corporation Commission, I worked in the Office of General Counsel in regulatory proceedings. In 2012, I worked for the Public Utility Division as a regulatory analyst providing testimony in regulatory proceedings. After leaving the Oklahoma Corporation Commission, I formed Resolve Utility Consulting PLLC, where I have represented numerous consumer groups and state agencies in utility regulatory proceedings, primarily in the areas of cost of capital and depreciation. I am a Certified Depreciation Professional with the Society of Depreciation Professionals. I am also a Certified Rate of Return Analyst with the Society of Utility and Regulatory Financial

Analysts. A more complete description of my qualifications and regulatory experience is included in my curriculum vitae.[1]

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. Describe the purpose and scope of your testimony in this proceeding.

A. The primary purpose of my testimony is to provide my opinion on the estimated cost of capital and awarded rate of return recommendation for UGI Utilities, Inc. – Gas Division ("UGI" or the "Company"). I am responding to the direct testimony of Company witness Paul R. Moul.

Q. Please describe the organization of your testimony.

A. In the executive summary below, I provide an overview of cost of capital issues, my recommendations, and my response to the Company's testimony on these issues. In the sections that follow, I discuss the legal standards governing the awarded return issue, as well as the general concepts involved in estimating the cost of equity. I provide detailed analysis of the Discounted Cash Flow ("DCF") Model, the Capital Asset Pricing Model ("CAPM"), including my results for these models and my responses to Mr. Moul's results. I also address capital structure, which is a key component to the cost of capital.

I. EXECUTIVE SUMMARY

Q. Please summarize your recommendation to the Commission.

A. My testimony can be distilled to the following recommendations:

[1] Exhibit DJG-1.

- The Commission should reject the Company's proposed return on equity ("ROE") of 11.20% as excessive and unsupported. An objective cost of equity analysis shows that UGI's cost of equity is about 7.0%.

- The legal standards governing this issue do not mandate that the awarded ROE equate to the result of a particular financial model, but rather that it be reasonable under the circumstances. In my opinion, it is never appropriate to use an awarded ROE significantly above a regulated utility's cost of equity; however, that concept is even more important under these unique circumstances. Accordingly, I recommend the Commission award UGI an authorized ROE of 8.5%. Although 8.5% is still clearly above UGI's market-based cost of equity estimate, it represents a gradual yet meaningful move towards market-based cost of equity.

- I recommend the Commission reject UGI's proposed capital structure consisting of 44.88% debt and 55.12% equity. This equity-rich capital structure has the effect of increasing capital costs above a reasonable level. An objective mathematical analysis of UGI's optimal capital structure indicates a debt ratio as high as 55%. Likewise, the average debt ratio of the proxy group is 58%. Thus, UGI's proposed debt ratio is far too low to be considered reasonable. I recommend an imputed capital structure consisting of 50% debt and 50% equity. My adjustments to the Company's proposed ROE and capital structure equate to an overall weighted average rate of return of 6.24%.

My proposed adjustments are illustrated in the table below.[2]

Figure 1:
OCA Weighted Average Rate of Return Proposal

Capital Component	Proposed Ratio	Cost Rate	Weighted Cost
Long-Term Debt	50.0%	3.98%	1.99%
Common Equity	50.0%	8.50%	4.25%
Total	100.0%		6.24%

The details supporting my proposed adjustments are discussed further in my testimony.

[2] *See also* Exhibit DJG-16.

Q. Are you recommending any adjustments to UGI's proposed cost of debt?

A. No.

A. Overview and Background

Q. Please explain the concept and significance of the Cost of Capital.

A. The term cost of capital, or Weighted Average Cost of Capital (WACC),[3] refers to the weighted average cost of the components within a company's capital structure, including the costs of both debt and equity. The three primary components of a company's WACC include the following:

1. Cost of Debt
2. Cost of Equity
3. Capital Structure

Determining the cost of debt is relatively straight-forward. Interest payments on bonds are contractual, embedded costs that are generally calculated by dividing total interest payments by the book value of outstanding debt. Determining the cost of equity, on the other hand, is more complex. Unlike the known, contractual, and embedded cost of debt, there is not any explicitly quantifiable "cost" of equity. Instead, the cost of equity must be estimated through various financial models. Cost of capital is expressed as a weighted average because it is based upon a company's relative levels of debt and equity, as defined by the particular capital structure of that company. The basic WACC equation used in regulatory proceedings is presented as follows:

[3] The terms cost of capital and WACC are synonymous and used interchangeably throughout this testimony.

Equation 1:
Weighted Average Cost of Capital

$$WACC = \left(\frac{D}{D+E}\right) C_D + \left(\frac{E}{D+E}\right) C_E$$

where:	$WACC$	=	*weighted average cost of capital*
	D	=	*book value of debt*
	C_D	=	*embedded cost of debt capital*
	E	=	*book value of equity*
	C_E	=	*market-based cost of equity capital*

Companies in the competitive market often use their WACC as the discount rate to determine the value of capital projects, so it is important that this figure be estimated accurately.

Q. How do experts and regulators typically assess the ROEs awarded to utilities and the corresponding opportunity for shareholders?

A. Investors, company managers, and academics around the world have used models, such as the CAPM and DCF to closely estimate cost of equity for many years, and weigh the results achieved against the results from proxy groups. Each of these concepts will be discussed in more detail later in my testimony.

B. <u>Recommendation</u>

Q. Please summarize your ROE recommendation to the Pennsylvania Public Utility Commission (Commission).

A. Pursuant to the legal and technical standards guiding this issue, the awarded ROE should be based on, or reflective of, the utility's cost of equity. UGI's estimated cost of equity is about 7.0%, when using reasonable inputs. However, legal standards do not mandate the awarded ROE be set exactly equal to the cost of equity. Rather, in *Federal Power Commission v. Hope Natural Gas Co.*, the U.S. Supreme Court found that, although the awarded return should be based on a utility's cost of equity, the "end result" should be just and reasonable.[4] Therefore, I recommend the Commission award UGI an ROE of 8.5%. In my opinion, an awarded ROE that is set too far above a regulated utility's cost of equity (which in this case is only about 7.0%) runs the risk of being at odds with the standards set forth in *Hope*[5] and *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*.[6] In other words, setting the awarded ROE far above the cost of equity results in an excess transfer of wealth from customers to the utility, which is never appropriate.

Q. If 8.5% exceeds UGI's actual cost of equity and still, in your opinion, results in an excessive wealth transfer from shareholders to ratepayers, how can it still be considered a just and reasonable result?

A. The ratemaking concept of "gradualism," though usually applied from ratepayers' standpoint to minimize rate shock, could also be applied illustratively to shareholders. An awarded return as low as 7.0% in any current rate proceeding would represent a stark and substantial movement. While generally reducing awarded ROEs for utilities would move awarded returns closer to market-based costs and so reduce the excess transfer of wealth from ratepayers to shareholders, I believe it is advisable to do so gradually. One of the primary reasons UGI's actual cost of equity is so low is because UGI is a low-risk investment. In general, utility stocks are low-risk investments because movements in their stock prices are not volatile. If the Commission were to make a significant, sudden change

---

[4] *See Federal Power Commission v. Hope Natural Gas Co*., 320 U.S. 591, 603 (1944). Here, the Court states that it is not mandating the various permissible ways in which the rate of return may be determined, but instead indicates that the end result should be just and reasonable. This is sometimes called the "end result" doctrine.

[5] *Id.*

[6] *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679, 692–93 (1923).

in the awarded ROE anticipated by regulatory stakeholders, it could have the undesirable effect of notably increasing the Company's risk profile, which could be in contravention to the *Hope* Court's "end result" doctrine. An awarded ROE of 8.5% represents a good balance between the Supreme Court's indications that awarded ROEs should be based on cost, while also recognizing that the end result must be just and reasonable under the circumstances. An awarded ROE of 8.5% represents a relatively gradual, yet decisive move toward UGI's market-based cost of equity, while still providing UGI's shareholders with the opportunity to earn a return that is more than 100 basis points above UGI's market-based cost of equity (8.5% vs. 7.0%).

Q. Please summarize your recommendation regarding capital structure.

A. The Company proposes an equity-rich capital structure consisting of 55.12% common equity and only 44.88% debt.[7] Unlike competitive companies, which have a natural financial incentive to issue sufficient amounts of debt to maximize profits, regulated utilities do not have the same incentive to issue sufficient amounts of debt. However, even Mr. Moul's own utility proxy group reported a debt ratio of 58%, which is substantially higher than the debt ratio proposed by UGI.[8] Although there is strong evidence to support an imputed debt ratio as high as 58%, I recommend the Commission impute a ratemaking debt ratio of 50% (and 50% equity) in the interest of a more gradual approach.

---

[7] Direct Testimony of Paul R. Moul, p. 21, lines 24-25.

[8] Exhibit DJG-15.

C. Response to the Company's Testimony

Q. Please provide an overview of the problems you have identified with the Company's testimony regarding cost of equity, capital structure, and the resulting awarded ROE.

A. Mr. Moul proposes a return on equity of 11.20%.[9] Mr. Moul's recommendation is based on the CAPM, DCF Model, and other models. A summary of Mr. Moul's positions are shown in the figure below.[10]

Figure 2:
UGI Weighted Average Rate of Return Proposal

Capital Component	Proposed Ratio	Cost Rate	Weighted Cost
Long-Term Debt	44.9%	3.98%	1.79%
Common Equity	55.1%	11.20%	6.17%
Total	100.0%		7.96%

However, several of his key assumptions and inputs to these models violate fundamental, widely accepted tenets in finance and valuation. I find several aspects of Mr. Moul's approach and resulting recommendations to be problematic, including the growth rates used in his DCF models and his inflated estimate for the equity risk premium ("ERP") used in his CAPM analysis. In addition, Mr. Moul adds what he calls a "leverage adjustment" to the results of his models, which inappropriate inflate the results. The Commission has previously rejected Mr. Moul's proposed leverage adjustment.[11] Finally, Mr. Moul

[9] Direct Testimony of Paul R. Moul, p. 4, lines 12-15.

[10] *See also* Direct Testimony of Paul R. Moul, Exhibit PRM-1, Sch. 1, p. 1.

[11] Pa. P.U.C. v. PPL Elec. Util. Corp., Docket No. R-2012-2290597, Order, 52 (Dec. 28, 2012), p. 52 of 105.

inappropriately adds premium to his cost of equity estimate for management performance, which further inflates a figure that is already overestimated.

Regarding capital structure, Mr. Moul adopts the Company's FPFTY capital structure ratios of 44.88% long-term debt and 55.12% common equity.[12] As discussed in my testimony, the Company does not have a financial incentive to operate with sufficient amounts of debt in its capital structure, and the evidence shows that UGI's proposed debt ratio is too low.

II. LEGAL STANDARDS AND THE AWARDED RETURN

Q. Discuss the legal standards governing the awarded rate of return on capital investments for regulated utilities.

A. In *Wilcox v. Consolidated Gas Co. of New York*, the U.S. Supreme Court first addressed the meaning of a fair rate of return for public utilities.[13] The Court found that "the amount of risk in the business is a most important factor" in determining the appropriate allowed rate of return.[14] As referenced earlier, in two subsequent landmark cases, the Court set forth the standards by which public utilities are allowed to earn a return on capital investments. First, in *Bluefield*, the Court held:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public. . . but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and

[12] Direct Testimony of Paul R. Moul, p. 4, lines 12-15.

[13] *Wilcox v. Consolidated Gas Co. of New York*, 212 U.S. 19 (1909).

[14] *Id.* at 48.

> economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.[15]

Then, in *Hope*, the Court expanded on the guidelines set forth in *Bluefield* and stated:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses <u>but also for the capital costs of the business.</u> These include service on the debt and dividends on the stock. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[16]

The cost of capital models I have employed in this case are designed to be in accordance with the foregoing legal standards.

Q. Is it important that the awarded rate of return be based on the Company's actual cost of capital?

A. Yes. The U.S. Supreme Court in *Hope* makes it clear that the allowed return should be based on the actual cost of capital.[17] Moreover, the awarded return must also be fair, just, and reasonable under the circumstances of each case. Among the circumstances that must be considered in each case are the broad economic and financial impacts to the cost of equity and awarded return caused by market forces and other factors. As a starting point, however, scholars agree that the actual cost of capital must be considered:

---

[15] *Bluefield* at 692–93.

[16] *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591, 603 (1944) (emphasis added) (internal citations omitted).

[17] The term "cost of capital" includes both debt and equity. The overall awarded rate of return should be based on the utility's cost of capital, which the awarded ROE should be based on the utility's cost of equity.

> Since by definition the cost of capital of a regulated firm represents precisely the expected return that investors could anticipate from other investments while bearing no more or less risk, and since investors will not provide capital unless the investment is expected to yield its opportunity cost of capital, the correspondence of the definition of the cost of capital with the court's definition of legally required earnings appears clear.[18]

The models I have employed in this case closely estimate the Company's true cost of equity. If the Commission sets the awarded return based on my lower and more reasonable rate of return, it will better comply with the U.S. Supreme Court's standards, allow the Company to maintain its financial integrity, and achieve reasonable returns for its investors. On the other hand, if the Commission sets the allowed rate of return much higher than the true cost of capital, as requested by UGI, it will result in an inappropriate transfer of wealth from ratepayers to shareholders.[19]

Q. What does this legal standard mean for determining the awarded return and the cost of capital?

A. The awarded return and the cost of capital are different but related concepts. On the one hand, the legal and technical standards encompassing this issue require that the awarded return reflect the true cost of capital. Yet on the other hand, the two concepts differ in that the legal standards do not mandate that awarded returns exactly match the cost of capital. Instead, awarded returns are set through the regulatory process and may be influenced by various factors other than objective market drivers. By contrast, the cost of capital should be evaluated objectively and be closely tied to economic realities, such as stock prices,

---

[18] A Lawrence Kolbe, James A. Read, Jr. & George R. Hall, *The Cost of Capital: Estimating the Rate of Return for Public Utilities* 21 (The MIT Press 1984).

[19] Roger A. Morin, *New Regulatory Finance* 23–24 (Public Utilities Reports, Inc. 2006) (1994) ("[I]f the allowed rate of return is greater than the cost of capital, capital investments are undertaken and investors' opportunity costs are more than achieved. Any excess earnings over and above those required to service debt capital accrue to the equity holders, and the stock price increases. In this case, the wealth transfer occurs from ratepayers to shareholders.").

dividends, growth rates, and, most importantly, risk. The cost of capital can be estimated by financial models used by firms, investors, and academics around the world for decades. The problem is, with respect to regulated utilities, there has been a trend in which awarded returns fail to closely track with market-based cost of capital, as further discussed below. To the extent this occurs, the results are detrimental to ratepayers and the state's economy.

Q. Describe the economic impact that occurs when the awarded return strays too far from the U.S. Supreme Court's time-honored cost of equity standards.

A. When the awarded ROE is set far above the cost of equity, it runs the risk of violating the U.S. Supreme Court's standards. This has the effect of diverting dollars from ratepayers for their internal or business uses that would otherwise support the local or state economy to the utility's shareholders at large. Moreover, establishing an awarded return that far exceeds true cost of capital effectively prevents the awarded returns from changing along with economic conditions. This is especially true given the fact that regulators tend to be influenced by the awarded returns in other jurisdictions, regardless of the various unknown factors influencing those awarded returns. If regulators rely too heavily on the awarded returns from other jurisdictions, they can create a cycle over time that bears little relation to the market-based cost of equity. In fact, this is exactly what we have observed since 1990. This is yet another reason why it is crucial for regulators to put more emphasis on the target utility's actual cost of equity than on the awarded returns from other jurisdictions. Awarded returns may be influenced by settlements and other political factors not based on true market conditions. In contrast, the true cost of equity as estimated through objective models is not influenced by these factors but is instead driven by market-based factors.

Q. Can you illustrate and provide a comparison of the relationship between awarded utility returns and market cost of equity since 1990?

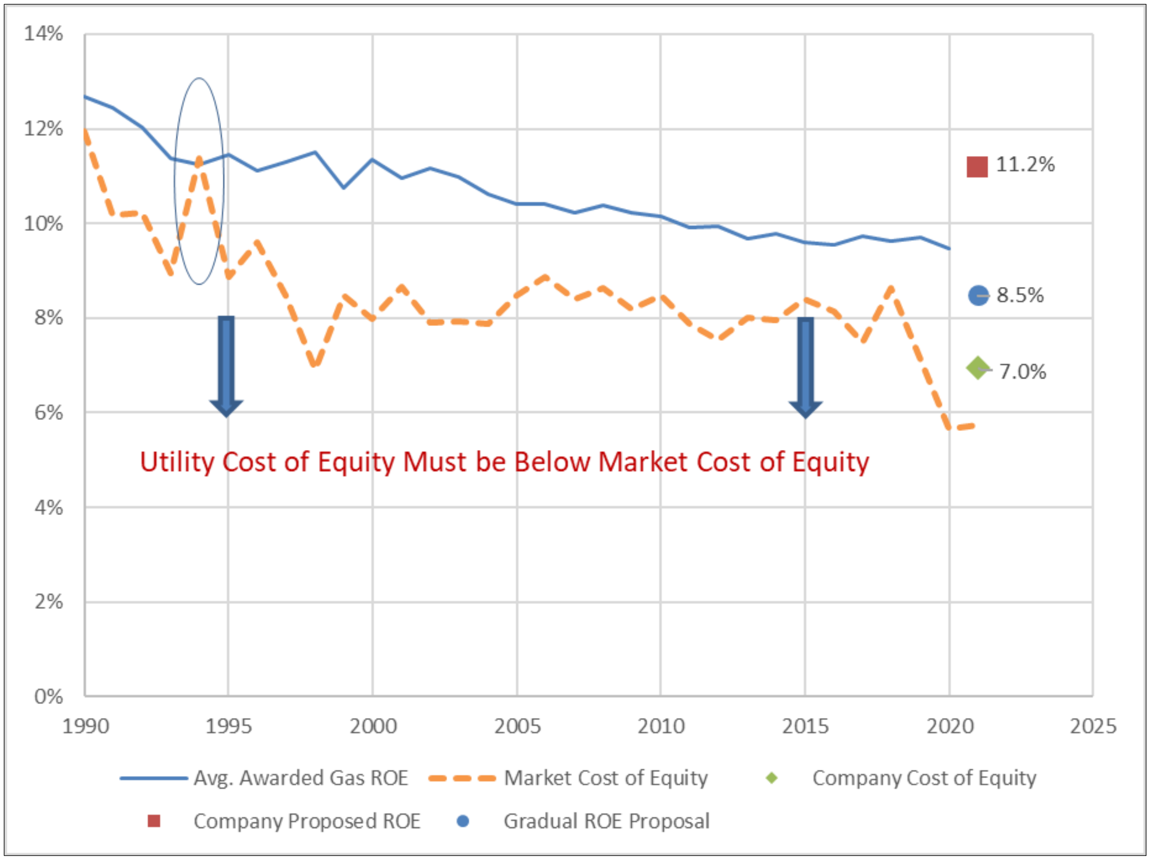
A. Yes. As shown in the figure below, awarded returns for electric and gas utilities have been above the average required market return since 1990.[20] Because utility stocks are consistently far less risky than the average stock in the marketplace, the cost of equity for utility companies is less than the market cost of equity.

To illustrate this fact, the graph in the figure below shows three trend lines. The top two line are the average annual awarded returns since 1990 for U.S. regulated electric and gas utilities. The bottom line is the required market return over the same period. As discussed in more detail later in my testimony, the required market return is essentially the return that investors would require if they invested in the entire market and, as such, the required market return is essentially the cost of equity of the entire market. Since it is undisputed that utility stocks are less risky than the average stock in the market, then the utilities' cost of equity must be less than the market cost of equity.[21] Thus, awarded returns (the solid line) should generally be below the market cost of equity (the dotted line), since awarded returns are supposed to be based on true cost of equity.

[20] Exhibit DJG-13.

[21] This fact can be objectively measured through a term called "beta," as discussed later in the testimony. Utility betas are less than one, which means utility stocks are less risky than the "average" stock in the market.

Figure 3:
Awarded ROEs vs. Market Cost of Equity



Notwithstanding the data in this graph, awarded ROEs have been consistently above the market cost of equity for many years. Also as shown in this graph, since 1990, there was only one year in which the average awarded ROE was below the market cost of equity. In 1994, regulators awarded ROEs that were the closest to utilities' market-based cost of equity. In my opinion, when awarded ROEs for utilities are below the market cost of equity, regulators more closely conform to the standards set forth by *Hope* and *Bluefield* and minimize the excess wealth transfer from ratepayers to shareholders.

Q. Have other analysts commented on this national phenomenon of awarded ROEs exceeding market-based cost equity for utilities?

A. Yes. In his article published in Public Utilities Fortnightly in 2016, Steve Huntoon observed that even though utility stocks are less risky than the stocks of competitive industries, utility stocks have nonetheless outperformed the broader market.[22] Specifically, Mr. Huntoon notes the following three points which lead to a problematic conclusion:

> 1. Jack Bogle, the founder of Vanguard Group and a Wall Street legend, provides rigorous analysis that the long-term total return for the broader market will be around 7 percent going forward. Another Wall Street legend, Professor Burton Malkiel, corroborates that 7 percent in the latest edition of his seminal work, A Random Walk Down Wall Street.
>
> 2. Institutions like pension funds are validating the first point by piling on risky investments to try and get to a 7.5 percent total return, as reported by the Wall Street Journal.
>
> 3. Utilities are being granted returns on equity around 10 percent.[23]

Other scholars have also observed that awarded ROEs have not appropriately tracked with declining interest rates over the years, and that excessive awarded ROEs have negative economic impacts. In a white paper issued in 2017, Charles S. Griffey stated:

[22] Steve Huntoon, "Nice Work If you can Get It," Public Utilities Fortnightly (Aug. 2016).

[23] *Id*.

> The "risk premium" being granted to utility shareholders is now higher than it has ever been over the last 35 years. Excessive utility ROEs are detrimental to utility customers and the economy as a whole. From a societal standpoint, granting ROEs that are higher than necessary to attract investment creates an inefficient allocation of capital, diverting available funds away from more efficient investments. From the utility customer perspective, if a utility's awarded and/or achieved ROE is higher than necessary to attract capital, customers pay higher rates without receiving any corresponding benefit.[24]

It is interesting that both Mr. Huntoon and Mr. Griffey use the word "sticky" in their articles to describe the fact that awarded ROEs have declined at a much slower rate than interest rates and other economic factors resulting in a decline in capital costs and expected returns on the market. It is not hard to see why this phenomenon of "sticky" ROEs has occurred. Because awarded ROEs are often based primarily on a comparison with other awarded ROEs around the country, the average awarded returns effectively fail to adapt to true market conditions, and regulators seem reluctant to deviate from the average. Once utilities and regulatory commissions become accustomed to awarding rates of return higher than market conditions actually require, this trend becomes difficult to reverse. The fact is, utility stocks are less risky than the average stock in the market, and thus, awarded ROEs should be less than the expected return on the market. However, that is rarely the case. My proposal assists the Commission in "see[ing] the gap between allowed returns and cost of capital,"[25] and reconciling this issue in an equitable manner.

[24] Charles S. Griffey, "When 'What Goes Up' Does Not Come Down: Recent Trends in Utility Returns," White Paper (February 2017).

[25] Leonard Hyman & William Tilles, "Don't Cry for Utility Shareholders, America," Public Utilities Fortnightly (October 2016).

Q. Summarize the legal standards governing the awarded ROE issue.

A. The Commission should strive to move the awarded return to a level more closely aligned with the Company's actual, market-derived cost of capital while keeping in mind the following two legal principles outlined below.

1. Risk is the most important factor when determining the awarded return. The awarded return should be commensurate with those returns on investments of corresponding risk.

The legal standards articulated in *Hope* and *Bluefield* demonstrate that the U.S. Supreme Court understands one of the most basic, fundamental concepts in financial theory: the more (or less) risk an investor assumes, the more (or less) return the investor requires. Since utility stocks are low risk, the return required by equity investors should be relatively low. I have used financial models to closely estimate the Company's cost of equity, and these financial models account for risk. The cost of equity models confirm the industry experiences relatively low levels of risk by producing relatively low cost of equity results. In turn, the awarded ROE in this case should reflect UGI's relatively low market risk.

2. The awarded return should be sufficient to assure financial soundness and integrity under efficient management.

Because awarded returns in the regulatory environment have not closely tracked market-based trends and commensurate risk, utility companies have been able to remain more than financially sound, perhaps despite management inefficiencies. In fact, the transfer of wealth from ratepayers to shareholders has been so far removed from actual cost-based drivers that a utility could remain financially sound even under relatively inefficient management. Therefore, regulatory commissions should strive to set utilities' returns based on actual market conditions to promote prudent and efficient management and minimize economic waste.

III. GENERAL CONCEPTS AND METHODOLOGY

Q. Discuss your approach to estimating the cost of equity in this case.

A. While a competitive firm must estimate its own cost of capital to assess the profitability of competing capital projects, regulators determine a utility's cost of capital to establish a fair rate of return. The legal standards set forth above do not include specific guidelines regarding the models that must be used to estimate the cost of equity for utilities. Over the years, however, regulatory commissions have consistently relied on several models. The models I have employed in this case have been the two most widely used and accepted in regulatory proceedings for many years. The specific inputs and calculations for these models are described in more detail below.

Q. Please explain why you used multiple models to estimate the cost of equity.

A. These models attempt to measure the return on equity required by investors by estimating several different inputs. It is preferable to use multiple models because the results of any one model may contain a degree of imprecision, especially depending on the reliability of the inputs used at the time of conducting the model. By using multiple models, the analyst can compare the results of the models and look for outlying results and inconsistencies. Likewise, if multiple models produce a similar result, it may indicate a narrower range for the cost of equity estimate.

Q. Please discuss the benefits of choosing a proxy group of companies in conducting cost of capital analyses.

A. The cost of equity models in this case can be used to estimate the cost of capital of any individual, publicly traded company. There are advantages, however, to conducting cost of capital analysis on a proxy group of companies that are comparable to the target company. First, it is better to assess the financial soundness of a utility by comparing it to a group of other financially sound utilities. Second, using a proxy group provides more reliability and confidence in the overall results because there is a larger sample size. Finally, the use of a proxy group is often a pure necessity when the target company is a subsidiary that is not publicly traded, as is the case here. This is because the financial models used to estimate the cost of equity require information from publicly traded firms, such as stock prices and dividends.

Q. Describe the proxy group you selected in this case.

A. In this case, I chose to use the same proxy group used by Mr. Moul. There could be reasonable arguments made for the inclusion or exclusion of a particular company in a proxy group; however, the cost of equity results are influenced far more by the underlying assumptions and inputs to the various financial models than the composition of the proxy group.[26] By using the same proxy group, we can remove a relatively insignificant variable from the equation and focus on the primary factors driving UGI's cost of equity estimate.

IV. RISK AND RETURN CONCEPTS

Q. Discuss the general relationship between risk and return.

A. Risk is among the most important factors for the Commission to consider when determining the allowed return. Thus, it is necessary to understand the relationship between risk and return. There is a direct relationship between risk and return: the more (or less) risk an investor assumes, the larger (or smaller) return the investor will demand.

[26] Exhibit DJG-2.

There are two primary types of risk: firm-specific risk and market risk. Firm-specific risk affects individual companies, while market risk affects all companies in the market to varying degrees.

Q. Discuss the differences between firm-specific risk and market risk.

A. Firm-specific risk affects individual companies, rather than the entire market. For example, a competitive firm might overestimate customer demand for a new product, resulting in reduced sales revenue. This is an example of a firm-specific risk called "project risk."[27] There are several other types of firm-specific risks, including: (1) "financial risk" – the risk that equity investors of leveraged firms face as residual claimants on earnings; (2) "default risk" – the risk that a firm will default on its debt securities; and (3) "business risk" – which encompasses all other operating and managerial factors that may result in investors realizing less than their expected return in that particular company. While firm-specific risk affects individual companies, market risk affects all companies in the market to varying degrees. Examples of market risk include interest rate risk, inflation risk, and the risk of major socio-economic events. When there are changes in these risk factors, they affect all firms in the market to some extent.[28]

Analysis of the U.S. market in 2001 provides a good example for contrasting firm-specific risk and market risk. During that year, Enron Corp.'s stock fell from $80 per share to its low when the company filed bankruptcy at the end of the year. If an investor's portfolio had held only Enron stock at the beginning of 2001, this irrational investor would

---

[27] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 62–63 (3rd ed., John Wiley & Sons, Inc. 2012).

[28] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 149 (9th ed., McGraw-Hill/Irwin 2013).

have lost the entire investment by the end of the year due to assuming the full exposure of Enron's firm-specific risk (in that case, imprudent management). On the other hand, a rational, diversified investor who invested the same amount of capital in a portfolio holding every stock in the S&P 500 would have had a much different result that year. The rational investor would have been relatively unaffected by the fall of Enron because his or her portfolio included about 499 other stocks. Each of those stocks, however, would have been affected by various market risk factors that occurred that year. Thus, the rational investor would have incurred a relatively minor loss due to market risk factors, while the irrational investor would have lost everything due to firm-specific risk factors.

Q. Can equity investors reasonably minimize firm-specific risk?

A. Yes. A fundamental concept in finance is that firm-specific risk can be eliminated through diversification.[29] If someone irrationally invested all his or her funds in one firm, he or she would be exposed to all the firm-specific risk and the market risk inherent in that single firm. Rational investors, however, are risk-averse and seek to eliminate risk they can control. Investors can eliminate firm-specific risk by adding more stocks to their portfolio through a process called "diversification." There are two reasons why diversification eliminates firm-specific risk.

First, each stock in a diversified portfolio represents a much smaller percentage of the overall portfolio than it would in a portfolio of just one or a few stocks. Thus, any firm-

---

[29] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 179–80 (3rd ed., South Western Cengage Learning 2010).

specific action that changes the stock price of one stock in the diversified portfolio will have only a small impact on the entire portfolio.[30]

The second reason why diversification eliminates firm-specific risk is that the effects of firm-specific actions on stock prices can be either positive or negative for each stock. Thus, in large diversified portfolios, the net effect of these positive and negative firm-specific risk factors will be essentially zero and will not affect the value of the overall portfolio.[31] Firm-specific risk is also called "diversifiable risk" because it can be easily eliminated through diversification.

Q. Is it well-known and accepted that, because firm-specific risk can be easily eliminated through diversification, the market does not reward such risk through higher returns?

A. Yes. Because investors eliminate firm-specific risk through diversification, they know they cannot expect a higher return for assuming the firm-specific risk in any one company. Thus, the risks associated with an individual firm's operations are not rewarded by the market. In fact, firm-specific risk is also called "unrewarded" risk for this reason. Market risk, on the other hand, cannot be eliminated through diversification. Because market risk cannot be eliminated through diversification, investors expect a return for assuming this type of risk. Market risk is also called "systematic risk." Scholars recognize the fact that market risk, or systematic risk, is the only type of risk for which investors expect a return for bearing:

---

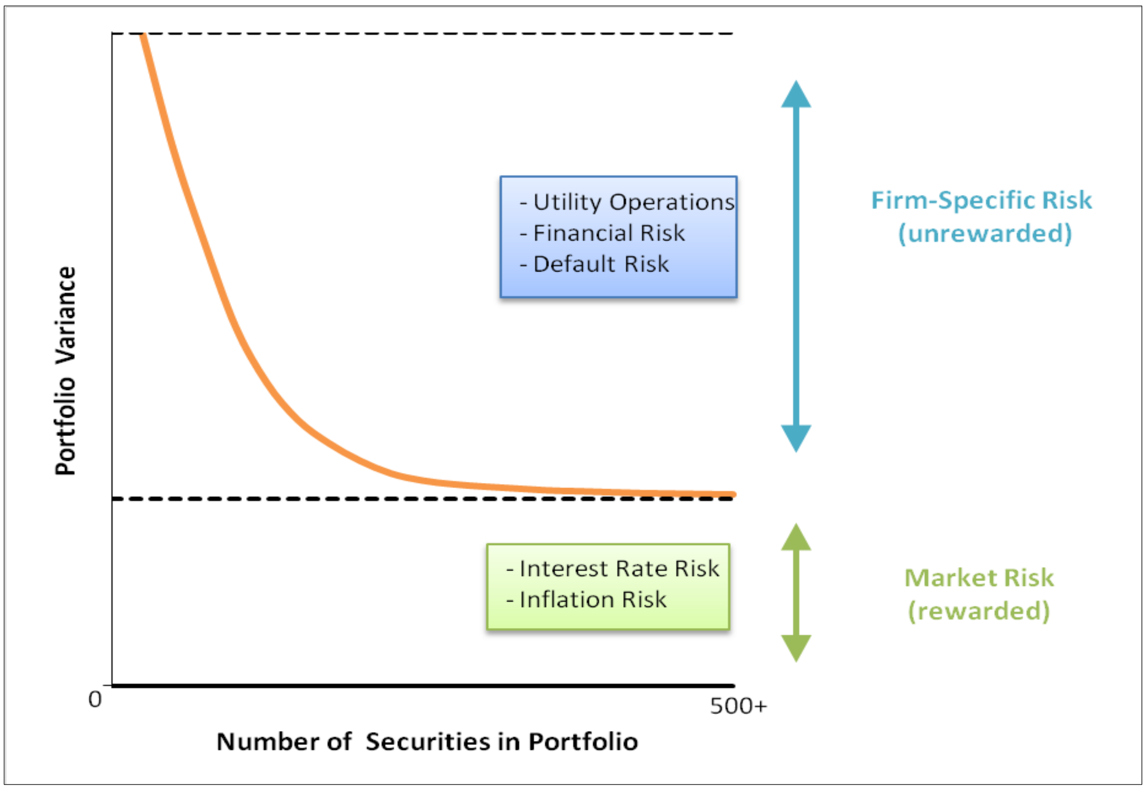
[30] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 64 (3rd ed., John Wiley & Sons, Inc. 2012).

[31] *Id.*

> If investors can cheaply eliminate some risks through diversification, then we should not expect a security to earn higher returns for risks that can be eliminated through diversification. Investors can expect compensation only for bearing systematic risk (i.e., risk that cannot be diversified away).[32]

These important concepts are illustrated in the figure below. Some form of this figure is found in many financial textbooks.

Figure 4:
Effects of Portfolio Diversification



This figure shows that as stocks are added to a portfolio, the amount of firm-specific risk is reduced until it is essentially eliminated. No matter how many stocks are added, however, there remains a certain level of fixed market risk. The level of market risk will

[32] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180 (3rd ed., South Western Cengage Learning 2010) (emphasis added).

vary from firm to firm. Market risk is the only type of risk that is rewarded by the market and is thus the primary type of risk the Commission should consider when determining the allowed return.

Q. Describe how market risk is measured.

A. Investors who want to eliminate firm-specific risk must hold a fully diversified portfolio. To determine the amount of risk that a single stock adds to the overall market portfolio, investors measure the covariance between a single stock and the market portfolio. The result of this calculation is called "beta."[33] Beta represents the sensitivity of a given security to the market as a whole. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than 1.0 are relatively more sensitive to market risk than the average stock. For example, if the market increases (or decreases) by 1.0%, a stock with a beta of 1.5 will, on average, increase (or decrease) by 1.5%. In contrast, stocks with betas of less than 1.0 are less sensitive to market risk, such that if the market increases (or decreases) by 1.0%, a stock with a beta of 0.5 will, on average, only increase (or decrease) by 0.5%. Thus, stocks with low betas are relatively insulated from market conditions. The beta term is used in the CAPM to estimate the cost of equity, which is discussed in more detail later.[34]

---

[33] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180–81 (3rd ed., South Western Cengage Learning 2010).

[34] Though it will be discussed in more detail later, Exhibit DJG-8 shows that the average beta of the proxy group was less than 1.0. This confirms the well-known concept that utilities are relatively low-risk firms.

Q. Are public utilities characterized as defensive firms that have low betas, have low market risk, and are relatively insulated from overall market conditions?

A. Yes. Although market risk affects all firms in the market, it affects different firms to varying degrees. Firms with high betas are affected more than firms with low betas, which is why firms with high betas are riskier. Stocks with betas greater than one are generally known as "cyclical stocks." Firms in cyclical industries are sensitive to recurring patterns of recession and recovery known as the "business cycle."[35] Thus, cyclical firms are exposed to a greater level of market risk. Securities with betas less than one, on the other hand, are known as "defensive stocks." Companies in defensive industries, such as public utility companies, "will have low betas and performance that is comparatively unaffected by overall market conditions."[36] In fact, financial textbooks often use utility companies as prime examples of low-risk, defensive firms.[37] The figure below compares the betas of several industries and illustrates that the utility industry is one of the least risky industries in the U.S. market.[38]

---

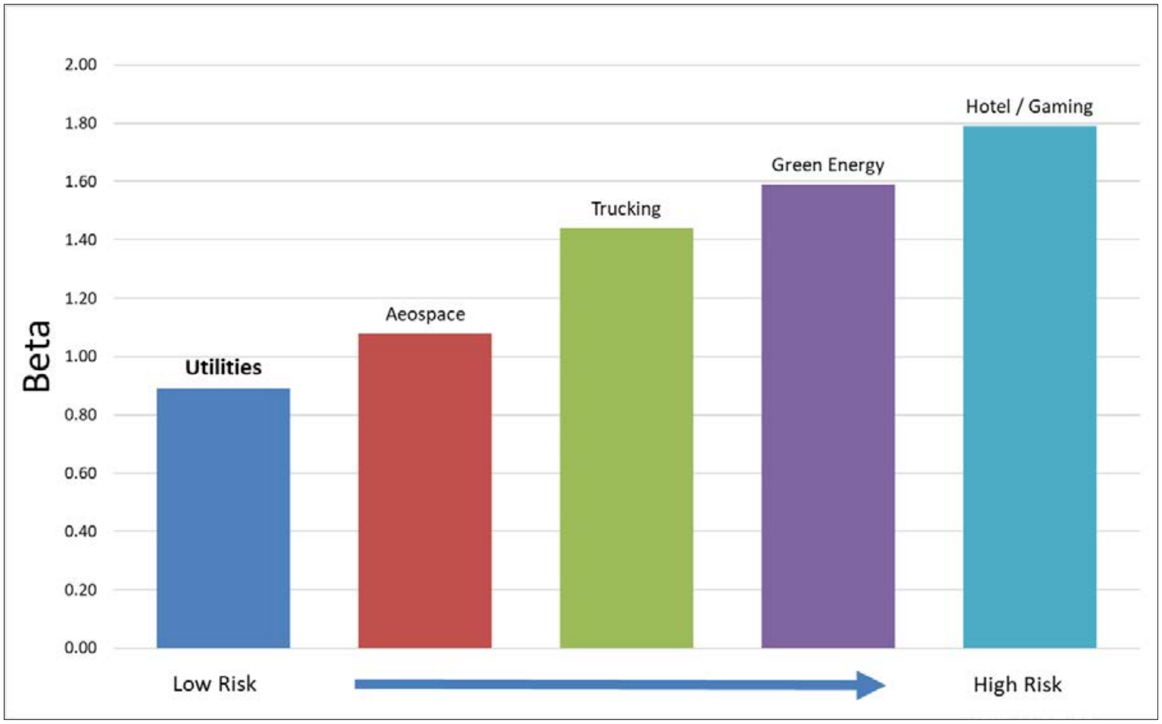
[35] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 382 (9th ed., McGraw-Hill/Irwin 2013).

[36] Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 383 (9th ed., McGraw-Hill/Irwin 2013).

[37] *See e.g.*, Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 382 (9th ed., McGraw-Hill/Irwin 2013); *see also* Aswath Damodaran, Investment Valuation: Tools and Techniques for Determining the Value of Any Asset 196 (3rd ed., John Wiley & Sons, Inc. 2012).

[38] *See* Betas by Sector (US) at http://pages.stern.nyu.edu/~adamodar/. The exact beta calculations are not as important as illustrating the well-known fact that utilities are low-risk companies. The fact that the utility industry is one of the lowest risk industries in the country should not change from year to year.

Figure 5:
Beta by Industry



The fact that utilities are defensive firms that are exposed to little market risk is beneficial to society. When the business cycle enters a recession, consumers can be assured that their utility companies will be able to maintain normal business operations and provide safe and reliable service under prudent management. Likewise, utility investors can be confident that utility stock prices will not fluctuate widely. So, while it is preferable for utilities to be defensive firms that experience little market risk and relatively insulated from market conditions, this should also be appropriately reflected in UGI's awarded return.

V. DCF ANALYSIS

Q. Describe the DCF Model.

A. The DCF Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates. Cash flows from common stock are paid to investors in the form of dividends. There are several variations of the DCF Model. These versions, along with other formulas and theories related to the DCF Model are discussed in more detail in Appendix A. For this case, I chose to use the Quarterly Approximation DCF Model because it accounts for the quarterly growth of dividends (as opposed to annual growth). I also used this variation of the DCF Model in the interest of reasonableness, as it produces the highest cost of equity estimates compared with the other DCF Model variations.

Q. Describe the inputs to the DCF Model.

A. There are three primary inputs in the DCF Model: (1) stock price; (2) dividend; and (3) the long-term growth rate. The stock prices and dividends are known inputs based on recorded data, while the growth rate projection must be estimated. The formula is presented as follows:

Equation 2:
Quarterly Approximation Discounted Cash Flow Model

$$K = \left[\frac{d_0(1+g)^{1/4}}{P_0} + (1+g)^{1/4}\right]^4 - 1$$

where: K = *discount rate / required return*
d_0 = *current quarterly dividend per share*
P_0 = *stock price*
g = *expected growth rate of future dividends*

I discuss each of these inputs separately below.

A. **Stock Price**

Q. How did you determine the stock price input of the DCF Model?

A. For the stock price (P_0), I used a 30-day average of stock prices for each company in the proxy group.[39] Analysts sometimes rely on average stock prices for longer periods (e.g., 60, 90, or 180 days). According to the efficient market hypothesis, however, markets reflect all relevant information available at a particular time, and prices adjust instantaneously to the arrival of new information.[40] Past stock prices, in essence, reflect outdated information. The DCF Model used in utility rate cases is a derivation of the dividend discount model, which is used to determine the current value of an asset. Thus, according to the dividend discount model and the efficient market hypothesis, the value for the "P_0" term in the DCF Model should technically be the current stock price, rather than an average.

Q. Why did you use a 30-day average for the current stock price input?

A. Using a short-term average of stock prices for the current stock price input adheres to market efficiency principles while avoiding any irregularities that may arise from using a single current stock price. In the context of a utility rate proceeding there is a significant length of time from when an application is filed, and testimony is due. Choosing a current stock price for one particular day could raise a separate issue concerning which day was chosen to be used in the analysis. In addition, a single stock price on a particular day may be unusually high or low. It is arguably ill-advised to use a single stock price in a model

---

[39] Exhibit DJG-3.

[40] *See* Eugene F. Fama, *Efficient Capital Markets: A Review of Theory and Empirical Work*, Vol. 25, No. 2 The Journal of Finance 383 (1970).

that is ultimately used to set rates for several years, especially if a stock is experiencing some volatility. Thus, it is preferable to use a short-term average of stock prices, which represents a good balance between adhering to well-established principles of market efficiency while avoiding any unnecessary contentions that may arise from using a single stock price on a given day. The stock prices I used in my DCF analysis are based on 30-day averages of adjusted closing stock prices for each company in the proxy group.[41]

B. Dividend

Q. Describe how you determined the dividend input of the DCF Model.

A. The dividend term in the Quarterly Approximation DCF Model is the current quarterly dividend per share (d_0). I obtained the most recent quarterly dividend paid for each proxy company.[42] The Quarterly Approximation DCF Model assumes that the company increases its dividend payments each quarter. Thus, the model assumes that each quarterly dividend is greater than the previous one by $(1 + g)^{0.25}$. This expression could be described as the dividend quarterly growth rate, where the term "g" is the growth rate and the exponential term "0.25" signifies one quarter of the year.

Q. Does the Quarterly Approximation DCF Model result in the highest cost of equity in this case relative to other DCF Models, all else held constant?

A. Yes. The Quarterly Approximation DCF Model I employed in this case results in a higher DCF cost of equity estimate than the annual or semi-annual DCF Models due to the

---

[41] Exhibit DJG-3. Adjusted closing prices, rather than actual closing prices, are ideal for analyzing historical stock prices. The adjusted price provides an accurate representation of the firm's equity value beyond the mere market price because it accounts for stock splits and dividends.

[42] Exhibit DJG-4. Nasdaq Dividend History, http://www.nasdaq.com/quotes/dividend-history.aspx.

quarterly compounding of dividends inherent in the model. In essence, the Quarterly Approximation DCF Model I used results in the highest cost of equity estimate, all else held constant.

Q. Are the stock price and dividend inputs for each proxy company a significant issue in this case?

A. No. Although my stock price and dividend inputs are more recent than those used by Mr. Moul, there is not a statistically significant difference between them because utility stock prices and dividends are generally quite stable. This is another reason that cost of capital models such as the CAPM and the DCF Model are well-suited to be used for utilities. The differences between my DCF Model and Mr. Moul's DCF Model are primarily driven by differences in our growth rate estimates, which are further discussed below.

C. <u>Growth Rate</u>

Q. Summarize the growth rate input in the DCF Model.

A. The most critical input in the DCF Model is the growth rate. Unlike the stock price and dividend inputs, the growth rate input (g) must be estimated. As a result, the growth rate is often the most contentious DCF input in utility rate cases. The DCF model used in this case is based on the constant growth valuation model. Under this model, a stock is valued by the present value of its future cash flows in the form of dividends. Before future cash flows are discounted by the cost of equity, however, they must be "grown" into the future by a long-term growth rate. As stated above, one of the inherent assumptions of this model is that these cash flows in the form of dividends grow at a constant rate forever. Thus, the growth rate term in the constant growth DCF model is often called the "constant," "stable," or "terminal" growth rate. For young, high-growth firms, estimating the growth rate to be used in the model can be especially difficult, and may require the use of multi-stage growth models. For mature, low-growth firms such as utilities, however, estimating the terminal growth rate is more transparent. The growth term of the DCF Model is one of the most important, yet apparently most misunderstood, aspects of cost of equity estimations in utility regulatory proceedings. Therefore, I have devoted a more detailed explanation of this issue in the following sections, which are organized as follows:

(1) The Various Determinants of Growth

(2) Reasonable Estimates for Long-Term Growth

(3) Quantitative vs. Qualitative Determinants of Utility Growth: Circular References, "Flatworm" Growth, and the Problem with Analysts' Growth Rates

(4) Growth Rate Recommendation

1. <u>The Various Determinants of Growth</u>

Q. Describe the various determinants of growth.

A. Although the DCF Model directly considers the growth of dividends, there are a variety of growth determinants that should be considered when estimating growth rates. It should be noted that these various growth determinants are used primarily to determine the short-term growth rates in multi-stage DCF models. For utility companies, it is necessary to focus primarily on long-term growth rates, which are discussed in the following section. That is not to say that these growth determinants cannot be considered when estimating long-term growth; however, as discussed below, long-term growth must be constrained much more than short-term growth, especially for young firms with high growth opportunities. Additionally, I briefly discuss these growth determinants here because it may reveal some of the source of confusion in this area.

A. Historical Growth

Looking at a firm's actual historical experience may theoretically provide a good starting point for estimating short-term growth. However, past growth is not always a good indicator of future growth. Some metrics that might be considered here are a historical growth in revenues, operating income, and net income. Since dividends are paid from earnings, estimating historical earnings growth may provide an indication of future earnings and dividend growth. In general, however, revenue growth tends to be more consistent and predictable than earnings growth because it is less likely to be influenced by accounting adjustments.[43]

B. Analyst Growth Rates

Analyst growth rates refer to short-term projections of earnings growth published by institutional research analysts such as Value Line and Bloomberg. A more detailed discussion of analyst growth rates, including the problems with using them in the DCF Model to estimate utility cost of equity, is provided in a later section.

C. Fundamental Determinants of Growth

Fundamental growth determinants refer to firm-specific financial metrics that arguably provide better indications of near-term sustainable growth. One such metric for fundamental growth considers the return on equity and the retention ratio. The idea behind

[43] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 279 (3rd ed., John Wiley & Sons, Inc. 2012).

this metric is that firms with high ROEs and retention ratios should have greater opportunities for growth.[44]

Q. Did you use any of these growth determinants in your DCF Model?

A. No. Primarily, these growth determinants discussed above would provide better indications of short- to mid-term growth for firms with average to high growth opportunities. Utilities, however, are mature, low-growth firms. While it may not be unreasonable on its face to use any of these growth determinants for the growth input in the DCF Model, we must keep in mind that the stable growth DCF Model considers only <u>long-term</u> growth rates, which are constrained by certain economic factors, as discussed further below.

2. <u>Reasonable Estimates for Long-Term Growth</u>

Q. Describe what is meant by long-term growth.

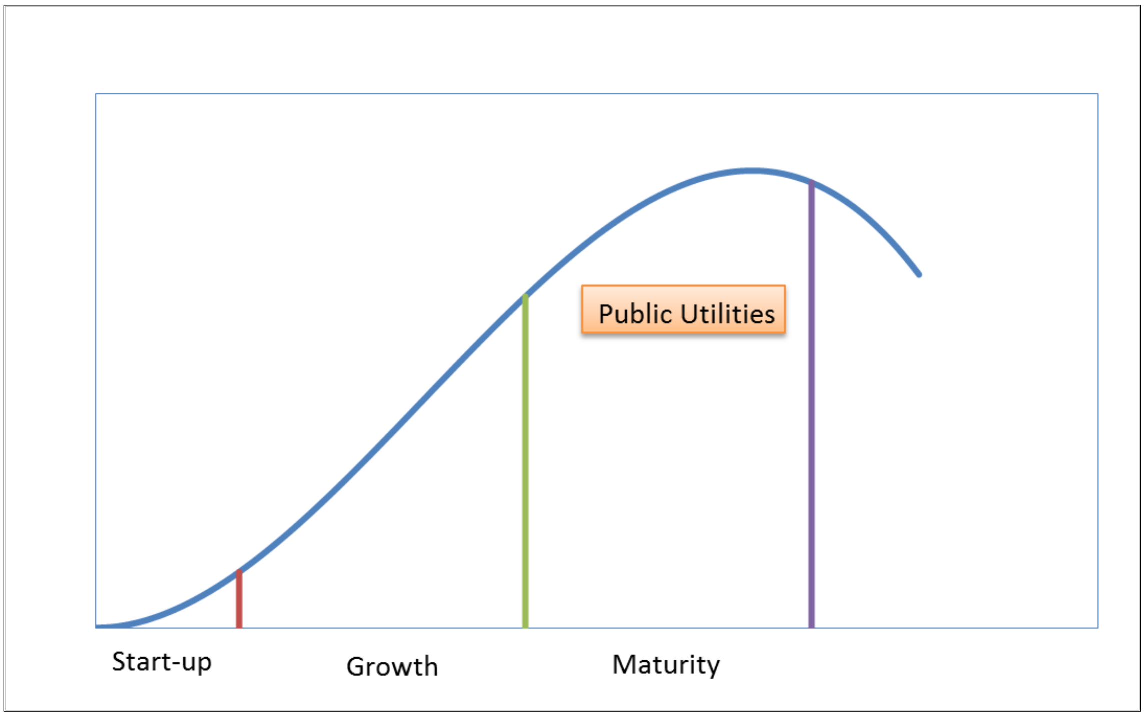
A. In order to make the DCF Model a viable, practical model, an infinite stream of future cash flows must be estimated and then discounted back to the present. Otherwise, each annual cash flow would have to be estimated separately. Some analysts use "multi-stage" DCF Models to estimate the value of high-growth firms through two or more stages of growth, with the final stage of growth being constant. However, it is not necessary to use multi-stage DCF Models to analyze the cost of equity of regulated utility companies. This is because regulated utilities are already in their "terminal," low growth stage. Unlike most competitive firms, the growth of regulated utilities is constrained by physical service

---

[44] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 279 (3rd ed., John Wiley & Sons, Inc. 2012).

territories and limited primarily by ratepayer and load growth within those territories. The figure below illustrates the well-known business/industry life-cycle pattern.

Figure 6:
Industry Life Cycle



In an industry's early stages, there are ample opportunities for growth and profitable reinvestment. In the maturity stage however, growth opportunities diminish, and firms choose to pay out a larger portion of their earnings in the form of dividends instead of reinvesting them in operations to pursue further growth opportunities. Once a firm is in the maturity stage, it is not necessary to consider higher short-term growth metrics in multi-stage DCF Models; rather, it is sufficient to analyze the cost of equity using a stable growth DCF Model with one terminal, long-term growth rate.

Q. Is it true that the terminal growth rate cannot exceed the growth rate of the economy, especially for a regulated utility company?

A. Yes. A fundamental concept in finance is that no firm can grow forever at a rate higher than the growth rate of the economy in which it operates.[45] Thus, the terminal growth rate used in the DCF Model should not exceed the aggregate economic growth rate. This is especially true when the DCF Model is conducted on public utilities because these firms have defined service territories. As stated by Dr. Damodaran: "[i]f a firm is a purely domestic company, either because of internal constraints . . . or external constraints (such as those imposed by a government), the growth rate in the domestic economy will be the limiting value."[46]

In fact, it is reasonable to assume that a regulated utility would grow at a rate that is <u>less</u> than the U.S. economic growth rate. Unlike competitive firms, which might increase their growth by launching a new product line, franchising, or expanding into new and developing markets, utility operating companies with defined service territories cannot do any of these things to grow. Gross Domestic Product ("GDP") is one of the most widely used measures of economic production and is used to measure aggregate economic growth. According to the Congressional Budget Office's Budget Outlook, the long-term forecast for nominal U.S. GDP growth is about 4%, which includes an inflation rate of 2%.[47] For mature companies in mature industries, such as utility companies, the terminal growth rate

---

[45] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 306 (3rd ed., John Wiley & Sons, Inc. 2012).

[46] *Id.*

[47] Congressional Budget Office Long-Term Budget Outlook, <u>https://www.cbo.gov/publication/56977</u> (last accessed June 22, 2021).

will likely fall between the expected rate of inflation and the expected rate of nominal GDP growth. Thus, UGI's terminal growth rate is between 2% and 4%.

Q. Is it reasonable to assume that the terminal growth rate will not exceed the risk-free rate?

A. Yes. In the long term, the risk-free rate will converge on the growth rate of the economy. For this reason, financial analysts sometimes use the risk-free rate for the terminal growth rate value in the DCF model.[48] I discuss the risk-free rate in further detail later in this testimony.

Q. Please summarize the various long-term growth rate estimates that can be used as the terminal growth rate in the DCF Model.

A. The reasonable long-term growth rate determinants are summarized as follows:

1. Nominal GDP Growth
2. Real GDP Growth
3. Inflation
4. Current Risk-Free Rate

Any of the foregoing growth determinants could provide a basis for a reasonable input for the terminal growth rate in the DCF Model for a utility company, including UGI. In general, we should expect that utilities will, at the very least, grow at the rate of projected inflation. However, the long-term growth rate of any U.S. company, especially utilities, will be constrained by nominal U.S. GDP growth.

---

[48] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 307 (3rd ed., John Wiley & Sons, Inc. 2012).

3. <u>Qualitative Growth: The Problem with Analysts' Growth Rates</u>

Q. Describe the differences between "quantitative" and "qualitative" growth determinants.

A. Assessing "quantitative" growth simply involves mathematically calculating a historic metric for growth (such as revenues or earnings) or calculating various fundamental growth determinants using certain figures from a firm's financial statements (such as ROE and the retention ratio). However, any thorough assessment of company growth should be based upon a "qualitative" analysis. Such an analysis would consider specific strategies that company management will implement to achieve real sustainable growth in earnings. Therefore, it is important to begin the analysis of UGI's growth rate with this simple, qualitative question: how is this regulated utility going to achieve a real sustained growth in earnings? If this question were asked of a competitive firm, there could be several answers depending on the type of business model, such as launching a new product line, franchising, rebranding to target a new demographic, or expanding into a developing market. Regulated utilities, however, cannot engage in these potential growth opportunities.

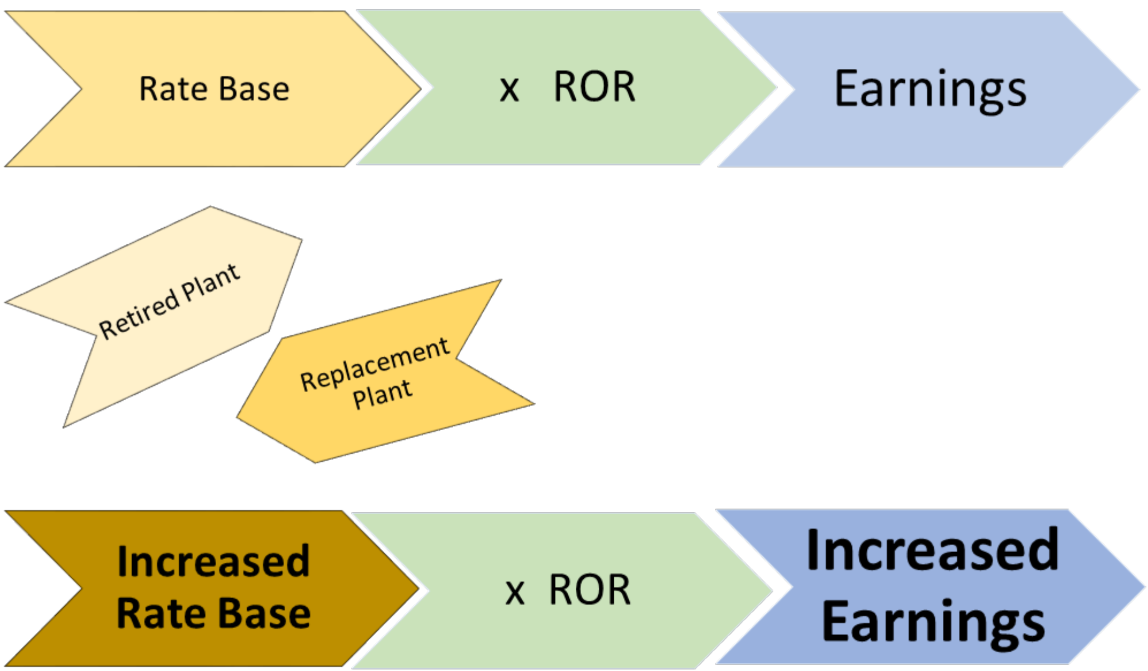
Q. Why is it especially important to emphasize real, qualitative growth determinants when analyzing whether a growth rate is fair for a regulated utility?

A. While qualitative growth analysis is important regardless of the entity being analyzed, it is especially important in the context of utility ratemaking. This is because the rate base rate of return model inherently possesses two factors that can contribute to distorted views of utility growth when considered exclusively from a quantitative perspective. These two factors are: (1) rate base and (2) the awarded ROE. I will discuss each factor further below. It is important to keep in mind that the ultimate objective of this analysis is to provide a foundation upon which to base the fair rate of return for the utility. Thus, we should strive to ensure that each individual component of the financial models used to estimate the cost of equity are also fair. If we consider only quantitative growth determinants, it may lead to projected growth rates that are overstated and ultimately unfair, because they result in inflated cost of equity estimates.

Q. How does rate base relate to growth determinants for utilities?

A. Under the rate base rate of return model, a utility's rate base is multiplied by its awarded rate of return to produce the required level of operating income. Therefore, increases to rate base generally result in increased earnings. Thus, utilities have a natural financial incentive to increase rate base. In short, utilities have a financial incentive to increase rate base regardless of whether such increases are driven by a corresponding increase in demand. A good, relevant example of this is seen in the early retirement of old, but otherwise functional coal plants in response to environmental regulations and replacing them with new generation assets. Under these circumstances, utilities have been able to increase their rate bases by a far greater extent than what any concurrent increase in demand would have required. In other words, utilities grew their earnings by simply retiring old assets and replacing them with new assets. This is not "real" or "sustainable" growth. If the tail of a flatworm is removed and regenerated, it does not mean the flatworm actually grew. Likewise, if a competitive, unregulated firm announced plans to close production plants and replace them with new plants, it would not be considered a real determinant of growth unless analysts believed this decision would directly result in increased market share for the company and a real opportunity for sustained increases in revenues and earnings. In the case of utilities, the mere replacement of "old plant" with "new plant" does not increase market share, attract new ratepayers, create franchising opportunities, or allow utilities to penetrate developing markets, but may result in short-term, quantitative earnings growth. However, this "flatworm growth" in earnings was merely the quantitative byproduct of the rate base rate of return model, and not an indication of real or qualitative growth and, therefore, using that data alone to estimate a growth rate is not fair. The following diagram in the figure below illustrates this concept.

Figure 7:
Analysts' Earnings Growth Projections: The "Flatworm Growth" Problem

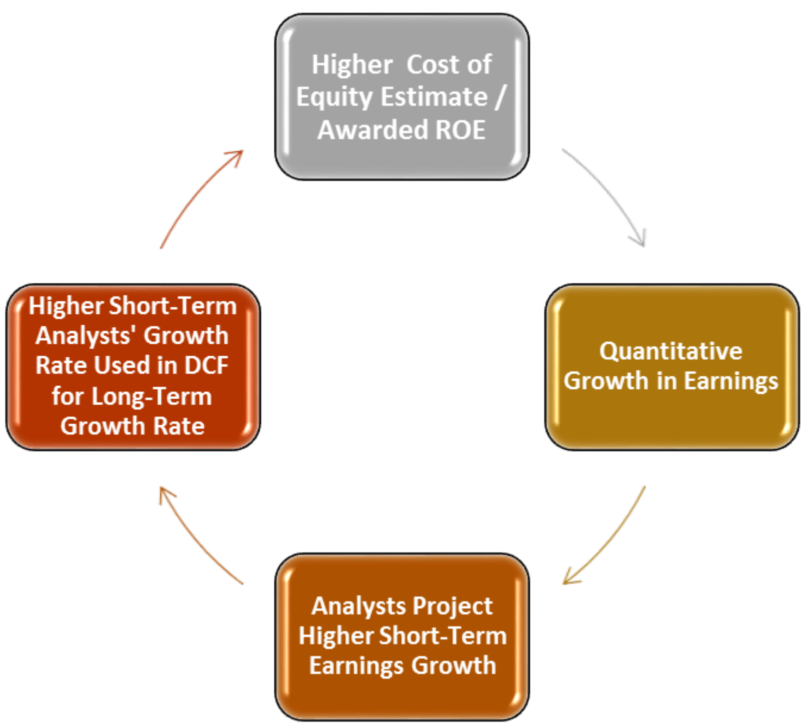


Of course, utilities might sometimes add "new plant" to meet a modest growth in ratepayer demand. However, as the foregoing discussion demonstrates, it would be more appropriate to consider load growth projections and other qualitative indicators, rather than mere increases to rate base or earnings, to attain a fair assessment of growth.

Q. Please discuss the other way in which analysts' earnings growth projections do not provide indications of real, qualitative growth for regulated utilities.

A. If we give undue weight to analysts' projections for utilities' earnings growth, it will not provide an accurate reflection of real, qualitative growth because a utility's earnings are heavily influenced by the ultimate figure that all this analysis is supposed to help us estimate: the awarded return on equity. This creates a circular reference problem or feedback loop. In other words, if a regulator awards an ROE that is above market-based cost of capital (which is often the case, as discussed above), this could lead to higher short-term growth rate projections from analysts. If these same inflated, short-term growth rate estimates are used in the DCF Model (as they often are by utility witnesses), it could lead to higher awarded ROEs; and the cycle continues, as illustrated in the figure below.

Figure 8:
Analysts' Earnings Growth Projections: The "Circular Reference" Problem



Therefore, it is not advisable to simply consider the quantitative growth projections published by analysts, as this practice will not necessarily provide fair indications of real, sustainable utility growth.

Q. Are there any other problems with relying on analysts' growth projections?

A. Yes. While the foregoing discussion shows two reasons why we cannot rely on analysts' growth rate projections to provide fair, qualitative indicators of utility growth in a stable growth DCF Model, the third reason is perhaps the most obvious and undisputable. Various institutional analysts—such as Zacks, Value Line, and Bloomberg—publish estimated projections of earnings growth for utilities. These estimates are short-term growth rate projections, ranging from 3 to 10 years. However, many utility ROE analysts inappropriately insert these short-term growth projections into the DCF Model as if they were *long-term* growth rate projections. For example, assume that an analyst at Bloomberg estimates that a utility's earnings will grow by 7% per year over the next 3 years. This analyst may have based this short-term forecast on a utility's plans to replace depreciated rate base (*i.e.*, "flatworm" growth) or on an anticipated awarded return that is above market-based cost of equity (*i.e.*, the "circular reference" problem). When a utility witness uses this figure in a DCF Model, however, it is the witness, not the Bloomberg analyst, that is testifying to the regulator that the utility's earnings will qualitatively grow by 7% per year over the long-term, which is an unrealistic assumption and a fundamentally different conclusion than that of the Bloomberg analyst.

4. <u>Long-Term Growth Rate Recommendation</u>

Q. Describe the growth rate input used in your DCF Model.

A. I considered various qualitative determinants of growth for UGI, along with the maximum allowed growth rate under basic principles of finance and economics. The following chart in the figure below shows three of the long-term growth determinants discussed in this section.[49]

Figure 9:
Terminal Growth Rate Determinants

Terminal Growth Determinants	Rate
Nominal GDP	3.8%
Real GDP	1.8%
Inflation	2.0%
Risk Free Rate	2.4%
Highest	**3.8%**

For the long-term growth rate in my DCF model, I selected the maximum, reasonable long-term growth rate of 3.8%, which means my model assumes that UGI's qualitative growth in earnings will qualitatively match the nominal growth rate of the entire U.S. economy over the long run – a charitable assumption.

Q. Please describe the final results of your DCF Model.

A. I used the Quarterly Approximation DCF Model discussed above to estimate UGI's cost of equity capital. I obtained an average of reported dividends and stock prices from the

---

[49] Exhibit DJG-5.

proxy group, and I used a reasonable terminal growth rate estimate for UGI. My DCF Model cost of equity estimate for UGI is 6.7%.[50]

D. Response to Mr. Moul's DCF Model

Q. Mr. Moul's DCF Model yielded a notably higher result. Did you find any problems with his analysis?

A. Yes. Mr. Moul's DCF Model produced cost of equity result of 11.21%, which includes a "leverage adjustment" of 0.95%[51]. As mentioned earlier, the results of Mr. Moul's DCF Model are overstated primarily because of a fundamental error regarding his growth rate inputs and his leverage adjustment.

Q. Describe the problems with Mr. Moul's assumed long-term growth input.

A. Mr. Moul assumes a projected growth rate of 6.75% in his DCF Model.[52] In arriving at this growth rate input, Mr. Moul considered growth rates as high as 10.5% for the proxy group,[53] which is <u>more than double</u> the long-term nominal U.S. GDP growth. This means Mr. Moul's growth rate assumption violates the basic principle that no company can grow at a greater rate than the economy in which it operates *over the long-term*, especially a regulated utility company with a defined service territory. Furthermore, Mr. Moul relies on short-term, quantitative growth estimates published by analysts to support his assumptions. Mr. Moul acknowledges that his growth rate projections cover only a five-

---

[50] Exhibit DJG-6.

[51] Direct Testimony of Paul R. Moul, p. 37.

[52] *Id*.

[53] Direct testimony of Paul R. Moul, Exhibit PRM-1, Sch. 9.

year period.[54] This period of time is not sufficient for a long-term estimate. As discussed above, these analysts' estimates are inappropriate to use in the DCF Model as long-term growth rates because they are estimates for short-term growth. For example, Mr. Moul assumes a long-term growth rate estimate of 10.5% for NextEra Energy (among other estimates), as reported by Value Line Investment Survey.[55] This means that an analyst at Value Line apparently thinks that NextEra's dividends will quantitatively increase by 10.5% each year over the next <u>several</u> years (*i.e.*, the short-term). However, it is Mr. Moul, not the commercial analyst, who is suggesting to the Commission that NextEra's dividends will increase by 10.5% (<u>more than double</u> U.S. GDP growth) each year, every year, for many decades into the future (*i.e.*, long-term growth).[56] Again, Mr. Moul is extrapolating the analyst's conclusions well beyond what the analyst actually said. Furthermore, this assumption is simply not realistic, and it contradicts fundamental concepts of long-term growth. Many of Mr. Moul's other short-term growth rate estimates also exceed projected U.S. GDP growth.

Q. Please describe Mr. Moul's leverage adjustment.

A. According to Mr. Moul, a leverage adjustment is necessary when "the DCF return applies to a capital structure used for ratemaking that is computed with book-value weighting rather than market-value weighting."[57]

---

[54] Direct testimony of Paul R. Moul, p. 29, lines 21-23.

[55] Direct testimony of Paul R. Moul, Exhibit PRM-1, Sch. 9.

[56] Technically, the constant growth rate in the DCF Model grows dividends each year to infinity. Yet even if we assumed that the growth rate applied to only a few decades, the annual growth rate would still be too high to be considered realistic.

[57] Direct testimony of Paul R. Moul, p. 35, lines 23-25.

Q. Have you ever seen or heard of a witness apply a leverage adjustment like the one Mr. Moul is proposing?

A. No. I have testified in numerous proceedings on the issue of cost of capital and other regulatory issues and have reviewed extensive amounts of testimony from many witnesses on cost of capital issues. Yet I cannot recall a witness applying a "leverage adjustment" in the way Mr. Moul is proposing in this case (other than Mr. Moul's proposed leverage adjustments in prior cases).

Q. Does the original DCF model have an input for a leverage adjustment?

A. No. The DCF model has been used by investors, analysts, managers, and academics for decades to assist with pricing assets and estimate the cost of equity of various assets and projects. I have not seen a variation of the DCF model in any financial textbook or other reliable source that presents the model with a "leverage adjustment" input similar to the way in which Mr. Moul presents the model in his testimony.

Q. Has the Commission rejected Mr. Moul's leverage adjustment in prior cases?

A. Yes.[58] In PPL's 2012 rate case, Mr. Moul proposed a substantially similar leverage adjustment. The Commission found that "[f]or the reasons developed by the OCA and I&E, the Company's leverage adjustment should be denied."[59]

Q. Have other commissions recently rejected Mr. Moul's leverage adjustment?

A. Yes. Recently, in the Application of Palmetto Wastewater Reclamation ("PWR"), the Public Service Commission of South Carolina rejected Mr. Moul's leverage adjustment.[60]

---

[58] *Pa. P.U.C. v. PPL Elec. Util. Corp.*, Docket No. R-2012-2290597, Order, 52 (Dec. 28, 2012), p. 52 of 105.

[59] *Id*. at p. 52.

[60] *In re Application of Palmetto Wastewater Reclamation, Inc. for an Adjustment of Rates and Charges*, 2021 S.C. PUC LEXIS *1, *23 (Dec. 21, 2021).

Relying in part on my testimony in the PWR case, the South Carolina commission agreed that "Mr. Moul's 0.97% leverage adjustment is not appropriate."[61]

Q. Do you agree with Mr. Moul's leverage adjustment?

A. No. Mr. Moul's proposed leverage adjustment is entirely unnecessary and inappropriate, and it has the effect of further inflating a DCF result that is already overestimated. Mr. Moul's leverage adjustment is based on the Hamada formula, which is further discussed below.

Q. What is the premise of the Hamada formula?

A. The Hamada formula can be used to analyze changes in a firm's cost of capital as it adds or reduces financial leverage, or debt, in its capital structure by starting with an "unlevered" beta and then "relevering" the beta at different debt ratios. As leverage increases, equity investors bear increasing amounts of risk, leading to higher betas. Before the effects of financial leverage can be accounted for, however, the effects of leverage must first be removed, which is accomplished through the Hamada formula. The Hamada formula for unlevering beta is stated as follows:[62]

[61] *Id*.

[62] Damodaran *supra* n. 18, at 197. This formula was originally developed by Hamada in 1972.

Equation 3:
Hamada Formula

$$\beta_U = \frac{\beta_L}{\left[1 + (1 - T_c)\left(\frac{D}{E}\right)\right]}$$

where: β_U = *unlevered beta (or "asset" beta)*
β_L = *average levered beta of proxy group*
T_C = *corporate tax rate*
D = *book value of debt*
E = *book value of equity*

Using this equation, the beta for the firm can be unlevered, and then "relevered" based on various debt ratios (by rearranging this equation to solve for β_L).

Q. Did Mr. Moul apply the Hamada formula correctly?

A. No. Mr. Moul's application of the Hamada formula is incorrect. I conducted the Hamada Model and present my results in my exhibits.[63] Using the Company's proposed capital structure and the levered betas published by Value Line, I calculate an unlevered beta of 0.53. When that beta is relevered to my proposed debt ratio of 50%, I calculate a cost of equity of 7.62%. However, conducting the Hamada formula in this fashion is not necessary in this case. This is because we are taking inputs from the proxy group, such as stock prices, dividends, and betas in order to estimate the cost of equity of UGI. The indicated cost of equity from the financial models are necessarily connected to the capital structures of the proxy group. In other words, the fact that UGI has proposed a debt ratio that is lower than the average debt ratio of the proxy group should not necessarily result in an increase in the Company's indicated cost of equity when we "unlever" the proxy beta based on UGI's unreasonably low debt ratio, and then relever it to the debt ratio of the proxy group

[63] *See* Exhibit DJG-17.

that was influencing the other cost of equity model inputs we relied upon. While the Hamada formula can be a useful tool to show how the cost of equity can change at different levels of leverage, the formula is simply not necessary to estimate UGI's cost of equity in this case. It is not surprising that the CAPM and DCF Models do not include inputs for leverage adjustments. It is also not surprising that the vast majority of ROE witnesses do not include separate leverage adjustments to their cost of equity models in the way Mr. Moul has done in this case. The Commission should reject Mr. Moul's leverage adjustment in this case, as it has done in prior cases.

Q. Have you quantified the financial impact to ratepayers that Mr. Moul's leverage adjustment would have?

A. Yes. As addressed in the direct testimony of OCA witness Mugrace, an increase of 0.95% to the ROE for Mr. Moul's inappropriate leverage adjustment would increase the revenue requirement by $23.5 million.

VI. CAPM ANALYSIS

Q. Describe the CAPM.

A. The CAPM is a market-based model founded on the principle that investors expect higher returns for incurring additional risk.[64] The CAPM estimates this expected return. The various assumptions, theories, and equations involved in the CAPM are discussed further in Appendix B. Using the CAPM to estimate the cost of equity of a regulated utility is consistent with the legal standards governing the fair rate of return. The U.S. Supreme Court has recognized that "the amount of risk in the business is a most important factor"

[64] William F. Sharpe, *A Simplified Model for Portfolio Analysis* 277–93 (Management Science IX 1963).

in determining the allowed rate of return,[65] and that "the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks."[66] The CAPM is a useful model because it directly considers the amount of risk inherent in a business.

Q. Describe the inputs for the CAPM.

A. The basic CAPM equation requires only three inputs to estimate the cost of equity: (1) the risk-free rate; (2) the beta coefficient; and (3) the equity risk premium. Here is the CAPM formula:

Equation 4:
Basic CAPM

Cost of Equity = Risk-free Rate + (Beta × Equity Risk Premium)

Each input is discussed separately below.

A. The Risk-Free Rate

Q. Explain the risk-free rate.

A. The first term in the CAPM is the risk-free rate (R_F). The risk-free rate is simply the level of return investors can achieve without assuming any risk. The risk-free rate represents the bare minimum return that any investor would require on a risky asset. Even though no investment is technically void of risk, investors often use U.S. Treasury securities to represent the risk-free rate because they accept that those securities essentially contain no

---

[65] *Wilcox*, 212 U.S. at 48.

[66] *Hope Natural Gas Co*., 320 U.S. at 603.

default risk. The Treasury issues securities with different maturities, including short-term Treasury Bills, intermediate-term Treasury Notes, and long-term Treasury Bonds.

Q. Is it preferable to use the yield on long-term Treasury bonds for the risk-free rate in the CAPM?

A. Yes. In valuing an asset, investors estimate cash flows over long periods of time. Common stock is viewed as a long-term investment, and the cash flows from dividends are assumed to last indefinitely. Thus, short-term Treasury Bill yields are rarely used in the CAPM to represent the risk-free rate. Short-term rates are subject to greater volatility and thus can lead to unreliable estimates. Instead, long-term Treasury bonds are usually used to represent the risk-free rate in the CAPM. I considered a 30-day average of daily Treasury yield curve rates on 30-year Treasury Bonds in my risk-free rate estimate, which resulted in a risk-free rate of 2.4%.[67]

B. The Beta Coefficient

Q. How is the beta coefficient used in this model?

A. As discussed above, beta represents the sensitivity of a given security to movements in the overall market. The CAPM states that in efficient capital markets, the expected risk premium on each investment is proportional to its beta. Recall that a security with a beta greater (or less) than one is more (or less) risky than the market portfolio. An index such as the S&P 500 Index is used as a proxy for the market portfolio. The historical betas for publicly traded firms are published by various institutional analysts. Beta may also be calculated through a linear regression analysis, which provides additional statistical

[67] Exhibit DJG-7.

information about the relationship between a single stock and the market portfolio. As discussed above, beta also represents the sensitivity of a given security to the market as a whole. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than 1.0 are relatively more sensitive to market risk than the average stock. For example, if the market increases (or decreases) by 1.0%, a stock with a beta of 1.5 will, on average, increase (or decrease) by 1.5%. In contrast, stocks with betas of less than 1.0 are less sensitive to market risk. For example, if the market increases (or decreases) by 1.0%, a stock with a beta of 0.5 will, on average, only increase (or decrease) by 0.5%.

Q. Describe the source for the betas you used in your CAPM analysis.

A. I used betas recently published by Value Line Investment Survey. The average beta for the proxy group is less than 1.0. Thus, we have an objective measure to prove the well-known concept that utility stocks are generally less risky than the average stock in the market. While there is evidence suggesting that betas published by sources such as Value Line may actually overestimate the risk of utilities (and thus overestimate the CAPM), I used the betas published by Value Line to be conservative.[68]

C. <u>The Equity Risk Premium</u>

Q. Describe the Equity Risk Premium (ERP).

A. The final term of the CAPM is the ERP, which is the required return on the market portfolio less the risk-free rate ($R_M - R_F$). In other words, the ERP is the level of return investors expect above the risk-free rate in exchange for investing in risky securities. Many experts

[68] Exhibit DJG-8; *see also* Appendix B for a more detailed discussion of raw beta calculations and adjustments.

would agree that "the single most important variable for making investment decisions is the equity risk premium."[69] Likewise, the ERP is arguably the single most important factor in estimating the cost of capital in this matter. There are three basic methods that can be used to estimate the ERP: (1) calculating a historical average; (2) taking a survey of experts; and (3) calculating the implied ERP. I will discuss each method in turn, noting advantages and disadvantages of these methods.

1. <u>Historical Average</u>

Q. Describe the historical ERP.

A. The historical ERP may be calculated by simply taking the difference between returns on stocks and returns on government bonds over a certain period of time. Many practitioners rely on the historical ERP as an estimate for the forward-looking ERP because it is easy to obtain. However, there are disadvantages to relying on the historical ERP.

Q. What are the limitations of relying solely on a historical average to estimate the current or forward-looking ERP?

A. Many investors use the historic ERP because it is convenient and easy to calculate. What matters in the CAPM model, however, is not the actual risk premium from the past, but rather the current and forward-looking risk premium.[70] Some investors may think that a historic ERP provides some indication of the prospective risk premium; however, there is empirical evidence to suggest the prospective, forward-looking ERP is actually <u>lower</u> than the historical ERP. In a landmark publication on risk premiums around the world, *Triumph*

---

[69] Elroy Dimson, Paul Marsh & Mike Staunton, *Triumph of the Optimists: 101 Years of Global Investment Returns* 4 (Princeton University Press 2002).

[70] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 330 (3rd ed., South Western Cengage Learning 2010).

of the Optimists, the authors suggest through extensive empirical research that the prospective ERP is lower than the historical ERP.[71] This is due in large part to what is known as "survivorship bias" or "success bias" – a tendency for failed companies to be excluded from historical indices.[72] From their extensive analysis, the authors make the following conclusion regarding the prospective ERP: "[t]he result is a forward-looking, geometric mean risk premium for the United States . . . of around 2½ to 4 percent and an arithmetic mean risk premium . . . that falls within a range from a little below 4 to a little above 5 percent."[73] Indeed, these results are lower than many reported historical risk premiums. Other noted experts agree:

> The historical risk premium obtained by looking at U.S. data is biased upwards because of survivor bias. . . . The true premium, it is argued, is much lower. This view is backed up by a study of large equity markets over the twentieth century (*Triumph of the Optimists*), which concluded that the historical risk premium is closer to 4%.[74]

Regardless of the variations in historic ERP estimates, many scholars and practitioners agree that simply relying on a historic ERP to estimate the risk premium going forward is not ideal. Fortunately, "a naïve reliance on long-run historical averages is not the only approach for estimating the expected risk premium."[75]

Q. Did you rely on the historical ERP as part of your CAPM analysis in this case?

A. No. Due to the limitations of this approach, I relied on the ERP reported in expert surveys and the implied ERP method discussed below.

2. Expert Surveys

Q. Describe the expert survey approach to estimating the ERP.

A. As its name implies, the expert survey approach to estimating the ERP involves conducting a survey of experts including professors, analysts, chief financial officers, and other executives around the country and asking them what they think the ERP is. The IESE Business School conducts such a survey each year. Their 2021 expert survey reported an average ERP of 5.5%.[76]

3. Implied ERP

Q. Describe the implied ERP approach.

A. The third method of estimating the ERP is arguably the best. The implied ERP relies on the stable growth model proposed by Gordon, often called the "Gordon Growth Model," which is a basic stock valuation model widely used in finance for many years.[77] This model is a mathematical derivation of the DCF Model. In fact, the underlying concept in both models is the same: the current value of an asset is equal to the present value of its future cash flows. Instead of using this model to determine the discount rate of one company, we

---

[76] Pablo Fernandez, Pablo Linares & Isabel F. Acin, *Market Risk Premium used in 171 Countries in 2016: A Survey with 6,932 Answers*, at 3 (IESE Business School 2015), copy available at http://www.valumonics.com/wp-content/uploads/2017/06/Discount-rate-Pablo-Fern%C3%A1ndez.pdf. IESE Business School is the graduate business school of the University of Navarra. IESE offers Master of Business Administration (MBA), Executive MBA and Executive Education programs. IESE is consistently ranked among the leading business schools in the world.

[77] Myron J. Gordon and Eli Shapiro, *Capital Equipment Analysis: The Required Rate of Profit* 102–10 (Management Science Vol. 3, No. 1 Oct. 1956).

can use it to determine the discount rate for the entire market by substituting the inputs of the model. Specifically, instead of using the current stock price (P_0), we will use the current value of the S&P 500 (V_{500}). Similarly, instead of using the dividends of a single firm, we will consider the dividends paid by the entire market. Additionally, we should consider potential dividends. In other words, stock buybacks should be considered in addition to paid dividends, as stock buybacks represent another way for the firm to transfer free cash flow to shareholders. Focusing on dividends alone without considering stock buybacks could understate the cash flow component of the model, and ultimately understate the implied ERP. The market dividend yield plus the market buyback yield gives us the gross cash yield to use as our cash flow in the numerator of the discount model. This gross cash yield is increased each year over the next five years by the growth rate. These cash flows must be discounted to determine their present value. The discount rate in each denominator is the risk-free rate (R_F) plus the discount rate (K). The following formula shows how the implied return is calculated. Since the current value of the S&P is known, we can solve for K: the implied market return.[78]

Equation 5:
Implied Market Return

$$V_{500} = \frac{CY_1(1+g)^1}{(1+R_F+K)^1} + \frac{CY_2(1+g)^2}{(1+R_F+K)^2} + \cdots + \frac{CY_5(1+g)^5 + TV}{(1+R_F+K)^5}$$

where:	V_{500}	=	*current value of index (S&P 500)*
	CY_{1-5}	=	*average cash yield over last five years (includes dividends and buybacks)*
	g	=	*compound growth rate in earnings over last five years*
	R_F	=	*risk-free rate*
	K	=	*implied market return (this is what we are solving for)*
	TV	=	*terminal value* $= CY_5\,(1+R_F)\,/\,K$

[78] *See* Exhibit DJG-9 for detailed calculation.

The discount rate is called the “implied” return here because it is based on the current value of the index as well as the value of free cash flow to investors projected over the next five years. Thus, based on these inputs, the market is “implying” the expected return; or in other words, based on the current value of all stocks (the index price), and the projected value of future cash flows, the market is telling us the return expected by investors for investing in the market portfolio. After solving for the implied market return (K), we simply subtract the risk-free rate from it to arrive at the implied ERP.

Equation 6:
Implied Equity Risk Premium

$$Implied\ Expected\ Market\ Return - R_F = Implied\ ERP$$

Q. Discuss the results of your implied ERP calculation.

A. After collecting data for the index value, operating earnings, dividends, and buybacks for the S&P 500 over the past six years, I calculated the dividend yield, buyback yield, and gross cash yield for each year. I also calculated the compound annual growth rate (g) from operating earnings. I used these inputs, along with the risk-free rate and current value of the index to calculate a current expected return on the entire market of 7.0%. I subtracted the risk-free rate to arrive at the implied equity risk premium of 4.9%.[79] Dr. Damodaran, one of the world’s leading experts on the ERP, promotes the implied ERP method discussed above. He calculates monthly and annual implied ERPs with this method and publishes

[79] Exhibit DJG-9.

his results. Dr. Damodaran's average ERP estimate for June 2021 using several implied ERP variations was 4.8%.[80]

Q. What are the results of your final ERP estimate?

A. For the final ERP estimate I used in my CAPM analysis, I considered the results of the ERP surveys along with the implied ERP calculations and the ERP reported by Duff & Phelps.[81] The results are presented in the following figure:

Figure 10:
Equity Risk Premium Results

IESE Business School Survey	5.5%
Duff & Phelps Report	5.5%
Damodaran (average)	4.8%
Garrett	4.9%
Average	**5.2%**
Highest	**5.5%**

While it would be arguably reasonable to select any one of these ERP estimates to use in the CAPM, to be conservative, I selected the highest ERP estimate of 5.5% to use in my CAPM analysis. All else held constant, a higher ERP used in the CAPM will result in a higher cost of equity estimate.

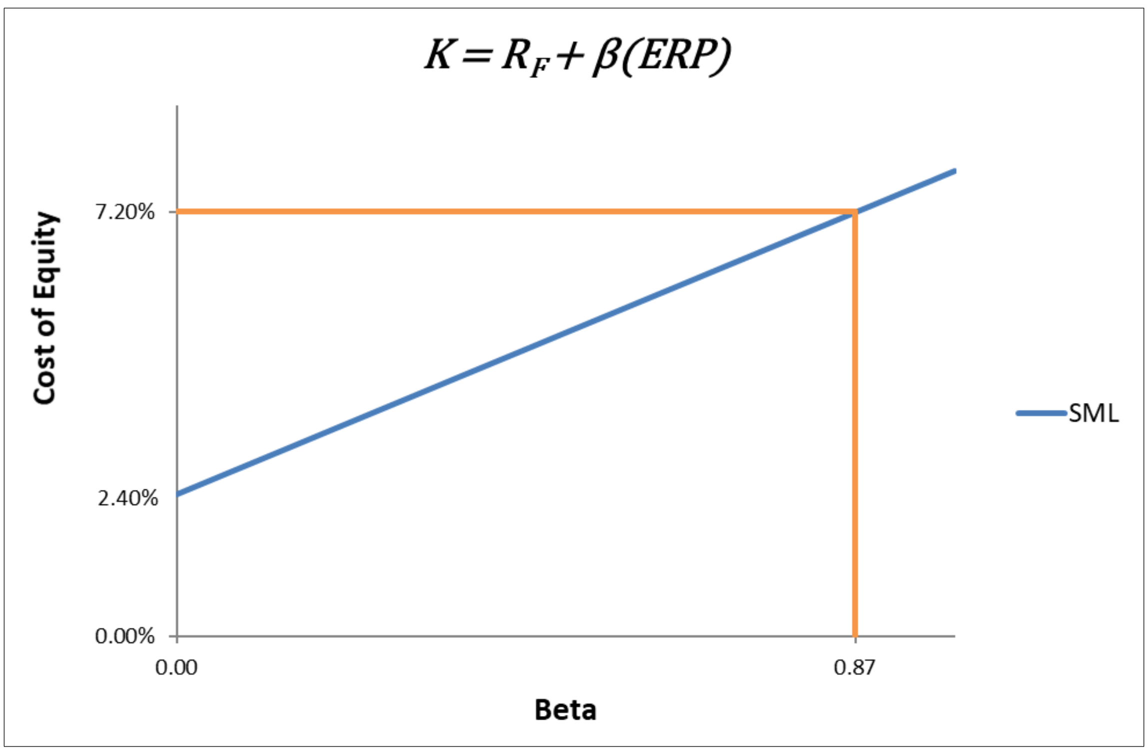
[80] Aswath Damodaran, *Implied Equity Risk Premium Update*, DAMODARAN ONLINE http://pages.stern.nyu.edu/~adamodar/.

[81] Exhibit DJG-10.

1 **Q. Please explain the final results of your CAPM analysis.**

2 A. Using the inputs for the risk-free rate, beta coefficient, and ERP discussed above, I estimate that UGI's CAPM cost of equity is 7.2%.[82] The CAPM may be displayed graphically through what is known as the Security Market Line ("SML"). The following figure shows the expected return (cost of equity) on the y-axis, and the average beta for the proxy group on the x-axis. The SML intercepts the y-axis at the level of the risk-free rate. The slope of the SML is the equity risk premium.

Figure 11:
CAPM Graph



[82] Exhibit DJG-11.

The SML provides the rate of return that will compensate investors for the beta risk of that investment. Thus, at an average beta of 0.87 for the proxy group, the estimated CAPM cost of equity for UGI is 7.2%.

D. Response to Mr. Moul's CAPM Analysis

Q. Mr. Moul's CAPM analysis yields notably higher results. Did you find specific problems with Mr. Moul's CAPM assumptions and inputs?

A. Yes, I did. Mr. Moul's estimates a CAPM cost of equity of 13.55%.[83] Mr. Moul has overestimated each input to the CAPM, and he includes an inappropriate size premium in his model. Each of these problems is discussed further below.

1. Beta

Q. Describe Mr. Moul's beta input to the CAPM.

A. Mr. Moul used a beta of 1.0 in his CAPM.[84] This beta is much higher than the average beta of Mr. Moul's proxy group as reported by Value Line, which is only 0.87.[85] The difference between a beta of 0.87 and 1.0 is significant, especially considering the fact that the beta of the entire market is 1.0. The betas reported by Value Line show that the proxy group is less risky than the market average, while the inflated beta derived by Mr. Moul would indicate the proxy group of utilities is riskier than the market average. Mr. Moul is essentially suggesting that the betas published by Value Line, an objective and widely-used source in utility regulation, are notably underestimated.

---

[83] Direct Testimony of Paul R. Moul, p. 42, lines 4-6.

[84] Direct Testimony of Paul R. Moul, p. 43, lines 11-13.

[85] Exhibit DJG-8.

Q. Do you agree with Mr. Moul's beta input?

A. No. By using a beta of 1.0, Mr. Moul is implying that UGI is equal to the risk of the average company in the U.S. market. Such a proposition contradicts any objective or intuitive understanding of a regulated utility's position and operations in the U.S. market. In fact, it is more accurate to say that UGI, and its utility peers, are among the least risky companies in the world. UGI is a regulated monopoly with a captive customer base who provides an essential product with a relatively inelastic demand – operating under a regulatory framework that would essentially prevent it from experiencing financial failure. Competitive firms in the market do not enjoy the same risk-mitigating framework and protections. I have also discussed my disagreement with Mr. Moul's beta input from a technical perspective when I addressed his leverage adjustment above. In short, it is inappropriate to use Value Line betas as a starting point and increasing them to account for leverage. The Commission should reject Mr. Moul's CAPM results for his beta input alone. However, his estimate for the ERP is also unreasonably high, as further discussed below.

2. <u>Equity Risk Premium</u>

Q. Did Mr. Moul rely on a reasonable measure for the ERP?

A. No, he did not. Mr. Moul used an input of 9.78% for the ERP, which is not realistic.[86] The ERP is one of three inputs in the CAPM equation, and it is one of the most important factors for estimating the cost of equity in this case. As discussed above, I used three widely accepted methods for estimating the ERP, including consulting expert surveys, calculating

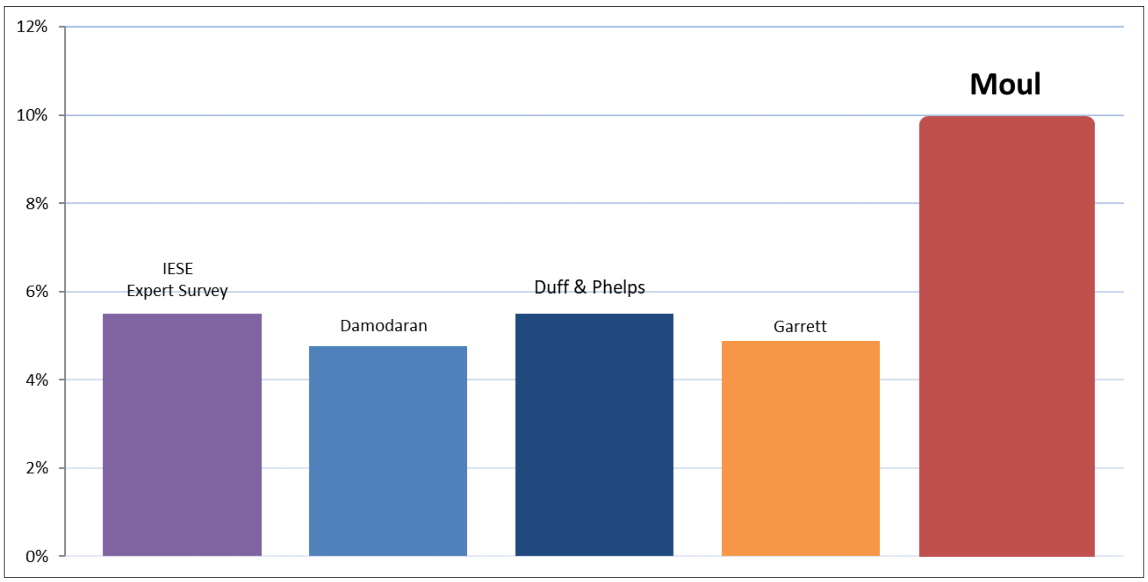
[86] Direct Testimony of Paul R. Moul, p. 45, lines 19-20.

the implied ERP based on aggregate market data, and considering the ERPs published by reputable analysts. The highest ERP found from my research and analysis is only 5.5%.

Q. Please discuss and illustrate how Mr. Moul's ERP compares with other estimates for the ERP.

A. The 2021 IESE Business School expert survey reports an average ERP of 5.5%. Similarly, Duff & Phelps recently estimated an ERP of 5.5%. Dr. Damodaran, one of the leading experts on the ERP, recently estimated an ERP of only 4.8%.[87] The chart in the following figure illustrates that Mr. Moul's ERP estimate is far out of line with other reasonable, objective estimates for the ERP.[88]

Figure 12:
Equity Risk Premium Comparison



[87] Aswath Damodaran, *Implied Equity Risk Premium Update*, DAMODARAN ONLINE, http://pages.stern.nyu.edu/~adamodar/. Dr. Damodaran estimates several ERPs using various assumptions.

[88] The ERP estimated by Dr. Damodaran is the highest of several ERP estimates under slightly differing assumptions.

When compared with other independent sources for the ERP, as well as my estimate, Mr. Moul's ERP estimate is clearly not within the range of reasonableness. As a result, his CAPM cost of equity estimate is overstated.

3. Size Premium

Q. Describe Mr. Moul's size premium adjustment to his CAPM.

A. Mr. Moul adds 1.02% to his CAPM on the basis that UGI is smaller than the proxy group.[89]

Q. Do you agree with Mr. Moul's size premium?

A. No. The "size effect" phenomenon arose from a 1981 study conducted by Banz, which found that "in the 1936 – 1975 period, the common stock of small firms had, on average, higher risk-adjusted returns than the common stock of large firms."[90] According to Ibbotson, Banz's size effect study was "[o]ne of the most remarkable discoveries of modern finance."[91] Perhaps there was some merit to this idea at the time, but the size effect phenomenon was short lived. Banz's 1981 publication generated much interest in the size effect and spurred the launch of significant new small cap investment funds. However, this "honeymoon period lasted for approximately two years. . . ."[92] After 1983, U.S. small-cap stocks actually underperformed relative to large cap stocks. In other words, the size effect essentially reversed. In *Triumph of the Optimists*, the authors conducted an extensive

---

[89] Direct Testimony of Paul R. Moul, p. 46, lines 10-12.

[90] Rolf W. Banz, *The Relationship Between Return and Market Value of Common Stocks* 3-18 (Journal of Financial Economics 9 (1981)).

[91] 2015 Ibbotson Stocks, Bonds, Bills, and Inflation Classic Yearbook 99 (Morningstar 2015).

[92] Elroy Dimson, Paul Marsh & Mike Staunton, *Triumph of the Optimists: 101 Years of Global Investment Returns* 131 (Princeton University Press 2002).

empirical study of the size effect phenomenon around the world. They found that after the size effect phenomenon was discovered in 1981, it disappeared within a few years:

> It is clear . . . that there was a global reversal of the size effect in virtually every country, with the size premium not just disappearing but going into reverse. Researchers around the world universally fell victim to Murphy's Law, with the very effect they were documenting – and inventing explanations for – promptly reversing itself shortly after their studies were published.[93]

In other words, the authors assert that the very discovery of the size effect phenomenon likely caused its own demise. The authors ultimately concluded that it is "inappropriate to use the term 'size effect' to imply that we should automatically expect there to be a small-cap premium," yet, this is exactly what utility witnesses often do in attempting to artificially inflate the cost of equity with a size premium. Other prominent sources have agreed that the size premium is a dead phenomenon. According to Ibbotson:

> The unpredictability of small-cap returns has given rise to another argument against the existence of a size premium: that markets have changed so that the size premium no longer exists. As evidence, one might observe the last 20 years of market data to see that the performance of large-cap stocks was basically equal to that of small cap stocks. In fact, large-cap stocks have outperformed small-cap stocks in five of the last 10 years.[94]

In addition to the studies discussed above, other scholars have concluded similar results. According to Kalesnik and Beck:

[93] *Id*. at 133.

[94] 2015 Ibbotson Stocks, Bonds, Bills, and Inflation Classic Yearbook 112 (Morningstar 2015).

> Today, more than 30 years after the initial publication of Banz's paper, the empirical evidence is extremely weak even before adjusting for possible biases. . . . The U.S. long-term size premium is driven by the extreme outliers, which occurred three-quarters of a century ago. . . . Finally, adjusting for biases . . . makes the size premium vanish. If the size premium were discovered today, rather than in the 1980s, it would be challenging to even publish a paper documenting that small stocks outperform large ones.[95]

For all of these reasons, the Commission should reject the arbitrary size premium proposed by the Company.

Q. Have other commissions recently rejected Mr. Moul's size adjustment?

A. Yes. Recently, in the Application of Palmetto Wastewater Reclamation ("PWR"), the Public Service Commission of South Carolina rejected Mr. Moul's size premium adjustment.[96] Relying in part on my testimony in the PWR case, the South Carolina commission agreed that "Mr. Moul's 1.02% size adjustment is not appropriate."[97]

VII. <u>OTHER COST OF EQUITY ISSUES</u>

Q. Are there any other issues raised in the Company's testimony to which you would like to respond?

A. Yes. In his testimony, Mr. Moul suggests that certain firm-specific risks and other factors should have an increasing effect on the cost of equity, apparently beyond that which is indicated by the CAPM and DCF Model. Mr. Moul also relies on comparable and expected

---

[95] Vitali Kalesnik and Noah Beck, *Busting the Myth About Size* (Research Affiliates 2014), available at <u>https://www.researchaffiliates.com/Our%20Ideas/Insights/Fundamentals/Pages/284_Busting_the_Myth_About_Size.aspx</u> (emphasis added).

[96] Order issued December 21, 2021, Application of Palmetto Wastewater Reclamation, before the Public Service Commission of South Carolina, p. 24.

[97] *Id*.

earnings to support his cost of equity estimate. Finally, Mr. Moul also suggests that management performance should have an increasing effect on UGI's authorized ROE.

A. Firm-Specific Business Risks

Q. Describe Mr. Moul's testimony regarding business risks.

A. In his Direct Testimony, Mr. Moul suggests that the Company is exposed to additional risks beyond those inherent in the proxy group. According to Mr. Moul, such risks include regulatory risks and operational risks, among other risks.[98] Mr. Moul also suggests that his cost of equity estimates for UGI reflect the inclusion of a weather normalization adjustment ("WNA").

Q. Do you agree with Mr. Moul that these firm-specific risk factors should influence UGI's cost of equity or awarded ROE?

A. No. All companies face business risks, including the other utilities in the proxy group; business risks are not unique to UGI. As discussed above, it is a well-known concept in finance that firm-specific risks are unrewarded by the market. This is largely because firm-specific risk can be eliminated through portfolio diversification. Scholars widely recognize the fact that market risk, or "systematic risk," is the only type of risk for which investors expect a return for bearing.[99]

Unlike interest rate risk, inflation risk, and other market risks that affect all companies in the stock market, the risk factors discussed by Mr. Moul are merely business risks specific to UGI. Investors do not require an additional term for these firm-specific

---

[98] *See* Direct testimony of Paul R. Moul, pp. 7-13.

[99] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180 (3rd ed., South Western Cengage Learning 2010).

business risks. Another way to consider this issue is to look at the CAPM and DCF Model. Did the creators of these highly regarded cost of equity models, which have been relied upon for decades by companies and investors to make crucial business decisions, simply neglect to add an input for business risks? Of course not. The DCF Model considers stock price, dividends, and a long-term growth rate. The CAPM considers the risk-free rate, beta, and the equity risk premium. Neither model includes an input for business risks due to the well-known truth that investors do not expect a return for such risks. Therefore, the Company's firm-specific business risks, while perhaps relevant to other issues in the rate case, have no meaningful effect on the cost of equity estimate. Rather, it is market risk that is rewarded by the market, and this concept is thoroughly addressed in my CAPM analysis discussed above. Thus, the Commission should reject any additional premium Mr. Moul has added to an already overstated cost of equity estimate to account for any firm-specific risks. This concept was also discussed and illustrated above in my testimony.[100]

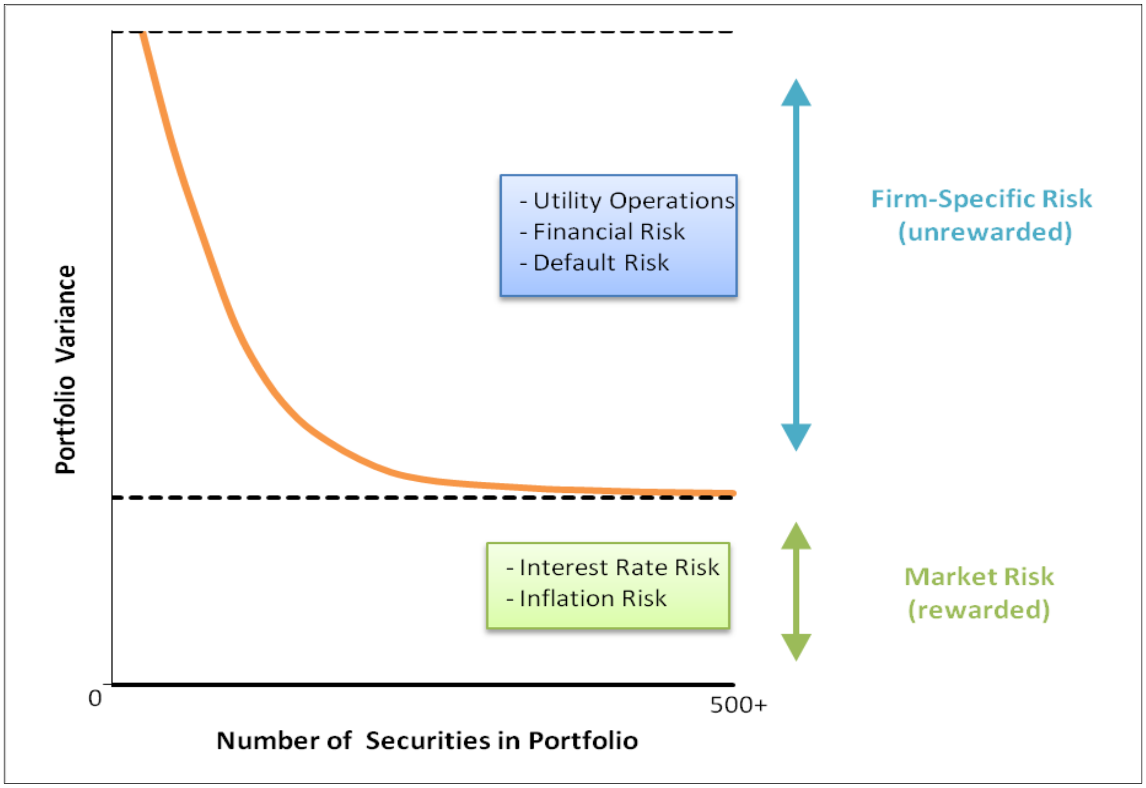
Q. Is UGI's proposed WNA a type of firm-specific business risk that should not directly affect the Company's cost of equity estimate?

A. Yes. OCA witness Jerome Mierzwa makes specific recommendations regarding the WNA in his direct testimony. Regardless of what the Commission decides regarding the WNA, it would not affect the Company's cost of equity estimate, nor should it impact a fair authorized ROE. Regulatory mechanisms relate to firm-specific risks, which are not rewarded by the market, and thus do not materially impact the cost of equity.

These important concepts are again illustrated in the figure below.

[100] *See* Section IV above.

Figure 13:
Effects of Portfolio Diversification



The financial models presented in my testimony (particularly the CAPM) directly measure market risk, which is the type of risk the Commission should focus on when determining a fair authorized ROE.

B. Comparable Earnings

Q. Please summarize Mr. Moul's comparable earnings approach.

A. Mr. Moul also analyzed the returns realized by non-regulated companies as an indication of UGI's cost of equity.[101] The results of his comparable earnings approach indicate a cost of equity for UGI of 12.7%.[102]

Q. Do you agree with Mr. Moul's analyses?

A. No. There are two notable problems with Mr. Moul's comparable earnings approach: (1) earned returns do not indicate the cost of equity; and (2) there is no marginal value in analyzing competitive firms beyond those of the utility proxy group in terms of assessing a comparable risk profile. First, the earned return of any company should have a meaningful effect on its cost of equity. Conceptually, "earned" returns and "expected" returns are different from each other. For example, we might conduct a cost of equity analysis on Walmart's stock and determine that, based on the risk inherent in that investment, we should "expect" a 10% return on our investment (i.e., the cost of equity from Walmart's perspective). Suppose that Walmart, however, has a bad year and only "earned" a 5% ROE. This does not mean that going forward we will now "expect" a return of only 5% on our equity investment in Walmart. Likewise, the same would be true if Walmart had a good year and earned a 20% return. In finance, the "expected" return on equity as investor (which is synonymous with the "cost" of equity from the company's perspective) is simply based on the risk inherent in that investment, and is not directly

---

[101] Direct testimony of Paul R. Moul, pp. 46-49.

[102] *Id*. at p. 49, line 22.

influenced by the company's actual, earned return for any given period of time. Thus, Mr. Moul's analysis of earned returns does not add any value for assessing the cost of equity for UGI beyond the results of the CAPM and DCF Model.

The second problem with Mr. Moul's comparable earnings approach is that it uses the earned returns of non-regulated, non-utility companies as an indication of UGI's cost of equity. Despite the title of Mr. Moul's model, competitive, non-utility companies are decisively *incomparable* to UGI. Primarily, the risk profiles of competitive firms will tend to be higher than those of low-risk utilities; thus, their cost of equity estimates will generally be higher. Not surprisingly, the results of Mr. Moul's "comparable" earnings approach are higher than those produced by the models he conducted on the utility proxy group.[103] There is simply no marginal value added to the process of estimating utility cost of equity by using non-utility, non-regulated firms in a proxy group that should contain firms with relatively similar risk profiles to the regulated utility being analyzed. Moreover, the results of Mr. Moul's comparable earnings approach is *more than 500 basis points* above a reasonable estimate for UGI's market-based cost of equity. In addition, Mr. Moul's results are more than 400 basis points above the current "ceiling" for utility cost of equity, which is discussed further below.

[103] Direct Testimony of Paul R. Moul, Exhibit PRM-1, Sch. 1, p. 2.

C. <u>Management Performance Premium</u>

Q. Please describe Mr. Moul's management performance premium.

A. Mr. Moul includes an additional 0.2% to his cost of equity estimate for the "Company's exemplary management."[104]

Q. Do you agree with Mr. Moul's management performance premium?

A. No. Such a premium is completely unrelated to UGI's cost of equity estimate. In financial textbooks, treatises, and other authoritative literature, I have not seen anyone suggest that this type of premium should be added to a cost of equity estimate. It is inappropriate to add an arbitrary and unsupported premium on top of awarded ROE recommendation that is at least 300 basis points higher than UGI's actual cost of equity.

Q. Did the Commission recently reject a management performance premium in the UGI Gas case?

A. Yes. In the last rate case for the UGI Gas division, UGI Gas proposed a 25-basis point premium for management effectiveness.[105] The Commission found that "such an upward adjustment is contrary to the public interest."[106] The Company's management performance claim in this case encompasses activities commenced as early as 2010 or projected to occur well past the end of the FPFTY.[107] Similarly, communications tools implemented by UGI

---

[104] Direct Testimony of Paul R. Moul, p. 4, line 14.

[105] *Pa. PUC v. UGI Energy – Gas Div.*, Docket No. R-2020-3018929, Order at 161-168 (June 22, 2021) (UGI Gas Order).

[106] *Id*. at pg. 167.

[107] OCA-XI-3 (Reduction in interruptions in CEMI areas discussed by UGI Witness McDonald direct page 15 based on comparison of 2010-2014 and 2016-2018 measures); OCA-XI-9 (UGI Witness McDonald's direct page 19 discussion of 26,000 poles relates to plans for 2023-2025); OCA-XI-11 (Two of the 6 substation retirements discussed by UGI Witness McDonald direct page 19 will be retired by the end of the FPFTY).

in 2015 and 2018 came several years after introduction by another Exelon affiliate.[108] OCA witness Roger Colton's review of the Company's customer service performance does not support the Company's claim. The Company already has an obligation to provide service that is safe, adequate, reasonable and efficient. I recommend the Commission deny the Company's proposed management performance premium in this case for the same reasons that it was denied in the UGI Gas case.

Q. Have you quantified the financial impact to ratepayers that Mr. Moul's management performance premium would have?

A. Yes. As addressed in the direct testimony of OCA witness Mugrace, an increase of 0.2% to the ROE for Mr. Moul's management performance premium would increase the revenue requirement by $4.9 million.

VIII. COST OF EQUITY SUMMARY

Q. Please summarize the results of the CAPM and DCF Model discussed above.

A. The following figure shows the cost of equity results from each model I employed in this case.[109]

---

[108] OCA-XI-12 (ComEd was the first Exelon utility to launch a mobile application in 2012. UGI first deployed in February 2018. ComEd was the first Exelon utility to develop two-way outage text features in 2012. UGI first deployed this in October 2015).

[109] Exhibit DJG-12.

Figure 14:
Cost of Equity Summary

Model	Cost of Equity
Discounted Cash Flow Model	6.7%
Capital Asset Pricing Model	7.2%
Average	**7.0%**

The average cost of equity resulting from my DCF Model and the CAPM is 7.0%.

Q. Please comment on the Commission's preference for DCF results.

A. It is my understanding that in prior cases, the Commission has indicated a preference for the results of the DCF Model to estimate cost of equity, while using the CAPM results as an alternative to verify the reasonableness of the results. As shown above, when reasonable inputs are used in both models (as applied to the proxy group in this case under current market conditions), the results of the models are relatively close. I would also add that unlike the DCF Model, the CAPM was specifically designed to estimate cost of equity, and it has direct inputs designed to assess market risk and the relative impacts of market risks on individual firms. The CAPM also avoids some of the circular reference problems inherent in the DCF Model when it issued to set the authorized ROE in utility rate cases.

IX. <u>CAPITAL STRUCTURE</u>

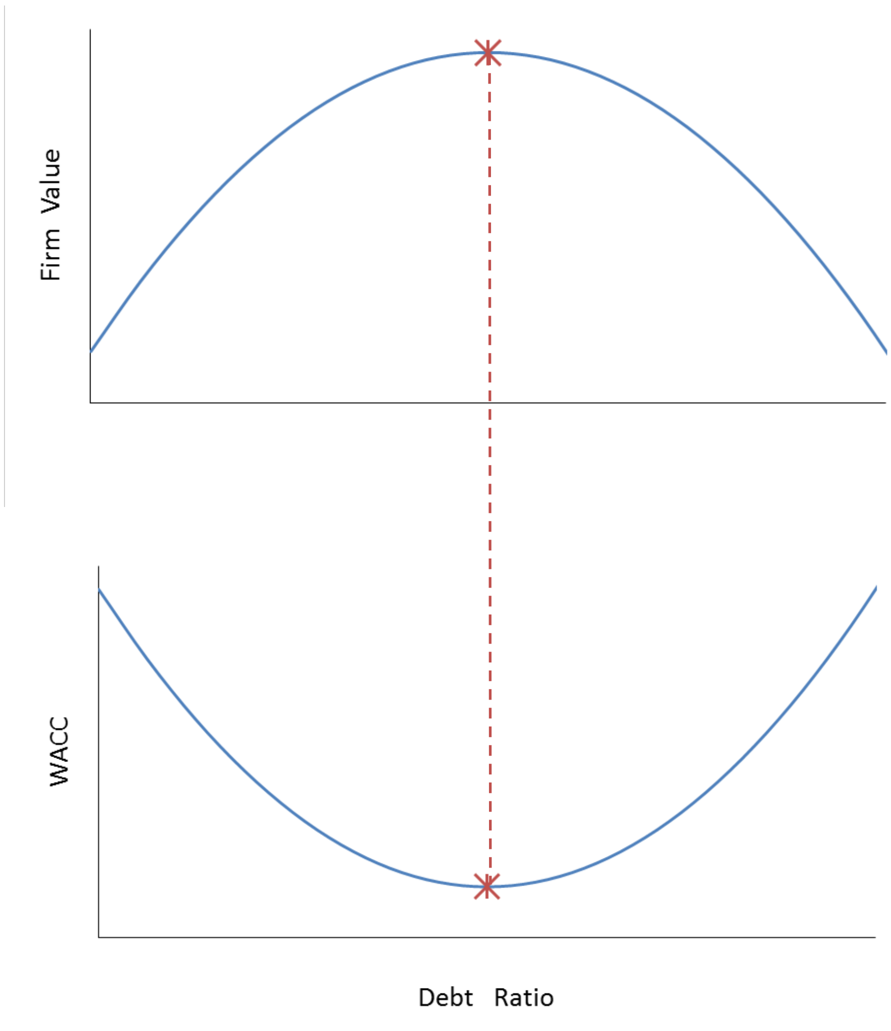
Q. Describe in general the concept of a company's capital structure.

A. "Capital structure" refers to the way a company finances its overall operations through external financing. The primary sources of long-term, external financing are debt capital and equity capital. Debt capital usually comes in the form of contractual bond issues that require the firm to make payments, while equity capital represents an ownership interest in the form of stock. Because a firm cannot pay dividends on common stock until it satisfies its debt obligations to bondholders, stockholders are referred to as "residual claimants." The fact that stockholders have a lower priority to claims on company assets increases their risk and the required return relative to bondholders. Thus, equity capital has a higher cost than debt capital. Firms can reduce their WACC by recapitalizing and increasing their debt financing. In addition, because interest expense is deductible, increasing debt also adds value to the firm by reducing the firm's tax obligation.

Q. Is it true that, by increasing debt, competitive firms can add value and reduce their WACC?

A. Yes, it is. A competitive firm can add value by increasing debt. After a certain point, however, the marginal cost of additional debt outweighs its marginal benefit. This is because the more debt the firm uses, the higher interest expense it must pay, and the likelihood of loss increases. This also increases the risk of non-recovery for both bondholders and shareholders, causing both groups of investors to demand a greater return on their investment. Thus, if debt financing is too high, the firm's WACC will increase instead of decrease. The following figure illustrates these concepts.

Figure 15:
Optimal Debt Ratio



As shown in this figure, a competitive firm’s value is maximized when the WACC is minimized. In both graphs, the debt ratio is shown on the x-axis. By increasing its debt ratio, a competitive firm can minimize its WACC and maximize its value. At a certain point, however, the benefits of increasing debt do not outweigh the costs of the additional risks to both bondholders and shareholders, as each type of investor will demand higher returns for the additional risk they have assumed.[110]

Q. Does the rate base rate of return model effectively incentivize utilities to operate at the optimal capital structure?

A. No. While it is true that competitive firms maximize their value by minimizing their WACC, this is not the case for regulated utilities. Under the rate base rate of return model, a higher WACC results in higher rates, all else held constant. The basic revenue requirement equation is as follows:

Equation 7:
Revenue Requirement for Regulated Utilities

$$RR = O + d + T + \boldsymbol{r}(A - D)$$

where:	RR	=	*revenue requirement*
	O	=	*operating expenses*
	d	=	*depreciation expense*
	T	=	*corporate tax*
	$\boldsymbol{r}$	=	***weighted average cost of capital (WACC)***
	A	=	*plant investments*
	D	=	*accumulated depreciation*

As shown in this equation, utilities can increase their revenue requirement by <u>increasing</u> their WACC, not by minimizing it. Thus, because there is no incentive for a regulated utility to minimize its WACC, a commission standing in the place of competition must ensure that the regulated utility is operating at the lowest reasonable WACC.

[110] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 440-41 (3rd ed., South Western Cengage Learning 2010).

Q. Can utilities generally afford to have higher debt levels than other industries?

A. Yes. Because regulated utilities have large amounts of fixed assets, stable earnings, and low risk relative to other industries, they can afford to have relatively higher debt ratios (or "leverage"). As aptly stated by Dr. Damodaran:

> Since financial leverage multiplies the underlying business risk, it stands to reason that firms that have high business risk should be reluctant to take on financial leverage. It also stands to reason that firms that operate in stable businesses should be much more willing to take on financial leverage. Utilities, for instance, have historically had high debt ratios but have not had high betas, mostly because their underlying businesses have been stable and fairly predictable.[111]

Note that the author explicitly contrasts utilities with firms that have high underlying business risk. Because utilities have low levels of risk and operate a stable business, they should generally operate with relatively high levels of debt to achieve their optimal capital structure.

Q. Are the capital structures of the proxy group a source that can be used to assess a prudent capital structure?

A. Yes. However, while the capital structures of the proxy group might provide some indication of an appropriate capital structure for the utility being studied, it is preferable to also consider additional types of analyses. The average debt ratios of a utility proxy group will likely be lower than what would be observed in a pure competitive environment. As I explain above, this is because utilities do not have a financial incentive to operate at the optimal capital structure.

---

[111] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 196 (3rd ed., John Wiley & Sons, Inc. 2012).

Q. How can utility regulatory commissions help overcome the fact that utilities do not have a natural financial incentive to minimize their cost of capital?

A. While under the rate base rate of return model utilities do not have a natural financial incentive to minimize their cost of capital, competitive firms, in contrast, can and do maximize their value by minimizing their cost of capital. Competitive firms minimize their cost of capital by including a sufficient amount of debt in their capital structures. They do not do this because it is required by a regulatory body, but rather because their shareholders demand it in order to maximize value. The Commission can provide this incentive to UGI by acting as a surrogate for competition and setting rates consistent with a capital structure that is similar to what would be appropriate in a competitive, as opposed to a regulated, environment.

Q. Please describe how you assessed the reasonableness of UGI's proposed capital structure in this case.

A. In this case, I examined the capital structures of the proxy group, as well as the capital structure of UGI's parent company, UGI Corp. Finally, I also looked at capital structures observed in other competitive industries to assess the overall reasonableness of my recommendation.

Q. Please describe the debt ratios of the proxy group.

A. Again, Mr. Moul and I used the same proxy group of utilities for our cost of capital analyses. The proxy group of utilities reported an average debt ratio of 53%, which is considerably higher than UGI's proposed debt ratio.[112]

---

[112] Exhibit DJG-14.

Q. What is the capital structure of UGI's parent company, UGI Corp.?

A. At the end of 2021, UGI Corp. reported a debt ratio of 53.4%, which is similar to the average debt ratio of the proxy group, and notably higher than the Company's proposed debt ratio of only 45%.

Q. Did you also look at other competitive firms around the country to compare their debt ratios?

A. Yes. In fact, there are currently nearly 2,000 firms in various industries across the country with debt ratios of 50% or greater, with an average debt ratio of 61 percent.[113] The following figure shows a sample of these industries, with debt ratios of at least 56%.

[113] Exhibit DJG-15.

Figure 16:
Industries with Debt Ratios of 56% or Greater

Industry	# Firms	Debt Ratio
Air Transport	21	85%
Hospitals/Healthcare Facilities	31	80%
Hotel/Gaming	66	77%
Brokerage & Investment Banking	31	76%
Retail (Automotive)	32	72%
Food Wholesalers	15	68%
Retail (Grocery and Food)	15	68%
Rubber& Tires	2	67%
Bank (Money Center)	7	67%
Advertising	49	67%
Computers/Peripherals	46	67%
Auto & Truck	26	66%
Real Estate (Operations & Services)	51	66%
Retail (Special Lines)	76	64%
Cable TV	11	63%
Oil/Gas Distribution	21	63%
Packaging & Container	26	62%
Telecom. Services	42	61%
Recreation	60	61%
Broadcasting	28	60%
Transportation (Railroads)	4	60%
R.E.I.T.	238	60%
Power	50	60%
Telecom (Wireless)	17	59%
Transportation	17	59%
Beverage (Soft)	32	58%
Utility (Water)	14	57%
Retail (Distributors)	68	57%
Office Equipment & Services	18	57%
Aerospace/Defense	73	57%
Household Products	118	56%
Computer Services	83	56%
Green & Renewable Energy	20	56%
Total / Average	**1,408**	**64%**

Many of the industries shown here, like public utilities, are generally well-established industries with large amounts of capital assets. The shareholders of these industries demand higher debt ratios in order to maximize their profits. There are several notable industries that are relatively comparable to public utilities in some respects. These debt ratios, as well as the average debt ratio of the utility proxy group, are notably higher than UGI's proposed debt ratio of only 44.88%.

Q. What is your recommendation regarding the Company's capital structure?

A. The analysis strongly indicates that UGI's proposed debt ratio is too low to be considered fair for ratemaking. An insufficiently low debt ratio causes the weighted average cost of capital to be unreasonably high. The table below compares the various debt ratios discussed in my testimony, and it highlights the unreasonableness of UGI's proposed debt ratio.

Figure 17:
Debt Ratio Comparison

Source	Debt Ratio
Power	60%
Telecom (Wireless)	59%
Utility (Water)	57%
Green & Renewable Energy	56%
Proxy Group of Utilities	**53%**
UGI Corp.	**53%**
Garrett Proposal	**50%**
Company Proposal	**45%**

Based on my findings, I recommend the Commission impute a capital structure for ratemaking purposes consisting of 50% debt and 50% equity. Although my findings indicate UGI's debt ratio should arguably be higher than 50%, I am recommending a 50% debt ratio in the interest of reasonableness and gradualism.

Q. If the Commission were to adopt UGI's proposed debt ratio, would that decision further reduce UGI's low-risk profile?

A. Yes. As illustrated in the optimal capital structure table above, increasing the debt ratio to an optimal level effectively minimizes the weighted average cost of capital. However, if UGI's authorized ROE is higher than its cost of equity, it will increase the WACC beyond its lowest optimal level. Thus, if the Commission were to approve UGI's low debt ratio, it should also strongly consider a meaningful reduction in its authorized ROE.

Q. Does this conclude your testimony?

A. Yes. To the extent I have not addressed an issue or proposal raised by the Company in this proceeding, it should not be construed that I agree with the same.

APPENDIX A:

DISCOUNTED CASH FLOW MODEL THEORY

The Discounted Cash Flow ("DCF") Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates. Cash flows from common stock are paid to investors in the form of dividends. There are several variations of the DCF Model. In its most general form, the DCF Model is expressed as follows:[114]

Equation 8:
General Discounted Cash Flow Model

$$P_0 = \frac{D_1}{(1+k)} + \frac{D_2}{(1+k)^2} + \cdots + \frac{D_n}{(1+k)^n}$$

where:	P_0	=	*current stock price*
	$D_1 \ldots D_n$	=	*expected future dividends*
	k	=	*discount rate / required return*

The General DCF Model would require an estimation of an infinite stream of dividends. Because this would be impractical, analysts use more feasible variations of the General DCF Model, which are discussed further below.

The DCF Models rely on the following four assumptions:[115]

1. Investors evaluate common stocks in the classical valuation framework; that is, they trade securities rationally at prices reflecting their perceptions of value;

2. Investors discount the expected cash flows at the same rate (K) in every future period;

---

[114] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 410 (9th ed., McGraw-Hill/Irwin 2013).

[115] *See* Roger A. Morin, *New Regulatory Finance* 252 (Public Utilities Reports, Inc. 2006) (1994).

3. The K obtained from the DCF equation corresponds to that specific stream of future cash flows alone; and

4. Dividends, rather than earnings, constitute the source of value.

The General DCF can be rearranged to make it more practical for estimating the cost of equity. Regulators typically rely on some variation of the Constant Growth DCF Model, which is expressed as follows:

Equation 9:
Constant Growth Discounted Cash Flow Model

$$K = \frac{D_1}{P_0} + g$$

where:	K	=	*discount rate / required return on equity*
	D_1	=	*expected dividend per share one year from now*
	P_0	=	*current stock price*
	g	=	*expected growth rate of future dividends*

Unlike the General DCF Model, the Constant Growth DCF Model solves for the required return (*K*) directly. In addition, by assuming that dividends grow at a constant rate, the dividend stream from the General DCF Model may be substituted with a term representing the expected constant growth rate of future dividends (*g*). The Constant Growth DCF Model may be considered in two parts. The first part is the dividend yield (D_1/P_0), and the second part is the growth rate (*g*). In other words, the required return in the DCF Model is equivalent to the dividend yield plus the growth rate.

In addition to the four assumptions listed above, the Constant Growth DCF Model relies on the following four additional assumptions:[116]

[116] *See* Roger A. Morin, *New Regulatory Finance* 254–56 (Public Utilities Reports, Inc. 2006) (1994).

1. The discount rate (K) must exceed the growth rate (g);

2. The dividend growth rate (g) is constant in every year to infinity;

3. Investors require the same return (K) in every year; and

4. There is no external financing; that is, growth is provided only by the retention of earnings.

Because the growth rate in this model is assumed to be constant, it is important not to use growth rates that are unreasonably high. In fact, the constant growth rate estimate for a regulated utility with a defined service territory should not exceed the growth rate for the economy in which it operates.

The basic form of the Constant Growth DCF Model described above is sometimes referred to as the "Annual" DCF Model. This is because the model assumes an annual dividend payment to be paid at the end of every year, as well as an increase in dividends once each year. In reality, however, most utilities pay dividends on a quarterly basis. The Constant Growth DCF equation may be modified to reflect the assumption that investors receive successive quarterly dividends and reinvest them throughout the year at the discount rate. This variation is called the Quarterly Approximation DCF Model.[117]

Equation 10:
Quarterly Approximation Discounted Cash Flow Model

$$K = \left[\frac{d_0(1+g)^{1/4}}{P_0} + (1+g)^{1/4}\right]^4 - 1$$

where: K = *discount rate / required return*
d_0 = *current quarterly dividend per share*
P_0 = *stock price*
g = *expected growth rate of future dividends*

---

[117] *See* Roger A. Morin, *New Regulatory Finance* 348 (Public Utilities Reports, Inc. 2006) (1994).

The Quarterly Approximation DCF Model assumes that dividends are paid quarterly, and that each dividend is constant for four consecutive quarters. All else held constant, this model results in the highest cost of equity estimate for the utility in comparison to other DCF Models because it accounts for the quarterly compounding of dividends. There are several other variations of the Constant Growth (or Annual) DCF Model, including a Semi-Annual DCF Model, which is used by the Federal Energy Regulatory Commission ("FERC"). These models, along with the Quarterly Approximation DCF Model, have been accepted in regulatory proceedings as useful tools for estimating the cost of equity.

APPENDIX B:

CAPITAL ASSET PRICING MODEL THEORY

The Capital Asset Pricing Model ("CAPM") is a market-based model founded on the principle that investors demand higher returns for incurring additional risk.[118] The CAPM estimates this required return. The CAPM relies on the following assumptions:

1. Investors are rational, risk-adverse, and strive to maximize profit and terminal wealth;

2. Investors make choices based on risk and return. Return is measured by the mean returns expected from a portfolio of assets; risk is measured by the variance of these portfolio returns;

3. Investors have homogenous expectations of risk and return;

4. Investors have identical time horizons;

5. Information is freely and simultaneously available to investors;

6. There is a risk-free asset, and investors can borrow and lend unlimited amounts at the risk-free rate;

7. There are no taxes, transaction costs, restrictions on selling short, or other market imperfections; and

8. Total asset quality is fixed, and all assets are marketable and divisible.[119]

While some of these assumptions may appear to be restrictive, they do not outweigh the inherent value of the model. The CAPM has been widely used by firms, analysts, and regulators for decades to estimate the cost of equity capital.

The basic CAPM equation is expressed as follows:

---

[118] William F. Sharpe, *A Simplified Model for Portfolio Analysis* 277-93 (Management Science IX 1963).

[119] *Id*.

Equation 11:
Capital Asset Pricing Model

$$K = R_F + \beta_i(R_M - R_F)$$

where:	K	=	*required return*
	R_F	=	*risk-free rate*
	β	=	*beta coefficient of asset i*
	R_M	=	*required return on the overall market*

There are essentially three terms within the CAPM equation that are required to calculate the required return (K): (1) the risk-free rate (R_F); (2) the beta coefficient (β); and (3) the equity risk premium ($R_M - R_F$), which is the required return on the overall market less the risk-free rate.

Raw Beta Calculations and Adjustments.

A stock's beta equals the covariance of the asset's returns with the returns on a market portfolio, divided by the portfolio's variance, as expressed in the following formula:[120]

Equation 12:
Beta

$$\beta_i = \frac{\sigma_{im}}{\sigma_m^2}$$

where:	β_i	=	*beta of asset i*
	σ_{im}	=	*covariance of asset i returns with market portfolio returns*
	$\sigma^2{}_m$	=	*variance of market portfolio*

Betas that are published by various research firms are typically calculated through a regression analysis that considers the movements in price of an individual stock and movements in the price of the overall market portfolio. The betas produced by this regression analysis are considered "raw" betas. There is empirical evidence that raw betas should be adjusted to account

[120] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180–81 (3rd ed., South Western Cengage Learning 2010).

for beta's natural tendency to revert to an underlying mean.[121] Some analysts use an adjustment method proposed by Blume, which adjusts raw betas toward the market mean of one.[122] While the Blume adjustment method is popular due to its simplicity, it is arguably arbitrary, and some would say not useful at all. According to Dr. Damodaran: "While we agree with the notion that betas move toward 1.0 over time, the [Blume adjustment] strikes us as arbitrary and not particularly useful."[123] The Blume adjustment method is especially arbitrary when applied to industries with consistently low betas, such as the utility industry. For industries with consistently low betas, it is better to employ an adjustment method that adjusts raw betas toward an industry average, rather than the market average. Vasicek proposed such a method, which is preferable to the Blume adjustment method because it allows raw betas to be adjusted toward an industry average, and also accounts for the statistical accuracy of the raw beta calculation.[124] In other words, "[t]he Vasicek adjustment seeks to overcome one weakness of the Blume model by not applying the same adjustment to every security; rather, a security-specific adjustment is made depending on the statistical quality of the regression."[125] The Vasicek beta adjustment equation is expressed as follows:

---

[121] *See* Michael J. Gombola and Douglas R. Kahl, *Time-Series Processes of Utility Betas: Implications for Forecasting Systematic Risk* 84–92 (Financial Management Autumn 1990).

[122] See Marshall Blume, *On the Assessment of Risk*, Vol. 26, No. 1 The Journal of Finance 1 (1971).

[123] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 187 (3rd ed., John Wiley & Sons, Inc. 2012).

[124] Oldrich A. Vasicek, *A Note on Using Cross-Sectional Information in Bayesian Estimation of Security Betas* 1233–1239 (Journal of Finance, Vol. 28, No. 5, December 1973).

[125] 2012 Ibbotson Stocks, Bonds, Bills, and Inflation Valuation Yearbook 77–78 (Morningstar 2012).

Equation 13:
Vasicek Beta Adjustment

$$\beta_{i1} = \frac{\sigma^2_{\beta_{i0}}}{\sigma^2_{\beta 0} + \sigma^2_{\beta_{i0}}}\beta_0 + \frac{\sigma^2_{\beta 0}}{\sigma^2_{\beta 0} + \sigma^2_{\beta_{i0}}}\beta_{i0}$$

where:	β_{i1}	=	*Vasicek adjusted beta for security i*
	β_{i0}	=	*historical beta for security i*
	β_0	=	*beta of industry or proxy group*
	$\sigma^2_{\beta 0}$	=	*variance of betas in the industry or proxy group*
	$\sigma^2_{\beta i0}$	=	*square of standard error of the historical beta for security i*

The Vasicek beta adjustment is an improvement on the Blume model because the Vasicek model does not apply the same adjustment to every security. A higher standard error produced by the regression analysis indicates a lower statistical significance of the beta estimate. Thus, a beta with a high standard error should receive a greater adjustment than a beta with a low standard error. As stated in Ibbotson:

> While the Vasicek formula looks intimidating, it is really quite simple. The adjusted beta for a company is a weighted average of the company's historical beta and the beta of the market, industry, or peer group. How much weight is given to the company and historical beta depends on the statistical significance of the company beta statistic. If a company beta has a low standard error, then it will have a higher weighting in the Vasicek formula. If a company beta has a high standard error, then it will have lower weighting in the Vasicek formula. An advantage of this adjustment methodology is that it does not force an adjustment to the market as a whole. Instead, the adjustment can be toward an industry or some other peer group. <u>This is most useful in looking at companies in industries that on average have high or low betas</u>.[126]

Thus, the Vasicek adjustment method is statistically more accurate and is the preferred method to use when analyzing companies in an industry that has inherently low betas, such as the utility industry. The Vasicek method was also confirmed by Gombola, who conducted a study

[126] 2012 Ibbotson Stocks, Bonds, Bills, and Inflation Valuation Yearbook 78 (Morningstar 2012).

specifically related to utility companies. Gombola concluded that "[t]he strong evidence of auto-regressive tendencies in utility betas lends support to the application of adjustment procedures such as the . . . adjustment procedure presented by Vasicek."[127] Gombola also concluded that adjusting raw betas toward the market mean of 1.0 is too high, and that "[i]nstead, they should be adjusted toward a value that is less than one."[128] In conducting the Vasicek adjustment on betas in previous cases, it reveals that utility betas are even lower than those published by Value Line.[129] Gombola's findings are particular important here, because his study was conducted specifically on utility companies. This evidence indicates that using Value Line's betas in a CAPM cost of equity estimate for a utility company may lead to overestimated results. Regardless, adjusting betas to a level that is higher than Value Line's betas is not reasonable, and it would produce CAPM cost of equity results that are too high.

EDUCATION

University of Oklahoma — Norman, OK
Master of Business Administration — 2014
Areas of Concentration: Finance, Energy

University of Oklahoma College of Law — Norman, OK
Juris Doctor — 2007
Member, American Indian Law Review

University of Oklahoma — Norman, OK
Bachelor of Business Administration — 2003
Major: Finance

PROFESSIONAL DESIGNATIONS

Society of Depreciation Professionals
Certified Depreciation Professional (CDP)

Society of Utility and Regulatory Financial Analysts
Certified Rate of Return Analyst (CRRA)

The Mediation Institute
Certified Civil / Commercial & Employment Mediator

WORK EXPERIENCE

Resolve Utility Consulting PLLC — Oklahoma City, OK
Managing Member — 2016 – Present
Provide expert analysis and testimony specializing in depreciation and cost of capital issues for clients in utility regulatory proceedings.

Oklahoma Corporation Commission — Oklahoma City, OK
Public Utility Regulatory Analyst — 2012 – 2016
Assistant General Counsel — 2011 – 2012
Represented commission staff in utility regulatory proceedings and provided legal opinions to commissioners. Provided expert analysis and testimony in depreciation, cost of capital, incentive compensation, payroll and other issues.

Perebus Counsel, PLLC — Oklahoma City, OK
Managing Member — 2009 – 2011
Represented clients in the areas of family law, estate planning, debt negotiations, business organization, and utility regulation.

Moricoli & Schovanec, P.C. — Oklahoma City, OK
Associate Attorney — 2007 – 2009
Represented clients in the areas of contracts, oil and gas, business structures and estate administration.

TEACHING EXPERIENCE

University of Oklahoma — Norman, OK
Adjunct Instructor – "Conflict Resolution" — 2014 – 2021
Adjunct Instructor – "Ethics in Leadership"

Rose State College — Midwest City, OK
Adjunct Instructor – "Legal Research" — 2013 – 2015
Adjunct Instructor – "Oil & Gas Law"

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Jerome D. Mierzwa. I am a Principal and Vice President of Exeter Associates, Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044. Exeter specializes in providing public utility-related consulting services.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND EXPERIENCE.

A. I graduated from Canisius College in Buffalo, New York in 1981 with a Bachelor of Science Degree in Marketing. In 1985, I received a Master's Degree in Business Administration with a concentration in finance, also from Canisius College. In July 1986, I joined National Fuel Gas Distribution Corporation ("NFGD") as a Management Trainee in the Research and Statistical Services ("RSS") Department. I was promoted to Supervisor RSS in January 1987. While employed with NFGD, I conducted various financial and statistical analyses related to the company's market research activity and state regulatory affairs. In April 1987, as part of a corporate reorganization, I was transferred to National Fuel Gas Supply Corporation's ("NFG Supply's") rate department where my responsibilities included utility cost-of-service and rate design analysis, expense and revenue requirement forecasting, and activities related to federal regulation. I was also responsible for preparing NFG Supply's Federal Energy Regulatory Commission ("FERC") Purchased Gas Adjustment ("PGA") filings and developing interstate pipeline and spot market supply gas price projections. These forecasts were utilized for internal planning purposes as well as in NFGD's 1307(f) proceedings.

In April 1990, I accepted a position as a Utility Analyst with Exeter. In December 1992, I was promoted to Senior Regulatory Analyst. Effective April 1996, I became a Principal of Exeter. Since joining Exeter, I have specialized in evaluating the gas purchasing practices and policies of natural gas utilities, utility class cost-of-service and rate design analyses, sales and rate forecasting, performance-based incentive regulation, revenue requirement analysis, the unbundling of utility services, and evaluation of customer choice natural gas transportation programs.

Q. HAVE YOU PREVIOUSLY TESTIFIED ON UTILITY RATES IN REGULATORY PROCEEDINGS?

A. Yes. I have provided testimony on nearly 400 occasions in proceedings before the FERC and utility regulatory commissions in Arkansas, Delaware, Georgia, Illinois, Indiana, Louisiana, Maine, Massachusetts, Montana, Nevada, New Hampshire, New Jersey, Ohio, Rhode Island, South Carolina, Texas, Utah, and Virginia, as well as before the Pennsylvania Public Utility Commission ("Commission").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. On January 28, 2022, UGI Utilities, Inc. – Gas Division ("UGI Gas" or "Company") filed a request with the Commission to increase its distribution base rates by $82.7 million, or 12.4 percent ("Filing"). The increase proposed for Residential customers is 18.1%. Exeter was retained by the Pennsylvania Office of Consumer Advocate ("OCA") to review the reasonableness of the cost-of-service study and rate design proposals included in UGI Gas' Filing. My testimony addresses UGI Gas' cost-of-service study and rate design proposals.

Q. HAVE YOU PREPARED EXHIBITS TO ACCOMPANY YOUR TESTIMONY?

A. Yes, I have. Schedules JDM-1 through JDM-3 are attached to my direct testimony.

Q. PLEASE SUMMARIZE YOUR FINDINGS AND RECOMMENDATIONS.

A. My findings and recommendations are as follows:

- Typical of a natural gas distribution company ("NGDC"), a significant percentage of UGI Gas' plant, nearly 55 percent, is comprised of transmission and distribution mains (collectively "Mains") investment;

- UGI Gas' class cost of service study misallocates its Mains plant investment and related costs, producing study results that do not reasonably reveal an accurate indication of class allocated cost responsibilities. UGI Gas' study also misallocates several other cost items including manufactured gas remediation costs, forfeited discounts, and reconnection fees.

- The Peak & Average Study presented by the OCA in this proceeding reflects an allocation of Mains investment that is consistent with established Commission precedent and cost-of-service principles and corrects other misallocations of costs in the Company's study;

- The revenue distribution in this proceeding should be guided by the results of the OCA's Peak & Average Study;

- UGI Gas' current monthly Residential customer charge is $14.60. The Company is proposing to increase this charge to $19.95, or by 37 percent. UGI Gas' proposal to increase the Residential customer charge to $19.95 should be rejected, and the charge should be established at no higher than $16.00;

- The balancing service charges to be assessed to non-Choice transportation customers under Rate NNS ("No-Notice Service") and Rate MBS (Monthly Balancing Service) which are based on the interstate pipeline charges assessed to UGI Gas should not be revised as discussed in my testimony;

- UGI Gas' current practice of assessing Rate LFD transportation customers a charge for released interstate pipeline capacity based on the Company's weighted average cost of firm transportation capacity, or demand ("WACOD"), which includes 50 percent of the demand charges associated with peaking services, should be extended to Rate XD customers that accept an assignment of capacity; and

- UGI Gas' proposed Weather Normalization Adjustment ("WNA") mechanism should be rejected. If not rejected, there should be a 3% deadband included like the pilot WNA Rider utilized by Columbia Gas of Pennsylvania.

Q. AS AN INITIAL MATTER, SEVERAL OF THE RATE SCHEDULES INCLUDED IN THE COMPANY'S TARIFF REFER TO THE FORMER NORTH, CENTRAL, AND SOUTH RATE DISTRICTS. PLEASE EXPLAIN HOW THESE RATE DISTRICTS WERE ESTABLISHED.

A. Prior to October 1, 2018, UGI Gas had two wholly-owned subsidiaries that were natural gas distribution companies ("NGDCs") subject to this Commission's jurisdiction. Those subsidiaries were UGI Penn Natural Gas, Inc. ("UGI PNG") and UGI Central Penn Gas ("UGI CPG"). UGI PNG began its operations as a UGI Gas company on August 24, 2006, the effective date of UGI Corporation's purchase of the natural gas distribution assets of the former PG Energy Division of Southern Union Company. UGI CPG, formerly PPL Gas Utilities Corporation, was acquired by UGI Corporation effective October 1, 2008.

On March 8, 2018, UGI Gas filed a Petition with the Commission to merge UGI PNG and UGI CPG into UGI Gas, and to thereafter operate as three rate districts adopting the former tariffs of UGI Gas, UGI PNG, and UGI CPG. A *Joint Petition for Approval of Settlement of All Issues* ("Merger Settlement") was subsequently reached and approved by the Commission in an Order entered on September 20, 2018 at Docket Nos. A-2018-3000381, A-2018-3000382, and A-2018-3000383 ("Merger Order").

The merger was completed on October 1, 2018 and UGI Gas commenced operations under three rate districts. UGI PNG began operating as the North Rate District, UGI CPG began operating as the Central Rate District, and UGI Gas began operating as the South Rate District. Each Rate District maintained separate: (a) base rates; (b) gas supply portfolios; (c) purchased gas cost ("PGC") rates; (d) sets of rules applicable to natural gas suppliers ("NGS") serving Choice and non-Choice transportation customers; and (e) tariffs.

On January 28, 2019, UGI Gas filed for a base rate increase at Docket No. R-2018-3006814 ("2019 Rate Case"). In that proceeding, the Company proposed to consolidate its base rate districts and operate under a single uniform tariff with uniform Residential and Commercial base rates and associated surcharges and riders across its system. The 2019 Rate Case was resolved by a settlement which was approved by the Commission in an Opinion and Order entered October 4, 2019. With a limited number of exceptions, the 2019 Rate Case settlement provided for the adoption of single uniform tariff for all rate districts. Several of those rate district exceptions currently remain in place.

Q. HOW IS THE REMAINDER OF YOUR TESTIMONY ORGANIZED?

A. Including this introductory section, my testimony is divided into seven sections. In the section following the introduction section, I detail the reasons that support a finding that UGI Gas' cost of service study produces an inaccurate indication of the allocated costs of serving the Company's various customer classes. The next section addresses class revenue requirement allocations. The fourth section of my testimony addresses UGI Gas' proposed Residential rate design. The next section of my testimony addresses UGI Gas' proposed charges for service under Rates NNS and MBS. The sixth section of my testimony addresses the charges assessed for interstate pipeline capacity released to Rate XD transportation customers. The final section of my testimony addresses UGI Gas' proposed WNA mechanism.

II. COST ALLOCATION

Q. PLEASE DESCRIBE THE COST OF SERVICE STUDY SUBMITTED BY UGI GAS IN THIS PROCEEDING.

A. UGI Gas' cost of service study is presented by Ms. Constance E. Heppenstall of Gannett Fleming Valuation & Rate Consultants, LLC. In a cost of service study, costs are assigned to the various customer classes based on, to the best ability of the cost practitioner performing the study to determine, the classes that have "caused" the utility to incur such costs. Customers cause the utility to incur costs by demanding the services for which the Company incurs costs.

Ms. Heppenstall claims that UGI Gas' study is based on the Average and Excess Demand Method ("A&E method") of allocating costs to service classifications (customer classes). The A&E method is identified in *Gas Rate Fundamentals* (published in 1987 by the American Gas Association's Rate Committee), in which it is described. The three basic categories of cost responsibility identified in UGI Gas' study are commodity, capacity, and customer costs.

Commodity costs are the costs that tend to vary with the quantity of gas used. In UGI Gas' study, commodity costs include production investment and operation and maintenance costs. Commodity costs were allocated to customer classes on the basis of average daily sales volumes.

Capacity costs are costs associated with meeting the peak demands of the UGI Gas system. Capacity costs include transmission and distribution expenses, and capital costs not associated with the customer cost category. Capacity costs were allocated to the customer classes on a combined basis of average use and excess demand (demand in excess of average use). For presentation purposes, commodity and capacity costs have been combined into a volumetric function in the Company's cost study.

Customer costs are costs associated with serving customers regardless of their usage or demand characteristics. Customer costs include the expenses and capital costs related to meters, services, and expenses related to meter reading and billing. Customer costs were allocated to the customer classes on the bases of the numbers of meters, services, and customers.

Q. PLEASE IDENTIFY THE CUSTOMER CLASSES INCLUDED IN UGI GAS' COST OF SERVICE STUDY.

A. The Company's cost of service study includes the following customer classes:

- Residential (Rates R and RT);
- Non-Residential (Rates N and NT);
- Delivery Service (Rate DS);
- Large Firm Delivery Service (Rate LFD);
- Extended Large Firm Delivery Service (Rate XD); and
- Interruptible Service (Rate IS).

Rates R and N are sales services provided by UGI Gas, and Rates RT and NT are transportation services. Rates DS, LFD, and XD are also transportation services. Historically, both sales and transportation service were available under Rate IS; however, the Company no longer provides sales service under Rate IS.

Q. HOW DID UGI GAS ALLOCATE ITS MAINS PLANT INVESTMENT, ITS SINGLE LARGEST RATE BASE ITEM?

A. The investment in Mains associated with serving Rate XD customers is directly assigned to this class. For all other classes, the remaining Mains investment was allocated using Ms. Heppenstall's version of the A&E method. Under the A&E method described in *Gas Rate Fundamentals*, the average daily demand and the total system coincident peak demand of each customer class are determined. The ratio developed by dividing average demands by total system coincident peak demand is referred to as the system average load factor. Under the A&E method described in *Gas Rates Fundamentals*, a portion of main investment equal to the system average load factor is classified as commodity-related and is allocated to class based on average daily demands. The balance, or the difference between total system coincident peak demand and average daily demands (i.e., 1 minus system average load factor), is considered Excess Demand. Excess Demand is allocated to each class based on each class' relative contribution to the total non-coincident peak demand of all the classes served.[1]

In summary, the A&E method claims to separately identify those costs associated with meeting average demands and allocates those costs to customer class based on average demands. It also separately identifies the costs associated with meeting demands in excess of average demands and allocates those costs to customer classes based on the non-coincident peak demands of each class. The A&E method presented in *Gas Rates Fundamentals* assumes a significant difference between each customer class' demand at the time of system peak (coincident peak demand), and each customer class' non-coincident peak demand. For illustrative purposes, shown below are the coincident and non-coincident peak demands of the customer classes included in the A&E method example presented in *Gas Rates Fundamentals*.

[1] The coincident peak demand of a customer class is that class' demand at the time of system peak. The non-coincident peak demand of a customer class is that class' maximum demand, regardless of whether that maximum demand occurred at the time of system peak.

Table 1. Class Demands Reflected in *Gas Rates Fundamentals* - A&E Method

	Peak Demand (Mcf)	
Class of Service	**Coincident**	**Non-Coincident**
Residential	1,570	3,000
Commercial	714	1,250
Industrial	599	1,100
Interruptible	1,284	3,000
Total	**4,167**	**8,350**

Q. DOES THE A&E METHOD PRODUCE A REASONABLE ALLOCATION OF MAINS COSTS ON THE UGI GAS SYSTEM?

A. No, it does not. In *Gas Rate Fundamentals*, the A&E method is described as an approach that captures the cost responsibility related to both the average annual volumetric use of capacity and to the additional capacity required to meet maximum system loads (peak demand). As explained later in my testimony, the A&E method, while claiming to recognize the importance of average annual volumetric use, actually assigns excessive cost responsibility to peak demands on the UGI Gas system. In addition, on systems such as UGI Gas' with little or no customer class load diversity, the A&E method collapses into a pure peak allocation method. That is, 100 percent of Mains investment would be allocated based on each class' contribution to the total system peak under the A&E method, and no costs would be allocated on average demands.

Q. WHAT DO YOU MEAN BY LOAD DIVERSITY?

A. Load diversity refers to the difference between the total system demand at the time of peak and the sum of the total non-coincident peak demands of each of the customer classes. The greater this difference, the greater the load diversity. Diversity can be captured in the concept of a load diversity ratio. A load diversity ratio can be calculated by dividing non-coincident peak demand by total system demand at the time of peak. Since the system peak demand cannot be greater than the sum of all class non-coincident peaks, the load diversity factor cannot be less than 1.0.

Q. PLEASE DEMONSTRATE HOW THE A&E METHOD COLLAPSES INTO A PURE PEAK METHOD WHEN NO SYSTEM LOAD DIVERSITY EXISTS.

A. There are several ways to demonstrate that the A&E method, while purporting to give significant weight to average demands, in fact, does not. One way is simply to examine the algebraic logic of the A&E formula. In algebraic terms, peak demands can be stated as the sum of average demands and excess demands:

(1) Peak Demand = Average Demand + Excess Demand.

Excess Demand, however, is simply Peak Demand less the Average Demand:

(2) Excess Demand = Peak Demand - Average Demand.

Substituting equation (2) for the Excess Demand term of equation (1) yields:

(3) Peak Demand = Average Demand + Peak Demand - Average Demand.

Equation (3) collapses into a useless identity:

(4) Peak Demand = Peak Demand

The algebra above holds true when there is no system diversity and average demands are weighted by system load factor and peak demands are weighted by one-minus-system load factor, as the *Gas Rate Fundamentals* description requires. Stated differently, the formula used by Ms. Heppenstall is:

$$\text{Allocation} = \text{Average}_{\text{Demand}} + (\text{Peak}_{\text{Demand}} - \text{Average}_{\text{Demand}})$$

The term in the parentheses is Excess Demand, but the whole right-hand side of the equation after the = sign is simply the definition of peak demand. Thus, where, as here, there is no load diversity, the algebra underpinning of the A&E allocation methodology is shown to be identical to the allocation of costs on a pure peak demand basis.

A second way to show that the A&E method appears to give substantial weight to average demands but, in fact, does not, is through an arithmetic example utilizing UGI Gas' customer classes. Table 2 below shows the resulting pure peak allocation factors and the resulting A&E allocation factors reflected in the study filed by UGI Gas with its application when the factors are developed consistent with the *Gas Rate Fundamentals* description.

Table 2. Comparison of Average & Excess and Peak Factors

Rate Class (a)	**Average Demand** (b)	**Peak Demand** (c)	**Excess Demand** (d)	**A&E Factor** (e)	**Peak Factor** (f)
Residential (R)	142,485	649,604	507,119	50.22%	50.22%
Non-Residential (N)	85,232	431,709	346,477	33.37%	33.37%
Large Firm Delivery Service (LFD)	64,765	115,419	50,654	8.92%	8.92%
Delivery Service (DS)	26,335	96,848	70,513	7.49%	7.49%
Total	**318,817**	**1,293,580**	**974,763**	**100.00%**	**100.00%**

Notes:
Load Factor = 24.6 percent.
A&E Factor = (Class Average Demand / Total Average Demand) x Load Factor + (Class Excess Demand / Total Excess Demand) x (1 – Load Factor).

This table shows that when average demands are weighted by the system load factor and when peak demands are based on the maximum system load, the resulting A&E allocation factors are identical to the pure peak allocation factors. As shown above, the A&E method, while appearing to arithmetically consider class average demands in the allocation of demand related costs, effectively provides no weight to average demands.

Q. HOW DO MS. HEPPENSTALL'S A&E ALLOCATION FACTORS DIFFER FROM THOSE REFLECTED IN TABLE 2?

A. Table 3 below shows the pure peak allocation factors calculated in Table 2 and the A&E allocation factors calculated by Ms. Heppenstall for each customer class in the study filed by UGI Gas in its application.

Table 3. Comparison of Company Peak and Average & Excess Allocation Factors

Rate Class	Pure Peak Factor	Company A&E Factor	Difference
Residential (R)	0.5022	0.4685	(0.0337)
Non-Residential (N)	0.3337	0.3058	(0.0279)
Delivery Service (DS)	0.0749	0.0728	(0.0021)
Large Firm Delivery Service (LFD)	0.0892	0.1061	0.0169
Interruptible Delivery Service (IS)	0.0000	0.0468	0.0468

For practical purposes, Mr. Heppenstall's A&E allocation factors and pure peak allocation factors are comparable, the difference being UGI Gas' inclusion of the average demands of interruptible customers. I would further note that in the cost of service study presented by Mr. Heppenstall, the excess demands of interruptible customers are assumed to be zero. As shown in Table 1, this is inconsistent with the application of the A&E method discussed in *Gas Rates Fundamentals*. I address the allocation of peak demand costs to interruptible customers later in my testimony.

Q. WHAT IS THE IMPORTANCE OF THIS FINDING THAT THE AVERAGE AND EXCESS ALLOCATION METHOD DOES NOT GIVE SIGNIFICANT WEIGHT TO ANNUAL OR AVERAGE DEMANDS?

