(e) A listing of each outage case exceeding 6 or more hours in duration:  
See Attachment A.

(f) Reason for the interruption or outages: Beginning the afternoon of Friday, March 03, 2023, Winter Storm Quest, moved from west to east across Pennsylvania, including the West Penn service territory. The storm produced a wintry mix of snow and ice along with wind gusts of up to 60 miles per hour on March 3 and 4, 2023. Wind continued to affect the West Penn Service territory during the restoration period with gusts in excess of 40 miles per hour on March 6 and March 7, 2023. See Attachment B for the maximum wind gusts from March 3 to 7, 2023 and 24-hour total precipitation for March 3 and 4, 2023.

Damage as a result of the high winds included downed trees/power lines, damaged and broken poles/crossarms, and damaged equipment. The Latrobe, Uniontown, and Pleasant Valley districts were the hardest hit areas. Approximately 52% of the total outages that occurred were tree related. Wind speeds, which often exceeded safe work ratings for aerial lifts, hampered restoration efforts.

Preliminary data indicate the reliability impact of the storm was 79.2 minutes of SAIDI, 0.07 of SAIFI, and an overall storm CAIDI of 1,089.48 minutes.

- (g) Projected time of restoration: It was estimated that the majority of customers would be restored by 2300 on March 6, 2023.

See Attachment C for the restoration curve and Attachment D for the order restoration graphs.

West Penn Storm Report

**Attachment E: Meteorologist Reports**

**Wednesday March 1, 2023 @ 1004**

1. **NEW:** Today. Added thunderstorm threat for this evening in south OH, west WV, and southwest PA. Confidence is slightly above normal with this panel.
2. Friday Winter Precipitation: Modified areal coverage of snow and ice. Added details to character of precipitation. Confidence is slightly below normal with this panel as some further fine-tuning is likely with areas based on forthcoming model guidance.
3. Friday Wind Gusts and Excessive Rain. Increased area and magnitudes for wind gusts – especially in northwest OH where a strong northeast flow of the lake will persist for most of the day. Confidence is normal with this threat. Reduced area and magnitude of excessive rain. Confidence is below normal with this threat (a good amount of rain will fall but it is not yet etched in stone if we will reach 2” in the outlined area).

See graphics below for further information.

**Changes.**

1. Friday Precipitation: Shifted bulk of snow north out of FE area. Decreased amounts of ice. Decrease area with potential for 2" rain. Confidence is slightly below normal with this panel given the storm track is not yet etched stone.
2. Friday Wind Gusts. Decreased area in east PA/NJ. Added detail for ridge-top gusts in WV/MD/PA AND for sustained 25-30mph winds in northwest OH. Shifted "null gust" area northwest. Confidence is slightly below normal with this panel for the same reason above.
3. Saturday Wind Gusts. Given new storm track needed to Introduce a round of gusts on Saturday. Confidence is slightly below normal with this threat for areal coverage of nuisance gusts.

See graphics below for further information.

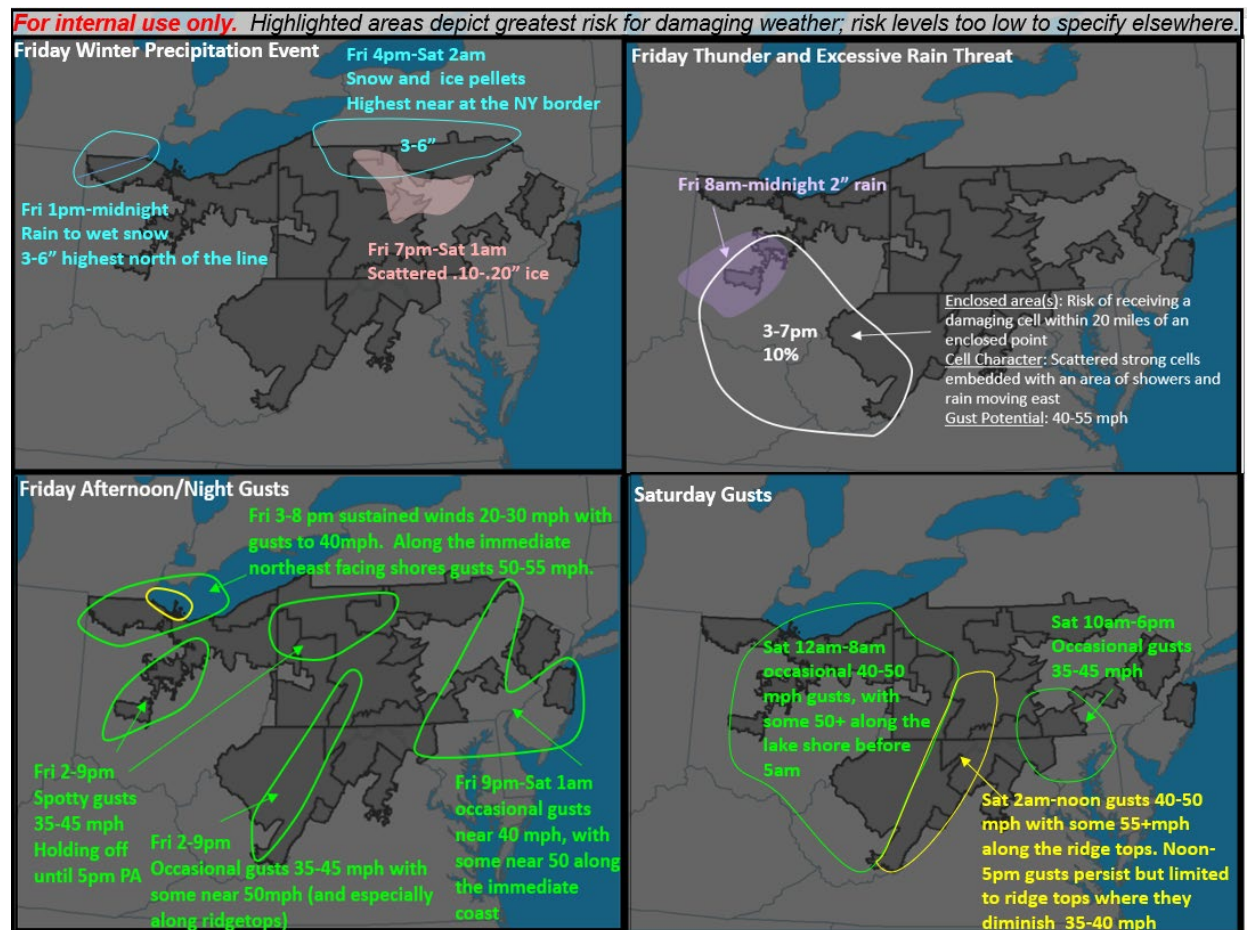

**Friday March 3, 2023 @ 1010**

**Changes.**

1. Friday Winter Precipitation: Slight shift north of snow area in PA, significant change to ice area. Fine-tuned timing of both. Confidence is slightly below normal for this panel especially with ice area. Confidence with amounts of ice and snow normal.
2. Friday Rain and Thunder: Added thunder threat in south OE and southwest MP. Confidence is normal for this panel.
3. Friday and Saturday Wind Gusts. Split threats into separate panels per day to help with detailing timing given the event will play out over a long period of time. Confidence is slightly below normal with these panels not so much with timing but precision of mini-areas.

See graphics below for further information.

**Saturday March 4, 2023 @ 0749**
