

C-2023-3038206

To Whom it May Concern —

On the week of 9-5-2022, when the problem occurred, the power went off and on several times. The refrigerator worked fine before that, then after that it stopped working. A maytag repair man told me that it was caused by a "power surge". I went to the appliance department at Lowes and talked to the man there and he said that the mother board went, due to a "power surge".

The dates on the paper that was sent to me does not have any dates close to or on 9-5-22 when the problem happened. NO one is perfect, not even me and everyone tries to do their best. I am on a fixed income and disabled, so my son let us borrow a refrigerator for the time being. Enclosed is a couple of letters from neighbors that had the same problem with the "power surges."

Sincerely —

To whom it may concern,

During the week of September 5, 2022, we were having power outages. The weather was un-forgiving. I live next door to Michael & Pam Shultz. Their judge is not what caused the outages we were having. And they in fact had to get another refund made.

Thank you,

Jim MacHarris