A. Ms. Heppenstall apparently believes, as I strongly believe, that a significant portion of UGI Gas' Mains plant and related expenses are properly allocated on average demands. In her cost of service study, Ms. Heppenstall shows that she intended to weight average demands 42.1 percent (UGI Gas Exhibit D, Schedule F, page 18), but in actuality, Ms. Heppenstall's Mains allocation factors are nearly identical to the results obtained when average demand allocation factors are weighted at zero, and pure peak allocation factors are weighted at 100 percent. I agree with Ms. Heppenstall that a significant portion of Mains costs should be allocated on average demands, and I will further address this subject later in my testimony when I present a class cost of service study that does, in fact, allocate a portion of Mains costs on the basis of average demands.

Q. IS IT APPROPRIATE FOR UGI GAS TO ALLOCATE ITS DISTRIBUTION SYSTEM COSTS ON CLASS PEAK DEMANDS ONLY?

A. No. The peak day demands utilized in UGI Gas' cost of service study are based on demands which would be expected to occur on the coldest day during the last 30 years (design peak day demand). If Ms. Heppenstall's allocation of UGI Gas' Mains costs on the basis of design day peak demands were in accord with the principle of cost-causality then demands for natural gas deliveries only under design peak day weather conditions would have to be the only cause for the existence and customer utilization of UGI Gas' Mains for gas delivery service. Design peak day demands represent the maximum demands that are expected under the most severe weather assumptions used for planning purposes. While a portion of UGI Gas' Mains costs are associated with, and hence, should be allocated on peak demands, it is wrong to claim that most Mains costs are caused by end-use consumer demands on the coldest day which is experienced in UGI Gas' service territory every 30 years or so. Quite simply, if UGI Gas' customers had a demand for gas only on design peak days, there wouldn't be a UGI Gas distribution system. The costs of delivered gas supplies on that one design peak day would be prohibitively high, and the cost of delivering gas through UGI Gas' distribution system on that one day simply could not compete with alternative energy costs.

Q. IF LOCAL GAS DISTRIBUTION SYSTEMS ARE NOT BUILT SOLELY TO MEET THE MOST SEVERE DAY WHICH MAY BE EXPERIENCED, WHY DO NGDCS INCUR DISTRIBUTION MAINS INVESTMENT COSTS?

A. The basic reason, of course, why NGDCs like UGI Gas invest in their distribution systems is to meet the annual demands for gas by end-use customers. This is the reason for the existence of the NGDC in the first place. Without sufficient annual gas usage over which to amortize the annual costs of providing service, there would be no gas distribution system. Additionally, as I will describe later, a small amount of the total cost of distribution service is related to installing a system with enough throughput capacity to meet peak demands as well as annual demands. Because Mains exist and are related to both annual demands and peak demands, both annual and peak demands must be recognized in the allocation of Mains costs, if the allocation is to be in accordance with the principle of cost-causality.

Q. HOW DOES UGI GAS DETERMINE WHETHER TO INVEST IN ITS DISTRIBUTION SYSTEM AND EXTEND ITS MAINS TO CONNECT CUSTOMERS?

A. UGI Gas' decisions to extend its Mains are guided by its Mains Extension Policy.

Q. DOES THE COMPANY'S MAINS EXTENSION POLICY CONSIDER PEAK DAY DEMANDS?

A. No, it does not. With the general exception of Mains extension up to 150 feet for new customers, estimated annual base rate revenues are considered in the Company's Mains extension decision making process. The Company's base rate revenues are primarily collected on a volumetric basis. This policy is set forth in Item 5 of the Rules and Regulations of the Company's current tariff. Therefore, anticipated annual customer usage is the primary factor influencing UGI Gas' Main extension decision-making process. The exception for mains extension of up to 150 feet is a very recent change to the Company's Main extension policy, which was adapted in the Settlement approved in the Company's most recent prior base rate case in Docket No. R-2019-3015162. Therefore, nearly all of UGI Gas Mains extensions to current customers served from its distribution system was decided based on customer annual base rate revenues

Q. WHY IS IT PROPER TO ALLOCATE MAINS INVESTMENT ON THE BASIS OF ANNUAL AS WELL AS PEAK DEMANDS?

A. The allocation of Mains investment costs on the basis of both annual and peak demands is in accord with the principle of allocating costs on the basis of cost causality. Natural gas is of little or no value to an end user if that gas cannot be delivered to the location of the gas burning equipment. UGI Gas' distribution system imparts locational value to the natural gas delivered across that system by allowing for the movement of that gas from its acquisition source to each customer's location. UGI Gas' distribution system exists, and related costs are incurred, to deliver gas to its customers whenever, over the course of each year, its customers demand gas. In other words, UGI Gas' system was built and costs were incurred to deliver gas both at the time of peak system demand and generally throughout the year. Because costs are incurred to deliver gas generally throughout the year, and additional costs are incurred to meet peak demands, UGI Gas' Mains costs must be allocated on the basis of both annual and peak demands if those costs are to be allocated in accord with the principle of cost causality. UGI Gas' failure to properly allocate its Mains costs associated with average demands, and its allocation of its Mains system investment costs on peak demands, violates the principle of cost-causality.

Q. PLEASE EXPLAIN YOUR STATEMENT THAT COSTS ARE INCURRED TO DELIVER BOTH ANNUAL AND PEAK VOLUMES ACROSS UGI GAS' SYSTEM.

A. UGI Gas' firm customers are projected to move approximately 325,000,000 Mcf across UGI Gas' system during the cost of service study annual test period. This equates to an average demand of about 890,300 Mcf each day. UGI Gas' peak demand is about 2,115,000 Mcf. UGI Gas could not meet its customers' annual gas demands with a system capability any smaller than 890,300 Mcf. In other words, if there were no variance in the daily demands on UGI Gas' system, the capacity of that system would have to be designed to accommodate the daily movement of 890,300 Mcf just to meet annual demands. To meet peak demands, UGI Gas' system capacity must be 2.4 times greater than 890,300 Mcf. Thus, some costs are related to the average deliveries each day on the UGI Gas' system, and some costs are related to the movement of gas when demands are above the average demand.

Rational investment decision analysis requires the consideration of annual volumes delivered across a NGDC's system. A gas distribution system would not exist if all demand related costs were the responsibility of peak demands. A viable gas market is dependent upon the ability to amortize delivery costs over a sufficient volume of service so as to result in a unit cost that can be recovered at a price at which gas can be sold and still compete with other energy sources. The association of costs with annual as well as peak demands, and the allocation of costs on the basis of both annual and peak demands for gas are absolutely essential to the economic feasibility of a gas delivery system. To largely ignore annual demands and allocate total Mains costs on peak demands, as UGI Gas' cost of service study does, is inconsistent with the consideration of annual demands which are absolutely essential to the economic justification of the very costs being allocated.

Q. HOW DO THE COSTS OF PROVIDING FOR THE MOVEMENT OF GAS TO MEET PEAK DEMANDS COMPARE TO THE COSTS OF PROVIDING FOR THE MOVEMENT OF GAS TO MEET LESSER DEMANDS?

A. Many of the costs associated with the distribution delivery system are not significantly affected by pipe size. These costs would include planning, surveying, excavating, hauling, pipe bed preparation, unloading and stringing of pipe, municipal inspection, backfill, and pavement and sidewalk replacement. Therefore, total costs do not increase at a one-to-one ratio with increases in maximum demands. The additional costs associated with meeting elevated demands are largely related to the cost of the pipe itself.

Moreover, throughput capability increases not at a one-to-one ratio with the size of the pipe, but at a rate equal to the square of the pipe's diameter. Doubling the diameter of a pipe, for example, increases its capacity by four times the original capacity. Thus, the additional costs of providing additional capacity are lower than the average costs of providing capacity. This means that the costs associated with providing capacity for the movement of average demands are greater on a unit basis than are the costs associated with providing capacity for additional demands. UGI Gas' distribution system exists to deliver annual system requirements. There are costs that are uniquely associated with meeting peak demands, and as such peak demands should bear some cost responsibility.

Q. ARE GAS FLOWS ON THE DESIGN PEAK DAY SO IMPORTANT THAT MOST OF UGI GAS' TOTAL TRANSMISSION AND DISTRIBUTION SYSTEM COSTS ARE DIRECTLY RELATED TO, AND CAUSED BY, PEAK DAY DEMAND REQUIREMENTS?

A. No. Peak demands are not the major cause of UGI Gas' demand related Mains cost, and it is therefore wrong to allocate Mains-related costs on the basis of peak demands, as Ms. Heppenstall has done. Only the marginal costs incurred to meet peak demands above other demands are caused by, or directly related to, peak requirements. The UGI Gas delivery system would not be viable and simply would not exist if the only demand for gas was the demand associated with extreme weather conditions. The UGI Gas delivery system exists because the total annual demand for gas is sufficient to warrant its existence. It is an extreme and erroneous view that the Mains costs associated with UGI Gas' delivery network are caused by peak day demands. Because UGI Gas' system exists to deliver annual gas requirements, but some additional costs are related to the delivery of gas during periods of elevated demand, it is appropriate to allocate its Mains costs on both annual and peak demands. The allocation of distribution system-related costs largely on the basis of peak demands, as UGI Gas has done, misallocates substantial costs.

Q. TO WHAT EXTENT DO THE COSTS OF MEETING PEAK GAS FLOW REQUIREMENTS EXCEED THE COSTS OF MEETING AVERAGE GAS FLOW REQUIREMENTS?

A. UGI Gas' firm peak day demand is about 2.4 times its firm average demand. A pipe's cross-sectional area, and correspondingly its capacity, varies with the square of its radius. Therefore, doubling the size of a pipe's radius (or diameter), increases the capacity of the pipe four-fold. For example, doubling the diameter of a 2-inch pipe to 4 inches increases the capacity by 4 times the capacity of the 2-inch pipe. Increasing the diameter of a 2-inch pipe to 8 inches increases the capacity by 16 times. The costs of meeting increased flow requirements that are caused by, or associated with, elevated demands is answered by the relationship of the change in total capacity costs and to the change in capacity.

I explained earlier that since many capacity costs do not change significantly with the size of the pipe, the increased costs associated with meeting increased capacity requirements is expected to be small. Indeed, it is largely these economies of scale that lead to falling average costs of service and the provision of gas distribution service more economically by one monopoly provider, like UGI Gas, rather than by many competing providers.

Q. DO YOU HAVE UGI GAS-SPECIFIC DATA ILLUSTRATING THAT THE INCREASED COSTS ASSOCIATED WITH MEETING INCREASED DEMANDS ARE SMALL?

A. Yes. Table 4 identifies the average original per-foot to install distribution mains for the pipe sizes with a total investment in excess of $100 million.

Table 4. Cost of Installed Distribution Mains	
Diameter (inches)	**Average Cost (per foot)**
2	$21.52
4	$29.68
6	$37.42
8	$56.21
12	$95.56

As shown on Table 4 the average cost of installing a 2-inch main was $21.52 per foot, while the average cost of installing a 4-inch main was $29.68 per foot. Thus, for a fourfold increase in capacity, UGI Gas' total average costs increased by 34 percent (($29.68 - $21.52) / $21.52). Based on this example, a doubling of the pipe size (and hence a quadrupling of capacity) increased capacity costs by 38 percent, indicating that increased demands above average demands can be accommodated at increased distribution mains costs that are approximately 9 percent (38 percent / fourfold increase in capacity) of the costs of meeting average demands:

2-inch	**4-inch**	**Cost per Foot Increase**	**Percent**	**Capacity Increase**	**Cost of Peak**
(a)	(b)	(c) = (b)-(a)	(d) = (c)/(a)	(e)	(f) ~ (d)/(e)
$21.52	$29.68	$8.16	38 %	4	9 %

Table 4 also indicates that the average cost of installing an 8-inch main was $56.21 per foot. Thus, for a 16-fold increase in capacity, UGI Gas' total average costs increased by more than 161 percent (($56.21 - $21.52) / $21.52) over the cost of a 2-inch pipe. Based on this example, a quadrupling of pipe size (and hence a 16-fold increase in capacity) increased capacity costs by about 161 percent, indicating that increased demands above average demands can be accommodated at an increased distribution mains costs that are approximately 10 percent (161 percent / 16-fold increase in capacity) of the costs of meeting average demands:

		Cost per Foot		Capacity	Cost of
2-inch	**8-inch**	**Increase**	**Percent**	**Increase**	**Peak**
(a)	(b)	(c) = (b)-(a)	(d) = (c)/(a)	(e)	(f) ~ (d)/(e)
$21.52	$56.21	$34.69	161%	16	10 %

Given these two UGI Gas-specific examples above, significantly less than half of distribution mains costs are associated with meeting elevated peak demand requirements and could be allocated based on peak demands, and the remainder is related to customers' annual demands for natural gas and could be allocated on average demands.

Q. PLEASE COMPARE YOUR VIEWS ON HOW MAINS RELATED COSTS SHOULD BE ALLOCATED WITH UGI GAS' VIEW.

A. UGI Gas supports the allocation of its Mains costs 42.1 percent on the basis of average demands and 57.9 percent on the basis of excess demands (UGI Gas Exhibit D, Schedule F, page 18). The A&E method utilized by Ms. Heppenstall results in an allocation of Mains costs essentially based on a pure peak method of allocation. I have shown that there are incremental costs, small though they may be, associated with building a gas delivery system with sufficient capacity to meet peak demands, which are higher than average demands.

Under Ms. Heppenstall's cost allocation procedures essentially no Mains costs are allocated on the basis of customer average demands, which is the basic service that UGI Gas provides and the very reason UGI Gas exists in the first place. UGI Gas' proposed cost allocation method, which in fact does not allocate costs on the basis of the primary service (annual delivery of gas) that UGI Gas provides, and without which the UGI Gas distribution system would not exist, violates the principle of allocating costs in accord with cost-causality. On the other hand, my subsequent recommendation to actually accomplish the allocation of a portion of Mains costs on the basis of average demands that cause those costs, and the allocation of a portion of Mains costs on the basis of the peak demands that cause the peak-related distribution costs, is consistent with Ms. Heppenstall's belief and her attempt to allocate a portion of costs on average demands, and comports with the principle that costs should be allocated to the service units that cause the costs.

Q. HOW CAN MAINS INVESTMENT COSTS BE PROPERLY ALLOCATED?

A. The additional costs of providing capacity in order to meet peak demands, as opposed to lesser demands, should be allocated on a peak demand basis. I demonstrated earlier that no more than approximately 10 percent of UGI Gas' Mains costs are associated with meeting increased demands, and hence, a small portion of Mains costs should be allocated on the basis of peak demands. I conservatively recommend that 50 percent of UGI Gas' Mains system costs, instead of a lesser amount, be allocated on the basis of peak demands. The remaining 50 percent of UGI Gas' Mains costs, being related to, or caused by, UGI Gas' annual gas requirements, should be allocated on annual or average demands. This 50 percent peak/50 percent average (Peak & Average) allocation is a conservative recommendation regarding the recognition of annual, or average, deliveries, as it recommends far less than the approximately 90 percent cost responsibility associated with annual demands.

Q. HAS THIS COMMISSION PREVIOUSLY APPROVED USE OF THE PEAK & AVERAGE METHOD?

A. Yes. In Columbia Gas of Pennsylvania, Inc. ("Columbia") Docket No. R-2020-3018835, the Commission recently endorsed the use of the Peak & Average Method. In that proceeding the Commission found:

> Furthermore, distribution mains exist and are related to both annual demands and peak demands. Both annual and peak demands must be recognized in the allocation of distribution mains cost if the allocation is to be in accord with the principle of cost-causality. It is not reasonable to allocate distribution mains investment based solely on design peak day demands as in Columbia Gas' Customer-Demand ACCOSS. The basic reason Columbia Gas invests in its distribution system is to meet the annual demands for gas by customers. Additionally, a portion of the total cost of distribution service is related to installing a system with enough throughput capacity to meet design peak demands in excess of annual demands. (Order at 217).
>
> For all these reasons, we find that the Peak & Average allocation methodology is the most appropriate allocation methodology to use in this proceeding because it is based on the premise of load-based investment. Accordingly, we shall deny Columbia Gas' Exceptions Nos. 18 and 19, and the OSBA's Exception No. 1, and PSU's Exception No. 1 as they relate to their respective ACCOSS arguments and adopt the OCA's P&A ACCOSS as proffered by OCA Witness Mr. Mierzwa in OCA Statement No. 4, at 5-33, and the OCA's Main Brief, at 150-155. (Order at 218).

A. The Commission has also endorsed the Peak & Average Method in other proceedings. In National Fuel Gas Distribution's ("NFGD") 1994 base rate proceeding, the Commission accepted the Peak & Average methodology, stating, "[t]he Peak and Average method that allocates Mains equally is a sound and reasonable method of cost allocation and should remain intact." <u>Pa. P.U.C. v. National Fuel Gas Distribution Co</u>., 83 Pa. PUC 262 (1994). See also, <u>Pa. P.U.C. v. National Fuel Gas Distribution Co</u>., 73 Pa. PUC 552 (1990); <u>Pa. P.U.C. v. Equitable Gas Co</u>., 73 Pa. PUC 301 (1990); <u>Pa.</u>

P.U.C. v. National Fuel Gas Distribution Corp. 72 Pa. PUC 1 (1989); Pa. P.U.C. v. Peoples Gas Co., 69 Pa. PUC 138 (1989).

Q. HAVE OTHER COMMISSIONS ACCEPTED THE USE OF THE PEAK AND AVERAGE METHOD?

A. Yes. The Indiana Utility Regulatory Commission ("IURC") has strongly endorsed the use of the Peak & Average methodology. See In re Citizens Gas & Coke Utility, IURC Cause No. 42767, (Oct. 19, 2006). The IURC found that the Peak & Average method was the "equitable and realistic" method for allocating distribution Mains costs, and provided the following analysis:

> Based upon the record evidence, this Commission concludes that the OUCC's cost-of-service study is most reflective of cost causation and possesses a high degree of objectivity upon which the Commission may place reliance in establishing the rates and charges in this proceeding.
>
> While we do not doubt that distribution Mains must be constructed with peak demand in mind, distributions Mains do not only serve customers on peak demand days. Therefore, a measure of the costs of distribution Mains must be allocated to customers based on their usage that takes place on non-peak days. For example, a customer that does not take service at all on the peak demand day-and therefore contributes nothing to peak demand requirements of distribution Mains-but receives service through distribution Mains at other times should be responsible for some portion of distribution main costs
>
> The OUCC's approach is much more equitable and realistic. Rather than allocating distribution main costs exclusively based on either peak demand day or average annual consumption, the OUCC used a compromise approach that allocated these costs based on both. Under the OUCC's cost of service study, 80% of distribution main costs are allocated based on average demand. (Public's Ex. No. 6 at 13.) In this way, the OUCC's approach allocates part of distribution main costs to customers who receive service through

> distribution Mains throughout the year but who may not receive much or any service on the peak demand day
>
> For the reasons set forth above, we find the OUCC's cost of service study most accurately reflects the manner in which distribution main costs are actually incurred. See, In Re Citizens Gas & Coke Utility, IURC Cause No. 39066, at 31 (Nov. 1, 1999). We therefore adopt the OUCC's cost of service study to implement the rates increase approved in this Cause.

In re Citizens Gas & Coke Utility, IURC Cause No. 42767, at 74-75 (Oct.19, 2006).

The Illinois Commerce Commission ("ICC") has accepted the Peak & Average method for allocating transmission and distribution costs in the natural gas industry. The ICC explained the reasoning behind utilizing a Peak & Average methodology in their decision as follows:

> Generally, [Central Illinois Public Service Company or "CIPS"] and [Union Electric Company or "UE"] gas transmission and distribution facilities exist because there is a daily need for such facilities. Regardless of when CIPS and UE experience their respective peak and the level of the peak, customers depend on the continued operation of the Ameren gas transmission and distribution systems to meet their daily needs. On the day that the peak does occur. Ameren's own Mr. Carls testifies that CIPS' and UE's respective systems are built to accommodate the system peak without regard to each class' peak. In light of the nature in which the transmission and distribution systems are used and because of the relatively declining cost of increasing capacity, peak demand is not the appropriate emphasis in allocating demand costs…As the Commission concluded in Docket 94-0040, a utility cannot justify its transmission and distribution investment on demands for a single day. The allocation method that properly weights peak demand is the [Average & Peak or "A&P"] method, the same method that the Commission adopted in CIPS' and UE's last gas rate cases. The A&P method properly emphasizes the average component to reflect the role of year-round demands in shaping transmission and distribution investments.

Central Ill. Pub. Service Co. Proposed General Increase in Natural Gas Rates, et al., 2003 Ill. PUC Lexis 824, 231-232 (2003).

Q. IS MS. HEPPENSTALL'S EXCLUSION OF INTERRUPTIBLE CUSTOMERS FROM AN ALLOCATION OF PEAK (EXCESS) DEMAND CAPACITY COSTS REASONABLE?

A. No. Interruptible customers benefit from the use of UGI Gas' peak demand component of Mains when not required to meet the requirements of firm customers on a design day. As indicated previously, UGI Gas' design day has a probability of occurrence once every 30 years. Therefore, it would be reasonable to assign a portion of peak demand capacity costs to interruptible customers. At a minimum, it would be reasonable, to assign peak demand costs to interruptible customers based on average daily usage. This would be consistent with the current practice of the FERC which designs rates for interruptible service based on a 100 percent load factor basis. That is, rates for interruptible service are designed assuming that the peak demand of an interruptible customer is equal to the customer's average daily usage. Under my recommendation, interruptible customers would be assigned peak demand costs based on a demand of 39,847 Dth. On the peak day during the winter of 2020-2021, interruptible customer usage was 156,500 Dth.

Q. DO YOU HAVE OTHER CONCERNS WITH UGI GAS' COST OF SERVICE STUDY?

A. Yes. I also have concerns with the Company's allocation of manufactured gas plant remediation costs, forfeited discounts, and reconnection fees.

Q. PLEASE EXPLAIN YOUR CONCERN WITH THE COMPANY'S ALLOCATION OF MANUFACTURED GAS PLANT REMEDIATION COSTS.

A. These expenses relate to site remediation of former manufactured gas plant sites. These plants were in operation during the period 1851-1955. Manufactured gas plant remediation costs are indicated in Accounts 740-742, 923, and 930 in the Company's cost of service study. The costs in Accounts 740-742 are allocated based in Factor 1 in the Company's cost of service study. Factor 1 allocates costs to customer class based on PGC sales volumes. The costs in Accounts 923 and 930 are allocated based on Factor 12 which allocates costs to customer class based on the overall allocation of operations and maintenance expenses. It is unreasonable to allocate the costs in Accounts 740-742 solely to current sales customers. It is unlikely that any of UGI Gas' current sales customers caused these costs to be incurred. Since these costs cannot be directly assigned to current customers, I recommend that they be allocated consistent with the allocation of the manufactured gas plant remediation costs in Accounts 923 and 930.

Q. PLEASE EXPLAIN YOUR CONCERN WITH THE COMPANY'S ALLOCATION OF FORFEITED DISCOUNTS.

A. Forfeited discounts have been assigned to each class based on Factor 20, which allocates costs based on an analysis of penalty revenues by class. I recommend that forfeited discounts be allocated based on actual forfeited discounts for the most recent 12 month period available (12-months ended January 2022, per Attachment OCA-I-18).

Q. PLEASE EXPLAIN YOUR CONCERN WITH THE COMPANY'S ALLOCATION OF RECONNECTION FEES?

A. The Company's cost of service study includes a separate line item for Reconnection Charges. However, there are no reconnection fees reflected on this line item in the Company's study. In the Company's study, reconnection fees totaling $580,00 have been included the Other Miscellaneous Revenue line item and allocated to customer class based on Factor 16, which provides for an allocation based on the overall allocated cost of service. (1&E-RS-24). I recommend that reconnection fees be removed from the Other Miscellaneous Revenue line item and be included in the Reconnection Charges line item and allocated based on actual reconnection fees for the most recent 12-month period available (12-month ended January 2022, per Attachment OCA-I-42).

Q. ARE THERE OTHER CHANGES THAT SHOULD BE MADE TO THE COMPANY'S COST OF SERVICE STUDY?

A. Yes. In the response to OCA-I-24, the Company indicated that there was an error in the allocation of the costs in Account 874 in its initially filed study. This error should be corrected.

Q. HAVE YOU PREPARED A COST OF SERVICE STUDY FOR THE UGI GAS SYSTEM THAT ADDRESSES YOUR CONCERNS WITH THE COMPANY'S STUDY?

A. Yes. Schedule JDM-1 presents the results of a cost of service study that I have performed for the UGI Gas system under present rates. My study is modeled after the Company's study but reflects the allocation of Mains utilizing the Peak & Average method. By allocating 50 percent of Mains investment costs on the basis of average demand in this study, I, as UGI Gas attempted to, have recognized the critical fact that UGI Gas' existence as a viable business entity relies upon, and thus, its distribution Mains investment costs are caused by, end-user annual gas requirements. I have also recognized that some additional costs are incurred to install Mains that can flow peak demand requirements in excess of average requirements by allocating a 50 percent portion of Mains investment costs on the basis of peak demands. This includes an allocation of peak demand costs to interruptible customers. Allocating 50 percent of UGI Gas' Mains costs based on peak demands results in a conservative recognition of volumetric cost responsibility, for the reasons previously discussed.

For the reasons previously discussed, my study also revised the allocation of manufactured gas plant remediation costs, forfeited discounts, and reconnection fees. These changes to UGI Gas' cost of service study correct significant misallocations of costs of UGI Gas' total cost of service and produce a cost study that is consistent with the principle that costs should be allocated to the service units that cause the costs to be incurred. I have also corrected the error in the allocation of costs in Account 874.

Q. HOW DO THE RESULTS OF YOUR RECOMMENDED PEAK & AVERAGE COST OF SERVICE STUDY COMPARE TO THE RESULTS OF UGI GAS' A&E STUDY?

A. Table 5 below compares the results of UGI Gas' and the OCA's cost of service studies at present rates.

Table 5. Combined Class Cost of Service and Rate of Return Present Rates

	Company			OCA Study		
	Cost of	Rate of Return		Cost of	Rate of Return	
Class	**Service**	**Percent**	**Unitized**	**Service**	**Percent**	**Unitized**
Residential (R)	$471,011,760	4.33%	0.70	$459,777,045	4.70%	0.77
Non-Residential (N)	$146,888,226	7.28%	1.18	$138,643,184	8.15%	1.33
Delivery Service (DS)	$32,808,421	8.61%	1.40	$32,985,303	8.52%	1.39
Large Firm Delivery Service (LFD)	$41,387,804	9.44%	1.54	$50,480,154	6.36%	1.04
Extended Large Firm Delivery Service (XD)	$28,012,485	14.01%	2.28	$30,405,440	12.32%	2.01
Interruptible (IT)	$17,906,171	13.46%	2.19	$25,712.852	7.11%	1.16
Overall	**$738,014,867**	**6.14%**	**1.00**	**$738,003.977**	**6.14%**	**1.00**

III. CLASS REVENUE REQUIREMENTS

Q. PLEASE DESCRIBE HOW UGI GAS IS PROPOSING TO DISTRIBUTE ITS REQUESTED REVENUE INCREASE AMONG ITS CUSTOMER CLASSES IN THIS PROCEEDING.

A. UGI Gas claims it is proposing to move each rate class toward the cost of service indicated by its study. UGI Gas' proposed revenue distribution is presented in Table 6.

Table 6. Company Proposed Revenue Distribution

Class	Present Rates	Proposed Rates	Increase	Percent
Residential (R)	$377,368,713	$445,483,863	$68,115,150	18.1%
Non-Residential (N)	$138,825,398	$153,278,225	$14,452,827	10.4%
Delivery Service (DS)	$33,778,394	$34,432,339	$653,945	1.9%
Large Firm Delivery Service (LFD)	$44,861,623	$46,392,850	$1,531,227	3.4%
Extended Large Firm Delivery Service (XD)	$36,697,802	$35,735,967	($961,835)	-2.6%
Interruptible (IT)	$24,012,357	$22,963,170	($1,049,187)	-4.4%
Total	**$655,544,286**	**$738,286,415**	**$82,742,129**	**12.6%**

Q. WHAT ARE SOME OF THE PRINCIPLES OF A SOUND REVENUE ALLOCATION?

A. A sound revenue allocation should:

- Utilize class cost of service study results as a guide;
- Provide stability and predictability of the rates themselves, with a minimum of unexpected changes seriously adverse to ratepayers or the utility (gradualism);
- Yield the total revenue requirement;
- Provide for simplicity, certainty, convenience of payment, understandability, public acceptability and feasibility of application; and
- Reflect fairness in the apportionment of the total cost of service among the various customer classes.[2]

Q. IS UGI GAS' PROPOSED REVENUE ALLOCATION REASONABLE?

A. No. UGI Gas' proposed revenue distribution is based on its cost of service study, and as explained in the prior section of my testimony, UGI Gas' cost of service study violates the principle of allocating costs on the basis of cost-causality, and does not reasonably reflect the costs of providing service to the various customer classes. The

[2] *Principles of Public Utility Rates*, Second Edition, James C. Bonbright, Albert L. Danielsen, David R. Kamerschen; Public Utility Reports, Inc., 1988, pages 383-384.

OCA's cost of service study, which corrects the flaws in UGI Gas' study, should be used as guide for the allocation of any increase authorized by the Commission in this proceeding

Although UGI Gas' revenue allocation is guided by its cost of service study results, the Company is not proposing to set rates based on the results indicated by its cost of service study, but has proposed a revenue allocation which reflects movement toward the indicated cost of service for each customer class. More specifically, as indicated in Table 4 of the direct testimony of UGI Gas witness Ms. Sherry A. Epler (Statement No. 8), the Company is proposing increases which move each customer class approximately 55 percent toward the system average rate of return. Overall, such an approach could generally be reasonable if that cost of service study provided a reasonable indication of the cost of service for each class. A revenue allocation based on the OCA's cost of service study which moves each customer class toward the system average rate of return based on UGI Gas' proposed revenue requirement is presented in Table 7. Table 8 identifies the movement toward the cost of service for each customer class.

Table 7. OCA Proposed Cost of Service Study Revenue Distribution

Class	**Present Rates**	**Proposed Rates**	**Increase**	**Percent**
Residential (R)	$377,368,713	$437,650,632	$60,281,919	16.0%
Non-Residential (N)	$138,825,398	$151,804,131	$12,978.733	9.3%
Delivery Service (DS)	$33,778,394	$35,906,433	$2,128,040	6.3%
Large Firm Delivery Service (LFD)	$44,861,623	$50,514,565	$5,652,942	12.6%
Extended Large Firm Delivery Service (XD)	$36,697,802	$36,697,801	$0	0.0%
Interruptible (IT)	$24,012,357	$25,712,852	$1,700,496	7.1%
Total	**$655,544,286**	**$738,286,415**	**$82,742,129**	**12.6%**

Table 8. Unitized Rates of Return

Class	Present Rates	Proposed Rates
Residential (R)	0.77	0.88
Non-Residential (N)	1.33	1.18
Delivery Service (DS)	1.39	1.19
Large Firm Delivery Service (LFD)	1.04	1.00
Extended Large Firm Delivery Service (XD)	2.01	1.51
Interruptible (IT)	1.16	1.00
Total	**1.00**	**1.00**

Q. HOW DID YOU DEVELOP YOUR PROPOSED REVENUE ALLOCATION?

A. For Rate XD, the Company has proposed a rate decrease. I don't believe it is appropriate for a customer class to receive a rate decrease when overall, rates are increasing. Therefore, I recommend no change to the percent rates of Rate XD customers. The Company has also proposed a rate decrease for Interruptible Service customers. Under my cost of service study, Interruptible Service customers are contributing revenues that are less than the indicated cost of service. I have proposed a rate increase for Interruptible Service customers which increase their revenue contribution to the indicated cost of service. I have also proposed a rate increase for Rate LFD sufficient to increase their revenues to the cost of service indicated by my cost of service study. For Rate DS, I have proposed an increase equal to over half the system average increase. This moves the rate of return for Rate DS 50% toward the indicated cost of service. I have reduced the increase proposed by the Company for Rate N by an amount equal to the additional revenues I have assigned to Rate DS. This moves the rate of return for Rate N approximately 50% toward the indicated cost of service. Finally, I have proposed an increase for Rate R to account for the remaining revenue deficiency. This moves the rate of return for Rate R 50% toward the indicated cost of service.

Q. IF THE COMMISSION AUTHORIZES AN INCREASE FOR UGI GAS WHICH IS LESS THAN ITS REQUESTED INCREASE, HOW DO YOU RECOMMEND YOUR REVENUE ALLOCATION BE ADJUSTED TO ACCOUNT FOR THE LESS THAN REQUEST INCREASE?

A. As explained in the Direct Testimony of OCA witness Dante Mugrace (OCA Statement 1), the OCA has found that UGI Gas has a revenue sufficiency of $38.7 million, and that no increase in the Company's current rates is warranted. If the Commission determines that an increase in UGI Gas's current rates is appropriate, but that increase is less than the Company's requested increase of $82.7 million, I recommend a proportionate scale-back of my revenue distribution to reflect the increase authorized by the Commission.

IV. RATE DESIGN

Q. PLEASE DESCRIBE UGI GAS' CURRENT AND PROPOSED RESIDENTIAL RATES.

A. Residential customers are currently assessed a monthly customer charge of $14.60 and a volumetric distribution charge of $4.1104 per Mcf. UGI Gas is proposing to increase the monthly Residential customer charge to $19.95, or 37 percent, and increase the volumetric distribution charge to $4.9996 per Mcf, or 22 percent.

Q. SHOULD UGI GAS' PROPOSED INCREASE IN THE RESIDENTIAL CUSTOMER CHARGE BE APPROVED?

A. No, it should not, for several reasons. First, UGI Gas' proposed Residential customer charge proposal is out of line with the Residential customer charges of other NGDCs in the Commonwealth. Second, UGI Gas' proposed Residential customer charge violates the principle of gradualism. Finally, a high fixed monthly customer charge is inconsistent with the Commission's general goal of fostering energy conservation. I would note that OCA witness Mr. Roger Colton is also addressing UGI Gas' proposed Residential customer charge and has found that the proposed charge would have a disproportionately negative impact on low-income and low-use customers.

Q. HOW DOES UGI GAS' PROPOSED RESIDENTIAL CUSTOMER CHARGE COMPARE WITH THE MONTHLY RESIDENTIAL CUSTOMER CHARGES OF OTHER NGDCS IN THE COMMONWEALTH?

A. Table 9 provides a comparison of UGI Gas' Residential customer charge proposal with the customer charges of other Pennsylvania NGDCs. If adopted, UGI Gas' proposed monthly Residential customer charge of $19.95 would be significantly higher than that of any other NGDC in the Commonwealth.

Table 9. Comparison of Residential Customer Charges for Pennsylvania NGDCs

UGI Gas (proposed)	**$19.95**
Columbia Gas of Pennsylvania	$16.75
UGI Gas (current)	$14.60
Peoples Gas	$15.75
Philadelphia Gas Works	$14.90
Peoples Natural Gas	$14.50
PECO Energy Company	$13.63
National Fuel Gas Company	$12.00

Q. PLEASE EXPLAIN YOUR COMMENT THAT UGI GAS' RESIDENTIAL CUSTOMER CHARGE PROPOSAL VIOLATES THE PRINCIPLE OF GRADUALISM.

A. Gradualism is an important factor in developing a sound rate design and refers to stability and predictability in rates with a minimum of unexpected changes seriously adverse to ratepayers, and with a sense of historical continuity. In short, gradualism refers to the avoidance of rate shock. UGI Gas' Residential customer charge proposal represents an increase of 37 percent in that rate. Such a significant increase should be avoided.

Q. WHY IS A HIGH FIXED MONTHLY CUSTOMER CHARGE INCONSISTENT WITH THE COMMISSION'S GENERAL GOAL OF FOSTERING ENERGY CONSERVATION?

A. The more revenue that is collected through the fixed monthly charge, the lower the volumetric charge. The higher the volumetric charge, the greater the incentive is to lower usage. In the UGI Gas' base rate proceeding in Docket No. R-2018-3006814, UGI Gas proposed a consolidated natural gas Energy Efficiency and Conservation

("EE&C") Plan to reduce ratepayers' natural gas bills, and increase comfort levels. The EE&C Plan was approved by the Commission. Higher customer charges may counter the EE&C Plan's effectiveness, as it limits the amount of potential bill savings through the reduction of variable charges, which may in turn, discourage ratepayers from implementing energy conservation measures.

Q. WHAT IS YOUR RECOMMENDATION CONCERNING THE RESIDENTIAL CUSTOMER CHARGE THAT SHOULD BE ESTABLISHED IN THIS PROCEEDING?

A. Based on UGI Gas' requested increase, a Residential customer charge of $16.00 would be reasonable. A Residential customer charge of $16.00 would provide for consistency with the customer charges of other Pennsylvania NGDCs, and better promote the Commission's energy conservation goals. To the extent the Commission authorizes an increase that is less than the Company's requested increase, I recommend that the $16.00 charge be proportionately scaled-back to reflect the reduction in UGI Gas' requested increase. This would provide for a Residential customer charge that is consistent with the charges of other Pennsylvania NGDCs, provide for gradualism, and better promote energy conservation than the charge proposed by the Company.

V. <u>RATES NNS AND MBS</u>

Q. PLEASE DESCRIBE THE SERVICE PROVIDED BY UGI GAS' CURRENT RATE DISTRICTS UNDER RATE NO-NOTICE SERVICE.

A. Transportation customers served under Rate Schedules DS, LFD, XD, and IS are required to use their best efforts to balance deliveries on their behalf with their usage. On a daily basis, transportation customers are allowed imbalance tolerances which if exceeded, will result in the assessment of Daily Balancing Charges. The current daily imbalance tolerance is +/- 4.5 percent. The Daily Balancing Charges assessed for exceeding the daily imbalance tolerance vary depending on whether the imbalance occurs on a Critical Day or Non-Critical Day.[3]

Under Rate NNS, the Company either forwards or banks supplies to customers on a daily basis in amounts necessary to balance the customers' daily deliveries with daily consumption. In essence, Rate NNS increases the daily imbalance tolerance available to transportation customers. Customers elect the amount of NNS they wish to purchase (No-Notice Allowance or "NNA"). Customers may elect an NNA in an amount no less than the daily imbalance tolerance applicable to the maximum firm daily contract requirements ("DFR") to 100 percent of their DFR. Therefore, customers can elect an NNA of between 4.5 percent and 100 percent of their DFR. NNA revenues are currently credited to PGC customers.

Q. WHAT IS UGI GAS PROPOSING WITH RESPECT TO RATE NNS IN THIS PROCEEDING?

A. The current charge for Rate NNS is $0.4880 per Mcf/day of elected NNA. UGI Gas is proposing a charge of $0.1860 per Mcf/day of elected NNA based on what the Company claims is the cost of interstate storage service that can be utilized for balancing excess or shortfall requirements on the Company's system. Revenues received for Rate NNS will continue to be credited to PGC rates.

Q. IS THE PROPOSED CHARGE FOR RATE NNS REASONABLE?

A. The proposed Rate NNS charge is not reasonable. UGI Gas' interstate pipeline storage resources are the primary assets used by the Company to provide service under Rate NNS. The charges incurred by the Company for these storage services include fixed daily deliverability and seasonal capacity demand charges; variable storage

[3] Critical Days are days determined by the Company in its sole desecration, when variations in supply or demand could jeopardize the safety or reliability of service.

transportation-related fuel and commodity charges; and variable storage injection, withdrawal, and fuel charges. As shown on UGI Gas Exhibit SAE-8, the proposed Rate NNS charge is based on a storage trip cost of $0.1330 per Mcf .[4] The storage trip costs only include the variable costs associated with providing service under Rate NNS. PGC and non-Choice transportation customers are currently responsible for all of the demand charges associated with the interstate pipeline storage resources utilized to provide Rate NNS, and under UGI Gas' Rate NNS rate design, receive no contribution for the demand charges associated with the storage resources utilized to provide service under Rate NNS. This is unreasonable. PGC and non-Choice transportation customers should receive a contribution toward the fixed costs associated with the storage assets utilized to provide service under Rate NNS. I recommend that the storage trip cost be adjusted to include the demand charges associated with providing service under Rate NNS on a 100 percent load factor basis. This would be consistent with the current practices of the FERC which design rates for interruptible service based on a 100 percent load factor basis. As shown in Schedule JDM-2, inclusion of storage demand charges on a 100 percent load factor basis in calculating the storage trip cost would increase the storage trip cost to $1.425 per Mcf, and would increase the charge for Rate NNS service to $1.9960 per Mcf/day of elected NNA.

Q. PLEASE DESCRIBE THE SERVICE PROVIDED BY UGI GAS UNDER RATE MBS ("MONTHLY BALANCING SERVICE").

A. In addition to imposing daily imbalance requirements on transportation customers served under Rates DS, LFD, XD, and IS, monthly imbalance requirements are imposed. Usage in excess of deliveries of up to 5 percent (delivery shortfall) on a monthly basis are sold to a transportation customer or cashed-out, at a price reflective

[4] The storage trip cost reflects the variable charges incurred to inject and withdraw 1 Mcf of gas.

of a market price of gas in each former Rate District. Deliveries in excess of usage (excess deliveries) of up to 5 percent in a month are purchased by the Company from transportation customers, or cashed-out, at a price reflective of a market price. For delivery shortfalls in excess of 5 percent, multipliers are applied to the cash-out price which increases the price depending on the magnitude of the delivery shortfall. For excess deliveries in excess of 5 percent, multipliers are applied to the cash-out price which decreases the price depending on the magnitude of the excess delivery. Rate MBS is a monthly balancing service offered by the Company that allows transportation imbalances of up to 10 percent for the month, an increase of 5 percent, to be carried forward in the customer's MBS account for delivery of excess deliveries, or receipt of shortfalls, in subsequent months. Like the charges under Rate NNS, the charges collected under Rate MBS are currently credited to PGC customers.

Q. WHAT IS UGI GAS PROPOSING WITH RESPECT TO RATE MBS IN THIS PROCEEDING?

A. The charges applicable under Rate MBS currently vary by customer class. The current and proposed charges for service under Rate MBS are summarized in Table 10.

Table 10. Summary of Current and Proposed Charges under Rate MBS

Class	Current	Proposed
DS/IS	$0.0277	$0.0437
LFD	$0.0160	$0.0263
XD	$0.0165	$0.0221

Q. ARE THE PROPOSED CHARGES FOR SERVICE UNDER RATE MBS REASONABLE?

A. The proposed Rate MBS charges are not reasonable. As shown on UGI Gas Exhibit SAE-9, the proposed Rate MBS charges are based on an anticipated average transportation customer monthly imbalance of 2.5737 percent. Rate MBS provides for an additional monthly imbalance tolerance of 5 percent.

Q. WHAT DO YOU RECOMMEND WITH RESPECT TO THE DESIGN OF RATES FOR SERVICE UNDER RATE MBS?

A. I recommend that Rate MBS be designed based on a transportation customer monthly imbalance of to 5 percent to reflect the additional 5 percent monthly imbalance tolerance provided under Rate MBS. The charges for service under Rate MBS that reflect my recommended adjustment are developed and presented on Schedule JDM-3.

VI. <u>CAPACITY ASSIGNMENT</u>

Q. DOES THE COMPANY CURRENTLY RESERVE INTERSTATE PIPELINE CAPACITY TO MEET THE REQUIREMENTS OF ITS NON-CHOICE TRANSPORTATION CUSTOMERS?

A. Yes. UGI Gas currently maintains interstate pipeline capacity which it releases, or assigns, to non-Choice Transportation customers (Rates DS, LFD, and XD). For Rate DS customers, or their natural gas supplier, are assigned interstate pipeline firm transportation capacity based on the weighted average cost of the demand associated with the capacity reserved by the Company, inclusive of delivered supply services ("WACOD"). Per the settlement approved in Docket Nos. R-2018-3006814, also included in the WACOD calculation are 100 percent of the demand charges for peaking services. Rate LFD customers are similarly assessed a WACOD for assigned capacity with the exception that, pursuant to the settlement approved in Docket No. R-2018-3006814, the WACOD calculation includes 50 percent of the demand charges associated with peaking services. In the former South Rate District, Rate XD customers are assigned Columbia Gas Transmission ("TCO") firm transportation ("FT") pipeline capacity, and are assessed the same rates UGI Gas is charged for that capacity by TCO. UGI Gas is proposing to maintain its current capacity assignment procedures.

Q. IS UGI GAS' PROPOSAL TO CONTINUE THE EXISTING PROCEDURES FOR THE RELEASE OF CAPACITY TO RATE XD CUSTOMERS IN THE FORMER SOUTH RATE DISTRICT REASONABLE?

A. No. The TCO capacity released to Rate XD customers in the former South District is among the Company's lowest cost capacity resources. Rate XD customers should not have preferential access to the Company's lowest cost capacity resources while PGC and Choice transportation customers are held responsible for the costs associated with the Company's higher cost capacity resources. For example, the current monthly demand charge for TCO FT capacity is $9.59 Dth per day, while UGI Gas' WACOD for FT capacity is $14.90 and the WACOD of peaking capacity is $14.94 Dth (Response to OCA-I-43). Capacity should be released to Rate XD customers based on the WACOD calculation applicable for LFD customers. It is my understanding that Rate XD customers currently maintain service contracts that specifically provide for the assignment of TCO capacity. Therefore, Rate XD customers should continue to be assigned TCO capacity until their current service contracts expire, at which time Rate XD customers should be assessed the same charges for released capacity that are assessed to Rate LFD customers.

VII. WEATHER NORMALIZATION ADJUSTMENT MECHANISM

Q. PLEASE DESCRIBE THE WEATHER NORMALIZATION ADJUSTMENT MECHANISM PROPOSED BY UGI GAS.

A. The WNA proposed by UGI would apply to Residential customers receiving service under Rates R and RT, and Non-Residential customers receiving service under Rates N and NT. Under the WNA, the amount billed to each customer will be adjusted to offset what the Company claims is the usage impact caused by variations between actual heating degree days ("HDD") and normal HDD. Actual usage on each customer's bill will be utilized to calculate the WNA. The WNA would apply during the months of October through May.

Q. PLEASE EXPLAIN HOW THE WNA WILL BE CALCULATED FOR EACH CUSTOMER.

A. Based on three-years of usage for each customer during the period June 21 through September 20, the Company will determine each customer's Baseload Month Commodity usage (BLMC), or non-temperature sensitive usage. For each month during the billing periods for October through May, normal HDD will be divided by actual HDD to determine the percentage variance from normal weather. A customer's Actual Monthly Commodity usage (AMC) will then be reduced by the customer's BLMC to determine the customer's weather sensitive usage, and weather sensitive usage will then be multiplied by the percentage variance from normal weather to determine weather-normalized usage. Each customer will then be billed or credited for the variance between weather-normalized and actual usage through the proposed WNA mechanism.

Q. HAS THE COMMISSION ADOPTED A STATEMENT OF POLICY CONCERNING ALTERNATIVE RATE MAKING MECHANISMS SUCH THE WNA MECHANISM PROPOSED BY UGI GAS?

A. Yes. In an Order entered July 18, 2019, in Docket No. M-2015-2518883, the Commission set forth its Statement of Policy with respect to alternative ratemaking methodologies. In its Statement of Policy, the Commission identified 14 factors it would consider in evaluating an alternative ratemaking mechanism. The Statement of Policy required a utility proposing an alternative ratemaking mechanism to explain how each of these 14 factors impact the rates of each customer class.

Q. DOES THE COMPANY ADDRESS THESE 14 FACTORS IN ITS DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes, the 14 factors are identified in the Direct Testimony of Mr. John D. Taylor (Statement No. 11). Mr. Taylor also addresses how the WNA mechanism allegedly aligns with the Commission's Statement of Policy on alternative ratemaking.

Q. WHAT ARE THE 14 FACTORS FOR CONSIDERATION IDENTIFIED IN THE COMMISSION'S STATEMENT OF POLICY ON ALTERNATIVE RATEMAKING, WHAT IS MR. TAYLOR'S RESPONSE TO THE 14 FACTORS, AND WHAT IS YOUR RESPONSE TO MR. TAYLOR'S CLAIMS?

A. Each rate consideration identified in the Statement of Policy is listed below along with the Company's claimed relevant effect of the WNA Mechanism on each rate consideration. Also identified below is my response to the Company's claim:

Consideration 1	Please explain how the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.
	<u>UGI GAS:</u> UGI Gas' proposed WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. UGI Gas recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to

customers and are composed of fixed operation and maintenance ("O&M") expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of Straight Fixed Variable ("SFV") rate design; where all fixed costs are recovered in a fixed monthly charge, a WNA mechanism will better align distribution revenues with cost causation principles; appropriately accounting for variation in usage due to weather.

<u>OCA</u>: The Company's response does not indicate how the WNA mechanism aligns revenues with cost causation as to fixed and variable costs. In addition, as subsequently discussed in my testimony, the WNA does not appropriately account for variations in customer usage due to weather and is biased in the Company's favor during colder-than-normal billing periods.

Consideration 2 — Please explain how the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

<u>UGI GAS:</u> UGI Gas' WNA proposal has no identifiable impact on capacity utilization.

<u>OCA</u>: I agree with the Company's response.

Consideration 3 — Please explain whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

<u>UGI GAS:</u> Customer specific usage factors corresponding to their individual demand (the BLMC for each customer) is continually updated and reflects the level of demand associated with the customer's anticipated consumption levels.

<u>OCA</u>: The BLMC is a customer's baseload demand and, therefore, only reflects a small portion of a customer's demand during the October through May proposed effective period of the WNA mechanism. Therefore, the Company's response is incomplete.

Consideration 4 — How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

	<u>UGI GAS</u>: Since the proposed WNA mechanism is applying rates which are based upon the specific revenue allocation and rate design approved by the Commission, it will mitigate the potential for interclass or intraclass cost shifting related to weather driven usage variances from those weather assumptions used in establishing rates.
	<u>OCA</u>: The WNA does not result in interclass or intraclass cost shifting.
Consideration 5	Please explain how the WNA limits or eliminates disincentives for the promotion of efficiency programs.
	<u>UGI GAS</u>: The proposed WNA only addresses variations due to weather. The WNA does not negatively impact energy efficiency programs. Moreover, UGI Gas maintains a robust Energy Efficiency & Conservation ("EE&C") program, which it has voluntarily implemented for its customers and will use to continue promoting energy efficiency measures.
	<u>OCA</u>: The WNA does not limit or eliminate incentives for the promotion of efficiency programs.
Consideration 6	Please explain how the WNA impacts customer incentives to employ efficiency measures and distributed energy resources.
	<u>UGI GAS</u>: Customers will continue to have an incentive to employ energy efficiency measures and distributed energy resources because a reduction in usage still reduces their overall bill and the portion of their bill that is subject to the WNA mechanism.
	<u>OCA</u>: As discussed by OCA witness Mr. Roger Colton, the WNA will disproportionately and adversely affect low-income customers.
Consideration 7	Please explain how the WNA impacts low-income customers and support consumer assistance programs.
	<u>UGI GAS</u>: Under the WNA mechanism, certain customers enrolled in the Customer Assistance Program ("CAP") who pay an "average bill" amount will see lower bill variability for distribution costs during colder than average periods, while CAP customers who are paying on a percent-of-income basis will see little to no impact.
	<u>OCA</u>: As discussed by OCA witness Mr. Roger Colton, the WNA will disproportionately and adversely affect low-

income customers. In addition, as subsequently explained, the WNA will not appropriately adjust a customer's bill to reflect normalized usage during colder-than-normal billing periods.

Consideration 8	Please explain how the WNA impacts customer rate stability principles.
	UGI GAS: The WNA mechanism will provide customers more stable annual bills and directly mitigate volatility in their monthly costs.
	OCA: As discussed by OCA witness Mr. Roger Colton, budget billing would better protect Residential customers from bill volatility due to weather volatility. In addition, as subsequently explained, the WNA will not appropriately adjust a customer's bill to reflect normalized usage during colder-than-normal billing periods.
Consideration 9	Please explain how weather impacts utility revenue under the WNA.
	UGI GAS: The proposed WNA adjusts a customer's bill due to variations from normal weather and is employed for usage during the heating season months (October – May). It only applies to certain of the Company's customer classes (Rates R, RT, N and NT) and it does not ensure the utility will recover 100% of its authorized distribution revenues, but it does reduce the amount of weather-related variation in both customer bills and associated utility distribution revenues.
	OCA: I generally agree with the Company's response. However, as subsequently explained, the WNA will not appropriately adjust a customer's bill to reflect normalized usage during colder-than-normal billing periods.
Consideration 10	Please explain how the WNA impacts the frequency of rate case filings and affects regulatory lag.
	UGI GAS: The WNA is not anticipated to impact the frequency of rate cases or have an impact on regulatory lag.
	OCA: A reduction to the frequency of rate case filings would be a benefit of an alternative ratemaking mechanism. The WNA does not provide this benefit.

Consideration 11	Please explain if the WNA interacts with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).
	UGI GAS: The Company's proposed WNA (appearing as Rider C – WNA in the Tariff) only applies to distribution related charges that are recovering the base distribution revenue requirement from applicable WNA customer classes for the heating season of October through May. Specifically, the billing for the Company's Riders, including Rider F – USP, Rider G – EE&C, and Rider B – PGC, will continue to be based on actual monthly usage.
	OCA: The WNA will not interact with other revenue sources.
Consideration 12	Please explain whether the WNA includes appropriate consumer protections.
	UGI GAS: The WNA mechanism will result in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates. UGI Gas will not recover additional distribution revenues due to colder than average temperatures that result in higher-than-normal usage from customers.
	OCA: The WNA does not include appropriate consumer protections and should be rejected for the reasons subsequently discussed in my testimony.
Consideration 13	Please explain whether the WNA is understandable to customers.
	UGI GAS: UGI Gas' WNA is not a new concept to the regulated utility industry. Similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. UGI Gas has proposed a WNA tariff that provides detailed information to the customer of how the mechanism works based on successful working versions found in the tariffs of other Pennsylvania natural gas distribution companies that have implemented a WNA tariff. Further, educational materials and customer service training will be developed upon approval of the mechanism, as well

as appropriate notice being provided to customers related to the WNA being approved pursuant to the Commission's alternative ratemaking notice requirements

<u>OCA</u>: UGI has not provided any evidence to indicate that the WNA will be understandable to customers.

Consideration 14 Please explain how the WNA will support improvements in utility reliability.

<u>UGI GAS</u>: UGI Gas' cost of service is inclusive of investments and costs to continue to enhance the safety and reliability of its system. The proposed WNA will help minimize the volatility of the recovery of these costs.

<u>OCA</u>: The WNA does not provide an incentive to increase the safety and reliability of the UGI Gas System.

Q. SHOULD THE WNA MECHANISM BE APPROVED BY THE COMMISSION?

A. No. The WNA mechanism should not be approved for the following reasons:

- The proposed WNA mechanism embodies a take-or-pay pricing policy.
- The proposed WNA mechanism inappropriately adjusts rates without considering other changes in total revenues and costs.
- The proposed WNA mechanism is biased to the Company's benefit during colder-than normal billing periods.
- UGI Gas has not demonstrated that its current system of rates and charges result in inadequate revenue stability, and does not decrease the frequency of rate case filings by UGI Gas.

Based on these concerns, the WNA mechanism should not be approved.

Q. DOES THE PROPOSED WNA MECHANISM EMBODY A TAKE-OR-PAY PRICING POLICY?

A. Yes. In the marketplace, consumers pay for the goods and services they receive. Under the proposed WNA mechanism, consumers would pay for distribution service they do and do not receive. No matter how much distribution service is actually purchased by

UGI Gas' Residential customers, ultimately, under the proposed WNA mechanism, those customers would pay for a normalized level of service whether they take delivery or not. This conversion of a volumetric rate into rates that yield a given revenue, regardless of the amount of service purchased, converts the Company's volumetric rate into a take-or-pay billing feature.

Q. PLEASE EXPLAIN HOW WNA COULD RESULT IN INAPPROPRIATE REVENUE ADJUSTMENTS.

A. The proposed WNA mechanism operates to adjust revenues, automatically, between rate cases, simply as a function of Rate R, RT, N, and NT distribution revenues being different from normalized revenues due to weather. There is no review of UGI Gas' costs. For example, an NGDC's O&M expenses would tend to increase as demand increase under colder-than-normal weather and tend to decline as demand decreases under warmer-than-normal weather. Under the WNA proposed by UGI Gas, and as explained by the Company, revenues billed to those rate classes subject to the WNA would be increased during warmer-than-normal billing periods from those that would be billed based on actual weather. Those billing increases would not be adjusted to reflect any decline in O&M expenses that may have occurred resulting in inappropriate revenue adjustments.

Q. YOU INDICATED THAT THE WNA IS BIASED TO THE COMPANY'S BENEFIT DURING COLDER-THAN-NORMAL BILLING PERIODS. PLEASE EXPLAIN THIS BIAS.

A. Under the WNA, actual usage is adjusted to reflect usage under normal temperatures as measured by HDD. The usage of customers per HDD increases as HDD increase. Therefore, during colder-than-normal billing periods, customer usage per HDD is higher than customer usage per HDD would be during a billing period with normal temperatures. Under the WNA, normalized customer usage is determined based on actual usage per HDD during the billing month. As a result, during a colder than normal billing period, normalized usage under the WNA is higher than it would be if normal weather were experienced, and the credit to a customer under the WNA for additional usage would be lower, which benefits the Company. Hypothetically, for example, let's say normal HDD for a month are 800 and under normal weather a customer is would use 18 Mcf, of which 2 Mcf is baseload usage (BLMC). For this customer, heat sensitive usage is .02 Mcf per HDD ((18 Mcf actual usage -2 Mcf BLMC usage)/800 HDD). Total normalized usage for this customer would be 18 Mcf and heat sensitive usage would be 16 Mcf. But, if a month is colder than normal, say for example, 1,000 HDD, usage per HDD goes up as it gets colder. Let's say that usage per HDD for this customer goes to .025 Mcf. In a month with 1,000 HDD, usage for this customer would be 27 Mcf ((.025 Mcf usage per HDD x 1,000 HDD) + 2 Mcf BLMC). That is, heat sensitive usage would be 25 Mcf and baseload usage would be 2 Mcf. Under the WNA, the 25 Mcf in heat sensitive usage would be multiplied by 80% (800 normal HDD/1000 actual HDD) which would be added to the BLMC indicating WNA adjusted usage of 22 Mcf ((80% x 25 Mcf) + 2Mcf BLMC). This is higher than normalized usage of 18 Mcf and thus results in a benefit to the Company and not the customer.

Q. HAS UGI GAS DEMONSTRATED THAT ITS CURRENT SYSTEM OF RATES AND CHARGES DO NOT PROVIDE FOR ADEQUATE REVENUE STABILITY?

A. No. UGI Gas' current system of rates and charges, which include fixed monthly customer charges, a Purchased Gas Adjustment mechanism, and a Distribution System Improvement Charge, provide for revenue stability, and UGI Gas has not demonstrated that this stability is inadequate.

Q. ARE THERE OTHER REASONS THAT THE WNA SHOULD NOT BE APPROVED AT THIS TIME?

A. Yes. The COVID-19 pandemic is another reason WNA mechanism should not be approved. There is a great deal of uncertainty concerning the impact of the pandemic on customer usage and unintended consequences could result. For example, under the WNA, the BLMC is based on a three-year average. The BLMC of Residential customers could have changed significantly as a result of the pandemic and customers could be assessed charges for these changes in usage. Alternative ratemaking mechanisms such as the WNA mechanism need to be accompanied by sufficient consumer protections.

Q. IF THE COMMISSION DISAGREES WITH YOUR RECOMMENDATION AND APPROVES THE WNA MECHANISM PROPOSED BY THE COMPANY, SHOULD THE MECHANISM BE MODIFIED?

A. Yes. Consistent with the WNA pilot of Columbia Gas of Pennsylvania, Inc., the Company's proposed WNA should be modified to include a 3 percent deadband so that the WNA is not applied if weather is less than 3 percent warmer or colder than normal. It is unreasonable to assume that weather and natural gas usage is abnormal if a particular day is only a few HDDs warmer or colder than normal. If a deadband is not adopted, the WNA would be applied if actual weather was only one HDD colder or warmer than normal. An HDD is determined by taking the average of daily high and low temperatures, and daily usage can vary due to factors other than temperature such as windspeed. In addition, HDD is not a precise measurement of the average daily temperature which should be utilized to determine temperature sensitive usage. There can be significant differences in the average daily temperature as measured by HDD, and a daily average temperature which is determined, for example, by averaging the temperatures observed each hour of the day. UGI Gas is proposing to separately calculate the WNA based on temperatures in each Delivery Region. For the South Delivery Region which is, the Company's largest Delivery Region, UGI Gas is proposing to average temperatures reported for five different weather stations to determine the WNA. Temperatures within a Delivery Region, and temperatures at the five different weather stations for the South Delivery Region can vary. Therefore, a 3 percent deadband should be adopted to help ensure that the assessment of the WNA is limited to changes in usage attributable to variations in temperature.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does at this time.

Schedule JDM-2

UGI Utilities, Inc. - Gas Division
No Notice Service (NNS) Rate Calculation

Notes:

1/ Storage Trip Cost ($/mcf) 1.4253

2/ Weekend Load Reduction Factor (%) 15.0%

WELF = Weekend Load Reduction Factor
WD = Weekday Day Use
WE = Weekend Day Use
AVERAGE = Average Daily Use

3/ EQ #1 **WD** **= (1/(1 - WELF)) * WE**
= (1/(1 - 0.15)) * WE
WD = 1.18 * WE

EQ #2 **AVERAGE = [(5 * WD) + (2 * WE)] / 7** — substitute EQ #1 into EQ #2 to remove variable WD
Step 1 AVERAGE = [5 * ((1/ (1 - WELF)) * WE)) + (2 * WE)] / 7
= [5 * (1/(1 - WELF)) + 2] * WE] / 7
= [5 * (1/(1 - 0.15)) + 2] * WE] / 7
7.90 * WE / 7
Step 2 WE = 0.89 * AVERAGE — solve Step 1 equation for WE

4/ EQ #3 **Wkly Imbalance = 5 x (WD - AVERAGE) + 2 (AVERAGE - WE)**
= (5 * WD) - (3 * AVERAGE) - (2 * WE) — substitute EQ #1 into EQ #3 to remove variable WD
= (5 * (1/(1-WELF) * WE) - (3 * AVERAGE) - (2 * WE)
= [(5 * (1/(1-WELF)) - 2) * WE] - (3 * AVERAGE)
= [(5 * (1/(1-0.15)) - 2) * WE] - (3 * AVERAGE)
3.90 * WE - (3 * AVERAGE) — substitute EQ# 2 step 2 into EQ #3 to remove variable WE
0.47 * AVERAGE

EQ #4 **Unit Cost Calculation ($/mcf)**
= [(Wkly Imbalance) / (7 * AVERAGE)] * STORAGE TRIP COST
= [(0.47 x Average) / (7 x AVERAGE)] x 0.133 — substitute EQ #3 for Wkly Imbalance
0.07 x 1.4253
0.0998

EQ #5 **Per Unit of Demand Calculation ($/mcf per month)**
= Unit Cost Demand x 20 days
= 0.0998 x 20
1.9960

Notes:

1/ Weighted average of storage trip costs based on SCQ of storages
2/ Aggregate load reduction for all non-Choice transportation customers electing NNS
Weekend Load Reduction factor percentage based on historical data for the period Nov 2020 through Oct 2021
3/ Assumes WD use approximately equal for all weekdays (work week)
Assumes WE use approximately equal for all weekend days
4/ Assumes levelized deliveries on all days

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
v.	:	Docket No. R-2021-3030218
UGI Utilities – Gas Division	:	

Direct Testimony of
Roger D. Colton

On Behalf of:
Office of Consumer Advocate
Statement 4

April 20, 2022

Table of Contents

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger Colton. My address is 34 Warwick Road, Belmont, MA.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT POSITION?

A. I am a principal in the firm of Fisher Sheehan & Colton, Public Finance and General Economics of Belmont, Massachusetts. In that capacity, I provide technical assistance to a variety of federal and state agencies, consumer organizations and public utilities on rate and customer service issues involving water/sewer, natural gas and electric utilities.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of the Office of Consumer Advocate.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL BACKGROUND.

A. I work primarily on low-income utility issues. This involves regulatory work on rate and customer service issues, as well as research into low-income usage, payment patterns, and affordability programs. At present, I am working on various projects in the states of New Hampshire, Maryland, Pennsylvania, Ohio, Michigan, Tennessee, Kansas, Wisconsin and Washington. My typical clients include state agencies (e.g., Pennsylvania Office of Consumer Advocate, Maryland Office of People's Counsel, Illinois Office of Attorney General), federal agencies (e.g., the U.S. Department of Health and Human Services), community-based organizations (e.g., National Housing Trust, Natural Resources Defense Council, Advocacy Centre Tenants Ontario), and private utilities (e.g., Toledo Water, Entergy Services, Xcel Energy d/b/a Public Service of Colorado). In addition to state-specific and utility-specific work, I engage in national work throughout the United States. For example, in 2011, I worked with the U.S. Department of Health and Human Services (the federal LIHEAP office) to advance the review and utilization of the Home Energy Insecurity Scale as an outcomes measurement tool for the federal Low-Income Home Energy Assistance Program ("LIHEAP"). In 2007, I was part of a team that performed a multi-sponsor public/private national study of low-income energy assistance programs. In 2020, I completed a study of water affordability in twelve U.S. cities for the London-based newspaper, The Guardian. In 2021, I prepared a Water Affordability Plan for the City of Toledo (OH). A brief description of my professional background is provided in Appendix A.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND.

A. After receiving my undergraduate degree in 1975 (Iowa State University), I obtained further training in both law and economics. I received my law degree in 1981 (University of Florida). I received my Master's Degree (regulatory economics) from the MacGregor School in 1993.

Q. HAVE YOU EVER PUBLISHED ON PUBLIC UTILITY REGULATORY ISSUES?

A. Yes. I have published three books and more than 80 articles in scholarly and trade journals, primarily on low-income utility and housing issues. I have published an equal number of technical reports for various clients on energy, water, telecommunications and other associated low-income utility issues. My most recent publication is a chapter in the book "Energy Justice: US and International Perspectives," published by Edward Elgar

Publishing in London. My chapter was titled "The equities of efficiency: distributing usage reduction dollars." It offers an objective definition of "equity" based on legal and economic doctrine.

Q. HAVE YOU EVER TESTIFIED BEFORE THIS OR OTHER UTILITY COMMISSIONS?

A. Yes. I have testified before the Pennsylvania Public Utility Commission ("PUC" or "Commission") on numerous occasions regarding utility issues affecting low-income customers and customer service. I have also testified in regulatory proceedings in more than 300 proceedings in 43 states and various Canadian provinces on a wide range of utility issues. A list of the states and provinces in which I have testified is listed in Appendix A.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR DIRECT TESTIMONY.

A. The purpose of my Direct Testimony is as follows.

- First, I examine the disproportionate harms that the proposed UGI Gas residential customer charge will impose on low-income customers of UGI Gas;
- Second, I examine the impact of the Company's proposed Weather Normalization Adjustment (WNA) on low-income customers;
- Third, I examine the appropriate steps for UGI Gas to take when it converts low-income customers from a non-gas fuel to natural gas service;
- Fourth, I examine the performance of UGI Gas in achieving specified universal service outcomes. I recommend that the Commission, rather than

reviewing the universal activities of UGI Gas (what the Company says it *does*), should instead review what UGI Gas *accomplishes*;

- Fifth, I examine the need to continue certain COVID-19 protections until at least UGI Gas files its next base rate case;
- Sixth, I examine the need to invest additional dollars in low-income energy efficiency in order to stabilize low-income bills in light of the harms imposed on low-income customers as a result of proposals UGI Gas advanced in this rate case;
- Seventh, I discuss the reason why I recommend deferring consideration of the proper inter-class allocation of universal service costs to a future rate case; and
- Finally, I examine the reasonableness of UGI Gas' request for an adder to its return on equity based on the Company's claims of exemplary management.

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.

A. Based on the data and discussion presented below, I recommend as follows:

1. I recommend that the residential customer charge proposed by OCA witness Jerome Mierzwa be approved.

2. I recommend that the proposals of OCA witness Jerome Mierzwa regarding the Company's proposed WNA be adopted.

3. I recommend that UGI Gas be directed to screen customers who the Company assists in their conversion to natural gas in order to identify those converted customers as Confirmed Low-Income customers and to enroll those customers in CAP where appropriate.

    a. I further recommend that the Company add a new incremental component to its Low-Income Usage Reduction Program (LIURP) through which it will provide LIURP investments to Confirmed Low-Income customers as part of the process of converting those customers to natural gas

4. I recommend the Commission establish three measurable Outcome Objectives that UGI Gas should seek to accomplish with respect to CAP:

    a. **<u>Outcome Objective #1</u>**: UGI Gas should achieve a Confirmed Low-Income identification rate, as a percentage of estimated low-income customers, no less than the Confirmed Low-Income identification rate of Pennsylvania natural gas utilities as a whole (excluding the UGI Gas companies).

    b. **<u>Outcome Objective #2</u>**: UGI Gas should achieve a CAP participation rate, as a percentage of Confirmed Low-Income customers, no less than the CAP participation rate of Pennsylvania natural gas utilities as a whole (excluding the UGI Gas companies).

    c. **<u>Outcome Objective #3</u>**: UGI Gas should achieve a CAP default rate as a percentage of participants in the lowest poverty level range that is no less than the CAP default rate in that poverty level range for Pennsylvania gas utilities as a whole.

5. I recommend further that the Commission should determine that it will use these outcome performance metrics to review the adequacy of UGI Gas performance in future rate cases.

6. I recommend that the COVID responses that UGI had previously agreed to extend through the end of 2021 be continued until UGI Gas' next base rate case. In particular, I recommend:

    a. UGI commit to continuing to offer the extended payment plans as identified in the April 2021 Order in Docket M-2020-0319244;

    b. UGI reinstate its waiver of residential deposits for existing customers. The COVID-related payment difficulties of residential customers are not indicators of long-term payment risks. And the imposition of a cash security deposit remains an impediment to customers retiring the arrears that they have already incurred;

c. UGI reinstate its expanded hardship grant income eligibility, along with its expanded maximum hardship grant; and

d. UGI make an additional $1.0 million non-rate recoverable contribution to its hardship fund on an additional one-time basis.

7. I recommend that, to offset the harms imposed on Confirmed Low-Income customers by the relief UGI Gas seeks in this rate case, UGI Gas expand its LIURP spending by $1.425 million a year, sufficient to serve 231 additional Confirmed Low-Income customers per year. These additional LIURP jobs are in addition to the LIURP jobs that I recommend above be directed toward low-income households at the time they are converted from other fuels to natural gas.

8. I recommend that the consideration of the appropriate inter-class allocation of universal service costs be deferred to a future rate case to be considered once the economic crisis associated with the COVID-19 health pandemic has been reasonably resolved.

9. I recommend that the recommendation of OCA witness David Garrett should be adopted with respect to the UGI Gas request for an additional return on equity for exemplary management performance.

PART 1. The Impact of the Proposed UGI Gas Customer Charge on Low-Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine how the proposed increase in the UGI Gas residential customer charge disproportionately and adversely affects low-income customers. UGI Gas proposes to increase its residential customer charge by 37%, from $14.60 per month to $19.95 per month. (UGI St. 8, at 20). As I will explain further in my testimony, this proposed increase would impose disproportionate harms on low-income customers.

Q. ARE LOW-INCOME CUSTOMERS PROTECTED AGAINST INCREASES IN THE CUSTOMER CHARGE BY THE UGI GAS CUSTOMER ASSISTANCE PROGRAM (CAP)?

A. No. UGI Gas has confirmed the low-income status of only a fraction of its low-income customers. In turn, the Company has enrolled only a fraction of its Confirmed Low-Income customers into CAP. In the past two years (2020, 2021), UGI Gas has confirmed the low-income status of only half of its estimated number of low-income customers. Most recently, UGI Gas had nearly 75,000 customers that were estimated to be low-income, but not identified as low-income on its system. In 2018, UGI Gas had confirmed the low-income status of only 40% of its low-income customers, leaving nearly 94,000 low-income customers unidentified as low-income. (OCA-II-17). In turn, UGI Gas has enrolled only a fraction of its Confirmed Low-Income customers into CAP. In 2021, fewer than 30% of the Company's Confirmed Low-Income customers were enrolled in CAP. Putting those two figures together, I find that in 2021 only 14% of the estimated low-income customer base of UGI Gas is enrolled in the Company's CAP.

Table 1. Estimated Low-Income Customers, Confirmed Low-Income Customers, CAP Participants (2018 – 2020) (OCA-II-15, OCA-II-17)

	Estimated LI	Confirmed LI	Pct Confirmed of Estimated LI	CAP Participants (December)	Pct CLI Participating in CAP	% Estimated LI Participating in CAP
2018	159,649	66,094	41%	18,282	28%	11%
2019	153,971	74,493	48%	23,451	31%	15%
2020	151,918	77,553	51%	24,023	31%	16%
2021	153,437	78,450	51%	22.025	28%	14%

This data provided in discovery is consistent with UGI Gas data reported in the Bureau of Consumer Services 2020 annual Report on Universal Service Programs and Collections

Performance.[1] BCS reports the same 2020 data for estimated low-income customers (151,918) and Confirmed Low-Income customers (77,553); it reports virtually the same number of CAP participants (24,236).

From this, we can deduce that at least 86% of UGI's estimated low-income customers are not paying a percentage of income-based CAP bill and, thus, are not insulated from the effects of the proposed increase in UGI's fixed monthly customer charge.

Q. DOES PARTICIPATION IN CAP, UNTO ITSELF, PROTECT LOW-INCOME CUSTOMERS FROM THE HARMS OF AN INCREASED CUSTOMER CHARGE?

A. No. CAP only protects low-income customers from the harms of an increased customer charge if they participate in the percentage of income-based CAP program offered by the Company. If a low-income customer instead participates in the CAP program where CAP bills are based on average bills, any increase in rates, particularly any increase in rates through the unavoidable fixed customer charge, will increase the average bill that must be paid by these CAP participants.

Not all CAP customers participate in the percentage of income part of the UGI Gas CAP. A sizable percentage of CAP participants instead participate in CAP under the average bill structure. According to UGI Gas, of the 20,601 CAP participants as of March 6, 2022, more than half (51%) (10,547) participate in the average bill CAP program.

[1] Available at https://www.puc.pa.gov/media/1709/2020-universal-service-report-final.pdf (last accessed April 16, 2022).

(CAUSE-PA-I-2). Customers participate in the average CAP program component if their budget billing amount is less than the percentage-of-income based payment.

Q. PLEASE SUMMARIZE THE EXTENT TO WHICH CAP PROTECTS LOW-INCOME CUSTOMERS.

A. UGI Gas has confirmed the low-income status of only half (51%) of its estimated number of low-income customers. UGI Gas has then enrolled only 28% of those Confirmed Low-Income customers into CAP (28% x 51% = 14%). Of those 14% of low-income customers who are enrolled in CAP, more than half (51%) are enrolled in a CAP program structure that bases the participant bills on an average bill rather than on a percentage of income. I conclude that a very small percentage of low-income customers (14% x 51% = 7%) are protected against the proposed increase in the customer charge by CAP participation.

Q. CAN YOU PLACE THE PROPOSED FIXED MONTHLY CUSTOMER CHARGE INTO SOME CONTEXT FOR LOW-INCOME CUSTOMERS OF UGI GAS?

A. Yes. First, as I explain below, the fixed customer charge is paid no matter how much or how little gas a customer uses and, in this regard, the costs are unavoidable. No amount of conservation by the customer will impact those costs. Second, as I document above, UGI Gas has an estimated 153,437 low-income customers on its system. (OCA-II-17). UGI Gas proposes to increase its unavoidable fixed customer charge by $5.35/month (from $14.60 to $19.95), or $64.20/year ($5.35 x 12 = $64.20). The total increase in unavoidable fixed charges to the UGI Gas low-income population is thus $9,850,655 ($64.20 x 153,437). In comparison, the low-income customers of UGI Gas received a total of $10,325,947 in LIHEAP grants in 2021 ($8,992,894 in Cash grants + $1,333,053 in Crisis grants). (OCA-II-2). The increased customer charge standing alone, in other words, will remove 95.4% of the total value of federal fuel assistance being delivered to low-income customers.

Q. WHY ISN'T THIS PROBLEM ASSOCIATED WITH THE RATE INCREASE AS A WHOLE RATHER THAN ASSOCIATED WITH THE INCREASED CUSTOMER CHARGE IN PARTICULAR?

A. In part, the rate increase as a whole does pose problems to low-income customers. In much larger part, however, the problem is associated with the increased fixed monthly customer charge. The increased customer charge is an unavoidable fixed monthly fee. Even if low-income customers could reduce their usage, they would not be able to avoid any part of the proposed increase in the fixed monthly customer charge. UGI Gas witness John Taylor concedes that the Company's proposed rate structure will reduce the revenue collected through the UGI Gas volumetric charge to only 64% of total revenues charged to customers. (St. 11, at 5).

Moreover, UGI has not considered how its proposed increase in the fixed monthly customer charge affects the cost-effectiveness of residential energy efficiency measures, through which a customer might reduce consumption to mitigate the impact of the Company's rate increase. (OCA-II-35).

Q. WHAT DO YOU CONCLUDE?

A. The low-income customers of UGI Gas have difficulty in paying their UGI Gas bills at the present time. (OCA-II-1). In this discovery response, UGI Gas provided the data which the Company reports to BCS each year for inclusion in the annual BCS report on Collections Performance and Universal Service Programs. The total data provided to BCS is somewhat more detailed (e.g., it includes monthly data rather than simply average annual data) than that which BCS presents in its annual report.

Increasing the UGI Gas fixed monthly customer charge will increase the payment difficulties which low-income customers currently face. Not only will the increased customer charge have the same effect on the low-income population as eliminating more than 98% of the existing federal fuel assistance that is provided, it will make it more difficult for low-income customers to control their exposure to unaffordable bills through the implementation of energy efficiency or usage conservation measures. For more than 90% of the UGI Gas low-income population, CAP does not provide affordability protections. For these reasons, I recommend that the residential customer charge proposed by OCA witness Jerome Mierzwa be approved.

Part 2. Weather Normalization Adjustment Clause.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the impact of the Company's proposed Weather Normalization Adjustment ("WNA") on low-income customers. UGI Gas witness John Taylor asserts that the WNA proposal will benefit low-income customers.

He states that "certain customers enrolled in the Customer Assistance Program (CAP) who pay an 'average bill' amount will see lower bill variability for distribution costs during colder than average periods. . ." (UGI Gas St. 11, at 16). He further asserts that "customers receive greater stability in the non-gas portion of their utility bills, a benefit during the winter months when gas prices tend to be at their highest, and a particular benefit for low-income customers with high bills during the lengthy heating seasons in UGI Gas's service areas." (Id., at 22).

Q. IS THERE A BETTER WAY TO PROTECT RESIDENTIAL CUSTOMERS GENERALLY, AND LOW-INCOME CUSTOMERS IN PARTICULAR, FROM BILL VOLATILITY DUE TO WEATHER VOLATILITY?

A. Yes. Enrolling residential customers on budget billing would provide more transparent and consistent protections to residential customers from the volatility in home heating bills. Budget billing allows a customer to spread annual bills in equal installments over an 11-month period (with Month 12 being a reconciliation month).[2] By enrolling in budget billing, a customer will know from month-to-month what their natural gas bill will be. The bills become more predictable, and thus more payable. Figure 1 below shows the variability in the aging of arrears for residential accounts from October 2018 through January 2022 (nearly three complete heating seasons). In each complete cold weather season (October 2018 – April 2019, October 2019 – April 2020, October 2020 – April 2021), the number of residential accounts experiencing short-term nonpayment (30 days arrears) increases, only to decline in the subsequent warm weather months. While the

[2] Budget bills are recalculated every three months in the event that the budget billing amount is substantially over-collecting or under-collecting revenue for the year.

2021 – 2022 heating seasons is not yet complete (data available only through January 2022), the same pattern appears to again exist.

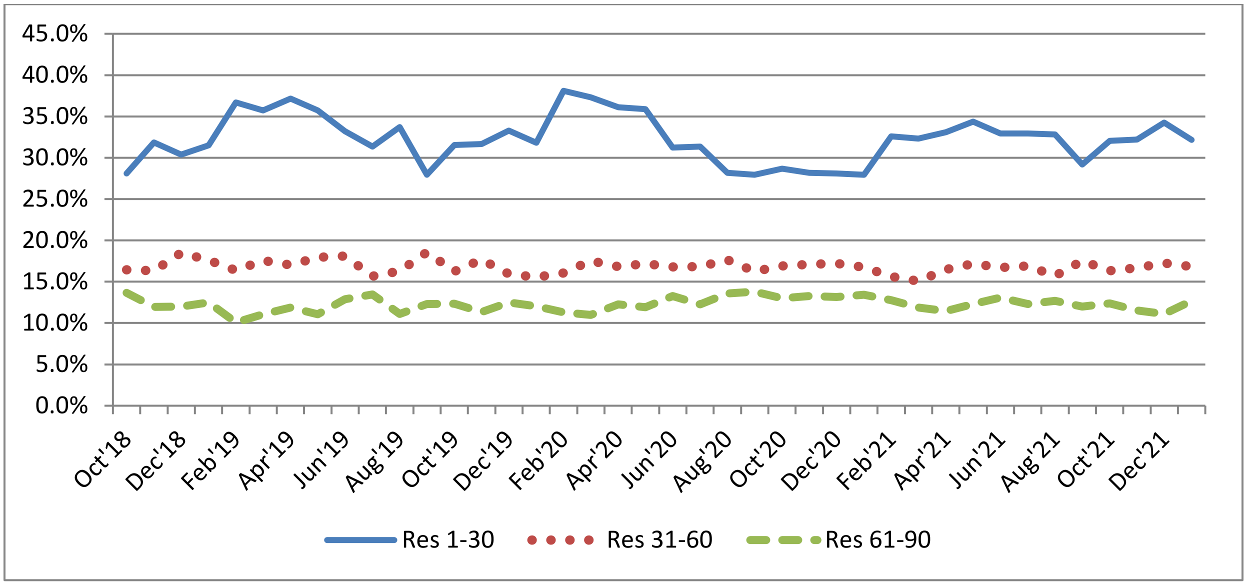

Figure 1. Aging of Arrears –Residential Accounts

The fact that this variation in payment patterns can be attributed to volatility in the level of cold weather bills can be seen in Figure 2 below. This Figure, too, shows the aging of arrears from October 2018 through January 2022. It shows, however, that the variability in dollars of arrears is even higher than the numbers of accounts in arrears. Moreover, while the number of accounts in arrears either 31 to 60 days, or 61 to 90 days remains relatively constant throughout the winter heating seasons, the number of dollars either 31 to 60 days in arrears, or 61 to 90 days in arrears, shows the same seasonal volatility that the number of dollars 1 to 30 days in arrears shows. While implementation of the proposed UGI Gas WNA would not address these problems, emphasized focus on enrolling residential customers in budget billing would be much more likely to do so.

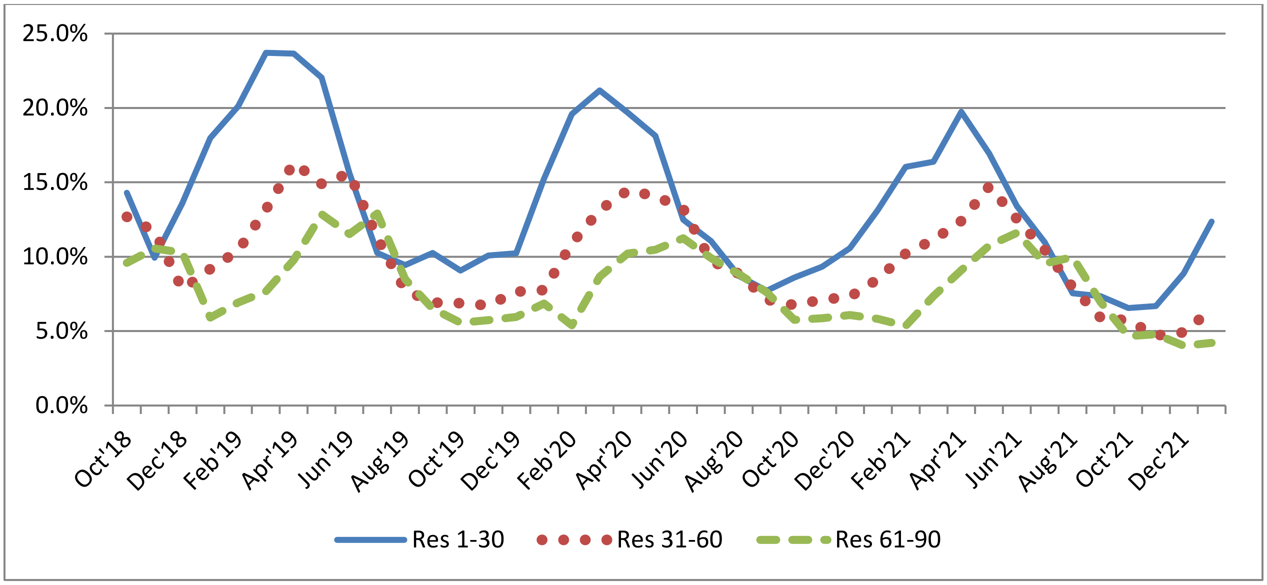

Figure 2. Aging of Arrears –Residential Dollars

Q. DOES BUDGET BILLING INDEED HELP TO SMOOTH BILLS FOR UGI GAS RESIDENTIAL CUSTOMERS?

A. Yes. For the most recent twelve months available (OCA-II-30), UGI Gas reports that 37,445 customers "over-paid" their balance, with an average overpayment of only $51.59. In contrast, 80,346 customers "under-paid" their accounts, with an average under-payment of only $70.04. (OCA-II-30). An "over-payment" or "under-payment" occurs when the sum of the monthly budget billing amounts are greater than or less than actual UGI Gas bills during the 11-month period for which levelized bills are provided.

Q. WHAT DO YOU CONCLUDE?

A. Based on the data above, I conclude that UGI Gas does not need to implement its proposed WNA to increase customer satisfaction with respect to levelizing gas heating bills. The existing Budget Billing program provides a more than satisfactory opportunity to customers who seek to use it. Moreover, Budget Billing has the effect of being able to address the volatility in bill payment that arises as a result of variations in cold weather monthly heating bills. The Budget Billing program would play that role in a much more efficient and effective fashion than would the WNA.

More generally, I conclude first that the recommendations of OCA witness Jerome Mierzwa regarding the Company's proposed WNA be adopted. In addition, the disproportionate adverse impact on low-income customers I have identified provides an additional basis for the recommendations I make below regarding an increase in funding to the UGI Gas Low-Income Usage Reduction Program ("LIURP"). The expansion of LIURP investments will help insulate low-income customers from year-to-year usage swings based on weather. Expanding the number of low-income weatherized homes will mitigate the impacts of the WNA on low-income households.

Part 3. Conversion of Residential Customers to Natural Gas.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I address one issue raised in the Direct Testimony of UGI Gas witness Christopher Brown. Mr. Brown states in response to a question about "environmental stewardship" that "[s]ince 1995, the Company has successfully converted more than 115,000 customers, mostly from fuel oil, to more environmentally-friendly natural gas." (UGI Gas St. 1, at 33). In my discussion below, I do not question whether converting customers to natural gas is "more environmentally friendly" than having those customers remain "mostly [on] fuel oil." From a rate perspective, however, there are universal service cost concerns that UGI should address.

Q. PLEASE EXPLAIN THE CONCERNS YOU HAVE FROM A UNIVERSAL SERVICE PERSPECTIVE.

A. Of the 115,000 conversions Mr. Brown referenced in his Direct Testimony, UGI Gas has converted nearly 30,000 (29,885) in the past five years (2017 – 2021). Of those conversions, a small, but not insignificant, number of accounts (n=354) have been Confirmed Low-Income customers. Nearly half of those Confirmed Low-Income customers are CAP participants (n=168, 47.5%). These numbers, however, will understate the Confirmed Low-Income status, and CAP participant status, of the residents who are converted to natural gas. UGI Gas notes that, "[t]he Company does not track household mobility. Therefore, the Company is only able to query ***the original customers*** who are active in the Customer Information System and ***remain at the converted premise***." (OCA-V-9) (emphasis added). Since 2004, the accounts that have been converted to natural gas have added 425 participants to the UGI Gas CAP program, and 890 Confirmed Low-Income customers. (OCA-V-9). UGI reports that detailed account data is not available prior to 2004. I have, however, previously discussed the high mobility rates within the low-income population in the UGI Gas service territory.

Table 2. Conversions to Natural Gas (2017 – 2021)
By Total Residential, Confirmed Low-Income, and CAP
(OCA-V-9)

	Converted	Confirmed Low-Income[3]	CAP[4]
2017	6,137	82	37
2018	6,646	56	26
2019	6,022	62	30
2020	5,827	69	32
2021	5,253	85	43
Total	29,885	354	168

I have also previously discussed how UGI Gas has confirmed the low-income status of only a fraction of its estimated low-income customers. And only a fraction of the Confirmed Low-Income customers actually participate in CAP. The low-income payment difficulties taken on by UGI Gas when it converts residences to natural gas will, in other words, be much greater than those difficulties associated with the 354 Confirmed Low-Income accounts since 2017 identified as being one of the "original customers who are active in the Customer Information System and remain at the converted premise." (OCA-V-9).

Q. WHAT IS YOUR CONCERN?

A. Low-income households often have far more significant difficulty paying their home heating bills by virtue of their poverty as seen by the data in Table 3 below. There is little

[3] This number is not the total number. This number reflects only those customers who were the original customers at the time of the conversion who remain at the converted premises.

[4] This number is not the total number. This number reflects only those customers who were the original customers at the time of the conversion who remain at the converted premises.

question but that converting low-income households from more expensive fuel oil to relatively less expensive natural gas heat would likely reduce overall home heating costs to these low-income customers and also provide customer service protections that would otherwise not be available to these households. The reality is, however, that without help, low-income customers of UGI Gas often cannot pay their full UGI Gas home heating costs.

Even though the conversion to natural gas may be beneficial, in other words, by converting low-income households to natural gas, UGI Gas is likely imposing additional costs on other ratepayers who may bear the costs of the nonpayment of the Confirmed Low-Income customer accounts.

Table 3. Residential and Confirmed Low-Income Nonpayment Metrics (2019) (UGI Gas South, UGI Gas North)[5]

UGI South	Residential	Confirmed Low-Income
Average arrears	$340.29	$635.39
Pct dollars in arrears	5.4%	24.8%
Percent accounts in arrears	11.2%	37.4%
UGI North	Residential	Confirmed Low-Income
Average arrears	$444.94	$720.04
Pct dollars in arrears	5.4%	20.3%
Percent accounts in arrears	12.7%	33.6%

In addition to taking on the costs of low-income nonpayment, when UGI Gas converts low-income customers to natural gas, it is reasonable to project that many of these low-

[5] BCS Annual Report on Universal Service Programs and Collections Performance (2020) (2020 data not used because of the impact of COVID-19), available at https://www.puc.pa.gov/filing-resources/reports/universal-service-reports/ (last accessed April 6, 2022).

income customers will enroll in UGI's CAP. From the perspective of the low-income customer this is a net positive because not only do they get access to less expensive means of heat by virtue of the conversion from fuel oil to gas, but they also have the benefit of a program that helps with their arrears and lowers their bill by virtue of a PIPP or average bill. However, the impact of this will be to increase CAP costs overall which affects other ratepayers. These CAP costs are annual costs.

Table 4. Average Total CAP Costs per CAP Participant (2018 & 2019) (UGI Gas South, UGI Gas North)[6]

	2018	2019
UGI South	$561	$532
UGI North	$553	$665

My comments above should not be construed as opposing the conversion of low-income customers to natural gas. However, in converting low-income households from other fuels to natural gas, it should also be the responsibility of UGI Gas to take reasonable steps to help control the added costs of those conversions to other residential ratepayers. This responsibility particularly manifests itself when UGI Gas converts low-income households to natural gas.

Moreover, if UGI Gas is truly going to use gas conversion as a mechanism to increase the reduction of carbon emissions, the Company should not only pursue its conversions, but it should pursue efforts to reduce overall energy use as well. When it seeks to expand

[6] BCS Annual Report on Universal Service Programs and Collections Performance (2020) (2020 data not used because of the impact of COVID-19), available at https://www.puc.pa.gov/filing-resources/reports/universal-service-reports/ (last accessed April 6, 2022).

natural gas usage through conversions from other fuels, therefore, UGI Gas should also seek to ensure ***efficient*** natural gas usage through expanded energy efficiency and conservation. This would have the dual impacts of: (1) further reducing carbon emissions consistent with the Company's stated environmental goals; and (2) reducing the costs of CAP (and low-income payment difficulties) for residential ratepayers.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that UGI Gas be directed to screen customers who the Company assists in their conversion to natural gas, as Mr. Brown discusses ("the Company has successfully converted more than 115,000 customers"), to identify those converted customers as Confirmed Low-Income customers and to enroll those customers in CAP where appropriate. I further recommend that the Company add a new incremental component to its Low-Income Usage Reduction Program (LIURP) through which it will provide LIURP investments to Confirmed Low-Income customers as part of the process of converting those customers to natural gas. According to the most recent BCS annual Report on Universal Service Programs and Collections Performance,[7] the average UGI Gas North LIURP cost per job for gas heating was $6,593 in 2019. The average UGI Gas North LIURP cost per job for gas heating was $5,746 in 2019. (See also, OCA-II-1-1, at 7, 16).

[7] Available at https://www.puc.pa.gov/filing-resources/reports/universal-service-reports/ (last accessed April 6, 2022).

While UGI Gas merged its two gas divisions in its last rate case, the Company did not disaggregate the number of gas conversions it identified between UGI gas divisions. Given the number of Confirmed Low-Income gas conversions in 2021 (85), at the averaged UGI Gas LIURP cost per job of $6,170, the total additional LIURP budget would be $524,450.

Q. WHY DOES THIS NEED TO BE AN ADDITIONAL LIURP BUDGET?

A. If UGI Gas were simply to redirect part of its existing LIURP budget to serving these gas conversion customers, there would be no net gain. To the extent that gas conversion customers were served, low-income customers who would have been served in the absence of the gas conversion would be left out.

Q. IS THE ADDITIONAL BUDGET YOU IDENTIFY ABOVE THE TOTAL INCREMENTAL INCREASE IN THE UGI GAS UNIVERSAL SERVICE COSTS?

A. No. Treating these low-income customers with LIURP services will result in decreased bills that, in turn, will result in a dollar-for-dollar decrease in CAP benefits. According to the most recent BCS annual Report on Universal Services Programs and Collections Performance, cited above, the average annual bill reduction arising from LIURP gas heating job investments was $304 in 2018 and $324 in 2017.[8] Annual CAP credits for both UGI South ($417 in 2018, $479 in 2019) and UGI North ($440 in 2018; $375 in 2019) exceeded these bill reductions. As a result, any increase in total universal service

[8] The BCS annual report does not report savings for each gas utility. Instead, these savings are total LIURP gas heating job savings.

spending due to an increase in the LIURP budget will be offset by a decrease in total universal service spending due to a decrease in the CAP budget. Moreover, to the extent that LIURP investments are made prior to enrolling a customer in CAP, the resulting bill reductions will reduce the level of arrears subject to arrearage forgiveness pursuant to the CAP.

Q. DOES YOUR RECOMMENDATION AFFECT THE RATES TO BE SET IN THIS PROCEEDING?

A. No. My recommendation would be paid through the Company's universal service charge. Through the reconciliation process of the Universal Service Rider, the total costs will be collected taking into account: (1) the number of gas conversions that occur in a particular year; (2) the number of gas conversions that are Confirmed Low-Income customers; (3) the number of Confirmed Low-Income gas conversion customers that are served by the additional LIURP services I recommend; (4) the number of Confirmed Low-Income gas conversion customers served through LIURP that are CAP participants; (5) the bill reductions generated for those Confirmed Low-Income gas conversion customers served through LIURP that are CAP participants; and (6) the resulting CAP credit reductions resulting from those bill reductions. In turn, the level of the resulting CAP and arrearage forgiveness credit reductions depends on the income and Poverty Level of the CAP participants (which dictate the level of CAP credits in the absence of the LIURP treatment). Taking account of this myriad of interacting influences is precisely why the Universal Service costs are collected through the Universal Service Rider.

Part 4. UGI Universal Service Performance.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the extent to which UGI Gas generates an appropriate participation in its CAP program. Rather than focusing on what UGI Gas is doing (i.e., its activities), in this section of my testimony, I will focus on an assessment of UGI Gas enrollment outcomes (i.e., its results).

Q. PLEASE EXPLAIN THE DISTINCTION YOU ARE MAKING WHEN YOU IDENTIFY "ACTIVITIES" AND "OUTCOMES."

A. Measuring "outcomes" is to be distinguished from measuring "activities" and measuring "outputs." An "activity" is defined as the work performed that directly produces products or services. The "output" of an activity is the direct result of program activities. The "outcome" of a program is the accomplishment of program objectives attributable to program outputs.

Performance measurement has been growing now for nearly 30 years in both public and private programs. Perhaps the best-known application is the federal Government Performance and Results Act of 1993. GPRA was designed to address the same conceptual issues that UGI Gas must address for its low-income universal service programs: to grapple with how to best improve effectiveness and service quality while limiting costs. It shifts the focus from program activities to program results.

According to GPRA, "[t]he key concepts of this performance-based management are the need to define clear agency missions, set results-oriented goals, measure progress toward achievement of those goals, and use performance information to help make decisions and strengthen accountability." Utilities face the same sort of problems in measuring efficiency as do federal agencies. As the U.S. General Accounting Office has observed, "[m]any agencies have a difficult time moving from measuring program activities to establishing results-oriented goals and performance measures."[9]

Within this construct, in my discussion below, I will focus not on what UGI Gas should or should not be *doing*. I will instead focus on what UGI Gas should or should not be *accomplishing*.

Q. WHAT IS THE FIRST STEP IN MEASURING OUTCOMES?

A. The first step in measuring outcomes is to establish measurable objectives or goals (i.e., outcomes) that UGI Gas should seek to achieve. After establishing these measurable outcomes, UGI Gas can engage in an ongoing process to determine whether those objectives have, in fact, been achieved and, if not, what needs to be modified in order to improve performance.

[9] James Hinchman (Acting Comptroller General). (June 24, 1997). Managing for Results: The Statutory Framework for Improving Federal Management and Effectiveness, at 1, Testimony before U.S. Senate Committee on Appropriations and Committee on Governmental Affairs (GAO/T-GGD/AIMD-97-144).

Q. WHAT MEASURABLE PERFORMANCE GOALS DO YOU RECOMMEND UGI GAS SHOULD ESTABLISH?

A. I recommend three measurable performance goals that UGI Gas should seek to accomplish with respect to CAP:

- **<u>Outcome Objective #1</u>**: UGI Gas should achieve a Confirmed Low-Income identification rate, as a percentage of estimated low-income customers, no less than the Confirmed Low-Income identification rate of Pennsylvania natural gas utilities as a whole (excluding the UGI Gas companies).

- **<u>Outcome Objective #2</u>**: UGI Gas should achieve a CAP participation rate, as a percentage of Confirmed Low-Income customers, no less than the CAP participation rate of Pennsylvania natural gas utilities as a whole (excluding the UGI Gas companies).

- **<u>Outcome Objective #3</u>**: UGI Gas should achieve a CAP default rate as a percentage of participants in the lowest poverty level range that is no less than the CAP default rate in that poverty level range for Pennsylvania gas utilities as a whole.

Through the first Outcome objective, UGI Gas will seek to ensure that it is adequately identifying its low-income customers. Through the second and third Outcome objectives, UGI Gas will seek to ensure that, having identified its low-income population, it is then enrolling its known low-income customers into its primary low-income assistance program.

In subsequently assessing actual performance relative to the desired performance (measured in terms of the identified Outcomes), neither the Commission nor other stakeholders will focus on what UGI Gas is or is not doing in the abstract. A review of what UGI Gas is (or is not) doing will instead occur within the context of whether those activities are cost-effectively and cost-efficiently generating the identified outcomes. If UGI Gas is not achieving its identified performance objectives, it would need to identify the cause of the performance shortcoming and decide what it needs to do differently in order to improve its performance.

Q. DO YOU RECOMMEND A SYSTEM OF PENALTIES OR REWARDS BASED ON PERFORMANCE RELATIVE TO THE IDENTIFIED OBJECTIVES IN THIS PROCEEDING?

A. No. While I would reserve the right to propose a system of penalties (for poor performance as measured by a continuing failure to meet the stated performance objectives) or rewards (for superior performance as measured by exceeding the performance objectives) in a future rate case, my intention in this proceeding is to change the conversation about the identification of low-income customers, about CAP enrollment, and about the participation of the lowest income customers in CAP, from a discussion of what UGI Gas should be doing to a discussion of what UGI Gas should be accomplishing.

Q. HOW DOES UGI GAS PERFORM RELATIVE TO PENNSYLVANIA NATURAL GAS UTILITIES IN IDENTIFYING THEIR CONFIRMED LOW-INCOME CUSTOMERS, WHICH IS YOUR PROPOSED OUTCOME OBJECTIVE #1?

A. As I discussed above with respect to my proposed Outcome Objective #1, UGI Gas identifies fewer of its estimated low-income customers as Confirmed Low-Income customers than do Pennsylvania's natural gas utilities as a whole. The data available by which to measure this performance metric is readily available in the annual BCS report on Universal Service Programs and Collections Performance. As documented in Table 5 below, Pennsylvania's natural gas utilities (without UGI Gas) identify 66.4% of their estimated low-income customer base as Confirmed Low-Income customers. In contrast, UGI Gas identifies 48.3% of its estimated low-income customer base as Confirmed Low-Income customers. For UGI Gas to perform at least as well as all other Pennsylvania utilities, it would need to identify 88,026 of its estimated low-income customers as Confirmed Low-Income customers. Application of Performance Objective #1, in other words, would indicate that UGI Gas is under-performing relative to identifying its Confirmed Low-Income customers.

Table 5. Identification of Estimated Low-Income (LI) Customers as Confirmed Low-Income (L)
Pennsylvania Natural Gas Utilities / UGI Gas (2019)

	Estimated LI	Confirmed LI	% Confirmed LI of Estimated LI
Columbia	97,268	67,582	69.5%
NFG	60,947	32,282	53.0%
PECO Gas	74,914	24,977	33.3%
Peoples	84,437	67,718	80.2%
Peoples Equitable	58,791	41,585	70.7%
PGW	197,855	147,014	74.3%
Total (without UGI)	574,212	381,158	66.4%
UGI South	86,314	39,108	45.3%
UGI North	46,297	24,934	53.9%
Combined UGI	132,611	64,042	48.3%

Q. HOW DOES UGI GAS PERFORM RELATIVE TO PENNSYLVANIA NATURAL GAS UTILITIES IN ENROLLING THEIR CONFIRMED LOW-INCOME CUSTOMERS INTO CAP, WHICH IS YOUR PROPOSED OUTCOME OBJECTIVE #2?

A. As I discussed above with respect to my proposed Outcome Objective #2, UGI Gas enrolls fewer of its Confirmed Low-Income customers as CAP participants than do Pennsylvania's natural gas utilities as a whole. As with the discussion above regarding the identification of Confirmed Low-Income customers, the data available by which to measure this performance metric is readily available in the annual BCS report on Universal Service Programs and Collections Performance.[10] As documented in Table 6 below, Pennsylvania utilities (excluding UGI Gas) enroll 35.1% of their Confirmed Low-Income customers into CAP. In contrast, UGI Gas enrolls only 21.5% of its Confirmed Low-Income customers into CAP.

Given UGI's current level of Confirmed Low-Income customers, for UGI Gas to perform at least as well as all other Pennsylvania utilities, it would need to enroll 22,479 of its Confirmed Low-Income customers as CAP participants (64,402 x 0.351 = 22,479). Application of Performance Objective #2, in other words, would indicate that UGI Gas is under-performing relative to CAP enrollment of Confirmed Low-Income customers.[11]

[10] Available at https://www.puc.pa.gov/filing-resources/reports/universal-service-reports/ (last accessed April 6, 2022).

[11] If UGI were to achieve its Outcome Objective #1 of identifying 88,026 Confirmed Low-Income customers, it would need to enroll 30,897 customers in CAP to achieve Outcome Objective #2 (88,097 x 0.351 = 30,897).

Table 6. Identification of Estimated Low-Income (LI) Customers as Confirmed Low-Income (L) Pennsylvania Natural Gas Utilities / UGI Gas (2019)			
	Confirmed LI	CAP Participants	% CAP of Confirmed LI
Columbia	67,582	23,551	34.8%
NFG	32,282	7,294	22.6%
PECO Gas	24,977	19,427	77.8%
Peoples	67,718	17,034	25.2%
Peoples Equitable	41,585	12,928	31.1%
PGW	147,014	53,722	36.5%
Total (without UGI)	381,158	133,956	35.1%
UGI South	39,108	8,422	21.5%
UGI North	24,934	5,369	21.5%
Combined UGI	64,042	13,791	21.5%

Q. PLEASE EXPLAIN THE BASIS FOR YOUR PROPOSED OUTCOME OBJECTIVE #3.

A. My proposed Outcome Objective #3 measures a different type of performance than do the first two proposed Outcome Objectives. Outcome Objective #3 is directed toward ensuring appropriate participation of customers in the lowest range of Poverty Level in the UGI Gas CAP. Outcome Objective #3, however, does not compare the percentage of customers with income below 50% of Poverty enrolled in CAP to the percentages enrolled by other gas utilities. Other gas utilities may have different total percentages of their customer base with income at or below 50% of Poverty. Nor does the proposed Outcome Objective #3 compare the percentage of CAP customers with income below 50% of Poverty to the percentage of total households in the service territory with income below 50% of Poverty. Not all customers with income below 50% of Poverty would necessarily be natural gas customers.

Accordingly, the proposed Outcome Objective #3 seeks to measure the extent to which UGI Gas retains its lowest income customers once those customers are enrolled in CAP. It is possible to do this by examining “default rates.” According to the annual BCS report on Universal Service Programs and Collections Performance, the “default rate” is “calculated by dividing the average monthly CAP participation rate at each poverty level by the total annual number of defaults for each poverty level.” BCS, which reports default rates in its annual report, states that “[a]ctions resulting in CAP defaults include missing payments, making late payments, or failing to recertify.” (2020 BCS, at 61). By far, since July 2021, when utilities began again to remove CAP customers for failing to recertify after not having done so during the height of COVID-19, failing to recertify has been the biggest reason for default. From July 2021 through January 2022, UGI Gas removed 4,361 CAP participants for failing to recertify. (OCA-II-16). Even before COVID, however, failing to recertify was the largest cause of program default. (Id.)[12]

Q. HOW DOES UGI GAS PERFORM RELATIVE TO THE THIRD PROPOSED OUTCOME PERFORMANCE OBJECTIVE YOU HAVE IDENTIFIED?

A. In 2019, according to the most recent BCS annual report on Universal Service Programs and Collections Performance,[13] UGI had a CAP default rate for customers with income

[12] Not all program exits represent “program defaults.” For example, having a customer move, or die, or become over-income is not a program default.

below 50% of Poverty, which is my proposed Outcome Objective #3, that was higher than the statewide average default rate for gas utilities, and was higher than every other gas utility excepting PGW. Table 7 presents the data. UGI South had a default rate within the population below 50% of Poverty of 31.4%, while UGI North had a default rate within that population of 31.3%. PGW's default rate for its population below 50% of Poverty was 32.8% in2019. Similarly, UGI Gas' default rate for CAP participants with income at or below 50% of Poverty was higher than every other gas utility in 2018. UGI South had a default rate of 33.4% while UGI North had a default rate of 31.3%. The next highest gas utility was PECO-Gas (28.1%), while the statewide average for gas utilities was 25.4%.

Table 7. CAP Default Rate for Participants with Income at or Below 50% of Poverty
Pennsylvania Natural Gas Utilities / UGI Gas (2018 - 2019)

	2018	2019
Columbia	16.3%	19.1%
NFG	19.0%	24.4%
PECO Gas	28.1%	28.0%
Peoples	23.0%	24.9%
Peoples Equitable	23.2%	23.7%
PGW	26.9%	32.8%
Total/Industry Average (with UGI)	25.4%	27.0%
UGI South	33.4%	31.4%
UGI North	31.3%	31.3%

Q. WHAT DO YOU CONCLUDE?

A. Using the three performance metrics I identify above, it is evident that UGI Gas is under-performing other Pennsylvania utilities in the extent to which it is confirming the low-income status of its natural gas customers and in the extent to which it is enrolling the customers for whom it has confirmed their low-income status into CAP. In addition, UGI Gas is under-performing in the extent to which it prevents CAP defaults within its population of CAP participants with income at or below 50% of Poverty. I conclude that the use of the performance metrics I recommend shows inadequate performance by UGI Gas that should be remedied.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that rather than having the Commission engage in continuing reviews of the specific activities that UGI Gas pursues to identify its low-income customers and to enroll those customers in CAP, the Commission instead require UGI Gas to measure its outcome performance in these respects on an ongoing basis. The Commission should determine that it will use these outcome performance metrics to review the adequacy of UGI Gas performance in future rate cases.

Q. WHY IS IT APPROPRIATE TO ADDRESS THIS ISSUE IN THIS RATE PROCEEDING RATHER THAN IN THE COMMISSION'S REVIEW OF UGI'S UNIVERSAL SERVICE AND ENERGY CONSERVATION PLAN (USECP)?

A. If for no other reason, the under-performance on the three Outcome Objectives I have identified above are reasons that the Company's proposed increase to its return on equity should not be approved.

In addition, however, my recommendation above could not have been advanced in the UGI Gas USECP given that the rate case proposals advanced in this proceeding had not yet been filed. My recommendations above are designed to determine whether UGI is adequately protecting low-income customers from the consequences of this rate proceeding. UGI Gas, itself, asserts that enrollment in CAP is one reason why it projects that this proposed rate case will have no adverse effect on low-income customers. (CAUSE-PA-I-1). The rate case had not been filed at the time UGI submitted its most recent USECP, and additional rate cases may be filed before any future USECP is submitted to the Commission for review. The Outcome Objectives proposed to measure the performance of UGI Gas could not have been raised in the USECP review. And the review of performance on Outcome Objectives would not necessarily be an issue in any future USECP review.

Part 5. Continuing COVID-19 Relief Efforts.

Q. PLEASE DESCRIBE THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine whether UGI Gas should continue to provide certain expanded universal activities which it began providing in response to the novel Coronavirus health pandemic. While residential arrears have begun to decline in recent months, they have not returned to pre-COVID levels. Total dollars of residential arrearages and total dollars of arrearages aged 90-days old or older have declined in 2021 relative to 2020, but remain higher than in 2019. Moreover, the dollars of arrearages owed at the time of nonpayment service disconnections remain higher at the end of 2021 than they were at the end of 2019.

Table 8 shows the data. While total 90-day arrears (in dollars) are lower in all three months (October, November, December) of 2021 than they were in 2020, they remain consistently higher than they were in the corresponding three months of 2019. Moreover, in all three months (October, November, December), the percentage of total residential arrears that are 90-days old (or older) is higher in 2021 than they were in either 2019 or 2020.

Table 8. Residential Arrears
October – December (2019 – 2021) (OCA-II-39)

	Oct 19	Oct 20	Oct 21	Nov 19	Nov 20	Nov 21	Dec 19	Dec 20	Dec 21
Total Arrears	$34,167,129	$45,965,739	$41,420,665	$33,972,055	$45,948,466	$41,231,296	$38,858,323	$47,549,467	$43,032,651
Arrears 90+ Days	$27,652,882	$37,372,199	$35,600,619	$27,311,405	$37,416,338	$35,413,444	$27,442,340	$37,130,511	$35,388,132
Pct 90+ days	81%	81%	86%	80%	81%	86%	71%	78%	82%
Total Disconnects	3,814	0	1,830	1,113	0	1,774	1	40	0
Arrears at Disconnect	$4,477,872	$0	$2,400,722	$1,228,637	$0	$2,407,129	$2,692	$45,851	$0
Avg Arrs at Disconnect	$1,174	---	$1,312	$1,104	---	$1,357	---	---	---

Continuing payment difficulties are evidenced by data on residential disconnections as well. While there was a sharp drop in October 2021 disconnections relative to 2019, there was a 60% increase in disconnections in November 2021 relative to November 2019 ([1,774 – 1,113] / 1,113 = 0.594). Moreover, the average arrearage balance at the time of disconnection remained higher in October and November 2021 than the average arrearage balance was at the time of disconnection in October and November 2019.[14]

[14] There were no disconnections in December 2021 and only one in December 2019, so no comparison can be made.

From this data, it is clear that, while circumstances are improving relative to the heart of the COVID public health and economic crisis that existed throughout 2020 and much of 2021, the COVID-related payment difficulties facing UGI Gas customers are not behind the Company. Payment difficulties have declined, but are not back to pre-COVID levels. More customers have long-term arrears. More customers have sufficiently high arrears that they are facing nonpayment disconnections.

Q. DID UGI GAS OFFER EXTENDED COVID-RELATED PAYMENT PLANS TO CUSTOMERS IN ARREARS?

A. Yes. According to the Company, "in compliance with the April 1, 2021 modification of the PUC Order at Docket No. M-2020-0319244, upon request, UGI offered a payment arrangement with minimum terms of: 5 years for customers below 250% FPL, 2 years for customers between 250% and 300% FPL, 1 year for customers above 300% FPL, and 18-months for small business customers." (OCA-II-40). Moreover, UGI reports that it has "ceased assessing security deposits on existing customers until November 17, 2021." (Id.)

Q. HAS UGI OFFERED OTHER EXTENDED COVID RELIEF PROGRAMS TO ITS RESIDENTIAL CUSTOMERS?

A. Yes. The Company raised the income eligibility for its hardship grants from 200% of FPL to 250% of FPL from the period of July 2020 through December 2021. In addition, pursuant to the Settlement reached in the 2020 Gas Rate Case (Docket R-2019-3015162), the Company expanded the maximum grant size from $400 to $600 between July 2020 and December 2021. The Company agreed to provide an additional, one-time, $2.0 million disbursement ($1 million from UGI Gas and $1 million from interstate pipeline refunds) to the UGI Gas Operation Share program on a non-rate recoverable basis. (OCA-III-44).

Q. WHAT DO YOU RECOMMEND?

A. I recommend that the COVID responses that UGI had previously agreed to extend through the end of 2021 be continued until UGI Gas' next base rate case. In particular, I recommend:

- UGI commit to continuing to offer the extended payment plans as identified in the April 2021 Order in Docket M-2020-0319244;

- UGI reinstate its waiver of residential deposits for existing customers. The COVID-related payment difficulties of residential customers are not indicators of long-term payment risks. And the imposition of a cash security deposit remains an impediment to customers retiring the arrears that they have already incurred;

- UGI reinstate its expanded hardship grant income eligibility, along with its expanded maximum hardship grant; and

- UGI make an additional $1.0 million non-rate recoverable contribution to its hardship fund on an additional one-time basis.

Part 6. Stabilizing Low-Income Usage/Bills.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I will explain how various aspects of the relief sought by UGI Gas in this rate case proceeding synergistically operate to the detriment of low-income customers. Even aside from the size of the rate hike, itself, the proposed increase in the residential customer charge makes a greater proportion of a low-income customer's monthly bill more difficult to reduce by having a higher proportion of the bill be an unavoidable fixed charge. Through the Weather Normalization Adjustment (WNA), UGI Gas seeks to transfer to ratepayers the risk of climate-change induced increases in the volatility of weather, when that increased weather volatility is caused, at least in part, by the very consumption of fossil fuels. In the meantime, UGI Gas confirms the low-income status of only half of the estimated number of low-income customers on its system, and enrolls only little more than a quarter of the Confirmed Low-Income customers it has identified in its CAP. As I discuss in detail above, a full 86% of UGI Gas' low-income customers are not protected from the harms of the various Company proposals in this rate proceeding through participation in CAP.

As a result, low-income customers have an average arrearage which is two times higher than residential customers. Low-income customers incur dollars of arrears at a rate between four and five times higher than residential customers. In addition, of the 17,309 residential customers UGI Gas disconnected for nonpayment in 2019, nearly 2,000 (1,877, more than one-in-ten) either remained without heat or were using an unsafe heating source (as defined by the PUC) at the start of the subsequent cold weather heating season.

In the meantime, the climate change which UGI Gas seeks to insulate itself from the impacts of continues to have disproportionate impacts on low-income customers. By the Year 2100, extreme heat waves that historically occurred once every 20 years are predicted to occur every other year.[15] It is not merely "outdoor" climate-induced health effects that represent the harms to be avoided through usage reduction programs. Because Americans spend 67% of their time in their homes, indoor air quality also affects health. Indoor air pollutants have been ranked as among the top five environmental risks to public health. Poor indoor air quality in the home has been linked to cancer, to asthma, and to carbon monoxide poisoning.[16]

The confluence of the harms associated with outdoor air quality and those associated with indoor air quality should be recognized and responded to. One consistent piece of advice given to people on how to avoid the adverse impacts of poor outdoor air quality is to remain indoors.[17] This advice assumes that indoor air quality is superior to outdoor air quality. But this means that people whose indoor air quality is compromised may be more susceptible to adverse health effects from indoor air than the population at large.

[16] The purpose of this discussion is not to comprehensively document the relationship between housing quality and adverse health outcomes. Those interested in the topic should explore the literature of "ecosocial epidemiology." *See generally* Shafiei, et al. "Reducing Health Disparity through Healthy Housing," *in* Healthy and Safe Homes: Research, Practice and Policy Chapter 4, pp.73-90 (Rebecca Morley et al. eds., 2011), available at https://ajph.aphapublications.org/doi/10.2105/9780875531977ch04 (last accessed April 10, 2022). *See also* Krieger, "Theories for Social Epidemiology in the 21st Century: An Ecosocial Perspective," 30 Int'l J. Epidemiology 668, 671-673 (2001), available at https://academic.oup.com/ije/article/30/4/668/705885 (last accessed April 10, 2022). For a discussion of the positive health impacts flowing from an improvement in housing quality, see generally, Thompson et al., "The Health Impacts of Housing Improvement: A Systematic Review of Intervention Studies from 1887 to 2007," 99 Am. J. Public Health S681 S682-S689, S690-S691(2009), available at https://www.researchgate.net/publication/51439420_The_Health_Impacts_of_Housing_Improvement_A_Systematic_Review_of_Intervention_Studies_From_1887_to_2007 (last accessed April 20m, 2022).

[17] See e.g., Laumbach, Meng and Kipen "What can individuals do to reduce personal health risks from air pollution?" J.Thorac.Dis. 2015 Jan; 7(1): 96–107, available at https://pubmed.ncbi.nlm.nih.gov/25694820/ (last accessed April 10, 2022).

Low-income people are much more likely to be exposed to, and therefore suffer the effects of poor indoor air quality than the general population. So the advice to stay indoors might be good for the majority of people but bad for a minority. When being indoors is just as deadly as being outdoors, there is, quite simply, no place to hide.

Q. HOW DOES THIS DISCUSSION APPLY TO THE UGI GAS SERVICE TERRITORY?

A. When the UGI Gas service territory is defined by community,[18] data provided through the U.S. Department of Housing and Urban Development's Comprehensive Housing Affordability Strategy (CHAS) data base shows that low-income households, and particularly low-income renters:[19]

- Live in older (and presumptively less energy efficient) housing;
- Live in housing units with more "severe housing problems."

Moreover, the CHAS data demonstrates that low-income households in the communities served by UGI Gas are disproportionately likely to be renters.[20] This data demonstrates that low-income households in the UGI Gas service territory are more likely to face the difficulties I identify above, and less likely to be able to redress those difficulties through their own resources.

---

[18] When UGI Gas was asked to provide a complete list of the communities served by the utility, it replied that it had data only by county. (OCA-II-18). A list of "cities" was obtained from the UGI Gas tariff.

[19] Available at https://www.huduser.gov/portal/datasets/cp.html#2006-2017_data (last accessed April 8, 2022).

[20] See, CHAS data base, supra note 19, at Tables 2, 3, 5 and 12. Available at https://www.huduser.gov/portal/datasets/cp.html#2006-2017_data (last accessed April 8, 2022).

I examined CHAS data for the following UGI Gas communities: Allentown, Bethlehem, Bloomsburg, Carbondale, Easton, Harrisburg, Hazleton, Lancaster, Lebanon, Lock Haven, Nanticoke, Oil City, Parker, Pittston, Pottsville, Reading, Scranton, Shamokin, Sunbury, Wilkes-Barre, and Williamsport.

Q. WHAT DO YOU RECOMMEND?

A. The primary way to redress the hardships which the UGI Gas rate filing imposes on the Company's low-income customers is to undertake expanded efforts to make the housing of its low-income customers as energy efficient as possible. UGI Gas operates the Low-Income Usage Reduction Program (LIURP) to serve low-income customers. Because of the expanded hardships which UGI Gas will impose on its low-income customers due to the relief that it seeks in this proceeding, UGI Gas should undertake efforts to protect an expanded number of low-income households through its LIURP initiative.

UGI Gas reports that roughly half of the bills it rendered to its Confirmed Low-Income customers in the heating seasons (defined to be October through March) for the past three heating seasons (2018 – 2019, 2019 – 2020, 2020 – 2021) were bills for 151 CCF or more. (OCA-II-18). The data provided by UGI Gas is summarized in Table 9 below.

Table 9. Confirmed Low-Income Bills Exceeding 151 CCF (OCA-II-18(b))

	Monthly Avg # LI Bills (151+ CCF)	Monthly Avg # LI Bills (total)	Pct Total LI Bills (151+ CCF)
Oct 2018-Mar 2019	12,334	21,803	56.6%
Oct 2019-Mar 2020	12,292	26,530	46.3%
Oct 2020 - Mar 2021	14,449	29,599	48.8%

To reach 40% of those low-income customers over a ten-year period would require UGI Gas to serve 5,780 Confirmed Low-Income customers in that period (578 LIURP jobs/year). At a weighted cost of $6,170 (2019 LIURP costs, OCA-II-1), the total cost of doing so would be $3.566 million (5,780 x $6,170 = $3,565,971). To reach this objective, UGI Gas needs to add $1.425 million to its current combined LIURP spending level of $2,140,667 (OCA-I-1, at 6, 15).

Accordingly, to offset the harms imposed on Confirmed Low-Income customers by the relief UGI Gas seeks in this rate case, I recommend that UGI Gas expand its LIURP spending by $1.425 million a year, sufficient to serve 231 additional Confirmed Low-Income customers per year. These additional LIURP jobs are in addition to the LIURP jobs that I recommend above be directed toward low-income households at the time they are converted from other fuels to natural gas.

Q. WOULD THE TOTAL INCREMENTAL UNIVERSAL SERVICE COST OF YOUR PROPOSAL THUS BE $1.425 MILLION A YEAR?

A. No. As with my recommendation above with respect to providing LIURP services to low-income customers who UGI Gas converts to natural gas from a non-gas fuel, investing LIURP dollars would generate universal service cost reductions as well. Bill reductions resulting from LIURP investments will, on a dollar-for-dollar basis, reduce the level of future CAP credits to the extent that the customer is also enrolled in CAP. Moreover, to the extent that a low-income customer receives LIURP services prior to enrolling in CAP, it is more likely than not that the customer will experience reduced arrearages.[21] As a result, there would be a reduction in arrearages subject to forgiveness through the UGI Gas CAP program. Given that CAP Credits and Arrearage Forgiveness credits comprise 93.5% of the total costs of the UGI North CAP program, and comprise 92.8% of the total costs of the UGI South CAP program, these reductions in universal service costs that would offset any LIURP investment would be substantial.

Q. IS THERE A NEED TO QUANTIFY THESE OFFSETS TO THE LIURP SPENDING AND EXPLICITLY RECOGNIZE THEM?

A. No. To the extent that future CAP credits are reduced through the delivery of LIURP services, those reduced credits will be automatically recognized in the Universal Service Rider. The Rider only allows UGI Gas to recover those CAP credits that have been actually paid. The same is true for reductions in future arrearage forgiveness credits. Given that the Universal Service Rider allows UGI Gas to recover only those arrearage forgiveness credits that are actually granted, to the extent that the delivery of LIURP investments will reduce those arrearage forgiveness credits, the collection of universal service costs will, without further action, be adjusted to reflect those reductions.

[21] Shingler (2008). Long Term Study of Pennsylvania's Low-Income Usage Reduction Program: Results of Analyses and Discussion, available at https://aese.psu.edu/research/centers/csis/publications (last accessed April 8, 2022).

Q. WHY ISN'T THIS RECOMMENDATION MORE APPROPRIATELY PRESENTED IN UGI'S PROCEEDING TO REVIEW ITS UNIVERSAL SERVICE AND ENERGY CONSERVATION PLAN (USECP)?

A. The base spending for the UGI Gas LIURP program is considered in the proceeding to review the UGI Gas USECP. However, my recommendation above could not have been advanced in the UGI Gas USECP given that the rate case proposals advanced in this proceeding had not yet been filed. My recommendation above is designed to respond to, and to reflect, the necessary LIURP spending to respond to the proposals advanced by UGI Gas in *this* proceeding. They could not have been raised in the USECP review.

Part 7. Allocation of Universal Service Costs.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I briefly explain why the universal service costs of UGI Gas should be allocated amongst all customer classes, rather than being allocated exclusively to the residential customer class. Despite this explanation, I do not propose that the PUC consider a reallocation in this proceeding. The issue of how to allocate UGI Gas universal service costs should be deferred to the next UGI Gas rate case.

Q. WHY DO YOU PROPOSE TO DEFER CONSIDERATION OF THE APPROPRIATE ALLOCATION OF UNIVERSAL SERVICE COSTS?

A. As I discuss in more detail in the section of my Direct Testimony discussing the ongoing COVID_19 pandemic, while the public health issues created by COVID-19 are being brought under control, the economic crisis associated with the pandemic continue to affect Pennsylvania consumers. Given these unusual economic times in which we are living, it seems to be an inappropriate moment to consider a change in policy such as how to allocate universal service costs among customer classes. By deferring the consideration of this issue, it is possible for the PUC to review how such allocations should occur within the context of normal economic circumstances for all customer classes.

Q. PLEASE EXPLAIN WHY YOU MENTION THIS ISSUE GIVEN THAT YOU DO NOT PROPOSE A CHANGE IN THE UNIVERSAL SERVICE COST ALLOCATION IN THIS PROCEEDING.

A. In its 2019 Final Policy Statement and Order in the PUC's generic investigation into energy affordability in Pennsylvania (Docket M-2019-3012599),[22] the Commission explicitly acknowledged that, historically, it allocated universal service costs exclusively to residential customers, but then stated that "our review of Pennsylvania's current universal service model in the *Review* and *Energy Affordability* proceedings has provided reasons to reconsider this position." (Final Policy Statement and Order, at 92). The Commission observed that "[t]he current cost-recovery method for universal services, including CAP costs, is putting a significant burden on residential customer bills. . ." (Id.). The Commission's decision to substantially reduce the definition of an "affordable" burden will create even more universal service costs and will increase that "significant burden" even more. According to the Commission:

[22] http://www.puc.pa.gov/about_puc/consolidated_case_view.aspx?Docket=M-2019-3012599 (November 5, 2019) (last accessed April 21, 2021).

> Given the significant past increase in EDC universal service spending – and the anticipated increases in both EDC and NGDC universal spending through 2021 – the Commission is concerned that recovering CAP costs (as well as other universal service costs) from only residential ratepayers will continue to make electric and/or natural gas bills increasingly unaffordable for non-CAP customers, especially those with incomes between 151-200% of the FPIG.

(Id., at 95). I agree with these observations. There is a substantial population of UGI Gas customers who have difficulties in paying their utility bills without being sufficiently "low-income" to qualify for CAP. The current CAP costs could prove to be problematic for these customers, and those costs will increase in the future, both for the reasons identified in the Commission's Final Order (pages 94 – 95) and for the reason that the Commission has revised its Final Policy Statement recommending reductions of the percentage of income payments to be charged to CAP customers.[23]

The Commission stated in its Final Order that "the Commission finds it appropriate to consider recovery of the costs of CAP costs from all ratepayer classes. Utilities and stakeholders are advised to be prepared to address CAP cost recovery in utility-specific rate cases consistent with the understanding that the Commission will no longer routinely exempt non-residential classes from universal service obligations. . ." (Id., at 99, notes omitted).[24]

[23] While the Office of Consumer Advocate has urged that CAP is designed to address long-term structural poverty, these costs might increase even more to the extent that COVID-19 results in structural job loss. Temporary loss of income due to COVID-19 should be considered to be addressed through a PUC-approved emergency relief program.

[24] The Commission observed that it was not making "a final precedential decision regarding cost recovery in this docket. We are merely providing that the recovery of CAP costs in particular can be fully explored in utility rate cases henceforth." (Id., at note 150).

Q. HOW DO YOU RESPOND TO THIS PUC GUIDANCE?

A. While I am not recommending that universal service costs be allocated across all customer classes in this proceeding, for the reasons set forth above and further below, I agree that:

- the PUC's observation was accurate when it found in its 2019 Final Order that poverty is "not just [a] residential class problem."

- the Pennsylvania PUC's observation was accurate when it found in its Final Order (2019) that several factors "contribute to households struggling to afford utility service" and that, amongst those factors are "poverty, poor housing stock, and other factors."

- the Pennsylvania PUC was correct when it found in Final Order (2019) that poverty is a broad-based social problem not associated with any particular customer class, including specifically not being associated with the residential class exclusively.

- the Pennsylvania PUC was correct when it found in its Final Order (2019) that "helping low-income families maintain utility service and remain in their homes is also a benefit to the economic climate of a community."

- the Pennsylvania PUC was correct when it found in its Final Order (2019) that "Clearly, there is a persuasive argument to be made that home heating and energy assistance for low-income households serves a public good whose responsibility is not merely other residential ratepayers."

- The Pennsylvania PIC was correct when it found in its Final Order (2019) that "while there are strong arguments to be made that non-residential classes do benefit from universal services, there are also strong arguments to be made in favor of multi-class allocation even if one discounts any non-residential benefits."

Finally, I agree that the PUC's observation is applicable to UGI Utilities, when the Commission observed in its Final Order (2019), quoted above, that: "In approving PGW's practice of recovering such costs across all ratepayer classes, we noted that 'all firm customers, including commercial and industrial customers, benefit indirectly from PGW's extensive low-income assistance programs.'" (internal note omitted).

Q. WHAT DO YOU CONCLUDE AS TO UNIVERSAL SERVICE COST ALLOCATION FOR UGI GAS?

A. Notwithstanding this willingness and ability to demonstrate the applicability of these previous PUC findings to UGI Utilities, for the reasons stated above, I do not present the issue of the allocation of universal service costs in this proceeding, but reserve this issue for a future proceeding.

Part 8. Proposed Increase to ROE Based on Management Excellence.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. UGI Gas requests that it be granted an additional equity return of 0.20% to reflect what it asserts is exemplary management. (UGI Gas St. 1, at 38 – 39). UGI witness Chris Brown asserts that this excellence is manifested in safety, community partnership, and the commitment to customer service. Based on my discussion below, I conclude that the recommendation of OCA witness David Garrett should be adopted with respect to this request for an additional return on equity.

Q. HAVE YOU REVIEWED CUSTOMER SATISFACTION AS IT RELATES TO UGI GAS?

A. Yes. UGI Gas ranks consistently toward the middle to bottom of customer satisfaction as reported by the Pennsylvania PUC. I reviewed the BCS 2020 "Customer Service

Performance Report."[25] I use this data because it is the data that the PUC has deemed appropriate as a basis upon which to review utility performance. My review of customer satisfaction finds that:

- UGI Gas tied with PGW as ranking last among Pennsylvania's natural gas utilities on customers who reported that call center representatives were "very knowledgeable." One-in-seven customers found UGI Gas representatives to be less than "very knowledgeable." Whether it is responding to a collection call, enrolling in a universal service program, or some other customer service issue, having very knowledgeable customer service representatives is key to good customer service.

- UGI Gas ranked next to last (ahead of only PGW) in customer satisfaction with the "overall quality of service" during a recent contact. Nearly one-in-five (18%) of customers reported being less than "very satisfied" during their recent contact.

- UGI Gas customers ranked the Company below the statewide average for customer satisfaction with respect to credit and collection calls. UGI Gas's ranking was higher than NFG, and tied with PGW, but otherwise lower than average.

- UGI ranked last among Pennsylvania natural gas utilities on overall customer satisfaction with the way a premise visit was handled. Even when considering those customers who were only "somewhat satisfied," UGI customers reported satisfaction with premise visits in only 87% of the cases.

- UGI ranked last among Pennsylvania natural gas utilities on satisfaction that premise visit work was "completed promptly." Even when including "somewhat satisfied," nearly one-in-five UGI Gas customers (17%) were less than satisfied that premise visit work was completed promptly.

[25] Available at https://www.puc.pa.gov/filing-resources/reports/customer-service-performance-reports/ (last accessed April 8, 20220.

A review of the customer service performance reveals that UGI Gas does not perform at the top of Pennsylvania utilities. Its customer satisfaction does not support an upward adjustment in the return on equity.

Q. HAVE YOU REVIEWED CUSTOMER SERVICE AS IT RELATES TO UGI GAS?

A. Yes. Using the same BCS annual report as I discussed immediately above, I find that UGI Gas had far more instances where it did not respond to a residential dispute within 30 days. In 2020, UGI Gas had 156 instances where it did not respond to a dispute within 30 days. The Company asserted that this was a result of COVID19 restrictions. However, the next highest gas utility (NFG) had only four (4) instances where it did not respond within 30 days. Moreover, 2018 data (before COVID-19), shows that the 298 instances where UGI Gas did not respond to a residential dispute within 30 days was highest among the natural gas utilities. The next highest was PGW, which had only 61 instances of not responding within 30 days.

In addition to the BCS Customer Service Performance Report, I reviewed the most recent "Quarterly Update to UCARE Report."[26] The fourth quarter update of each year includes January through December (i.e., complete year) data. The Fourth Quarter report for 2020 is the most recent Fourth Quarter report available. (The Fourth Quarter 2021 report is not yet available.) The Fourth Quarter (2020) UCARE report documents that:

[26] Available at https://www.puc.pa.gov/filing-resources/reports/consumer-activities-report-evaluation/ (last accessed April 8, 2021).

- In 2019 (with some utilities not reporting 2020 data), UGI Gas (including UGI Penn Natural) has more residential complaints which BCS found “needs more investigation” than any other natural gas utility other than PGW.

- In 2019, UGI Gas (including UGI Penn Natural) had more residential Payment Arrangement Requests (PARs) that BCS found “need further investigation” than any utility other than PGW.

- In 2020, UGI Gas had a higher percent of customer complaints that BCS found to be “justified” than any other gas utility other than PGW.

- In 2020, UGI Gas had a higher percent of PARs that BCS found to be “justified” than any other gas utility other than Peoples.

- In 2020, UGI had 19 “verified infractions,” higher than every other natural gas utility other than PGW. The next highest natural gas utility was Peoples, with two (2) verified infractions.

According to BCS, a “justified consumer complaint” is one where “prior to BCS intervention, the company did not comply with commissions Orders, policies, regulations, reports, Secretarial Letters, tariffs, or guidelines when the consumer brought the complaint to the company’s attention.” A “justified PAR” is one where “prior to BCS intervention, the company did not comply with Commission regulations, reports, Secretarial Letters, tariffs or guidelines.”

Q. HAVE YOU REVIEWED UNIVERSAL SERVICE ACTIVITIES AS THEY RELATE TO UGI GAS?

A. Yes. In reviewing universal service performance, I reviewed the most recent BCS annual report on Universal Service Programs and Credit and Collections. The 2020 annual report is the most recent report available. I have discussed this 2020 BCS report in a number of instances throughout my testimony. The 2020 BCS report documents that:

- UGI is tied with NFG as the gas utility with the second lowest percentage of Confirmed Low-Income customers (as a percentage of estimated low-income customers). Only PECO Gas has confirmed the low income status of a lower percentage of its estimated number of low-income customers.

- UGI South has the highest total percentage of Confirmed Low-Income customers in debt (37.4%), more than twice as high as the statewide average Confirmed Low-Income customers in debt (17.5%). UGI North has the third highest percentage (33.6%), just somewhat lower than NFG who has the second highest (35.6%).

- UGI South (24.8%) and UGI North (20.3%) have the highest and second highest percentage of billings in debt for Confirmed Low-Income customers. Both UGI utilities are at or near two times the statewide average percentage of Confirmed Low-Income billings in debt (statewide average is 11.0%). The next highest percentage after UGI North is NFG, at 14.6% of its Confirmed Low-Income billings in debt.

- UGI's poor collections performance achieved through its universal service programs occurs notwithstanding the fact that it spends more on total residential collection costs than any other Pennsylvania natural gas utility. The UGI Gas expenditure of $4,599,633 is higher than the next highest utility (Peoples: $3,240,421). In addition to spending more on total residential collections, UGI spends a higher percentage of its residential collection costs on its Confirmed Low-Income customers (48.1%). This percentage is 50% higher than the statewide average percentage of total collection costs devoted to Confirmed Low-Income customers (31.2%), and far higher than the utility that has the next highest percentage (NFG = 38.8%).

- UGI, by far, enrolls the lowest percentage of its Confirmed Low-Income customers in its CAP (17.8%). The UGI Gas percentage of CAP enrollees of Confirmed Low-Income customers is roughly half that of the Pennsylvania natural gas utilities statewide (32.8%) and noticeably lower than the gas utility with the next highest percentage (NFG: 20.7%). If UGI Gas were to be excluded from the calculation of the statewide average, the statewide average CAP enrollment of Confirmed Low-Income would be 36.0%.

In addition to these findings, I have explained in detail above my findings with respect to UGI Gas under-performance regarding three universal service Outcome Objectives.

Q. WHAT DO YOU CONCLUDE?

A. In my testimony above, I reviewed whether UGI Gas has engaged in exemplary management in the areas of customer satisfaction, customer service, and universal service. I conclude that UGI Gas, at best, under-performs relative to Pennsylvania's natural gas utilities rather than in an exemplary fashion. UGI Gas has not manifested any particular "excellence" in management that would support an upward adjustment in its return on equity.

Q. DOES THIS COMPLETE YOUR DIRECT TESTIMONY?

A. Yes, it does.

Appendix: Colton Abbreviated Vitae

Roger Colton
Fisher, Sheehan & Colton
Public Finance and General Economics
Belmont, MA
*** ***

EDUCATION:

J.D. (Order of the Coif), University of Florida (1981)

M.A. (Regulatory Economics), McGregor School, Antioch University (1993)

B.A. Iowa State University (1975) (journalism, political science, speech)

PROFESSIONAL EXPERIENCE:

Fisher, Sheehan and Colton, Public Finance and General Economics: 1985 - present.

As a co-founder of this economics consulting partnership, Colton provides services in a variety of areas, including: regulatory economics, poverty law and economics, public benefits, fair housing, community development, energy efficiency, utility law and economics (energy, telecommunications, water/sewer), government budgeting, and planning and zoning.

Colton has testified in state and federal courts in the United States and Canada, as well as before regulatory and legislative bodies in more than three dozen states. He is particularly noted for creative program design and implementation within tight budget constraints.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	
v.	Docket No. R-2021-3030218
UGI Utilities, Inc. – Gas Division	

REBUTTAL TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

May 17, 2022

Q. Please state your name and business address.

A. My name is David J. Garrett. My business address is 101 Park Avenue, Suite 1125, Oklahoma Company, Oklahoma 73102.

Q. By whom are you employed and in what capacity?

A. I am the managing member of Resolve Utility Consulting, LLC. I am an independent consultant specializing in public utility regulation.

Q. Did you file direct testimony in this proceeding?

A. Yes. I filed direct testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"), in which I addressed the estimated cost of capital and awarded rate of return recommendation for UGI Utilities, Inc. – Gas Division ("UGI" or the "Company") in response to Company witness Paul R. Moul.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony addresses the cost of equity estimates and authorized return on equity ("ROE") recommendation of Anthony Spadaccio, who testified on behalf of the Bureau of Investigation & Enforcement ("I&E").

Q. What issues are you responding to?

A. Specifically, I will address Mr. Spadaccio's growth rate inputs used in his Discounted Cash Flow ("DCF") Model and the Equity Risk Premium ("ERP") input used in his Capital Asset Pricing Model ("CAPM"). To the extent I do not specifically address an issue raised in Mr. Spadaccio's testimony, it does not constitute my agreement with such issue.

Q. Please summarize Mr. Spadaccio's authorized ROE recommendation and compare it with your recommendation.

A. Mr. Spadaccio proposes an authorized ROE of 9.92% for UGI,[1] which is notably higher than my proposed ROE of 8.5%.

Q. Please summarize the results of Mr. Spadaccio's DCF Model.

A. Mr. Spadaccio's DCF cost of equity estimate is 9.92%, which equates to his overall ROE recommendation.[2] In contrast, my DCF cost of equity estimate for UGI is 6.7%.

Q. Do you agree with the results of Mr. Spadaccio's DCF Model?

A. No. A cost of equity estimate over 9% for UGI is unreasonably high under current market conditions. The results of Mr. Spadaccio's DCF Model are unreasonably high due to his assumptions about long-term growth. As discussed in my direct testimony, the growth rate input is the most important input in the DCF Model. Mr. Spadaccio relied on short-term growth rate inputs for the long-term growth rate input in his DCF Model, which has resulted in unsustainable long-term growth rate estimates.[3] Specifically, he relied on five-year growth rate projections.[4] Furthermore, his growth rate projections are as high as 10.5%,[5] which is more than twice as high as projected U.S. GDP growth (about 3.8%).[6] Even Mr. Spadaccio's average long-term growth rate input of 6.53% is not sustainable for the same reason.

---

[1] Direct Testimony of Anthony Spadaccio, p. 5.

[2] *Id*. at p. 22.

[3] The concern over the use of short-term growth rates is discussed in detail in my direct testimony at pp. 30-42.

[4] *Id*. at p. 21, lines 5-8.

[5] I&E Exh. No. 2, Sch. 5.

[6] Exhibit DJG-5.

In my opinion, there are several problems with using analysts' growth rates in the DCF to measure utility cost of equity. First, analysts' growth rates are short-term growth rates. A company might be able to increase earnings by 10% each year for the next several years, but it is essentially impossible to do that year after year for decades into the future. Furthermore, even if a utility could maintain a 10% annual growth in earnings (presumably due to excessive, regular rate increases), we have a circular reference problem to the extent the regulator is relying on the growth rates they helped produced (and that would be noted by the commercial analyst) to measure a metric (the ROE) that will in turn have a heavy influence on earnings. For these reasons, it is reasonable to look at GDP as a constraint on long-term growth, and it is a factor that avoids the circular reference problem of short-term analysts' growth rates.

Q. Are there other reasons why GDP should be viewed as a limiting factor on long-term growth for individual companies?

A. Yes. It is a fundamental concept that no company’s earnings can grow at a greater rate than the economy in which it operates. If this were not true, then the earnings of a particular company could eventually exceed GDP, which is not a reasonable assumption. As stated by Dr. Damodaran: “[i]f a firm is a purely domestic company, either because of internal constraints . . . or external constraints (such as those imposed by a government), the growth rate in the domestic economy will be the limiting value.”[7] Thus, Mr. Spadaccio’s short-term growth rate inputs are unreasonably high, which results in a DCF cost of equity estimate that is also unreasonably high.

---

[7] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 306 (3rd ed., John Wiley & Sons, Inc. 2012).

Q. Please summarize the results of Mr. Spadaccio's CAPM.

A. Mr. Spadaccio's CAPM produced a cost of equity estimate of 12.13%.[8] This result is considerably higher than my CAPM cost of equity estimate of 7.2%.

Q. Do you agree with the results of Mr. Spadaccio's CAPM?

A. No. A cost of equity estimate over 12% is unreasonably high for UGI. Mr. Spadaccio's CAPM is overestimated primarily due to his assumed ERP. The ERP is arguably the single most important metric used by financial analysts to assess market risk and cost of equity. The ERP is essentially the level of return investors expect above the risk-free rate in exchange for investing in risky securities; it is the required return on the entire equity market, minus the risk-free rate. Mr. Spadaccio estimates an ERP of 11.64%, which includes an expected return on the overall market of 13.99%.[9]

Q. How does Mr. Spadaccio's ERP estimate compare with your ERP estimate and the estimate of other experts?

A. As discussed in my testimony, I considered the ERP reported in expert surveys, the ERP estimated by Duff & Phelps, the ERP estimated by Dr. Damodaran, and my own ERP estimate in determining a reasonable ERP input for my CAPM. The results are presented in the following figure:

---

[8] Direct Testimony of Anthony Spadaccio, p. 25.

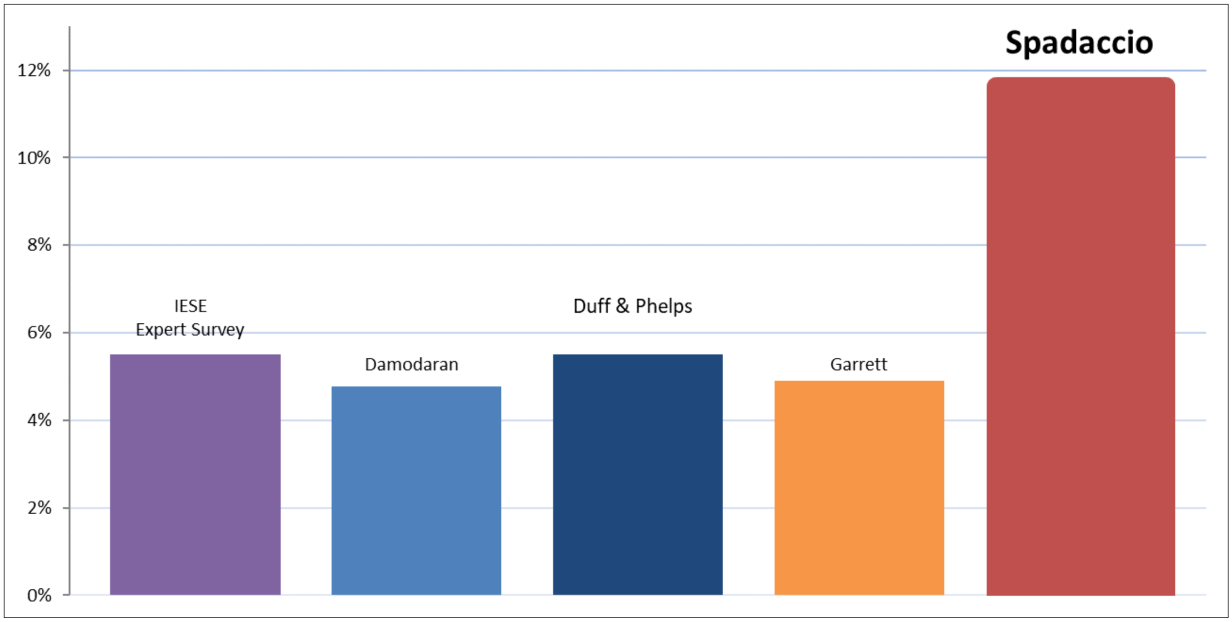
[9] *Id*.

Figure 1:
Equity Risk Premium Results

IESE Business School Survey	5.5%
Duff & Phelps Report	5.5%
Damodaran (average)	4.8%
Garrett	4.9%
Average	**5.2%**
Highest	**5.5%**

While it would be arguably reasonable to select any one of these ERP estimates to use in the CAPM, to be conservative, I selected the highest ERP estimate of 5.5% to use in my CAPM analysis. This means Mr. Spadaccio used an ERP that is more than twice as high as the highest ERP shown in this figure. The chart in the following figure illustrates that Mr. Spadaccio's ERP estimate is far out of line with other reasonable, objective estimates for the ERP.

Figure 2:
Equity Risk Premium Comparison



Because Mr. Spadaccio used an unreasonably high estimate for the ERP, his CAPM cost of equity estimate is overstated.

Q. Does this conclude your rebuttal testimony?

A. Yes.

REBUTTAL TESTIMONY OF

JEROME D. MIERZWA

ON BEHALF OF THE
PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

May 17, 2022

EXETER
ASSOCIATES, INC.
10480 Little Patuxent Parkway, Suite 300
Columbia, Maryland 21044

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Jerome D. Mierzwa. I am a Principal and Vice President of Exeter Associates, Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044. Exeter specializes in providing public utility-related consulting services.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony was submitted as OCA Statement 3 on April 20, 2022.

Q. WHA IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to respond to the cost allocation and rate design direct testimony of Ethan H. Cline submitted on behalf of the Bureau of Investigation and Enforcement ("I&E"), and Robert E. Knecht submitted on behalf of the Office of Small Business Advocate ("OSBA").

II. I&E WITNESS CLINE

Q. WHAT DID MR. CLINE RECOMMEND WITH RESPECT TO THE ALLOCATION OF THE RATE INCREASE TO EACH CUSTOMER CLASS IF THE COMMISSION GRANTS UGI GAS A RATE INCREASE THAT IS LESS THAN THE INCREASE REQUESTED BY UGI GAS?

A. Mr. Cline recommends that if the Commission grants UGI Utilities, Inc. – Gas Division ("UGI Gas" or "Company") a rate increase that is less than the increase initially requested by the Company, the allocation of the rate increase initially proposed by UGI

Gas for each class be proportionately scaled back to produce the revenue requirement authorized by the Commission.[1]

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. No. The allocation of the rate increase to each customer class initially proposed by UGI Gas was based on the class cost-of-service study sponsored by UGI Gas. That cost-of-service study was prepared utilizing the Average & Excess ("A&E") method. As explained in my direct testimony and further explained in my subsequent response to OSBA witness Mr. Knecht, the A&E method produces study results that do not reasonably or responsibly allocate class costs of service.[2] The Peak & Average ("P&A") Study represented in my direct testimony reflects an allocation of costs consistent with Commission precedent and cost-of-service principles, and corrects other cost misallocations in the Company's study. Thus, a simple scale back – as proposed by I&E witness Cline -- is insufficient. Rather, the allocation of the revenue increase to each customer class should be guided by the results of the P&A Study. In my direct testimony I present such an allocation of the revenue increase initially requested by UGI Gas, and consistent with the recommendation in my direct testimony, those allocations should be proportionately scaled back to produce the revenue requirement authorized by the Commission.

III. <u>OSBA WITNESS KNECHT</u>

Q. IN HIS DIRECT TESTIMONY, MR. KNECHT DISCUSSES THREE COMMON METHODS TYPICALLY UTILIZED IN PENNSYLVANIA TO ALLOCATE MAINS COSTS IN A COST-OF-SERVICE STUDY WHICH

[1] See, I&E St. 4 at 27.
[2] See, OCA St. 3 at 22-23.

HE IDENTIFIES AS ALLOCATIONS BASED ON PEAK DEMAND, P&A DEMAND, AND A&E DEMAND. WHAT IS MR. KNECHT'S ASSESSMENT OF THE P&A METHOD?

A. Mr. Knecht correctly notes that, under the P&A method, mains costs are allocated based on a weighted mix of design day and average day demands.[3] However, he claims that the P&A approach is conceptually flawed because no mains cost are caused by average day demands, and if mains were sized to meet average day demands, gas customers would be without heat on the coldest days of the winter. He contends that a main sized to meet a demand of 100 Mcf per day costs the same whether that main is used to deliver 100 Mcf per day on every day of the year, or if that main only averages 20 Mcf per day over the course of the year.

Q. IS MR. KNECHT CORRECT THAT MAINS COSTS ARE NOT CAUSED BY AVERAGE DAY DEMANDS?

A. No. As explained in my direct testimony, with the exception of mains extensions up to 150 feet which is a recently adopted policy, and as set forth in Item 5 of the Rules and Regulations of the Company's tariff, anticipated annual customer usage, or average day demands, and the associated annual revenues, are the primary factor influencing UGI Gas' decisions to extend mains and make the associated investment to connect new customers to its distributions system.[4] Without sufficient annual gas usage over which to amortize the annual costs of providing service, there would be no UGI Gas distribution system. While UGI Gas may incur additional mains investment costs to meet demands in excess of average demands, those cost are significantly less than the costs of meeting annual demands. As demonstrated in my direct testimony, based on

[3] See, OSBA St. 1 at 8.
[4] See, OCA St. 3 at 16.

UGI Gas' actual main investment costs, meeting demands in excess of average demands can be accommodated at increased distribution mains costs that are approximately 10 percent of the costs of meeting average demands.[5]

Q. DOES MR. KNECHT CLAIM THAT THE COMMISSION HAS A STANDARD POLICY CONCERNING THE ALLOCATION OF MAINS COSTS?

A. No. Mr. Knecht claims that the Commission has indicated that it does not have a standard policy regarding the allocation of mains costs, and that the Commission intends to evaluate the issue on a case-by-case basis.[6] He notes that in 2021, the Commission approved the use of both the P&A and A&E methods. Mr. Knecht further notes that in the 2021 PECO Energy Company ("PECO") proceeding in which the Commission approved the use of the A&E method, the Commission "concluded that the excess demand component of PECO's distribution mains system garners considerable weight in the balance of mains costs."[7]

Q. WHAT IS YOUR RESPONSE TO THE COMMISSION'S FINDINGS IN THE PECO PROCEEDING WITH RESPECT TO THIS PROCEEDING?

A. As just explained, in this proceeding, I have demonstrated that on the UGI Gas system, meeting demands in excess of average demands can be accommodated at increased distribution mains costs that are approximately 10 percent of the costs of meeting average demands. Nevertheless, in the P&A cost-of-service study I present in this preceding, I have allocated 50% of mains costs based on peak demands. Therefore, I

[5] See, OCA St. 3 at 21-22.
[6] See, OSBA St. 1 at 8-9.
[7] Non-Proprietary Version, Opinions and Order, Docket No. R-2020-3018929, Order Entered June 22, 2021 ("PECO Order"), at 229.

have given considerable weight to the peak demand component of UGI Gas' distribution system.

Q. IN THE PECO PROCEEDING DISCUSSED BY MR. KNECHT, THE COMMISSION WAS PERSUADED BY PECO'S ARGUMENT THAT THE P&A METHOD IMPLICITLY DOUBLE COUNTS AVERAGE DEMANDS. PLEASE EXPLAIN THIS ARGUMENT.

A. P&A method uses a weighting 50% for the full peak demand which has a component of average daily usage (peak demand = average daily usage + excess demand), and a weighting of 50% on average daily usage. It has been argued that this method has the effect of weighting the average usage twice, once in the peak demand and once in average daily usage.

Q. WHAT IS YOUR RESPONSE TO THE DOUBLE COUNT CLAIM?

A. The double count claim is incorrect and misleading. Consider the following example. Customer A, a Residential customer, has a peak demand of 10 Mcf and an average demand of 4 Mcf. Customer B, an industrial customer, also has a peak demand of 10 Mcf, but an average demand of 8 Mcf. Under the P&A method, each customer would be allocated 50 percent of peak demand-related mains costs, as each customer's peak demand represents 50 percent of the total peak demand of 20 Mcf. Customer A would be allocated 33.3 percent (4/(4 + 8)) of annual demand-related mains costs and Customer B would be allocated 66.7 percent (8/(4 + 8)) of annual demand-related mains costs. Now assume the average demand of Customer A increases to 6. Under the P&A method, each customer would continue to be allocated 50 percent of peak demand-related mains costs, but the allocation of annual demand-related mains costs to Customer A would increase. The change in annual demand of Customer A has no effect on the allocation of peak demand-related costs and, therefore, there is no double-counting of annual usage.

Another way to demonstrate that the P&A method does not double-count annual demands is as follows. The allocation of the annual component of mains under the P&A method reflects average usage over a 365-day period. The peak day used to allocate the peak component of mains is theoretically supposed to reflect usage on one day during the year. To eliminate the alleged double-count, the annual average component of mains can be allocated based on average daily usage over a 364-day period. That is, the annual allocation would reflect average usage on every day except the peak day. Of course, a calculation of average daily use over a 364-day period will differ little from that computed over a 365-day period, so this hypothetical flaw in the P&A method would have no material impact on the cost of service study results.

Q. DID MR. KNECHT PROPOSE ANY CHANGES TO THE COMPANY'S PROPOSED ALLOCATION OF THE REVENUE INCREASE TO THE VARIOUS CUSTOMER CLASSES?

A. Mr. Knecht proposed two changes to the revenue allocation presented by the Company. First, he recommends that Rate XD and Rate IS not be assigned rate decreases. Second, he proposes decreasing the rate increase assigned to Rate N/NT and Rate LFD, and increasing the rate increase assigned to Rate R/RT and Rate DS.

Q. DO YOU AGREE WITH THE CUSTOMER CLASS REVENUE ALLOCATION MODIFICATIONS PROPOSED BY MR. KNECHT?

A. To some extent. I agree with Mr. Knecht that no customer class should receive a rate decrease. However, Mr. Knecht's proposed revenue allocation is based on the results of the Company's A&E cost of service study. As previously explained, the A&E

method produces results that do not reasonably reveal an accurate indication of class allocated cost responsibility and, therefore, Mr. Knecht's proposed revenue allocation should be rejected. I would note, however, that like Mr. Knecht, under my proposed revenue allocation, the increase to Rate N/NT has been reduced from that proposed by the Company, and the increase to Rate DS has been increased.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
v.	:	Docket No. R-2021-3030218
UGI Utilities – Gas Division	:	

Rebuttal Testimony of
Roger D. Colton

On Behalf of:
Office of Consumer Advocate
Statement 4R

May 17, 2022

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger Colton. My address is 34 Warwick Road, Belmont, MA.

Q. ARE YOU THE SAME ROGER COLTON WHO PREVIOUSLY PREPARED DIRECT TESTIMONY ON BEHALF OF THE OFFICE OF CONSUMER ADVOCATE IN THIS PROCEEDING?

A. Yes.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR REBUTTAL TESTIMONY.

A. In my Rebuttal Testimony, I respond to the Consumer Input Hearing testimony of two different public witnesses: (1) Lisa Musser (April 13, 2022 1:05 p.m. public input hearing, at Tr. 22 – 25); and (2) Ruth Weaver (April 13, 2022 1:05 p.m. public input hearing, at Tr. 46 – 47). I limit my response to statements of fact provided by each public input witness, rather than responding to expressions of opinion.

Q. WHAT PUBLIC HEARING TESTIMONY OF MS. MUSSER DO YOU WISH TO RESPOND TO?

A. Ms. Musser expressed concerns about the affordability of UGI bills to her family. She further expressed concerns about her family's inability to control its bills through concerted efforts to reduce usage. According to Ms. Musser:

> In January of 2021, my family used 254 CCF and our bill was $231. In January of this year, we turned down the heat and we used 218 CCF, and our bill was $263. So, we used 36 less CCF, but our bill was $32 more than the previous year. In March of '21, my family used 286 CCF and the bill was $264. This year, we used 232 CCF due to turning the heat down often and our bill was $279. So this March, we froze to lower our bill, used 54 less CCF than [last] year, and our bill was ten more dollars. I

> cannot imagine what our bill would have been if we didn't freeze half the winter. How would we have afforded to pay it? I am constantly chasing after my children saying things like put your slippers back on, go get socks on your feet, put a hoodie on, it's not that cold in here and go grab a blanket. I cannot imagine what it is doing to people in our community who live in poverty.

(04-13-22 PIH Tr., at 23 – 24).

Q. WHAT IS YOUR RESPONSE TO MS. MUSSER'S PUBLIC HEARING TESTIMONY?

A. Ms. Musser's testimony affirms and expands upon the information I provided in my Direct Testimony through her direct, personal experience. My Direct Testimony stated in relevant part that one problem with the UGI Gas proposed rate hike "is associated with the increased fixed monthly customer charge. The increased customer charge is an unavoidable fixed monthly fee. Even if low-income customers could reduce their usage, they would not be able to avoid any part of the proposed increase in the fixed monthly customer charge." (OCA St. 4, at 10). Ms. Musser explains in compelling detail, based on her personal experience, the accuracy of that observation. She explained how her family decreased usage, and yet her bill increased. She explained how her family decreased usage at considerable sacrifice to the family, and yet her bill for that decreased consumption increased. As she testified, "I cannot imagine what our bill would have been if we didn't freeze half the winter." (04-13-22 PIH Tr., at 24).

The payment difficulties identified in Ms. Musser's testimony should not be ignored. In the Fall of 2021, the U.S. Department of Energy (DOE) released its October 2021 "Short Term Energy Outlook." That October 2021 price projection stated in relevant part:[1]

> As we head into the winter of 2021–22, retail prices for energy are at or near multiyear highs in the United States. The high prices follow changes to energy supply and demand patterns in response to the COVID-19 pandemic. We expect that households across the United States will spend more on energy this winter compared with the past several winters because of these higher energy prices and because we assume a slightly colder winter than last year in much of the United States.
>
> Even when we vary weather expectations, we expect the increase in energy prices as the United States returns to economic growth to mean higher residential energy bills this winter:
>
> - We expect that the nearly half of U.S. households that heat primarily with natural gas will spend 30% more than they spent last winter on average—50% more if the winter is 10% colder-than-average and 22% more if the winter is 10% warmer-than-average."

Even though the Short Term Energy Outlook projected an increase in natural gas heating costs of between 30% and 50% for the winter of 2021 – 2022, many, if not most, analysts expected that fly-up in price to be a short-term anomaly. However, as we now know, with turmoil in world commodity markets, inflation, and war in Europe all driving higher consumer prices, energy prices are still increasing. Ms. Musser's concerns about the impact of adding an increase in distribution rates on top of these other price increases are well-founded.

Yet, while affirming my Direct Testimony, Ms. Musser's testimony also expanded upon my Direct Testimony. My Direct Testimony regarding the adverse impacts on "low-

[1] Available at: https://www.eia.gov/outlooks/steo/report/WinterFuels.php (last accessed May 9, 2022).

income" customers was directed toward customers with income sufficiently low that they might qualify for either CAP or LIHEAP. In contrast, Ms. Musser's testimony demonstrates how the concerns I express are applicable to those households who may have income sufficiently high to be no longer income-eligible for universal service programs such as CAP and LIHEAP, but is sufficiently low to be unable to afford their UGI Gas bill. Ms. Musser testified that "Those of us who don't qualify for LIHEAP should be able to by state standards afford our heating bills, but that is slowly becoming not the case with every increase that UGI requests." (Id., at 23). Referring to herself as "those of us who don't qualify for LIHEAP" indicates that the concern about unaffordability, as well as the concerns about the inability to reduce bills by reducing consumption, is not limited merely to those who fall below income-eligibility guidelines for programs such as CAP and LIHEAP. There is yet another population of families who face payment difficulties, and yet who do not qualify for assistance.

Q. WHAT PUBLIC HEARING TESTIMONY OF MS. WEAVER DO YOU WISH TO RESPOND TO?

A. Ms. Weaver expressed concern about the opportunities that are available to her to improve the affordability of her UGI Gas bill. According to Ms. Weaver's public hearing testimony:

> My complaint today is the weather normalization program UGI wants to implement. UGI offers a budget for those who choose to normalize their expenses. This program only benefits UGI by forcing me to pay more in the summer so their income is more equal year round.
>
> I do not want this program for the following reasons. My electric bills are higher in the summer. My lawn, garden and home maintenance expenses are higher in the summer. I do more in the summer which increases my expenses. School taxes are

> due in the summer. By forcing me in this program, you are taking away the extra money I have in the summer to do the things that I want and need to do.
>
> As a senior citizen I only get so much money per month and need to make it last. I can't ask the government to pay me more in the winter to put aside for the summer months when my expenses are higher.

(04-13-22 PIH Tr., at 46 – 47).

Q. WHAT IS YOUR RESPONSE TO MS. WEAVER'S PUBLIC HEARING TESTIMONY?

A. Ms. Weaver's testimony not only supports my Direct Testimony regarding the unreasonable impacts of the proposed increase in the fixed monthly customer charge, but also expands its reach.

In my Direct Testimony, I explain why, given that UGI Gas enrolls only 14% of its income-eligible population in CAP, "[W]e can deduce that at least 86% of UGI's estimated low-income customers are not paying a percentage of income-based CAP bill and, thus, are not insulated from the effects of the proposed increase in UGI's fixed monthly customer charge." (OCA St. 4, at 8). In contrast, Ms. Weaver identifies another population of customers with an inability to pay who "are not insulated from the effects of the proposed increase in UGI's fixed monthly customer charge." When asked by UGI Gas counsel, "Ms. Weaver, would you be all right if someone from the company reached out to you to see if you would qualify for any of the customer assistance programs," Ms. Weaver responded, "I'm not eligible." (04-13-22 PIH Tr., at 48).

In contrast, Ms. Weaver's testimony buttresses my Direct Testimony because she makes clear that her family's inability-to-pay involves no choice on her part. Rather, even though having income sufficiently high that she is "not eligible" for programs such as LIHEAP and CAP, she provides a detailed explanation, based on personal experience, of how she has an absolute mismatch between household income and her UGI Gas bill. The question to Ms. Weaver is not one of receiving a UGI Gas bill and making a payment, but rather a question of which bill gets paid this month.

As with the testimony of Ms. Musser, the testimony of Ms. Weaver identifies a population of customers who are not eligible for energy assistance programs such as LIHEAP or CAP, but who nonetheless have insufficient household resources to be able to pay their UGI Gas bills, even without any increase in the irreducible portion of the bill attributable to an increase in the fixed monthly customer charge. To customers such as Ms. Musser, the question is not one of levelizing her monthly bills. She states quite explicitly that "My electric bills are higher in the summer. My lawn, garden and home maintenance expenses are higher in the summer. I do more in the summer which increases my expenses. School taxes are due in the summer. By forcing me in this program, you are taking away the extra money I have in the summer to do the things that I want and need to do." (04-13-22 PIH Tr., at 48).

Q. DO YOU HAVE ANY CONCLUDING REMARKS ABOUT THE PUBLIC INPUT TESTIMONY OF MS. WEAVER AND MS. MUSSER?

A. Yes. Everything that both Ms. Weaver and Ms. Musser say about their difficulties as families with income that are sufficiently high to not qualify them for LIHEAP or CAP would be equally applicable to households with even lower incomes who *do* qualify for LIHEAP and CAP. Ms. Weaver's testimony, along with Ms. Musser's testimony, provide compelling personal real-life examples of the need for the Commission to adopt each recommendation set forth in my Direct Testimony.

Q. DOES THIS COMPLETE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

SURREBUTTAL TESTIMONY OF

DANTE MUGRACE

ON BEHALF OF THE

PENNSYLVANIA

OFFICE OF CONSUMER ADVOCATE

<u>HIGHLY CONFIDENTIAL VERSION</u>

May 27, 2022

TABLE OF CONTENTS

I. PURPOSE OF SURREBUTTAL TESTIMONY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dante Mugrace. My business address is 22 Brooks Avenue, Gaithersburg, MD 20877.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS DOCKET?

A. Yes. I submitted Direct Testimony on April 20, 2022, which was marked as OCA Statement 1. My qualifications and experience are attached to my Direct Testimony.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my Surrebuttal Testimony is to address the Rebuttal Testimonies of Company witnesses Hazenstab (UGI Statement No. 2-R), Ressler (UGI Statement No. 3-R), Schappell (UGI Statement No. 5-R) and Angstadt Statement No. 9-R. I am also making certain adjustments to proposals in my testimony and a revised calculation of the Company's revenue requirement that incorporates the effects of my adjustments. I've also updated the Company's adjustments to certain of its revenue requirement schedules, as noted in the Company's UGI Gas Exhibit A FPFTY Rebuttal. To the extent that I do not respond to or address a particular issue or argument, I defer to my Direct Testimony on those issues.

Q. HAS THE COMPANY MADE ADJUSTMENTS TO ITS AS FILED PETITION WITH RESPECT TO ITS PROPOSED REVENUE REQUIREMENT?

A. Yes. As stated by Mr. Brown (UGI Statement No. 1-R), inflationary increases and other economic factors impacted the Company's operations as well as increased contractors' costs that resulted in an updated revenue requirement adjustment of $7.1 million (UGI Statement No. 1-R at 4). The overall effect of the updates and corrections to the Company's claim is that the Company has allegedly supported a revenue increase of $87,619,000 as compared to the as-filed claim of $82,742,000 using the Company's proposed capital structure, revised weighted average cost of debt and proposed return on equity of 11.20%. (UGI Statement No. 3-R at 6).

Q. WITH YOUR ADJUSTMENTS TO YOUR DIRECT TESTIMONY, WHAT IS YOUR REVISED COMPANY REVENUE REQUIREMENT?

A. With my revised adjustments, I have calculated a revenue requirement decrease of $24,754,635. This includes OCA Witness Mr. Garrett's overall rate of return of 6.24% which includes a common equity cost rate component of 8.50%.

II. REVENUE REQUIREMENT ISSUES

A. Rate Base Issues

1. Utility Plant In Service (UPIS)

Q. WHAT IS THE COMPANY'S POSITION REGARDING YOUR ADJUSTMENTS TO ITS UTILITY PLANT IN SERVICE?

A. Ms. Schappell did not agree with my adjustments related to the Company's Plant in Service Adjustment that were projected for the FTY and the FPFTY. (UGI Statement No. 5-R at 2). Ms. Schappell did not agree with my adjustment in removing plant in service totaling $85,681,967 (decrease for the FTY of $27,785,189 and a decrease for the FPFTY of $57,896,778). Ms. Schappell stated that I incorrectly identified the FPFTY period as ending in December 31, 2023, when it should have been September 30, 2023. (Id. at 3). Ms. Schappell stated that I was correct in part that the projects listed in my direct testimony will be placed in service after the end of the FPFTY. (Id.). Ms. Schappell stated that I misunderstood the Company's response to I&E RE-RB-4-D and that all of these budgeted projects for the FTY and the FPFTY were already excluded from the projected plant in service. The $85,681,967 that I recommended should be excluded is not appropriate as they were never included in the Company's filed claim. (UGI Statement No. 5-R at 3). Ms. Schappell stated that the Company reduced its plant in service balance by $700,846 as the Company inadvertently included some of these post-FPFTY projects. (Id. at 5).

Q. WHAT IS YOUR RESPONSE?

A. I did err in stating that the FPFTY period was December 31, 2023, it should have been September 30, 2023, however, this has no effect on my recommended adjustment balance for the FTY and the FPFTY period. I reviewed Ms. Schappell's Confidential UGI Gas

Exhibit VAS-1R in which Ms. Schappell demonstrated that the projects I excluded in the amount of $85,681,967 were already excluded. I did see where the Company made adjustments to record the plant additions claimed to not be included in Company Exhibit VAS-1R, In reviewing the Confidential response to I&E RB-4-D Supplemental the Company recorded **(BEGIN CONFIDENTIAL)** $452,496,0338 of FY 2022 Capital Budget additions and a net balance of $397,703,948 **(END CONFIDENTIAL)** which matches the Company's Schedule C-2. (UGI Gas Exhibit A FPFTY Rebuttal). The Company recorded **(BEGIN CONFIDENTIAL)** $469,839,637 of FY 2023 Capital Budget additions and a net balance of $476,426,821 **(END CONFIDENTIAL)** which matches the Company's Schedule C-2, (UGI Gas Exhibit A FPFTY Rebuttal). [1] The information provided by Ms. Schappell in UGI Confidential VAS-1R was not part of the discovery in response to I&E RB-4-D. In reviewing UGI Confidential VAS-1R, I was able to trace and track the approximate $85,681,000 of plant adjustments that the Company excluded from its capital budget projection. In sum, I am accepting the Company's response and information submitted with respect to the $85,681,967 of plant additions that were already excluded from the Company's plant in service balance.

2. Accumulated Depreciation

Q. WHAT DID MS. RESSLER STATE WITH RESPECT TO YOUR ADJUSTMENTS TO ACCUMULATED DEPRECIATION?

A. Ms. Ressler did not agree with my adjustments to the Company's Accumulated Depreciation Balance as she disagreed with my adjustments to the Company's Gas Plant in Service Balance. (Statement No. 3-R at 5).

Q. WHAT IS YOUR RESPONSE?

A. Given that I am accepting the Company's response to the $85,681,967 of plant additions, I am accepting the Company's balance to its Accumulated Depreciation. The Company

[1] Any differences are due to rounding.

has adjusted its Accumulated Depreciation by reducing it by $480,933 to reflect its updated adjustment to plant in service. (Statement No. 3-R at 5).

3. Accumulated Deferred Income Taxes

Q. WHAT DID MS. RESSLER STTE WITH RESPECT TO YOUR ADJUSTMENTS TO THE ACCUMULATED DEFERRED INCOME TAXES?

A. Ms. Ressler did not agree with my adjustments to the Company's Accumulated Deferred Income Taxes as she explained with her disagreements related to Accumulated Depreciation. (Statement No. 3-R at 6).

Q. WHAT IS YOUR RESPONSE?

A. Given that I am accepting the Company's claim on its Gas Plant In Service balance, specifically the plant additions for FY 2022 and FY 2023, I am recommending acceptance of the Company's Accumulated Deferred Income Taxes. The Company has adjusted its Accumulated Depreciation by reducing it by $85,000 to reflect its updated adjustment to plant in service. (Statement No. 3-R at 6).

4. Cash Working Capital

Q. WHAT DID MS. HAZENSTAB STATE REGARDING YOUR ADJUSTMENT TO THE COMPANY'S CASH WORKING CAPITAL?

A. Ms. Hazenstab stated that she did not agree with my adjustments to the extent that these adjustments relate to underlying expense or tax adjustments. (Statement No. 2-R at 17). Ms. Hazenstab stated that my Cash Working Capital adjustments are based solely on my recommended expense adjustments O&M expenses and payroll expense adjustments, the interest payments components to net plant in service, and the overall impact of all adjustments and a reduced revenue requirement which reduces income taxes. (Statement No. 2-R at 18-19).

Q. WHAT IS YOUR RESPONSE?

A. Ms. Hazenstab's statements regarding my adjustments to certain O&M expenses, payroll expenses, interest payments and the effect of a lower revenue requirement are correct. My

Cash Working Capital balance reflects all my adjustments to the Company's revenue requirement proposal, and those flow-through adjustments reflect the balance that I am recommending. I don't believe we are in disagreement with the methodology used to compute the Cash Working Capital, just the adjustments to the calculation of the overall balance.

B. OPERATING INCOME

1. Operating Revenues – Forfeited Discounts, Miscellaneous Revenues and Rent from Gas Properties

Q. WHAT HAS THE COMPANY STATED REGARDING YOUR ADJUSTMENT TO OPERATING REVENUE – FORFEITED DISCOUNTS, MISCELLANEOUS REVENUES AND RENT FROM PROPERTIES?

A. Ms. Hazenstab did not agree with my normalized three-year period adjustment for these Operating Revenues categories. (Statement No. 2-R at 7). Ms. Hazenstab stated that I showed a total balance in the FTY of $19,181,000 in my direct testimony but my revenue adjustment on my schedules total $10,181,000. (Statement No. 2-R at 7). Ms. Hazenstab stated that based upon monthly three-year averages of historical data for each revenue category that the Company prepared in its FTY and FPFTY revenue projections, the additional averaging of revenue is unnecessary. Ms. Hazenstab stated that my adjustments did not remove the Company's share of off-system sales (Statement No. 2-R at 8).

Q. WHAT IS YOUR RESPONSE?

A. I note that I did err in my direct testimony related to the total balance of $19,181,000 but included $10,181,000 in my schedules. This did not affect my revenue requirement calculation. I reviewed the responses to I&E RS-25, 26 and 27 and, based upon the responses, I am accepting the Company's position that these costs have been developed based upon monthly three-year averages of historical data for each revenue category. Therefore, I am accepting the Company's balances for these Operating Revenues categories. My adjustment is shown on my Schedule SR-DM-4.

2. OPERATION AND MAINTENANCE EXPENSES

a. Payroll Expense/Payroll Taxes/Vacancy Rate

Q. WHAT DID MS. HAZENSTAB STATE REGARDING YOUR ADJUSTMENTS TO PAYROLL EXPENSE?

A. Ms. Hazenstab agreed with my adjustment of $779,368 to payroll expense related to the exclusion of 17 open positions related to replacement for which candidates have yet been identified. (Statement No. 2-R at 13).

Q. WHAT IS YOUR RESPONSE?

A. Given that the Ms. Hazenstab has accepted my adjustments related to these 17 open positions, I have not further adjustments related to Payroll Expense. My adjustment is shown on my Schedule SR-DM-4 and 11.

Q. WHAT DID THE COMPANY STATED REGARDING YOUR ADJUSTMENT TO PAYROLL TAXES?

A. Ms. Hazanstab stated that she agreed with my adjustment to Payroll Taxes related to the reduction of the payroll expense of $779,000 for the exclusion of the 17 open positions but disagrees with my Payroll Tax adjustment for Incentive Compensation. (Statement No. 2-R at 15). Ms. Hazenstab referred to the rebuttal testimony of Ms. Ressler (Statement No. 3-R) for her disagreements, which I will address under the Incentive and Stock Compensation section of my surrebuttal.

b. Incentive Compensation Expense/Stock Compensation

Q. WHAT DID COMPANY WITNESS MS. RESSLER STATE REGARDING YOUR ADJUSTMENTS TO INCENTIVE COMPENSATION EXPENSE?

A. Ms. Ressler stated that she did not agree with my disallowance to recover the Company's incentive compensation programs. Ms. Ressler stated that the Company's incentive compensation is a component of its overall compensation program designed by management to offer a competitive package to attract and retain qualified employees. If the Company were to eliminate incentive compensation, it would need to increase another component of compensation in order to remain competitive in the employment market. (Statement No. 3-R at 22). Ms. Ressler stated that I incorrectly assumed that the

Company's O&M Expense claim included incentive compensation associated with the UNITE management incentive plan. (Statement No. 3-R at 22). Ms. Ressler stated that in response to I&E discovery requests as CONFIDENTIAL Attachments I&E RE-17.3 and I&E RE-17.4 which describe the Company's UNITE Project Milestone Incentive Plan, I argued that the incentive compensation costs contemplated by this plan are not included in the incentive compensation costs but subsequently recommended that the UNITE Management Incentive Plan budgeted amount of **(BEGIN CONFIDENTIAL)** $2,603,000 be disallowed **(END CONFIDENTIAL).**

Q. WHAT IS YOUR RESPONSE?

A. Ms. Ressler is correct that I stated that the UNITE Initiative does not include expenses related to incentive compensation. (OCA Statement No. 1 at 45). My adjustment is related to the response to Confidential I&E RE-17.2 and further explanation in response to I&E RE-18 which asked for a detailed explanation of the Company's claimed incentive compensation of $11,129,787 and how the budgeted amount was calculated. I may have mis-characterized my adjustment that related to the UNITE Project Milestone Incentive Plan and the Company may have misinterpreted the information requested, but nevertheless, my adjustment is related to the Company's Incentive Compensation Plan shown in the response to Confidential I&E RE-17.2 and fully explained by the Company in response to I&E RE-18. My recommendation to disallow the Management Incentive Plan of **(BEGIN CONFIDENTIAL)** $2,603,000 **(END CONFIDENTIAL)** is the same, which I explain in more detail in #3 below.

Q. WHAT DID MS. RESSLER STATE REGARDING A BREAKDOWN OF THE COMPANY'S INCENTIVE COMPENSATION AMOUNTS INCLUDED IN THIS CASE?

A. Ms. Ressler stated that the Company has included **(BEGIN CONFIDENTIAL)** $10,785,000 **(END CONFIDENTIAL)** of Incentive Compensation as shown on UGI Gas Exhibit VKR-5R Confidential. Ms. Ressler stated that this schedule agreed to a similar schedule provided in response to I&E RE-17.2 as part of the discovery request process with the exception of **(BEGIN CONFIDENTIAL)** $431,000 **(END CONFIDENTIAL)** of deferred compensation is excluded because the Company does not believe that the amount associated with this plan is appropriately defined as incentive compensation. (Statement No. 3-R at 24).

Q, WHAT IS YOUR RESPONSE?

A. Since I removed the amount related to SERP expenses of **(BEGIN CONFIDENTIAL)** $431,000 **(END CONFIDENTIAL)**, I do not have any further adjustments to Mr. Ressler updated response related to the Company's Incentive Compensation. However, I do not believe these SERP expenses should be recovered elsewhere in the Company's O&M Expenses. My argument for removal is shown under section 4 in this testimony– Executive Bonus Plan, Performance Stock Awards, Stock Options and SERP.

1. UGI Corporate Allocation

Q. WHAT DID MS. RESSLER STATE REGARDING YOUR ADJUSTMENT TO THE COMPANY'S UGI CORPORATE ALLOCATION?

A. Ms. Ressler did not agree with my disallowance of the Company's **(BEGIN CONFIDENTIAL)** $6,213,000 **(END CONFIDENTIAL)** in incentive compensation expense that was allocated to UGI Gas from UGI Corporation. (Statement No. 3-R at 24). Ms. Ressler stated that my disallowance was connected to the UNITE bonus program document and was not relevant to UGI Corporate Allocation costs to UGI Gas. (Statement No. 3-R at 25). Ms. Ressler stated that the Company was allocated **(BEGIN CONFIDENTIAL)** $2.185 million for incentive compensation, $3.472 million to stock options and restricted stock awards and $555,000 related to equity compensation for directors **(END CONFIDENTIAL)**. (Statement No. 3-R at 25).

Q. WHAT INFORMATION DID MS. RESSLER PROVIDE TO SUPPORT THE COMPANY'S UGI CORPORATE ALLOCATION RELATED TO INCENTIVE COMPENSATION?

A. Ms. Ressler stated that the incentive compensation is awarded to UGI Corporation employees and executives based upon performance under plans which establish financial and non-financial targets. The non-financial targets are related to safety for non-executive employees and, for executives, the non-financial targets are related to safety and diversity and are shown on Confidential UGI Gas Exhibit VKR-6R. (Statement No. 3-R at 25-26). Ms. Ressler stated that the stock and restricted stock awards were provided to employees based upon employee agreements and / or management discretion. The overall compensation policies and programs for executives are established by the Compensation and Management Development Committee of the Board of Directors of UGI Corporation. The program is designed to attract and retain talented and experienced executives and to reward them for leadership excellence. (Statement No. 3-R at 26). Ms. Ressler referred to Exhibit VKR-7R related to directors' compensation which are provided with long-term equity rewards in accordance with the director compensation program overseen by the Corporate Governance Committee and the Board of Directors as a whole. Ms. Ressler stated that the Company believes these plans are like in kind with executive and director compensation that the Commission has consistently allowed to be recovered in base rates for decades. (Statement No. 3-R at 26). Ms. Ressler stated that without these plans and the incentives that they provide, the Company could lose the executives or be required to simply increase their base salaries to compensate for the loss of the plan. (Statement No. 3-R at 26).

Q. WHAT IS YOUR RESPONSE?

A. Ms. Ressler information to support the Company's UGI Corporate Allocation is new information which was not provided in discovery. In response to OCA Set III-1, I asked for information related to Incentive Bonuses and confidential information. In response to OCA Set VII-13, I asked for information related to Stock Compensation expenses. In response to OCA-Set III-1, the Company provided information on increasing salaries for workers, compensation surveys and compensation adjustments which did not include information related to incentive compensation. In response to OCA-VII-13, I asked for information related to Stock Compensation, and the response referred to I&E RE-17.2 and all stock compensation expense can be found in Book V, Exhibit A Schedule B-4 FERC 920.0 Administrative Salaries. I did not receive any information (through discovery) related to what has been contained in UGI Gas Exhibit VKR-6R, nor what has been contained in UGI Gas Exhibit VKR-7R (which was not attached to Ms. Ressler's rebuttal testimony). Nevertheless, I believe that these costs should not be included in the Company's O&M Expense. While I understand the importance of providing incentive compensation to employees, I do not believe that certain areas of Executive incentive compensation—that do not provide specific benefits to customers—should be recoverable from ratepayers. In Ms. Ressler's Confidential Exhibit VKR-6R the Company has not provided the dollar amounts associated with safety, only the performance target/threshold goals, so I am unable to fully evaluate the reasonableness of the Company's claim for incentive Compensation. The Company has not provided Confidential Exhibit VKR-7R, so I am unable to evaluate what is contained in that Exhibit. In sum, part of the Company's argument in recovering incentive compensation is that it has to incentivize employees to perform their duties, to retain and attract talented and experienced executives, and to reward them for leadership excellence. While I agree that incentive compensation is embedded in all major companies' compensation package, I believe that incentive compensation related to executive management should be paid out by the shareholders of the Company and not by the ratepayers, since these types of incentive compensation has no impact on customer service or on customers.

2. UGI Gas Utility Incentive Compensation

Q. WHAT HAS MS. RESSLER STATED WITH RESPECT TO YOUR ADJUSTMENTS RELATED TO UGI'S GAS UTILITY INCENTIVE COMPENSATION?

A. Ms. Ressler did not agree with my adjustment to remove these costs. (Statement No. 3-R at 27). Ms. Ressler stated that my attempt to evaluate individual aspects of the Company's incentive compensation program in isolation should be rejected. Ms. Ressler stated that the Commission has previously rejected proposed adjustments to other utilities' claims for incentive compensation including stock-based compensation. (Statement No. 3-R at 28). She stated that the Commission made clear that incentive compensation programs must be evaluated as a whole when determining whether the plan includes goals which benefit customers. Ms. Ressler stated that breaking apart the Company's incentive compensation program into individual components inappropriately tries to single out individual aspects of the Company's total incentive compensation program, when as a whole, the program clearly contains both financial and operating metrics and goals which benefit customers, consistent with the Commission's Order in 2018 UGI Electric base rate proceeding. (Statement No. 3-R at 28-29).

Q. WHAT HAS MS. RESSLER STATED WITH RESPECT TO RECOVERY OF STOCK AWARDS AND STOCK OPTIONS?

A. Ms. Ressler stated that the Company must have access to capital in order to invest in the infrastructure necessary to provide safe and reliable natural gas service to its ratepayers. The achievement of financial goals makes investment in the Company's stock an attractive option to investors, thereby allowing access to this necessary capital and therefore, it is appropriate for ratepayers to bear the cost of these incentive compensation programs just as they bear other costs of the Company from which they directly or indirectly benefit. (Statement No. 3-R at 29).

Q. WHAT IS YOUR RESPONSE?

A. I do not believe that ratepayers should be burdened with costs related to the access of capital markets and to have the Company be attractive to investors to access capital markets. This is a business decision, and the business risks should lie with the Company. The customers do not have that decision-making ability nor has the Company asked the customers to do so. I believe this is the responsibility of the shareholders. Ratepayers should not be 100% responsible for the actions that relate to financial goals or business risks. In reviewing Ms. Ressler's UGI Gas Exhibit VKR-7R, I am still of the opinion that these types of incentive costs do not provide benefits to ratepayers.

Q. WHAT DID MS. RESSLER STATE REGARDING YOUR INQUIRY ON THE RECEIPT AND TIMING OF INCENTIVE COMPENSATION PAYOUTS?

A. Ms. Ressler stated that my assertion that the receipt and timing of incentive compensation is an impossible test to meet for any utility that seeks to recover projected incentive compensation expense for the FPFTY because incentive compensation is paid out based upon satisfaction of performance standards during the FPFTY. Ms. Ressler stated that my proposal for recovery of an expense should be rejected. Ms. Ressler stated that it is reasonably certain that the Company's incentive compensation program, as a whole, is necessary to attract and retain qualified employees. (Statement No. 3-R at 30).

Q. WHAT IS YOUR RESPONSE?

A. In order to recover costs, the Company has the burden of proof that the costs are both known and measurable as well as prudent. The Company claimed that it seeks to recover projected incentive compensation and that it is reasonably certain that the Company's incentive compensation program, as a whole, is necessary to attract and retain qualified employees. Without certainty, or a definitive level of known and measurable costs related to incentive compensation, it is unreasonable for the Company to expect all recovery of costs that it will assume to be incurred. If the Company includes all projected costs related to incentive compensation and subsequently does not pay out all of the projected incentive compensation, due to certain performance metrics and goals not being met by employees, it would be difficult to recover these costs back to ratepayers. The Company's all or nothing approach is not appropriate way to evaluate compensation, as it is an unrealistic approach.

3. UGI Gas MIP

Q. WHAT HAS MS. RESSLER STATED REGARDING YOUR ADJUSTMENT RELATED TO THE UGI GAS MANAGEMENT INCENTIVE PROGRAM (MIP)?

A. Ms. Ressler reiterated that my adjustment to remove **(BEGIN CONFIDENTIAL)** $2,603,000 of MIP costs **(END CONFIDENTIAL)** should be disallowed in that I associated these costs with the Company's UNITE incentive program. (Statement No. 3-R at 31).

Q. WHAT IS YOUR RESPONSE?

A. Regardless of whether these costs are related to the Company's UNITE Management Incentive Program or another management incentive program, I relied on the response to I&E RE-18 which shows the Company's claimed incentive compensation expenses of $11,129,787 and an explanation of how the budgeted amount was calculated.

Q. WHAT DID MS. RESSLER STATE RELATED TO THE COMPANY'S MIP?

A. Ms. Ressler stated that the Company's MIP is an annual incentive program for which regular full-time employees at career levels between M1-M6 and between P2-P5 are eligible. The goals included in the plan span a wide range of areas including financial performance, safety, reliability, customer satisfaction, business growth, sustainability and capital deployment (Statement No. 3-R at 31). Ms. Ressler stated that ratepayers benefit directly when the Company provides safe and reliable natural gas service and when its customer service is responsive to customer needs. (Statement No. 3-R at 32).

Q. WHAT IS YOUR RESPONSE?

A. UGI Gas Exhibit VKR-8R is new information provided by the Company in its rebuttal testimony; it was not provided in discovery where I asked for this information in response to OCA Set III-1. While I will accept incentive compensation that relates to ratepayer benefits such as safety and reliability, customer service and customer satisfaction, I am unable to evaluate dollar amounts associated with these performance goals. The Company has not included such costs in VKR-8R but only included weights and metrics shown on page 4. Given that the information related to these metrics, as well as other information needed to evaluate the level of incentive compensation the Company is proposing to include in rates, and the fact that certain information has been redacted, I am unable to ascertain or determine the reasonableness of any dollar amount associated with certain performance and targeted goals.

4. Executive Bonus Plan, Performance Restricted Stock Awards, Stock Options and SERP

Q. WHAT HAS MS. RESSLER STATED WITH RESPECT TO YOUR ADJUSTMENTS FOR EXECUTIVE BONUS, PERFORMANCE RESTRICTED STOCK AWARDS, STOCK OPTIONS AND SERP?

A. Ms. Ressler stated that she does not agree with my adjustments to remove **(BEGIN CONFIDENTIAL)** $2,312,000 **(END CONFIDENTIAL)** associated with each of these incentive compensation programs. (Statement No. 3-R at 32-33). Mr. Ressler stated that I do not understand how each of these programs benefits ratepayers and play an essential role in the Company's ability to provide the compensation necessary to attract and retain qualified employees that provide safe, efficient and reliable natural gas service. Ms. Ressler reiterated that I am singling out one aspect of the Company's overall compensation strategy for disallowance. (Statement No. 3-R at 33).

Q. WHAT DID MS. RESSLER STATE AS TO THE NEED FOR THE EXECUTIVE BONUS PLAN?

A. Ms. Ressler stated that these plans applied to executives of the UGI Utilities business and rewards these executives for meeting financial, safety and diversity goals. These goals are specific to the Earning Before Income Taxes (EBIT). Ms. Ressler stated that ratepayers benefit from the safety performance plan metric and the diversity initiative incentive which considers diversity in hiring practices. (Statement No. 3-R at 34).

Q. WHAT IS YOUR RESPONSE?

A. Ratepayers should not shoulder the burden to pay for costs of executive retainment. This is a business decision and the Company should bear the responsibility of paying for these costs of executive retainment. I do not see a nexus between executive retainment and ratepayer benefits. In response to VKR-8R, I am unable to evaluate the benefits related to safety and diversity goals as the Company did not provide any dollar amount associated with these goals. I do not believe that ratepayers should pay for incentive related goals for financial performance (EBIT) as these promote Shareholder interests and the alignment of Shareholder growth. These performance goals should be funded through Shareholder dollars and not ratepayer dollars.

Q. WHAT DID MS. RESSLER STATE AS TO THE NEED FOR PERFORMANCE RESTRICTED STOCK AWARDS AND STOCK OPTIONS?

A. Ms. Ressler stated that these awards are based upon employment contracts and management discretion, and awards are granted to employees and have a vesting period of three-years. Ms. Ressler stated that these awards and stock options benefit ratepayers by incentivizing key employees to maintain tenure with the Company through the vesting period. (Statement No. 3-R at 34-35). If the Company were to eliminate its equity compensation it would need to increase base pay by at least the same amount in order to remain competitive in the employment marketplace for talented executive – level employees. (Statement No. 3-R at 35).

Q. WHAT IS YOUR RESPONSE?

A. Ratepayers should not be responsible for pay for executive level employees to be retained by the Company. I believe it is the responsibility of the Company to provide these funding dollars. I do not see a nexus between stock awards and stock options and providing safe efficient and reliable service to customers.

Q. WHAT DID MS. RESSLER STATE REGARDING THE RECOVERY OF SERP?

A. Ms. Ressler stated that the SERP (Supplemental Executive Retirement Plan) is designed to provide retirement benefits for executive-level employees who are not eligible to receive the full typical Company contribution within its pension or 401 (k) program. Current (not retired) executives who earn more than the cap for the regular pension or 401 (k) plan are eligible for SERP. (Statement No. 3-R at 35). Ms. Ressler stated that if the SERP were excluded, the Company would need to increase base salary or other compensation in order to remain competitive for talented executives. The Company's SERP has existed for many years and has not been challenged in its rate proceedings. (Statement No. 3-R at 35-36).

Q. WHAT IS YOUR RESPONSE?

A. As I stated previously regarding the disallowance of stock awards and stock options for the retainment and to be competitive in the industry for talent, I believe that the Company should be responsible for covering these types of costs, not ratepayers. As Ms. Ressler stated, SERP has no goals or criteria to be met, and therefore, is a business decision on the Company, and the responsibilities should lie with Company to fund these costs.

Q. WHAT DID MS. RESSLER STATE REGARDING YOUR REMOVAL OF THE COMPANY'S $38,000 AND $51,000 OF INCENTIVE COMPENSATION FOR CETAIN OF THE COMPANY EMPLOYEES?

A. Ms. Ressler did not agree with my disallowance related to these incentive compensation claims. Ms. Ressler stated that the Company has clear performance goals, but the Company cannot yet know the final outcome of the performance goals for the FY 2023 period because the Company's case is based on a FPFTY. Based upon past performance, the Company believes that it is reasonable to assume that these goals will be achieved in order to earn a payout on the incentive compensation plan. (Statement No. 3-R at 37).

Q. WHAT IS YOUR RESPONSE?

A. As I stated earlier, in order to recover costs, the Company has the burden of proof that the costs are both known and measurable and prudent. The Company claimed that it seeks to recover projected incentive compensation and that it is reasonably certain that the Company's incentive compensation program, will be achieved. Without certainty, or a definitive level of known and measurable costs related to incentive compensation, it is unreasonable for the Company to expect all recovery of costs that it will assume to be incurred. The Company stated that it cannot yet know the final outcome of the performance goals. If the Company includes all projected costs related to incentive compensation and subsequently does not pay out all of the projected incentive compensation, due to certain performance metrics and goals not being met by employees, it would be difficult to recover these costs back to ratepayers. The Company is assuming an all or nothing approach and is not appropriate as it is an unrealistic approach to recovering costs.

c. Employee Benefits

Q. WHAT HAS THE COMPANY STATED IN REGARD TO YOUR EMPLOYEE BENEFITS – HEADCOUNT ADJUSTMENT?

A. Ms. Hazenstab stated that she did not agree with my adjustment to normalize the Company's medical and dental costs over FY 2021-2023. (Statement No. 2-R at 14). Ms. Ressler in Statement No. 3-R stated that she did not agree with my adjustment because the Company relied upon the analysis provided by its insurance broker based upon a national survey but then tailored specifically to UGI's covered population. (Statement No. 3-R at 38). Ms. Ressler stated that Pennsylvania healthcare costs tend to be overall in line with the national average, while healthcare costs in bordering states are higher than the costs in Pennsylvania. Ms. Ressler stated that the broker indicated that UGI's population is slightly older than average, which was factored into the specific increase that the broker recommended for UGI. (Statement No. 3-R at 38). UGI's reliance on the analysis provided by its broker is a normal business practice and that my adjustment provides no basis whatsoever to call into question the analysis of the broker. (Statement No. 3-R at 38).

Q. WHAT DID MS. RESSLER STATE REGARDING YOUR RECOMMENDATION ON THE COMPANY EXPLORING MORE AFFORDABLE HEALTHCARE OPTIONS?

A. Ms. Ressler stated that the Commission should not rely upon my recommendation with respect to exploring more affordable healthcare options. Ms. Ressler stated that I did not provide any study, report, review evaluation or analysis of whether the Company has switched to a hybrid workplace or reduced employee costs by switching to a hybrid workplace. (Statement No. 3-R at 39). Ms. Ressler also stated that I indicated, in response to UGI-Gas-OCA-I-17, that I did not, nor did I prepare any study, report, review evaluation or analysis of the savings UGI Gas could gain by switching to a hybrid workplace, including savings related to my claim that the Company could refinance health care option. (Statement No. 3-R at 39).

Q. WHAT IS YOUR RESPONSE?

A. In response to I&E RE-28, the Company stated that it included a 7% increase and a 2% increase for its FTY and FPFTY projected claims for Dental plans, and an 8% increase for both the FTY and FPFTY periods for Medical plans. However, the Company has not provided any further information but for the arguments addressed by Ms. Ressler in her Statement No. 3-R and the reliance of its broker taken from a national survey. The Company has not provided any additional information such as insurance invoice premiums that reflect the increased costs. In addition, knowing that medical and dental costs are increasing, the Company should look into options that may reduce cost to the Company and to the employee. In response to I&E RE-28, the Company stated that it did not prepare claims for medical and dental costs as the information is not available. Even though I did not provide any study, report, or review calculations or analysis of potential savings, the Company should not be short-sighted in not preparing its own analysis of the benefits of a hybrid workplace and whether or not costs can be achieved.

d. Environmental Remediation

Q. WHAT DID MS. RESSLER STATE REGARDING YOUR ADJUSTMENT TO THE COMPANY'S ENVIRONMENTAL REMEDIATION EXPENSE ADJUSTMENT?

A. Ms. Ressler did not agree with my 5-year amortization period to recover the environmental remediation costs for Environmental Adjustment #1 and #3. She stated that the current 5-year amortization periods for the under-recoveries of costs in the period prior to FY 2019 and during FY 2029 are the results of agreements in prior cases and have no bearing on the correct amortization to apply in this proceeding for the FY 2020 and FY 2021 under-recoveries. She stated the Company continues to incur expenditures for environmental remediation and for each year since 2019 has spent more than it recovered in rates, thereby adding to its regulatory asset under-recovery each year. (Statement No. 3-R at 11-12). Ms. Ressler stated that further delay in recovery results in additional mismatch between the periods in which the costs incurred and the period of recovery. Given the Company's frequent rate case filings, it is most appropriate to allow the Company to recover these costs currently so that they are not a lingering issue for future rate proceedings. Ms. Ressler stated that the Company's environmental costs are fully reconcilable, and it is illogical to attempt to minimize the amount of annul recovery

Q. WHAT IS YOUR RESPONSE?

A. With respect to the Company's Environmental Remediation adjustment #1, the use of a five-year average reduces the recovery by $43,733, which is not a major difference. In response to Confidential response I&E -RE-44 **(BEGIN CONFIDENTIAL)** the Company stated that the use of a three-year period was to eliminate high and low spend and approximating an average year of spend. **(END CONFIDENTIAL)**. Given that the use of a five year average results in a minimal difference, it is appropriate and consistent to use this five year time period with other environmental adjustments. I do not believe there is precedent to use a three-year average for this adjustment, and so I disagree with the Company's determination that the use of a three-year average is reasonable in this case. With respect to the Company's one-year recovery of Environmental Adjustment #3, the Company stated in Confidential response to I&E – RE- 44 **(BEGIN CONFIDENTIAL)** it believes this is a reasonable period between rate cases **(END CONFIDENTIAL)**. I do not believe there is a precedent to use a one-year recovery for this adjustment, and as I stated previously, it is consistent with other environmental adjustments. If the Company's environmental expenditures become increasingly high in future years, adding to the under-recovery each year, then the timing and amortization period year should be revisited at that time.

e. Outside Contractors

Q. WHAT HAS MS. RESSLER STATED WITH REGARD TO YOUR ADJUSTMENT TO THE COMPANY'S OUTSIDE CONTRACTOR EXPENSES?

A. Ms. Ressler did not agree with my adjustments related to Outside Contractors for Distribution Expense ($2,114,000), Customer Accounts ($9,000) and A&G ($22,000). (Statement No. 3-R at 13). Ms. Ressler stated that the Company renegotiated its contracts with outside contractors approximately every three to four years. The 2020 and 2021 costs for outside contractors were based upon pricing from the 2018 negotiation, while the FPFTY costs will be based on the pricing from the 2022 negotiation. She stated that it is not appropriate to use prior periods for outside contractor costs for the FPFTY, as these costs are based on entirely different and outdated contracts and the new contract costs are known and measurable. Based upon these updated contracts, the Company has proposed an adjustment to increase its claim for outside contractor labor by $2,692,000 as discussed in the rebuttal testimony of Mr. Timothy Angstadt. (Statement No. 3-R at 14). Ms. Ressler stated that my normalization period that I used resulted in the lowest amount of allowed expense of the three normalization periods available. Ms. Ressler stated that I selected different normalization periods without explanation and my method appears to be wholly arbitrary. (Statement No. 3-R at 14-15).

Q. WHAT IS YOUR RESPONSE?

A. In reviewing the response to OCA-Set III-33, the Company's Outside Contractor expenses related to A&G expenses were lower in 2019 and increased in the years 2020 through 2023; Customer Accounts expenses were higher in 2019 and 2020, lower in 2021 and higher in 2022 and 2023; Distribution expenses were higher in 2019 and declined in 2020, 2021, and increasing in 2022 and 2023. These are the balances and expense levels. I used the most recent three-years to compute my adjustments to these Outside Contractor expenses, and I did not select years in which the Company's costs were greater than other years. That would be cherry-picking to the benefit of the Company. Outside Contractors expenses do vary from year to year because they are volatile and are out of the control of the Company. As I stated in my direct testimony, there is no discernable trend that shows a gradual increase or decrease in these costs. They fluctuate from year to year. In its Rebuttal testimony the Company claimed that based upon updated contracts, the Company has proposed an adjustment to increase its claim for outside contractor labor by $2,692,000.

Q. WHAT DID MR. ANGSTADT STATE REGARDING INCREASED OPERATING COSTS?

A. Mr. Angstadt stated that the Company received the results from three RFP's for pipeline construction and maintenance, restoration, and traffic control services contained within a Master Pipeline Construction Agreement, Master Restoration Services Agreement and the Master Pipeline Support Services Agreement. The results of these agreements reflect a significant impact of inflation on all parts of the Company's operations, both on contractor costs that affect pipeline replacement and restoration activities and on activities that drive operations and maintenance expenses. (Statement No. 9-R at 1-2). Mr. Angstadt stated that the increase in prices is driven by inflationary pressures impacting all elements of the Company's gas operations. (Statement No. 9-R at 3). Pipeline construction labor market is constrained, and the region is experiencing extremely low unemployment rates. Contractors must pay higher labor rates and those rates are passed on to UGI Gas. Inflationary impacts to materials, equipment and supplies are also reflected in the bids received by the Company in response to its RFP. (Statement No. 9-R at 4). Mr. Angstadt stated that the Company has quantified the impact of the increased contractor costs on its expense claim (UGI Gas Exhibit TJA-1R and in response to OCA-III-33). Mr. Angstadt stated that the Company's outside contractor expenses in this case for the FPFTY was $21.723 million and with the impact of incorporating the increased contractor costs received by the Company in the 2022 RFP increased outside contractor expenses by $2.692 million for a total of $24.416 million. (Statement No. 9-R at 4).

Q. WHAT IS YOUR RESPONSE?

A. In reviewing Mr. Angstadt Exhibit TJA-2R, I am accepting the Company's outside contractor expenses and the increase in its pipeline, restoration, and traffic control. I am not accepting the Company's Plant Contractor Labor Other in the increased amount of $594,000. These costs were increased based on the CPI percentage which I believe are not known and measurable. The use of a CPI increase is not supportive of costs incurred by the Company but rather an overall blanket-type adjustments that are applied to all goods and services that may not be directly related to costs incurred by the Company. It is simply a prediction of cost adjustments. While inflation adjustments are used to develop economic data it should not be used for ratemaking purposes. Goods and services fluctuate, the costs increase and decrease over time. My adjustment is shown on my Schedule SR-DM-12, SR-DM-13, and SR-DM-17.

f. Employee Activity Costs

Q. WHAT HAS MS. RESSLER STATED WITH REGARD TO YOUR ADJUSTMENTS TO EMPLOYEE ACTIVITIES EXPENSES?

A. Ms. Ressler stated that she did not agree with my adjustment of $588,226. (Statement No. 3-R at 40). Ms. Ressler stated that this proposed costs is for a reasonable level of normal employee activities to allow the opportunity for employees to develop relationships with one another and to recognize service tenure. A reasonable calendar of activities designed to reward and incentivize employees is important to employee retention. (Statement No. 3-R at 41). Ms. Ressler stated that the Company has experienced an increase in voluntary turnover in a tight labor market, and given this situation, it would not be prudent for the Company to eliminate programs that contribute to the retention of qualified personnel who are responsible for the provision of safe, reliable natural gas service. Ms. Ressler stated that the Company believed that its investment in a reasonable level of employee activities is worthwhile to create an environment conducive to employee satisfaction. (Statement No. 3-R at 41).

Q. WHAT IS YOUR RESPONSE?

A. Ratepayers should not be responsible for employee morale or productivity, but rather the Company should be wholly responsible for providing a safe, healthy and productive workplace. I do not see a nexus between Company celebrations, activities, picnics and other in-hour celebratory gatherings with safe, adequate and reliable service to customers. While I commend the Company recognizing employees for staying at the Company, and building a comradery among employees, I do not see a nexus between these costs and the ability for the Company to provide safe and reliable natural gas service to customers. Ratepayers do not benefit from employees to attend picnics, service awards, holiday gathering or other socially related events. The Company should not ask for costs and expenses—not related to their duties and responsibilities—to be recovered from ratepayers over and above the employee's compensation. Ratepayers should not be burdened to pay for costs for improving or enhancing employee morale. Employees should not be incentivized to perform their duties and responsibility that they were initially hired to perform in the first place. My recommendation is the same as my recommendation in my direct testimony which disallows the Company's Employee Activities costs of $588,276 and is shown on my Schedule SR-DM-17.

g. OSHA Compliance

Q. WHAT HAS COMPANY WITNESS MS. RESSLER STATED REGARDING YOUR ADJUSTMENT TO THE COMPANY'S CLAIM ASSOCIATED WITH OSHA / ETS COMPLIANCE?

A. Ms. Ressler stated that the already-incurred costs related to OSHA / ETS compliance of $52,934 should be recovered from ratepayers. These costs were incurred by the Company to obtain legal advice related to complying with the mandate (in advance of the Supreme Court's decision) and to subscribe to a vaccine tracking software. (Statement No. 3-R at 42). Ms. Ressler stated that these costs were reasonably and prudently incurred at the time they were incurred and not whether the costs are deemed moot based on the facts and circumstances that after the costs were incurred. (Statement No. 3-R at 42).

Q. WHAT IS YOUR RESPONSE?

A. Utilities should be afforded the opportunity to recover costs that are used and useful, and benefit ratepayers when rates are set for service. These OSHA/ETS costs of $52,934 that the Company incurred was at the time related to complying with the mandate. Given that the mandate has been overturned and no similar mandate will pass into law, these costs will not benefit ratepayers in the FPFTY, regardless of whether the costs incurred were prudent at that time. The Company runs the risks in this situation of having costs not being recovered in rates. The Company indicated that the mandate was initially to be effective in January 2022, and the Company needed to be prepared to implement the requirements (OCA-Set III-25). This costs were simply imprudently incurred.

h. Advertising

Q. WHAT HAS MS. RESSLER STATED IN RESPONSE TO YOUR ADJUSTMENT REGARDING ADVERTISING EXPENSE?

A. Ms. Ressler did not agree with my adjustments related to Other Advertising Programs of $885,178 and for Conservation Advertising of $659,827. (Statement No. 3-R at 44). Ms. Ressler stated that Other Advertising Programs consist primarily of costs for sponsorships, building meetings/trade shows, and branded promotional items. Attending these events allows the Company to raise awareness of natural gas as an option, and to develop relationships and discuss the benefits of natural gas with other attendees. These sponsorships are key to attracting additional customers and these additional customers reduce the overall revenue requirement that is borne by each individual customer. (Statement No. 3-R at 45). Ms. Ressler stated that she did not agree with my normalization of Conservation Advertising over a three-year period. (Statement No. 3-R at 45). Ms. Ressler stated that I was incorrect in stating that the Company did not record any costs to this account in FY 2019, but rather the Company recorded $603,642 on Conservation of Energy advertising in FY 2019. (Statement No. 3-R at 46). Ms. Ressler stated that I appeared to be cherry-picking normalization periods to minimize the Company's allowed claim and that I selected different periods for different adjustments. In the case of conservation advertising the period selected included the year that was most impacted by the COVID-19 pandemic (2020) but excluded the prior year when conservation advertising costs were higher (2019). (Statement No. 3-R at 47).

Q. WHAT IS YOUR RESPONSE TO CONSERVATION ADVERTISING?

A. With respect to my error that the Company did not record any Conservation Advertising in FY 2019, I am accepting Ms. Ressler's statement. I reviewed Attachment III-A-25 and realized that the Company did record costs in FY 2019 related to Conservation Advertising. Given that 2020 was an off year due to the COVID-19 pandemic, and not to be cherry-picking to minimize the Company's allowed claim, I substituted FY 2020 for FY 2019 for costs related to Conservation Advertising, resulting in a normalized three-year average reduction of $119,528 instead of my prior recommendation of $193,114, a difference of $73,586. I am still continuing to recommend a normalized three-year average because the Company has not provided any further information for the 70% increase from FY 2021 to FY 2022. Ms. Ressler stated that the Company is resuming normal activities in print and digital channel advertising related to conservation – related efforts but has not provided any updated information to support this. My adjustment is shown on my Schedule SR-DM-16.

Q. WHAT IS YOUR RESPONSE WITH RESPECT TO OTHER ADVERTISING PROGRAMS?

A. I am still recommending removal of the Company's Other Advertising Programs of $885,178. As I stated in my direct testimony, these types of costs appear to support or bolster the Company's image and reputation. The Company has not provided any further information with respect to whether any ratepayers of the Company had attended or were aware that these types of events were being held. The Company did not provide any information as to whether any attendees actually signed up for natural gas service and ultimately became customers of the Company. My recommendation is still the same and is shown on my Schedule SR-DM-16.

i. Sponsorship

Q. WHAT HAS MS. RESSLER STATED WITH RESPECT TO YOUR ADJUSTMENT RELATED TO SPONSORSHIPS EXPENSES?

A. Ms. Ressler stated that she did not agree with my adjustment related to sponsorship costs of $424,000. Ms. Ressler stated that these costs are essential to maintaining ties in the communities where the Company provides service. These opportunities ensure that the

Company's potential customer base remains aware the Company and services it provides, and they serve as an attraction for potential customers and potential employees. Ms. Ressler stated that my adjustment of $424,000 is duplicative of my adjustment related to Other Advertising Programs as within this category of advertising as required for this standard filing requirement. (Statement No. 3-R at 48). Ms. Ressler stated that, in Attachment III-A-28.1, $389,774 is included within FERC account 930.2, and therefore, a portion of my adjustment should be rejected solely because it is duplicative of my earlier adjustment to Other Advertising Programs. (Statement No. 3-R at 48).

Q. WHAT IS YOUR RESPONSE?

A. I am still of the opinion that Sponsorship expenses do not provide benefits to ratepayers. The Company should not be using ratepayer monies to maintain ties in the communities. While a utility company may choose to be a good corporate citizen in the communities that they serve, the role of the utility company that ratepayers should fund is to provide safe and adequate utility service. I do not see a nexus between these Sponsorship costs and gas utility service. With respect to the Company's issue on my duplicative adjustment related to Other Advertising Programs and the fact that these costs are included in the Company's Miscellaneous General Expenses shown on Attachment III-A-28.1, the Company should provide a schedule that shows the duplicative adjustment between Sponsorship expenses and Other Advertising Expenses, and I will make the necessary adjustments to eliminate any duplicative adjustment.

j. Membership Dues

Q. WHAT HAS MS. RESSLER STATED REGARDING YOUR ADJUSTMENT TO MEMBERSHIP DUES?

A. Ms. Ressler did not agree with my adjustment to remove $540,192 related to Membership Dues Expense (Statement No. 3-R at 49). Ms. Ressler stated that these Membership Dues are related to economic development corporations (PA Chamber of Business & Industry, PA Economy League) which allows the Company to grow its customer base, primarily by attracting new industrial and commercial customers. These organizations work primarily with large commercial companies who are making site selections, and the Company's active involvement in these organizations allows it to proactively work with these targets, promoting the benefits of natural gas for their energy needs and encouraging them to select sites that are located in close proximity to existing gas mains. Without these membership and active involvement in these organizations, the Company would experience less commercial growth, resulting in higher costs passed along to ratepayers, including its residential customers. (Statement No. 3-R at 51). Ms. Ressler stated that these organizations have a variety of purposes, including the promotion of safe operating practices, advocating for renewable natural gas resources, growing the use of natural gas and the sharing of information among utilities. These Membership Dues allow the Company to benefit from resources provided by these various organizations, receiving information about safety and reliability, as well as growth within natural gas and renewables, all of which benefit ratepayers. (Statement No. 3-R at 51). Ms. Ressler stated that my proposed adjustment is not sound as the Company's original filing at Attachment SDR-RR-30 shows total membership costs at $1,115,404 but noted that $32,858 is related to lobbying costs and excluded from the Company's claims; Ms. Ressler stated that my adjustment should have been $430,130. (Statement No. 3-R at 55).

Q. WHAT IS YOUR RESPONSE?

A. I believe many of these costs do not comport to costs associated with the provision of providing natural gas service to customers. Chambers of Commerce, consortiums, Economic Development, Advocating before members of the General Assembly, market data and labor data information, and community development appears to be costs associated with non-utility issues. Ratepayers do not have a say as to which entities these costs are paid to**,** nor do they provide any customer utility service benefit. In 66 Pa. C.S. Section 1316.1, no public utility may charge to its customers as a permissible operating expense for ratemaking purposes, costs related to fraternal, social or sports clubs or organization. While I do not see any sports or social type fees as noted in Attachment SDR-RR-30, I do note that most of these costs are related to Chambers of Commerce, business alliances, economic development and advocating before members of the General Assembly. I believe these types of costs should not be recovered from ratepayers.

Therefore, I am continuing to recommend disallowance of these costs in rates. I noted that I erred in my adjustment to Membership Dues. In response to an Interrogatory Request from the Company in OCA Set I-13, I adjusted my disallowance from $540,912 to $462,988. Ms. Ressler stated that I did not adjust my disallowance by removing $32,858 of costs related to lobbying costs. I believe I did. My recommendation is shown below and, on my Schedule SR-DM-17.

Total Membership Dues – SDR-RR-30	$1,115,404
American Gas (net of Lobbying)	$ 597,416
Northeast Gas Association	$ 55,000
Total Disallowance	$ 462,988

k. Pension Expense

Q. WHAT HAS MS. RESSLER STATED WITH REGARD TO YOUR ADJUSTMENT TO PENSION BENEFITS EXPENSE?

A. Ms. Ressler did not agree with my normalization of the pension expense over a three-year period. She stated that if the Company's actual cash contributions are normalized it actually increases the Company's claim from $5.501 million to $5.765 million, an increase of $0.264 million. (Statement No. 3-R at 15-16). Ms. Ressler stated that my normalization adjustment should be rejected because of my misunderstanding of the basis for the Company's claim to recover pension costs which is a cash contribution to the pension fund; is inconsistent with the established ratemaking practice in Pennsylvania which allows public utilities to claim certain expense based upon the cash contribution to their pension fund and; is arbitrary and inconsistent with proposed normalization periods regarding other categories of expenses. (Statement No. 3-R at 16). Ms. Ressler stated that my adjustment would result in a claim which is based neither on GAAP expense nor cash contributions and is not connected to the Company's cost for providing pension benefits. (Statement No. 3-R at 16-17). Ms. Ressler stated that my adjustment is based upon historical figures and not based upon up to date information or the full amount of the current cash contribution amount. (Statement No. 3-R at 18). Ms. Ressler stated that the Company's contributed to its pension plan based upon the cash contributions as calculated by its third-party actuarial firm, and if the Company accepted my adjustment, its actual cash contribution would not change. (Statement No. 3-R at 18).

Q. WHAT IS YOUR RESPONSE TO THE COMPANY'S ARGUMENT REGARDING YOUR NORMALIZATION ADJUSTMENT TO PENSION EXPENSES?

A. I believe it is appropriate to average out contributions made in prior years to contributions made during current years. In response to OCA-VII-3, the Company's Pension Expense has fluctuated from a high of $6.417 million of expense in 2018 to a low of ($2.887 million) of income in 2022 and for the FPFTY period. The cash contributions attributable to UGI Gas has varied from $10.618 million in 2018, to $8.849 million in 2019, to $9.937 million in 2020, to $10.038 million in 2021 and to $9.168 million in 2022. The Company has not provided information as to the reason why its pension expense went from $2.434 million of expense in 2021 to pension income in 2022 of $2.887 million, a difference or a swing of $5.321 million ($2.434 million plus ($2.887) million. While I understand that the Company based its cash contribution by relying on its actuarial firms recommendation, and the fact that the Company made its adjustment based upon GAAP and established ratemaking practices in Pennsylvania, historical costs that were incurred should be taken into consideration, as solely relying on current actually-determined cash contributions to the pension fund can result in costs that may be too high *or* too low for the new regulatory period when new rates are set. Costs changes over time, but not always proportionately.

l. Corporate Allocation of ESG Costs and Company Membership Costs

Q. WHAT HAS MS. RESSLER STATED REGARDING YOUR ADJUSTMENT TO ITS ENVIRONMENTAL, SOCIAL AND GOVERNANCE COSTS AND COMPANY MEMBERSHIP COSTS?

A. Ms. Ressler did not agree with my adjustment related to the Company's Environmental, Social and Governance (ESG) costs. She stated that these costs are important to the investor community which secures the future success of the Company and enables the continued provision of safe and reliable service to customers by funding capital investment. (Statement No. 3-R at 20). Ms. Ressler stated that ESG costs is a hot topic and investors are interested in a Company ESG strategy and often request this information prior to investing in a Company's stock. Ms. Ressler stated that the New York Stock Exchange has developed an ESG Resource Center website for its members and investors and the United States Securities and Exchange Commission (SEC) proposed enhanced and standardized climate-related disclosures from its registrants. (Statement No. 3-R at 20). Ms. Ressler stated that a portion of the ESG costs will be used to prepare for and/or comply with this SEC proposal, and failure to align with shareholders' ESG expectations can lead to an increased cost of capital. (Statement No. 3-R at 21). Ms. Ressler stated that ratepayers benefit from ESG activities which are focused on environmental stability, social policies that promote diversity and inclusion, and governance of the Company to ensure that it has a clear purpose and strategic direction. Ratepayers benefit because strong policies in this area allow the Company to access capital markets to obtain the capital that is necessary to funds its replacement and betterment program. (Statement No. 3-R at 21). ESG activities focus on the collection of needed environmental, social and governance data in an efficient manner, which limits the cost of this activity and lowers the overall expense passed along to ratepayers. (Statement No. 3-R at 21).

Q. WHAT IS YOUR RESPONSE?

A. I am continuing to recommend removal of these costs from rates. I believe these costs are geared or pitched towards the Company's financial success and growth to satisfy the investor community. The Company is free to fund these costs through shareholder monies but should not expect ratepayers to pay for these costs that relate to supporting social movements, societal impacts and financial factors in the investor world to maintain a level of financial returns or growth. As I testified in my direct testimony, I am of the opinion that ESG costs are not related to the provision of safe and reliable utility services to ratepayers, but rather, are costs related to and are akin to national and societal issues, sponsorships and civic related activities. I am not convinced that these ESG costs actually benefits or lowers costs to ratepayers.

m. Rate Case Expense

Q. WHAT DID MS. HAZENSTAB STATE REGARDING YOUR ADJUSTMENT TO RATE CASE EXPENSES?

A. Ms. Hazenstab did not agree with my adjustment to amortize these costs over a two-year period. (Statement No. 2-R at 9). Ms. Hazenstab stated that the frequency of the Company's past base rate cases is not a predictor of the frequency of future base rate cases. The time frame between the Company's most recent base rate proceeding at Docket No. R-2019-3015162 and the current one was subject to a one-year settlement stay-out clause that prohibited the Company from making a base rate filing earlier than January 2, 2022, effectively added one-year to the period when the Company could not make a filing. Removing that 1-year period would reduce the normalization period and my recommendation is not supported by any particular rationale and should be rejected outright. (Statement No. 2-R at 9-10).

Q. WHAT IS YOUR RESPONSE?

A. I am continuing recommending normalizing rate case expenses based upon actual prior rate case expense filings. The fact that the Company was subjected to a one-year stay out does not change my position, as my recommendation is based upon prior rate case filings and the frequency of historic rate case filings, and not based upon this instant proceeding, or whether the Company was subjected to a one-year settlement stay out. It is my understanding that the Commission looks to the historical filing frequency to determine the proper normalization period, which in this case, calculates to a 24-month (2 year) period. Prior rate case filing typically acts as a guide to rate case frequency. My recommendations are the same as that in my direct testimony and is shown on my Schedule SR-DM-17.

Q. WHAT OTHER ARGUMENTS DID MS. HAZENSTAB STATE AS TO THE REASONS FOR A ONE-YEAR RATE CASE NORMALIZATION PERIOD?

A. Ms. Hazenstab stated that the Company is expected to file another base rate case in one year based upon an assessment of future capital requirements, continued information system improvements through the UNITE project, and the cost of other improvements as detailed in the Company's second LTIIP filing. Ms. Hazenstab stated that all of the Company's operating expenses are subject to inflation and the revenue requirements for plant additions that are not Distribution System Improvement Charge (DSIC) eligible will cause further pressure to file a rate case within one year after the rates in this case become effective. (Statement No. 2-R at 10).

Q. WHAT IS YOUR RESPONSE?

A. My arguments for a two-year normalization period are the same. The Company's argument, that it files base rate cases annually, does not comport to what it has historically filed in the past. In response to OCA-III-16, the Company, on average has filed base rate case proceeding every two years. The Company filed two rate cases in 2016 and 2017 and two rate cases in 2019 and 2020. There was a five year gap between 2011 and the next rate case 2016. There was a two year gap between the 2020 filing and this instant filing. As I reiterated previously, the one-year stay out does not change the pattern of rate case frequency. The Commission is not bound by the Company's request to recover rate case expenses over a one-year period.

n. Depreciation

Q. WHAT DID MS. RESSLER STATE REGARDING YOUR ADJUSTMENT TO THE COMPANY'S DEPRECIATION EXPENSE?

A. Given that the Company did not agree with my adjustments to the Company's plant in service balance, the Company has disagreed with my adjustments to my recommended Depreciation Expense, which are derivatives of my adjustments to the Company's plant in service (Statement No. 3-R at 56).

Q. WHAT IS YOUR RESPONSE?

A. Since I am accepting the Company's plant in service balance, I am accepting the Company's Depreciation Expense in the amount of $124,782,000. The Company has updated its Depreciation claim by $18,000 as a result of reducing its plant in service balance (Statement No. 3-R at 56).

o. State and Local Taxes

Q. WHAT DID MS. HAZENSTAB STATE REGARDING YOUR ADJUSTMENTS TO THE COMPANY'S STATE AND LOCAL TAX EXPENSE?

A. Ms. Hazenstab stated that she agreed with my adjustment related to the Pennsylvania State and Local tax expense in the amount of **(BEGIN CONFIDENTIAL)** $77,000 **(END CONFIDENTIAL)**.

Q. WHAT IS YOUR RESPONSE?

A. Given that Ms. Hazenstab has accepted my adjustment related to the Company's Pennsylvania State and Local Taxes, I have no further adjustments. This is shown on my Schedule SR-DM-19.

p. Interest Synchronization

Q. WHAT DID MS. HAZENSTAB STATE REGARDING YOUR ADJUSTMENT TO THE COMPANY'S INTEREST SYNCHRONIZATION?

A. Ms. Hazenstab stated that she did not agree with my income tax expense which is based upon OCA's recommendation to rate base and capital structure. Ms. Hazenstab stated that this adjustment is related to OCA witness Mr. David Garrett's adjustments to the Company's capital structure and cost of equity, as well as my recommended rate base balance. (Statement No. 2-R at 19-20).

Q. WHAT IS YOUR RESPONSE?

A. I relied on Mr. Garrett's recommendation related to the Company's capital structure and overall cost of debt. Mr. Garrett recommended a weighted cost of debt of 1.99% which calculates to an overall interest synchronization balance of $63,188,732. With respect to my recommended rate base balance, I have addressed these concerns under my Rate Base section II A. This is shown on my Schedule SR-DM-20.

C. Act-40 Requirements (Act 40 of 2016)

Q. WHAT DID MS. HAZENSTAB STATE REGARDING YOUR ADJUSTMENTS TO THE COMPANY'S CONSOLIDATED TAX ADJUSTMENT (CTA) AND ACT 40 OF 2016?

A. Ms. Hazenstab stated that I argued that the Company has not demonstrated the remaining 50% of the CTA had been used related to general corporate purposes. (Statement No. 2-R at 21). Ms. Hazenstab stated that, while it is not practical to trace a hypothetical amount to specific projects, 50% of the Act 40 amount will be used to for general operating expenses of the Company. Ms. Hazenstab stated that, in the Company's Exhibit A - FPFTY Schedule B-4, the Company's total budgeted O&M expense is $625,766,000 and that these expenses will be used to benefit ratepayers including $2.177 million in meter reading expenses, $28.149 million for the maintenance of mains, and $35.342 million for various customer service expenses and, therefore, the Company spent over 50% of the hypothetical CTA on general expenses that are specifically for the purpose of providing utility service to ratepayers. (Statement No. 3-R at 22). Ms. Hazenstab stated that, based upon the advice of counsel, the utilities need only to show that their capital expenditures, and expenditures on other general corporate purposes, exceed the fifty percent of the differential in tax expense resulting from Act 40. (Statement No. 2-R at 23). Ms. Hazenstab stated that the testimony presented by the Company in its direct testimony in this case is similar to the testimony that was accepted by the presiding Administrative Law Judges and the Commission in the Company's 2018 Electric Division rate case. (Statement No. 2-R at 24). Ms. Hazenstab stated that my CTA adjustment to rate base would result in a tax normalization violation raising the risk of an adverse IRS ruling on the issues. Ms. Hazenstab stated that my adoption of my CTA adjustment has the potential of jeopardizing the loss of $628.595 million of ADIT to the detriment of the Company's customers and adversely impact the cash position of the Company, as those taxes may become due immediately, which the risk clearly overwhelms the minor benefit for customers that would result from my adjustment for tax benefits that are not the result of the Company's activities but rather the activities of the Company's non-regulated affiliates. (Statement No. 2-R at 25).

Q. WHAT IS YOUR RESPONSE?

A. The Company should not benefit from the use of the compliance with Act 40 without any specific use related to general corporate purposes. While Ms. Hazenstab stated that 50% of the CTA is related to “rate base eligible” infrastructure and has demonstrated that the Company has utilized these dollars for such, the Company simple omits how the other 50% of the differential is to be used for general corporate purposes. Ratepayers are already supporting the Company’s infrastructure and reliability investments through rates; more information is needed to show that the additional revenues now being provided by ratepayers is actually being used and not simply going to shareholders. The Company should provide evidence of actual applications of its differential related to general corporate purposes in a manner that reduces ratepayer obligations. In response to OCA-III-20, I asked the Company to show how the 50% of the CTA is used to support general corporate purposes. The Company responded by stating that the $760 million operating expense budget is more than the CTA adjustment related to general corporate purposes of $1,825 million. With respect to any IRS violations, the Commission has the broad authoritative oversight to set rates based upon ratemaking principles and does not have to rely on whether any IRS violations exists. There will always be a difference of how the Company records costs on its books and records for corporate purposes, and how the Company records costs on its books and records for ratemaking purposes based upon Commission rulings.

Q **DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?**

A. Yes, it does.

SUMMARY SCHEDULE

Measure of Value and Revenue Increase

SURREBUTTAL TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

May 27, 2022

I. <u>INTRODUCTION</u>

Q. Please state your name and business address.

A. My name is David J. Garrett. My business address is 101 Park Avenue, Suite 1125, Oklahoma Company, Oklahoma 73102.

Q. By whom are you employed and in what capacity?

A. I am the managing member of Resolve Utility Consulting, LLC. I am an independent consultant specializing in public utility regulation.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed direct testimony in OCA Statement 2 on April 20, 2022, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). I also filed rebuttal testimony in OCA Statement 2R on May 17, 2022. A summary of my qualifications is included in my direct testimony.

Q. What is the purpose of your surrebuttal testimony?

A. My surrebuttal testimony primarily responds to the rebuttal testimony of UGI Utilities, Inc. – Gas Division's ("UGI" or the "Company") witness Paul Moul. I also address a few issues raised in the rebuttal testimony of UGI witness Christopher Brown.

Q. Did any of the Company's rebuttal testimony you reviewed cause you to change your positions and recommendations as stated in your direct testimony?

A. No. To the extent I did not specifically address a statement made in the Company's rebuttal testimony filed in this case, it should not constitute my agreement with such testimony.

Q. In his rebuttal testimony, did Mr. Moul raise any new, significant issues related to your cost of equity and rate of return testimony and analysis?

A. No. In Mr. Moul's rebuttal testimony, it is clear that he disagrees with my opinions regarding UGI's cost of capital and my return on equity ("ROE") recommendation. However, I do not believe he raised any new, significant arguments or issues in addition to those provided in his direct testimony. Thus, in my surrebuttal testimony, I will not repeat all of the arguments and points raised in my direct testimony; rather, I will reiterate a few important points in my response to Mr. Moul's rebuttal testimony.

Q. Please describe the organization of your surrebuttal testimony.

A. In my surrebuttal, I respond to several pertinent issues discussed in Mr. Moul's rebuttal testimony, including (1) capital structure; (2) the Discounted Cash Flow ("DCF") Model; (3) Mr. Moul's ROE comparisons; (4) the results of the Capital Asset Pricing Model ("CAPM"); (5) the leverage adjustment; and (6) the management performance premium. Finally, I respond to issues raised in the rebuttal testimony of Mr. Brown.

I. CAPITAL STRUCTURE

Q. Please summarize Mr. Moul's surrebuttal testimony regarding capital structure.

A. Mr. Moul disagrees with my recommendation to adjust the Company's ratemaking capital structure. Mr. Moul claims that I did not demonstrate that UGI's proposed ratemaking capital structure is unreasonable.[1] Mr. Moul also points to capital structures authorized for other companies in other rate cases to support his assertion that the Commission should accept the Company's proposed capital structure.

[1] Direct Testimony of Paul R. Moul, p. 10, lines 10-11.

Q. Did you demonstrate in your direct testimony that UGI's proposed debt ratio is unreasonably low?

A. Yes. I provide three different analyses that each indicated the Company's proposed debt ratio is too low for ratemaking purposes. In summary, I analyzed the capital structures of the proxy group, UGI's parent company, and other competitive industries. Particularly, the debt ratios of the proxy group should be considered when assessing a reasonable debt ratio for UGI. This is because the metrics obtained from the proxy group to estimate cost of equity (and ultimately the authorized ROE) are necessarily interrelated with the capital structures of the proxy group. I demonstrated this fact mathematically in my Hamada model, which shows how various debt ratios impact the cost of equity.[2] The average debt ratio of Mr. Moul's (and my) proxy group is 53%, which is considerably higher than the Company's proposed debt ratio of 45%. If the average debt ratio of the proxy group were only 45%, the cost of equity indicated from that group would be lower. Thus, by accepting other metrics of the proxy group while ignoring their debt ratios, Mr. Moul's overall cost of capital recommendation is unreasonably high.

Q. Can you quantify the impact on the cost of equity resulting from the difference in a 53% debt ratio and a 45% debt ratio?

A. Yes. This issue was discussed in my direct testimony as it relates to the Hamada model. Using the Hamada model presented in my testimony, the Company's indicated CAPM cost of equity at a 45% debt ratio is 7.2%. The Company's indicated CAPM cost of equity at a 53% debt ratio, however, is 7.9%. Thus, setting aside the various assumptions about the risk-free rate, beta, and the equity risk premium, the difference in these debt ratios indicates

---

[2] Exhibit DJG-17.

a difference in the cost of equity estimate of about 0.7% (or 70 basis points). Also, as shown in my Hamada model, the Company's indicated cost of equity at a 50% debt ratio (which is my recommended ratemaking debt ratio) is 7.62%, which is notably lower than my recommended authorized ROE for the Company.

Q. What is the impact to the revenue requirement related to your proposed capital structure adjustment?

A. If the Commission were to authorize my proposed capital structure adjustment, it would reduce the revenue requirement by $10.3 million.

Q. Are the authorized capital structures for other utilities relevant to this proceeding?

A. Relatively speaking, they are not. When determining a fair ratemaking debt ratio for UGI, the Commission should focus on a debt ratio that might be observed for UGI if it existed in a purely competitive environment. We can look to the debt ratios of the proxy group as an indication of what UGI's debt ratio might look like in a comparative environment. The average debt ratio of the proxy group is 53%. Similarly, the average debt ratio of UGI's parent company is also 53%. Based on this analysis, it would be reasonable to conclude that, for ratemaking purposes, UGI's debt ratio should be 53%. In the interest of gradualism, I propose a ratemaking debt ratio for UGI of 50%.

Q. Mr. Moul claims that your proposed capital structure is inconsistent with Commission policy. Do you have a response?

A. Yes. I am not aware of a specific Commission "policy" that would require the Commission to simply accept a regulated utility's proposed capital structure. It is incumbent on the Commission to ensure that all of the Company's costs passed to ratepayers are prudent, which means they might require an adjustment. This is especially true with one of the Company's most significant costs: capital costs. As demonstrated in my testimony, the

Company's proposed capital structure results in capital costs that are not at their lowest reasonable level.

Q. Mr. Moul claims that your proposed capital structure "merely lowers the Company's revenue requirement."[3] Do you have a response?

A. Yes. From a mathematical standpoint, adopting my proposed ratemaking capital structure for UGI would result in a lower revenue requirement, all else held constant (which is quantified above). However, I take exception with Mr. Moul's testimony here because it implies that the purpose of my capital structure adjustment is to lower the Company's revenue requirement, which is not the case. From this standpoint, however, I could argue that many of the decisions made by Mr. Moul with regard to his cost of equity models "merely increase" the Company's revenue requirement, such as the various premiums he adds to his models and the unreasonable assumptions he makes – all which have increasing effects on the cost of capital estimate and revenue requirement. I stand by the belief that my proposed adjustments to the Company's authorized ROE and capital structure are fair and reasonable, and they are not designed to achieve a particular revenue requirement outcome.

Q. Mr. Moul claims that your examination of the capital structure of UGI's parent company is "without merit." Do you have a response?

A. Yes. The Commission should ensure that UGI's capital costs are reasonable, of which capital structure is a key component. What is considered "reasonable" in terms of capital structure analysis would be to ensure that UGI is operating with a capital structure that might be observed for the Company if it operated in a purely competitive (unregulated)

[3] Rebuttal Testimony of Paul R. Moul, p. 10, lines 11-12.

environment, since unregulated companies have a natural financial incentive to minimize capital costs (i.e., operate with sufficient amounts of debt). I can think of no better proxy for assessing a competitive debt ratio for UGI than the reported debt ratio of its unregulated parent company. In my opinion, the Commission should strongly consider the fact that UGI Corp's debt ratio is 53%, which is notably higher than the Company's proposed ratemaking debt ratio of only 45%.

II. <u>DCF MODEL</u>

Q. Please summarize Mr. Moul's surrebuttal testimony regarding the growth rate input to the DCF Model.

A. Mr. Moul disagrees with my use of projected nominal GDP as a limiting factor for long-term growth projections of the proxy utility group. Mr. Moul relies instead on the growth rates published by various analysts.

Q. Please summarize the problems you have with the growth rates Mr. Moul used in his DCF Model.

A. The problems I have with Mr. Moul's growth rate inputs could be summarized into several key points: (1) analysts' growth rates cover short-term time periods; (2) it is not reasonable to assume that any company can outpace the growth rate of the aggregate economy in which it operates over the long run; and (3) Mr. Moul's growth rates result in a DCF Model that must be overstated given it exceeds a reasonable estimate for the market cost of equity. I will address each of these points below.

Q. Are the analyst growth rates used by Mr. Moul in his DCF Model long-term growth rates?

A. No. Growth rates published by various analysts typically cover a period of 3 – 10 years. However, the growth rate input in the constant growth DCF Model (or the terminal growth rate in a multi-stage DCF Model) contemplates a *long-term* period of time (technically, infinity). Regardless of the quantitative accuracy of the published growth rates Mr. Moul relies upon, the Commission should understand that it is Mr. Moul, not the commercial analysts, who is suggesting to the Commission that the proxy companies will experience these annual rates of growth year after year for many years into the future.

Q. Is it reasonable to assume that a company's earnings or dividends will grow at an annual rate greater than that of the projected annual growth rate of the aggregate economy in which it operates?

A. No, I do not believe so. This is a fundamental concept in finance, but it also make sense intuitively. The growth rate of our economy is most widely measured by U.S. GDP. As discussed in my direct testimony, a reasonable projection of annual GDP growth going forward is about 3.8% (over the long-run). We could think of GDP as an "average" of sorts, which means there are relatively high-growth companies (that have not yet reached their mature stage of the lifecycle) that are bringing the average up, and likewise, there are relatively low-growth companies that are bringing the average down. Some companies would even have negative growth rates (i.e., decreasing earnings and/or dividends). The growth rates of all the companies in the U.S. market are constantly changing over time, but GDP growth is relatively consistent. Mathematically, if a company were to consistently outpace GDP growth year after year, then it would eventually have earnings that exceeded U.S. GDP, regardless of its starting point. An appropriate metaphor might be two runners in an infinite race. If Runner A runs at a faster pace than Runner B, Runner A will eventually surpass Runner B no matter the head-start distance Runner B was given. It is simply not reasonable to assume that the earnings of any one company, especially a low-growth utility, would ever surpass U.S. GDP.

Q. Do the results of Mr. Moul's DCF analysis appear unreasonable in light of the strong likelihood that they exceed a reasonable estimate for the current market cost of equity?

A. Yes. Regardless of the differing opinions regarding technical aspects of long-term growth indicators in the DCF Model, we should nonetheless check the results for reasonableness. Since the growth rate input in the DCF Model is the primary driver of the end results (given the fact that stock prices and dividends much less subjective), then an unreasonably high DCF result based on market indicators could be primarily attributable to an unreasonably high growth rate input. Mr. Moul's DCF Model produced a result of 11.21%.[4] Since the average beta of the proxy group is less than 1.0, then the market cost of equity (which is based on a beta equal to 1.0) acts as a "ceiling" on UGI's cost of equity. The market cost of equity is estimated by adding the risk-free rate (as estimated by the current yield on 30-year U.S. Treasury bonds) to the equity risk premium ("ERP"). Although the ERP will be discussed in more detail below in relation to the CAPM, it is instructive here as part of our cost of equity "ceiling" estimate. The current risk-free rate is about 2.4%.[5] A reasonable estimate for the ERP is about 5.5%.[6] Thus a reasonable estimate for the market cost of equity is about 8%. Any cost of equity estimate for UGI that is more than 300 basis points above this estimate for the "ceiling" is clearly unreasonable.

---

[4] Direct Testimony of Paul R. Moul, p. 37.

[5] *See* Exhibit DJG-7.

[6] *See* Exhibit DJG-10.

Q. Mr. Moul suggests that gas utilities can outpace GDP growth over the long-run due to asset replacement programs. Do you have a response?

A. Yes. I will reiterate some of the lengthy discussion in my direct testimony on this issue. First, from a quantitative standpoint, utilities can achieve earnings growth that exceed U.S. GDP growth. However, as explained in my direct testimony, this relationship suffers from two important problems that the Commission should consider from the standpoint of considering a fair and accurate application of the DCF Model. First, using a utility's quantitative earnings growth in a particular period as the long-term growth rate assumption in the DCF Model suffers from a feedback loop that is not present in the CAPM. In this case (as in most cases), the short-term growth rate assumptions reported by analysts such as Value Line are notably higher than long-term GDP growth. If those short-term rates are used for the sustainable growth rate input in the DCF Model to asses cost of equity, it will inevitably result in an inflated cost of equity estimate, which will presumably lead to inflated earnings growth, and the cycle continues.

Second, I do not believe a utility's ability to increase earnings by simply increasing its rate base is indicative of real, qualitative growth that should be directly considered as a quantitative input in a fair application of the DCF Model. The reason for my opinion on this issue is that competitive (non-regulated) companies cannot simply increase the amount of capital assets on its balance sheet and automatically see earnings growth results. Investing in large capital projects is risky, and unless it results in increased market share over the long-run, such investments will not necessarily generate earnings growth. Unlike many competitive firms, UGI does not have the ability to launch new product lines, franchise, or expand to new and developing markets in order to increase market share and achieve real, qualitative growth. Rather, any quantitative earnings growth UGI will realize will be as a result of rate increases authorized by the Commission, which may be partially driven by merely retiring and replacing assets to serve its existing customer base. In the competitive environment, this dynamic does not represent how companies actually grow. Utilities in general, including UGI, are effectively non-growth companies, but that does not prevent their shareholders from seeking quantitative earnings growth through increased rate bases and proposals to the regulator for authorized ROEs (and capital structures) that result in awarded returns that clearly exceed market-based capital costs.

Q. Do you have any remarks regarding the use of the Quarterly Approximation DCF Model you used in this case?

A. Yes. Although Mr. Moul and I clearly disagree on several issues related to the DCF Model, he does not criticize my use of the Quarterly Approximation DCF Model. In fact, Mr. Moul also considers a variation of the DCF model which assumes the quarterly compounding of dividends, among other variations.[7] In my opinion, it is reasonable to use any of the DCF Model variations that consider different timings of dividend growth, whether it is annually, semi-annually, or quarterly. In addition, these variations do not have a signification impact on the results. For example, in Mr. Moul's exhibits, he presents a semi-annual, annual, and quarterly variation of the DCF, which results in dividend yields of 3.50%, 3.53%, and 3.49%, respectively.[8] This highlights the fact that variations in DCF results are primarily driven by growth rate assumptions (and potential premiums added to the model such as the leverage adjustment), rather than the type of DCF Model being used.

---

[7] *See* UGI Gas Exhibit B, Sch. 7.

[8] *Id*.

III. Comparison to Pennsylvania Allowed ROEs

Q. Please comment on Mr. Moul's comparison to utility returns recently authorized by the Commission.

A. Mr. Moul cites to a variety of ROEs allowed by the Public Utility Commission since 2018.[9] They include ROEs for small and large gas utilities, a small electric utility, and a large water utility. Several were determined based on market information before the impact of the COVID-19 pandemic. The PUC allowed PECO Gas a 10.24% ROE based upon a time frame which included the COVID-19 pandemic shut-down and re-opening. What Mr. Moul does not show is that any of the allowed rates of returns incorporated his particular approach to estimating a cost of equity, such as his leverage adjustment to the DCF and CAPM.

Q. Mr. Moul also references an ROE identified by the Commission for use in electric utility Distribution System Improvement Charges (DSICs). Should the Commission use that DSIC ROE as a limit in this proceeding?

A. No, I disagree with Mr. Moul's suggestion. I have been advised that the DSIC allows UGI to impose a surcharge to recover certain eligible investments in natural gas infrastructure replacements between base rate cases. As such, the DSIC amounts to an automatic rate recovery mechanism for UGI that, in turn, lowers its risk.

Commission regulations allow UGI to implement a DSIC surcharge to further public policy which favors replacement of certain natural gas infrastructure, subject to consumer protections. Consumers are protected by a 5% cap on the amount of eligible investment in plant which UGI may recover through the DSIC surcharge. UGI's calculated

[9] Rebuttal Testimony of Paul R. Moul, p. 5.

achieved return on its DSIC eligible plant investment is compared to one of two benchmarks. The first benchmark is the utility's allowed ROE in a base rate case within two years. In the absence of a specific allowed ROE, the Commission's Quarterly Earnings Report identifies an industry ROE for use in the DSIC. The benchmark ROE serves as a guard against over-earnings. If UGI's calculated achieved return on its DSIC investment exceeds the applicable benchmark ROE, then UGI cannot collect the DSIC surcharge for the next quarter.

An ROE that is calculated in some way by Commission staff, for use in a single quarter test of whether a natural gas utility without a recent allowed cost of equity may be over-earning through its DSIC surcharge, is not suited to identification of the cost of common equity which UGI should be allowed the opportunity to earn as of the end of the FPFTY.

IV. Credibility of CAPM Results

Q. Please summarize Mr. Moul's surrebuttal testimony regarding your CAPM results.

A. Mr. Moul claims that the result of my CAPM is not credible.[10]

Q. Please summarize the inputs and results of your CAPM.

A. The CAPM is a Nobel-prize-winning financial model that has three inputs: (1) risk-free rate; (2) beta; and (3) the ERP. I will summarize and contrast the sources of these inputs between my CAPM and Mr. Moul's CAPM.

---

[10] Rebuttal Testimony of Paul R. Moul p. 27, lines 14-15.

1. Risk-free rate

Financial analysts use the yield on Treasury securities as a proxy for the risk-free rate. I used a recent 30-day average on the daily yields on 30-year Treasury bonds as a proxy for the risk-free rate in my CAPM. This is a very reasonable approach. In contrast, Mr. Moul relies on projected bond yields. I have reviewed dozens of utility ROE testimony dating back more than 20 years. In nearly every one of those cases, the witness representing the utility will rely on a forward-looking or projected Treasury bond yield for the risk-free rate, instead of relying on the current, *known* Treasury bond yield. In every single one of those cases, I cannot recall a single instance in which the utility's projected bond yield was *lower* than the current bond yield. In other words, I cannot recall a single case in which a utility witness's prediction of the future did not, all else held constant, result in a higher cost of equity estimate in the present. After observing this tactic numerous times over many years without exception, it reinforces my opinion that it is preferable use known (current) bond yields rather than unknown (future) bond yields.

2. Beta

For the beta input in my CAPM, I relied on the betas published by Value Line. In my experience, the vast majority of ROE witness in utility rate proceedings (representing both utilities and customers) rely on Value Line betas without further adjustment. In contrast, Mr. Moul takes the unusual approach of adjusting Value Line's published betas. It is not surprising that this adjustment is in the upward direction.

2. ERP

Mr. Moul criticized me for looking back over 30 days to get an average yield on T-bonds for my risk-free rate and described it as "backward-looking."[11] In contrast, Mr. Moul relies on data that predates the invention of color televisions in his ERP estimate. Relying on data dating back to 1940 is not a reasonable approach in estimating the ERP.[12] As discussed in my direct testimony, there is substantial evidence showing that the current and forward-looking EPR is notably lower than the historical ERP (especially if one begins their historical ERP analyses just after the end of the Great Depression). In contrast to Mr. Moul's approach, I relied on a survey of thousands of unbiased experts in helping develop a reasonable estimate for the ERP. I also looked at the estimate published by Duff & Phelps (a respected, international corporate advising firm) and the estimate published by one of the world's leading experts on the ERP – Dr. Aswath Damodaran. The *highest* ERP from these sources is 5.5% (notably lower than Mr. Moul's 8.77% estimate). That is the ERP I used in my CAPM.

Q. Based on this summary, what do you conclude about the results on your CAPM analyses as compared with Mr. Moul's results?

A. I used reasonable figures for each of the three CAPM inputs. My inputs are not affected by biases. Indeed, there is very little of my own personal judgement injected into the CAPM results. The current risk-free rate is based on the current yields of Treasury bonds, which are known; it does not require a subjective estimate or adjustment. The betas I used are published by Value Line. To my knowledge, Value Line does not have any conflict of

[11] Rebuttal Testimony of Paul R. Moul, p. 27, line 17.

[12] UGI Gas Exhibit B, Sch. 12.

interest with either utilities or ratepayers that might affect their judgment. The ERP I used reflects the results from a survey of thousands of unbiased experts. Based on these inputs, the results of my CAPM are quite reasonable.

V. Leverage Adjustment

Q. Please summarize Mr. Moul's rebuttal testimony regarding his leverage adjustment.

A. Mr. Moul claims that I "never really refute" his leverage adjustment and that I employ his leverage adjustment approach through the use of a similar mathematical technique as part of my capital structure analysis.[13]

Q. What is your response to Mr. Moul's rebuttal testimony regarding the leverage adjustment?

A. First, Mr. Moul's claim that I "never really refute" his leverage adjustment is inaccurate. In my direct testimony, I stated that "Mr. Moul's proposed leverage adjustment is entirely unnecessary and inappropriate."[14] I also provided several reasons why I disagree with Mr. Moul's leverage adjustment. As discussed in my direct testimony, if we consider the effects of leverage in the cost of equity calculation, it indicates a cost of equity of about 7.6% at a 50% debt ratio for UGI.[15]

Q. What is the impact to the revenue requirement related to Mr. Moul′s proposed leverage adjustment?

A. If the Commission were to reject the Company's proposed leverage adjustment, it would reduce the revenue requirement by $23.755 million.

---

[13] Rebuttal Testimony of Paul R. Moul, p. 22, lines 22-23.

[14] Direct Testimony of David J. Garrett, p.46, lines 4-5.

[15] Exhibit DJG-17.

VI. Management Performance Premium and Response to Mr. Brown's Testimony

Q. Please summarize Mr. Moul's rebuttal testimony regarding his premium for management performance.

A. Mr. Moul reaffirms his belief that 20 basis points should be added to the cost of equity estimate as additional compensation to shareholders for management performance.

Q. What is your response to the Company's rebuttal testimony regarding the management performance premium?

A. Mr. Moul states the premium should be 20 basis points. Mr. Brown states that it should be at the high end of Mr. Moul's recommended range. Regardless, I maintain the opinion stated in my direct testimony that the Commission should affirmatively reject any premium to either a cost of equity estimate or authorized ROE that is related to managerial performance. The market would have already accounted for the Company's past performance. Imposing additional costs on consumers, to reward UGI for giving away shareholder dollars or managing O&M expense since the last rate case does not benefit consumers who will have to pay the higher rates. I recommend that the Commission deny the Company's request.

Q. What is the impact to ratepayers that the management performance premium would have?

A. As addressed in the direct testimony of OCA witness Mugrace, an increase of 0.2% to the ROE for Mr. Moul's management performance premium would increase the revenue requirement by $4.9 million.

Q. Please summarize Mr. Brown's rebuttal testimony directed at your direct testimony.

A. Mr. Brown states that there are a few errors in my testimony related to references I made to "UGI Gas" case, but the citations were to a case involving PECO Energy Company ("PECO").[16]

Q. Do you have a response to Mr. Brown's assertions?

A. Yes. There are a few typographical errors in my direct testimony related to this issue. The references made to UGI Gas on page 70, lines 11-17 (and corresponding citations), are meant to refer to PECO, as noted in Mr. Brown's rebuttal testimony.

Q. Mr. Brown makes several assertions related to inflation and its impact on the Company's proposals related to cost of capital and other costs. Do you have a response?

A. Yes. First, while it is not surprising to see many utility representatives around the country use the current inflationary environment as part of its support for rate increases, it is important for regulators to keep in mind that inflation impacts customers as well. I would argue that the adverse impacts of inflation are felt more by customers than by UGI's institutional shareholders. More importantly, the cost of equity models I employed in this case account for the impacts of inflation on current market conditions. Thus, we have an objective way to consider the quantitative impacts of inflation, rather than relying on the general narrative statements made by Mr. Brown or any other witness.

Q. Does this conclude your surrebuttal testimony?

A. Yes.

SURREBUTTAL TESTIMONY OF

JEROME D. MIERZWA

ON BEHALF OF THE

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

May 27, 2022

EXETER
ASSOCIATES, INC.
10480 Little Patuxent Parkway, Suite 300
Columbia, Maryland 21044

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Jerome D. Mierzwa. I am a Principal and Vice President of Exeter Associates, Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044. Exeter specializes in providing public utility-related consulting services.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony was submitted as OCA Statement 3 on April 20, 2022, and my rebuttal testimony was submitted as OCA Statement 3R on May 17, 2022.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to certain aspects of the rebuttal testimony of UGI Utilities Inc. – Gas Division ("UGI Gas" or "Company") witnesses Constance E. Heppenstall, Sherry A. Epler, Christopher R. Brown, and John D. Taylor; and Office of Small Business Advocate ("OSBA") witness Robert D. Knecht.

II. UGI GAS

WITNESS: Constance E. Heppenstall

Q. MS. HEPPENSTALL CLAIMS THAT SHE USED THE AVERAGE AND EXCESS METHOD IN HER COST-OF-SERVICE STUDY BECAUSE IT WAS ACCEPTED BY THE COMMISSION IN PECO ENERGY COMPANY ("PECO") DOCKET NO. R-2020-3018929.[1] WHAT IS YOUR RESPONSE?

[1] Rebuttal Testimony of Constance E. Heppenstall, UGI Gas Statement No. 10-R, p. 3.

A. The Commission's Order in the PECO proceeding was issued in 2021. In an Order issued by the Commission earlier in 2021 in Columbia Gas of Pennsylvania, Inc. ("Columbia") Docket No. 2020-3018835, the Commission accepted the use of the Peak and Average ("P&A") method.[2] In the PECO Order the Commission indicated that it does not have a standard cost of service methodology, and that it intends to evaluate the appropriate cost of service method for a natural gas distribution company ("NGDC") on a case-by-case basis.[3]

Q. MS. HEPPENSTALL CLAIMS THAT THE P&A METHOD IS FLAWED BECAUSE IT COUNTS AVERAGE DEMANDS TWICE. WHAT IS YOUR RESPONSE?

A. Mr. Knecht raised the same claim in his direct testimony, and I addressed this claim in my rebuttal testimony on pages 6-7, finding the double count claim to be incorrect and misleading.[4]

Q. IN YOUR DIRECT TESTIMONY, YOU ALLOCATED EXCESS CAPACITY RELATED COSTS TO INTERRUPTIBLE CUSTOMERS. DOES MS. HEPPENSTALL AGREE WITH YOUR ALLOCATION?

A. No. Ms. Heppenstall claims that it is inappropriate to allocate excess capacity or peak demand related costs to interruptible customers because interruptible customers can be interrupted during periods of peak demand.[5]

---

[2] Opinion and Order, Docket No. 2020-3018835, Order Entered February 19, 2021 ("Columbia Order"), at 218.

[3] Non-Proprietary Version Opinion and Order, Docket No. R-2020-3018929, Order Entered June 22, 2021 ("PECO Order"), at 230-231.

[4] Rebuttal Testimony of Jerome D. Mierzwa, OCA Statement 3R, at 6-7.

[5] Rebuttal Testimony of Constance E. Heppenstall, UGI Gas Statement No. 10-R, p. 6.

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL'S CLAIM CONCERNING THE ALLOCATION OF EXCESS CAPACITY COSTS TO INTERRUPTIBLE CUSTOMERS?

A. First, as explained in my direct testimony, the A&E method is presented and described in *Gas Rate Fundamentals*.[6] As shown in Table 1 of my direct testimony, assigning no peak demand related costs to interruptible customers is inconsistent with the use of the A&E method presented in *Gas Rate Fundamentals*.

Second, in UGI Gas' most recent base rate proceeding in Docket No. R-2019-3015162, the Company presented an A&E cost of service study that was sponsored by Mr. Paul R. Herbert, who like Ms. Heppenstall, was from Gannett Fleming Valuation and Rate Consultants, LLC. In responding to Mr. Knecht in UGI Gas' prior proceeding, Mr. Herbert acknowledged that 105 of the 371 interruptible customers being served by the Company were in essence receiving firm service. He claimed that including these 105 customers in his cost-of-service study as firm customers would increase the Rate IS cost of service by $1.035 million. In evaluating the cost of service impact of considering these 105 Rate IS customers as firm customers, Mr. Herbert assigned a peak day demand of 40,944 Mcf to Rate IS.[7] In the cost of service study presented in my direct testimony, I assigned a peak day demand of 39,847 Mcf to Rate IS.[8] The difference between the peak day assignment for Rate IS I have proposed and what Mr. Herbert contended would be appropriate to recognize the firm nature of Rate IS service is immaterial. It is unlikely that the Company's system operations have changed significantly from the Company's last base proceeding with respect to interrupting

[6] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 6.

[7] Workpapers of the Rebuttal Testimony of Paul R. Herbert, UGI Gas Statement No. 8-R, Docket No. R-2019-3015162.

[8] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 27.

interruptible customers. Therefore, in addition to being reasonable for the reasons presented in my direct testimony, my proposed assignment of peak day demand to Rate IS is also supported by the firm nature of the service provided to certain Rate IS customers.

Q. IN YOUR DIRECT TESTIMONY YOU CLAIMED THAT MS. HEPPENSTALL'S A&E METHOD EQUATES TO USING A PEAK ALLOCATION.[9] DID MS. HEPPENSTALL AGREE WITH YOUR CLAIM?

A. No. Ms. Heppenstall contends that my claim is simply wrong, and for the Residential class her A&E allocation factor is 3.37% percent less than a peak allocation factor.[10]

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL?

A. As demonstrated in my direct testimony, when there is no diversity in peak load on a natural gas distribution company's system such as the UGI Gas' system, the A&E method is identical to an allocation based solely on peak demands.[11] As also explained in my direct testimony, Ms. Heppenstall's application of the A&E method differs slightly from a pure peak allocation only because she has included the average usage of Rate IS customers and excluded the peak demand of Rate IS customers.[12]

Q. ALTHOUGH MS. HEPPENSTALL AGREES WITH YOUR PROPOSED REVISIONS TO THE ALLOCATION OF FORFEITED DISCOUNTS AND RECONNECTION FEES, SHE DISAGREES WITH YOUR PROPOSED MODIFICATION TO THE ALLOCATION OF MANUFACTURED GAS

---

[9] *Id*., pp. 11-13.

[10] Rebuttal Testimony of Constance E. Heppenstall, UGI Gas Statement No. 10-R, p. 7.

[11] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 10.

[12] *Id*., p. 13.

REMEDIATION EXPENSES.[13] WHY DOES SHE DISAGREE WITH THIS MODIFICATION?

A. Ms. Heppenstall acknowledges that these remediation expenses are related to manufactured gas plants ("MGPs") that have been long retired and no longer produce gas supply. She contends that if these MGPs were still in operation, the gas produced and the associated costs would be included in the Company's Purchased Gas Cost ("PGC") calculation related to core market Residential and small firm service. This is because, historically, the MGPs were overwhelmingly used to provide gas supply to Residential and small commercial customers, rather than industrial customers.[14]

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL'S CLAIMS CONCERNING THE ALLOCATION OF MGP REMEDIATION EXPENSES?

A. I agree with Ms. Heppenstall that if UGI Gas' MGPs were in operation today, the gas produced would be included in the Company's PGC calculation related to core market Residential and small firm service. However, UGI Gas' MGPs ceased operations in 1955, which was 67 years ago. It is highly unlikely that any current Residential or small firm service customer was a customer of UGI Gas 67 years ago. Therefore, it is inappropriate to solely recover MGP remediation expenses from Residential and small firm service customers. It would be more appropriate to deny UGI Gas recovery of these costs since MGPs are not currently used and useful in the provision of utility service.

Q. IN HER REBUTTAL TESTIMONY, MS. HEPPENSTALL INCLUDES A STATEMENT FROM THE COMMISSION'S ORDER IN THE PECO

[13] Rebuttal Testimony of Constance E. Heppenstall, UGI Gas Statement No. 10-R, pp. 7-8.

[14] *Id*.

PROCEEDING.[15] ARE THERE OTHER STATEMENTS IN THAT ORDER THAT ARE RELEVANT TO THE ISSUES IN THIS PROCEEDING?

A. Yes, In the PECO Order the Commission found that the P&A method is a reasonable method to utilize in a cost-of-service study for an NGDC.[16] In addition, the Commission found:

> Therefore, we conclude that the excess demand component of PECO'S distribution mains system garners considerable weight in the balance of mains costs.[17]

Q. WHAT IS YOUR RESPONSE TO THIS FINDING IN THE PECO PROCEEDING?

A. This statement implies that peak demands were given considerable weight by the Commission in the allocation of mains costs in the PECO proceeding. In this proceeding, in my direct testimony, I have demonstrated that on the UGI Gas system, only approximately 10% of distribution mains costs are associated with meeting peak demand requirements.[18] Therefore, the excess demand component of UGI Gas' distribution mains system does not garner the considerable weight it was given in the PECO proceeding.

Q. DID MS. HEPPENSTALL PRESENT A REVISED COST OF SERVICE STUDY IN THE REBUTTAL TESTIMONY?

A. Yes. Ms. Heppenstall presents a revised cost of service study in her rebuttal testimony reflecting the following changes to the study filed in her direct testimony:

---

[15] *Id.*, p. 4.

[16] PECO Order, at 230.

[17] PECO Order, at 229.

[18] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 23.

- A revised split of costs in FERC Account 874;
- A revised allocation of reconnection fees and forfeited discounts based on the most recent data available;
- A revised allocation of the costs identified as MGP remediation costs in Accounts 923 and 930; and
- A revised allocation of the design day demand for Rate R/RT and Rate N/NT customers.[19]

Q. DID THE COST-OF-SERVICE STUDY PRESENTED IN YOUR DIRECT TESTIMONY REFLECT ANY OF MS. HEPPENSTALL'S REVISIONS?

A. Yes. The study I filed in my direct testimony already reflected the revised split of costs in FERC Account 874, and the revised allocation of reconnection fees and forfeited discounts.[20] I would note that Ms. Heppenstall claims that the costs in Account 874 should be allocated 55.08% to mains and 44.92% to services.[21] However, her revised cost of service study allocated 55.08% of Account 874 costs to services and 44.92% to mains. A corrected cost of service study was filed by the Company on May 24, 2022. As also just explained, I continue to disagree with Ms. Heppenstall's allocation of MGP remediation costs. The study I presented in my direct testimony did not reflect the revised allocation of design day demand for Rate R/RT and Rate N/NT. I present a study which reflects this revised allocation for Rate R/RT and Rate N/NT later in my surrebuttal testimony.

Q. IN YOUR DIRECT TESTIMONY, YOU RECOMMENDED THAT UGI GAS' PROPOSED RESIDENTIAL MONTHLY CUSTOMER CHARGE OF $19.95 BE REJECTED, AND THAT THE MONTHLY CUSTOMER

---

[19] Rebuttal Testimony of Constance E. Heppenstall, UGI Gas Statement No. 10-R, p. 2.

[20] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 30.

[21] Rebuttal Testimony of Constance E. Heppenstall, UGI Gas Statement No. 10-R, p. 2.

CHARGE FOR RESIDENTIAL CUSTOMERS BE INCREASED TO NO HIGHER THAN $16.00.[22] DID MS. HEPPENSTALL AGREE WITH THIS RECOMMENDATION?

A. No. Ms. Heppenstall claims a cost-based monthly customers charge for Residential customers is $27.79 and, therefore, the proposed charge of $19.95 is justified.[23]

Q. WHAT IS YOUR RESPONSE TO MS. HEPPENSTALL?

A. As explained in my direct testimony, to provide for constancy and uniformity with the monthly Residential customer charges of other Pennsylvania NGDCs, to provide for gradualism, and to promote energy conservation, the monthly customer charge for Residential customers should be increased to no higher than $16.00.[24]

III. <u>UGI GAS</u>

WITNESS: Sherry A. Epler

Q. IN YOUR DIRECT TESTIMONY YOU FOUND THAT THE COMPANY'S PROPOSED REVENUE ALLOCATION TO BE UNREASONABLE AND THAT THE REVENUE ALLOCATION SHOULD BE BASED ON YOUR P&A COST-OF-SERVICE STUDY.[25] DOES MS. EPLER AGREE?

A. No. Ms. Epler contends that, based on the testimony of Ms. Heppenstall, the P&A cost of service I present in this proceeding should not be adopted by the Commission and, therefore, my proposed revenue allocation should also not be adopted.[26]

Q. WHAT IS YOUR RESPONSE?

---

[22] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 38.

[23] Rebuttal Testimony of Constance E. Heppenstall, UGI Gas Statement No. 10-R, p. 10.

[24] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 36.

[25] *<u>Id.</u>*, pp. 32-33.

[26] Rebuttal Testimony of Sherry A. Epler, UGI Statement No. 8-R, p. 13.

A. In my direct and rebuttal testimony, I have demonstrated that the A&E cost of service study method presented by Ms. Heppenstall does not present an accurate indication of class allocated cost responsibilities, and that the P&A method is consistent with established cost of service precedent. Therefore, the P&A method should be utilized to determine the revenue allocation in this proceeding.

Q. IN YOUR DIRECT TESTIMONY YOU RECOMMENDED THAT THE RESIDENTIAL CUSTOMER CHARGE BE INCREASED TO NO MORE THAT $16.00.[27] WHAT WAS THE BASIS FOR THAT RECOMMENDATION?

A. In this proceeding the Company is proposing to increase the Residential customer charge from $14.60 to $19.95, or 37%. As previously explained, I recommended that the Residential customer charge be increased to no more than $16.00 because the Company's proposal: (1) is out of line with the Residential customer charges of other NGDCs in Pennsylvania; (2) violates the principle of gradualism; and (3) is inconsistent with the Commission's goal of fostering energy conservation.[28] I further noted that a higher customer charge may counter the effectiveness of the Company's proposed Energy Efficiency and Conservation ("EE&C") Plan as it limits the amount of potential bill savings through the reduction of variable charges, which may in turn, discourage ratepayers from implementing energy conservations measures.[29]

Q. MS. EPLER CLAIMS THAT THE COMPARISON BETWEEN UGI GAS' PROPOSED RESIDENTIAL CUSTOMER CHARGE AND THE CUSTOMER CHARGES OF OTHER NATURAL GAS UTILITIES IN

[27] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 38.

[28] *Id.*, p. 36.

[29] *Id.*, pp. 37-38.

PENNSYLVANIA SHOULD NOT DETERMINE THE REASONABLENESS OF UGI GAS' PROPOSED CUSTOMER CHARGE FOR RESIDENTIAL CUSTOMERS.[30] WHAT IS YOUR RESPONSE?

A. In my direct testimony, I noted the principles of a sound rate structure. These principles included understandability and public acceptability.[31] Under the Company's Residential customer charge proposal, UGI Gas' charge would be well in excess of the charge of any other Pennsylvania NGDC.[32] It is unlikely that a UGI Gas Residential customer comparing their rates to those of other Pennsylvania NGDCs would find the customer charge rate difference to be understandable or acceptable.

Q. MS. EPLER DISAGREES WITH YOUR CLAIM THAT THE COMPANY'S PROPOSED $19.95 RESIDENTIAL CUSTOMER CHARGE IS INCONSISTENT WITH THE CONCEPT OF GRADUALISM.[33]

A. Ms. Epler claims that the concept of gradualism should apply to the overall rate increase, not individual rate components. UGI Gas' proposed customer charge reflects an increase of 37%. While on average UGI Gas' overall rate design may provide for gradualism, it would not provide for gradualism for customers with lower usage levels. In assessing the need for gradualism, the impact of the increases on customers with a range of usage levels should be considered, as well as average use customers.

Q. MS. EPLER CONTENDS THAT THE COMPANY'S PROPOSED INCREASE IN THE RESIDENTIAL CUSTOMER CHARGE WOULD NOT

[30] Rebuttal Testimony of Sherry A. Epler, UGI Statement No. 8-R, pp. 17-18.

[31] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 32.

[32] ***Id***., pp. 36-37.

[33] Rebuttal Testimony of Sherry A. Epler, UGI Gas Statement No. 8-R, pp. 19-20.

DISCOURAGE RATEPAYERS FROM IMPLEMENTING ENERGY CONSERVATION MEASURES. DO YOU AGREE?

A. No. Any increase in a customer charge would discourage ratepayers from implementing energy conservation measures when compared to maintaining or minimizing the increase in customer charges. As explained by the Maryland Public Service Commission:

> Even more to the point, however, recovery through fixed customer charges is inconsistent as a matter of policy with …energy efficiency and conservation…Capturing this incremental revenue in volumetric charges leaves customers entirely in control of their usage and charges, and thus leaves each individual customer in control of the extent (if any) to which this modest rate increase affects him or her. Accordingly, we reject the Company's request to increase customer charges and direct it to recover all incremental revenues through volumetric charges.[34]
>
> In arriving at this increase, the Commission places emphasis on Maryland's public policy goals that intend to encourage energy conservation. Maintaining relatively low customer charges provides customers with greater control over their heating bills by increasing the value of volumetric charges. No matter how diligently customers might attempt to conserve energy or respond to pricing incentives, they cannot reduce fixed service charges.[35]
>
> However, in this case we believe that holding the line on gas customer charges during the rate-effective period for this case will permit gas customers to have better control of their gas bills,

[34] Order No. 83085 at pp. 53-54, *In the Matter of the Application of Delmarva Power and Light Company for an Increase in its Retail Rates for the Distribution of Electric Energy*, 2019 (ML 120754) (Case No. 9192).

[35] Order No. 88944, p. 131, *in the Matter of the Application of Washington Gas Light Company for Authority to Increase Existing Rates and Charges and to Revise its Terms and Conditions for Gas Service*, 2018 (ML 223208) (Case No. 9481).

> allowing them the opportunity to wisely manage their gas usage. This decision is also keeping the Commission precedent.[36]

Q. MS. EPLER RECOMMENDS THAT, IF YOUR $16.00 RESIDENTIAL CUSTOMER CHARGE IS APPROVED BY THE COMMISSION, IT SHOULD NOT BE SCALED BACK TO REFLECT THE ACTUAL INCREASE AUTHORIZED BY THE COMMISSION IN THE PROCEEDING?[37] WHAT IS YOUR RESPONSE?

A. Scaling back the $16.00 Residential customer charge to reflect the increase authorized by the Commission would further ensure gradualism and further promote the Commission's goal of fostering energy conservation.

Q. IN YOUR DIRECT TESTIMONY YOU PROPOSED MODIFICATIONS TO THE DESIGN OF THE CHARGES FOR RATES NNS AND MBS. PLEASE SUMMARIZE THOSE MODIFICATIONS.

A. For Rate NNS, I proposed that the storage trip charge should be adjusted to include demand charges.[38] For Rate MBS, I recommended that daily deliverability demand charges be included in designing the applicable charges, and that the monthly imbalance percentage be increased to 5 percent.[39]

Q. DOES MS. EPLER AGREE WITH YOUR RECOMMENDATION TO INCLUDE DEMAND CHARGES IN DESIGNING THE APPLICABLE RATES FOR RATE NNS AND MBS?

---

[36] Order No. 68706 at pp. 195-96, *In the Matter of the Application of Baltimore Gas and Electric Company for Adjustments to its Electric and Gas Base Rates*, 2016 WL 7011611 (Case No. 9406, June 2016) (citations omitted).

[37] Rebuttal Testimony of Sherry A. Epler, UGI Statement No. 8-R, p. 21.

[38] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 4, p. 40.

[39] *Id*., p. 42.

A. No. Ms. Epler claims that the same storage assets are used to provide both NNS and MBS service. Therefore, one must look at the full contribution non-choice transportation customers make toward the cost of the interstate pipeline storage resources by considering the revenue paid under both Rate NNS and Rate MBS to determine if any underpayment for the services is being made by non-choice transportation customers. Ms. Epler then presents an analysis which indicates additional storage demand costs should not be assigned to Rate NNS.[40]

Q. WHAT IS YOUR RESPONSE TO MS. EPLER'S TESTIMONY CONCERNING THE ASSIGNMENT OF STORAGE DEMAND CHARGES TO RATE NNS AND MBS?

A. The design of the rates for service under Rates NNS and MBS has been an issue in prior UGI Gas base rate proceedings in which I have participated on behalf of the OCA. This is the first proceeding in which the Company has advanced this argument concerning the assignment of demand charges to Rate NNS. At this point in this proceeding, I will no longer pursue the allocation of storage demand charges to Rate NNS.

Q. DOES MS. EPLER AGREE WITH YOUR PROPOSAL TO DESIGN THE CHARGES FOR RATE MBS BASED ON AN IMBALANCE PERCENTAGE OF 5%?

A. No. Ms. Epler contends that the charge for service under Rate MBS should be based on actual average annual monthly imbalances which is 2.5737% rather than the 5% permitted tolerance.[41]

Q. WHAT IS YOUR RESPONSE?

---

[40] Rebuttal Testimony of Sherry A. Epler, UGI Statement No. 8-R, pp. 22-25.

[41] *Id.*, pp. 25-26.

A. Customers should be charged for the level of service they are entitled to and, therefore, it is appropriate to design the MBS rate based on the 5% percent tolerance. For example, customers under Rates LFD and XD are charged for the maximum daily quantity of service they are entitled to. These charges are not reduced if a customer does not utilize their maximum daily service entitlement. Similarly, PGC customers are charged for interstate pipeline capacity costs based on their expected design day demands, not their actual demands.

IV. UGI GAS

WITNESS: Christopher R. Brown

Q. IN YOUR DIRECT TESTIMONY, YOU RECOMMENDED THAT THE COMPANY INCREASE THE CAPACITY RELEASE CHARGE FOR RATE XD CUSTOMERS TO REFLECT THE COMPANY'S WEIGHTED AVERAGE COST OF DEMAND ("WACOD") CALCULATION IN EFFECT FOR LFD CUSTOMERS RATHER THAN THE COST OF COLUMBIA GAS TRANSMISSION ("COLUMBIA') FIRM TRANSPORTATION ("FT") CAPACITY ONCE THE CURRENT CONTRACTS WITH RATE XD CUSTOMERS EXPIRE.[42] DOES MR. BROWN AGREE WITH YOUR RECOMMENDATION?

A. No. Mr. Brown claims that increasing capacity charges to Rate XD customers could result in these customers leaving the Company's distribution system or perhaps more likely, demanding a reduction to the base distribution charges they currently pay. Mr. Brown also contends that Rate XD customers employ thousands of people that work in

[42] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 3, p. 43.

the Company's service territory and may move their business operations to other locations, resulting in economic implications to UGI Gas' customers.[43]

Q. WHAT IS YOUR RESPONSE TO MR. BROWN'S CLAIMS CONCERNING YOUR RECOMMENDATION TO RELEASE CAPACITY TO RATE XD CUSTOMERS BASED ON THE WACOD APPLICABLE TO LFD CUSTOMERS?

A. UGI Gas' PGC customers pay the Company's WACOD for the firm interstate pipeline capacity required to provide sales service. Choice and certain traditional (non-Choice) transportation customers accept an assignment of interstate pipeline capacity from UGI Gas, and the price paid for the assigned capacity is based on UGI Gas' WACOD. Not all traditional transportation customers accept an assignment of UGI Gas' interstate pipeline capacity. Rate XD customers that accept an assignment of Columbia Gas capacity from UGI Gas pay less than UGI Gas' WACOD for that capacity. The current cost of Columbia Gas from transportation capacity is $9.8100 per Dth per month, or $117.72 Dth per year. UGI Gas currently releases 49,773 Dth per month of Columbia Gas capacity to Rate XD customers.[44] UGI Gas' current WACOD for firm transportation capacity assigned to other transportation customers is approximately $15.00 per Dth per month.[45] There is no basis to discriminate between what UGI Gas' sales and transportation customers pay for firm interstate pipeline capacity. The assignment of Columbia Gas capacity to Rate XD customers results in an unreasonable and discriminatory discount of approximately $3.1 million that is paid for by sales and

[43] Rebuttal Testimony of Christopher R. Brown, UGI Statement No. 1-R, pp. 32-33.

[44] Response to OCA-I-17.

[45] Response to OCA-I-43.

transportation customers that accept an assignment of capacity from UGI Gas (49,733 Dth x ($15.00 - $9.81) x 12 months).

Mr. Brown claims that adopting my recommendation concerning the assignment of capacity to Rate XD customer could possibly result in subsequent reductions in base rate revenues from Rate XD customers.[46] That is certainly possible. However, adopting my capacity assignment pricing recommendation would result in these additional discounts, and the assigned capacity cost discount, being recovered more equitably from all customers. This is because under my proposal, transportation customers that do not accept an assignment of capacity would bear some responsibility for the capacity cost and distribution charge discounts granted to Rate XD customers.

Q. DOES MR. BROWN PRESENT ANY EVIDENCE THAT IT IS A LIKELY SCENARIO FOR ANY RATE XD CUSTOMER CURRENTLY RECEIVING AN ASSIGNMENT OF COLUMBIA GAS FIRM TRANSPORTATION CAPACITY TO MOVE THEIR BUSINESS OPERATIONS IF THEY ARE NO LONGER ASSIGNED COLUMBIA GAS FIRM TRANSPORTATION CAPACITY?

A. No. As just indicated, there are currently 15 Rate XD customers that are released a total of 49,773 Dth per day of Columbia FT capacity. As also just indicated, based on the current cost difference between Columbia Gas firm transportation capacity and the WACOD that would be applicable under my recommendation, without any subsequent off setting distribution base rate discounts, the annual cost for gas service from UGI Gas for these 15 Rate XD customers would increase by approximately $3.1 million. Based on the current usage characteristics of Rate XD customers reflected in UGI Gas'

[46] Rebuttal Testimony of Christopher R. Brown, UGI Statement No. 1-R, p. 33.

cost of service study, adopting my recommendation to assess Rate XD customers the Rate LFD WACOG would increase the average cost of gas for a Rate XD customer by approximately 24 cents per Dth.[47] This seems to be an insufficient incentive for a Rate XD customer to move their business operations. I would further note that Mr. Brown has also presented no evidence that there are location options available to Rate XD customers where the cost of natural gas service would be comparable to their current service costs.

V. <u>UGI GAS</u>

WITNESS: John D. Taylor

Q. IN YOUR DIRECT TESTIMONY YOU RECOMMENDED THAT UGI GAS' PROPOSED WEATHER NORMALIZATION ADJUSTMENT ("WNA") NOT BE APPROVED, BUT IF IT WERE TO BE APPROVED, A 3% DEAD BAND SHOULD BE INCLUDED SIMILAR TO THE PILOT WNA OF COLUMBIA GAS OF PENNSYLVANIA, INC.[48] DOES MR. TAYLOR AGREE THAT, IF APPROVED, UGI GAS' WNA SHOULD INCLUDE A 3% DEAD BAND?

A. No. Mr. Taylor contends that a dead band would add an unnecessary level of complexity for the Company's administration and communication related to the WNA,

---

[47] As previously indicated, the cost difference between Columbia Gas firm transportation capacity and the recommended Rate LFD WACOG is approximately $5.19 ($15.00 - $9.81). The amount of capacity currently assigned to Rate XD customers is 49,733 Dth per day. The Company's cost of service study indicates that Rate XD customers operate at a 70 percent load factor. Therefore:

a. Lost Capacity Discount: 49,733 Dth x $5.19 x 12 = $3,099,862
b. Rate XD Volumes: 49,733 Dth x 365 x 70 percent = 12,717,002 Dth
c. Rate Impact: a/b = 24.4 cents per Dth.

[48] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 4, p. 53.

as well as to the understanding of the mechanics of the WNA for customers. Therefore, the Commission should reject the application of the dead band in approving WNA.[49]

Q. WHAT IS YOUR RESPONSE TO MR. TAYLOR?

A. In Columbia Docket No. R-2018-2647577, a Settlement Agreement was approved which reduced Columbia's WNA dead band from 5% to 3%. In Docket No. R-2020-3018835, Columbia subsequently proposed to eliminate the 3% dead band. Columbia proposed eliminating the dead band because it claimed it ignored the true effect of weather, and would simplify the administration of a proposed Revenue Normalization Adjustment ("RNA"). The proposed RNA would adjust variations in revenues due to factors other than weather. The additional complexity for administration as well as the understanding of the mechanics of the WNA for customers was not cited by Columbia as a reason for eliminating the dead based. The Recommend Decision ("RD") of the Administrative Law Judge ("ALJ") in Docket No. R-2020-3018835 found that the 3% dead band was a reasonable provision, because it allowed for a range of what is considered "[n]ormal" weather in which Columbia's Commission approved rates would be applied without adjustment. The Commission's Order in Docket No. R-2020-3018835 adopted the ALJ's recommendation on this topic in the RD.[50]

Q. ONE OF THE FACTORS YOU CITE IN SUPPORT OF ADOPTING A DEAD BAND IS THAT USAGE CAN BE AFFECTED BY VARIABLES OTHER THAN TEMPERATURE.[51] DOES MR. TAYLOR AGREE?

---

[49] Rebuttal Testimony of John D. Taylor, UGI Statement No. 11-R, p. 4.

[50] Opinion and Order, Docket No. 2020-3018835, at 264-265.

[51] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 4, p. 53.

A. Yes. Mr. Taylor agrees that usage can be impacted by variables other than temperature much as humidity, wind speed, precipitation, and cloud cover.[52]

Q. CITING BONBRIGHT'S, "CRITERIA OF A SOUND RATE STRUCTURE," MR. TAYLOR AGAIN CLAIMS THAT A DEAD BAND ADDS COMPLEXITY AND INCONSISTENCY TO THE WNA.[53] WHAT IS YOUR RESPONSE?

A. The Company has presented no evidence that a dead band would add complexity and inconsistency that would result in customer confusion. Columbia and Philadelphia Gas Works have been operating under WNA's with dead bands for a number of years without evidence of there being customer confusion. In addition, a dead band is consistent with Commission precedent as it provides protection to customers against the unnecessary reconciliation of day-to-day temperature variations that are a part of normal business.[54]

Q. IN YOUR DIRECT TESTIMONY YOU FOUND THAT THE PROPOSED WNA EMBODIES A TAKE-OR-PAY POLICY.[55] WHAT WAS MR. TAYLOR'S RESPONSE?

A. In my direct testimony, I found that the proposed WNA embodies a take-or-pay policy because under the WNA customers would pay for a normalized level of distribution service regardless of their actual usage. Mr. Taylor claims that when the weather is colder than normal, customers use more gas, but do not purchase more distribution

[52] Rebuttal Testimony of John D. Taylor, UGI Statement No. 11-R, p. 5.

[53] ***Id.***, pp. 6-7.

[54] Columbia Gas of Pennsylvania, Inc,, Docket No. R-2020-3018835, Opinion and Order, at 264.

[55] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 4, pp. 50-51.

service, and when the weather is warmer than normal customers use less gas, but do not purchase less distribution service.[56]

Q. WHAT IS YOUR RESPONSE TO MR. TAYLOR?

A. Mr. Taylor's claim is simply wrong. UGI Gas provides gas distribution service and customers are charged for distribution service based on their gas usage. Therefore, the amount of distribution service provided by UGI Gas and charged to a customer will be higher when weather is colder than normal and lower when weather is warmer than normal.

Q. IN YOUR DIRECT TESTIMONY YOU INDICATED THAT THE WNA INAPPROPRIATELY AUTOMATICALLY ADJUSTS REVENUES BETWEEN RATE CASES WITHOUT CONSIDERING OTHER CHANGES IN TOTAL REVENUES AND COSTS.[57] WHAT IS MR. TAYLOR'S RESPONSE?

A. Mr. Taylor finds my claim to be an unreasonable critique of the WNA.[58] However, he does not dispute my conclusion.

Q. IN YOUR DIRECT TESTIMONY YOU CLAIM THAT AN NGDC'S "O&M" EXPENSES WOULD TEND TO INCREASE AS DEMAND INCREASES UNDER COLDER-THAN-NORMAL WEATHER, AND TEND TO DECLINE AS DEMAND DECREASES UNDER WARMER-THAN-NORMAL WEATHER.[59] WHAT IS MR. TAYLOR'S RESPONSE?

A. Mr. Taylor claims I have provided no evidence of this relationship.[60]

[56] Rebuttal Testimony of John D. Taylor, UGI Statement No. 11-R, pp. 16-17.
[57] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 4, p. 51.
[58] Rebuttal Testimony of John D. Taylor, UGI Statement No. 11-R, p. 18.
[59] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 4, p. 51.
[60] Rebuttal Testimony of John D. Taylor, UGI Statement No. 11-R, p. 19.

Q. WHAT IS YOUR RESPONSE TO MR. TAYLOR?

A. Customer demands increase as temperature decreases, and utilization of the UGI Gas distribution system increases as customer usage increases. It is reasonable and logical to expect that O&M expenses would increase as utilization of UGI Gas' distribution system increases. Mr. Taylor has presented no evidence that O&M expenses are not affected by distribution system utilization.

Q. IN HIS DIRECT TESTIMONY, MR. TAYLOR RESPONDED TO EACH OF THE 14 CONSIDERATIONS OUTLINED IN THE COMMISSION'S STATEMENT OF POLICY ON ALTERNATIVE RATEMAKING AND IN YOUR DIRECT TESTIMONY YOU ADDRESSED EACH OF MR. TAYLOR'S RESPONSES.[61] DOES MR. TAYLOR PROVIDE AN ADDITIONAL RESPONSE TO ANY OF THOSE CONSIDERATIONS?

A. Yes. Mr. Taylors presents an additional response to Considerations 10, 12, 13 and 14. Below, I identify each of these four Considerations, the Company's initial response, my response to the Company's initial response, Mr. Taylor's rebuttal testimony response to my initial response, and my response to Mr. Taylor's rebuttal testimony response:[62]

Consideration 10	Please explain how the WNA impacts the frequency of rate case filings and affects regulatory lag.
	<u>Initial UGI GAS</u>: The WNA is not anticipated to impact the frequency of rate cases or have an impact on regulatory lag.

[61] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 4, pp. 45-50.

[62] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 4, pp. 45-50; Rebuttal Testimony of John D. Taylor, UGI Statement No. 11-R, pp. 24-26.

	Initial OCA: A reduction to the frequency of rate case filings would be a benefit of an alternative ratemaking mechanism. The WNA does not provide this benefit.
	Rebuttal UGI Gas: As an alternative ratemaking proposal, the WNA is not a mechanism which is intended to reduce the frequency of rate case filings.
	Surrebuttal OCA: Mr. Taylor does not dispute my initial claim.
Consideration 12	Please explain whether the WNA includes appropriate consumer protections.
	Initial UGI GAS: The WNA mechanism will result in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates. UGI Gas will not recover additional distribution revenues due to colder than average temperatures that result in higher-than-normal usage from customers.
	Initial OCA: The WNA does not include appropriate consumer protections and should be rejected for the reasons subsequently discussed in my testimony.
	Rebuttal UGI Gas: The WNA mechanism insulates customers from high bills during colder-than-normal months, while also limiting a decline in distribution revenues for UGI Gas during warmer-than-normal months. In particular, WNA bills will be otherwise lower than non-WNA bills during colder than normal periods. These cold periods are the most sensitive to customers since they stand to create the largest burden to customers. Thus, inherent in the application of a WNA is this "consumer protection" against the burdens cold weather bills can produce. There are no further consumer protections required, as this is a balance in risk and reward sharing between UGI Gas and UGI Gas's customers.
	Surrebuttal OCA: Customers already have a budget billing option to reduce the volatility of their gas utility bills. Budget billing provides greater stability in a customer's gas utility bill than would the WNA because it provides for levelized billing in winter months regardless if it's warmer or colder than normal.

Consideration 13	Please explain whether the WNA is understandable to customers.
	Initial UGI GAS: UGI Gas' WNA is not a new concept to the regulated utility industry. Similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. UGI Gas has proposed a WNA tariff that provides detailed information to the customer of how the mechanism works based on successful working versions found in the tariffs of other Pennsylvania natural gas distribution companies that have implemented a WNA tariff. Further, educational materials and customer service training will be developed upon approval of the mechanism, as well as appropriate notice being provided to customers related to the WNA being approved pursuant to the Commission's alternative ratemaking notice requirements.
	Initial OCA: UGI has not provided any evidence to indicate that the WNA will be understandable to customers.
	Rebuttal UGI Gas: UGI Gas's proposed WNA mechanism is similar to that implemented by Columbia, PGW, and other utilities across the United States. UGI Gas's proposed WNA mechanism adjusts current billings on a monthly billing basis as the bill is being calculated and issued, helping with customer understanding.
	Surrebuttal OCA: First, Mr. Taylor's response is inconsistent with the testimony of UGI Gas witness Ms. Epler. Ms. Epler contends that UGI Gas' customer charges should not be compared to those of other NGDCs, but Mr. Taylor contends that the WNA should be compared to the WNAs of other utilities. In addition, unlike UGI Gas, PGW is a cash flow utility. Finally, I would note that Columbia's WNA is still a pilot program.
Consideration 14	Please explain how the WNA will support improvements in utility reliability.
	Initial UGI GAS: UGI Gas' cost of service is inclusive of investments and costs to continue to enhance the safety and reliability of its system. The proposed WNA will help minimize the volatility of the recovery of these costs.
	Initial OCA: The WNA does not provide an incentive to increase the safety and reliability of the UGI Gas System.

> Rebuttal UGI Gas: As stated in my direct testimony, the proposed WNA will help minimize the volatility of the recovery of UGI Gas's cost of service, inclusive of investments and costs to continue enhancing the safety and reliability of its system. The stabilization of cash flows allows a utility to focus more acutely on operational items under its direct control, as Chairman Gladys Brown Dutrieuille determined upon review of Columbia's WNA, when she stated, "This decoupling of uncontrollable weather from revenues stabilizes Columbia's cashflow, and in turn, allows Columbia to more acutely focus on operational items within its control; namely infrastructure upgrades and repairs."
>
> Surrebuttal OCA: The WNA will reduce the volatility in cash flows for UGI Gas. As previously explained, if customers are interested in reducing the volatility of their gas utility bill, they already have this option through budget billing.

Q. PLEASE SUMMARIZE YOUR POSITION ON WHETHER THE WNA SHOULD BE APPROVED.

A. The WNA should not be approved because it embodies a take-or-pay pricing policy, inappropriately adjusts rates without considering other changes in total revenues and costs, UGI Gas has not demonstrated that its current system of rates and charges results in inadequate revenue stability, and does not decrease the frequency of base rate case filings by UGI Gas. If the Commission elects to approve a WNA for UGI Gas, a 3% dead band should be included in the WNA similar to the dead band currently utilized in Columbia's pilot WNA.

Q. IN ADDITION TO BEING ADDRESSED BY MS. HEPPENSTALL AND MS. EPLER, MR. TAYLOR ALSO ADDRESSES YOUR RESIDENTIAL CUSTOMER CHARGE PROPOSAL.[63] DOES MR. TAYLOR PRESENT

[63] Rebuttal Testimony of John D. Taylor, UGI Statement No. 11-R, pp. 29-34.

ANY NEW REBUTTAL TESTIMONY ON THIS ISSUE TO WHICH YOU WOULD LIKE TO RESPOND?

A. No. Mr. Taylor's rebuttal testimony is similar to that of Ms. Heppenstall and Ms. Epler on this issue and I have already responded to Ms. Heppenstall's Ms. Epler's rebuttal testimony.

VI. <u>OSBA</u>

WITNESS: Robert D. Knecht

Q. MR. BROWN INDICATES THAT OSBA WITNESS MR. KNECHT PROPOSED A RATE INCREASE FOR THE RATE IS CUSTOMER GROUP.[64] DID YOUR PROPOSED REVENUE ALLOCATION ALSO INCLUDE A RATE INCREASE FOR RATE IS?

A. Yes.[65]

Q. DID MR. BROWN AGREE WITH THE INCREASE PROPOSED BY MR. KNECHT FOR RATE IS?

A. No. Mr. Brown claims that customers paying Rate IS are competitively situated customers with negotiated rates. He claims that these customers have options that could either allow them to bypass the UGI Gas system or they may move their operations outside the Company's service territory. He further claims that the Company's ability to increase the rates of Rate IS customers is limited.[66]

Q. WHAT IS YOUR RESPONSE TO MR. BROWN'S CLAIM CONCERNING INCREASING THE RATES FOR CUSTOMERS SERVED UNDER RATE IS?

[64] Rebuttal Testimony of Christopher R. Brown, UGI Statement No. 1-R, p. 33.

[65] Direct Testimony of Jerome D. Mierzwa, OCA Statement No. 4, p. 33.

[66] Rebuttal Testimony of Christopher R. Brown, UGI Statement No. 1-R, p. 34.

A. Mr. Brown's claims imply that it is unreasonable to ever propose an increase for Rate IS customers with competitive options. A comparison of revenues at present rates in the Company's two prior base rate cases and in the current proceeding is presented below. This comparison reveals that it is unreasonable to contend that UGI Gas cannot increase the revenues generated by Rate IS customers in the future:

Revenues at Present Rates

	Docket No. R-2018-3006814	Docket No. R-2019-3015162	Docket No. R-2021-3030218
Rate IS	$15,007,007	$23,442,353	$24,012,357

Q. DO YOU HAVE ANY INITIAL COMMENTS CONCERNING MR. KNECHT'S REBUTTAL TESTIMONY?

A. Yes. Several of the statements with which I do not agree that are included in Mr. Knecht's rebuttal testimony were included in his direct testimony. I have previously responded to these statements in my rebuttal testimony and, therefore, it is unnecessary to again respond to those statements.

Q. IN YOUR DIRECT TESTIMONY, YOU PRESENTED WHAT MR. KNECHT HAS CHARACTERIZED AS FOUR "TECHNICAL CHANGES" TO THE COMPANY'S COST OF SERVICE STUDY.[67] DOES MR. KNECHT ACCEPT THOSE CHANGES?

A. In my direct testimony I presented "technical changes" to the allocation of MGP remediation costs, forfeited discounts, reconnection fees, and the sub-finalization of costs in Account 874. Mr. Knecht agreed with all of these technical changes except the allocation of reconnection fees.[68]

[67] Direct Testimony of Robert D. Knecht, OSBA Statement No. 1-R, p. 3.
[68] *Id.*

Q. WHAT DOES MR. KNECHT RECOMMEND CONCERNING THE ALLOCATION OF RECONNECTION FEES?

A. Mr. Knecht believes reconnection fees and reconnection costs should be allocated on the same basis. He proposes to allocate reconnections fees based on an aggregate O&M allocation.[69]

Q. WHAT IS YOUR RESPONSE TO MR. KNECHT'S RECOMMENDATION?

A. Mr. Knecht has not demonstrated that an aggregate O&M allocation for reconnection fees is reasonable. In addition, as previously indicated, I would note that the Company has accepted my technical change to the allocation of reconnection fees.

Q. WHAT DOES MR. KNECHT CONCLUDE CONCERNING YOUR PROPOSED REVENUE ALLOCATION?

A. Mr. Knecht finds that my proposed revenue allocation is directly consistent with the results of my P&A cost-of-service study. However, he contends that my revenue allocation does not move the Rate R/RT class sufficiently toward the cost of service indicated by my P&A study. More specifically, as presented in Table RDK-R1, my revenue allocation moves the Rate R/RT class from a revenue-cost rate of 91.9% to 95.3%, or nearly 50% toward the cost of service indicated by my P&A study. As shown in Table RDK-R2, Mr. Knecht subsequently proposes a revenue allocation which moves the revenue-cost ratio of Rate R/RT customers to 97.7% of the cost of service indicated by my P&A study.[70]

Q. WHAT IS YOUR RESPONSE TO MR. KNECHT'S ALTERNATIVE REVENUE ALLOCATION?

[69] *Id.*

[70] *Id.*, pp. 4-6.

A. As shown in Table RDK-R1, with the exception of Rate XD, my proposed revenue allocation reflects significant movement toward the cost-of-service rates indicated by my P&A study for the Rate R/RT, Rate N/NT and Rate DS customer classes for which current revenues differ most significantly from the indicated cost of service. I have not proposed a revenue decrease for Rate XD-firm even though the revenues from this class exceed the indicated cost of service because I don't believe it to be appropriate for any customer class to receive a rate decrease when overall, rates are increasing. The revenues at present rates for Rate LFD customers are essentially equal to the indicated cost of service under my proposed revenue allocation, and would remain cost based under proposed rates. For Rate IS/XD-I whose current rates were slightly in excess of the indicated cost of service, I have proposed cost-based rates. I believe that this proposed revenue allocation is reasonable in that it provides for gradualism and significant movement toward cost-based rates.

VI. CONCLUSION

Q. IN LIGHT OF THE POSITIONS OF THE PARTIES IN THIS PROCEEDING, HAVE YOU MODIFIED YOUR P&A COST OF SERVICE STUDY AND REVENUE ALLOCATION PRESENTED IN YOUR DIRECT TESTIMONY?

A. Yes. The cost-of-service study initially presented in my direct testimony allocated distribution mains costs based on the P&A method. Nothing presented in the rebuttal testimony of the other parties has changed my finding that the P&A method is consistent with cost-of-service principles. My initial cost-of-service study reflected three additional "technical changes" to the Company's A&E cost-of-service study. These technical changes related to the allocation of MGP remediation costs, forfeited discounts, and reconnection fees. As explained previously in this surrebuttal testimony, my position has not changed on these cost allocations. The only cost of service study change proposed by a party in this proceeding which I have not opposed is Mr. Knecht's proposed change in the calculation of the design day demands for the Rate R/RT and Rate N/NT classes. I have revised my initial study to reflect this change and modified my proposed revenue allocation to reflect the results of my revised study. Schedule JDM-1 Revised presents the results of my revised study at present rates. I have also revised Tables 5, 7, and 8 from my direct testimony to reflect the results of my revised study, and have revised the revenue allocation for Rates R/RT and N/NT. These revised tables are presented below. In developing my revised revenue allocation, I have attempted to maintain the same movement towards cost based rates for Rates R/RT and N/NT that was initially reflected in my direct testimony.

Table 1. Revised - Combined Class Cost of Service and Rate of Return Present Rates

	Company			**OCA Study**		
	Cost of Service	**Rate of Return**		**Cost of Service**	**Rate of Return**	
Class		**Percent**	**Unitized**		**Percent**	**Unitized**
Residential (R)	$471,011,760	4.33%	0.70	$464,929,702	4.54%	0.74

Surrebuttal Testimony of
Roger D. Colton

On Behalf of:
Office of Consumer Advocate
Statement 4SR

May 27, 2022

Table of Contents

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger Colton. My address is 34 Warwick Road, Belmont, MA.

Q. ARE YOU THE SAME ROGER COLTON WHO PREVIOUSLY PREPARED DIRECT AND REBUTTAL TESTIMONY FOR THE OFFICE OF CONSUMER ADVOCATE IN THIS PROCEEDING? IN WHAT POSITION?

A. Yes.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY.

A. The purpose of my Direct Testimony is to respond to the Rebuttal Testimony of the following witnesses:

- CAUSE-PA rebuttal witness Harry Geller;
- I&E rebuttal witness Zachari Walker;
- UGI Gas rebuttal witness Chris Brown;
- UGI Gas rebuttal witness Sherry Epler;
- UGI Gas rebuttal witness Constance Heppinstall;
- UGI Gas rebuttal witness John Taylor; and
- UGI Gas rebuttal witness Daniel Adamo.

PART 1. Response to CAUSE-PA Witness Harry Geller.

Q. PLEASE RESPOND TO MR. GELLER'S REBUTTAL TESTIMONY REGARDING YOUR PROPOSED SCREENING OF CUSTOMERS CONVERTED TO NATURAL GAS FOR CAP ELIGIBILITY.

A. CAUSE-PA witness Harry Geller states that he supports my recommendation to screen gas conversion customers for CAP in order to help ensure that UGI Utilities – Gas Division (UGI or the Company) customers can afford service and reduce uncollectible costs passed on to other customers (CAUSE-PA St. 1-R at 2-3). As I noted in my Direct Testimony, while UGI has converted nearly 30,000 customers to natural gas, it has identified only 354 of those customers (1.2%) as Confirmed Low-Income customers.

Mr. Geller states, however, that screening these customers for low-income status "will not address the low CAP participation numbers for UGI's existing low-income customers. . ." (CAUSE-PA St. 1-R at 2). I agree with Mr. Geller's observation.

My remedy for UGI's failure to confirm the low-income status of its customers, and to enroll those Confirmed Low-Income customers in its Customer Assistance Program (CAP), is to establish measurable outcome objectives. As I state in my Direct Testimony, and will discuss further below in this Surrebuttal Testimony, establishing measurable outcome objectives are based on the need to define clear agency missions, set results-oriented goals, measure progress toward achievement of those goals, and use performance information to help make decisions and strengthen accountability. I share Mr. Geller's concerns about the extent to which low-income customers are identified by UGI Gas and enrolled in CAP. And I agree that his recommended remedy is reasonable and urge its adoption. The remedy I propose is necessary even if Mr. Geller's recommendations are approved.

The purpose of screening customers converted to natural gas, however, is not simply to expand the population of Confirmed Low-Income customers or the CAP enrollment. As I explain in my Direct Testimony, without screening natural gas conversions in this fashion, and extending LIURP to those customers, the conversion of customers to natural gas will impose unnecessary costs on remaining ratepayers. While natural gas conversions likely generate both environmental and affordability benefits to the customers converted, UGI Gas should undertake those reasonable steps I propose to mitigate the adverse cost consequences to other ratepayers.

PART 2. Response to I&E Witness Zachari Walker .

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the Rebuttal Testimony of I&E witness Zachari Walker. Mr. Walker opposes my recommendation to provide an increase of $524,450 to treat low-income customers who are converted from non-gas heating fuels to natural gas. Mr. Walker argues that UGI has not exhausted its LIURP spending in recent years and thus there is no reason to expand that budget in this proceeding. (I&E St. 1-R at 3).

Mr. Walker does not acknowledge three things which render his conclusion not well-grounded. First, Mr. Walker does not acknowledge the spending dynamics which underlie the discovery request he cites. It is true that UGI North did not spend its LIURP budget in 2019. However, the amount of under-spending was only $37,547, or 3.7% of the projected spending. (BCS 2019 annual Report on Universal Service Programs and

Collections Performance, at 46) (projected spending of $1,015,495 with actual spending of $977,948). The substantial UGI Gas under-spending in 2019 was with UGI South (projected 2019 spending of $1,816,431 and actual spending of $1,162,713). (Id.) UGI South projected that it would use that 2019 under-spending in 2020. (Id.) However, as we all know, the world shutdown in 2020 due to COVID-19. Utilities across the nation had difficulties in spending all of their energy efficiency budgets during the economic shutdown during the COVIDI-19 pandemic. Not spending one's budget during the COVID-19 years of 2019 and 2020 is no reason not to provide the budget that is needed today.

Second, Mr. Walker does not acknowledge that my recommendation is not merely to increase the budget, but to create a mechanism identifying the increased need. I do not propose to increase the LIURP budget and then expect UGI to create the demand for that budget. My recommendation is to provide the budget necessary to meet the demand that will exist given the continuing UGI efforts to convert customers, including low-income customers, from non-natural gas heating fuels to natural gas service.

Finally, Mr. Walker does not acknowledge that his recommendation to deny my proposed increase in the LIURP budget for a specific purpose (i.e., to serve low-income households converted to natural gas from non-natural gas heating fuels) will, unto itself, impose a substantial cost on other ratepayers. Indeed, as I noted, and Mr. Walker did not acknowledge, expanding the LIURP budget to treat these "new" CAP participants will result in a dollar-for-dollar decrease in CAP spending for every dollar of bill reduction achieved through LIURP. In addition, the LIURP investments will reduce costs to other ratepayers through the reduction of arrears subject to forgiveness. Each of these cost reductions will, on a dollar-for-dollar basis, be a reduction in rates to remaining ratepayers through a reduction in costs passed through the UGI Gas Universal Service Rider.

<u>PART 3. Response to UGI Witness Chris Brown</u>.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I address the Rebuttal Testimony of Chris Brown, UGI St. No. 1-R. While Mr. Brown states that he will respond to my Direct Testimony, at no point does his testimony directly cite my testimony and provide a response.

Mr. Brown does assert in generic terms that "UGI Gas has exceptional customer satisfaction performance. . ." (UGI St. No. 1-R at 10). I respond further to UGI Gas testimony with respect to "customer satisfaction" in my response to the Rebuttal Testimony of Daniel Adamo below.

<u>PART 4. Response to UGI Rebuttal Witness Sherry Epler</u>.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the Rebuttal Testimony of Sherry Epler. Ms. Epler, UGI St. No. 8-R, references the Rebuttal Testimony of Daniel Adamo for the proposition that "low-income customers are, on average, higher use customers." (UGI St. No. 8-R at 19). I will respond to that argument in my response to Mr. Adamo below.

Ms. Epler further states, however, that "an increase in [the] customer charge. . .serves to reduce the burden on low-income customers." (UGI St. No. 8-R at 19). In making that statement, however, Ms. Epler ignores the unrebutted information I provide documenting that: (1) the increased customer charge will increase rates to at least 86% of UGI's estimated low-income customers who are not protected by UGI's CAP (OCA St. 4 at 8); (2) the increased customer charge, standing alone, will remove 95.4% of the total value of federal fuel assistance being delivered to UGI Gas' low-income customers (OCA St. 4 at 10); (3) the UGI Gas proposed increase in its fixed monthly customer charge will increase the payment difficulties which low-income customers currently face (OCA St. 4 at 11); and (4) the increased UGI Gas customer charge will make it more difficult for low-income customers to control their exposure to unaffordable bills through the implementation of energy efficiency or usage conservation measures. (OCA St. 4 at 11). Ms. Epler errs when she argues, without evidentiary support, that the increase in the customer charge will "reduce the burden on low-income customers." (UGI St. 8-R, at 19).

PART 5. Response to UGI Rebuttal Witness Constance Heppenstall.

Q. PLEASE DESCRIBE THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I briefly note that while UGI Gas Rebuttal Witness Constance Heppenstall asserts that she responds to my Direct Testimony (UGI St. No. 10-R at 1, 10), no part of her testimony takes issue with the information and data I present in my Direct Testimony. Accordingly, I provide no further response to Ms. Heppenstall.

<u>PART 6. Response to UGI Gas Rebuttal Witness John Taylor</u>.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the Rebuttal Testimony of John Taylor, UGI St. No. 11-R. Mr. Taylor responds to my Direct Testimony regarding the UGI Gas proposed Weather Normalization Adjustment (WNA). He argues that (1) the WNA does not disproportionately adversely affect low-income customers (UGI St. No. 11-R at 8 - 9); (2) that budget billing does not provide a better alternative mechanism through which to stabilize their monthly payments (UGI St. No. 11-R at 9 – 10, 24); and (3) that the Company's proposed increased customer charge will decrease annual bills to CAP customers. In addition, Mr. Taylor asserts that UGI Gas provides adequate consumer education to customers regarding the proposed WNA. (UGI St. No. 11-R at 27 – 28).

Q. DOES THE WNA DISPROPORTIONATELY ADVERSELY AFFECT LOW-INCOME CUSTOMERS?

A. Yes. I demonstrate that low-income customers will be disproportionately affected by the WNA. While Mr. Taylor cites a conclusory statement that I make regarding the impacts of the WNA (made in response to a question "what do you conclude?"), he does not address the ways in which low-income customers are adversely affected.

- More low-income customers are in arrears during the cold weather months. The WNA will increase bills during some winter months. As I demonstrate, the fact that "on average," over multiple years, bills will be somewhat the same is irrelevant from a low-income perspective. It is the month-to-month variation.

- Not only are more low-income customers in arrears during the cold weather months, but they are ***<u>deeper</u>*** in arrears. When those arrears become due, total bill payments (arrears plus bills for current service) become a higher percentage of income and thus less payable. Again, the fact that on average, over multiple years, bills will be somewhat the same does not address the adverse impacts on low-income customers by taking bills that are likely already unaffordable and making them more so.

- By increasing the winter bills (in some years), low-income customers reach the spring months with a higher outstanding balance and are, as a result, more likely to be disconnected.

- When low-income accounts are disconnected for nonpayment, they will be disconnected with a higher outstanding balance at the time of disconnection. Accordingly, it will be more difficult to have service restored.

Low-income customers are not protected by UGI's PIP. As I discuss in my Direct Testimony, UGI identifies a small portion of customers as Confirmed Low-Income customers and, even then, enrolls a small portion of its Confirmed Low-Income customer base in its PIP. These observations are made consistently throughout my Direct Testimony. To cite my conclusion without addressing the underlying data and discussion presented throughout my testimony does not serve to "rebut" the data presented.

Q. DOES BUDGET BILLING PROVIDE A BETTER ALTERNATIVE TO STABILIZE MONTHLY PAYMENTS THAN THE WNA?

A. Yes. The question originally presented by UGI Gas was not whether rates would be more stable on a year-to-year basis. Remember what Taylor first asserted in his Direct Testimony. He asserted as the advantage of the WNA that "certain customers enrolled in the Customer Assistance Program (CAP) who pay an 'average bill' amount will see lower bill variability for distribution costs ***during colder than average periods***. . ." (UGI Gas St. No. 11 at 16) (emphasis added). He further asserts that "customers receive greater stability in the non-gas portion of their utility bills, a benefit ***during the winter*** *months* when gas prices tend to be at their highest, and a particular benefit for low-income customers with high bills *during the lengthy heating seasons* in UGI Gas's service areas." (Id. at 22) (emphasis added).

What drives customer inability-to-pay is not year-to-year variation in bills, but rather is month-to-month variation. (See e.g., OCA St. 4, Figure 2, at 34). The WNA has no impact on providing bill stability to customers during the winter months (i.e., during "the heating season"). What customers need to stabilize their winter heating bills is budget billing. It is not the year-to-year volatility in bills, it is the monthly volatility.

Q. DOES THE PROPOSED INCREASE IN CUSTOMER CHARGE DECREASE ANNUAL BILLS TO LOW-INCOME CUSTOMERS?

A. No. Taylor does not address the impact of the proposed WNA on low-income customers generally. Instead, he asserts that the WNA will reduce annual bills to *CAP* customers. (UGI St. No 11-R at 34) (emphasis added). What Taylor does not acknowledge is that the population of "CAP participants" is not representative of, let alone synonymous with, the low-income population in general. The UGI CAP program is largely percentage of income based. What that means is that customers whose usage is sufficiently low that the bill is lower than the percentage of income will not participate in the program. While half (51%) of the UGI CAP participants are on the "average bill" CAP program component, that means that half of the CAP participant population does participate in the percentage of income program. With half of the CAP population being low-income customers with bills sufficiently high to be higher than the maximum bill burdens provided through PIPP, the overall usage of the total CAP participant population will be substantially higher than the overall low-income customer base. Even if Mr. Taylor is correct in that CAP participants will have an average reduction in their bills of somewhat less than $1.00 per month ($11.63 per year / 12 months), those participants are not representative of the low-income customer base. Mr. Taylor argues that he presents a similar comparison for "low-income" customers. He does not acknowledge the low percentage of low-income customers that the Company has identified as confirmed low-income customers.

Q. WHAT DO YOU KNOW ABOUT THE RELATIONSHIP BETWEEN NATURAL GAS USAGE AND LOW-INCOME STATUS?

A. Every federal agency that has examined natural gas usage and income has found that as income increases, natural gas consumption increases as well. The fact that any one of these federal agencies reaches this conclusion is perhaps not the most significant observation to draw from this data. The more significant conclusion to draw is the fact that ***every single one*** of the federal agencies charged with studying such relationships has found a relationship to exist between income and natural gas consumption. Low-income customers use less gas, period.

Consider, first, the U.S. Department of Energy's Energy Information Administration (DOE/EIA) data generated through its Residential Energy Consumption Survey (RECS). The most recent (2015) DOE/EIA data reports that there is an association between energy use, natural gas use, and income. For both the United States as a whole, and for the Northeast Census Region (of which Pennsylvania is a part), while energy usage and natural gas usage is less efficient at lower income levels, total usage increases as incomes increase. In the Northeast Region, for example, while households with income less than $20,000 use 501 CCF of natural gas per year (on average), households with income at $80,000 to $99,999 use 779 CCF, and households with income at $120,000 to $140,000 use 972 CCF.

Table 1. U.S. and Northeast Total Energy Consumption and Natural Gas Consumption by Income (U.S. Department of Energy/Energy Information Administration)

Annual Income	U.S. Site Energy Consumption		U.S. Energy Expenditures		Northeast Average Site Natural Gas Consumption (of HHs Using Nat Gas)	
	Per Household (million Btu)	Per Square Foot (thousand Btu)	Per Household (dollars)	Per Square Foot (dollars	Per Household (million Btu)	Per Household (CCF)
Less than $20,000	67.2	46.6	$1,320	$0.91	52.0	501
$20,000 - $39,999	84.7	44.5	$1,571	$0.82	63.5	616
$40,000 - $59,999	88.7	40.6	$1,675	$0.77	64.8	630
$60,000 - $79,999	99.3	40.8	$1,872	$0.77	65.9	642
$80,000 - $99,999	105.4	41.1	$1,996	$0.78	80.2	779
$100,000 - $119,999	113.9	34.9	$2,205	$0.68	99.7	972
$120,000 - $139,999	124.8	39.6	$2,294	$0.73	85.7	833
$140,000 or more	143.8	38.8	$2,418	$0.65	80.0	782

This lower total consumption for low-income customers occurs despite the fact that natural gas usage by low-income consumers may be less efficient than gas consumption by higher income consumers. The lower efficiency occurs because low-income households tend to live in less energy efficient homes. They tend to use less efficient energy consuming systems (e.g., space heating systems, hot water systems).[1] However, despite this inefficiency, low-income homes are sufficiently smaller --often multi-family

[1] The extent to which, if at all, ratepayers should provide subsidies for energy efficiency improvements is not at issue in this proceeding. I do not address that question.

rental apartments rather than single-family detached homes-- that the *total* consumption of low-income households is lower than residential customers as a whole.

It is not merely DOE/EIA data which reports that natural gas consumption increases as income increases. The U.S. Bureau of Labor Statistics releases its Consumer Expenditures Survey (CEX) on an annual basis. The CEX tracks natural gas expenditures by income level. In the Northeast, natural gas expenditures are somewhat less than three times higher with an income of $200,000 or more compared to expenditures at an income of less than $15,000; they are more than two times higher at an income of $100,000 to $149,999 than they are at an income of less than $15,000. The same relationship exists for natural gas expenditures nationwide as exists for natural gas expenditures in the Northeast.

Table 2. Mean Expenditures on Natural Gas by Income before Taxes
(U.S. and Northeast) (U.S. Department of Labor Statistics)
(shading simply to improve readability)

	Less than $15,000	$15,000 to $29,999	$30,000 to $39,999	$40,000 to $49,999	$50,000 to $69,999	$70,000 to $99,999	$100,000 to $149,999	$150,000 to $199,999	$200,000 or more
U.S. (2020)	$251	$313	$339	$347	$389	$430	$496	$569	$732
Northeast (2019 – 2020)	355	468	543	551	574	640	715	798	988

Finally, the U.S. Department of Health and Human Services (HHS), which is the federal agency administering the Low-Income Home Energy Assistance Program (LIHEAP), publishes a periodic “Home Energy Notebook.” The LIHEAP agency’s Home Energy Notebook includes data both on home energy expenditures by heating fuel and on home energy consumption by heating fuel. The most recent HHS Home Energy Notebook compared natural gas expenditures and consumption for “all households,” “non-low-income households” and “low-income households” (in addition to splitting LIHEAP recipients out separately). Like the Department of Energy and the Department of Labor Statistics, the federal LIHEAP office finds that low-income households use noticeably less natural gas for space heating than do non-low-income households. According to the LIHEAP report, low-income households annually use 18 MMBtus less natural gas for space heating, and spend nearly $500 less for natural gas space heating than do non-low-income households.

Table 3. Annual Average Natural Gas Heating Expenditures and
Annual Average Natural Gas Heating Usage
(Per Household) (Northeast Region) (LIHEAP Home Energy Book)

	Usage (MMBtus)	Expenditures
All households	121.8	$2,530
Non-low-income households	128.2	$2,710
Low-income households	110.9	$2,225

Q. WHAT DO YOU CONCLUDE?

A. Every federal agency that has an institutional mission of considering such data, and that has examined the question, has empirically found that income and natural gas usage are associated with each other. Mr. Taylor’s use of a non-representative sample of low-income customers, which is non-representative in a way that would inflate usage figures, cannot be found to contradict these findings.

Q. WHAT FACTORS DRIVE THIS RESULT?

A. The factors that drive this result in the UGI Gas service territory are the same factors that the DOE/EIA Residential Energy Consumption Survey has found to drive the result.

While gas consumption may be less efficient at lower incomes than the gas consumption at higher incomes on a per-square foot of housing basis, low-income households tend to live in much smaller housing units. As a result, even while the gas usage may be less efficient on a per square foot basis, low-income households live in homes that have sufficiently fewer square feet of housing space that the total gas consumption is nonetheless lower for lower income households.

Q. DOES UGI GAS PROPOSE AN ADEQUATE CUSTOMER INFORMATION AND EDUCATION PROGRAM FOR THE WNA?

A. No. First, it is important to remember that UGI does not have, and did not present, a consumer education program. Mr. Taylor could only say that "[t]he Company is *working to develop* a communication plan designed to educate customers about the WNA mechanism." (UGI St. No. 11-R at 27) (emphasis added). The only "customer education" efforts that UGI Gas proposes, other than "notice" required by regulation, include a bill insert, an article in the Company's "customer newsletter," and posting to the Company's website. (UGI St. No. 11-R at 27). It also plans to "train" its customer service representatives. (UGI St. No. 11-R at 28).

Taylor identifies no culturally appropriate outreach. As the National Regulatory Research Institute (NRRI), the research arm of the National Association of Regulatory Utility Commissioners (NARUC), has reported, consumer outreach and education needs to differ based on age, ethnicity, and income. Some customers turn to neighbors and friends, while others turn to the utility. Some customers depend on word of mouth, while others rely on contacts from the utility. Some customers turn to nonprofit community organizations, while others rely on the media. What a consumer outreach and education program is *not* is a program that relies on bill inserts, an article in the Company newsletter, and internal training to internal staff.

PART 7. Response to UGI Gas Rebuttal Witness Daniel Adamo.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the Rebuttal Testimony of Daniel Adamo, UGI St. No. 12-R. Mr. Adamo addresses my Direct Testimony regarding COVID-19 relief, customer satisfaction, the residential customer charge, natural gas conversions, and the establishment of measurable Outcome Objectives for low-income customers.

A. Continuing COVID Relief.

Q. PLEASE EXPLAIN WHAT MR. ADAMO STATES IN REBUTTAL WITH RESPECT TO UGI's COVID-19 RESPONSE?

A. Mr. Adamo outlined a series of steps undertaken by UGI Gas to respond to the COVID-19 pandemic, and the economic crisis associated with that health crisis. According to Mr. Adamo, the Company ceased service terminations on March 13, 2020; stopped removing customers from its Customer Assistance Program ("CAP") for failure to recertify on March 18, 2020; and voluntarily began waiving all late payment charges on March 24, 2020. (UGI St. No. 12-R at 4). Moreover, Mr. Adamo stated that since its last rate case, the Company increased its Operation Share donations by $500,000 per year beginning FY19; expanded eligibility under its Operation Share grant program to 250% of the federal poverty limit ("FPL"); and increased the maximum grant size from $400 to $600. (Id.) Mr. Adamo cited UGI Gas' COVID-19 Emergency Relief Program ("ERP"), which provided benefits including billing relief and/or payment relief for customers who needed temporary relief measures during the pendency of the COVID-19 pandemic, as well as for a limited period following the termination of the PUC Emergency Order period. (Id.) I don't deny any of those actions, or the benefits provided to UGI Gas customers as a result of those actions.

Q. WHERE DO YOU DIFFER FROM MR. ADAMO'S REBUTTAL TESTIMONY?

A. Where Mr. Adamo errs is when he asserts that UGI Gas no longer needs to undertake any further COVID-19 related relief. Mr. Adamo states that continued UGI action "need not be continued in light of the transition back to pre-COVID-19 employment rates and the increase in other state and federal programs. . ." (UGI St. No. 12-R at 7). Moreover, Mr. Adamo errs in concluding that the fact that only 16% of the CAP customers UGI Gas sought to recertify in October 2021 recertified in fact, and only 17% of those UGI Gas sought to recertify did so in January 2022, is evidence of the fact that those customers not recertifying were no longer in need. He offers no evidence that a failure to recertify is evidence of, let alone conclusive evidence of, the fact that customers were no longer in need.

Mr. Adamo's testimony is not consistent with the data UGI Gas provided in response to discovery. According to UGI Gas, while there was a spike in the number of customers who exited CAP in July/August 2021 (n=1,921), which was to expected given that those were the first months in which UGI Gas required a recertification since the inception of

COVID, only 178 more customers failed to recertify during the months of September through November 2021. Only in December 2021/January 2022, was there another spike in the number of customers who failed to recertify (2,262), the months where it is most likely that CAP participants would have credits on their bill attributable to the receipt of LIHEAP. (OCA-II-16). One additional fact that Mr. Adamo does *not* provide is the number of those customers who exited CAP due to a failure to recertify who subsequently re-entered CAP by providing the required recertification information.

All in all, from July 2021 through January 2022, one piece of data that Mr. Adamo did not provide was the fact that more people were removed from CAP due to the fact that they had moved than were removed from CAP due to a failure to recertify. (OCA-II-16). Moreover, Mr. Adamo did not disclose in his testimony that only 456 CAP participants were removed for being over-income. (Id.) That figure is a far better indicator of who might have entered the program during the COVID pandemic but no longer needed CAP. Indeed, UGI Gas data demonstrates that while 358 CAP participants were removed for being over-income in the first six months of 2021, only 419 were removed for being over-income in the last six months of 2021. (Id.). There is no indication at all that CAP exits experienced any substantial fly-ups attributable to people who entered CAP while they were in economic distress in the COVID months of 2020 and 2021 and then left CAP when that distress no longer existed.

Finally, while Mr. Adamo asserts in summary fashion that there has been a "transition back to pre-COVID-19 employment rates," he provides no data to support that conclusion, particularly for the lower-income customers who were most affected by the loss of jobs and/or the cutback in hours. Particularly in the low wage job sector, the loss of jobs attributable to COVID-19 has been found to involve a permanent loss of jobs. Moreover, while Mr. Adamo cites the availability "existing federal programs, such as Emergency Rental Assistance Program ("ERAP") and Pennsylvania Homeowner Assistance Fund ("PAHAF"), and LIHEAP" (UGI St. No. 12-R at 33), he does not report that the first two of those programs are *temporary* emergency crisis programs, and that they primarily provided housing assistance. Even the spike in LIHEAP funding that occurred in 2021 is not now expected to be repeated (and, more recently, proposals have been made to add water assistance to LIHEAP without a corresponding increase in overall funding).

What Mr. Adamo does not rebut is the continuing economic crisis facing lower-income households in Pennsylvania. Indeed, he does not even to respond to the facts that I documented in my Direct Testimony that the difficulties that lower-income are having in paying normal household expenses in March/April 2022 are nearly as deep as the difficulties that were being experienced at the height of the health crisis in 2020 and 2021.

My recommendations did not involve UGI Gas continuing *every* COVID-19 response that it undertook for its payment challenged customers. But to argue now that the economic crisis is over and that, in any event, sufficient funding is available elsewhere to address the ongoing economic crisis is simply contrary to fact.

B. Customer Satisfaction.

Q. PLEASE OUTLINE WHAT MR. ADAMO STATES IN REBUTTAL WITH RESPECT TO CUSTOMER SATISFACTION.

A. Mr. Adamo criticizes my Direct Testimony regarding customer satisfaction by asserting that, aside from the metrics that I discussed in my Direct Testimony, other metrics existed showing that customers are "very satisfied" with UGI Gas customer service. (UGI St. 12-R, at 8) The only two metrics he provides, however, are satisfaction with the ability of customers to reach the Company and satisfaction with the Company's automated telephone system. (UGI St. No. 12-R at 8).

Once customers have reached the Company, however, their satisfaction substantially declines, a fact that Mr. Adamo refuses to even acknowledge, let alone seek to remedy. Mr. Adamo argues, for example, that when he examines customer satisfaction with "call center courtesy" and the "knowledge" of the Company's call center staff, the "Company's performance remains at a very high level." (Id. at 9). He does not acknowledge that the "satisfaction" figures he cites includes a combination of customers who are only "somewhat satisfied" along with those who are "very" satisfied.

The problem with amalgamating all of this "customer satisfaction" data together is that UGI Gas is seeking to use the data to demonstrate *exemplary* performance. Exemplary performance requires something more than customers, having made contact with the Company, reporting that those contacts are with staff that are merely "somewhat courteous" and only "somewhat knowledgeable."

Moreover, Mr. Adamo cites external customer satisfaction surveys as evidence of the Company's exemplary performance. (UGI St. 12-R, at 9). These surveys, which are cited but not provided, should not stand in lieu of evidence that the PUC, itself, dictates that Pennsylvania utilities annually file. It is more relevant, and more appropriate, to rely on the information I reviewed from the BCS 2020 "Customer Service Performance Report."[2] I used this data because it is the data that the PUC has deemed appropriate as a basis upon which to review utility performance. Mr. Adamo's citation to external third party surveys, which have not been explained or provided, cannot stand in lieu of the PUC's own data which, as I documented in my Direct Testimony, show that:

- UGI Gas ranked next to last (ahead of only PGW) in customer satisfaction with the "*overall quality of service*" during a recent contact. Nearly one-in-five (18%) of customers reported being less than "very satisfied" during their recent contact.

- UGI Gas customers ranked the Company below the statewide average for customer satisfaction with respect to credit and collection calls. UGI Gas' ranking was higher than NFG, and tied with PGW, but otherwise lower than average.

- UGI ranked last among Pennsylvania natural gas utilities on *overall customer satisfaction* with the way a premise visit was handled. Even when considering those customers who were only "somewhat satisfied," UGI customers reported satisfaction with premise visits in only 87% of the cases.

OCA St. 4 at 48._The customer satisfaction of UGI Gas customers does not support an adder to the Company's equity return for exemplary management.

C. Residential Customer Charge.

Q. PLEASE RESPOND TO MR. ADAMO'S TESTIMONY REGARDING THE PROPOSED INCREASE IN THE UGI GAS RESIDENTIAL CUSTOMER CHARGE.

A. Mr. Adamo criticizes my Direct Testimony about the adverse impact that the Company's proposed increase in the residential customer charge will have on low-income customers. His testimony, however, relies almost exclusively on the Rebuttal Testimony of UGI Gas witness Heppenstall and Taylor.

Mr. Adamo relies on one statement that is simply inaccurate. He asserts that I "assumed that all 153,437 low-income customers on page 9, line 18 of his direct testimony received Federal Fuel assistance funding." (UGI St. No. 12-R at 44). I made no such assumption. I not only specifically provided the amount of LIHEAP I relied upon in my Direct Testimony (OCA St. 4 at 10, lines 1 – 2), but cited the UGI Gas data request from which that dollar amount was taken. The amount of LIHEAP funding, in other words, was not my number, but was the number provided by UGI Gas, itself.

Q. DOES MR. ADAMO ERRONEOUSLY ARGUE THAT LOW-INCOME USAGE IS LOWER THAN RESIDENTIAL USAGE AS A WHOLE?

A. Yes. Mr. Adamo relies on his Exhibit DVA-5R in support of his erroneous assertion that low-income usage is lower than the usage of residential customers as a whole. His Exhibit, however, carries with it the same shortcomings that Mr. Taylor's related argument carries. His definition of "low-income" is of Confirmed Low-Income customers. He makes no effort to demonstrate that the sample of customers comprised of Confirmed Low-Income customers is representative of the Company's low-income customer base as a whole. Indeed, for all of the reasons I discussed in response to Mr. Taylor's Rebuttal Testimony, using the population of Confirmed Low-Income customers is not a representative sample of low-income customers as a whole. The Confirmed Low-Income customer base will systematically consume more natural gas than will lower-income customers as a whole. What Mr. Adamo does, in other words, as did Mr. Taylor, is to segregate a sub-population of higher use low-income customers and to argue that the consumption level of that higher-use sub-population is somehow representative of the low-income customer base as a whole. His argument cannot legitimately be used as a basis for decisionmaking.

D. Natural Gas Conversions.

Q. PLEASE RESPOND TO MR. ADAMO'S REBUTTAL TESTIMONY REGARDING SCREENING CUSTOMERS FOR CAP ELIGIBILITY WHEN THEY CONVERT TO NATURAL GAS FROM NON-GAS HEATING FUELS.

A. Mr. Adamo opposes my recommendation that UGI screen customers for CAP eligibility when those customers convert to natural gas from non-gas heating fuels. My recommendation is for UGI to "screen customers *<u>who the Company assists in their conversion</u>* to natural gas in order to identify those converted customers as Confirmed Low-Income customers and to enroll those customers in CAP where appropriate." (OCA St. 4 at 4 – 5).

Mr. Adamo objects to my recommendation by responding to a proposal that was not made. Mr. Adamo states, for example, that "the Company on average receives approximately 9,000 natural gas conversion leads annually, *__all of which would need to be screened__* under Mr. Colton's recommendation." (UGI St. No. 12-R at 27) (emphasis added). Moreover, Mr. Adamo asserts that, under my recommendation, UGI Gas would be required "to track and store income and occupant information for *__prospective__* customers." (Id.) (emphasis added). Neither of those statements is accurate.

Mr. Adamo concedes that the Company identified only 1.5% of the 2021 homes it converted to natural gas as Confirmed Low-Income customers. Moreover, it enrolled only half of those Confirmed Low-Income customers into CAP (43 of the 85). He does not deny that these numbers are likely to substantially under-count the number of low-income customers that are being converted. Nor does he deny that those low-income customers will bring the payment troubles that other low-income customers experience on to the system when they become customers.

The process of identifying Confirmed Low-Income customers at the time of natural gas conversion would be no more difficult than the process of identifying Confirmed Low-Income customers at any other point in time. And, just as UGI Gas does not need to "track and store income and occupant information" for its existing Confirmed Low-Income customers, it would not need to do so for its Confirmed Low-Income customers identified through the gas conversion process.

Mr. Adamo's objections to identifying Confirmed Low-Income customers at the time of gas conversion, and to enrolling those customers into CAP when appropriate, do not address or rebut the substantive need for, or benefits from, doing so. My recommendation should be adopted.

E. Measurable Outcome Objectives.

Q. DOES MR. ADAMO OPPOSE CREATING MEASURABLE OUTCOME OBJECTIVES BY WHICH TO TRACK UGI GAS UNIVERSAL SERVICE PERFORMANCE?

A. Yes. Referring to the notion of having measurable outcome objectives by which to track UGI Gas performance as "drastic and unprecedented," Mr. Adamo opposes the adoption of such outcome objectives. He urges that the creation of such outcome objectives should be pursued only within the context of the Company's Universal Service and Energy Conservation Plan (USECP) proceedings. (Adamo, at 10). Indeed, Mr. Adamo asserts the proposition that "'all aspects' of Universal Service Programs should be addressed in utilities' individual USECP proceedings, as opposed to base rate cases." (UGI St. No. 12-R at 10).

The fallacy of Mr. Adamo's reasoning is demonstrated by the fact that, if nothing else, UGI Gas collects its universal service costs through rates. The structure and extent of rate recovery of universal service costs is not consigned to the USECP proceedings.

Moreover, the fallacy of Mr. Adamo's reasoning is demonstrated by the fact that, by definition, the Outcome Objectives do not address the content of the UGI Gas USECP. Indeed, establishing measurable outcome objectives in a rate case, and leaving the question of how to achieve those objectives to the USECP proceeding, is the most appropriate process. Through establishing the outcome objectives, the Commission establishes a process by which to assess whether, as with any other UGI Gas expenditure, ratepayer dollars are being spent effectively and efficiently. Considering the efficiency of utility operations is the function of a rate case, not the function of a USECP proceeding. The USECP proceeding is the proceeding where UGI Gas presents to the Commission what it plans to do (i.e., its universal service activities). A rate case is the appropriate place for the Commission to decide how it wishes to measure the effectiveness (and efficiency) of what the expenditure of ratepayer money is accomplishing (i.e., the outcomes).

Q. DO YOU HAVE ANY FINAL RESPONSE TO MR. ADAMO'S ASSERTION THAT THE QUESTION OF WHETHER ESTABLISHING MEASURABLE OUTCOME OBJECTIVES SHOULD ONLY BE UNDERTAKEN IN A UNIVERSAL SERVICE PROCEEDING.

A. I understand that the Commission recently affirmed its prior decisions stating that "it was not appropriate to consider proposals relating to a public utility's energy burdens, CAP, and other universal service program issues within the context of a base rate proceeding. . ." (Pennsylvania PUC v. Aqua Pennsylvania, Docket R-2021-3027385, at 333, May 12, 2022). The Outcomes Objectives proposed in my Direct Testimony are specifically designed to be in compliance with this decision. UGI, itself, raised the issue of the impact of this rate proceeding on low-income customers. UGI Gas asserted that this rate case would have *no adverse impact* on low-income customers *because of the Company's CAP*. (CAUSE-PA-I-1). My recommended Outcome Objectives are designed to determine whether UGI is correct in making that assertion. It would be unreasonable to allow UGI Gas to rely on assertions about the effectiveness of CAP in protecting low-income customers, made in support of its rate hike request, and to deny other parties the right even to present a mechanism by which to measure whether UGI Gas is correct in its assertion. Moreover, Mr. Adamo errs in asserting that any discussion of low-income impacts of a rate proceeding, and available mechanisms to mitigate those adverse impacts, are equivalent to a discussion of the Company's universal service programs. My Objective #1, for example, involves not the design and operation of the Company's universal service programs but rather simply whether UGI is adequately identifying its Confirmed Low-Income customers. My Outcome Objective #2 does not involve decisions about the design and operation of the Company's CAP, but rather simply whether the Company is adequately enrolling customers in that program, irrespective of how that program is designed and implemented. My Outcome Objective #3 does not involve decisions about the design and operation of the Company's CAP, but rather simply whether the Company's program is serving to protect its lowest income customers, a direct measurement of whether the Company is correct in asserting that there are no adverse impacts on low-income customers because of the CAP.

The fact is that UGI Gas made the following assertion:

> The Company's proposed rate increase will not impact CAP payments set at a percent of income or a minimum payment. However, as of the date of this response,

> approximately 51% of UGI CAP customers have their CAP payment set at their average monthly bill. Upon income re-certification, these average monthly bill CAP payments could be impacted in an amount up to the approved rate increase. Also, no CAP Customer would pay more than their applicable percentage of income calculation, set forth in the Company's USECP.
>
> As a result, UGI is unable to estimate the impact of the proposed rate increase to CAP participant's payment amounts.

(CAUSE-PA-1-1). It would be the height of unreasonableness to allow UGI to make these assertions about the impact of participating in CAP on protecting low-income customers from the adverse impacts of UGI's rate hike request, but then to deny any opportunity to propose a mechanism to measure the number and type of customers who are *not* participating in CAP.

Finally, my testimony is specifically designed within the constraints of the Commission's prior Order. The Commission's Aqua decision did not bar any consideration of the particular impacts of rates cases on low-income households. It instead stated that it was inappropriate to consider proposals "relating to a public utility's energy burdens, CAP, and other *universal service program issues*." (emphasis added).

Given the adverse impacts of *this rate case* on low-income customers, it establishes a mechanism by which to determine the number and nature of customers *not* participating in UGI's universal service programs. It then entirely leaves the "program issues" involving the design of appropriate universal service program responses to the Company, to stakeholders, and to the Commission, to consider within the context of reviewing the Company's universal service programming decisions in the review of USECPs.

Q. IS MR. ADAMO'S TESTIMONY INCONSISTENT WITH ANY OTHER TESTIMONY OFFERED BY THE COMPANY?

A. The Rebuttal Testimony of UGI witness Brown asserts that "In particular, inflation has significantly increased in recent months, and continues to do so. The material impacts of this inflation must be called out here as an important matter. The consumer price index ("CPI") jumped 8.5% in March 2022 from 12 months earlier, the sharpest year-over-year increase in over 40 years (since 1981). Just 1 recently, the April 2022 inflation numbers were reported to be 8.3%. As a result, the Company is proposing several key inflation-related adjustments in its rebuttal case. . ." (UGI St. !-R, at 3 – 4).

Mr. Brown continues to argue that "Inflation has broad and pervasive impacts on the Company's operations and is expected to touch almost every daily activity that UGI Gas undertakes. However, the Company is not proposing numerous specific adjustments for the anticipated increased operating expenses related to inflation, other than those noted above. I believe the Commission should consider the overall economic climate and these inflationary pressures on the cost of goods and services that the Company procures as part of providing safe and reliable service when deciding the merits of the Company's requested base rate increase." (Id., at 6).

The identical comments could be made about the pernicious impacts of inflation on ratepayers in general, and on low-income ratepayers in particular. It would be absolutely accurate to say, as well, that "inflation has broad and pervasive impacts on a household's operations and is expected to touch almost daily activities that a household undertakes. The Commission should consider the overall economic climate and these inflation pressures on the cost of goods and services that a household procures as part of living a safe and healthy life when deciding the merits of the Company's requested base rate increase."

This testimony of Mr. Brown is inconsistent with Mr. Adamo's objections to proposals to create measurable Outcome Objectives to determine the Company's performance in protecting low-income customers not enrolled in its universal service programs. Rather than allowing the Commission to establish ways to measure how well low-income customers are protected, Mr. Adamo would have the Commission delay even considering what should be measured until the next UGI USECP proceeding which would not even *begin* until the Company files its next USECP in April 2025. In the meantime, UGI Gas seeks rate relief (including an extra adder to its return on equity) based on "inflationary pressures." (UGI St. 1-R, at 6) ("the Company's exposure to inflationary forces outside the areas it has quantified above represents increased financial risk for the Company and further supports the Company's claimed cost of equity. . .")

Q. PLEASE RESPOND TO MR. ADAMO'S OBJECTION THAT ESTABLISHING MEASURABLE OUTCOME OBJECTIVES SHOULD ONLY BE UNDERTAKEN THROUGH A PUC RULEMAKING PROCEEDING.

A. Mr. Adamo argues that establishing measurable outcome objectives should only be taken through a PUC rulemaking proceeding. He argues that the same outcome objectives should be applied to every utility. He states:

> …if adopted, as part of this proceeding, these outcome objectives would only apply to UGI Gas. If that happens, UGI Gas would be subject to regulatory standards different than those applied to every other NGDC in Pennsylvania.

> However, all NGDCs in Pennsylvania should be evaluated under the same regulatory standards. Therefore, Mr. Colton's proposal should be raised, if at all, within the context of a statewide rulemaking proceeding which would permit participation from all stakeholders.

UGI St. No. 12-R at 15. Mr. Adamo does not explain *why* the same outcome objectives should be applied to all natural gas utilities in Pennsylvania. Given that measurable outcome objectives are designed as a mechanism to determine how effectively and efficiently a utility is using ratepayer dollars, it is entirely possible that such outcome objectives might differ between utilities. The outcomes which the PUC might seek to measure for an urban utility may differ from the outcomes the PUC might seek to measure for a rural utility. The outcomes for a utility with a large *very* low-income population (e.g., households with income less than 50% of Poverty Level) may differ from a utility with fewer very low-income customers.

As I stated in my Direct Testimony, "[t]he key concepts of. . .performance-based management are the need to define clear agency missions, set results-oriented goals, measure progress toward achievement of those goals, and use performance information to help make decisions and strengthen accountability." (OCA St. 4 at 24). It is entirely possible that different utilities would have different "results-oriented goals" programs toward which the PUC deems it necessary to track. It is entirely possible that different utilities would need different results-oriented goals "to help make decisions and strengthen accountability."

Moreover, Mr. Adamo's objection in this regard is not consistent with his other recommendation. Mr. Adamo also recommended that establishing results-oriented measurable outcome objectives be undertaken in UGI Gas' USECP proceeding. UGI St. No. 12-R at 10. Even if that were to occur, which it should not, each utility's USECP proceeding would involve individual proceedings. Mr. Adamo's own internal inconsistency demonstrates the fallacy of his arguments.

Q. PLEASE RESPOND TO MR. ADAMO'S ARGUMENT THAT UGI GAS ALREADY REPORTS DATA ON UNIVERSAL SERVICE PERFORMANCE.

A. Mr. Adamo argues that my recommended measurable outcome objectives are not needed because UGI Gas already tracks universal service data and reports that data to the PUC's Bureau of Consumer Services. (UGI St. No. 12-R at 15 -16). This argument, however, does more to support my recommendation than to detract from it. My measurable outcome objectives do not require new data collection on the part of UGI Gas. Even Mr. Adamo concedes that while it tracks and reports information, it has not established any performance standards which that information is used to inform. He further states that "the Commission has not developed Universal Service regulations, performance standards, or metrics that NGDCs must meet as compared to other NGDCs." (UGI St. No. 12-R at 16). Mr. Adamo's argument in this regard errs in the same two respects I discuss above. First, the purpose of the measurable outcome objectives is not to establish standards by which to compare one natural gas utility to another. Instead, the use of outcome objectives is to define utility-specific results-oriented goals, to measure the progress of a utility toward achievement of its own utility-specific goals, and to use performance information to help make utility-specific decisions and strengthen utility-specific accountability. Second, as I state above, there is no necessary reason for all utilities to have the same measurable outcome objectives. Different utilities may have different goals that are needed to allow it to measure progress toward, to make decisions, and to strengthen accountability.

Q. PLEASE RESPOND TO MR. ADAMO'S OBJECTIONS TO THE USE OF OUTCOME OBJECTIVES GENERALLY BY WHICH TO MEASURE UGI GAS PERFORMANCE.

A. In his Rebuttal Testimony, Mr. Adamo objects to the creation of ***any*** measurable outcome objectives by which to measure UGI Gas performance. He argues that using CAP data for comparative purposes from other NGDCs is inappropriate "given their distinctive customer populations, demographics, and service territories; that my proposed objectives and the anticipated results are "largely out of the Company's control," and that additional actions which may influence customer behavior requires the deployment of additional and targeted resources. UGI St. No. 12-R at 16.

The nature of Mr. Adamo's responses are precisely the reasons why the Commission should establish measurable outcome objectives for UGI Gas. The fact that different utilities might have "distinctive customer populations, demographics, and service territories" is precisely the reason why a UGI Gas-specific outcome objective should be established. Mr. Adamo's objection in this regard is inconsistent with his objection that uniform outcome objectives should be established for all utilities in a statewide proceeding rather than having utility-specific outcome objectives such as I propose in this proceeding.

Mr. Adamo's objection is also inconsistent with his own testimony on other issues in this proceeding. With respect to customer satisfaction, Mr. Adamo argued that "the Company's performance regarding customer satisfaction is very high as based on the Company's performance in JD Power East Large Residential Gas Utility. UGI Gas maintained the second highest score from 2015 through 2021, with the Company being number one in 2014. The Company was among 35 utility companies nationwide recognized as "Easiest to do Business With" in the 2021 and 2022 Cogent Syndicated Utility Trusted Brand & Customer Engagement™ Residential study. . ." (UGI St. No. 12-R at 9). In making that argument, the fact that other utilities might have "distinctive customer populations, demographics, and service territories" did not seem to bother Mr. Adamo.

Moreover, Mr. Adamo's assertion that the "anticipated results are largely out of the Company's control" is not necessarily true. Having never previously established measurable outcome objectives, UGI Gas does not know what results are or are not "out of the Company's control."

Finally, Mr. Adamo's assertion that "additional actions which may influence customer behavior require the deployment of additional and targeted resources." His conclusion that the only possible response is to take "additional actions" which would "require the deployment of additional and targeted resources" is not necessarily accurate. Through the use of measurable outcome objectives, UGI Gas could determine what it is currently doing that is working, and what it is currently doing that is not working. It may choose to take ***different*** actions in the future rather than taking ***additional*** actions.

The fact that Mr. Adamo merely assumes, without knowing, that "anticipated results are largely out of the Company's control" and that the only possible responses are those which require the "deployment of additional and targeted resources" is evidence unto itself of the need to establish measurable outcome objectives by which to track UGI Gas performance.

Q. PLEASE RESPOND TO MR. ADAMO'S CRITICISM THAT YOU OFFERED NO "SOLUTIONS" IN YOUR PROPOSAL?

A. Mr. Adamo offers two related objections to my proposal to adopt measurable outcome objectives. First, he argues that "Mr. Colton has not outlined any specific measures, anticipated budget amounts which may be spent, or the appropriate cost recovery thereof." (UGI St. No. 12-R at 16). Second, he argues that "Mr. Colton fails to offer any solutions to achieve those outcomes. . .The Company believes Mr. Colton could be more constructive to identify actions which have proven effective. . ." (Id.)

Mr. Adamo's objections in this regard are not well-grounded as objections to the creation of measurable outcome objectives. As I explained in my Direct Testimony, the purpose of creating outcome objectives is to define what the utility should seek to accomplish. The means by which to pursue accomplishing those objectives is left to the utility to decide. The utility may well seek the advice of external stakeholders, but the development of the specific strategies and tactics to employ is left for the utility to propose in its USECP.

Moreover, Mr. Adamo's objection is counter to the role of a rate case. A rate case is the time and place to determine how the Commission will measure the effectiveness and efficiency of the use of ratepayer dollars. Decisions on how to achieve the objective will be left to the utility (subject to review through the USECP process). My decision to leave proposing solutions to the PUC process designed to consider such solutions was intentional.

Q. DID MR. ADAMO OBJECT TO EACH OF THE THREE MEASURABLE OUTCOME OBJECTIVES YOU PROPOSE?

A. Yes. I will address his objection to each outcome objective in turn. First, Mr. Adamo objected to my proposed Outcome Objective #1 which measures the percent of Confirmed Low-Income UGI Gas customers of the total number of estimated low-income UGI Gas customers. He argues that the number of estimated low-income customers is "based upon census data analyzed by Penn State University, which is then provided to the Commission. As such, the census data provided to the Company does not provide any level of information at a customer-specific level; it is only a total for the estimated population." (UGI St. No. 12-R at 18). It is not clear what objection Mr. Adamo is making at this point. The fact that the Census data does not provide "information at a customer-specific level" does not affect the proposed outcome objective. If Mr. Adamo believes that the information that the PUC has Penn State University either over- or under-counts the estimated number of low-income customers, his dispute is with the PUC, not with the proposed outcome objective. In addition, Mr. Adamo argues that "While a master detailed list of all customers and incomes within the UGI Gas service territory would be useful in assigning CLI status to customer accounts, the privacy and protection of customers' personal information is an overriding concern." (Id.) Nothing, however, in the proposed Outcome Objective #1 requires UGI Gas to have a "master detailed list of all customers and incomes within the UGI Gas service territory." His objection on this basis is a red herring that should be rejected.

Mr. Adamo further argues that UGI Gas has increased the percentage of its Confirmed Low-Income customers since 2018. (UGI St. No. 12-R at 19 – 20). He does not acknowledge, however, that despite that improvement, UGI Gas still has a lower percentage than every other Pennsylvania natural gas utility other than PECO Gas. (UGI St. No. 12-R at 20). The fact that its increase is as high as it is merely reflects how poorly UGI Gas was performing in 2018. It is certainly not evidence that UGI Gas is performing well with respect to the percentage of estimated low-income customers (as set by the PUC) that have been identified as Confirmed Low-Income.

The Commission should adopt my proposal to establish, for UGI Gas, a measurable outcome objective that UGI Gas should achieve a Confirmed Low-Income identification rate, as a percentage of estimated low-income customers, no less than the Confirmed Low-Income identification rate of Pennsylvania natural gas utilities as a whole (excluding the UGI Gas companies).

Q. HOW DO YOU RESPOND TO MR. ADAMO'S OBJECTION TO YOUR SECOND PROPOSED OUTCOME OBJECTIVE?

A. Mr. Adamo objects to using the measurement of the percent of Confirmed Low-Income customers that have been enrolled in CAP as my proposed measurable Outcome

Objective #2. Similarly to his objection above, Mr. Adamo argues that UGI Gas "has materially improved CAP participation rates from just four years ago." (UGI St. No. 12-R at 21).

Mr. Adamo further argues that there are "four key reasons for CAP exits. Customers are moving to a new residence, failing to recertify, choosing a payment arrangement, and/or failing to pay." (UGI St. No. 12-R at 21). He does not explain why the "four key reasons for CAP exits" is the primary factor driving CAP participation rates. His reference to these exits should not be used as a basis for decisionmaking. In addition, however, Mr. Adamo's own testimony indicates the need for, and reason to create, measurable outcome objectives. He argues that "Notable trends included the increase in CAP failure to recertify post COVID-19 *even with significant outreach efforts*." UGI St. No. 12-R at 21) (emphasis added). The fact that the outcome being sought is not being achieved by the activities being implemented, an ongoing review of the desired outcomes should not result in a continuation of the ineffective activities. Instead, UGI Gas should be asking what can be done differently or more effectively in order to improve the outcomes. Mr. Adamo has the review process backwards. He assumes that the activities of the utility will remain constant and the outcomes are what should differ. Instead, the outcomes should remain constant and UGI Gas should be considering what it could be doing differently.

It is important to remember that the measurable outcome objectives that I recommend are not pulled out of thin air. The proposed measurable outcome objectives simply assess whether UGI Gas is achieving the same results as other Pennsylvania natural gas utilities are achieving (excluding UGI Gas). In this regard, Mr. Adamo's argument that CAP enrollment decreased in 2021 because the Commission again allowed utilities to impose a recertification requirement that had not been imposed during the height of COVID-19. The thing is that *every* utility would have experienced that same impact. A decrease in CAP participation rate due to a failure to recertify when the Commission again allowed CAP recertification to be required has no impact on the proposed Outcome Objective #2. To discuss the failure to recertify is another red herring that should be rejected.

The broader problem with Mr. Adamo's analysis is the same as above. The fact that the data shows that "the Company has materially improved CAP participation rates from just four years ago" is not a failure of the objective. It instead shows the success of, and need for, the Outcome Objective. As I indicate both above and in my Direct Testimony, the use of a measurable outcome objective is to set results-oriented goals, *measure progress toward achievement of those goals*, and use performance information to help make decisions and strengthen accountability.

Mr. Adamo's analysis is not a demonstration that the proposed outcome objective is inappropriate or doesn't work. In fact, it demonstrates quite the opposite. The Commission should adopt my recommended Outcome Objective #2, that UGI Gas should achieve a CAP participation rate, as a percentage of Confirmed Low-Income customers, no less than the CAP participation rate of Pennsylvania natural gas utilities as a whole (excluding the UGI Gas companies).

Q. WHY DOES MR. ADAMO OBJECT TO YOUR THIRD RECOMMENDED OUTCOME OBJECTIVE?

A. Mr. Adamo objects to my recommended Outcome Objective #3 on the grounds that the Company's high default rates in 2022 can be attributed to a failure to recertify once the Company, pursuant to PUC order, again began to require CAP recertification. UGI St. No. 12-R at 21 -22. His objection, however, does not specifically relate to my proposed Outcome Objective. My recommended Outcome Objective is that UGI Gas should achieve a CAP default rate as a percentage of participants ***in the lowest poverty level range*** that is no more than the CAP default rate in that poverty level range for Pennsylvania gas utilities as a whole. (emphasis added). Nothing that Mr. Adamo discusses addresses that specific outcome objective.

Mr. Adamo objects to my critique of UGI Gas' performance relative to this proposed Outcome Objective. His use of 2022 data showing reasons for high overall default rates in 2022, however, does not relate to my critique. In my critique, I explicitly limit my discussion to pre-COVID data:

> In 2019, according to the most recent BCS annual report on Universal Service Programs and Collections Performance,[3] UGI had a CAP default rate for customers with income below 50% of Poverty, which is my proposed Outcome Objective #3, that was higher than the statewide average default rate for gas utilities, and was higher than every other gas utility excepting PGW."

(OCA St. 4 at 31).

In addition, his discussion of 2022 data does not rebut the applicability of my recommended Outcome Objective #3. My recommended Outcome Objective #3 is limited to CAP participants with income less than 50% of Poverty. This is the population that the Commission has expressed particular concern for. (see e.g., Final Order, at 79, Docket No M-2019-3012599) (emphasis added). Nothing that Mr. Adamo presents relates to the exit rates for this population that has previously been identified by the PUC as being of particular concern. Indeed, Mr. Adamo's prior testimony, where he states that the 2022 increases in the failure to recertify could be attributed to customers who experienced temporary income disruptions, only later to return to their pre-COVID income levels (and thus no longer need CAP) is evidence that the population failing to recertify in 2022 does not fall within this very low-income population (i.e., below 50% of Poverty) toward which the proposed Outcome Objective #3 is directed.

Overall, the very fact that UGI Gas seeks to divert attention from the very low-income population of concern by focusing its attention exclusively on the CAP population as a whole is evidence of the need for this proposed Outcome Objective directed to the very low-income population.

Q. PLEASE RESPOND TO MR. ADAMO'S OPINION REGARDING THE PROPRIETY OF IMPOSING REWARDS AND PENALTIES BASED ON MEASURABLE OUTCOME OBJECTIVES?

A. Mr. Adamo objects to the use of rewards and penalties as a response to the extent to which, if at all, UGI Gas achieves the measurable outcome objectives I recommend in this proceeding. Even then, Mr. Adamo asserts that the only system of rewards and penalties would involve an adjustment to the UGI Gas return on equity. (Adamo, at 15). He asserts that "Such a system would constitute performance-based rates, a form of alternative ratemaking that the Commission can only approve upon 'an application by a utility in a base rate proceeding.'" (UGI St. No. 12-R at 15). At the least, Mr. Adamo's objection is premature. Even if Mr. Adamo were correct that the only system of rewards and penalties would involve an adjustment to the UGI Gas return on equity, which he is not, no system of "rewards and penalties" has been proposed in this proceeding. Mr. Adamo is objecting to a proposal that has not been made.

Q. PLEASE RESPOND TO MR. ADAMO'S REBUTTAL TESTIMONY REGARDING THE ALLOCATION OF UNIVERSAL SERVICE COSTS.

A. Mr. Adamo states in his Rebuttal Testimony that "I want to make clear that to the extent that Mr. Colton's testimony is, or could be, construed as a proposal to reallocate universal service costs as a part of this proceeding, the Company opposes this proposal." (UGI St. No. 12-R at 50). As I indicated in my Direct Testimony, no proposal to reallocate universal service costs has been advanced in this proceeding. There is no proposal for the Company to "oppose."

Q. DOES THIS COMPLETE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Re: Pennsylvania Public Utility Commission	:	
	:	
v.	:	Docket No. R-2021-3030218
	:	
UGI Utilities, Inc. – Gas Division	:	

VERIFICATION

I, Roger D. Colton, hereby state that the facts set forth in my Surrebuttal Testimony, OCA Statement 4SR, are true and correct (or are true and correct to the best of my knowledge, information, and belief) and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

OCA Discovery Exhibit 1 - UGI Response to CAUSE-PA Set II-10

UGI Utilities, Inc. - Gas Division
Docket No. R-2021-3030218
UGI Gas 2022 Base Rate Case
Responses to CAUSE-PA Set II (1 thru 16)
Delivered on March 21, 2022

CAUSE-PA-II-10

Request:

For each year in the past 5 years, disaggregated by year, what would the residential customer bill have been for a household at average usage levels if WNA had been in effect under the following parameters?

a. No dead band
b. 1% dead band
c. 3% dead band
d. 5% dead band

Response:

UGI Gas does not have the ability to recompute individual historic bills for determination of specific WNA billing impacts. However, please see Attachment CAUSE-PA-II-10 for a proxy of what the calculated annual WNA impact would have been to a residential bill over the past five years using an estimated average usage across the various deadbands. In addition, please see Attachment CAUSE-PA-II-9 for a five-year history of a monthly residential bill using the same estimated average usage.

Prepared by or under the supervision of: John D. Taylor

UGI Utilities, Inc. - Gas Division
WNA Scenario Analysis (Fiscal Years 2017 - 2021)
Estimated Annual Impact to R/RT Customer at Current Rates
charge (credit) to customer

	No Deadband	1% Deadband	3% Deadband	5% Deadband
Fiscal 2017	$ 39.05	$ 37.39	$ 34.11	$ 30.84
Fiscal 2018	$ 7.81	$ 8.65	$ 10.28	$ 10.68
Fiscal 2019	$ 6.17	$ 6.58	$ 5.34	$ 3.69
Fiscal 2020	$ 35.35	$ 32.87	$ 28.77	$ 25.48
Fiscal 2021	$ 29.59	$ 26.71	$ 22.60	$ 19.32

Assumptions:

Modeling based on estimated annual usage per UGI Gas Exhibit E for R and RT customers of 844 ccf using currently effective rates.

For modeling the estimated annual usage was allocated by month using the following percentages:

OCT	5.8%	JAN	20.1%	APR	7.0%	JUL	1.4%
NOV	11.5%	FEB	16.3%	MAY	3.1%	AUG	1.5%
DEC	15.8%	MAR	13.4%	JUN	1.8%	SEP	2.3%

Monthly baseloads were calculated using the daily usage calculated during the period of June-September multiplied by the number of days in each month

Composite historical and normal HDD data used as found on SDR-RR-11(a). Assumes all customers' calculations are based on the composite HDD information. If approved, actual WNA calculations would be specific to each customer's delivery region.

The above amount represents an approximation of WNA charges/credits only and does not reflect any other additional riders that may be applied such as DSIC or STAS

The underlying model assumes that all customers are billed and weather is measured based on calendar month which will differ from actual billing and weather periods that would be used if implemented. See Rider K in UGI Gas Exhibit F for proposed tariff language.

OCA Discovery Exhibit 2 - UGI Response to CAUSE-PA Set V-1, 2

CAUSE-PA-V-1

Request:

Using the criteria utilized by UGI for calculation of its Weather Normalization Adjustment (WNA), for each year since 2011 please indicate whether the year was warmer or cooler than normal and the percentage warmer or cooler as measured in heating degree days.

Response:

Please see Attachment CAUSE-PA-V-1.

	Annual Estimated Impact
Fiscal 2011	$ (16.44)
Fiscal 2012	$ 59.61
Fiscal 2013	$ 0.82
Fiscal 2014	$ (31.25)
Fiscal 2015	$ (18.90)
Fiscal 2016	$ 48.09
Fiscal 2017	$ 39.05
Fiscal 2018	$ 7.81
Fiscal 2019	$ 6.17
Fiscal 2020	$ 35.35
Fiscal 2021	$ 29.59

Assumptions:

Modeling based on estimated annual usage per UGI Gas Exhibit E for R and RT customers of 844 ccf using currently effective rates.

For modeling the estimated annual usage was allocated by month using the following percentages:

OCT	5.8%	JAN	20.1%	APR	7.0%	JUL	1.4%
NOV	11.5%	FEB	16.3%	MAY	3.1%	AUG	1.5%
DEC	15.8%	MAR	13.4%	JUN	1.8%	SEP	2.3%

Monthly baseloads were calculated using the daily usage calculated during the period of June-September multiplied by the number of days in each month

Composite historical and normal HDD data used as found on SDR-RR-11(a). Assumes all customers' calculations are based on the composite HDD information. If approved, actual WNA calculations would be specific to each customer's delivery region.

The above amount represents an approximation of WNA charges/credits only and does not reflect any other additional riders that may be applied such as DSIC or STAS

The underlying model assumes that all customers are billed and weather is measured based on calendar month which will differ from actual billing and weather periods that would be used if implemented. See Rider K in UGI Gas Exhibit F for proposed tariff language.

LIST OF THE EVIDENCE OFFERED BY THE
OFFICE OF SMALL BUSINESS ADVOCATE

The Office of Small Business Advocate ("OSBA") intends to introduce the following evidence into the record in the above-captioned proceedings at the hearings scheduled for June 2nd & 3rd 2022:

- OSBA Statement No. 1 and Exhibits RDK-1, RDK-2 and RDK-3: the Direct Testimony, Exhibits and Mr. Knecht's signed Verification

- OSBA Statement No. 1-R and Exhibit RDK-1R, the Rebuttal Testimony and Exhibit of Robert D. Knecht, and Mr. Knecht's signed Verification

- OSBA Statement No. 1-S and Exhibits RDK-S1 and RDK-S2: the Surrebuttal Testimony and Exhibits of Robert D. Knecht and Mr. Knecht's signed Verification

COMMONWEALTH OF PENNSYLVANIA

Commonwealth Keystone Building
Harrisburg, PA 17120

Re: Pennsylvania Public Utility Commission v. UGI Utilities, Inc. – Gas Division / Docket No. R-2021-3030218

Dear Judge Cheskis and Judge Chiodo:

Enclosed please find the Direct Testimony and Exhibits of Robert D. Knecht, labeled OSBA Statement No. 1, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-captioned proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

Steven C. Gray
Senior Supervising
Assistant Small Business Advocate
Attorney I.D. No. 77538

Direct Testimony of

ROBERT D. KNECHT

On Behalf of the

Pennsylvania Office of Small Business Advocate

Topics:

Cost Allocation
Revenue Allocation
Rate Design

Date Served: April 20, 2022

Date Submitted for the Record: ____________________________

DIRECT TESTIMONY OF ROBERT D. KNECHT

1. <u>Introduction and Overview</u>

Q. Please state your name and briefly describe your qualifications.

A. My name is Robert D. Knecht. I am an independent economic consultant, specializing in the preparation of analysis and expert testimony in the field of regulatory economics. For more than 30 years, I was a Principal of Industrial Economics, Incorporated ("IEc"), a consulting firm located at 2067 Massachusetts Avenue, Cambridge, MA 02140, and I served as Treasurer of that firm for 15 years. I obtained a B.S. degree in Economics from the Massachusetts Institute of Technology in 1978, and an M.S. degree in Management from the Sloan School of Management at M.I.T. in 1982, with concentrations in applied economics and finance.

I am appearing in this proceeding on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"). I have represented the OSBA before the Pennsylvania Public Utility Commission in a variety of matters since 1994. I have provided testimony in a variety of proceedings involving both the Electric and Gas Divisions of UGI Utilities, Inc., its former subsidiaries Penn Natural Gas and Central Penn Gas, and the subsidiaries' predecessor utilities PG Energy, PPL Gas, and PFG/North Penn Gas, beginning in 1996. My résumé and a listing of the expert testimony that I have filed in utility regulatory proceedings during the past five years are attached in Exhibit RDK-1.

Q. What is the purpose of this testimony?

A. I was retained by the OSBA to review the filing of UGI Utilities, Inc. – Gas Division ("UGI Gas" or "the Company"), to evaluate whether the Company's cost allocation, revenue allocation, and rate design proposals are consistent with sound regulatory economics and policy and are fair and reasonable to small business customers. Consistent with Pennsylvania practice, I have also been asked to provide OSBA's positions with respect to the Company's proposed weather normalization adjustment ("WNA") mechanism, and with respect to the claim for plant costs related to the heat content adjustment factor.

Q. Please summarize the Company's filing from a cost allocation/rate design perspective.

A. The salient features of the Company's proposal are as follows:

- The Company proposes a base rate increase of $82.3 million, or 12.8 percent of base rate revenues, for the fully projected future test year ("FPFTY") ending September 30, 2023.[1] This filing follows base rate cases in 2016, 2019, and 2020, summarized in Table RDK-1 below. Prior to the 2016 filing, UGI Gas had not filed a base rate since 1996.[2]

Table RDK-1
Recent UGI Gas Base Rate Increase Cases

Docket No.	Test Year Ending	Proposed Increase ($mm)	Award Amount ($mm)	Award Percent
R-2015-2518438	9/30/2017	$58.6	$27.0	46%
R-2018-3006814	9/30/2020	$71.1	$30.0	42%
R-2019-3015162	9/30/2021	$74.6	$20.0	27%
Total		**$204.3**	**$77.0**	**37.7%**
R-2021-3030218	9/30/2023	$82.7	--	--

The three prior proceedings' revenue requirements were resolved by settlement.

- The Company justifies the proposed rate increase as a result of its significant capital spending, for both asset replacement and system expansion. The Company's revenue requirement claim includes a book equity share of capital of 55.1 percent and an allowed return on equity of 11.2 percent.[3]

[1] The Company also proposes a modest change in the Merchant Function Charge ("MFC") which results in an additional increase of $0.5 million related to uncollectibles for gas sales.

[2] In the intervening years, UGI Gas acquired PG Energy in 2006 and PPL Gas Utilities, Inc. in 2008. These utilities were operated and regulated independently, and then merged in 2018. Virtually all regulatory and rate differences between these companies have been eliminated, save for certain continuing rate differentials, which are addressed further herein.

[3] Each 100 basis points (1.0 percent) in allowed RoE results in about $25 million in revenue requirement at statutory income tax rates, all other factors being equal.

- In its cost of service allocation study ("CSAS"), the Company generally follows the methodology that it has advanced in the last few base rate proceedings. Mains costs are allocated using an "average and excess" allocation methodology with a non-standard weighting methodology. The results of the Company's CSAS indicate that the residential class ("Rate R/RT") exhibits a rate of return at current rates below system average, the small and medium commercial/industrial rate classes (Rates N/NT and DS) exhibit rates of return modestly above system average, and the large C&I (Rate XD) and interruptible (Rate IS) rate classes exhibit rates of return well above system average.

- The Company's proposed allocation of the rate increase among the rate classes reflects the results of its CSAS, summarized in Table RDK-2 below. Based on the Company's CSAS, the revenue allocation for all classes results in substantial progress toward cost-based rates.[4] The rate increase for the R/RT class is limited to just under 1.5 times system average, which results in a class rate of return at proposed rates that remains moderately below system average. Rate reductions for the XD and IS classes reflect the reset of the Distribution System Improvement Charge ("DSIC"), without any corresponding increase to base rate charges.

[4] In making this observation, I do not rely on the "indexed rate of return" metric used by the Company, because that metric (a) generally overstates progress toward cost-based rates, and (b) can in some cases incorrectly show progress toward cost-based rates when none exists. My conclusion is based on the revenue-cost ratio metric, as shown in RDK WP1.

Table RDK-2 UGI Gas Proposed Revenue Allocation: FPFTY Ending 9/30/2023			
Class	**Present Rates RoR**	**Dollar Increase ($000)**	**Base Rate Percent Increase**
R/RT	4.3%	$68.12	18.1%
N/NT	7.3%	$14.53	10.4%
DS	8.6%	$0.65	1.9%
LFD	9.4%	$1.53	3.4%
XD-Firm	14.0%	($0.96)	-2.6%
Interruptible*	13.5%	($1.05)	-4.4%
Total	**6.1%**	**$82.74**	**12.6%**
* Includes Rate IS and Rate XD-Interruptible. Source: RDK WP1			

- The Company's proposed rate design for the R/RT and N/NT classes (which together represent nearly 80 percent of present rate revenues) involve disproportionately large increases to the fixed monthly customer charges, at 36.6 and 27.7 percent respectively.

- The Company proposes to eliminate the rate differentials in Rates N/NT and DS between customers in the south and central operating areas and customers in the north district. This proposal results in intra-class north/other increase differentials of 18.4%/8.4% for Rate N/NT, and 24.7%/-4.1% for Rate DS. The Company argues that the large increase for customers in the north district are reasonable because they are within 2.0 times the 12.6 percent system average increase.

- The Company proposes to adopt a weather normalization adjustment ("WNA") mechanism for Rates R/RT and N/NT. This mechanism would adjust each customer's billing determinants for non-summer months to reflect the difference between actual and normal weather.

2. Cost Allocation

Q. What is a utility cost allocation study?

A. A utility cost allocation study ("CSAS") is an analytical tool that assigns the utility's test year total costs (i.e., the "revenue requirement") among the various utility rate classes. Pennsylvania electric and gas distribution utilities use an "embedded cost" approach to cost allocation, in which accounting book costs are assigned among the rate classes, rather than a marginal cost approach. Cost allocation analysts generally agree that costs should, to the extent practicable, be assigned among rate classes on the basis of "cost causation," such that costs caused by a particular class of customers are assigned to that class.

A CSAS generally involves a three-step process, in which costs are (a) segregated by function ("functionalization"), (b) further segregated by cost causation factor, notably throughput, peak demand, "excess" demand, and customer count ("classification"), and (c) allocated among the rate classes based on each class' contribution to the cost causation factor ("allocation").

Q. What purpose does the CSAS serve in a utility rate proceeding?

A. The CSAS informs both the assignment of the rate increase among customer classes ("revenue allocation") and the design of rates to recover those costs. Revenue allocation is often used to move rate revenue more into line with allocated costs from the CSAS for each rate class. For rate design, classified costs, such as customer-related and demand-related costs, are used to inform the development of specific rate charges, such as monthly customer and demand charges.

Q. What are the most important cost allocation issues for a natural gas distribution company ("NGDC") such as UGI Gas?

A. A CSAS allocates rate base and associated capital costs, distribution expense, customer accounts/service expense, expense, administrative/general ("A&G") expense and taxes.[5] Often, costs are allocated on a derivative basis, based on costs already allocated. For example, depreciation, income taxes and return are allocated in the same manner as or in

[5] Distribution, customer accounts/service and A&G expenses are collectively called operating and maintenance ("O&M") expense.

proportion to rate base. General plant and A&G costs are typically allocated based on some combination of overall plant, O&M expense or labor cost allocations. Thus, the overall results of a CSAS are substantially driven by the allocation of a few large asset accounts. These "big ticket" issues for NGDC cost allocation are generally:

- Classification of mains costs, potentially into peak demand, throughput and/or customer components. For UGI Gas, mains represent 50 percent of rate base.
- Allocation of meters and services costs. UGI Gas meters and services account for 32 percent of rate base.[6]
- Definition and derivation of the peak-demand allocation factor, including the treatment of interruptible load in the allocator.

My testimony in this proceeding addresses the mains cost allocation method and the development of the demand allocator. The Company reports that its mains and services plant allocation is based on direct assignment of costs based on plant records, which is the best method for those costs where reliable data are available. As such, I do not address that issue in detail.

As part of my evaluation, I first replicated the Company's CSAS using my own spreadsheet model, and then developed an alternative version that reflects the changes I propose in this testimony. Electronic versions of these models are filed with this testimony, denoted RDK WP1 and RDK WP2 respectively.[7]

Q. Please address the basics of embedded cost allocation of NGDC mains costs.

---

[6] These percentages are based on rate base before the deferred tax offset.

[7] In my testimony in previous UGI Gas proceedings, I explained why it would be more reasonable for the Company to segregate Rate XD-Interruptible customers from those in the Rate IS class for cost allocation purposes, and I modified the CSAS accordingly. See OSBA Statement No. 1 at Docket No. R-2020-2019-3015162, pages 26-27. While I retain my view in this respect, I did not undertake that effort in this proceeding as it would not affect my conclusions.

A. NGDC mains costs are incurred to (a) interconnect the customers who take gas distribution service, and (b) provide sufficient capacity in each segment of the distribution system to meet the "design day" demands of firm service customers downstream from that segment.

With the enormous improvement in GIS and system modeling technology over the past few decades, one might think that NGDCs would be able to use that technology to specifically allocate the cost of individual mains segments to customers served downstream from those mains. In fact, UGI Gas developed such an approach for its 1996 base rates case. Alas, however, UGI Gas (and the other Pennsylvania NGDCs) continue to rely on hoary cost allocation methods, none of which rely on detailed modeling of how costs are actually incurred, and which produce radically divergent results depending on the method chosen.

In these traditional approaches to mains cost allocation, the first decision involves the "classification" of mains costs into costs that are "customer-related" and "demand-related." For those utilities that include a "customer-component" of mains costs, the classification method generally involves determining the "fixed" costs associated with a minimum-sized distribution system (or a statistically-modeled zero-volume system) and classifying that portion of the mains cost as customer-related. The conceptual logic for this method is flawed, of course, because there is no reason to conclude that the fixed costs for any particular mains segment are proportional to the number of customers served by that segment. However, some analysts argue that the cost to extend the distribution system, in terms of mains footage, is higher per unit of demand for smaller more geographically distributed customers than for larger customers or those concentrated in business districts. This logic would justify including some mechanism like a customer component to reflect these economies of scale in cost allocation. However, the existing methods for deriving a customer component are not based on this cost model.

The second consideration for mains cost allocation is the choice of the allocation factor for the "demand-related" costs. In Pennsylvania, the most common choices are the following:

Peak Demand: Costs are allocated in proportion to each class's share of system "design day" peak demand, which represents the capacity needed to serve the class under extreme weather conditions. The logic for this approach is that the mains must be sized to meet peak day demand.

Peak and Average ("P&A"): Costs are allocated based on a weighted mix of design day peak demand and average day demand.[8] Weighting the two components is typically 50/50. This approach suffers from the conceptual flaw that no mains costs are caused by average day demand – if mains costs were sized based on average demands, gas customers would be without heat on the coldest days of the winter. A main sized to meet a 100 mcf per day load costs the same whether that main is used at 100 mcf per day on every day of the year, or if that main only averages 20 mcf per day over the course of the year.

Average and Excess ("A&E"): Costs are allocated based on a weighted mix of average demand and "excess demand," where excess demand is measured as the difference between each customer's design day demand and average demand. The standard weighting factor for the A&E allocator is to apply the system load factor to the average component of the allocator (and one minus the system load factor to the excess component). The traditional A&E method is essentially a peak demand method that is adjusted to reflect the diversity of customer load. Diversity refers to the difference between the sum of individual customer peaks and system-wide peaks. Thus, if all customers peak at the same time, there is zero load diversity. The A&E method can be arithmetically expressed as a linear combination of the peak demand allocator and an average demand allocator. More load diversity implies a higher weighting for the average demand component. In the special case where there is zero load diversity and the system load factor weighting is used for the allocator, the A&E allocator is arithmetically identical to the peak demand allocator. Because gas customers' peak demands are weather-related, NGDCs generally exhibit little in the way of demand diversity, and traditional A&E allocation factors are thus very similar to peak demand allocators.

Q. Does the Commission have a policy regarding mains cost allocation?

[8] Average day demand is the annual customer load divided by 365 days. Arithmetically, average day demand and annual consumption are identical for cost allocation purposes.

A. The Commission indicates that it does not have a standard policy regarding mains cost allocation, and that it intends to evaluate the issue on a case-by-case basis.[9] Nevertheless, in its recent decisions, the Commission has relied substantially on precedent with respect to mains cost allocation.[10] With respect to the issue of mains plant classification, the Commission has consistently rejected the inclusion of a customer component for mains costs (although it has approved the use of a customer component for joint-use electric distribution plant, where the cost causation logic is the same). Regarding the allocation method for mains, the Commission has approved both P&A and A&E methods, as summarized below:

National Fuel Gas (1994):	83 Pa. PUC 262 (1994)	P&A
PPL Gas (2007):	R-00061398	A&E
PGW (2007):	R-00061931	A&E
Columbia Gas (2021)	R-2020-3018835	P&A[11]
PECO Gas (2021)	R-2020-3018929	A&E

Further, in the 2021 PECO Gas matter, the Commission indicated that the A&E method was more appropriate than the P&A method used in the Columbia matter because PECO's *". . . distribution mains system is designed to meet the demands of its system on a design day that all customers can be served. . . . Therefore, we conclude that the excess demand component of PECO's distribution mains system garners considerable weight in the balance of mains costs."*[12] As Columbia Gas (and all other Pennsylvania NGDCs) also size their mains to meet design day demand, it is unclear whether the Commission made some specific finding regarding the topology of the PECO Gas system that makes the A&E method more appropriate. As a participant in both the PECO Gas and Columbia Gas

[9] Non-Proprietary Version Opinion and Order, Docket No. R-2020-3018929, Order Entered June 22, 2021 ("PECO Order"), at 230-231.

[10] Opinion and Order, Docket No. 2020-3018835, Order Entered February 19, 2021 ("Columbia Order"), at 213-214.

[11] In its decision, the Commission correctly observed that no party offered an A&E approach in the proceeding. Columbia Order at 214.

[12] PECO Order, at 229.

proceeding, I do not recall that any evidence was presented that PECO Gas' distribution planning criteria were different from those used by Columbia Gas. As such, the Commission's logic in the PECO Gas matter would appear to reasonably apply to all Pennsylvania NGDCs.

Q. What approach does UGI Gas use in this proceeding?

A. The Company classifies all mains costs as demand-related (i.e., zero customer component) and allocates the costs using a modified load-factor weighted A&E method.

For the large industrial Rate XD-F and XD-I customers, the Company directly assigns the cost of the specific mains used by those customers to the respective classes. These customers are generally located in close proximity to interstate transmission lines, and the specific mains are identifiable. Thus, the average demands and peak demands for those customers are set to zero for the development of the class allocation factors.

However, in developing the load factor for developing the weighting factors for average demand and excess demand, the Company uses the system load factor including the XD customers, and it uses zero as the peak demand for all Rate IS and XD-I customers. Thus, the Company uses a load factor of 42.1 percent for weighting its A&E allocator, rather than the 26.9 percent that would result from a traditional interpretation of the A&E method.

The upshot of the Company's method is that the UGI Gas A&E factor is arithmetically equivalent to a P&A allocator that is weighted 79 percent peak, 21 percent average.[13]

While this particular mains cost allocation approach does not explicitly address any particular design features of the UGI Gas distribution systems, it does produce an allocation method that lies between the A&E and P&A methods recently approved by the Commission. I therefore accepted the Company's classification/allocation approach for mains cost in this proceeding.

Q. Please address the allocation of mains costs to interruptible customers.

[13] See RDK WP1 "Allocs" worksheet for supporting calculations.

A. In theory, interruptible customers can provide significant value to a gas distribution system, as those customers can be interrupted during periods of extreme weather or other stresses on the distribution system. Thus, the utility can use the interruptibility of these customers to avoid expanding capacity, and thus avoid costs. From a strict cost causation perspective, some analysts therefore argue that interruptible customers do not contribute to mains cost causation, and they assign a peak demand allocation factor of zero. In those cases, rates for interruptible customers are generally set based on value of service criteria, rather than allocated cost.

In this proceeding, the Company proposes to set the "excess" portion of the A&E allocator to zero for the interruptible customers, while including the average portion of demand in the allocator. In so doing, the Company implicitly treats interruptible customers as having a peak demand equal to their average demand. As a result, the allocation method results in an allocation of mains costs to these customers that lies between zero and the full cost share that would result if interruptible customers' peak demands were recognized. Thus, like the Company's A&E allocator in general, this approach has little in the way of cost causation logic, but it produces an allocation that lies between the extremes.

In this light, and recognizing that rates for Rate IS are set by negotiation, I do not contest this approach in this proceeding.

Q. How does the Company derive its design day demands to develop the excess demand allocation factor for its A&E method?

A. The Company's design day workpapers were provided in OSBA-I-4. Based on that workpaper, the Company's method is at follows:

1. Begin with the system-wide design day demand from last year's Section 1307(f) "PGC" proceeding;

2. Add in contract demands for large customers that were not included in the PGC proceeding;

3. Set the design day demands for the DS, LFD and XD-Firm customers at the contract demand levels;[14]

4. Split the remaining design day demand between the R/RT and N/NT classes based on a factor called "actual average consumption per customer per day" multiplied by number of customers in the class. It is necessary to develop a method to split the design day demand for these two classes because the classes are not daily metered, and the design day for the two classes (the "Core Market") is derived together in the PGC proceedings using a statistical regression methodology.

Q. Do you agree with this approach?

A. Based on the information that is currently available, I do not. First, it is incorrect to segregate design day demands between R/RT and N/NT customers based on average consumption. Such segregation must reflect the relative design day demands of the two classes. Second, the source for the Company's actual average consumption factors is not specified and is not clear. Third, the Company's methodology produces an anomalous result for the R/RT and N/NT classes, namely that the load factor for the Rate N/NT class is materially lower than that for the Rate R/RT class, at 19.7 percent and 21.9 percent respectively. In my experience, the load factors for residential and small commercial gas customers are either similar in magnitude, or the commercial class exhibits modestly higher load factors. Moreover, the Company's analysis in this case results in a significant shift in load factors since the last case, where the R/RT and N/NT load factors were 20.6 percent and 20.9 percent respectively.

Q. Did you conduct any independent analysis of the relative load factors of R/RT and N/NT customers?

A. I did. When daily metered data are not available, analysts can use monthly data to estimate the base load and heating load for a rate class, using either regression or simple arithmetic methods. I applied a regression method to both the monthly class data provided in response to OSBA-I-3, and to the more detailed monthly class data provided in the various

[14] The Company's workpaper indicates that it relies on daily firm requirements ("DFRs") for contract demands for the LFD and XD-F classes, and the maximum daily quantity ("MDQ") for Rate DS.

attachments to OSBA-I-18. I also applied a simple arithmetic method to the monthly data in OSBA-I-3. All of these analyses show the same pattern: the historical load factor for the N/NT class is modestly higher than that for the R/RT rate class. My analysis is attached to this testimony at RDK WP3.[15]

I therefore modified the Company's split of the design day demand between R/RT and N/NT customers to be consistent with the load factors derived in my analysis.

This is the only modification that I made to the Company's cost allocation methodology.

Q. How do the results of your modified CSAS compare to the Company's results?

A. Table RDK-3 below shows class rates of return at present rates for (a) the Company's CSAS, (b) my replication of the Company's CSAS in RDK WP1, and (c) my alternative CSAS with the modified peak demand allocators in RDK WP2. As shown, my replication matches the Company's results, and my alternative model produces modestly different returns for Rates R/RT and N/NT.

Table RDK-3
Comparative CSAS Results:
Class Rates of Return at Current Rates

	UGI Gas CCAS	RDK Replication	RDK Alternative
R/RT	4.33%	4.33%	4.09%
N/NT	7.28%	7.28%	8.13%
DS	8.61%	8.61%	8.61%
LFD	9.44%	9.44%	9.44%
XD-F	14.01%	14.01%	14.01%
Interruptible	13.46%	13.46%	13.46%
Total	**6.14%**	**6.14%**	**6.14%**
Sources: Exhibit D, RDK WP1, RDK WP2			

[15] In preparing this analysis, I also estimated implied design day demands for the DS and LFD classes. My analysis of the DS class produced load factor results that were similar to the Company's MDQ load factors. However, for the LFD class, my analysis implies a materially lower load factor than that implied by the Company's DFR method. I did not make an adjustment in this respect because service to LFD customers above the DFR is not guaranteed, but my analysis may imply that UGI Gas is implicitly providing more capacity under extreme weather conditions to the LFD customers than that implied by the DFRs.

3. <u>Revenue Allocation</u>

Q. What is revenue allocation?

A. Revenue allocation is the assignment of the dollar net increase or decrease to each of the Company's rate classes in a base rates proceeding. In contrast, *rate design* determines how the allocated revenue is recovered from individual ratepayers within each class. From a cost recovery standpoint, revenue allocation addresses *inter-class* cross-subsidization issues, while rate design addresses *intra-class* cross-subsidization issues.

Q. What are the basic principles for revenue allocation in regulated utility base rate proceedings?

A. In general, allocated cost is the primary criterion used by regulators in the revenue allocation process. Most utilities and regulators adopt a policy in base rates proceedings of attempting to move revenues more into line with allocated costs by varying the magnitude of the rate increases for the individual classes. However, regulators also subject the rate increases to other non-cost criteria of ratemaking. Of the traditional rate design criteria, the most common non-cost considerations in the revenue allocation process are:

- the *gradualism* principle (or avoidance of "rate shock"), in which large rate increases for individual customers or classes of customers are avoided; and

- the *value of service* principle, which is often used to mitigate rate increases for customers or customer classes with relatively price-elastic demand. [16]

Using these criteria, the utility will develop a proposal for assigning the increase in the revenue requirement among the classes that reflects both cost and non-cost considerations. With this proposal, the ACOSS can be simulated at both present and proposed rates to

[16] See, for example, <u>Principles of Public Utility Rates</u>, Second Edition, Bonbright, Danielsen, Kamerschen, 1988, pages 383 to 387. Note that the criteria in this text apply to the overall development of a utility rate structure. The criteria that I discuss in this testimony are those that apply to the revenue allocation portion of the process, which is only one aspect of the development of utility rates.

evaluate the magnitude of "progress" has been made toward the policy of achieving cost-based rates.

As a practical rule-of-thumb, rate gradualism is often reflected in revenue allocation by limiting the increase for any particular class to 1.5 to 2.0 times the system average.

Q. Do you agree with the Company's proposed revenue allocation, as presented above?

A. I have two disagreements.

First, there I disagree that rate decreases should be assigned to the Rate XD and Rate IS classes. These customers are subject to negotiated rates, which have already been accepted by the customers. In particular, the Rate IS tariff requires that the negotiated rates be set based on the cost of alternative fuels. There is therefore no competitive need to provide rate reductions to these customers. I propose to set the rate increases for those customer classes at zero and (implicitly or explicitly) roll the current DSIC revenues into the regular rates.

Second, under my alternative CSAS, the Company's proposed revenue allocation is inequitable to the Rate N/NT class, as it would result in relatively small progress toward cost-based rates compared to the other rate classes. I therefore propose to further modify the Company's proposed revenue allocation by (a) setting the rate increase for the R/RT class at 1.5 times the system average increase (1.5 x 12.6% = 18.9%), and (b) set the increases for the N/NT, DS and LFD classes to produce equivalent progress toward cost-based rates.[17] Using the normalized revenue-cost ratio metric, my proposal results in the revenue allocation summarized in Table RDK-4 below, and detailed in RDK WP2.

Table RDK-4 RDK Alternative Proposed Revenue Allocation				
	Increase $mm	**Increase %**	**R-C Ratio Current Rates***	**R-C Ratio Proposed Rates***
R/RT	$71.45	18.9%	88.3%	93.8%
N/NT	$ 9.04	6.5%	114.4%	106.4%
DS	$ 1.38	4.1%	115.8%	107.0%
LFD	$ 0.88	2.0%	123.2%	110.4%
XD-Firm	$ 0.00	0.0%	145.3%	130.7%
IS/XD-I	$ 0.00	0.0%	152.8%	133.7%
Total	**$82.74**	**12.6%**	**100.0%**	**100.0%**

* Based on RDK proposed CSAS methodology in RDK WP2.
Source: RDK WP2

As shown in Table RDK-4, no class is assigned a rate decrease, no class exhibits an increase that is more than 1.5 times the system average, and every class makes material progress toward cost-based rates as measured by the revenue-cost ratio metric. The N/NT, DS and LFD classes all move a little more than halfway toward cost-based rates. For example, at present rates, the revenue cost ratio for Rate N/NT is 115.8%. As my proposed rates, the class moves to 107.0%, moving 8.8 (115.8 – 107.0) percentage points closer to cost-based rates, of the 15.8 percentage points needed to set rates at costs.

In making this proposal, I recognize that I assign a larger rate increase to the Rate DS class than that proposed by UGI Gas. However, the Company's revenue allocation proposal for Rate DS was designed to try to make the harmonization of the rates within that class somewhat less painful to those customers in the northern operating district. As I explain below, while the Company should continue to make progress toward harmonizing rates, full harmonization in this proceeding is not yet reasonable.

Q. Do you have recommendations in the event the Commission awards UGI Gas with an increase below the $82.74 million requested?

A. In order to retain the parameters that I use in my revenue allocation, a proportional scaleback approach is not unreasonable. Thus, for example, if the allowed increase is set at $35 million (a little better for the Company than the average of the last three cases), the increase for the residential class would be $71.45 million * $35 million / 82.74 million = $30.22 million, or 8.0 percent. The XD and IS class rate changes would remain at zero. The progress toward cost-based rates for the N/NT, DS and LFD classes would necessarily be reduced, but that effect is unavoidable without assigning an increase to the R/RT class that is more than 1.5 times system average.

4. Rate Design

Q. Please summarize the Company's proposal to harmonize the base rates tariff for Rates N/NT and DS in this proceeding.

A. Prior to 2018, UGI Utilities, Inc. had one operating division that was a regulated gas utility and two subsidiary gas utilities, namely UGI Central Penn Gas and UGI Penn Natural Gas. At Docket Nos. A-2018-300381/2/3, the Commission approved the merger of these three entities into the UGI Utilities, Inc. (Gas Division), although separate regulations and tariffs continued to apply to each of t three "rate districts" (denoted South, Central, and North respectively). However, for several years prior to the merger, the Company had substantially harmonized the rate class definitions and eligibility rules for the three entities. In the Company's last two base rates proceedings at Docket No. R-2018-3006814 and Docket No. R-2020-3015162, the Company proposed to fully harmonize the tariffs for the three rate districts, both with respect to the purchased gas cost ("PGC") rate charged to utility gas sales customers and the base rates tariff charges for distribution and related services.

In both of those proceedings, I objected to the full harmonization for base rates, due to the rate shock implications.[18] These effects would have been unreasonable and excessive for the Rate N/NT customers and especially Rate DS customers in the North rate district. The settlement in the former proceeding provided for full harmonization of the PGC rate, and it harmonized base rates for the South and Central districts. However, it retained base rate differentiations between the North rate district and the South/ Central rate districts, for Rate N/NT and Rate DS. The settlement of that first case explicitly recognized that the

[18] OSBA Statement No. 1, Docket No. R-2018-3006814, pages 27-30. OSBA Statement No. 1, Docket No. R-2020-3015162, pages 38-41.

Company could propose full harmonization in its next base rates case, and that parties could oppose such a proposal.[19] In the most recent base rate case, the settlement indicates that the Company's proposal to harmonize the rates was withdrawn without prejudice, with the provision that "[t]he Company may propose this in the Company's next base rate case, but no sooner than January 1, 2022."

In this proceeding, the Company again proposes to fully harmonize the base distribution rates for Rate N/NT and Rate DS. UGI Gas witness Sherry A. Epler concludes that this proposal does not violate the traditional bounds for rate shock because the proposed increases for the North district customers in those classes are less than twice the system average increase.[20]

Q. What is the Company's specific proposal for base rates tariff charges for Rate N/NT and Rate DS in this proceeding?

A. Table RDK-5 below shows the proposed changes in tariff charges, as well as the bill implications for the average customer.

[19] The Settlement states, "For Step 1, the Rate N/NT North rate district rates will be increased by twelve (12) percent and Rate DS North rate district rates will be increased by twenty (20) percent, with Rate N/NT and Rate DS South and Central rate districts being set uniformly by class to recover the remaining N/NT and DS revenue requirements, respectively. For Step 2, the parties reserve their rights to oppose the Company's proposed rates and propose alternative rates."

[20] UGI Gas Statement No. 1 at page 19, footnote 1. Witness Epler's upper limit of two times system average appears to only apply to small business customers. For revenue allocation in this proceeding, the Company proposes to assign an increase of approximately 1.5 times the system average to the residential class, leaving that class still falling well short of a system average rate of return. Similarly, Witness Epler complains that North district Rate DS customers have been under-paying their cost of service for a three-year period. However, Witness Epler's concerns in this respect do not appear to apply to the R/RT class, where revenues have fallen short of allocated costs for decades.

Table RDK-5 UGI Gas Rate Design Proposal: Rate N/NT and Rate DS						
	Rate N/NT			Rate DS		
	Current Rates	Proposed Rates	Percent	Current Rates	Proposed Rates	Percent
Customer Charge ($/mo.)	23.50	30.00	27.7%	260.00	260.00	0.0%
Distribution Charge ($/mcf) South/Central	3.6271	4.0413	11.4%	2.9730	2.9977	0.8%
Distribution Charge ($/mcf) North	3.2653	4.0413	23.8%	2.1335	2.9977	39.3%
Typical Bill ($/Year) South/Central	$1,986	$2,153	8.4%	$24,832	$23,821	-4.1%
Typical Bill ($/Year) North	$1,817	$2,153	18.5%	$18,876	$23,821	26.2%

Notes:

1. The base rate tariff charges under current rates exclude the DSIC, which would be at 5.0 percent without a base rate increase.
2. The typical bill is based on customer and distribution charges inclusive of DSIC, excluding PGC and other charges for specific functions.

Sources: RDK WP1.

With this proposal for Rate N/NT, the Company proposes an overall average increase of a little over 10 percent, but the increase for the North district customers is some 2.1 times the increase for the South/Central rate district. For Rate DS, the typical increase for a North district customer would exceed 26 percent, while other customers in the class would see a material rate decrease.

I respectfully submit that imposing a 26 percent rate increase on one group of customers in this proceeding is not reasonable.

Q. What of the Company's argument that the Rate DS increase is within two times the system average?

A. Even if it were reasonable to accept an upper bound of two-times system average, the Company's argument quickly falls apart when the reality of a credible rate increase intrudes. As parties are aware, the actual rate increase award in a Pennsylvania base rates proceeding, either as a result of settlement or Commission decision, is almost always materially lower than the filed increase. Given the specific context of the current case, I deem it likely that any awarded rate increase will be significantly lower than the $82.7 million claimed. Based on the history of the past three proceedings shown in Table RDK-1 above, the awarded increase may very well be below $35 million (5.3 percent).

However, fully harmonizing the rates in a single rate proceeding will require rate increases to the North district customers that are nearly as large as those proposed in the filing, particularly for the Rate DS class. That is, the relative impact of harmonizing the rates on the North district customers does not get fully scaled back with a reduction in the overall rate increase.

For example, suppose the overall rate increase was reduced to $35 million, or about 5.3 percent, and the increases for Rates N/NT and DS were scaled back proportionately from the Company's proposed revenue allocation. I calculate that full harmonization of the Rate N/NT rates would require increases for North district customers of about 12.8 percent (which would be 2.4 times system average) and harmonization of the Rate DS rates would require an increase of 25.8 percent (4.8 times the system average). The basic arithmetic fact is that harmonizing Rate DS, and to a less extent Rate N/NT, will require a very large rate increase for North district customers, regardless of the level of the overall utility increase.[21]

Q. What do you recommend for this proceeding?

A. I recommend that the increase for North district customers be limited to no more than 1.5 times the system average increase, which would be 18.9 percent at the Company's full proposed increase. Similarly, I propose that the increase for both groups of customers within the N/NT and DS classes be proportionately scaled back for any reduction in the Company's claimed rate increase. Thus, if the overall increase is reduced from $82.7 to

[21] In theory, this increase could be mitigated by providing a substantial decrease to Rate DS overall. I deem such an outcome to be highly improbable, based on experience.

$35.0 million, the increase for North district customers would be limited to an increase of $35.0/$82.7 * 18.9% or 8.0 percent.

A detailed proof of revenues for rates at the Company's full proposed revenue requirement with my revenue allocation and these recommendations is included in RDK WP2. The specific tariff charges are shown in Table RDK-6 at the end of this testimony.

Note that my recommendation in this respect applies to any approved revenue allocation, for both the N/NT and DS rate classes. However, as shown in RDK WP2, at my proposed revenue allocation with the reduced assignment to Rate N/NT (before the effects of any scaleback), this limit would allow for full harmonization of the N/NT rates. The Rate DS volumetric charges would continue to be differentiated, even with the typical North district customer being assigned an 18.9 percent increase, while other DS customers would see an increase of less than 1.0 percent.

Q. Please address the issue of the customer charge for Rate N/NT.

A. As shown in Table RDK-5 above, the Company proposes to assign a nearly 28 percent increase to the Rate N/NT customer charge, compared to an overall class average increase of about 10 percent. Because the customer charge for the rate districts has already been harmonized, this proposal is not intertwined with the issue of harmonizing the North district rates. Nevertheless, this proposal will materially shift the nature of cost recovery in the Rate N/NT class, it and will result in a substantial rate increase for smaller customers within the class. For example, for small businesses with loads that are similar to an average residence, the Company's rate design proposal will result in an increase of 13.5 percent for South and Central district customers, and a nearly 20 percent increase for North district customers.

Q. How should the results from the CSAS be used to inform setting the customer charge for the Rate N/NT class?

A. The simplest approach would be to sum the costs classified to "customer-related" in the CSAS, and divide by the number of monthly bills. The problem with that approach is that, unlike the residential class, the Rate N/NT class includes customers with a wide array of sizes and costs to serve. Larger customers within the customer class require larger meters and more costly service lines. Thus, if a single customer charge applies to all customers in the class, using the average cost method will simply mean that small customers are inequitably subsidizing larger customers. For this reason, some Pennsylvania NGDCs have adopted differentiated customer charges for general service customers. UGI Gas has not made such a proposal in this proceeding.

Thus, in the UGI Gas single customer charge framework, the correct cost basis for the customer charge should be the customer related cost to service the smaller customers within the class, leaving the volumetric charge to absorb the costs for the more expensive meters used by the larger customers. While the cost for a small Rate N/NT customer is not directly available from the CSAS, the customer-related cost for a residential customer is. Since small Rate N/NT customers can be similar in size to a residential customer, this approach results in a reasonable proxy.

Using my CSAS simulation at the UGI Gas proposed rates, the full customer component of residential class costs is about $33 per customer per month. As such, the Company's $30 proposed customer charge is near the upper bound of the cost range for small Rate N/NT customers.

Q. How does the Company's proposal compare to the customer charge used by other Pennsylvania NGDCs for smaller non-residential customers?

A. The $30 charge would be at the upper end of the range, but not outside it. Table RDK-6 below shows the monthly customer charge for small non-residential customers.

Table RDK-6 Non-Residential Customer Charges: Pennsylvania NGDCs	
	$/month
National Fuel Gas Dist'n C&PA (< 250 mcf)	$19.89
Peoples Natural Gas SGS (< 500 mcf)	$20.00
UGI Gas N/NT (current)	$23.50
Philadelphia Gas Works GS-C	$25.35
PECO Gas GC*	$28.55
Columbia Gas SGSS/SCD/SGDS**	$29.92
UGI Gas N/NT (proposed)	$30.00
Peoples Gas (TWP) SGS (<500 mcf)	$35.00

* PECO proposes a $38.82 customer charge in its current base rates proceeding.

** Columbia proposes a $34.23 customer charge in its current base rates proceeding.

Note: Customer charges exclude the effects of DSIC, TCJA or other multipliers.

Sources: Company websites

Q. With that background, what do you recommend?

A. Because the Company's proposal is justified on a cost basis at its proposed rates, I do not object to the $30 charge if the full increase were to be granted. However, to mitigate the rate shock for small customers, the increase should be scaled back with any overall reduction in the Company's proposed revenue requirement. Thus, for example, if the Company's allowed increase is $35.0 million rather than $82.7 million, the customer charge increase would be scaled back; i.e., $23.50 + $6.50 * $35.0/$82.7 = $26.25 per month.

Q. In light of your recommendations for revenue allocation, rate harmonization and the Rate N/NT customer charge, what is your recommended rate design for Rates N/NT and DS?

A. Table RDK-7 below provides my recommendation. Detailed supporting calculations are provided in RDK WP2.

Table RDK-7 RDK Rate Design Proposal: Rate N/NT and DS at Full Revenue Requirement						
	RDK Rate N/NT			**RDK Rate DS**		
	Current Rate	**Proposed Rate**	**Percent**	**Current Rate**	**Proposed Rate**	**Percent**
Customer Charge ($/mo.)	23.50	30.00	27.7%	260.00	260.00	0.0%
Distribution Charge ($/mcf) South/Central	3.6271	3.8673	6.6%	2.9730	3.1668	6.5%
Distribution Charge ($/mcf) North	3.2653	3.8673	18.4%	2.1335	2.7992	30.1%
Typical Bill ($/Year) South/Central	$1,986	$2,076	4.5%	$24,832	$24,989	0.6%
Typical Bill ($/Year) North	$1,817	$2,076	14.2%	$18,876	$22,450	18.9%

Notes:
1. The base rate tariff charges under current rates exclude the DSIC, which would be at 5.0 percent without a base rate increase.
2. The typical bill is based on customer and distribution charges inclusive of DSIC, excluding PGC and other charges for specific functions.Sources: RDK WP2.

Q. Please state OSBA's position with respect to the Company's proposed weather normalization adjustment ("WNA") mechanism.

A. The Company proposes to implement a WNA for its R/RT and N/NT classes. The mechanism would adjust customer bills in all months between October and May for the difference between actual heating degree days ("HDDs") and the normal HDDs used to develop base rates. The adjustments would occur in "real time," in that each bill would reflect both the actual and normal HDDs for the particular period that applied to that bill. The Company's mechanism would reflect a customer-specific parameter for the "base" non-heating load (based on a three-year history of summer use), and it would adjust the actual use in excess of that base amount for the ratio of normal to actual HDDs. The adjusted actual use would then serve as the volumetric billing determinant. As proposed, the WNA mechanism would not be a pilot program, and it would include no "dead band" within which no adjustments are made.

I am advised by counsel that OSBA intends to contest this proposal as not just and reasonable on the grounds that the substantial risk reduction benefits to the Company and the rate instability implications for customers associated with this mechanism are not reasonably reflected in the allowed return on capital claim in this proceeding.

Q. What is the OSBA's concern regarding the Company's cost claim related to the BTU heat content rate adjustment mechanism?

A. At Docket No. R-2021-3026078, the Company proposed, and the Commission approved, a rate mechanism designed to facilitate the incorporation of renewable gas supplies with below-average BTU content into the Company's gas distribution mix. In effect, the tariff was modified to be able to reflect geographic differences in gas energy content such that customers would all pay the same per unit of energy delivered. In its filed tariff supplement at that docket, the Company indicated, "The proposed change is intended to assure there is no impact to the utility's revenue and expenses." In this proceeding, the Company reports that it is claiming approximately $2.0 million in information system rate base associated with the adoption of this rate mechanism.[22] I am advised by counsel that based on the evidence available at this time, OSBA intends to contest this claim.

Q. Does this conclude your direct testimony?

A. Yes, it does.

[22] See OCA-I-39, OSBA-I-16.

EXHIBIT RDK-1

RÉSUMÉ AND EXPERT TESTIMONY LIST

FOR

ROBERT D. KNECHT

Overview

Mr. Knecht has more than 40 years of economic consulting experience, focusing on the energy, utility, metals and mining industries. For the past 30 years, Mr. Knecht's practice has primarily involved providing analysis, consulting support and expert testimony in regulatory matters, primarily involving electric and natural gas utilities. Mr. Knecht's work includes many aspects of utility regulation, including industry restructuring, cost unbundling, cost allocation, rate design, rate of return, customer contributions, energy efficiency programs, smart metering programs, treatment of stranded costs and utility revenue requirement issues. He has consulted to state advocacy agencies, industrial customer groups, law firms, regulatory agencies, government agencies and utilities, in both the United States and Canada. He has provided expert testimony in more than one hundred separate utility proceedings.

In addition to his work with regulated utilities, Mr. Knecht has consulted on international industry restructuring studies, prepared economic policy analyses, participated in a variety of litigation matters involving economic damages, and developed energy industry forecasting models.

Mr. Knecht served as a Principal of IEc for 33 years, and as its Treasurer for 15 years. He is currently an independent consultant who remains affiliated with IEc.

Education

Master of Science, Management (Applied Economics and Finance), Sloan School of Management, M.I.T.

Bachelor of Science, Economics, Massachusetts Institute of Technology

Select Project Experience

For more than 25 years, Mr. Knecht has provided consulting services, analysis and expert testimony before the Pennsylvania Public Utility Commission on all manner of regulatory proceedings to the **Pennsylvania Office of Small Business Advocate**. In addition to expert testimony, Mr. Knecht has assisted OSBA with the development of public policy positions, litigation strategy, and longer term strategy.

For the **Attorney General of the State of Rhode Island**, Mr. Knecht provided consulting and expert witness services in an acquisition proceeding involving PPL Corporation's proposed acquisition of Narragansett Electric from National Grid. Mr. Knecht's testimony addressed financial, economic, environmental, tax, operating cost and rate implications.

For the **New Brunswick Public Intervener,** Mr. Knecht provides consulting and expert witness services in a variety of regulatory proceeding before the New Brunswick Energy and Utilities Board involving New Brunswick Power, Enbridge Gas New Brunswick, and petroleum products. Mr. Knecht has addressed issues of load forecasting, costs forecasting, cost of capital, allocation of corporate overhead costs, utility cost allocation, revenue allocation, market-based rate design, cost-based rate design, and rate decoupling.

For **l'Association québécoise des consommateurs industriels d'électricité (AQCIE) and le Conseil de l'industrie forestière du Québec (CIFQ)**, Mr. Knecht provided analysis, consulting advice and expert testimony before the Régie de l'énergie in regulatory matters involving Hydro Québec Distribution and TransÉnergie. This work includes revenue requirement, power purchasing, cost allocation, treatment of cross-subsidies, and rate design.

For the **Independent Power Producers Society of Alberta**, Mr. Knecht provided consulting advice, analysis and expert testimony before the Alberta Energy and Utilities Board in a series of proceedings involving the restructuring of the electric utility industry, the unbundling of rates, and the development of transmission rates.

Rebuttal Testimony of

ROBERT D. KNECHT

On Behalf of the

Pennsylvania Office of Small Business Advocate

Topics:

Cost Allocation
Revenue Allocation

Date Served: May 17, 2022

Date Submitted for the Record: ___________________________

REBUTTAL TESTIMONY OF ROBERT D. KNECHT

Q. Please state your name and briefly describe your qualifications.

A. My name is Robert D. Knecht. I submitted direct testimony and associated exhibits earlier in this proceeding, and my qualifications were presented therein.

Q. What is the purpose of this rebuttal testimony?

A. This rebuttal testimony responds briefly to the cost allocation and revenue allocation recommendations of Office of Consumer Advocate ("OCA") Witness Jerome D. Mierzwa.

Q. Please summarize the changes proposed by Witness Mierzwa for the Company's cost of service allocation study ("CSAS").

A. Witness Mierzwa recommends that the Company's modified average-and-excess ("A&E") method for classifying and allocating mains costs be replaced with a 50/50 weighted peak-and-average ("P&A") methodology. Witness Mierzwa also recommends making four technical adjustments to the CSAS.

I note also that Witness Mierzwa accepted the Company's methodology for deriving the class design day demands that are used in both the A&E and P&A allocation factors. As such, I do not believe that Witness Mierzwa's CSAS is reasonable, because it relies on unreasonable estimates for the design day demands of the R/RT and N/NT rate classes.

Q. Please restate your view of the P&A methodology for classifying and allocating mains costs.

A. As I explained in my direct testimony, none of the standard methods for classifying and allocating mains costs are consistent with cost causation, and none are reasonable in this era where detailed system modelling techniques are available. The P&A method is particularly problematic, in that it relies heavily on average demand. Mains costs are not causally related to average demand. Mains are designed to meet design day demand, and to interconnect customers. However, as I also explained in direct testimony, the Company has not offered a detailed modelling approach (since 1996), and the Commission has recently accepted both the A&E method (for PECO Gas) and the P&A method (for

Columbia Gas). As the Commission has provided little guidance as to why it accepted the A&E method in PECO Gas after approving the P&A method in Columbia Gas, it is difficult to evaluate whether the Company's method or Witness Mierzwa's method is more consistent with Commission precedent. As I noted, the PECO Gas decision (using the A&E method) may be more relevant, since it involved a head-to-head comparison of the A&E and P&A methods, whereas the A&E method was not directly before the Commission in the Columbia Gas matter.

Q. Witness Mierzwa indicates that ". . . Ms. Heppenstall's Mains allocation factors are nearly identical to the results obtained when average demand allocation factors are weighted at zero, and pure peak allocation factors are weighted at 100 percent." Do you agree?

A. Not completely. As I explained in my direct testimony, I agree with Witness Mierzwa that the traditional load-factor weighted A&E method will arithmetically default to a pure peak demand allocator if there is no diversity in demand. However, the Company does not rely on the actual system load factor for weighting the average component of costs in its A&E allocator, but in fact uses an alternative weighting factor that increases the weight assigned to average demand. Its method therefore produces an allocator that is 79 percent based on peak demand and 21 percent based on average demand.[1] As such, the Company's method lies between a traditional A&E approach and Witness Mierzwa's recommended P&A method.

Q. What do you conclude from Witness Mierzwa's views on mains cost classification and allocation?

A. I acknowledge that Witness Mierzwa's method is consistent with that approved by the Commission for Columbia Gas. However, I conclude that the Company's method is also reasonably consistent with the Commission's decision in PECO Gas (wherein the P&A method was rejected), the Company's method has a reduced reliance on average demand which is not a contributor to mains cost causation, and the Company's method represents

[1] These values are derived in RDK WP1 in the "Allocs" worksheet at cells B119:K127.

a compromise between a traditional A&E method and Witness Mierzwa's P&A method. I therefore continue to rely on the Company's modified A&E method in this proceeding.

Q. What technical changes does Witness Mierzwa propose for the CSAS?

A. Witness Mierzwa proposes the following changes:

- Manufactured gas plant remediation costs included in accounts 740-742 should be allocated in proportion to overall O&M expense, consistent with the treatment of those costs for Accounts 930 and 932;

- Forfeited discounts should be allocated based on actual historical forfeited discounts, rather than penalty revenues;

- Reconnection fees should be allocated based on actual reconnection fees, rather than the overall revenue requirement;

- The Company's acknowledged error for sub-functionalizing costs in Account 874 should be incorporated into the CSAS.

Q. Do you agree with these recommendations?

A. With the exception of Witness Mierzwa's proposed change to reconnection fees, I do.

Regarding reconnection fees, these charges are imposed to recover the costs associated with reconnections. Therefore, the revenues are an offset to those costs, and should be allocated in the same manner. Thus, if the Company were to allocate the *costs* incurred for reconnections based on actual reconnections, Witness Mierzwa's approach for the reconnection *fees* would be reasonable. However, the Company does not separately allocate the costs for reconnections, and it implicitly uses an aggregate O&M allocator for those costs. As such, it is not appropriate to allocate reconnection fees based on actual history, but rather based on aggregate O&M costs. In effect, reconnection costs and reconnection fees should both be allocated on the same basis.

Q. Have you replicated Witness Mierzwa's CSAS, using your cost allocation model?

A. I have. It is attached as RDK WPR1.

Q. Will you reflect the changes proposed by Witness Mierzwa with which you agree in your CSAS?

A. I will. I intend to update my CSAS in surrebuttal testimony to address any changes that result from the Company's rebuttal filing, as well as to incorporate the three technical changes offered by Witness Mierzwa with which I agree. I will similarly update my revenue allocation and rate design recommendations, as necessary.

Q. What is Witness Mierzwa's revenue allocation recommendation?

A. Witness Mierzwa's revenue allocation is summarized in Table RDK-R1 below. Because the Company's indexed rate of return metric cannot reasonably be used to measure progress toward cost-based rates, I rely on the normalized revenue-cost ratio method. The column labeled "progress" represents how much the proposed revenue allocation moves the revenue-cost ratio toward 100%. So, for example, the R/RT revenue cost ratio moves 3.4 percentage points from 91.9% to 95.3%, out of the 8.1 percentage points needed to move from 91.9% to 100.0%, a ratio of 3.4/8.1 = 42%.

Table RDK-R1
OCA Revenue Allocation Proposal Using
OCA Cost of Service Allocation Study

	Increase $mm	**Increase %**	**R-C Ratio Current Rates***	**R-C Ratio Proposed Rates***	**Progress**
R/RT	$60.28	16.0%	91.9%	95.3%	42%
N/NT	$12.98	9.3%	114.5%	109.3%	36%
DS	$2.13	6.3%	115.2%	108.7%	43%
LFD	$5.65	12.6%	101.6%	100.1%	96%
XD-Firm	--	0.0%	133.3%	120.5%	38%

* Based on OCA proposed CSAS methodology, replicated in RDK WPR1.
Source: RDK WPR1

Q. Is Witness Mierzwa's proposed revenue allocation consistent with the OCA proposed CSAS?

A. Witness Mierzwa's revenue allocation proposal is *directionally* consistent with the OCA CSAS, but it appears to elevate the criterion of rate gradualism above the criterial of moving rates into line with allocated cost. In Pennsylvania, the Commonwealth Court has determined that cost is the "polestar" criterion for revenue allocation. Moreover, in terms of equity, the R/RT class has been generating revenues that fall well short of allocated costs, since at least 1996. Small and medium-sized businesses in the N/NT and DS classes have been paying for that shortfall for a similar period. Despite those considerations, Witness Mierzwa proposes an increase for the R/RT class that is only 1.27 times the system average increase, when the traditional rule of thumb for rate gradualism is to limit the increase to 1.5 or 2.0 times system average. As such, I conclude that even if the OCA CSAS methodology were adopted, Witness Mierzwa's proposed revenue allocation is not reasonable as it simply perpetuates a long-standing historical inequity.

Q. If Witness Mierzwa's CSAS is adopted, what revenue allocation would you propose?

A. Under the OCA CSAS, my recommendation is shown in Table RDK-R2 below. In developing this recommendation, I accept Witness Mierzwa's proposals for the LFD and IS/XD-I classes, because his proposals move those classes fully into line with the OCA's allocated cost. Consistent with my direct testimony, I assign a 1.5 times system average increase to the R/RT class, which still fails to bring revenues into line with allocated cost.[2] The balance of the increase is assigned to the N/NT and DS classes, so as to balance the revenue-cost ratio for those classes at proposed rates. As shown, my revenue allocation under the OCA CSAS results in considerably more progress toward cost-based rates than that offered by Witness Mierzwa. For example, this revenue allocation moves the revenue-cost ratio for the residential class from 91.9 percent to 97.7 percent, thereby making progress toward cost-based rates of 71 percent.

[2] The OCA has supported the use of these parameters in other proceedings. See, for example, OCA Statement No. 4 at page 26 at Docket No. R-2020-3018929 (the PECO Gas matter in which the Commission approved the A&E method), wherein OCA applies both the 1.5X and 2.0X increases.

Table RDK-R2 RDK Revenue Allocation Proposal Using OCA Cost of Service Allocation Study					
	Increase $mm	**Increase %**	**R-C Ratio Current Rates***	**R-C Ratio Proposed Rates***	**Progress**
R/RT	$71.45	18.9%	91.9%	97.7%	71%
N/NT	$3.79	2.7%	114.5%	102.8%	81%
DS	$0.15	0.4%	115.2%	102.8%	81%
LFD	$5.65	12.6%	101.6%	100.1%	96%

Re: Pennsylvania Public Utility Commission v. UGI Utilities, Inc. – Gas Division / Docket No. R-2021-3030218

Dear Judge Cheskis and Judge Chiodo:

Enclosed please find the Surrebuttal Testimony and Exhibits of Robert D. Knecht, labeled OSBA Statement No. 1-S, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-captioned proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

On Behalf of the

Pennsylvania Office of Small Business Advocate

Topics:

Cost Allocation
Revenue Allocation

Date Served: May 27, 2022

Date Submitted for the Record: ____________________________

SURREBUTTAL TESTIMONY OF ROBERT D. KNECHT

1. Introduction

Q. Please state your name and briefly describe your qualifications.

A. My name is Robert D. Knecht. I submitted direct testimony, rebuttal testimony and associated exhibits earlier in this proceeding, and my qualifications were presented therein.

Q. What is the purpose of this surrebuttal testimony?

A. This testimony responds to the rebuttal testimony of various UGI Utilities Inc. – Gas Division ("UGI Gas" or "the Company") witnesses, specifically:

- On cost allocation matters, Witness Constance E. Heppenstall;
- On revenue allocation matters, Witnesses Christopher R. Brown and Sherry A. Epler;
- On the issue of "harmonizing" Rates N/NT and DS, Witness Epler;
- On the Company's proposed weather normalization adjustment ("WNA") mechanism, Witness John D. Taylor.

I note that Pennsylvania Office of Consumer Advocate Witness Jerome D. Mierzwa submitted rebuttal testimony regarding cost allocation matters. However, my rebuttal testimony addresses the relevant methodological issues, and it provides my recommendation for revenue allocation in the event Witness Mierzwa's cost allocation method is adopted. As such, there is no need to respond further in this testimony.

The four topics are addressed sequentially below.

2. <u>Cost Allocation</u>

Q. Did the Company update its cost of service allocation study ("CSAS") in rebuttal testimony to reflect the parties' filings?

A. Yes, or at least it attempted to do so.[1] The Company submitted a summary of its revised CSAS in Exhibit D-R, and it made its electronic workpapers available to intervenors. The Company made the following changes to the CSAS from the filed version:

- In response to my direct testimony, the Company modified the design day demand allocators for the R/RT and N/NT classes to reflect the historical weather sensitivity analysis that I presented;
- In response to Witness Mierzwa's direct testimony, the Company modified the allocation of certain environmental O&M costs related to long-shuttered manufactured gas facilities so as to assign those costs only to gas sales customers and to exempt all transportation customers from any responsibility for those costs;
- Consistent with its own response to an interrogatory and Witness Mierzwa's direct testimony, the Company modified its sub-functionalization of O&M operating costs in Account 874 for meters/services between costs related to meters and costs related to services;
- In response to Witness Mierzwa's direct testimony, the Company modified its allocation of certain "other" revenues to reflect actual historical revenue patterns.

Q. Do you agree with the Company's adjustments to the design day demand allocator?

A. I do. The design day demand factor in the Company's revised CSAS in Exhibit D-R is now consistent with my recommendation.

Q. Do you agree with the Company's adjustment to O&M costs related to manufactured gas facilities?

[1] In addition to the errors detailed herein, the Company continues its practice of aggressively rounding its allocation factors to no apparent purpose. In its rebuttal CSAS under present rates, at least four of the allocation factors fail to total to 100 percent (Factors 12, 13, 14, and 15). This practice is mostly harmless, but it can result in needless distortions for rate classes with relatively low cost to serve. I eliminate this rounding in RDK WPS1.

A. No.[2] The Company claims that these costs are related to gas supply, and thus should be borne only by sales customers. The Company's argument is akin to claiming that the costs of cleaning up a buggy whip factory are causally related only to customers who now buy automobiles. The costs in question were incurred in a different era and under a different regulatory regime, notably one in which shopping for gas supplies was not permitted and all customers benefited from manufactured gas facilities. That gas utilities are allowed to recover the costs for these facilities at all, which are not "used and useful," suggests that these costs are more akin to an environmental tax than a typical utility cost of service. Moreover, it is likely that few if any of UGI Gas's current customers benefited from the manufactured gas plants which give rise to these costs.

As such, these costs are better allocated broadly across all customers, rather than assigning them only on the basis of gas sales volume. Thus, as I indicated in my rebuttal testimony, I agree with Witness Mierzwa's proposal to consistently allocate these costs across all rate classes, using the O&M expense allocator (Factor 12).

Moreover, if the Commission approves the assignment of these costs in the manner proposed by the Company, it will become necessary to establish separate rates for sales (Rates R and N) and retail transportation (Rate RT and NT). Under the Company's logic, if the manufactured gas plant costs are assigned only to utility sales customers, the retail transportation customers in Rates RT and NT have no responsibility for the costs in question and thus should pay lower rates.

Q. Do you agree with the Company's proposal to modify the sub-functionalization of Account 874 meters/services operating costs?

A. I agree with that proposal because the Company indicated that its original filing was erroneous and inconsistent with the workpaper provided in response to discovery. As a practical matter, however, implementing this modification is proving to be problematic. In developing the OCA CSAS, Witness Mierzwa correctly modified the sub-functionalization

[2] As a technical matter, in modifying its allocation of certain manufactured gas O&M costs in Accounts 923 and 930, it failed to make a similar modification to the Labor O&M costs in those accounts. As I reject the Company's proposed method, there is no need for me to correct this error.

of Account 874 O&M costs, but the witness did not carry that calculation through to the Account 874 Labor O&M costs. Thus, the labor allocator in Witness Mierzwa's CSAS is based on an inaccurate sub-functionalization of the labor costs in Account 874.[3]

In the Company's rebuttal case in Exhibit D-R, the Company compounded the errors in Witness Mierzwa's CSAS. First, rather than modifying the sub-functionalization to be 55.1% mains and 44.9% services, the Company's calculation is reversed, and O&M costs are sub-functionalized as 44.9% to mains and 55.1% to services. (The Company subsequently corrected this error in response to informal OSBA discovery.) Second, like Witness Mierzwa, the Company fails to carry the change through to the Labor O&M cost allocation. (Although the Company indicated informally to OSBA that it intended to modify the labor allocator in the corrected version of the CSAS, the functionalization of labor costs for Account 874 in the revised CSAS is unchanged from the original filing.)[4]

Q. Do you agree with the Company's changes to the allocation of other operating revenues, as offered by Witness Mierzwa?

A. Yes and no. As I explained in my rebuttal testimony, Witness Mierzwa's proposal for forfeited discounts is reasonable, and the Company's revised CSAS adopts it. However, Witness Mierzwa's change in the allocation of reconnection revenues is not reasonable, because it should be allocated on the same basis as the cost for those reconnections, for the reasons laid out in my rebuttal. As such, I disagree with the Company's revised CSAS, as it adopts Witness Mierzwa's proposal.

Q. Have you developed a modified version of your proposed CSAS to reflect these changes?

A. I have, and it is attached in electronic form in RDK WPS1. Relative to the Company's original filing, it reflects:

---

[3] My RDK WPR1 CSAS follows Witness Mierzwa's method, because the object of my rebuttal analysis was to replicate the OCA CSAS and evaluate its implications for revenue allocation.

[4] See UGI Gas Exhibit D-R (Corrected) at page 21, where the Account 874 costs are split between mains and services at 51.9% mains, 48.1% services, unchanged form UGI Gas Exhibit D.

- Revised design day demand allocators;
- Allocation of all manufactured gas plant O&M costs using Factor 12;
- Sub-functionalization of both Account 874 O&M and Account 874 Labor O&M at 55.1% mains, 44.9% services;
- Allocation of forfeited discount revenues based on historical patterns.

Q. How does your revised CSAS compare to the Company's original filing and the CSAS in your direct testimony?

A. Table RDK-S1 below shows class rates of return at present rates under the four CSAS models.

Table RDK-S1
Comparison of Allocated Cost of Service Study Results
Class Rate of Return at Present Rates

	UGI Gas Filing	RDK Direct	OCA Direct	UGI Gas Rebuttal*	RDK Surrebuttal
R/RT	4.3%	4.1%	4.7%	4.1%	4.1%

* Partially corrected in response to OSBA informal discovery.
Source: RDK WP1, RDK WP2, RDK WPR1, UGI Gas Exhibit D-R, RDK WPS1

As shown in Table RDK-S1, all of the CSASs on file in this proceeding show that the residential R/RT classes produce revenues well below allocated cost, while all other classes produce revenues in excess of allocated cost. The only material difference for the non-residential classes is that the OCA "P&A" CSAS produces a class rate of return for the LFD class that is only slightly above system average, whereas the other "A&E" CSASs indicate that the LFD class rate of return is well above system average.

Table RDK-S1 also shows that the changes recommended by Witness Mierzwa which I incorporated into my surrebuttal testimony have almost no discernible impact on class rates of return compared to the results from the CSAS filed in my direct testimony.

3. Revenue Allocation

Q. What is the Company's position regarding your revenue allocation recommendations?

A. In my direct testimony, I explained why rate decreases should not be assigned to the XD and IS classes, that the increase for the R/RT class should be 1.5 times system average, and the balance of the increase should be used to allow for uniform progress toward cost-based rates for the N/NT, DS and LFD classes. Witness Brown presents the Company's view as to why rate reductions for the XD and IS classes are reasonable. Witness Epler addresses the issue of the maximum reasonable increase for the residential classes (R/RT).

Q. What are Witness Brown's arguments regarding the rate decreases?

A. Witness Brown makes two points. Initially, he argues that both the XD and IS classes exhibit class rates of return well above system average, and that the rate decreases are cost-justified. While I agree with Witness Brown's assessment of cost of service, I have three observations. First, Witness Brown clearly indicates that the XD and IS rates are market-based competitive rates.[5] As such, the cost of service criterion is less relevant for these rate classes than for other classes. Second, in my experience in Pennsylvania, I observe that it is unusual for the Commission to assign rate decreases to certain rate classes while other classes face large rate increases. Third, as shown in my workpapers, a zero rate increase for these classes will result in substantial progress toward cost-based rates.

Witness Brown makes a second point that the Company has been able to negotiate contracts with some XD and IS customers such that rates increase with the DSIC. Witness Brown argues that, with the DSIC reset from a base rates case, the contracts in place will necessarily result in a rate reduction from those customers. Witness Brown indicates that

[5] UGI Gas Statement No. 1-R at page 31 line 3, page 32 line 20, page 33 line 19, page 34 lines 9 and 22.

reopening those contracts to incorporate a provision to roll in the DSIC during a rate case would open the possibility that less favorable contracts would need to be negotiated.

Q. Is Witness Brown's argument regarding the contract provisions reasonable?

A. No. Consider the circumstances. These are customers who, according to the Company, have credible competitive alternatives to taking service from UGI Gas, presumably either an alternative fuel or bypass potential to interstate pipelines. In its negotiations with these customers, the Company determines that the competitive conditions are such that the customer can afford to experience rate increases associated with the DSIC. The Company then negotiates a contract in which the rates from these customers are allowed to increase with the DSIC, *only so long as those revenues flow to UGI Gas shareholders.* As long as the Company is between rate cases, the DSIC revenues flow to the shareholders. However, under the Company's negotiated contracts, as soon as new rates are imposed as a result of a base rates case, the DSIC is reset to zero, and the Company demands that the resulting revenue reduction get handed back to other ratepayers.

This approach is neither reasonable nor equitable. Negotiating a contract that is purportedly based on a customer's competitive alternatives, but which provides for an automatic rate reduction with the Company's next base rates proceeding, is unreasonable and borderline irresponsible. I recommend that the Commission not sanction this behavior by allowing the Company to force other ratepayers to pay for automatic rate decreases to competitive rates that have already been negotiated and accepted. Thus, for regulatory purposes, the allowed rate change for the XD and IS classes should be set to zero. If the Company both has the ability and chooses to re-open these contracts to negotiate more reasonable terms, it is free to do so at management's discretion.

Q. What is Witness Epler's position regarding revenue allocation to the R/RT classes?

A. Witness Epler's rebuttal states,

> "In addition, the Company continues to believe that an increase for the Rate R/RT customer class of 2.0 times the system average increase is appropriate, just, and reasonable. The Company has consistently utilized this standard in its rate cases as it does address the ratemaking principle of gradualism. An increase of 2.0 times the system average increase is further supported as appropriate for

> Rate R/RT in this case in order to move the only class demonstrating lower than system average returns closer to paying a system average rate of return; a demonstration of equity across all rate classes."[6]

I am puzzled by this rebuttal because (a) the Company did not propose a 2.0 times system average for the R/RT class in its filing, (b) I proposed a 1.5 times system average increase for the R/RT class in my direct testimony, and (c) the Company's rebuttal testimony continues to show revenue allocation for the R/RT class at 1.43 times system average, which produces a class rate of return at proposed rates that remains well below allocated cost.[7] Specifically, the system average increase is 12.62 percent, the Company's original and rebuttal proposed increase for R/RT is 18.05 percent (1.43 times system average), my proposed increase is 18.93 percent (1.50 times system average), and Witness Epler's rebuttal supports a 25.24 percent increase (2.00 times system average).[8]

In effect, Witness Epler appears to conclude that UGI Gas's own proposed allocation of the rate increase to the R/RT class is far too low, but the Company declines to change its revenue allocation to reflect Witness Epler's rebuttal testimony.

While a reasonable case could potentially be made to increase the R/RT increase to two times system average, I have not changed my recommendation for the R/RT class to reflect this apparent shift in the Company's position. As shown in my workpapers, the 1.5 times system average increase that I propose for Rate R/RT will result in material progress toward cost-based rates for all rate classes. However, I recommend that the Commission, when evaluating the various revenue allocation proposals in this case, recognize that the Company's rebuttal testimony supports a substantially larger increase for the R/RT class than that in my recommendation.

Q. Have you updated your revenue allocation analysis to reflect the changes to the CSAS?

---

[6] UGI Gas Statement No. 8-R at 14.

[7] See Exhibit D-R Corrected, at Schedule A page 1 and Schedule B page 1.

[8] These values are based on tariff revenues excluding PGC costs, but including the MFC and GPC charges that apply only to sales service customers.

A. As detailed in the "SumProposed" worksheet of RDK WPS1, I developed an alternative revenue allocation based on the revised cost allocation analysis in that workpaper, using the same logic as that presented in my direct testimony. However, the differences between the surrebuttal revenue allocation analysis and that in my direct testimony are *de minimis*. As such, I retain the revenue allocation proposal in my direct testimony.

4. <u>Harmonizing Rates N/NT and DS</u>

Q. Why is there an issue regarding the harmonizing of Rates N/NT and Rate DS.

A. In 2008, UGI Utilities, Inc. ("UGIU") purchased PPL Gas Utilities Company from PPL Electric Utilities Corporation, and began operating it as UGI Central Penn Gas, Inc. ("CPG"). Also in 2008, UGIU purchased PG Energy Inc. from Southern Union Company, and began operating it as UGI Penn Natural Gas, Inc. ("PNG"). During the period in which these companies were operated and regulated as separate utilities, UGIU set rates based on the costs incurred for the individual utilities, but it undertook to harmonize rate class definitions, eligibility, and other tariff considerations across the UGIU family of gas utilities. In general, I supported UGI Gas's efforts in this respect, subject to rate gradualism and other rate design considerations.[9]

In 2018, the Commission approved a petition by UGIU et al. to merge UGI Gas, CPG and PNG into a single utility, at Docket Nos. A-2018-3000381/382/383, pursuant to a settlement among the parties (including OSBA).[10] In that proceeding, I submitted testimony that was generally supportive of the public benefits associated with the merger, but which recognized (and evaluated in some detail) the impacts on some customers if tariff rates were to be fully harmonized.[11] As detailed in that testimony, the primary negative impacts of the merger on rate harmonization would be for Rate N/NT and particularly for Rate DS customers in the PNG service territory. The settlement in that proceeding recognized that rates could not easily be harmonized, and that separate costing and rate design remained necessary for three operating areas: North (formerly PNG), Central

[9] See OSBA Statement No. 1, Docket No. R-2010-2214415; OSBA Statement No. 1, Docket No. R-2008-2079660.

[10] Joint Petition for Approval of Settlement of All Issues, Docket No s. A-2018-3000381/382/383, July 20, 2018.

[11] OSBA Statement No. 1, Docket No. A-2018-3000381 et al., at 8-13.

(formerly CPG) and South (formerly UGI Gas). Since that time, the Company has filed three base rates proceedings, it has moved away from separate costing within rate districts, and it has phased out rate differentials between the South and Central operating areas. In each proceeding, including the current one, the Company has proposed to apply rate increases far in excess of system average to North District (formerly PNG) N/NT and DS classes. While I have generally supported the Company's goal of eliminating separate costing regimes and gradually harmonizing rates, I have opposed the Company's efforts to impose rate increases on Rate N/NT and Rate DS customers that are many multiples of the system average increase, particularly when the effects of a rate scaleback are reflected.[12] It is simply not reasonable to impose enormous *relative* increases on a subset of small and medium business customers over a very short period of time simply because they had the misfortune to have their utility acquired by another utility with a higher cost structure.

Q. In your direct testimony, you recommended that the rate increase for Rate N/NT and DS customers in the former North operating area be limited to no more than 1.5 times the system average increase. How does the Company respond?

A. Witness Epler begins by stating that this is the third time the Company has attempted to harmonize the rates, and that not doing so will perpetuate an intra-class subsidy and that customers will not be treated equally. Witness Epler goes on to argue that if the Commission accepts that the principle of rate gradualism should apply to Rate N/NT and DS customers in the North district, the Commission should permit UGI Gas to increase the rates for North district customers by 2.0 times the system average in this proceeding, purportedly consistent with my recommendation for an upper limit in a recent Columbia Gas base rates proceeding.[13] Witness Epler then requests that the Company be permitted to apply another rate increase to North district customers on October 1, 2023 (presumably

[12] As I explained in my direct testimony, a scaleback of the Company's proposed rate increase has little impact on the relative intra-class cost impact of harmonization. Much of the Company's proposed increase to the North district rates is related to catching up with the current rates for the other customers in the class, and that part of the increase is not reduced with a lower overall revenue requirement.

[13] As I explained to the Company, the circumstances in the Columbia proceeding were decidedly different from those in the current case. See UGI-OBA-I-1

with offsetting reductions to rates for the other customers within each class), which would result in harmonized rates.[14]

Q. Please respond to Witness Epler's rebuttal.

A. Sadly, Witness Epler begins by blaming the victim. It is not the fault of North district customers that UGI Gas operates its gas system at a cost of service well in excess of that of the former owner, and it is not the fault of North district customers that UGI Gas continues to require an above system average rate of return from both N/NT and DS customers, which exacerbates the problem.

Second, Witness Epler refers to the lower rates from North district customers as an intra-class cross-subsidy. There is zero evidence for this statement. A cross-subsidy represents the difference between rate revenues and costs. UGI Gas offers no cost evidence in support of its position, because it no longer tracks costs by operating area. Thus, no party has any knowledge of the cost of providing service to North district customers relative to providing service to other customers. I acknowledge, of course, that the use of postage stamp rates across utilities is a common regulatory approach for utility tariffs. However, the use of postage stamp rates does not imply that intra-class geographic cross-subsidies do not exist, and the Company is wrong to claim that they exist without evidence.

Third, while I acknowledge that I have recommended an increase up to 2.0 times the system average in other Pennsylvania proceedings, based on my evaluation of the specific circumstances for those proceedings. The circumstances surrounding North district customers in this proceeding are wholly different from the proceeding referenced by Witness Epler.[15] Moreover, Witness Epler does not offer any example in Pennsylvania where a specific rate class or sub-class is singled out for a very large rate increase in a base

[14] It is unclear why the Company feels the need for a separate rate adjustment for Rate DS customers on October 1, 2023. In this proceeding, the Company argues that its rate case costs should be amortized over a single year, since it expects to file another rate case in a year. UGI Gas Statement No. 2-R at 8-11.

[15] See UGI Gas-OSBA-I-1, attached in Exhibit RDK-S2.

rate case, followed by an extraordinary supplementary increase outside of a base rate proceeding.

Finally, Witness Epler's rebuttal shows that the Company's standard for rate gradualism is different for small businesses than it is for residential customers. In this proceeding, the R/RT class exhibits a rate of return well below system average under every CSAS filed in this proceeding, and yet the Company's rebuttal testimony proposes an increase of only 1.43 times the system average for that class.[16] Moreover, the Company does not propose to impose another increase on R/RT customers on October 1, 2023 to make further progress toward cost based rates that it fails to achieve in this proceeding. In contrast, for some unlucky non-residential customers, the Company insists on a 2.0 times system average increase in this proceeding, followed by another increase on October 1, 2023.

Adopting the Company's proposal in this respect would be a clear indication that different regulatory standards apply to residential and non-residential customers. In contrast, my proposal relies on applying the same standard for rate gradualism to both residential and non-residential customers. I recommend against adopting the Company's proposals for mandatory rate harmonization on basic fairness grounds, namely that residential and non-residential customers should be treated comparably.

5. <u>Weather Normalization</u>

Q. In rebuttal testimony, Witness Taylor indicates that under the Company's proposed weather normalization adjustment ("WNA") mechanism, customers bills will be more stable and that rates will not vary from month to month. Do you agree?

A. I agree that the WNA will likely reduce the impact of weather fluctuations on the dollar cost of a customer's monthly gas distribution bill. I disagree that the rates per unit of gas consumed will not vary from month to month.[17] While Witness Taylor does not directly state as much, the witness presumably argues that the WNA adjusts volumes rather than rates. This is sophistry. Actual metered volumes are actual metered volumes. If a

---

[16] I recognize, of course, that Witness Epler *says* that the maximum increase for the R/RT class should be 2.0 times system average. I caution the Commission to follow the old saw and "watch what they do, not what they say."

[17] See OSBA-I-2, attached in Exhibit RDK-S2.

customer has metered volumes of 50 mcf in January and 50 mcf in February, the customer will pay the same distribution bill in both months under current rates, but will almost certainly pay a different distribution bill under the WNA. I expect that customer will recognize that the rates have changed, even if Witness Taylor sees it otherwise.

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does.

UGI Utilities, Inc. – Gas Division ("UGI Gas" or "the Company")
Base Rates Case, FPFTY Ending September 30, 2023
Docket No. R-2021-3030218
Responses to UGI-OSBA Set I

UGI-OSBA-I-1

Reference OSBA Statement No. 1, pages 15, 20-21. In any base rate cases over the past 10 years, has Mr. Knecht ever supported setting a customer class's increase to more than 1.5 times the system average increase? If so, please identify each such base rate case and provide copies of Mr. Knecht's testimony in each such base rate case.

Response:

I did not review my base rates cases for the past ten years in preparing my direct testimony in this proceeding, and undertaking such a review would be unduly costly and time-consuming. Nevertheless, I have indeed recommended in testimony that the regulator set the rate increase for a class at more than 1.5 times the system average. A recent example is at Pennsylvania Public Utility Commission Docket No. R-2021-3024296, a base rates proceeding for Columbia Gas of Pennsylvania, Inc. A copy of my direct testimony in that proceeding is included as Attachment UGI-OSBA-I-1.

In evaluating the limits for rate gradualism, I consider a variety of factors relevant to each case, including (but not necessarily limited to) the magnitude of the system increase, the relative cost performance of each class, the overall bill impact for the class, the history of relative class rate increases, and the relevant economic environment for each rate class.

UGI-OSBA-I-2

Reference OSBA Statement No. 1, page 25. Mr. Knecht states that "I am advised by counsel that OSBA intends to contest this proposal as not just and reasonable on the grounds that the substantial risk reduction benefits to the Company and the rate instability implications for customers associated with this mechanism are not reasonably reflected in the allowed return on capital claim in this proceeding."

a) Does Mr. Knecht agree with UGI Gas witness Moul that his cost of equity analysis accounts for the Company's Weather Normalization Adjustment ("WNA") mechanism? If not, please explain in detail why.

b) Does Mr. Knecht agree with UGI Gas witness Moul that each of his Gas Group members has some form of a WNA mechanism? If not, please explain in detail why.

c) Please explain in detail what Mr. Knecht means by "rate instability implications for customers associated with this mechanism."

d) Please produce all non-privileged Documents relied upon by Mr. Knecht in making this statement and in responding to subparts (a) through (c) of this interrogatory.

Responses:

a) I respectfully disagree with Mr. Moul. Outside the cloistered world of utility rate of return analysts, independent financial experts deem the U.S. equity risk premium above the ten-year Treasury yield to be in the 5.0 to 5.5 percent range for the average risk company.[1] (See, e.g., Damodaran at https://pages.stern.nyu.edu/~adamodar/ and https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4066060 , Kroll at

[1] In a welcome development in this proceeding, OCA witness David J. Garrett (OCA Statement No. 2) recognizes that allowed utility equity returns have become divorced from reality.

https://www.kroll.com/en/insights/publications/cost-of-capital/recommended-us-equity-risk-premium-and-corresponding-risk-free-rates .) Even with 10-Year T-Bonds now yielding a little under 3.0 percent, the cost of equity capital for the average risk US firm is in the 8.0 to 8.5 percent range.

Natural gas distribution utilities, of course, are below-average risk investments, measured either by systematic risk (beta) or all return variability (standard deviation). Thus, the cost of equity capital for a natural gas distribution utility should have an equity risk premium materially below the 5.0 to 5.5 percent range, and a full return materially below the 8.0 to 8.5 percent range.

In my direct testimony at Docket No. R-2020-3018929 (Attachment UGI-OSBA-2a), I demonstrated that, twenty-five to thirty years ago, the equity risk premium in utility RoE awards was in the 4.0 to 5.0 percent range. Since that time, adoption of various regulatory initiatives have served to reduce the risk of utility investments, including (i) restructuring of many electric and gas utilities (reducing fuel price and generation risk), (ii) fuel-adjustment clauses, such as Pennsylvania's PGC, (iii) automatic capital passthrough mechanisms, such as Pennsylvania's DSIC, (iv) weather normalization mechanisms (reducing utility weather risk), and (v) rate decoupling mechanisms (which shift virtually all volume risk to ratepayers). Despite this trend of risk reduction, utility regulators have allowed the implied equity risk premium in RoE awards to rise to 7.0 to 8.0 percent, far above that of average risk US corporations. While the reasons for this trend cannot be known with certainty, I hypothesized in Attachment UGI-OSBA-2a that this trend reflects (a) higher utility spending in regulatory proceedings, (b) excessive regulatory reliance on DCF methods for deriving RoE (with the circular reliance on analysts' growth estimates combined with the bizarre assumption that natural gas distribution companies will experience dividend growth rates that exceed GDP growth rates forever) and regulatory capture (wherein regulators and governments see utilities as partners in achieving social aims through ratepayer-subsidized programs such as low-income assistance and energy conservation measures, and they reward the utilities with excessive returns).

As Mr. Moul recommends that the allowed RoE be set at 11.20 percent, which has an implied equity risk premium that exceeds 8.2 percent, I conclude that Mr. Moul has not reflected the risk reduction impacts of the adoption of weather normalization and rate decoupling mechanisms, but in fact has increased the implied risk premium above historical norms.

b) I have not reviewed the rate structures of the firms included in Mr. Moul's Gas Group.

c) With a "real time" weather normalization mechanism and no deadband as proposed by UGI Gas, the volumetric rate paid by Rate R/RT and N/NT customers for delivered gas will necessarily vary from month to month. In the current rate mechanism, the base rates volumetric charge is constant from month-to-month, save for the effects of the DSIC.

d) The specific documents that I relied upon in responding to this interrogatory are attached to the responses or referenced with URLs. My responses also rely on my academic training in economics and finance, as well as my experience in utility rate proceedings in the past thirty years.

DIRECT TESTIMONY OF

CHRISTOPHER REYES

ON BEHALF OF NRG ENERGY, INC.

(***PROPRIETARY VERSION***)

TOPICS:

Standards of Conduct
Auburn Gathering System
Operational Issues
Weighted Average Cost of Delivered Gas

APRIL 20, 2022

Table of Contents

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, TITLE AND BUSINESS ADDRESS.

A. My name is Christopher Reyes and I am Sr. Manager, Regional Operations (NY Metro, North East & Mid-Atlantic) for NRG Energy, Inc. ("NRG"). My business address is 194 Wood Avenue S., Iselin, New Jersey 08830.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE AND EDUCATIONAL BACKGROUND.

A. I have worked in the Oil & Gas industry in positions of increasing responsibility since 1995. Immediately prior to my current position that I have been in since January 5, 2021 when NRG completed the acquisition of Direct Energy from Centrica plc, I held the same title and fulfilled the same responsibilities with Direct Energy dating back to June 2017. Before that, I was Sr. Natural Gas Trader for Direct Energy from January 2014 until June 2017. My prior employer, before I joined Direct Energy, was Hess Corporation where I worked for over 18 years in various positions, including Sr. Natural Gas Trader, Natural Gas Trader and Sr. Wholesale Natural Gas Scheduler. I received a Master of Business Administration from Webster University in Finance in 2001 and a Master of Arts, Business and Organizational Security Management, from Webster University in 2003.

Q. WHAT ARE YOUR KEY RESPONSIBILITIES IN YOUR CURRENT POSITION?

A. In my current role, I am responsible for managing both the Retail Natural Gas Pricing and Scheduling Teams.

Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION?

A. No.

Q. ON WHOSE BEHALF IS THIS DIRECT TESTIMONY OFFERED?

This Direct Testimony is offered on behalf of NRG. As natural gas suppliers ("NGSs") licensed by the Pennsylvania Public Utility Commission ("Commission"), NRG's subsidiaries supply natural gas services to retail consumers in the Company's service territory.[1]

Q. PLEASE DESCRIBE NRG.

NRG is a leading integrated power company built on dynamic retail brands and diverse generation assets and home services company powered by its customer-focused strategy, strong balance sheet, and comprehensive sustainability framework. A Fortune 500 company, NRG brings the power of energy to millions of North American customers. Our family of brands help people, organizations and businesses achieve their goals by leveraging decades of market expertise to deliver tailored solutions. Working in concert, its dynamic multi-brand retail strategy coupled with supply risk-management forms a uniquely positioned, integrated competitive energy provider. Its retail brands serve more than six million customers across North America, including a significant share in Pennsylvania — so significant, in fact, that NRG's northeast retail business is headquartered in Philadelphia. NRG's subsidiaries include several NGSs that are actively serving residential, commercial, industrial and institutional customers in the Companies' service territories and throughout Pennsylvania.

[1] As NGSs in Pennsylvania, NRG subsidiaries hold licenses as follows: Independence Energy Group d/b/a Cirro Energy: A-2013-2396449; Reliant Energy Northeast LLC d/b/a NRG Home, NRG Business, NRG Retail Solutions: A-2015-2478293; Green Mountain Energy Company: A-2017-2583732; XOOM Energy Pennsylvania, LLC: A-2012-2283967; Stream Energy Pennsylvania, LLC: A-2012-2308991; Direct Energy Services, LLC: A-125135; Direct Energy Business, LLC: A-125072; Direct Energy Business Marketing, LLC: A-2013-2365792; Gateway Energy Services Corporation: A-2009-2138725.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my Direct Testimony is to offer NRG's perspectives on specific aspects of Supplement No. 32 to UGI Tariff Gas – Pa. P.U.C. Nos. 7 and 7S filed by UGI Utilities, Inc. – Gas Division ("UGI" or "Company") on January 28, 2022, and to describe concerns regarding the Company's overall natural gas operations, particularly as they affect the retail natural gas market. Specifically, my Direct Testimony addresses the following issues: (1) Commission's Standards of Conduct; (2) Auburn Gathering System; (3) Operational Issues; and (4) Weighted Average Cost of Delivered Gas.

Q. DO YOU HAVE SPECIFIC RECOMMENDATIONS IN EACH OF THESE AREAS?

A. Yes. My recommendations can be summarized as proposing that the Commission:

- Take various measures designed to ensure UGI's compliance with the Standards of Conduct, including scrutiny of internal information by the Bureau of Technical Utility Services, the Bureau of Audits and the Office of Competitive Market Oversight;
- Require UGI to provide information to NGSs that outlines the full capabilities of its delivery system, including the ability to move gas between regional pools;
- Direct UGI to implement automated programming for notification of utility cuts to nominations over weekends or implement weekend staffing that would offer the same level of service that is provided on weekdays; and
- Mandate specific changes to UGI's handling of Weighted Average Cost of Delivery gas rates to improve NRG's ability to accurately estimate costs in setting natural gas prices for its supply customers.

Q. ARE YOU SPONSORING ANY EXHIBITS?

Yes. Below is a table of the exhibits I am sponsoring. All are attached to my Direct Testimony.

NRG Exhibit CR-1	UGI's Response to NRG-I-1

II. STANDARDS OF CONDUCT

Q. PLEASE DECRIBE THE STANDARDS OF CONDUCT.

A. The Commission has Standards of Conduct that are applicable to natural gas distribution companies ("NGDCs") and NGSs at 52 Pa. Code § 62.142, which contain several key provisions that:

- Prohibit the sharing of NGDC employees who have responsibility for operating the distribution system, including natural gas delivery or billing or metering, as well as those responsible for marketing and customer service, with an affiliated NGS;[2]
- Require an NGDC to reasonably allocate to its affiliated NGS the costs or expenses for general administration or support services provided to its affiliated NGS;[3]
- Obligate an NGDC and its affiliated NGS to maintain separate books and records, and require an NGDC to avoid cross-subsidies, to fully allocate shared facilities between the NGDC function and the affiliated function, and to maintain its accounts and records so that the costs incurred on behalf of an affiliated NGS are clearly identified;[4]
- Prohibit an NGDC from applying a tariff provision in a manner that would give its affiliated NGS preference over other NGSs with regard to matters such as scheduling, balancing, transportation, storage, curtailment, capacity release and assignment, non-delivery and other services provided to its affiliated NGS.[5]

Q. WHAT IS THE SIGNIFICANCE OF THE COMMISSION'S STANDARDS OF CONDUCT?

A. The significance of the Commission's Standards of Conduct is that UGI's affiliated NGS, UGI Energy Services, LLC ("UGI-ES"), is operating in the retail market as a licensed NGS.[6] To my knowledge, no other Pennsylvania NGDC has an affiliated NGS. As a

---

[2] 52 Pa. Code § 62.142(a)(13).

[3] 52 Pa. Code § 62.142(a)(9).

[4] 52 Pa. Code § 62.142(a)(12).

[5] 52 Pa. Code § 62.142(a)(2).

[6] NRG Exhibit CR-1 (UGI's Response to NRG-I-1).

licensed NGS, UGI-ES is competing against NRG and other nonaffiliated NGSs in supplying natural gas services to retail customers in UGI's service territory. To the extent that UGI is not vigilant about strict adherence to the Standards of Conduct, UGI-ES could have an unfair advantage over nonaffiliated NGSs, which prevents the robust functioning of the competitive retail market. In initiating the proposed rulemaking that led to adoption of the Standards of Conduct, the Commission emphasized the need to "ensure that consumers of natural gas will be able to shop for gas that is marketed on a level playing field for all market participants."[7]

A. <u>Sharing of Employees</u>

Q. DO YOU HAVE ANY CONCERNS ABOUT UGI'S COMPLIANCE WITH THE STANDARDS OF CONDUCT ADDRESSING THE SHARING OF EMPLOYEES?

A. Yes. I have personally observed employees migrating back and forth between UGI and UGI-ES, which shows that they are being shared by both entities. One day an employee might be the director of an operations team for UGI and the next day the same employee is a director in UGI-ES. When an employee serves as director for major accounts at UGI and then migrates to UGI-ES as director of sales and marketing, the potential exists for the intelligence to be transferred such that UGI-ES is aware of the products being offered by its competitors. It is also not clear if or how their salaries are allocated between UGI and UGI-ES.

Q. WHAT DO YOU RECOMMEND AS A SOLUTION?

A. I recommend that the Commission direct UGI to provide a full accounting to the Bureau of Technical Utility Services ("TUS"), within 60 days after the issuance of a final order

---

7 *Permanent Standards of Conduct Pursuant to 66 Pa.C.S. §2209(b)*, Docket No. L-00030162 (Proposed Rulemaking Order entered September 23, 2003, at 1).

in this proceeding, of all employees, along with their titles and job descriptions, who migrate back and forth between UGI and UGI-ES, along with documentation of how their salaries are allocated. I am not referring to employees who legitimately transfer from one entity to the other, provided the transfer is not for the purpose of avoiding a violation of the provision in the Standards of Conduct. Rather, I am referring to employees in director level or high management level positions who are shared by both UGI and UGI-ES. Given the importance of the prohibition in the Standards of Conduct against sharing of certain employees between UGI and UGI-ES, and the responsibility the Commission has to oversee the proper functioning of the retail natural gas market, I believe that the affiliate relationship between these entities warrants scrutiny by TUS and any further action as may be necessary.

B. <u>Reasonable Allocation of Costs for General Administration or Support Services</u>

Q. DO YOU HAVE ANY CONCERNS ABOUT UGI'S COMPLIANCE WITH THE PROVISION REQUIRING UGI TO REASONABLY ALLOCATE TO UGI-ES THE COSTS OR EXPENSES FOR GENERAL ADMINISTRATION OR SUPPORT SERVICES PROVIDED TO UGI-ES?

A. Yes. In response to a discovery request, UGI explained that it maintains a Cost Allocation Manual ("CAM") that discusses the methods used to allocate or direct charge for services between UGI-ES and the Company. UGI also attached its confidential CAM.[8]

Q. DOES THE CAM SATISFY YOUR CONCERN?

A. Not really. Provided that UGI is strictly following its CAM, it appears that costs for general administration or support services are probably being fairly allocated to UGI-ES. However, I note that NRG's discovery request asked for supporting documentation that

[8] **Confidential** NRG Exhibit CR-2 (UGI's **Confidential** Response to NRG-I-4).

shows compliance with the provision in the Standards of Conduct, which was not furnished. Since this involves an internal allocation process, I do not have access to information that demonstrates compliance. Yet, the proper allocation is critical to the healthy functioning of the competitive market due to the importance of UGI fully allocating the costs to UGI-ES that it incurs to provide general administration or support services.

Q. WHAT DO YOU RECOMMEND?

A. To the extent that the Commission is not already including this issue as part of its periodic audits of UGI, I recommend that it direct the Bureau of Audits to examine UGI's compliance with the CAM in allocating costs to its affiliate NGS. Without such review, it is not possible to verify that the allocations are being fairly handled. If UGI is not properly allocating costs to UGI-ES, nonaffiliated NGSs in the market are competing against a UGI-ES product that does not reflect all of the costs that are incurred to offer it to consumers, which again gives the NGS affiliate a competitive edge over those NGSs that are not affiliated with UGI. Such an advantage runs contrary to the way in which a truly competitive market should operate.

C. Separate Books and Records

Q. WHAT DOES UGI DO TO COMPLY WITH THE REQUIREMENT FOR SEPARATE BOOKS AND RECORDS AND THE AVOIDANCE OF CROSS SUBSIDIES?

A. In response to a discovery request, UGI provided its confidential training materials that simply set forth these requirements, without any details or explanations as to how actual compliance is achieved.[9]

---

[9] **Confidential** NRG Exhibit CR-3 (UGI's **Confidential** Response to NRG-I-2).

Q. HOW DO YOU RESPOND?

A. Although the materials advise employees of these requirements in the Commission's Standards of Conduct, UGI has not indicated how frequently the training materials are provided to employees. Further, UGI has not explained whether it audits the practices of employees to ensure that all of these requirements are followed. Having subsidiaries in the retail gas market competing against UGI-ES, NRG believes that additional steps are necessary to consider whether any existing practices are resulting in UGI giving UGI-ES an unfair competitive advantage.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that in tandem with the audit I have suggested to examine the proper allocation of costs by UGI to UGI-ES, the Commission also direct the Bureau of Audits to review UGI's books and records to confirm that they are maintained separately from UGI-ES, that shared facilities between the UGI and UGI-ES functions are fully allocated and that UGI maintains its accounts and records so that the costs incurred on behalf of UGI-ES are clearly identified. Again, the importance of performing this review is to ensure that UGI is not giving UGI-ES a competitive edge over nonaffiliated NGSs.

D. <u>No Preference in Provision of Services</u>

Q. DO YOU HAVE CONCERNS ABOUT UGI'S COMPLIANCE WITH THE PROHIBITION AGAINST GIVING UGI-ES PREFERENCE OVER OTHER NGSS IN THE PROVISION OF SERVICES?

A. Yes. In a discovery request, NRG asked how UGI ensures compliance with the provision that prohibits an NGDC from giving its affiliated NGS preference over other NGSs with regard to matters such as scheduling, balancing, transportation, storage, curtailment, capacity release and assignment, non-delivery and other services provided to its affiliated NGS. In response, the Company provided confidential training materials.[10]

Q. PLEASE RESPOND.

A. Although the materials advise employees of this provision in the Commission's Standards of Conduct, UGI has not indicated how frequently the training materials are provided to employees. UGI has further not explained whether it audits the practices of employees to ensure that all of these requirements are followed. Having subsidiaries in the retail gas market competing against UGI-ES, NRG believes that additional steps are necessary to consider whether any existing practices are resulting in UGI giving UGI-ES an unfair competitive advantage.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that the Commission direct that UGI periodically conduct an internal audit that is designed to review compliance with this provision of the Standards of Conduct and report to the Office of Competitive Market Oversight ("OCMO") on a quarterly basis all measures it has taken and how it has handled any departures from the requirements that it may uncover during an internal audit. It is my understanding that OCMO was created to oversee competition in the retail natural gas supply market, so as to promote the development of the competitive retail market and address obstacles faced by NGSs participating in this market.[11] Therefore, ensuring that UGI is taking the necessary steps to comply with rules that prohibit the showing of a preference to an NGS affiliate appears to fall squarely under that mission.

---

[10] **Confidential** NRG Exhibit CR-3 (UGI's **Confidential** Response to NRG-I-2).

[11] https://www.puc.pa.gov/natural-gas/committees-working-groups/natural-gas-office-of-competitive-market-oversight-ocmo/

III. AUBURN GATHERING SYSTEM

Q. PLEASE DECRIBE UGI'S DIRECT TESTIMONY CONCERNING A NEW CAPACITY LEASE AGREEMENT.

A. UGI Witness Brown references a new Capacity Lease Agreement, which allows the Company direct access to natural gas supplies for delivery from the Tennessee Gas Pipeline through the UGI Gas Auburn Gate Station into the Auburn Gathering System, which is owned by UGI-ES.[12]

Q. DO YOU HAVE ANY CONCERNS ABOUT THIS NEW CAPACITY LEASE AGREEMENT?

A. Based on UGI's discovery response regarding the purpose of this new Capacity Lease Agreement, which was to provide a conduit for an additional source of natural gas supply into an area of the Company's natural gas service territory that is exclusively served by the UGI-ES Auburn Gathering System, as a least cost approach to other options,[13] I do not have a particular concern with this agreement. However, I do have concerns about UGI-ES undertaking risk-free projects to acquire assets and then selling them to UGI, with the rate base bearing the burden. This concern is based on the fact that several of UGI's recent supply expansion activities, including the Auburn Gathering System, have been met by UGI-ES.

Q. DO YOU HAVE ANY CONCERNS ABOUT THE TRANSPARENCY OF UGI'S DELIVERY SYSTEM?

A. Yes. During past Interstate Open Seasons, when available interstate pipeline capacity is being bid, I am aware of instances where the capability to move gas between regional pools on UGI's delivery system was known only to UGI and UGI-ES. For example, the

[12] UGI Statement No. 1 at 25-26.

[13] NRG Exhibit CR-1 (UGI's Response to NRG-I-1).

Sunberry Capacity had been granted access to the UGI south pool via a spur on UGI central that was never available or disclosed to the system marketers and was only discovered during offline settlement discussions during the 2019 UGI rate case after UGI-ES had subscribed to the capacity. Had the information been public, there would have been a more robust interest in the open season by competitors of UGI-ES.

Q. HOW WOULD UGI-ES KNOWN OF THE CAPABILITY OF UGI'S DELIVERY SYSTEM?

A. Due to the sharing of employees between the two entities and the inevitable transfer of knowledge.

Q. WHAT DO YOU RECOMMEND?

A. The Commission should direct UGI to provide information to NGSs that outlines the full capabilities of its delivery system when it receives gas from the interstate pipelines. These capabilities include how UGI is able to move gas between regional pools so as to ensure that NGSs are granted the same access and have the same understanding that UGI-ES is afforded.

IV. <u>OPERATIONAL ISSUES</u>

Q. DO YOU HAVE ANY CONCERNS REGARDING OPERATIONAL ISSUES THAT ARE AFFECTING NRG'S PARTICIPATION IN THE RETAIL MARKET?

A. Yes. NRG is experiencing an ongoing operational issue regarding the lack of timely notifications of utility cuts, which occur when a nomination made by an NGS needs to be corrected, over the weekend. A nomination is the action taken by an NGS to communicate and confirm that a particular amount of gas is to be delivered or received at the gas delivery point and/or the alternative gas delivery point(s) and providing all information that may be necessary to cause such delivery or receipt to occur. Through the nomination, the NGS is providing a pre gas day notification of intended gas consumption by its customers for a gas day and must follow the NGDC's gas nomination procedures established by tariff.

Q. WHY WOULD NOMINATIONS NEED TO BE CORRECTED?

A. For a variety of reasons. This process involves a robust third-party market, with entities making changes and information constantly changing outside the control and/or knowledge of NGSs. For instance, an interstate pipeline may experience constraints or operational issues. Or a transposition error could have occurred in identifying the contract.

Q. WHAT NORMALLY HAPPENS WHEN A CORRECTION IS NEEDED?

A. When the utility discovers an error during the confirmation cycle and does a cut on a weekday, the NGS is able to correct the nomination and avoid penalties imposed by NGDCs and the pipelines. However, on weekends, an NGS does not receive notice of the utility cut from UGI and has no ability to promptly correct the nomination. The effect of this is that the best NRG can hope to do is convince the pipelines and UGI to allow the submission of a retroactive nomination, which they have no obligation to do. This may subject NRG to penalties, which would be exacerbated if the utility cut occurs when an operational flow order or operational matching order is in effect due to the steeper penalties that are imposed. Particularly given the fact that UGI has an affiliated NGS operating in the competitive market, the risk of penalties needs to be solved since the imposition of penalties on NRG would benefit its competitor, UGI-ES.

Q. HOW DO YOU RECOMMEND UGI ADDRESS THIS ISSUE?

A. I recommend that UGI be directed to implement automated programming for these notifications or implement weekend staffing that would offer the same level of service as is provided on weekdays. Most utilities use automatic notifications so that an NGS has an opportunity to timely correct the nomination and avoid the imposition of penalties. In discovery, NRG asked UGI whether it has considered the use of automatic notifications of utility cuts over the weekend. UGI responded that it was not aware of ongoing operational issues concerning a lack of notifications with regard to utility supply cuts during weekend periods. Therefore, the Company has not considered implementing automated programming for these notifications but welcomes additional communications which would help UGI understand the frequency and impact of the alleged concerns.[14]

Q. PLEASE RESPOND.

A. During a supplier collaborative in 2021, this issue was raised with UGI. An email from UGI dated July 30, 2021 demonstrates that NRG brought the issue to UGI's attention, asking to see utility cuts in real time.[15] Automating the process was the precise request made at that time. If UGI continues to be unable to automate the process, as I note above, it should be able to provide weekend staffing to ensure that NGSs receive prompt notifications about utility cuts during the confirmation cycle of the nomination process.

V. WEIGHTED AVERAGE COST OF DELIVERED GAS

Q. PLEASE DESCRIBE THE ISSUE WITH THE WEIGHTED AVERAGE COST OF DELIVERED GAS.

A. UGI uses weighted average cost of delivered ("WACOD") gas for recovery of charges for released capacity and provides monthly information on its Electronic Bulletin Board ("EBB") to show the WACOD gas rates as reflecting interstate pipeline rate changes approved by the Federal Energy Regulatory Commission. However, this information

---

[14] NRG Exhibit CR-4 (UGI's Response to NRG-I-9).

[15] NRG Exhibit CR-5 (UGI's Email dated July 30, 2021).

does not show the projected total dollar impact of each specific pipeline rate case on the WACOD gas rate each month. This is a problem because the individual impact of a rate case affects the natural gas prices that NRG is charging customers. I took the screenshot below from UGI's EBB. The portion in highlighting shows what is provided and notes only which rate cases are included. However, it does not tell us what the estimated maximum rate impact is, which would give us the ability to isolate the individual impacts of a specific rate case. For instance, following the line that indicates that the WACOD rate change "Includes TETCO Base Rate at Docket RP21-1188 for April 2022," NRG is looking for the addition of "with an estimated maximum rate impact of $0.XX." I am not asking UGI to undertake any forecasting that it is not already doing, but rather to include the forecasts they have made to show the impact of the individual rate cases over a 12-month period following implementation.

UGI Utilities, Inc. Choice Projected WACOD Rates ($/dth/month)

Mar-22	Apr-22	May-22	Jun-22	Jul-22	Aug-22	Sep-22	Oct-22	Nov-22	Dec-22	Jan-23	Feb-23
$26.6383	$8.5469	$8.5961	$8.5386	$8.5897	$8.5897	$8.5358	$9.1249	$23.8220	$25.2212	$25.2217	$25.0390

Updated February 22, 2022

WACOD Rate Changes
Includes TETCO Base Rate Case at Docket RP21-1188 for April 2022
Includes EGTS Base Rate Case at Docket RP21-1187 for April 2022
Includes TETCO Base Rate Case at Docket RP21-1001 for March 2022
Includes adjustment due to Docket RP21-1001 not included February 2022 calculations

UGI Utilities, Inc. Choice Projected Capacity Release Rates

The Company will assess the WACOD for an NGSs Peak Day Delivery Requirement ("PDDR") via a capcity release.

Example	Mar-22
NGS PDDR (dth)	100
WACOD	$26.6383
Total Cost	$2,663.83

Pipeline Released	Annual Firm Transportation Allocation	Capacity Release Quantity (dth/day)	Capacity Release Term	Capacity Release Rate ($/dth/month)	Total Capacity Release Costs
Texas Eastern	14.2%	14	Monthly	$ 176.1651	$ 2,466.31
Transco	4.5%	5	Annual	$ 15.5035	$ 77.52
Columbia	5.1%	5	Annual	$ 15.0000	$ 75.00
Tennessee	3.2%	3	Annual	$ 15.0000	$ 45.00
Total	27.0%	27	Annual	$ 26.6383	$ 2,663.83

Q. WHAT DO YOU RECOMMEND?

A. The simple solution is for UGI to show this more detailed information on its EBB. The Company is already providing WACOD gas rates on a monthly basis. In a discovery response, UGI indicated that its WACOD calculation process utilizes only effective pipeline rates and does not support rate segmentation as described.[16]

Q. HOW DO YOU RESPOND?

A. While UGI's WACOD calculation process may not support the rate segmentation as described, it is my understanding that the information about the effect of pipeline rate changes is available and can be provided either on the EBB or through an alternate means. For example, UGI could provide suppliers with information via electronic mail of the impact of each rate case on the WACOD calculation. NRG should not be required to request this information each month. Rather, UGI should automatically furnish it, through whatever means the Company determines is the most efficient. Below is a screen shot showing what UGI has posted in the format that we are requesting, along with a 12-month of forward impact from the implementation of a rate change.

UGI Utilities, Inc. Choice Projected WACOD Rates ($/dth/month)

	Sep-20	Oct-20	Nov-20	Dec-20	Jan-21	Feb-21	Mar-21	Apr-21	May-21	Jun-21	Jul-21	Aug-21
	$4.3366	$6.5519	$21.8503	$25.6154	$22.1369	$21.6328	$21.6632	$7.5642	$7.6053	$7.4707	$7.5202	$7.5200
WACOD Increase/(Decrease) related to TCO Rate Case:	$0.0000	$0.0000	$0.0000	$0.0000	$0.0000	$1.5700	$1.5700	$1.2400	$1.2400	$1.2400	$1.2400	$1.2400

Updated August 13, 2020

WACOD Rate Changes

WACOD includes impact of proposed rate increases to be effective Feb 2021, for services provided by Columbia Gas Transmission, based on Columbia's proposed rates at Docket RP20-1060-000.
Does not include the rate increase impact of Columbia's Preferred Case at Docket No. RP20-1060-000.

UGI Utilities, Inc. Choice Projected Capacity Release Rates

The Company will assess the WACOD for an NGSs Peak Day Delivery Requirement ("PDDR") via a capcity release.

Example	Sep-20
NGS PDDR (dth)	130
WACOD	$4.3366
Total Cost	$563.76

Pipeline Released	Annual Firm Transportation Allocation	Capacity Release Quantity (dth/day)	Capacity Release Term	Capacity Release Rate ($/dth/month)	Total Capacity Release Costs
Texas Eastern	11.2%	11	Monthly	$ 12.4327	$ 136.76
Transco	4.3%	4	Annual	$ 31.0000	$ 124.00
Columbia	7.0%	7	Annual	$ 30.0000	$ 210.00
Tennessee	2.8%	3	Annual	$ 31.0000	$ 93.00
Total	25.3%	25	Annual	$ 5.6376	$ 563.76

16 NRG Exhibit 6 (UGI's Response to NRG-I-10).

Q. DO YOU HAVE ANY OTHER CONCERNS ABOUT WACOD RATES?

A. Yes. This month, UGI placed a notice on its EBB regarding an adjustment for Economic Benefit of Peaking Service ("EBPS"). The purpose of the adjustment is to credit the economic benefit realized from the use of the peaking assets due to an error that the Company made in implementing a change to the peaking service contract cost allocations as a result of the Settlement of the 2019 UGI Rate Case at Docket No. R-2018-3006814. UGI also posted a notice of an adjustment to the Rate LFC WACOD capacity release rates that have not properly reflected the portion of a customer's daily firm requirement allocated to delivered supply.[17] The result of this adjustment is an increase to the LFD and DS WACOD rates due to UGI's under recovery of peaking charges from the prior 2 years .

Q. WHAT IS YOUR CONCERN ABOUT THESE NOTICES?

A. The issue that I have is that both the EBPS and the LFD gross up should be removed from the LFD WACOD rates. These credits/charges are currently included on the NGS's invoice. When both costs and credits are handled in the WACOD rates, the amounts are artificially high or low and as the costs or credits roll off, the rates can change dramatically especially when the utility is only posting a 12-month rate schedule.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that the EBPS and LFD gross up be handled similar to the DS rate, which UGI bills directly to customer. NRG should not be in a position of explaining UGI errors to its supply customers or be required to decide how to allocate credits/costs resulting from UGI adjustments, particularly when some of the affected customers were not being

[17] Exhibit NRG Exhibit CR-7 (April 2022 Notices Posted on EBB).

served by NRG when the charges were initially included on bills. In addition, similar to the issue described above about needing to know the impact of individual rate NRG needs to see any non-recurring costs or credits that are in the WACOD rate line itemed so that we can estimate the forward costs accurately.

Q. DOES THAT COMPLETE YOUR DIRECT TESTIMONY?

A. Yes; however, I reserve the right to supplement this testimony as may be appropriate.

Verification

I, Christopher Reyes, state that I am Sr. Manager, Regional Operations (NY Metro, North East & Mid-Atlantic) for NRG Energy, Inc. ("NRG") and providing the foregoing Direct Testimony of NRG. I hereby state that the facts contained in the foregoing Direct Testimony are true and correct to the best of my knowledge, information and belief. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904, relating to unsworn falsification to authorities.

April 20, 2022

NRG Exhibit CR-1

UGI Utilities, Inc. - Gas Division
Docket No. R-2021-3030218
UGI Gas 2022 Base Rate Case
Responses to NRG Set I (1 thru 10)
Delivered on April 11, 2022

NRG-I-1

Request:

Reference Direct Testimony of Christopher R. Brown, pages 25-26. Mr. Brown references a new Capacity Lease Agreement allowing the Company direct access to natural gas supplies for delivery from the Tennessee Gas Pipeline through the UGI Gas Auburn Gate Station, into the Auburn Gather system, a natural gas gathering system located in northeast Pennsylvania, owned by UGI Energy Services, LLC ("UGI-ES"), an affiliate of the Company,

A. Please confirm that UGI-ES is a natural gas supplier ("NGSs") licensed by the Commission to provide retail gas supply services to customers throughout the Commonwealth of Pennsylvania, including in the Company's service territory. If you do not confirm, please explain.

B. Please explain the rationale underlying the new Capacity Lease Agreement. In responding, please indicate whether this approach was the least cost option on available capacity or whether the goal was to remove under-utilized assets from the UGI-ES books.

Response:

A. UGI-ES is a natural gas supplier licensed by the PA PUC.

B. The purpose of the Capacity Lease Agreement was to provide a conduit for an additional source of natural gas supply (Tennessee Gas Pipeline Company) into an area of the Company's natural gas service territory that is exclusively served by the UGI-ES Auburn gathering system that is currently supplied exclusively by local natural gas production wells. Use of the existing UGI-ES gathering system offered the least cost approach as other options would have required greenfield construction of a parallel nature that would have been much more expensive.

Prepared by or under the supervision of: Christopher R. Brown

NRG Exhibit CR-2

NRG-I-4

Request:

Please describe how the Company reasonably allocates to UGI-ES the costs or expenses for general administration or support services provided to its UGI-ES. Provide supporting documentation. 52 Pa. Code § 62.142(a)(9).

Response:

The Company maintains a Cost Allocation Manual that discusses the methods used to allocate or direct charge for services between UGI-ES and the Company in accordance with Commission Orders approving such services. Please see CONFIDENTIAL Attachment NRG-I-4 for a copy of the Cost Allocation Manual.

Prepared by or under the supervision of: Vivian K. Ressler

UGI UTILITIES, INC.

COST ALLOCATION MANUAL

September 2020

TABLE OF CONTENTS

COST ALLOCATION PRINCIPLES

Purpose of Manual

It is important that utility costs incurred to support non-utility affiliates be clearly identified and charged to those affiliates to avoid any inadvertent subsidization of those businesses. It is equally important that charges to the utility from affiliates (including the holding company and any shared services company) be reasonable and adequately supported. Because UGI Utilities, Inc. consists of two regulated utility businesses (Gas and Electric), it is also imperative that costs of shared functions are reasonably allocated across those businesses, as each of these two businesses is regulated separately, has a different customer base, and have different sets of rates.

As defined by the National Association of Regulatory Utility Commissioners (NARUC) Guidelines for Cost Allocations and Affiliate Transactions, a cost allocation manual (CAM) should include, but not be limited to:

- An organization chart of the holding company, depicting all affiliates, and regulated entities.
- A description of all assets, services and products provided to and from the regulated entity and each of its affiliates.
- A description of all assets, services and products provided by the regulated entity to non-affiliates.
- A description of the cost allocators and methods used by the regulated entity and the cost allocators and methods used by its affiliates related to the regulated services and products provided to the regulated entity.

The purpose of UGI Utilities, Inc.'s ("UGI Utilities" or the "Company") Cost Allocation Manual ("CAM") is to comply with the above principles, in so doing, to provide the Pennsylvania Public Utility Commission ("PUC") with transparency into processes and procedures that govern how costs are allocated both amongst UGI Utilities' regulated businesses and between UGI Utilities and its various affiliates.

The CAM and its appendices address situations where, under applicable affiliated interest standards, costs are to be allocated on the basis of cost. Thus, the CAM does not address (1) purchases or sales of gas supply assets or services at market rates or at FERC-regulated rates which are subject to annual review in PUC Purchase Gas Cost ("PGC") proceedings, including, but not limited to, purchases or sales of gas commodity, pipeline capacity, storage capacity and asset management services; (2) purchases or sales of wholesale electric supply assets or services at market rates or at FERC-regulated rates pursuant to a PUC-approved default service plan; (3) the provision or receipt of goods or services at PUC or FERC-approved tariff rates and terms and conditions of service; or (4) the provision or receipt of goods or services pursuant to a PUC-approved affiliated interest agreement or security certificate authorizing non-cost based pricing or rates which, in the case of UGI Utilities, Inc. – Gas Division and UGI Utilities, Inc. – Electric Division, may include , HVAC services, HVAC employees services, retail natural gas or electric service for utility buildings, propane supply services or specific ground lease payments pursuant to the terms of PUC-approved affiliated interest agreements authorizing non-cost based charges.

UGI Corporation Organizational Structure and Common Services

UGI Utilities is a wholly owned first tier subsidiary of UGI Corporation. See Appendix A for UGI Corporation's organizational chart, which shows all first-tier subsidiaries. UGI Corporation provides common services including finance, legal, executive, and other administrative activities to its subsidiaries, and where such costs can be directly attributed to a particular subsidiary, they are direct assigned to it. With respect to the expenses incurred by UGI Corporation associated with common activities provided to all of UGI Corporation's operating subsidiaries, such expenses are allocated to first-tier subsidiaries using UGI Corporation's Modified Wisconsin Formula ("MWF"), which measures the relative size and activity of each first-tier subsidiary in determining a reasonable allocation method, or another allocation factor tailored to the nature of the service being provided. This calculation and related expense allocation are updated annually by UGI Corporation. For more information describing the common services allocated by UGI Corporation, as well as the details of the MWF calculation and related allocation, see Appendix B for UGI Corporation's CAM.

Within UGI Corporation are several executives that oversee various aspects of the Company's natural gas line of business ("UGI Natural Gas"). UGI Natural Gas consists of UGI Utilities, UGI Energy Services, and UGI HVAC Enterprises, and their various subsidiaries. UGI Natural Gas executives perform Chief Executive, Information Technology, Human Resources, Communications, and Strategic roles. Costs associated with these executives are allocated using various methodologies including MWF (Strategic), employee headcount (IT, HR and Communications), or on a pre-determined time allocation (Chief Executive).

UGI Utilities and Affiliates Organizational Structures

UGI Utilities owns and operates a natural gas distribution business and an electric distribution business. The "Gas Utility" segment consists of the regulated natural gas distribution business of UGI Utilities. The "Electric Utility" segment consists of the regulated electric distribution business of UGI Utilities. See Appendix C for UGI Utilities' organizational chart.

UGI Utilities' various affiliates are comprised of its subsidiaries (none of which are actively operating as utilities), UGI Corporation, and other subsidiaries of UGI Corporation. See Appendix D for UGI Corporation's other subsidiaries' organizational charts.

Cost Allocation Philosophy and Process

Internal cost allocations amongst the businesses of UGI Utilities (Gas Utility and Electric Utility), as well as cost allocations into and out of these businesses, are governed by the use of a fully distributed cost allocation methodology. A fully distributed cost allocation is premised on the concept of distributing all costs to business activities, either through direct charges or allocations, based on a consistent method of determining cost causation from period to period so that reasonable cost attribution occurs. Under a fully distributed cost allocation, all direct and indirect expenses such as labor, supplies, and other related expenses are included in the cost of the various business activities performed. In addition, overhead charges, which may include fringe benefits and overhead expenses, are applied to the direct and indirect labor charges captured to arrive at the fully distributed cost for each business activity performed. All resultant cost allocations both between UGI Utilities and its subsidiaries and between UGI Utilities and its subsidiaries and other affiliates, are predicated on some relevant measure of cost causation for that business activity.

Whenever feasible, all costs which can be specifically attributed are charged directly from the business incurring the cost to the business receiving the benefit. There are instances, however, where direct charging is not practical, and in those instances, an allocation methodology which reasonably apportions costs based on the relative benefit of the service to each affected business is used to allocate those expenses amongst the applicable businesses.

Direct Charging of Costs

Direct charging of costs internally from one UGI Utilities business to another, or externally to other non-regulated affiliates, can occur through several types of procedures. The direct charging of labor costs is frequently accomplished using the time recording system, which records individual hours. Whenever any employee performs activities on behalf of another affiliate, the amount of time and work effort required is charged to a project that is coded for intercompany billing to the affiliate, unless that time is charged to the affiliate utilizing an indirect cost allocation methodology (see below).

In direct charging supplies, services, and other non-labor costs received from third parties to another business unit, the third-party invoice associated with those items should, for the most part, be coded for payment with a project that is flagged for intercompany billing if an affiliate gave rise to the necessity to procure those items. If more than one entity is responsible for the procurement of the items, the invoice balance is allocated among the different entities, which will facilitate intercompany billing of the appropriate affiliates.

Other costs, which do not have an associated invoice, may be direct charged to and from affiliates. Examples of these expenses would be postretirement expenses, employee contributions and withholdings, and employee expenses. These are described in further detail in Appendix G.

A key element of the process of direct charging of costs is timely communication with the associated business. The responsible individual or department making the direct charge should inform the associated business of the nature of the service being charged and the associated amount. The responsible individual or department making the direct charges to one of the affiliate entities should provide sufficiently detailed documentation of the charges (i.e. vouchers, invoices, payroll registers, etc.) such that the associated business can understand the nature and appropriateness of the charge. Additional information should be provided upon request.

Indirect Allocation of Costs

For certain business activities, it may be impractical to direct charge labor, supplies, or other costs because of the associated administrative burden to track such costs. In these situations, the costs related to a business activity may be accumulated and subsequently allocated based on a cost-causation allocation formula. In determining a reasonable and prudent allocation factor for these types of costs, such an allocation should consider the relative degree of utilization of the business activity by the respective entities. Examples of indirect allocation methods used are respective MWF allocations, net assets employed (“NAE”) allocation, employee headcount, unit count, etc. The ultimate objective is to achieve a proper sharing of costs among entities whereby costs assigned are commensurate with associated benefits.

Payroll Burden

Payroll burden includes fringe benefits such as medical, life and other insurance coverage, pension plan expense, employee savings plan participation, payroll taxes, and paid time off. Fringe benefits and paid time off are considered additions to the cost of company labor, which must be applied so that the full cost of labor is properly attributed to business activities and affiliates. These rates are charged in addition to labor rates when UGI Utilities charges labor to an affiliate. The rates for fringe benefits and paid time off are based upon the budgets for these costs in relation to budgeted company labor costs and are reviewed at least quarterly and adjusted as needed throughout the year to reflect actual fringe benefits, paid time off and labor incurred.

Use of UGI Utilities' Assets

In certain instances, the regulated businesses within UGI Utilities share common assets. Under such circumstances, the approach is to allocate the related costs such as depreciation and property taxes based upon respective MWF allocations. UGI Utilities utilizes MWF allocation rates to allocate costs amongst different businesses as necessary based on which businesses benefit from the asset. This is done so not to incorrectly allocate associated costs with businesses which are not receiving the benefits of using the related assets. See below for more detailed information as it relates to UGI Utilities' MWF calculations.

In addition, UGI Utilities may also share assets (such as office space), pursuant to affiliated interest agreements, with other non-regulated affiliates. Under such circumstances, the cost allocation approach should ensure that UGI Utilities' regulated utility operations are made whole by charging all costs related to the portion of the asset being used and for the entire period it is utilized by the affiliate. The charge to the affiliate should generally include an allocation of depreciation and other applicable costs related to the portion of the asset utilized for the period. In addition, any operating and maintenance costs related to the asset and incurred by UGI Utilities' operations during the affiliate's usage period should be captured and allocated, to the extent appropriate, to the unregulated affiliate.

If the usage of the asset by the non-regulated affiliate is anticipated to be for a prolonged period of time, consideration should be given to transferring the asset from UGI Utilities' regulated utility operations to the affiliate.

UGI Utilities Cost Allocation Methods

As noted above under "Indirect Allocation of Costs", UGI Utilities may use various cost allocation factors to share costs, depending on the business activity being provided and the entities receiving the benefit. The allocation factor should represent the relative degree of utilization of the business activity by the respective entities.

As part of final gas base rate case order issued October 4, 2019, the Pennsylvania Public Utility Commission ("PAPUC") approved a single tariff and combined rates for substantially all of the rate classes within the Company's existing gas rate districts (North, South and Central). This has substantially eliminated the need to track costs at the gas rate district level. However, because the consolidated rates did not take effect until after Fiscal Year 2020 had begun and because there are certain other residual reporting requirements related to the three former gas rate districts, the Company has maintained MWF allocations for the three gas rate districts as well as for Electric Utility for Fiscal Year 2020.

As part of the 2020 gas base rate settlement, all residual required gas rate district accounting should be eliminated, effective October 1, 2020. As a result, the current means of allocating common costs to the three former gas rate districts will be eliminated. Thus, all costs previously allocated to the former gas rate districts will be more simply assigned to the Gas Division.

The following are cost allocation factors used by UGI Utilities to allocate shared costs amongst its regulated businesses (Gas Utility and Electric Utility) or to non-regulated affiliates.

Modified Wisconsin Formula (MWF) allocations

UGI Utilities utilizes the its MWF allocation method, which measures the relative size and activity of each business, to allocate the majority of its shared costs.

Activity is measured by (1) total revenues and (2) total operating expenses excluding taxes other than income taxes, depreciation, and amortization (before UGI Corporate allocated costs). Revenue and expense amounts used in the MWF are from the previous fiscal year. Size, the third (3) component of the MWF, is measured by gross property, plant, and equipment from the previous fiscal year ended. Each of the three components described above receives an equal one-third (1/3) weighting in the MWF calculation. This equal weighting is then used to determine the overall percent to be applied to each respective business within UGI Utilities.

UGI Utilities' Modified Wisconsin Formula is an equitable, easily verifiable, consistently applied method of allocation and prevents the use of arbitrary judgments based on one-time events. UGI Utilities updates its respective MWF allocations at least annually. The Accounting department is responsible for calculating and approving the MWF allocation rates. The Accounting department also updates and maintains the rates in the Company's ERP system and communicates the rates to other departments, where applicable. The most recent UGI Utilities MWF calculations are attached as Appendix E.

Net Assets Employed (NAE) allocation

In some instances, UGI Utilities may allocate certain costs based on each respective businesses' net assets employed (NAE). NAE is defined as total assets, excluding cash, less total current liabilities, less total deferred liabilities. Intra-company account balances are included in the NAE calculation as each business is considered standalone for the purposes of the NAE calculation.

UGI Utilities' Net Assets Employed calculation is a reasonable and supportable method of allocation which is especially useful in allocating costs that are driven primarily by balance sheet amounts. The NAE allocation is easily updated and should be done so at least quarterly. The Accounting department is responsible for calculating, approving, and updating the NAE allocation factors in the Company's ERP system.

Other indirect allocation methods

UGI Utilities and its subsidiaries may allocate costs using other methods more specific to the business activity being performed, in order to assign the costs more accurately to be commensurate with the associated benefits. Examples of these allocation methods include, but are not limited to:

- Employee headcount – allocating costs associated with employee headcount based upon the number of employees at each business as a percentage of total employees related to the business activity being performed.
- Number of licenses – allocated costs associated with certain shared informational technology systems based on the number of licenses utilized by each business as a percentage of the total licenses.
- Unit or transaction counts – allocating costs associated with the number of respective units or transactions, based upon each business's measurable number of units or transactions as a percentage of the total for each business activity being performed.

The department which is most closely connected to the business activity being performed is responsible for maintaining the supporting data and providing the allocation factors to the Accounting department.

APPENDIX F – INDEX OF SERVICES ALLOCATED ON A COST BASIS WITHIN UGI UTILITIES BUSINESSES

The following is an index of services and related costs which are shared amongst various regulated businesses within UGI Utilities (Gas Utility and Electric Utility). Each identified service contains a general description as well as a discussion of the cost allocation procedures which will be followed for charging or allocating the respective costs to the various businesses.

Detailed records supporting the cost allocations to the affiliates are maintained by UGI Utilities. These summaries of services and related costs will be updated annually.

Use of Common Assets

To the extent multiple regulated businesses share common assets, the related costs such as depreciation, operations and maintenance expenses, property taxes, and property insurance, are allocated amongst the businesses using these assets using respective MWF allocations. UGI Utilities and its subsidiaries utilize MWF calculations to allocate costs amongst different businesses that are sharing the common assets. This is done so not to allocate associated costs to businesses not receiving the benefits of using the related assets.

Examples of these common assets include shared office buildings, leasehold improvements of shared leased facilities, office furniture, informational technology equipment and software.

The Accounting department is responsible for maintaining the supporting data and updating the respective allocations.

Occupancy Costs for Common Use of Leased Facilities

Gas Utility and Electric Utility lease and occupy facilities which are utilized by employees performing services attributable to multiple businesses (see “Intracompany Labor and Relate Burdens” below). The related occupancy costs are allocated to each applicable business using the respective MWF allocation, depending on which applicable businesses are utilizing the facility. Occupancy costs include rent, property taxes, maintenance, and other operations related expenses.

Intracompany Labor and Related Burdens

Due to the close interrelation of the regulated businesses and many of the Company’s employees (typically exempt employees) performing services attributable to multiple businesses, it is not administratively feasible to specifically measure each employees time allotted to each business. Thus, these employees’ time and related payroll and burden costs are allocated amongst the respective businesses by predetermining the allocation of each employees’ time, which is then automatically charged to each business based on the predetermined allocation.

Each supervisor is responsible for determining their respective employees’ time allocations when employees start new positions and communicating that with the Human Resources department, which then enters the allocation into the payroll system. As part of the performance of a key SOX Control, Vice Presidents are required to review each employee’s allocation annually to ensure that employees’ duties and responsibilities are properly reflected in their predetermined time allocations.

There may be instances where an employee who is specifically identified as one particular business's employee, works on a specific project for another business. In these cases, the employee's time is directly coded to the other business's project code. As a result, the employee's time and related payroll and burden costs are directly charged to the correct business. Employees' time is subject to review and approval by their supervisor for each pay period.

Information Technology Services

Certain information technology costs and the related benefits are attributable to multiple businesses. Examples of these costs include application and phone services, software license fees, third party support costs, and maintenance costs of electronic data processing (EDP) equipment. These costs are allocated to each applicable business using the respective MWF allocation, depending on which businesses are receiving the benefit from each individual service. The Information Services department is responsible for providing information to the Accounting department regarding which business activities apply to which business. The Accounting department is responsible for applying the appropriate MWF allocation and calculating the applicable cost to each business.

Insurance Services

UGI Utilities has numerous insurance policies for various types of coverage, which protect all businesses. These invoiced costs are allocated amongst the applicable businesses using the respective MWF allocation, depending on which applicable businesses are receiving the benefit from the insurance coverage. The Accounting department is responsible for applying the appropriate MWF allocation and calculating the applicable cost to each business.

Membership Dues

UGI Utilities pays various industry related membership dues which benefit multiple businesses. These invoiced costs are allocated amongst the applicable businesses using the respective MWF allocation, depending on which applicable businesses are receiving the benefit from the membership. The Accounting department is responsible for applying the appropriate MWF allocation and calculating the applicable cost to each business.

Office Supplies and Expenses

Whenever feasible, office supplies and general operating office expenses are charged directly to the applicable business. However, in many cases, direct charging is not practical. In these instances, these costs are allocated to each applicable business using the respective MWF allocation, depending on which applicable businesses are receiving the benefit from each individual cost. The Accounting department is responsible for applying the appropriate MWF allocation and calculating the applicable cost to each business.

Other Administrative and General Expenses

UGI Utilities cost allocations are not limited to those costs listed above. There are other instances where directly charging a business is not administratively feasible. In these instances, these costs are allocated to each applicable business using the respective MWF allocation.

APPENDIX G – INDEX OF UGI UTILITIES' SERVICES TO NON-REGULATED AFFILIATES

The following is an index of UGI Utilities services currently provided to non-PUC regulated affiliates and, where applicable, the method for determining cost assignment or allocation. Each identified service contains a general description as well as a discussion of the cost assignment or allocation procedures which will be followed for charging or allocating costs to the affiliates where there is not an alternative PUC-approved affiliated interest agreement methodology. When providing a service to a non-regulated affiliate, UGI Utilities follows the general principle of charging the greater of its incurred costs or market value for similar services, if applicable.

Detailed records supporting the cost allocations to the affiliates are maintained by UGI Utilities and its subsidiaries. These summaries of services and related costs are updated at least annually.

Please note that this list comprises services that UGI Utilities and its subsidiaries are currently providing to UGI Corporation, or other of its subsidiaries. This list could change, some services being discontinued, and potentially other services being added. Additionally, services provided by UGI Utilities are done so pursuant to the respective PUC-Affiliate Interest Agreement.

Occupancy Costs for Use of UGI Utilities Owned or Leased Assets

Non-regulated affiliates' employees utilize portions of assets owned or leased by UGI Utilities. To the extent affiliates jointly occupy a UGI Utilities or subsidiary-owned or leased facility, the cost to the affiliate is an allocation based on the relative square footage of the facility occupied by the affiliate. Occupancy costs include all the following which apply: operations and maintenance expenses (including rent), depreciation, property taxes, and property insurance. These costs are captured by location and are divided by the total square footage of the facility to arrive at the occupancy cost per square foot. Total square footage occupied by the affiliate is reviewed at least annually and more frequently if there are significant changes throughout the year.

For other assets which have no associated square footage, such as informational technology equipment and software, all costs related to those assets, such as operations and maintenance expenses (including lease payments), depreciation, and a pre-tax rate of return on UGI Utilities owned assets, are captured by asset or group of assets, and are allocated based upon usage of the asset(s). Allocation methods for these types of assets can include allocating costs by the estimated usage time of the asset by each affiliate, the number of respective units used by each affiliate, the number of associated transactions by each affiliate, or respective MWF allocation, if applicable. The allocation method which is both administratively feasible and most reasonably attributes costs is selected. Any allocation factor used to allocate these costs is reviewed and updated at least annually.

Each respective associated department is responsible for gathering the supporting data, calculating, and approving the cost per square foot and the respective allocation factor for the use of any UGI Utilities owned or leased assets by an affiliate. This information is sent to and maintained by the Accounting department for billing and accounting purposes.

Labor and Related Burdens

UGI Utilities and its subsidiary employees sometimes provide administrative, telemetry or other services to non-regulated affiliates on a cost or market basis. In the case of pipeline, engineering, construction, maintenance and related services, these services are provided at the higher of cost or market pursuant to a Commission-approved affiliated interest agreement. When allocated on the basis of cost, these employees' time and related payroll and burden costs are captured and charged to the respective affiliate in two general manners: 1) direct charge or 2) predetermined time.

There may be instances where a UGI Utilities employee works specifically on a project for an affiliate. In these cases, the employee's time is coded to the affiliate's project code. As a result, the employee's time and related payroll and overhead costs associated with that project are calculated and charged. As noted above, when providing services to non-regulated affiliates, UGI Utilities charges the greater of its incurred costs or market value for similar services unless otherwise authorized by a PUC-approved affiliated interest agreement.

In many cases, it is not administratively feasible to specifically measure each UGI employee's time allotted to each affiliate. Thus, these employees' time and related payroll and burden costs are allocated amongst UGI Utilities and each respective affiliate by predetermining the allocation of each UGI employee's time, which is then charged to each affiliate based on the predetermined calculation. In most of these cases, it is accepted by all parties that the calculated payroll and burden costs are equal to market value and that is what is charged to each affiliate. If any exceptions, an agreed upon market value is directly charged to the affiliate.

Each UGI Utilities supervisor of predetermined time employees is responsible for determining their respective employees' time allocations when employees start new positions and communicating that with the Human Resources department, which then enters the allocation into the payroll system. The predetermined allocations should be agreed upon by all relative parties and any changes should be communicated. As part of the performance of a key SOX control, UGI Utilities' Vice Presidents are required to review each employee's allocation annually to ensure that UGI Utilities' employees' level of service to affiliates is properly reflected in their predetermined time allocations. Any changes to services performed to affiliates or changes to the allocation factors of these services should be reflected in changes made to the respective employees' predetermined time.

Employee expenses incurred by UGI Utilities while performing services for other affiliates are charged directly to the affiliates as incurred.

See below for services that UGI Utilities is providing to non-regulated affiliates.

Natural Gas Business Activities

Several former UGI Utilities employees (primarily executives) serve in their preexisting roles overseeing their respective areas for all the Natural Gas businesses (UGI Utilities and UGI Energy Services, LLC) of UGI Corporation. These employees are employed and paid by UGI Corporation. See Appendix B for current listing of these Natural Gas employees and applicable allocation methodologies of their costs to each business unit. Some of these Natural Gas executives directly supervise and oversee UGI Utilities employees, activities, and services that benefit UGI Utilities and non-regulated affiliates, including:

- **Human Resources**
  - *Payroll and HR Services*

    UGI Utilities processes payroll and administers HR services for non-regulated affiliates' employees. The associated payroll and burden costs of UGI Utilities' HR department employees is allocated to each respective affiliate based upon each employee's predetermined time, as described above in "Labor and Related Burdens". Predetermined time for HR department employees is allocated based on employee headcount of each affiliate utilizing UGI Utilities' payroll processing and HR services.

    Third party payroll and benefit provider costs, which are directly billed to UGI Utilities, are allocated to the respective affiliates based on the total employee headcount of each affiliate utilizing UGI Utilities' payroll processing and HR services.

    Affiliate employees' payroll withholdings and affiliate contributions, such as insurance premiums, flexible spending account (FSA), Political Action Committee (PAC), and retirement plan contributions, are remitted directly to the third party by UGI Utilities. This also includes affiliate employees' payroll withholdings towards purchases through the affiliate, which are remitted by UGI Utilities to the respective affiliate. UGI Utilities identifies and segregates all affiliate withholdings and contributions and direct charges these costs to the affiliates.

    The HR department is responsible for the supporting data and calculations of these allocations.

- **Information Technology**

  UGI Utilities provides support of a general nature to other affiliates, including access security, infrastructure, application support, operational and disaster recovery services, and participation in corporate special projects. The associated payroll and burden costs of UGI Utilities' IT department employees is allocated to each respective affiliate based upon each employee's predetermined time, as described above in "Labor and Related Burdens". Predetermined time for IT department employees is allocated based on various methodologies, dependent on the applications being supported or services being provided, and which affiliates utilize those.

  Third party costs (such as support, maintenance, etc.) which are directly billed to UGI Utilities, are allocated to the respective affiliates based on various methodologies, dependent on the applications being supported or services being provided, and which affiliates utilize those.

  UGI Utilities' IT department incurs and allocates costs based on three categories:

  - Direct – costs that are solely related to UGI Utilities or a non-regulated affiliate
  - Common – costs related to services and support that are available to all employees of the business units utilizing the service
  - Shared – contains components, each of which have a distinct cost allocation factor, such as number or users utilizing a particular service or application

  The IT department is responsible for determining and approving these charges and providing the information to the Accounting department for billing.

- **Communications & Community Relations**

  UGI Utilities provides support of a general nature to other affiliates, including the preparation of communications and participation in corporate special projects. The associated payroll and burden costs of UGI Utilities' Communications department employees is allocated to each respective affiliate based upon each employee's predetermined time, as described above in "Labor and Related Burdens".

Office, Courier, and General Services

UGI Utilities provides support of a general nature to other affiliates, including mailing services for several affiliates and participation in corporate special projects.

The associated payroll and burden costs of UGI Utilities' Office Services department employees are allocated to each respective affiliate based upon each employee's predetermined time, as described above in "Labor and Related Burdens".

All postage charges related to an affiliate's activities are captured separately by the Office Services department, provided to the Accounting department, and directly charged to the affiliate.

Office supplies and other similar purchases are charged directly to the corresponding affiliate. The department making the purchase is responsible for identifying affiliates' items and providing that information to the Accounting department for billing.

Courier expenses for UGI Utilities and several affiliates are billed in full to UGI Utilities. These expenses are allocated and charged based on the estimated service usage of each respective affiliate. This allocation is reviewed at least annually and adjusted as needed by the Office Services department. The allocation is provided to the Accounting department for entry into accounting application.

The Company's annual picnic for employees is shared with affiliates' employees. The associated costs, which are directly billed to UGI Utilities, are then allocated and billed to the respective affiliates based on the number of employees attending from each affiliate.

Pension and Other Postretirement Benefits

UGI Utilities sponsors a pension plan, a supplemental executive retirement plan (SERP), and other postretirement plans providing health care benefits to retirees. These plans benefit certain current and former employees of both UGI Utilities and other affiliates. Based on information provided by a third-party actuary, UGI Utilities performs the accounting for these retirement plans for all impacted entities. In doing so, UGI Utilities allocates a portion of related expense to each respective affiliate. The annual expense amounts are allocated and determined by the actuary, based upon the performance obligations of each affiliates' respective employees and retirees of each plan. UGI Utilities charges each affiliate monthly based on the expense allocations provided by the actuary.

Engineering Services

From time to time, UGI Utilities may provide operation, maintenance, and repair services, including emergency call center services, for a certain affiliate in association with the affiliate's natural gas pipeline facilities and regulation stations at locations within the services territories of UGI Utilities. These services include both routine and emergency services, as further described in separate agreements between UGI Utilities and the affiliate.

UGI Utilities charges the affiliate for these services on a market basis. Costs include direct labor at standard billing rates, travel expense, materials, equipment, and other direct costs plus any overheads. UGI Utilities is also reimbursed for all expenses incurred in utilizing third-party contractors.

UGI Utilities also provides certain environmental remediation services to certain affiliates. The costs of external parties that perform these services are billed to the affiliate. UGI Utilities' internal labor for the environmental remediation services should be direct charged and billed to the affiliate.

Gas Control Support Services

As part of UGI Central Gas Control, LLC ("UGI Gas Control") providing gas control services to UGI Utilities (see Appendix H), UGI Utilities has provided certain support services, including SCADA (software licensing and hosting/support services) and non-SCADA services (for miscellaneous software and support services). These services are required for UGI Gas Control to maintain its ability to perform its gas control functions. UGI Utilities directly charges UGI Gas Control based on actual expenditures incurred to perform these services. See separate affiliate interest agreement and related memo for specifics surrounding this arrangement.

See Appendix H for the allocation of services and costs from affiliates to UGI Utilities.

APPENDIX H – INDEX OF NON-PUC REGULATED AFFILIATES' SERVICES TO UGI UTILITIES

The following is an index of services potentially provided from non-regulated affiliates to UGI Utilities. Each identified service contains a general description as well as a discussion of the cost allocation procedures which will be followed for charging or allocating costs from the affiliates. Except where another method is authorized or required by the PUC-approved affiliated interest agreement, when receiving a service from a non-regulated affiliate, UGI Utilities is charged the lesser of the affiliate's incurred costs or market value for similar services, if applicable.

Detailed records supporting the affiliates' cost allocations are maintained by UGI Utilities. These summaries of services and related costs will be updated annually.

Please note that this list comprises services that affiliates other than UGI Corporation are currently providing UGI Utilities. UGI Corporation services provided to UGI Utilities are included in UGI Corporations CAM in Appendix B. This list could change, some services being discontinued and potentially, other services being added. Additionally, services provided by UGI Utilities' affiliates are done so pursuant to the respective Affiliate Interest Agreement where applicable.

Materials and Other Purchases

All materials, equipment, or other purchases such as contractor services made by affiliates, which are specifically identified to benefit UGI Utilities, are directly charged to UGI Utilities at cost.

Leasing of Office Space

To the extend UGI Utilities occupies a portion of a non-regulated affiliate owned or leased facility, the lower of cost or market is charged to UGI Utilities. Occupancy costs include all the following which apply: operations and maintenance expenses (including rent), depreciation, property taxes, and property insurance.

Gas Control Services

UGI Gas Control performs gas control services (monitoring and responding to UGI Utilities' Distribution System Signals and Alarms) These costs for these services are allocated and charged from UGI Gas Control to UGI Utilities by way of a percentage share of actual costs based on the annual number of signals and alarms that UGI Gas Control will receive for each respective company. See separate affiliate interest agreement and related memo for specifics surrounding this arrangement.

NRG Exhibit CR-3

Confidential

NRG-I-2

Request:

Please reference the Commission's Standards of Conduct applicable to natural gas distribution companies ("NGDCs") and NGSs at 52 Pa. Code § 62.142. How do the Company's practices ensure compliance with the provision that prohibits an NGDC from giving its affiliated NGS preference over other NGSs with regard to matters such as scheduling, balancing, transportation, storage, curtailment, capacity release and assignment, nondelivery and other services provided to its affiliated NGS? 52 Pa. Code § 62.142(a)(2).

Response:

The Company embraces the Commission's Standard of Conduct through a training program designed to ensure compliance with the cited regulatory standards. In the case of the Capacity Lease, the lease was negotiated in the context of UGI-ES's role of a midstream infrastructure owner and not as a retail service provider. Moreover, the Capacity Lease was filed at Docket No. G-2021-3028753 and approved by the Commission's Secretarial Letter dated November 22, 2021. By way of additional response, please see CONFIDENTIAL Attachment NRG-I-2(a) and CONFIDENTIAL Attachment NRG-I-2(b) for hardcopies of the Company's most recent electronic training materials related to compliance with the Standards of Conduct.

THIS RESPONSE IS CONFIDENTIAL AND SHALL BE RELEASED TO PARTIES WHICH HAVE EXECUTED THE STIPULATED PROTECTIVE AGREEMENT OR IN ACCORDANCE WITH A PROTECTIVE ORDER.

Prepared by or under the supervision of: Christopher R. Brown

NRG Exhibit CR-4

NRG-I-9

Request:

Regarding an ongoing operational issue regarding the lack of timely notifications over the weekend of utility cuts, please indicate whether UGI has considered the use of automatic notifications so that an NGS has an opportunity to promptly correct the nomination. If so, please describe the results of that analysis. If not, please note whether UGI is willing to consider this option.

Response:

UGI is not aware of ongoing operational issues concerning a lack of notifications with regard to utility supply cuts during weekend periods. Thus, the Company has not considered implementing automated programming for these notifications. The Company would welcome additional communications which might help the Company understand the frequency and impact of the alleged concerns.

Caution: This email originated from outside of the organisation. Do not click links or open attachments unless you recognise the sender and know the content is safe.

Good Afternoon Kim/Chris,

I wanted to follow up on the two questions you had asked during the supplier collaborative

1. *Can we get improvements to the capacity release screens such as the specific rate class for each release and possibly the XD/LFD customer names associated with releases?*
   Over the next few months, supply will be labelling the XD/LFD/DS releases so that on the EMW, they will show up under the comments section denoting which rate group the release is for. While the customer names associated with the releases is possible for XD, LFD and DS are released at a pool level and will have multiple customers that the release represents, so this is something we would only be able to do for XD.
2. *Can you please take back a request to see cuts real time in EMW?*
   With UGI's current programming, the process for identifying and communicating cuts is still a very manual effort for the supply team. While automating the process is a very long-term goal, it is not something we will be able to implement any time soon.

Please let me know if you have any other questions or concerns.

Thank you and have a good weekend!

NRG Exhibit CR-6

NRG-I-10

Request:

As to the weighted average cost of delivered gas ("WACOD") used for recovery of charges for released capacity, the Company currently provides monthly information on its EBB showing the WACOD rates as reflecting pipeline rate changes. Please explain why this information does not show the total dollar impact of each specific rate case on the WACOD each month. In responding, please indicate whether the Company is willing to present the information in this manner on its EBB on a monthly basis.

Response:

The Company's WACOD calculation process utilizes only effective pipeline rates and does not support rate impact segmentation as described. The Company has not evaluated any functional requirement changes, related costs, timing or cost/benefit analysis which would be required to provide the functionality in support of the information of the type suggested.

Prepared by or under the supervision of: Christopher R. Brown

NRG Exhibit CR-7

UGI is notifying shippers serving LFD and DS customers on its system of the following adjustments starting with the April 2022 Weighted Average Cost of Demand (WACOD) rate.

Adjustment for Economic Benefit of Peaking Service (EBPS)

According to the Settlement of the 2019 UGI Rate Case at Docket R-2018-3006814, UGI provides an EBPS credit to LFD and DS Customers, up to the annual peaking premium impact to the WACOD related to peaking service contract cost allocations. Please reference the UGI Gas Division: Service Tariff No. 7 & Choice Supplier Tariff No. 7s Section 22.A.6 on the EMW for more information on the EBPS. UGI is issuing a $186,246.20 credit for LFD customers and a $925,256.22 credit for DS Customers, which reflects the annual peaking premium EPBS credit for the 2021-2022 winter peaking season. Based on UGI's tariff, this is the maximum economic benefit of peaking service that can be returned to these customers. UGI is also issuing an additional $2,358.24 credit for LFD customers and $5,836.04 credit for DS customers associated with the 2020-2021 winter peaking season related to a reconciliation for that period. The total EBPS credits issued are $188,604.44 for LFD customers and $931,092.26 for DS customers. Both credits will be applied to the April WACOD.

Adjustment for LFD Gross Up

UGI recently identified that LFD WACOD release rates have not been properly adjusted to reflect the portion of a customer's DFR allocated to delivered supply. The monthly WACOD rate was applied to capacity release quantities only (not the full LFD DFR quantity). This incorrectly excluded the Delivered Supply allocation of the shippers' monthly DFR volumes from having the WACOD charge applied. UGI has corrected the release cost calculation methodology for April releases to reflect the proper cost gross up on released quantities, thus having costs reflect the application of the full WACOD to the full DFR quantity. The under-collection impact of this error has been calculated by UGI and will be reconciled by adjusting the total costs in the LFD WACOD calculation by $46,120.10 per month over an equal twenty-nine month term during which this under-collection accumulated. This period will begin April 2022 and end August 2024.. Please note the projected WACOD rates found on the EMW include these adjustments, as well as a sample calculation for the LFD WACOD 'gross up' adjustment.

In summary, as a result of these adjustments, for the month of April the LFD WACOD rate will be $11.82, and the DS WACOD rate will be $6.86. The updated projected WACOD sheet is posted on UGI's EMW.

If you have any questions, please contact UGIGasCompliance@ugi.com.

SURREBUTTAL TESTIMONY OF

CHRISTOPHER REYES

ON BEHALF OF NRG ENERGY, INC.

TOPICS:

Standards of Conduct
Transparency of Delivery System
Operational Issues
Weighted Average Cost of Delivered Gas

May 27, 2022

Table of Contents

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, TITLE AND BUSINESS ADDRESS.

A. My name is Christopher Reyes and I am Sr. Manager, Regional Operations (NY Metro, North East & Mid-Atlantic) for NRG Energy, Inc. ("NRG"). My business address is 194 Wood Avenue S., Iselin, New Jersey 08830.

Q. DID YOU SUBMIT DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes.

Q. ON WHOSE BEHALF IS THIS SURREBUTTAL TESTIMONY OFFERED?

This Surrebuttal Testimony is offered on behalf of NRG. As natural gas suppliers ("NGSs") licensed by the Pennsylvania Public Utility Commission ("Commission"), NRG's subsidiaries supply natural gas services to retail consumers in the Company's service territory.[1]

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my Surrebuttal Testimony is to respond to the Rebuttal Testimony of Christopher R. Brown submitted by UGI Utilities, Inc. – Gas Division ("UGI" or "Company"). (UGI Statement No. 1-R). Specifically, my Surrebuttal Testimony addresses the following issues: (1) Commission's Standards of Conduct; (2) Transparency of UGI's Delivery System; (3) Operational Issues; and (4) Weighted Average Cost of Delivered Gas.

[1] As NGSs in Pennsylvania, NRG subsidiaries hold licenses as follows: Independence Energy Group d/b/a Cirro Energy: A-2013-2396449; Reliant Energy Northeast LLC d/b/a NRG Home, NRG Business, NRG Retail Solutions: A-2015-2478293; Green Mountain Energy Company: A-2017-2583732; XOOM Energy Pennsylvania, LLC: A-2012-2283967; Stream Energy Pennsylvania, LLC: A-2012-2308991; Direct Energy Services, LLC: A-125135; Direct Energy Business, LLC: A-125072; Direct Energy Business Marketing, LLC: A-2013-2365792; Gateway Energy Services Corporation: A-2009-2138725.

Q. ARE YOU SPONSORING ANY EXHIBITS WITH THIS TESTIMONY?

A. Yes. I am sponsoring NRG Exhibit CR-8, which is attached to this testimony.

II. STANDARDS OF CONDUCT

Q. PLEASE SUMMARIZE YOUR DIRECT TESTIMONY CONCERNING THE COMMISSION'S STANDARDS OF CONDUCT.

A. The Commission has Standards of Conduct that are applicable to natural gas distribution companies ("NGDCs") and NGSs at 52 Pa. Code § 62.142, which contain several key provisions that address obligations of NGDCs when they have an affiliated NGS competing against nonaffiliated NGSs in the retail natural gas market. Among the topics covered by the Standards of Conduct are the sharing of employees, the allocation of costs, the maintaining of separate books and records and the application of tariff provisions. It is my understanding that the purpose of the Standards of Conduct is to ensure a level playing field for all market participants, which ultimately benefits consumers.[2]

Q. WHAT IS THE SIGNIFICANCE OF THE COMMISSION'S STANDARDS OF CONDUCT?

A. The significance of the Commission's Standards of Conduct is that UGI's affiliate, UGI Energy Services, LLC ("UGI-ES"), is operating in the retail market as a licensed NGS.[3] To my knowledge, no other natural gas or electric utility in Pennsylvania has an affiliate serving retail customers. As I explained in my Direct Testimony, UGI's vigilance in complying with these Standards of Conduct is critical to the robust functioning of the competitive retail market. (NRG Statement No. 1 at 4-9).

---

[2] *Permanent Standards of Conduct Pursuant to 66 Pa.C.S. §2209(b)*, Docket No. L-00030162 (Proposed Rulemaking Order entered September 23, 2003, at 1).

[3] NRG Exhibit CR-1, attached to my Direct Testimony.

Q. WHAT DID YOU RECOMMEND IN YOUR DIRECT TESTIMONY?

A. I offered a series of recommendations involving review by the Commission staff of UGI's practices as a way of ensuring full compliance with the Standards of Conduct. (NRG Statement No. 1 at 5-9).

Q. HOW DOES MR. BROWN ADDRESS YOUR TESTIMONY REGARDING THE STANDARDS OF CONDUCT?

A. Mr. Brown testifies that UGI is committed to compliance with the Standards of Conduct, which it shows through annual training, internal audits, regular meetings, and process reviews by senior management and Company executives. He further points to the lack of specific fact-based allegations in my Direct Testimony. Mr. Brown concludes that no action is required by the Commission. (UGI Statement No. 1-R at 16-21).

Q. PLEASE RESPOND.

A. As an initial matter, I note that NRG asked UGI in discovery to explain what measures it takes to ensure compliance with various specific provisions of the Standards of Conduct. In response, UGI provided a confidential Cost Allocation Manual and confidential training materials. The discovery response included no indication of the frequency of training and was devoid of any reference to the other measures that Mr. Brown has now identified in his Rebuttal Testimony.[4]

With respect to Mr. Brown's observation that my Direct Testimony does not contain specific fact-based allegations, that is due to my lack of access to information that is available only to UGI and the Commission. My concerns and recommendations are driven solely by the fact that UGI has an affiliated supplier competing in the retail market against NRG's subsidiaries, making compliance with the Standards of Conduct necessary

[4] Confidential NRG Exhibit CR-3, attached to my Direct Testimony.

to ensure that UGI-ES does not have a competitive edge over nonaffiliated NGSs. Given the existence of an affiliated NGS in the market, and the adverse effect on the market if any preferences are being shown, I believe it is imperative for the Commission to exercise its authority to ensure that UGI is strictly following the Standards of Conducts. Assuming UGI is fully compliant and taking adequate measures to maintain such compliance, UGI should have no concerns about regulatory scrutiny.

Q. PLEASE SUMMARIZE YOUR CONCERN ABOUT THE SHARING OF EMPLOYEES BETWEEN UGI AND UGI-ES.

A. As I explained in my Direct Testimony, I have personally observed employees migrating back and forth between UGI and UGI-ES, which shows that they are being shared by both entities. (NRG Statement No. 1 at 5).

Q. HOW DOES MR. BROWN RESPOND?

A. Mr. Brown notes that in response to discovery, I identified three management employees from UGI-ES who were previously UGI employees whom I have observed migrating back and forth. He testifies that these three individuals have extensive training and experience relating to the Standards of Conduct. (UGI Statement No. 1-R at 17-18).

Q. DOES THIS RESPONSE ADDRESS YOUR CONCERNS?

A. Not entirely. I continue to believe that some level of Commission oversight is warranted, as recommended in my Direct Testimony. (NRG Statement No. 1 at 5-6). At the very least, this situation raises a concern about the optics that the Commission should examine. Further, I note that NRG asked UGI in discovery to identify Company employees who are shared with UGI-ES, including name, title and brief description of responsibilities. Rather than responding to the question, Mr. Brown indicated that there are no shared employees with responsibilities that would violate the Standards of

Conduct.[5] This response did not give NRG an opportunity to consider whether we might have a different view than Mr. Brown does about whether certain employees have responsibility for operating the distribution system, marketing or customer service.

Q. PLEASE DESCRIBE MR. BROWN'S TESTIMONY RESPONDING TO YOUR RECOMMENDATION FOR A REVIEW OF CERTAIN STANDARDS OF CONDUCT DURING AUDITS BY THE BUREAU OF AUDITS.

A. Mr. Brown notes that UGI is subject to regular audits by the Bureau of Audits that, among other things, address affiliate relations and cost allocations and refers to a Focused Management and Operations Audit issued in October 2019. He testifies that the Bureau of Audits made five findings and recommendations in these areas to improve the Company's tracking of affiliate costs and timekeeping for services rendered to affiliates. (UGI Statement No. 1-R at 19).

Q. HOW DO YOU RESPOND?

A. In my Direct Testimony, I recommended that to the extent that the Commission is not already addressing cost allocations and separate books and records requirements through periodic audits, it should direct the Bureau of Audits to undertake this review. (NRG Statement No. 1 at 7). Having reviewed the Commission's Focused Management and Operations Audit, I continue to have concerns.[6] The Bureau of Audits described UGI's affiliated interest and cost allocation practices as needing "moderate improvement."[7] Further, Section V of the Audit Report, entitled Affiliated Interests and Cost Allocations, refers only to training that UGI provides to employees about functional separation and

[5] NRG Exhibit CR-8 (UGI Response to NRG-II-1).

[6] The Audit Report issued in October 2019 is available here.

[7] Audit Report, p. 4, Exhibit I-1.

the sharing of employees.[8] Of note, the Audit Report found that UGI could not "substantiate whether the costs of goods and services received from, or provided to, its affiliates are fair and reasonable."[9] The Audit Report also found that UGI's CAM lacks key information and should be updated.[10] Another finding observed that although UGI's CAM indicates that non-regulated affiliates should be charged for labor and overhead by direct charge, UGI has no documentation or formalized process providing guidance for employees to direct charge an affiliate for shared services.[11] This finding is similar to the concern I expressed in my Direct Testimony where I stated that if UGI is following its CAM, costs are likely being properly allocated. However, merely having the CAM in place does not provide any assurances if UGI is not following the directives set forth in the manual. (NRG Statement No. 1 at 6-7).

While UGI indicates that it has implemented the recommendations associated with these findings, it is not unreasonable for NGSs competing against UGI-ES to expect verification of those efforts and a determination that what UGI has done fully satisfies the Standards of Conduct. It is noteworthy that when the Commission delved into UGI's affiliate interest and cost allocation practices, the auditors identified shortcomings and made recommendations. These findings support the greater scrutiny I have recommended in connection with UGI's compliance with the Standards of Conduct.

9 Audit Report, p. 27.

10 Audit Report, p. 28.

11 Audit Report, pp. 29-30.

III. TRANSPARENCY OF UGI'S DELIVERY SYSTEM

Q. PLEASE SUMMARIZE YOUR DIRECT TESTIMONY REGARDING THE TRANSPARENCY OF UGI'S DELIVERY SYSTEM.

A. Referring to the Sunberry Capacity as example, I noted that when available interstate pipeline capacity is being bid, there are instances when the capability to move gas between regional pools on UGI's delivery system was known only to UGI and UGI-ES. Had the information been public, there would have been a more robust interest in the open season by competitors of UGI-ES. (NRG Statement No. 1 at 10-11).

Q. WHAT DID YOU RECOMMEND?

A. The Commission should direct UGI to provide information to NGSs that outlines the full capabilities of its delivery system when it receives gas from the interstate pipelines. These capabilities include how UGI is able to move gas between regional pools so as to ensure that NGSs are granted the same access and have the same understanding that UGI-ES is afforded. (NRG Statement No. 1 at 11).

Q. PLEASE DESCRIBE MR. BROWN'S REBUTTAL TESTIMONY ON THIS ISSUE.

A. Mr. Brown testifies that Sunbury was a publicly noticed open season that was certificated by the Federal Energy Regulatory Commission and that the rules "relating to delivery on Sunbury were developed through a collaborative process that determined delivery requirements and acceptable substitutes based on the hydraulic and supply characteristics of each geographic segment of the UGI Gas system." (UGI Statement No. 1-R at 22). He further states that UGI readily offers the information NRG is seeking to suppliers on its system and identifies the availability of interconnections for suppliers on UGI's Energy Management Website, system flexibility that is offered in the form of ranges for delivery points, and regularly scheduled supplier collaboratives. (UGI Statement No. 1-R at 22-23).

Q. DOES MR. BROWN'S RESPONSE ADDRESS YOUR CONCERNS?

A. No. I do not dispute UGI's use of the open season for Sunbury. However, at that time, NRG and other nonaffiliated NGSs were not aware of UGI's capability to move gas received from the interstate pipelines to the UGI south pool via a spur on UGI central. The information described by Mr. Brown is available to NGSs. What is not available to NGSs is knowledge of the full capabilities of UGI's delivery system when it receives gas from the interstate pipelines. These capabilities include how UGI is able to move gas between regional pools.

IV. <u>OPERATIONAL ISSUES</u>

Q. PLEASE SUMMARIZE YOUR DIRECT TESTIMONY REGARDING OPERATIONAL ISSUES?

A. I described an issue that NRG is experiencing regarding the lack of timely notifications of utility cuts, which occur when a nomination made by an NGS needs to be corrected over the weekend. I recommended that UGI either implement automated programming for these notifications or implement weekend staffing.

Q. HOW DOES MR. BROWN ADDRESS THIS ISSUE?

A. Mr. Brown suggests that NRG's proposal for automated program may not be workable, and if workable, would likely have a very significant operational cost to UGI. He further testifies that he is not personally aware of any instances where UGI has cut supply over a weekend due to a mismatch between nominations provided by an NGS. Mr. Brown believes that the primary issue appears to be related to a lack of communication between NRG and its third-party suppliers. (UGI Statement No. 1-R at 23-24).

Q. PLEASE RESPOND.

A. Due to an interest in safeguarding their systems, it is standard industry practice for utilities to alert entities when a nomination is not confirmed. Every other utility with which I transact sends notifications seven days per week. Given the ability of the UGI to impose punitive penalties if an NGS does not meet the delivery requirement for the day, it stands to reason that the Company should provide these notifications seven days per week. In addition, I question the magnitude of any operational costs that would be incurred since someone at UGI is reviewing nominations over the weekend due to the need for the utility to balance on a daily basis.

Q. PLEASE DESCRIBE MR. BROWN'S TESTIMONY REGARDING NRG'S NOMINATION PRACTICES.

A. Mr. Brown notes that the deadline for Saturday, Sunday and Monday nominations is on Friday at 2:00 p.m. He then testifies that "[a] review of the Company's records indicates that NRG regularly fails to meet this deadline for its Sunday and Monday nominations." (UGI Statement No. 1-R at 25).

Q. PLEASE RESPOND.

A. The nomination deadline is unrelated to weekend notifications of cuts. It is nothing more than a red herring designed to be a distraction from the problem I have identified. That NRG regularly misses the deadline for its Sunday and Monday nominations is unavoidable due to mismatches between the utility deadline and the interstate pipelines' deadlines. As Mr. Brown is well aware, all NGSs are waiting to receive contracts from interstate pipelines by 2 p.m. on Friday, which makes a 2 p.m. utility deadline unrealistic for the Sunday and Monday nominations. Many third parties are involved in this robust process, and as an NGS, NRG is the end user waiting for it at the gate with no control over when the information is received so that the nomination can be submitted. Again, the issue I raised about weekend notifications has nothing to with the timeliness of NRG's nominations on Friday. Rather, the issue is that changes occur over the weekend of which NRG needs to be notified to avoid the risk of substantial penalties.

V. WEIGHTED AVERAGE COST OF DELIVERED GAS

Q. PLEASE SUMMARIZE YOUR DIRECT TESTIMONY REGARDING THE ISSUE WITH THE WEIGHTED AVERAGE COST OF DELIVERED GAS.

A. UGI uses weighted average cost of delivered ("WACOD") gas for recovery of charges for released capacity and provides monthly information on its Electronic Bulletin Board ("EBB") to show the WACOD gas rates as reflecting interstate pipeline rate changes approved by the Federal Energy Regulatory Commission. However, this information does not show the projected total dollar impact of each specific pipeline rate case on the WACOD gas rate each month. This is a problem because the individual impact of a rate case affects the natural gas prices that NRG is charging customers.

Q. WHAT DID YOU RECOMMEND?

A. I recommended that UGI provide NGSs with information showing the impact of each individual pipeline rate case along with a 12-month estimate of forward impact from the implementation of a rate change.

Q. HOW DOES MR. BROWN RESPOND?

A. Mr. Brown testifies that UGI identifies when FERC rate changes are first included in the WACOD and also identifies when any adjustments are made to reflect the final rates, as well as refunds. He explains that the Company does not separately itemize FERC rate impacts in the overall calculation or show an individual proceeding's particular impact on a monthly basis over time because this would be a resource intensive process. Mr.

Brown adds that NRG should be able to assess the impacts of various FERC proceedings on the cost of transportation service it relies upon in serving customers. (UGI Statement No. 1-R at 26).

Q. DOES MR. BROWN'S RESPONSE SATISFY YOUR CONCERN?

A. No. As I explained in my Direct Testimony, NRG is not asking UGI to undertake any additional work than it is already doing. Rather, NRG is requesting that UGI include the forecasts it has made to show the impact of the individual rate cases over a 12-month period following implementation.

Q. DID YOU IDENTIFY ANY OTHER CONCERNS ABOUT WACOD RATES?

A. Yes. In April 2022, UGI placed notices on its EBB regarding a credit for Economic Benefit of Peaking Service ("EBPS") and an increase to the LFD WACOD rates. I recommended that both the EBPS and the LFD gross up should be removed from the LFD WACOD rates, which are included on NFG's invoice. This approach would be similar to the way these adjustments are handled for the DS rate.

Q. DOES MR. BROWN AGREE WITH THIS RECOMMENDATION?

A. No. Mr. Brown describes the "WACOD as a mechanism that is intended to fully reflect the costs of providing the transportation program to the customers who utilize it" and concludes that the EBPS and LFD costs are appropriately incorporated into the WACOD. He further indicates that any modifications to change the bill format will cause the Company to incur additional programming costs. (UGI Statement No 1-R at 27).

Q. PLEASE RESPOND.

A. As explained in my Direct Testimony, when both costs and credits are handled in the WACOD rates, the amounts are artificially high or low and as the costs or credits roll off, the rates can change dramatically especially when the utility is only posting a 12-month rate schedule. NRG should not be in a position of explaining UGI errors to its supply customers or be required to decide how to allocate credits/costs resulting from UGI adjustments, particularly when some of the affected customers were not being served by NRG when the charges were initially included on bills.

Q. DOES THAT COMPLETE YOUR SURREBUTTAL TESTIMONY?

A. Yes; however, I reserve the right to supplement this testimony as may be appropriate.

Verification

I, Christopher Reyes, state that I am Sr. Manager, Regional Operations (NY Metro, North East & Mid-Atlantic) for NRG Energy, Inc. ("NRG") and providing the foregoing Direct Testimony of NRG. I hereby state that the facts contained in the foregoing Direct Testimony are true and correct to the best of my knowledge, information and belief. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904, relating to unsworn falsification to authorities.

May 27, 2022

NRG Exhibit CR-8

NRG-II-1

Request:

1. Please reference the Commission's Standards of Conduct at 52 Pa. Code § 62.142(a)(13), which prohibit the sharing of certain natural gas distribution employees with affiliated natural gas suppliers.

   A. Please identify Company employees who are shared with UGI Energy Services, LLC ("UGI-ES"), including name, title and brief description of responsibilities.

   B. Please identify employees who have transferred from the Company to positions at UGI-ES, including name, title, brief description of responsibilities, date of transfer and last date of employment. In describing responsibilities, please note whether the employee has responsibility for operating the distribution system, including natural gas delivery or billing and metering, or for marketing and customer service.

   C. Please identify employees who have transferred to the Company from positions at UGI-ES, including name, title, brief description of responsibilities, date of transfer and last date of employment. In describing responsibilities, please note whether the employee has responsibility for operating the distribution system, including natural gas delivery or billing and metering, or for marketing and customer service.

Response:

A. None. There are no shared employees "who have responsibility for operating the distribution system, including natural gas delivery or billing and metering, as well as those responsible for marketing and customer service."

B. Data for the last three years is provided in Attachment NRG-II-1(B).

C. Data for the last three years is provided in Attachment NRG-II-1(C).

Prepared by or under the supervision of: Christopher R. Brown

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
	:	
v.	:	Docket No. R-2021-3030218
	:	
UGI Utilities, Inc. - Gas Division	:	

DIRECT TESTIMONY OF HARRY S. GELLER

ON BEHALF OF

THE COALITION FOR AFFORDABLE UTILITY SERVICES AND ENERGY EFFICIENCY IN PENNSYLVANIA ("CAUSE-PA")

April 20, 2022

TABLE OF CONTENTS

PREPARED DIRECT TESTIMONY OF HARRY S. GELLER

Q: Please state your name, occupation, and business address.

A: My name is Harry S. Geller. I am an attorney. I am retired as the Executive Director of the Pennsylvania Utility Law Project (PULP), but have maintained an office at 118 Locust St., Harrisburg, PA 17101 for the purpose of providing consulting services and assistance to low income individuals and the organizations which represent them in utility and energy matters. Since the Governor's Emergency Order regarding the Covid-19 pandemic, I have been working from 4213 Orchard Hill Rd, Harrisburg, PA, 17110.

Q: Briefly outline your education and professional background.

A: I received my B.A. degree from Harpur College, State University of New York at Binghamton in 1966, and a J.D. degree from Washington College of Law, American University in 1969. Upon graduation from law school, I entered the Volunteers in Service to America (VISTA) program, where I was assigned to the New York University Law School. I took courses in the Law School's Urban Affairs and Poverty Law program and worked with the Community In Action Program on the West Side of Manhattan in New York City from 1969-1971. In 1971, I started as a Staff Attorney for the New York City Legal Aid Society, Criminal Court, and Supreme Court Branches in New York County. In 1974, I moved to Pennsylvania and began working for Legal Services, Incorporated (LSI). LSI was a civil legal aid program serving Adams, Cumberland, Franklin, and Fulton Counties. I worked at LSI from 1974-1987 first as a Staff Attorney, then as Managing Attorney, and ultimately became Executive Director. Through a restructuring with other legal services programs, LSI became part of what is now known as MidPenn Legal Services and Franklin County Legal Services.

In 1988, I was hired to be the Executive Director of PULP, a statewide legal aid project dedicated to protecting the rights of low income utility customers. At PULP, I represented low income individuals with utility and energy concerns and supported organizations advocating for low income households in utility and energy matters. As the Executive Director, I consulted and co-counseled on a wide variety of individual utility consumer cases, and I participated in task forces, work groups and advisory panels, including serving as chair of the Department of Human Services' LIHEAP Advisory Committee and the Pennsylvania Public Utility Commissions' Consumer Advisory Committee. I frequently trained communities, legal aid staff, and advocacy groups across Pennsylvania about the various utility and energy matters affecting Pennsylvania's low income population. I retired from PULP on June 30, 2015. Since that time, I have continued to provide consulting services for PULP and its clients, as well as other organizations serving the low income community.

In sum, I have over 50 years' experience working on behalf of households in poverty, including the past 30 years focusing specifically on utility and energy issues affecting low income consumers. My resume is attached as Appendix A.

Q: Please describe the focus of your work over the past fifty years, including relevant work experience on issues of low income families' ability to afford essential services such as utilities?

A: I have represented low income individuals and organizations serving low income populations in a wide variety of legal matters, including family law, public benefits, unemployment compensation, utility shut-offs, debtor/creditor, and housing-related disputes. Over the past 30 years, my focus has been to ensure that low income households can connect to, afford, and maintain utility and energy services.

In all of these legal matters, I worked almost exclusively on behalf of individuals and households that subsist on incomes at or below 150% of the Federal Poverty Level (FPL). Through this work, I have had a close view of the daily lives of countless of our poorest citizens. I have spent thousands of hours assisting clients, combing through their budgets to see whether it is even possible to make ends meet. Over the years, I have consistently seen the near total absence of the ability of low income families to afford the most basic monthly necessities with the incomes they have, even assuming heroic self-control and conscientious budgeting and spending. Almost every month, my clients faced the stark reality of having to choose which bills they can forgo with the least drastic consequences.

In addition to my deep understanding of the daily monetary struggles facing poor families, I have an extensive knowledge of the array of programs designed to allow low income individuals to afford utility service. While at PULP, I was involved in hundreds of proceedings evaluating the effectiveness of programs that are intended to reduce low income households' energy burdens and help them conserve energy through efficiency and weatherization. I have spent thousands of hours evaluating universal service programs and making recommendations for changes to these programs to better serve low income consumers. This advocacy ultimately led to the recognition of the need to develop integrated programs for low income consumers. Furthermore, I played an instrumental role in the development, oversight, and monitoring of the initial pilot and then the statutorily required low income universal service programs, each of which is structured to provide a different yet complimentary form of assistance to low income customers to enable those customers to afford and maintain basic service.

For example, the Customer Assistance Program (CAP) provides alternatives to traditional collection methods for low income, payment troubled utility customers, allowing participants to receive a more affordable bill and earn forgiveness on arrears in exchange for making in-full payments on their discounted bill. In turn, the Low Income Usage Reduction Program (LIURP) is a targeted weatherization program designed to assist low income households with the highest energy consumption, payment problems, and arrearages to reduce their overall energy consumption. CAP and LIURP work in tandem and are designed to assist low income households in maintaining affordable utility services and safe living environments while reducing utility collection, thereby benefitting other ratepayers and the communities in which they live and work.

Q: Have you testified in any proceeding before the Pennsylvania PUC?

A: Yes. I have presented testimony in many proceedings before the PUC. A complete list is included in my resume, which is attached as Appendix A.

Q: For whom are you testifying in this proceeding?

A: I am testifying on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your testimony?

A: CAUSE-PA intervened in this proceeding to ensure that the proposed rate increase and rate design will not adversely affect UGI's low income customers' ability to connect to, maintain, and afford natural gas service, which is essential for heating, cooking, and hot water – all critical components to a safe and healthy home.

Q: How is your testimony organized?

A: My testimony is divided into five sections.

In section I, I will discuss the financial impact that UGI's proposed residential rate increase will have on its low income customers. UGI's proposed rate increase would raise residential customer bills by 9.5%.[1] According to UGI's estimates, approximately 25% of its residential customers have income at or below 150% of the Federal Poverty Level (FPL).[2] These households struggle to afford life's most basic necessities and increasing the cost of natural gas service will worsen these struggles, leading to increased payment troubles and, in turn, increased termination rates and resulting uncollectible expenses. As I will explain, UGI's current universal service programs do not adequately address the affordability gap for economically vulnerable customers. If approved, this rate increase will make it more difficult for low income consumers to maintain safe energy services to their home. UGI must do more to improve access and affordability of its universal service programs.

In section II, I will review UGI's existing universal service programs, and will discuss the impact of UGI's rate increase on universal service program participants. I make several recommendations for how UGI can mitigate the impact of the rate increase on UGI's economically vulnerable consumers by making targeted improvements to its universal service programs.

In section III, I discuss UGI's proposed rate design, which seeks to recover an increased portion of the residential cost of service through a fixed monthly customer charge and will address UGI's proposed Weather Normalization Adjustment (WNA). Increases to the fixed customer charge impede customers' ability to reduce their energy costs through energy efficiency measures; thus, if the Commission decides to allow any rate increase, it should be added exclusively to the volumetric charge. Also, UGI's proposed WNA shifts the risk of changing weather patterns from

[1] UGI St. 1 at 7.
[2] See OCA to UGI II-17, 18, 19 (As of December 2021, UGI reported having 610,158 residential customers, 153,437 estimated low income customers, and 78,450 confirmed low income customers.).

the utility to the consumer and prevents low income customers from realizing bill savings due to warming trends. For these reasons, as explained more thoroughly below, I recommend that the Commission reject UGI's fixed charge and WNA proposals.

In section IV, I discuss UGI's late fees and reconnection fees. As I explain, UGI's late fees and reconnection fees unfairly penalize low income customers that are unable to afford their bill. Late fees and reconnection fees do not motivate payment from economically vulnerable households – they compound financial instability and raise additional barriers to households seeking to prevent termination and/or reconnect service. Thus, I recommend that UGI no longer assess late fees and reconnection fees to confirmed low income customers.

Finally, in section V, I summarize the recommendations and proposals provided throughout my direct testimony.

I. IMPACT OF UGI'S RATE PROPOSAL ON LOW INCOME HOUSEHOLDS

Q: Please summarize UGI's requested rate increase as it applies to residential customers.

A: UGI proposes to increase its distribution rates by approximately $82.7 million per year, or 7.8% on a total revenue basis.[3] The rate increase to individual customers will depend on each customer's level of usage. However, most of the impact of UGI's proposed rate increase for residential customers comes from a substantial increase to the fixed monthly service charge – from $14.60 to $19.95, an increase of $5.35 or 36.6%.[4] Thus, homes using the least amount of gas will face the highest percentage increase, while homes using more gas will see a lower percentage

[3] UGI St. 1 at 6.
[4] UGI St. 8 at 20.

increase. The total bill for the average residential heating customer purchasing gas from UGI would increase from $98.62 to $108.01 per month, or 9.5%.[5]

Q: How many low income consumers reside in UGI's service territory?

A: Like other large regulated public utilities in Pennsylvania, UGI tracks its low-income customer population two ways. First, an "estimated low-income customer" count, which uses census data and UGI's residential customer count to estimate the likely number of customers in UGI's service territory with low income.[6] Second, a "confirmed low-income customer" count, which includes only those customers from whom UGI has obtained information documenting low income or who UGI has identified as receiving LIHEAP.[7] As of December 2021, UGI reported having an estimated low income customer count of 153,437 (approximately 25% of residential customers) and a confirmed low income customer count of 78,450 (approximately 13% of residential customers).[8]

While both metrics show that a substantial number of UGI's customers are low-income, the estimated low-income customer figure (25%) presents a more accurate picture of the low income population in UGI's service territory. The confirmed low-income customer count provides only a limited subset and skewed assessment of the low-income population – counting only the number of customers who have affirmatively sought out and obtained assistance in the last year. The estimated low-income customer count provides a more realistic assessment of the number of low-income households served by UGI by using verified census data proportional to its service

[8] See OCA to UGI II-17, 18, 19 (As of Dec. 2021, UGI reported 610,158 residential, 153,437 estimated low income, and 78,450 confirmed low income customers.).

territory and customer data. Regardless of the measure applied, there are a substantial number of low-income customers (between 13% to 25%) in UGI's service territory.

Q: What level of income qualifies a household as a "low income"?

A: With some exceptions, most utility assistance programs require households to have income that is not greater than 150% of the federal poverty level (FPL) to qualify. The FPL is a measure of poverty based exclusively on the size of the household, but not the composition of the household (i.e., whether the household consists of adults or children) or geography. As a baseline, a family of four at 150% FPL has a gross annual income of just $41,265.[9] This is insufficient income to support a family of this size and is substantially less than a household this size needs to meet their basic expenses in any of the counties in UGI's service territory.[10]

The Self Sufficiency Standard is a benchmark often used to assess how much income a household needs to live without assistance in Pennsylvania. This tool measures the income that a family must earn to meet their basic needs and consists of the combined cost of 6 basic needs – housing, child care, food, health care, transportation, and taxes – without the help of public subsidies.[11] Unlike the federal poverty level, which does not change based on geographic location or family composition, the Self Sufficiency Standard accounts for the varied costs of these six basic needs in different geographical areas and for differently aged household members.[12] In 2021, the average Self Sufficiency Standard for a family of four in the Pennsylvania counties served by

[9] U.S. Dept. of Health and Human Services, 2022 U.S. Federal Poverty Guidelines, available at https://aspe.hhs.gov/topics/poverty-economic-mobility/poverty-guidelines
[10] Self Sufficiency Standard, http://www.selfsufficiencystandard.org/Pennsylvania.
[11] See PathWays PA, Overlooked and Undercounted 2019 Brief: Struggling to Make Ends Meet in Pennsylvania, available at: https://pathwayspa.org/wp-content/uploads/2020/01/PA2019_OverlookedUndercounted_Web.pdf
[12] See PathWays PA, Overlooked and Undercounted, How the Great Recession Impacted Household Self-Sufficiency in Pennsylvania, available at: http://www.selfsufficiencystandard.org/sites/default/files/selfsuff/docs/PA2012.pdf.

UGI was $62,617 – which is over $20,000 more than a household with income at 150% FPL makes in a given year.[13] Most of UGI's confirmed low income customers do not have income that is even close to these numbers. The average annual income for UGI's confirmed low income customers is just $12,084.[14] The average income for low income customers actively enrolled in UGI's Customer Assistance Program (CAP) is just $14,526.[15] Falling nearly $50,000 short of the average self-sufficiency standard in UGI's territory, these customers' household incomes are less than a quarter of the approximately $62,617 needed to be self-sufficient and live without financial assistance in UGI's service territory. Any increase in the cost of necessities, including the rates for natural gas for heating, cooking, and hot water, will result in increased unaffordability for low and moderate income households, and will likely result in a corresponding increased rate of involuntary service terminations and uncollectible expenses.

Q: How would UGI's proposed rate increase impact low-income households?

A: Low-income families struggle to make ends meet each month and are often forced to choose between critical necessities; thus, any increase in costs for essential services, like natural gas, will severely impact these households forcing many to make impossible trade-offs between paying for shelter, food, utilities, or other basic needs. UGI's proposed *average* monthly increase from $98.62 to $108.01 per month, an increase of $9.39 per month ($112.68 per year) is a substantial increase in basic living expenses even for many moderate income households. For low-

[14] CAUSE-PA to UGI I-15. Note that the average annual income for UGI's confirmed low income customers has dropped from $18,533 2020 to 12,084 in 2022; see Pa. PUC v. UGI Gas of Pennsylvania, Inc., Docket No. R-2019-3015162, CAUSE-PA St. 1, Direct Testimony of Mitchell Miller, at 13 (Submitted May 22, 2020).

[15] CAUSE-PA to UGI I- 16.

income households who already struggle to afford their monthly bills, the effects of the increase will impact their ability to connect to, maintain, and afford natural gas service.

To further contextualize the impact of the proposed increase on low-income households, it is helpful to look at the relative energy burden (the percentage of income a household pays for energy costs) of low-income households. For natural gas customers, the energy burden has two components, their electric bill burden and their natural gas bill burden. To be affordable, a household's total housing costs – *including utility costs* – should account for no more than 30% of the household's total income.[16] But across Pennsylvania, households with income at or below 150% FPL pay 9% or more of their income on *energy costs alone*, with households at or below 50% FPL paying 30% of their annual income simply for their home energy bills.[17] In comparison, the Commission's Bureau of Consumer Services (BCS) estimates that the combined energy burden of Pennsylvania's residential customers as a whole is roughly 4% of their household income (not including CAP customers).[18]

The average annual income for UGI's confirmed low income customers is $12,084, or $1,007 per month.[19] UGI's proposed rate increase would increase the total bill for the average residential heating customer from $98.62 to $108.01 per month.[20] If approved, the average energy burden for UGI's confirmed low income customers would increase from 9.8% to 10.7%, *not*

[19] CAUSE-PA I-15.

[20] UGI St. 1 at 7.

including their electric bill burden. The energy burden for these customers is already far above what is considered affordable, and UGI proposes to raise it even higher.

Even with bill assistance through CAP, many of UGI's low-income consumers still face disproportionately high energy burdens.[21] In 2021, the natural gas bill burden for UGI CAP participants ranged between a low of 4.88% to a high of 15.15%.[22] It is worth noting that these excessive bill burdens were for natural gas service only – *not including the additional cost of their electric bill burden*. Notably, CAP only reaches a small portion of the eligible population. As of December 2021, only 22,025 of UGI's low income customers were enrolled in CAP,[23] which was only 28% of UGI's confirmed low-income customers[24] and 14% of its estimated low-income customers.[25] In other words, between 72-86% of UGI's low-income customers will bear the full impact of the proposed rate increase – without assistance from CAP.

The overwhelming energy burden on low-income households makes it difficult to pay for other basic necessities; has substantial and long-term impacts on mental and physical health; creates serious risks to the household and the larger community; and negatively impacts the greater economy.[26] According to the U.S. Energy Information Administration, in 2020, approximately one third of households surveyed reported household energy insecurity and nearly a quarter of households reported that they reduce or forego other critical necessities like food and medicine to afford their home energy costs.[27] In a 2018 survey conducted by the National Energy Assistance

[27] RECS Survey, Table HC11.1 Household energy insecurity, 2020.

Directors' Association, 72% of LIHEAP recipients reported foregoing other necessities to afford energy, and 26% reported keeping their home at unsafe or unhealthy temperatures.[28]

Ultimately, an increase in rates for natural gas service such as the increase proposed here will necessarily result in increased unaffordability for vulnerable households and is likely to result in a corresponding increase in involuntary payment-related terminations and, in turn, uncollectible expenses borne by all residential ratepayers. These impacts can and do have a deep and lasting impact on the health and wellbeing of those in the household and the welfare of the entire community.[29]

Q: Is there other evidence that UGI's low-income customers already struggle to afford and maintain natural gas service – even before any rate increase is approved?

A: Yes. There are strong indicators that service is already unaffordable. UGI's low-income customers are disproportionately payment troubled and carry a disproportionate amount of residential consumer debt to the Company. These indicators demonstrate that UGI's low-income consumers already struggle to pay for natural gas service and will likely experience increased payment trouble if UGI's proposed rate increase is approved.

According to the 2020 Universal Service Report, 97.2% of UGI's payment troubled customers are confirmed low income customers, which is substantially higher than the industry average 72.6% and is the highest among all reporting natural gas distribution companies

[28] NEADA Survey at 17, 20.
[29] See id. When a family is unable to use their primary heating system, they often resort to dangerous, high usage, and high-cost alternative heating methods such as electric space-heaters, electric stoves, and/or portable generators, which increases the risk of carbon monoxide poisoning and house fires – placing themselves and the greater community at risk of harm. See Nat'l Fire Protection Ass'n, Fire Analysis & Research Division, Home Fires Involving Heating Equipment, at 1 (Dec. 2018) (finding that space heaters cause 44% of all home heating related fires, and 86% of deaths caused by home heating related fires).

(NGDCs).[30] The fact that nearly all of UGI's payment troubled customers are confirmed low income customers is particularly troubling because only approximately 13% of UGI's residential customers are confirmed low-income,[31] which is well below the industry average and the second lowest among NGDCs.[32] The number of low income customers experiencing payment trouble will likely worsen if UGI's proposed rate increase is approved without adopting targeted measures to mitigate the impact of the increase on low-income households.

UGI's confirmed low-income customers are not only disproportionately payment troubled, but they also carry a disproportionate percentage of customer debt compared to residential customers as a group. As of March 2022, approximately 30% of confirmed low-income customers were in debt to UGI, compared to just 11% of general residential customers.[33] Further, even though confirmed low-income customers only represent approximately 13% of UGI's residential ratepayers, they represent 38% of customers in debt[34] and carry a large majority (66%) of total dollars owed.[35]

Q: Did UGI make any changes to its policies and procedures impacting low income customers in response to the COVID-19 pandemic?

A: Yes. On March 13, 2020, the Commission issued an Emergency Order placing a moratorium on utility terminations due to the emergence of the COVID-19 pandemic.[36] Beginning March 18, 2020, UGI ceased removing customers from CAP for failure to recertify their income

[30] 2020 Universal Service Report at 11.
[31] See OCA to UGI II-17, 18, 19 (As of Dec. 2021, UGI reported 610,158 residential, 153,437 estimated low income, and 78,450 confirmed low income customers.).
[32] 2020 Universal Service Report at 6.
[33] CAUSE-PA to UGI IV-14, Attach.
[34] Id. (As of March 2022, 26,100 confirmed low income customers in debt out of 68,439 total residential customers in debt).
[35] Id. (As of March 2022, $26,301,342 of total residential debt belonged to confirmed low income customers out of $39,686,285 total residential dollars in debt).
[36] Pa. PUC Emergency COVID-19 Moratorium Order, Docket M-2020-3019244.

and instructed Community Based Organizations (CBOs) to accept telephonic "signatures" for CAP program authorizations.[37] On March 24, 2020, the Company began waiving all late payment charges.[38] UGI also implemented a Phase I Emergency Relief Program (ERP) to assist natural gas customers impacted by the Pandemic that provided grants of up to $400 for residential customers and ran from October through December 2020.[39] UGI's proposal for Phase II ERP was denied by the Commission, and the Company subsequently resumed normal low-income activities in July 2021.[40]

Q: How have low income customers been impacted by the expiration of the emergency COVID-19 measures?

A: While the emergency measures taken by the Commission and UGI undoubtedly helped UGI's customers maintain service despite the public health emergency and initial economic fallout of the COVID-19 pandemic, the expiration of these measures has disproportionately impacted UGI's low income customers, resulting in increased low income termination rates, debt, and CAP removals. After the discontinuance of the emergency COVID-19 measures, UGI's confirmed low income termination rate, CAP termination rate, and number of CAP removals have significantly increased compared to pre-COVID levels. As of June 2021, UGI resumed removing customers from CAP for failure to recertify.[41] From June 2021 through January 2022, 4,361 customers were removed from CAP for failure to recertify.[42] These 4,361 customers represent 18% of CAP customers that were enrolled as of June 2021.[43] For reference, only 380 customers were removed

[37] UGI St. 1 at 12.
[38] Id.
[39] UGI St. 1 at 15-16.
[40] Id.
[41] OCA to UGI II-44.
[42] Id. at II-16, Attach.
[43] Id. at II-15, Attach.

for failure to recertify in all of 2019.[44] Ultimately, many of these customers did not reenroll, as UGI's total CAP enrollment reduced from 24,164 in June 2021 to 20,245 in February 2022, a total decline of over 16%.[45]

The significant number of low income customers being removed from CAP as a result of recertification requirements has likely contributed to increased low income termination rates – which indicates that the decline in CAP enrollment is not due to a decline in the need for assistance. In 2021, UGI's confirmed low income termination rate was more than double its 2019 rate and its CAP termination rate was more than triple 2019 levels.[46] Meanwhile, its general residential termination rate remained similar to 2019 levels.[47] Table 1 and Table 2 show the changes to UGI's termination rates between 2019 and 2021.

TABLE 1 – 2019 UGI Termination Rates

2019	Residential Customers	Confirmed Low Income Customers	CAP Customers
Terminations	20,813[48]	1,385[49]	690[50]
Customer Count	593,709[51]	74,493[52]	23,451[53]
Termination Rate	3.5%	1.9%	2.9%

[44] OCA to UGI II-16, Attach.
[45] OCA to UGI II-15, Attach.
[46] See OCA to UGI II-15, II-16.
[47] Id.
[48] CAUSE-PA to UGI I-7.
[49] CAUSE-PA to UGI I-8.
[50] CAUSE-PA to UGI I-9.
[51] CAUSE-PA to UGI I-17.
[52] CAUSE-PA to UGI I-3.
[53] CAUSE-PA to UGI I-4.

TABLE 2 – 2021 UGI Termination Rates

2021	Residential Customers	Confirmed Low Income Customers	CAP Customers
Terminations	23,013[54]	3,848[55]	2,153[56]
Customer Count	610,158[57]	78,450[58]	22,025[59]
Termination Rate	3.8%	4.9%	9.8%

These tables show that there is a substantially higher rate of involuntary termination for low income households since the emergency pandemic measures expired. Notably, while the termination rate for residential customers remained largely consistent from 2019 to 2021, the termination rate for confirmed low income customers more than doubled and the termination rate for CAP customers more than tripled.

UGI reports that a substantial number of low income households are at risk of termination following expiration of the 2021-2022 winter termination moratorium. As of April 1, 2022, 5,840 confirmed low income customers (approximately 7%) and 4,680 CAP customers (approximately 23%) were at risk of termination; whereas approximately 5% of residential customers as a whole were at risk of termination. [60]

I note here that the explicit statutory purpose of CAP is to assist low income customers to maintain gas service to their home.[61] Yet last year, one in every ten CAP participants had their service involuntarily terminated because they could not afford to pay. The disparity in involuntary

[61] See 66 Pa. C.S. § 2202 (definition of "Universal Service and Energy Conservation").

termination rates concentrated across UGI's low income customer base underscores the need for UGI to remediate rate unaffordability by further strengthening the availability and assistance provided to low income consumers through its universal service programs to offset unaffordability at both existing and proposed rates.

Q: How does the involuntary termination of natural gas service impact a household?

A: Loss of natural gas service has a deep and lasting impact on the health and wellbeing of the entire household and the community as a whole and is a common catalyst to homelessness.[62] When a family is unable to use a primary heating system, they often resort to dangerous, high usage / high cost heating methods – such as electric space-heaters, electric stoves, and/or portable generators – which increases the risk of carbon monoxide poisoning and house fires.[63] Heating equipment is a leading cause of fires in U.S. homes.[64] Space heaters are most often responsible for home heating equipment fires, accounting for more than two in five fires, as well as the vast majority of the deaths and injuries in home fires caused by heating equipment.[65]As of February 2022, UGI reported that 344 of its residential customers were *known* to be without a central heating source in the winter months, and 25 households were *known* to be using a potentially unsafe alternative heating source.[66]

UGI must take steps to protect its customers from the harsh consequences of its proposed rate increase. I will make several recommendations later in my testimony that will enable UGI to better protect these vulnerable customers.

II. UGI UNIVERSAL SERVICE PROGRAMS

Q: Please briefly describe UGI's Universal Service Programs.

A: As required by Commission regulations, UGI has established a Universal Service and Energy Conservation Plan (USECP).[67] UGI's universal service programs include (1) a Customer Assistance Program (CAP), (2) a Hardship Fund (Operation Share), (3) a Low Income Usage Reduction Program (LIURP), and (4) a Customer Assistance and Referral Evaluation Services (CARES).[68] In this section, I will address UGI's CAP, LIURP, and Operation Share programs and provide recommendations for how UGI should improve each of these programs to better address the need for assistance for UGI's low income customers to remediate rate unaffordability at both existing and proposed rates.

a. Customer Assistance Program (CAP)

Q: Are customers who are enrolled in the UGI's Customer Assistance Program (CAP) insulated from the financial impact of the rate increase?

A: The answer to this question differs from customer to customer and depends on the type of CAP payment plan a customer is assigned. UGI currently has three types of CAP rates: (1) a percentage of income (PIP) rate, which is calculated based on a fixed percentage of the customer's

[67] UGI 2020-2025 Universal Service and Energy Conservation Plan (USECP), Docket No M-2017-2598190 (2020-2025 USECP).
[68] Id. at 2.

income[69]; (2) an average bill rate, which is based on the customer's average 12-month bill; and (3) a minimum bill, which is set at $25 for heating CAP customers and $15 for non-heating CAP customers.[70] Once a customer enrolls in CAP, and a CAP rate is assigned, UGI adjusts the customer's rate on a quarterly basis to reflect the most recently applicable rates, usage, and income data available.[71]

About half (49%) of UGI's CAP customers receive a PIP or minimum bill CAP rate.[72] These CAP participants will be largely insulated from the financial impact of the proposed rate increase, assuming they can meet the recertification requirements and other obligations necessary to remain in the program.[73] That said, if rates are increased as proposed, the subsidy necessary to assist CAP participants with a PIP or minimum bill CAP rate will increase, which will consequently increase the cost of CAP to other residential ratepayers – including for those whose income is over 150% FPL but are nevertheless well below the self-sufficiency standard (discussed above).

The remaining 51% of CAP customers have CAP rates set according to their average bill rate. These CAP participants are not insulated from the impact of UGI's proposed rate increase and will experience the full financial impact of UGI's proposed rate increase.[74] UGI's quarterly CAP rate adjustments will shift some customers who are currently billed at the average bill rate

---

[69] 2020-2025 USECP at 16 (Currently, UGI CAP customers with income between 0-50% FPL are billed at 7% of the household's monthly income; those with income between 51-100% FPL are billed at 8% of the household's monthly income; and those with income between 101-150% FPL are billed at 9% of the household's monthly income.).

[70] 2020-2025 USECP at 16-17.

[71] <u>See</u> UGI 2019 Rate Case, Docket No. R-2018-3006814, Joint Petition for Settlement at ¶ 47:

> On a quarterly basis, UGI Gas will review CAP rates for those enrolled in the average bill or percentage of income CAP rate plans to determine whether a more affordable rate plan is available. To the extent the CAP customer qualifies, the CAP customer's applicable CAP rate will be adjusted to the lowest available rate at the time of review.

[72] CAUSE-PA to UGI I-1.

[73] <u>Id.</u>

[74] <u>Id.</u>

into the percentage of income payment (PIP) category – which will help to limit (*but not eliminate*) the overall impact of the rate increase. However, customers transitioned from the average bill rate to the percentage of income bill rate as a result of the rate increase will still pay more because, prior to the rate increase, the average bill payment would have been less expensive than their applicable percentage of income will be after the rate increase. Of course, CAP customers who *remain* in the average bill rate category will experience the full, unmitigated impact of the rate increase.

Q: Are all low-income customers enrolled in CAP?

A: No. Less than a third of UGI's confirmed low-income customers are enrolled in CAP. As of December 2021, only 22,025 customers were enrolled in CAP,[75] which was only 28% of UGI's confirmed low-income customers[76] and 14% of its estimated low-income customers.[77] Thus, between 72-86% of UGI's low-income customers are left to bear the full impact of the proposed rate increase.

As I explained above, UGI's CAP enrollment and participation rate dropped significantly when the Company reinstated CAP recertification requirements after the expiration of the Commission's COVID-19 Emergency Order. However, even before the COVID-19 pandemic, UGI had a consistently lower CAP participation rate compared to the industry average.[78] Table 3 shows the CAP enrollment rate for UGI North and UGI South compared with the NGDC average over a 10-year period.[79]

[75] OCA to UGI II-15, Attachment.
[76] Id. at II-17 (78,450 confirmed low income as of Dec. 2021).
[77] Id. (153,437 estimated low income customers as of Dec. 2021).
[78] OCA to UGI II-16.
[79] *Note*: On Oct. 4, 2019, at Docket No. R-2018-3006814, et al., the Commission approved the merger of the UGI Utilities, Inc. separate rate districts – UGI South, UGI North, and UGI Central – into one rate district existing as

TABLE 3: CAP Participation Rate[80]

	2009	**2010**	**2011**	**2012**	**2013**	**2014**	**2015**	**2016**	**2017**	**2018**	**2019**
UGI North	19%	22%	18%	14%	14%	22%	25%	25%	24%	26%	29%
UGI South	24%	21%	17%	13%	11%	18%	21%	23%	24%	25%	31%
NGDC Avg.	40%	41%	40%	37%	36%	37%	35%	34%	34%	45%	34%

In 2020, UGI's CAP participation rate was 31% and the NGDC industry average CAP participation rate was 36.1%.[81] In 2021, UGI's CAP participation rate dropped to 28%.[82]

UGI's CAP participation rates are low compared to average CAP participation rates amongst other NGDCs in the Commonwealth and highlight the need for critical improvements to CAP outreach and enrollment processes to reach a greater number of households in need of assistance to access and maintain safe and affordable natural gas services to their homes. This is especially true if UGI's proposed rate increase is approved, as even more households will need assistance to keep up with increasing rates.

Q: Has UGI taken any steps that you believe will help improve its CAP participation rate?

UGI Utilities, Inc. – Gas Division. Although this change took effect when UGI's amended tariff became effective on Oct. 11, 2019, data reported based on the combined rate districts did not begin until Jan. 1, 2020. Prior to the merger, UGI Central was not subject to Universal Service Reporting requirements. See 2020 Universal Service Report at 1, fn. 9.

[80] The CAP enrollment rate is the total of CAP customers as of December 31 of the given year, divided by the number of confirmed low-income customers. CAP enrollment rates were collected from the Commission's Universal Service Programs & Collections Performance Reports (hereinafter Universal Service Reports). The last publicly available CAP enrollment data was released in December 2019 for the 2018 calendar year. See 2020 Universal Service Report at 58; 2018 Universal Service Report at 52; 2017 Universal Service Report at 51; 2016 Universal Service Report at 50; 2015 Universal Service Report at 42; 2014 Universal Service Report at 42; 2013 Universal Service Report at 37; 2011 Universal Service Report at 40; 2009 Universal Service Report at 39. Note that percentages were rounded to the nearest whole number.

[81] 2020 Universal Service Report at 58.

[82] See OCA to UGI II-15,17 (22,025 CAP customers and 78,450 CLI customers as of Dec. 2021).

A: Yes. I believe that adopting the Commission's recommended maximum CAP energy burdens will aid in the goal toward achieving affordability and, in turn, increase participation rates of UGI's CAP. On May 21, 2020, UGI filed a petition requesting to modify its USECP to reduce its maximum PIP rate.[83] In this petition, the Company sought to update its USECP to reflect the Commission's revised CAP Policy Statement,[84] including adopting the Commission's maximum CAP energy burden standards of 4% for customers with income at or below 50% FPL and 6% for customers with income between 51-150% FPL. While UGI's petition is currently pending at a separate docket, I recommend that UGI be required to implement the reduced maximum energy burden standards proposed therein as a condition to approval of any rate increase in this proceeding. Reducing the maximum CAP energy burden thresholds in this proceeding will help to address and remediate deep rate unaffordability for low income customers at both existing and proposed rates.

Q: Do you have additional recommendations that will help improve UGI's CAP participation rate?

A: Yes. I recommend that UGI take the following steps to help increase CAP participation and ensure that the program reaches more customers in need of assistance:

- ***UGI should simplify enrollment in CAP for non-CAP Low Income Home Energy Assistance Program (LIHEAP) recipients.***

In the Settlement for its 2020 rate case, as a temporary measure in response to the COVID-19 pandemic, UGI agreed to conduct enhanced customer screening to determine CAP and LIHEAP eligibility, to auto-enroll non-CAP LIHEAP recipients in CAP, and to generate pre-populated

[83] UGI Addendum to 2020-2025 USECP, Docket No. M-2017-2598190, May 1, 2020 (UGI PIP Petition).
[84] 52 Pa. Code § 69.261 et seq.

LIHEAP applications for non-LIHEAP CAP customers.[85] Although these policies were adopted by UGI as temporary emergency-based changes to address the COVID-19 pandemic, these policies continue to be vital to help ensure that low income customers are able to access all needed assistance programs for which they are eligible. Specifically, LIHEAP recipients have already submitted documentation to the Pennsylvania Department of Human Services (DHS) verifying that their income is at or below 150% FPL.[86] They should not be forced to jump through additional unnecessary hoops to submit that same documentation to enroll in CAP, which has the same income requirements.

I recommend that, within 180 days of a final order in this case, UGI establish a simplified process for non-CAP LIHEAP recipients to enroll in CAP similar to the process established pursuant to the 2020 rate case settlement. To that end, within 90 days of a final order in this case, UGI should survey all non-CAP LIHEAP recipients to better understand why they have not enrolled in CAP and include a prepopulated CAP application with the survey. UGI should present the results of the survey to its Universal Service Advisory Committee to gather input and suggestions for how to effectively streamline cross-program enrollment while avoiding potential unintended consequences.

Additionally, to help leverage additional LIHEAP funds, I also recommend that UGI reinstitute its practice of generating pre-populated LIHEAP applications for all non-LIHEAP CAP customers.

[85] Pa. PUC v. UGI, R-2019-3015162, Joint Pet. for Settlement at ¶ 27(c)(ii) (submitted Aug. 3, 2020).
[86] Pennsylvania Low Income Home Energy Assistance Program (LIHEAP) 2022 State Plan, available at: https://www.dhs.pa.gov/Services/Assistance/Documents/Heating%20Assistance_LIHEAP/2022%20LIHEAP%20State%20Plan_FINAL%20Approved.pdf

- ***UGI should refer all customers that call seeking a payment arrangement to apply for CAP and other Universal Service Programs and should actively assist with enrollment.***

It is unclear whether and how UGI is currently referring customers seeking a payment arrangement to apply for available universal service programs. In 2020, UGI reported 9,835 confirmed low income customers were in payment arrangements attempting to pay down approximately $19.5 million dollars in debt.[87] These confirmed low income customers represented approximately 77% of residential customers on payment arrangements and 95% of all residential dollars in debt on a payment arrangement.[88] The Public Utility Code specifically requires that whenever customer or applicant contacts a public utility to make a payment agreement, the public utility must, "[r]efer the customer or applicant to the universal service program administrator of the public utility to determine eligibility for a program and to apply for enrollment in a program."[89] The utility must also, "[p]rovide information about the public utility's universal service programs, including a customer assistance program."[90]

When a customer falls behind on their bill or an applicant is denied service due to an outstanding balance, their first instinct is often to call the utility and request a payment arrangement. These customers may be newly low income as a result of a financial set back and unaware that they qualify for CAP and/or other universal service programs, which will help address their arrearage and reduce their monthly bill.

UGI should be required to screen household income of all residential customers who call requesting a payment plan and should refer potentially income-eligible customers to apply for CAP

[87] 2020 Universal Service Report at 11, 30.
[88] Id. (Dollars in Debt on an Arrangement: UGI reports $20,498,260 residential and $19,462,068 confirmed low income.).
[89] 66 Pa. C.S. §1410.1(2).
[90] 66 Pa. C.S. §1410.1(1).

and other universal service programs before entering a payment arrangement. To streamline the referral process, UGI should either assist the customer to enroll in a universal service program over the phone or should provide a "warm transfer" to UGI's universal service program administrator to complete the application process. UGI should develop call scripts and call center training to implement this referral process and ensure that low income customers who request a payment plan are provided information, referred to, and assisted to enroll in universal services programs. Additionally, customers at risk of termination who are transferred through this warm referral process should have a hold placed on termination while the CAP application is pending.

- ***UGI should conduct outreach to all customers who have been removed from CAP for failure to recertify income since the expiration of the Commission's Emergency COVID-19 Order.***

As I explained above, UGI suspended CAP recertifications for the duration of the Commission's COVID-19 Emergency Order.[91] Subsequently, when UGI's recertification requirements resumed, nearly 3,000 (12%) of CAP customers were removed from CAP for failure to recertify in a single year.[92] These removals had a significant impact on UGI's CAP enrollment, which dropped from 24,241 in January 2021 to 22,025 in December 2021 - a 9% annual reduction.[93] The large number of CAP removals also negatively impacted UGI's CAP participation rate, which dropped from 31% in 2020 to 28% in 2021. I recommend that UGI conduct affirmative outreach to all households that have been removed from CAP for failure to recertify and encourage them to reapply. UGI should conduct initial outreach via telephone calls and text messages and should send follow up letters with postage-paid envelopes for customers to more easily complete

[91] Pa. PUC v. UGI, R-2019-3015162, Joint Pet. for Settlement at ¶ 27(c)(ii).
[92] OCA to UGI II-16.
[93] Id. at II-15, Attach.

the income recertification requirements. UGI should also coordinate with their Universal Service Advisory Group for additional recommendations to reach these customers.

For those who successfully complete recertification and can show that they had received LIHEAP or were otherwise eligible for CAP on the date of their removal, UGI should recertify CAP enrollment back to the date of program removal – allowing households to receive retroactive bill subsidy and arrearage forgiveness for the time between removal and recertification.

b. Low Income Usage Reduction Program (LIURP)

Q: Please briefly describe the aspects of UGI's LIURP that you wish to address.

A: UGI's LIURP is a critical universal service program designed to improve bill affordability, reduce arrearages and termination rates over the long term, and work in tandem with CAP to help reduce uncontrollably high usage attributable to home energy inefficiencies that low income households cannot afford to address on their own.[94] Throughout Pennsylvania, natural gas heating customers who receive LIURP services achieve annual bill savings that average approximately $304 per year - or roughly 16.6%.[95] In 2019, UGI's average bill savings per LIURP job was 20-25%.[96] Bill reductions through comprehensive energy efficiency and conservation efforts improve affordability and help to ensure that low income customers remain connected to service at more affordable rates.

Despite the value of UGI's LIURP and its impressive results, UGI's LIURP is not operating at a rate sufficient to fulfill the estimated need for comprehensive usage reduction services within a reasonable amount of time.[97] In 2021, LIURP services were provided to just 378 households

[94] 52 Pa. Code § 58.1; 2020-2025 USECP at 25.
[95] 2020 Universal Service Report at 56-57.
[96] CAUSE-PA to UGI II-16.
[97] CAUSE-PA to UGI I-13.

across its service territory.[98] According to UGI's most recent LIURP needs assessment, it will take several decades to serve identified needs across its service territory.[99] In UGI's former South District, it would take 25 years to serve estimated need; while in UGI's former North District, it would take an estimated 40 years to serve those in need.[100] Despite this overwhelming unmet need for services, UGI has historically underspent its LIURP budget in each geographic region.[101] In 2021, UGI had over $1 million left in its LIURP budget across its three rate divisions.[102]

LIURP services are critical to assisting low income households to move toward energy affordability by improving their energy efficiency and reducing their monthly bills, and it is critical that UGI fully expend available LIURP funds and allocate additional needed funding to meet the needs of its low income customers who are currently in need of weatherization and energy efficiency services.

Q: Do you have recommendations that would help UGI's LIURP program reach a greater number of homes in need of service?

A: Yes. I recommend that UGI reduce its LIURP minimum usage threshold for households at or below 150% FPL. I also recommend that UGI increase its annual LIURP budget by a percentage at least equal to the average residential bill impact of any approved residential rate increase. I will outline these recommendations in further detail below.

---

[98] CAUSE-PA to UGI I-10, Attach.
[99] Id. at I-13(b) (The needs assessment was performed on two of the three UGI Gas territories. The former South District would take 25 years, and the former North District would take 40 years.).
[100] Id.
[101] CAUSE-Pa to UGI I-14.
[102] Id.

- ***UGI should lower its LIURP minimum usage threshold.***

The minimum usage threshold for eligibility for UGI's LIURP services requires that, in addition to meeting the income based eligibility criteria for the program, applicants must also have usage of at least 30% above the average usage for UGI customers.[103] However, many low income customers in need of usage reduction services may not meet this standard because they live in smaller homes and apartments. These customers may have lower overall usage than non-low income residential ratepayers – yet may still have relatively higher usage per square foot of living space. These customers would benefit from comprehensive usage reduction services because they have higher usage relative to the size of their home due to older inefficient housing stock.

In the Settlement for its 2020 rate case, UGI agreed to adjust its LIURP minimum usage threshold to help ramp up its LIURP production after months of installation delays due to the COVID-19 pandemic.[104] For the duration of its 2020 LIURP program year, UGI reduced its LIURP minimum usage threshold to reflect the average usage of residential customers (no longer average usage + 30%) for customers at or below 150% FPL.[105] In order to address the continued underspending of LIURP, I recommend that UGI continue this appropriate modification and adopt this reduced LIURP minimum usage threshold. This action will enable low income households who currently need to improve their energy efficiency and reduce their monthly bills be able to reduce and manage their consumption in a cost effective manner.

[104] Pa. PUC v. UGI, Docket No. R-2019-3015162, Joint Pet. for Settlement at 13 (submitted August 3, 2020).
[105] Id.

- ***At a minimum, UGI should increase its annual LIURP budget commiserate with any approved residential rate increase.***

To address the gap between need and available budget, and to help mitigate the impact of the rate increase on low-income families with uncontrollably high usage, I recommend that – at a minimum – UGI should be required to increase its overall LIURP budget by a percentage equal to the percentage increase of any approved residential rate increase. I recommend that these additional funds be targeted proportionally to the existing need in each UGI service district to even out the timeframe for addressing the existing need identified in UGI's needs assessment between the North and South districts.

As proposed, UGI's residential rate hike will increase the bill of a residential customer with average usage from $98.62 to $108.01 per month, or by 9.5%.[106] The Company's current total LIURP budget is $3,705,350.[107] Thus, if UGI's rates were approved as proposed, UGI's LIURP budget should be increased, at a minimum, by 9.5% or $352,008 – distributed proportionally according to the existing need in UGI's former North, South, and Central rate districts.

c. Operation Share

Q: Please briefly describe the aspects of UGI's Operation Share that you wish to address.

A: In response to the COVID-19 pandemic, UGI made several temporary adjustments to its universal service programs, including the provision of an additional $2 million in funding for the Operation Share program, expanded income eligibility up to 250% FPL, and increased the maximum grant size from $400 to $600.[108] Subsequently, Operation Share grants increased by

[106] UGI St. 1 at 7.
[107] CAUSE-PA to UGI IV-3.
[108] UGI St. 1 at 13; see also Pa. PUC v. UGI, R-2019-3015162, Joint Pet. for Settlement at ¶ 28(c).

605%, from 1,034 grants totaling $302,179 in 2019 to 5,192 grants totaling $2,130,738 in 2021.[109] However, since the expiration of the Commission's Emergency COVID-19 Order, the program has not been effective at curbing the dramatic increase in low income termination rates.

Despite the availability of additional Operation Share funds and the increase in the number of grants awarded, UGI low income customers still experienced a disproportionate increase in termination rates. As I explained above, in 2021, UGI's confirmed low income termination rate was more than double its 2019 rate and its CAP termination rate was more than triple 2019 levels, while UGI's general residential termination rate remained in line with 2019 levels.[110] At the end of the 2021-2022 winter moratorium, 7% of confirmed low income customers and 23% of CAP customers were at risk of termination, compared to only 5% of residential customers as a group.[111] This disproportionate increase in low income termination rates occurred despite the fact that the Operation Share program was carrying a significantly increased budget throughout 2021. As of January 2022, $1,916,100 remained in the Operation Share Budget, which is nearly quadruple the amount carried through all of 2019.[112] The significant amount of unspent Operation Share funds remaining in the Operation Share Budget, despite the high termination rates amongst confirmed low income and CAP customers, highlights the need for substantial improvements in UGI's targeting and disseminating these grants.

Q: Do you have any recommendations regarding UGI's Operation Share Program?

A: Yes. I recommend that UGI take additional steps to refocus the Operation Share program to address the steep increase in low income termination rates and more appropriately target its

[112] CAUSE-PA I-26 (a), Attach.

Operation Share grants to help customers most in need of assistance. I will discuss each of these recommendations in detail below.

- ***Increase the maximum grant amount for customers at or below 150% FPL.***

I recommend that UGI increase the maximum grant amount available to low income households at risk of termination. In furtherance of the explicit statutory purpose of CAP to assist low income customers to maintain gas service to their home,[113] I recommend that UGI increase the maximum grant amount for customers at risk of termination in the lowest income tiers to ensure that customers with least ability to pay are provided the most assistance. Thus, I recommend that the maximum grant amounts be increased to $600 for customers with income 101-150% FPL, $700 for customers with income 51-100%, and $800 for customers with income at or below 50% FPL.

- ***UGI should increase its annual Operation Share contribution by an amount that is at least proportional to its residential rate increase.***

As explained above, low income customers already struggle to afford service and are at a greater risk of service termination compared to general residential customers. Any increase to the cost of essential utility service, such as UGI's currently proposed rate increase, will worsen these struggles and lead to an increased threat of termination for these customers. Thus, I recommend that UGI make additional Operation Share funds available that are, at a minimum, proportional to any rate increase approved in this proceeding. UGI's low income termination rates are soaring, and the currently available funds could quickly be depleted if this trend continues. Increasing the Company's annual Operation Share contributions at a percentage that is at least commensurate with the percentage of any residential bill increase that may result from this proceeding will help

[113] See 66 Pa. C.S. § 2202 (Definition of "Universal Service and Energy Conservation").

the program budget better keep pace with the cost of residential service and that the policies, protections, and services which are currently in place to avoid termination are not as significantly reduced as a result of any potential rate increase.

III. PROPOSED RATE DESIGN

Q: Please briefly describe the aspects of UGI's residential rate design proposal that you wish to address.

A: Through this proceeding, UGI seeks to increase its fixed monthly residential customer charge from $14.60 to $19.95, an increase of $5.35 or 36.6%.[114] UGI also proposes a Weather Normalization Adjustment (WNA), which is designed to decouple UGI's sales revenue from changes in weather.[115]

a. Fixed Customer Charge

Q: How would UGI's proposed increase to its fixed monthly residential customer charge impact low income households?

A: This level of increase to the fixed charge will undermine the ability of consumers to control costs through energy efficiency, conservation, and consumption reduction, which is particularly problematic for low-income customers who already struggle to pay for natural gas service and rely on offsetting high bills through careful conservation and usage reduction.

---

[114] UGI St. 8 at 20.
[115] UGI St. 10 at 6.

Q: Would UGI's proposed increase to the fixed charge affect the Company's LIURP program?

A: Yes. UGI's proposal undermines the explicit goals of the Low-Income Usage Reduction Program (LIURP) to "reduce residential energy bills." [116] By reducing the amount of bill reduction that can be obtained through LIURP measures, the proposed increase to the fixed charge threatens the continued effectiveness of ratepayer investments intended to reduce energy consumption, delinquencies, collections, and uncollectible costs. Thus, the proposed increase to the fixed charge will, in turn, impact the ability of LIURP to "decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs."[117] This would be a perverse and unreasonable result. LIURP is a statutorily mandated program to be provided by the Companies to help low income customers reduce or manage their energy consumption in a cost-effective manner. Any increase to the fixed charge would both undermine the goal of LIURP and make the existing program less cost effective.

As explained above, UGI's LIURP is effective at achieving these goals and producing meaningful average bill savings of 20-25% for the low income households who have been able to receive services.[118] The ability to save money through energy efficiency is tied directly to a bill structure that bases costs on throughput. But as more residential customer costs are shifted to the fixed charge, the achievable bill savings – and the corresponding impact on bill payment behavior – will erode.

---

[116] 52 Pa. Code § 58.1 ("The programs are intended to assist low-income customers conserve energy and reduce residential energy bills. The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs.").
[117] Id.
[118] CAUSE-PA to UGI II-16.

The current customer charge ($14.60) makes up approximately 14.8% of the current average residential bill ($98.62).[119] If UGI's proposed rate increase and fixed customer charge are approved, the $19.95 fixed charge would equal approximately 18.5% of the average bill ($108.01).[120] In other words, if the proposed increase in the fixed customer charge is approved, UGI customers will lose the ability to control (on average) as much as 3.7% of their monthly bill ($48.00 annually based on UGI's proposed $108.01 average monthly bill) through energy conservation and consumption reduction efforts. Thus, the effect of the increased fixed charge would reduce the effectiveness of LIURP to achieve meaningful bill savings for low income consumers.

The ability to achieve bill savings through energy efficiency and conservation measures is especially important for households with income above 150% but less than 200% of poverty who are ineligible for CAP or LIHEAP but are eligible for energy efficiency and conservation services through LIURP or the federal Weatherization Assistance Program (WAP) – both of which have income guidelines of up to 200% FPL. These households need to retain the ability to reduce their monthly energy costs through adoption of comprehensive energy efficiency and conservation programming.

Given low income households are disproportionately at risk of termination and often lack the ability to control usage due to poor housing stock and older, less efficient appliances,[121] it is critical that they continue to have access to effective conservation tools capable of producing meaningful and lasting bill reductions. Additionally, UGI's high fixed charge proposal will

---

[119] See UGI St. 1 at 7; UGI St. 8 at 20.
[120] See Id.
[121] See ACEEE, Lifting the High Energy Burden in America's Largest Cities: How Energy Efficiency Can Improve Low-income and Underserved Communities (April 2016), available at: https://www.aceee.org/sites/default/files/publications/researchreports/u1602.pdf.

undermine the millions of ratepayer dollars that UGI is authorized to invest in energy efficiency through its voluntary Energy Efficiency and Conservation Program Plan.

Q: Do you have any recommendations that could help mitigate the effect of the proposed rate design on low-income households?

A: Yes. UGI's fixed monthly customer charges should not be increased. To the extent any increase in UGI's residential distribution rate is approved, it should be applied to the volumetric charge. This would protect the ability of low income households to lower their utility costs by reducing consumption and would preserve the effectiveness of the LIURP program at reducing customer bills and improving payment behavior.

b. Weather Normalization Adjustment (WNA)

Q: Please briefly describe the UGI's proposed WNA.

A: UGI's proposed WNA is a bill adjustment applied to certain customer classes (including residential customers) during the winter heating months that attempts to break the link between the revenue collected through the volumetric rate and the effects of variations in temperature.[122] UGI claims that the WNA would protect the utility from reduced revenue due to warmer weather and would protect customers from higher bills due to colder than normal weather.[123] However, in practice, WNAs implemented in other service territories have resulted in higher charges for residential consumers and shifted all risk of changing weather from utilities onto consumers.[124]

---

[122] UGI St. 10 at 6.
[123] Id.
[124] See Pa. PUC v. Columbia Gas of Pa., Inc., R-2020-3018835, Columbia St. 3 at 17-18 (submitted Apr. 24, 2020); See also Pa. PUC v. Philadelphia Gas Works, R-2017-2586783, PGW Annual WNA Reporting (filed Dec. 31, 2019; June 9, 2021; Jan. 6, 2022).

Q: Why do WNAs result in consistently higher bills for residential customers?

A: Utility distribution rates are based on expected throughput during normal weather. When temperatures are warmer than normal, which they have been for the last several years, WNAs result in a higher bill for residential customers. In 2019, 2020, and 2021, the weather in UGI's service territory, was 3%, 9% and 9% warmer than normal, respectively.[125] If UGI's WNA had been in place, the automatic charge would have increased residential bills every year over the past five years.[126] Table 4 shows UGI's estimated annual impact of the WNA to residential customers over the past five years at current rates:

Table 4: WNA Analysis - Estimated Impact to R/RT Customers at Current Rates[127]

Fiscal Year	Estimated Annual Impact to R/RT Customer at Current Rates
2017	$39.05
2018	$7.81
2019	$6.17
2020	$35.35
2021	$29.59

Q: Do you support adoption of the WNA in this proceeding?

A: No. UGI's proposed WNA would prevent residential customers from realizing bill savings that result from warming weather trends and would shift all weather-related risk from the utility to the consumer. Low income customers struggle to afford service and need to retain every ability to

---

[125] OCA to UGI VI-3; see also Pa. Dep. of Enviro. Protect'n, Pa. Climate Impacts Assessment 2021, (published May 202, revised July 28, 2021), available at: http://www.depgreenport.state.pa.us/elibrary/GetDocument?docId=3667348&DocName=PENNSYLVANIA%20CLIMATE%20IMPACTS%20ASSESSMENT%202021.PDF%20%20%3cspan%20style%3D%22color:green%3b%22%3e%3c/span%3e%20%3cspan%20style%3D%22color:blue%3b%22%3e%28NEW%29%3c/span%3e%204/30/2023 .

[126] CAUSE-PA to UGI II-10.

[127] Id., Attach.

realize bill savings due to reduced usage, even reduced usage due to changing weather patterns. As I explained earlier, approximately half of UGI's CAP customers are charged a CAP rate relative to their average bill which has been based upon usage and would lose the opportunity to recognize bill savings resulting from reduced usage during warmer than normal winters.

Residential customers will receive no practical benefit from implementation of the WNA. Any risk of increased bills due to colder than normal winters is outweighed by the increasing frequency of warmer winters. Further, the risk of varying bills due to colder than normal winters can be mitigated by enrollment in CAP or budget billing. While UGI touts that the WNA will produce more predictable bills, a more predictable but less affordable bill will not benefit low income customers who already struggle to afford service. Thus, I recommend that the Commission reject UGI's proposed WNA.

IV. <u>LATE FEES AND RECONNECTION FEES</u>

Q: Please briefly describe UGI's late fees and reconnection fees.

A: If a customer falls behind on their bill, UGI charges 1.5% per month on the overdue portion of the bill.[128] This is the maximum allowed under the Commission's regulations.[129] The overdue charges continue to accrue interest until either the overdue balance is satisfied or until the final bill is produced post termination.[130] If the customer falls so far behind on their bill that UGI terminates service for nonpayment, UGI charges an additional $73.00 to reconnect that customer.[131]

---

[128] UGI Tariff at 43.
[129] 52 Pa. Code §56.22(a)
[130] CAUSE-PA to UGI III-4.
[131] UGI Tariff at 46.

Q: How do late fees and reconnection fees affect low income consumers?

A: When a customer cannot afford to pay their bill, late fees function as a punitive measure, punishing those who fall behind because they are unable to afford their bills – not because they are unwilling to pay. Late fees in turn add additional costs to arrears that the customer already cannot afford to pay, which contributes to the high rate of low income terminations.[132] These regressive charges disproportionately impact low income households who cannot afford their monthly bill and, more specifically, disproportionately impact low income Black and Hispanic households, families with young children, and medically vulnerable households – all of whom are more likely to face utility insecurity.[133]

Like late fees, reconnection fees also add a substantial barrier to reconnection, resulting in low income customers experiencing longer periods of time without service. The average income for UGI's confirmed low income customers is $12,084, or just $1,007 per month.[134] UGI is proposing to increase total bill for the average residential heating customer from $98.62 to $108.01 per month, which would raise the natural gas bill burden for these customers from 9.8% to 10.7%, not including the additional burden of their electric bill. [135] If these customers are unable to pay and are subsequently terminated, UGI's $73.00 reconnection charge requires that they pay additional 7.2% or their monthly income to reconnect to service.

As I explained above, loss of natural gas service has a deep and lasting impact on the health and wellbeing of the entire household and the community as a whole, and is a common catalyst to

[132] Jasen Lo, Food or power: Energy bill late fees force tough choices, AP News, March 14, 2022, available at: https://apnews.com/article/energy-late-fees-Louisiana-Kentucky-da59030e9abc8b5271b4a13eee15f63d .
[133] Memmott, T., Carley, S., Graff, M. et al. Sociodemographic disparities in energy insecurity among low-income households before and during the COVID-19 pandemic. Nat Energy 6, 186–193 (2021), available at: https://doi.org/10.1038/s41560-020-00763-9 .
[134] CAUSE-PA to UGI I-15.
[135] UGI St. 1 at 7.

homelessness.[136] When families are unable to use a primary heating system, they often resort to dangerous heating methods that increase the risk of carbon monoxide poisoning and house fires.[137] UGI's reconnection fee increases those risks by adding additional barriers to the ability of households to reconnect to service, thus increasing the amount of time households may remain without a functioning primary heating system.

Q: Do you have any recommendations regarding UGI's late fees and reconnection fees?

A: Yes. I recommend that UGI stop charging late fees and reconnection fees to low income customers. I note that the Commission has prohibited utilities from charging security deposits to low income households due to the detrimental effect they have on those customers' ability to connect or reconnect to service.[138] UGI's late fees and reconnection fees raise similar barriers for low income customers seeking to establish and maintain affordable natural gas service in their homes. It is unjust and unreasonable to continue to penalize low income customers for not being able to pay bills that they cannot afford to pay, terminating service based on nonpayment of those charges, and ultimately adding even more charges to the bill for reconnection.

V. SUMMARY OF RECOMMENDATIONS

Q: Please summarize your recommendations.

A: I have made several recommendations throughout my testimony to address current levels of unaffordability and mitigate the financial impact of any approved rate increase on low-income

---

[138] See 52 Pa. Code § 56.32(e).

households. Specifically, I recommend that UGI take the following steps to strengthen and reform UGI's universal service programming to more effectively reach and serve low income customers:

- Adopt a process for simplified enrollment in CAP for Non-CAP Low Income Home Energy Assistance Program (LIHEAP) recipients.
- Inquire about the household income level of all customers seeking payment arrangements and provide a "warm transfer" for all potentially eligible customers to apply for CAP and other universal service programs.
- Conduct outreach to all customers who have been removed from CAP for failure to recertify since the expiration of the Commission's Emergency COVID-19 Order.
- Lower the minimum usage threshold to access energy efficiency and usage reduction services through LIURP.
- Increase the annual budget for LIURP commiserate with residential rate increase to help reduce energy usage in low income homes.
- Increase the maximum Operation Share grant amount for customers with income at or below 150% FPL.
- Increase the annual Operation Share contribution proportional to residential rate increase.

In addition to the above recommendations regarding UGI's universal service programming, I also recommended that the Commission:

- Reject UGI's proposed increase to its fixed customer charge.
- Reject UGI's proposed WNA.
- Prohibit UGI from assessing late fees and reconnection fees to confirmed low income customers.

Q: Does this conclude your direct testimony?

A: Yes.

THE COALITION FOR AFFORDABLE UTILITY SERVICE AND ENERGY EFFICIENCY IN PENNSYLVANIA

APPENDIX A

RESUME OF HARRY S. GELLER

RESUME OF HARRY S. GELLER

EDUCATIONAL BACKGROUND:

Harpur College, State University of New York at Binghamton, B.A. 1966
Washington College of Law, American University, J.D. 1969
New York University Law School, courses in Urban Affairs and Poverty Law, as part of Volunteers in Service to America (VISTA) Program 1969-1971

EMPLOYMENT:

1988 – 2015 Executive Director, Pennsylvania Utility Law Project (PULP), a project of the civil non-profit Pennsylvania Legal Aid Network. PULP is dedicated to providing technical support, information sharing, and representation to low-income individuals and organizations, assisting and advocating for the low income in utility and energy matters. Responsibilities include project oversight, case consultation, co-counseling, and participation on task forces, work groups and advisory panels, community education and training in utility and energy matters affecting the low income.

While at PULP, served in the following capacities:

- Chairman, Low-Income Home Energy Assistance Program (LIHEAP) Advisory Committee to the Secretary, Pennsylvania Department of Human Services
- Member, Pennsylvania Public Utility Commission, Consumer Advisory Council Coordinator, Pennsylvania Legal Services Utility/Energy Work Groups
- Member, Weatherization Policy Advisory Committee to the Department of Community and Economic Development
- Member, PECO Universal Service Advisory Committee and LIURP Subcommittee

1974-1987 Staff Attorney, Managing Attorney and ultimately, Executive Director of Legal Services, Incorporated (LSI), a civil legal services program serving Adams, Cumberland, Franklin and Fulton Counties. Through a restructuring with other legal services programs, LSI became part of what is now known as MidPenn Legal Services and Franklin County Legal Services.

1971-1972 Staff Attorney, New York City Legal Aid Society, Criminal Court and Supreme Court Branches, New York County.

1969-1971 Volunteer in Service to America (VISTA) assigned to the New York University Law School Project on Urban Affairs and Poverty Law.

UGI Utilities, Inc. - Gas Division
Docket No. R-2021-3030218
UGI Gas 2022 Base Rate Case
Responses to CAUSE PA Set I (1 thru 26)
Delivered on March 4, 2022

CAUSE-PA-I-1

Request:

Please identify the financial impact of the proposed increase on customers enrolled in UGI's Customer Assistance Program (CAP) by payment plan type. If you are unable to identify the financial impact, or assert that there will be no impact, please explain.

Response:

As stated in the Company's Universal Service and Energy Conservation Plan ("USECP"), which has been provided in the Company's February 5, 2020 filing at Docket No. M-2017-2598190 available on the Public Utility Commission's website, the Company's CAP participants pay a monthly CAP amount based on a percent of income, or, if the percent of income payment is greater than their average bill, the CAP participant pays a monthly CAP amount equal to their average bill. Notwithstanding the foregoing, a CAP Customer's minimum monthly payment is set at a floor of $25 for heating accounts and $15 for non-heating accounts. A CAP participant's monthly payment is fixed until the participant recertifies income (at which time it is determined whether the monthly payment amount should change).

The Company's proposed rate increase will not impact CAP payments set at a percent of income or a minimum payment. However, as of the date of this response, approximately 51% of UGI CAP customers have their CAP payment set at their average monthly bill. Upon income re-certification, these average monthly bill CAP payments could be impacted in an amount up to the approved rate increase. Also, no CAP Customer would pay more than their applicable percentage of income calculation, set forth in the Company's USECP.

As a result, UGI is unable to estimate the impact of the proposed rate increase to CAP participant's payment amounts.

CAUSE-PA-I-13

Request:

Please provide UGI's most recent LIURP needs assessment approved by the Pennsylvania Utility Commission.

a. If UGI has prepared and submitted a needs assessment that has not yet been approved, please provide a copy.

b. Assuming that UGI treats an identical number of low income units as will be treated through LIURP in the current fiscal year, and assuming no unit will be retreated, please indicate the number of years it would take to treat 100% of the low income units identified in the above requested needs assessment(s).

Response:

Please see Attachment CAUSE-PA-I-13, pg. 43 Appendix B-1.

a. Not applicable.

b. The needs assessment was performed on two of the three UGI Gas territories. The former South District would take 25 years, and the former North District would take 40 years.

Re: Universal Service and Energy Conservation Plan for the Five-Year Period January 1, 2020 – December 31, 2025; Docket No. M-2017-2598190 et al.

Dear Secretary Chiavetta:

In a November 15, 2019 Secretarial Letter, UGI Utilities, Inc. ("UGI") was directed to file and serve a further revised 2020-2025 Universal Service and Energy Conservation Plan ("USECP") within 10 days to address the following two items:

1. Clarify that income received for the benefit of a minor is not considered by UGI as income of the adult. August 8 Order at 55.

2. Adjustments to reflect the provisions and duration of the temporary and partial waivers of Sections 58.10(a)(1) and 58.11(a) as those sections and waivers directly apply to UGI North's LIURP rules relative to residential customer's inoperable gas furnaces. August 8 Order at 60, 61.

The November 15, 2019 Secretarial Letter further encouraged UGI to consult with the Bureau of Consumer Services ("BCS") on the USECP revision prior to filing.

Subsequent to the November 15, 2019 Secretarial Letter, the Company requested, and received, a short extension until December 6, 2019 to file its USECP revisions. The Company consulted with BCS on the requested revisions to its USECP and the Company herein submits a final revised USECP. The changes to the USECP filed on October 24, 2019 are indicated in redline on pages 7, 17, and 18. The Company is also including with this filing a complete clean version of the USECP.

To address the request that UGI clarify that "income received for the benefit of a minor is not considered as income of the adult," this final revised USECP includes language clarifying that the Company does not consider unearned income of a minor in its calculation of household income for the purpose of CAP eligibility.

This final version also addresses the term of the LIURP waivers granted by the Commission's August 8, 2019 Order. The August 8, 2019 stated:

> Make appropriate adjustments to the UGI North revised USECP to reflect the approved waivers of Sections 58.10(a)(1) and 58.11(a) as those sections directly apply to UGI North's LIURP rules relative to residential customers' inoperable gas furnaces. These temporary waivers will expire in five years or with UGI North's next USECP, whichever is earlier, unless an extension is expressly requested by UGI North and granted by the Commission.

August 8, 2019 Order at p. 82.

As noted in the November 15, 2019 Secretarial Letter, the Company expanded this program to all UGI Gas customers upon the elimination of rate districts in its Gas Base Rate Proceeding at Docket No. R-2018-3006814. Subsequent to the August 8th Order, the Commission extended the term of this USECP to five (5) years.[1] If the Company's next USECP is not approved within five years, the waivers will expire, if not extended pursuant to the Company's request. To maintain program continuity, the Company therefore requests in this proceeding that the Commission extend the waiver of these LIURP regulations until the approval of UGI's next USECP.

The Company has served this filing on the active parties to this docket, namely the Office of Consumer Advocate ("OCA"), the Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA"), and the Commission on Economic Opportunity ("CEO"). The parties have all affirmatively represented that they have no objections to this final version of the Company's USECP.

Very truly yours,

Danielle Jouenne
Counsel for UGI

Revised: October 24, 2019
Revised: December 6, 2019

repair and replacement projects. Should there continue to be amounts to roll over after two years, any remaining roll over amounts will roll over to UGI Gas's general LIURP budget. The August 8th Order approved UGI's petition for waiver of LURP regulation payback requirement at 52 Pa. Code § 58.11(a) and the LIURP high-use criteria at 52 Pa. Code § 58.10(a)(1). Paragraph 19 of the August 8th Order provided that these temporary waivers will expire in five years or with the Company's next USECP, whichever is earlier, unless an extension is expressly requested by the Company and granted by the Comission. (August 8th Order, p. 82) Subsequent to the August 8th Order, the Commission extended the term of this USECP to five (5) years. To maintain program continuity, the Company therefore requests that the Commission grant waiver of these regulations until the approval of UGI's next USECP.

C. NEEDS ASSESSMENT

As required by 52 Pa. Code § 62.4(b)(3), at the time of initial filing, UGI South and UGI North rate districts submitted a needs assessment in Appendix B of this Plan. The needs assessment is based on 2010 census data and 2015 UGI Gas records. Pursuant to 52 Pa. Code §§ 54.77 and 62.7, EDCs and NGDCs with less than 100,000 residential customers are not required to submit a needs assessment; therefore, UGI Electric and the former UGI Central rate district did not submit a needs assessment. Future USECPs will provide needs assessments on a combined basis for UGI Gas.

III. THE CARES PROGRAM

A. DESCRIPTION OF THE CARES PROGRAM

1. Goals and Objectives

The goal of the CARES Program is to provide personal assistance and referrals to payment-troubled customers and to help improve their delinquent bill payment problems. The CARES Program identifies special needs customers and guides them to the appropriate program or agency. CARES concentrates on, but is not exclusively for, the low-income segment that may lack the knowledge of energy conservation, budget counseling and fuel assistance programs. Unlike other USPs administered by UGI, the CARES Program is geared toward the customer who has a temporary, immediate need, such as loss of income, loss of head of household, illness or any other temporary situation resulting in an inability to pay. CARES is intended to be a short-term assistance referral program to guide a customer through a difficult time and to help inform and educate them about the available assistance. The CARES Program also provides extensive LIHEAP outreach to help increase awareness of the program and encourage all eligible households to apply for grants. Specifically, all customers who provide UGI with a copy of their PFA order are handled by CARES representatives for specific program referrals and payment options.

2. Program Design

income, as calculated above, exceeds the customer's otherwise applicable average bill amount, the customer's average bill will be set as the customer's monthly CAP payment amount.

At any time during the program should a participant's monthly income change, the monthly CAP payment amount will also be reviewed and changed, where appropriate. It is the customer's obligation to notify the company or the CAP Administering Agency of the change in income. UGI reserves the right to require that the customer provide proof of the change in income. A recertification will be processed using the updated income and historical usage to determine the new monthly CAP payment amount.

Additionally, the participant's monthly CAP bill will be reevaluated quarterly, to ensure that the participant is actively on the most affordable billing option. For example, if the customer entered into CAP either at a 7%, 8%, or 9% income level, and upon a quarterly review, the customers average bill is deemed to be the most affordable at the time of the review, the customer's new CAP will be based on their average bill until the next review.

UGI's minimum monthly CAP payment is within the suggested range set forth in the Commission's Policy Statement on Customer Assistance Programs at 52 Pa. Code § 69.265(3)(i)(A)-(C). The CAP payment for gas heating accounts is set at $25, non-heating accounts at $15, and electric heating accounts at $30.

2. Household Income Documents

To determine CAP eligibility and the appropriate CAP monthly payment, proof of income at or below 150% of FPIG must be provided by the customer to the Company. However, for customers receiving LIHEAP, who have already been determined to have income under 150% of the FPIG by DHS, the Company will accept self-cetification of income level for the purpose of calculating the customer's monthly payment and no documentation of income is required for such customers. Acceptable income documents are:

- Recent paystubs or W-2 forms
- verified copy of rent receipts for rental income
- Benefit letter or copy of bank statement for;
  - Social security
  - Pension
  - Disability
  - SSI
- Verification Letter
  - ~~Child support and/or~~ alimony support
- Unemployment determination letter
- Notarized letter stating income
- Zero income form

Additional Notes:

- ~~Child support amount should be based off Court Order unless customer can provide proof that they are receiving a different amount (Example: Bank statement).~~
- Interest does not need to be counted as income.
- UGI does not include income earned from an occupant under the age of 18, nor does it include income received for the benefit of a minor, in its calculation of household income.

3. Use of LIHEAP Grants

LIHEAP grants received will be applied consistent with the Commonwealth of Pennsylvania's Low-Income Home Energy Assistance Program – Final State Plan ("Final State Plan"), and any subsequent amendments or changes thereto.

4. Late Fees & Security Deposits

While actively participating in the program, late payment charges will not be imposed on CAP customers. Security deposits are also not imposed on CAP customers.

I. PARTICIPANT OBLIGATIONS

In order to remain eligible for participation in CAP, a customer must agree to (in writing) and perform the following obligations:

- make the monthly CAP payments;
- apply for and direct to UGI the customer's LIHEAP Cash or Crisis grant;
- conserve energy and, if eligible, participate in LIURP and any other weatherization services offered through local and state weatherization agencies (unless residence was previously weatherized under these programs);
- provide access to the meter for an actual meter reading, if required;[13]
- participate in good faith and comply with all educational, assistance, social or governmental programs recommended by the Company or by the CBO;
- report immediately to the CBO any change in family size, or change in income
- comply with the recertification requirements; and
- apply for any assistance grant for which he/she may be eligible.

In order to assure fair treatment of all participants, however, UGI will administer the

[13] CAP Credit and Pre-Program Arrearage forgiveness may be held up if an actual meter reading is not available.

UGI 2020-2025 USECP

I. INTRODUCTION

UGI Utilities, Inc. ("UGI") hereby submits this revised Universal Service and Energy Conservation Plan ("USECP" or "Plan") for the five-year period January 1, 2020 through December 31, 2025 to the Pennsylvania Public Utility Commission ("PUC" or "Commission") for its review and approval in accordance with the Commission's *Universal Service and Energy Conservation Reporting Requirements* at 52 Pa. Code §§ 54.71 – 54.78 and §§ 62.1 – 62.8.[1] The USECP replaces and supersedes the UGI Companies' Universal Service and Energy Conservation Plan for the four-year period of January 1, 2014 through December 31, 2017 (the "2014-2017 USECP") previously approved by the Commission at Docket No. M-2013-2371824 by orders entered January 15, 2015, June 11, 2015 and September 3, 2015. The USECP pertains to the universal service programs of UGI's Electric Division ("UGI Electric") and Gas Division ("UGI Gas"). This revision incorporates the modifications required by the Commission's Order entered August 8, 2019 ("August 8th Order") and the Commission approval of the settlement in the UGI Gas base rate proceeding at Docket No. R-2018-3006814 (Order entered October 4, 2019)("2019 Rate Case Order").

This 2020-2025 USECP sets forth the rules, terms and conditions and funding levels under which UGI will administer its universal service and energy conservation programs and policies ("Universal Service Programs" or "USPs") to eligible customers for the period of January 1, 2020 through December 31, 2025. **Appendix A** of the Plan sets forth the committed funding levels and budgets for each of the UGI divisions during this time period. **Appendix B** of the Plan sets forth the projected needs assessment as required by the Commission's regulations at 52 Pa. Code § 62.4(b)(3).[2] **Appendices C & D** provide a list of third-party, community-based organizations ("CBOs") to be utilized by UGI to assist in administering the Universal Service Programs. **Appendix E** sets forth UGI's notification process to prompt customers to recertify for CAP. **Appendix F** provides the Zero Income form to be used for CAP. **Appendix G** provides the CAP Agency Audit Scorecard.

UGI Gas is a "public utility" and a "natural gas distribution company" ("NGDC") as defined under the Public Utility Code, 66 Pa.C.S. §§ 102 and 2202, and is subject to the regulatory jurisdiction of the Commission. UGI Gas provides natural gas distribution service and supplier of last resort ("SOLR") service. UGI Gas combined serves approximately 585,000 residential

---

[1] By Order entered on October 3, 2019 at Docket No. M-2019-3012601 ("October 3rd Order"), the Pennsylvania Public Utility Commission granted temporary partial limited waivers of 52 Pa. Code §§ 54.74, 54.76 (a-b), 62.4, and 62.6 (a-b) to natural gas and electric distribution companies for the purpose of adhering to the 2020-2025 universal service and energy conservation plan and universal services impact evaluation filing schedule provided therein. The term of the UGI USECP is therefore 2020 through 2025.

[2] The needs assessment was calculated for the former UGI North and UGI South Rate Districts. The UGI Central Rate District was not required to conduct a projected needs assessment since it serves fewer than 100,000 residential accounts. See 52 Pa. Code § 62.7. Per the October 3rd Order these rate districts are no longer in existence. For the Company's next USECP, the needs assessment for UGI Gas will be calculated on a combined basis. UGI Electric is not required to conduct a projected needs assessment since it serves fewer than 60,000 residential accounts. See 52 Pa. Code § 54.77.

customers in 46 counties.

UGI Electric is a "public utility" and an "electric distribution company," as defined under the Public Utility Code, 66 Pa.C.S. §§ 102 and 2803, and is subject to the regulatory jurisdiction of the Commission. UGI Electric provides electric distribution, transmission and default supply services to customers located in its certificated service territory. UGI Electric furnishes electric distribution service to approximately 54,000 residential customers located in portions of two northeastern Pennsylvania counties (Luzerne and Wyoming counties).

On October 1, 2018 UGI Penn Natural Gas, Inc. ("PNG") and UGI Central Penn Gas, Inc. ("CPG") merged into UGI Utilities, Inc. Data prior to October 1, 2018 may reference the UGI Distribution Companies and individually, the former PNG, CPG, and UGI Utilities, Inc. – Gas Division corporate entities then in existence. References to "UGI Gas" pre-October 1, 2018 refer to the UGI Utilities, Inc. – Gas Division operations.

II. 2020-2025 USECP OVERVIEW

A. SUMMARY OF THE 2020-2025 USECP

1. USECP Programs

To assist low-income and payment-troubled customers located in their service territories, UGI has established the USECP in accordance with the Commission's regulations. UGI's Universal Service Programs include the following:

- Customer Assistance and Referral Evaluation Services ("CARES" or the "CARES Program");
- Hardship Fund or the "Operation Share Energy Fund";
- Customer Assistance Program ("CAP"); and
- Low Income Usage Reduction Program ("LIURP").

UGI also actively encourages payment-troubled, low-income customers to apply for grants from the Low-Income Home Energy Assistance Program ("LIHEAP").

2. Customers Served

In 2016, the UGI Distribution Companies assisted approximately 51,000 residential customers through their Universal Service Programs. The total number of participants by program for UGI Gas, UGI Electric, PNG and CPG in 2016 is set forth in Table 1: (CAP customer counts are as of 12/31/16).

Table 1. Universal Service Customers Served in 2016						
Number of Participants	**CAP**	**LIURP**	**CARES***		**Hardship Fund**	**Total**
			CARES referral	**LIHEAP recipients**		
UGI Gas	7,126	124	171	11,816	698	19,935
PNG	5,146	149	67	11,906	521	17,789
CPG	1,861	47	6	4,961	231	7,106
UGI Electric	2,322	16	16	2,734	167	5,255
Total	16,455	336	260	31,417	1,617	50,085

*CARES consists of number of CARES customer and # of LIHEAP (Cash and Crisis) recipients

A summary of the UGI Distribution Companies' program expenditures for the Universal Service Programs in 2016 is found below:

Table 2. 2016 Universal Service Program Expenditures					
Company	**CAP**	**LIURP**	**CARES**	**Hardship Fund**	**Total**
UGI Gas	$2,470,473	$853,543	$68,108	$6,980	$3,399,105
PNG	$2,137,094	$881,288	$36,617	$5,210	$3,060,209
CPG	$735,806	$294,362	$17,040	$2,310	$1,049,518
UGI Electric	$1,848,644	$76,960	$16,797	$1,670	$1,944,071
Total	$7,192,018	$2,106,153	$138,562	$16,170	$9,452,903

3. Administration

UGI has dedicated employees who are trained and committed to ensuring eligible customers are referred to all appropriate Universal Service Programs ("USP Staff") in order to provide the greatest benefits to customers. The USP staff is structured as follows:

- Director, Customer Service (1 full time): Responsible for overall strategy and development of universal service offerings.
- Senior Manager, Credit & Collections and Regulatory Compliance (1 full time): Responsible for the supervision of the group and all reporting requirements.
- Customer Outreach Senior Supervisor (1 full-time): Responsible for the day to day supervision of the group and all reporting requirements.

- Senior Customer Outreach Coordinator (1 full-time): Primarily responsible for training UGI staff and CBO caseworkers.

- Senior Customer Outreach Representative (2 full-time): Responsible for leadership support of Outreach team and the CBOs.

- Customer Outreach Representatives (6 full-time): Responsible for the day to day operations of LIURP, CAP, Operation Share Energy Fund, CARES and LIHEAP. Each maintains daily contact with the CBOs responsible for the administration of each program.

- LIHEAP Outreach Representatives (4 seasonal part-time): Responsible for the day to day operations of LIHEAP. Each maintains daily contact with CBOs responsible for the administration of LIHEAP.

UGI contracts with CBOs to assist the USP Staff in customer referrals and administration of the USPs. Together, the USP Staff and the CBOs have the capability to screen, enroll and refer customers for all available Universal Service Programs. The USP Staff incorporates all Universal Service Program referrals into existing processes (Cold Weather Interim Procedure ("CWIP"), collection, compliance and contract management). In addition to referrals to all Universal Service Program components, referrals are also made to LIHEAP and State Weatherization programs.

4. Communication

There are numerous means by which the USP Staff and its CBO partners provide residential customers with information on available programs and assist them in receiving assistance from CBOs. Information about the USPs is delivered to customers via regular bill inserts and through the USP Staff upon customer inquiry. UGI has a dedicated toll-free telephone number, 1-800-UGI-WARM that customers can call to get program information. UGI also maintains a page on its website that provides information on universal service programs and eligibility. https://www.ugi.com/customer-services/customerassistance/

As stated in more detail in the summary of plan changes, with this 2020-2025 USECP UGI is creating additional communication channels with their customers by permitting its customers to apply and/or recertify for CAP over the phone with provision of supportive documentation through mail, or additional means, as permitted by the CBOs.

B. SUMMARY OF CHANGES TO PLAN

As required by Section 62.4 of the Commission's regulations, 52 Pa. Code § 62.4, this section of the Plan describes the modifications and enhancements made to UGI's Commission-approved 2014-2017 USECP. Set forth below is a description of the changes made to the individual Universal Service Programs. Certain changes that touch on more than one program include: (1) UGI's establishment of a Universal Service Advisory Committee ("USAC") to convene at least twice per calendar year to consist of interested stakeholders, including but not limited to the active parties at this docket, CBOs, and the Commission's Bureau of Consumer Services; and (2) revisions to enrollment and budget projections.

1. The CARES Program

UGI has modified its protection from abuse ("PFA") handling procedures to further ensure the confidentiality of PFA information consistent with the settlement of the UGI Gas base rate proceeding, at Docket Number R-2015-2518438 (Opinion and Order entered October 14, 2016 at ordering paragraph 53). Consistent with the Settlement, any customer who provides UGI with a copy of their PFA order is handled solely by the smaller number of CARES representatives for USP program referrals and payment options.

2. Operation Share Energy Fund

UGI has made the following changes to the Operation Share Energy Fund:

- Permit the use of Hardship Funds for through Operation Share for reconnection fees for income-qualified UGI customers or applicants, regardless of the customer or applicant's prior or current enrollment in CAP.

- Clarification that only the fee payable to CBOs for Hardship Fund-related services is recoverable through the USP Rider.

3. CAP

The 2020-2025 Plan includes the following changes to CAP:

- Customers are permitted to apply and/or recertify for CAP over the phone, with provision of supportive documentation of income eligibility through mail. CBOs are permitted to offer additional means of providing supportive documentation. Those CBOs which offer additional means of communication are indicated in Appendix C of the Plan. In-person appointments with a CBO will remain available to those customers who choose to apply in person.

- To improve customer solicitation for CAP, starting in year 2 of the 2020-2025 USECP, the Companies will provide CAP CBOs with low-income indicated customer lists for direct CAP solicitation. Customers will have the ability to opt-out from provision of their customer information to third parties by a general opt-out option on the customer information system portal.

- The CAP welcome letter for enrolled customers will include the CBO contact information.

- Updated eligibility criteria as follows: (1) permitting customers who operate a business from their residential home to enroll in CAP so long as the business that is being operated from the residential home uses less than fifty percent of the anticipated gas usage served through a single meter; (2) prohibition of CAP for customers using utility service to heat a swimming pool; (3) elimination of the CAP eligibility restriction for customers with balances above $4,500 who have failed multiple payment arrangements; (4) specification of acceptable forms of identification; (5) clarification of "household income" definition; (6) clarification of terms "fraud" and "theft of service."

- Clarifications to the CAP application policy and reinstatement policy.
- Introduction of quarterly evaluations of CAP bills.
- Inclusion of Audit Checklist to evaluate CAP CBO performance as Appendix G.
- Specification of new reporting requirement.
- Provision of hypothetical to demonstrate CAP offset calculation.
- UGI Electric has increased its minimum CAP payment from $25 to $30 to comport with the Commission's Policy Statement on Customer Assistance Programs at 52 Pa. Code § 69.265(3)(i)(A)-(C).

4. LIURP

The 2020-2025 Plan includes the following changes to the LIURP program:

- Non heating LIURP customers may be provided an Energy Conservation Kit.
- Updated eligibility criteria as follows: (1) permitting customers who operate a business from their residential home to enroll in LIURP so long as the business that is being operated from the residential home uses less than fifty percent of the anticipated gas usage served through a single meter; (2) prohibition of LIURP for customers using utility service to heat a swimming pool; (3) clarification of "above-average" usage.
- Pursuant to the August 8th Order and the 2019 Rate Case Order, UGI Gas will expand the use of LIURP funds to address the repair or replacement of its residential customers' inoperable gas furnaces. UGI Gas will increase its per-job LIURP funding cap to $11,000 where furnace replacement is necessary. Additionally, UGI Gas will set aside $250,000 annually from its general LIURP budget for furnace repair and replacement projects. For the first two years of the USECP, any unused amounts will roll over to the next year's budget for furnace

repair and replacement projects. Should there continue to be amounts to roll over after two years, any remaining roll over amounts will roll over to UGI Gas's general LIURP budget. The August 8th Order approved UGI's petition for waiver of LURP regulation payback requirement at 52 Pa. Code § 58.11(a) and the LIURP high-use criteria at 52 Pa. Code § 58.10(a)(1). Paragraph 19 of the August 8th Order provided that these temporary waivers will expire in five years or with the Company's next USECP, whichever is earlier, unless an extension is expressly requested by the Company and granted by the Comission. (August 8th Order, p. 82) Subsequent to the August 8th Order, the Commission extended the term of this USECP to five (5) years. To maintain program continuity, the Company therefore requests that the Commission grant waiver of these regulations until the approval of UGI's next USECP.

C. <u>NEEDS ASSESSMENT</u>

As required by 52 Pa. Code § 62.4(b)(3), at the time of initial filing, UGI South and UGI North rate districts submitted a needs assessment in Appendix B of this Plan. The needs assessment is based on 2010 census data and 2015 UGI Gas records. Pursuant to 52 Pa. Code §§ 54.77 and 62.7, EDCs and NGDCs with less than 100,000 residential customers are not required to submit a needs assessment; therefore, UGI Electric and the former UGI Central rate district did not submit a needs assessment. Future USECPs will provide needs assessments on a combined basis for UGI Gas.

III. <u>THE CARES PROGRAM</u>

A. DESCRIPTION OF THE CARES PROGRAM

1. Goals and Objectives

The goal of the CARES Program is to provide personal assistance and referrals to payment-troubled customers and to help improve their delinquent bill payment problems. The CARES Program identifies special needs customers and guides them to the appropriate program or agency. CARES concentrates on, but is not exclusively for, the low-income segment that may lack the knowledge of energy conservation, budget counseling and fuel assistance programs. Unlike other USPs administered by UGI, the CARES Program is geared toward the customer who has a temporary, immediate need, such as loss of income, loss of head of household, illness or any other temporary situation resulting in an inability to pay. CARES is intended to be a short-term assistance referral program to guide a customer through a difficult time and to help inform and educate them about the available assistance. The CARES Program also provides extensive LIHEAP outreach to help increase awareness of the program and encourage all eligible households to apply for grants. Specifically, all customers who provide UGI with a copy of their PFA order are handled by CARES representatives for specific program referrals and payment options.

2. Program Design

The CARES Program was developed as an outreach and referral service to assist customers with special hardships. CARES is available to any residential customer who is confronted with a temporary hardship that could result in the loss of utility service. Assistance is obtained through UGI's programs and the established network of social agencies. CARES is designed to help a select group of customers with special circumstances, which may include, among other things, the need for help in paying their utility bill or assistance from a social agency. UGI offers information, guidance and referrals to obtain energy assistance and other social help programs from the Customer Outreach Department. Each CARES customer may receive an informational mailing. The mailing contains educational material on each of the assistance programs and any other referral information that may be helpful to the customer.

At appropriate times of the year, eligible CARES customers receive information on additional Customer Outreach programs, such as LIHEAP, LIURP, CAP, and the Operation Share Energy Fund.

B. FUNDING AND BUDGET

See Appendix A for the UGI's budgets for the CARES program.

C. ELIGIBILITY CRITERIA

Any residential customer with a delinquent balance or a negative ability-to-pay and special circumstance may be eligible for CARES. For example, recent unemployment, disability, loss of head of household, inability to understand their bill, temporary illness or need for senior citizen assistance, would render a customer eligible for CARES.

D. INTAKE / NETWORKING

Customer Outreach employees maintain contact with CBOs through referrals and educational services. Upon request, employees organize and/or conduct community meetings and workshops to educate customers in energy conservation and to increase public awareness of the various CARES Program services. Presentations are made throughout the service territory and brochures and literature are distributed to communicate the social services that are available to customers. Employees maintain communication with appropriate professional and local organizations to strengthen skills and remain current on local issues.

IV. THE OPERATION SHARE ENERGY FUND

A. PURPOSE & OBJECTIVES

A number of causes, foreseen and unforeseen, could potentially affect the ability of customers to pay their bills. UGI's hardship fund – Operation Share Energy Fund – has been formed for the purpose of providing assistance to residential customers faced with a hardship in paying their energy bill due to an unforeseen situation. To achieve its purpose, the Operation Share Energy Fund includes the following objectives:

- to provide customers, employees and the public an opportunity to contribute money to help their less fortunate neighbors who are unable to pay their energy bills due to unforeseen circumstances;
- to give financial assistance to current customers that have fixed or low incomes, are unemployed, disabled or faced with some catastrophic event or crisis situation;
- to provide additional funds and support to community organizations that are dedicated to this same purpose.

For the 2020-2025 USECP, UGI will be permitted to use hardship funds to pay for reconnection fees for customers or applicants who are income qualified for the program, regardless of the customer or applicant's prior or current enrollment in CAP.

B. FUNDING AND BUDGET

Operation Share funding will be used to make voucher payments directly to residential customers declared eligible by the designated administering agency, less amounts used for administrative expenses. For every two dollars the customers, employees or outside sources contribute to Operation Share, UGI will issue an additional one dollar in energy vouchers, up to the committed matching funds contribution. For example, UGI will contribute one dollar for every two dollars donated by a customer, employee or outside source, up to $10,000, its total matching funds contribution. No matching funds are made available to match public, tax-supported sources, such as LIHEAP, however. Employees of UGI are encouraged to make a donation directly to Operation Share. Additional fundraising events may be organized in each of UGI's service territories. It is intended that an appeal will be made at least twice during the year to all of UGI's customers, via a billing insert, to make a contribution to Operation Share. The insert describes Operation Share and requests support with a check for any amount.

See **Appendix A** for UGI's funding for the hardship fund.

C. ADMINISTRATION

The Operation Share program is administered by UGI's USP Staff using the Customer Outreach System ("COS"). The COS provides customer information, such as eligibility criteria, account balance, recent bills and payments. UGI contracts with CBOs that have the ability to process grants using web-based applications, which then use the account information from the COS to determine the amount of grant awarded to the customer. The COS also maintains the financial aspects of the program.

A specific role is established in the COS for the representative that has the final authority to approve or deny assistance for a customer. This designated person is responsible for the Operation funds assigned to a CBO. UGI's personnel will not participate in the determination of grants, other than to refer applicants to the CBO for consideration.[3]

Operation Share Energy Fund is designated as a public charity under section 501(c)(3) of the Internal Revenue Code. All donations from customers, employees, and outside sources are kept in a separate Operation Share bank account and passed directly to the participating agencies to permit them to make direct payments to energy vendors for those applicants who qualify.

D. ELIGIBILITY

The guidelines for grants from Operation Share allow for administrative flexibility in providing assistance. In order to assure fair treatment of all applicants, however, the following guidelines must be followed (unless UGI or the CBOs agree to waive or modify a guideline in extraordinary circumstances):

- the customer must have a residential account with UGI and the customer's premise is the customer's primary residence;
- the customer must have an active heating or non-heating utility account;
- the customer must not have received an Operation Share grant in the last 12 months;
- the customer must have an outstanding balance on their utility bill;
- the maximum income of the customer's household must be at or below the current federal poverty income guidelines ("FPIG") of 200%;
- the customer must provide adequate information to demonstrate inability to pay energy bills;[4]
- customers for Operation Share with delinquent balances must first contact the Credit Department to discuss their options; and
- an active participant in the CAP is not eligible for Operation Share assistance.

Residential accounts with the following indicators are not eligible for this program:

- health care facilities;
- landlord/tenant (account is in the landlord's name);
- ratepayer/occupant (the ratepayer does not reside at the property);
- foreign load (one meter supplies more than one unit);

[3] There are some occasions where personnel will approve Operation Share on a customer's behalf, for example, in the instance of a legislative request to supplement LIHEAP grants.

[4] Necessary information includes evidence of income of all members of the household. In addition, the applicant will authorize the CBO (verbally or written) to obtain account history information from their energy vendor. There is no requirement that each household member must verify household expenses as part of the Operation Share application process.

- theft of service; and
- Landlord if Shut-off ("LIFSO") agreement (account is in the owner's name).

In order to assure fair treatment of all customers, the following amounts represent the maximum grant to be awarded per eligible customer in each of UGI's divisions and rate districts.

Table 3. Maximum Operation Share Grant	
Division	**Maximum Amount**
UGI Gas	$400
UGI Electric	$400

Exceptions to the maximum grant amount may be approved for special circumstance customers.

E. PAYMENT OF GRANTS

The designated CBO is granted a maximum amount against which vouchers can be written. So long as the CBO's maximum amount is not exceeded, a voucher may be written and will be honored by UGI for the payment of the applicant's bill.

All cash funds must be retained by the CBO in its Operation Share account and payments from this account shall only be made to UGI. Under no circumstances will any payments be made directly to a customer.

V. CUSTOMER ASSISTANCE PROGRAM

A. INTRODUCTION

CAP provides all eligible low-income, payment-troubled residential customers that reside in the rate districts of UGI a more affordable way to pay their natural gas or electric bill. Each month, CAP participants are billed an equal CAP payment amount based on the participant's gross income or average bill,[5] depending on which option provides the most affordable monthly CAP payment.

In this 2020-2025 USECP, UGI will continue the practice instituted in the previous 2014-2017 USECP to place no limit on CAP enrollment or set a maximum CAP credit per customer.

B. INTAKE/NETWORKING/EDUCATION

Customer Outreach employees maintain contact with CBOs through referrals and educational services. Upon request, employees organize and/or conduct community meetings and

[5] A customer's average bill will be determined based upon twelve-months of historical usage for the residence or, if usage data is not available for the residence, the customer's average bill will be set using the average bill for all residential customers.

workshops to educate customers of the benefits of CAP. Presentations are made throughout the service territory and brochures and literature are distributed to communicate the social services that are available to customers. Employees maintain communication with appropriate professional and local organizations to strengthen skills and remain current on local issues. UGI will work with its USAC to explore opportunities to provide consistent consumer education to CAP customers during their participation in CAP.

C. FUNDING AND BUDGET

See Appendix A for a more detailed description of CAP funding.

D. ADMINISTERING AGENCIES

CAP is administered by a variety of CBOs, listed in Appendix C of this Plan (the "CAP CBOs") that are overseen by UGI's Customer Outreach Senior Supervisor.

With the help of the COS, the CAP CBOs are responsible for taking the following steps to enroll customers in the CAP[6]:

- verify the application is complete and consent has been obtained;
- properly complete the CAP enrollment;[7]
- verify eligibility, proof of identification, proof of income and family size;
- assist applicant to properly complete LIHEAP and other grant applications;
- fully explain the program benefits and responsibilities to the customer;
- discuss the payment amount, based on guidelines provided by UGI; and
- inform applicants in writing of missing information along with steps the applicant can follow to provide that information.
- confirm customer's acceptance in the program.
- inform applicants in writing if CAP application is denied along with steps the applicant can follow to contest denial.

The CAP CBOs will provide customer education in the areas of:

- usage reduction education consistent with that outlined in LIURP below;
- low cost/no cost energy conservation tips;
- basic household budget counseling; and
- related items specific to the individual applicant's needs, including providing an energy

[6] UGI's USP Staff also enroll eligible customers into the CAP program.
[7] The CAP enrollment process will include application completion via telephone or mail when an in person visit is not required or feasible.

education session for customers who historically have an above average usage.[8]

The CAP CBOs are responsible for: (1) referring participants to any other assistance, social, or governmental programs that may provide help for any other present needs; (2) monitoring each account monthly based on UGI's prompted tasks on the COS, such as past due phone calls and recertification; and (3) providing energy education sessions to above average usage customers (i.e. customers exceeding the CAP usage criteria in Table 4).

Finally, while the CAP Administering Agencies will be responsible for processing the annual recertification of all requirements, UGI itself will process appeals for reconsideration from participants removed from CAP within 30 days.

Two changes in this 2020-2025 USECP, previously mentioned, are (1) the allowance of alternate means of communication for CAP enrollment and recertification; and (2) the expanded ability of CAP CBOs to directly solicit low-income indicated customers of the UGI Companies.

Alternative Means of Communication for CAP Enrollment and Recertification

UGI will allow customers and applicants for service to apply and/or recertify for CAP over the phone, with provision of supportive documentation through mail or other means (including but not limited to fax, email, or text messaging) that are reasonably available to the Company's CBO serving that portion of UGI's service territory. Once the CBO has verified that all of the documentation is received and accurate, the Company will send a Welcome Letter to the applicant, which will: (1) confirm that the applicant has been approved for CAP ; (2) provide the applicable CBO contact information; and (3) explain that at any time the customer may unenroll from CAP. In-person appointments with a CBO will remain available to those individuals who choose to apply in person. The available means of communication for each CBO is indicated on **Appendix C**.

Direct Solicitation

In year 2 of this USECP, UGI will provide CBOs with low-income customer lists for direct CAP solicitation.[9] To maintain customer privacy and respect customer preference, customers will have an option to opt-out from provision of their information to third-parties by a general opt-out option on the Customer Information System ("CIS") and through information on bill inserts.

E. MONITORING

UGI will provide routine information and metrics to the CAP CBO pertaining to the performance of the administration of the program. In addition, UGI will make routine visits to the agencies and will also conduct annual training updates for CAP caseworkers. Further, UGI will audit agency performance by reviewing: enrollments, re-certifications, and completed tasks. The

[8] The UGI Companies will monitor CAP customer usage and implement controls to avoid excessive CAP customer usage.
[9] UGI will implement the direct solicitation of CAP customers by CBOs in year 2 of the USECP to ensure that any programming required for this programmatic change is completed prior.

audit will include confirmation that the appropriate paperwork is signed and when required, income verification and customer identification were obtained. The COS will maintain specific agency statistics such as: number of program participants; percentage of CAP customers that are past due; and an active list of customers that require re-certification. UGI's audit checklist is outlined in **Appendix G**.

F. EVALUATION

As required by the Commission's regulations, 52 Pa. Code § 62.6, both a program process evaluation and impact evaluation were performed in 2012 by an independent, third party evaluator (APPRISE), which provided a report of findings addressing the following areas:

- program design;
- administrative costs;
- program costs;
- payment behavior;
- consumption habits; and
- energy assistance participation.

UGI considered the recommendations of the APPRISE report in reviewing and preparing this 2020-2025 USECP. By Order entered on October 3, 2019 at Docket No. M-2019-3012601, the Commission granted temporary partial limited waivers of 52 Pa. Code §§ 54.74, 54.76 (a-b), 62.4, and 62.6 (a-b) to natural gas and electric distribution companies for the purposes of adhering to the 2020-2025 universal service and energy conservation plan and universal services impact evaluation filing schedule provided therein. UGI's next USECP evaluation report will be filed with the Commision by April 1, 2024 as provided in the October 3rd Order.

G. CUSTOMER ELIGIBILITY REQUIREMENTS

To be eligible for CAP, customers may be referred by UGI or CAP CBOs. To be eligible, a customer must: (1) complete the CAP application and have gross household income verified at 150 percent of poverty or less;[10] (2) be a residential heating or non-heating customer with active energy service from UGI; and (3) if a previous participant, a review will be completed to assure the reason for the prior default has been cured or the customer has been out of the program for a minimum of 12 months for a voluntary removal.

An applicant's Social Security Number (SSN) is requested in the CAP application as a form of customer identification, but is not required for enrollment into the program. UGI will accept Individual Tax Identification Numbers ("ITIN") in lieu of the applicant's SSN. For those applicants who do not provide either a SSN or ITIN, UGI will waive this requirement provided that the customer provides two other acceptable forms of identification. Acceptable forms are:

[10] A customer with no income will be eligible to participate in CAP and be responsible to make the minimum monthly CAP payment.

1. One government issued photo identification such as:
   - Driver's License
   - Passport
   - Military ID card
   - ID cards issued by Federal State or Local Government or;
   - Any valid foreign government ID

2. Two alternative forms of identification if a government issued photo identification is not available, such as:
   - College student ID card
   - Social security card
   - Voter registration card
   - Birth Certificate
   - U.S. Citizen ID card/ Permanent Resident Card
   - Native American Tribal Card
   - ITIN (individual Taxpayer Identification Number)

All forms of identification must be valid and not expired.

Residential accounts with the following indicators are ineligible for CAP or will be removed from CAP:

- health care facilities;
- landlord/tenant (account is in the landlord's name);
- ratepayer/occupant (the ratepayer does not reside at the property);
- foreign load (one meter supplies more than one unit);
- theft of service;
- LIFSO agreement (account is in the owner's name);
- choice customers;
- utility service used to operate a swimming pool;
- a residential property where more than fifty percent of the anticipated usage served through a single meter is used to operate a business.

UGI further reserves the right to deny enrollment if the customer is deemed to lack good faith, honesty or fair dealing while working with the CAP CBO or one of UGI during the application process or if the customer fails to engage in good faith efforts to conserve energy. Demonstration of lack of good faith honesty and fair dealing may be evidenced by fraud or theft of service. The Company defines "fraud" as the intentional misrepresentation of CAP eligibility criteria. "Theft of Service" occurs when a person obtains utility service by deception, tampering with Company facilities, or other means designed to avoid payment for utility service provided by the Company. The two most common examples of theft of service are: (1) a customer's physical bypass of a meter so that all energy usage is not recorded; and (2) the magnetic tampering of a meter to impede the registration of usage. However, this list is not conclusive and other instances of theft may arise that results in a customer's disqualification from CAP.

Upon request, subject to the recertification process, a CAP participant must provide evidence of continued program eligibility, which he/she may do so via the communication means indicated on **Appendix C**.

If a CAP participant changes residences, the following conditions will apply and be communicated to the customer: (1) as long as all eligibility requirements and other terms and conditions continue to be met, the participant may remain eligible to participate in CAP; and (2) so long as the participant remains enrolled in the program, no late payment charges will be imposed.

An applicant determined ineligible would receive written notification specifying the reason(s) for ineligibility. If the applicant is not satisfied with the determination of eligibility, the Company will use utility company dispute procedures in accordance with Chapter 56.151 and 56.152. The applicant may also appeal the denial of eligibility to the Bureau of Consumer Services in accordance with 52 Pa. Code §§ 56.162-56.166, relating to informal complaint procedures and may pursue a formal complaint against the Company. Notice of right to appeal will be provided with the written notification of ineligibility.

H. MONTHLY CAP PAYMENT AMOUNT

1. Determination of Monthly CAP Payment Amount

The amount to be paid by a CAP customer each month will be based on the lower of the percentage of the customer's monthly income, as described below, or the customer's otherwise applicable average monthly bill.[11] To determine the customer's monthly CAP payment amount based on the percentage of the customer's income, the customer's monthly income is compared to the FPIG, and the payment amount is set based on the following guidelines:

	Percent of Poverty	Monthly CAP Payment
Income Level 1:	0[12] - 50%	7% of Participant's Monthly Income
Income level 2:	51 - 100%	8% of Participant's Monthly Income
Income level 3:	101 - 150%	9% of Participant's Monthly Income

If a customer's monthly CAP payment amount as a percentage of the customer's monthly

[11] Exceptions to the payment schedule and grant application practice will be made based on individual needs.
[12] A customer with no income will be responsible to make the minimum monthly CAP payment.

income, as calculated above, exceeds the customer's otherwise applicable average bill amount, the customer's average bill will be set as the customer's monthly CAP payment amount.

At any time during the program should a participant's monthly income change, the monthly CAP payment amount will also be reviewed and changed, where appropriate. It is the customer's obligation to notify the company or the CAP Administering Agency of the change in income. UGI reserves the right to require that the customer provide proof of the change in income. A recertification will be processed using the updated income and historical usage to determine the new monthly CAP payment amount.

Additionally, the participant's monthly CAP bill will be reevaluated quarterly, to ensure that the participant is actively on the most affordable billing option. For example, if the customer entered into CAP either at a 7%, 8%, or 9% income level, and upon a quarterly review, the customers average bill is deemed to be the most affordable at the time of the review, the customer's new CAP will be based on their average bill until the next review.

UGI's minimum monthly CAP payment is within the suggested range set forth in the Commission's Policy Statement on Customer Assistance Programs at 52 Pa. Code § 69.265(3)(i)(A)-(C). The CAP payment for gas heating accounts is set at $25, non-heating accounts at $15, and electric heating accounts at $30.

2. Household Income Documents

To determine CAP eligibility and the appropriate CAP monthly payment, proof of income at or below 150% of FPIG must be provided by the customer to the Company. However, for customers receiving LIHEAP, who have already been determined to have income under 150% of the FPIG by DHS, the Company will accept self-cetification of income level for the purpose of calculating the customer's monthly payment and no documentation of income is required for such customers. Acceptable income documents are:

- Recent paystubs or W-2 forms
- verified copy of rent receipts for rental income
- Benefit letter or copy of bank statement for;
    - Social security
    - Pension
    - Disability
    - SSI
- Verification Letter
    - alimony support
- Unemployment determination letter
- Notarized letter stating income
- Zero income form

Additional Notes:

- Interest does not need to be counted as income.
- UGI does not include income earned from an occupant under the age of 18, nor does it include income received for the benefit of a minor, in its calculation of household income.

3. Use of LIHEAP Grants

LIHEAP grants received will be applied consistent with the Commonwealth of Pennsylvania's Low-Income Home Energy Assistance Program – Final State Plan ("Final State Plan"), and any subsequent amendments or changes thereto.

4. Late Fees & Security Deposits

While actively participating in the program, late payment charges will not be imposed on CAP customers. Security deposits are also not imposed on CAP customers.

I. PARTICIPANT OBLIGATIONS

In order to remain eligible for participation in CAP, a customer must agree to (in writing) and perform the following obligations:

- make the monthly CAP payments;
- apply for and direct to UGI the customer's LIHEAP Cash or Crisis grant;
- conserve energy and, if eligible, participate in LIURP and any other weatherization services offered through local and state weatherization agencies (unless residence was previously weatherized under these programs);
- provide access to the meter for an actual meter reading, if required;[13]
- participate in good faith and comply with all educational, assistance, social or governmental programs recommended by the Company or by the CBO;
- report immediately to the CBO any change in family size, or change in income
- comply with the recertification requirements; and
- apply for any assistance grant for which he/she may be eligible.

In order to assure fair treatment of all participants, however, UGI will administer the aforementioned obligations with sufficient flexibility to provide the assistance intended by the program. Therefore, UGI or CAP CBOs may agree to waive or modify one or more of the

[13] CAP Credit and Pre-Program Arrearage forgiveness may be held up if an actual meter reading is not available.

participant obligations in extraordinary circumstances.

J. PRE-PROGRAM ARREARAGE FORGIVENESS

UGI forgives a CAP customer's pre-program arrearage balance on a one thirty-sixth (1/36th) basis upon receipt of each timely and in-full CAP monthly payment. This practice provides immediate incentive for a CAP customer to continue the positive payment behavior. UGI also provides no less than a $10.00 per month pre-program arrearage forgiveness. UGI applies arrearage forgiveness for each timely and in-full monthly payment, regardless of arrears, and retroactively for any months missed once those months are paid. For example, if a CAP customer is delinquent for three months of payments, and makes catch-up payments for two of those three months, the customer will receive forgiveness for those two months.

To be eligible for pre-program arrearage forgiveness, participants must maintain all program requirements in each month since enrolling in the program.

K. APPLICATION OF CAP CREDITS

Pursuant the Commission’s regulations, at 52 Pa. Code § 62.2, and UGI’s effective tariffs, a CAP credit is set as the difference between the CAP customer’s actual usage bill calculated at the standard residential rate and the CAP monthly bill. UGI applies CAP credits on a monthly basis with each full CAP payment received. Any CAP credits associated with missed CAP payments will be applied once the customer brings their payments up to date.

UGI eliminated its per-customer maximum CAP credit in its 2014-2017 USECP. UGI’s 2020-2025 USECP will likewise not have a per-person CAP credit maximum.

UGI institutes the following CAP control features to encourage energy conservation:

High Annual Usage at Enrollment: UGI uses the following thresholds to determine when a customer is considered to be a high usage customer. These thresholds were determined by analyzing the current population of customers and their usage information and determining a 95% confidence level.

Table 4. High Usage Criteria

Division	High Usage
UGI Gas	2,356 ccf
UGI Electric	34,465 kwh

Any customer that applies for CAP, and any existing CAP customer with usage above these assigned thresholds, will:

1. Participate in an interview with the CAP caseworker. The CAP caseworker will review

data specific to the customer's residence to determine potential reasons for the customer's high usage.
2. The CAP caseworker will then conduct an energy education session.
3. If applicable, referrals will be made for the LIURP program.
4. If enrolled, high usage will continue to be monitored for additional outreach and referrals.

This high-usage evaluation will take place annually for existing CAP customers.

Removal from CAP

1. A CAP customer may be removed from CAP for refusing to participate in the LIURP program.
2. A customer may be removed for failure to comply with these high usage controls.[14]

L. RECERTIFICATION POLICY

1. CAP Recertification Requirements for LIHEAP and Non-LIHEAP Participants

Participants must provide evidence of continued program eligibility. The recertification process is a mandatory requirement in order to ensure proper participation and continued program eligibility.

UGI has a triennial recertification requirement for known LIHEAP participants. CAP customers who are not known LIHEAP participants are required to recertify for CAP annually. A customer will not be deemed ineligible for CAP on the basis of failure to participate in LIHEAP. Non-LIHEAP CAP customers who recertify annually for CAP will remain enrolled in CAP. To recertify, participants must provide:

- For LIHEAP Participants - When the LIHEAP income guidelines are the same as CAP; LIHEAP participants who have received a LIHEAP Cash or Crisis grant within the last 12 months will only be required to provide income documentation every three years to UGI.[15]

- For Non-LIHEAP Participants - Income documentation must be provided annually to verify that the participant's household income is at or below the current 150% of the FPIG.

Should the participant fail or refuse to recertify within two billing cycles of being notified

[14] Exceptions may be granted where the factors giving rise to the customer's increased consumption are beyond the customer's reasonable control.
[15] Historically the income criteria for CAP has matched that for LIHEAP. Should the LIHEAP and CAP income requirements differ, UGI will notify the LIHEAP-participating CAP customer of the responsibility to recertify on an annual basis.

to do so, UGI may remove the customer from CAP. UGI believes this practice encourages those participants who continue to have household incomes at or below 150% to complete the recertification process and, therefore, maintain affordable energy bills. The customer is responsible to reenroll in the program.

2. Recertification Reminder Schedule

The Companies actively remind CAP participants of their obligation to recertify income eligibility as per the following schedule:[16]

- A recertification notice letter is mailed a month prior to the anniversary date (recertification due date);
- A contact from the CBO is made 15 days prior to the anniversary date;
- A reminder letter is mailed from the Company on the anniversary or on the recertification due date; and
- A contact from the CBO is made 1 month past the anniversary date.

3. Use of Zero Income Statements for CAP Enrollment and Recertification

UGI customers who report zero household income at the time of CAP enrollment and recertification are required to complete a "Zero Income Form," as set forth in Appendix F. The Zero Income Form need not be notarized. The Zero Income Form must be filled out by the individual who holds the account with UGI. The following information is required: (1) customer name; (2) date of application; (3) account number; (4) service address; (5) a list of adult household members with zero income; and (6) an explanation of how household expenses were met for food and shelter during the applicable period. The Zero Income Form must be signed by both the account holder and a CAP CBO representative. As stated on the form, by signing the Zero Income Form, the customer provides consent to UGI to verify income with government agencies. UGI CBOs have reported that use of the form does not hinder participation in the UGI universal service programs and therefore UGI will continue to use the Zero income form without modification.

As outlined in the participant obligations customers are to immediately report a change in household size or income. Specifically, for a customer who reports zero income, UGI will require the customer update their income (if they have not already done so) six months following the report of zero income.

4. Impact of Recertification

Appropriate changes in the percentage of income and/or average bill payment will be made upon completion of the recertification process. If income or average bill payment at the time of recertification dictates a change in the monthly payment, the new amount will be used for future monthly payments. Future bills issued upon completion of recertification will reflect an

[16] *See* Appendix E for a schematic of the Companies' recertification process.

appropriate CAP bill amount but past CAP bills issued are the customer's responsibility to pay. During the recertification process, if a participant is deemed ineligible for continued participation in CAP, the customer will be notified that they are no longer eligible to participate and the reason(s) why they are no longer eligible for CAP.

M. REASONS FOR REMOVAL FROM CAP

- Failure to make CAP payments that results in termination and the customer has not cured his/her payments within 109 days of termination.
- failure to comply with any customer obligation set forth in the program;
- failure to comply with the obligation of good faith, honesty and fair dealing while working with the CAP CBO or UGI;
- household income increases to greater than 150% poverty;
- failure to comply with established high usage controls;[17]
- refusal to participate in LIURP;
- any reason for which the customer's service may be terminated under Chapter 56 or Chapter 14;
- failure/refusal to recertify in CAP;
- bankruptcy - at the time of the filing of bankruptcy all receivable amounts which may include frozen pre-program arrearage will fall under the jurisdiction of the bankruptcy court and will no longer be eligible for CAP benefits; and
- legal action - should UGI have reason to take legal action against a participant that encompasses any receivable owed it, all receivable amounts which may include pre-program arrearages will fall under the jurisdiction of the applicable court and will no longer be eligible for CAP benefits. Participants removed from the CAP will receive a written statement indicating the reason(s) for the dismissal. Customers defaulting and dropped from the CAP will be referred to the Company's Credit and Collection Department for further action, if necessary.

Any CAP participant may voluntarily request to be removed from the program. However, if a CAP participant requests to be removed from CAP for the reason that their seasonal usage bills total less than the monthly CAP amount ("seasonal short-term benefit"), the customer will be removed from the program and will forfeit all program benefits. The customer will then be required to remain out of CAP for a period of twelve months before they can re-apply for the program, provided exceptions will be granted on a case-by-case basis based on demonstrated hardship. The customer will be mailed a letter to confirm his request to be voluntarily removed

[17] Exceptions may be granted where the factors giving rise to the customer's increased consumption are beyond the customer's reasonable control.

from CAP. UGI will accept the request for removal via phone with a UGI representative.

UGI removes customers when service is voluntarily discontinued by the customer and the CAP participant is no longer a customer. All unpaid bills and unforgiven dollars are due upon the removal from CAP as this is considered a broken payment arrangement.

UGI also reserves the right to remove any CAP customer if the program is deemed non-beneficial without having to receive the customer's consent.

N. CAP NON-PAYMENT DEFAULT AND CREDIT AND COLLECTION POLICIES

Customers who miss a CAP payment are provided two payment notifications prior to the Company initiating its termination procedures. After the customer's first missed payment, assuming the payment has not been made, the CAP CBO sends a notification to the customer at 15 days and 25 days after the missed payment. The 15-day notification may be a letter or telephone call. The 25-day notification is a mailed letter. Both the 15 and 25 day notifications advise the customer that their CAP payment is overdue.

Upon the customer's second missed CAP payment, UGI moves forward with the appropriate notifications and shut-off procedure and will send a termination notice stating the past-due amount. The customer will be required to pay the amount set forth in the termination notice, prior to the scheduled termination date to avoid shut-off. If the customer fails to pay per the terms of the termination notice, service is shut off.

When the service is shut off for non-payment, the terminated customer has up to 109 days to pay the full catch-up CAP amount, including any CAP bills that may have come due during the shut-off process, plus reconnection fees. Upon receipt of the full catch-up amount and the reconnection fee, the customer will be returned to CAP. If the terminated customer does not pay the full catch-up amount within 109 days, the customer will be removed from CAP and the customer will be responsible to make full payment of any outstanding balance and reconnections fees prior to the reconnection of service. Upon full payment and service restoration, the customer may then re-apply to enroll in CAP. One additional exception to the reinstatement policy would be when the customer's actual balance is less than the CAP balance.

UGI Utilities, Inc. Operation Share hardship funds will be permitted to be used for reconnection fees for all eligible UGI customers.

O. REINSTATEMENT POLICY

Customers requesting reinstatement must comply with and agree to all applicable program eligibility requirements and customer obligations. As a condition of reinstatement, a customer must:

- provide adequate assurance that the reason(s) for the prior default and resulting program dismissal have been removed or corrected; and

- make up all missed CAP payments or full balance when appropriate before reinstatement.

As a condition of reinstatement, a customer may also be required, depending upon individual circumstances, to make an up-front payment. Upfront payments are most common for a customer that is looking to restore service and remain on CAP. A reconnection charge can be required as an upfront payment. Another scenario where an upfront payment is required is when it is a prerequisite for the customer's receipt of additional grants or program services. For example, if a customer owes $500 in missed CAP payments, a CBO may require the customer to pay $300 which permits the CBO to approve $200 in Federal Emergency Management Agency ("FEMA") funds. The Companies never charge a CAP participant a security deposit for reconnection of service.

As stated above, UGI Utilities, Inc. Operation Share hardship funds will be permitted to be used for reconnection fees for all eligible UGI customers.

If a customer voluntarily removes themselves from CAP for seasonal short-term benefit, the customer will not be eligible again until after a one-year waiting period. The customer, however, would be able to have their CAP reinstated before the year if they, at the time of their request, can satisfy the CAP amount covering both the missed CAP payments while on CAP, and the month(s) they spent out of the program (i.e. CAP catch-up amount).

P. CAP UNIVERSAL SERVICE REQUIREMENTS REPORTING

As required by the August 8th Order, by April 1st of each year, UGI Utilities, Inc. shall file and serve a report at these dockets detailing the following information by utility, FPIG level, and account type for the preceding calendar:

- CAP Participation Rate;
- Average Annual CAP Credits;
- Number of CAP accounts that exceeds the previous maximum CAP Credit limit;
- Total dollars above previous maximum CAP Credit limit;
- Average of CAP credits above previous maximum CAP Credits;
- Gross Write-Offs in Dollars by Residential Customers and Confirmed Low-Income Customers
- The difference in pre-program and current energy usage (+/-) of CAP customers who exceeded energy usage threwwsholds but received energy conservation assistance from a CAP caseworker (stated as an average yearly percentage)

VI. LIURP

A. INTRODUCTION

UGI's LIURP consists of a Weatherization Program and a Rehabilitation Program.

B. FUNDING AND BUDGET

See Appendix A for a more detailed discussion of the program budgets.

C. LIURP ENROLLMENT LEVELS

The table shows the number of jobs completed per Company and the associated spending for the period of 2014 through 2016.

Table 5. Completed LIURP Jobs for 2014 - 2016		
Company	**Number of jobs**	**Cost**
UGI Gas	318	$2,048,978
PNG	399	$2,566,887
CPG	194	$1,131,508
UGI Electric	71	$287,895

D. LIURP REPORTING REQUIREMENTS

The Companies report all data required by the LIURP codebook.

E. LIURP WEATHERIZATION PROGRAM

The LIURP Weatherization Program is offered to reduce the energy consumption of low-income customers through the installation of energy conservation measures and energy conservation education. By reducing the energy consumption of these customers, the intent of LIURP is to reduce customer arrearage, collection and termination costs. The program places top priority on the health and safety of all LIURP participants.

Program services are provided free of charge to the customer. Upon verification of program eligibility by the LIURP agency, each LIURP heating customer will receive an on-site energy survey/audit. Energy saving measures for gas customers and electric space heat customers may include, but are not limited to, the following: insulation, furnace repair/replacement, water heater repair/replacement, furnace efficiency modification, windows and baseboard caulking, door and window weather stripping, door sweeps and thresholds, replacement of broken window panes, storm windows, attic ventilation, electrical outlet and switch plate gaskets on outside walls, water conservation measures, energy education, infiltration measures and incidental repairs (necessary to the effective performance of weatherization materials). Low cost energy saving measures for electric non-heating customers may include but are not limited to: refrigerator replacement, high efficiency lighting, window air conditioner replacement and other measures necessary to the effective performance of weatherization materials within the job limit costs. Eligible electric non heating customers may receive an in home or telephonic energy education sessions. For the 2020-2025 USECP, UGI will begin to provide UGI Electric weatherization participants with an Energy Conservation Kit containing items they may install to reduce electric consumption.

Energy saving measures installed will be those Commission-approved measures in the LIURP codebook. Job inspections are completed by a third party agency.

Additionally, UGI Gas will, in this 2020-2025 USECP, expand the use of LIURP Weatherization Program funds to address the repair or replacement of its residential customers' inoperable gas furnaces. UGI Gas will increase its per-job LIURP funding cap to $11,000 where furnace replacement is necessary. Additionally, UGI Gas will set aside $250,000 annually from its general LIURP budget for furnace repair and replacement projects. For the first two years of the USECP, any unused amounts will roll over to the next year's budget for furnace repair and replacement projects. Should there continue to be amounts to roll over after two years, any remaining roll over mounts will roll over to UGI Gas's general LIURP budget. In its August 8, Order, the Commission has approved UGI Gas's petition to waive the LIURP regulation payback requirement at 52 Pa. Code § 58.11(a) and the the high-use criteria at 52 Pa. Code § 58.10(a)(1) for customers needing furnace repair or replacement.

1. Weatherization Program Administration

Refer to **Appendix D** for the CBOs currently contracted for the provision of energy survey and measure installation. In addition, UGI engages a third-party to independently verify that home weatherization was completed in accordance with LIURP standards.

2. Weatherization Program Eligibility

To be eligible for the LIURP Weatherization Program, the customer must be able to demonstrate the following:[18]

- the customer is an active residential gas heating customer or residential electric customer;[19]
- the customer's gross household income is at or below the current 150% of the FPIG;[20]
- the customer's annual consumption is above average usage; Above average usage is defined as a customer who exceeded the average residential threshold by 25% for electric customers (baseload and heat) and 30% for natural gas customers. The threshold will be reviewed annually to consider significant changes in usage patterns.

[18] Exceptions may be granted.
[19] UGI Gas will waive the requirement that the customer be an active gas heating customer for the purpose of furnace repair or replacement spending.
[20] However, up to 20% of LIURP participants may have a household income at 151-200% of the FPIG, on a first-come, first-serve basis.

Table 6. Minimum Usage Criteria	
Division	**High Usage**
UGI Gas	950 ccf
UGI Electric	12,788 kwh

- the customer has had continuous service for twelve months;
- the customer's premises are suitable for weatherization services;[21] and
- the customer's premise is the customer's primary residence.[22]
- The premise has not received LIURP weatherization services for the past seven (7) years.

Residential accounts with the following indicators are not eligible for the LIURP Weatherization Program:

- health care facilities;
- landlord/tenant (account is in the landlord's name);
- ratepayer/occupant (the ratepayer does not reside at the property);
- foreign load (one meter supplies more than one unit);
- LIFSO agreement (account is in the owner's name);
- utility service used to operate a swimming pool
- a residential property where more than fifty percent of the anticipated gas usage served through a single meter is used to operate the business.

3. Weatherization Program Outreach and Intake Efforts

UGI is in constant contact with weatherization CBOs, local government, weatherization providers and any other appropriate agencies for input and advice on the most efficient and effective methods to provide LIURP weatherization services without duplication or exclusion. Through the use of local CBOs, such as LIURP providers found in **Appendix D**, integration of federal, state and local funds for LIURP weatherization participants are more easily accomplished. UGI will inform each LIURP weatherization participant of any and all appropriate services.

4. Weatherization Program Identification & Referral of Low-Income Customers

With the use of COS for the administration of LIURP, UGI reviews its customer records

[21] Program measures follow applicable payback periods; therefore, a customer's residence that has been previously weatherized may not be eligible for LIURP until the applicable payback period has expired.
[22] The program is available to both homeowners and renters. Renters can qualify with written permission from landlords.

to identify high usage, high arrearage, low income customers. In addition, UGI accepts referrals from CBOs, community groups and customer inquiries. LIURP referrals may also come from UGI's Energy Efficiency and Conservation Plan program management.

5. Weatherization Program Inter-Utility Coordination

UGI maintains contact with appropriate gas and electric utilities within their service territory to initiate inter-utility coordination with both NGDCs and EDCs when applicable.[23] UGI and the other utilities coordinate comprehensive program services to better serve LIURP weatherization customers. In many cases, UGI and the corresponding utility employ the same LIURP measure installer. Therefore, inter-utility coordination may be accomplished without the need for written contract or inter-utility billing. As previously stated in the CAP section, UGI will form a USAC which will hold two annual meetings. UGI will include the electric utilities that overlap its gas service territory to these meetings to continue to discuss the coordination of the provision of LIURP services, and particularly, to improve identification of customers with inoperable natural gas furnaces who may be using electricity for space heating so as to improve the provision of LIURP services for those customers.

F. REHABILITATION PROGRAM

Through the Rehabilitation Program, UGI funds the installation of energy efficient measures at the time of construction or rehabilitation of low-income residential housing. These measures include the installation of ENERGY STAR rated high efficiency natural gas furnaces, hot water heaters, upgraded installation, and energy efficient windows.

The Rehabilitation Program achieves usage reduction by: (1) allowing identified low-income and special needs customers to benefit from a variety of energy efficient measures which will avoid future high usage, and (2) maximizing the LIURP dollars spent on installed weatherization measures. Specifically, this program treats low income housing at the construction/rehabilitation phase in order to maximize material and labor dollars. The expectation is that these homes could eventually receive LIURP services. Therefore, through this program, these customers receive service at the construction/rehabilitation phase to assist in covering the costs of the project(s) and to avoid future high usage and arrearage problems. By implementing energy efficiency measures at the rehabilitation or construction phase, the overall cost of the measures can be more economical than implementing them after the construction is complete. UGI periodically joins forces with rehabilitation projects within its service area to assure energy efficiency in low income housing.

1. Rehabilitation Program Eligibility

Each Rehabilitation Program project must have the following criteria to qualify for LIURP

[23] UGI restates its commitment to coordinating with EDCs in overlapping service territories who may be providing similar services pursuant to Act 129.

services and/or funds:

- the customer is an active residential gas heating customer or residential electric customer;
- the customer's premise is the customer's primary residence.[24]
- the customer's gross household income is at or below the current 200% of the FPIG; and
- existing gas heat or electric heating customer;[25] and
- coordination with a CBO(s).

Possible CBOs that would become involved in this project include:

- Neighborhood Housing Services;
- Habitat for Humanity;
- Housing Authorities; and
- Community Development Offices.

Residential accounts with the following indicators are not eligible for the LIURP Rehabilitation Program:

- health care facilities;
- landlord/tenant (account is in the landlord's name);
- ratepayer/occupant (the ratepayer does not reside at the property);
- foreign load (one meter supplies more than one unit);
  LIFSO agreement (account is in the owner's name);
- utility service used to operate a swimming pool.
- a residential property where more than fifty percent of the anticipated gas usage served through a single meter is used to operate the business.

All LIURP required information will be collected for each dwelling.

UGI will reserve up to 10% of its total current year LIURP budget for Rehabilitation Project Funding. If the entire budgeted amount is not expended, the remainder will be returned to traditional LIURP services funding.

As with the 2014-2017 USECP, UGI: (1) will limit the use of LIURP funding under this program to residential rate housing units and, in the case of rental housing units, only where the tenant has payment responsibilities for the utility service; (2) may direct funds to HOME developments, the Low Income Housing Tax Credit ("LIHTC") program and to non-profit agencies; and (3) will track customer participation levels and energy savings on a prospective basis.

[24] The program is available to both homeowners and renters. Renters can qualify with written permission from landlords.
[25] Customers of UGI-Electric with electric heat are eligible to participate in the LIURP Rehabilitation Program.

UGI 2020-2025 USECP

In the 2020-2025 UGI will continue to track and report the program results and details separately.

UGI 2020-2025 USECP

APPENDIX A

FUNDING COMMITMENTS FOR EACH UNIVERSAL SERVICE PROGRAM

I. UGI PROJECTED PARTICIPATION AND BUDGET PER PROGRAM

Projected participation and budgets for USECP programs are set forth below. For LIURP and Operation Share, participation and budget figures are provided for the geographic footprints of the UGI Gas Division's former three rate districts in accordance with settlement paragraph 38 of the 2019 UGI Gas Rate Case Settlement.

A. CAP

1. UGI Gas

UGI Gas's projected participation levels and budget for CAP is shown below:

Table A-1. UGI Gas CAP Annual Participation Levels & Budget for 2020-2025		
Year	**Projected Participation Levels**	**Projected Budget**
2020	20,123	8,954,230
2021	21,129	9,401,880
2022	22,185	9,872,006
2023	23,294	10,365,606
2024	24,458	10,883,887
2025	25,680	11,428,081

2. UGI Electric

UGI Electric's projected participation levels and budget for CAP is shown below:

Table A-2. UGI Electric Annual CAP Participation Levels & Budget for 2020 - 2025		
Year	**Projected Participation Levels**	**Projected Budget**
2020	2,885	$2,725,275
2021	3,029	$2,861,300
2022	3,180	$3,005,050
2023	3339	$3,155,303
2024	3506	$3,313,068
2025	3681	$3,478,721

B. LIURP

The projected LIURP participation levels and budgets for the geographic footprint of the former UGI Gas rate districts, and the UGI Electric service territory are set forth in table A-3.

UGI 2020-2025 USECP

APPENDIX A

Table A-3. Annual LIURP Participation Levels & Budget 2020 - 2025[26]		
Geographic Area	**Projected Participation Levels**	**Projected Budget**
South	202	$1,605,900
North	194	$1,333,450
Central	85	$695,000
UGI Electric	66	$274,750

C. OPERATION SHARE HARDSHIP FUND

Table A-4. UGI Operation Share Company Annual Funding Level for 2020 – 2025[27]		
Geographic Area	**Energy Funds Amount**	**Matching Funds**
South	$38,500	$38,500
North	$22,000	$22,000
Central	$12,000	$12,000
Electric	$10,000	$10,000
SubTotal	$82,500	$82,500

Table A-5. UGI Operation Share Annual Costs by Geographic Area for 2020 – 2025[28]						
Geographic Area	**Projected Participation Levels**	**Initial Contribution (voucher)**	**Matching Funds (voucher)**	**Projected CASH donations**	**Total Donations**	**Projected Administrative Budget[29]**
South	385	$38,500	$38,500	$77,000	$154,000	$5,775
North	185	$22,000	$22,000	$30,000	$74,000	$2,775
Central	120	$12,000	$12,000	$24,000	$48,000	$1,800
Electric	98	$10,000	$10,000	$19,000	$39,000	$1,470

UGI proposes to allocate available funds to administering agencies, based on the 2010 Census Data, as updated in 2015, and the Commission's estimate of the number of residents under 150% of the FPIG, as follows:

[26] The Settlement of the UGI Gas 2019 Rate Case increased the aggregate UGI Gas LIURP budget by $500,000, which was distributed proportionally between the different geographic areas of the service territory.
[27] This does not include Customer donations.
[28] Cash donations are donations provided by utility customers.
[29] The increase is due to per-grant CBO fee increase from $10 to $15.

UGI 2020-2025 USECP

APPENDIX A

Table A-6. UGI Allocations By Geographic Area

Former Rate District	Agency	Inter-Area Funding Allocation
UGI South	Allentown Salvation Army	15%
	Bethlehem Salvation Army	5%
	Easton Salvation Army	10%
	Harrisburg Salvation Army	21%
	Commission on Economic Opportunity	3%
	Lancaster Community Action Program	19%
	Lebanon Christian Ministries	5%
	Reading Salvation Army	22%
North	AGAPE	7%
	Commission on Economic Opportunity	35%
	Scranton Salvation Army	38%
	S.T.E.P., Inc.	11%
	TREHAB, Inc.	2%
	Union-Snyder Community Action Agency	7%
Central	Central PA Community Action	8%
	Central Susquehanna Opportunities	12%
	East Stroudsburg Salvation Army	6%
	Hamburg Salvation Army	20%
	Commission on Economic Opportunity	8%
	Northern Tier Community Action Corp	14%
	Schuylkill County Community Action	5%
	S.T.E.P., Inc.	2%
	TREHAB, Inc.	24%
	Union-Snyder Community Action Agency	1%

Each administering agency must spend their share of donations in order to maintain the allocation of funds; otherwise, UGI reserves the right to reallocate the funds to another administering agency. Furthermore, if and when there is a change to the existing administering agencies, such as, for example, an addition or removal of an agency, UGI will revise the amounts allocated to the administering agencies accordingly.

D. CARES

UGI Gas's projected participation levels and budget for LIHEAP and CARES Outreach are shown below:

Table A-7. UGI Gas CARES Participation Levels & Budget 2020-2025	
Projected Participation Levels	**Projected Budget**
185	$115,000

UGI Electric's projected participation levels and budget for CARES is shown below:

Table A-8. UGI Electric CARES Participation Levels & Budget 2020-2025	
Projected Participation Levels	**Projected Budget**
20	$20,000

II. UGI RIDER USP

In accordance with the Company's Gas Tariff[30] and Electric Tariff[31] available at https://www.ugi.com/tariffs/, UGI is permitted to recover costs for the USECP under its USP Riders with an annual reconciliation for costs and recoveries. The Rider USP rate shall be calculated to recover costs for the following programs: LIURP; CAP; Hardship Funds; and any other replacement or Commission-mandated Universal Service Program or low income program that is implemented during the period that the Rider is in effect.

[30] UGI Gas – Pa. P.U.C. No. 7.
[31] UGI Electric Pa. P.U.C. No. 6.

UGI 2020-2025 USECP

APPENDIX B

PROJECTED NEEDS ASSESSMENT

Per 52 Pa. Code § 62.4(b)(3), NGDCs with more than 100,000 residential accounts are required to provide a projected needs assessment for each Universal Service Program component and provide an explanation of how each program component responds to one or more identified needs. Per 52 Pa. Code § 62.7, UGI did not conduct a projected needs assessment for the former Central Rate District as it served fewer than 100,000 residential accounts. Likewise, UGI Electric is not required to conduct a projected needs assessment since it serves fewer than 60,000 residential accounts, as per 52 Pa. Code § 54.77.

The needs assessment for the former UGI South and UGI North Rate Districts, based on 2015 Census Data, included the number of estimated and identified low-income customers, the number of estimated and identified payment-troubled, low-income customers, the number of customers still needing LIURP services and the cost to serve them and the enrollment size of CAP to serve all eligible customers.

Table B-1.

	UGI SOUTH	**UGI NORTH**
1. Number of Identified Low-Income Customers	34,269	23,061
2. Estimate of Number of Low-Income Customers	91,478	49,410
3. Number of Identified Payment-Troubled, Low-Income Customers[32]	8,353	4,663
4. Number of Customers In Need of LIURP Services[33]	5,251	4,756
5. Cost of Serving the Number of Customers In Need of LIURP Services	$36,142,633	$28,131,740
6. Enrollment Size of CAP to Serve all Eligible Customers	34,269	23,061

In future USECPs the Company will provide a consolidated needs assessment for the Gas Division that will incorporate all former rate districts.

[32] 52 Pa. Code § 62.4 requires the inclusion of estimated low-income payment-troubled customers in a NGDC's needs assessment. Due to the methodology employed by the UGI Companies, this figure is equal to the identified payment-troubled low-income customers set forth in line 3 and is not repeated to avoid redundancy.

[33] This figure accounts for the following eligibility criteria: (1) identified low-income; (2) 12 months of consecutive service; (3) meeting LIURP usage criteria; (4) premises not having received LIURP weatherization services within the past seven (7) years. The UGI Companies may grant exceptions where warranted on a case-by-case basis to customers who do not meet this eligibility criteria and will report exceptions annually to the Commission.

Delivered on March 4, 2022

CAUSE-PA-I-14

Request:

Please indicate for each year for the past three years, whether:

a. UGI Gas exhausted its LIURP budget;

b. If such budget was not exhausted, indicate the number of dollars not spent;

c. UGI's three gas divisions exhausted its LIURP budget;

d. If such budget was not exhausted, indicate the number of dollars not spent;

e. If UGI's LIURP budget was exhausted, indicate the number of LIURP applicants that did not receive LIURP services despite having been found to be LIURP eligible;

Response:

a. UGI Gas only exhausted its LIURP budget in 2018 for the North District.

b.

	2018	2019	2020	2021
South	$530,531	$753,712	$1,497,368	$354,796
North	$(32,955)	$137,547	$884,099	$490,140
Central	$- 0	$- 0	$355,399	$165,453

c. - d. See the response to CAUSE-PA-I-14-b.

e. Not Applicable.

Responses to CAUSE-PA Set II (1 thru 16)
Delivered on March 21, 2022

CAUSE-PA-II-10

Request:

For each year in the past 5 years, disaggregated by year, what would the residential customer bill have been for a household at average usage levels if WNA had been in effect under the following parameters?

a. No dead band
b. 1% dead band
c. 3% dead band
d. 5% dead band

Response:

UGI Gas does not have the ability to recompute individual historic bills for determination of specific WNA billing impacts. However, please see Attachment CAUSE-PA-II-10 for a proxy of what the calculated annual WNA impact would have been to a residential bill over the past five years using an estimated average usage across the various deadbands. In addition, please see Attachment CAUSE-PA-II-9 for a five-year history of a monthly residential bill using the same estimated average usage.

Page 1 of 1

UGI Utilities, Inc. - Gas Division
WNA Scenario Analysis (Fiscal Years 2017 - 2021)
Estimated Annual Impact to R/RT Customer at Current Rates
charge (credit) to customer

	No Deadband	1% Deadband	3% Deadband	5% Deadband
Fiscal 2017	$ 39.05	$ 37.39	$ 34.11	$ 30.84
Fiscal 2018	$ 7.81	$ 8.65	$ 10.28	$ 10.68
Fiscal 2019	$ 6.17	$ 6.58	$ 5.34	$ 3.69
Fiscal 2020	$ 35.35	$ 32.87	$ 28.77	$ 25.48
Fiscal 2021	$ 29.59	$ 26.71	$ 22.60	$ 19.32

Assumptions:

Modeling based on estimated annual usage per UGI Gas Exhibit E for R and RT customers of 844 ccf using currently effective rates.

For modeling the estimated annual usage was allocated by month using the following percentages:

OCT	5.8%	JAN	20.1%	APR	7.0%	JUL	1.4%
NOV	11.5%	FEB	16.3%	MAY	3.1%	AUG	1.5%
DEC	15.8%	MAR	13.4%	JUN	1.8%	SEP	2.3%

Monthly baseloads were calculated using the daily usage calculated during the period of June-September multiplied by the number of days in each month

Composite historical and normal HDD data used as found on SDR-RR-11(a). Assumes all customers' calculations are based on the composite HDD information. If approved, actual WNA calculations would be specific to each customer's delivery region.

The above amount represents an approximation of WNA charges/credits only and does not reflect any other additional riders that may be applied such as DSIC or STAS

The underlying model assumes that all customers are billed and weather is measured based on calendar month which will differ from actual billing and weather periods that would be used if implemented. See Rider K in UGI Gas Exhibit F for proposed tariff language.

Request:

How does UGI define the term “Confirmed Low Income Customer”? Please explain how UGI calculates its count and include citation and/or copies of all workpapers.

Response:

The Company reports Confirmed Low Income Customer Counts each year in the Universal Service Reporting Requirements. Per the Data Dictionary and Clarifications Offered by BCS, Utilities are reminded to include all Fuel Fund recipients (LIHEAP CASH and CRISIS grants) in the "confirmed low income" category.

A non-fuel fund recipient will also be defined as a "Confirmed Low Income Customer" if they are a CAP participant, a LIURP Participant (at or below 150%) an Operation Share participant (at or below 150%) or, if for purposes of receiving a security deposit waiver, the customer provided income information to their local Community Based Organization (CBO).

UGI Gas 2022 Base Rate Case
Responses to CAUSE-PA Set IV (1 thru 14)
Delivered on April 14, 2022

CAUSE-PA IV-8

Request:

As of April 1, 2022, how many UGI customers were at risk of termination, disaggregated by:

a. Residential customers

b. Confirmed low income customers

c. CAP customers

Response:

The Company defined "at risk of termination" as accounts that meet the arrearage threshold set in the system that would trigger a 10-day notice being mailed.

a. 30,251

b. 5,840

c. 4,680

Prepared by or under the supervision of: Daniel V. Adamo

UGI Utilities, Inc. - Gas Division
Docket No. R-2021-3030218
UGI Gas 2022 Base Rate Case
Responses to CAUSE-PA Set IV (1 thru 14)
Delivered on April 14, 2022

CAUSE-PA IV-14

Request:

For 2017, 2018, 2019, and thus far in 2020 (Jan.-Apr.), disaggregated by month, please provide:

a. the number of residential customers in debt
b. the number of confirmed low-income customers in debt
c. the percentage of residential customers in debt
d. the percentage of confirmed low-income customers in debt
e. the dollars in debt for residential customers
f. the dollars in debt for confirmed low-income customers
g. the percent of dollars owed that are on a payment arrangement for residential customers
h. the percent of dollars owed that are on a payment arrangement for confirmed low-income customers
i. the average arrearage for residential customers
j. the average arrearage for confirmed low-income customer

Response:

Per discussion with CAUSE-PA, the corrected dates are 2019, 2020, 2021 and 2022 year to date.

Please see Attachment CAUSE-PA-IV-14.

Prepared by or under the supervision of: Daniel V. Adamo

UGI Gas 2022 Base Rate Case
Responses to OCA Set II (1 thru 51)
Delivered on March 2, 2022

OCA-II-15

Request:

Please provide in Excel format the number of CAP participants as of the end of the month by month since October 2018 to present inclusive. In addition to providing the total number, provide this number disaggregated by Federal Poverty Level.

Response:

Please see Attachment OCA-II-15. The Company does not maintain the historic CAP participation levels disaggregated by Federal Poverty Level.

Reference UGI Statement No. 11, page 9, lines 6 through 9. For the past three years, please identify and quantify the erratic financial results experienced by the Company due to colder and warmer than normal weather.

Response:

UGI Gas margin for the 2019, 2020 and 2021 fiscal periods were $515.9 million, $530.2 million and $553.5 million respectively. New base rates were the driver of the higher margin in 2020 and 2021 resulting from filings under PA Docket Nos. R-2018-3006814 and R-2019-3015162 but it should be noted actual margin for 2020 and 2021 fell approximately $26 million and $19 million short of expected margin when compared to the approved total revenues pursuant to the Company's filed Proof of Revenues, which are based on normal weather, provided in those cases. The primary driver of variances was weather. Weather, as measured in heating degree days, for 2019, 2020 and 2021 fiscal periods were 3%, 9% and 9% warmer than normal, respectively. Additional historical heating degree data can be found in SDR-RR-11(a).

Prepared by or under the supervision of: John D. Taylor

UGI Utilities, Inc. - Gas Division	:	

REBUTTAL TESTIMONY OF HARRY S. GELLER, ESQ.

ON BEHALF OF

THE COALITION FOR AFFORDABLE UTILITY SERVICES AND

ENERGY EFFICIENCY IN PENNSYLVANIA ("CAUSE-PA")

May 17, 2022

PREPARED REBUTTAL TESTIMONY OF HARRY GELLER

Q: Please state your name, occupation, and business address.

A. My name is Harry S. Geller. I am an attorney. I am retired as the Executive Director of the Pennsylvania Utility Law Project (PULP), but have maintained an office at 118 Locust Street, Harrisburg, PA 17101 for the purpose of providing consulting services and assistance to low income individuals and the organizations which represent them in utility and energy matters.

Q: Did you previously submit testimony in this proceeding?

A: Yes. I submitted direct testimony pre-marked as CAUSE-PA Statement 1 on behalf of the Coalition for Affordability Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your rebuttal testimony?

A: My rebuttal testimony responds to the direct testimony of the Office of Consumer Advocate's expert witness, Mr. Roger Colton.[1] In Mr. Colton's direct testimony he makes several recommendations about much needed improvements to UGI's low income programs and customer service, many of which I agree with and support; however, I wish to voice some concerns and clarifications regarding some of Mr. Colton's recommendations. The specific recommendations made by Mr. Colton that I wish to address in my rebuttal testimony are his recommendations that UGI: (1) screen customers converting to natural gas in order to identify Confirmed Low Income customers for CAP enrollment and to provide LIURP investments to Confirmed Low Income customers as part of the process of converting those customers to natural gas, (2) expand its

[1] OCA St. 4.

existing LIURP spending by $1.425 million per year, and (3) establish measurable outcome objectives based on the performance of Pennsylvania Natural Gas utilities as a whole.

My rebuttal testimony is not intended to address every issue raised or otherwise discussed in the direct testimonies submitted by expert witnesses in this proceeding. Absence of a response to any specific recommendation or position of any witness does not indicate my agreement. Unless required for the context of providing further response to direct testimony, I will not reiterate the extensive agreements and evidence that I provided in my direct testimony. To the extent that an argument raised by any party is already sufficiently addressed in by direct testimony, I do not intend to respond, and stand on the evaluations, analyses, and recommendations contained in my direct testimony.

Q: Please summarize Mr. Colton's recommendation that UGI screen customers converting to natural gas in order to identify Confirmed Low Income customers and for CAP enrollment?

A: In Mr. Colton's direct testimony, he raises universal service issues related to UGI's process for converting consumers to natural gas service.[2] He points out that UGI Gas has converted nearly 30,000 customers in the past five years with 354 of those accounts being identified as confirmed low income customers, about half of which (168 accounts) were CAP participants.[3] However, he notes that UGI is only able to track the original customers who are active in the Customer Information System and remain at the converted premise; thus, these numbers likely understate the number of low income customers that UGI converted to natural gas during this time due to the

[2] OCA St. 4 at 15-23.
[3] Id. at 16.

high mobility rate of low income consumers and the fact that UGI only has only confirmed the low income status of a small fraction of its estimated low income customers.[4]

Mr. Colton further notes that, despite the historically low cost of natural gas service relative to deliverable fuels, without help, low income customers of UGI Gas often cannot pay their full UGI Gas home heating costs and that the addition of these struggling low income accounts without providing them necessary assistance likely imposes additional costs on other ratepayers.[5] To that end, he recommends that UGI Gas be directed to screen customers who the Company assists in their conversion to natural gas to identify those converted customers as Confirmed Low Income customers and to enroll those customers in CAP where appropriate.[6]

Q: What is your response to this recommendation?

A: I support Mr. Colton's recommendation and agree that screening gas conversion customers for CAP will help ensure that these customers can afford service and reduce uncollectible costs passed on to other customers. However, screening gas conversion customers for CAP enrollment will not address the low CAP participation numbers for UGI's existing low income customers that I explained my direct testimony.[7] Thus, the Commission should direct UGI to adopt both Mr. Colton's recommended CAP screening processes for gas conversion customers as well as my recommended CAP screening and referral processes for existing customers to help ensure that UGI achieves an adequate level of CAP enrollment to address both the existing need in its service territory and the additional need created by gas conversion.

---

[4] Id.
[5] Id.
[6] Id. at 20.
[7] CAUSE-PA St. 1 at 20-21.

In my direct testimony I explained that less than a third of UGI's confirmed low income customers are enrolled in CAP and that UGI has had a consistently lower CAP participation rate compared to the industry average.[8] I further explained that UGI's total CAP enrollment declined over 16% when the Company resumed removing customers for failure to recertify after halting that practice due to COVID-19 concerns.[9] I recommended that UGI implement a process for simplified enrollment in CAP for non-CAP Low Income Home Energy Assistance Program (LIHEAP) recipients, inquire about the household income level of all customers seeking payment arrangements and provide a "warm transfer" for all potentially eligible customers to apply for CAP and other universal service programs, and conduct outreach to all customers who have been removed from CAP for failure to recertify since the expiration of the Commission's Emergency COVID-19 Order.

UGI must both address its problem with low CAP participation among currently identified low income customers, as well as address the problems identified by Mr. Colton with identifying and enrolling low income customers in the process of converting to gas. Thus, the Commission should order UGI to adopt both my recommendation to bolster CAP enrollment among UGI's existing customers and Mr. Colton's recommendations about increasing CAP enrollment among low income customers converting to gas service.

Q: Please summarize Mr. Colton's recommendation that UGI expand its LIURP spending?

---

[8] Id. at 20-21.
[9] Id. St. 1 at 14, 21.

A: Mr. Colton recommends an additional, incremental component to its LIURP program that would provide LIURP investments to low income customers identified as part of the process of converting customers to natural gas and an expansion of UGI's existing LIURP budget.

Regarding the new incremental LIURP component for gas expansion customers, Mr. Colton explains that, in converting low income households from other fuels to natural gas, it should be the responsibility of UGI Gas to take reasonable steps to help control the added costs of those conversions to other residential ratepayers.[10] Mr. Colton recommends that UGI seek to ensure efficient natural gas usage through expanded energy efficiency and conservation.[11] He recommends that UGI add a new incremental component to its Low Income Usage Reduction Program (LIURP) through which it will provide LIURP investments to Confirmed Low Income customers as part of the process of converting those customers to natural gas, with a budget of \$524,450.[12]

Mr. Colton also recommends that UGI Gas undertake efforts to protect an expanded number of low income households through its LIURP due to the expanded hardships which UGI Gas will impose on its low income customers due to its rate proposal in this proceeding.[13] He explains that the primary way to redress the hardships which UGI's proposed rate increase will impose on the Company's low income customers is to undertake expanded efforts to make the housing of its low income customers as energy efficient as possible.[14] He recommends that UGI expand its LIURP program to reach 40% of confirmed low income households with usage over

[10] Id. at 19
[11] Id. at 20.
[12] Id.
[13] OCA St. 4 at 40.
[14] Id.

151 CCF or more within the next ten years.[15] To achieve this goal, he recommends that UGI expand its annual LIURP budget by $1.425 million.[16]

Q: What is your response to Mr. Colton's recommendations regarding expanding UGI's LIURP program?

A: I agree that the additional LIURP measures and funding proposed by Mr. Colton are necessary to offset the increased hardships that will be caused by UGI's proposed rate increase and to help reduce the additional cost to UGI customers from gas conversion customers. In my direct testimony, I recommended that UGI increase its LIURP budget by ***at least*** a percentage equal to the percentage increase of any approved residential rate increase.[17] After reviewing Mr. Colton's testimony, I believe that the additional $1.425 million LIURP increase recommended by Mr. Colton is necessary to adequately address need for energy efficiency measures among high usage, low income customers in light of UGI's proposed rate increase. UGI's LIURP is a critical universal service program designed to improve bill affordability, and that UGI's average bill savings per LIURP job was 20-25%.[18] However, the program is not operating at a rate sufficient to fulfill the estimated need for comprehensive usage reduction services within a reasonable amount of time. At UGI's current rate of production, it would take between 25-40 years for UGI to serve all eligible households in need of LIURP services.[19] Expanding UGI's LIURP budget by the $1.425 million recommended by Mr. Colton will substantially increase the rate at which UGI can provide LIURP services to serve the existing need in its service territory.

---

[15] Id. at 40-41.
[16] Id. at 41.
[17] CAUSE-PA St. 1 at 29.
[18] Id. at 26.
[19] Id. at 27.

I also agree that Mr. Colton's recommended $524,450 incremental LIURP investments to low income customers identified as part of the process of converting customers to natural gas is necessary to both help low income gas conversion customers to afford service and to mitigate the potential impact of these customers struggles to afford service could have on existing customers. I also agree with Mr. Colton that this amount should be added on top of UGI's existing LIURP budget because the existing funds are necessary to serve the existing need in UGI's service territory.[20]

Q: Please summarize Mr. Colton's recommendation about establishing measurable outcomes for its universal service performance.

A: Mr. Colton voices many concerns similar to those raised in my direct testimony about UGI's need to better identify confirmed low income customers and enroll them in CAP and to have customers remain in CAP once enrolled.[21] Mr. Colton recommends the Commission establish three measurable Outcome Objectives that UGI Gas should seek to accomplish with respect to CAP.[22]

The Outcome Objectives he recommends are:

1. UGI Gas should achieve a Confirmed Low Income identification rate, as a percentage of estimated low income customers, no less than the Confirmed Low Income identification rate of Pennsylvania natural gas utilities as a whole (excluding the UGI Gas companies).

[20] Id. at 21.
[21] See OCA St. 4 at 27-31; See also CAUSE-PA St. 1 at 20-21.
[22] OCA St. 4 at 5.

2. UGI Gas should achieve a CAP participation rate, as a percentage of Confirmed Low Income customers, no less than the CAP participation rate of Pennsylvania natural gas utilities as a whole (excluding the UGI Gas companies).
3. UGI Gas should achieve a CAP default rate as a percentage of participants in the lowest poverty level range that is no less than the CAP default rate in that poverty level range for Pennsylvania gas utilities as a whole.[23]

Mr. Colton indicates that he would not recommend a system of rewards or penalties at this time but reserves the right to propose a system of penalties or rewards in a future rate case.[24]

Q: What is your response to these recommended measurable outcomes?

A: I support Mr. Colton's general idea to quantify established outcomes in CAP enrollment and retention. However, while it is concerning that UGI's identification of confirmed low income customers and CAP participation rates fall well below the industry standards for Pennsylvania natural gas utilities,[25] I do not believe that basing the measurable outcomes on the industry average statistics reported by other utilities is the appropriate metric against which to measure UGI's performance. The Public Utility Code requires that universal service programs are appropriately funded and available to meet the need for such services in the utility's service territory.[26] Nothing under the Code nor Commission regulations indicate that anything less than appropriate funding to fully meet low income needs is appropriate.

I believe that the success in identifying confirmed low income customers should be measured against full identification of all estimated low income customers and CAP enrollment

[23] Id.
[24] Id. at 26.
[25] CAUSE-PA St. 1 at 20-21; OCA St. 4 at 27-31.
[26] 66 Pa. C.S. § 2203(8).

should be measured against full enrollment of all confirmed low income customers. Any future penalty or rewards based on UGI's success in achieving these goals over time should be measured in percentage point increments as the Company progresses toward full identification and enrollment of all low income customers.

Q: Does this conclude your direct testimony?

A: Yes.

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

SURREBUTTAL TESTIMONY OF HARRY S. GELLER, ESQ.

ON BEHALF OF

THE COALITION FOR AFFORDABLE UTILITY SERVICES AND

ENERGY EFFICIENCY IN PENNSYLVANIA ("CAUSE-PA")

May 27, 2022

PREPARED SURREBUTTAL TESTIMONY OF HARRY S. GELLER, ESQ.

Q: Please state your name, occupation, and business address.

A. My name is Harry S. Geller. I am an attorney. I am retired as the Executive Director of the Pennsylvania Utility Law Project (PULP), but have maintained an office at 118 Locust Street, Harrisburg, PA 17101 for the purpose of providing consulting services and assistance to low income individuals and the organizations which represent them in utility and energy matters.

Q: Did you previously submit testimony in this proceeding?

A: Yes. I submitted direct testimony and rebuttal testimony pre-marked as CAUSE-PA Statement 1 and CAUSE-PA Statement 1-R on behalf of the Coalition for Affordability Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your surrebuttal testimony?

A: My surrebuttal testimony responds to the rebuttal testimony of UGI witnesses Sherry A. Epler,[1] Constance E. Heppenstall,[2] John D. Taylor,[3] and Daniel V. Adamo;[4] and Bureau of Investigation and Enforcement (I&E) witness Zachari Walker.[5] My surrebuttal testimony is not intended to address every issue raised or otherwise discussed by these or other witnesses in rebuttal. Absence of response to any specific recommendation or position of any witness does not indicate my agreement. Unless required for context in providing a further response to rebuttal testimony, I will not reiterate the extensive arguments and evidence that I provided in my direct and rebuttal testimony. To the extent an argument raised by any party in rebuttal was already

[1] UGI St. 8-R
[2] UGI St. 10-R.
[3] UGI St. 11-R.
[4] UGI St. 12-R.
[5] I&E St. 1-R.

sufficiently addressed in direct, I do not intend to respond, and stand firmly on the evaluation, analysis, and recommendations contained in my direct testimony.

Q: How is your surrebuttal testimony organized?

A: I will begin by responding to the rebuttal testimony of UGI witness Adamo and I&E witness Walker regarding the Company's universal service programs. I will then respond to the rebuttal testimony of UGI witnesses Eppler and Adamo regarding my recommendation that the Company cease charging late fees and reconnection fees to confirmed low income customers. Finally, I will respond to UGI witnesses Eppler, Happenstal, and Taylor regarding the Company's proposal to increase its residential fixed customer charge.

I. UNIVERSAL SERVICE PROGRAMS

a. Low Income Usage Reduction Program

Q: Did you make recommendations in your direct testimony regarding UGI's Low Income Usage Reduction Program (LIURP)?

A: Yes. In my direct testimony I explained that UGI's LIURP is a critical program that helps low income customers reduce energy usage, thus improving bill affordability and, in turn, helping to reduce associated arrearages and terminations.[6] However, I further explained that despite the program's value and impressive results, UGI's LIURP is not operating at a rate sufficient to fulfill the demonstrated need within a reasonable amount of time.[7] As such I recommended that UGI increase its LIURP budget by an amount at least proportional to the percentage residential bill increase in this case.[8]

[6] CAUSE-PA St. 1 at 26.
[7] Id.
[8] Id.

Q: Please briefly summarize the testimony regarding the Company's LIURP to which you wish to respond.

A: UGI witness Adamo argues that the LIURP regulations set forth factors to be considered when revising a utility's LIURP funding and that none of the parties in this proceeding have testified to any of those factors.[9] Also, both UGI witness Adamo and I&E witness Walker argue that it is not appropriate to increase LIURP funding through this proceeding because the LIURP budget was approved in the Company's most recent USECP proceeding.[10] Mr. Walker also points out that I made a miscalculation regarding UGI's current LIURP budget.[11]

Q: How do you respond to Mr. Walker's assertion that you made a calculation error regarding the Company's LIURP budget?

A: Mr. Walker is correct. In my direct testimony, I recommended that the Company increase its LIURP budget by a percentage at least equal to the percentage of any residential bill increase approved in this proceeding.[12] I provided an example based on the Company's proposed increase of 9.5% to the bill of a residential customer with average usage.[13] However, in my example, I only included the LIURP budget for UGI's former North and South divisions and failed to account for the LIURP budget attributable to the Central division. So, Mr. Walker is correct, that my example should have been based on a total LIURP budget of $3,714,350, and the 9.5% an increase should have resulted in a budget of <u>$352,863</u>. However, I did subsequently, in rebuttal, adjust my LIURP budget recommendation based on the testimony and recommendation of OCA witness Colton.

[9] UGI St. 12-R at 29-30.
[10] <u>Id.</u> at 30-31; I&E St. 1-R at 4.
[11] I&E St. 1 at 5.
[12] CAUSE-PA St. 1 at 29.
[13] <u>Id.</u>

Q: What adjustments did you make to this recommendation in your rebuttal testimony?

A: After reviewing the testimony of OCA witness Roger Colton,[14] I agreed with Mr. Colton that the additional $1.425 million LIURP increase recommended by Mr. Colton is necessary to adequately address the need for energy efficiency measures among high usage, low income customers in light of UGI's proposed rate increase.[15]

Q: What are the LIURP funding factors that witness Adamo claims were not addressed by the parties?

A: Mr. Adamo states that no parties addressed the factors to be considered regarding LIURP funding, as set forth in 52 Pa. Code § 58.4(c).[16] Those factors are:

> (c) Guidelines for revising program funding. A revision to a covered utility's program funding level is to be computed based upon factors listed in this section. These factors are the following:
>
> > (1) The number of eligible customers that could be provided cost-effective usage reduction services. The calculation shall take into consideration the number of customer dwellings that have already received, or are not otherwise in need of, usage reduction services.
> >
> > (2) Expected customer participation rates for eligible customers. Expected participation rates shall be based on historical participation rates when customers have been solicited through approved personal contact methods.
> >
> > (3) The total expense of providing usage reduction services, including costs of program measures, conservation education expenses and prorated expenses for program administration.
> >
> > (4) A plan for providing program services within a reasonable period of time, with consideration given to the contractor capacity necessary for provision of services and the impact on utility rates.

Q: Did you address these factors in your direct testimony?

A: Yes. I addressed all of these factors in my direct testimony.

---

[14] OCA St. 4 at 40-41.
[15] CAUSE-PA St. 1 at 6-7.
[16] UGI St. 12-R at 29-30.

(1) Regarding the number of eligible customers, I cited to UGI's most recent needs assessment, which indicates that, based on the number of customer dwellings that have already received, or are not otherwise in need of, usage reduction services, "In UGI's former South District, it would take 25 years to serve estimated need; while in UGI's former North District, it would take an estimated 40 years to serve those in need."[17]

(2) Regarding the expected participation rates, I pointed out that, "In 2021, LIURP services were provided to just 378 households across its service territory."[18]

(3) Regarding the total expense of providing LIURP services, I explained that, "The Company's current total LIURP budget is $3,705,350. Thus, if UGI's rates were approved as proposed, UGI's LIURP budget should be increased, at a minimum, by 9.5% or $352,008 – distributed proportionately according to the existing need in UGI's former North, South, and Central rate districts."[19]

(4) Regarding a plan for providing program services within a reasonable period of time, I explained that I further explained that, it will take between 25-40 years for UGI to serve identified needs across its service territory,[20] and that "UGI's LIURP is not operating at a rate sufficient to fulfill the estimated need for comprehensive usage reduction services within a reasonable amount of time."[21]

[17] CAUSE-PA St. 1 at 27.
[18] Id. at 26-27.
[19] Id. at 29.
[20] Id. at 27.
[21] Id. at 26.

Q: How do you respond to UGI witness Adamo's and I&E witness Walker's assertions that it is not appropriate to increase LIURP funding through this proceeding because the LIURP budget was approved in the Company's most recent USECP proceeding.

A: I disagree. It is both appropriate and relevant for a utility and the Commission to examine the Company's LIURP budget in the context of a proposed rate increase in order to help mitigate the impact of the proposed increase on its low income customers. UGI is proposing to substantially increase residential rates through this proceeding, and if approved, the proposed rate increase will exacerbate existing levels of unaffordability for UGI's low income, high usage customers, causing additional need for LIURP services to help mitigate the bill impacts and prevent additional arrearages and terminations. It is common for LIURP budgets to be adjusted in rate cases in order to help mitigate the impact of the rate increases on low income, high usage customers and help prevent increased arrearages and terminations associated with the residential bill increase.

As I explained in my direct testimony, low income customers already suffer disproportionate energy burdens and struggle to pay their UGI bills and often make impossible trade-offs to stay connected to service.[22] If the Commission approves any rate increase in this proceeding, an adjustment to UGI's LIURP budget will be needed to help mitigate the substantial financial impact on UGI's most vulnerable customers.

[22] CAUSE-PA St. 1 at 9-10.

b. Operation Share

Q: Did you make recommendations in your direct testimony regarding UGI's Hardship Fund (Operation Share)?

A: Yes. In my direct testimony, I explained that UGI's low income termination rates have increased significantly since the expiration of COVID-19 emergency measures.[23] I further explained that these high termination rates amongst confirmed low income and CAP customers demonstrates there is need for substantial improvements in UGI's Operation Share Program.[24] To that end, I recommended that UGI increase its Operation Share budget and increase the maximum grant amounts available to low income customers at risk of termination.[25]

Q: Please briefly summarize the testimony regarding Operation Share to which you wish to respond.

A: UGI witness Adamo argues that a funding increase for Operation Share is not necessary because the Company has already supplemented funding to the program over the past few years due to the COVID-19 pandemic and because federal programs, such as Emergency Rental Assistance Program (ERAP) and Pennsylvania Homeowner Assistance Fund (PAHAF), and the Low Income Home Energy Assistance Program (LIHEAP), support low income customers.[26] He also argues that increasing the maximum grant amount for customers would reduce the number of customers who are able to take advantage of the program's funding due to the proposed higher grant levels.[27]

---

[23] Id. at 14-17.
[24] CAUSE-PA St. 1 at 30.
[25] Id. at 30-32.
[26] UGI St. 12-R at 33.
[27] Id.

Q: How do you respond to UGI witness Adamo's argument that additional Operation Share funds are not necessary?

A: I recognize that the Company has increased Operation Share funds over the past few years due to the unprecedented need caused by the COVID-19 pandemic; however, more is needed to help reduce low income termination rates in UGI's service territory. As I explained in my direct testimony, despite the availability of these additional Operation Share funds and the increase in the number of grants awarded, UGI low income customers still experienced a disproportionate increase in termination rates – clear evidence of existing unaffordability.[28] I further explained:

> In 2021, UGI's confirmed low income termination rate was more than double its 2019 rate and its CAP termination rate was more than triple 2019 levels, while UGI's general residential termination rate remained in line with 2019 levels. At the end of the 2021-2022 winter moratorium, 7% of confirmed low income customers and 23% of CAP customers were at risk of termination, compared to only 5% of residential customers as a group. **This disproportionate increase in low income termination rates occurred despite the fact that the Operation Share program was carrying a significantly increased budget throughout 2021**.[29]

Moreover, ERAP and PAHAF are only temporary programs and will not be available to help offset the impact of this rate increase. These emergency relief programs are time-limited, and some have already run out of funds or will soon close to new applicants.[30] Additional Operation Share funding is needed to reduce UGI's disproportionately high low income termination rates.

[28] CAUSE-PA St. 1 at 30.
[29] Id. (emphasis added).
[30] See Pa. Department of Human Services, Emergency Rental Program (ERAP) Instructions and Requirements, March 2021, available at: https://www.dhs.pa.gov/ERAP/Documents/ERAP%20I%20R%20Revised%20December%202021.pdf ; See also Pa. Housing Finaance Agency, Pa. Homeowner Assistance Fund Program Plan, October 2021, available at: https://www.phfa.org/forms/haf/pahaf-plan.pdf .

Q: How do you respond to UGI witness Adamo's argument that increasing the grant amount will reduce the number of customers able to access grants?

A: I stand by my recommendation that increased grant amounts are needed to curb disproportionately high low income termination rates in UGI's service territory.[31] The documented increase in UGI's low income termination rates shows that additional assistance is needed to offset the financial impact of UGI's rate increase and keep low income customers connected to service. Increasing the Operation Share budget as recommended in my direct testimony, as well as that of OCA witness Colton and CEO witness Brady, will help ensure that funds are available to customers, in crisis, who need them.

c. OCA Recommended Measurable Outcomes

Q: Are there other issues regarding low income customer service that you wish to address?

A: Yes. In his direct testimony, OCA witness Roger Colton recommended that UGI adopt several measurable outcomes in an effort to improve the Company's performance identifying confirmed low income customers, enrolling them in CAP, and keeping them in the program once enrolled.[32] In my rebuttal testimony, I voiced support for Mr. Colton's recommendations and suggested some clarifications.[33]

[31] CAUSE-PA St. 1 at 30-31.
[32] OCA St. 4 at 5.
[33] CAUSE-PA St. 1-R at 7-9.

Q: Is there testimony from the Company about this subject to which you wish to respond?

A: Yes. UGI witness Adamo argues that there is not enough time to investigate and evaluate proposals related to the Company's universal service programs in the context of this base rate case.[34] He argues that these changes should be considered in the context of UGI's next Universal Service and Energy Conservation Plan (USECP).[35]

Q: What is your response?

A: Mr. Colton's recommended measurable outcomes are not necessarily related to making changes to the Company's universal service programs but are instead focused on ensuring that the Company be required to improve its customer service to low income customers.[36] All of these metrics are customer service metrics, necessary to assess UGI's operations, management efficiencies, and quality of service. These customer service issues are squarely within the bounds of the current rate case. Further, the Company's universal service rider, uncollectible expenses, and terminations are all tied to the performance of its universal service programs. The Choice Act requires that universal service programs are appropriately funded and available and operated in a cost-effective manner.[37] The Choice Act also requires that the Commission, ***at a minimum***, continue the level and nature of the consumers protections, policies and services to assist low income retail gas customers to afford natural gas services.[38]

[34] UGI St. 12-R at 10.
[35] Id.
[36] OCA St. 4 at 5.
[37] 66 Pa. C.S. §2203(8).
[38] 66 Pa. C.S. §2203(7).

Despite Mr. Adamo's claim that there is not enough time to evaluate these recommendations in the context of a rate case, universal service programming has a direct impact on rates for participants and other ratepayer and must not be divorced from base rate proceedings, which provide a more appropriate level of due process review. USECP proceedings only provide a limited ability for noncompany parties to evaluate the level and nature of the consumer protections, policies and services to assist low income customers. Unlike a rate case, where parties are able to engage in a factual inquiry into a utility's provision of service to all consumers through discovery and submit sworn expert testimony before an Administrative Law Judge, a USECP offers only a brief comment and reply comment period with no opportunity for formal discovery or to be heard by an Administrative Law Judge. As such, this rate case is an appropriate venue for the evaluation of the customer service and collections metrics proposed by Mr. Colton, as well as the program modifications which I proposed in my direct testimony.

II. LATE FEES AND RECONNECTION FEES

Q: Did you make recommendations in your direct testimony regarding UGI's late fees and reconnection fees?

A: Yes. In my direct testimony I explained that late fees function as a punitive measure for low income customers by punishing them for their inability to afford their bills and add additional costs that contribute to the disproportionately high rate of low income terminations.[39] I further explained that these regressive charges disproportionately impact low income Black and Hispanic households, families with young children, and medically vulnerable households.[40] I also explained that the combination of UGI's late fees and reconnection fees raise additional barriers to the ability

[39] CAUSE-PA St. 1 at 38.
[40] Id.

of low income households to reconnect to service, which increases the public safety risks associated with termination of natural gas service.[41] As such, I recommended that UGI stop charging late fees and reconnection fees to low income customers.[42]

Q: Please briefly summarize the testimony regarding the Company's late fees and reconnection fees to which you wish to respond.

A: UGI witness Adamo states that he partially agrees with my position and indicates that confirmed low income customers who receive LIHEAP crisis grants or who are on CAP are not assessed late fees by the Company.[43] However, he argues that reconnection fees facilitate customer engagement in order to prevent customers from being terminated.[44] UGI witness Eppler responded to my recommendation by stating that if UGI were to waive reconnection fees, rate revenues would need to be adjusted downward and would add to the Company's requested increase by $275,000 to recover the lost revenue.[45]

Q: How do you respond to Mr. Adamo's indication that low income customers enrolled in CAP or receive LIHEAP are not currently charged late fees?

A: I stand by my recommendation that UGI exempt all its confirmed low income customers from both late fees and reconnection fees. UGI's confirmed low income customers are not limited to only CAP customers and LIHEAP recipients. The Company also identifies and confirms low income status for LIURP Participants with income at or below 150% of the federal poverty level (FPL), Operation Share participants with income at or below 150% FPL, and customers who

---

[41] Id. at 38.
[42] Id. at 39.

[44] Id.
[45] UGI St. 8-R at 27-28.

provided income information to their local Community Based Organization (CBO) for purposes of security deposit waivers.[46] All of these subgroups have provided evidence demonstrating their inability to afford natural gas service without assistance. Late fees and reconnection fees are a hinderance to these customers' ability to maintain service. The Company should exempt them from these regressive, burdensome charges.

Q: How do you respond to Mr. Adamo's statement that late fees and reconnection fees serve as a deterrent to terminations?

A: Late fees and reconnection fees should not be used as a deterrent or punishment for low income customers who do not earn enough to pay their monthly expenses. Furthermore, I am unable to see the logic that charging these fees serves to facilitate engagement in order to prevent disconnects from occurring in the first place. My recommendation was limited to confirmed low income customers, which is a segment of UGI's customer base in need of assistance. My personal experience, and likely the philosophy behind UGI's current policy of waiving fees for its LIHEAP and CAP recipients, is that these households are unable to pay the current level of their bills and adding additional fees will only serve to further push them to delinquency and service loss. As I indicated in my direct, the average income for UGI's confirmed low income customers is just $1,007 per month and, under the Company's rate proposal, the average residential heating customer's bill would be $108.01 per month.[47] Thus, the natural gas bill burden for the average confirmed low income customer at average usage levels would be 10.7 % – *not including the additional burden of electric service*. Adding UGI's $73.00 reconnection charge to a customer

[46] CAUSE-PA to UGI IV-1.
[47] CAUSE-PA St. 1 at 38.

who cannot afford this overwhelming energy burden and is subsequently terminated would require an additional 7.2% of their monthly income to reconnect to service.[48]

The confirmed low income customers who have demonstrated eligibility for a deposit waiver, for LIURP, or Operation Share crisis assistance are in the same economic category as those LIHEAP and CAP recipients for whom UGI already waives late fees. Further, UGI's reconnection fees add a substantial barrier to reconnection for customers in this situation and it is not just or reasonable to penalize these customers for their inability to pay, or to throw up additional barriers that compound unaffordability and impede their ability to reconnect to service.

Q: How do you respond to Mr. Eppler's concerns about lost revenue from not charging reconnection fees to low income customers?

A: I recognize Mr. Eppler's concerns about the possibility of lost revenue from reconnection fees charged to confirmed low income customers. As I explained above, the purpose of late fees and reconnection fees should not be to punish or deter late payment. In the context of the Company's proposed $82.7 million dollar proposed increase, the reduction of $275,000 as a result of the eliminated reconnection fees for confirmed low income customers is a reasonable amount to help ensure that confirmed low income customers who are terminated for nonpayment are not unduly hindered from reconnecting to service.

[48] Id.

III. RESIDENTIAL FIXED CUSTOMER CHARGE

Q: Did you make recommendations in your direct testimony regarding UGI's proposal to increase its residential fixed customer charge?

A: Yes. In my direct testimony I explained that increasing the fixed residential customer charge undermines the ability of consumers to control costs through energy efficiency and conservation, which is problematic for low income customers who struggle to afford service and rely on offsetting high bills through usage reduction.[49] I further explained that increasing the fixed residential charge undermines the explicit goals of the Low Income Usage Reduction Program (LIURP) to "reduce residential energy bills."[50] I recommended that the fixed charge not be increased and that if the Commission grants any rate increase it should be assessed to the volumetric charge.[51]

Q: Please briefly summarize the Rebuttal testimony regarding the Company's residential fixed customer charge to which you wish to respond.

A: UGI witness Eppler states that low income customers are, on average, higher use customers and will thus benefit from a higher fixed charge.[52] He also argues that increasing the fixed charge will not affect customers' incentive to conserve because the Company will still increase its volumetric charge as well.[53] UGI witness Taylor argues that dedicating resources to reducing customer bills through energy efficiency measures does not reduce the costs incurred by the utility and, therefore, these actions are "not an efficient use of our resources as a society."[54]

[49] CAUSE-PA St. 1 at 32-33.
[50] 52 Pa. Code § 58.1.
[51] CAUSE-PA St. 1 at 35.
[52] UGI St. 8-R at 19.
[53] UGI St. 8-R at 19.
[54] UGI St. 11-R at 31.

Q: How do you respond to Mr. Eppler's assertion that low income customers are, on average, higher use customers.

A: It is troubling that low income customers are experiencing the levels of high usage laid out in Mr. Eppler's testimony. Low income households tend to live in smaller homes or apartments, which means the higher average usage is likely more easily controlled with basic efficiency measures and home repair. High usage low income customers are in need of energy efficiency and conservation programming to reduce their usage and remediate unsustainably high energy burdens. They are not helped in the long run by increasing the fixed residential customer charge. UGI should be taking additional steps to respond to the demonstrated need for energy efficiency and conservation measures through its LIURP.

The explicit goal of LIURP is to "reduce residential energy bills" by providing energy efficiency measures to low income households.[55] UGI's LIURP is effective at achieving this goal and producing meaningful average bill savings of 20-25% for the few hundred low income households who are able to receive LIURP services each year, and the program's effectiveness at achieving bill reduction is tied directly to volumetric rates.[56] However, despite these impressive results, UGI's LIURP is not operating at a rate sufficient to fulfill the estimated need for services.[57] To address the problematic high usage of low income customers, UGI needs to ramp up LIURP production. Raising the fixed charge will only serve to negate the bill impact of usage reduction

[55] CAUSE-PA St. 1 at 33-34; See also 52 Pa. Code § 58.1 ("The programs are intended to assist low-income customers conserve energy and reduce residential energy bills. The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs.").
[56] CAUSE-PA St. 1 at 33.
[57] CAUSE-PA to UGI I-13.

measures because, as more residential customer costs are shifted to the fixed charge, the achievable bill savings will necessarily erode.[58]

Q: How do your respond to Mr. Epplers assertion that increasing the fixed charge will not affect customers' incentive to conserve usage, because the Company will still increase its volumetric charge?

A: While customers will still be able to reduce costs through energy efficiency, the achievable bill savings will decrease according to how much the fixed charge is increased. As I explained in my direct, if the proposed increase in the fixed customer charge is approved, UGI customers will lose the ability to control as much as 3.7% of their monthly bill through energy conservation, which will reduce the bill savings for customers who implement EE&C measures and negatively impact the effectiveness of LIURP to achieve meaningful bill reductions for low income consumers.[59] Thus, I stand by my recommendations that the fixed charge should not be increased and that the Company's LIURP production should be increased to adequately meet the demonstrated need.[60]

I also note that, setting aside the impact increased fixed charges will have on a consumers' incentive to conserve, the fact remains that increasing the fixed customer charge shifts risk and costs to consumers and skims off bill savings achievable through conservation.

[58] Id.
[59] CASUE-PA St. 1 at 34.
[60] See CAUSE-PA St. 1 at 40.

Q: How do you respond to UGI witness Taylor's argument that attempting to achieve residential bill reduction through energy efficiency measures is "not an efficient use of our resources as a society" because it does not reduce the costs incurred by the utility?[61]

A: I totally disagree. The LIURP regulations state that the program is intended to "assist low-income customers conserve energy and **reduce residential energy bills**."[62] The regulation further states that, "The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs."[63] Reducing energy bills for low income customers helps decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs. [64] It also helps prevent terminations, and in turn reduce homelessness, blight, fires, and the public health impacts of termination.[65] Furthermore, there are other non-monetary societal benefits achievable through comprehensive energy efficiency, including health benefits from improved indoor air quality and stable temperatures, improved household comfort, and reduced greenhouse gas emissions; however, my direct testimony was limited to the effect of energy efficiency measures on low income bills.

Q: Does this conclude your surrebuttal testimony?

A: Yes.

COMMISSION ON ECONOMIC OPPORTUNITY

CEO Statement No. 1

Direct Testimony of Eugene M. Brady

Pennsylvania Public Utility Commission

v.

UGI Utilities, Inc. – Gas Division

Docket Number: R-2021-3030218

Q. Please state your full name and business address.

A. Eugene M. Brady, 165 Amber Lane, PO Box 1127, Wilkes-Barre, Pennsylvania 18703-1127.

Q. By whom are you employed and in what capacity?

A. I am employed by the Commission on Economic Opportunity (CEO) as Executive Director.

Q. What are the interests of the Commission on Economic Opportunity in this rate case?

A. The Commission on Economic Opportunity is a non-profit organization serving the low-income and elderly in Luzerne County, PA. In a typical year, the Commission serves more than 25,000 Luzerne County residents, of which 98% are at or below 150% of the federal poverty level. It is part of our responsibility to our constituency to advocate for their interests in regulatory proceedings and this proposed request will certainly have an impact upon those low-income ratepayers. In addition to the affordability of rates, CEO is particularly interested in the ability of our clients to save money through conserving energy.

Q. **What background and experience in energy issues qualify you and the Commission on Economic Opportunity to participate in this case?**

A. I have served as the Executive Director of the Commission since 1978. During my tenure CEO's experience and the expertise of its staff in energy programs has been recognized on state and national levels. CEO's energy related programs have been acknowledged by receipt of a Superior Achievement Award from the United States Department of Energy. CEO has weatherized more than 25,000 homes under the U.S. Department of Energy Weatherization Assistance Program. The organization also serves as a subcontractor for the PPL Electric Utilities' WRAP Program (LIURP) and the Low Income Usage Reduction Programs operated by the UGI Gas and Electric Divisions. In addition to energy conservation, the Commission is the contracted operator of Customer Assistance Programs sponsored by PPL and UGI and operates the hardship assistance funds for each of those utility companies. CEO is also the PA Department of Public Welfare's contracted operator of the crisis component of the Low Income Home Energy Assistance Program (LIHEAP) in Luzerne and Wyoming Counties. CEO was also a major contractor for PPL in the Low Income Renewable Energy Pilot, and secured funding and installed several solar thermal water heating systems for the former PG Energy and UGI Gas Division.

Throughout my career I have served on numerous Boards, Committees and Task Forces in the energy field under the auspices of the US Department of Energy, The PA Department of Community & Economic Development, and the PA Public Utility Commission. Presently, I serve on the Board of Directors of the National Center for Appropriate Technology; I am on the Board of the National Community Action Foundation, the Chair of the Pennsylvania Weatherization Providers Task Force, and Chair of the Department of Community & Economic Development Weatherization Policy Advisory Council.

Additionally, CEO has been an active party in many restructuring and rate cases before the PUC including the last rate cases of UGI Electric (R-2021-3023618) and UGI Gas (R-2019-3015162).

Q. Please describe the areas of your testimony.

A. In its request for a rate increase the Company does not propose any increase in funding or measures that would help low-income customers to deal with the proposed rate increase. The Company's pending Universal Service and Energy Conservation Plan (M-2017-2598190) that sets funding for its universal service programs up to and including 2025 does not consider the impact of this rate increase. Further, an increase in the fixed monthly charge, as requested by the Company, would negatively impact a customer's motive and ability to conserve energy. The Company's proposal if granted would increase rates, discourage conservation, and leave a customer with less ability to conserve energy and less ability to reduce their electric bills. Despite the impact of its proposal on residential customers, and in particular low-income customers, the Company's proposal offers nothing in the way of changes or increases in funding to its low-income programs, programs that would help mitigate the negative impact of the Company's proposals.

The Company is requesting a rate increase of $82.7M, of which $68.1M, or 82.3%, will be allocated to the residential class. An average residential customer using 73.1Ccf of gas per month will see their bill increase from $98.62 to $108.01, an increase of approximately 9.5% for the residential class. Despite this increase and despite the impact it will have on low-income customers, the Company is not proposing any changes to its low-income programs, there is nothing proposed that will help low-income customers deal with the impact of this proposed rate increase. Specifically, my testimony will address how the Company's proposal to increase its monthly fixed service charge effects a customer's ability to conserve and how the impact of the Company's proposal could be mitigated through changes to the funding level of the Company's low-income reduction program (LIURP) and other universal service programs.

Q. Before addressing the specifics of your testimony, do you have general concerns regarding this rate case?

A. Yes. As I indicate above, I am concerned that this proposed increase does not come with any proposals that will help low-income customers deal with the impact of the rate increase and rate design. A large part of the residential customer's increase will be due to an increase in the fixed monthly customer charge, from $14.60 to $19.95, an increase of 36.6% This increase in the monthly fixed charge concerns me, as it has the Commission in recent cases, because it discourages conservation and impacts a customer's ability to save money through conservation; as the Company moves towards charging customers based upon the Company's fixed costs and away from a customer's consumption there is less incentive, and ability, to conserve. One of the only defenses a family, particularly a poor family, has against the sharp increases in energy costs is to conserve – lower the thermostat, seal air leaks, change filters regularly, add more insulation, get a more efficient heating unit, etc. The Company's proposal to increase the fixed costs greatly impacts a customer's motive to conserve and the ability to lessen the impact of any rate increase. The combined effect of an increase in rates and an increase in fixed monthly charges, without any changes to universal service funding, not only results in higher rates but also lessens the ability of customers to deal with those increases. In particular, the negative impact would be particularly harsh on the Company's low-income customers and the Company's proposed request ignores the interests of its low-income customers. The Gas Choice Act requires that the Commission ensure that universal service programs are 'appropriately funded and available' and the result of this proceeding will impact the question of whether the Company's universal service programs are appropriately funded and available.

Q. How does the effect of the Company's requests impact upon your testimony in this case?

A. I do not believe that the Commission should allow an increase in rates and allow an increase in the fixed monthly customer charge without requiring an increase in universal service funding that would allow some relief to low-income customers. For a typical residential customer, a 9.5% increase is substantial. The Company has indicated that the average annual income of its low-income customers if $12,084 so one can see the dramatic impact a 9.5% increase would have on low-income customers. High utility costs are not the only challenge for a poor person; we are in a time of great inflation where the costs of essential items-housing, transportation, food etc.-have been increasing at rates not seen for decades. Our agency has been helping low-income people for years and knows firsthand that they face financial challenges on many fronts and a dramatic increase in the costs for essential items can have a devastating impact. That negative impact goes beyond just an increase in rates in this case because the increase in the fixed monthly charge makes it more difficult for a consumer to lessen the impact of an increase in rates through conservation. Accordingly, I believe that any increase in rates and a rate design that discourages conservation should be accompanied by measures that allow a customer to conserve energy and thereby lower their utility bill.

Q: Does CEO take a position on whether the Company's rate increase should be granted?

A: No. Our concern is with the combination of the Company's request to increase rates and to increase the fixed portion of a customer's bill without any increases proposed for universal service funding or measures to help its low-income customers.

Q: What impact would the Company's proposed rate design have on low-income customers?

A: The more a customer's bill is made up of fixed charges the less incentive and ability there is for a low-income customer to save money by conserving energy. In this case the Company is proposing a 36.6% increase of its fixed monthly charge, from $14.60 to $19.95. I am concerned about this proposal and CEO opposes any increase to the fixed monthly customer charge.

Q: Why does CEO oppose an increase to the fixed monthly customer charge?

A: In prior cases, former PUC Commissioner Cawley has expressed concerns about proposals to increase the fixed portion of a customer's bill or any proposal that would impact a customer's motive and ability to conserve. In a National Fuel Gas case (No. R-

00061493) Commissioner Cawley issued a statement while the case was pending concerning NFG's proposal to increase its fixed monthly customer charge. That statement read in relevant part:

> "This proposed change raises important policy issues that affect this Commission's goals of promotion and encouragement of conservation of natural resources, including natural gas. Given the extremely volatile and currently high natural gas prices facing this nation, a policy that does not optimally reward consumers for conservation efforts, but instead charges fixed fees regardless of usage, should, I feel, be addressed by the parties to this case."

We share Commissioner Cawley's concerns and believe that fixed monthly charges should be held in check.

Q. What would you like to address concerning the Company's LIURP program?

A. The Company has indicated that as of January 31, 2022, it has 81,081 confirmed low-income customers but estimates that is had 153,437 low-income customers in 2021. The Company's last needs assessment submitted as part of the Company's pending USECP found that there were 5,251 customers in need of LIURP measures in the Company's former UGI South district and 4,756 in need of LIURP in the Company's former North division. The former Central district was not part of that needs assessment because of the low number of customers in that district at the time of the assessment. The Company has stated that it would take 25 years to meet that need in the South district and

40 years to meet the need in the North district. The unmet need is compounded by the fact that during the COVID-19 pandemic the Company's LIURP budget was not fully spent.

Despite this large unmet need for LIURP services snd its proposal to increase rates in this proceeding, the Company is not proposing any increase in LIURP funding. As a result of this proceeding rates are likely to increase, a customer's ability to conserve will decrease (if the fixed monthly charge is increased) yet no relief is being provided to customers that would allow them to increase their conservation of energy and decrease their monthly bills. No progress will be made towards reducing the number of low-income customers in need of LIURP services.

Q. Do you believe that funding for LIURP should be increased and if so why?

A. I do believe that funding for LIURP should be increased in light of the above-described need and the effect, if approved, of the Company's requests in this proceeding.

Q. Do you have a specific recommendation regarding LIURP funding?

A. Yes. Current funding for LIURP is set at $3,634,350 annually and I am recommending that the annual funding for LIURP be increased by $750,000 effective upon the effective date of any rate increase emanating from this proceeding.

Q. What is the basis for recommending that LIURP funding be increased by $750,000 annually?

A. Initially, based upon the Company's own needs assessment there are approximately 10,000 low-income customers in need for LIURP services in just two of the three prior UGI Gas districts and as indicated above it will take 25 years in one of those districts and 40 years in the other to meet that need. So, in order to begin to meet that need the number of LIURP jobs will need to be increased as will LIURP funding. With an additional increase the Company can begin to meet the need that exists in its service territory.

The Company plans to complete 481 LIURP jobs per year across its service territory. I believe a good target would be an additional 100 jobs per year across the Company's territory. At a rounded LIURP job cost of $7,500 per job this would require an increase of $750,000 in additional annual funding. Further, as I mentioned above, often the only defense that a poor person has to rising utility costs is conservation and LIURP services increase a person's ability to conserve. LIURP provides conservation measures that a poor person could otherwise not afford. With the many economic challenges facing a low-income person, they lack the resources to improve energy efficiencies in the home. Additionally, because of the effect of the Company's proposed increase on the residential class and the move towards higher fixed charges, more help has to be given to the low-income residential customer in the form of improving their ability to conserve and thereby control their energy costs.

Q. Are there other reasons why you propose increasing LIURP funding by $750,000 annually?

A. Yes. Because I believe, like the Commission, that the energy conservation measures which result from a well funded LIURP program are an essential part of helping low income consumers deal with rising energy costs. The Commission has also found great value in LIURP programs by stating:

> "The Commission finds that LIURP has been one of the Commonwealth's most successful programs for assisting low-income customers. The Commission has found that LIURP reduces bad debt by reducing customers' bills. Customers who receive LIURP services are able to pay their entire bill plus contribute to their arrearage."

PUC Order on Duquesne Light's Restructuring, R-00974104, page 293.

And I believe that an effective LIURP program is especially important now in light of this Company's current request for a rate increase and change in rate design.

Although I believe the Company's other universal service programs serve important needs, they help a low-income customer only after a problem has arisen, whether it be arrearages or other crisis that impacts a person's ability to pay. Whereas a well-funded usage reduction program helps a poor person avoid a crisis by allowing for greater conservation and thereby a reduction in their monthly bills while at the same time promoting the common good that comes from energy conservation. I believe these are the reasons why the Commission has long recognized the value of a well-funded LIURP program.

Q. Do you have any general comments on the Company's universal service programs?

A. This Company has a history of using community-based organizations in the administration and implementation of its universal service programs, and I commend them for doing so. And it has indicated that it intends to continue to use community-based organizations relative to its universal service programs. As part of this proceeding, the Company should be directed to continue to use community-based organizations in the administration and implementation of its universal service programs as it has traditionally.

These organizations serve thousands of low income and disadvantaged members of the community; they have direct knowledge of the barriers and impediments to self-sufficiency, and continually innovate and evolve the service delivery system to better meet the needs of the population they serve. Community based organizations are governed by volunteer Boards of Directors; accountable to the communities they serve, and are not conflicted by a duty to shareholders and investors. The focus and active experience of community-based organizations make them singularly suited to speak for the needs of the community. Local, experienced community-based organizations must continue to operate these programs; the CEO operates as a one stop facility for the energy problems of the poor. This system has been shown to be efficient, cost-effective and serves as a vital link between utility programs and the low-income customers served by those programs.

Q. Do you have any recommendations regarding other universal service programs?

A. Yes. As part of the settlement in this Company's last rate case, the Company agreed to increase Company donations to its Operation Share Hardship fund by $1,000,000 on a one-time basis. Considering the current request to increase rates, the number of low-income customers served and the inflationary pressures those customers face I am recommending that the Company's annual contribution to its hardship fund be increased by $1,000,000.

Q. Can you summarize your recommendations?

A. I am recommending the following:

1. That annual LIURP funding be increased by $750,000 with any unspent portion being carried over to the following year;

2. That the Company's request to increase its fixed monthly customer charge be denied;

3. That the Company be directed to continue to use community-based organizations as it has traditionally done in the administration and implementation of its universal service programs;

4. That the Company's annual contribution to its hardship fund be increased by $1,000,000.

Q. Does this conclude your testimony?

A. Yes.

<u>INTRODUCTION</u>

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Zachari Walker, and my business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. WHAT IS YOUR EDUCATIONAL AND EMPLOYMENT BACKGROUND?

A. My education and employment background is attached as Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for representing the public interest in rate and other proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to review the base rate filing of UGI Utilities, Inc. – Gas Division (UGI Gas or Company) and recommend adjustments to the Company's proposed operating and maintenance (O&M) expenses, taxes, and cash working capital (CWC) claims for the fully projected future test year (FPFTY) ending September 30, 2023.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1 contains schedules that support my direct testimony.

Q. PLEASE SUMMARIZE THE COMPANY'S REQUESTED REVENUE INCREASE.

A. UGI Gas' base rate case was filed on January 28, 2022, with a requested increase of $82,742,000[1] to claimed present rate revenues of $1,062,724,000 resulting in an overall revenue requirement of $1,145,466,000 for the FPFTY.[2]

Q. PLEASE SUMMARIZE YOUR ADJUSTMENTS.

A. The following table summarizes my recommended adjustments:

[1] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-2.
[2] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-2.

	UGI Gas Claim	I&E Recommended Allowance	I&E Adjustment
O&M Expenses:			
Employee Activity Costs	$588,226	$217,935	($370,291)
Advertising Expense	$1,901,541	$1,016,363	($885,178)
Membership Dues	$1,115,404	$961,406	($153,998)
Interest for Customer Deposits	$972,000	$648,000	($324,000)
Payroll Expense	$82,929,000	$80,677,324	($2,251,676)
Employee Benefits Expense	$22,117,000	$21,510,994	($606,006)
Total O&M Adjustments			**($4,591,139)**
Taxes:			
Payroll Taxes	$6,927,000	$6,738,985	($188,015)
Total Tax Adjustments			**($188,015)**
Rate Base:			
Cash Working Capital	$62,148,000	$61,313,000	($835,000)
Total Rate Base Adjustments			**($835,000)**

I&E OVERALL RECOMMENDED REVENUE REQUIREMENT

Q. WHAT IS I&E'S TOTAL RECOMMENDED REVENUE REQUIREMENT?

A. I&E's total recommended revenue requirement is $1,094,441,000. This recommended revenue requirement represents an increase of $18,072,000 to the I&E-adjusted present rate revenues of $1,076,369,000. This total recommended allowance incorporates my adjustments made in this testimony to O&M expenses, taxes, and CWC, and those recommended adjustments made in the testimony of I&E witnesses Anthony Spadaccio,[3] Brian LaTorre,[4] Ethan Cline,[5] and Esyan Sakaya.[6]

---

Rate of Return	6.13%		6.84%		7.26%

EMPLOYEE ACTIVITY COSTS

Q. WHAT IS INCLUDED IN EMPLOYEE ACTIVITY COSTS?

A. Per the Company's response to I&E-RE-24(b),[7] the employee activity costs consist of expenses related to the company picnic, employee service awards, an annual holiday breakfast, and "other activity." In further explanation, the Company states "other activity" includes, but is not limited to, department

[7] I&E Exhibit No. 1, Schedule 1, pp. 1-2.

meetings, employee gifts, field employee welfare (water, ice, etc.), special activity gifts, flowers, and cards.[8]

Q. WHAT IS THE COMPANY'S CLAIM FOR EMPLOYEE ACTIVITY COSTS?

A. UGI Gas' FPFTY expense claim for Employee Activity Costs is $588,226.[9] A breakdown of the FPFTY claim is as follows:[10]

Company Picnic	$213,000
Service Awards	$165,996
Annual Holiday Breakfast	$24,800
Other Activity	$184,430
Total	**$588,226**

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

8 I&E Exhibit No. 1, Schedule 1, p. 2.
9 UGI Gas Book II, SDR-RR-30(e).
10 I&E Exhibit No. 1, Schedule 1, p. 2.

Q. WHAT IS YOUR RECOMMENDATION FOR EMPLOYEE ACTIVITY COSTS?

A. I recommend an allowance of $217,935 or a reduction of $370,291 ($588,226 - $217,935) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on the historic year 2019 level expense inflated to the FPFTY. The 2019 data represents the most recent known and measurable data prior to the effects of the COVID-19 pandemic. In response to I&E-RE-24, the Company provided a breakdown of employee activity costs by year for 2019 through the FPFTY.[11] There is a considerable difference in expense level during 2020 and the HTY, seemingly due to the impact of the COVID-19.[12] Going forward the Company plans to resume the Company picnic in 2022 and 2023;[13] however, it appears the Company has accepted the new level of expense as the new normal.[14] At this juncture, given that we are still in the midst of a pandemic, it is impossible to determine whether all employees would be willing to gather at an optional Company picnic. Even if all UGI Gas employees attend the picnic, the $123 ($213,000[15] ÷ 1,731 employees[16]) cost per employee is not prudent.

---

[11] I&E Exhibit No. 1, Schedule 1, p. 2.
[12] I&E Exhibit No. 1, Schedule 1, p. 1, Response Part B.
[13] I&E Exhibit No. 1, Schedule 1, p. 1, Response Part B.
[14] I&E Exhibit No. 1, Schedule 1, p. 2.
[15] I&E Exhibit No. 1, Schedule 1, p. 2.
[16] I&E Exhibit No. 1, Schedule 2, p. 2.

Q. HOW DID YOU CALCULATE YOUR RECOMMENDATION?

A. First, I started with the known and measurable historic expense level from 2019, \$189,346, provided in response to I&E-RE-24.[17] Using the CPI Inflation Calculator, I converted the September 30, 2019 expense to the September 30, 2021 (2021) equivalent after inflation, \$202,289.[18] Next, I applied an average of consumer price index (CPI)[19] inflation factors of 6.0% [(7.9% + 5.8% + 6.6% + 3.8%) ÷ 4] and 2.8% [(3.0% + 2.9% + 2.6% + 2.6%) ÷ 4] for the four quarters in the 2022 fiscal year and the four quarters in the 2023 fiscal year, respectively, to adjust the 2021 equivalent value to the 2023 equivalent value. This yields \$217,935 [{\$202,289 x (1+6.0%)} x (1+2.8%)] for my FPFTY recommended allowance. My recommended allowance of \$217,935 represents a reduction of \$370,291 (\$588,226 - \$217,935) to the Company's FPFTY employee activity costs claim.

<u>COVID-19 RELATED UNCOLLECTIBLE ACCOUNTS EXPENSE</u>

Q. WHAT IS UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. Uncollectible accounts expense are specific receivables that are determined to be uncollectible, in whole or in part, either because the debtors do not pay or because the creditor finds it impracticable to enforce payment. Those accounts deemed uncollectible are charged against income as uncollectible accounts expense.

---

17 I&E Exhibit No. 1, Schedule 1, p. 2.
18 I&E Exhibit No. 1, Schedule 3.
19 Blue Chip Financial Forecasts Vol 41, No. 4, April 1, 2022, p. 2.

Q. HOW DO UTILITIES RECOGNIZE UNCOLLECTIBLE EXPENSE FOR RATEMAKING PURPOSES?

A. Generally, for ratemaking purposes, utilities compute uncollectible expense on an annual prospective basis. While the uncollectible expense is a prospective claim, the proper calculation begins with a historic analysis of actual net write-offs to gross revenues to develop a historic write-off ratio. Thus, net write-offs are gross write-offs less recoveries of amounts previously written off. This ratio is applied to projected revenues to determine the proper prospective allowance. Normally, the historic analysis is based on several years of data.

Q. WHAT CLAIM ARE YOU ADDRESSING HEREIN FOR UNCOLLECTIBLE EXPENSE?

A. I am addressing the COVID-19 related cost recovery associated with uncollectible accounts expense.

Q. WHAT IS THE COMPANY'S CLAIM FOR COVID-19 RELATED UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. The Company's total claim for COVID-19 cost recovery of deferred uncollectible accounts expense is $1,503,000 which represents $607,000 through September 30, 2020, and $896,000 through 2021.[20] This produces a ten-year amortization of

[20] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-11.

$150,000 ($1,503,000 ÷ 10 years). The Company is also proposing regulatory asset treatment going forward for incremental uncollectible costs above what is included in this proceeding to be recovered in the next base rate proceeding.[21]

Q. WHAT IS THE BASIS FOR THE COMPANY'S COVID-19 RELATED UNCOLLECTIBLE ACCOUNTS EXPENSE CLAIM?

A. The Company followed the Commission's guidance in the May 13, 2020 Secretarial Letter regarding *COVID-19 Cost Tracking and Creation of Regulatory Asset, Docket No. M-2020-3019775* (May 13, 2020 Secretarial Letter), taking the difference between the amount of uncollectible expense claimed in the prior base rate case and the amount experienced at the fiscal year ended September 30, 2020, and the amount experienced at the fiscal year ended September 30, 2021. The Company included this amount in a regulatory asset and is following the 10-year amortization period in line with the Settlement Agreement in the previous base rate case at Docket No. R-2019-3015162.[22] Additionally, the Company does not agree that the accumulation of COVID-19 related uncollectible deferrals should cease upon the effective date of new rates in the instant proceeding.[23] In this regard, the Company states it should be able to continue to accumulate and defer costs above the normalized level as approved within the Company's new rates as a

---

[21] I&E Exhibit No. 1, Schedule 4, p. 1, Response Part B.
[22] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-11.
[23] I&E Exhibit No. 1, Schedule 4, p. 1, Response Part B.

regulatory asset citing higher than normal delinquency rates on COVID-19 related payment arrangements.[24]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR THE CONTINUED DEFERRAL OF COVID-19 RELATED UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. I accept the Company's total deferral claim of $1,503,000 for the 2020 and 2021 excess COVID-19 related uncollectible accounts, as well as the 10-year amortization period as approved by the Commission as part of the settlement in the UGI Gas 2020 BRC proceeding.[25] However, I disagree that the Company should be allowed to continue recording a regulatory asset for ongoing COVID-19 related incremental uncollectible costs after the effective date of new rates for the instant proceeding. Upon the effective date of new rates for this proceeding, the Company will have a new uncollectible accounts expense percentage built into the rate formula that accounts for the increased delinquency rates and higher customer balances.

---

[24] I&E Exhibit No. 1, Schedule 4, p. 1, Response Part B.

[25] *Pa. PUC, et al. v. UGI,* Docket Nos. R-2019-3015162 (Order entered on October 8, 2020).

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. First, the Company has provided evidence that COVID-19 related uncollectible accounts expenses are included in forward-looking routine uncollectible accounts expense as seen in the discrepancy between the rate of accrual provided in UGI Gas Book I, Attachment III-A-5 and UGI Gas Book V, Schedule D-11. The Company states the 2020 Uncollectible Accounts Expense on Schedule D-11, $13,417[26] (12,810[27] + $607[28]), includes the COVID-19 related uncollectible accounts expense, and the 2021 Uncollectible Accounts Expense, $13,706[29] ($12,810[30] + $896[31]), includes the COVID-19 related uncollectible accounts expense. Therefore, allowing the Company to continue the deferral past the effective date of new rates in this proceeding would allow for redundant recovery of the COVID-19 related uncollectible accounts since they are already built into the routine uncollectible accounts percentage on Schedule D-11 for the FPFTY calculation.[32]

Additionally, in the 2020 Joint Petition for Unopposed Settlement – UGI Gas et al., page 21, item 49, the Company states COVID-19 Pandemic Costs may include reasonable and prudently incurred…annual uncollectible accounts expense beginning with the fiscal year period ending September 30, 2020 and continuing

[30] UGI Gas Book I, Attachment III-A-5.
[31] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-11, Footnote 1.
[32] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-11, lines 1-4.

for annual periods thereafter until the effective date of the Company's next base rate filing. This statement in the previous base rate case Settlement Agreement indicates the Company agreed not continue to accumulate COVID-19 related costs beyond the effective date of new rates for the instant proceeding.

ADVERTISING EXPENSE

Q. WHAT IS THE COMPANY'S CLAIM FOR ADVERTISING EXPENSE?

A. The Company's FPFTY claim for advertising expense is $1,901,541.[33]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. In response to I&E-RE-30, the Company indicated it has an integrated advertising campaign promoting the benefits of domestic natural gas, including messaging that relates to the overall economic value of natural gas versus other energy sources and benefits of high efficiency natural gas appliances.[34]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

---

[33] UGI Gas Book 1, Attachment III-A-25.
[34] I&E Exhibit No. 1, Schedule 5, p. 1, Response Part C.

Q. WHAT IS YOUR RECOMMENDATION FOR ADVERTISING EXPENSE?

A. I recommend an allowance of $1,016,363 or a reduction of $885,178 ($1,901,541 - $1,016,363) to UGI Gas' FPFTY advertising expense claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. In response to I&E-RE-31, the Company provided a breakdown of the other advertising programs included in its advertising expense claim.[35] The listed categories: Sponsorship, Builder Meetings/Trade Shows, Branded Promotional Items, Customer Promotional Offers, and Miscellaneous Advertising, are represented by images provided in response to I&E-RE-30.[36] These representations merely promote the Company's image without promoting the benefits of domestic natural gas. Therefore, I recommend the other advertising programs in the amount of $885,178[37] be disallowed for ratemaking purposes as they are not necessary to ensure safe and reliable gas service.

MEMBERSHIP DUES

Q. WHAT IS INCLUDED IN MEMBERSHIP DUES?

A. The Company's claim includes payments to industry organizations with the

---

35 I&E Exhibit No. 1, Schedule 6, p. 2.
36 I&E Exhibit No. 1, Schedule 5, pp. 2-5.
37 UGI Gas Book I, Attachment III-A-25.

intention of improving the welfare, educational, social, and economic climate in the Company's local communities.[38]

Q. WHAT IS THE COMPANY'S CLAIM FOR MEMBERSHIP DUES?

A. UGI Gas is claiming membership dues of $1,115,404 for the FPFTY.[39]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR MEMBERSHIP DUES?

A. I recommend an allowance of $961,406, or a decrease of $153,998 ($1,115,404 - $961,406) to the Company's membership dues claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on disallowing, for ratemaking purposes, claims for numerous organizations where the Company has not provided adequate support for their necessity to ensure safe and reliable gas service.[40] The recommended decrease to the FPFTY claim is the total of the following: Allentown Economic Development Corporation ($5,148); Economic Development Company of Lancaster County ($32,964); Lebanon Valley Economic Development Corporation

---

[38] I&E Exhibit No. 1, Schedule 7.
[39] UGI Gas Book II, Attachment SDR-RR-30.
[40] I&E Exhibit No. 1, Schedule 8, pp. 1-3.

($8,244); Lehigh Valley Economic Development Corporation ($21,636); Northeastern Pennsylvania Alliance ($1,704); Penn's Northeast ($5,664); Pennsylvania Chamber of Business & Industry ($66,521); and Pennsylvania Economy League ($12,117). The total of the organizations listed above is my recommended reduction of $153,998 ($5,148 + $32,964 + $8,244 + $21,636 + $1,704 + $5,664 + $66,521 + $12,117) to the Company's FPFTY membership dues claim.

INTEREST ON CUSTOMER DEPOSITS

Q. WHAT IS THE COMPANY'S CLAIM FOR INTEREST ON CUSTOMER DEPOSITS?

A. The Company's FPFTY expense claim for interest on customer deposits is $972,000.[41]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. UGI Gas is required to pay interest on customer deposits that it holds in accordance with tariff requirements. The interest is calculated by using the average level of customer deposits anticipated for the FPFTY times the required interest rate (4.50%) anticipated for the FPFTY, as published by the Department of Revenue and as required under the Company's tariff.[42] Additionally, in response

[41] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-15, line 7.
[42] UGI Gas Statement No. 2, pp. 21-22.

to I&E-RE-59, the Company stated 4.50% is the maximum lawful rate of interest for residential mortgages for December 2021 as published by the Department of Banking and Securities on November 13, 2021.[43]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR INTEREST ON CUSTOMER DEPOSITS?

A. I recommend an allowance of $648,000, or a reduction of $324,000 ($972,000 - $648,000) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. Per the Pennsylvania Secretary of Revenue, the current interest rate for Title 72 taxes is 3% for 2021 and 2022.[44] This interest rate is revised every year in December. The Company's FPFTY begins in October 2022 and the Pennsylvania Department of Revenue may revise the current interest rate in December 2022; however, as of today, this is speculative. Thus, I am recommending the allowance of $648,000 ($21,600,000[45] x 3.00%) using the current interest rate for Title 72 taxes.

---

[43] I&E Exhibit No. 1, Schedule 9.
[44] I&E Exhibit No. 1, Schedule 10.
[45] UGI Gas Statement No. 2, p. 21.

PAYROLL EXPENSE

Q. WHAT IS INCLUDED IN THE COMPANY'S CLAIM FOR PAYROLL EXPENSE?

A. The Company's payroll expense claim includes operations and maintenance salaries and wages for union, exempt, and non-exempt employees.

Q. WHAT IS THE COMPANY'S CLAIM FOR PAYROLL EXPENSE?

A. The Company's FPFTY claim for payroll expense is $82,929,000.[46]

Q. WHAT IS THE BASIS FOR THE COMPANY'S PAYROLL EXPENSE CLAIM?

A. The Company's claim for payroll expense is based on the HTY budgeted headcount with an increase of 43 regular employees in the FTY and an additional 27 regular employees to the FTY headcount.[47] The claim includes compensation changes targeted at increasing retention and recruitment.[48]

Q. DO YOU AGREE WITH THE COMPANY'S PAYROLL EXPENSE CLAIM?

A. No.

---

[46] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-7, p. 1.

[47] UGI Gas Book II, SDR-RR-20.

[48] UGI Gas Book II, SDR-RR-20.

Q. WHAT IS YOUR RECOMMENDATION FOR PAYROLL EXPENSE?

A. I recommend an allowance of $80,677,324, or a reduction of $2,251,676 ($82,929,000 - $80,677,324) to the Company's FPFTY claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on an employee vacancy adjustment for unfilled positions included in the Company's claim.

Q. PLEASE EXPLAIN YOUR RECOMMENDED VACANCY ADJUSTMENT.

A. My recommended vacancy adjustment is based on an average employee vacancy rate of 2.74% [(2.63% + 5.04% + 0.54%) ÷ 3] determined from the response to I&E-RE-63.[49] I calculated the monthly vacancy rate by dividing the actual monthly vacancies by the budgeted positions for each month in the fiscal years ended September 30, 2019; September 30, 2020; and September 30, 2021.[50] Next, I calculated the annual average vacancy rate for each fiscal year and then calculated the overall average vacancy rate,[51] as summarized in the table below:

Fiscal Year Ended	Vacancy Rate
September 30, 2019	2.63%
September 30, 2020	5.04%
September 30, 2021	0.54%
Average Vacancy Rate	2.74%

[49] I&E Exhibit No. 1, Schedule 11, pp. 1-3.
[50] I&E Exhibit No. 1, Schedule 12.
[51] I&E Exhibit No. 1, Schedule 12.

The average of the annual employee vacancy rate, 2.74% [(2.63% + 5.04% + 0.54%) ÷ 3] yields 47 (1,731 FPFTY budgeted employees[52] x 0.0274) vacant employee positions for the FPFTY. Finally, I multiplied the vacant positions by the average annual payroll, $47,908 ($82,929,000 ÷ 1,731), per employee which produces my recommended payroll adjustment of $2,251,676 ($47,908 x 47 positions). This adjustment results in my recommended payroll allowance of $80,677,324 ($82,929,000 - $2,251,676).

Q. EXPLAIN YOUR RATIONALE FOR THE VACANCY ADJUSTMENT.

A. The Company budgeted its payroll expense based on the average employee count of 1,731 at the end of the FPFTY as compared with the HTY employee count of 1,667 employees,[53] which includes 20 anticipated additional new employees in the FPFTY.[54] It is unreasonable to assume that the Company will fill and maintain 100% full staffing of 1,731 budgeted positions in the FPFTY based on its own historic vacancy records of the fiscal years ended September 30, 2019, 2020, and 2021. As discussed above, using my recommendation, the Company would reflect a normal vacancy rate of 2.74% in the FPFTY. Additionally, as evidenced at the end of the first quarter of the FTY, the Company experienced an overall increase to a 2.24% vacancy rate and an average vacancy rate of 1.73%.[55] These historic

[52] I&E Exhibit No. 1, Schedule 2, p. 2.
[53] I&E Exhibit No. 1, Schedule 2, p. 2.
[54] UGI Gas Statement No. 9, p. 16.
[55] I&E Exhibit No. 1, Schedule 12.

vacancy rates support my recommended 47 vacant positions based on an average vacancy rate of 2.74% for an adjustment to payroll expense.

With the current COVID-19 pandemic, the Company may continue to face challenges to fill all positions as budgeted in the FTY and FPFTY. Additionally, there will always be a certain level of normal vacancies due to retirements, resignations, transfers, layoffs, etc., on a day-to-day operating basis, which are unpredictable and there will always be search and placement time involved in filling normal employee vacancies as well as newly added positions. Such vacancies will yield an annual savings in payroll costs that must be reflected in payroll expense to eliminate an unreasonable impact to ratepayers.

EMPLOYEE BENEFITS

Q. WHAT IS INCLUDED IN THE COMPANY'S CLAIM FOR EMPLOYEE BENEFITS EXPENSE?

A. The Company's employee benefits claim includes insurance premiums for medical, dental, basic life, long term disability, accidental death and dismemberment, and business travel accident insurances.[56]

[56] UGI Gas Book II, Attachment SDR-RR-22.

Q. WHAT IS THE COMPANY'S CLAIM FOR EMPLOYEE BENEFITS EXPENSE?

A. The Company is claiming employee benefits expense of $22,177,000 for the FPFTY.[57]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company has based its FPFTY claim for employee benefits expense on budgeted 2022 fiscal year health and dental insurance expense.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR EMPLOYEE BENEFITS EXPENSE?

A. I recommend an allowance of $21,510,994, or a reduction of $606,006 ($22,117,000 - $21,510,994) to the Company's FPFTY claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on an employee vacancy adjustment as noted in the payroll expense section above. I applied the 2.74% vacancy rate to the Company's

---

[57] I&E Exhibit No. 1, Schedule 13, p. 2.

claim for employee benefits to calculate my employee benefits expense adjustment. The result is my recommended adjustment of $606,006 ($22,117,000 x 0.0274).

PAYROLL TAXES

Q. WHAT IS THE COMPANY'S CLAIM FOR PAYROLL TAXES?

A. The Company is claiming $6,927,000 for FPFTY payroll taxes.[58]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on the FPFTY payroll expense claim including an adjustment for an increase in payroll expense[59] and the social security and Medicare taxes, federal unemployment tax, and Pennsylvania state unemployment tax.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR PAYROLL TAXES?

A. I recommend an allowance of $6,738,985, or a reduction of $188,015 ($6,927,000 - $6,738,985) to the Company's FPFTY claim.

[58] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-31, lines 4-6.
[59] UGI Gas Statement No. 2, p. 25.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on my recommended total payroll expense adjustment of $2,251,676 and calculated by applying the Company's payroll tax rate of $8.35% (7.59% + 0.14% + 0.62%).[60] The result is my recommended adjustment of $188,015 ($2,251,676 x 0.0835), a reduction to the Company's FPFTY payroll tax claim.

<u>**CASH WORKING CAPITAL**</u>

Q. WHAT IS A CASH WORKING CAPITAL (CWC) ALLOWANCE FOR RATEMAKING PURPOSES?

A. CWC includes the amount of funds necessary to operate a utility during the interim period between the rendition of service, including the payment of related expenses, and the receipt of revenue in payment for services rendered by the utility.

Q. HOW DOES THE COMPANY CALCULATE ITS CWC CLAIM?

A. The Company calculates its CWC claim by using a lead/lag study. A lead/lag study measures the differences in time between: (1) the time services are rendered until payment of those services is received; and (2) the time between the point when a utility has incurred an expense and the actual payment of the expense.

---

[60] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-32, lines 3,7, and 9.

Stated a different way, the lead/lag study measures how many days exist on an average between the midpoint of the service period and the date the payment is made.

Q. DO YOU AGREE WITH THE COMPANY'S USE OF THE LEAD/LAG METHOD?

A. Yes. I agree with the Company's use of the lead/lag method for CWC calculation.

Q. WHAT IS THE COMPANY'S CWC CLAIM?

A. The Company's FPFTY CWC claim is $62,148,000.[61]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND?

A. I recommend an allowance of $61,313,000, or a reduction of $835,000 ($62,148,000 - $61,313,000) to the Company's claim.[62]

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation includes modification of the Company's claim based on my

---

[61] UGI Gas Book V, Exhibit A – Fully Projected, Schedule C-4, p. 1.
[62] I&E Exhibit No. 1, Schedule 14, p. 1, line 5.

recommended adjustments to O&M expenses as discussed previously in this testimony and the other I&E witnesses as explained below.

Q. HOW DO YOUR PROPOSED ADJUSTMENTS, DISCUSSED ABOVE, IMPACT YOUR RECOMMENDATION FOR CWC?

A. All O&M adjustments that are cash-based expense claims are included when determining the Company's overall CWC requirement. Therefore, CWC was adjusted to reflect these recommended adjustments. To reflect the I&E recommended adjustments, I modified the Company's electronic CWC file as shown on UGI Gas Book V, Schedule C-4, pp. 1, 2, 3, and 7, for each recommended adjustment.[63]

Q. SUMMARIZE WHERE EACH OF THE I&E RECOMMENDED O&M EXPENSE ADJUSTMENTS ARE REFLECTED IN THE CWC COMPUTATION.

A. **Expense Lag Days - Payroll:**

I recommended a payroll expense adjustment of ($2,251,676) in the Expense Lag - Payroll, which is reflected as reduction to line 3 of the Company's Exhibit A – Fully Projected, Schedule C-4, p. 2 as shown in I&E modified Schedule C-4.[64]

[63] I&E Exhibit No. 1, Schedule 14, pp. 1-4.
[64] I&E Exhibit No. 1, Schedule 14, p. 2, line 3.

Expense Lag Days – Purchased Gas Costs:

Mr. Cline recommended a purchased gas expense increase of $7,729,631, which is reflected as an addition in the FPFTY purchased gas costs of $404,893,000 ($397,163,000 + $7,729,631) in the Purchased Gas Costs Expense Lag Days calculation.[65]

Expense Lag Days – Other Expenses:

Mr. LaTorre and I recommended the following expense adjustments in the Expense Lag Days - Other Expenses as an overall decrease of $6,662,328 of the Company's Exhibit A – Fully Projected, Schedule C-4, p. 2 as shown in I&E modified Schedule C-4:[66]

Other Expenses	Reduction
Employee Activity Costs	$370,291
Advertising Expense	$885,178
Membership Dues	$153,998
Interest on Customer Deposits	$324,000
Rate Case Expense	$422,000
Environmental Remediation Expense	$1,861,600
OSHA/Emergency Temporary Standard Compliance Costs	$1,851,240
Employee Benefits Expense	$606,006
Payroll Taxes	$188,015
Total	**$6,662,328**

65 I&E Exhibit No. 1, Schedule 14, p. 2, line 4.
66 I&E Exhibit No. 1, Schedule 14, p. 2, line 5.

Revenue Lag Calculations:

The Company provided a correction to miscellaneous revenue reducing present rate revenue by $1,003,000 as seen in the Company's response to I&E-RS-27.[67] Mr. Cline recommended an adjustment to increase present rate revenue by $14,648,202. The net of the two adjustments, $13,645,202, is reflected as an addition in the total account receivable amount of $1,304,884,202 ($1,327,239,000 + $13,645,202) and in the total sales revenue of $857,917,202 ($844,272,000 + $13,645,202) in the Revenue Lag calculation.[68]

Interest Payment Lag Calculations:

Mr. Sakaya recommended an adjustment to rate base of $145,872,000 ($137,649,000 + $8,223,000), which is reflected as a reduction to rate base resulting in an updated total of $3,023,154,000 ($3,169,026,000 - $145,872,000) in the Interest Payments Lag calculation.[69]

Q. DOES YOUR RECOMMENDED ALLOWANCE REPRESENT A FINAL RECOMMENDED ALLOWANCE FOR CWC?

A. No. All adjustments to the Company's claims for revenues, expenses, taxes, and rate base must be consistently brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This

[67] I&E Exhibit No. 4, Schedule 5.
[68] I&E Exhibit No. 1, Schedule 14, p. 3, lines 15 and 18.
[69] I&E Exhibit No. 1, Schedule 14, p. 4, line 1.

process, which is known as iteration, effectively prevents the determination of a precise calculation until such time as all adjustments have been made to the Company's claim.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

Bureau of Investigation & Enforcement

Concerning:

LOW-INCOME USAGE REDUCTION PROGRAM

TABLE OF CONTENTS

<u>INTRODUCTION OF WITNESS</u>

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Zachari Walker, and my business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME ZACHARI WALKER WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 1 AND THE SCHEDULES IN I&E EXHIBIT NO. 1?

A. Yes.

Q. DOES YOUR REBUTTAL TESTIMONY INCLUDE AN ACCOMPANYING EXHIBIT?

A. Yes. I&E Exhibit No. 1-R contains schedules that support my rebuttal testimony.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to address the direct testimony of (1) Office of Consumer Advocate (OCA) witness Roger D. Colton[1] concerning his recommended increase to UGI Utilities, Inc. – Gas Division's (UGI or Company)

---

[1] OCA Statement No. 4 (Corrected), pp. 4-43.

Low Income Usage Reduction Program (LIURP) budget by $524,450;[2] (2) Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA) witness Harry S. Geller[3] concerning his recommended $352,008 increase to the Company's LIURP budget;[4] and (3) the Commission on Economic Opportunity (CEO) witness Eugene M. Brady[5] concerning his recommended $750,000 increase to the Company's LIURP budget.[6]

<u>RESPONSE TO OCA WITNESS ROGER D. COLTON</u>

Q. SUMMARIZE OCA WITNESS ROGER D. COLTON'S TESTIMONY REGARDING UGI'S LIURP BUDGET.

A. Mr. Colton recommended the Company's LIURP include a new incremental component to provide investments to confirmed low-income customers as part of the process of converting those customers to natural gas and resulting in an increase of $524,450 to the Company's LIURP budget.[7]

Q. WHAT IS THE BASIS FOR MR. COLTON'S RECOMMENDATION?

A. Mr. Colton opines that if UGI redirected a portion of its existing LIURP budget to serving gas conversion customers it would result in no net gain.[8] He calculates his recommended addition to the Company's LIURP budget using the 85 confirmed low-income gas conversions in 2021 and the calculated 2019 average UGI LIURP cost per

---

2 OCA Statement No. 4 (Corrected), p. 21.
3 CAUSE-PA Statement No. 1, pp. 26-35.
4 CAUSE-PA Statement No. 1, p. 29.
5 CEO Statement No. 1, pp. 7-12.
6 CEO Statement No. 1, p. 8.
7 OCA Statement No. 4 (Corrected), p. 21.
8 OCA Statement No. 4 (Corrected), p. 21.

job of $6,170[9] producing his recommended increase of $524,450 to the Company's current LIURP budget.

Q. DO YOU AGREE WITH MR. COLTON'S RECOMMENDATION?

A. No. While Mr. Colton's recommendation is well-intentioned, it is inappropriate to consider such a significant increase in the LIURP budget in this base rate case proceeding.

Q. WHAT IS YOUR RECOMMENDATION?

A. I recommend that no increase to the budgeted LIURP amount be allowed.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. In response to CAUSE-PA-I-14, UGI has shown it was unable to exhaust its LIURP budget in the four most recent historic years other than exhausting it one time for the North District in 2018.[10] Additionally, Mr. Colton does not provide adequate support for how this incremental component ensures UGI will exhaust its existing LIURP budgeted funds.

<u>RESPONSE TO CAUSE-PA WITNESS HARRY GELLER</u>

Q. SUMMARIZE MR. GELLER'S TESTIMONY CONCERNING UGI'S LIURP BUDGET.

A. First, Mr. Geller asserts that UGI's LIURP is not operating at a rate sufficient to

---

9 OCA Statement No. 4 (Corrected), pp. 20-21.
10 I&E Exhibit No. 1-R, Schedule 1.

fulfill the estimated need for comprehensive usage reduction services within a reasonable amount of time, citing UGI's most recent LIURP needs assessment results of 25 years to serve estimated need in UGI's former South District and 40 years to serve estimated need in UGI's former North District.[11] Additionally, he acknowledges UGI has failed to exhaust its existing LIURP budget.[12] In response to the aforementioned issues, he recommends UGI reduce its LIURP minimum usage threshold for households at or below 150% federal poverty level[13] and he recommends UGI increase its annual LIURP budget by a percentage equal to or greater than the average residential bill impact of any approved residential rate increase.[14] His recommendation results in an increase of $352,008 to the Company's current total LIURP budget of $3,705,350.[15]

Q. DO YOU AGREE WITH MR. GELLER THAT THE COMPANY SHOULD INCREASE ITS LIURP BUDGET BY $352,008 IN THIS PROCEEDING?

A. No, in part. First, I accept Mr. Geller's recommendation that UGI should continue its 2020 LIURP program year modification which lowered its LIURP minimum usage threshold to reflect the average usage of residential customers for customers at or below 150% of the Federal Poverty Level[16] to provide increased opportunity for UGI to exhaust its LIURP budgeted funds. Secondly, there is an error in Mr. Geller's calculation of the proposed LIURP budget increase which I will address next.

[11] CAUSE-PA Statement No. 1, p. 26.
[12] CAUSE-PA Statement No. 1, p. 27.
[13] CAUSE-PA Statement No. 1, p. 27.
[14] CAUSE-PA Statement No. 1, p. 27.
[15] CAUSE-PA Statement No. 1, p. 29.
[16] CAUSE-PA Statement No. 1, p. 28.

Finally, while his recommendation is well-intentioned, it is inappropriate to consider such an increase in the LIURP budget in this base rate proceeding.

Q. PLEASE ADDRESS MR. GELLER'S CALCULATION ERROR RELATED TO THE COMPANY'S LIURP BUDGET.

A. Mr. Geller cites UGI's response to CAUSE-PA IV-3 as the source of the Company's current total LIURP budget, stating a total of $3,705,350.[17] However, the resulting sum of the three district values provided in response to CAUSE-PA IV-3 is correctly calculated as $3,714,350 ($1,641,100 + $1,363,050 + $710,200).[18] Based on this correction, Mr. Geller's resulting recommended LIURP budget increase based on the residential rate increase percentage of 9.5%[19] would be $352,863 ($3,714,350 x 0.095).

Q. WHAT DO YOU RECOMMEND?

A. Even with the corrected calculation, Mr. Geller's recommendation should be denied and no change to the budget amount be allowed. As mentioned above, I accept Mr. Geller's suggestion that UGI should continue its 2020 LIURP program year modification which lowered its LIURP minimum usage threshold to reflect the average usage for residential customers at or below 150% of the Federal Poverty Level potentially providing increased opportunities for LIURP funds to be utilized.

---

[17] CAUSE-PA Statement No. 1, p. 29.
[18] I&E Exhibit No. 1-R, Schedule 2.
[19] CAUSE-PA Statement No. 1, p. 29, line 11.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. Mr. Geller admits that UGI has historically underspent its LIURP budget in each of the aforementioned former districts as evidenced by over $1 million unspent LIURP funds in 2021.[20] In essence he acknowledges UGI has failed to exhaust its existing LIURP budget.[21] This is visible by UGI's unused LIURP budgeted funds totaling $497,576 ($530,531 -$32,955)[22] in 2018; $891,529 ($753,712 + $137,547)[23] in 2019; $2,736,866 ($1,497,368 + $884,099 + $355,399)[24] in 2020; and $1,010,389 ($354,796 + $490,140 + $165,453) in 2021.[25] Given that UGI has not historically spent is LIURP funds and that Mr. Geller provides no support that UGI would be able to exhaust an increased LIURP budget, his recommendation should be denied.

<u>RESPONSE TO CEO WITNESS EUGENE BRADY</u>

Q. SUMMARIZE MR. BRADY'S TESTIMONY CONCERNING UGI'S LIURP BUDGET.

A. Mr. Brady states the Company estimates at the current funding level it would take 25 years to meet the LIURP need of the South District and 40 years to meet the LIURP need of the North District. In response, he recommends the annual funding for LIURP be increased by $750,000.[26]

---

20 I&E Exhibit No. 1-R, Schedule 1.
21 CAUSE-PA Statement No. 1, p. 27.
22 I&E Exhibit No. 1-R, Schedule 1.
23 I&E Exhibit No. 1-R, Schedule 1.
24 I&E Exhibit No. 1-R, Schedule 1.
25 I&E Exhibit No. 1-R, Schedule 1.
26 CEO Statement No. 1, p. 8.

Q. WHAT IS THE BASIS FOR MR. BRADY'S RECOMMENDATION?

A. Mr. Brady refers to the Company's needs assessment stating there are approximately 10,000 low-income customers in need for LIURP services in two of the three prior UGI gas districts. Next, he states the Company's plan is to complete 481 LIURP jobs per year across its service territory and opines a good target would be complete an additional 100 jobs per year across the Company's service territory. Using a rounded LIURP job cost of $7,500 per job, the result would be an overall increase of $750,000 in additional funding required to complete the additional 100 LIURP jobs.

Q. DO YOU AGREE WITH MR. BRADY'S RECOMMENDATION?

A. No.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDED DISALLOWANCE OF MR. BRADY'S PROPOSAL?

A. While Mr. Brady's recommendation is well-intentioned, it is inappropriate to consider increasing the LIURP budget in the instant proceeding. The Company has shown that it is unable to exhaust the existing budget,[27] and Mr. Brady has not provided support indicating that the Company would be able to utilize the increased amount.

Q. DO YOU HAVE ANY ADDITIONAL OVERALL COMMENTS REGARDING YOUR RECOMMENDATION TO DENY THESE PROGRAM INCREASES IN THIS PROCEEDING?

A. Yes. While my positions to the three witnesses above have specifically related to the

[27] I&E Exhibit No. 1-R, Schedule 1.

witnesses' failure to provide support for UGI's ability to utilize the additional funding, it is important to note that these program costs are directly assessed to other ratepayers. In the current economic climate with natural gas commodity costs climbing and overall inflation costing consumers substantially more in day-to-day necessities, implementing increases to these programs with no certainty of the Company's ability to utilize these additional funds is unreasonable. Furthermore, the ongoing supply chain and workforce issues may impede the Company's ability to utilize even the currently designated LIURP budget. From both perspectives, I find it unreasonable to impose additional costs to other ratepayers for this program in this proceeding.

RECENT COMMISSION ORDERS

Q. ARE THERE ANY RECENT COMMISSION DECISIONS THAT SUPPORT YOUR RECOMMENDATIONS AS EXPLAINED ABOVE?

A. In the recent PECO Energy Company – Gas Division proceeding the Commission did not consider CAUSE-PA's proposals relating to CAP and other universal service program issues within the context of the base rate proceeding because they would be more properly considered in its USECP proceeding.[28] The Commission referenced last year's Columbia Gas of Pennsylvania, Inc. (Columbia Gas) proceeding[29] in which it concluded, "that energy burdens should not be considered separately from other parts of the Company's CAP and universal service programs but should be considered

[28] *PA PUC v. PECO Energy Company – Gas Division*, Docket No. R-2020-3018929, pp. 195-196 (Order Entered June 22, 2021).

as part of the Company's entire universal service plan, including the need for changes and associated costs."[30] It should be noted that in last year's Columbia Gas proceeding the Commission rejected a similar proposal related to the Health and Safety Pilot Program from CAUSE-PA.[31] In that proceeding the Commission agreed with the Administrative Law Judge's recommended decision denying any change to the pilot program until its effectiveness can be evaluated.[32]

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

OPERATING AND MAINTENANCE EXPENSES

TAXES

LOW-INCOME USAGE REDUCTION PROGRAM

CASH WORKING CAPITAL

TABLE OF CONTENTS

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Zachari Walker, and my business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME ZACHARI WALKER WHO SUBMITTED I&E STATEMENT NO. 1, I&E EXHIBIT NO. 1, I&E STATEMENT NO. 1-R, AND I&E EXHIBIT NO. 1-R?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of UGI Utilities, Inc. – Gas Division (UGI Gas or Company) witnesses Christopher R. Brown (UGI Gas Statement No. 1-R), Tracy A. Hazenstab (UGI Gas Statement No. 2-R), Vivian K. Ressler (UGI Gas Statement No. 3-R, and Daniel V. Adamo (UGI Gas Statement No. 12-R). Additionally, I respond to the rebuttal testimony of the Coalition for Affordable Utility Services and Energy Efficiency in

Pennsylvania (CAUSE-PA) witness Harry Geller (CAUSE-PA Statement No. 1-R).

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN ACCOMPANYING EXHIBIT?

A. Yes. I&E Exhibit No. 1-SR contains schedules that support my surrebuttal testimony. Additionally, I refer to my direct testimony and its accompanying exhibit (I&E Statement No. 1 and I&E Exhibit No. 1) and my rebuttal testimony (I&E Statement No. 1-R) in this surrebuttal testimony.

<u>OPERATING AND MAINTENANCE EXPENSE ADJUSTMENTS</u>

Q. PLEASE SUMMARIZE THE COMPANY'S REQUESTED REVENUE INCREASE.

A. In rebuttal testimony, UGI Gas explained that it believed it could now justify an increase of $87,619,000[1] for the Fully Projected Future Test Year (FPFTY) ending September 30, 2023. However, because the notice to customers indicated UGI Gas was requesting an increase of $82.7 million, it would not be possible for the Company's revenue increase to exceed this amount. Therefore, the UGI Gas actual requested increase remains $82.7 million.

[1] UGI Gas Exhibit A – FFPTY REBUTTAL, Schedule D-2.

Q. PLEASE SUMMARIZE YOUR ADJUSTMENTS AS CONTAINED IN THIS SURREBUTTAL TESTIMONY.

A. The following table summarizes my recommended adjustments to the Company's rebuttal position:

	UGI Gas Claim	I&E Recommended Allowance	I&E Adjustment
O&M Expenses:			
Employee Activity Costs	$588,226	$217,935	($370,291)
Advertising Expense	$1,901,541	$1,016,363	($885,178)
Membership Dues	$1,115,404	$930,926	($184,478)
Payroll Expense	$82,237,000	$80,929,432	($1,307,568)
Employee Benefits Expense	$22,021,935	$21,671,786	($350,149)
Total O&M Adjustments			**($3,097,664)**
Taxes:			
Payroll Taxes	$6,870,000	$6,760,818	($109,182)
Total Tax Adjustments			**($109,182)**
Rate Base:			
Cash Working Capital	$61,697,000	$60,684,000	($1,060,000)
Total Rate Base Adjustments			**($1,060,000)**

SUMMARY OF I&E OVERALL UPDATED POSITION

Q. WHAT IS I&E'S TOTAL UPDATED RECOMMENDED REVENUE REQUIREMENT?

A. I&E's total recommended revenue requirement for UGI Gas is $1,101,304,000.[2] This recommended revenue requirement represents an increase of $25,923,000 to the I&E-adjusted present rate revenues of $1,075,381,000. This total

[2] This amount includes base customer charges, gas cost revenue and other operating revenues like the Company's filing format shown on UGI Gas Schedule A-1.

recommended allowance incorporates my adjustments made in this testimony to O&M expenses, taxes, and cash working capital (CWC), and those recommended adjustments made in the surrebuttal testimony of I&E witnesses Anthony Spadaccio,[3] Brian LaTorre,[4] Ethan Cline,[5] and Esyan Sakaya.[6]

An updated calculation of I&E's recommended revenue requirement is shown below:

UGI UTILITIES INC. - GAS DIVISION		**TABLE I**

[5] I&E Statement No. 4-SR.
[6] I&E Statement No. 5-SR.

EMPLOYEE ACTIVITY COSTS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR EMPLOYEE ACTIVITY COSTS.

A. I recommended an allowance of $217,935 or a reduction of $370,291 ($588,226 - $217,935) to the Company's claim.[7] This recommendation is based on the historic year 2019 level expense inflated to the FPFTY equivalent due to the 2019 data representing the most recent known and measurable data prior to the effects of the pandemic. Given that we are still in the midst of the pandemic, it is not possible to know how many employees would be willing to gather at an optional Company picnic; therefore, the Company's claim is not prudent.

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. UGI Gas witness Vivian Ressler disagrees with my recommendation.

Q. SUMMARIZE MS. RESSLER'S RESPONSE.

A. Ms. Ressler cites UGI Gas witness Christopher R. Brown's direct testimony which states the Company has experienced an increase in voluntary turnover. She states that the labor market is tight, and the Company believes spending a modest amount of money on activities can increase employee job satisfaction and therein

[7] I&E Statement No. 1, pp. 5-7.

employee retention. Finally, she opines the investment is insignificant compared to the cost of recruiting and training replacement employees.[8]

Q. DO YOU AGREE WITH MS. RESSLER'S ASSERTIONS?

A. No.

Q. WHAT IS YOUR RESPONSE?

A. Ms. Ressler did not cite data to support her claim of cost savings, nor the Company's position on employee job satisfaction and employee retention deriving from Company-sponsored activities. Additionally, she did not provide data to support that at least a majority of UGI Gas employees would be willing to attend an optional Company picnic.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR EMPLOYEE ACTIVITY COSTS?

A. No. The Company has the burden of proof to provide adequate support that the expenses claimed are incurred for the provision of safe and reliable gas service. It is my opinion that adequate support was not provided regarding the cost of employee activity costs claimed. Therefore, I have no changes to my

[8] UGI Gas Statement No. 3-R, pp. 40-41.

recommended allowance of $217,935 or a reduction of $370,291 ($588,226 - $217,935) to the Company's claim.

<u>COVID-19 RELATED UNCOLLECTIBLE ACCOUNTS EXPENSE</u>

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR COVID-19 RELATED UNCOLLECTIBLE ACCOUNTS EXPENSE.

A. I accepted UGI Gas' total deferral claim of $1,503,000 for the 2020 and 2021 excess COVID-19 related uncollectible accounts, as well as the 10-year amortization period as approved by the Commission as part of the settlement in the UGI Gas 2020 base rate proceeding. However, I recommended that the Company should not be allowed to continue recording a regulatory asset for ongoing COVID-19 related incremental uncollectible costs after the effective date of new rates for the instant proceeding. This recommendation is based on COVID-19 related uncollectible accounts expenses being included in the forward-looking routine uncollectible accounts expense. As a result, allowing the Company to continue deferring these costs past the effective date of new rates in this proceeding would allow for redundant recovery of the COVID-19 related uncollectible accounts since they are already built into the routine uncollectible accounts percentage for the FPFTY calculation.[9]

[9] I&E Statement No. 1, pp. 10-11.

Additionally, in the 2020 Joint Petition for Unopposed Settlement – UGI Gas et al., page 21, item 49, the Company agreed not to continue accumulating COVID-19 related costs beyond the effective date of new rates for the instant proceeding.

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. UGI Gas witness Vivian Ressler disagrees with my recommendation.

Q. SUMMARIZE MS. RESSLER'S RESPONSE.

A. Ms. Ressler states the Company would not continue to recover incremental uncollectible expense above the existing $12.81 million cap after the implementation of new rates for the instant proceeding, but would defer, for future recovery, costs in excess of the uncollectible accounts amount included in the new rates of the instant proceeding. She contests the Company did not relinquish its right to request an extension to the period of time to continue accumulating and deferring costs above the normalized level until the effective date of the Company's next base rate filing. Additionally, she states the Company has continued to experience higher than normal delinquency rates on COVID-related payment arrangements citing customers on these arrangements continue to carry balances that are higher than they were prior to the Commission's March 13, 2020 Emergency Order. Next, she cites inflationary factors causing the commodity cost of gas to increase opining this will likely cause the Company to incur additional incremental expenses above those embedded in rates. Then, she explains the Company's plan to defer and amortize incremental uncollectible costs in detail which includes deferral of costs in excess of an updated uncollectible accounts expense amount of $18.0 million until the next base rate filing. Finally, she proposes the Company be allowed to recover for ratemaking purposes the previously mentioned excess costs over a three-year amortization period, without interest.[10]

Q. WHAT IS YOUR RESPONSE TO MS. RESSLER'S ASSERTIONS?

A. In the current COVID-19 climate higher uncollectible accounts expense is the new normal and will be so for an undetermined amount of time moving forward. Thus, it is important to reflect the higher percentage in routine uncollectible accounts (as the Company has done) and cease the continued deferral of the excess uncollectible accounts expense past the effective date of new rates in the instant proceeding. It should be noted that in future base rate cases, the routine uncollectible percentage will be developed based on an average of three years of historic data which ensures the Company will recover higher amounts on an ongoing basis if this trend for higher uncollectible accounts expense continues. Thus, there is no need for a continued deferral of differences.

---

[10] UGI Gas Statement No.3-R, p. 59.

The statement in the previous base rate case Settlement Agreement as stated in my direct testimony[11] most assuredly does not include verbiage that allows the Company to continue to accumulate COVID-19 related costs beyond the effective date of new rates for the instant proceeding. In summary, the continued accumulation, deferral, and ultimately amortization of COVID-19 related costs should not continue past the effective date of new rates in the instant proceeding.

Furthermore, Ms. Ressler's reference to ongoing inflationary factors potentially causing future increased uncollectible accounts is outside of the scope of the COVID-19 permitted deferrals originally authorized by the Commission. There is no basis to allow the Company to accrue increases in uncollectible expenses resulting from ongoing economic conditions unrelated to the pandemic in a regulatory asset account as changes in the economy and customer reaction to those changes are part of the normal cost of doing business. As I mentioned previously, these transient changes will be covered in the changing uncollectible percentage embedded in rates in future base rate filings and, at some point, it is likely that the embedded rate may even exceed the uncollectible percentage the Company would experience in a subsequent rate year.

---

[11] I&E Statement No. 1, pp. 11-12.

Q. IF THE COMMISSION DECIDES TO ALLOW CONTINUED DEFERRAL OF COVID-19 RELATED UNCOLLECTIBLE ACCOUNTS, IN THIS INSTANCE IN EXCESS OF THE $18 MILLION PER YEAR CLAIM, SHOULD THE REQUESTED THREE-YEAR AMORTIZATION PERIOD (WITHOUT INTEREST) BE GRANTED?

A. No. It is inappropriate to grant an amortization period for an unknown amount to begin amortization in a future proceeding for COVID-19 related uncollectible accounts in excess of the claimed $18 million amount. I agree, if the Commission approves the Company's request, the amortization should occur without interest; however, until the actual amount would become known and be verifiable, it is not appropriate to assign a recovery period. An immaterial amount may allow for a shorter recovery period, and to the contrast, a very large deferral might require a longer recovery period.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR COVID-19 RELATED UNCOLLECTIBLE ACCOUNTS EXPENSE?

A. No. I continue to recommend that the deferral of COVID-19 related uncollectible accounts expense be disallowed upon the effective date of new rates in the instant proceeding. I further clarify my position to include a recommended denial for the deferral of any increase in uncollectible expense that may occur unrelated to the COVID-19 pandemic, which it appears that the Company now wants to recover as well.

ADVERTISING EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR ADVERTISING EXPENSE.

A. I recommended an allowance of $1,016,363 or a reduction of $885,178 ($1,901,541 - $1,016,363) to the Company's advertising expense claim. This recommendation was based on images provided that merely promote the Company's image without promoting the benefits of domestic natural gas. Consequently, I recommended the other advertising programs in the amount of $885,178 be disallowed for ratemaking purposes as these programs are not necessary to ensure safe and reliable gas service.[12]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. UGI Gas witness Vivian Ressler disagrees with my recommendation.

Q. SUMMARIZE MS. RESSLER'S RESPONSE.

A. Ms. Ressler states the images which solely depict the image of the Company's logo are not able to visually show the opportunities afforded to Company personnel as a benefit of the Company's sponsorships. She further states these opportunities allow Company personnel to raise awareness of natural gas as an option by developing relationships and discussing the benefits of natural gas with

[12] I&E Statement No. 1, p. 13.

non-affiliated attendees. Finally, she opines that these sponsorships are key to attracting additional customers which reduces the overall revenue requirement that is borne by each individual customer.[13]

Q. DO YOU AGREE WITH MS. RESSLER'S ASSERTIONS?

A. No.

Q. WHAT IS YOUR RESPONSE?

A. Ms. Ressler did not provide data supporting her assertion that additional customers would be obtained this way and would reduce the overall cost per customer, nor did she provide data showing how many additional customers are directly gained from these sponsorships.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR ADVERTISING EXPENSE?

A. No. The Company has the burden of proof to provide adequate support that the expenses claimed are incurred for the provision of safe and reliable gas service. As to the matter of advertising expense, the support is not adequate and thus I continue to recommend an allowance of $1,016,363 or a reduction of $885,178 ($1,901,541 - $1,016,363) to the Company's FPFTY advertising expense claim.

---

[13] UGI Gas Statement No. 3-R, pp. 44-45.

<u>MEMBERSHIP DUES</u>

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR MEMBERSHIP DUES.

A. I recommended the disallowance of claims for numerous organizations where the Company has not provided adequate support for the necessity of ensuring safe and reliable gas service resulting in a decrease of $153,998 to the Company's membership dues claim, or an allowance of $961,406 ($1,115,404 - $153,998).[14]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. UGI Gas witness Vivian Ressler disagrees with my recommendation.

Q. SUMMARIZE MS. RESSLER'S RESPONSE.

A. First, Ms. Ressler stated that the Company misidentified the organization that uses the acronym "CREDC." Due to the nature of the organizations for which I recommended to disallowance in my direct testimony, she includes the additional $30,480 with my adjustment. She states she will address my proposed adjustment as if it were a total of $184,478 ($153,998 + $30,480).[15]

---

14 I&E Statement No. 1, pp. 14-15.
15 UGI Gas Statement No. 3-R, pp. 49-50.

Q. DO YOU HAVE ANY CONCERNS WITH MS. RESSLER'S ASSUMPTION REGARDING YOUR PROPOSED ADJUSTMENT?

A. No. If the organization was properly identified, I agree that I would have included it in my recommended adjustment.

Q PLEASE CONTINUE SUMMARIZING MS. RESSLER'S RESPONSE.

A. Ms. Ressler states the membership in economic development corporations like the PA Chamber of Business & Industry and the PA Economy League allow the Company to grow its customer base. She explains these organizations work with large commercial companies who are making site selections and by being a member of these organizations, the Company can proactively work with these potential customers to promote the benefits of natural gas for their energy needs. She opines this can also lead to opportunities for the Company to encourage new industrial and commercial customers to select sites that are near existing gas mains. Finally, she opines without membership and active involvement in these organizations, the Company would miss out on potential commercial customer growth which would result in higher costs passed along to residential customers.[16]

Q. WHAT IS YOUR RESPONSE TO MS. RESSLER'S ASSERTION?

A. Ms. Ressler did not provide data to support the claim that additional industrial and

[16] UGI Gas Statement No. 3-R, p. 51.

commercial customers would result in a reduction of costs passed along to residential customers. Furthermore, the Company has not adequately supported this expense's necessity to ensure safe and reliable gas service to its existing customers. Therefore, expenses associated with the organizations mentioned in my direct testimony[17] and the Capital Region Economic Development Company ($30,480) should be disallowed.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR MEMBERSHIP DUES?

A. Yes. As corrected in the Company's rebuttal testimony,[18] I recommend the disallowance of an additional $30,480 from the Company's claim, which is directly attributed to the previously misidentified organization, Capital Region Economic Development Company. This misidentification resulted in a misinterpretation of the organization's necessity to ensure safe and reliable gas service. My updated recommendation is an allowance of $930,926 ($1,115,404 - $184,478), or a decrease of $184,478 ($153,998 + $30,480) to the Company's FPFTY membership dues claim.

---

[17] I&E Statement No. 1, pp. 14-15.
[18] UGI Gas Statement No. 3-R, p. 49.

INTEREST ON CUSTOMER DEPOSITS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR INTEREST ON CUSTOMER DEPOSITS.

A. I recommended an allowance of $648,000, or a reduction of $324,000 ($972,000 - $648,000) to the Company's claim.[19] My recommendation was based on the current interest rate for Title 72 taxes of 3% for 2021 and 2022 and thus resulted in my recommended allowance of $648,000 ($21,600,000[20] x 3.00%).

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. UGI Gas witness Tracy Hazenstab accepts my recommendation to use the current interest rate of 3.00% for Title 72 taxes to calculate the FPFTY expense claim for interest on customer deposits.[21]

Q. DID THE COMPANY MAKE ANY CHANGES TO ITS CLAIM FOR CUSTOMER DEPOSITS?

A. Yes. Per UGI Gas Exhibit A – FPFTY REBUTTAL, Schedule C-7, the Company's updated claim based on a 13-month period ended April 2022 results in an updated claim of $21,434,000 for customer deposits.

[19] I&E Statement No. 1, p. 16.
[20] UGI Gas Statement No. 2, p. 21.
[21] UGI Gas Statement No. 2-R, p. 12.

Q. DID THE COMPANY CARRY THIS THROUGH IN ITS CALCULATION FOR THE UPDATED CLAIM FOR INTEREST ON CUSTOMER DEPOSITS?

A. No. However, the difference would be immaterial (approximately $5,000), and I am not arguing this point for that reason.

Q. WHAT IS THE COMPANY'S UPDATED CLAIM?

A. The Company's updated claim is $648,000 ($21,600,000[22] x 3.00%)[23] based on the original claim for customer deposits multiplied by my recommended 3.00% rate.

<u>PAYROLL EXPENSE</u>

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PAYROLL EXPENSE.

A. I recommended an allowance of $80,677,324, or a reduction of $2,251,676 ($82,929.000 - $80,677,324) to the Company's FPFTY payroll expense claim. This recommendation was based on an employee vacancy adjustment, produced by averaging fiscal year 2019, 2020, and 2021 historic vacancy rates, for unfilled positions included in the Company's claim using a vacancy rate of 2.74% to determine 47 vacant positions based on the average.[24] Finally, I multiplied the

---

22 UGI Gas Statement No. 2, p. 21.
23 UGI Gas Exhibit A – FPFTY REBUTTAL, Schedule D-15.
24 I&E Statement No. 1, pp. 18-20.

average annual payroll of $47,908 to determine my recommended adjustment of $2,251,676.[25]

This was necessary because it is unreasonable to assume that 100% full staffing of all budgeted positions during the FPFTY.[26] Additionally, I noted that due to the COVID-19 pandemic, the Company may continue to face challenges keeping all positions filled and that there will always be a certain number of normal vacancies due to retirements, resignations, transfers, etc., on a day-to-day operating basis and that there will always be search and placement time in filling such vacancies.[27] Removing this savings from base rates is appropriate to avoid an unreasonable impact to ratepayers.

Q. DID THE COMPANY MAKE ANY CHANGES TO ITS CLAIM?

A. Yes. The Company updated its claim in rebuttal testimony.

Q. WHAT IS THE COMPANY'S UPDATED CLAIM?

A. UGI Gas updated its FPFTY payroll expense claim from $82,929,000 to $82,237,000.[28]

---

25 I&E Statement No. 1, p. 19.
26 I&E Statement No. 1, p. 19.
27 I&E Statement No. 1, p. 20.
28 UGI Gas Exhibit A – FPFTY REBUTTAL, Sch. D-7, p. 1.

Q. WHAT WAS THE BASIS FOR THE COMPANY'S UPDATED CLAIM?

A. Ms. Hazenstab states the Company accepts OCA witness Mugrace's adjustment of $779,368 to reduce payroll expense for 17 speculative positions that are not yet filled.[29]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. UGI Gas witness Tracy Hazenstab disagrees with my recommendation.

Q. SUMMARIZE MS. HAZENSTAB'S RESPONSE.

A. Ms. Hazenstab criticizes my adjustment opining it is biased due to COVID-19 impacting the Company's ability to hire new employees in fiscal year 2020 (FY20). Finally, she suggests removing FY20 which would lower the vacancy rate down to 1.59%.[30]

Q. WHAT IS YOUR RESPONSE TO MS. HAZENSTAB'S ASSERTION?

A. I am willing to accept Ms. Hazenstab's assertion that 2020 did heavily weight the average vacancy rate; however, upon further review it appears the reason is due to the unordinary increase in budgeted positions beginning in January 2020.[31] Due to the anomaly of budgeted positions in fiscal year 2020 and the extraordinary hiring circumstances as evidenced in the actual employees the Company held during this

[29] UGI Gas Statement No. 2-R, p. 13.
[30] UGI Gas Statement No. 2-R, pp. 13-14.
[31] I&E Exhibit No. 1, Schedule 11, p. 3.

period, I will accept the suggestion to lower the vacancy rate to 1.59% by removing the inconsistent data.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR PAYROLL EXPENSE?

A. Yes. I agree with the Company's acceptance of OCA's recommendation to eliminate 17 unfilled, speculative positions from the FPFTY; however, I continue to recommend a modified vacancy adjustment to the Company's updated claim. I am updating my recommendation with the FY20 data removed resulting in an average employee vacancy rate of 1.59% [(2.63% + 0.54%) ÷ 2]. My updated recommendation reflects a reduction of $1,307,568 ($82,237,000 x 1.59%) to the Company's updated FPFTY payroll expense claim, or an allowance of $80,929,432 ($82,237,000 - $1,307,568).

This adjustment continues to be necessary given there will still be a routine level of ongoing vacancies to the adjusted payroll claim as discussed above and in my direct testimony even after the removal of 17 speculative FPFTY positions.

<u>**EMPLOYEE BENEFITS**</u>

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR EMPLOYEE BENEFITS.

A. I recommended an allowance of $21,510,994, or a reduction of $606,000 to the Company's FPFTY employee benefits claim based on an employee vacancy adjustment to payroll expense of 2.74%. The 2.74% vacancy rate was applied to the Company's employee benefits claim.[32]

Q. DID THE COMPANY MAKE ANY CHANGES TO ITS CLAIM?

A. Yes.

Q. WHAT IS THE COMPANY'S UPDATED CLAIM?

A. As calculated based on the response to I&E-RE-32,[33] the Company's updated claim is $22,021,935 ($22,117,000 - $95,065[34]) when accounting for the acceptance of OCA witness Mr. Mugrace's adjustment.

Q. DID ANY WITNESSES ADDRESS YOUR RECOMMENDATION?

A. Yes. UGI Gas witness Tracy Hazenstab disagrees with my recommendation and UGI Gas witness Vivian Ressler addresses an update to the Company's claim.

Q. SUMMARIZE MS. HAZENSTAB'S RESPONSE.

A. Ms. Hazenstab states the Company disagrees with my recommendation as it is derivative of my proposed adjustment to the projected FPFTY employee headcount. Additionally, she points to Ms. Ressler's testimony which addresses a

---

[32] I&E Statement No. 1, pp. 21-22.
[33] I&E Exhibit No. 1, Sch. 13, p. 2.
[34] UGI Gas Statement No. 2-R, p. 14.

related three-year normalization recommendation made by OCA witness Mr. Mugrace.[35]

Q. SUMMARIZE MS. RESSLER'S REBUTTAL TESTIMONY REGARDING EMPLOYEE BENEFITS.

A. Ms. Ressler addresses OCA witness Mr. Mugrace's recommendation to normalize medical and dental costs over a three-year period from 2021-2023. She asserts his reasons do not support that his adjustment is reasonable or appropriate; however, she cites his overall headcount reduction and states the Company has reflected the reduction in its adjustment to employee benefits expense – medical and dental costs. The adjustment results in a reduction of $95,065 to the Company's pre-rebuttal FPFTY employee benefits claim.[36]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. I am updating my recommendation to reflect my updated payroll vacancy adjustment by applying the 1.59% vacancy rate to the Company's updated claim for employee benefits. This results in a reduction of $350,149 ($22,021,935 x 1.59%) to the Company's updated claim or an allowance of $21,671,786 ($22,021,935 - $350,149).

---

[35] UGI Gas Statement No. 2-R, p. 14 and UGI Gas Statement No. 3-R, pp. 37-39.
[36] UGI Gas Statement No. 3-R, pp. 37-39.

PAYROLL TAXES

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PAYROLL TAXES.

A. I recommended an allowance of $6,738,985, or a reduction of $188,015 ($6,927,000 - $6,738,985) to the Company's FPFTY claim based on the total payroll expense adjustment of $2,251,676 and calculated by applying the Company's payroll tax rate of 8.35%.[37]

Q. DID THE COMPANY UPDATE ITS CLAIM?

A. Yes.

Q. WHAT IS THE COMPANY'S UPDATED CLAIM?

A. The Company's updated claim for payroll tax expense is $6,870,000. This is due to the Company's acceptance of OCA witness Mr. Mugrace's proposed elimination of 17 speculative FPFTY positions, which produces a corresponding payroll tax expense reduction of $57,000.[38]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. No. However, since UGI Gas witness Tracy Hazenstab disagrees with my payroll

---

[37] I&E Statement No. 1, pp. 22-23.
[38] UGI Gas Statement No. 2-R, p. 15.

expense recommendation, it is safe to assume she disagrees with my payroll tax expense recommendation.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. My updated recommendation for payroll tax expense is calculated by applying the Company's payroll tax rate of 8.35% to my updated payroll expense adjustment of $1,307,568. This produces an updated recommended reduction of $109,182 ($1,307,568 x 0.0835) to the Company's updated claim of $6,870,000, or an updated allowance of $6,760,818 ($6,870,000 - $109,182).

PROPOSED ADDITIONAL PAYROLL EXPENSE

Q. DID THE COMPANY ADDRESS ADDITIONAL EXPENSES RELATED TO PAYROLL COSTS?

A. Yes. UGI Gas witness Christopher R. Brown mentioned that since the original base rate filing was assembled the Company has decided to prepare an enhanced merit program to be rolled out later this year in response to increased turnover and increased inflation.[39]

Q. WHAT IS THE PROJECTED COST OF THIS PROGRAM?

A. UGI Gas witness Brown indicates an additional two percent pay increase to non-

[39] UGI Gas Statement No. 1-R, pp. 4-5.

union personnel would result in an additional $960,000 in FPFTY operating expense after the Company's acceptance of OCA's adjustment for the removal of 17 positions.[40]

Q. IS THE COMPANY CLAIMING AN ADDITIONAL $960,000 IN ITS FPFTY PAYROLL CLAIM?

A. No. However, the Company is asking the Commission to consider adding an additional $960,000 for merit increases to offset any further downward adjustments to payroll in this proceeding.[41]

Q. DO YOU AGREE THAT THE COMPANY SHOULD BE ALLOWED TO INTRODUCE A NEW PAYROLL PROPOSAL IN REBUTTAL TESTIMONY?

A. No. In its filing, the Company already made a claim for a compensation benchmarking adjustment relying on data provided by the American Gas Association.[42] Those planned adjustments increased the Company's FPFTY claim by $1.2 million,[43] and I did not argue against that claim. I disagree that it should be necessary to increase merit pay increases from three percent to five percent in the FPFTY given that salaries are already being adjusted in response to this

---

40 UGI Gas Statement No. 1-R, p. 5.
41 UGI Gas Statement No. 1-R, pp. 5-6.
42 UGI Gas Statement No. 1, p. 27.
43 UGI Gas Exhibit A – Fully Projected, Schedule D-9.

industry study. To do both would be imprudent and burdensome to ratepayers. Thus, I disagree with Mr. Brown that the Commission should consider tacking on additional non-union pay increases to offset any further downward adjustments in this proceeding. Awarding extra pay increases to non-union workers on top of adjusted salaries would be very inappropriate given that UGI Gas plans to make base rate filings on a regular frequency and has not even allowed itself to view the impact of the upward pay adjustments already claimed.

CASH WORKING CAPITAL

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR CWC.

A. I recommended an allowance of $61,313,000, or a reduction of $835,000 ($62,148,000 - $61,313,000) to the Company's claim.[44] My recommendation includes modification of the Company's claim based on my recommended adjustments to O&M expenses as discussed in I&E's direct testimony.

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. UGI Gas witness Tracy Hazenstab disagrees with my CWC recommendation based on the Company's disagreement with my recommended adjustments to individual O&M expenses.

---

[44] I&E Statement No. 1, p. 24.

Q. WHAT IS THE COMPANY'S UPDATED CWC CLAIM?

A. UGI Gas updated its FPFTY CWC claim from $62,148,000 to $61,697,000.[45]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No. However, I have an update to my recommendation for CWC. As stated in my direct testimony, all O&M expense adjustments that are cash-based expense claims are included when determining the Company's overall CWC requirement. Therefore, CWC was adjusted to reflect these recommended adjustments. To reflect the I&E recommended adjustments, I modified the Company's electronic CWC file as shown on UGI Gas Book V, Schedule C-4, pp. 1, 2, 3, and 7, for each recommended adjustment.

Q. SUMMARIZE WHERE EACH OF THE I&E RECOMMENDED O&M EXPENSE ADJUSTMENTS ARE REFLECTED IN THE CWC COMPUTATION.

A. **Expense Lag Days - Payroll:**

I recommended a payroll expense adjustment of ($1,307,568) in the Expense Lag - Payroll, which is reflected as reduction to line 3 of the Company's Exhibit A – Fully Projected, Schedule C-4, p. 2 as shown in I&E modified Schedule C-4.[46]

---

[45] UGI Gas Statement No. 2-R, p. 16.

[46] I&E Exhibit No. 1-SR, Schedule 1, p. 2, line 3.

Expense Lag Days – Purchased Gas Costs:

Mr. Cline recommended a purchased gas expense increase of $7,221,028, which is reflected as an addition in the FPFTY purchased gas costs of $404,384,000 ($397,163,000 + $7,221,028) in the Purchased Gas Costs Expense Lag Days calculation.[47]

Expense Lag Days – Other Expenses:

Mr. LaTorre and I recommended the following expense adjustments in the Expense Lag Days - Other Expenses as an overall decrease of $3,273,252 of the Company's Exhibit A – Fully Projected, Schedule C-4, p. 2 as shown in I&E modified Schedule C-4:[48]

Other Expenses	Reduction
Employee Activity Costs	$370,291
Advertising Expense	$885,178
Membership Dues	$184,478
Rate Case Expense	$422,000
Environmental Remediation Expense	$930,800
OSHA/Emergency Temporary Standard Compliance Costs	$21,174
Employee Benefits Expense	$350,149
Payroll Taxes	$109,182
Total	**$3,273,252**

47 I&E Exhibit No. 1-SR, Schedule 1, p. 2, line 4.
48 I&E Exhibit No. 1-SR, Schedule 1, p. 2, line 5.

<u>Revenue Lag Calculations:</u>

Mr. Cline recommended an adjustment to increase present rate revenue by $13,659,652 and is reflected as an addition in the total account receivable amount of $1,304,898,652 ($1,327,239,000 + $13,659,652) and in the total sales revenue of $857,931,652 ($844,272,000 + $13,659,652) in the Revenue Lag calculation.[49]

<u>Interest Payment Lag Calculations:</u>

Mr. Sakaya recommended an adjustment to rate base of $153,739,000 ($137,539,000 + $16,200,000), which is reflected as a reduction to rate base resulting in an updated total of $3,022,857,000 ($3,176,596,000 - $153,739,000) in the Interest Payments Lag calculation.[50]

Q. BASED ON THE ABOVE TESTIMONY, WHAT IS YOUR UPDATED RECOMMENDED ALLOWANCE FOR CWC?

A. Based on reflecting all of I&E's recommended adjustments as discussed above, my updated recommendation for CWC is an allowance of $60,637,000, or a reduction of $1,060,000 ($61,697,000 - $60,637,000) to the Company's updated claim.[51]

---

[49] I&E Exhibit No. 1-SR, Schedule 1, p. 3, lines 15 and 18.
[50] I&E Exhibit No. 1-SR, Schedule 1, p. 4, line 1.
[51] I&E Exhibit No. 1-SR, Schedule 1, p. 1, line 5.

Q. DOES YOUR RECOMMENDED ALLOWANCE REPRESENT A FINAL RECOMMENDED ALLOWANCE FOR CWC?

A. No. All adjustments to the Company's claims for revenues, expenses, taxes, and rate base must be consistently brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, which is known as iteration, effectively prevents the determination of a precise calculation until such time as all adjustments have been made to the Company's claim.

<u>LOW INCOME USAGE REDUCTION PROGRAM (LIURP)</u>

Q. SUMMARIZE YOUR RECOMMENDATION IN REBUTTAL TESTIMONY FOR LIURP.

A. In my rebuttal testimony, I stated the recommendations of CAUSE-PA witness Harry S. Geller, OCA witness Roger D. Colton, and CEO witness Eugene M. Brady which advocated to increase the Company's LIURP budget should be denied because the Company has been unable to exhaust its budget as it stands, and the witnesses have failed to show how the Company's would utilize the additional funding.[52]

[52] I&E Statement No. 1-R.

Q. DID ANY WITNESSES' REBUTTAL TESTIMONY CONFLICT WITH YOUR RECOMMENDATION?

A. Yes. CAUSE-PA witness Harry S Geller's rebuttal testimony conflicts with my recommendation.

Q. SUMMARIZE MR. GELLER'S RESPONSE.

A. Mr. Geller states the Company's LIURP budget should be increased in line with OCA witness Mr. Colton's recommendation which would expand UGI Gas' LIURP budget by $1.425 million and include incremental LIURP investments of $524,450.[53]

Q. DID ANY WITNESS' RECOMMENDATION ALIGN WITH YOUR REBUTTAL TESTIMONY?

A. Yes. UGI Gas witness Daniel V. Adamo puts forth rebuttal testimony in line with mine on this topic.

Q. SUMMARIZE MR. ADAMO'S RESPONSE AS IT RELATES TO YOUR RECOMMENDATION.

A. Mr. Adamo states that the LIURP budget should be addressed in the Company's next universal service proceeding where a needs assessment would be completed

[53] CAUSE-PA Statement No. 1-R, pp. 6-7.

to help determine the appropriate budget level, and he states that Mr. Colton is making a recommendation on an annual LIURP spending level of $2.1 million but the Company already has an approved budget of approximately $3.7 million.[54] Similarly, he disagrees with Mr. Geller's and Mr. Brady's recommendations for LIURP.[55]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR UGI GAS' LIURP BUDGET?

A. No. I continue to recommend any increase to the annual funding for LIURP be disallowed.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

---

[54] UGI Gas Statement No. 12-R, p. 30.
[55] UGI Gas Statement No. 12-R, pp. 31-32.

I&E Statement No. 2
Witness: Anthony Spadaccio

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

UGI UTILITIES, INC. – GAS DIVISION

Docket No. R-2021-3030218

Direct Testimony

of

Anthony Spadaccio, CRRA

Bureau of Investigation & Enforcement

Concerning:

Rate of Return

TABLE OF CONTENTS

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Anthony Spadaccio. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. WHAT IS YOUR EDUCATION AND PROFESSIONAL EXPERIENCE?

A. My educational and professional experience is set forth in Appendix A, which is attached.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for representing the public interest in rate and other proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the utility company, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my testimony is to address the rate of return, including capital structure, cost of long-term debt, the cost of equity, and the overall fair rate of return for UGI Utilities, Inc. – Gas Division (UGI Gas or Company) for the fully projected future test year (FPFTY) ending September 30, 2023.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 2 contains schedules that support my direct testimony.

<u>BACKGROUND</u>

Q. WHAT IS THE GENERAL DEFINITION OF RATE OF RETURN IN THE CONTEXT OF A RATE CASE?

A. Rate of return is one of the components of the revenue requirement formula. Rate of return is the amount of revenue an investment generates in the form of net income and is usually expressed as a percentage of the amount of capital invested over a given period of time.

Q. WHAT IS THE REVENUE REQUIREMENT FORMULA?

A. The revenue requirement formula used in base rate cases is as follows:

$$RR = E + D + T + (RB \times ROR)$$

Where:

RR	=	Revenue Requirement
E	=	Operating Expenses
D	=	Depreciation Expense
T	=	Taxes
RB	=	Rate Base
ROR	=	Overall Rate of Return

In the above formula, the rate of return is expressed as a percentage. The calculation of that percentage is independent of the determination of the appropriate rate base value for ratemaking purposes. As such, the appropriate total dollar return is dependent upon the proper computation of the rate of return and the proper valuation of the Company's rate base.

Q. WHAT CONSTITUTES A FAIR AND REASONABLE OVERALL RATE OF RETURN?

A. A fair and reasonable overall rate of return is one that will allow the utility an opportunity to recover those costs prudently incurred by all classes of capital used to finance the rate base during the prospective period in which its rates will be in effect.

The *Bluefield Water Works & Improvements Co. v. Public Service Comm. of West Virginia,* 262 U.S. 679, 692-93 (1923), and the *Federal Power Commission et al v. Hope Natural Gas Co.,* 320 U.S. 591, 603 (1944) cases set forth the principles that are generally accepted by regulators throughout the country as the appropriate criteria for measuring a fair rate of return:

1. A utility is entitled to a return similar to that being earned by other enterprises with corresponding risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures.
2. A utility is entitled to a return level reasonably sufficient to assure financial soundness.
3. A utility is entitled to a return sufficient to maintain and support its credit and raise necessary capital.
4. A fair return can change (increase or decrease) along with economic conditions and capital markets.

Q. EXPLAIN HOW THE OVERALL RATE OF RETURN IS TRADITIONALLY CALCULATED IN BASE RATE PROCEEDINGS.

A. In base rate proceedings, the overall rate of return is traditionally calculated using the weighted average cost of capital method. To calculate the weighted average cost of capital, a company's capital structure must first be determined by comparing the percentage of each capitalization component, which has financed rate base, to total capital. Next, the effective cost rate of each capital structure component must be determined. The historical component of the cost rate of debt can be computed accurately, and any future debt issuances are based on estimates. The cost rate of common equity is not fixed and is more difficult to measure. Because of this difficulty, a proxy group is used as discussed later in this testimony. Next, each capital structure component percentage is multiplied by its corresponding effective cost rate to determine the weighted capital component cost rate. The table in the *"I&E Position"* section below demonstrates the interaction of each capital structure component and its corresponding effective cost rate. Finally, the sum of the weighted cost rates produces the overall rate of return. This overall rate of return is multiplied by the rate base to determine the return portion of a company's revenue requirement.

COMPANY'S RATE OF RETURN CLAIM

Q. WHO IS THE COMPANY'S RATE OF RETURN WITNESS IN THIS CASE?

A. Paul R. Moul is the primary witness addressing rate of return. Throughout his Direct Testimony (UGI Gas Statement No. 6), Mr. Moul provides his analysis for the claimed capital structure, long-term debt, and cost of common equity for UGI Gas.

Q. PLEASE SUMMARIZE MR. MOUL'S RECOMMENDATIONS FOR THE COMPANY'S RATE OF RETURN CLAIM.

A. Mr. Moul recommends the following rate of return for the Company based on its FPFTY ending September 30, 2023:[1]

UGI UTILITIES, INC. - GAS DIVISION Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost**
UGI Utilities, Inc. - Gas Division			
Long-Term Debt	44.88%	3.98%	1.79%
Common Equity	55.12%	11.20%	6.17%
Total	100.00%		7.96%

I&E POSITION

Q. PLEASE SUMMARIZE YOUR RATE OF RETURN RECOMMENDATION FOR THE COMPANY.

A. I recommend the following rate of return for the Company:[2]

I&E Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost**
UGI Utilities, Inc. - Gas Division			
Long-Term Debt	44.88%	3.98%	1.79%
Common Equity	55.12%	9.92%	5.47%
Total	100.00%		7.26%

[1] UGI Gas Exhibit B, Schedule 1.
[2] I&E Exhibit No. 2, Schedule 1.

<u>PROXY GROUP</u>

Q. WHAT IS A PROXY GROUP AS USED IN BASE RATE CASES?

A. A proxy group is a set of companies that have similar traits as compared to the subject utility. This group of companies acts as a benchmark for determining the subject utility's rate of return in a base rate case.

Q. WHAT ARE THE REASONS FOR USING A PROXY GROUP?

A. A proxy group's cost of equity is used as a benchmark to satisfy the long-established guideline of utility regulation that seeks to provide the subject utility with the opportunity to earn a return similar to that of enterprises with corresponding risks and uncertainties.

A proxy group is typically utilized since the use of data exclusively from one company may be less reliable. The lower reliability occurs because the data for one company may be subject to events that can cause short-term anomalies in the marketplace. The rate of return on common equity for a single company could become distorted in these circumstances and would therefore not be representative of similarly situated companies. Therefore, a proxy group has the effect of smoothing out potential anomalies associated with a single company.

Q. WHAT CRITERIA DID YOU USE IN SELECTING YOUR GAS UTILITY PROXY GROUP?

A. The criteria for my proxy group was designed to select companies that are representative of UGI Gas. I applied the following criteria to Value Line's "Natural Gas Utility" company group:

1. Fifty percent or more of the company's revenues must be generated from the regulated gas utility industry.

2. The company's stock must be publicly traded.

3. Investment information for the company must be available from more than one source, which includes Value Line.

4. The company must not be currently involved in an announced merger or the target of an acquisition.

5. The company must have four consecutive years of historic earnings data.

6. The company must be operating in a state that has a deregulated gas utility market.

Q. WHAT CRITERIA DID MR. MOUL USE IN SELECTING THE COMPANIES THAT FORMULATE HIS "GAS GROUP"?

A. Mr. Moul began with the gas utilities contained in Value Line's Investment Survey. From there, he eliminated one company, UGI Corp., due to its diversified businesses, which includes six reportable segments. These various business segments include propane, international LPG segments, natural gas utility, energy services, and electric generation. Beyond his rationale for excluding UGI Corp., Mr. Moul has not provided a list of criteria used to determine the remainder of his Gas Group other than that it is made up of the companies the Commission's Bureau of Technical Utility Services used to calculate the cost of equity in its Quarterly Earnings Reports approved on October 9, 2021.[3]

[3] UGI Gas Statement No. 6, p. 5, lines 4-18.

Q. WHAT PROXY GROUP DID YOU USE IN YOUR ANALYSIS?

A. I included the following seven companies in my proxy group:

Atmos Energy Corp.	ATO
Chesapeake Utilities	CPK
NiSource Inc.	NI
Northwest Natural Gas Co.	NWN
One Gas Inc.	OGS
South Jersey Industries Inc.	SJI
Spire Inc.	SR

Q. WHAT PROXY GROUP DID MR. MOUL USE IN HIS ANALYSIS?

A. Mr. Moul's Gas Group consists of the following nine companies:[4]

Atmos Energy Corp.	ATO
Chesapeake Utilities	CPK
New Jersey Resources Corp.	NJR
NiSource Inc.	NI
Northwest Natural Gas Co.	NWN
One Gas Inc.	OGS
South Jersey Industries Inc.	SJI
Southwest Gas Corp.	SWX
Spire Inc.	SR

Q. DO YOU AGREE WITH MR. MOUL'S GAS PROXY GROUP?

A. Not entirely. While Mr. Moul's Gas Group included all seven of the companies in my proxy group, I have excluded two of the companies he uses.

4 UGI Gas Exhibit B, Schedule 3, p. 2.

Q. PLEASE IDENTIFY THE TWO COMPANIES MR. MOUL HAS INCLUDED THAT YOU DO NOT AND EXPLAIN WHY YOU HAVE EXCLUDED THEM FROM YOUR PROXY GROUP.

A. The two companies Mr. Moul included in his Gas Group that I have excluded from my proxy group are New Jersey Resources Corp. and Southwest Gas Holdings, Inc. as these companies did not meet my first criterion that fifty percent or more of the company's revenues must be generated from the regulated gas utility industry. This is important because revenues represent the percentage of cash flow a company receives from each business line related to providing a good or service. If less than fifty percent of revenues come from the regulated gas sector, the companies are not comparable to the subject utility as they do not provide a similar level of regulated business. Therefore, these companies should be removed from the proxy group.

<u>CAPITAL STRUCTURE</u>

Q. WHAT IS A CAPITAL STRUCTURE?

A. A capital structure represents how a firm has financed its rate base with different sources of funds. The primary sources of funding are long-term debt and common equity. A capital structure may also include preferred stock and/or short-term debt, although this is not the case for UGI Gas.

Q. WHAT IS THE COMPANY'S CLAIMED CAPITAL STRUCTURE?

A. The Company's claimed capital structure is summarized in the table below:[5]

UGI Utilities, Inc. - Gas Division Capital Structure - September 30, 2023	
Long-Term Debt	44.88%
Common Equity	55.12%
Total	**100.00%**

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIMED CAPITAL STRUCTURE?

A. Mr. Moul explains that UGI Utilities, Inc. raises its own long-term debt directly in the capital markets. He believes the consolidated capital structure ratios for UGI Utilities, Inc. should be used in determining the rate of return for each of its utility divisions because all operations of each the division are financed on a consolidated basis.[6]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S CAPITAL STRUCTURE?

A. I recommend using the Company's claimed capital structure as presented in the table above.

[5] UGI Gas Statement No. 6, p. 21, ln. 22 through p. 22, ln. 4 and UGI Gas Exhibit B, Schedule 5.
[6] UGI Gas Statement No. 6, p. 20, lines 5-16.

Q. WHAT IS THE BASIS FOR YOUR CAPITAL STRUCTURE RECOMMENDATION?

A. Although I believe a capital structure of 50% long-term debt and 50% common equity is optimal when trying to balance the financial integrity of a utility as well as trying to control costs to ratepayers, in this proceeding, I recommend using the Company's claimed capital structure as it falls within the range of my proxy group's 2020 (most recently available) capital structures. The most recent five-year average range contains individual company capital structure ratios from 27.88% to 55.48% long-term debt and 34.19% to 56.96% equity, with an overall five-year average of 41.48% long-term debt and 46.93% common equity.[7] UGI Gas only employs short-term debt to finance non-rate base items, which is why it has been excluded in this proceeding.

It is worth noting that the Company's equity ratio is well above the average and near the highest end of the proxy group's equity ratios. In fact, five of the seven companies in my proxy group have a capital structure wherein the equity ratio is less than 50%. This equity heavy capital structure must be recognized when considering UGI Gas' financial risk, as higher equity ratios generally correspond with lower financial risk as Mr. Moul himself concedes.[8]

For consideration when examining the Company's overall financial risk, the example below illustrates the cost savings to ratepayers if the Company were to employ a 50% long-term debt and 50% common equity capital structure in its cost of capital while

---

[7] I&E Exhibit No. 2, Schedule 2.
[8] UGI Gas Statement No. 6, p. 17, lines 5-7.

maintaining its claimed return on equity and rate base:

Type of Capital	Ratio	Cost Rate	Weighted Cost
UGI UTILITIES, INC. - GAS DIVISION			
Summary of Cost of Capital			
AS FILED CAPITAL STRUCTURE			
Long-Term Debt	44.88%	3.98%	1.79%
Common Equity	55.12%	11.20%	6.17%
Total	100.00%		7.96%
50/50 OPTIMAL CAPITAL STRUCTURE			
Long-Term Debt	50.00%	3.98%	1.99%
Common Equity	50.00%	11.20%	5.60%
Total	100.00%		7.59%
Difference In The Overall Rate of Return (7.96% - 7.59% = 0.37%)			0.37%
Impact To Ratepayers (Claimed Rate Base* x Difference In The Overall Rate of Return) ($3,169,023,000 x .0037)			$11,725,385
Gross Revenue Conversion Fator**			1.429864
Total Impact To Ratepayers ($11,725,385 x 1.429864)			**$16,765,706**

*UGI Gas Exhibit A, Schedule A-1, ln. 9.
**UGI Gas Exhibit A, Schedule A-1, ln. 24.

In this example, if the Company were to employ a 50/50 capital structure, the cost savings to ratepayers would be $16,765,706. While I understand achieving and maintaining an exact 50/50 capital structure is not truly feasible, this example is intended to demonstrate UGI Gas's financial security as compared to its peers and prove that Mr. Moul's various "add-ons" to his cost of equity calculations are unnecessary.

COST OF LONG-TERM DEBT

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S COST RATE OF LONG-TERM DEBT?

A. I recommend using the Company's claimed long-term debt cost rate of 3.98% for the FPFTY.[9]

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION TO USE THE COMPANY'S CLAIMED COST RATE OF LONG-TERM DEBT?

A. The Company's claimed cost rate of long-term debt is reasonable, as it is representative of the industry. It falls within my proxy group's implied long-term debt cost range of 1.96% to 4.58%, with an average implied long-term debt cost of 3.99%.[10] Additionally, the Company's forecasted cost of long-term debt has been gradually trending downward, which is beneficial to ratepayers; therefore, I recommend the claimed cost rate of long-term debt be used.

COST OF COMMON EQUITY

COMMON METHODS

Q. WHAT METHODS ARE COMMONLY PRESENTED BY UTILITIES IN DETERMINING THE COST OF COMMON EQUITY?

A. Four methods commonly presented to estimate the cost of common equity are the Discounted Cash Flow (DCF), the Capital Asset Pricing Model (CAPM), the Risk Premium (RP) Method, and the Comparable Earnings (CE) Method.

---

[9] UGI Gas Statement No. 6, p. 23, ln. 25 through p. 24, ln. 1 and UGI Gas Exhibit B, Schedule 6, p. 3.
[10] I&E Exhibit No. 2, Schedule 3.

Q. WHAT IS THE THEORETICAL BASIS FOR THE DCF METHOD?

A. The DCF method is the "dividend discount model" of financial theory, which maintains that the value (price) of any security or commodity is the discounted present value of all future cash flows. The DCF method assumes that investors evaluate stocks in the traditional economic framework, which maintains that the value of a financial asset is determined by its earning power, or its ability to generate future cash flows.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CAPM?

A. The CAPM describes the relationship of a stock's investment risk and its market rate of return. It identifies the rate of return investors expect so that it is comparable with returns of other stocks of similar risk. This method hypothesizes that the investor-required return on a company's stock is equal to the return on a "risk free" asset plus an equity premium reflecting the company's investment risk. In the CAPM, two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta. The CAPM allows for investors to receive a return only for bearing systematic risk. Unsystematic risk is assumed to be diversified away, and therefore, does not earn a return.

Q. WHAT IS THE THEORETICAL BASIS FOR THE RP METHOD?

A. The theoretical basis for the RP method is a simplified version of the CAPM. The RP method's theory is that common stock is riskier than debt, thus, investors require a higher expected return on stocks than bonds. In the RP approach, the cost of equity is made up of the cost of debt and a risk premium. While the CAPM uses the market risk premium, it also directly measures the systematic risk of a company or proxy group through the use of beta. The RP method does not measure the specific risk of a company.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CE METHOD?

A. The CE method utilizes the concept of opportunity cost. This means that investors will likely dedicate their capital to the investment offering the highest return with similar risk to alternative investments. Unlike the DCF, CAPM, and the RP methods, the CE method is not market-based and relies upon historic accounting data. The most problematic issue with the CE method is determining what constitutes comparable companies.

Q. WHAT METHOD DO YOU RECOMMEND USING TO DETERMINE AN APPROPRIATE COST OF COMMON EQUITY FOR UGI GAS?

A. I recommend using the DCF method as the primary method to determine the cost of common equity. Additionally, I recommend using the results of the CAPM as a comparison to the DCF results. This is consistent with the methodology historically used by the Commission in base rate proceedings, but also as recently as 2017, 2018, 2020, and 2021.[11]

Citizens Electric Company of Lewisburg, PA;* Docket No. R-2019-3008212 (Order Entered April 29, 2020). *See generally* Disposition of Cost of Common Equity, pp. 91-92. *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.;* Docket No. R-2020-3018835 (Order Entered February 19, 2021). *See generally* Disposition of Cost of Common Equity, p. 131.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO USE THE DCF AND CAPM IN YOUR ANALYSIS.

A. I have used the DCF as the primary method for a variety of reasons. The DCF is appealing to investors since it is based upon the concept that the receipt of dividends in addition to expected appreciation is the total return requirement determined by the market.[12] The use of a growth rate and expected dividend yield are also strengths of the DCF, as this recognizes the time value of money and is forward-looking. The use of the utilities' own, or in this case the proxy group's, stock prices and growth rates directly in the calculation also causes the DCF to be industry and company specific. Therefore, the DCF method is superior for determining the rate of return for the current economic market because it measures the cost of equity directly.

I have included a CAPM analysis as a comparison because the CAPM and the DCF include inputs that allow the results to be specific to the utility industry, although the CAPM is far less responsive to changes in the industry than the DCF. The CAPM is based on the performance of U.S. Treasury bonds and the performance of the market as measured through the S&P 500 and is company-specific only through the use of beta. Beta reflects a stock's volatility relative to the overall market, thereby incorporating an industry-specific aspect to the CAPM, but only as a measure of how reactive the industry is compared to the market as a whole. Although changes in the utility industry are more likely to be accurately reflected in the DCF, which uses the companies' actual prices, dividends, and growth rates, I have included the results of my CAPM analysis because changes in the market, whether as a whole or specific to the utility industry, affect the

[12] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2010 Edition, p. 151.

outcome of each method in different ways. Although I have chosen to use the CAPM as a secondary method, it does have several disadvantages and should not be used as a primary method.

Q. EXPLAIN THE DISADVANTAGES OF THE CAPM.

A. The CAPM, and the RP method by virtue of its similarities to the CAPM, give results that indicate to an investor what the equity cost rate should be if current economic and regulatory conditions are the same as those present during the historical period in which the risk premiums were determined. This is because beta, which is the only company-specific variable in the CAPM model, measures the *historical* volatility of a stock compared to the *historical* overall market return. Reliance on historical values is especially problematic now given the recent impact of the COVID-19 pandemic on economic conditions. Although the CAPM and RP results can be useful to investors in making rational buy and sell decisions within their portfolios, the DCF method is the superior method for determining the rate of return for the current economic market and measuring the cost of equity directly. The CAPM and the RP methods are less reliable indicators because they measure the cost of equity indirectly and risk premiums vary depending on the debt and equity being compared. Also, regulators can never be certain that economic and regulatory conditions underlying the historical period during which the risk premiums were calculated are the same today or will be the same in the future.

Q. IS THERE ANY ACADEMIC EVIDENCE THAT QUESTIONS THE CREDIBILITY OF THE CAPM MODEL?

A. Yes. An article, "Market Place; A Study Shakes Confidence in the Volatile-Stock

Theory," which appeared in the *New York Times* on February 18, 1992, summarized a CAPM study conducted by professors Eugene F. Fama and Kenneth R. French.[13] Their study examined the importance of beta, CAPM's risk factor, in explaining returns on common stock. In CAPM theory a stock with a higher beta should have a higher expected return. However, they found that the model did not do well in predicting actual returns and suggested the use of more elaborate multi-factor models.

A more recent article, "The Capital Asset Pricing Model: Theory and Evidence," which appeared in the *Journal of Economic Perspectives,* states that "the attraction of the CAPM is that it offers powerful and intuitively pleasing predictions about how to measure risk and the relation between expected return and risk. Unfortunately, the empirical record of the model is poor - poor enough to invalidate the way it is used in applications."[14] As a result, I conclude that the CAPM's relevance to the investment decision making process does not carry over into the regulatory rate setting process.

Q. PLEASE EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE RP METHOD FROM YOUR ANALYSIS.

A. The RP method is excluded because it is a simplified version of the CAPM and is subject to the same faults explained above. Most importantly, unlike the CAPM, the RP method does not recognize company-specific risk through beta.

---

13 Berg, Eric N. "Market Place; A Study Shakes Confidence in the Volatile-Stock Theory" *The New York Times*, 18 Feb 1992: *nytimes.com* Web. 23 Mar 2016.

14 Fama, Eugene F. and French, Kenneth R., "The Capital Asset Pricing Model: Theory and Evidence." *Journal of Economic Perspectives* (2004): Volume 18, Number 3, pp. 25-46.

Q. EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE CE METHOD IN YOUR ANALYSIS.

A. The CE method is excluded because the choice of which companies are comparable is highly subjective, and it is debatable whether historic accounting values are representative of the future. Moreover, its historical usage in this regulatory forum has been minimal.

<u>SUMMARY OF THE COMPANY'S RESULTS</u>

Q. WHAT ARE THE RESULTS OF THE COMPANY'S COST OF EQUITY ANALYSES?

A. Mr. Moul employed the DCF, CAPM, RP, and CE methods in analyzing the Company's cost of equity. He makes several adjustments to his results, which include consideration of risk, leverage, and size.[15] Ultimately, Mr. Moul opines that a cost of equity of 11.20% is warranted due to UGI Gas' risk characteristics, so it can compete in the capital markets, attain reasonable credit quality, and be recognized for the Company's strong management performance.[16]

<u>I&E RECOMMENDATION</u>

Q. WHAT IS YOUR RECOMMENDED COST OF COMMON EQUITY FOR UGI GAS?

A. Based upon my analysis, I recommend a cost of common equity of 9.92%.[17]

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on the use of the DCF method. As explained below, I used

---

15 UGI Gas Exhibit B, Schedule 1, p. 2.
16 UGI Gas Statement No. 6, p. 50, lines 2-16.
17 I&E Exhibit No. 2, Schedule 1.

my CAPM result only to present to the Commission a comparison to my DCF results. My DCF analysis uses a spot dividend yield, a 52-week dividend yield, and earnings growth forecasts.

<u>DISCOUNTED CASH FLOW</u>

Q. PLEASE EXPLAIN YOUR DCF ANALYSIS.

A. My analysis employs the constant growth DCF model as portrayed in the following formula:

$$K = D_1/P_0 + g$$

Where:

K	=	Cost of equity
D_1	=	Dividend expected during the year
P_0	=	Current price of the stock
g	=	Expected growth rate

When a forecast of D_1 is not available, D_0 (the current dividend) must be adjusted by one half of the expected growth rate to account for changes in the dividend paid in period one. As forecasts for each company in my proxy group were available from Value Line, no dividends were adjusted for the purpose of my analysis.

Q. PLEASE EXPLAIN HOW YOU DEVELOPED THE DIVIDEND YIELDS USED IN YOUR DCF ANALYSIS.

A. A representative dividend yield must be calculated over a time frame that avoids the problems of both short-term anomalies and stale data series. For my DCF analysis, the dividend yield calculation places equal emphasis on the most recent spot and the 52-week average dividend yields. The following table summarizes my dividend yield computations for the proxy group:[18]

Proxy Group - Average Dividend Yields	
Spot	3.23%
52-week average	3.55%
Average	3.39%

Q. WHAT INFORMATION DID YOU RELY UPON TO DETERMINE YOUR EXPECTED GROWTH RATE?

A. I have used five-year projected growth rate estimates from Value Line, Yahoo! Finance, Zacks, and Morningstar.

Q. WHAT WERE THE RESULTS OF YOUR FORECASTED EARNINGS GROWTH RATES?

A. The expected average growth rates for my gas proxy group ranged from 4.63% to 7.33% with an overall average of 6.53%.[19]

[18] I&E Exhibit No. 2, Schedule 4.
[19] I&E Exhibit No. 2, Schedule 5.

Q. WHAT IS THE RESULT OF YOUR DCF ANALYSIS BASED ON YOUR RECOMMENDED DIVIDEND YIELD AND GROWTH RATE?

A. The results of my DCF analysis are calculated as follows:[20]

K	=	D_1/P_0	+	g
9.92%	=	3.39%	+	6.53%

<u>**CAPITAL ASSET PRICING MODEL**</u>

Q. PLEASE EXPLAIN YOUR CAPM ANALYSIS.

A. My analysis employs the traditional CAPM as portrayed in the following formula:

$K = R_f + \beta(R_m - R_f)$

Where:

K	=	Cost of equity
R_f	=	Risk-free rate of return
R_m	=	Expected rate of return on the overall stock market
β	=	Beta measures the systematic risk of an asset

Q. WHAT IS BETA AS EMPLOYED IN YOUR CAPM ANALYSIS?

A. Beta is a measure of the systematic risk of a stock in relation to the rest of the stock market. A stock's beta is estimated by calculating the linear regression of a stock's return against the return on the overall stock market. The beta of a stock with a price pattern identical to that of the overall stock market will equal one. A stock with a price

[20] I&E Exhibit No. 2, Schedule 6.

movement that is greater than the overall stock market will have a beta that is greater than one and would be described as having more investment risk than the market. Conversely, a stock with a price movement that is less than the overall stock market will have a beta of less than one and would be described as having less investment risk than the overall stock market.

Q. HOW DID YOU DETERMINE YOUR BETA FOR YOUR CAPM ANALYSIS?

A. In estimating an equity cost rate for my proxy group, I used the average of the betas for the companies as provided in the Value Line Investment Survey. The average beta for my proxy group is 0.84.[21]

Q. WHAT RISK-FREE RATE OF RETURN HAVE YOU USED FOR YOUR FORECASTED CAPM ANALYSIS?

A. I have chosen to use the risk-free rate of return (R_f) from the projected yield on 10-year Treasury Notes. While the yield on the short-term T-Bill is a more theoretically correct parameter to represent a risk-free rate of return, it can be extremely volatile. The volatility of short-term T-Bills is directly influenced by Federal Reserve policy. At the other extreme, the 30-year Treasury Bond exhibits more stability but is not risk-free. Long-term Treasury Bonds have substantial maturity risk associated with market risk and the risk of unexpected inflation. Long-term treasuries normally offer higher yields to compensate investors for these risks. As a result, I chose to use the yield on the 10-year Treasury Note because it mitigates the shortcomings of the other two alternatives.

[21] I&E Exhibit No. 2, Schedule 7.

Additionally, the Commission has recently agreed with I&E and recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.[22]

The forecasted yield on the 10-year Treasury Note, as seen in Blue Chip Financial Forecasts, is expected to range between 2.00% and 2.50% from the second quarter of 2022 through the second quarter of 2023, and it is forecasted to be 2.90% from 2023-2027. For my forecasted CAPM analysis, I used 2.35%, which is the average of all the yield forecasts I observed.[23]

Q. HOW DID YOU DETERMINE THE RETURN ON THE OVERALL STOCK MARKET EMPLOYED IN YOUR FORECASTED CAPM ANALYSIS?

A. To arrive at a representative expected return on the overall stock market, I observed Value Line's 1700 stocks and the S&P 500. Value Line expects its universe of 1700 stocks to have an average yearly return of 12.57% over the next three to five years based on a forecasted dividend yield of 1.90% and a yearly index appreciation of 50%. The S&P 500 index is expected to have an average yearly return of 15.41% over the next five years based upon Barron's forecasted dividend yield of 1.41% and Morningstar's average expected increase in the S&P 500 index of 13.90%.[24]

---

22 *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99.

23 I&E Exhibit No. 2, Schedule 8.

24 I&E Exhibit No. 2, Schedule 9.

Q. WHAT IS THE EXPECTED RETURN ON THE OVERALL STOCK MARKET BASED ON YOUR FORECASTED ANALYSIS?

A. The expected return on the overall market is 13.99% for my forecasted analysis.[25]

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR CAPM ANALYSIS?

A. The result of my analysis is as follows:[26]

K	=	R_f	+	$\beta(R_m - R_f)$
12.13%	=	2.35%	+	0.84 (13.99% - 2.35%)

<u>CRITIQUE OF MR. MOUL'S PROPOSED COST OF EQUITY</u>

Q. DO YOU AGREE WITH MR. MOUL'S PROPOSED COST OF EQUITY?

A. No. I disagree with Mr. Moul's proposed cost of equity analysis for several reasons. First, I disagree with the weights given to the results of Mr. Moul's CAPM, RP, and CE analyses in his recommendation. Second, I take issue with certain aspects of Mr. Moul's risk analysis of UGI Gas. Third, I disagree with his application of the DCF including the forecasted growth rate and leverage adjustment he uses. Fourth, I do not agree with his use of the 30-year Treasury Bond in place of the 10-year Treasury Note, his inclusion of a size adjustment, and use of an inflated beta in his CAPM analysis. Finally, I disagree with Mr. Moul's recommendation to include an adjustment to the cost of equity for recognition of management performance.

---

[25] I&E Exhibit No. 2, Schedule 9.

[26] I&E Exhibit No. 2, Schedule 10.

<u>WEIGHTS GIVEN TO THE CAPM, RP, AND CE METHODS</u>

Q. DO YOU AGREE WITH MR. MOUL'S RELIANCE ON THE CAPM AND RP MODELS?

A. No. While I am not opposed to providing the Commission the results of the CAPM methodology for a point of comparison to the results of the DCF calculation, I am opposed to giving the CAPM and RP considerable weight. For the reasons previously discussed in this testimony, including my reference to recent Commission orders, it is inappropriate to give the CAPM and RP models similar weight to the DCF as Mr. Moul has done in creating his recommended cost of equity range.[27] As discussed above, the CAPM measures the cost of equity indirectly and can be manipulated by the time period chosen. Since the RP is a simplified version of the CAPM, it suffers these same flaws.

Q. DO YOU AGREE WITH MR. MOUL'S USE OF THE CE METHOD?

A. No. The companies in Mr. Moul's analysis are not utilities, and, therefore, they are too dissimilar to be used in a CE analysis. The companies in Mr. Moul's CE proxy group are simply not comparable to gas utilities in terms of business risk or financial risk profile. Natural gas distribution companies are monopolies, which are subject to very little competition, if any at all. Due to this minimal competition, utilities in general have very low business risk and can maintain higher financial risk profiles by employing more leverage. Conversely, since the companies in Mr. Moul's CE proxy group operate in an unregulated competitive environment with a higher level of business risk, they must maintain lower financial risk profiles by employing a smaller amount of leverage.

[27] UGI Gas Statement No. 6, p. 6, ln. 10 through p. 7, ln. 3.

Further, in his CE analysis, Mr. Moul states, “I used 20% as the point where those returns could be viewed as highly profitable and should be excluded from the Comparable Earnings approach.”[28] I do not believe this arbitrary use of 20% is justified, as I am unaware of any natural gas utility company that has been granted a Commission authorized or regularly earns a 20% or greater return on equity.

RISK ANALYSIS

Q. PLEASE SUMMARIZE MR. MOUL’S CLAIMS REGARDING THE RISK FACTORS THE COMPANY FACES.

A. Mr. Moul described the Company’s claimed risk factors in two different sub-sections. In the first section, labeled “Natural Gas Risk Factors,” he described the *qualitative* risk factors. In this section, Mr. Moul discussed the potential for bypass, the Company’s construction program, and the proposed weather normalization adjustment (WNA) mechanism.[29] In the second section of his risk analysis, labeled “Fundamental Risk Analysis,” he described the *quantitative* risk factors. In this section, Mr. Moul discusses the Company’s credit quality, as well as many different financial metrics including size, market ratios, common equity ratios, return on book equity, operating ratios, pre-tax interest coverage, quality of earnings, internally generated funds, and betas.[30]

Q. WHAT HAS MR. MOUL CLAIMED REGARDING THE POTENTIAL RISK OF BYPASS?

A. Mr. Moul opines that the Company’s close proximity to the Marcellus Shale production

[28] UGI Gas Statement No. 6, p. 49, lines 15-17.
[29] UGI Gas Statement No. 6, p. 7, ln. 12 through p. 14, ln. 2.
[30] UGI Gas Statement No. 6, p. 14, ln. 3 through p. 20, ln. 3.

area, and the competition gas utilities face from alternative energy sources such as electricity, fuel oil, and propane contribute to the Company's risk profile.[31]

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S CLAIMED RISK OF BYPASS FOR UGI GAS?

A. All natural gas distribution utilities face competition from the alternate sources of energy Mr. Moul mentions. Furthermore, all gas utilities face similar risk with competitive market customers. The overlapping territories in western Pennsylvania provide a good example. In my opinion, UGI Gas faces no more risk than any of the companies in my proxy group. The cost of equity measured by my proxy group adequately compensates investors for these risks common to all gas utilities.

Q. WHAT IS MR. MOUL'S CLAIM REGARDING ADDITIONAL RISK DUE TO THE COMPANY'S CONSTRUCTION PROGRAM AND AGING INFRASTRUCTURE?

A. Mr. Moul claims that the Company must invest in new facilities to meet growth demands and to maintain and upgrade existing facilities to maintain safe and reliable service to existing customers.[32] The Company anticipates that gross construction expenditures will represent a 59% increase in net utility plant, including construction work in progress during 2022-2025 period.[33]

---

[31] UGI Gas Statement No. 6, p. 8, lines 6-18.
[32] UGI Gas Statement No. 6, p. 10, lines 5-9.
[33] UGI Gas Statement No. 6, p. 11, lines 1-4.

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S CLAIM REGARDING THE COMPANY'S CONSTRUCTION PROGRAM AND REPLACEMENT OF AGING INFRASTRUCTURE?

A. First, Mr. Moul states, "[w]ith customer demand for the Company's service at high levels, the Company is faced with the requirement to invest in new facilities…"[34] It is worth noting that this statement is contrary to Mr. Moul's concerns regarding loss of customers and risk of bypass as discussed above. Every gas utility faces the same issues of upgrading or replacing its infrastructure. As costs for replacing infrastructure increase, UGI Gas, like any other regulated gas utility, has the option to file a base rate case at any time to address revenue inadequacy due to increasing costs, infrastructure replacement, or any other associated issues. Base rate cases allow a utility to recover its costs and provide it with the *opportunity* to earn a reasonable return on capital investments. Additionally, the Commission offers risk reducing mechanisms such as the Distribution System Improvement Charge (DSIC) and the FPFTY to help reduce any regulatory lag in recovery of infrastructure investment or other unforeseen expenditures. It should be noted that these mechanisms were not designed to eliminate the need for periodic base rate case filings, but only to mitigate regulatory lag and support increasing infrastructure replacement needs.

Q. ACCORDING TO MR. MOUL, WHAT ADDITIONAL BUSINESS RISKS AFFECT THE COMPANY?

A. Mr. Moul suggests that regulatory risks such as the requirements to obtain the necessary

---

[34] UGI Gas Statement No. 6, p. 10, lines 5-7.

permits and approvals to secure adequate and reliable gas supply have become time consuming and costly.[35] Further, he opines that the Company faces operational risks such as counterparty risk, cyber security, and attacks from foreign enemies and domestic terrorists.[36]

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S CLAIMS REGARDING THE VARIOUS BUSINESS (REGULATORY AND OPERATIONAL) RISKS HE MENTIONS?

A. The issues referenced by Mr. Moul affect the entire gas utility industry, therefore, UGI Gas faces the same exposure to these issues as do all the other companies in our respective proxy groups. Investors voluntarily buy and hold shares of stocks in natural gas utility companies, indicating they are aware of these risks and the returns. The cost of equity I present for UGI Gas in this proceeding is adequately measured by my proxy group and adequately compensates investors for these risks.

Q. PLEASE COMMENT ON THE COMPANY'S PROPOSAL REGARDING A WEATHER NORMALIZATION ADJUSTMENT (WNA) MECHANISM AND ITS CLAIM REGARDING THE POTENTIAL IMPACT ON THE COMPANY'S COST OF EQUITY.

A. Generally, the goal of a WNA is to stabilize revenues from volumetric charges as they are highly variable depending on weather conditions. Company witness John D. Taylor (UGI Gas Statement No. 11) discusses in detail the specifics of UGI Gas' WNA proposal.

[35] UGI Gas Statement No. 6, p. 9, lines 8-13.
[36] UGI Gas Statement No. 6, p. 9, lines 15-21.

Mr. Moul claims that all the companies in his Gas Group have similar WNA mechanisms to what UGI Gas is proposing in this proceeding, and that his market-determined return on equity analysis reflects the effects of decoupling on investor expectations.[37]

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S CLAIM REGARDING THE COMPANY'S PROPOSED WNA MECHANISM?

A. The Commission allows utilities the opportunity to propose alternative ratemaking mechanisms such as the WNA requested by the Company in this proceeding. If the Commission approves the Company's WNA proposal, the benefits of revenue decoupling would certainly reduce the Company's overall risk profile. However, I&E's position on UGI Gas' specific request regarding the WNA proposal are addressed in the testimony of I&E witness Cline (I&E Statement No. 4).

Q. PLEASE DISCUSS THE CLAIMS MR. MOUL MAKES REGARDING QUANTITATIVE RISK FACTORS IN THE SECTION HE LABELS "FUNDAMENTAL RISK ANALYSIS."

A. Mr. Moul states that it is necessary to establish a company's relative risk position within its industry through an analysis of quantitative and qualitative factors. In this section, Mr. Moul uses various financial metrics to compare UGI Gas to the S&P Public Utilities Index and his Gas Group.[38]

---

[37] UGI Gas Statement No. 6, p. 12, lines 4-11.
[38] UGI Gas Statement No. 6, p. 14, lines 6-13.

Q. WHAT ARE YOUR COMMENTS REGARDING MR. MOUL'S "FUNDAMENTAL RISK ANALYSIS?"

A. Two of the points he examines, size risk and betas, are discussed and disputed elsewhere in my direct testimony. Throughout the remainder of his "fundamental risk analysis," Mr. Moul makes several statements to indicate that UGI Gas has no more of a risk than any other company in his Gas Group. First, Mr. Moul identifies the Company's long-term issuer credit quality rating from Moody's Investors Service (Moody's) to be A2, which is categorized as upper-medium investment grade with low credit risk. By comparison, the average Moody's ratings of Mr. Moul's Gas Group and the S&P Public Utilities Index both have a rating one step lower at A3.[39] These ratings indicate that UGI Gas has a lower credit risk than both Mr. Moul's Gas Group and the S&P Public Utilities Index.

Second, while discussing common equity ratios, Mr. Moul states, "The five-year average common equity ratios, based on permanent capital, were 56.6% for UGI Gas, 51.5% for the Gas Group, and 41.3% for the S&P Public Utilities." He concludes that UGI Gas' higher common equity ratio indicates lower financial risk than that of his Gas Group.[40]

Third, regarding operating ratios, Mr. Moul states, "The five-year average operating ratios were 76.7% for the Company, 83.6% for the Gas Group, and 78.8% for the S&P Public Utilities".[41] As Mr. Moul explains, the operating ratio illustrates the percentage of revenue required to cover operating expenses. The lower the operating

[39] UGI Gas Statement No. 6, p. 15, lines 11-19.
[40] UGI Gas Statement No. 6, p. 17, lines 3-7.
[41] UGI Gas Statement No. 6, p. 17, lines 20-21.

ratio is, the higher the operating margin becomes.[42] In this case, UGI Gas's lower operating ratio implies less risk than the Gas Group and the S&P Public Utilities Index.

Fourth, concerning coverage, he explains that excluding the Allowance for Funds Used During Construction, the five-year average pre-tax interest coverage was 5.07 times for the Company, 4.05 times for the Gas Group, and 3.02 times for the S&P Public Utilities. Mr. Moul acknowledges that "[t]he interest coverages were higher for the Company as compared to the Gas Group, thereby indicating lower credit risk."[43]

Fifth, regarding quality of earnings, Mr. Moul concludes, "[q]uality of earnings has not been a significant concern for the Company, the Gas Group, and the S&P Public Utilities."[44]

Finally, concerning internally generated funds (IGF), Mr. Moul shows the five-year average percentage of IGF to capital expenditures to be 72.4% for UGI Gas, 56.0% for his Gas Group, and 69.5% for the S&P Public Utilities.[45] Although the Company's IGF to capital expenditures dropped in 2019 and 2020, the higher five-year average percentage indicates lower financial risk as compared to the Gas Group and the S&P Public Utilities.

Q. PLEASE CONTINUE.

A. Mr. Moul summarizes his fundamental risk analysis by stating, "[o]n balance, the cost of equity measured with the Gas Group data will provide a reasonable, albeit conservative, representation of the Company's cost of equity."[46] While some measures he discusses

---

42 UGI Gas Statement No. 6, p. 17, lines 18-20 and Footnote 3.
43 UGI Gas Statement No. 6. p. 18, lines 5-9.
44 UGI Gas Statement No. 6. p. 18, lines 21-22.
45 UGI Gas Statement No. 6. p. 18, ln. 23 through p. 19, ln. 4.
46 UGI Gas Statement No. 6, p. 20, lines 1-3.

may imply a higher risk profile for the Company, he provides a greater amount and more convincing measures that illustrate the Company has lower risk. Overall, through his own analysis and testimony, Mr. Moul substantiated that the Company has very similar risk as compared to that of his Gas Group, therefore, any additional consideration for the Company's risk profile is unnecessary.

COST OF EQUITY ADJUSTMENTS

INFLATED GROWTH RATES USED IN DCF ANALYSIS

Q. WHAT GROWTH RATE HAS MR. MOUL USED IN HIS DCF ANALYSIS?

A. Mr. Moul has chosen a growth rate of 6.75%.

Q. WHAT IS THE BASIS FOR MR. MOUL'S GROWTH RATE?

A. Mr. Moul indicates that Schedule 9 of his exhibit shows the prospective five-year earnings per share growth rates projected for the Gas Group to be 5.41% from IBES/First Call, 5.88% from Zacks, and 7.61% from Value Line.[47] Although the average of his sources for the growth rate is 6.30%,[48] Mr. Moul chooses to use 6.75% claiming that DCF growth rates should not be established by mathematical formulation and that the reasonableness of his chosen growth rate is justified by investor-expected growth for the Gas Group and continuation of gas utility infrastructure spending.[49]

Q. DO YOU AGREE WITH MR. MOUL'S GROWTH RATE ANALYSIS?

A. No. Contrary to Mr. Moul's belief that DCF growth rates *should not* be established by

---

[47] UGI Gas Statement No. 6, p. 31, lines 12-13.
[48] (5.41% + 5.88% + 7.61%) ÷ 3 = 6.30%.
[49] UGI Gas Statement No. 6, p. 32, lines 8-15.

mathematical formulation, I feel that any alternative is subjective and introduces additional and unnecessary bias and should be avoided when possible. The use of a higher growth rate than the average of his proxy group ignores the fact that analysts making earnings per share growth forecasts are already aware of the economic conditions and the state of the gas utility industry. The reasons Mr. Moul has given for choosing a growth rate above his calculated average are factors that are already included in the earnings per share growth forecasts; thus, choosing a growth rate higher than the average of his proxy group would account for the same factors twice.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING THE RESULTS OF MR. MOUL'S PROJECTED GROWTH RATES?

A. Yes. While the five-year projected growth rates can be used in analyses, one must be aware that analysts' estimates may be biased. This bias has been observed in literature. An article authored by Professors Ciciretti, Dwyer, and Hasan in 2009 observed strong support of earnings forecasts being higher than actual earnings.[50] In spring of 2010, McKinsey on Finance presented an article reporting that after a decade of stricter regulation analysts' forecasts are still overly optimistic.[51]

Analysts' estimates are an attempt to forecast future cash flows and thus expected earnings growth. However, it should be kept in mind that prudent judgment must be exercised as to the sustainability of forecasted growth rates with respect to the base earnings. If the base year earnings are abnormally high, the growth rates from which

[50] Ciciretti, Rocco; Dwyer, Gerald R; and Iftekhan Hasan. "Investment Analysts' Forecasts of Earnings" Federal Reserve Bank of St. Louis *Review*, September/October 2009, 91 (5, part 2) pp. 545-67.

[51] Goedhart, Marc J; Raj, Rishi; and Abhishek Saxena. "Equity analyst: Still too bullish" McKinsey on Finance Number 35 Spring 2010, pp. 14-17.

they are calculated will be biased downward. Similarly, if the base year earnings are abnormally low, the growth rates from which they are calculated will be biased upward. As a result, it is typically necessary to employ a methodology to smooth out the abnormally high or low base year earnings.

In summary, since analysts' projected growth forecasts are most often overly optimistic, there is no need to arbitrarily and non-formulaically increase the estimates used in a DCF analysis.

LEVERAGE ADJUSTMENT APPLIED TO DCF ANALYSIS

Q. HAS MR. MOUL MADE ANY ADDITIONAL ADJUSTMENTS TO THE RESULT OF HIS DCF ANALYSIS?

A. Yes. Mr. Moul proposes to make a 95-basis point "leverage" adjustment[52] to the results of his DCF analysis to account for applying a market-determined cost of equity to a book value capital structure.[53]

Q. WHAT IS FINANCIAL LEVERAGE?

A. Financial leverage is the use of debt capital to supplement equity capital. A firm with significantly more debt than equity is considered highly leveraged.

Q. WHAT IS A MARKET-TO-BOOK (M/B) RATIO?

A. A market-to-book ratio is used to evaluate a public firm's equity value by comparing the market value and book value of a company's equity. One way of doing this is to divide

---

[52] UGI Gas Exhibit B, Schedule 1, p. 2.
[53] UGI Gas Statement No. 6, p. 33, lines 12-14.

the current price per share of stock by the book value per share. A M/B result of above one (1) is desired.

Q. HAS MR. MOUL PROPOSED TO ADJUST THE RESULT OF HIS DCF ANALYSIS TO RECOGNIZE HOW THE COMPANY IS LEVERAGED?

A. No. Mr. Moul does not propose to change the capital structure of the utility (a leverage adjustment), nor does he proposed to apply the market-to-book ratio to the DCF model (a market-to-book adjustment). Instead, Mr. Moul proposes to make an adjustment to account for applying the market value cost rate of equity to the book value of the utility's capital structure. I am not aware of any term in academic journals, textbooks, or other literature that describes this type of adjustment.

Q. WHAT IS THE BASIS FOR MR. MOUL'S PROPOSED LEVERAGE ADJUSTMENT?

A. As stated above, Mr. Moul theorizes that to make the DCF results relevant to a book value capital structure, the market-derived cost of equity needs to be adjusted to take into consideration the difference in financial risk.[54] Mr. Moul opines this is because market valuations of equity are based on market value capital structures, which in general have more equity, less debt, and therefore, less risk than book value capital structures.[55]

---

[54] UGI Gas Statement No. 6, p. 33, lines 12-14.
[55] UGI Gas Statement No. 6, p. 33, lines 4-10.

Q. HOW DOES MR. MOUL CALCULATE THE LEVERAGE ADJUSTMENT USED IN HIS ANAYSIS?

A. Mr. Moul simply states:

> I know of no means to mathematically solve for the 0.95% leverage adjustment by expressing it in the terms of any particular relationship of market price to book value. The 0.95% adjustment is merely a convenient way to compare the 11.21% return computed using the Modigliani & Miller formulas to the 10.26% return generated by the DCF model based on a market-value capital structure.[56]

Q. DO YOU AGREE WITH MR. MOUL'S "LEVERAGE ADJUSTMENT"?

A. No. Mr. Moul's adjustment is inappropriate for a couple of reasons, including the characterization of financial risk and its inconsistency with Commission precedent.

Q. EXPLAIN HOW RATING AGENCIES ASSESS FINANCIAL RISK.

A. Rating agencies assess financial risk based upon a company's booked debt obligations and the ability of its cash flow to cover the interest payments on those obligations. The agencies use a company's financial statements for their analysis, not market capital structure. The income statement reflects the financial risk of a company because it represents the performance of the company over a certain period. A change in the market value of the stock is not reflected in the income statement nor is a change in market value capital structure reflected in the book value capital structure unless treasury stock is purchased. It is a company's financial statements that affect the market value of the stock, and, therefore, the financial statements and the book value capital structure are relied upon in an analysis such as that done by rating agencies.

[56] UGI Gas Statement No. 6, p. 36, lines 17-23.

Q. WHAT ARE THE MOST RECENT COMMISSION DECISIONS REGARDING A LEVERAGE ADJUSTMENT?

A. The following cases are the most recent instances where the Commission has addressed the use of a "leverage adjustment." In these cases, this adjustment has been rejected.

First, in *Pennsylvania Public Utility Commission v. Aqua Pennsylvania, Inc.*, at Docket No. R-00072711 (Order Entered July 31, 2008), pp. 38-39, the Commission rejected the ALJ's recommendation for a leverage adjustment stating, "[t]he fact that we have granted leverage adjustments in the past does not mean that such adjustments are indicated in all cases." In this proceeding, the Commission determined that there was no viable support for an upwards adjustment to compensate for any perceived risk.

Second, in *Pennsylvania Public Utility Commission, et al v. City of Lancaster – Bureau of Water*, at Docket No. R-2010-2179103 (Order Entered July 14, 2011), p. 101, the Commission agreed with the I&E position and stated, "any adjustment to the results of the market based DCF are unnecessary and will harm ratepayers. Consistent with our determination in *Aqua 2008* there is no need to add a leverage adjustment. . ."

Third, in *Pennsylvania Public Utility Commission, et al v. UGI Utilities, Inc. – Electric Division*, at Docket No. R-2017-2640058 (Order Entered October 25, 2018), pp. 93-94, the Commission agreed with the I&E position and stated, "we conclude that an artificial adjustment in this proceeding is unnecessary and contrary to the public interest. Accordingly, we decline to include a leverage adjustment in our calculation of the DCF cost of equity."

Fourth, in *Pennsylvania Public Utility Commission, et. al v. Columbia Gas of Pennsylvania, Inc.*, at Docket R-2020-3018835 (Order Entered February 19, 2021), pp.

137-141, the Commission adopted the ALJ's recommendation to use I&E's DCF methodology, which excluded Columbia's application of a leverage adjustment.

Finally, in the most recent case of *Pennsylvania Public Utility Commission, et. al v. PECO Energy Company – Gas Division*, at Docket R-2020-3018929 (Order Entered June 22, 2021, Public Version), pp. 172-173, the Commission adopted the ALJ's recommendation to use I&E's DCF methodology, which excluded PECO's application of a leverage adjustment.

Q. BASED ON THE COMPANY'S FILED RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 95 BASIS POINTS FOR MR. MOUL'S LEVERAGE ADJUSTMENT TO THE COST OF EQUITY?

A. The example below illustrates the impact of 95 additional basis points for the leverage adjustment to the Company's cost of equity:

UGI Utilities, Inc. - Gas Division	
Claimed Equity Percentage of Capital Structure	55.12%
Additional Basis Points to Calculated Cost of Equity	95
Claimed Rate Base*	$3,169,023,000
Impact Prior to Gross Up (0.5512 x 0.0095 x $3,169,023,000)	$16,594,272
Gross Revenue Conversion Factor**	1.429864
Total Impact ($16,594,272 x 1.429864)	**$23,727,552**
*UGI Gas Exhibit A, Schedule A-1, ln. 9. **UGI Gas Exhibit A, Schedule A-1, ln. 24.	

In this example, an addition of 95 basis points for the leverage adjustment to the cost of equity would force ratepayers to fund an unwarranted additional amount of $23,727,552 annually to cover the increase of the inflated rate of return along with the associated impact resulting from increases to income taxes, gross receipts tax, uncollectibles, and assessments.

Q. SUMMARIZE YOUR RECOMMENDATION REGARDING THE PROPOSED LEVERAGE ADJUSTMENT.

A. I recommend that Mr. Moul's proposed 95-basis point leverage adjustment be rejected because true financial risk is a function of the amount of interest expense, and capital structure information provided to investors through Value Line is that of book values, not market values. This demonstrates that investors base their decisions on book value debt and equity ratios for the regulated utilities; therefore, no adjustment is needed. Mr. Moul's proposed adjustment serves only to manipulate the DCF's market-based methodology and causes undue harm to ratepayers as illustrated above.

Q. DO YOU HAVE ANY FURTHER COMMENTS REGARDING MR. MOUL'S DCF CALCULATION?

A. Yes. While I am not directly disputing Mr. Moul's adjusted dividend yields, it is important to recognize that, as cited above, the Commission has recently agreed with I&E's DCF methodology which includes the appropriate calculation of dividend yields. Although it is acceptable to adjust historical dividend yields as Mr. Moul has done, it is preferable to use forecasted dividends to calculate the dividend yields when available, such as the ones offered by Value Line that I have employed.

Q. WHAT WOULD MR. MOUL'S DCF BE WITHOUT ANY ADJUSTMENTS?

A. Without Mr. Moul's use of inflated growth rates and a leverage adjustment, his DCF would consist of a dividend yield of 3.51% and an average growth rate of 6.30%, which results in an 9.81% cost of equity. This result is slightly lower, yet comparable to my DCF result of 9.92% and is much more reasonable than his originally calculated and inappropriately inflated result of 11.21%.

<u>RISK-FREE RATE OF RETURN</u>

Q. HOW HAS MR. MOUL CALCULATED HIS RISK-FREE RATE FOR USE IN HIS CAPM MODEL?

A. Mr. Moul's calculation of his risk-free rate is similar to mine. He considered Treasury yield estimates published by Blue Chip Financial Forecasts over the next six quarters, from the time of his analysis, as well as long-range, five-year averages. However, he used the 30-year Treasury Bond while I employed the 10-year Treasury Note. Also, where I used a long-range, five-year average, future data point accounting for years 2023-2027 predictions, Mr. Moul used two future data points accounting for not only years 2023-2027, but also included an estimate for years 2028-2032. His calculation resulted in a 2.75% risk-free rate as opposed to the 2.35% I used.[57]

Q. WHAT COMMENTS DO YOU HAVE REGARDING MR. MOUL'S CALCULATION OF THE RISK-FREE RATE?

A. First, I must reiterate my earlier statements that long-term Treasury Bonds have

[57] UGI Gas Statement No. 6, p. 43, ln. 14 through p. 45, ln. 5 and UGI Gas Exhibit B, Schedule 13, p. 2.

substantial maturity risk associated with the market risk and the risk of unexpected inflation and normally offer higher yields to compensate investors for these risks. Using the 10-year Treasury Note is more appropriate to balance the short-term volatility risk and the long-term inflation risk.

The Commission has recently recognized the 10-year Treasury Note as the superior measure for the risk-free rate by stating the following: [58]

> We agree with I&E and the ALJs that using the yield on the 10-year Treasury Note provides a better measure of the risk-free rate of return than using the yield on the 30-year Treasury Bond, as recommended by UGI. In our view, using the 10-year Treasury Note balances the shortcomings of the short-term T-Bill and the 30-year Treasury Bond. Although long-term Treasury Bonds have less risk of being influenced by federal policies, they have substantial maturity risk associated with the market risk. In addition, long-term Treasury Bonds bear the risk of unexpected inflation.

Additionally, the further out into the future one projects, the less reliable the information becomes. Using the projection for 2028-2032 is an unreliable measure and this should not be included in the risk-free rate. The Company's FPFTY ends September 30, 2023, and in my opinion using an estimated risk-free rate that is up to nine years beyond the FPFTY is unreasonable and unnecessary.

<u>INFLATED BETAS USED IN CAPM ANALYSIS</u>

Q. HOW HAS MR. MOUL INFLATED THE BETAS EMPLOYED IN HIS CAPM ANALYSIS?

A. Mr. Moul has used the same logic for inflating his CAPM betas from 0.88 to 1.00 that he

---

[58] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order entered October 25, 2018), p. 99. (Disposition of Capital Asset Pricing Model (CAPM)).

used to enhance his DCF returns, through a financial risk or "leverage" adjustment.[59]

Q. DO YOU AGREE WITH MR. MOUL'S USE OF ADJUSTED BETAS?

A. No. Such enhancements are unwarranted for beta in a CAPM analysis for the same reasons that the "leverage" adjustment is unwarranted for DCF results.

Additionally, if the unadjusted *Value Line* betas do not reflect an accurate investment risk as Mr. Moul contends, the question naturally arises as to why *Value Line* does not publish betas that are adjusted for leverage. Until this type of adjustment is demonstrated in the academic literature to be valid, such leverage adjusted betas in a CAPM model should be rejected.

Finally, as described in my CAPM analysis above, a stock with a price movement that is greater than the overall stock market will have a beta that is greater than one and would be described as having more investment risk than the market. Due to being regulated and the monopolistic nature of utilities, very rarely do they have a beta equal to or greater than one. Therefore, in this case, to apply an adjusted beta of 1.00 to the entire industry or gas proxy group is irrational.

<u>SIZE ADJUSTMENT APPLIED TO CAPM ANALYSIS</u>

Q. PLEASE EXPLAIN MR. MOUL'S PROPOSED SIZE ADJUSTMENT.

A. Mr. Moul adds 102 basis points to his CAPM indicated cost of common equity because he believes that as the size of a firm decreases, its risk and required return increases. Mr. Moul relies upon technical literature including the Stocks, Bonds, Bills, and Inflation

---

[59] UGI Gas Statement No. 6, p. 42, ln. 14 through p. 43, ln. 13.

Yearbook, a Fama and French study entitled "The Cross-Section of Expected Stock Returns," and an article published in Public Utilities Fortnightly entitled "Equity and the Small-Stock Effect."[60]

Q. DO YOU AGREE WITH MR. MOUL'S SIZE ADJUSTMENT?

A. No. Mr. Moul's proposed size adjustment is unnecessary because the technical literature he cites supporting investment adjustments relating to the size of a company is not specific to the utility industry, and therefore, has no relevance in this proceeding.

Q. IS THERE ACADEMIC EVIDENCE THAT SUPPORTS YOUR CONCLUSION THAT THE SIZE ADJUSTMENT FOR RISK IS NOT APPLICABLE TO UTILITY COMPANIES?

A. Yes. In the article "Utility Stocks and the Size Effect: An Empirical Analysis," Dr. Annie Wong concludes:

> The objective of this study is to examine if the size effect exists in the utility industry. After controlling for equity values, there is some weak evidence that firm size is a missing factor from the CAPM for the industrial but not for utility stocks. This implies that although the size phenomenon has been strongly documented for the industriales, the findings suggest that there is no need to adjust for the firm size in utility rate regulation.[61]

UGI Gas presents no evidence to support application of a non-utility study regarding a size adjustment for risk to a utility setting. Absent any credible article to refute Dr. Wong's findings, Mr. Moul's size adjustment to his CAPM results should be rejected.

---

[60] UGI Gas Statement No. 6, p. 45, ln. 21 through p. 46 ln. 16.

[61] Dr. Annie Wong, "Utility Stocks and the Size Effect: An Empirical Analysis," *Journal of Midwest Finance Association* 1993, pp. 95-101.

Further, the Commission has recently rejected the application of a size adjustment to the CAPM cost of equity calculation where it agreed that the same literature the Company cites is not specific to the utility industry.[62]

Q. BASED ON THE COMPANY'S CLAIMED RATE BASE AND CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 102 BASIS POINTS FOR MR. MOUL'S SIZE ADJUSTMENT TO THE COST OF EQUITY?

A. The example below illustrates the impact of 102 additional basis points for the size adjustment to the Company's cost of equity:

UGI Utilities, Inc. - Gas Division	
Claimed Equity Percentage of Capital Structure	55.12%
Additional Basis Points to Calculated Cost of Equity	102
Claimed Rate Base*	$3,169,023,000
Impact Prior to Gross Up (0.5512 x 0.0102 x $3,169,023,000)	$17,817,008
Gross Revenue Conversion Factor**	1.429864
Total Impact ($17,817,008 x 1.429864)	**$25,475,898**
*UGI Gas Exhibit A, Schedule A-1, ln. 9. **UGI Gas Exhibit A, Schedule A-1, ln. 24.	

62 *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058 (Order Entered October 25, 2018), p. 100 (Disposition of Cost of Common Equity).

Q. WHAT WOULD MR. MOUL'S CAPM RESULT BE USING YOUR CALCULATED 10-YEAR TREASURY NOTE FOR HIS RISK-FREE RATE AND WITHOUT HIS SIZE ADJUSTMENT AND INFLATED BETAS?

A. Mr. Moul's CAPM result would be 11.13%. This is 242 basis points lower than his originally calculated 13.55% result. The calculation is repeated below without Mr. Moul's unnecessary adjustments:

Rf	+	*β*	x	*(Rm-Rf)*	+	*size*	=	*k*
2.35%	+	0.88	x	9.98%	+	0%	=	**11.13%**

MANAGEMENT PERFORMANCE

Q. DISCUSS THE COMPANY'S CLAIMS SPECIFIC TO MANAGEMENT PERFORMANCE.

A. Mr. Moul proposes that 20 basis points be added to the calculated cost of equity in recognition of the Company's exemplary management performance. He refers to the direct testimony of Company witness Christopher R. Brown (UGI Gas Statement No. 1) to support the consideration of additional basis points for UGI Gas' management performance.[63]

Q. WHAT INFORMATION DOES MR. BROWN PROVIDE TO SUPPORT THE COMPANY'S CLAIM OF EXEMPLARY MANAGEMENT PERFORMANCE?

A. Mr. Brown claims that UGI Gas' superior management performance has been

[63] UGI Gas Statement No. 6, p. 6, ln. 20 through p. 7, ln. 11.

demonstrated in recent years through management efforts that include excellent customer service, infrastructure improvements made in line with the Company's Long-Term Infrastructure Improvement Plan, investments in safety and training, modernization of information technology, environmental and social governance initiatives, community engagement, and diversity and inclusion.[64]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIMS REGARDING MANAGEMENT PERFORMANCE?

A. No. First, many of the topics presented by Mr. Brown fall within the categories of reliability, customer satisfaction, and safety which are required of every public utility company under 66 Pa C.S.A. §1501. Additionally, the Company passes capital expenditures to its ratepayers via base rates, or it can utilize a DSIC for capital expenditure recovery. Further, if the Company is effective at controlling operating and maintenance costs, those savings should flow through to ratepayers and/or investors. These savings would likely be offset by the addition of basis points for management performance as ratepayers would have to fund the additional costs. This defeats the purpose of any cost cutting measures to benefit ratepayers.

Q. BASED ON THE COMPANY'S FILED RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 20 BASIS POINTS FOR THE CONSIDERATION OF MANAGEMENT PERFORMANCE TO THE COST OF EQUITY?

A. The example below illustrates the impact of 20 additional basis points for the

[64] UGI Gas Statement No. 1, p. 30, ln. 12 through p. 39, ln. 2.

consideration of management performance to the Company's cost of equity:

UGI Utilities, Inc. - Gas Division	
Claimed Equity Percentage of Capital Structure	55.12%
Additional Basis Points to Calculated Cost of Equity	20
Claimed Rate Base*	$3,169,023,000
Impact Prior to Gross Up (0.5512 x 0.0020 x $3,169,023,000)	$3,493,531
Gross Revenue Conversion Factor**	1.429864
Total Impact ($3,493,531 x 1.429864)	**$4,995,274**
*UGI Gas Exhibit A, Schedule A-1, ln. 9. **UGI Gas Exhibit A, Schedule A-1, ln. 24.	

In this example, an addition of 20 basis points to the cost of equity in consideration of management performance would force ratepayers to fund an unwarranted additional amount of $4,995,274 annually to cover the increase of the inflated rate of return along with the associated impact resulting from increases to income taxes, gross receipts tax, uncollectibles, and assessments.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE CONSIDERATION OF ADDITIONAL BASIS POINTS FOR THE COMPANY'S MANAGEMENT PERFORMANCE?

A. Ultimately, as alluded to above, true strong management performance is earning a higher return through efficient use of resources and cost cutting measures. The greater net income resulting from cost savings and true efficiency in management and operations is available to be passed on to both ratepayers and shareholders. I do not believe that UGI Gas, or any utility should be gifted additional basis points for doing what they are required to do to provide adequate, efficient, safe, and reasonable service under 66 Pa C.S.A. §1501.

For these reasons, I recommend that any addition of basis points to the cost of equity for management performance be disallowed.

<u>OVERALL RATE OF RETURN RECOMMENDATION</u>

Q. WHAT IS THE COMPANY'S PROPOSED COST OF EQUITY AND OVERALL RATE OF RETURN?

A. The Company recommends a cost of equity of 11.20% and an overall rate of return of 7.96%.

Q. WHAT IS I&E'S RECOMMENDED COST OF EQUITY AND OVERALL RATE OF RETURN?

A. I&E Exhibit No. 2, Schedule 1, shows the calculation of an appropriate cost of equity to be 9.92% with an overall rate of return for UGI Gas to be 7.26%.

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING THE COMPANY'S PROPOSED RETURN ON EQUITY?

A. Yes. First, a report issued by <u>Regulatory Research Associates, a group within S&P</u>

Global Market Intelligence,[65] illustrates that UGI Utilities Inc. - Gas Division's 11.20% requested return on equity is a significant 99 basis points higher than the average return on equity request of 10.21% of all pending gas utility rate cases as of March 10, 2022.

Second, when asked, Mr. Moul indicated he was unaware if any natural gas distribution utilities throughout the United States were granted a Commission authorized return of 11.20% or higher cost of common equity in the past two years.[66]

Third, the Company's requested return on common equity is 100 basis points higher than the Commission's approved DSIC rate of 10.20% (Q3 2021 Quarterly Earnings Summary Report) for gas distribution companies. The DSIC rate is designed to encourage its use and to incentivize accelerated pipeline replacement and infrastructure upgrades to bring the existing aging infrastructure closer to meeting safety and reliability requirements in between base rate filings. Additionally, the DSIC rate establishes a benchmark above which a utility company is considered "overearning." As such, the DSIC rate does not serve as a proper measurement of a subject utility's cost of equity in a rate case proceeding. To suggest the cost of equity must be at or above the DSIC rate in this base rate proceeding is inappropriate and not in the public interest.

Finally, as detailed in the various charts above, the effect of Mr. Moul's adjustments to the market-determined cost of common equity are an enormous burden to ratepayers and are completely unwarranted and unnecessary. Although they are not cumulative, the impact to ratepayers of each of the disputed adjustments is summarized

[65] Regulatory Research Associates, "Major energy utility cases in progress in the US, Quarterly update on pending rate cases," *S&P Global Market Intelligence*, March 16, 2022.
[66] I&E Exhibit No. 2, Schedule 11.

as follows:

Leverage Adjustment	$23,727,552
Size Adjustment	$25,475,898
Management Performance	$4,995,274

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

*Testimony Submitted

I&E Statement No. 2-SR
Witness: Anthony Spadaccio

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

UGI UTILITIES, INC. – GAS DIVISION

Docket No. R-2021-3030218

Surrebuttal Testimony

of

Anthony Spadaccio, CRRA

Bureau of Investigation & Enforcement

Concerning:

Rate of Return

TABLE OF CONTENTS

<u>INTRODUCTION OF WITNESS</u>

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Anthony Spadaccio. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME ANTHONY SPADACCIO WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 2 AND THE SCHEDULES IN I&E EXHIBIT NO. 2?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to address statements made in the rebuttal testimonies of UGI Utilities, Inc. – Gas Division (UGI Gas or Company) witnesses Christopher R. Brown (UGI Gas Statement No. 1) and Paul R. Moul (UGI Gas Statement No. 6-R) and the Pennsylvania Office of Consumer Advocate (OCA) witness David J. Garrett (OCA Statement 2R) regarding rate of return topics including the cost of common equity and the overall fair rate of return, which will be applied to the Company's rate base.

Q. DID THE COMPANY PROVIDE AN UPDATE TO ITS RATE OF RETURN?

A. Yes. The Company provided an update to its cost of long-term debt. The Company is now requesting a cost of long-term debt of 4.30% to reflect the cost of new issues of senior notes in May, July, and October 2022. The Company's update to its cost of long-term debt is an increase of 0.32% (4.30% - 3.98%) to its initial claim of 3.98%.[1] This results in an increase to the Company's overall requested rate of return from 7.96% to 8.10%. Below is the Company's updated rate of return claim:

UGI UTILITIES, INC. - GAS DIVISION
Summary of Cost of Capital

Type of Capital	Ratio	Cost Rate	Weighted Cost
	UGI Utilities, Inc. - Gas Division		
Long-Term Debt	44.88%	4.30%	1.93%
Common Equity	55.12%	11.20%	6.17%
Total	100.00%		8.10%

[1] UGI Gas Statement No. 6-R, p. 13, lines 1-10.

<u>SUMMARY OF MR. GARRETT'S REBUTTAL TESTIMONY</u>

Q. SUMMARIZE MR. GARRETT'S RESPONSE IN REBUTTAL TESTIMONY TO YOUR RECOMMENDATIONS MADE IN DIRECT TESTIMONY.

A. Mr. Garrett takes issue with the growth rates I employ in my Discounted Cash Flow (DCF) analysis as well as the Equity Risk Premium (ERP) used in my Capital Asset Pricing Model (CAPM) analysis.[2]

Q. WHAT IS MR. GARRETT'S SPECIFIC CRITICISM REGARDING YOUR DCF ANALYSIS?

A. Mr. Garrett opines that the results of my DCF analysis are unreasonably high caused by the growth rate inputs I use. He claims that I rely on short-term growth rates as opposed to long-term growth rates resulting in unsustainable growth rate estimates. Mr. Garrett further reasons that it is near impossible to increase earnings by 10% year after year for decades. Finally, he argues that U.S. GDP growth should be viewed as a limiting factor on long-term growth for individual companies as it avoids the circular reference problem of short-term analysts' growth rates.[3]

[2] OCA Statement 2R, p. 1, lines 17-19.
[3] OCA Statement 2R, p. 2, ln. 8 through p. 3, ln. 21.

Q. HOW DO YOU RESPOND TO MR. GARRETT'S CRITICISMS OF YOUR DCF ANALYSIS?

A. First, it should be noted, in the context of recommending an appropriate return on equity and overall rate of return, I&E's role is to perform an unbiased analysis using current and reputable sources. In determining an appropriate growth rate for my DCF analysis, I relied upon the forecasted earnings estimates from Value Line, Yahoo! Finance, Zacks, and Morningstar.[4] These resources are trusted and used industry wide, including by most Company, advocate, and Commission witnesses who submit rate of return testimony. Other than Mr. Garrett, I do not recall another witness that does not give at least some consideration or weighting to these forecasted growth estimates.

Next, the estimates I use from the sources listed above are five-year growth forecasts which are not short-term, nor are they intended to be viewed as sustainable for decades. This time period is reasonable as it covers the Fully Projected Future Test Year (FPFTY) and rate case filing frequency of many utilities.

Additionally, using U.S. GDP growth as Mr. Garrett suggests ignores the strength of the DCF, which is its company and/or industry specific inputs. Also, it does not combat the circularity issue he mentions. With regulation in general, and specifically the use of proxy groups of similarly situated companies, and use of

[4] I&E Exhibit No. 2, Schedule 5.

generally accepted cost of equity models, there will always be some degree of circularity.

Finally, the Commission has repeatedly confirmed I&E's DCF methodology for determining a fair return on common equity. Specifically, in the 2020 Columbia Gas rate case, the Commission agreed with the ALJ's recommendation to use I&E's cost of equity methodology, which included using five-year growth estimates in the DCF analysis.[5]

Q. WHAT IS MR. GARRETT'S SPECIFIC CRITICISM REGARDING YOUR CAPM ANALYSIS?

A. Mr. Garrett notes that the result of my CAPM analysis is considerably higher than his own. He opines that the reason my CAPM result is overestimated is due to the ERP, which he argues is the single most important metric used to assess market risk and the cost of equity.[6]

Q. HOW DO YOU RESPOND TO MR. GARRETT'S CRITICISMS OF YOUR CAPM ANALYSIS?

A. To an extent, I agree with Mr. Garrett. I believe the differences in our applications of the CAPM illustrate just how subjective the inputs of this cost of equity model can be. For example, I agree with Mr. Moul that Mr. Garrett's implied total

---

[5] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.;* Docket No. R-2020-3018835 (Order Entered February 19, 2021). *See generally* Disposition of Cost of Common Equity.

[6] OCA Statement No. 6R, p. 4, ln. 1through p. 6, ln. 2.

market return of 7.90% is nowhere near actual market returns of the past few years.[7] Additionally, like Mr. Moul, I question the sources he uses to determine the ERP, which include "expert surveys" from IESE Business School. When determining the overall market return and ERP, I am hesitant to set aside analysis from well-known and reputable financial institutions such as Morningstar, Barron's, and Value Line in favor of more obscure sources, for instance, school surveys.

In direct testimony, I thoroughly discuss the disadvantages of the CAPM and explain why the DCF is the superior model.[8] In the end, as I explain below, I do not base my recommendation on the CAPM, I simply provide the results as a comparison.

SUMMARY OF MR. MOUL'S REBUTTAL TESTIMONY

Q. SUMMARIZE MR. MOUL'S RESPONSE IN REBUTTAL TESTIMONY TO YOUR RECOMMENDATIONS MADE IN DIRECT TESTIMONY.

A. Mr. Moul disputes my recommendations regarding an appropriate proxy group, my reliance on and application of the DCF method, the DCF growth rate, and disallowance of his leverage adjustments to the DCF and beta of his CAPM. Further, Mr. Moul disagrees with the appropriate risk-free rate to use and my exclusion of a size adjustment in my CAPM analysis, my disagreement with his

7 UGI Gas Statement No. 6-R, p. 28, lines 1-4.
8 I&E Statement No. 2, p. 17, ln. 5 through p. 18, ln. 13.

use of the Risk Premium (RP) and Comparable Earnings (CE) methods, and my recommended disallowance of additional basis points for management performance. Finally, Mr. Moul opines that the Commission-determined Distribution System Improvement Charge (DSIC) rates should serve as the bare minimum cost of equity in this proceeding.

PROXY GROUP

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR PROXY GROUP.

A. Mr. Moul simply claims that I erroneously omitted New Jersey Resources Corp. and Southwest Gas Holdings, Inc. from my proxy group. He offers no further discussion refuting my reasoning to omit these two companies.[9]

Q. PLEASE REITERATE WHY YOU ELIMINATED NEW JERSEY RESOURCES CORP. AND SOUTHWEST GAS HOLDINGS, INC. FROM YOUR PROXY GROUP.

A. As explained in my direct testimony, both companies, New Jersey Resources Corp. and Southwest Gas Holdings, Inc. were excluded for not meeting my criterion that 50% or more of revenues must be generated from regulated gas utility operations. Again, this criterion is important because revenues represent the percentage of cash flow a company receives from each business line related to

---

[9] UGI Gas Statement No. 6-R, p. 2, lines 11-13.

providing a good or service. If less than 50% of revenues come from the gas distribution sector, the companies are not comparable to the subject utility as they do not provide a similar level of regulated business.[10]

Q. DO YOU HAVE ANY CHANGES TO YOUR PROXY GROUP?

A. No. For the reasons discussed above, the percentage of revenue is an appropriate criterion. As New Jersey Resources Corp. and Southwest Gas Holdings, Inc. include an insufficient percentage of regulated gas revenues, they should not be included in the proxy group and compared to UGI Gas.

<u>DISCOUNTED CASH FLOW</u>

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR DCF ANALYSIS.

A. Mr. Moul agrees that results of a DCF analysis should be given weight, but he asserts that use of multiple methods provides a superior foundation to determine the cost of equity. He compares the DSIC rate determined by the Commission in the Quarterly Earnings Summary Reports to the rates calculated using market data. He further disagrees with my results based on the outcomes of certain individual companies and disputes my growth rate analysis. Finally, Mr. Moul disagrees with my recommendation to reject his leverage adjustment.[11]

---

[10] I&E Statement No. 2, p. 9, lines 1-12.
[11] UGI Gas Statement No. 6-R, p. 13, ln. 11 through p. 23, ln. 6.

EXCLUSIVE USE OF THE DCF

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR USE OF THE DCF.

A. Mr. Moul asserts that the use of more than one method provides a superior foundation for the cost of equity determination. He claims that the use of more than one method will capture the multiplicity of factors that motivate investors to commit their capital to a particular enterprise.[12]

Q. WERE ANY METHODS OTHER THAN THE DCF EMPLOYED IN YOUR ANALYSIS?

A. Yes. Although my recommendation was based on the results of my DCF analysis, I also employed the CAPM as a comparison. For the reasons discussed in my direct testimony, the DCF method is the most reliable.[13] Although no one method can capture every factor that influences an investor, including the results of methods less reliable than the DCF does not make the end result more reliable or more accurate. In direct testimony, I cited several cases that illustrate the methodology I employed is consistent with the methodology historically used by the Commission in base rate proceedings as recently as 2017, 2018, 2020, and 2021.[14]

---

[12] UGI Gas Statement No. 6-R, p. 13, lines 15-20.
[13] I&E Statement No. 2, p. 16, ln. 1 through p. 17, ln. 3.
[14] I&E Statement No. 2, p. 15, lines 11-17.

Q. ARE THERE ANY RECENT COMMISSION ORDERS THAT DEVIATE FROM THIS PRACTICE?

A. Yes. The Commission recently indicated in the 2022 Aqua Pennsylvania, Inc. (Aqua) rate case order that its method "for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies"[15] and that "I&E's DCF and CAPM produce a range of reasonableness for the ROE…"[16], thus deviating from prior Commission practice.

Q. SHOULD THE COMMISSION'S USE OF THE CAPM AS A CEILING FOR A "RANGE OF REASONABLENESS" APPLY IN THIS INSTANT PROCEEDING?

A. No. In my direct testimony I explain more fully why the CAPM should not be used as a primary method and continue to express those concerns in this proceeding as to why it should only be used as a comparison to, not a check of the DCF. Thus, I disagree with a method that provides the CAPM comparable weight to the DCF method.[17]

17 I&E Statement No. 2, p. 17, ln. 5 through p. 18, ln. 13.

<u>DSIC RATES</u>

Q. SHOULD THE COMMISSION CONSIDER THE AUTHORIZED DSIC RATE ESTABLISHED IN THE QUARTERLY EARNINGS SUMMARY REPORTS AS AN APPROPRIATE MEASURE TO DETERMINE THE COST OF EQUITY IN THIS PROCEEDING?

A. No. Mr. Moul's comparison between the I&E recommended return on equity in this proceeding and the Company's DSIC rate is misguided. My understanding is that the DSIC rate is designed to encourage its use and to incentivize accelerated pipeline replacement and infrastructure upgrades to bring aging infrastructure closer to meeting safety and reliability requirements in between base rate filings. To suggest the cost of equity must be at or above the DSIC rate in this base rate proceeding is inappropriate and not in the public interest. Additionally, the DSIC rate establishes a benchmark above which a utility company is considered "overearning" for use of the DSIC mechanism. As such, the DSIC rate should not serve as a proper measurement of a subject utility's cost of equity in a base rate proceeding since the DSIC rate is routinely higher than any return on equity approved in such base rate proceedings. In fact, 66 Pa. C.S. § 1358(b)(3) states the following:

> The distribution system improvement charge shall be reset at zero if, in any quarter, data filed with the commission in the utility's most recent annual or quarterly earnings report show that the utility will earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the distribution system improvement charge.

Finally, the DSIC mechanism serves to lower a utility's risk because it reduces the lag time in the recovery of a company's capital outlays. DSIC spending requires preapproval of eligible plant via a Long-Term Infrastructure Improvement Plan so there is little question as to the prudence of those expenditures.

Q. ARE THERE ANY INSTANCES YOU ARE AWARE OF WHERE THE COMMISSION GRANTED A RETURN ON EQUITY THAT WAS HIGHER THAN THE MOST RECENTLY PUBLISHED DSIC RATE?

A. Yes. In the recent Aqua base rate case the Commission awarded that company a return on equity of 10.00%,[18] which was higher than the most recently published DSIC rate for water and wastewater utilities of 9.80%.[19] While this report is based on a period ended September 30, 2021, this DSIC rate is still in effect as the Commission has published no DSIC rates since this report was made public in January 2022.

---

18 *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 178 (Order entered May 16, 2022).

19 PA Public Utility Commission, Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended September 30, 2021, approved at Public Meeting on January 13, 2022 at Docket No. M-2021-3030045.

Q. ARE THERE ANY POTENTIAL PROBLEMS WITH AWARDING A RETURN ON EQUITY THAT IS EQUAL TO OR HIGHER THAN THE DSIC RATE?

A. Yes. First off, it removes incentive for utilities to use the DSIC mechanism between rate filings and may encourage the more frequent filing of base rate cases. Secondly, it may encourage litigation as opposed to settlement of cases, since companies may improperly believe this is the new norm. And finally, it may set companies up to quickly land in an over-earnings status and preclude them from being able to utilize the DSIC mechanism at all.

Therefore, in my opinion, the DSIC rate should generally be an incentive rate that is higher than a return on equity percentage granted in a rate proceeding, and I am anticipating that the recent Commission decision is not indicative of "the new normal."

Q. WERE THERE ANY SPECIAL CIRCUMSTANCES THAT CAUSED THE COMMISSION'S GRANTED RETURN ON EQUITY TO EXCEED THAT OF THE MOST RECENTLY AVAILABLE DSIC RATE FOR AQUA?

A. Yes. The Commission granted 25 basis points for management effectiveness,[20] which caused the return on equity of 9.75% to go up to 10.00% thereby exceeding

[20] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 178 (Order entered May 16, 2022).

the currently effective DSIC rate of 9.80% for water and wastewater. I will address management performance is a separate section of testimony below.

EVALUATING THE DCF BASED ON INDIVIDUAL RESULTS

Q. SUMMARIZE MR. MOUL'S RESPONSE IN REBUTTAL TESTIMONY REGARDING THE RESULTS OF YOUR DCF.

A. Mr. Moul explains that when some results are unreasonable on their face, the reliability of or the witness' application of that method must be questioned. He points to the results of two companies in my proxy group and claims that they fall into the category of unreasonableness. Mr. Moul attempts to support his theory by arguing that the spread between the cost of debt and the cost of equity is 6.75%.[21]

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S ATTEMPT TO DISAGGREGATE YOUR RESULTS?

A. Mr. Moul derives his suggested 6.75% spread from his RP analysis.[22] However, I have refuted the use of the RP method both in my direct testimony,[23] and later in this testimony, as it is an inferior method for calculating the cost of common equity. Further, the 9.92% result of my DCF analysis offers a 5.62% margin over the undisputed 4.30% updated cost of debt (9.92% - 4.30% = 5.62%). My recommended cost of equity is more than double, or 231% higher that the

[21] UGI Gas Statement No. 6-R, p. 15, ln. 16 through p. 16, ln. 7.
[22] UGI Gas Statement No. 6, p. 41, lines 10-12.
[23] I&E Statement No. 2, p. 13, ln. 7 through p. 19, ln. 6.

Company's cost of debt, which I certainly believe satisfies Mr. Moul's statement that, "It is a fundamental tenet of finance that the cost of equity must be higher than the cost of debt by a meaningful margin to compensate for the higher risk associated with a common equity investment."[24]

GROWTH RATE

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR GROWTH RATES.

A. Mr. Moul argues that I should have removed the "unduly low" growth rate of One Gas Inc. from my proxy group average. He suggests that had I done this and excluded One Gas Inc.'s accompanying dividend yield from my analysis, my DCF result would have increased from 9.92% to 10.23% (3.39% dividend yield + 6.84% growth rate).[25]

Q. DO YOU AGREE WITH MR. MOUL'S RECALCULATION OF YOUR DCF RESULTS BASED ON THE REMOVAL OF ONE GAS INC. DUE TO WHAT HE DEEMS TO BE AN UNREASONABLY LOW GROWTH RATE?

A. No. Mr. Moul removes this company from my analysis simply because he believes its growth rate and corresponding DCF result are too low. His

[24] UGI Gas Statement No. 6-R, p. 15, ln. 22 through p. 16, ln. 2.
[25] UGI Gas Statement No. 6-R, p. 17, lines. 5-15.

recalculation results in a DCF that is 31 basis points (10.23% - 9.92%) higher than my recommendation, yet still 97 basis points (11.20% - 10.23%) below his cost of equity recommendation.

Mr. Moul's decision to remove One Gas Inc. only serves to inflate the DCF result as his argument lacks objective rationale and defeats the purpose of using a proxy group. Mr. Moul himself states, "The principal purpose of assembling a barometer group is to avoid relying on data for a single company that may not be representative and to thereby smooth out any abnormalities".[26] This acknowledgement is counterintuitive to his suggestion to remove One Gas Inc. from my analysis. Ironically, and worth noting, Mr. Moul employs One Gas Inc. in his own proxy group and analysis.

<u>LEVERAGE ADJUSTMENT</u>

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING HIS LEVERAGE ADJUSTMENT.

A. First, Mr. Moul states that credit rating agencies do not measure the market-required cost of equity for a company, nor are they concerned with how it is applied in the rate-setting context. Rather, the credit rating agencies are only concerned with the interests of lenders and the timely payment of principal and interest by companies. Then, Mr. Moul questions my references to prior

[26] UGI Gas Statement No. 6-R, p. 15, lines 16-18.

Commission orders. Finally, Mr. Moul disagrees with my claim that investors base their decisions on the book value of a company's debt and equity.[27]

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S REBUTTAL TESTIMONY CONCERNING CREDIT RATING AGENCIES?

A. Mr. Moul has actually supported my argument that his proposed leverage adjustment is not needed by stating that the credit rating agencies are only concerned with the timely payment of principal and interest by utilities. Mr. Moul's stated need for the leverage adjustment is based on his assertion that the difference between the book value capital structure and his market value capital structure poses a financial risk difference.[28]

Financial risk does relate to the capital structure of a company, but it is created by the financing decisions (the use of debt or equity) and the amount of leverage or debt with which a company chooses to finance its assets. Financial risk and the book value capital structure of a company are represented in the financial statements, which are part of what is evaluated by rating agencies. Mr. Moul agrees with me that credit rating agencies use a company's booked debt obligations, found in the financial statements, in their analysis to assess financial risk and determine creditworthiness.[29]

---

[27] UGI Gas Statement No. 6-R, p. 20, ln. 16 through p. 22, ln. 19.
[28] UGI Gas Statement No. 6, p. 33, lines 3-10.
[29] UGI Gas Statement No. 6-R, p. 20, lines 17-20.

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY ON YOUR REFERENCE TO PRIOR COMMISSION ORDERS.

A. Mr. Moul refers to the discussion in my direct testimony about five recent cases where the Commission has rejected a "leverage adjustment." He explains that even though the Commission declined to make a "leverage adjustment" in a prior Aqua Pennsylvania case, it does not invalidate its use. Further, he states, "Notably, the Commission did not repudiate the leverage adjustment in the Aqua case, but instead arrived at an 11.00% return on equity for Aqua by including a separate return increment for management performance."[30] Next, Mr. Moul claims that the adjustment proposed in the City of Lancaster case was much different than what he proposes in this case. Then, regarding UGI Electric, Mr. Moul acknowledges the Commission granted a "management performance increment," not a leverage adjustment when arriving at the allowed equity return. As for the Columbia Gas case, Mr. Moul concedes that the Company accepted I&E's return on equity recommendation which did not include a leverage adjustment or addition of points for management performance. Finally regarding the PECO Gas case, he argues that the Commission arrived at an equity return on the higher side without a leverage adjustment, therefore no adjustment was warranted.[31]

[30] UGI Gas Statement No. 6-R, p. 21, lines 6-8.
[31] UGI Gas Statement No. 6-R, p. 21, lines 1-26.

Q. WHAT IS YOUR RESPONSE TO MR. MOUL REGARDING THE REFERENCED PRIOR COMMISSION ORDERS IN YOUR DIRECT TESTIMONY?

A. In this proceeding, Mr. Moul is recommending a 95-basis point "leverage adjustment." To be clear, the Commission did in fact refuse to accept the leverage adjustment in the Aqua case by stating "…we reject the ALJ's recommendation to allow a 65 basis point leverage adjustment."[32] The management performance points awarded to Aqua were case-specific and in no way related to the proposed leverage adjustment. Regarding the City of Lancaster case, the Commission did not reject the leverage adjustment based on the manner in which it was calculated, but rather, the Commission stated, "…the ALJ's recommendation is in error as any adjustment to the results of the market based DCF as we have previously adopted are unnecessary and will harm ratepayers."[33] Regarding the UGI Electric case, the Commission concluded that "…an artificial adjustment in this proceeding is unnecessary and contrary to the public interest. Accordingly, we decline to include a leverage adjustment in our calculation of the DCF cost of equity."[34] Regarding the most recent Columbia Gas case, the Commission stated,

> … we have adopted the ALJ's recommendation to use I&E's DCF methodology utilizing I&E's dividend yield of 3.34% and growth rate of 6.52%. As noted above, the ALJ did not specify a recommended cost of equity for Columbia in their

---

[32] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket No. R-00072711, pp. 38-39 (Order entered July 31, 2008).

[33] *Pa. PUC v. City of Lancaster – Bureau of Water*; Docket No. R-2010-2179103, p. 101 (Order entered July 14, 2011).

[34] *Pa. PUC v. UGI Utilities, Inc. – Electric Division;* Docket No. R-2017-2640058, pp. 93-94 (Order entered October 25, 2018).

> Recommended Decision. However, we note that I&E's methodology results in an ROE of 9.86%.[35]

The ALJ's Recommended Decision stated the following:

> The ALJ agrees with BIE's reasoning that Columbia Gas' calculated return on equity was flawed for five reasons: (1) the weights given to the results of the Company's CAPM, RP, and CE analyses; (2) certain aspects of Columbia's discussion of risk; (3) Columbia Gas' application of the DCF including the forecasted growth rate and leverage adjustment used; (4) Columbia's inclusion of a size adjustment, reliance on the 30-year Treasury Bond for the risk- free rate, and the use of a double-adjusted *beta* in the CAPM analysis; and (5) the Company's request for an additional 20 basis points for "strong management performance" is unjustified.[36]

While the Company accepted I&E's DCF return without regard to the leverage adjustment or management performance in the last base rate case, in the Recommended Decision, the ALJ clearly rejected the Company's proposed leverage adjustment and the Commission agreed with the ALJ's Recommended Decision.

Finally, in the PECO Energy – Gas Division case, the Commission stated,

> … we have adopted the ALJ's recommendation to use I&E's DCF methodology and to use I&E's CAPM calculation as a check on the reasonableness of the DCF determined cost of equity. Therefore, we shall adopt the ALJ's recommended 10.24% cost of equity. In our view, this is an appropriate cost of equity for PECO given the record developed in this proceeding.[37]

[35] *Pa. PUC v. Columbia Gas of Pennsylvania*; Inc. Docket No. R-2020-3018835, p. 141 (Order entered February 19, 2021).

[36] *Pa. PUC v. Columbia Gas of Pennsylvania*; Inc. Docket No. R-2020-3018835, Recommended Decision, pp. 184-185.

[37] *Pa. PUC v. PECO Energy Company – Gas Division*. Docket No. R-2020-3018929, p. 171 (Order entered June 22, 2021).

In the Recommended Decision, the ALJ agreed with I&E's recommended cost of equity which did not include a leverage adjustment.[38]

Q. WHAT IS YOUR RESPONSE TO MR. MOUL'S ASSERTION THAT INVESTORS DO NOT BASE THEIR DECISIONS ON BOOK VALUE, BUT RATHER THE RETURN THEY EXPECT TO EARN ON THE DOLLARS THEY INVEST?

A. Investors purchase securities such as stocks at market value as opposed to book value. In doing so, they accept the returns and associated risks implied by market prices. However, financial statements, which are based on book values, show the entire true financial position of a company which provide the foundation for investment and financing decisions. For example, financial institutions such as banks lend money based on actual book values and not the current price of a stock. Further, almost all financial ratios used in financial analysis utilize at least one book value variable from either the income statement or the balance sheet.

Mr. Moul's assertion that investors are unconcerned with the book value debt or "some accounting value of little relevance to them"[39] of a utility is unsupported. Clearly an investor takes the financial risk of the utility into consideration when determining a required return. In addition, the market capitalization information included in Value Line's reports and discussed by Mr.

[38] *Pa. PUC v. PECO Energy Company – Gas Division*. Docket No. R-2020-3018929, Recommended Decision, p. 215.

[39] UGI Gas Statement No. 6-R, p. 22, lines 11-13.

Moul is not the same as market value capital structure. Market capitalization refers to the number of shares outstanding multiplied by the current price. A market value capital structure refers to the ratio of market debt to market equity, which, to my knowledge, is not included in Value Line's reports. Therefore, Mr. Moul's contention that Value Line includes market capitalization data does not offer any support for his leverage adjustment.

Q. HAS YOUR RECOMMENDATION CHANGED FROM DIRECT TESTIMONY REGARDING MR. MOUL'S LEVERAGE ADJUSTMENT?

A. No. For the reasons discussed above, I continue to recommend that Mr. Moul's 95-basis point leverage adjustment be rejected.

<u>INFLATION</u>

Q. DOES THE DCF ADEQUATELY FACTOR IN RECENT INFLATIONARY TRENDS?

A. Yes. My DCF calculation includes a spot stock price when determining the dividend yield and analysts who generate forecasted earnings growth rates almost certainly take inflation into consideration as well, therefore, it contains the most up-to-date projected information of any model. Therefore, Mr. Brown's assertion that "the Commission should consider the overall economic climate and these inflationary pressures…when deciding the merits of the Company's requested base rate increase,"[40] are adequately covered by use of the DCF as a primary model for determining an appropriate return on equity.

CAPITAL ASSET PRICING MODEL

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR APPLICATION OF THE CAPM.

A. Mr. Moul opines that my CAPM analysis understates the cost of equity for a few reasons, including my use of the yield on 10-year Treasury Notes for my risk-free rate, failure to use leverage adjusted betas, and rejection of his size adjustment.[41] Each of these topics are discussed in more detail below.

RISK-FREE RATE

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR USE OF THE YIELD ON THE 10-YEAR U.S. TREASURY NOTE.

A. Mr. Moul claims that by using the 10-year Treasury Note, I introduced a systematic understatement of CAPM returns that can be traced to extraordinary monetary policy actions to deal with the recession created by the pandemic. He opines that his use of the yield on a 30-year U.S. Treasury Bond is more appropriate than my use of the yield on a 10-year Treasury Note because 30-year

[40] UGI Gas Statement No. 1-R, p. 6.
[41] UGI Gas Statement No. 6-R, p. 23, lines 10-12.

bonds are "more a reflection of investor sentiment of their required returns…" and are also less susceptible to Federal policy actions.[42]

Q. DO YOU AGREE WITH MR. MOUL THAT USING THE YIELD OF A 30-YEAR U.S. TREASURY BOND IS MORE APPROPRIATE DUE TO A LONGER-TERM BOND BEING LESS SUSCEPTIBLE TO FEDERAL POLICY ACTIONS?

A. No. As explained in my direct testimony,[43] I chose the 10-year Treasury Note as it balances the short-comings of the short-term T-Bill and the 30-year Treasury Bond. Although long-term Treasury Bonds have less risk of being influenced by federal policies, they have substantial maturity risk associated with the market risk. In addition, long-term treasury bonds bear the risk of unexpected inflation. As such, my choice of a 10-year Treasury Note is more appropriate. Additionally, as mentioned in my direct testimony, the Commission has recently agreed with I&E and recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.[44]

---

42 UGI Gas Statement No. 6-R, p. 23, ln. 24 through p. 24, ln. 10.
43 I&E Statement No. 2, p. 23, ln. 12 through p. 24, ln. 2.
44 *Pa. PUC v. UGI Utilities, Inc. – Electric Division,* Docket No. R-2017-2640058, p. 99 (Order entered October 25, 2018).

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING YOUR CALCULATION OF THE RISK-FREE RATE USED IN THE CAPM FORMULA.

A. Mr. Moul opines that I have incorrectly given the same weight to the yield on the 10-year Treasury Note for the second quarter of 2022 as I do for the entire five-year period encompassing 2023 to 2027. He then recalculates the risk-free rate by averaging the 10-year Treasury yield forecasts by year from 2022 through 2027 to increase my calculated risk-free rate of 2.35% to 2.80%.[45]

Q. DO YOU AGREE WITH MR. MOUL'S ANALYSIS OF YOUR RISK-FREE RATE?

A. No. Mr. Moul's new calculation proposes to give equal weight to each separate year from 2022 to 2027. The flaw with this approach is that the further out into the future one forecasts, the less reliable and more speculative the estimates become; therefore, to give the less reliable estimates equal weight would not be sensible. It is more appropriate to weight the quarters and years as I have done in my direct testimony.[46] My calculation provides a more accurate estimation of the risk-free rate during the FPFTY, as the further out one forecasts, the less reliable the information becomes.

---

45 UGI Gas Statement No. 6-R, p. 24, ln. 11 through p. 25, ln. 1.
46 I&E Exhibit No. 2, Schedule 8.

<u>LEVERAGED ADJUSTED BETAS</u>

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING THE USE OF LEVERAGED ADJUSTED BETAS.

A. Mr. Moul simply claims that I failed to use leveraged adjusted betas.[47] He does not offer an explanation beyond what he argued in his direct testimony.

Q. IS THE USE OF "LEVERAGED ADJUSTED BETAS" IN CAPM ANALYSIS APPROPRIATE?

A. No. Mr. Moul's adjustment only serves to inflate the result of his CAPM analysis which I have discussed in greater detail in my direct testimony.[48] <u>Value Line</u> is a well-known and trusted source that both investors and the Commission rely upon, therefore, it is not necessary to make any type of adjustment to the <u>Value Line</u> betas.

<u>SIZE ADJUSTMENT</u>

Q. SUMMARIZE YOUR DIRECT TESTIMONY REGARDING A SIZE ADJUSTMENT.

A. In direct testimony, I stated that Mr. Moul's 102-basis point CAPM size adjustment is unnecessary because none of the technical literature he cited in his direct testimony supporting investment adjustments related to the size of a

[47] UGI Gas Statement No. 6-R, p. 23, lines 11-12.
[48] I&E Statement No. 2, p. 43, ln. 23 through p. 44, ln. 16.

company is specific to the utility industry. In addition, I presented an article by Dr. Annie Wong that demonstrates there is no need to make an adjustment for the size of a company in utility rate regulation. Further, I noted that the Commission has recently rejected the application of a size adjustment to the CAPM cost of equity calculation where it agreed that the same literature the Company cites is not specific to the utility industry.[49]

Q. SUMMARIZE MR. MOUL'S RESPONSE IN REBUTTAL TESTIMONY REGARDING A SIZE ADJUSTMENT.

A. Mr. Moul states that enormous changes have occurred in the industry since the article "Utility Stocks and the Size Effect: An Empirical Analysis" by Dr. Annie Wong was published. He also references the Fama/French study, "The Cross-Section of Expected Stock Returns," to illustrate that his size adjustment is a separate factor from beta that helps explain systematic risk and returns. Additionally, Mr. Moul opines that external factors, such as loss of larger customers and unexpected changes in expenses, can affect the financial performance of a small company. Finally, he acknowledges that in the 2020 PECO Energy – Gas Division rate case (at Docket No. R-2020-3018929), both the ALJs and the Commission determined that an adjustment for size was not necessary in utility rate regulation.[50]

---

[49] I&E Statement No. 2, p. 45, ln. 5 through p. 46, ln. 3.
[50] UGI Gas Statement No. 6-R, p. 25, ln. 6 through p. 27, ln. 3.

Q. DOES THE TIME WHICH HAS ELAPSED SINCE AN ARTICLE WAS WRITTEN NECESSARILY INVALIDATE ITS RESULTS?

A. No. Although Mr. Moul states that enormous changes have occurred in the industry since the 1960s, he presents no evidence that these "changes" have caused the need for a size adjustment. To the contrary, Dr. Wong's study demonstrated that one does *not* need to be made in the regulated utility industry. As stated in my direct testimony, absent any credible article to refute Dr. Wong's findings, Mr. Moul's size adjustment to his CAPM results should be rejected.

Q. DOES THE FAMA/FRENCH STUDY REFUTE DR. WONG'S ARTICLE?

A. No. As stated in my direct testimony, Dr. Wong's article presents evidence that although a size effect may exist for industrial stocks, it does not exist for utility stocks. As the Fama/French study is not specific to utility stocks, it does not demonstrate that a size effect exists in the utility industry. In addition, the size effect that exists for industrial stocks varies to such an extent that it is difficult to predict. The difficulty in predicting the effect of size is demonstrated in the variance from year to year of the measurement of difference between the annual returns on the large and small-capitalization stocks of the NYSE/AMEX/NASDAQ in the Ibbotson *Stocks, Bonds, Bills & Inflation: 2015 Yearbook*. As stated on page 100 of the SBBI Yearbook,

> While the largest stocks actually declined in 2001, the smallest stocks rose more than 30%. A more extreme case occurred in the depression-recovery year of 1933, when the difference between the first and 10th decile returns was far more

> substantial. The divergence in the performance of small- and large- cap stocks is evident. In 30 of the 89 years since 1926, the difference between the total returns of the largest stocks (decile 1) and the smallest stocks (decile 10) has been greater than 25 percentage points.

Page 109 states,

> In four of the last 10 years, large-capitalization stocks (deciles 1-2 of NYSE/AMEX/NASDAQ) have outperformed small-capitalization stocks (deciles 9-10). This has led some market observers to speculate that there is no size premium. But statistical evidence suggests that periods of underperformance should be expected.

Page 112 states,

> Because investors cannot predict when small-cap returns will be higher than large-cap returns, it has been argued that they do not expect higher rates of return for small stocks.

Q. ARE MR. MOUL'S CONCERNS REGARDING THE IMPACT OF LOSING LARGE CUSTOMERS OR UNEXPECTED INCREASES IN EXPENSES VALID?

A. No. Regulated utility companies have the option to file a base rate case to address declining revenues and to recover the increasing costs of doing business in addition to emergency rate relief provisions for large unforeseen impacts. In contrast, non-utility businesses that may be significantly impacted by events of this nature due to small operating size do not have these opportunities. Further, while a smaller utility may pay higher prices for services and materials just due to volume buying power, the actual costs are part of the revenue requirement presented by that company, so to increase the return to account for the potential size disadvantage would only further unfairly burden ratepayers who are already likely paying higher utility bills to recover the higher operating costs.

Q. WHAT IS YOUR RECOMMENDATION REGARDING MR. MOUL'S SIZE ADJUSTMENT?

A. I continue to recommend that his use of the 1.02% size adjustment be disallowed in calculating the CAPM.

Q. MR. MOUL HAS RECALCULATED YOUR CAPM RESULTS.[51] DO YOU AGREE WITH HIS RECALCULATION?

A. No. Mr. Moul's recalculation is incorrect for a couple of reasons. As stated in both my direct testimony and above, he used an inaccurate risk-free rate and an unnecessary size adjustment. Because of these factors, the recalculation of my CAPM results as Mr. Moul illustrates is unreliable and unnecessary.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING YOUR CAPM ANALYSIS?

A. Yes. My recommend cost of equity is primarily based upon my DCF analysis for the reasons explain above and in my direct testimony. I present a CAPM analysis to the Commission for comparison, not recommendation purposes as the inputs are highly subjective, and other than beta, not company or industry specific. Again, it

---

[51] UGI Gas Statement No. 6-R, p. 25, lines 2-5.

has traditionally been the preference of the Commission to view both the DCF and CAPM analysis in base rate proceedings.

INFLATION

Q. IS IT NECESSARY TO EMPLOY THE CAPM WITH EQUAL WEIGHT TO THE DCF WHEN DETERMINING A SPECIFIC RETURN ON EQUITY DUE TO RECENT INFLATIONARY TRENDS?

A. No. My use of the DCF as a primary method in determining an appropriate return on equity sufficiently takes this into consideration. As mentioned above, the DCF includes a spot stock price in the dividend yield calculation and analysts who generate forecasted earnings growth almost certainly take inflation into consideration as well, so it contains the most up-to-date projected information of any model. In other words, the inputs of the DCF capture all known economic factors, including inflation.

RISK PREMIUM

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING THE RISK PREMIUM METHOD.

A. Mr. Moul opines that the RP approach should be given serious consideration because it is straight-forward, understandable, and uses a company's own borrowing rate. He claims it provides a direct and complete reflection of a utility's risk and return. Mr. Moul also states that I make an unfounded assertion that the RP method does not measure the current cost of equity as directly as the DCF.[52]

Q. DO YOU AGREE WITH MR. MOUL THAT THE RP METHOD PROVIDES A DIRECT AND COMPLETE REFLECTION OF A UTILITY'S RISK AND RETURN?

A. No. The RP method produces an indirect measure when compared to the DCF method.

Q. PLEASE COMMENT ON THE INDIRECT MEASURE OF THE RP METHOD VERSUS THE MORE DIRECT MEASURE OF THE DCF METHOD.

A. Mr. Moul claims my statement, that the Risk Premium method does not measure the current cost of equity as directly as the DCF, is without foundation. In my direct testimony, I have clearly illustrated how the two measures are different.[53] The main reason is that the RP method determines the rate of return on common equity indirectly by observing the cost of debt and adding to it an equity risk premium. The DCF measures equity more directly through the stock information (using equity information), whereas the RP method measures equity indirectly using debt information.

[52] UGI Gas Statement No. 6-R, p. 28, ln. 5 through p. 29, ln. 19.
[53] I&E Statement No. 2, p. 13, ln. 17 through p. 19, ln. 6.

COMPARABLE EARNINGS

Q. SUMMARIZE MR. MOUL'S REBUTTAL TESTIMONY REGARDING THE CE METHOD.

A. Mr. Moul claims that using the CE method satisfies the comparability standard established in the *Hope* case. Additionally, he states, "the financial community has expressed the view that the regulatory process must consider the returns that are being achieved in the non-regulated sector to ensure that regulated companies can compete effectively in the capital markets."[54]

Q. DO YOU BELIEVE THAT THE COMPANIES USED BY MR. MOUL IN HIS CE METHOD ANALYSIS ARE COMPARABLE TO UGI GAS?

A. No. As explained in my direct testimony,[55] the companies in Mr. Moul's analysis are not utilities, and therefore, are too disparate to be used in a CE analysis. For example, the criteria Mr. Moul uses to choose the companies in his CE group results in the selection of companies such as Altria Group Inc. (Tobacco), Bio-Techne Corp. (Biotechnology), CVS Caremark Corp. (Retail/Pharmacy), Intuit Inc, (Computer Software), Monster Beverage Corp. (Beverage), Quest Diagnostics Inc. (Medical Services), Toro Co. (Machinery), and Western Union Co. (Financial Services) just to name few.[56] All these companies operate in industries very different from a utility company and operate under varying degrees of regulation.

---

54 UGI Statement No. 6-R, p. 30, lines 5-11.
55 I&E Statement No. 2, p. 26, ln. 13 through p. 27, ln. 5.
56 UGI Gas Exhibit B, Schedule 14.

Also, a large majority, if not all the companies Mr. Moul uses in his analysis, are not monopolies as utilities largely are. This means that they have significantly more competition and would require a higher return for the added risk. Further, the CE method should be excluded because it is entirely subjective as to which companies are comparable and it is debatable whether historical accounting returns are representative of the future.

MANAGEMENT PERFORMANCE POINTS

Q. SUMMARIZE THE COMPANY'S REBUTTAL TESTIMONY REGARDING MANAGEMENT PERFORMANCE POINTS.

A. Mr. Moul continues to advocate for 20 additional basis points to the cost of equity as he believes UGI Gas has performed in an exemplary manner. He points to Mr. Brown's testimony[57] for support.

Mr. Brown acknowledges my position that UGI Gas should not be rewarded for doing what the Company is legally required to do, and that the savings resulting from true management effectiveness are available to be passed on to shareholders. He suggests that I disagree with Pennsylvania law, specifically 66 Pa. C.S. § 523 which gives the Commission the ability to consider management performance. Additionally, he cites to UGI Electric's 2017 rate case where the Commission granted additional basis points for management performance. Mr.

[57] UGI Gas Statement No. 6-R, p. 30, ln. 12 through p. 31, ln. 1.

Brown argues that UGI Gas has similar types of programs to UGI Electric, and he recaps the achievements discussed in his direct testimony.[58]

Q. WHAT IS YOUR RESPONSE TO THE COMPANY'S REBUTTAL TESTIMONY REGARDING THE CONSIDERATION OF ADDITIONAL BASIS POINTS FOR MANAGEMENT PERFORMANCE?

A. As discussed in greater detail in my direct testimony,[59] I maintain that UGI Gas, or any utility company for that matter, should not reap additional rewards for programs funded by ratepayers or for meeting their obligations under 66 Pa C.S.A. §1501.

Also, while I am aware that under 66 Pa C.S.A. §523 the Commission shall consider a utility's performance, it is not mandatory that the Commission grant additional points. Moreover, I continue to assert that for any company, true strong management performance is earning a higher return through its efficient use of resources and cost cutting measures. The greater net income resulting from cost savings and true efficiency in management and operations is available to be passed on to shareholders. Additionally, it is nonsensical to support the idea that since ratepayers fund the initiatives and accomplishments Mr. Brown mentions, ratepayers should then in turn fund a higher equity return for UGI Gas' investors.

---

[58] UGI Gas Statement No. 1-R, p. 6, ln. 18 through p. 14, ln. 1.
[59] I&E Statement No. 2, p. 47, ln. 9 through p. 50, ln. 7.

Q. ARE YOU AWARE OF ANY OTHER COMPANIES THAT HAVE RECEIVED ADDITIONAL BASIS POINTS IN RECOGNITION OF MANAGEMENT PERFORMANCE?

A. Yes. Most recently, the Commission awarded Aqua an addition of 25 basis points for its management performance efforts.[60] However, it is important to recognize that this addition was based specifically on Aqua rescuing troubled water and wastewater systems at the Commission's request. In this proceeding, the Commission stated the following: [61]

> We specifically recognize Aqua's efforts and willingness to quickly provide emergency aid to various water and wastewater systems that needed substantial improvement. Aqua has often provided this emergency aid on short notice and at the request of the Commission or other parties to protect the public from egregious health and safety threats and to protect the Commonwealth's drinking water resources from catastrophic damage.

Q. DOES THE COMMISSION'S PAST ISSUANCE OF ADDITIONAL EQUITY POINTS TO RECOGNIZE MANAGEMENT PERFORMANCE MEAN THAT UGI GAS SHOULD ALSO RECEIVE AN ADJUSTED RETURN ON EQUITY?

A. No. The issuance of equity points to recognize management performance must always be done on a case by case basis. The situation in the Aqua case as discussed above was very specific to the Company rescuing troubled water and

[60] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 168-173 (Order entered May 16, 2022).

[61] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, p. 169 (Order entered May 16, 2022).

wastewater systems and preventing health and safety concerns regarding drinking water. This scenario does not apply to UGI Gas. Further, the example Mr. Brown provides, the 2017 UGI Electric rate case, is irrelevant to the determination of whether UGI Gas should be granted additional basis points to its cost of equity for management performance. Management performance is something that is very specific to each individual utility. Therefore, what the Commission has historically decided in this regard, and the management performance of other utilities, has no bearing on whether UGI Gas should receive a higher return on equity to recognize its management performance. Notably however, in the 2017 UGI Electric case, which was decided in a pre-pandemic climate when ratepayers were not faced with the current levels of inflation, the Commission awarded the Company a nominal five additional basis points for management effectiveness. Additionally, since Mr. Brown makes the argument that the management performance of UGI Gas is comparable to that of UGI Electric, the implication that UGI Gas should receive much more than what UGI Electric was awarded is unreasonable.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS CONCERNING THE COMPANY'S CLAIM REGARDING MANAGEMENT PEFORMANCE?

A. Yes. While I am aware of the rising costs of capital due to the after-effects of the pandemic and the increasing levels of inflation, I believe it is important not to over burden ratepayers.

Notably, in recognition of recent inflation, I&E is not disputing the updated increase in the cost of long-term debt as presented above.

Further, my 9.92% recommended cost of equity based on the DCF model is higher than the average Commission-granted return on equity for all natural gas utilities across the country since 2012.[62] In addition, as mentioned in my direct testimony, a report issued by Regulatory Research Associates, a group within S&P Global Market Intelligence,[63] illustrates that UGI Gas' 11.20% requested return on equity is 99 basis points higher (almost one full percentage point higher) than the average return on equity request of 10.21% of all pending gas utility rate cases as of March 10, 2022. So, as the economy is in decline, UGI Gas is requesting a record return on equity to apply to its equity heavy capital structure. It should be noted that strong stock market performance does not always equate to strong economic performance.

Finally, and perhaps most importantly, most of the programs Mr. Brown discusses are ultimately *funded by ratepayers* and any savings resulting from cost cutting measures would likely be offset by the addition of basis points for management performance as ratepayers would have to fund those additional costs as well. This defeats the purpose of efforts to reduce costs to benefit ratepayers.

[63] Regulatory Research Associates, "Major energy utility cases in progress in the US, Quarterly update on pending rate cases," *S&P Global Market Intelligence*, March 16, 2022.

Q. HAS YOUR RECOMMENDATION REGARDING THE COMPANY'S REQUEST FOR ADDITIONAL BASIS POINTS FOR MANAGEMENT PERFORMANCE CHANGED?

A. No. I continue to recommend that any additional basis points for management performance be rejected.

<u>OVERALL RATE OF RETURN</u>

Q. HAS YOUR OVERALL RATE OF RETURN RECOMMENDATION CHANGED FROM YOUR DIRECT TESTIMONY?

A. Yes. While I continue to support my calculated 9.92% cost of common equity, I have updated my overall rate of return recommendation to reflect the Company's updated cost of long-term debt.

Q. WHAT IS YOUR OVERALL RATE OF RETURN RECOMMENDATION?

A. I recommend the following rate of return for UGI Gas:

I&E
Summary of Cost of Capital

Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost**
	UGI Utilities, Inc. - Gas Division		
Long-Term Debt	44.88%	4.30%	1.93%
Common Equity	55.12%	9.92%	5.47%
Total	100.00%		7.40%

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

I&E Statement No. 3
Witness: Brian J. LaTorre

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

UGI UTILITIES, INC. – GAS DIVISION

Docket No. R-2021-3030218

Direct Testimony

of

Brian J. LaTorre

Bureau of Investigation and Enforcement

Concerning:

OPERATING & MAINTENANCE EXPENSES

TABLE OF CONTENTS

INTRODUCTION

Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Brian LaTorre. I am a Fixed Utility Financial Analyst in the Technical Division of the Pennsylvania Public Utility Commission's (Commission or PUC) Bureau of Investigation and Enforcement (I&E). My business address is Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. PLEASE DESCRIBE YOUR EDUCATION AND PROFESSIONAL BACKGROUND.

A. My education and professional background are set forth in Appendix A, which is attached.

Q. DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in rate proceedings. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to review the base rate filing of UGI Utilities, Inc. – Gas Division (UGI Gas or Company) and make recommended adjustments to the Company's proposed operating and maintenance (O&M) expense claims for the fully projected future test year (FPFTY) ending September 30, 2023.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 3 contains schedules that support my direct testimony.

SUMMARY OF RECOMMENDED ADJUSTMENTS

Q. PLEASE SUMMARIZE YOUR RECOMMENDED ADJUSTMENTS AS EXPLAINED IN THIS DIRECT TESTIMONY.

A. The following table summarized my recommended adjustments to the O&M expense claims under my purview. These recommended adjustments are reflected in the overall I&E recommended revenue requirement presented by I&E witness Zachari Walker[1] in this proceeding.

	Company Claim	**Recommended Allowance**	**I&E Adjustment**
O&M Expenses:			
Rate Case Expense	$1,055,000	$633,000	($422,000)
2020 and 2021 Environmental Remediation Expense	$2,327,000	$465,400	($1,861,600)
OSHA/Emergency Temporary Standard Compliance Costs	$1,883,000	$31,760	($1,851,240)
Total O&M Expense Adjustments			**($4,134,840)**

[1] I&E Statement No. 1.

<u>RATE CASE EXPENSE</u>

Q. DESCRIBE THE NATURE AND TYPES OF EXPENDITURES TYPICALLY ALLOWED AS PART OF A REGULATED UTILITY'S OVERALL RATE CASE EXPENSE.

A. The nature and types of individual expenditures that comprise a utility's allowable claim for rate case expense are those directly incurred to compile, present, and defend a utility's request for a rate base increase before the Commission. The actual expenditures and estimated costs typically found in an allowable rate case expense claim include legal fees for outside counsel, fees to outside consultants, and the cost of printing, document assembly, and postage.

Q. HOW HAS THE COMMISSION TRADITIONALLY TREATED RATE CASE EXPENSE FOR RATEMAKING PURPOSES?

A. The Commission has historically stated that it considers prudently incurred rate case expense as an ongoing expense, occurring at irregular intervals, related to the rendering of utility service. Thus, it is necessary to normalize rate case expense for ratemaking purposes. The Commission has also cited the importance of considering the involved utility's history regarding the frequency of rate case filings as an essential element in determining the normalized level of rate case expense for ratemaking purposes.

Q. HOW IS THE FREQUENCY OF RATE CASE FILINGS DETERMINED?

A. The frequency is determined by calculating the average number of months between the filing dates of a utility's previous base rate cases.

Q. WHAT IS THE COMPANY'S CLAIM FOR RATE CASE EXPENSE?

A. The Company's FPFTY claim for rate case expense is $1,055,000.[2]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company has estimated a total rate case expense of $1,055,000 and is requesting a normalization period of one year (12 months). In his testimony, UGI Gas witness Christopher R. Brown indicated the Company expects to file its next rate case approximately one year following the filing of this base rate case.[3]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR RATE CASE EXPENSE?

A. I recommend the Company's rate case expense be normalized over a 20-month period resulting in an annual allowance of $633,000 [($1,055,000 ÷ 20 months) x 12] or a reduction of $422,000 ($1,055,000 - $633,000) to the Company's annual rate case expense claim.

---

[2] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-10.

[3] UGI Gas Statement No. 1, pp. 9-10.

Q. WHAT IS THE BASIS OF YOUR RECOMMENDATION?

A. The Company's requested normalization period of one year for rate case expense is not supported by the historic filing frequency of the Company. In response to I&E-RE-46,[4] the Company provided the following information about its last three historic base rate cases:

Docket No.	Filing Date	Filing Interval - Months
R-2021-3030218	1/28/2022	24
R-2019-3015162	1/28/2020	12
R-2018-3006814	1/28/2019	24
R-2016-2580030	1/19/2017	

The Company filed its three most recent rate cases on January 19, 2017; January 28, 2019; and January 28, 2020. Including the current rate case, which was filed on January 28, 2022, the average filing frequency is 20 months [(24 months + 12 months + 24 months) ÷ 3]. The recommended 20-month normalization period is consistent with the Commission's emphasis on the importance of considering the utility's history of rate case filings when determining the normalization period of rate case expenses. A one-year normalization period should be disallowed as it would result in an unreasonable increase in customer rates.

[4] I&E Exhibit No. 3, Schedule 1.

Q. ARE THERE ANY COMMISSION DECISIONS THAT SUPPORT YOUR RECOMMENDATION FOR A RATE CASE FILING INTERVAL BASED ON HISTORIC FILING FREQUENCY?

A. Yes. In a base rate case filed by Emporium Water Company, the Commission adopted the I&E-recommended historic filing frequency finding in favor of I&E's recommended five-year normalization period based on historic average filing frequency that was rounded down from 64 months.[5]

Similarly, the Commission agreed with I&E's recommendation in the City of DuBois base rate case to use a historic filing frequency finding in favor of I&E's recommended 64-month normalization period, matching the actual historic filing frequency.[6]

Likewise, in the 2020 Columbia Gas of Pennsylvania, Inc. base rate proceeding, the Commission confirmed the normalization period should align with the historic data rather than the Company's intent to file its next rate case.[7]

Finally, and most recently, the Commission determined that a normalization period based on actual historic filing frequency is more reliable than future speculation in the 2020 PECO Energy Company – Gas Division (PECO Gas) rate case. In the PECO Gas case, the Commission accepted I&E's

recommended five-year normalization period in contrast to a claim based on a three-year period.[8]

UNRECOVERED ENVIRONMENTAL REMEDIATION EXPENSE

Q. WHAT ARE THE ENVIRONMENTAL REMEDIATION COSTS ASSOCIATED WITH MANUFACTURED GAS PLANTS (MGPs)?

A. Environmental remediation costs are those costs attributed to the site investigations, remediation, restoration of MGPs, and Pennsylvania Department of Environmental Protection oversight costs. There may also be costs incurred to obtain an environmental covenant at the site to prevent certain uses of the site and miscellaneous costs associated with transferring the site to a third party once the site has been restored.[9] Briefly, remediation costs are expenses for investigation, assessment, site characterization, and clean-up of MGPs.

Q. BRIEFLY SUMMARIZE THE COMPONENTS OF THE COMPANY'S ENVIRONMENTAL REMEDIATION EXPENSE CLAIM.

A. The Company is claiming a current ongoing cash expenditure based on a three-year historic average,[10] it is making a claim for the unrecovered MGP expenses for

---

8 *PA PUC v. PECO Energy Company – Gas Division,* Docket No. R-2020-3018929, Opinion and Order, pp. 117-119 (Non-Proprietary Order Entered June 22, 2021).

9 UGI Gas Statement No. 9, pp. 24-25.

10 UGI Gas Statement No. 3, p. 17 and UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-8, Environmental Adjustment #1.

the Fiscal Year 2019 and prior periods,[11] and it is making a claim for under-recovery of environmental expenditures for 2020 and 2021.[12]

Q. WHAT IS UNRECOVERED ENVIRONMENTAL REMEDIATION EXPENSE?

A. This expense represents the Company's amortization of unrecovered environmental remediation costs for MGPs that exceed the annual allowance for the expense amount approved in the prior base rate cases.

Q. WHICH UNRECOVERED ENVIRONMENTAL REMEDIATION EXPENSE CLAIM ARE YOU ADDRESSING HEREIN?

A. I am addressing the proposed amortization of: (1) unrecovered 2019 and prior years' environmental remediation expenses; and (2) unrecovered 2020/2021 environmental remediation expenses.

---

[11] UGI Gas Statement No. 3, p. 18 and UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-8, Environmental Adjustment #2.

[12] UGI Gas Statement No. 3, p. 18 and UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-8, Environmental Adjustment #3.

Unrecovered 2019 and Prior Years' Environmental Remediation Expense

Q. WHAT IS THE COMPANY'S CLAIM FOR THE AMORTIZATION OF 2019 AND PRIOR YEARS' UNRECOVERED ENVIRONMENTAL REMEDIATION EXPENSE?

A. The Company is claiming $1,865,000 for the FPFTY.[13]

Q. WHAT IS THE BASIS OF THE COMPANY'S CLAIM?

A. UGI Gas witness Vivian K. Ressler has indicated that in the 2020 rate case, the Company was authorized to amortize $8.103 million of under-recovered expense over five years, resulting in $1.621 million per year for fiscal years prior to September 2018, and it was authorized $1.219 million over five years, or $0.24 million per year for Fiscal Year 2019. Thus, she asserts that the annual amount is $1.865 million per year until the total is fully amortized.[14]

Q. DO YOU ACCEPT THE COMPANY'S CLAIM FOR THE 2019 AND PRIOR YEARS' UNRECOVERED ENVIRONMENTAL REMEDIATION EXPENSE AMORTIZATION?

A. Yes. However, I recommend the Company be required to provide a full line-by-line account of the yearly amortizations in the next base rate proceeding because, based on the explanation provided below, by the time the Company files its next rate case and new rates go into effect in that subsequent proceeding I anticipate

---

[13] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-8, Environmental Adjustment #2.
[14] UGI Gas Statement No. 3, p. 18.

that the amounts prior to Fiscal Year 2019 will be fully extinguished and there will be no remaining balance left to recover.

Q. IN WHAT YEAR SHOULD THE AMORTIZATIONS HAVE BEGUN?

A. According to the Commission Orders as cited below, the Company should have begun the amortization on October 1, 2019 for periods prior to September 2019 (for the $1.621 million), and January 1, 2021 for the $0.244 million per year that applies to the Fiscal Year 2019.

Q. WHEN WOULD THOSE AMOUNTS BE FULLY EXTINGUISHED?

A. Based on the following table, the amounts would be fully extinguished as follows:

<u>For Periods Prior to September 2019</u>:[15]
2019 $1.621 million
2020 $1.621 million
2021 $1.621 million
2022 $1.621 million
2023 $1.621 million
(After FPFTY 2023, fully extinguished)

<u>For Fiscal Year 2019</u>:[16]
2021 $0.244 million x 75% (for Jan.-Sep.) or $0.183 million
2022 $0.244 million
2023 $0.244 million
2024 $0.244 million
2025 $0.244 million
2026 $0.244 million x 25% (for Oct.-Dec.) or $0.061 million
(After Dec. 31, 2026, fully extinguished)

[15] *PA PUC v. UGI Utilities, Inc – Gas Division* Docket No. R-2018-3006814, Order Entered September 19, 2019; Paragraph 64

[16] *PA PUC v. UGI Utilities, Inc – Gas Division* Docket No. R-2019-3015162, Order Entered October 8, 2020; Paragraph 33

Unrecovered 2020/2021 Environmental Remediation Expense

Q. WHAT IS THE COMPANY'S CLAIM FOR AMORTIZATION OF 2020 AND 2021 UNRECOVERED ENVIRONMENTAL REMEDIATION EXPENSE?

A. The Company is claiming amortization of unrecovered 2020 and 2021 environmental remediation expense of $2,327,000 over a period of one year.[17]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on amortization of the total 2020 and 2021 unrecovered expense related to environmental remediation costs of $2,327,000 over one year, which is also the FPFTY claim.[18]

Q. UPON WHAT DID THE COMPANY BASE ITS PROPOSED ONE-YEAR AMORTIZATION?

A. The Company's claimed one-year amortization for unrecovered 2020/2021 environmental remediation expense is in line with its claimed one-year normalization period for rate case expense.[19]

---

[17] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-8, Environmental Adjustment #3.
[18] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-8, line 13-17.
[19] UGI Gas Statement No. 3, p. 18 and UGI Gas Statement No. 1, pp. 9-10.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM FOR THE AMORTIZATION OF 2020 AND 2021 UNRECOVERED ENVIRONMENTAL REMEDIATION EXPENSE?

A. No.

Q. WHAT DO YOU RECOMMEND FOR THE AMORTIZATION OF UNRECOVERED 2020 AND 2021 ENVIRONMENTAL REMEDIATION EXPENSE?

A. I recommend an allowance of $465,400 for unrecovered 2020 and 2021 environmental remediation expense or a reduction of $1,861,600 ($2,327,000 - $465,400) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommended allowance for the amortization of 2020 and 2021 environmental remediation expense is based on an amortization period of five years to remain consistent with the amortization period of five years for unrecovered environmental remediation expense from the Opinion and Order in the prior case.[20] Accordingly, I calculated the FPFTY amortization or the unrecovered expense by applying the amortization period of five years, which produced my recommended allowance of $465,400 ($2,327,000 ÷ 5 years).

---

[20] *PA PUC v. UGI Utilities, Inc – Gas Division* Docket No. R-2019-3015162, Order Entered October 8, 2020; Paragraph 33.

This amortization would begin in the FPFTY 2023 and be fully amortized by Fiscal Year 2027.

<u>OSHA/EMERGENCY TEMPORARY STANDARD (ETS) COMPLIANCE COSTS</u>

Q. WHAT ARE OSHA/ETS COMPLIANCE COSTS?

A. OSHA/ETS compliance costs are costs associated with President Biden's COVID-19 Action Plan and the U.S. Department of Labor's OSHA ETS requirements relating to vaccination and testing mandates. These costs include vaccination status tracking, performing required COVID-19 tests, legal assistance, and policy drafting and communication to affected employees and contractors.[21]

Q. WHAT IS THE COMPANY'S CLAIM FOR OSHA/ETS COMPLIANCE COSTS?

A. In its filing, the Company claims a total budget of $1,883,000 as an adjustment to operating expenses in the FPFTY. These costs include $1,692,000 for the tracking of COVID-19 Vaccination Status and performing required testing, and $191,000 in one-time costs for communication and legal costs.[22]

Q. WHAT IS THE BASIS FOR THE COMPANY'S PROPOSED OSHA/ETS COMPLIANCE COSTS?

A. The Company proposes amortizing these COVID-19 related costs over a one-year

[21] UGI Gas Statement No. 3, pp. 24-26.
[22] UGI Gas Statement No. 3, p. 25 and UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-13.

period in line with its claimed rate case filing interval.[23] On November 5, 2021, OSHA issued the vaccination and testing ETS for businesses that have over 100 employees. Company witness Ressler acknowledges that there is uncertainty concerning the federal mandates due to a recent decision by the U.S. Supreme Court but asserted that "it is appropriate to include a cost associated with vaccination and testing mandates in its revenue requirement to ensure future cost recovery in the event such mandates or similar mandates become law."[24]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM FOR OSHA/ETS COMPLIANCE COSTS?

A. No.

Q. WHAT DO YOU RECOMMEND FOR OSHA/ETS COMPLIANCE COSTS?

A. I recommend an allowance of $31,760 for amortization of deferred COVID-19 related OSHA/ETS compliance costs or a reduction of $1,851,240 ($1,883,000 - $31,760) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. In response to OCA-III-25,[25] the Company states that it is withdrawing a majority

---

[23] UGI Gas Book V, Exhibit A – Fully Projected, Schedule D-13.
[24] UGI Gas Statement No. 3, p. 25.
[25] I&E Exhibit No. 3, Schedule 2.

of the claim because the U.S. Supreme Court overturned the Federal Mandate. However, the Company is still claiming $52,934 on already incurred costs and is requesting to amortize this cost over a one-year period. These are costs that were associated with legal advice related to the application of the mandate, and a subscription to a vaccine tracking software.

While I accept that these COVID-19 related costs are already incurred, I recommend an amortization period of 20 months in line with my recommended rate case filing frequency for rate case expense as explained above. This would minimize any over- or under-recovery of the related cost. Therefore, I recommend an allowance of $31,760 [($52,934 ÷ 20 months) x 12].

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

Brian LaTorre

Professional and Educational Background

Professional Experience

Pennsylvania Public Utility Commission, Harrisburg, Pennsylvania
November 2021 to Present
Fixed Utility Financial Analyst, Bureau of Investigation and Enforcement

Pennsylvania House of Representatives, Lansdale, Pennsylvania
December 2018 to October 2021
Constituent Services Advisor
Organized meetings with local officials and stakeholders on issues impacting the community. Assisted residents and business owners with issues relating to state government, including LIHEAP and Unemployment Compensation.

SimiTree Healthcare Consulting, Conshohocken, Pennsylvania
June 2016 to March 2018
Analyst
Tracked and analyzed revenue cycle accounts receivable trends for home healthcare and hospice clients. Identified and corrected Medicare, Medicaid, and Private Insurance billing issues. Maintained external dashboards that displayed key performance indicators for clients.

OPERATING & MAINTENANCE EXPENSES

TABLE OF CONTENTS

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Brian LaTorre. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation and Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME BRIAN LATORRE WHO SUBMITTED TESTIMONY IN I&E STATEMENT NO 3. AND I&E EXHIBIT NO. 3?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of UGI Utilities, Inc. – Gas Division (UGI Gas or Company) witnesses Tracy A. Hazenstab (UGI Statement No. 2-R), and Vivian K. Ressler (UGI Statement No. 3-R).

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. No. However, I do refer to my direct testimony.[1]

SUMMARY OF RECOMMENDED ADJUSTMENTS

Q. PLEASE SUMMARIZE YOUR RECOMMENDED ADJUSTMENTS AS EXPLAINED IN THIS SURREBUTTAL TESTIMONY.

A. The following table summarizes my updated recommended adjustments to the O&M expense claims under my purview. These recommended adjustments are reflected in the overall I&E recommended revenue requirement presented by I&E witness Zachari Walker[2] in this proceeding.

	Updated Company Claim	**Updated I&E Recommended Allowance**	**I&E Adjustment**
O&M Expenses:			
Rate Case Expense	$1,055,000	$633,000	($422,000)
2020 and 2021 Environmental Remediation Expense	$2,327,000	$1,396,200	($930,800)
OSHA/Emergency Temporary Standard Compliance Costs	$52,934	$31,760	($21,174)
Total O&M Expense Adjustments			**($1,373,974)**

RATE CASE EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR RATE CASE EXPENSE.

A. I recommended that the Company's rate case expense be normalized over a period

[1] I&E Statement No. 3.

[2] I&E Statement No. 1-SR.

of 20 months, resulting in an annual expense of $633,000 [($1,055,000 ÷ 20 months) x 12 months], or a reduction of $422,000 ($1,055,000 - $633,000) to the Company's claim. My recommendation was based on the Company's base rate case filing history since 2017 [3] in contrast to the Company's claimed one-year normalization period, which is based on when the Company expects to file its next rate case.[4]

Q. DID ANY COMPANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Company witness Tracy A. Hazenstab[5] responded to my recommendation for rate case expense.

Q. SUMMARIZE MS. HAZENSTAB'S RESPONSE.

A. Ms. Hazenstab disagrees with using historical base rate case frequency as a predictor of the frequency of future base rate cases. Ms. Hazenstab opines that the Company's expectation that it will file another base rate case in a year is based upon an assessment of future capital requirements and system improvements as outlined in the Company's Long-Term Infrastructure Improvement Plan (LTIIP), in addition to rising inflation, capital cost rates, and a higher risk associated with the rate of return. Additionally, Ms. Hazenstab states that the Columbia Gas 2020

---

3 I&E Statement No. 3, pp. 4-5.
4 UGI Gas Statement No. 1, pp. 9-10.
5 UGI Gas Statement No. 2-R, p. 9.

and PECO Gas 2021 cases I cited in my direct testimony are distinguishable from the instant case due to circumstances surrounding the COVID-19 pandemic.[6] Finally, Ms. Hazenstab refutes my calculation of the frequency of past base rate cases, arguing that the Company's most recent base rate proceeding was subject to a one-year settlement stay-out clause that prohibited the Company from making a base rate filing until January 2, 2022, which added a year to the period the UGI Gas could not make a filing.

Q. WHAT OTHER UTILITY DID MS. HAZENSTAB REFERENCE THAT RECEIVED APPROVAL FOR A NORMALIZATION PERIOD BASED ON SPECULATION OF A FUTURE FILING?

A. In her rebuttal testimony, Ms. Hazenstab states that I disregarded the fact that the reliance upon historic rate case filing frequency was rejected by the Commission in Pa. PUC v. UGI Utilities, Inc. – Electric Division, Docket No. R-2017-2640058 (Order entered Oct. 25, 2018) (UGI Electric 2018). In UGI Electric 2018*,* I&E recommended a five-year normalization period based on historic filing frequency as opposed to UGI Electric's three-year normalization period based on speculation of a future base rate filing. In UGI Electric 2018, UGI Electric had last filed a rate case in 1996, 22 years prior. In addition, UGI Electric had its LTIIP approved

[6] UGI Gas Statement No. 2-R, p. 9-11.

between the 1996 rate case and the 2018 rate case, which significantly increased capital spending.

Q. HOW DOES THE UGI ELECTRIC 2018 FILING DIFFER FROM THE INSTANT PROCEEDING?

A. UGI Gas has a more frequent and recent filing history, which provides more support for the use of historic filing frequency. Additionally, UGI Gas had already been subject to its second LTIIP at the time of its last proceeding.[7] These two factors distinguish UGI Electric 2018 from the instant case. Thus, I continue to recommend use of a historic filing frequency to determine a normalization period for UGI Gas.

Q. DO YOU AGREE WITH MS. HAZENSTAB THAT BOTH COLUMBIA GAS 2020 AND PECO GAS 2021 ARE DISTINGUISHIBLE FROM THE INSTANT CASE?

A. No. However, because this is a legal argument, it will be further addressed in the I&E briefs by the I&E prosecutor.

[7] Petition of UGI Utilities, Inc. – Gas Division for Approval of its Second Long Term Infrastructure Improvement Plan, Docket No. P-2019-3012337 (Opinion and Order entered Dec. 19, 2019).

Q. DO YOU AGREE WITH MS. HAZENSTAB THAT THE ONE-YEAR STAY-OUT CLAUSE FROM THE PRIOR PROCEEDING SHOULD BE FACTORED INTO THE CALCULATION OF FILING FREQUENCY?

A. No. While it may be true that UGI Gas was subject to a one-year stay-out clause in its prior proceeding[8], this one-year period should not be excluded when calculating UGI Gas's historic filing frequency of base rate cases. By agreeing to the one-year stay-out clause, UGI Gas made an affirmative decision not to file a rate case. It is appropriate to include the one-year period as part of the historic filing frequency because UGI Gas was in control of the timeframe for when it could file.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an allowance of $633,000, or a reduction of $422,000 ($1,055,000 - $633,000) to the Company's annual rate case expense claim.

UNRECOVERED ENVIRONMENTAL REMEDIATION EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATIONS IN DIRECT TESTIMONY FOR UNRECOVERED ENVIRONMENTAL REMEDIATION EXPENSE.

A. In my direct testimony, I made two recommendations concerning unrecovered

[8] *PA PUC v. UGI Utilities, Inc – Gas Division* Docket No. R-2019-3015162, Order Entered October 8, 2020; Paragraph 9.

environmental remediation expense. First, I recommended that the Company be required to provide a full line-by-line account of the yearly amortizations of unrecovered environmental remediation expense in the next base rate case. Additionally, I recommended that unrecovered 2020 and 2021 environmental remediation expense be amortized over a five-year period resulting in an allowance of $465,400 or a reduction of $1,861,600 ($2,327,000 - $465,400) to the Company's claim. The five-year amortization period is based on the amortization period from the prior Opinion and Order as opposed to the Company's proposed one-year amortization period to align with the rate case amortization period.[9]

Q. DID ANY COMPANY WITNESS RESPOND TO YOUR RECOMMENDATIONS?

A. Yes. UGI Gas witness Vivian K. Ressler[10] responded to my recommendations.

Q. SUMMARIZE MS. RESSLER'S RESPONSE TO YOUR RECOMMENDATION THAT THE COMPANY BE REQUIRED TO PROVIDE A LINE-BY-LINE ACCOUNT OF YEARLY AMORTIZATIONS IN ITS NEXT RATE CASE.

A. Ms. Ressler agrees with my recommendation that the Company be required to

9 I&E Statement No. 3, pp. 9-11.
10 UGI Gas Statement No. 3-R, p. 7.

provide a full line-by-line account of yearly amortizations of unrecovered environmental remediation expenses in its next base rate proceeding.[11] Additionally, Ms. Ressler prepared UGI Gas Exhibit VKR-2R to help explain how the Company has amortized under-recovered environmental remediation expense and agreed to provide a similar schedule in the next rate case filing.

Q. SUMMARIZE MS. RESSLER'S RESPONSE CONCERNING THE UNRECOVERED 2020/2021 ENVIRONMENTAL REMEDIATION EXPENSE AMORTIZATION PERIOD.

A. Ms. Ressler disagrees with my proposed five-year amortization period for unrecovered 2020/2021 environmental remediation costs. The Company selected a one-year amortization period because it anticipates that another rate case would be filed within the next year. Ms. Ressler asserts that a five-year recovery period represents a mismatch between the period in which costs are incurred and when they would be allowed to be recovered and would unfairly frustrate the Company's ability to timely recover the full amount of these expenses. Ms. Ressler further states that my recommendation based on prior case settlement should have no persuasive value in this proceeding. Ms. Ressler also opines that the Company has spent more than it has recovered in rates for each year since 2019, thereby adding to its regulatory asset under-recovery each year.[12]

---

[11] UGI Gas Statement No. 3-R, pp. 8-9.
[12] UGI Gas Statement No. 3-R, pp. 9-13.

Q. WHAT IS YOUR RESPONSE TO MS. RESSLER?

A. Upon consideration of points made in her rebuttal testimony, I accept that the amortization period for the unrecovered 2020/2021 expense should be tied to the rate case normalization period, however as discussed above, I disagree with the Company's one-year rate case normalization period. I find persuasive Ms. Ressler's statement that a five-year amortization period for unrecovered 2020 and 2021 environmental remediation expenses would unfairly delay recovery of the full amount of these expenses. The Company has incurred expenditures for environmental remediation for each year since 2019, resulting in increases to its regulatory asset each year. Furthermore, I agree with the company that the three-year average of environmental expenditures of $5.171 million should be used as the budgeted amount in the FPFTY, and that differences between $5.171 million and actual expenditures should be deferred as a regulatory asset (where expenditures are greater than $5.171 million per year) or as a regulatory liability (where expenditures are less than $5.171 million per year).

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. I have adjusted my recommended amortization period to align with my recommended rate case expense normalization period of 20 months. This adjustment results in an annual allowance of $1,396,200 [($2,327,000 ÷ 20 months) x 12 months] or a reduction of $930,800 ($2,327,000 - $1,396,200) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR UPDATED RECOMMENDATION?

A. Upon reviewing the Company's rebuttal testimony, I accept that it would make more sense to fully amortize this expense before the next base rate filing and have updated my recommendation accordingly.

<u>OSHA/EMERGENCY TEMPORARY STANDARD (ETS) COMPLIANCE COSTS</u>

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR OSHA/ETS COMPLIANCE COSTS.

A. First, I recommended that $1,830,066 be disallowed for OSHA/ETS compliance costs because the Company withdrew a majority of its claim after the U.S. Supreme Court overturned the Federal Mandate. Next, I recommended that the remaining OSHA/ETS compliance costs of $52,934 be amortized over a 20-month period resulting in an annual allowance of $31,760 [($52,934 ÷ 20 months) x 12].[13]

Q. DID ANY COMPANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. UGI Gas witness Vivian K. Ressler[14] responded to my recommendation.

---

13 I&E Statement No. 3, pp. 14-15.

14 UGI Gas Statement No. 3-R, pp. 42-43.

Q. SUMMARIZE MS. RESSLER'S RESPONSE IN REBUTTAL TESTIMONY.

A. Ms. Ressler accepts the disallowance of $1,830,066 due to the Company's withdrawal of a majority of its claim and recommends a one-year amortization period based on UGI Gas witness Ms. Hazenstab's recommended one-year rate case expense normalization period.[15]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an allowance of $31,760, or a reduction of $21,174 ($52,934 - $31,760) to the Company's OSHA/ETS compliance costs in line with my recommended rate case expense normalization period.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

[15] UGI Gas Statement No. 3-R pp. 42-43.

Bureau of Investigation and Enforcement

Concerning:

Test Year
Present Rate Revenue
Weather Normalization Adjustment
Average Bill Comparison
Scale Back of Rates

TABLE OF CONTENTS

INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Ethan H. Cline. My business address is 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation and Enforcement (I&E) as a Fixed Utility Valuation Engineer.

Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A. My education and professional background are set forth in Appendix A, which is attached.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in the proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my testimony is to evaluate UGI Utilities, Inc. - Gas Division's ("UGI" or "Company") request for an annual increase in operating revenue of approximately $82.7 million. My testimony will address issues related to the weather normalization adjustment, present rate revenue, and scale back of rates.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 4 contains schedules relating to my testimony.

WEATHER NORMALIZATION ADJUSTMENT

Q. WHAT IS A WEATHER NORMALIZATION ADJUSTMENT MECHANISM?

A. As stated on page 6 of UGI Statement No. 11, a Weather Normalization Adjustment ("WNA") mechanism adjusts a customer's bill to correct for variations from normal weather in order to have the bill reflect normal weather conditions through credits and surcharges for colder than normal and warmer than normal weather, respectively.

Q. IS UGI PROPOSING TO INTRODUCE A WEATHER NORMALIZATION ADJUSTMENT IN THIS CASE?

A. Yes. UGI is proposing to implement a WNA mechanism that adjusts billings on a monthly basis as the bill is being calculated and issued (UGI St. No. 11, p. 7).

Q. IS UGI'S PROPOSED WNA MECHANISM SIMILAR TO A WNA RIDER OF ANOTHER PENNSYLVANIA NATURAL GAS DISTRIBUTION COMPANY?

A. Yes. UGI claims that its proposed WNA mechanism is similar to the calculation of Columbia Gas of Pennsylvania's ("Columbia") WNA rider (UGI St. No. 11, p. 9).

Q. DO YOU AGREE THAT THE UGI WNA IS SIMILAR TO THE COLUMBIA WNA APPROVED BY THE COMMISSION?

A. No. Columbia's WNA includes a deadband range while the UGI's proposal does not. The Company believes that application of a deadband adds unnecessary complexity to the rider. Additionally, UGI stated that the WNA's intended goal is to stabilize billings and distribution revenues from readily identified weather related variances rather than "arbitrarily established" elements of weather variance (UGI St. No. 11, p. 11).

Q. WHAT IS A DEADBAND?

A. A deadband is a threshold of Normal Heating Degree Days where the WNA adjustment is not triggered (UGI St. No. 11, p. 11).

Q. DO ANY OTHER PENNSYLVANIA NGDCS WITH A WNA UTILIZE A DEADBAND?

A. Yes. As previously mentioned, Columbia Gas has a 3% deadband and PGW has a 1% deadband (UGI St. No. 11, p. 11).

Q. ARE THERE CURRENTLY ANY PENNSYLVANIA NGDCS WITH A WNA THAT DO NOT UTILIZE A DEADBAND?

A. I am not aware of any Pennsylvania NGDC with a WNA that does not utilize a deadband.

Q. HAS THE COMMISSION DESCRIBED WHY A DEADBAND COMPONENT IS APPROPRIATE IN A WNA?

A. Yes. In Columbia's 2020 base rate case, the Commission determined that "without an extraordinary set of circumstances, there is no need for Columbia to reconcile day-to-day temperature variations that are part of normal business." (Docket No. R-2020-3018835, Order entered February 19, 2021, pp. 264-265).

Q. WHY IS A DEADBAND A REASONABLE PROVISION TO INCLUDE IN UGI'S PROPOSED WNA?

A A WNA is a departure from traditional ratemaking in that it allows the Company to adjust a customer's base rate bill, which was calculated based on Commission approved rates, outside the scope of a base rate case. I believe such a departure from traditional ratemaking should only occur due to circumstances that are an extraordinary departure from normal operating conditions, such as abnormal weather. There is no need to reconcile the day-to-day temperature variations that can be considered a normal part of doing business. Therefore, a 3% deadband as is applicable in Columbia Gas' WNA mechanism is a reasonable provision because it allows for a range of what is considered "normal" weather in which the Company's Commission-approved rates would be applied without adjustment. Without the deadband customer rates could be subject to constant adjustment for normal weather variations in every billing cycle.

Q. DID UGI PROVIDE ANY EVIDENCE THAT WOULD SHOW WHY A DEADBAND WOULD NOT BE APPROPRIATE IN ITS CIRCUMSTANCES?

A. No. UGI presented no evidence to show that, unlike other Pennsylvania NGDCs, UGI should be permitted to reconcile day-to-day temperature variations that are part of normal business. UGI provided no evidence or support that would show how or why a departure from the Commission's previous ruling in Columbia regarding the deadband should not be followed.

Q. WHAT DO YOU RECOMMEND REGARDING UGI'S PROPOSED WNA?

A. I recommend that UGI's WNA be approved on the condition that a 3% deadband is included. My recommendation maintains consistency with the Commission's previous ruling and with Columbia's existing WNA.

TEST YEAR

Q. WHAT IS A TEST YEAR AND HOW IS IT USED?

A. A test year is the twelve-month period over which a utility's costs and revenues are measured as the basis for setting prospective base rates. In order to meet its burden of proof, a utility has the option of selecting to use a historic test year (HTY), a future test year (FTY), or a fully projected future test year (FPFTY). An HTY is a twelve-month period selected by a company that represents the most recent full year of actual data. The FTY begins the day after the HTY ends and is determined using a combination of actual data and a projection of annualized and normalized estimates of future revenues and expenses and a corresponding measure of value at the end of that period. The FPFTY is defined as the twelve-month period that begins with the first month that the new rates will be placed into effect, after the application of the full suspension period permitted under Section 1308(d). The FPFTY is made up entirely of projections forecasted by the Company.

Q. WHAT TEST YEARS HAS THE COMPANY USED IN THIS PROCEEDING?

A. UGI has selected the year ended September 30, 2021 as the HTY, the year ending September 30, 2022 as the FTY, and the year ending September 30, 2023 as the FPFTY (UGI St. No. 2, p. 2).

Q. WHAT TEST YEAR HAS THE COMPANY BASED ITS REVENUE REQUIREMENT UPON IN THIS PROCEEDING?

A. UGI based its requested revenue requirement on the FPFTY ending September 30, 2023 (UGI St. No. 1, p. 6).

<u>PRESENT RATE REVENUE</u>

Q. WHAT AMOUNT PRESENT RATE REVENUE IS THE COMPANY REFLECTING FOR THE FPFTY ENDING SEPTEMBER 30, 2023?

A. UGI is reflecting approximately $1,062,724,000 of present rate revenue including gas costs, surcharges, and other operating revenues (UGI Book V, FPFTY Ex. A-1 p. 1).

Q. DO YOU AGREE WITH THE CLAIMED $1,062,724,000 OF PRESENT RATE REVENUE FOR THE FPFTY?

A. No. As described below, I have determined that UGI has understated its present rate revenue in the FPFTY and I am recommending an increase of $14,648,202 from $662,172,239 to $676,822,441. My recommendation is based on two adjustments to UGI's claimed $662,172,239 of present rate revenue in the FPFTY as discussed below.

Q. WHAT IS THE BASIS OF YOUR TWO ADJUSTMENTS TO UGI'S PRESENT RATE REVENUE CLAIM IN THE FPFTY?

A. First, I will address the rate class R/RT heating customer usage decline reflected in the FPFTY that was projected beyond the end of the FPFTY. Second, I will address the overall regression analysis performed by UGI to project usage per R/RT heating customer to determine sales volumes.

<u>R/RT HEATING CUSTOMER USAGE DECLINE</u>

Q. WHAT IS THE COMPANY'S CLAIM REGARDING R/RT HEATING CUSTOMER USAGE?

A. UGI projected that R/RT heating customer usage is declining and its usage per customer projections included a reduction to account for conservation items and measures including, but not limited to, regular and accelerated appliance replacements, high efficiency appliance installations, setback thermostat installations, modifications to new and existing buildings that are designed to decrease energy consumption, and changes in consumer behavior in response to energy price changes, and other economic influences (UGI St. No. 8, p. 10).

Q. WHAT AVERAGE USAGE PER R/RT HEATING CUSTOMER IS THE COMPANY PROJECTING?

A. The Company's projected annual usage in the FPFTY for R/RT heating customers is approximately 87.8 Mcf per customer (UGI, Book II, Attachment SDR-RR-11(a), p. 8 of 9).

Q. HOW DID UGI PROJECT THAT R/RT HEATING CUSTOMERS WOULD USE 87.8 MCF PER YEAR?

A. The Company performed a regression analysis of actual usage, degree day, lagged heating degree days, and the weighted trend data for the period October 2003 through September 2021 (UGI Book II, Attachment SDR-RR-11(a)). The Company then used the results of the regression analysis to project the usage decline per month through the FTY, the FPFTY, and through March 2024, which is six months past the end of the FPFTY with the final result being the projected 87.8 Mcf per customer. UGI also projected its commercial usage through March 2024, but that projection did not result in any change from the year end September 2023 projection as shown on UGI Exhibit SAE 3(b). Therefore, my discussion will focus on R/RT Heating customers.

Q. DO YOU AGREE WITH THE COMPANY'S PROJECTED USAGE PER R/RT HEATING CUSTOMER?

A. No. I believe the Company has understated its projected usage per customer for R/RT heating customers.

Q. WHY HAVE YOU CONCLUDED THE COMPANY'S PROJECTED USAGE PER CUSTOMER FOR R/RT HEATING CUSTOMERS IS UNDERSTATED?

A. My disagreement with the Company's determination of average usage per customer concerns the inclusion of usage decline beyond the end of the FPFTY period used to project the average usage per R/RT heating customer in the FPFTY. The FPFTY ends September 30, 2023; however, the Company's analysis projects residential heating customer usage declines through March 2024, which is six months beyond the FPFTY.

Q. DID THE COMPANY EXPLAIN WHY IT EXTENDED THE DECLINE IN USAGE BEYOND THE END OF THE FPFTY?

A. In its response to I&E-RS-14-D, attached as I&E Ex. No. 4, Sch. 1, the Company stated that it used a "mid-period convention in order to capture the full annualized impacts related to customer conservation activities" through the September 30, 2023 end date of the FPFTY.

Q. IS THE USE OF A MID-YEAR CONVENTION APPROPRIATE?

A. No. The Company has selectively used a mid-year convention to make a projection that extends beyond the end of the FPFTY for usage decline when all other financial criteria are based on the end of the FPFTY. This inappropriately misaligns data for determination of a revenue requirement and affords the Company a greater revenue increase than is appropriate for its FPFTY claim. I explain the impact of this discrepancy further below.

Q. IS THERE ANY BASIS FOR PROJECTING USAGE BEYOND THE END OF THE FPFTY?

A. No. The Company selected September 30, 2023 as the end of the FPFTY, and there is no basis for projecting usage six months beyond the end of the FPFTY. The test year period is meant to be a snapshot look at one year of a utility's revenue requirement such that all inputs into the ratemaking equation, i.e. rate base, depreciation, revenues, expenses, taxes, are determined using the same time period. Therefore, the average usage per R/RT heating customer that is used to determine revenue should also be determined consistent with the end-of-FPFTY time period. For example, the Company based its projection of customer count as of the end of the FPFTY; therefore, it is improper to base the usage per R/RT heating customer on the projected average usage per customer six months past the end of the FPFTY as a different customer count would be applicable to that time period. The proposed mismatch in the usage per customer conflicts with all other ratemaking inputs.

Q. WILL THE USE OF "ANNUALIZED" USE PER CUSTOMER DATA BENEFIT THE COMPANY THROUGH INCREASED REVENUES?

A. Yes. If permitted to use the mid-period annualization, the Company would receive additional revenue during the FPFTY. This additional revenue would be the result of deducting the usage of R/RT heating customers that are projected to use less gas after the end of the FPFTY before these customers use less gas. For example, the Company may believe that if a R/RT heating customer replaces their furnace with a high efficiency furnace in February or March 2024, then that customer's usage should be "annualized" for the FPFTY ending September 2023. However, in this example, this R/RT heating customer will use the higher level of gas from October 1, 2023 through January or February 2024, which is 4-5 months <u>beyond</u> the end of the FPFTY. As a result, the Company will sell more gas to this customer for the prior 16-17 months and keep the incremental revenue until that customer potentially uses less gas in February or March of 2024.

Q. WILL THE CUSTOMER AND THE COMPANY EXPERIENCE LOWER SALES FROM A CUSTOMER THAT INSTALLS A HIGH EFFICIENCY HEATING SYSTEM IN FEBRUARY OR MARCH IMMEDIATELY?

A. No. Any furnace replacement in February or March occurs towards the end of the heating season. As such, the savings experienced by those R/RT heating customers would be much less than residential customers that replaced their heating system at the beginning heating season in September or October. Since customers use much less gas in the summer, the late winter/early spring furnace replacement described above lessens the impact on usage until the following heating season. Therefore, that customer (and the Company) likely would not experience any potential meaningful usage decline until the winter heating season begins in the following October. For those customers replacing their heating systems in February or March of 2023, their saving would not be experienced fully until a full year after the end of the of the FPFTY in this case.

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS CONCERNING THE COMPANY'S "ANNUALIZATION" OF POST FPFTY USAGE DECLINES?

A. The usage decline beyond the end of the FPFTY should be rejected. There is no justification for allowing the level of usage projected at the end of the FPFTY to be "annualized" by projecting out to March 2024. The inclusion of such an "annualization" will benefit the Company to the detriment of customers.

Q. WHAT AVERAGE USAGE PER R/RT CUSTOMER DO YOU RECOMMEND TO ELIMINATE THE INCLUSION OF ANY POST FPFTY DECLINE?

A. I recommend that the average usage per R/RT customer be increased by 0.1307 Mcf per customer per year (I&E Ex. No. 4, Sch. 2, line 6). This 0.1307 Mcf per customer per year was determined by subtracting the 87.9625Mcf per customer at the end of the FPFTY from the 87.8318 Mcf per customer as of March 2024 as shown on UGI Book II, Attachment SDR-RR-11(a), page 9.

Q. HOW MUCH DO GAS VOLUMES INCREASE IF THE AVERAGE USAGE PER R/RT CUSTOMER IS INCREASED BY 0.1307 PER CUSTOMER PER YEAR?

A. Gas volumes increase by 77,061 Mcf (589,601 X 0.1307). This 77,061 Mcf of gas was determined by multiplying the 0.1307 per customer per year times 589,601 R/RT heating customers shown on UGI Book III, Exhibit SAE-7(a).

Q. HOW MUCH DOES PRESENT RATE USAGE REVENUE INCREASE IF THE AVERAGE USAGE PER R/RT HEATING CUSTOMER IS INCREASED BY 0.1307 MCF PER CUSTOMER PER YEAR?

A. If my recommendation to use the FPFTY year-end usage is approved, present rate usage revenue increases by $316,752 (I&E Ex. No. 4, Sch. 2, line 6, col. D). This $316,752 of present rate R/RT revenue was determined by multiplying the 77,061 Mcf of gas described above times the present usage rate of $4.1104 per Mcf shown on UGI Book V, Exhibit E, p. 2. The result would be to increase the Company's claimed present rate revenue for residential heating customers by $316,752 from $662,174,239 to $662,490,991.

Q. IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE REVENUE BY $316,752 TO $662,490,991 SHOULD THERE BE A CORRESPONDING INCREASE IN PURCHASED GAS REVENUE AND EXPENSES?

A. Yes. Under present rates, the PGC volumes equal approximately 85.47% of total usage volumes (I&E Ex. No. 4, Sch. 2, line 11, col. A). Therefore, increasing total R/RT sales volumes by 77,061 Mcf increases the PGC by 65,862 Mcf (77,061 Mcf X 0.8547) (I&E Ex. No. 4, Sch. 2, line 10, col. B). This results in an increase in PGC revenue and expenses of $413,399 (65,862 Mcf X the $6.2767 per Mcf PGC rate) (I&E Ex. No. 4, Sch. 4, line 10, col. D).

Q. IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE REVENUE BY $541,133 TO $191,863,159 SHOULD THERE BE A CORRESPONDING INCREASE IN OTHER SURCHARGES?

A. Yes. Since the following surcharges are based upon volumes or revenue, they would each increase if the Commission accepts my recommendation to eliminate the post FPFTY usage decline. Under present rates, the Merchant Function Charge will increase by $8,971 to $6,189,251 (I&E Ex. No. 4, Sch. 2, line 14, col. D). The Gas Procurement Charge will increase by $4,347 to $2,999,100 (I&E Ex. No. 4, Sch. 2, line 17, col. D). The Universal Service Program rider will increase by $25,484 to $17,562,382 (I&E Ex. No. 4, Sch. 2, line 20, col. D). The Energy and Conservation Efficiency Rider will increase by $16,006 to $11,042,760 (I&E Ex. No. 4, Sch. 2, line 23, col. D).

Q. WHAT IS THE TOTAL INCREASE IN PRESENT RATE REVENUE IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE DISTRIBUTION VOLUME BY 77,061 MCF?

A. Present rate revenue increases by $427,964 from $662,174,239 to $662,602,203 (I&E

Ex. No. 4, Sch. 2, line 29, col. D). It should be noted that, if the Commission accepts my second adjustment, discussed below, then this $427,964 adjustment would not be added as it is already a part of the regression analysis adjustment below.

R/RT HEATING CUSTOMERS – REGRESSION ANALYSIS

Q. WHAT IS THE SECOND ADJUSTMENT YOU RECOMMEND TO THE COMPANY'S PROJECTED USAGE FOR R/RT HEATING CUSTOMERS?

A. As described above, my second recommendation addresses UGI's use of 18 years of data to project the 87.8 Mcf annual usage for the R/RT heating customers (UGI Book III, Ex. SAE-7(a)).

Q. DID THE COMPANY ADDRESS WHY IT SELECTED 18 YEARS?

A. No. UGI only stated that it selected 18 years of data because October 2003 was the earliest common data set available for the entire service territory (UGI St. No. 8, p, 10).

Q. DO YOU AGREE THAT USING ALL AVAILABLE DATA TO PERFORM THE REGRESSION ANALYSIS TO DETERMINE USAGE DECLINE IS REASONABLE?

A. No. As a rule, older usage data is less indicative of recent trends. As Ms. Epler described on page 10 of UGI Statement No. 8, the changes in usage per customer are influenced by regular appliance replacements, accelerated appliance replacements, high-efficiency appliance installations, setback thermostat installations, modifications to new and existing buildings that are designed to decrease energy consumption, and changes in consumer usage behavior due to other economic influences. It is reasonable to assume that, as UGI's service territory becomes more saturated with high-efficiency appliance installations and more buildings are modified as time goes on, the decline in residential usage per customer will have a progressively declining impact. Therefore, it is not reasonable to allow less significant older data from a time period when the service territory was not as saturated with usage reducing appliances to influence the results of the projection of future usage.

Q. WHAT TIME PERIOD DO YOU RECOMMEND FOR THE REGRESSION ANALYSIS IN THIS CASE?

A. In this case, I recommend the 15-year time period from October 2006 through September 2021 for the residential usage per customer regression analysis.

Q. WHY DO YOU RECOMMEND THE USE OF 15 YEARS TO PROJECT THE AVERAGE USAGE PER R/RT CUSTOMER FOR THE FPFTY?

A. I recommend the use of 15-years of data for several reasons. First, a fifteen-year time period is consistent with the reasons UGI described for utilizing a multi-year regression period. Second, the 15-year time period is consistent with the time period used for the Company's weather normalization adjustment. Third, the Company has supported the use of 15-year time period for its regression analysis in its previous cases. Finally, I believe that usage and temperature data older than 15 years is not representative of recent usage trends on which to base the usage projection.

Q. WHAT REASONS DID UGI PROVIDE FOR UTILIZING A MULTI-YEAR REGRESSION ANALYSIS TO DETERMINE RESIDENTIAL USE PER CUSTOMER TRENDS?

A. On page 11 of UGI Statement No. 8, Ms. Epler stated that "[t]he Company decided to use the multi-year period because it provides a larger sample set of data to smooth out short-term variations and capture the underlying long-term use per customer trends to more accurately project usage per customer during the period rates are likely to be in effect."

Q. IS THE USE OF A FIFTEEN-YEAR PERIOD IN THE MULTI-YEAR REGRESSION ANALYSIS CONSISTENT WITH THE COMPANY'S REASONS FOR USING A MULTI-YEAR REGRESSION ANALYSIS?

A. Yes. A fifteen-year period remains long enough to smooth out short-term variations and capture the underlying long-term use per customer trends while having the added benefit of not including data that is no longer representative of more recent trends, such as data before October 2006.

Q. WHAT TIME PERIOD DOES THE COMPANY USE TO DETERMINE ADJUSTMENTS FOR TEMPERATURE DATA?

A. UGI has consistently used, over the previous seven base rate cases of both UGI and its former affiliates, a 15-year period updated every five years to determine normal heating degree days (UGI St. No. 8, p. 7). While the analyses performed to determine normalized temperatures and use per customer are different types of analyses, the fact that the Company has consistently used 15-years to normalize highly variable weather data shows that the use of 15-years of data to project use per customer data is reasonable.

Q. HAS UGI SUPPORTED THE USE OF 15 YEARS OF DATA TO PERFORM ITS USE PER CUSTOMER ANALYSIS IN PREVIOUS CASES?

A. Yes. The UGI gas rate case at Docket R-2018-3006814 ("2018 Base Rate case") the Company utilized and supported using 15 years of data to project usage per customer that is used to determine sales volumes for R/RT heating customers at the end of the FPFTY.

Q. IN THE 2018 BASE RATE CASE, DID THE COMPANY STATE THAT 15 YEARS OF DATA WAS STATISTICALLY VALID TO PROJECT R/RT HEATING CUSTOMERS USAGE?

A. Yes. In the 2018 base rate case, the Company supported the use of 15 years of data stating:

> "This is the same methodology was used by the Company in the past several rate base rate cases. UGI's use of a fifteen-year period in its regression analysis is statistically valid and consistent with its use of extended, available periods of data to show long term trends in use per customer" (UGI St. No. 8-R, p. 7).
>
> "UGI Gas's 15-year regression results are strongly supported by other data from the American Gas Association ("AGA") and the US Energy Information Administration ("EIA")" (UGI St. No. 8-R, p. 9).

Q. DOES USING 15 YEARS OF DATA RATHER THAN 18 YEARS OF DATA MAKE A DIFFERENCE IN THE USAGE PER R/RT HEATING CUSTOMER?

A. Yes. Using 15 years of data, the projected average usage per R/RT customer for the FPFTY ending September 30, 2023 is approximately 90.2576 Mcf per year (I&E Ex. No. 4, Sch. 3, p. 4). This shows that when the stale data beyond the fifteen-year time period is removed, the average usage per R/RT customer increases from 87.8138 Mcf per customer per year to 90.2576 Mcf per customer per year, which is an increase of 2.4438 (90.2576 – 87.8138) Mcf per R/RT customer per year.

Q. HOW MUCH DO GAS VOLUMES INCREASE IF THE AVERAGE USAGE PER R/RT CUSTOMER IS INCREASED BY 2.4438 MCF PER CUSTOMER PER YEAR?

A. Gas volumes increase by 1,440,867 Mcf (589,601 X 2.4438). This 1,440,867Mcf of gas was determined by multiplying the 2.4438 MCF per customer per year times 589,601 R/RT heating customers shown on UGI Book III, Exhibit SAE-7(a).

Q. HOW MUCH DOES PRESENT RATE USAGE REVENUE INCREASE IF THE AVERAGE USAGE PER R/RT HEATING CUSTOMER IS INCREASED BY 2.4438 MCF PER CUSTOMER PER YEAR?

A. If my recommendation to use the FPFTY average usage is approved, present rate usage revenue increases by $5,922,539 (I&E Ex. No. 4, Sch. 4, line 6). This $5,922,539 of present rate R/RT revenue was determined by multiplying the

1,440,867 Mcf of gas described above times the present usage rate of $4.1104 per Mcf shown on UGI Book V, Exhibit E, p. 2. The result would be to increase the Company's claimed present rate revenue for residential customers by $5,922,539 from $662,174,239 to $668,096,778.

Q. IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE REVENUE BY $5,922,539 TO $668,096,778 SHOULD THERE BE A CORRESPONDING INCREASE IN PURCHASED GAS REVENUE AND EXPENSES?

A. Yes. Under present rates, the PGC volumes equal approximately 85.47% of total usage volumes (I&E Ex. No. 4, Sch. 4, line, col. A). Therefore, increasing total R/RT sales volumes by 1,440,867 Mcf increases the PGC by 1,231,480 Mcf (1,440,867 Mcf X 0.8547) (I&E Ex. No. 4, Sch. 4, line 10 col. B). This results in an increase in PGC revenue and expenses of $7,729,631 (1,231,480 Mcf X the $6.2767 per Mcf PGC rate) (I&E Ex. No. 4, Sch. 4, line 10, col. D).

Q. IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE REVENUE BY $5,922,539 TO $668,096,778 SHOULD THERE BE A CORRESPONDING INCREASE IN OTHER SURCHARGES?

A. Yes. Since the following surcharges are based upon volumes or revenue, they would each increase if the Commission accepts my recommendation to eliminate the post FPFTY usage decline. Under present rates, the Merchant Function Charge will increase by $167,733 to $6,348,013 (I&E Ex. No. 4, Sch. 4, line 14, col. 14). The Gas Procurement Charge will increase by $81,278 to $3,076,030 (I&E Ex. No. 4, Sch. Post-FPFTY, line 17, col. D). The Universal Service Program rider will increase by $118,297 to $17,655,195 (I&E Ex. No. 4, Sch. 4, line 20, col. D). The Energy and Conservation Efficiency Rider will increase by $299,268 to $11,101,118 (I&E Ex. No. 4, Sch. 4, line 23, col. D).

Q. WHAT IS THE TOTAL INCREASE IN PRESENT RATE REVENUE IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE DISTRIBUTION VOLUME BY 1,440,867 MCF?

A. Present rate revenue increases by $14,648,202 from $662,174,239 to $676,822,441 (I&E Ex. No. 4, Sch. 4, line 29, col. D).

Q. DOES YOUR RECOMMENDATION TO INCREASE USAGE PER R/RT HEATING CUSTOMER INCLUDE THE VOLUMES AND DOLLARS OF YOUR FIRST RECOMMENDATION CONCERNING POST FPFTY R/RT HEATING USAGES?

A. Yes. As I stated above, the adjustments in my second recommendation are inclusive of the adjustment I described regarding the inclusion of post FPFTY usage data. Therefore, if the Commission accepts my second recommendation and adjustments, there is no need to reflect the first adjustment of $316,752 of present rate revenue nor the $413,399 of additional purchase gas expense shown on I&E Ex. No. 4, Sch. 2, line 29 concerning post FPFTY usage declines.

<u>MISCELLANEOUS REVENUE</u>

Q. WHAT IS THE COMPANY'S CLAIM FOR MISCELLANEOUS REVENUE UNDER PRESENT RATES IN THE FPFTY?

A. The Company's claim for miscellaneous revenue under present rates in the FPFTY is $1,998,000 (UGI Book IX, Schedule E, p. 4).

Q. DID THE COMPANY PROVIDE AN UPDATE TO THIS CLAIM DURING THE PROCESS OF DISCOVERY?

A. Yes. In its response to I&E-RS-27, attached as I&E Exhibit No. 4, Schedule 5, the Company admitted that it inadvertently included the company share of off-system sales that should be reflected below the line for ratemaking purposes. The Company further indicated that it would reduce its miscellaneous revenue claim by $1,003,000 from $1,998,000 to $995,000 to correct this error.

Q. IS THE COMPANY'S PLANNED ADJUSTMENT TO ITS MISCELLANEOUS REVENUE CLAIM REASONABLE?

A. Yes. It is reasonable for the Company to correct its claim for miscellaneous revenues in its rebuttal testimony.

<u>AVERAGE BILL COMPARISON</u>

Q. DID THE COMPANY MAKE ANY CLAIMS IN ITS DIRECT TESTIMONY REGARDING THE COMPARISON OF CURRENT RESIDENTIAL RATES TO HISTORIC RESIDENTIAL RATES?

A. Yes. On page 7 of UGI Statement No. 1, the Company claimed that "the Company's average customer bills are less than they were in 2008."

Q. DID THE COMPANY PROVIDE ANY DATA TO SUPPORT ITS CLAIM THAT THE COMPANY'S AVERAGE CUSTOMER BILLS ARE LESS THAN THEY WERE IN 2008?

A. No. The Company provided no data, support, or any other form of analysis support its claim regarding its average customer bills in 2008.

Q. IS THE COMPANY'S CLAIMED COMPARISON OF RATES IN 2008 REPRESENTATIVE OF RATE INCREASES CUSTOMERS HAVE EXPERIENCED IN RECENT HISTORY?

A. No. The level of customer rates in 2008 is not representative of base rate increases customers have experienced in recent history. Specifically, UGI customers, and the customers of its former affiliates, have experienced rate increases in 2016 (UGI Utilities, Inc., Docket No. R-2015-2518438), 2017 (UGI Penn Natural Gas, Inc., Docket No. R-2016-2580030), 2019 (UGI Utilities, Inc., Docket No. R-2018-3006814), 2019 (UGI Utilities, Inc., Docket No. R-2019-3015162), and now in 2022 with the current proceeding.

Q. ARE YOU AWARE OF ANY RATE DECREASES PROPOSED BY UGI OR ITS FORMER AFFILIATES SINCE 2008?

A. No. I am not aware of any rate decreases proposed by UGI or its former affiliates since 2008.

Q. IF UGI HAS ONLY INCREASED ITS BASE RATES SINCE 2008, HOW COULD CUSTOMER RATES BE LOWER NOW THAN IN 2008?

A. Because UGI has not provided any data supporting its claim that rates are lower now than in 2008 despite the multiple increases in base rates in that same time period, it is not possible to accurately determine the cause of this anomaly. One explanation could be that UGI is including the Gas Cost Rate in its analysis.

Q. HOW HAS THE GAS COST RATE CHANGED BETWEEN 2008 AND NOW?

A. In 2008, the purchased gas rate (PGC) for UGI Utilities peaked at approximately $13.261 per Mcf. In this filing, the Company reflected a PGC rate of $6.2757 per Mcf (I&E Ex. No. 4, Sch 6, pp. 1-2). Therefore, even after more than doubling the customer charge, increasing the distribution rate, and creating numerous surcharges, the total bill of a customer is less than it was in 2008 because the PGC component of a customer's bill was so large.

Q. WILL THIS ALWAYS BE THE CASE?

A. Not necessarily. The PGC rate fluctuates and could increase in the future. Just recently the PGC rate increased from $4.4594 per MCF in June 2021 to $6.2767 today (I&E Ex.

No. 4, Sch. 7, pp. 1-2). This is an increase of $1.8173 per Mcf or 40.8%. Given this recent increase, it is certainly possible future increases could match or be greater than the 40.8%.

Q. SHOULD THE GAS COST RATE BE INCLUDED IN A COMPARISON OF HISTORIC TO CURRENT RATES IN THE CONTEXT OF A BASE RATE CASE?

A. No. Gas Cost Rates do not change as a result of a base rate case. In fact, UGI has no control over the historic or present level of the Gas Cost Rate. Therefore, it is disingenuous for UGI to claim credit for lower overall rates when the driving factor of that circumstance is entirely outside of UGI's control.

Q. WHAT DO YOU RECOMMEND REGARDING UGI'S CLAIM THAT CURRENT RATES ARE LOWER THAN RATES IN 2008?

A. I recommend that this claim be disregarded because it is unsupported and misleading for the reasons I described above.

Q. DID UGI INCLUDE ANY OTHER INACCURATE CLAIMS IN ITS FILING?

A. Yes. On page 10 of UGI Statement No. 1, Mr. Brown included a chart showing a comparison of UGI's current and proposed rates of residential heating customers of the major Pennsylvania NGDCs.

Q. DID THE COMPANY EXCLUDE A MAJOR PENNSYLVANIA GAS COMPANY IN ITS RESIDENTIAL BILL COMPARISON?

A. Yes. The Company failed to include National Fuel Gas Distribution Corporation ("NFGD"). If they had, the Company would have determined that the average bill of an NFGD customer is much lower than the average bill of a UGI customer. After the UGI rate increases, the average bill of a residential customer will be $108 per month. With this increase and including NFGD in the comparison results show that four major gas distribution companies will have lower average rates than UGI instead of just three.

Q. WHAT DO YOU RECOMMEND THE COMPANY DO IN FUTURE FILINGS?

A. I recommend that if the Company chooses to provide a comparison of its rates to other NGDCs in Pennsylvania, then the Company should include all major gas companies and compare proposed rates after the UGI increase.

<u>SCALE BACK OF RATES</u>

Q. PLEASE SUMMARIZE THE COMPANY'S PROPOSED INCREASE BY CLASS?

A. The Company proposed R/RT revenue increase by $68,115,150, N/NT revenue - increase by $14,452,827, DS revenue by, $653,949, LFD revenue by $1,531,227, XD revenue decrease by $931,834 and Interruptible revenue decrease by $1,049,187 (UGI Book V, Ex. E, p. 1).

Q. WHAT IS A SCALE BACK OF RATES?

A. If the Commission grants an increase less than the amount UGI requested, the Company's proposed rates would be reduced, or scaled back, to produce the revenue requirement allowed by the Commission.

Q. WHAT SCALE BACK METHODOLOGY DO YOU RECOMMEND FOR THE R/RT AND N/NT CLASSES?

A. I recommend that both the customer charge and usage rates be scaled back such that increase for each customer class is scaled back proportionally to the increase originally proposed by the UGI based on the cost of service study that is ultimately approved.

Q. WHY DO YOU RECOMMEND THAT CUSTOMER CHARGES BE INCLUDED IN ANY SCALE BACK?

A. There are several. First, the proposed increase in the R/RT and N/NT customer charges are larger than increases proposed for the respective usage rates. Therefore, in order to limit the increase in the customer charge applicable to zero and low usage customers, it should be included in the scale back. Second, this recommendation promotes conservation because it causes a larger portion of the customer's bill to be recovered in volumetric rates, thus giving customers more of an incentive to reduce usage. Finally, in the last UGI Electric case, the Commission determined that in spite of the higher customer cost determination in the cost of service study, the customer charges should be reduced for all customers (UGI Electric R-2017-2640058, Order entered October 25, 2018, p. 175).

Q. WHAT SCALE BACK METHODOLOGY DO YOU RECOMMEND FOR THE DS CLASS?

A. The DS customer charge was not increased under proposed rates, so it should not be included in any scale back. I recommend that the usage rates be scale back but no lower than the present North / Central division usage rate of $2.930 per Mcf.

Q. WHAT SCALE BACK METHODOLOGY DO YOU RECOMMEND FOR THE LFD CLASS?

A. The LFD customer charge was not increased under proposed rate, so it should not be included in any scale back. I recommend that the usage rates be scale back proportionally to reduce the revenue from this class.

Q. WHAT SCALE BACK METHODOLOGY DO YOU RECOMMEND FOR THE XD AND INTERRUPTIBLE CLASSES?

A. The customer charges and usage rates were not increased under proposed rate, so they should not be included in any scale back. I recommend that only the surcharges be for these competitive customers be adjusted.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

ETHAN H. CLINE

PROFESSIONAL EXPERIENCE AND EDUCATION

EXPERIENCE:

03/2009 - Present

Bureau of Investigation and Enforcement, Pennsylvania Public Utility Commission - Harrisburg, Pennsylvania

Fixed Utility Valuation Engineer – Assists in the performance of studies and analyses of the engineering-related areas including valuation, depreciation, cost of service, quality and reliability of service as they apply to fixed utilities. Assists in reviewing, comparing and performing analyses in specific areas of valuation engineering and rate structure including valuation concepts, original cost, rate base, fixed capital costs, inventory processing, excess capacity, cost of service, and rate design.

06/2008 – 09/2008

Akens Engineering, Inc. - Shiremanstown, Pennsylvania

Civil Engineer – Responsible, primarily, for assisting engineers and surveyors in the planning and design of residential development projects

10/2007 – 05/2008

J. Michael Brill and Associates - Mechanicsburg, Pennsylvania

Design Technician – Responsible, primarily, for assisting engineers in the permit application process for commercial development projects.

01/2006 – 10/2007

CABE Associates, Inc. - Dover, Delaware

Civil Engineer – Responsible, primarily, for assisting engineers in performing technical reviews of the sewer and sanitary sewer systems of Sussex County, Delaware residential development projects.

EDUCATION:

Pennsylvania State University, State College, Pennsylvania
Bachelor of Science; Major in Civil Engineering, 2005

- Attended NARUC Rate School, Clearwater, FL
- Attended Society of Depreciation Professionals Annual Conference and Training, 2017, 2018, and 2019

TESTIMONY SUBMITTED:

I have testified and/or submitted testimony in the following proceedings:

1. Clean Treatment Sewage Company, Docket No. R-2009-2121928
2. Pennsylvania Utility Company – Water Division, Docket No. R-2009-2103937
3. Pennsylvania Utility Company – Sewer Division, Docket No. R-2009-2103980
4. UGI Central Penn Gas, Inc., 1307(f) proceeding, Docket No. R-2010-2172922
5. AQUA Clarion Wastewater Operations, Docket No. R-2010-2166208
6. AQUA Claysville Wastewater Operations, Docket No. R-2010-2166210
7. Citizens' Electric Company of Lewisburg, Pa, Docket No. R-2010-2172665
8. City of Lancaster – Bureau of Water, Docket No. R-2010-2179103
9. Peoples Natural Gas Company LLC, Docket No. R-2010-2201702
10. UGI Central Penn Gas, Inc., Docket No. R-2010-2214415
11. Pennsylvania-American Water Company, Docket No. R-2011-2232243
12. Pentex Pipeline Company, Docket No. A-2011-2230314
13. Peregrine Keystone Gas Pipeline, LLC, Docket No. A-2010-2200201
14. Philadelphia Gas Works 1307(f), Docket No. R-2012-2286447
15. Peoples Natural Gas Company LLC, Docket No. R-2012-2285985
16. Equitable Gas Company, Docket Nos. R-2012-2312577, G-2012-2312597
17. City of Lancaster – Sewer Fund, Docket No. R-2012-2310366
18. Peoples TWP, LLC 1307(f), Docket No. R-2013-2341604
19. UGI Penn Natural Gas, Inc. 1307(f), Docket No. R-2013-2361763
20. UGI Central Penn Gas, Inc. 1307(f), Docket No. R-2013-2361764
21. Joint Application, Docket Nos. A-2013-2353647, A-2013-2353649, A-2013-2353651
22. City of Dubois – Bureau of Water, Docket No. R-2013-2350509
23. The Peoples Water Company, Docket No. R-2013-2360798
24. Pennsylvania American Water Company, Docket No. R-2013-2355276
25. Generic Investigation Regarding Gas-on-Gas Competition, Docket Nos. P-2011-227868, I-2012-2320323
26. Philadelphia Gas Works 1307(f), Docket No. R-2014-2404355
27. Pike County Light and Power Company (Gas), Docket No. R-2013-2397353
28. Pike County Light and Power Company (Electric), Docket No. R-2013-2397237
29. Peoples Natural Gas Company LLC 1307(f), Docket No. R-2014-2403939
30. UGI Penn Natural Gas, Inc. 1307(f), Docket No. R-2014-2420273
31. UGI Utilities, Inc. – Gas Division 1307(f), Docket No. R-2014-2420276
32. UGI Central Penn Gas, Inc. 1307(f), Docket No. R-2014-2420279
33. Emporium Water Company, Docket No. R-2014-2402324
34. Borough of Hanover – Hanover Municipal Water, Docket No. R-2014-2428304
35. Philadelphia Gas Works 1307(f), Docket No. R-2015-2465656
36. Peoples Natural Gas Company LLC 1307(f), Docket No. R-2015-2465172
37. Peoples Natural Gas Company – Equitable Division 1307(f), Docket No. R-2015-2465181
38. PPL Electric Utilities Corporation, Docket No. R-2015-2469275
39. UGI Penn Natural Gas, Inc. 1307(f), Docket No. R-2015-2480934

40. UGI Central Penn Gas, Inc. 1307(f), Docket No. R-2015-2480937
41. UGI Utilities, Inc. – Gas Division 1307(f), Docket No. R-2015-2480950
42. UGI Utilities, Inc. – Gas Division, Docket No. R-2015-2518438
43. Joint Application of Pennsylvania American Water, et al., Docket No. A-2016-2537209
44. UGI Utilities, Inc. – Gas Division 1307(f), Docket No. R-2016-2543309
45. UGI Central Penn Gas, Inc. 1307(f), Docket No. R-2016-2543311
46. City of Dubois – Company, Docket No. R-2016-2554150
47. UGI Penn Natural Gas, Inc., Docket No. R-2016-2580030
48. UGI Central Penn Gas, Inc. 1307(f), Docket No. R-2017-2602627
49. UGI Penn Natural Gas, Inc. 1307(f), Docket No. R-2017-2602633
50. UGI Utilities, Inc. – Gas Division 1307(f), Docket No. R-2017-2602638
51. Application of Pennsylvania American Water Company Acquisition of the Municipal Authority of the City of McKeesport, Docket No. A-2017-2606103
52. Pennsylvania American Water Company, Docket No. R-2017-2595853
53. Pennsylvania American Water Company Lead Line Petition, Docket No. P-2017-2606100
54. UGI Utilities, Inc. – Electric Division, Docket No. R-2017-2640058
55. Peoples Natural Gas Company, LLC – Peoples and Equitable Division 1307(f), Docket Nos. R-2018-2645278 & R-2018-3000236
56. Peoples Gas Company, LLC 1307(f), Docket No. R-2018-2645296
57. Columbia Gas of Pennsylvania, Inc., Docket No. R-2018-2647577
58. Duquesne Light Company, Docket No. R-2018-3000124
59. Suez Water Pennsylvania, Inc., Docket No. R-2018-3000834
60. Application of Pennsylvania American Water Company Acquisition of the Municipal Authority of the Township of Sadsbury, Docket No. A-2018-3002437
61. The York Water Company, Docket No. R-2018-3000006
62. Application of SUEZ Water Pennsylvania, Inc. Acquisition of the Water and Wastewater Assets of Mahoning Township, Docket Nos. A-2018-3003517 and A-2018-3003519
63. Pittsburgh Water and Sewer Authority, Docket Nos. R-2018-3002645 and R-2018-3002647
64. Joint Application of Aqua America, Inc. et al., Acquisition of Peoples Natural Gas Company LLC, et al., Docket Nos. A-2018-3006061, A-2018-3006062, and A-2018-3006063
65. Implementation of Chapter 32 of the Public Utility Code Regarding Pittsburgh Water and Sewer Authority, Docket Nos. M-2018-2640802 and M-2018-2640803
66. Philadelphia Gas Works 1307(f), Docket No. R-2019-3007636
67. People Natural Gas Company, LLC, Docket No. R-2018-3006818
68. Application of Pennsylvania American Water Company Acquisition of the Steelton Borough Authority, Docket No. A-2019-3006880
69. Application of Aqua America, Inc. et al., Acquisition of the Wastewater System Assets of the Township of Cheltenham, Docket No. A-2019-3006880
70. Philadelphia Gas Works, Docket No. R-2019-3009016
71. Wellsboro Electric Company, Docket No. R-2019-3008208

72. Valley Energy, Inc., Docket No. R-2019-3008209
73. Citizens' Electric Company of Lewisburg, Pa, Docket Non. R-2019-3008212
74. Application of Aqua America, Inc. et al., Acquisition of the Wastewater System Assets of the East Norriton Township, Docket No. A-2019-3009052
75. Peoples Natural Gas Company, LLC 1307(f), Docket No. R-2020-3017850
76. Peoples Gas Company, LLC 1307(f), Docket No. R-2020-3017846
77. Philadelphia Gas Works, Docket No. R-2020-3017206
78. Pittsburgh Water and Sewer Authority, Docket Nos. R-2020-3017951 et al.
79. Columbia Gas of Pennsylvania, Docket No. R-2020-3018835
80. Pennsylvania America Water Company, Docket Nos. R-2020-3019369 and R-2020-3019371
81. PECO Energy Company – Gas Division, Docket No. R-2020-3019829
82. PGW 1307(f), Docket No. R-2021-3023970
83. Peoples Natural Gas Company, LLC 1307(f), Docket No. R-2021-3023965
84. Peoples Gas Company, LLC 1307(f), Docket No. R-2021-3023967
85. UGI Utilities, Inc. – Electric Division, Docket No. R-2021-3023618
86. Columbia Gas of Pennsylvania, Inc., Docket No. R-2021-3024926
87. Duquesne Light Company, Docket No. R-2021-3024750
88. UGI Utilities, Inc. – Gas Division 1307(f), Docket No. R-2021-3025652
89. Pittsburgh Water and Sewer Authority, Docket Nos. R-2021-3024773 et al.
90. Application of Aqua America Wastewater, Inc. et al., Acquisition of the Wastewater System Assets of Lower Makefield Township, Docket No. A-2021-3024267
91. Aqua Pennsylvania Water, Inc. and Aqua Pennsylvania Wastewater, Inc., Docket Nos. R-2021-3027385 and R-2021-3027386
92. Application of Pennsylvania-American Water Company for Acquisition of the Wastewater Collection and Treatment System Assets of the York City Sewer Authority, Docket No. A-2021-3024681
93. City of Lancaster – Bureau of Water, Docket No. R-2021-3026682
94. Application of Aqua America Wastewater, Inc. et al., Acquisition of the Wastewater System Assets of East Whiteland Township, Docket No. A-2021-30246132

I&E Statement No. 4-SR
Witness: Ethan H. Cline

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

UGI UTILITIES, INC. – GAS DIVISION

Docket No. R-2021-3030218

Surrebuttal Testimony

of

Ethan H. Cline

Bureau of Investigation and Enforcement

Concerning:

Test Year
Present Rate Revenue
Weather Normalization Adjustment
Average Bill Comparison
Scale Back of Rates

TABLE OF CONTENTS

INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Ethan H. Cline. My business address is 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation and Enforcement (I&E) as a Fixed Utility Valuation Engineer.

Q. ARE YOU THE SAME ETHAN H. CLINE THAT SUBMITTED DIRECT TESTIMONY ON APRIL 20, 2022?

A. Yes. I submitted I&E Statement No. 4 and I&E Exhibit No. 4 on April 20, 2022.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to make corrections to my direct testimony and address the rebuttal testimony of UGI Utilities, Inc. - Gas Division ("UGI" or "Company") witnesses Christopher R. Brown at UGI Statement No. 1-R, Sherry A. Epler at UGI Statement No. 8-R, and John D. Taylor at UGI Statement No. 11-R. I will also address the rebuttal testimony of Office of

Consumer Advocate ("OCA") witness Jerome D. Mierzwa at OCA Statement No. 3R.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 4-SR contains schedules relating to my testimony.

<u>WEATHER NORMALIZATION ADJUSTMENT</u>

Q. WHAT DID YOU RECOMMEND REGARDING UGI'S PROPOSED WNA?

A. I recommended that UGI's WNA be approved on the condition that a 3% deadband is included. My recommendation maintains consistency with the Commission's previous ruling and with Columbia's existing WNA (I&E St. No. 4, p. 5).

Q. DID THE COMPANY AGREE WITH YOUR RECOMMENDATION?

A. No. The Company disagreed with my recommendation to apply a 3% deadband to the WNA (UGI St. No. 11-R, p. 3).

Q. WHAT REASON DID THE COMPANY PROVIDE FOR NOT AGREEING WITH YOUR RECOMMENDATION?

A. The Company claimed that my recommendation to include a 3% deadband is misplaced and not fully supported with evidence. First, UGI witness Taylor claimed that Commission's Order regarding Columbia Gas of Pennsylvania's ("Columbia") WNA, approving the WNA with a 3% deadband included, does not apply to UGI's proposed WNA. Second, he claimed that customer rates could not be subject to constant adjustment for normal weather variations in every billing cycle because UGI's WNA only applies to the months October through May. Third, Mr. Taylor stated that the primary intent of a WNA mechanism is to adjust for differences measured against normal weather, and he claimed that a deadband should not be included so that the WNA will be easier for customers to understand (UGI St. No. 11-R, pp. 2-3).

Q. DO YOU AGREE THAT SINCE UGI'S PROPOSED WNA IS ADJUSTED ON A MONTHLY BASIS RATHER THAN DAY-TO-DAY BASIS, THE COMMISSION'S RULING DOES NOT APPLY TO UGI'S WNA?

A. Not at all. Whether the adjustment is being made on a day-to-day basis or a monthly basis, the WNA is designed to adjust for variations in temperature and, as I stated on page 4 of I&E Statement No. 4, the Commission was clear in stating that there is no need to reconcile temperature variations that are part of normal business. Specifically, in the same Order (Docket No. R-2020-3018835, Order entered February 19, 2021, pp. 264-265), the Commission determined that the deadband was a reasonable provision because it allows for a range of what is considered "normal" weather in which the Company's Commission-approved rates would be applied without adjustment. In my opinion, this statement applies regardless of whether an adjustment is applied on a daily or monthly basis.

Q. PLEASE RESPOND TO THE COMPANY'S POSITION THAT CUSTOMERS CANNOT BE SUBJECT TO CONSTANT ADJUSTMENT BECAUSE THE PROPOSED WNA MECHANISM ONLY ADJUSTS BILLS ACROSS THE BILLING CYCLE DURING THE MONTHS OF OCTOBER THROUGH MAY.

A. Mr. Taylor appears to be playing semantics with this position. Natural gas heating customers, who would be subject to a WNA, would not have adjustments occur outside of the heating season of October through May because customers generally don't heat their homes or businesses outside of those months. As described in my direct testimony, without a deadband, customers would be subject to constant adjustment for normal weather variations is to illustrate that temperature naturally has variations and that "normal" weather should be a range rather than a single temperature point. As discussed above, the Commission determined a 3% deadband was reasonable in its Columbia Order.

Q. DO YOU AGREE THAT A DEADBAND ADDS AN ADDITIONAL LEVEL OF COMPLEXITY THAT CUSTOMERS WOULD NOT UNDERSTAND?

A. No. As has been established, both Columbia and Philadelphia Gas Works have established a WNA with a deadband and I am unaware of any problems regarding customers being able to understand their billing as a result of the WNA with a deadband. Additionally, Mr. Taylor did not provide any evidence that customers who pay bills under the deadbanded WNA have had problems understanding their bills. Therefore, this claim should be disregarded.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. For the reasons discussed above, I continue to recommend the proposed WNA be approved on the condition that a 3% deadband is included.

<u>PRESENT RATE REVENUE</u>

Q. WHAT AMOUNT PRESENT RATE REVENUE IS THE COMPANY REFLECTING FOR THE FPFTY ENDING SEPTEMBER 30, 2023?

A. UGI is reflecting approximately $1,062,721,000 of present rate revenue including gas costs, surcharges, and other operating revenues (UGI Ex. A FPFTY Rebuttal, Sch. D-1).

Q. DO YOU AGREE WITH THE CLAIMED $1,062,721,000 OF PRESENT RATE REVENUE FOR THE FPFTY?

A. No. As described below, I have determined that UGI has understated its present rate revenue in the FPFTY and I am recommending a revised increase of approximately $13,660,000 from $1,062,721,000 to $1,076,381,000. My recommendation is based on two adjustments to UGI's claimed $662,174,239 of present rate revenue (not including gas costs) in the FPFTY and a correction to my 15-year regression analysis as discussed below.

Q. WHAT IS THE BASIS OF YOUR TWO ADJUSTMENTS TO UGI'S PRESENT RATE REVENUE CLAIM IN THE FPFTY?

A. First, I will address the rate class R/RT heating customer usage decline reflected in the FPFTY that was projected beyond the end of the FPFTY. Second, I will address the overall regression analysis performed by UGI to project usage per R/RT heating customer to determine sales volumes.

<u>R/RT HEATING CUSTOMER USAGE DECLINE</u>

Q. DID YOU AGREE WITH THE CLAIMED $1,062,724,000 OF PRESENT RATE REVENUE FOR THE FPFTY IN YOUR DIRECT TESTIMONY?

A. No. As described in my direct testimony and below, I recommended two adjustments to UGI's claimed $1,062,724,000 of present rate revenue (I&E St. No. 4, pp. 6-22).

<u>R/RT HEATING CUSTOMER POST FPFTY USAGE DECLINE</u>

Q. HOW DID THE COMPANY PROJECT USAGE DECLINE IN THIS CASE?

A. The Company projected the usage per customer decline six months beyond the end of the FPFTY test year in UGI Book II, Attachment SDR-RR-11(a) to justify a lower average usage per residential heating customer during the FPFTY in the proof of revenue.

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS CONCERNING THE COMPANY'S "ANNUALIZATION" OF POST FPFTY USAGE DECLINES?

A. I recommended that the usage decline beyond the end of the FPFTY be rejected. There is no justification for allowing the level of usage projected at the end of the FPFTY to be "annualized" by projecting usage out to March 2024. The inclusion of such an "annualization" will benefit the Company to the detriment of customers (I&E St. No. 4, p. 12).

Q. WHAT AVERAGE USAGE PER R/RT CUSTOMER DID YOU RECOMMEND SO THAT THE POST FPFTY DECLINE IS ELIMINATED?

A. I recommended that the average usage per R/RT customer be increased by 0.1307 Mcf per customer per year (I&E Ex. No. 4, Sch. 2, line 5). This 0.1307 Mcf per customer per year was determined by subtracting the 87.9625 Mcf per customer at the end of the FPFTY from the 87.8318 Mcf per customer as of March 2024 as shown on UGI Book II, Attachment SDR-RR-11(a), page 9. (I&E St. No. 4, p. 12).

Q. HOW MUCH DID GAS VOLUMES INCREASE IF THE AVERAGE USAGE PER R/RT CUSTOMER IS INCREASED BY 0.1307 PER CUSTOMER PER YEAR?

A. As described in I&E St. No. 4, pp. 13, gas volumes increase by 77,061 Mcf (589,601 x 0.1307). This 142,926 Mcf of gas was determined by multiplying the 0.1307 per customer per year times 589,601 R/RT heating customers shown on UGI Book III, Exhibit SAE-7(a).

Q. WHAT INCREASE IN PRESENT RATE USAGE REVENUE DID YOU RECOMMEND IF THE AVERAGE USAGE PER R/RT HEATING CUSTOMER IS INCREASED BY 0.1307 MCF PER CUSTOMER PER YEAR?

A. As described in I&E St. No. 4, p. 13, present rate usage revenue increases by $316,752 (I&E Ex. No. 4, Sch. 2, line 6).

Q. IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO REJECT THE POST FPFTY USAGE DECLINE, DID YOU ALSO RECOMMEND COMMENSURATE ADJUSTMENTS TO GAS COSTS AND SURCHARGES?

A. Yes. These adjustments are described on I&E St. No. 4, pp. 13-14.

Q. WHAT IS THE TOTAL INCREASE IN PRESENT RATE REVENUE IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE DISTRIBUTION VOLUME BY 77,061 MCF?

A. As stated on I&E St. No. 4, pp. 14-15, present rate revenue increases $427,964 (I&E Ex. No. 4, Sch. 2, line 29).

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION TO REMOVE THE PROJECTED POST-FPFTY USAGE DECLINE FOR THE R/RT HEATING CLASS?

A. Yes. The Company believes that my recommendation should be rejected (UGI St. No. 8-R, p. 4-5).

Q. WHAT REASONS DOES THE COMPANY PROVIDE TO REJECT YOUR RECOMMENDATION TO REMOVE THE PROJECTED POST-FPFTY DECLINE?

A. The Company provided several reasons to reject my recommendation. First, the Company claims that its analysis does not incorporate post-FPFTY usage decline. Second, the Company argues that it is proper to incorporate post-FPFTY to annualize usage for the FPFTY using the annual period ending March 30, 2024. Third, the Company claims that its methodology incorporates usage reductions already in place at the end of the FPFTY and annualizes that impact. Finally, the

Company provided what it believes to be justification for projecting usage decline six months beyond the end of the FPFTY by attempting to capture customer heating equipment upgrades that occur in the FPFTY but prior to the next heating season.

Q. IS THE COMPANY'S TESTIMONY IN UGI STATEMENT NO. 8-R CONTRADICTORY REGARDING POST-FPFTY USAGE DECLINE?

A. Yes. On UGI Statement No. 8-R, page 3, lines 11-12, the Company indicates that it does not incorporate post-FPFTY usage decline; however, on line 21 of the same page, the Company stated that it "must project monthly use through the end of March 31, 2024 to develop an annualized value for us per customer." This is the exact opposite of the Company's statement that it does not incorporate post-FPFTY usage decline.

Q. IS THE COMPANY'S CLAIM THAT POST-FPFTY DECLINES SHOULD BE INCLUDED AS A NORMAL FPFTY RATEMAKING ADJUSTMENT VALID?

A. No. Post-FPFTY usage declines occur after the end of the FPFTY, not during the FPFTY; therefore, there is no sound ratemaking reason that data outside the test year data should be considered in a base rate proceeding.

Q. IS THE COMPANY'S CLAIM THAT REACHING BEYOND THE END OF THE FPFTY IS NECESSARY TO ANNUALIZE THE USAGE FOR CUSTOMERS AS OF SEPTEMBER 30, 2023 VALID?

A. No. The Company's claim is baseless. The Company's own analysis contradicts this unfounded claim. As shown on UGI Book II, Attachment SDR-RR-11(a), each monthly usage projection is a rolling average of the previous twelve months. Therefore, the Company's usage projection of 87.9625 Mcf per R/RT heating customer per year as of September 30, 2023 already includes the usage declines for each previous month of the FPFTY, including the FPFTY winter heating season. As such, the projected 87.8138 Mcf per R/RT heating customer as of March 31, 2024 should not be used to establish rates in this proceeding.

Q. DOES THIS CLEARLY SHOW HOW THE COMPANY'S EXAMPLE UNDERSTATES REVENUE IN THE FPFTY?

A. Yes. As shown on UGI Book II, Attachment SDR-RR-11(a), the Company's own usage projections in the FPFTY range from 88.1221 Mcf to 87.9625 Mcf per R/RT heating customer per year, which on average would be approximately 88.04 (88.1221 + 87.9625)/ 2)) Mcf in the FPFTY. Yet the Company erroneously believes that the usage per customer in the FPFTY should be annualized all the way down to 87.8138 Mcf per R/RT heating customer per year. If the Company's proposal is accepted, it will be permitted to base rates on a projected usage that is lower than its own projected usage and allow UGI to collect a revenue windfall.

Q. DOES THE EXAMPLE PROVIDED BY THE COMPANY IN WHICH A CUSTOMER INSTALLS A NEW FURNACE ACTUALLY SUPPORT YOUR RECOMMENDATION INSTEAD?

A. Yes, it does. The Company provided an example in which a customer installs a new furnace prior to the end of the FPFTY that are in place but not yet measured via observed and billed usage (UGI St. No. 8-R, p. 4). In this example, the Company believes the customer's usage <u>must</u> be annualized to capture the usage after September 30, 2023, beyond the end of the FPFTY. Under this scenario, the Company would bill that customer for 87.8138 Mcf of usage during the twelve months of the FPFTY. Thus, charging customers rates that anticipate expected post-FPFTY heating season conservation measures has the effect of penalizing customers for conservation efforts before those efforts are even undertaken.

Q. DID THE COMPANY PROVIDE ANY SUPPORT FOR ITS POSITION THAT WOULD CAUSE YOU TO CHANGE YOUR RECOMMENDATION?

A. No. I continue to believe that including post-FPFTY usage projections to determine use per customer is improper. Therefore, I continue to recommend that the inclusion of post-FPFTY projections in the usage per customer analysis be denied.

Q. DID THE COMPANY PROVIDE ANY VALID REASONS FOR INCLUDING POST FPFTY USAGE DECLINES WHEN DETERMINING THE USAGE AT THE END OF THE FPFTY?

A. No. Therefore, present rate revenue should be increased $427,964 from $662,174,239 to $662,602,203 (I&E St No. 4, p. 14).

<u>R/RT HEATING CUSTOMERS – REGRESSION ANALYSIS</u>

Q. WHAT IS THE SECOND ADJUSTMENT YOU RECOMMENDED TO THE COMPANY'S PROJECTED USAGE FOR R/RT HEATING CUSTOMERS?

A. As described on pages 14-22 of I&E Statement No. 4, my second recommendation addresses the use of 18 years of data to project usage per customer that is used to project the 87.8 Mcf per year of usage for the R/RT heating customer claimed by the Company.

Q. WHAT TIME PERIOD OF DATA DID YOU RECOMMEND IN THIS CASE TO PROJECT THE AVERAGE USAGE PER R/RT CUSTOMER?

A. I recommended the most recent 15-years of data as proposed in UGI's previous base rate case to project the average use per R/RT heating customer in this case. (I&E St. No. 4, p. 16).

Q. WHY DID YOU RECOMMEND THE USE OF 15 YEARS TO PROJECT THE AVERAGE USAGE PER R/RT CUSTOMER FOR THE FPFTY?

A. I recommended the use of 15-years of data for several reasons. First, a fifteen-year time period is consistent with the reasons UGI described for utilizing a multi-year regression period. Second, the 15-year time period is consistent with the time period used for the Company's weather normalization adjustment. Third, the Company has supported the use of 15-year time period for its regression analysis in its previous cases. Finally, I stated that I believed that usage and temperature data older than 15 years is not representative of recent usage trends on which to base the usage projection (I&E St. No. 4. pp. 16).

Q. WHAT IS THE TOTAL INCREASE IN PRESENT RATE REVENUE YOU RECOMMENDED AS A RESULT OF YOUR 15-YEAR REGRESSION ANALYSIS, INCLUDING ASSOCAITED CHANGES TO PURHCASED GAS AND OTHER SURCHARGES

A. I recommended present rate revenue increase by $14,648,202 from $662,174,239 to $676,822,441 (I&E Ex. No. 4, p. 21).

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION TO USE A 15-YEAR PERIOD TO PROJECT R/RT HEATING CUSTOMER USAGE?

A. Yes. The Company stated that it does not agree with my proposed adjustment concerning the Company's regression analysis (UGI St. No. 8-R, pp. 5-6).

Q. DID THE COMPANY AGREE THAT YOUR ANALYSIS IS CONSISTENT WITH THE COMPANY'S REASONS FOR UTILIZING A MULTI-PERIOD REGRESSION ANALYSIS?

A. Yes. However, the Company did not agree with the rest of my rationale for using a 15-year regression period. (UGI St. No. 8-R, p. 6).

Q. WHAT RATIONALE DID THE COMPANY PROVIDE FOR REJECTING YOUR RECOMMENDATION TO UTILIZE 15 YEARS OF DATA TO PROJECT R/RT HEATING CUSTOMER USAGE?

A. First, the Company opposed the comparison of the time periods to determine weather normalization and use per customer (UGI St. No. 8-R, p. 6). Second, the Company disagreed with my assessment that the Company supported the use of 15-years for its regression analysis in its previous cases. Third, the Company stated that it is not aware of a regulatory "stale" standard that is appropriate for ratemaking and thus does not agree with my assertion that the fifteen-year period does not include data that is no longer representative of more recent trends UGI St. No. 8-R, p. 9).

Q. WHY DID THE COMPANY OPPOSE THE COMPARISON OF WEATHER NORMALIZATION AND USE PER CUSTOMER?

A. The Company opposed the comparison of weather normalization and use per customer because "the two factors require independent assessment which can then be utilized to support proper ratemaking design, claims and conclusion." (UGI St. No. 8-R, p. 7).

Q. DID YOU ACKNOWLEDGE THAT WEATHER NORMALIZATION AND USE PER CUSTOMER ARE DIFFERENT TYPES OF ANALYSES IN YOUR DIRECT TESTIMONY?

A. Yes. I stated on page 17 of I&E Statement No. 4 that the analyses performed to determine normalized temperatures and use per customer are different types of analyses.

Q. DOES ACKNOWLEDGING THAT WEATHER NORMALIZATION AND USE PER CUSTOMER ARE SEPARATE FACTORS NEGATE YOUR COMPARISON OF THE ASSESSMENT TIME PERIODS BETWEEN THE TWO FACTORS?

A. No. This acknowledgement does not erase the fact that the two factors are similar in that they each are based on highly variable sets of data analyzed over an extended period of time. That the Company uses a fifteen-year time period, rather than longer periods of 20- or 30-years, to normalize data as highly variable as weather shows that it is not necessary to use "all available data" to provide an accurate estimation of use per customer as the Company suggests.

Q. WHY DID THE COMPANY DISAGREE WITH YOUR ASSESSMENT THAT THE COMPANY SUPPORTED THE USE OF 15-YEARS FOR ITS REGRESSION ANALYSIS IN ITS PREVIOUS CASES?

A. The Company referred to the two cases following the 2019 UGI Gas merger case in which it used "all available common years" which amounted to 16 and 18 years of data. It further stated that this approach is used in an effort to smooth out transient aberrations that may occur year-to-year for various reasons and best capture long-term trends influencing use per customer. (UGI St. No. 8-R, pp. 7-8).

Q. DID THE COMPANY PROVIDE ANY EXPLANATION WHY CONTINUALLY ADDING YEARS TO ITS ANALYSIS IN SUBSEQUENT BASE RATE CASES IS NEEDED TO SMOOTH OUT "TRANSIENT YEAR-TO-YEAR ABERRATIONS AND CAPTURE LONG-TERM TRENDS"?

A. No. In its 2019 case, the use of 15-years was a sufficient data set to smooth out the transient year-to-year aberrations and capture long-term trends. The Company failed to provide any explanation or rationale for why the existence of additional data suddenly means that 15-years is no longer enough data to smooth out any aberrations or capture long-term trends.

Q. IS IT REASONABLE TO UTILIZE ALL AVAILABLE DATA TO PROJECT THE AVERAGE USAGE PER R/RT HEATING CUSTOMERS?

A. No. As I stated above, in the 2019 base rate case, the Company believed that using 15 years of data was "statistically valid." As described above, now the Company believed that using 16 years of data is "statistically valid." Furthermore, as I stated on page 18 of I&E Statement No. 4, the Company, in its 2019 case, also supported utilizing 15 years of data because the use of 15 years of data is recommended by the American Gas Association and the US Energy Information Association.

Q. DID THE COMPANY PROVIDE ANY SUPPORT FROM THE AMERICAN GAS (AGA) ASSOCIATION OR THE US ENERGY INFORMATION ASSOCIATION (US-EIA) TO SUPPORT USING 18 YEARS OF DATA?

A. No. The Company made no mention of the AGA or the US-EIA to support its current proposed used of 18-years in its direct or rebuttal testimony.

Q. DID THE COMPANY EXPLAIN WHY CONTINUALLY ADDING USAGE DATA TO ITS ANALYSIS IN EACH SUBSEQUENT BASE RATE CASE IS REASONABLE?

A. Yes. The Company stated that it is not aware of a regulatory "stale" standard that is appropriate for ratemaking and thus does not agree with my assertion that data older than 15-years is not representative of recent usage trends and is therefore stale. (UGI St. No. 8-R, p. 9).

Q. IS THE COMPANY'S REFERENCE TO A REGULATORY "STALE" STANDARD DISINGENUOUS?

A. Yes. While there is no written standard regarding the concept of stale data, in practice, the idea of not using data because it is stale is common in base rate cases. The Company does not use "all data available" when determining ratemaking items including, but not limited to, materials and supplies (determined using 13-months of data), forfeited discounts (determined using a three-year average of data), and weather normalization (determined using 15-years of data), because the data outside of the respective time periods is not indicative of current trends. As an example, if there were data from 30 years ago, I would assume that the Company would consider all of that data valid and useful for usage trend analysis.[1] This is simply inaccurate as 30 years of data would encompass large gains in efficiency developments for appliances and home heating technology and even changes in the heating quality of the gas with the introduction of shale gas inside that time period. These type of large magnitude changes impacting gas usage simply cannot be expected to recur going forward, so including the many years of

[1] This assumption is supported by the Company's reference to UGI Gas (former South Rate District) 2016 base rate case in which the Rate R/RT residential use per customer regression was based on a period of nearly 21 years of data. The use of 21 years of data was also opposed by I&E.

data that reduced customer usage due to significant changes should ultimately drop out of the trend analysis to assure that usage projection declines are not overstated going forward. Therefore, there is no justification for adding data simply because its available.

Q. WHAT DID THE COMPANY STATE REGARDING THE INTENT OF YOUR ANALYSIS?

A. On page 9 of UGI Statement No. 8-R, the Company stated that my approach "appears only intended to establish a result which would increase Rate R/RT residential heating use per customer and should be rejected." It supported this accusation by claiming that the data I referred to as stale is related to a downward trend in usage and that the several trends that were upwards in magnitude (2010-2011, 2012-2013, and 2016-2018, specifically) were not excluded.

Q. PLEASE RESPOND.

A. The Company's accusation is false and without merit. While the Company is correct that I could have recommended a five-year period to determine use per customer, I did not do this because, as I stated on I&E Statement No. 4, p. 17, "[a] fifteen-year period remains long enough to smooth out short-term variations and capture the underlying long-term use per customer trends while having the added benefit of not including data that is no longer representative of more recent trends." This statement is consistent with the Company's stated goal of "transient year-to-year aberrations and capture long-term trends" as discussed above. The Company's reference to upward trends in usage in 2010-2011, 2012-2013, and 2016-2018 are also false because, as UGI files additional rate cases over the years, those time periods will eventually no longer be included as they fall out of the data range that should be considered recent. It appears that the Company came to this conclusion and calls into question whether the reason the Company wants to include "all available data" is to smooth out aberrations, as it claims, or to ensure the higher usage in October 2003 is always included so that the use per customer trend decreases more and, thus, increases customer rates.

Q. WHAT DID THE COMPANY STATE REGARDING I&E'S USE PER CUSTOMER RECOMMENDATIONS IN PRIOR CASES?

A. Ms. Epler claimed that I&E's methodology for determining use per customer has varied in UGI Gas's most recent cases, claiming that I used a 5-year and 1-month period in the current case, a 15-year period in the 2020 UGI base rate case, and a 10-year regression period during the Company's 2019 base rate case. (UGI St. No. 8-R, p. 12).

Q. IS THE COMPANY'S DESCRIPTION OF I&E'S PRIOR RECOMMENDATIONS ACCURATE?

A. No. As I discuss below, the 5-year and 1-month analysis was provided in error and the correct 15-year analysis is described below. Though I was not the witness for the 2019 base rate case, I am aware that I&E proposed using a 10-year regression period in that case.

Q. IS THE COMPANY'S CRITICISM OF I&E'S PRIOR RECOMMENDATIONS VALID?

A. No. The time periods selected by I&E were based upon the specific circumstances of each case.

Q. DID THE COMPANY INTRODUCE ANY OTHER ISSUES WITH YOUR ANALYSIS?

A. Yes. On page 10 of UGI Statement No. 8-R, UGI witness Epler correctly indicated that the support for my analysis was based upon 61 months (or 5 years and one month) instead of 180 months (or 15-years) as I described in my direct testimony and above. Pages 11-12 of UGI Statement No. 8-R were dedicated to a discussion of the statistical analysis and P-values of the previous, incorrect, analysis. My intention in Direct Testimony was to use 15-years; however, UGI is correct that I utilized the incorrect time period in my analysis. As such, I would like to correct my recommendation so that it is based on a 15-year data set instead of 5-years and 1 month as I discuss below. For ease of reference, I will discuss this adjustment based on the Company's recommendation.

Q. WHAT IS THE UPDATED USAGE PER R/RT HEATING CUSTOMER THAT YOU ARE RECOMMENDING?

A. I recommend a projected average use per customer for the FPFTY ending September 30, 2023 of approximately 90.0968 Mcf per year (I&E Ex. No. 4-SR, Sch. 1, p. 4). As shown on I&E Exhibit No. 4-SR, Schedule 1, this use per customer is based on a regression analysis of 180 months, or 15-years. The regression results are shown on I&E Exhibit No. 4-SR, Schedule 2. This results in an increase of 2.283 (90.0968-87.8138) Mcf per R/RT customer per year.

Q. HOW MUCH DO GAS VOLUMES INCREASE IF THE AVERAGE USAGE PER R/RT CUSTOMER IS INCREASED BY 2.283 MCF PER CUSTOMER PER YEAR?

A. Gas volumes increase by 1,346,059 Mcf (589,601 X 2.283). This 1,346,059 Mcf of gas was determined by multiplying the 2.283 Mcf per customer per year times 589,601 R/RT heating customers shown on UGI Book III, Exhibit SAE-7(a).

Q. HOW MUCH DOES PRESENT RATE USAGE REVENUE INCREASE IF THE AVERAGE USAGE PER R/RT HEATING CUSTOMER IS INCREASED BY 2.283 MCF PER CUSTOMER PER YEAR?

A. If my recommendation to use the FPFTY average usage is approved, present rate usage revenue increases by $5,532,841 (I&E Ex. No. 4-SR, Sch. 3, line 6). This $5,532,841 of present rate R/RT revenue was determined by multiplying the

1,346,059 Mcf of gas described above times the present usage rate of $4.1104 per Mcf shown on UGI Book V, Exhibit E, p. 2. The result would be to increase the Company's claimed present rate revenue for residential customers by $5,532,841 from $662,174,239 to $667,707,080.

Q. IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE REVENUE BY $5,532,841 TO $667,707,080 SHOULD THERE BE A CORRESPONDING INCREASE IN PURCHASED GAS REVENUE AND EXPENSES?

A. Yes. Under present rates, the PGC volumes equal approximately 85.47% of total usage volumes (I&E Ex. No. 4-SR, Sch. 3, line 11, col. A). Therefore, increasing total R/RT sales volumes by 1,346,059 Mcf increases the PGC by 1,150,450 Mcf (1,346,059 Mcf X 0.8547) (I&E Ex. No. 4-SR, Sch. 3, line 10 col. B). This results in an increase in PGC revenue and expenses of $7,721,028 (1,150,450 Mcf X the $6.2767 per Mcf PGC rate) (I&E Ex. No. 4-SR, Sch. 3, line 10, col. D).

Q. IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE REVENUE BY $5,532,841 TO $667,707,080 SHOULD THERE BE A CORRESPONDING INCREASE IN OTHER SURCHARGES?

A. Yes. Since the following surcharges are based upon volumes or revenue, they would each increase if the Commission accepts my recommendation to eliminate the post FPFTY usage decline and 15-year regression analysis. Under present rates, the Merchant Function Charge will increase by $156,696 to $6,348,013 (I&E Ex. No. 4-SR, Sch. 3, line 14, col. 14). The Gas Procurement Charge will increase by $75,930 to $3,070,682 (I&E Ex. No. 4-SR, Sch. 3, line 17, col. D). The Universal Service Program rider will increase by $86,979 to $17,623,877 (I&E Ex. No. 4-SR, Sch. 3, line 20, col. D). The Energy and Conservation Efficiency Rider will increase by $279,576 to $11,081,427 (I&E Ex. No. 4-SR, Sch. 3, line 23, col. D).

Q. DOES YOUR RECOMMENDATION TO INCREASE USAGE PER R/RT HEATING CUSTOMER INCLUDE THE VOLUMES AND DOLLARS OF YOUR FIRST RECOMMENDATION CONCERNING POST FPFTY R/RT HEATING USAGES?

A. Yes. As I stated on page 21 of I&E Statement No. 4, the adjustments in my second recommendation are inclusive of the adjustment I described regarding the inclusion of post FPFTY usage data.

Q. DID YOUR UPDATED ANALYSIS PRODUCE A NEW SET OF P-VALUES?

A. Yes. As shown on I&E Exhibit No. 4-SR, Schedule 2, all of the P-values, except for X Variable 3 are below the 0.05 threshold.

Q. ACCORDING TO THE COMPANY, IS YOUR ANALYSIS "STATISTICALLY SIGNIFICANT"?

A. No. However, "statistical significance" should not be the only factor in determining whether a use per customer adjustment is reasonable. As I stated above, conditions that determine use per customer change over time and should no longer be considered representative of current trends. A 50-year regression analysis would likely produce a result that is "statistically significant," but it is not reasonable to assume that data and usage trends from the 1960's, 1970's, and 1980's is indicative of customer usage patterns in 2022 and 2023.

Q. WHAT IS THE TOTAL INCREASE IN PRESENT RATE REVENUE IF THE COMMISSION ACCEPTS YOUR RECOMMENDATION TO INCREASE R/RT PRESENT USAGE RATE DISTRIBUTION VOLUME BY 1,346,059 MCF?

A. Present rate revenue increases by $13,659,652 from $662,174,239 to $675,833,892 (I&E Ex. No. 4-SR, Sch. 3, line 29, col. D). This represents a decrease of $988,550 from the $676,822,441 present rate revenue recommendation shown on I&E Statement No. 4, p. 21 to $675,833,892. As stated above, including gas costs, this represents a revised increase of approximately $13,660,000 from $1,062,721,000 to $1,076,381,000.

AVERAGE BILL COMPARISON

Q. DID THE COMPANY MAKE ANY CLAIMS IN ITS DIRECT TESTIMONY REGARDING THE COMPARISON OF CURRENT RESIDENTIAL RATES TO HISTORIC RESIDENTIAL RATES?

A. Yes. On page 7 of UGI Statement No. 1, the Company claimed that "the Company's average customer bills are less than they were in 2008."

Q. IS THIS ARGUMENT PERSUASIVE?

A. No. As I stated in my Direct Testimony, his claim should be disregarded because it is unsupported and misleading because the comparison is driven largely by the Gas Cost Rate, which is outside of UGI's control (I&E St. No. 4, pp. 24-25).

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. The Company disagreed that the Gas Cost Rate should not be considered in the comparison of average bills in the context of a base rate case. The Company also disagreed with my statement that UGI has no control over the gas costs paid by UGI customers (UGI St. No. 1-R, pp. 14-15).

Q. WHY DOES UGI BELIEVE GAS COSTS SHOULD BE INCLUDED IN THE COMPARISON OF AVERAGE BILLS?

A. UGI witness Brown stated that the average bill comparison was focused on customer affordability, and, from that perspective, it is not logical to do a partial bill comparison because that is not how customers experience a gas bill. He further stated that this analysis shows a "data point showing that the customer's bill as a result of this case will still be within the range of their historic experience." (UGI St. No. 1-R, p. 14).

Q. DO YOU AGREE WITH THE STATEMENT THAT THE CUSTOMER'S BILL AS A RESULT OF THIS CASE WILL STILL BE WITHIN THE RANGE OF THE CUSTOMER'S HISTORIC EXPERIENCE?

A. No. This statement will only be accurate if the cost of gas does not increase, and gas costs to customers have increased substantially over just the past year. Furthermore, cherry picking the year 2008 when gas costs were at an all-time high to indicate cost stability is not how a consumer evaluates their month-to-month costs as monthly expenses from 14 years ago would be substantially different and incomparable to current costs and income. It would be illogical to assume that UGI bases its current budgets and cost expectations on conditions 14 years in the past, and it is equally illogical to do so and make this comparison on the utility customer's basis.

Q. HOW DOES MR. BROWN CLAIM THAT UGI IS ABLE TO CONTROL THE COST OF GAS?

A. On page 15 of UGI Statement No. 1-R, Mr. Brown lists a number of methods that UGI uses to control the cost of gas, none of which are able to be assessed or adjusted in the course of a base rate case. In fact, on March 1, 2021, the UGI gas rate was $4.2426 per Mcf, and as of March 1, 2022, the UGI gas rate is $6.2767 per Mcf, an increase of 47.9% in one year ($6.2767-$4.2426/$4.2426), which is hardly indicative of controlled gas costs.

Q. DO YOU AGREE WITH THE COMPANY THAT IT TAKES STEPS TO REDUCE GAS COSTS FOR CUSTOMERS?

A. Yes, but that is not the same thing as having control over the final cost of gas and the total cost of gas on the customer's bill. It should also be noted that the Company also takes steps to increase gas costs, such as including the cost of LNG and additional cost of capacity to increase supplies and reliably.

Q. DO THE METHODS OF AFFECTING THE COST OF GAS IN THE 1307(F) PURCHASED GAS COST FILING LISTED BY MR. BROWN GIVE UGI COMPLETE CONTROL OVER THE COST OF GAS?

A. No. The despite UGI's methods to affect it, the cost of gas is still controlled by the prices set by the natural gas suppliers, the natural gas market, and the need for capacity to deliver the gas to UGI on peak days which are not under the control of the Company.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?

A. No. Providing customers an average bill comparison in the context of a base rate case that includes the cost of gas without mentioning the cost of gas and its effects on the average bill is misleading and I continue to recommend it be disregarded.

SCALE BACK OF RATES

Q. WHAT SCALE BACK METHODOLOGY DID YOU RECOMMEND FOR THE R/RT AND N/NT CLASSES?

A. I recommended that both the customer charge and usage rates be scaled back such that increase for each customer class is scaled back proportionally to the increase originally proposed by UGI based on the cost of service study that is ultimately approved.

Q. WHAT SCALE BACK METHODOLOGY DID YOU RECOMMEND FOR THE DS CLASS?

A. The DS customer charge was not increased under proposed rates, so it should not be included in any scale back. I recommended that the usage rates be scaled back but no lower than the present North / Central division usage rate of $2.930 per Mcf.

Q. WHAT SCALE BACK METHODOLOGY DID YOU RECOMMEND FOR THE LFD CLASS?

A. The LFD customer charge was not increased under proposed rate, so it should not be included in any scale back. I recommended that the usage rates be scaled back proportionally to reduce the revenue from this class.

Q. WHAT SCALE BACK METHODOLOGY DID YOU RECOMMEND FOR THE XD AND INTERRUPTIBLE CLASSES?

A. The customer charges and usage rates were not increased under proposed rate, so they should not be included in any scale back. I recommended that only the surcharges be for these competitive customers be adjusted.

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATIONS?

A. Not directly. However, UGI witness Epler, on page 27 of UGI Statement No. 8-R, stated that the increases by classes as proposed by the Company should be adjusted proportionate across all classes and that the scale back should only apply to the distribution charge portion of the Company's proposed rates, in contradiction of my recommendation to also scale back the customer charge, because it is supported by the customer cost analysis.

Q. DO YOU AGREE WITH THE COMPANY'S RECOMMENDATION?

A. No. As I stated in direct testimony and above, the customer charge should be included in the scale back of rates. Reducing the customer charge despite the support is consistent with Commission precedent in the UGI Utilities, Inc. – Electric base rate case at Docket No. R-2017-2640058 (I&E St. No. 4, pp.27-28).

The Company provided no evidence or rationale provided in this case for reversing the Commission's prior decision concerning customer charges in that case.

Q. DID ANY OTHER PARTIES ADDRESS YOUR SCALE BACK RECOMMENDATION?

A. Yes. OCA witness Mierzwa opposed my recommendation because it is based on the Company's cost of service study which used the Average and Excess methodology as opposed to the cost of service study he proposed which employs the Peak and Average methodology (OCA St. No. 2R, p. 3).

Q. DO YOU OPPOSE THE OCA'S RECOMMENDED PEAK AND AVERAGE COST OF SERVICE STUDY?

A. I did not perform an analysis of the OCA's Peak and Average cost of service study. However, in general, the Peak and Average methodology for performing a cost of service study is also reasonable. Therefore, I neither support nor oppose OCA's proposed cost of service study.

Q. DO YOU WISH TO CHANGE YOUR SCALE BACK RECOMMENDATION?

A. No. I continue to recommend that the customer charge and usage rates be scale back only for those rate classes that have a proposed increase. I would like to add, however, that this scale back should be based on whichever cost of service study that the Commission deems most reasonable in this case.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

I&E Statement No. 5
Witness: Esyan A. Sakaya

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

UGI UTILITIES, INC. – GAS DIVISION

Docket No. R-2021-3030218

Direct Testimony

of

Esyan A. Sakaya

Bureau of Investigation and Enforcement

Concerning:

Rate Base
Utility Plant in Service
Annual Depreciation
Accumulated Depreciation Expense
Reporting Requirements

TABLE OF CONTENTS

INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Esyan A. Sakaya. My business address is 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission ("Commission") in the Bureau of Investigation and Enforcement ("I&E") as a Fixed Utility Valuation Engineer.

Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A. My education and professional background are set forth in Appendix A, which is attached.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my testimony is to evaluate UGI Utilities, Inc. - Gas Division's ("UGI" or "Company") request for an annual increase in operating revenue of approximately $82,700,000 using the Fully Projected Future Test Year ("FPFTY") ending September 30, 2023 (UGI Gas Book No. 1, p. 6). My testimony will address issues related to plant in service, proposed rate base, annual depreciation expense, accumulated depreciation, and reporting requirements.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 5 contains schedules relating to my testimony.

<u>RATE BASE</u>

Q. WHAT IS RATE BASE?

A. Rate base is the depreciated original cost of a utility's investment in plant a utility has in place to serve customers plus other additions and deductions that the Commission determines to be necessary in order to keep the utility operating and providing safe and reliable service to its customers.

Q. HOW IS THE DEPRECIATED ORIGINAL COST OF PLANT-IN-SERVICE AT THE END OF THE TEST YEAR DETERMINED?

A. The depreciated original cost is equal to the original cost of the utility plant-in-service that is projected to be used and useful in the provision of service to the customers, <u>less</u> the depreciation reserve as adjusted by other items such as salvage value and removal costs. The FPFTY depreciated original cost claimed by the Company in this proceeding for UGI is $3,723,465,000 (UGI Book V, Ex. A - Fully Projected, Sch. C-1, ln.3). The $3,723,465,000 is based upon $5,042,025,000 of original cost less

$1,318,560,000 of accumulated depreciation (UGI Book V, Ex. A - Fully Projected, Sch. C-1, ln. 1-2 and I&E Ex. No. 5, Sch. 1, column B, p-. 1 lines 1, 2 and 4.

Q. WHAT OTHER ADDITIONS AND DEDUCTIONS TO THE DEPRECIATED ORIGINAL COST OF UTILITY PLANT ARE ALLOWED?

A. Some of the additions to the depreciated original cost of a company's investment in utility include materials and supplies, gas inventory, and cash working capital. Some of the deductions include deferred income taxes and customer deposits.

The claimed additions to the Company's depreciated original cost are as follows:

1. Materials and Supplies;
2. Working Capital;
3. Gas Inventory;

The deductions to the depreciated original cost are:

1. ADIT;
2. Customer Deposits.

Q. WHAT IS THE COMPANY'S CLAIM FOR RATE BASE FOR THE FPFTY?

A. The Company claims a FPFTY rate base, identified as Total Measure of Value, of $3,169,023,000 (UGI Book V, Ex. A - Fully Projected, Sch. C-1, ln. 9 and I&E Ex. No. 5, Sch. 1, column B, p. 1, line 12).

Q. WHAT RATE BASE DO YOU RECOMMEND IN THIS PROCEEDING?

A. I recommend that rate base be reduced by $145,872,000 to $3,023,151 as a result of my recommended changes to the utility plant-in-service and the accumulated depreciation described below (I&E Ex. No. 5, Sch. 1, column C, p. 1, line 12).

UTILITY PLANT-IN-SERVICE

Q. WHAT IS UTILITY PLANT-IN-SERVICE?

A. Utility plant-in-service comprises all the utility's assets, including both intangible and tangible assets. For example, intangible assets include organization costs, franchise and consents costs, and land and land rights costs. Tangible assets include facilities and equipment. Utility plant-in-service reflects the original cost of the utility's assets before depreciation. UGI also includes a portion of shared corporate costs in its total utility plant in service claim (UGI Book 6, p. II-5).

Q. WHAT IS THE COMPANY'S CLAIMED UTILITY PLANT-IN-SERVICE AT THE END OF EACH TEST YEAR AND HOW MUCH NET PLANT IS PROJECTED TO BE ADDED IN THE FUTURE TEST YEAR AND FULLY PROJECTED FUTURE TEST YEAR?

A. The Company's utility plant-in-service claim for the FTY ending September 30, 2022 is $4,597,404,000 (UGI Ex. A - Future, Sch. C-1, ln. 1). The Company's utility plant-in-service claim for the FPFTY ending September 30, 2023 is $5,042,025,000 (UGI Ex. A - Fully Projected, Sch. C-1, ln. 1). The difference in these two amounts is the total net plant additions from the FTY to the FPFTY, of $444,621,000 ($5,042,025,000 - $4,597,404,000) (I&E Ex. No. 5, Sch. 2, column B, line 13 and column F line 13). The Company's utility plant in service claim for the HTY ending

September 30, 2021 was $4,247,028,000 (UGI Ex A – HTY, Sch. C-1, line 1). The difference between the HTY and the FTY, is $350,376,000 ($4,597,404,000 - $4,247,028,000) (I&E Ex. No. 5, Sch. 2, column B, line 13 and I&E Ex. No. 5, Sch. 4, column D, line 17).

Q. WHAT DO YOU RECOMMEND REGARDING UTILITY PLANT-IN-SERVICE IN THIS PROCEEDING?

A. I recommend that the Company's FPFTY projected plant be reduced by $137,649,000 (I&E Ex. No. 5, Sch. 2, column G, line 13).

Q. WHAT IS THE BASIS FOR YOUR $137,649,000 REDUCTION TO PLANT IN SERVICE?

A. I determined that over the last two base rate cases at Dockets R-2018-3006814 and R-2019-3015162, the Company failed to place into service all the plant projected in those cases. Since rates in those cases were based upon the plant at the end of the FPFTY, this allowed the Company to receive a return on plant not placed into service that established rates in those cases.

Q. HOW DID YOU DETERMINE THE $137,649,000 REDUCTION TO PLANT IN SERVICE IN THIS CASE?

A. As described below, the $137,649,000 was determined by calculating the average percentage of gas plant and common plant projected to be placed into service in the last two base rate cases, then applying those percentage to the corresponding gas and common plant projected to be placed into service in this case. This methodology assumes the Company will only complete a percentage of plant projected to be completed in this case.

Q. WHAT AMOUNT OF FPFTY PLANT WAS PROJECTED TO BE PLACED INTO SERVICE IN THE 2018 CASE?

A. In the 2018 base rate case, the Company projected that it would have $3,950,991,000 of total plant in service by the end of the FPFTY in that case, which was September 30, 2020.[1] This $3,950,991,000 is comprised of $3,726,871,000 of gas plant in service and $224,120,000 of UGI's share of common plant (I&E Ex. No. 5, Sch. 4, p. 1, column B, lines 7 and 14).

Q. WHAT AMOUNT OF FPFTY PLANT WAS ACTUALLY PLACED INTO SERVICE AS OF SEPTEMBER 30, 2020 AND WHAT WAS THE DIFFERENCE BETWEEN THAT AMOUNT AND THE AMOUNT PROJECTED TO BE PLACED INTO SERVICE?

A. The total plant in service as of September 30, 2020 was $3,891,210,000 comprised of $3,665,076,000 of gas plant and $226,134,000 of the gas division's share of common plant (I&E Ex. No. 5 Sch 4, p. 1, column D, lines 7 and 14). The difference between the FPFTY projected plant in service in the 2018 case to the actual amount of plant in service shows that UGI placed $59,781,000 less plant into service than it projected

---

[1] UGI Gas Book 6, p. II-6, column 4 at Docket R-2018-3006814.

($3,950,991,000 – $3,891,210,000) (I&E Ex. No. 5, Sch. 4, p. 1, column C, line 17). Accordingly, the Company only completed 82.0% (I&E Ex No. 5, Sch 4, p. 1 column C, lines 18-20) of projected FPFTY total plant.

Q. DID YOU DETERMINE THE PERCENTAGE OF GAS PLANT ACTUALLY PLACED INTO SERVICE COMPARED TO GAS PLANT PROJECTED TO BE PLACED INTO SERVICE IN THE 2018 CASE?

A. Yes. In the 2018 rate case, the Company projected it would have $3,726,871,339 of gas plant in service as of September 30, 2020. However, the Company's actual gas plant in service was only $3,665,076,106 as of that date. This is a difference of $61,795,233 (I&E Ex. No. 5, Sch. 4, p. 1, column C, line 7). In the 2018 case, the Company projected it would add $317,833,525 of gas plant in the FPFTY (I&E Ex. No. 5, Sch. 4, p. 1, column B, line 8). Comparing these two amounts indicates that the Company only completed 80.56% (($317,833,525 - $61,795,233) / $317,833,525) of projected FPFTY gas plant (I&E Ex. No. 5, Sch. 4, p. 1, column C, lines 8-9).

Q. DID YOU DETERMINE THE PERCENTAGE OF COMMON PLANT ACTUALLY PLACED INTO SERVICE COMPARED TO COMMON PLANT PROJECTED TO BE PLACED INTO SERVICE IN THE 2018 CASE?

A. Yes. The Company projected it would have $224,119,817 of common plant in service as of September 30, 2020, in the 2018 base rate case. However, the Company's actual common plant in service was $226,134,102. This is a difference of $2,014,284 (I&E Ex. No. 5, Sch. 4, p. 1, column C, line 14). In the 2018 case, the

Company projected it would install $15,075,391 of common plant in the FPFTY (I&E Ex. No. 5, Sch. 4, p. 1, column C, line 15). Comparing these two amounts indicates that the Company completed 113.36% (($2,014,284 + $15,075,391) / $15,075,391) of projected common FPFTY plant (I&E Ex. No. 5, Sch. 4, p. 1, column C, lines 15-16).

Q. WHAT AMOUNT OF TOTAL PLANT WAS PROJECTED TO BE PLACED INTO SERVICE IN THE FPFTY IN THE 2019 BASE RATE CASE?

A. In the 2019 base rate case, the Company projected that it would have $4,324,364,000 of total plant in service in the FPFTY ending September 30, 2021.[2] This $4,324,364,000 is comprised of $4,051,159,000 of gas plant in service and $273,205,000 of the gas division's share of common plant (I&E Ex. No. 5, Sch. 4, p. 2, column B, lines 7 and 14).

Q. WHAT AMOUNT OF TOTAL PLANT WAS ACTUALLY PLACED INTO SERVICE IN THE FPFTY AND WHAT WAS THE DIFFERENCE BETWEEN THESE AMOUNTS?

A. The total plant in service as of September 30, 2021 was $4,247,028,000 comprised of $4,007,295,000 of gas plant and $239,733,000 of the gas division's share of common plant (I&E Ex. No. 5 Sch 4, p. 2, column D, lines 7 and 14). Accordingly, UGI placed $77,336,000 ($4,324,364,000 – $4,247,028,000) less plant in service than

[2] UGI Gas Book 6, p. II-5, column 4 at Docket R-2019-3015162.

projected in the 2019 base rate case (I&E Ex. No. 5, Sch. 4, p. 2, columns B to D, line 17).

Q. BREAKING THAT TOTAL PLANT DOWN EVEN FURTHER, WHAT AMOUNT OF GAS PLANT AND COMMON PLANT PROJECTED IN THE 2019 RATE CASE WAS ACTUALLY PLACED INTO SERVICE?

A. Comparing the gas plant projected to be placed into service for the FPFTY in the 2019 case with the actual gas plant placed into service indicates that the Company only completed 86.83% of projected FPFTY gas plant (I&E Ex. No. 5, Sch. 4, p. 2, column B, lines 7-9). Comparing the common plant projected to be placed into service with the actual common plant placed into service indicated that the Company completed 21.98% of projected common FPFTY plant (I&E Ex. No. 5, Sch. 4, p. 2, column C, lines 15-16).

Q. WHAT IS THE AVERAGE PERCENT OF PLANT COMPLETED IN THE LAST TWO BASE RATE CASES?

A. The average percent of gas plant completed in the last two base rate cases was approximately 83.69% and the average common plant completed in the last two base rate cases was approximately 67.67% (I&E Ex No. 5, Sch. 3, column B, lines 3 and 6).

Q. IN THE CURRENT RATE CASE, HOW MUCH GAS AND COMMON PLANT DOES THE COMPANY PROJECT IT WILL ADD IN THE FTY?

A. The Company is projecting it will add $382,709,152 of gas plant in the FTY and have $27,393,337 of corresponding retirements (UGI Gas Book 7, p. V-10). The Company also projects it will add $15,694,645 of common plant in the FTY and have $20,634,175 of corresponding retirements (UGI Gas Book 7, p. V-11).

Q. HOW MUCH OF THE PROJECTED FTY GAS AND COMMON PLANT ADDITIONS DO YOU RECOMMEND BE ALLOWED?

A. Given that the Company's average gas plant completed in the last two base rate cases was approximately 83.69% and the average common plant completed in the last two base rate cases was approximately 67.67%, I recommend that those percentages be applied to the Company's plant addition claims in this proceeding.

This recommendation results in an allowance of $320,305,000 ($382,709,152 X 0.83694) of FTY gas plant. I also applied the approximately 83.69% factor to the gas plant retirements to recommend that only $22,927,000 ($27,393,337, X 0.83694) of retirements be reflected. Similarly, applying the 67.67% to FTY common plant, results in an allowance of $10,620,000 ($15,694,645 X 0.67669). I also applied the approximately 67.67% factor to the retirements to recommend that only $13,963,000 ($20,634,175 X 0.67669) of retirements be reflected (I&E Ex. No. 5, Sch 3, column B, lines 3 and 6).

Q. BASED ON YOUR RECOMMENDATION ABOVE, WHAT TOTAL ADJUSTMENT DO YOU RECOMMEND FOR THE PROJECTED FTY GAS AND COMMON PLANT ADDITIONS?

A. This recommendation reduced projected FTY total plant in service by $56,343,000 (I&E Ex. No. 5, Sch. 2, column C, line 13).

Q. HOW MUCH GAS AND COMMON PLANT DOES THE COMPANY PROJECT IT WILL ADD IN THE FPFTY?

A. The Company is projecting it will add $413,027,000 of gas plant in the FPFTY and have $23,722,000 of corresponding retirements (UGI Gas Book 6, p. II-9). The Company also projects it will add $63,400,000 of common plant in the FPFTY and have $8,240,000 of corresponding retirements (UGI Gas Book 6, p. II-10).

Q. HOW MUCH OF THE PROJECTED FPFTY GAS AND COMMON PLANT ADDITIONS DO YOU RECOMMEND BE ALLOWED?

A. I recommend that only approximately 83.69% of projected FPFTY gas plant be included in plant in service or $345,679,000 ($413,026,743 X 0.83694). I also applied the 83.69% factor to the gas plant retirements to recommend that only $19,896,000 ($23,771,977, X 0.83694) of retirements be reflected. I also recommend that only approximately 67.67% of projected FPFTY common plant be included in plant in service or $42,902,000 ($63,400,078 X 0.67669). I also applied the approximately 67.67% factor to the retirements to recommend that only $5,576,000 ($8,239,512 X 0.67669) of retirements be reflected.

Q. BASED ON YOUR RECOMMENDATION ABOVE, WHAT TOTAL ADJUSTMENT DO YOU RECOMMEND FOR THE PROJECTED FPFTY GAS AND COMMON PLANT ADDITIONS?

A. After considering additions, and retirements for gas and common plant, I recommend projected FPFTY total plant in service be reduced by $81,305,845 (I&E Ex. No. 5, Sch. 2, p. 2, column D, line 6).

Q. WHAT IS YOUR TOTAL ADJUSTMENT TO PLANT IN SERVICE FOR BOTH THE FTY AND FPFTY?

A. The total adjustment to plant in service is $137,649,000 (I&E Ex. No. 5, Sch. 1, p. 1, column C, line 1).

Q. WHAT DID THE COMPANY CLAIM CONCERNING THE AMOUNT OF PLANT COMPLETED OVER THE PAST FIVE YEARS?

A. The Company claims that it completed 98.0% of plant budgeted over the past 5 years (UGI Book 3, Exhibit VAS-2).

Q. DO THE COMPANY'S BUDGETED AMOUNTS ON EXHIBIT VAS-2 CORRELATE WITH WHAT THE COMPANY CLAIMED IN THE RECENT BASE RATE CASE?

A. No. In the 2019 case, the Company projected it would add $405,430,000 in 2021.[3]

---

[3] UGI Book 6 page II-10, Docket R-2019-3015162

However, as shown on VAS-2 the "budgeted" additions for 2021 are only $389,008,000. Furthermore, even UGI's response in standard data requirements for budget to actual capital expenditures reflect 93% actual completion in 2019, 85% actual completion in 2020, and 89% actual completion in 2021.[4] It is unclear how UGI reports a 98% completion of plant budgeted with this response in the standard data requirements.

Q. IS COMPARING THE COMPANY'S PERCENT OF BUDGETED PLANT COMPLETED A VALID COMPARISON?

A. No. As described above, the Commission should only consider the actual plant in service compared to the amount of plant claimed in the prior rate cases. The Company's "budgeted" plant amounts can be adjusted over time and may not reflect what was claimed in past cases. On the other hand, the Company's FPFTY plant amounts cannot be changed which is why that should be used for comparison. Moreover, the FPFTY amounts from the prior two cases are what the Company actually sought to recover from ratepayers and are a more accurate comparison to what it is seeking to recover in this proceeding.

---

[4] UGI Book II, Attachment SDR-RR-15

Q. ARE YOU CONCERNED THAT UTILIZING THE 2020 AND 2021 PANDEMIC ERA DATA IN PERFORMING YOUR ANALYSIS WILL UNDERSTATE THE COMPANY'S COMPLETION RATE IN THIS FTY AND FPFTY?

A. No. I anticipate that supply chain difficulties, hiring difficulties, and availability of outside contractors that have been an outcome of the Covid-19 pandemic will persist through the FTY and FPFTY. My average completion rate for gas plant additions of 83.69% in this proceeding reflects my expectation of ongoing construction issues related to the pandemic.

<u>ACCUMULATED DEPRECIATION</u>

Q. WHAT IS ACCUMULATED DEPRECIATION?

A. Accumulated depreciation is the total of all prior depreciation expense plus other adjustments such as cost of removal and salvage. Accumulated depreciation reduces the value of the original cost of the plant placed into service and thus reduces rate base.

Q. IF THE COMMISSION ACCEPTS YOUR ADJUSTMENTS TO PLANT IN SERVICE SHOULD ACCUMULATED DEPRECIATION ALSO BE ADJUSTED?

A. Yes. As described below, reducing plant in service in the FTY and FPFTY reduces the accumulated depreciation that would be associated with these plant additions and reduced retirements of existing plant.

Q. WHAT ADJUSTMENT TO ACCUMULATED DEPRECIATION DO YOU RECOMMEND IF THE COMMISSION ACCEPTS YOUR ADJUSTMENTS TO PLANT IN SERVICE?

A. Accumulated depreciation should be increased from $1,315,560,000 by $8,223,000 to $1,326,783,000 (I&E Ex. No. 5, Sch. 1, p. 1, columns C and D, line 2). The accumulated depreciation by account is shown on I&E Ex. No. 5. Sch. 5, pp. 1-2, column F, lines 1-134).

Q. HOW DID YOU DETERMINE THE $1,326,783,000 ACCUMULATED DEPRECIATION FOR THE FPFTY?

A. After reducing the plant in service in the FTY as described above I recalculated the annual depreciation expense for the FTY. The recalculated annual depreciation expense was then brought forward to determine the accumulated depreciation at the beginning of the FPFTY. Then I continued the same adjustments in the FPFTY to calculate the accumulated depreciation in the FPFTY to arrive at the $1,326,783,000 (I&E Ex. No. 5, Sch. 5, p. 2, column F, line 134).

ANNUAL DEPRECIATION EXPENSE

Q. WHAT IS ANNUAL DEPRECIATION EXPENSE?

A. Depreciation is the loss of value of a utility's assets used and useful in the provision of utility service due to usage, passage of time, etc. The National Association of Regulatory Utility Commissioners defines annual depreciation expense as the annual cost associated with the diminution in the usefulness of an asset over time.

Depreciation expense is the way the return of a utility's investment is captured in rates and is generally computed by dividing the original cost of an asset by its expected useful life or by multiplying the original cost by the annual accrual rate.

Q. WHAT IS UGI'S CLAIMED ANNUAL DEPRECIATION AND AMORTIZATION EXPENSE FOR THE FTY?

A. UGI's claimed annual depreciation expense for the FPFTY ending September 30, 2023 is $114,735,000 ($106,728,000 + $8,007,000) (UGI Book V – Combined FTY, Sch. D-1, line 15). The Company determined its annual depreciation expense claim for the FTY by taking the calculated annual depreciation expense plus the amortization of net salvage and subtracted an amount charged to clearing accounts as shown on UGI Book V – Combined FTY, Sch. D-21, lines 64-66.

Q. WHAT IS UGI'S CLAIMED ANNUAL DEPRECIATION AND AMORTIZATION EXPENSE FOR THE FPFTY?

A. UGI's claimed annual depreciation expense for the FPFTY ending September 30, 2023 is $133,908,000 ($127,824,000 + $6,084,000) (UGI Book V - Combined FPFTY, Sch. D-1, line 15) and (I&E Ex. No. 5, Sch. 1, p. 2, column B, line 1). The Company determined its annual depreciation expense claim for the FPFTY by taking the calculated annual depreciation expense plus the amortization of net salvage as shown on UGI Book V – Combined FPFTY, Sch. D-21, lines 64-66.

Q. WHAT ANNUAL DEPRECIATION EXPENSE DO YOU RECOMMEND FOR THE FPFTY?

A. I recommend that the $133,908,000 of annual depreciation expense be reduced by $3,666,000 to $130,242,000 (I&E Ex. No. 5, Sch. 1, p. 2, column C and D, line 1).

Q. HOW DID YOU DETERMINE THE $130,242,000 OF ANNUAL DEPRECIATION EXPENSE FOR THE FPFTY?

A. The $130,242,000 is based on my recommendation to reduce FTY and FPFTY gas and common plant additions as described above for the FPFTY, the determination of the $130,242,000 of annual depreciation expense is shown on I&E Ex. No 5, Sch. 5, p. 2, column I, line 134.

Q. DID YOU APPLY THE SAME DEPRECIATION RATE BY ACCOUNT THE COMPANY DID TO PROJECT THE ANNUAL DEPRECIATION EXPENSE BY ACCOUNT IN THE FPFTY?

A. Yes. The annual depreciation rates on I&E Ex. No. 5, Sch. 5, columns H that I used to calculate the $130,242,000 depreciation expense are the same annual depreciation rates used by the Company in the original filing (UGI Volume 6, p. II-3 to 5).

<u>FTY AND FPFTY REPORTING</u>

Q. WHAT AMOUNT OF ADDITIONAL NET PLANT WILL BE ASSOCIATED WITH THE INCLUSION OF THE FTY ENDING SEPTEMBER 30, 2022 FOR UGI?

A. The Company’s projected addition net plant for the FTY ending September 30, 2022 is $398,404,000 (UGI Book V, FTY Sch. C-2, line 64).

Q. WHAT AMOUNT OF ADDITIONAL NET PLANT WILL BE ASSOCIATED WITH THE INCLUSION OF THE FPFTY ENDING SEPTEMBER 30, 2023 FOR UGI?

A. The Company's projected plant additions for the FPFTY ending September 30, 2023 is $476,632,000 (UGI Book V, FPFTY Sch. C-2, line 64).

Q. DO YOU HAVE ANY RECOMMENDATIONS REGARDING PLANT ADDITIONS THAT UGI PROJECTS TO BE IN SERVICE DURING THE FTY ENDING SEPTEMBER 30, 2022 AND THE FPFTY ENDING SEPTEMBER 30, 2023?

A. Yes. I recommend that the Company provide the Commission's Bureau of Investigation and Enforcement and the Office of Consumer Advocate with an update to UGI Book 5 - Sch. C-2, no later than January 2, 2023, which should include actual capital expenditures, plant additions, and retirements by month from October 1, 2021 through September 30, 2022, and which should be filed under this docket number. I also recommend that the Company provide a similar update for actuals capital expenditures, plant additions, and retirements by month from October 1, 2022 through September 30, 2023, no later than January 2, 2024.

Q. WHY DO YOU RECOMMEND THAT UGI PROVIDE THESE UPDATES?

A. I&E believes that there is value in determining how accurately UGI projects investments in future facilities compared to the monthly actual investments and retirements that are made by the end of the FTY and FPFTY. With the use of the

FTY and FPFTY, UGI is not able to guarantee any of the projected plant additions it proposes will be completed and placed into service. Therefore, requiring the Company to provide updates of the “actual” investment and retirements by month compared to the projections used in setting rates using the FPFTY will enable the Commission to evaluate the Company’s projections used to determine rates in future rate cases.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

ESYAN A. SAKAYA
PROFESSIONAL EXPERIENCE AND EDUCATION

EDUCATION:

National Association of Regulatory Utility Commissioners, Clearwater, FL
Utility Rate School; Utility Rate Making Basics, October 2019

Society of Depreciation Professionals, Philadelphia, PA
Introduction to Depreciation; Depreciation Fundamentals, September 2019

Temple University, Philadelphia, PA
Bachelor of Science; Major in Engineering Technology, 2015

Community College of Philadelphia, Philadelphia, PA
Associate of Applied Science; Major in Construction Management Technology, 2011

Island School of Building Arts, Gabriola Island, BC-Canada
Certificate Graduate: Heavy Timber Construction Aug 2002-Nov 2002

Solar Energy International, Carbondale, CO
Certificate Graduate: Basic and Advanced Photovoltaic Design, April 2002-May 2002

EXPERIENCE:

12/2018-Present

Pennsylvania Public Utility Commission-Harrisburg, PA

Fixed Utility Valuation Engineer- Assist in engineering related studies related to valuation, depreciation, cost of service, quality of service as they apply to regulated utilities. Contribute in evaluating, contrasting and conducting performance analyses in distinctive sections of valuation engineering and rate structure involving valuation concepts, original cost, rate base, fixed capital costs, inventory processing, excess capacity, cost of service, and rate design. Provide expert testimony in rate related utility cases.

4/2018-12/2018

Pennsylvania Department of Transportation-Harrisburg, PA

Photogrammetry Technician I- Created three-dimensional mapping layouts of natural and man-made features from stereoscopic images on a computer workstation. Assisted in the field placement of ground based surveyed control-points prior to aerial photography acquisition. Provided field support in the use of laser scans for comprehensive digital surveying data. Operated global positioning satellite surveying equipment to obtain accurate geodetic coordinates of pre-established benchmarks.

8/2017-4/2018

Pennoni and Associates. Consulting Engineers-King of Prussia, PA

Construction Inspector-Provided quality assurance in the onsite material testing of concrete, soils, and asphalt. Read and interpreted construction drawings and specifications of materials and components. Completed daily reports regarding project progress to engineers, project managers/superintendents, contractors and clients.

TESTIMONY SUBMITTED:

I have assisted and/or submitted testimony in the following proceedings:

v.

UGI UTILITIES, INC. – GAS DIVISION

Docket No. R-2021-3030218

Surrebuttal Testimony

of

Esyan A. Sakaya

Bureau of Investigation and Enforcement

Concerning:

RATE BASE
UTILITY PLANT IN SERVICE
ANNUAL DEPRECIATION
ACCUMULATED DEPRECIATION

TABLE OF CONTENTS

INTRODUCTION

Q. WOULD YOU PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Esyan A. Sakaya. My business address is 400 North Street, Harrisburg, PA 17120.

Q. ARE YOU THE SAME ESYAN A. SAKAYA THAT SUBMITTED DIRECT TESTIMONY ON APRIL 15, 2022?

A. Yes. I submitted I&E Statement No. 5 and I&E Exhibit No. 5.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to update and correct the recommendations and schedules contain in my direct testimony, address the rebuttal testimonies and exhibits of Vivian K. Ressler (UGI St. No. 3-R) regarding rate base, annual depreciation, and accumulated depreciation expense, and the rebuttal testimony of Vicky Schappell (UGI St. No. 5-R) concerning utility plant in service in relation to UGI Utilities, Inc. - Gas Division's ("UGI" or "Company") request for an annual increase in operating revenue of approximately $82,700,000 using the Fully Projected Future Test Year ("FPFTY") ending September 30, 2023.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. Yes, I&E Exhibit 5-SR will accompany my surrebuttal testimony. However, some exhibit references will be directed towards I&E Exhibit No. 5, which was the Exhibit to accompany my Direct Testimony identified as I&E Statement No. 5.

RATE BASE – COMPANY REVISION

Q. WHAT WAS THE COMPANY'S RATE BASE CLAIM IN THE INITIAL FILING?

A. The Company claimed a rate base of $3,169,023,000 (UGI Book V, Ex. A - Fully Projected, Sch. C-1, ln. 9 and I&E Ex. No. 5, Sch. 1, column B, p. 1, line 12).

Q. DID THE COMPANY REVISE ITS RATE BASE CLAIM IN REBUTTAL TESTIMONY?

A. Yes. The Company claimed a revised rate base of $3,176,596,000 in its Rebuttal Testimony, which is an increase of $7,573,000 ($3,176,596,000 -$3,169,023,000) over the claim in the original filing (UGI Gas - Exhibit A - FPFTY -Rebuttal, Schedule A-1, column 3, line 9).

Q. WHAT WAS THE BASIS FOR UGI'S $7,573,000 INCREASE IN RATE BASE?

A. UGI's adjusted rate base claims shown in UGI Exhibit A – FPFTY, Schedule C-1 were additions and subtractions to plant in service, accumulated depreciation, working capital, gas inventory, accumulated deferred income taxes, customer deposits, and materials and supplies. I will address the plant in service and accumulated depreciation below.

<u>UTILITY PLANT IN SERVICE – COMPANY REVISION</u>

Q. WHAT DID THE COMPANY INITIALLY CLAIM FOR UTILITY PLANT IN SERVICE AT THE END OF EACH TEST YEAR AND HOW MUCH NET PLANT WAS PROJECTED TO BE ADDED IN EACH TEST YEAR?

A. The Company's initial utility plant in service claim for the FTY ending September 30, 2022 was $4,597,404,000 (UGI Ex. A - Future, Sch. C-1, ln. 1). The Company's utility plant in service claim for the FPFTY ending September 30, 2023 is $5,042,025,000 (UGI Ex. A - Fully Projected, Sch. C-1, ln. 1). Accordingly, the total net plant additions from the FTY to the FPFTY is $444,621,000 ($5,042,025,000 - $4,597,404,000) (I&E Ex. No. 5, Sch. 2, column B, line 13 and column F line 13). The Company's utility plant in service claim for the HTY ended September 30, 2021 was $4,247,028,000 (UGI Ex A – HTY, Sch. C-1, line 1). Accordingly, the total net plant additions from the HTY to the FTY is $350,376,000 ($4,597,404,000 - $4,247,028,000) (I&E Ex. No. 5, Sch. 2, column B, line 13 and I&E Ex. No. 5, Sch. 4, column D, line 17).

Q. WHAT UTILITY PLANT IN SERVICE DID THE COMPANY CLAIM IN REBUTTAL TESTIMONY?

A. In rebuttal testimony, the Company claimed $5,041,354,000 of total utility plant in service for the FPFTY (UGI Gas Ex. A - FPFTY Rebuttal, Sch. C-1). This is a reduction of $671,000 ($5,042,025,000 - $5,041,354,000) and is shown on UGI Gas Ex. A - Rebuttal, Sch. C-2, page 3, Column 3, line 8.

Q. WHAT WAS THE BASIS FOR UGI'S $671,000 REDUCTION TO PLANT IN SERVICE?

A. UGI reduced the projected level of Mains by approximately $671,000 (UGI Gas Exhibit A - Rebuttal Schedule C-2 Column 4, line 40, page 5). The Company attributes this reduction in Mains to adjustments made in both the FTY and FPFTY to three projects that are estimated to be completed after the end of the FPFTY (UGI Gas Ex. VKR-1R).

ACCUMULATED DEPRECIATION – COMPANY REVISION

Q. WHAT ACCUMULATED DEPRECIATION DID THE COMPANY CLAIM IN THE ORIGINAL FILING?

A. In the original filing, the Company claimed $1,318,560 of accumulated depreciation as of September 30, 2023 (UGI Volume V, Sch. A-1, p. 1, line 2).

Q. WHAT ACCUMULATED DEPRECIATION DID THE COMPANY CLAIM IN REBUTTAL TESTIMONY?

A. In its rebuttal testimony, the Company lowered the accumulated depreciation to $1,318,079 as of September 30, 2023 (UGI Ex. A – Rebuttal, Sch. A-1, p. 1, line 2). This $481,000 reduction ($1,318,560 – $1,318,079) is the result of changes to the original cost of account 376 and 378 that impacted the annual depreciation expense, corrections to a service life for Allowance for Funds Used for Construction (AFUDC), and a re-allocation of depreciation expense to other UGI gas operations, (UGI FPFTY Rebuttal Ex. A, Sch. C-3, p. 5, lines 40-41).

<u>I&E RATE BASE RECOMMENDATION – REVISION</u>

Q. WHAT DID YOU RECOMMEND IN YOUR DIRECT TESTIMONY CONCERNING PLANT IN SERVICE?

A. In direct testimony, I recommended that UGI's rate base be reduced from $3,169,023,000 to $3,023,151,000, which was a reduction of $145,872,000 (I&E Ex. No. 5, Sch. 1, p. 1, line 12).

Q. DO YOU WISH TO REVISE YOUR RECOMMENDATION IN THIS SURREBUTTAL TESTIMONY?

A. Yes. After submitting my direct testimony, I became aware of an error in my calculation for the accumulated depreciation for 2023. Therefore, I recalculated the accumulated depreciation for 2023 and incorporated this correction into my revised recommendation described below. I have also incorporated the Company's revisions to plant in service and accumulated depreciation described above in my revised recommendation. My recommendation is to reduce the revised rate base of $3,176,596,000 to $3,022,865,000, which is a reduction of $153,740,000 (I&E Ex. No. 5-SR, Sch. 1, p. 1, columns D-F, line 12).

<u>UTILITY PLANT IN SERVICE – I&E REVISION</u>

Q. WHAT DID YOU RECOMMEND IN YOUR DIRECT TESTIMONY CONCERNING PLANT IN SERVICE?

A. In direct testimony, I recommended that UGI's $5,042,025,000 of plant in service be reduced to $4,904,376,000, which was a reduction $137,649,000 (I&E Ex. No. 5, Sch. 1, p. 1, line 1).

Q. WHAT REDUCTION TO PLANT IN SERVICE DO YOU NOW RECOMMEND?

A. As a result of the Company revising its projected plant in service, I now recommended that total plant in service be reduced by $137,539,000. This recommendation reduces the Company's rebuttal utility plant in service claim from $5,041,354,000 to $4,903,815,000 (I&E Ex. No. 5, Schedule 1-SR, p. 1, line 1, columns D-F). A breakdown of the adjustment for each plant category is shown on I&E Ex. No. 5-SR, Sch. 2, page 1. On page 1, the 2022 plant additions and adjustments are shown under columns A-D, and the plant additions and adjustments for both 2022 and 2023 are shown under columns E-H. The FPFTY alone is shown on I&E Ex. No. 5-SR, Sch. 2, page 2.

Q. WHAT WAS THE BASIS FOR YOUR RECOMMENDATION TO REDUCE PLANT IN SERVICE?

A. As stated in my direct testimony, in the last two rate cases the Company has a demonstrated history of over projecting plant relative to what has actually been placed in service (I&E St. No. 5, pp. 5-6). On average, during the 2018 and 2020 cases, the Company only completed 83.694% of FPFTY gas plant and 67.669% of FPFTY common plant (I&E Ex. No. 5, Sch. 3, lines 3 and 6).

Q. DID THE COMPANY DISAGREE WITH YOUR RECOMMENDATION TO REDUCE FTY AND FPFTY PLANT IN SERVICE PROJECTIONS?

A. Yes, for several reasons. First, the Company claims that the proper comparison is to budgeted plant additions and not plant projected in past rate cases and that I&E disregarded UGI's budgeting process. Second, the Company claims that the appropriate time to evaluate the proper comparison of plant placed into service is to compare 3 to 5 years. Third, the Company attempts to dispute the use of a two-year period during the Covid-19 pandemic. Fourth, the Company believes the Commission should consider inflation in this case when evaluating past performance. Fifth, the Company claims that my methodology does not take into considerations adjustments made in settlements. Sixth, the Company believes that I did not properly account for retirements. Seventh, the Company believes that I improperly separated gas plant and common plant in my analysis. Finally, the Company disputes that it earned a return on plant that it did not place into service (UGI St. No. 5-R, pp. 5-7).

Q. WHAT METHODOLOGY DID YOU USE IN YOUR FTY AND FPFTY PLANT PROJECTIONS?

A. The methodology I used is called "variance analysis." It is an accounting methodology that compares predicted and actual outcomes. The details of this analysis are described in my direct testimony and the results are summarized on I&E Ex. No. 5, Sch. 1, pp 1-2.

Q. WHAT IS VARIANCE AND HOW DOES IT APPLY TO UTILITY ACCOUNTING?

A. Variance in accounting is the difference between a forecasted amount and the actual amount (Forecast – Actual = Variance). As stated below, in the past two rate cases at

Dockets R-2018-3006814 and R-2020-3015162, UGI did not meet or exceed its initially forecast projections. The actuals for the past two rate cases were below forecast. Because of these inaccurate forecasts, the Company can unfairly pass its claimed plant additions to ratepayers through the established revenue requirement without placing the claimed plant into service.

Q. WHAT DID THE COMPANY CLAIM CONCERNING THE AMOUNT OF PLANT COMPLETED OVER THE PAST FIVE YEARS?

A. The Company claims that it completed 98.0% of plant budgeted over the past five years (UGI St. 5-R, p. 10 and Book 3, Exhibit VAS-2).

Q. SHOULD COMPANY "BUDGETED" AMOUNTS BE USED TO DETERMINE THE PERCENTAGE OF PLANT COMPLETED AS SUGGESTED BY THE COMPANY?

A. No, for several reasons. First, rates are not based upon "budgeted" plant additions, rates are based upon FTY and FPFTY plant claimed in base rate filings. They are two different things. In the 2019 base rate case, the Company projected it would add $405,430,000 in 2021.[1] However, as shown on UGI Ex. VAS-2 the "budgeted" additions for 2021 were only $389,008,000. Therefore, the Company is claiming, and potentially recovering, much more in base rate cases than what it is actually budgeting. Second, budgets can be adjusted as time progresses and there is no indication when the "budgeted" amounts on UGI Ex. VAS-2 were prepared or

---

1 UGI Book 6, p. II-10, at Docket R-2019-3015162

adjusted. Finally, a review of a UGI's standard data requests for the last three rate cases at Dockets R-2018-3006814, R-2019-3015162 and R-2021-3030218 reflects a 93% actual completion in September of 2019 at Docket R-2018-3006814[2]. When comparing the plant claimed at Docket R-2018-3006814 to amount being claimed at Docket R-2019-3015162 only 85% actual plant was completed in September of 2020[3]. Finally, when comparing the actual plant placed into service from Docket R-2019-3015162 into Docket R-2021-3030218 only of 89% actual plant was completed in September of 2021.[4] Therefore, utilizing a variable changing "budget" amount for comparison instead of a fixed rate base claim is not valid and should be discarded for comparison purposes.

Q. IS COMPARING THE COMPANY'S PERCENT OF BUDGETED PLANT COMPLETED A VALID COMPARISON?

A. No. As described above, and in my direct testimony, the Commission should only consider the actual plant in service compared to the amount of plant claimed in the prior rate cases. The Company's "budgeted" plant amounts can be adjusted over time and may not reflect what was claimed in past cases. On the other hand, the Company's FPFTY plant projections amounts cannot be changed which is why that should be used for comparison. Moreover, the FPFTY amounts from the prior two cases are what the Company actually sought to recover from ratepayers and are a more accurate comparison to what it is seeking to recover in this proceeding.

[2] UGI Book 2, SDR-RR-15, at Docket R-2018-3006814
[3] UGI Book 2, SDR-RR-15, at Docket R-2019-3015162
[4] UGI Book 2, SDR-RR-15, at Docket R-2021-3030128

Q. WHAT DID THE COMPANY CLAIM CONCERNING THE TIME PERIODS COVERED BY I&E'S ANALYSIS?

A. The Company believes my two-year analysis is not long enough to make the plant comparisons valid. In addition to this, UGI mentions past rate base cases of other companies that made use of a regulatory requirement that required a longer time period to justify plant additions (UGI St. No. 5-R, pp. 7-9).

Q. ARE THE COMPANY'S CONCERNS REGARDING THE SHORTER TIME PERIOD VALID?

A. No. I believe a two-year review is sufficient to evaluate the Company's success at meeting FPFTY projections. I am not aware of any minimum review period for comparing plant additions.

Q. DID THE COMPANY PROVIDE A LONGER COMPARISON OF FTY AND FPFTY PLANT IN SERVICE THAT WOULD DEMONSTRATE YOUR ANALYSIS IS UNRELIABLE?

A. No. If the Company had evidence that over the last three or more years or cases, that it actually installed all the projected FTY and FPFTY plant, it should have provided this analysis to support its allegation. However, the Company failed to provide this analysis, which leads me to believe that including more years would have produced similar results.

Q. WHAT ADDITIONAL TESTIMONY DOES THE COMPANY PROVIDE TO ATTEMPT TO SUPPORT ITS CLAIM THAT THREE YEARS IS THE ONLY VALID TIME PERIOD TO EVALUATE THE LEVEL OF PLANT INSTALLED?

A. The Company claims it is important that the 52 Pa Code 53.53 filing requirement requires a utility to provide a three-to-five-year comparison of measure of value to determine the reasonableness of the projected measure of value while making no reference to a two-year period comparison (UGI St. 5-R, pp. 8-9).

Q. SHOULD THE COMMISSION BASE ITS DETERMINATION OF PLANT IN SERVICE ON ONLY ONE FILING REQUIREMENT?

A. No, for two reasons. First, filing requirements simply describe what a utility must provide in a rate case. There is nothing in this filing requirement that limits, directs, or instructs the Commission that it must makes its decision based solely on this filing requirement. Second, as described above, if the Company had evidence to support its claim that over the past 5 years, it completed more plant than projected in the FTY or FPFTY, it should have provided it. Therefore, the claim that the Commission is somehow limited to the data originally provided in 52 Pa Code 53.53 is incorrect.

Q. WHAT DOES THE COMPANY CLAIM CONCERNING PANDEMIC DELAYS?

A. The Company believes my recommendation should be rejected because the time-period I evaluated includes time during the Covid-19 pandemic, and despite the pandemic, it still completed 98% of budgeted plant additions over the past five years (UGI St. No. 5-R, p. 10).

Q. WHY IS THIS ARGUMENT INVALID?

A. Again, the Company erroneously believes the Commission should compare "budgeted" plant additions to actual plant additions as opposed to those plant additions claimed for rate recovery in base rate cases. As described above, this comparison has no value and is substantially misleading relative to what the Company requested for inclusion in rates. To further respond, a review of current events in the news indicates that a continuation of supply chain difficulties, hiring difficulties, and availability of outside contractors as the result of the Covid-19 pandemic will persist through the FTY and FPFTY, which will continue to impact the Company's ability to complete plant addition projections.

Q. WHAT DOES THE COMPANY CLAIM CONCERNING INFLATION?

A. The Company claims that inflation has not been a factor in contracts up to the early part of 2022 but will be from now on. The Company states that the higher inflated contract costs are not included in the FTY or FPFTY plant projections but are now reasonably known and measurable (UGI St. No. 5-R, p. 11-12).

Q. DOES INFLATION OR THE POSSIBILITY OF INFLATION MATTER?

A. No. If inflation increases the unit cost of investments, UGI can still invest the original "budgeted" dollar amount, but less physical plant will be installed since the unit price will increase. Therefore, the Company's claim that somehow inflation negates the fact that they failed to invest in the level of FPFTY described in past rate cases is not valid. Since my analysis was based on dollars of plant claimed for addition in a rate case to dollars of plant actually added, the Company's attempt to relate the shortfall to inflation is without merit. In fact, the higher cost of materials and labor would have caused the Company to exceed its rate case projection if it had achieved the actual physical plant project completion it had claimed in its rate cases.

Q. WHAT DOES THE COMPANY CLAIM CONCERNING THE LEVEL OF PLANT IN RECENT CASES?

A. The Company believes that my recommendation is flawed because I did not consider that in both the 2019 and 2020 Gas Base Rate Cases, the Company reduced its initially filed total plant in service claims for the FPFTY downward, thus making it appear UGI was less successful in installing plant in service than it actually was (UGI St. No. 5-R, pp. 16-17).

Q. IS IT VALID TO ARGUE THAT MY METHODOLOGY IS FLAWED BECAUSE PLANT ACCOUNTS WERE ADJUSTED IN PAST CASES?

A. No. First, the Company made only de minimis charges to its plant addition projections during the rebuttal phases of the past two cases. Second, my recommendation was based upon the original filing because I could not anticipate future plant changes agreed to or proposed by the Company after the initial case was filed. In addition, as described above, I incorporated the most recent plant additions and plant in service claims to establish my revised surrebuttal recommendation.

Q. WHAT DOES THE COMPANY CLAIM CONCERNING THE LEVEL OF RETIREMENTS IN THE CALCULATION OF THE PLANT PROJECTIONS?

A. The Company believes that my methodology failed to properly account for all the projected retirements (UGI St. No. 5-R, pp. 18-19).

Q. IS THIS A VALID ARGUMENT?

A. No. First, my recommendation has been revised to properly account for retirements, cost of removal, and salvage. My response to UGI-II-1 indicated a correction was required, which as described above, is incorporated in my revised recommendation. Second, retirements were properly adjusted to account for the fact that if plant is not placed into service, retirements will not occur.

Q. WHAT DOES THE COMPANY CLAIM CONCERNING THE LEVEL OF GAS PLANT AND COMMON PLANT?

A. The Company believes that my methodology is flawed because I analyzed gas plant and common plant separately. The Company claims that my analysis is flawed because it does not budget plant that way, and recommends my methodology be changed to account for this (UGI St. No. 5-R, pp. 18-19).

Q. PLEASE EXPLAIN WHY YOU ANALYZED GAS PLANT AND COMMON PLANT SEPARATELY.

A. I analyzed gas plant and common plant separately because I determined the percentages of completed plant were different for each type of plant. In addition to this, the Company provided exhibits showing annual accumulated depreciation, along with a set of associated spreadsheets that provided a separate breakdown of gas and common plant. The fact that the Company doesn't "budget" plant additions this way is irrelevant. As described above, the amounts and how they are presented in a base rate case is what should be considered. Since the Company separates gas plant and common plant in rate cases, it is reasonable to separate gas plant and common plant when evaluating the percent completion rate for each type. Therefore, it is not necessary to revise my methodology and recalculate my recommendation as suggested by the Company (I&E Exhibit No. 5-SR, Sch. 2, p, 1).

Q. WHAT DOES THE COMPANY CLAIM CONCERNING RETURN ON PLANT NOT PLACED INTO SERVICE?

A. The Company believes that since the cases were "black box" settlements they did not earn the return they requested in those cases. Therefore, the Company believes that it is incorrect to assert that it earned a return based upon the projected additions in each case (UGI St. No. 5-R, pp. 22-23).

Q. PLEASE ADDRESS THE COMPANY'S ASSERTION THAT SINCE THESE CASES WERE SETTLED IT DID NOT EARN A RETURN BASED UPON PROJECTED ADDITIONS IN EACH CASE?

A. In a black box settlement, because it is unlikely that all parties could agree on the specific adjustments, the adjustments each party used to reach the agreed upon revenue requirement are not specified. Therefore, the FTY and FPFTY plant that was claimed is assumed to be embedded in the settlement as plant additions relate to provision of safe and reliable service, so even if the Company earned a lower rate of return than desired or claimed, that plant, which was presumed to be installed during the impending rate year, does earn a return. In fact, the DSIC implementation paragraph included in most settlements uses the Company's claimed FPFTY rate base as the DSIC trigger point, which reinforces my position that claimed plant remains intact, even in black box settlements.

ACCUMULATED DEPRECIATION – I&E REVISION

Q. WHAT DID YOU RECOMMEND IN YOUR DIRECT TESTIMONY CONCERNING ACCUMULATED DEPRECIATION?

A. I recommended that accumulated depreciation be increased from $1,318,560,000 to $1,326,783,000, which is an increase of $8,223,000 (I&E Ex. No. 5, Sch. 1, p. 1, line 2). The rational for increasing accumulated depreciation was provided on I&E St. No. 5, p. 14.

Q. DUE TO COMPANY AND I&E REVISIONS TO PLANT IN SERVICE, WHAT ADJUSTMENT TO ACCUMULATED DEPRECIATION DO YOU RECOMMEND IN SURREBUTTAL TESTIMONY?

A. As described above, after my direct testimony was filed, I discovered and error in my calculation. Correcting this error together with incorporating the Company's revisions described in its rebuttal testimony, results in me recommending that that the Company's revised accumulated depreciation be increased from $1,318,079,000 to

$1,334,279,000 which is an increase of $16,200,000 (I&E Ex. No. 5-SR, Sch. 1, p. 1, columns D, E, and F, line 2). The accumulated depreciation by account is shown on I&E Ex. No. 5-SR. Sch. 3, pp. 1-2 column F, lines 1-134).

Q. HOW DID YOU DETERMINE THE $1,334,279,000 ACCUMULATED DEPRECIATION FOR THE FPFTY?

A. After reducing the plant in service in the FTY as described above, I recalculated the annual depreciation expense for the FTY. The recalculated annual depreciation expense was then brought forward to determine the accumulated depreciation at the beginning of the FPFTY. Then I continued the same adjustments in the FPFTY to calculate the accumulated depreciation in the FPFTY to arrive at the $1,334,279 000 (I&E Ex. No. 5-SR, Sch. 3, column F, line 134, p. 2).

Q. IF THE COMMISSION ACCEPTS YOUR ADJUSTMENTS TO PLANT IN SERVICE, SHOULD ACCUMULATED DEPRECIATION ALSO BE ADJUSTED?

A. Yes. As described above, reducing plant in service in the FTY and FPFTY reduces the accumulated depreciation that would be associated with these plant additions and reduces retirements of existing plant.

<u>ANNUAL DEPRECIATION EXPENSE – I&E REVISION</u>

Q. WHAT DID YOU RECOMMEND IN YOUR DIRECT TESTIMONY CONCERNING ANNUAL DEPRECIATION EXPENSE?

A. I recommended that annual depreciation expense be reduced from $133,908,000 to

$130,242,000 which is a decrease of $3,666,000 (I&E Ex. No. 5, Sch. 1, p. 2, line 1). The rational for decreasing annual depreciation expense was provided in I&E St. No. 5, p. 15.

Q. DUE TO COMPANY AND I&E REVISIONS TO PLANT IN SERVICE, WHAT ADJUSTMENT TO ANNUAL DEPRECIATION EXPENSE DO YOU RECOMMEND IN SURREBUTTAL TESTIMONY?

A. I recommend that annual depreciation expense be decreased from $133,134,000 to $129,641,000. This is a reduction of $3,494,000 (I&E Ex. No. 5-SR, Sch. 1, p. 2, columns B, C and D, line 1). The annual depreciation expense by account is shown on I&E Ex. No. 5-SR. Sch. 3, p. 2, column D, line 1).

Q. HOW DID YOU DETERMINE THE $129,641,000 ANNUAL DEPRECIATION EXPENSE FOR THE FPFTY?

A. After adjusting the projected plant in service in the FTY and FPFTY as described above, I recalculated the annual depreciation expense for the FPFTY based upon the same service lives the Company used for each plant account to arrive at the $129,641,000 (I&E Ex. No. 5-SR, Sch. 3, pp. 1-2, column I, lines 1-134).

Q. IF THE COMMISSION ACCEPTS YOUR ADJUSTMENTS TO PLANT IN SERVICE, SHOULD ANNUAL DEPRECIATION EXPENSE ALSO BE ADJUSTED?

A. Yes. As described above, reducing plant in service in the FTY and FPFTY reduces the annual depreciation expense that would be associated with these plant additions and reduced retirements of existing plant.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

I&E Statement No. 6
Witness: Jessalynn Heydenreich
NON-PROPRIETARY

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

UGI UTILITIES, INC. – GAS DIVISION

Docket No. R-2021-3030218

Direct Testimony

of

Jessalynn Heydenreich

Bureau of Investigation & Enforcement

Concerning:

PIPELINE REPLACEMENT COSTS
SYSTEM LEAK REDUCTION

TABLE OF CONTENTS

INTRODUCTION

Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Jessalynn Heydenreich. I am a Fixed Utility Valuation Engineer in the Pipeline Safety Division of the Pennsylvania Public Utility Commission's (Commission) Bureau of Investigation and Enforcement (I&E). My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. WHAT IS YOUR EDUCATIONAL AND EMPLOYMENT EXPERIENCE?

A. I attended the Pennsylvania State University and earned a Bachelor of Science Degree in Mechanical Engineering in 2003. I joined the Pennsylvania Public Utility Commission's Pipeline Safety Division in October 2015.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my testimony is to address UGI Utilities, Inc. - Gas Division's (UGI or Company) pipeline replacement costs, particularly restoration costs, associated with the replacement of mains.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 6 contains schedules relating to my testimony.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. HAVE YOU REVIEWED THE DIRECT TESTIMONY OF UGI WITNESS MR. ANGSTADT AS IT RELATES TO UGI'S PLAN TO REPLACE CAST IRON AND BARE STEEL PIPELINES?

A. Yes. I have reviewed Mr. Angstadt's direct testimony as it relates to UGI's plan to replace cast iron and bare steel pipelines.[1] Replacement and betterment infrastructure projects are chosen for inclusion in the capital budget using a risk-based prioritization process.[2] Mr. Angstadt summarizes UGI's risk-based prioritization process used to evaluate the replacement of cast iron and bare steel pipelines. Mr. Angstadt states that UGI's cast iron and bare steel mains are more susceptible to failure than other pipe materials. Mr. Angstadt also references UGI's Long Term Infrastructure Improvement Plan (LTIIP) to prioritize projects for its' capital budget. UGI uses a risk-based prioritization process Distribution

[1] UGI Statement No. 9, pp. 10, ln 8-15.
[2] UGI Statement No. 9, p. 9-10.

Integrity Management Program (DIMP) to determine which pipelines should be replaced.

Q. WHAT FEDERAL AND STATE REGULATIONS CONTROL UGI'S PIPELINE REPLACEMENT?

A. UGI is mandated to implement a DIMP under Chapter 49 CFR 192 Subpart P – Gas Distribution Pipeline Integrity Management (IM) of the Code of Federal Regulations. Additionally, utilities, like UGI, which are seeking to continue a previously-approved DSIC mechanism, are required to submit an LTIIP pursuant to 52 Pa Code §121.1 and §121.3.

Q. WHY MUST A NATURAL GAS DISTRIBUTION COMPANY COMPLY WITH THE DIMP REGULATIONS?

A. The Pipeline and Hazardous Material Safety Administration (PHMSA) created DIMP regulations to reduce the number of U.S. Department of Transportation (U.S. DOT) Reportable Incidents.[3] DIMP is a performance based regulatory program required of gas distribution operators and is driven by risk management.

---

[3] A PHMSA Reportable Incident is defined by the following events: (1) An event that involves a release of gas from a pipeline, or of liquefied natural gas, liquefied petroleum gas, refrigerant gas, or gas from an LNG facility, and that results in one or more of the following consequences:(i) A death, or personal injury necessitating in-patient hospitalization;(ii) Estimated property damage of $50,000 or more, including loss to the operator and others, or both, but excluding cost of gas lost;(iii) Unintentional estimated gas loss of three million cubic feet or more;(2) An event that results in an emergency shutdown of an LNG facility. Activation of an emergency shutdown system for reasons other than an actual emergency does not constitute an incident;.(3) An event that is significant in the judgment of the operator, even though it did not meet the criteria of paragraphs (1) or (2) of this definition.

Q. WHY MUST A NATURAL GAS DISTRIBUTION COMPANY FILE AN LTIIP?

A. A natural gas distribution company must submit an LTIIP for Commission approval to be eligible to recover the reasonable and prudently incurred costs regarding the repair, improvement, and replacement of eligible property from the Distribution System Improvement Charge (DSIC). The LTIIP must show the acceleration of the replacement of aging infrastructure by the utility and be sufficient to ensure and maintain adequate, efficient, safe, reliable, and reasonable service to customers.[4]

Q. WHAT ARE THE REQUIREMENTS OF A DIMP?

A. DIMP requires gas distribution pipeline operators to:

1. Demonstrate knowledge of the gas distribution system;
2. Identify threats;
3. Evaluate and rank risks;
4. Identify and implement measures to address risk;
5. Measure performance, monitor results and evaluate effectiveness;
6. Evaluate and improve the DIMP;
7. Report results.

[4] See 52 Pa. Code § 121.1.

DIMP requirements include the identification of threats to pipeline facilities and the requirement for operators to create plans to mitigate and reduce the risks caused by those threats. UGI uses a risk-based prioritization process to select pipelines for replacement. UGI determines pipeline replacements by managing the risk ranking of the different aspects of the pipeline and then replacing the pipe based on the highest risk ranking.

Q. WHAT ARE THE REQUIREMENTS OF AN LTIIP?

A. The LTIIP must include the following elements:

1. Identification of types and age of eligible property owned and operated by the utility for which it is seeking DSIC recovery.
2. An initial schedule for planned repair and replacement of eligible property.
3. A general description of location of eligible property.
4. A reasonable estimate of quantity of eligible property to be improved or repaired.
5. Projected annual expenditures and means to finance the expenditures.
6. A description of the manner in which infrastructure replacement will be accelerated and how repair, improvement, or replacement will ensure and maintain adequate, efficient, safe, reliable, and reasonable service to customers.

7. A workforce management and training program designed to ensure that the utility will have access to a qualified workforce to perform work in a cost-effective, safe, and reliable manner.
8. A description of a utility's outreach and coordination activities with other utilities, Department of Transportation and local governments regarding the planned maintenance/construction projects and roadways that may be impacted by the LTIIP.

The LTIIP must address only the specific property eligible for DSIC recovery.[5]

Q. WHAT ARE THE COMMON MITIGATION MEASURES FOR HIGH RISK PIPELINE SEGMENTS?

A. The industry's common mitigation measure to reduce pipeline risk is to replace the highest risk pipelines first. As a company replaces the pipelines calculated to be at the highest risk, the total system risk should be reduced. The overall risk of the asset group will reduce as the riskiest pipeline is replaced, if enough pipe is replaced in that asset group annually to overcome the increasing risks on other segments within that group.

[5] See 52 Pa. Code § 121.3.

Q. SHOULD PIPELINE REPLACEMENT MITIGATION MEASURES BE BASED ON LTIIP OR DIMP?

A. Pipeline replacement, which includes high risk cast iron and bare steel should be based on DIMP. The LTIIP is a forward-looking plan for the replacement of DSIC eligible assets. Overall, pipeline replacement should be risk based and, thus, driven by DIMP.

<u>RESTORATION COSTS</u>

Q. WHAT IS INCLUDED IN UGI's PIPELINE REPLACEMENT COSTS?

A. UGI's capital costs include Contractor, Material, Other, Restoration, Labor, Equipment, and Overhead.

Q. ARE THE PIPELINE REPLACEMENT COSTS INCREASING?

A. Yes. UGI's pipeline replacement costs are increasing. {**BEGIN PROPRIETARY**}

{**END PROPRIETARY**}

Q. DOES THE TOTAL COST FOR PIPELINE REPLACEMENT INCLUDE THE COSTS ASSOCIATED WITH SERVICE LINE REPLACEMENT?

A. No. {**BEGIN PROPRIETARY**}

{**END PROPRIETARY**}

6

7

Q. WHAT PORTION OF UGI'S PIPELINE REPLACEMENT COSTS ARE INCREASING AT THE GREATEST RATE PER MILE?

A. The largest increase in pipeline replacement is associated with the restoration costs per mile. {**BEGIN PROPRIETARY**} {**END PROPRIETARY**}

Q. WHAT ARE UGI'S FORECASTED PIPELINE REPLACEMENT GOALS?

A. Pipeline replacement goals for 2022, 2023 and 2024[8] are known to be at least 70 miles per year, which is representative of the actual pipeline replacement rate of 76 miles in fiscal year 2021. Beyond Fiscal Year 2024, UGI's pipeline replacement goals will be determined in a new LTIIP filed with the Commission.

Q. HAS THE COMPANY COMMENTED ON THE INCREASING RESTORATION COSTS?

A. Yes. UGI indicated in the response to I&E-PS-29, that it is continuing efforts to lower restoration costs with a strategy focused on three main areas: municipal outreach, project aggregation, and installation technology.

[8] See UGI Statement No. 9, p 10, ln 8-15.

Q. IN YOUR OPINION, WILL UGI'S RESTORATION COSTS PER MILE INCREASE IN 2022 AND THROUGH 2024?

A. Yes. {**BEGIN PROPRIETARY**}

---

[9] See Exhibit No. 6, Schedule No. 2.
[10] See Exhibit No. 6, Schedule No. 1.

{**END PROPRIETARY**}

Q. DO INCREASING RESTORATION COSTS NEGATIVELY IMPACT UGI'S CAPITAL SPENDING ON PIPELINE REPLACEMENT PROJECTS?

A. Yes. {**BEGIN PROPRIETARY**}

{**END PROPRIETARY**}

11

12

Q. WHEN CAPITAL IS UTILIZED FOR MORE ANCILLARY SPENDING SUCH AS RESTORATION COSTS, DO THOSE ADDED COSTS REDUCE THE FUNDS AVAILABLE FOR PIPELINE REPLACEMENT?

A. Yes. The increasing restoration costs divert funds from UGI's pipeline replacement projects. The fewer projects UGI can complete in a year equates to less risky pipe being replaced, which slows the desired reduction in total pipeline risk. The less money UGI spends on restoration costs, the more funds it has for pipeline replacement.

Q. DO YOU HAVE ANY RECOMMENDATIONS REGARDING RESTORATION COSTS?

A. Yes. I recommend that UGI continue to take affirmative steps to reduce restoration costs through efforts including, but not limited to, coordinating pipe replacement projects with other street projects and replacing pipe using trenchless construction techniques where technically and economically feasible. I also recommend UGI produce by March 2023 for FY 2022 pipeline replacements and annually thereafter for subsequent years and discuss the results of the audits of the restoration costs for its 10 largest projects in the prior three years, identifying costs incurred in excess of the Pennsylvania Department of Transportation restoration standards including: paving, shoulders, sidewalks, etc., and permitting fees.

<u>LEAK IDENTIFICATION</u>

Q. PLEASE DESCRIBE HOW UGI CLASSIFIES LEAKS ON ITS SYSTEM?

A. UGI assigns grades to leaks on its system according to the severity of the leaks. These assignments include Class 'A', 'B', and 'C'. Class 'C' leaks are deemed hazardous and repaired immediately. Class 'B' leaks may become hazardous if otherwise not repaired and are scheduled for repair within twelve (12) months, not to exceed fifteen (15) months. Class 'A' are deemed non-hazardous leaks.

Q. HOW HAVE UGI'S LEAKS TRENDED FROM 2017 TO 2021?

A. In response to I&E-PS-15, the Company provided historic leak information. {**BEGIN PROPRIETARY**}

{**END PROPRIETARY**}

Q. DO YOU HAVE A RECOMMENDATION REGARDING UGI'S LEAKS?

A. Yes. I recommend UGI perform a root cause analysis to determine why the increase in total number of leaks found in 2021 does not correlate with removing 60 miles of risky pipeline in 2020. Further, I recommend UGI present the findings

---

13

of said analysis to I&E Pipeline Safety, including any corrective actions the Company takes, no later than September 30, 2022.

Q. WHY DO YOU RECOMMEND UGI COMPLETE A ROOT CAUSE ANALYSIS REGARDING THE UPWARD TREND OF LEAKS ON ITS SYSTEM?

A. The increase of UGI's leaks in the last year is concerning given the amount of priority pipe the Company has been replacing. [14] Theoretically, as risky pipes are replaced, the number of leaks should go down, which is not the case here. A root cause analysis would be a good investment of ratepayers' money given the threats leaks pose to life and property.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes

[14] See Exhibit No. 6, Schedule No. 3 (Proprietary).

I&E Statement No. 6-SR
Witness: Jessalynn Heydenreich

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

UGI UTILITIES, INC. – GAS DIVISION

Docket No. R-2021-3030218

Surrebuttal Testimony

of

Jessalynn Heydenreich

Bureau of Investigation & Enforcement

Concerning:

PIPELINE REPLACEMENT COSTS
SYSTEM LEAK REDUCTION

Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Jessalynn K. Heydenreich. I am a Fixed Utility Valuation Engineer in the Pipeline Safety Division of the Pennsylvania Public Utility Commission's ("Commission") Bureau of Investigation and Enforcement ("I&E"). My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. ARE YOU THE SAME JESSALYNN K. HEYDENREICH WHO SUBMITTED DIRECT TESTIMONY ON BEHALF OF THE BUREAU OF INVESTIGATION AND ENFORCEMENT?

A. Yes. I submitted I&E Statement No. 6 and I&E Exhibit No. 6.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to address the rebuttal testimony of UGI Utilities – Gas Division ("UGI") witness Timothy J. Angstadt's testimony identified as UGI Statement No. 9-R concerning UGI's pipeline replacement costs and system leaks.

Q. PLEASE SUMMARIZE YOUR DIRECT TESTIMONY.

A. I stated in my direct testimony that restoration costs associated with pipeline replacement are increasing and mitigation of the increases were suggested.

Additionally, I discussed the system leak history and increase in documented leaks for 2021 and how that would pertain to the Distribution Integrity Management Program ("DIMP") to determine which pipelines should be replaced.

Q. DID MR. ANGSTADT ADDRESS YOUR DIRECT TESTIMONY IN HIS REBUTTAL TESTIMONY?

A. Yes. Mr. Angstadt replied to my direct testimony by stating UGI Utilities has plans going forward to reduce restoration costs of pipeline replacement, but he specifically disagrees with my representation that restoration costs have impacted pipeline replacement as UGI remain on track with its filed long term infrastructure improvement plan (UGI St. No. 9-R, pp. 8-10). Additionally, Mr. Angstadt stated that UGI utilizes varying leak survey intervals and due to the variability of leak rates in different assets, some year-to-year leak detection volatility is to be expected. (UGI St. No. 9-R, p. 11)

Q. DO YOU AGREE WITH MR. ANGSTADT THAT RESTORATION COSTS WILL NOT NEGATIVELY IMPACT PIPELINE REPLACEMENT RATES?

A. Not necessarily. Utilities do not have unlimited funds. The more money it costs to replace pipeline, which would include restoration costs, it follows that less pipeline can be replaced simply because utilities do not have unlimited funds. While it may not match dollar for dollar, I believe that if restoration costs continue to rise, it will necessarily follow that the utility will not be able to replace as much pipeline as it would at lower restoration costs.

Q. DO YOU HAVE ANY FURTHER COMMENTS REGARDING RESTORATION COSTS?

A. Yes. Mr. Angstadt stated the remaining cast iron and bare steel is in more urban areas and will incur higher replacement costs (UGI St. No 9-R at 6-7). I agree the replacement costs will increase and the rate of increase will likely exceed my previous calculations. This simply serves to illustrate the importance of UGI's efforts to reduce restoration costs associated with replacement of cast iron and bare steel pipelines.

Q. DID MR. ANGSTADT AGREE WITH ANY OF YOUR RECOMMENDATIONS RELATED TO RESTORATION COSTS?

A. Yes. Mr. Angstadt stated that UGI will continue its efforts to control restoration costs by coordinating projects where it can and using technology that will reduce restoration activities, as well as taking other actions to reduce restoration costs. In addition, UGI has agreed that it will prepare and submit an annual report to the Gas Safety Division on March 1 which will identify the ten most expensive restoration projects per year over the past three years with the corresponding cost breakdowns (UGI St. 9-R, p. 10).

Q. IS MR. ANGSTADT'S STATEMENT OF LEAK VOLATILITY DUE TO UGI'S VARIED INSPECTION SCHEDULE AN ADEQUATE EXPLANATION FOR THE INCREASE IN LEAKS IN 2021?

A. No. In UGI St. No 9-R, Figure 1, UGI indicates they repair fewer leaks annually as proof that the main replacement program is working; however, system improvement must include a decrease in new leaks, not just a decrease in the repair of existing leaks. Therefore, this figure is not illustrative of the total leaks on the pipeline system. Class 'A' and 'B' leaks are historically found during leak surveys, which have a variable inspection cycle by asset type. Class 'C', which are hazardous leaks, are generally found due to odor complaints and because of pipeline damage. An increase in the number of leaks in 2021 over 2020 may indicate that the riskiest pipeline in UGI's pipeline system has not been replaced.

Q. FOR PIPELINE ASSETS HAVING A LEAK INSPECTION CYCLE LESS FREQUENTLY THAN ONCE PER YEAR, WOULD DIMP ADDRESS THESE ASSETS ON AN ANNUAL BASIS?

A. Yes, pipeline assets are ranked annually by DIMP, with the goal of reducing risk to the pipeline system. Mr. Angstadt stated that there are variable inspection cycles for different asset types (UGI St. No. 9-R, p. 11). Pipeline assets are still evaluated annually in an effective DIMP to reduce pipeline system risk, regardless of the leak inspection cycle.

Q. WHAT WAS MR. ANGSTADT'S RESPONSE TO YOUR PROPOSAL THAT UGI COMPLETE A ROOT CAUSE ANALYSIS TO DETERMINE WHY LEAKS INCREASED FROM 2020 TO 2021?

A. Mr. Angstadt said that because the level of increase was small, he did not believe further analysis was necessary (UGI St. No. 9-R, p. 12).

Q. DO YOU CONTINUE TO RECOMMEND UGI COMPLETE A ROOT CAUSE ANALYSIS?

A. Yes. It is important to determine the cause of any increase in leaks even if it is a modest increase. Therefore, I continue to recommend UGI complete a root cause analysis.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes
