16. Indemnification; Limitation of Liability: **A.** Seller will be responsible for and shall indemnify Buyer against all losses, cost and expenses which attach before title passes to Buyer. Seller hereby agrees to indemnify, save and hold harmless, and defend Customer, its officers, agents and employees from and against all liens, charges, claims, demands, losses, costs, judgments, liabilities, and damages of every kind and nature whatsoever, including court costs and

Exhibit EB-12

attorney's fees arising by reason of: the performance by Seller of any Services under this Agreement; any act, error or omission of Seller or of an agent, employee, licensee, Seller or subSeller of Seller; and any breach by Seller of any of the terms, conditions or provisions of this Agreement.

C. NEITHER PARTY WILL BE LIABLE TO THE OTHER UNDER THIS AGREEMENT FOR CONSEQUENTIAL, INDIRECT OR PUNITIVE DAMAGES, LOST PROFITS OR SPECIFIC PERFORMANCE.

17. Other: (A) The Agreement, and any dispute arising hereunder, is governed by the law of the state in which Customer's Service Locations are located (i.e. City of Pittsburgh in the County of Allegheny) including with regard to venue and forum and without regard to any conflict of rules doctrine. **(B)** No delay or failure by a Party to exercise any right or remedy to which it may become entitled under this Agreement will constitute a waiver of that right or remedy **(D)** Any notice or waiver including without limitation any termination or disconnection notice, shall be provided in writing and, if sent to Seller, a copy delivered to: Direct Energy Business, Attn: Customer Services Manager, 1001 Liberty Avenue, Pittsburgh, PA 15222, Phone: (888) 925-9115; Fax: (866) 421-0257; Email: CustomerRelations@directenergy.com; and if sent to Buyer, chris.hornstein@pittsburghpa.gov. Notice sent by electronic means shall be deemed to have been received by the close of the Business Day on which it was transmitted, or such earlier time as is confirmed by the receiving Party. Notice delivered by overnight courier shall be deemed to have been received on the Business Day after it was sent, or such earlier time as is confirmed by the receiving Party. Notice delivered by first class mail (postage prepaid) shall be deemed to have been received at the end of the third Business Day after the date of mailing. **(C)** No amendment to this Agreement will be enforceable unless reduced to writing and executed by both Parties. **(D)** Seller may pledge, encumber or assign this Agreement or the accounts, revenues and proceeds thereof without Buyer's consent. Buyer may not assign this Agreement without Seller's consent not to be unreasonably withheld. **(E)** This Agreement may be executed in separate counterparts by the Parties, each of which when executed and delivered shall be an original, but all of which shall constitute one and the same instrument. **(F)** Any capitalized terms not defined in this CMA are defined in the Transaction Confirmation or shall have the meaning set forth in the applicable Utility rules, tariffs or other governmental regulations, or if not defined therein then it shall have the generally accepted meaning customarily attributed to it in the natural gas or electricity generation industries, as applicable. **(G)** Any document generated by the Parties with respect to the Agreement, including the Agreement, may be imaged and stored electronically and may be introduced as evidence in any proceeding as if it were an original business record and shall not be contested by either party as admissible evidence. **(H)** Where multiple parties are Party to this Agreement with Seller and are represented by the same agent, this Agreement will constitute a separate agreement with each such Party, as if each such Party executed a separate Agreement, and that no such Party shall have any liability under this document for the obligations of any other Parties. **(I)** If a conflict arises between the terms of this CMA and a Transaction Confirmation, the Transaction Confirmation will control with respect to that particular Transaction. **(J)** If a broker or agent has been involved in any Transaction, such broker is an agent of Buyer only and not an agent of Seller.

ELECTRICITY TRANSACTION CONFIRMATION -

This Transaction Confirmation confirms the terms of the Electricity Transaction entered into between Direct Energy Business, LLC ("Seller"), and the customer above ("Buyer" or "Customer") pursuant to the terms of the Commodity Master Agreement between Customer and Seller and/or Seller's affiliate Direct Energy Business Marketing, LLC, d/b/a Direct Energy Business dated July 1, 2021, as may be amended, (the "CMA"). If the referenced CMA is between Customer and Direct Energy Business Marketing, LLC, d/b/a Direct Energy Business, Customer and Seller agree that this Transaction Confirmation shall be governed by and incorporate the terms of such CMA. All attachments and exhibits hereto, including any request for a Forward Purchase or a PowerPortfolio Transaction Report, are made a part of and incorporated into this Transaction Confirmation. The Purchase Price excludes Utility transmission and distribution charges and Taxes that are or may be the responsibility of Customer. Customer's execution and submission of this Transaction Confirmation, including Exhibit A hereto, to Seller shall constitute an offer from Customer to Seller to purchase the Commodity on the terms set forth in the CMA This Transaction Confirmation shall become effective only upon (i) execution by Customer of this Transaction Confirmation, including Exhibit A, and CMA; and (ii) the earlier of (a) execution of the CMA and this Transaction Confirmation by Seller or (b) written confirmation by Seller of its acceptance of the Transaction Confirmation to Customer.

DELIVERY PERIOD

For each Service Location, the first meter read date will be on or after: June 01, 2021, and will continue for a term of 59 Months. Notwithstanding the foregoing, the Delivery Period will extend through the meter read date following the expiration of any Forward Purchase as confirmed by a PowerPortfolio Transaction Report. Seller will request the Utility to enroll Customer on the first meter read date in the first month of the Delivery Period as defined by the Utility. The service start date hereunder will be the date that the Utility enrolls Customer for Seller's services. Seller shall not be liable for any lost savings or lost opportunity as a result of a delay in service commencement due to actions or inactions of the Utility.

Upon the expiration of the Delivery Period, this Transaction shall continue for successive one month terms (collectively the "Renewal Term") until either Party notifies the other Party in writing of its intention to terminate, at least 15 days prior to the end of the Delivery Period or 15 days prior to the end of each successive month Renewal Term. The termination date shall be the next effective drop date permitted by the Utility. All terms of the Agreement will remain in effect through the termination date as set by the applicable Utility. During the Renewal Term, the Purchase Price for each successive month Renewal Term will be the then market-based price for similar quantities of Commodity at the Delivery Point, including all Taxes, costs, charges or fees which are set forth herein, unless otherwise agreed to in writing by the Parties.

DELIVERY POINT

The Delivery Point shall be the point(s) where Commodity is delivered to the Utility. The Utility is specified on Exhibit A.

BILL TYPE - DUAL

CONTRACT QUANTITY

Customer and Seller agree that the Contract Quantity purchased and received means a positive volume up to or greater than the estimated quantities listed on Exhibit A. The section of the CMA regarding material deviation shall not apply to this Transaction Confirmation.

PURCHASE PRICE

The Purchase Price per kWh to be paid by Buyer for the services provided hereunder during the Delivery Period of this Agreement shall be that set forth on Exhibit A. The Purchase Price includes a Services Fee, as well as the components marked below as "Included". For those components marked "Pass through", they will be passed through to you at cost and shown as a line item on your bill.

DEFINITIONS

Ancillaries: Wholesale commodity services and products required to facilitate delivery of Commodity to the Utility.

Auction Revenue Rights (ARR): Entitlements allocated annually to Fixed Transmission Service Customers that entitle the holder to receive an allocation of the revenues from the Annual FTR Auction.

Block Purchase: Purchasing an amount of Electricity from Seller in an amount no less than 300kW, which may be increased in increments of 100kW, for a minimum term of one (1) calendar month.

Capacity: The Capacity obligations met through the provisions of the PJM Reliability Assurance Agreement (RAA).

Day-Ahead LMP Purchase: The purchase of a certain quantity of Commodity (per MWh(s)) on the day preceding the day in which the Energy (which includes the Commodity component) is to be delivered to the Delivery Point.

Exhibit A: The list of Service Locations attached to this Transaction Confirmation, which list specifies the Service Locations covered under the scope of this Transaction Confirmation for PowerPortfolio, Day-Ahead, Real-Time and other index products. For fixed price products, it refers to the pricing attachment to this Transaction Confirmation that sets forth (together with this Transaction Confirmation) the Purchase Price applicable to, and the Service Locations covered by, this Transaction Confirmation.

Exhibit B: A Forward Purchase Order Form which Customer may complete, execute, and submit to Seller to confirm their offer to Seller to make a Forward Purchase.

Forward Purchase: The purchase of a certain quantity of Commodity (power per MWh(s)) for a period of time greater than one day, which will be part of the Energy which is to be delivered to the Delivery Point.

Locational Marginal Price (LMP): The hourly integrated market clearing marginal price for Commodity at the location the Commodity is delivered or received as defined by the PJM RTO.

Marginal Loss Credit: A credit provided by certain RTOs as a result of an over-collection of funds for transmission and distribution losses.

Off-Peak: Monday through Sunday hours ending ("HE") 0100 through HE 0700 and HE 2400 and Saturday through Sunday HE 0800 through HE 2300. Off Peak also includes NERC Holidays HE 0100 through HE 2400. HE shall be at Eastern prevailing time.

On-Peak: Monday through Friday HE 0800 through HE 2300, excluding NERC Holidays. HE shall be at Eastern prevailing time.

PJM: The Pennsylvania New Jersey Maryland Interconnection, L.L.C.

PJM RTO: The PJM Interconnection Regional Transmission Organization.

PowerPortfolio Transaction Report: The written confirmation sent by Seller to confirm its acceptance of Customer's offer of a Forward Purchase.

Regional Transmission Expansion Plan (RTEP): PJM's Regional Transmission Expansion Plan identifies transmission system additions and improvements needed to keep electricity flowing to the millions of people throughout PJM's region.

Reliability Must Run (RMR): A unit that must run for operational or reliability reasons, regardless of economic considerations. Also called reliability agreement.

Renewable Portfolio Standard (RPS): A regulation that requires the increased production of energy from renewable energy sources.

Services Fee: The fee for the services provided by Seller to meet the Service Locations' load requirements, including any applicable broker fee, which is included in the Purchase Price to be paid by Buyer.

Transmission: The transportation of energy over high voltage wires from a generator to the Utility.

Utility Defined Loss Factor: Loss Factor as published in applicable utility tariff.

SPECIAL PROVISIONS

1.. Product Description: Seller will work with Buyer to develop an overall approach for Buyer's Commodity purchases ("Buying Strategy") that is mutually agreed upon by the Parties, based on the options given below. This Special Provision will outline the types of services that Seller provides as part of the PowerPortfolio Product, the Purchasing Options available to meet Buyer's Commodity requirements, the total cost of the Energy and services provided and the process by which Commodity purchases are to be effectuated.

A. Portfolio Purchasing Options: Seller will use the Purchasing Options below, as selected by Buyer, to meet Buyer's Commodity requirements at its Service Locations in accordance with the Buying Strategy:

1. Day-Ahead Locational Marginal Price ("Day-Ahead LMP") Purchase: The Day-Ahead LMP Purchase is the hourly integrated market clearing marginal prices for Commodity for the next operating day based on submitted demand bids and generation offers at the location of the Commodity is delivered or received. Day-Ahead LMP Purchase(s) are made in 0.1 megawatt ("MW") increments and are not permitted for Service Locations unless Buyer's forecasted usage for those Service Locations per Utility territory is equal to, or greater than, 0.1 MW.

2. Forward Purchase: During the Delivery Period of this Agreement, Buyer may purchase any amount of the Commodity component of its Energy requirements from Seller as a Forward Purchase. Buyer will request a Forward Purchase at least five (5) business days prior to Buyer's desired start date for such purchase. Forward Purchase(s) are no less than 300kW, in increments of 100kW, and is for a minimum term of one (1) calendar month and are not permitted for certain Service Locations unless Buyer's forecasted usage for those Service Locations per Utility territory is equal to, or greater than 300kW. In all events, Seller will make Forward Purchase amounts available to Buyer in a commercially reasonable timeframe following Buyer's request to effectuate a Forward Purchase. To initiate a Forward Purchase, Customer should complete and submit a Forward Purchase Order Form as set forth in Exhibit B or pursuant to an email transaction containing the required information set forth in Exhibit B and submit to Seller five business days prior to the desired start date. If Seller is able to fulfill the request, it will send Customer a PowerPortfolio Transaction Report. Seller will invoice Buyer, and Buyer will pay, for the entire quantity of any Block Purchase regardless of whether the entire amount is consumed. Buyer may not purchase a quantity of Commodity that is greater than Buyer's forecasted usage, as agreed to by Buyer and Seller.

3. If Buyer has not specifically selected a Day-Ahead LMP or Forward Purchase for any given day during the Delivery Period, Seller will purchase Commodity necessary to meet Buyer's Energy requirements for Buyer's forecasted usage on a Day-Ahead LMP basis as if Buyer and Seller had agreed upon such Day-Ahead LMP Purchase.

4. To the extent Buyer's Day-Ahead LMP and/or Forward Purchase(s) do not meet Buyer's hourly Commodity requirements, Seller will meet Buyer's remaining Commodity requirements with PJM Real-Time LMP. Buyer will pay Seller the associated Real-Time LMP for such additional Commodity purchase(s).

5. Seller will deliver all quantities of Energy made under Day-Ahead and/or Forward Purchase(s) into the PJM RTO regardless if they are actually consumed by Buyer. Although Buyer is obligated and shall pay Seller for the entire quantity of such Day-Ahead LMP and/or Forward Purchases, Seller will credit/debit Buyer for the dollar amount that Seller receives from the PJM RTO for such quantity(ies) of unconsumed Commodity. The dollar amount credited/debited to the Buyer for such unconsumed Commodity is derived from the PJM RTO's settlement of the unconsumed Commodity against the PJM RTO Real-Time LMP.

6. Purchasing Acknowledgement: Buyer acknowledges that under any Forward Purchase or Day-Ahead LMP Purchase selection, Buyer may not knowingly purchase or allow for the scheduling of a quantity of Commodity that is greater than Buyer's forecasted usage. In all cases all forecasts and Commodity purchases shall be, as reasonably determined by Buyer and Seller, in accordance with Buyer's full usage requirements.

7. Email Transactions: The Parties consent to the use of electronic agreements and to conduct Transactions and/or Forward Purchases via email and/or facsimile. Such electronic correspondence shall be deemed a "writing", by which the Parties intend to be bound, for purposes of satisfying any applicable state and federal legal requirements. The Parties agree that a typed name and title, including the use of an automated email signature block, in such writing(s) is the legal equivalent of such Party's representative's manual signature (an "E-signature"). The Parties agree that no certification of authority or other third-party verification shall be necessary to validate an E-signature and lack of such certification or third-party verification will not in any way affect the enforceability of a Party's E-signature. In all cases, the failure of Seller to send a PowerPortfolio Transaction Report or the failure of Buyer to acknowledge receipt of a PowerPortfolio Transaction Report shall not invalidate the Forward Purchase agreed to by the Parties. If there are any inconsistencies between this Transaction Confirmation and any finalized Forward Purchase, such inconsistencies will be resolved in favor of the latter for that applicable purchase.

2.. Change in Utility Account Numbers: The account number for a Service Location shall be the Utility Account Number set forth in the Service Locations attached in the Exhibit A, or any replacement account number issued by the Utility from time to time.

3.. Third Party Charges: Customer acknowledges that any costs assessed by the Utility or any third party as a result of Customer's switch to or from Seller, including but not limited to switching costs, are not included in the Purchase Price and shall be the responsibility of the Customer.

4.. Billing and Payment: The following is hereby added to the Billing and Payment section of the CMA:

"Seller and Buyer agree upon the following condition regarding its non-interval monthly meter accounts, if any: Seller will deaggregate the Buyer's usage, based on Utility and ISO settlement protocols, and Buyer agrees to accept the results of this deaggregation as its hourly billing determinants. Where Buyer has interval meters, Seller will use the interval meter hourly usage for billing only to the extent that the hourly usage is used by the applicable Utility and ISO for settlement purposes with Seller. In the event of an interval meter where the Utility and ISO do not use the hourly usage for settlements, Seller will deaggregate Buyer's usage, based on Utility and ISO settlement protocols, and Buyer agrees to accept the results of this deaggregation as its hourly billing determinants."

5.. Risk Acknowledgements: By selecting and executing this Transaction Confirmation, Buyer acknowledges that it is acting for its own account, and it has made its own independent decision to enter into this Agreement based solely upon its own judgment and upon advice from such advisors as it has deemed necessary. It is not relying on any communication (written or oral) of Seller or its affiliates (or its respective representatives) in any respect, and in particular, not as investment advice or as a recommendation to enter into any Agreement, it being understood that information and explanations related to the terms and conditions of any Agreement will not be considered investment advice or a recommendation to enter into the Agreement. Buyer understands and agrees that the energy market is a volatile market and that - except as to any agreed prices between the Parties described in this Agreement - no warranties (express or implied) and no guarantees regarding market movement or price trends are made by Seller or its affiliates in connection with this Agreement. No communication (written or oral) received from Seller or its affiliates (or their respective representatives) will be deemed to be an assurance or guarantee as to the expected results of any transaction elected by Buyer under this Agreement.

TAX EXEMPTION STATUS - If exempt, must attach certificate

General Terms and Conditions Base Contract for Sale and Purchase of Natural Gas

SECTION 1. PURPOSE AND PROCEDURES

1.1. These General Terms and Conditions are intended to facilitate purchase and sale transactions of Gas on a Firm or Interruptible basis. "Buyer" refers to the party receiving Gas and "Seller" refers to the party delivering Gas. The entire agreement between the parties shall be the Contract as defined in Section 2.7.

The parties have selected either the "Oral Transaction Procedure" or the "Written Transaction Procedure" as indicated on the Base Contract.

Oral Transaction Procedure:

1.2. The parties will use the following Transaction Confirmation procedure. Any Gas purchase and sale transaction may be effectuated in an EDI transmission or telephone conversation with the offer and acceptance constituting the agreement of the parties. The parties shall be legally bound from the time they so agree to transaction terms and may each rely thereon. Any such transaction shall be considered a "writing" and to have been "signed". Notwithstanding the foregoing sentence, the parties agree that Confirming Party shall, and the other party may, confirm a telephonic transaction by sending the other party a Transaction Confirmation by facsimile, EDI or mutually agreeable electronic means within three Business Days of a transaction covered by this Section 1.2 (Oral Transaction Procedure) provided that the failure to send a Transaction Confirmation shall not invalidate the oral agreement of the parties. Confirming Party adopts its confirming letterhead, or the like, as its signature on any Transaction Confirmation as the identification and authentication of Confirming Party. If the Transaction Confirmation contains any provisions other than those relating to the commercial terms of the transaction (i.e., price, quantity, performance obligation, delivery point, period of delivery and/or transportation conditions), which modify or supplement the Base Contract or General Terms and Conditions of this Contract (e.g., arbitration or additional representations and warranties), such provisions shall not be deemed to be accepted pursuant to Section 1.3 but must be expressly agreed to by both parties; provided that the foregoing shall not invalidate any transaction agreed to by the parties.

Written Transaction Procedure:

1.2. The parties will use the following Transaction Confirmation procedure. Should the parties come to an agreement regarding a Gas purchase and sale transaction for a particular Delivery Period, the Confirming Party shall, and the other party may, record that agreement on a Transaction Confirmation and communicate such Transaction Confirmation by facsimile, EDI or mutually agreeable electronic means, to the other party by the close of the Business Day following the date of agreement. The parties acknowledge that their agreement will not be binding until the exchange of nonconflicting Transaction Confirmations or the passage of the Confirm Deadline without objection from the receiving party, as provided in Section 1.3.

1.3. If a sending party's Transaction Confirmation is materially different from the receiving party's understanding of the agreement referred to in Section 1.2, such receiving party shall notify the sending party via facsimile, EDI or mutually agreeable electronic means by the Confirm Deadline, unless such receiving party has previously sent a Transaction Confirmation to the sending party. The failure of the receiving party to so notify the sending party in writing by the Confirm Deadline constitutes the receiving party's agreement to the terms of the transaction described in the sending party's Transaction Confirmation. If there are any material differences between timely sent Transaction Confirmations governing the same transaction, then neither Transaction Confirmation shall be binding until or unless such differences are resolved including the use of any evidence that clearly resolves the differences in the Transaction Confirmations. In the event of a conflict among the terms of (i) a binding Transaction Confirmation pursuant to Section 1.2, (ii) the oral agreement of the parties which may be evidenced by a recorded conversation, where the parties have selected the Oral Transaction Procedure of the Base Contract, (iii) the Base Contract, and (iv) these General Terms and Conditions, the terms of the documents shall govern in the priority listed in this sentence.

1.4. The parties agree that each party may electronically record all telephone conversations with respect to this Contract between their respective employees, without any special or further notice to the other party. Each party shall obtain any necessary consent of its agents and employees to such recording. Where the parties have selected the Oral Transaction Procedure in Section 1.2 of the Base Contract, the parties agree not to contest the validity or enforceability of telephonic recordings entered into in accordance with the requirements of this Base Contract. However, nothing herein shall be construed as a waiver of any objection to the admissibility of such evidence.

SECTION 2. DEFINITIONS

The terms set forth below shall have the meaning ascribed to them below. Other terms are also defined elsewhere in the Contract and shall have the meanings ascribed to them herein.

2.1. "Alternative Damages" shall mean such damages, expressed in dollars or dollars per MMBtu, as the parties shall agree upon in the Transaction Confirmation, in the event either Seller or Buyer fails to perform a Firm obligation to deliver Gas in the case of Seller or to receive Gas in the case of Buyer.

2.2. "Base Contract" shall mean a contract executed by the parties that incorporates these General Terms and Conditions by reference; that specifies the agreed selections of provisions contained herein; and that sets forth other information required herein and any Special Provisions and addendum(s) as identified on page one.

2.3. "British thermal unit" or "Btu" shall mean the International BTU, which is also called the Btu (IT).

- 2.4. "Business Day" shall mean any day except Saturday, Sunday or Federal Reserve Bank holidays.
- 2.5. "Confirm Deadline" shall mean 5:00 p.m. in the receiving party's time zone on the second Business Day following the Day a Transaction Confirmation is received or, if applicable, on the Business Day agreed to by the parties in the Base Contract; provided, if the Transaction Confirmation is time stamped after 5:00 p.m. in the receiving party's time zone, it shall be deemed received at the opening of the next Business Day.
- 2.6. "Confirming Party" shall mean the party designated in the Base Contract to prepare and forward Transaction Confirmations to the other party.
- 2.7. "Contract" shall mean the legally-binding relationship established by (i) the Base Contract, (ii) any and all binding Transaction Confirmations and (iii) where the parties have selected the Oral Transaction Procedure in Section 1.2 of the Base Contract, any and all transactions that the parties have entered into through an EDI transmission or by telephone, but that have not been confirmed in a binding Transaction Confirmation.
- 2.8. "Contract Price" shall mean the amount expressed in U.S. Dollars per MMBtu to be paid by Buyer to Seller for the purchase of Gas as agreed to by the parties in a transaction.
- 2.9. "Contract Quantity" shall mean the quantity of Gas to be delivered and taken as agreed to by the parties in a transaction.
- 2.10. "Cover Standard", as referred to in Section 3.2, shall mean that if there is an unexcused failure to take or deliver any quantity of Gas pursuant to this Contract, then the performing party shall use commercially reasonable efforts to (i) if Buyer is the performing party, obtain Gas, (or an alternate fuel if elected by Buyer and replacement Gas is not available), or (ii) if Seller is the performing party, sell Gas, in either case, at a price reasonable for the delivery or production area, as applicable, consistent with: the amount of notice provided by the nonperforming party; the immediacy of the Buyer's Gas consumption needs or Seller's Gas sales requirements, as applicable; the quantities involved; and the anticipated length of failure by the nonperforming party.
- 2.11. "Credit Support Obligation(s)" shall mean any obligation(s) to provide or establish credit support for, or on behalf of, a party to this Contract such as an irrevocable standby letter of credit, a margin agreement, a prepayment, a security interest in an asset, a performance bond, guaranty, or other good and sufficient security of a continuing nature.
- 2.12. "Day" shall mean a period of 24 consecutive hours, coextensive with a "day" as defined by the Receiving Transporter in a particular transaction.
- 2.13. "Delivery Period" shall be the period during which deliveries are to be made as agreed to by the parties in a transaction.
- 2.14. "Delivery Point(s)" shall mean such point(s) as are agreed to by the parties in a transaction.
- 2.15. "EDI" shall mean an electronic data interchange pursuant to an agreement entered into by the parties, specifically relating to the communication of Transaction Confirmations under this Contract.
- 2.16. "EFP" shall mean the purchase, sale or exchange of natural Gas as the "physical" side of an exchange for physical transaction involving gas futures contracts. EFP shall incorporate the meaning and remedies of "Firm", provided that a party's excuse for nonperformance of its obligations to deliver or receive Gas will be governed by the rules of the relevant futures exchange regulated under the Commodity Exchange Act.
- 2.17. "Firm" shall mean that either party may interrupt its performance without liability only to the extent that such performance is prevented for reasons of Force Majeure; provided, however, that during Force Majeure interruptions, the party invoking Force Majeure may be responsible for any Imbalance Charges as set forth in Section 4.3 related to its interruption after the nomination is made to the Transporter and until the change in deliveries and/or receipts is confirmed by the Transporter.
- 2.18. "Gas" shall mean any mixture of hydrocarbons and noncombustible gases in a gaseous state consisting primarily of methane.
- 2.19. "Imbalance Charges" shall mean any fees, penalties, costs or charges (in cash or in kind) assessed by a Transporter for failure to satisfy the Transporter's balance and/or nomination requirements.
- 2.20. "Interruptible" shall mean that either party may interrupt its performance at any time for any reason, whether or not caused by an event of Force Majeure, with no liability, except such interrupting party may be responsible for any Imbalance Charges as set forth in Section 4.3 related to its interruption after the nomination is made to the Transporter and until the change in deliveries and/or receipts is confirmed by Transporter.
- 2.21. "MMBtu" shall mean one million British thermal units, which is equivalent to one dekatherm.
- 2.22. "Month" shall mean the period beginning on the first Day of the calendar month and ending immediately prior to the commencement of the first Day of the next calendar month.
- 2.23. "Payment Date" shall mean a date, as indicated on the Base Contract, on or before which payment is due Seller for Gas received by Buyer in the previous Month.
- 2.24. "Receiving Transporter" shall mean the Transporter receiving Gas at a Delivery Point, or absent such receiving Transporter, the Transporter delivering Gas at a Delivery Point.
- 2.25. "Scheduled Gas" shall mean the quantity of Gas confirmed by Transporter(s) for movement, transportation or management.
- 2.26. "Spot Price" as referred to in Section 3.2 shall mean the price listed in the publication indicated on the Base Contract, under the listing applicable to the geographic location closest in proximity to the Delivery Point(s) for the relevant Day; provided, if there is no single price published for such location for such Day, but there is published a range of prices, then the Spot Price shall be the average

of such high and low prices. If no price or range of prices is published for such Day, then the Spot Price shall be the average of the following: (I) the price (determined as stated above) for the first Day for which a price or range of prices is published that next precedes the relevant Day; and (II) the price (determined as stated above) for the first Day for which a price or range of prices is published that next follows the relevant Day.

2.27. "Transaction Confirmation" shall mean a document, similar to the form of Exhibit A, setting forth the terms of a transaction formed pursuant to Section 1 for a particular Delivery Period.

2.28. "Termination Option" shall mean the option of either party to terminate a transaction in the event that the other party fails to perform a Firm obligation to deliver Gas in the case of Seller or to receive Gas in the case of Buyer for a designated number of days during a period as specified on the applicable Transaction Confirmation.

2.29. "Transporter(s)" shall mean all Gas gathering or pipeline companies, or local distribution companies, acting in the capacity of a transporter, transporting Gas for Seller or Buyer upstream or downstream, respectively, of the Delivery Point pursuant to a particular transaction.

SECTION 3. PERFORMANCE OBLIGATION

3.1. Seller agrees to sell and deliver, and Buyer agrees to receive and purchase, the Contract Quantity for a particular transaction in accordance with the terms of the Contract. Sales and purchases will be on a Firm or interruptible basis, as agreed to by the parties in a transaction.

The parties have selected either the "Cover Standard" or the "Spot Price Standard" as indicated on the Base Contract.

Cover Standard:

3.2. The sole and exclusive remedy of the parties in the event of a breach of a Firm obligation to deliver or receive Gas shall be recovery of the following: (i) in the event of a breach by Seller on any Day(s), payment by Seller to Buyer in an amount equal to the positive difference, if any, between the purchase price paid by Buyer utilizing the Cover Standard and the Contract Price, adjusted for commercially reasonable differences in transportation costs to or from the Delivery Point(s), multiplied by the difference between the Contract Quantity and the quantity actually delivered by Seller for such Day(s); or (ii) in the event of a breach by Buyer on any Day(s), payment by Buyer to Seller in the amount equal to the positive difference, if any, between the Contract Price and the price received by Seller utilizing the Cover Standard for the resale of such Gas, adjusted for commercially reasonable differences in transportation costs to or from the Delivery Point(s), multiplied by the difference between the Contract Quantity and the quantity actually taken by Buyer for such Day(s); or (iii) in the event that Buyer has used commercially reasonable efforts to replace the Gas or Seller has used commercially reasonable efforts to sell the Gas to a third party, and no such replacement or sale is available, then the sole and exclusive remedy of the performing party shall be any unfavorable difference between the Contract Price and the Spot Price, adjusted for such transportation to the applicable Delivery Point, multiplied by the difference between the Contract Quantity and the quantity actually delivered by Seller and received by Buyer for such Day(s). Imbalance Charges shall not be recovered under this Section 3.2, but Seller and/or Buyer shall be responsible for Imbalance Charges, if any, as provided in Section 4.3. The amount of such unfavorable difference shall be payable five Business Days after presentation of the performing party's invoice, which shall set forth the basis upon which such amount was calculated.

Spot Price Standard:

3.2. The sole and exclusive remedy of the parties in the event of a breach of a Firm obligation to deliver or receive Gas shall be recovery of the following: (i) in the event of a breach by Seller on any Day(s), payment by Seller to Buyer in an amount equal to the difference between the Contract Quantity and the actual quantity delivered by Seller and received by Buyer for such Day(s), multiplied by the positive difference, if any, obtained by subtracting the Contract Price from the Spot Price; or (ii) in the event of a breach by Buyer on any Day(s), payment by Buyer to Seller in an amount equal to the difference between the Contract Quantity and the actual quantity delivered by Seller and received by Buyer for such Day(s), multiplied by the positive difference, if any, obtained by subtracting the applicable Spot Price from the Contract Price. Imbalance Charges shall not be recovered under this Section 3.2, but Seller and/or Buyer shall be responsible for Imbalance Charges, if any, as provided in Section 4.3. The amount of such unfavorable difference shall be payable five Business Days after presentation of the performing party's invoice, which shall set forth the basis upon which such amount was calculated.

3.3. Notwithstanding Section 3.2, the parties may agree to Alternative Damages in a Transaction Confirmation executed in writing by both parties.

3.4. In addition to Sections 3.2 and 3.3, the parties may provide for a Termination Option in a Transaction Confirmation executed in writing by both parties. The Transaction Confirmation containing the Termination Option will designate the length of nonperformance triggering the Termination Option and the procedures for exercise thereof, how damages for nonperformance will be compensated, and how liquidation costs will be calculated.

SECTION 4. TRANSPORTATION, NOMINATIONS, AND IMBALANCES

4.1. Seller shall have the sole responsibility for transporting the Gas to the Delivery Point(s). Buyer shall have the sole responsibility for transporting the Gas from the Delivery Point(s).

4.2. The parties shall coordinate their nomination activities, giving sufficient time to meet the deadlines of the affected Transporter(s). Each party shall give the other party timely prior Notice, sufficient to meet the requirements of all Transporter(s) involved in the transaction, of the quantities of Gas to be delivered and purchased each Day. Should either party become aware that actual deliveries at the Delivery Point(s) are greater or lesser than the Scheduled Gas, such party shall promptly notify the other party.

4.3. The parties shall use commercially reasonable efforts to avoid imposition of any Imbalance Charges. If Buyer or Seller receives an Invoice from a Transporter that includes Imbalance Charges, the parties shall determine the validity as well as the cause of such Imbalance Charges. If the Imbalance Charges were incurred as a result of Buyer's receipt of quantities of Gas greater than or less than the Scheduled Gas, then Buyer shall pay for such Imbalance Charges or reimburse Seller for such Imbalance Charges paid by Seller. If the Imbalance Charges were incurred as a result of Seller's delivery of quantities of Gas greater than or less than the Scheduled Gas, then Seller shall pay for such Imbalance Charges or reimburse Buyer for such Imbalance Charges paid by Buyer.

SECTION 5. QUALITY AND MEASUREMENT

All Gas delivered by Seller shall meet the pressure, quality and heat content requirements of the Receiving Transporter. The unit of quantity measurement for purposes of this Contract shall be one MMBtu dry. Measurement of Gas quantities hereunder shall be in accordance with the established procedures of the Receiving Transporter.

SECTION 6. TAXES

The parties have selected either "Buyer Pays At and After Delivery Point" or "Seller Pays Before and At Delivery Point" as indicated on the Base Contract.

Buyer Pays At and After Delivery Point:

Seller shall pay or cause to be paid all taxes, fees, levies, penalties, licenses or charges imposed by any government authority ("Taxes") on or with respect to the Gas prior to the Delivery Point(s). Buyer shall pay or cause to be paid all Taxes on or with respect to the Gas at the Delivery Point(s) and all Taxes after the Delivery Point(s). If a party is required to remit or pay Taxes that are the other party's responsibility hereunder, the party responsible for such Taxes shall promptly reimburse the other party for such Taxes. Any party entitled to an exemption from any such Taxes or charges shall furnish the other party any necessary documentation thereof.

Seller Pays Before and At Delivery Point:

Seller shall pay or cause to be paid all taxes, fees, levies, penalties, licenses or charges imposed by any government authority ("Taxes") on or with respect to the Gas prior to the Delivery Point(s) and all Taxes at the Delivery Point(s). Buyer shall pay or cause to be paid all Taxes on or with respect to the Gas after the Delivery Point(s). If a party is required to remit or pay Taxes that are the other party's responsibility hereunder, the party responsible for such Taxes shall promptly reimburse the other party for such Taxes. Any party entitled to an exemption from any such Taxes or charges shall furnish the other party any necessary documentation thereof.

SECTION 7. BILLING, PAYMENT, AND AUDIT

7.1. Seller shall Invoice Buyer for Gas delivered and received in the preceding Month and for any other applicable charges, providing supporting documentation acceptable in industry practice to support the amount charged. If the actual quantity delivered is not known by the billing date, billing will be prepared based on the quantity of Scheduled Gas. The invoiced quantity will then be adjusted to the actual quantity on the following Month's billing or as soon thereafter as actual delivery information is available.

7.2. Buyer shall remit the amount due under Section 7.1 in the manner specified in the Base Contract, in immediately available funds, on or before the later of the Payment Date or 10 Days after receipt of the invoice by Buyer; provided that if the Payment Date is not a Business Day, payment is due on the next Business Day following that date. In the event any payments are due Buyer hereunder, payment to Buyer shall be made in accordance with this Section 7.2.

7.3. In the event payments become due pursuant to Sections 3.2 or 3.3, the performing party may submit an invoice to the nonperforming party for an accelerated payment setting forth the basis upon which the invoiced amount was calculated. Payment from the nonperforming party will be due five Business Days after receipt of invoice.

7.4. If the Invoiced party, in good faith, disputes the amount of any such invoice or any part thereof, such Invoiced party will pay such amount as it concedes to be correct; provided, however, if the invoiced party disputes the amount due, it must provide supporting documentation acceptable in industry practice to support the amount paid or disputed. In the event the parties are unable to resolve such dispute, either party may pursue any remedy available at law or in equity to enforce its rights pursuant to this Section.

7.5. If the invoiced party fails to remit the full amount payable when due, interest on the unpaid portion shall accrue from the date due until the date of payment at a rate equal to the lower of (i) the then-effective prime rate of interest published under "Money Rates" by The Wall Street Journal, plus two percent per annum; or (ii) the maximum applicable lawful interest rate.

7.6. A party shall have the right, at its own expense, upon reasonable Notice and at reasonable times, to examine and audit and to obtain copies of the relevant portion of the books, records, and telephone recordings of the other party only to the extent reasonably necessary to verify the accuracy of any statement, charge, payment, or computation made under the Contract. This right to examine, audit, and to obtain copies shall not be available with respect to proprietary information not directly relevant to transactions under this Contract. All invoices and billings shall be conclusively presumed final and accurate and all associated claims for under- or overpayments shall be deemed waived unless such invoices or billings are objected to in writing, with adequate explanation and/or documentation, within two years after the Month of Gas delivery. All retroactive adjustments under Section 7 shall be paid in full by the party owing payment within 30 Days of Notice and substantiation of such inaccuracy.

7.7. Unless the parties have elected on the Base Contract not to make this Section 7.7 applicable to this Contract, the parties shall net all undisputed amounts due and owing, and/or past due, arising under the Contract such that the party owing the greater amount shall make a single payment of the net amount to the other party in accordance with Section 7; provided that no payment required to be made pursuant to the terms of any Credit Support Obligation or pursuant to Section 7.3 shall be subject to netting under this Section. If the parties have executed a separate netting agreement, the terms and conditions therein shall prevail to the extent inconsistent herewith.

SECTION 8. TITLE, WARRANTY, AND INDEMNITY

8.1. Unless otherwise specifically agreed, title to the Gas shall pass from Seller to Buyer at the Delivery Point(s). Seller shall have responsibility for and assume any liability with respect to the Gas prior to its delivery to Buyer at the specified Delivery Point(s). Buyer shall have responsibility for and any liability with respect to said Gas after its delivery to Buyer at the Delivery Point(s).

8.2. Seller warrants that it will have the right to convey and will transfer good and merchantable title to all Gas sold hereunder and delivered by it to Buyer, free and clear of all liens, encumbrances, and claims. EXCEPT AS PROVIDED IN THIS SECTION 8.2 AND IN SECTION 14.8, ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR OF FITNESS FOR ANY PARTICULAR PURPOSE, ARE DISCLAIMED.

8.3. Seller agrees to indemnify Buyer and save it harmless from all losses, liabilities or claims including reasonable attorneys' fees and costs of court ("Claims"), from any and all persons, arising from or out of claims of title, personal injury or property damage from said Gas or other charges thereon which attach before title passes to Buyer. Buyer agrees to indemnify Seller and save it harmless from all Claims, from any and all persons, arising from or out of claims regarding payment, personal injury or property damage from said Gas or other charges thereon which attach after title passes to Buyer.

8.4. Notwithstanding the other provisions of this Section 8, as between Seller and Buyer, Seller will be liable for all Claims to the extent that such arise from the failure of Gas delivered by Seller to meet the quality requirements of Section 5.

SECTION 9. NOTICES

9.1. All Transaction Confirmations, Invoices, payments and other communications made pursuant to the Base Contract ("Notices") shall be made to the addresses specified in writing by the respective parties from time to time.

9.2. All Notices required hereunder may be sent by facsimile or mutually acceptable electronic means, a nationally recognized overnight courier service, first class mail or hand delivered.

9.3. Notice shall be given when received on a Business Day by the addressee. In the absence of proof of the actual receipt date, the following presumptions will apply. Notices sent by facsimile shall be deemed to have been received upon the sending party's receipt of its facsimile machine's confirmation of successful transmission. If the day on which such facsimile is received is not a Business Day or is after five p.m. on a Business Day, then such facsimile shall be deemed to have been received on the next following Business Day. Notice by overnight mail or courier shall be deemed to have been received on the next Business Day after it was sent or such earlier time as is confirmed by the receiving party. Notice via first class mail shall be considered delivered five Business Days after mailing.

SECTION 10. FINANCIAL RESPONSIBILITY

10.1. If either party ("X") has reasonable grounds for insecurity regarding the performance of any obligation under this Contract (whether or not then due) by the other party ("Y") (including, without limitation, the occurrence of a material change in the creditworthiness of Y), X may demand Adequate Assurance of Performance. "Adequate Assurance of Performance" shall mean sufficient security in the form, amount and for the term reasonably acceptable to X, including, but not limited to, a standby irrevocable letter of credit, a prepayment, a security interest in an asset or a performance bond or guaranty (including the issuer of any such security).

10.2. In the event (each an "Event of Default") either party (the "Defaulting Party") or its guarantor shall: (i) make an assignment or any general arrangement for the benefit of creditors; (ii) file a petition or otherwise commence, authorize, or acquiesce in the commencement of a proceeding or case under any bankruptcy or similar law for the protection of creditors or have such petition filed or proceeding commenced against it; (iii) otherwise become bankrupt or insolvent (however evidenced); (iv) be unable to pay its debts as they fall due; (v) have a receiver, provisional liquidator, conservator, custodian, trustee or other similar official appointed with respect to it or substantially all of its assets; (vi) fail to perform any obligation to the other party with respect to any Credit Support Obligations relating to the Contract; (vii) fail to give Adequate Assurance of Performance under Section 10.1 within 48 hours but at least one Business Day of a written request by the other party; or (viii) not have paid any amount due the other party hereunder on or before the second Business Day following written Notice that such payment is due; then the other party (the "Non-Defaulting Party") shall have the right, at its sole election, to immediately withhold and/or suspend deliveries or payments upon Notice and/or to terminate and liquidate the transactions under the Contract, in the manner provided in Section 10.3, in addition to any and all other remedies available hereunder.

10.3. If an Event of Default has occurred and is continuing, the Non-Defaulting Party shall have the right, by Notice to the Defaulting Party, to designate a Day, no earlier than the Day such Notice is given and no later than 20 Days after such Notice is given, as an early termination date (the "Early Termination Date") for the liquidation and termination pursuant to Section 10.3.1 of all transactions under the Contract, each a "Terminated Transaction". On the Early Termination Date, all transactions will terminate, other than those transactions, if any, that may not be liquidated and terminated under applicable law or that are, in the reasonable opinion of the Non-Defaulting Party, commercially impracticable to liquidate and terminate ("Excluded Transactions"), which Excluded Transactions must be liquidated and terminated as soon thereafter as is reasonably practicable, and upon termination shall be a Terminated Transaction and be valued consistent with Section 10.3.1 below. With respect to each Excluded Transaction, its actual termination date shall be the Early Termination Date for purposes of Section 10.3.1.

The parties have selected either "Early Termination Damages Apply" or "Early Termination Damages Do Not Apply" as indicated on the Base Contract.

Early Termination Damages Apply:

10.3.1. As of the Early Termination Date, the Non-Defaulting Party shall determine, in good faith and in a commercially reasonable manner, (i) the amount owed (whether or not then due) by each party with respect to all Gas delivered and received between the parties under Terminated Transactions and Excluded Transactions on and before the Early Termination Date and all other applicable charges relating to such deliveries and receipts (including without limitation any amounts owed under Section 3.2), for which payment has not yet been made by the party that owes such payment under this Contract and (ii) the Market Value, as defined below, of each Terminated Transaction. The Non-Defaulting Party shall (x) liquidate and accelerate each Terminated Transaction at its Market Value, so that each amount equal to the difference between such Market Value and the Contract Value, as defined below, of such Terminated Transaction(s) shall be due to the Buyer under the Terminated Transaction(s) if such Market Value exceeds the Contract Value and to the Seller if the opposite is the case; and (y) where appropriate, discount each amount then due under clause (x) above to present value in a commercially reasonable manner as of the Early Termination Date (to take account of the period between the date of liquidation and the date on which such amount would have otherwise been due pursuant to the relevant Terminated Transactions).

For purposes of this Section 10.3.1, "Contract Value" means the amount of Gas remaining to be delivered or purchased under a transaction multiplied by the Contract Price, and "Market Value" means the amount of Gas remaining to be delivered or purchased under a transaction multiplied by the market price for a similar transaction at the Delivery Point determined by the Non-Defaulting Party in a commercially reasonable manner. To ascertain the Market Value, the Non-Defaulting Party may consider, among other valuations, any or all of the settlement prices of NYMEX Gas futures contracts, quotations from leading dealers in energy swap contracts or physical gas trading markets, similar sales or purchases and any other bona fide third-party offers, all adjusted for the length of the term and differences in transportation costs. A party shall not be required to enter into a replacement transaction(s) in order to determine the Market Value. Any extension(s) of the term of a transaction to which parties are not bound as of the Early Termination Date (including but not limited to "evergreen provisions") shall not be considered in determining Contract Values and Market Values. For the avoidance of doubt, any option pursuant to which one party has the right to extend the term of a transaction shall be considered in determining Contract Values and Market Values. The rate of interest used in calculating net present value shall be determined by the Non-Defaulting Party in a commercially reasonable manner.

Early Termination Damages Do Not Apply:

10.3.1. As of the Early Termination Date, the Non-Defaulting Party shall determine, in good faith and in a commercially reasonable manner, the amount owed (whether or not then due) by each party with respect to all Gas delivered and received between the parties under Terminated Transactions and Excluded Transactions on and before the Early Termination Date and all other applicable charges relating to such deliveries and receipts (including without limitation any amounts owed under Section 3.2), for which payment has not yet been made by the party that owes such payment under this Contract.

The parties have selected either "Other Agreement Setoffs Apply" or "Other Agreement Setoffs Do Not Apply" as indicated on the Base Contract.

Other Agreement Setoffs Apply:

10.3.2. The Non-Defaulting Party shall net or aggregate, as appropriate, any and all amounts owing between the parties under Section 10.3.1, so that all such amounts are netted or aggregated to a single liquidated amount payable by one party to the other (the "Net Settlement Amount"). At its sole option and without prior Notice to the Defaulting Party, the Non-Defaulting Party may setoff (i) any Net Settlement Amount owed to the Non-Defaulting Party against any margin or other collateral held by it in connection with any Credit Support Obligation relating to the Contract; or (ii) any Net Settlement Amount payable to the Defaulting Party against any amount(s) payable by the Defaulting Party to the Non-Defaulting Party under any other agreement or arrangement between the parties.

Other Agreement Setoffs Do Not Apply:

10.3.2. The Non-Defaulting Party shall net or aggregate, as appropriate, any and all amounts owing between the parties under Section 10.3.1, so that all such amounts are netted or aggregated to a single liquidated amount payable by one party to the other (the "Net Settlement Amount"). At its sole option and without prior Notice to the Defaulting Party, the Non-Defaulting Party may setoff any Net Settlement Amount owed to the Non-Defaulting Party against any margin or other collateral held by it in connection with any Credit Support Obligation relating to the Contract.

10.3.3. If any obligation that is to be included in any netting, aggregation or setoff pursuant to Section 10.3.2 is unascertained, the Non-Defaulting Party may in good faith estimate that obligation and net, aggregate or setoff, as applicable, in respect of the estimate, subject to the Non-Defaulting Party accounting to the Defaulting Party when the obligation is ascertained. Any amount not then due which is included in any netting, aggregation or setoff pursuant to Section 10.3.2 shall be discounted to net present value in a commercially reasonable manner determined by the Non-Defaulting Party.

10.4. As soon as practicable after a liquidation, Notice shall be given by the Non-Defaulting Party to the Defaulting Party of the Net Settlement Amount, and whether the Net Settlement Amount is due to or due from the Non-Defaulting Party. The Notice shall include a written statement explaining in reasonable detail the calculation of such amount, provided that failure to give such Notice shall not affect the validity or enforceability of the liquidation or give rise to any claim by the Defaulting Party against the Non-Defaulting Party. The Net Settlement Amount shall be paid by the close of business on the second Business Day following such Notice, which date shall not be earlier than the Early Termination Date. Interest on any unpaid portion of the Net Settlement Amount shall accrue from the date due until the

date of payment at a rate equal to the lower of (i) the then-effective prime rate of interest published under "Money Rates" by The Wall Street Journal, plus two percent per annum; or (ii) the maximum applicable lawful interest rate.

10.5. The parties agree that the transactions hereunder constitute a "forward contract" within the meaning of the United States Bankruptcy Code and that Buyer and Seller are each "forward contract merchants" within the meaning of the United States Bankruptcy Code.

10.6. The Non-Defaulting Party's remedies under this Section 10 are the sole and exclusive remedies of the Non-Defaulting Party with respect to the occurrence of any Early Termination Date. Each party reserves to itself all other rights, setoffs, counterclaims and other defenses that it is or may be entitled to arising from the Contract.

10.7. With respect to this Section 10, if the parties have executed a separate netting agreement with close-out netting provisions, the terms and conditions therein shall prevail to the extent inconsistent herewith.

SECTION 11. FORCE MAJEURE

11.1. Except with regard to a party's obligation to make payment(s) due under Section 7, Section 10.4, and Imbalance Charges under Section 4, neither party shall be liable to the other for failure to perform a Firm obligation, to the extent such failure was caused by Force Majeure. The term "Force Majeure" as employed herein means any cause not reasonably within the control of the party claiming suspension, as further defined in Section 11.2.

11.2. Force Majeure shall include, but not be limited to, the following: (i) physical events such as acts of God, landslides, lightning, earthquakes, fires, storms or storm warnings, such as hurricanes, which result in evacuation of the affected area, floods, washouts, explosions, breakage or accident or necessity of repairs to machinery or equipment or lines of pipe; (ii) weather related events affecting an entire geographic region, such as low temperatures which cause freezing or failure of wells or lines of pipe; (iii) interruption and/or curtailment of Firm transportation and/or storage by Transporters; (iv) acts of others such as strikes, lockouts or other industrial disturbances, riots, sabotage, insurrections or wars; and (v) governmental actions such as necessity for compliance with any court order, law, statute, ordinance, regulation, or policy having the effect of law promulgated by a governmental authority having jurisdiction. Seller and Buyer shall make reasonable efforts to avoid the adverse impacts of a Force Majeure and to resolve the event or occurrence once it has occurred in order to resume performance.

11.3. Neither party shall be entitled to the benefit of the provisions of Force Majeure to the extent performance is affected by any or all of the following circumstances: (i) the curtailment of interruptible or secondary Firm transportation unless primary, in-path, Firm transportation is also curtailed; (ii) the party claiming excuse failed to remedy the condition and to resume the performance of such covenants or obligations with reasonable dispatch; or (iii) economic hardship, to include, without limitation, Seller's ability to sell Gas at a higher or more advantageous price than the Contract Price, Buyer's ability to purchase Gas at a lower or more advantageous price than the Contract Price, or a regulatory agency disallowing, in whole or in part, the pass through of costs resulting from this Agreement; (iv) the loss of Buyer's market(s) or Buyer's inability to use or resell Gas purchased hereunder, except, in either case, as provided in Section 11.2; or (v) the loss or failure of Seller's gas supply or depletion of reserves, except, in either case, as provided in Section 11.2. The party claiming Force Majeure shall not be excused from its responsibility for Imbalance Charges.

11.4. Notwithstanding anything to the contrary herein, the parties agree that the settlement of strikes, lockouts or other industrial disturbances shall be within the sole discretion of the party experiencing such disturbance.

11.5. The party whose performance is prevented by Force Majeure must provide Notice to the other party. Initial Notice may be given orally; however, written Notice with reasonably full particulars of the event or occurrence is required as soon as reasonably possible. Upon providing written Notice of Force Majeure to the other party, the affected party will be relieved of its obligation, from the onset of the Force Majeure event, to make or accept delivery of Gas, as applicable, to the extent and for the duration of Force Majeure, and neither party shall be deemed to have failed in such obligations to the other during such occurrence or event.

11.6. Notwithstanding Sections 11.2 and 11.3, the parties may agree to alternative Force Majeure provisions in a Transaction Confirmation executed in writing by both parties.

SECTION 12. TERM

This Contract may be terminated on 30 Day's written Notice, but shall remain in effect until the expiration of the latest Delivery Period of any transaction(s). The rights of either party pursuant to Section 7.6 and Section 10, the obligations to make payment hereunder, and the obligation of either party to indemnify the other, pursuant hereto shall survive the termination of the Base Contract or any transaction.

SECTION 13. LIMITATIONS

FOR BREACH OF ANY PROVISION FOR WHICH AN EXPRESS REMEDY OR MEASURE OF DAMAGES IS PROVIDED, SUCH EXPRESS REMEDY OR MEASURE OF DAMAGES SHALL BE THE SOLE AND EXCLUSIVE REMEDY. A PARTY'S LIABILITY HEREUNDER SHALL BE LIMITED AS SET FORTH IN SUCH PROVISION, AND ALL OTHER REMEDIES OR DAMAGES AT LAW OR IN EQUITY ARE WAIVED. IF NO REMEDY OR MEASURE OF DAMAGES IS EXPRESSLY PROVIDED HEREIN OR IN A TRANSACTION, A PARTY'S LIABILITY SHALL BE LIMITED TO DIRECT ACTUAL DAMAGES ONLY. SUCH DIRECT ACTUAL DAMAGES SHALL BE THE SOLE AND EXCLUSIVE REMEDY, AND ALL OTHER REMEDIES OR DAMAGES AT LAW OR IN EQUITY ARE WAIVED. UNLESS EXPRESSLY HEREIN PROVIDED, NEITHER PARTY SHALL BE LIABLE FOR CONSEQUENTIAL, INCIDENTAL, PUNITIVE, EXEMPLARY OR INDIRECT DAMAGES, LOST PROFITS OR OTHER BUSINESS INTERRUPTION DAMAGES, BY STATUTE, IN TORT OR CONTRACT, UNDER ANY INDEMNITY PROVISION OR OTHERWISE. IT IS THE INTENT OF THE PARTIES THAT THE LIMITATIONS HEREIN IMPOSED ON REMEDIES AND THE MEASURE OF DAMAGES BE WITHOUT REGARD TO THE CAUSE OR CAUSES RELATED THERETO, INCLUDING THE NEGLIGENCE OF ANY PARTY, WHETHER SUCH NEGLIGENCE BE SOLE, JOINT OR CONCURRENT, OR ACTIVE OR PASSIVE.

TO THE EXTENT ANY DAMAGES REQUIRED TO BE PAID HEREUNDER ARE LIQUIDATED, THE PARTIES ACKNOWLEDGE THAT THE DAMAGES ARE DIFFICULT OR IMPOSSIBLE TO DETERMINE, OR OTHERWISE OBTAINING AN ADEQUATE REMEDY IS INCONVENIENT AND THE DAMAGES CALCULATED HEREUNDER CONSTITUTE A REASONABLE APPROXIMATION OF THE HARM OR LOSS.

SECTION 14. MISCELLANEOUS

14.1. This Contract shall be binding upon and inure to the benefit of the successors, assigns, personal representatives, and heirs of the respective parties hereto, and the covenants, conditions, rights and obligations of this Contract shall run for the full term of this Contract. No assignment of this Contract, in whole or in part, will be made without the prior written consent of the non-assigning party (and shall not relieve the assigning party from liability hereunder), which consent will not be unreasonably withheld or delayed; provided, either party may (i) transfer, sell, pledge, encumber, or assign this Contract or the accounts, revenues, or proceeds hereof in connection with any financing or other financial arrangements, or (ii) transfer its interest to any parent or affiliate by assignment, merger or otherwise without the prior approval of the other party. Upon any such assignment, transfer and assumption, the transferor shall remain principally liable for and shall not be relieved of or discharged from any obligations hereunder.

14.2. If any provision in this Contract is determined to be invalid, void or unenforceable by any court having jurisdiction, such determination shall not invalidate, void, or make unenforceable any other provision, agreement or covenant of this Contract.

14.3. No waiver of any breach of this Contract shall be held to be a waiver of any other or subsequent breach.

14.4. This Contract sets forth all understandings between the parties respecting each transaction subject hereto, and any prior contracts, understandings and representations, whether oral or written, relating to such transactions are merged into and superseded by this Contract and any effective transaction(s). This Contract may be amended only by a writing executed by both parties.

14.5. The interpretation and performance of this Contract shall be governed by the laws of the jurisdiction as indicated on the Base Contract, excluding, however, any conflict of laws rule which would apply the law of another jurisdiction.

14.6. This Contract and all provisions herein will be subject to all applicable and valid statutes, rules, orders and regulations of any governmental authority having jurisdiction over the parties, their facilities, or Gas supply, this Contract or transaction or any provisions thereof.

14.7. There is no third party beneficiary to this Contract.

14.8. Each party to this Contract represents and warrants that it has full and complete authority to enter into and perform this Contract. Each person who executes this Contract on behalf of either party represents and warrants that it has full and complete authority to do so and that such party will be bound thereby.

14.9. The headings and subheadings contained in this Contract are used solely for convenience and do not constitute a part of this Contract between the parties and shall not be used to construe or interpret the provisions of this Contract.

14.10. Unless the parties have elected on the Base Contract not to make this Section 14.10 applicable to this Contract, neither party shall disclose directly or indirectly without the prior written consent of the other party the terms of any transaction to a third party (other than the employees, lenders, royalty owners, counsel, accountants and other agents of the party, or prospective purchasers of all or substantially all of a party's assets or of any rights under this Contract, provided such persons shall have agreed to keep such terms confidential) except (i) in order to comply with any applicable law, order, regulation, or exchange rule, (ii) to the extent necessary for the enforcement of this Contract, (iii) to the extent necessary to implement any transaction, or (iv) to the extent such information is delivered to such third party for the sole purpose of calculating a published Index. Each party shall notify the other party of any proceeding of which it is aware which may result in disclosure of the terms of any transaction (other than as permitted hereunder) and use reasonable efforts to prevent or limit the disclosure. The existence of this Contract is not subject to this confidentiality obligation. Subject to Section 13, the parties shall be entitled to all remedies available at law or in equity to enforce, or seek relief in connection with this confidentiality obligation. The terms of any transaction hereunder shall be kept confidential by the parties hereto for one year from the expiration of the transaction.

In the event that disclosure is required by a governmental body or applicable law, the party subject to such requirement may disclose the material terms of this Contract to the extent so required, but shall promptly notify the other party, prior to disclosure, and shall cooperate (consistent with the disclosing party's legal obligations) with the other party's efforts to obtain protective orders or similar restraints with respect to such disclosure at the expense of the other party.

14.11 The parties may agree to dispute resolution procedures in Special Provisions attached to the Base Contract or in a Transaction Confirmation executed in writing by both parties.

DISCLAIMER: The purposes of this Contract are to facilitate trade, avoid misunderstandings and make more definite the terms of contracts of purchase and sale of natural gas. Further, NAESB does not mandate the use of this Contract by any party. NAESB DISCLAIMS AND EXCLUDES, AND ANY USER OF THIS CONTRACT ACKNOWLEDGES AND AGREES TO NAESB'S DISCLAIMER OF, ANY AND ALL WARRANTIES, CONDITIONS OR REPRESENTATIONS, EXPRESS OR IMPLIED, ORAL OR WRITTEN, WITH RESPECT TO THIS CONTRACT OR ANY PART THEREOF, INCLUDING ANY AND ALL IMPLIED WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS OR SUITABILITY FOR ANY PARTICULAR PURPOSE (WHETHER OR NOT NAESB KNOWS, HAS REASON TO KNOW, HAS BEEN ADVISED, OR IS OTHERWISE IN FACT AWARE OF ANY SUCH PURPOSE), WHETHER ALLEGED TO ARISE BY LAW, BY REASON OF CUSTOM OR USAGE IN THE TRADE, OR BY COURSE OF DEALING. EACH USER OF THIS CONTRACT ALSO AGREES THAT UNDER NO CIRCUMSTANCES WILL NAESB BE LIABLE FOR ANY DIRECT, SPECIAL, INCIDENTAL, EXEMPLARY, PUNITIVE OR CONSEQUENTIAL DAMAGES ARISING OUT OF ANY USE OF THIS CONTRACT.

PWSA Exhibit EB-14

**Pennsylvania Public Utility Commission v.
The Pittsburgh Water and Sewer Authority
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

**Responses of the Bureau of Investigation and Enforcement to the
Interrogatories of The Pittsburgh Water and Sewer Authority – Set I
Witness: Anthony Spadaccio**

PWSA-I&E-I-6 Refer to I&E Statement No. 1, page 6 at 12-15, did I&E consider what impact their revenue requirement recommendation would have on PWSA additional bonds test in FY 2024?

RESPONSE **Yes. I&E’s revenue requirement recommendation results in debt service coverage ratios of 1.70x for senior debt and 1.11x for total debt. Further, the I&E recommendation results in an ending unrestricted cash balance of approximately \$91 million and 293 days cash on hand. Mr. Spadaccio believes this is sufficient in meeting the additional bonds test.**

**Pennsylvania Public Utility Commission v.
The Pittsburgh Water and Sewer Authority
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

**Responses of the Bureau of Investigation and Enforcement to the
Interrogatories of The Pittsburgh Water and Sewer Authority – Set I
Witness: Anthony Spadaccio**

PWSA-I&E-I-9 Refer to I&E Statement No. 1, page 9 at 1-2, can you elaborate on what these economic impacts are?

RESPONSE **Some of the potential economic impacts may include supply-chain disruptions, inability to maintain and/or repair infrastructure due to understaffing, potential significant changes in debt cost, affordability to ratepayers, etc.**

**Pennsylvania Public Utility Commission v.
The Pittsburgh Water and Sewer Authority
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

**Responses of the Bureau of Investigation and Enforcement to the
Interrogatories of The Pittsburgh Water and Sewer Authority – Set I
Witness: Anthony Spadaccio**

PWSA-I&E-I-13 Refer to I&E Statement No. 1, page 20 at 11-15, is Mr. Spadaccio suggesting that unrestricted cash can be used to help meet PWSA's debt service coverage ratio?

RESPONSE **Yes, if necessary, PWSA's unrestricted cash can be used to meet debt service obligations. As a result of underspending on budgeted O&M and capital expenditures as revenues were largely intended, the Authority's ending unrestricted cash balance has steadily, yet significantly, grown to approximately \$91 million by the end of the FPFTY.**

**Pennsylvania Public Utility Commission v.
The Pittsburgh Water and Sewer Authority
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

**Responses of the Bureau of Investigation and Enforcement to the
Interrogatories of The Pittsburgh Water and Sewer Authority – Set I
Witness: Anthony Spadaccio**

PWSA-I&E-I-15 Refer to I&E Statement No. 1, page 23 at 2-5, does Mr. Spadaccio believe that municipal bonds and state and federal low-interest loans are cheaper than PAYGO? If not, then why should they be preferred over PAYGO?

RESPONSE **No. Mr. Spadaccio does not believe that municipal bonds and low-interest loans are cheaper than PAYGO funding, which is the reason Mr. Spadaccio supports the increase of DSIC funding from 5% to 7.5% of distribution revenues. However, DSIC funds must be used on projects identified in the Long-Term Infrastructure Improvement Plan which provides a level of accountability. Unrestricted PAYGO funding, considering the Authority’s historical variances between projected and actual expenditures for both O&M and capital projects expenditures, seems inappropriate at this time.**

VERIFICATION

I, Edward Barca, hereby state that: (1) I am the Director of Finance for The Pittsburgh Water and Sewer Authority (“PWSA”); (2) the facts set forth in my rebuttal testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

F. Flushing Distribution System.....	9
G. Fire Hydrants	10
H. Work Order Logs.....	11
III. CONCLUSION	12

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND POSITION FOR THE RECORD.**

3 A. My name is William J. McFaddin and I am the Director of Operations for The Pittsburgh
4 Water and Sewer Authority (“PWSA”).

5 **Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?**

6 A. Yes. I submitted Direct Testimony on May 9, 2023. (PWSA Statement No. 3).

7 **Q. WHAT TOPICS DID YOUR DIRECT TESTIMONY ADDRESS?**

8 A. I provided information regarding PWSA’s continued compliance with obligations in prior
9 settlements in the areas of valve maintenance, the replacement of meters and flushing of
10 the distribution system.

11 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

12 A. The purpose of my Rebuttal Testimony is to respond to the Direct Testimony of Ethan H.
13 Cline submitted on behalf of the Bureau of Investigation and Enforcement (“I&E”) (I&E
14 Statement No. 3); the Direct Testimony of Jerome D. Mierzwa submitted on behalf of the
15 Office of Consumer Advocate (“OCA”) (OCA Statement 3); and the Direct Testimony
16 submitted by Terry L. Fought on behalf of OCA. (OCA Statement 6).

17 **II. RESPONSES TO DIRECT TESTIMONY OF OTHER PARTIES**

18 **A. City of Pittsburgh’s Unmetered Properties**

19 **Q. PLEASE DESCRIBE THE TESTIMONY OF MR. MIERZWA CONCERNING**
20 **THE CITY OF PITTSBURGH’S UNMETERED PROPERTIES.**

21 A. Testifying for OCA, Mr. Mierzwa referred to two City of Pittsburgh properties that were
22 unmetered and recommended that PWSA be required to provide a timeline for metering
23 the two properties, along with an identification and description of services provided by
24 each property and an estimated revenue impact of metering these properties. (OCA
25 Statement 3 at 12).

1 **Q. WHAT IS YOUR RESPONSE?**

2 A. As PWSA indicated in a supplemental response to OCA-2-5 provided on August 21,
 3 2023, these last two unmetered properties owned by the City of Pittsburgh have now been
 4 metered. The first one was completed on June 13, 2023 and the second was completed
 5 on June 16, 2023. PWSA does not have an estimate for the annual water usage for these
 6 properties to determine the impact of metering them. Therefore, PWSA views this issue
 7 as having been resolved for this proceeding.

8 **B. Unaccounted-for Water**

9 **Q. PLEASE DESCRIBE MR. CLINE’S TESTIMONY ON UNACCOUNTED-FOR**
 10 **WATER.**

11 A. Testifying for I&E, Mr. Cline describes PWSA’s unaccounted-for water levels in 2021
 12 and 2022 as “extremely concerning.” (I&E Statement No. 3 at 23). Although Mr. Cline
 13 does not recommend an adjustment based on the unaccounted-for water levels, he
 14 indicated that adjustments to certain expenses, such as purchased power and chemicals,
 15 will likely be made in the next base rate case if progress is not shown in reducing these
 16 levels. (I&E Statement No. 3 at 23-24).

17 **Q. DO YOU HAVE A RESPONSE?**

18 A. Yes. PWSA expects to see a reduction in unaccounted-for water levels through various
 19 measures that are underway, including: (a) implementation of projects through the
 20 Distribution System Improvement Charge; (b) replacement of old infrastructure; (c)
 21 implementation of the leak detection program; (d) replacement of meters; and (e)
 22 installation of meters at previously unmetered properties. Also, this is not an issue that is
 23 unique to PWSA and, in fact, is currently a focus of the water industry due to other
 24 utilities facing high levels of unaccounted-for water. Audits are conducted because of

1 concerns about this issue. In fact, PWSA is subject to yearly audits to track the progress
2 we are making toward the reduction of non-revenue water.

3 **Q. PLEASE DESCRIBE MR. FOUGHT’S TESTIMONY REGARDING**
4 **UNACCOUNTED-FOR WATER.**

5 A. On behalf of OCA, Mr. Fought observes that PWSA estimated volumes of water used for
6 blow-offs, main flushing and firefighting were based on default values of the American
7 Water Works Association’s (“AWWA”) Water Audit. In Mr. Fought’s view, PWSA will
8 eventually need to reduce reliance on the AWWA Audit defaults and estimate volumes of
9 water used for blow-offs, main flushing and firefighting based on the operation of its
10 water system. Of note, OCA witness Fought also recognizes many of the factors I
11 identify above as leading to PWSA’s non-revenue water estimates becoming more
12 accurate and decreasing. (OCA Statement 6 at 6-7).

13 **Q. DO YOU HAVE A RESPONSE?**

14 A. PWSA is already capturing better information through the Spry Mobile application than it
15 has previously been able to gather regarding estimated volumes of water used for blow-
16 offs and main flushing, which will allow the Authority to eventually reduce reliance on
17 the AWWA Audit defaults. I would expect PWSA’s estimates to be lower than the
18 default estimates on which it is currently relying. It is also important to note that some
19 PWSA facilities, such as the Chlorine Booster Station, where water runs through the
20 analyzers continuously, factor into the unaccounted-for water levels. PWSA is actively
21 metering these facilities, which are classified as a PWSA account (metered but not
22 billed), to capture the water usage.

1 **C. Pressures and Pressure Surveys**

2 **Q. PLEASE DESCRIBE OCA WITNESS FOUGHT’S TESTIMONY REGARDING**
 3 **PRESSURES AND PRESSURE SURVEYS.**

4 A. Mr. Fought refers to the Commission’s regulations at 52 Pa. Code § 65.6, which require
 5 (with some exceptions) that utilities maintain normal operating pressure of not less than
 6 25 psi or more than 125 psi at the main. He acknowledges that less than 5% of PWSA’s
 7 customers, or fewer than 3,774 customers, have water pressures higher or lower than the
 8 range established by the Commission’s regulations. With respect to high pressures, OCA
 9 witness Fought recommends that PWSA should be required to reduce normal operating
 10 pressures exceeding 125 psi in its mains. He further proposes that PWSA be required to
 11 submit pressure surveys for each pressure zone until the Authority provides a complete
 12 complaint log that includes pressures. (OCA Statement 6 at 12-13).

13 **Q. DO YOU AGREE WITH MR. FOUGHT’S RECOMMENDATION?**

14 A. No. Initially, I note that Mr. Fought’s proposal is not consistent with PWSA’s tariff.
 15 With respect to pressure, the Authority’s tariff requires PWSA to maintain service at
 16 historic pressures at the main and permits PWSA to furnish service at other pressures
 17 where necessary to supply adequate service, which is clearly supported and permitted by
 18 52 Pa. Code § 65.6(a).¹ PWSA’s tariff provision further states as follows: “If a customer
 19 needs the system pressure reduced, the customer must install and maintain, at the
 20 customer’s expense, a pressure regulator or valve. The pressure regulator will be
 21 installed on the outlet side of the meter.”² In addition, under Section 860-177 of the

¹ This regulation provides that “[a] utility may undertake to furnish a service which does not comply with the foregoing specifications where compliance with such specifications would prevent it from furnishing adequate service to any customer or where called for by good engineering practices.”

² [Tariff Water](#) – Pa. P.U.C. No. 1, Original Page No. 33, Section B, Paragraph 8.

1 Allegheny County Code, Article XV (Water Supply and Distribution), when the water
2 service pressure to a building exceeds 80 psi, an approved water pressure regulator with
3 strainer shall be installed to reduce the pressure to the building.³

4 Further, Mr. Fought does not provide evidence of any so-called “problem” that he
5 is seeking to rectify. For instance, he does not identify the number of customers whose
6 pressure is over 125 psi or explain any issues that have arisen due to or harm that has
7 been caused by high pressures. In PWSA’s experience, consumers are more likely to
8 complain about low pressures. Additionally, reducing operating pressures that exceed
9 125 psi is particularly challenging given the topography of Pittsburgh. Due to the terrain
10 and hills throughout the City, this process would require PWSA to decrease pressure in
11 one area and then increase it again in the next area. That is not a reasonable expectation.
12 The proposal would require funds to construct new pump stations, tanks and piping
13 connections to support additional pressure districts, as well as additional staffing
14 resources to maintain these additional pump stations and tanks that PWSA does not have
15 available for this purpose.

16 Finally, PWSA is already capturing pressure inquiries in its work order logs.
17 Therefore, it is unnecessary for PWSA to submit pressure surveys for each pressure zone,
18 which would require resources and divert the Authority’s staff from the business of
19 operating the water, wastewater and stormwater systems. Especially when no particular
20 problem has been identified, adding a requirement for PWSA to submit pressure surveys
21 for each pressure zone is unreasonable and unnecessary.

³ <https://ecode360.com/8488949>

1 **Q. DO YOU HAVE ANYTHING FURTHER TO ADD?**

2 A. Yes. PWSA has been focused for over five years on monitoring the pressures for the
3 water distribution system and is taking measures to bring all pressures into compliance
4 with regulatory requirements. A Pennsylvania Department of Environmental Protection
5 Administrative Order dated October 15, 2017 required the initial installation of 24
6 Pressure Sensors, which were specifically located to sense and report out on critical low-
7 pressure points in water distribution system. The 24 Pressure Sensors were installed and
8 operational by July 8, 2018. This resulted in 24 pressure monitors being installed in 10 of
9 PWSA's total 17 System pressure zones. Subsequently and additionally, to comply with
10 the Commission's regulations at 52 Pa. Code §65.6(b), PWSA completed the installation
11 of an additional 37 pressure monitors (by January 21, 2021), ensuring at least one or
12 more continuous recording pressure monitors are operating in each separate pressure
13 zone throughout the PWSA Distribution System. As of January 21, 2021, PWSA has
14 maintained a total of 61 continuous recording pressure monitors throughout PWSA's
15 system. With respect to operation, the pressure sensors automatically send out alarms via
16 cellular transmitters that initiate emails and texts to key personnel in engineering,
17 operations, and dispatch. The routine pressure sensor settings for alarm activation are as
18 follows:

- 19 • Loss of pressure alarm (Any time the pressure is < or = to 0 for a single pressure
20 reading, an alarm is sent out.)
21
- 22 • Low pressure alarm (Any time the pressure drops below 20 psi for 6 consecutive
23 readings taken every 5 minutes, an alarm is sent out.)
24
- 25 • High Pressure Alarm (Any time the pressure is > 100 psi for a single pressure
26 reading, an alarm is sent out to ensure the safety of the sensing equipment to
27 identify the likelihood of freezing in locations where the vault might have a
28 potential for freezing.)

1
2 As this shows, PWSA is already going well above and beyond the requirements of the
3 regulations and actively reporting the results. Based upon all of the efforts already taken
4 by PWSA to measure and respond to deviations in water pressure, the Authority submits
5 that no further regulatory requirements need to be imposed.

6 **D. Isolation Valves**

7 **Q. PLEASE DESCRIBE MR. FOUGHT’S TESTIMONY REGARDING ISOLATION**
8 **VALVES.**

9 A. Mr. Fought recommends that PWSA: (1) exercise critical valves on a one- to three-year
10 schedule; (2) exercise non-critical valves on a seven- to ten-year schedule; and (3)
11 maintain useful records of when each valve was exercised. He also proposes that if
12 PWSA’s records indicate that any isolation valves have not been exercised within the
13 past ten years, the Authority should exercise them within the next five years until all have
14 ben exercised and are operable. (OCA Statement 6 at 17).

15 **Q. PLEASE RESPOND.**

16 A. In accordance with PWSA’s Implementation Plan filed in response to the PUC’s
17 Management and Operations Audit Report released on April 20, 2023,⁴ which is
18 referenced by Mr. Fought, the Authority has developed and implemented a valve
19 exercising program where all valves are inspected and exercised on a 5-year cycle. With
20 respect to critical valves, PWSA has identified such valves, which meet one of these two
21 criteria: (a) isolation valve with a diameter of 18 inches or larger; or (b) isolation valve
22 that would be closed to isolate a critical water service customer per PWSA’s critical

⁴ *Management and Operations Audit of the Pittsburgh Water and Sewer Authority*, Docket Nos. D-2021-3025584, D-2021-3025585 and D-2022-3030308 (Secretarial Letter, Report and Implementation Plan issued April 20, 2023). The Implementation Plan is available at this [link](#).

1 customer list. Further, in the response, PWSA noted its expectation to inspect and
2 exercise critical valves on a 3-year cycle by the fourth quarter of 2024. Additionally,
3 PWSA already maintains useful records of when each valve was exercised. Therefore, it
4 is unnecessary to impose any additional obligations on PWSA as part of this base rate
5 case.

6 **E. Meter Testing and Replacement**

7 **Q. PLEASE DESCRIBE MR. FOUGHT’S TESTIMONY REGARDING THE**
8 **TESTING AND REPLACEMENT OF CUSTOMER METERS.**

9 A. Mr. Fought discusses the Commission’s regulations and PWSA’s prior commitments
10 regarding the testing and replacement of customer meters. He also refers to my Direct
11 Testimony in this case noting that PWSA replaced 5,865 meters in 2022 and did not
12 achieve its target of 8,000 meters in a calendar year because of delays associated with the
13 Authority’s launch of the Enterprise Resource Planning (“ERP”) system, vendor turnover
14 and unexpected reductions in plumbing staff. (OCA Statement 6 at 18-20). Mr. Fought
15 recommends that PWSA test or replace 10,000 customer meters per calendar year until
16 all undocumented meters are either tested or replaced. He further proposes that since
17 PWSA has not been able to achieve its target of 8,000 meters, the Authority should
18 address its software, vendor and staffing issues. (OCA Statement 6 at 20-21).

19 **Q. PLEASE RESPOND.**

20 A. PWSA is doing everything within its power to achieve its target of 8,000 meters.
21 However, many factors are outside the Authority’s control and have prevented it from
22 fulfilling this objective. Mr. Fought’s recommendation to require PWSA to complete
23 10,000 meter replacements per calendar year is unreasonable. The single biggest factor
24 preventing PWSA from replacing 10,000 meters per calendar year is the continuing

1 struggle to get into customers' homes. The calendar year of 2019, which was prior to
2 COVID-19, is the last year PWSA replaced over 10,000 meters. Although customers in
3 2022 became generally less concerned about the need for social distancing due to the
4 pandemic than they were in 2020 and 2021, access to their homes remained a challenge.
5 In addition, PWSA encountered delays in restarting the non-access process following the
6 launch of its ERP system in August 2022. This is the automated process that sends
7 regulated notices to customers to facilitate meter upgrade appointments, and it could not
8 be fully tested until after the go-live date of the new system. Further, PWSA has
9 continued to have difficulties with vendors in the supply chain, making it especially
10 challenging to get Meter Transceiver Units ("MXUs"), which are automated meter
11 reading devices.

12 Finally, as I explained in my Direct Testimony, PWSA is actively recruiting
13 plumbers but has had to handle some unexpected reductions in staff in the Plumbing
14 section, with three plumbers on long-term leave due to personal issues. If PWSA would
15 hire plumbers to replace these individuals, we would be overstaffed when they return.
16 PWSA remains committed to trying to replace 8,000 meters each calendar year as an
17 internal target and should not be required to meet this objective or the more aggressive
18 one suggested by Mr. Fought.

19 **F. Flushing Distribution System**

20 **Q. PLEASE DESCRIBE MR. FOUGHT'S RECOMMENDATION REGARDING**
21 **FLUSHING THE DISTRIBUTION SYSTEM.**

22 A. Although Mr. Fought does not recommend any changes to PWSA's program for flushing
23 its distribution system, he expresses a concern about dead-end lines, testifying that it
24 appears PWSA may not know where many of its dead-end lines are located and if all of

1 its dead-end lines have a blow-off valve or hydrant for flushing. Therefore, he
2 recommends that PWSA should make an effort to identify, locate and track the dead-end
3 lines and make sure that they have a blow-off or hydrant so they can be flushed to
4 eliminate water quality problems. (OCA Statement 6 at 21-22).

5 **Q. PLEASE RESPOND.**

6 A. Mr. Fought is correct that PWSA is facing challenges in making sure that dead-end lines
7 have a blow-off or hydrant so they can be flushed. However, it is important to note that
8 PWSA is already making every effort to identify, locate and track the dead-end lines for
9 this purpose. Notwithstanding those efforts, due to the topography of Pittsburgh, many
10 dead-end lines cannot be fixed. Therefore, I do not believe it is feasible to direct PWSA
11 to do more than it is already doing with respect to dead-end lines.

12 **G. Fire Hydrants**

13 **Q. PLEASE DESCRIBE MR. FOUGHT'S TESTIMONY REGARDING FIRE**
14 **HYDRANTS.**

15 A. Although Mr. Fought has no criticisms about PWSA's fire hydrant flushing program, he
16 refers to about 374 public fire hydrants that cannot provide the minimum fire flow. He
17 recommends that PWSA mark these hydrants to indicate that they should only be used for
18 flushing and blow-offs. He further proposes that PWSA should provide confirmation to
19 the parties when this has been done. (OCA Statement 6 at 23).

20 **Q. PLEASE RESPOND.**

21 A. PWSA already marks these hydrants with a color-coded ring on the front nozzle that
22 identifies the flow. It is up to the Pittsburgh Fire Department to decide whether the color
23 of the ring means that it should not be used for a fire. This approach has been working,

1 and Mr. Fought does not suggest otherwise. Therefore, PWSA should not be required to
2 implement any new measures to address a problem that does not exist.

3 **H. Work Order Logs**

4 **Q. PLEASE DESCRIBE MR. FOUGHT’S TESTIMONY REGARDING WHAT HE**
5 **REFERS TO AS PWSA’S “CUSTOMER COMPLAINT LOGS.”**

6 A. In Mr. Fought’s view, what he refers to as PWSA’s “customer complaint logs” are
7 incomplete. Therefore, he recommends that the Authority should return to the template
8 used in the 2018 base rate case which provided more categories of customer complaints.
9 (OCA Statement 6 at 23-26, 28-30).

10 **Q. PLEASE RESPOND.**

11 A. At the outset, it is necessary to clarify the terminology so that all parties are on the same
12 page. The items identified in the documents that Mr. Fought is referring to as “customer
13 complaint logs” are not necessarily complaints. It appears from a review of his Direct
14 Testimony that Mr. Fought is actually seeking information related to work orders, which
15 result from many different sources including inquiries, requests and notifications. PWSA
16 already captures the data in the Spry Mobile application that Mr. Fought wishes to
17 receive, but since his request referred to “customer complaint logs,” this information was
18 not produced. An example is that PWSA may receive notification from a driver passing
19 by a certain area of a manhole lid being missing, which is nothing more than information
20 generating the opening of a work order. It is not a complaint. Countless other similar
21 situations are captured in the Spry Mobile application. The best way to move forward on
22 this issue would be to rename the logs as “Work Order Logs” and PWSA can provide
23 information to OCA and the other parties in the requested categories. PWSA is already

1 in the process of including the additional information identified by Mr. Fought in the logs
2 and will supplement prior discovery responses, as appropriate.

3 **III. CONCLUSION**

4 **Q. DOES THAT COMPLETE YOUR REBUTTAL TESTIMONY?**

5 **A.** Yes; however, I do reserve the right to supplement this testimony as may be appropriate.

VERIFICATION

I, William J. McFaddin, hereby state that: (1) I am the Director of Operations for The Pittsburgh Water and Sewer Authority (“PWSA”); (2) the facts set forth in my rebuttal testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

BK-5	March 4, 2020 Cost/Benefit Analysis of Operating the Highland Microfiltration Plant Versus Covering Highland No. 1 Reservoir
------	--

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND POSITION FOR THE RECORD.**

3 A. My name is Barry King and I am the Director of Engineering and Construction for The
4 Pittsburgh Water and Sewer Authority (“PWSA”).

5 **Q. DID YOU PREVIOUSLY PROVIDE TESTIMONY IN THIS PROCEEDING?**

6 A. Yes. I submitted Direct Testimony on May 9, 2023. (PWSA St. No. 4).

7 **Q. PLEASE IDENTIFY THE ISSUES YOU ADDRESSED IN YOUR DIRECT**
8 **TESTIMONY.**

9 A. I described PWSA’s Capital Improvement Plan (“CIP”), with an emphasis on the total
10 capital requirements of over \$1.8 billion for fiscal years 2023-2027. In addition, I
11 provided updates regarding prior rate case settlement commitments.

12 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

13 A. The purpose of my Rebuttal Testimony is to respond to the Direct Testimony of: Vanessa
14 Okum on behalf of the Bureau of Investigation and Enforcement (“I&E”) (I&E Statement
15 No. 2); Ethan H. Cline on behalf of I&E (I&E Statement No. 3); and Terry L. Fought on
16 behalf of the Office of Consumer Advocate (“OCA”) (OCA Statement 6).

17 **Q. ARE YOU SPONSORING ANY EXHIBITS?**

18 A. Yes. I am sponsoring PWSA Exhibit No. BK-5, which is a March 4, 2020 Cost/Benefit
19 Analysis of Operating the Highland Microfiltration Plant Versus Covering Highland No.
20 1 Reservoir.

21 **II. WET WEATHER CONSENT DECREE**

22 **Q. PLEASE DESCRIBE THE RECOMMENDATIONS OF MS. OKUM**
23 **REGARDING PWSA’S CLAIM FOR “OPERATING CONTRACTS OTHER.”**

24 A. Testifying for I&E, Ms. Okum recommends a reduction of \$7,500,000 in the Fully
25 Projected Future Test Year (“FPFTY”) of 2024 to Operating Contracts Other. If the

1 Commission approves PWSA’s multi-year rate plan, she recommends reductions of
2 \$9,750,000 in Fiscal Year (“FY”) 2025 and \$12,675,000 in FY 2026. Her
3 recommendations are based on a proposed disallowance of the entire amount of the
4 projected costs for the Wet Weather Consent Decree because the Decree is not expected
5 to be finalized until 2024. She further suggests that PWSA has not provided a breakdown
6 of claimed expenses, relevant calculations, or other supporting documentation. (I&E
7 Statement No. 2 at 16-18).

8 **Q. DO YOU AGREE WITH THIS RECOMMENDATION?**

9 A. No. As PWSA Witness Edward Barca testified in his Direct Testimony, it is estimated
10 that the Wet Weather Consent Decree will result in hundreds of millions of dollars in
11 required improvements, with a significant portion being paid for out of the operating
12 budget. (PWSA St. No. 2 at 17). The Wet Weather Consent Decree is the culmination of
13 a series of allegations made in November 2020 by the Environmental Protection Agency
14 (“EPA”), the Department of Justice (“DOJ”) and the Pennsylvania Department of
15 Environmental Protection (“PA DEP”) that PWSA is out of compliance with the federal
16 Clean Water Act and Pennsylvania’s Clean Streams Law. The options for resolving these
17 allegations are either the initiation of a lawsuit against PWSA, followed by the issuance
18 of a Consent Order, or the issuance of a Consent Decree, approving a negotiated
19 settlement among the parties. If PWSA is not successful in negotiating a settlement and
20 avoiding litigation initiated by federal and state government, ratepayers would be
21 required to shoulder the litigation costs, as well as the burden of civil penalties that result
22 from litigation of these issues, which could well exceed the level of penalties that are
23 included in the Consent Decree.

1 **Q. PLEASE DESCRIBE SOME OF THE COMMITMENTS THAT PWSA EXPECTS**
2 **TO MAKE UNDER THE CONSENT DECREE.**

3 A. During negotiations for a Consent Decree, PWSA has already committed to \$7.5 million
4 worth of planning aimed at significantly reducing sanitary sewer and combined sewer
5 overflows, as explained in the Rebuttal Testimony of Mr. Barca (PWSA Statement No. 2-
6 R at 45). In order to be able to timely honor these commitments upon issuance of a
7 Consent Decree, it is critical for PWSA to begin addressing them and incurring expenses
8 for action items in 2024. Frankly, it would be irresponsible on the part of the Authority
9 and place our ratepayers at the risk of absorbing the costs of non-compliance with the
10 Consent Decree, to not request the dollars now that will be needed for compliance.

11 **Q. PLEASE PROVIDE EXAMPLES OF ACTION ITEMS THAT NEED TO BE**
12 **DONE NOW.**

13 A. A specific commitment included in the Consent Decree would require PWSA to develop
14 an approvable Nine Minimum Control Plan Report and a Long-Term Control Plan. The
15 development of these plans requires a calibrated and verified hydrologic and hydraulic
16 model; water quality data collection and analysis; alternative evaluation and selection;
17 cost estimation and a robust stakeholder involvement process. PWSA must complete
18 these tasks; the only other alternative is to remain out of compliance from the standpoint
19 of DOJ, EPA and the PA DEP, risking litigation and the imposition of significant civil
20 penalties – all to the harm of our ratepayers. For the reasons I have explained, the
21 Commission should reject I&E’s recommendation to disallow the costs of the Wet
22 Weather Consent Decree.

1 **III. CAPITAL IMPROVEMENT PROJECTS**

2 **Q. PLEASE DESCRIBE MR. CLINE’S TESTIMONY REGARDING PWSA’S**
 3 **CAPITAL IMPROVEMENT PLAN (“CIP”).**

4 A. I&E witness Cline disagrees with the level of capital improvement projects that PWSA
 5 includes in the FPFTY because of what he describes as “a historic tendency to fall short
 6 of meeting the capital budget that it sets on an annual basis.” (I&E Statement No. 3 at 8-
 7 9, 19). In support of this assertion, Mr. Cline refers to I&E Exhibit No. 3, Schedule 3,
 8 which is PWSA’s response to IE-RS-1, containing budgeted dollars and actual dollars
 9 spent on capital improvement projects in FY 2019, FY 2020, FY 2021 and FY 2022.

10 **Q. DO YOU HAVE A RESPONSE TO THIS GENERAL ASSERTION?**

11 A. Yes. Mr. Cline’s general assertion is flawed. Four years’ worth of budgeted vs. actual
 12 dollars spent on capital improvement projects can hardly be viewed as a “historic”
 13 tendency on the part of PWSA. Rather, these comparisons span a minimal period
 14 because PWSA only came under the jurisdiction of the Commission on April 1, 2018 – a
 15 fact that I&E uses to recommend rejection of the multi-year rate plan due to the lack of
 16 historical information. (I&E Statement No. 1 at 8).

17 In addition, during this brief time, PWSA has faced many factors that have caused
 18 delays in the construction process, which were outside of the Authority’s control and
 19 could not have been anticipated. For example, planned capital projects in FY 2020 were
 20 significantly impacted by the COVID-19 pandemic. Those impacts continued into FY
 21 2021 with widely known supply chain issues that delayed construction and into FY 2022
 22 on focused areas, such as electrical equipment. In addition, PWSA has experienced a
 23 limited contracting pool, with the number of bidders significantly decreasing compared to
 24 the past. Other factors include delays in the permitting process of the Pennsylvania

1 Department of Environmental Protection (“DEP”), and the length of the technical review
2 (up to six months) conducted by the Pennsylvania Department of Transportation
3 (“PennDOT”), which are both beyond PWSA’s control. Likewise, PWSA has
4 encountered unexpected construction delays associated with requirements imposed by the
5 Pennsylvania State Historic Preservation Office (“SHPO”).

6 It is also worth mentioning that as a municipal authority, PWSA is required to
7 comply with a lengthy process established by the Municipal Authorities Act (“MAA”),
8 53 Pa. C.S. §§ 5601 et seq. For example, Section 5614 of the MAA mandates that all
9 construction projects exceeding a certain base amount (well below most of PWSA’s
10 projects) be done only under a contract with the lowest responsible bidder after public
11 notice seeking competitive bids. 53 Pa. C.S. § 5614. Additionally, it is my
12 understanding that investor-owned utilities do not have to rely on capital plans to obtain
13 Commission approval for construction expenses and that when divergences from the
14 budgets occur, they are reflected in their returns on assets, which is not applicable to
15 PWSA as a cash flow utility.

16 Despite these ongoing challenges, I note that in FY 2019 and FY 2022, the
17 differences between the budgeted amounts and actual expenditures were less than the
18 variations that occurred in FY 2020 and FY 2021. (I&E Exhibit No. 3, Schedule 2). For
19 example, in FY 2019, pre-COVID, PWSA spent nearly 80 percent of the budgeted
20 amount for capital improvements, and in FY 2022, PWSA spent approximately 70
21 percent of the budgeted amount. The larger divergences between budgeted and expended
22 amounts occurred in FY 2020 and FY 2021 with PWSA spending less than 60 percent of
23 the budgeted amounts. I would expect a trend toward greater accuracy to continue going

1 forward as PWSA has gathered important knowledge, such as the delays associated with
 2 the DEP, PennDOT and SHPO’s processes, which will be incorporated into future
 3 projections.

4 The bottom line is that the capital projects PWSA is planning need to be done. It
 5 is not a wish list. The level of capital improvements that PWSA is currently undertaking
 6 is necessary and unprecedented due to neglected infrastructure over many years.
 7 Spending less than projected over a few years, for unanticipated reasons that were outside
 8 of PWSA’s, is not a valid reason to drastically and arbitrarily reduce the level of spending
 9 on capital projects that has been approved by PWSA’s Board. Of note, any unspent
 10 monies earmarked for particular improvements do not go into the pockets of
 11 shareholders, of which PWSA has none, but rather go back into the water, wastewater
 12 and stormwater systems for the benefit of ratepayers, may expedite other capital projects,
 13 may pay down debt and may be reserves for a future year, delaying the need for future
 14 rate increases.

15 **Q. WHAT IS MR. CLINE’S RECOMMENDATION THAT IS BASED ON HIS**
 16 **FLAWED GENERAL ASSERTION?**

17 A. Based on his flawed general assertion, Mr. Cline recommends that PWSA’s proposal to
 18 increase its capital budget in the FPPTY by \$42,688,673 be reduced to \$10,063,371, or
 19 by \$32,625,303. He proposes to achieve this reduction by reducing the Water Treatment
 20 Plant increase by 25% and the Water Pumping and Storage increase by 50%, which are
 21 two categories of capital improvements in PWSA’s CIP. (I&E Statement No. 3 at 20).

22 **Q. PLEASE RESPOND.**

23 A. As noted in my Direct Testimony, the current CIP approved by the Board for 2023-2027
 24 includes the following capital requirements by category and fiscal year:

	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	Total
Water Treatment Plant	\$ 16,030,211	26,885,665	24,038,988	54,790,691	78,451,718	\$ 200,197,272
Water Pumping and Storage	55,304,597	115,127,475	121,491,637	113,245,473	30,009,851	435,179,033
Water Distribution	143,302,527	125,439,446	155,468,790	143,283,004	184,525,120	752,018,887
Wastewater System	50,634,240	31,442,487	27,579,779	45,751,309	54,918,077	210,325,892
Stormwater	29,822,932	34,827,423	36,884,821	33,038,424	26,808,750	161,382,350
Miscellaneous	11,439,316	15,500,000	33,000,000	500,000	500,000	60,939,316
Total Capital Requirements	\$ 306,533,823	349,222,497	398,464,014	390,608,900	375,213,516	\$ 1,820,042,750

1
2 Mr. Cline’s proposed reductions are arbitrary and fail to consider the impact on PWSA’s
3 ability to complete projects that have been identified as being necessary for regulatory
4 compliance, safety, quality of service and operating efficiency. All of the projects
5 included in these two categories relate to uninterrupted high quality drinking water,
6 which his proposal ignores. His recommendations further overlook the fact that many
7 projects span several years and are already underway, such as through permitting, design,
8 being out for bid and in construction. Further, I&E’s focus on FY 2024 is short-sighted
9 given the active planning that is underway for expenses that will be incurred in that fiscal
10 year. If a project is already in construction, PWSA would incur additional costs to halt
11 that construction and restart it at a later time.

12 It is also noteworthy that Mr. Cline makes no attempt to identify specific projects
13 in the categories of Water Treatment Plan or Water Pumping and Storage that can or
14 should be delayed if the funds are not available. In addition, even though Mr. Cline
15 reviews a limited period in PWSA’s history to make his general assertion about PWSA’s
16 spending on capital projects being less than its budget for such projects, he gives no
17 consideration to the fact that in FY 2022, the actual spending vs. budgeted amount for
18 both Water Treatment Plan and Water Pumping and Storage was significantly less than in
19 FY 2021. (I&E Exhibit 3, Schedule 3). Therefore, PWSA’s efforts to accurately project
20 spending for capital projects are improving, and as I said above, even if earmarked
21 money is unspent in a particular year, it is put to good use for the benefit of ratepayers.

1 **Q. PLEASE HIGHLIGHT SPECIFIC EXAMPLES OF CAPITAL PROJECTS IN**
 2 **THE WATER TREATMENT PLANT CATEGORY TO ILLUSTRATE THE**
 3 **NATURE OF THE CONSTRUCTION WORK THAT COULD BE AFFECTED IF**
 4 **MR. CLINE’S RECOMMENDED ARBITRARY REDUCTION IS APPROVED.**

5 A. The Water Treatment Plant budget for FY 2024 is \$26,885,665, which Mr. Cline
 6 proposes to reduce by 25%, includes the following projects:

- 7 • *Aspinwall Water Treatment Plant Raw Water Intakes – West Intake.* The West Gate
 8 is 100 years old and is 90% closed and inoperable. This project is necessary for
 9 regulatory compliance and water quality. (PWSA Exhibit EB-4 at 15).
- 10
- 11 • *Chemical Feed Modernization Project/Rapid Mix and Clarifier Improvements.* The
 12 upgrade of chemical feed systems is necessary to meet current regulatory
 13 requirements and optimize the water treatment process. It is also critical for safety,
 14 operating efficiency and quality of service. (PWSA Exhibit EB-4 at 17).
- 15
- 16 • *Clearwell Emergency Response Project.* The clearwell was constructed in 1908 and
 17 has not undergone any major modifications or upgrades since. A failure of the
 18 clearwell would cause a disruption to the supply of water. This project is necessary
 19 for regulatory compliance, safety, operating efficiency and water quality. (PWSA
 20 Exhibit EB-4 at 18).
- 21
- 22 • *Lime Slurry System Improvements.* Adequate lime storage is mandated by PA DEP,
 23 and the extra storage for liquid lime is critical to the reliable operation of the Water
 24 Treatment Plant. This project is necessary for safety, operating efficiency and water
 25 quality, and is already in permitting. (PWSA Exhibit EB-4 at 24).
- 26
- 27 • *Water Treatment Plant Filter Building Roof.* The existing roof is aged and in need of
 28 replacement, such that continued deterioration of the roof could result in emergency
 29 replacement. This project is necessary for regulatory compliance, safety, operating
 30 efficiency and water quality. (PWSA Exhibit EB-4 at 33).
- 31

32 Although this is just a small sampling of the projects that are included in the FY 2024
 33 capital budget, these examples illustrate the importance of permitting PWSA to proceed
 34 with its construction plans at the level proposed, and as approved by the Board, to ensure
 35 that the necessary upgrades are completed to ensure regulatory compliance and enhance
 36 operating efficiency, safety and water quality. Adoption of I&E’s recommendation

1 would necessarily delay the progress that PWSA is making to modernize its Water
2 Treatment Plants.

3 **Q. PLEASE HIGHLIGHT SPECIFIC EXAMPLES OF CAPITAL PROJECTS IN**
4 **THE WATER PUMPING AND STORAGE CATEGORY TO ILLUSTRATE THE**
5 **NATURE OF THE CONSTRUCTION WORK THAT COULD BE AFFECTED IF**
6 **MR. CLINE’S RECOMMENDED ARBITRARY REDUCTION IS APPROVED.**

7 A. The Water Pumping and Storage budget for FY 2024 is \$115,127,475, which Mr. Cline
8 proposes to reduce by 50%, includes the following projects:

- 9 • *Chlorine Booster Station Improvements.* PWSA’s existing chlorine residual levels
10 expose the Authority’s customers to poor water quality, and recent changes to PA
11 DEP regulations require an increase in minimum levels in the distribution system.
12 This project is necessary for regulatory compliance, safety, operating efficiency and
13 water quality, and is in design. (PWSA Exhibit EB-4 at 45).
14
- 15 • *Disinfection By-Products Mitigation.* The replacement of existing trihalomethane
16 removal systems at certain tanks would improve the level of service provided to
17 customers and avoid possible regulatory violations. This project is necessary for
18 regulatory compliance, safety, operating efficiency and water quality, and will be
19 going out for bid any day. (PWSA Exhibit EB-4 at 46).
20
- 21 • *Highland No. 2 Reservoir Liner and Cover Replacements.* The Highland No. 2
22 Reservoir will be used as a temporary clearwell while the new clearwell is being
23 constructed. Therefore, the existing reservoir liner and cover must be replaced and
24 existing chlorine feed facilities must be upgraded to meet PA DEP regulatory
25 requirements. This project is necessary for regulatory compliance, safety, operating
26 efficiency and water quality. (PWSA Exhibit EB-4 at 53).
27
- 28 • *Highland Reservoir Pump Station and Rising Main.* This project involves the
29 construction of a new finished water pump station and transmission main to supply
30 water to the Highland No. 1 Service Area from Highland No. 2 Reservoir. A failure
31 of the existing pump stations and rising mains would result in significant service
32 disruption. The project is necessary for regulatory compliance, safety, operating
33 efficiency and water quality, and is currently out for bids. (PWSA Exhibit EB-4 at
34 54).
35
- 36 • *Lanpher Reservoir Improvements.* This project involves the replacement of the
37 chlorine injection system and is required per Consent Order with PA DEP. A failure
38 to do this project would expose the Authority’s customers to poor water quality and
39 inadequate booster disinfection. The project is necessary for regulatory compliance,
40 safety, operating efficiency and water quality, and is going out for bids next month.
41 (PWSA Exhibit EB-4 at 57).

- *Lincoln Pump Station: Bypass Pump Station Project.* This planned pump station will allow for the existing pump station to be taken off line completely for rehabilitation. Delaying its construction will delay the renewal of existing pump stations that are in need of upgrades. This project is necessary for safety, operating efficiency and water quality. (PWSA Exhibit EB-4 at 59).

As I noted above about the projects planned for the Water Treatment Plant category, these are just a handful of the improvements and upgrades in the Water Pumping and Storage category that are designed to achieve regulatory compliance and enhance PWSA’s safety, water quality and operating efficiency. The Commission should reject I&E’s arbitrary proposed reduction to the capital budget for Water Pumping and Storage so that PWSA is able to stay the course on making the necessary improvements and enhancements to its system for the benefit of its customers.

MICROFILTRATION PLANT

Q. PLEASE DESCRIBE THE RECOMMENDATION OF OCA WITNESS FOUGHT REGARDING THE COST OF WATER TREATED AT THE MICROFILTRATION PLANT.

A. Mr. Fought, testifying on behalf of OCA, recommends that the City of Pittsburgh should pay for all water treated at the Microfiltration Treatment Plant (“MFP”) or that it should be considered as unaccounted for water or non-revenue water. He further testifies that if the City is not willing to pay for the amount of water treated by the MFP, PWSA should consider covering the Highland 1 Reservoir (“HR1”). (OCA Statement 6 at 36-37).

Q. HOW DO YOU RESPOND?

A. PWSA cannot require the City to pay for the water treated at the MFP. Prior to PWSA coming under the regulation of the Commission, the decision was made to keep HR1 uncovered. PWSA is not in a position to modify that decision. In the 2018 base rate case settlement, PWSA committed to providing a cost-benefit analysis of operating the MFP

1 instead of covering and placing a physical barrier around HR1.¹ This analysis was
2 performed and a March 4, 2020 memorandum explaining the results of that study is
3 attached as PWSA Exhibit No. BK-5. In my Direct Testimony offered in support of
4 PWSA's 2020 base rate request, I detailed the importance of the MFP to the delivery of
5 water supply and explained that a decision of whether to cover HRI is not one that can be
6 made based solely on costs.² That explanation remains true today. The feasibility of
7 covering the existing HR1 is not reasonable in terms of constructability, water quality and
8 cost. The result of that proceeding is that PWSA continued to operate the MFP and it
9 was not covered. Mr. Fought has provided no basis for reconsidering that decision now.
10 As to Mr. Fought's related recommendations concerning an amendment of the
11 Cooperation Agreement with the City, they are addressed in the Rebuttal Testimony of
12 William J. Pickering (PWSA Statement No. 1-R).

13 **V. CONCLUSION**

14 **Q. DOES THAT COMPLETE YOUR REBUTTAL TESTIMONY?**

15 **A.** Yes; however, I do reserve the right to supplement this testimony as may be appropriate.

¹ Joint Petition for Settlement, III.B.8, approved in *Pennsylvania Public Utility Commission v. Pittsburgh Water and Sewer Authority*, Docket Nos. R-2018-3002645 and R-2018-3002647 (Order entered February 17, 2019).

² *Pennsylvania Public Utility Commission v. Pittsburgh Water and Sewer Authority*, Docket Nos. R-2020-3017951 and R-2020-3017970 (Rate Case filed March 6, 2020); (PWSA Statement No. 4 at 15-19; PWSA Exhibit BK-3).

Exhibit BK-5

MEMO

To: Barry King, P.E., Director of Engineering and Construction

From: Sarah Bolenbaugh, P.E., Bradley McShane, and Anthony Gallina

Date: March 4, 2020

Subject: Cost/Benefit Analysis of Operating the Highland Membrane Filtration Plant Versus Covering Highland No. 1 Reservoir (and Constructing a Physical Barrier)

Purpose

On January 31, 2017, the PADEP issued a Field Order prompting PWSA to take the Highland Microfiltration Plant (HMFP) out of service, until PWSA either provided specific repairs to the HMFP or installed a cover and provided adequate security with a physical barrier for Highland Reservoir No. 1. In the 2018 rate case settlement, PWSA committed to provide a cost/benefit analysis of operating the HMFP instead of covering and placing a physical barrier around Highland Reservoir No. 1.

Highland Microfiltration Plant

The capital cost of renovating and updating the HMFP over the past several years has been spread over several projects. The scope of work included in these projects includes installation of a new ultraviolet (UV) disinfection system subsequent to the existing microfiltration system, component replacements and updates to the microfiltration system, numerous electrical equipment updates, repairs and upgrades to pumps, valves, flowmeters, and monitoring equipment, updates to the SCADA and reporting systems, assessment and repair of storage tanks, repairs to the building heating system, installation of a security monitoring system at the plant and around the reservoir, and replacement of the parapet wall around the top of the reservoir. The total capital cost to date of all of these direct and related improvements in support of restoration of the MFP Facility is approximately \$14,500,000.00.

Annual operation and maintenance (O&M) costs of the microfiltration plant include the following considerations: energy, chemical, equipment and maintenance, and staffing. Historical usage and current design operating parameters are used as the

MEMO

cost estimates basis. The estimated annual O&M cost of the microfiltration plant is \$1,625,929.25 for the first year, and \$1,199,215.25 annually for years 2 through 10 of operation. The table below breaks down the cost of each category for year 1.

Operation and Maintenance		
Energy	\$	394,620.65
Chemicals	\$	102,345.60
Equipment and Maintenance	\$	447,249.00
Staffing ¹	\$	681,714.00
Annual Total¹	\$	\$1,625,929.25
Footnotes:		
1. The staffing cost of \$681,714 presented hereon is the cost for first (and only) year of contracted operational staffing of MFP (via contract with CWM). Subsequent annual staffing cost is estimated at \$255,000.00, and will reduce the total annual Operation and Maintenance cost to \$1,199,215.25. in years 2 through 10.		

Highland Reservoir No. 1 Floating Cover Option

Highland Reservoir No. 1 would require an estimated 975,718 square feet of both liner and cover. This estimated area was calculated using costs from a previous lining contract and record drawings of the Highland 1 Reservoir to provide dimensions.

The cost estimate for covering Highland Reservoir No. 1 was developed using the cost of lining and covering Lanpher Reservoir. The construction cost of the Lanpher cover and liner, including the rainwater management system (electrical contract), equated to \$12.44 per square foot. An additional \$277,000 would be required for construction of a fence around the Highland Reservoir, a necessitated security measure. Including construction costs plus contingency (30%), project management (1.5%), design (15%), construction management (5%), construction inspection (7%), and design services during construction (2%) the total estimated cost of covering and securing Highland Reservoir No. 1 would be approximately \$21,100,000. This estimate is solely based on the costs associated with the actual installation of a new liner and cover, and does not account for contingency costs associated with:

- uncertainties about the existing reservoir structural/physical concrete conditions, and

- modifications to the reservoir's deficient "dam-related" physical elements that have been identified in the course of completing the preparation of the PADEP-required Dam Safety Permit for the existing reservoir (Note, while completing the inspections, analyses, and documentation for a PADEP Dam Safety Permit submittal, PWSA's Consultant has verified that the existing facility does not meet the minimum requirements necessary for permitting an modifications and upgrades that would be necessary to enable the covering of this existing reservoir)

Floating Cover Implications

Aside from the cost implications and comparisons between continued operation and maintenance of the HMFP versus covering the reservoir, there are several engineering, water quality, and logistical issues that must be considered:

Hydraulics-

The reservoir offers limited usable storage capacity, as the elevation of the reservoir required to meet the minimum pressure requirement (35 psi) at peak hour is only a few feet from the high level of the reservoir. As a result, only the top few feet of the reservoir provide available storage requiring almost constant operation of pumps to maintain an adequate elevation in the reservoir. This affects the reservoir's ability to turnover which can lead to stagnation and water quality issues.

Water quality-

The capacity of the Highland Reservoir No. 1 is 130.5 MG, at an average day demand of 28 MGD the reservoir would have a retention time of 4.7 days (the criteria for the required storage is 1 day's average demand). This excessive storage capacity leads to increased water age, potentially causing water quality deterioration problems.

Structural Safety

A dam safety assessment, conducted by a PWSA consultant, identified issues that would need rectified in order to operate Highland Reservoir No. 1 as a water storage facility long-term:

Trees and unsuitable vegetation would need removed from the embankment around the reservoir. This requires a tree study by a professional arborist and dam safety professional, as well as an engineered design for tree removal.

The embankment would need regraded to a uniform slope. The effects of regrading the embankment slope would result in other cost implications associated with necessary modifications to the park surrounding the reservoir (roadway modifications, disturbance to the historical structures (steps) around the reservoir, etc.)

Public Acceptance

Along with engineering challenges, there is strong political and public opposition to covering the reservoir. The reservoir is in a popular city park, situated in a community that prizes the historical significance and beauty of the reservoir. City Council even forbid a floating cover at Highland Reservoir #1 in 1993. It is not likely that public sentiment has or would change.

Operation and Maintenance

PWSA maintains a total of three covered storage reservoirs. The replacement schedule for these covers is every 15-20 years and requires constant maintenance of the cover pumps to ensure that no standing water is on the cover. The high replacement cost and O&M considerations for these reservoirs, as well as the fact that the reservoirs are oversized based on current standards, is leading PWSA to lean towards replacing these reservoirs with structural tanks with a capacity that is more in line with present and future demand.

Alternative Solution: New Storage

Considering the issues involved with covering Highland Reservoir No. 1 and the expense of operating the HMFP, an ideal long-term solution would be a 30-40 MG storage tank. This tank would be placed at an elevation providing the necessary minimum pressures to the system. Although an area had been identified for this storage tank in the 1990s, when the topic of covering the reservoir first arose, the area required would require acquiring city property for the tank as well as some major piping modifications to the system's rising and supply mains. As such, the

MEMO

timeline for a new tank would exceed the three years required to bring the MFP back online.

Conclusions

Although it took three years to complete the modifications and repairs required for the HMFP, it was likely the most expeditious route considering the issues involved in covering the reservoir or building new storage. It is accepted that operating the HMFP is not an economic long term solution. However, covering the reservoir is not practically feasible due to the prior mentioned concerns. Until a new storage facility can be constructed, operating the HMFP remains the most practical means of continuously supplying safe and potable water to the users.

VERIFICATION

I, Barry King, hereby state that: (1) I am the Director of Engineering for The Pittsburgh Water and Sewer Authority (“PWSA”); (2) the facts set forth in my rebuttal testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND POSITION FOR THE RECORD.**

3 A. My name is Tony Igwe. I am the Senior Group Manager, Stormwater for The Pittsburgh
4 Water and Sewer Authority (“PWSA”), a position that I assumed in January 2021. I
5 previously held this position on an interim basis beginning in September 2020.

6 **Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?**

7 A. Yes. I submitted Direct Testimony on May 9, 2023. (PWSA St. No. 5).

8 **Q. WHAT ISSUES DID YOU ADDRESS IN YOUR DIRECT TESTIMONY?**

9 A. I supported PWSA’s proposed stormwater rate increase. Additionally, I described the
10 Authority’s stormwater conveyance facilities, the related regulatory requirements and
11 PWSA’s stormwater management program. I also discussed the status of PWSA’s
12 Stormwater Strategic Plan.

13 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

14 A. The purpose of my Rebuttal Testimony is to respond to certain Direct Testimony
15 submitted by Michael J. McNamara and Eric M. Callocchia on behalf of the Pittsburgh
16 School District (“School District”) (School District St. Nos. 1 and 2, respectively); and
17 the Direct Testimony submitted by Robert Strauss and Cheryl McAbee on behalf of River
18 Development Corporation (“River Development” or “RDC”) (RDC St. Nos. 1 and 2,
19 respectively). Other stormwater issues raised by these witnesses will be addressed in
20 Rebuttal Testimony submitted by William J. Pickering and Keith Readling. (PWSA St.
21 Nos. 1-R and 8-R, respectively).

22 **Q. ARE YOU SPONSORING ANY EXHIBITS?**

23 A. Yes. I am sponsoring the following exhibits:
24

II. RESPONSE TO SCHOOL DISTRICT

Q. PLEASE RESPOND TO THE CONCERN OF THE SCHOOL DISTRICT’S WITNESS REGARDING THE IMPACT OF THE PROPOSED STORMWATER RATE INCREASE.

A. Mr. McNamara states that the School District has many large buildings with significant impervious area so an increase to the stormwater charge will have a major impact on the School District’s PWSA bills. (School District St. No. 1 at 11-12). While PWSA understands and appreciates the effect that an increase to the stormwater charge may have on entities like the School District, the increase is necessary for PWSA to comply with increasing regulatory requirements. (PWSA St. No. 5 at 3). The stormwater charge is designed to ensure that all properties pay their fair share for stormwater services based on the impervious area on the properties and thus the demand placed on the stormwater system. Like all other properties, the School District must pay its fair share for stormwater management, in the same way as it must pay its other utility bills.

Q. PLEASE SUMMARIZE MR. MCNAMARA’S TESTIMONY REGARDING THE SCHOOL DISTRICT’S EFFORTS TO MANAGE STORMWATER RUNOFF.

A. Mr. McNamara states that the School District has a “water efficiency plan” which includes the installation of rain gardens at three properties, as well as a rainwater collection system at its Central Operations building which reuses rainwater collected from the rooftop in the building’s cooling tower mechanical system. (School District St. No. 1 at 12; School District Exh. MJM-3).

1 **Q. MR. MCNAMARA STATES THAT THE SCHOOL DISTRICT IS NOT**
2 **RECEIVING ANY CREDITS ON ITS STORMWATER BILL FOR ITS EFFORTS**
3 **TO REDUCE STORMWATER RUNOFF. (SCHOOL DISTRICT ST. NO. 1 AT**
4 **13). PLEASE RESPOND.**

5 A. Pursuant to PWSA’s stormwater tariff, a customer must submit a credit application in
6 order to receive a stormwater credit.¹ Non-residential customers are eligible for credits
7 ranging from 45% to 60%, depending on the stormwater management standards that are
8 met. In addition, for non-residential customers who undertake regional efforts or exceed
9 Pittsburgh’s 2019 standards by controlling at least 25% more runoff than required, a
10 higher level credit may be granted upon review – with the maximum credit under this
11 approach being 100%.² In response to discovery, the School District acknowledged that
12 it has never applied for a stormwater credit.³ If the School District believes it is eligible
13 for a credit, I would encourage the School District to submit an application. The credit
14 application and the supporting credit manual are available on PWSA’s website.⁴
15 Additionally, PWSA is willing to assist the School District in exploring ways to qualify
16 for a credit or otherwise reduce the impervious areas on its properties.

17 **Q. PLEASE RESPOND TO THE SCHOOL DISTRICT’S CLAIM THAT IT DID**
18 **NOT ASK TO RECEIVE STORMWATER SERVICE FROM PWSA. (SCHOOL**
19 **DISTRICT ST. NO. 1 AT 13; SCHOOL DISTRICT ST. NO. 2 AT 28-29).**

20 A. Under PWSA’s PUC-approved stormwater tariff, the Authority’s stormwater rates apply
21 to those who: (1) own property in PWSA’s service territory, and (2) whose property has
22 at least 400 square feet of impervious area. Certain parcels owned by the School District

¹ PWSA Tariff Storm Water – Pa. P.U.C. No. 1 at 10 (“Customers must submit a completed BMP credit application. The current application will be available on the Authority’s website.”).

² PWSA Tariff Storm Water – Pa. P.U.C. No. 1 at 10.

³ PWSA Exhibit TI-3 (School District Response to PWSA I-13).

⁴ <https://www.pgh2o.com/your-water/stormwater/stormwater-fee/stormwater-credit-program>.

1 meet these qualifications, making the School District a PWSA stormwater customer.
2 PWSA's stormwater system benefits the School District by managing and/or conveying
3 stormwater runoff from its properties. The School District is charged for stormwater
4 service based on the demand placed on PWSA's stormwater system due to impervious
5 area on its properties.

6 Further, this is not unique to stormwater service. Under the Allegheny County
7 Health Department's Plumbing Code, properties are *required* to connect to connect to the
8 public water and sewer systems when they are available.⁵ In fact, the Plumbing Code
9 also requires that properties drain either to a separate storm sewer system or combined
10 sewer system where available.⁶ Properties are required to use the public water,
11 wastewater and stormwater systems where they are available. PWSA provides these
12 services, and under PWSA's PUC-approved tariff, customers are required to pay for these
13 services, including stormwater management service.

14 **Q. PLEASE RESPOND TO MR. MCNAMARA'S CLAIM THAT THE**
15 **STORMWATER CHARGE "IS OR MAY BE AN UNLAWFULLY IMPOSED**
16 **TAX." (SCHOOL DISTRICT ST. NO. 1 AT 4, 13-14).**

17 A. We disagree. I am advised by counsel that this is a legal issue that will be addressed in
18 briefs as necessary. This claim is also generally addressed in the Rebuttal Testimony of
19 PWSA witness William J. Pickering (PWSA St. No. 1-R).

⁵ Allegheny County Code § 860-36.

⁶ Allegheny County Code § 860-161.

1 **Q. SCHOOL DISTRICT WITNESS ERIC M. CALLOCCHIA STATES THAT**
2 **STORMWATER MANAGEMENT PROVIDES A “COMMUNITY-WIDE**
3 **BENEFIT.” (SCHOOL DISTRICT ST. NO. 2 AT 6-8). PLEASE DISCUSS.**

4 A. I agree that PWSA’s stormwater management provides benefits to the community as a
5 whole. However, individual customers also receive discrete, tangible benefits from these
6 stormwater services. Any property with impervious area creates stormwater runoff that
7 PWSA’s system must be available to collect and convey. Customers directly benefit
8 from PWSA’s stormwater services, since PWSA manages and/or conveys stormwater
9 runoff from such properties that may otherwise cause flooding, property damage, and/or
10 water quality issues.

11 **Q. DOES SCHOOL DISTRICT WITNESS CALLOCCHIA RECOMMEND STEPS**
12 **THAT PWSA SHOULD TAKE TO REDUCE ITS STORMWATER REVENUE**
13 **REQUIREMENT?**

14 A. Yes. Mr. Callocchia says that PWSA has not done “everything possible” to reduce its
15 stormwater revenue requirement, and that the Authority has a “duty” to investigate and
16 potentially implement Community-Based Public-Private Partnerships (“CBP3”) to reduce
17 stormwater-related capital improvement costs. (School District St. No. 2 at 9-12).

18 **Q. HAS PWSA EXPLORED A CBP3 OR OTHER SIMILAR ARRANGEMENT?**

19 A. Not at this time. Further, I am not aware of (and Mr. Callocchia does not point to) any
20 specific requirement that PWSA consider and/or implement this type of public-private
21 partnership. However, the Authority is willing to explore a CBP3 or similar arrangement
22 at the appropriate time. In my experience, these processes work best following the
23 development of specific stormwater alternatives. PWSA’s draft Stormwater Strategic
24 Plan currently includes a provision to consider these partnerships, and PWSA expects to
25 explore these options as the process is finalized in the future. In addition, Mr. Pickering’s

1 Rebuttal Testimony discusses funding that PWSA has received from private entities in
2 support of stormwater management. (PWSA St. No. 1-R).

3 **Q. DOES MR. CALLOCCHIA ARGUE THAT THE SCHOOL DISTRICT SHOULD**
4 **BE EXEMPT FROM STORMWATER CHARGES?**

5 A. Yes. Mr. Callocchia states that some entities exempt school districts from stormwater
6 fees, and claims that this is merely a “policy decision.” He also claims (without support)
7 that it would not be unduly discriminatory to exempt the School District from stormwater
8 charges. (School District St. No. 2 at 24-26).

9 **Q. DO YOU AGREE THAT THE SCHOOL DISTRICT SHOULD BE EXEMPT**
10 **FROM STORMWATER CHARGES?**

11 A. No, I do not agree. All entities that own property in PWSA’s service territory with
12 greater than 400 square feet of impervious area must pay their fair share for stormwater
13 services, pursuant to PWSA’s PUC-approved tariff. Stormwater service is a utility
14 service like any other. To my knowledge the School District is not exempt from paying
15 its bills for water, wastewater, electric, and/or natural gas services, and likewise it should
16 not be exempt from paying for stormwater services.

17 As examples, Mr. Callocchia points to the cities of Baltimore and Tacoma Park in
18 Maryland and Jacksonville, Florida as examples of entities that exempt certain customers
19 or groups of customers from paying stormwater charges. These examples are not
20 relevant here. First and foremost, none of these cities is regulated as a public utility. As
21 a regulated entity, PWSA is subject to a variety of statutory and regulatory requirements
22 that would not apply to the example cities. Additionally, as Mr. Callocchia recognizes,
23 under Maryland law there is a specific provision that authorizes certain entities to be
24 exempt from stormwater charges. (School District St. No. 2 at 24-25). There is no such

1 provision under Pennsylvania law that authorizes PWSA to exempt customers from
2 stormwater charges.

3 **Q. DOES PWSA EXEMPT ANY SPECIFIC CUSTOMER OR GROUP OF**
4 **CUSTOMERS FROM PAYING STORMWATER CHARGES?**

5 A. No, it does not. PWSA's tariff does not include an exemption for any specific customer
6 or group of customers, and PWSA has not proposed any such exemption in this rate case.
7 Under PWSA's PUC-approved tariff, customers may reduce the stormwater charge by
8 applying for and receiving a credit, by removing sufficient impervious area from the
9 property to reduce the number of ERUs, or for low-income residential customers to
10 qualify for the Bill Discount Program.

11 Mr. Callocchia points to a comment in particular cell in PWSA's cost of service
12 model as a basis for his claim that PWSA is exempting cemeteries from stormwater
13 charges. (School District St. No. 2 at 25-26). This comment was inadvertently left in the
14 model from a previous version in which PWSA had explored the impact of revenue from
15 cemeteries being removed, in response to concerns raised by certain cemeteries. This
16 was simply an informational exercise. Later, PWSA decided to include only the cost of
17 assigning credits, should they apply. The estimated cost of those credits, along with an
18 estimate of credits for other nonresidential customers, was included in the as-filed cost of
19 service model. PWSA has not proposed or implemented any exemption from
20 stormwater charges for cemeteries or any other customer or group of customers, and the
21 Authority did not include the costs of exempting cemeteries in the as-filed cost of service
22 model.

1 **Q. MR. CALLOCCHIA CLAIMS THAT IT WOULD NOT BE UNDULY**
 2 **DISCRIMINATORY TO EXEMPT THE SCHOOL DISTRICT FROM**
 3 **STORMWATER CHARGES. DO YOU AGREE?**

4 A. No, I do not agree. I am advised by counsel that Section 1304 of the Public Utility Code
 5 prohibits unreasonable discrimination in rates. A blanket exemption for the School
 6 District would provide an unreasonable preference to one entity, and importantly, all
 7 other PWSA customers would have to absorb the costs for managing stormwater runoff
 8 from the School District’s properties. This would be patently unfair. Additionally,
 9 PWSA should not be in the business of determining which entities provide a sufficient
 10 societal good (like the School District’s “public education mission” which Mr. Callocchia
 11 claims as a basis for an exemption) to justify their exemption from stormwater charges,
 12 while others still have to pay. Further, I have been advised by counsel that the
 13 Commonwealth Court affirmed the Commission’s decision in *Philadelphia Gas Works v.*
 14 *Pa. P.U.C.*, 898 A.2d 671 (2006), which had rejected the utility’s proposed senior
 15 discount program on the basis that it did not produce just and reasonable rates. The
 16 School District has pointed to no basis under the Public Utility Code or the Commission’s
 17 regulations that would support, or even allow, PWSA to exempt the School District or
 18 any other entity from stormwater rates. As such, Mr. Callocchia’s position must be
 19 rejected.

20 **Q. DOES PWSA CHARGE FOR IMPERVIOUS AREA WITHIN THE PUBLIC**
 21 **RIGHT OF WAY, AND IF NOT, WHY NOT?**

22 A. No, PWSA does not charge for impervious area in the public right of way, such as streets,
 23 roads and sidewalks. This is primarily because these facilities are an integral part of the
 24 drainage infrastructure. Most stormwater utilities in the United States do not bill for

1 impervious area in public rights of way, and to my knowledge no stormwater utility in
2 Pennsylvania bills for runoff from roadways.

3 **Q. DOES THE FACT THAT PWSA DOES NOT BILL FOR IMPERVIOUS AREA IN**
4 **THE PUBLIC RIGHT OF WAY SUPPORT MR. CALLOCCHIA’S CLAIM THAT**
5 **THE SCHOOL DISTRICT SHOULD BE EXEMPT FROM STORMWATER**
6 **CHARGES? (SCHOOL DISTRICT ST. NO. 2 AT 26).**

7 A. No, the fact that PWSA does not bill for impervious area in the public right of way
8 provides no support whatsoever for the School District’s argument that it should be
9 exempt from stormwater charges. Public streets and sidewalks are an integral part of the
10 stormwater management system conveying stormwater to the public sewers via curbs,
11 gutters, and catch basins, and as such are excluded from the charge. I would note that
12 even though PWSA does not charge for impervious area in the right of way, all other
13 parcels within the City-wide service area with at least 400 square feet of impervious area,
14 including those owned by government entities such as the City of Pittsburgh, Allegheny
15 County and the Pennsylvania Department of Transportation, are charged for stormwater
16 service.

17 **Q. DO YOU HAVE ANY OTHER TOPICS YOU WISH TO DISCUSS IN RESPONSE**
18 **TO THE SCHOOL DISTRICT?**

19 A. Yes. Prior to implementing its stormwater rates, PWSA conducted extensive outreach
20 and education throughout its service territory and involving a variety of stakeholders. For
21 example, PWSA convened its Stormwater Advisory Group made of up of a variety of
22 stakeholders that met over a number of years to provide input on PWSA’s stormwater
23 program. The Authority held dozens of community meetings throughout its service
24 territory in the years prior to implementing stormwater rates. Further, stormwater rates
25 were reviewed and approved in PWSA’s 2021 base rate case, which included six public
26 input hearings. To my knowledge, the School District did not participate in any of these

1 activities, even though it had the opportunity to do so. In response to discovery, the
 2 School District confirmed its lack of participation.⁷

3 **Q. HAS PWSA COMMUNICATED WITH THE SCHOOL DISTRICT SINCE**
 4 **IMPLEMENTING THE STORMWATER CHARGE?**

5 A. Yes. On February 8, 2022, PWSA made a presentation to the School District, which is
 6 attached as PWSA Exhibit TI-5. This presentation described the impacts to individual
 7 property types, development of the stormwater rate, resources available to ratepayers
 8 including stormwater credits, other stormwater planning initiatives and next steps.
 9 Another meeting was held on March 28, 2022 between representatives of PWSA and the
 10 School District to discuss specific concerns about the stormwater charges for certain
 11 accounts. In addition, between July and September 2022, a representative of the School
 12 District, Kelly Wacker, exchanged emails with Beth Dutton and James Stitt, who are part
 13 of PWSA’s Stormwater Team. This exchange, which is attached as PWSA Exhibit TI-6,
 14 resulted in adjustments to the ERUs and credits for some accounts of the School District.

15 **Q. HAS PWSA ALREADY RECEIVED COMMISSION APPROVAL FOR ITS**
 16 **CURRENT STORMWATER RATES AND RATE STRUCTURE?**

17 A. Yes. In our last base rate proceeding PWSA submitted a full stormwater tariff with
 18 proposed rates that was approved by the Commission and became effective in January
 19 2022. Since 2022, we have been charging customers a stormwater rate. Previously,
 20 PWSA used the funds generated from customer charges for sewer conveyance to fund
 21 stormwater management. A sewer conveyance charge (based on a PWSA customer’s
 22 water usage) was not an equitable way to charge customers for stormwater management.⁸

⁷ PWSA Exhibit TI-4 (School District Response to PWSA I-9).

⁸ *See Pa. PUC v. Pittsburgh Water and Sewer Authority*, Docket No. R-2021-3024773 *et al.*, Recommended Decision (entered Oct. 6, 2021), at 64 (adopted without modification by Final Order entered Nov. 18, 2021)

1 This is because the volume of stormwater that a property generates is a function of hard
 2 surface (impervious area) on that property, not water usage. The most common measure
 3 used by governments across the United States to charge for costs related to stormwater
 4 services is based on impervious surface area. Therefore, PWSA developed a stormwater
 5 rate to charge for stormwater management services more equitably to meet water quality
 6 and regulatory requirements. While we continue to recover some of our stormwater costs
 7 through the wastewater conveyance rates, we are doing so based on the principle of
 8 gradualism and are continuing, as part of this case, to increase the allocation we are
 9 recovering through stormwater rates.

10 **Q. WHAT WOULD HAPPEN IF PWSA’S STORMWATER RATES WERE TO GO**
 11 **AWAY?**

12 A. If PWSA’s stormwater rates were to go away or as a matter of policy be determined by
 13 the Commission to not be reasonable, PWSA would still have to recover the costs of its
 14 stormwater-related conveyance as a cash-flow basis utility. This would mean that those
 15 costs would have to be re-included in PWSA’s wastewater conveyance charges as they
 16 were recovered prior to PWSA’s stormwater rates being approved by the Commission.
 17 This would increase wastewater conveyance rates for all customers, but
 18 disproportionately to residential customers who typically have lower impervious surface
 19 areas. And, again, the Commission has found that PWSA’s use of impervious surface

(“I agree with the Joint Petitioners that the provisions of the proposed Settlement concerning the stormwater tariff and the new stormwater fee are in the public interest. PWSA currently uses the revenues generated from customer charges for wastewater conveyance to fund stormwater management. A wastewater conveyance charge – which is based on a PWSA customer’s water usage – is not an equitable way to charge customers for stormwater management. This is because the volume of stormwater that a property generates is a function of hard surface (impervious area) on that property, not water usage. PWSA’s stormwater fee will create a more equitable way to charge for stormwater management services in order to meet water quality and regulatory requirements, and address stormwater issues in Pittsburgh.”)

1 area is an equitable way to determine stormwater rates and has on at least one separate
 2 occasion affirmed PWSA’s stormwater rates based on impervious surface area.⁹

3 **III. RESPONSE TO RIVER DEVELOPMENT CORPORATION**

4 **Q. PLEASE DISCUSS YOUR UNDERSTANDING OF THE ISSUES THAT RDC IS**
 5 **PURSUING IN THIS PROCEEDING AND THOSE THAT RDC IS RESERVING**
 6 **FOR THE ACTIVE COMPLAINT PROCEEDING AT DOCKET NO. C-2023-**
 7 **3039163.**

8 A. As a brief background, and as discussed in RDC’s July 26, 2023 Petition to Intervene,
 9 RDC has filed a Formal Complaint with the Commission which, as of the submission of
 10 this testimony, has not yet had an evidentiary hearing before Deputy Chief Law Judge
 11 Mark A. Hoyer. Portions of the testimony in this proceeding overlap significantly with
 12 testimony that will be offered in the Complaint proceeding. The parties are actively
 13 working on a joint stipulation of facts in the Complaint proceeding, but there is a general
 14 agreement on which issues should be addressed in each proceeding.

15 In short, issues RDC has explicitly indicated are reserved for the Complaint
 16 proceeding include: 1) whether RDC was properly notified of the stormwater rates
 17 proposed at Docket No. R-2021-3024779; 2) whether existing rates, including the
 18 increase from 2022 to 2023, are reasonable; and 3) whether PWSA is properly authorized
 19 to apply stormwater charges. My testimony does not address these issues.

20 It is my understanding that RDC believes the following topics are issues to be
 21 considered in this proceeding: 1) whether PWSA is billing Catholic Cemeteries
 22 Association; 2) whether PWSA should establish a “sliding scale” of rates for small,
 23 disadvantaged businesses; 3) whether it is discriminatory for PWSA to have a tiered rate

⁹ See *Schad v. PWSA*, Docket No. C-2022-3036934, Initial Decision (entered July 25, 2023), at 8 (Final Order entered Aug. 25, 2023).

1 structure for residential customers but not for small business customers; 4) whether the
2 general policy for stormwater rates should be reconsidered by the Commission related to
3 pollution impacts and impervious surface area; and 5) the impact of an alleged 2026
4 deadline on PWSA. I address each of these issues below, except for the issue concerning
5 a tiered rate structure for small businesses, which is addressed in the Rebuttal Testimony
6 of Keith Readling (PWSA St. No. 8-R). Failure to address any issue raised by RDC in its
7 direct testimony, in light of the simultaneous litigation of this proceeding and the
8 Complaint proceeding including overlapping testimony and exhibits from RDC, does not
9 constitute a waiver of those issues in this matter and I reserve the right to address any
10 additional or refined issues raised by RDC in further testimony.

11 **Q. DR. MCABEE CLAIMS THAT PWSA IS NOT ISSUING A STORMWATER**
12 **BILL TO THE CATHOLIC CEMETERIES ASSOCIATION. (RDC ST. NO. 1 AT**
13 **14). IS THIS ACCURATE?**

14 A. No. The only cemetery that is part of the Catholic Cemeteries Association in PWSA's
15 service territory is Calvary Catholic Cemetery. The most recent billing statement shows
16 that PWSA is billing this customer for stormwater services. A copy of this bill is
17 attached as Confidential PWSA Exhibit TI-7.

18 **Q. PLEASE RESPOND TO THE TESTIMONY OF DR. MCABEE CLAIMING**
19 **THAT PWSA IS MAKING SMALL, DISADVANTAGED BUSINESS PAY FOR**
20 **“LARGE, INDUSTRIAL POLLUTERS.” (RDC ST. NO. 2 AT 8-10).**

21 A. Dr. McAbee has not demonstrated a link between PWSA stormwater charges and the
22 general pollution that is created by large industrial users. Stormwater is rain or snowmelt
23 that does not infiltrate into the ground. When precipitation falls on an impervious area, it
24 runs off the property rather than being absorbed. Developed areas that are impervious,
25 such as rooftops and paved areas, prevent water from being absorbed and create a faster
26 rate of runoff. This development often causes localized flooding or other water quantity

1 or quality issues. In addition, stormwater can carry harmful pollutants (such as such as
 2 oil, dirt, chemicals, and lawn fertilizers) that adversely affect water quality. Stormwater
 3 can further cause flooding, erode topsoil, and stream banks, and destroy habitats.
 4 PWSA’s service territory has densely developed areas with a lot of impervious surfaces.
 5 PWSA manages the volume of runoff by directly assigning the costs of stormwater
 6 management in proportion to the amount of impervious surface are on the property. This
 7 approach reflects stormwater management as a service for costs should be funded by
 8 residents and businesses in a fair and equitable manner.

9 **Q. DID PWSA REQUEST AN EXPLANATION IN DISCOVERY FOR RDC’S**
 10 **PERCEPTION OF A LINK BETWEEN STORMWATER CHARGES AND THE**
 11 **GENERAL POLLUTION THAT IS CREATED BY LARGE INDUSTRIAL**
 12 **USERS?**

13 A. Yes, PWSA pursued this inquiry in a number of different ways through discovery.
 14 However, the discovery response provided by River Development to PWSA-I-10 on
 15 September 7, 2023, which RDC relied upon in responding to each request in this area,
 16 was merely a compilation of links to applications for pollution discharge permits, permit
 17 fact sheets, and stormwater management manuals. As River Development has not
 18 demonstrated any relevance of pollution discharge permits to PWSA’s costs of managing
 19 stormwater runoff on properties in the Authority’s service area, this factor should not be
 20 considered by the Commission in this proceeding.

21 **Q. WHAT IS RIVER DEVELOPMENT’S SUGGESTION FOR THE**
 22 **STORMWATER RATE THAT SHOULD BE CHARGED TO**
 23 **NONRESIDENTIAL CUSTOMERS?**

24 A. Dr. McAbee suggests that the Commission should establish River Development’s
 25 stormwater charge at an amount that does not exceed five percent of its net revenues.
 26 (RDC St. No. 2 at 8).

1 **Q. PLEASE RESPOND.**

2 A. The costs incurred by PWSA to manage stormwater for nonresidential properties in
3 Pittsburgh are not related to the amount of a business' net revenues. If a business has a
4 large amount of impervious area, which causes stormwater runoff that must be managed,
5 it is immaterial what the level of the net revenues are for the business. In addition, such
6 an approach would require PWSA to calculate a stormwater charge on the basis of
7 information that is not readily available to the Authority. This would be a highly
8 burdensome process that would require PWSA to go well beyond its current accounting
9 and customer service procedures to collect each and every business' financial viability
10 information – whether that be through review of tax returns or other matters.
11 Importantly, a business's net revenue has no relevance to the business' responsibility to
12 pay for the service PWSA is providing, let alone the amount of impervious area the
13 business owns that contributes to PWSA's costs. PWSA's approach of assessing
14 stormwater charges on the basis of impervious surface area is consistent with the industry
15 standard, and no consideration should be given to the irrelevant net revenues of
16 businesses in PWSA's service territory.

17 **Q. DR. MCABEE ALSO SUGGESTS THAT AS OTHER PUBLIC UTILITIES**
18 **IMPOSE DIFFERENT RATES ON SMALL AND LARGE BUSINESSES, PWSA**
19 **SHOULD BE REQUIRED TO DO THE SAME. (RDC ST. NO. 2 AT 12). HOW**
20 **DO YOU RESPOND?**

21 A. The manner in which other public utilities may charge for utility service is not germane
22 to the method used by PWSA to assess stormwater charges. For purposes of calculating
23 stormwater charges, the critical factor is the amount of impervious area on the property.
24 In determining responsibility to pay PWSA's stormwater managements costs, it is
25 irrelevant how large or small a business is. A business could be very large but not have a

1 significant amount of impervious area, and vice versa. Therefore, PWSA has
2 appropriately calculated these charges on the basis of impervious area, which results in
3 businesses with higher amounts of stormwater runoff as being responsible for higher
4 stormwater charges.

5 **Q. DR. MCABEE REFERS TO DISCUSSIONS SHE HAD WITH PWSA**
6 **REPRESENTATIVES PRIOR TO THE RATE CASE BEING FILED ABOUT**
7 **USING A DIFFERENT APPROACH FOR SMALL BUSINESSES AND SMALL**
8 **CHURCHES. (RDC ST. NO. 2 AT 8). PLEASE RESPOND.**

9 A. Dr. McAbee is correct that discussions were held about the possibility of creating a
10 different stormwater rate structure for certain small businesses and small churches.
11 Ultimately, however, PWSA did not take that approach in making its proposals in this
12 rate case. Therefore, those prior discussions are irrelevant.

13 **Q. PLEASE RESPOND TO DR. MCABEE’S TESTIMONY COMPARING RIVER**
14 **DEVELOPMENT TO “FICTITIOUS LARGE STEEL INDUSTRIAL**
15 **POLLUTERS.” (RDC ST. NO. 2 AT 9-10).**

16 A. In this portion of Dr. McAbee’s testimony, she provides a comparison between the
17 practices of River Development to that of what she refers to as a “Steel Industrial
18 Polluter.” (RDC St. No. 2 at 10, Table 1). This testimony, as acknowledged by Dr.
19 McAbee, is based on “fictitious” information, and therefore provides no basis upon which
20 the Commission can make a decision about PWSA’s stormwater charges. The table that
21 she provides “for illustration purposes only” should be disregarded by the Commission in
22 reviewing PWSA’s proposed stormwater rates.

23 **Q. DOES DR. MCABEE ALSO ADDRESS PWSA’S STORMWATER RATES FROM**
24 **THE PERSPECTIVE OF AFFORDABILITY SPECIFICALLY FOR RIVER**
25 **DEVELOPMENT?**

26 A. Yes. Dr. McAbee expresses concern about the affordability of PWSA’s stormwater
27 charges to River Development. (RDC St. No. 2 at 10-11, Table 2). PWSA understands

1 that stormwater rates may be difficult for customers to afford, particularly when they
 2 were previously not a customer of PWSA and therefore not paying stormwater
 3 management costs through wastewater conveyance charges. However, it is more
 4 equitable to recover the costs of stormwater management through a separate rate that is
 5 specifically designed to calculate the charge based upon the amount of stormwater runoff
 6 that is caused by a particular property due to its amount of impervious surface area.
 7 PWSA has repeatedly expressed a willingness and remains willing to work with River
 8 Development to explore ways in which stormwater charges can be mitigated. In addition
 9 to a simple and robust credit program offered by PWSA, many steps can be taken by
 10 River Development to reduce the amount of impervious area on its property.

11 **Q. IN FACT, HAS PWSA ALREADY REDUCED RDC'S IMPERVIOUS AREA**
 12 **BASED ON AN EARLIER DISPUTE?**

13 A. Yes. Originally, RDC's property was measured as having 224,860 square feet of
 14 impervious area, or 137 ERUs. After discussions with Dr. McAbee on January 18, 2022,
 15 PWSA agreed to shift the parcel boundary, which had been gathered from Allegheny
 16 Count Real Estate records, and the impervious area was reduced to 202,589 square feet,
 17 or 123 ERUs. That is the calculation upon which River Development's current
 18 stormwater charges are being based.

19 **Q. DR. MCABEE ALSO TESTIFIES AND PROVIDES PHOTOGRAPHS OF WHAT**
 20 **SHE BELIEVES SHOULD BE CONSIDERED PERVIOUS SURFACES,**
 21 **INCLUDING VEGETATION FILLED CRACKS IN PAYMENT AND HER FLAT**
 22 **ROOF (RDC ST. NO. 2 AT 15; RDC EXHS. 6 AND 7.) PLEASE RESPOND.**

23 A. Dr. McAbee testifies that because PWSA walked her property before the growing season,
 24 certain areas of her property which now have vegetation in cracks in the asphalt were
 25 mischaracterized as an impervious surface. I have reviewed the photographs and
 26 testimony, and PWSA's position remains unchanged – these surfaces fall squarely under

1 PWSA’ definition of impervious surface under its tariff. Simply because there are cracks
 2 and vegetation in a large, asphalt covered or compacted parking lot does not mean the
 3 surface is now “pervious” and capable of controlling runoff from reaching PWSA’s
 4 collection system. The pictures clearly show that despite the small cracks, the surface will
 5 still contribute significant runoff during a storm event.

6 Similarly, Dr. McAbee argues that her roof is a “60 mils ethylene propylene diene
 7 terpolymer (“EPDM”) roof” that rainwater will evaporate from because it is a flat roof. I
 8 do not agree that a flat roof, which may evaporate some residual moisture after a storm
 9 event, is capable of controlling and mitigating stormwater runoff from reaching PWSA’s
 10 collection system to warrant any stormwater credit. PWSA’s position remains that RDC’s
 11 property does not contain controlling or mitigating enhancements to warrant a stormwater
 12 credit, and RDC is being properly charged for the impervious surface area of the property
 13 like all other PWSA customers.

14 **Q. DR. MCABEE DISCUSSES A 2026 DEADLINE BEING FACED BY PWSA**
 15 **REGARDING STORMWATER MANAGEMENT. PLEASE RESPOND.**

16 A. PWSA is not facing a 2026 deadline to implement billing for stormwater management.
 17 Dr. McAbee may be thinking of deadlines that are facing other municipalities pursuant to
 18 orders that are not applicable to PWSA. Importantly, PWSA has been incurring
 19 stormwater management costs and will continue to do. The change resulting from the
 20 2021 base rate case that PWSA proposes to continue as part of this case is the collection
 21 of these costs through a separate stormwater rate.

22 **VI. CONCLUSION**

23 **Q. DOES THAT COMPLETE YOUR REBUTTAL TESTIMONY?**

24 A. Yes. However, I reserve the right to supplement this testimony as necessary.

PWSA Exhibit TI-3

Respondent:
Michael J. McNamara, Chief Operations Officer, Pittsburgh School District

Date: August 31, 2023

13. Refer to School District St. No. 1 at 13, lines 2-5. Has the School District applied for a stormwater credit using the application form available on PWSA's website?

RESPONSE:

No, but the School District is currently evaluating projects to determine their eligibility for potential credits.

PWSA Exhibit TI-4

Respondent:
Michael J. McNamara, Chief Operations Officer, Pittsburgh School District

Date: August 31, 2023

9. Did the School District participate in any of the following community meetings regarding PWSA's proposed stormwater charge prior to its implementation?
- (a) Mount Washington Community Development Corporation, April 15, 2021
 - (b) Building Owners & Managers Association of Pittsburgh, April 22, 2021
 - (c) NAIOP Commercial Real Estate Development Association – Pittsburgh Chapter, May 11, 2021
 - (d) Brighton Heights Citizen Federation, May 13, 2021
 - (e) Bellefield Area Citizens Association, June 8, 2021
 - (f) Allegheny City Central Association, June 14, 2021
 - (g) Parking Operators, June 16, 2021
 - (h) Pittsburgh Council on Higher Education, June 23, 2021
 - (i) Bloomfield-Garfield Corporation, June 29, 2021
 - (j) All Pittsburgh Watersheds Task Force, June 30, 2021
 - (k) North Point Breeze Development Corporation, July 12, 2021
 - (l) 31st Ward Community Action Group, July 13, 2021
 - (m) Hazelwood Initiative, August 10, 2021
 - (n) Highland Park Community Council, August 19, 2021
 - (o) Oakland Planning and Development Corporation, August 31, 2021
 - (p) Spring Hill Civic League, September 13, 2021

RESPONSE:

To the best of my knowledge, the School District was not aware of and therefore did not participate in the referenced community meetings.

PWSA Exhibit TI-5

Stormwater Management
Program and Fee

Pittsburgh Public Schools

February 8, 2022

1

**Welcome &
Introductions**

2

Agenda

- Impacts to Individual Property Types
- Development of Stormwater Rate
- Resources for Ratepayers
- Other Stormwater Planning Initiatives
- Discussion & Next Steps

3

Review Stormwater Findings

- Finding 1: Impacts of more rain
- Finding 2: Additional responsibility of managing stormwater
- Finding 3: Basis of fee
- Finding 4: Establish stormwater fee for stormwater projects
- Finding 5: Incentives and Credits
- Finding 6: Communication
- Finding 7: It will take time

4

Stormwater Program Overview

Stormwater Management

- Flooding and level of service
- Stormwater strategic plan
- MS4 NPDES and regulatory issues

Control of combined sewer overflows and sanitary sewer overflows

- Consent Decree negotiations with regulatory agencies

Current rate does not cover these items

- Ongoing planning
- Ongoing negotiations with EPA

5

Stormwater Fee

$$\text{Stormwater Fee (1 ERU)} = \frac{\text{Stormwater Revenue Requirements}}{\text{Stormwater Units of Service}}$$

Stormwater Monthly Fees	ERUs	2022	2023
Residential - Tier 1	0.5	\$2.98	\$3.98
Residential - Tier 2	1.0	\$5.96	\$7.95
Residential - Tier 3	2.0	\$11.92	\$15.90
Non-Residential	per ERU	\$5.96	\$7.95

ERU = Equivalent Residential Unit

9

Stormwater Parcel Classifications

Single Family Residential

- Townhouses
- Rowhouses
- Single Families
- 2, 3 & 4 Family
- Mobile Homes

Non-Single Family Residential

- Apartments
- Commercial
- Industrial
- Health and Education
- City

10

Stormwater Parcel Classifications: Residential

Single Family Residential

- Townhouses
- Rowhouses
- Single Families
- 2, 3, 4- family
- Mobile Homes

Key Takeaways

- Minimum Impervious Area = 400 square feet
- Tier 1 = minimum bill = 0.5 Equivalent Residential Unit (ERU)
- Tier 2 = typical bill = 1.0 ERU
 - **70% of residential customers are Tier 2**
- Tier 3 = maximum bill = 2.0 ERU

11

Residential Stormwater Parcels in Service Area

Legend

- Tier 1: >400 and <= 1,015 square feet
- Tier 2: >1,015 and <= 2,710 square feet
- Tier 3: >2,710 square feet

12

Stormwater Parcel Classifications: Non-Residential Classes

Non-Single Family Residential

Apartments

Commercial

Industrial

Health and Education

City

- 1 Equivalent Residential Unit = 1,650 square feet
- Minimum Impervious Area = 400 square feet
- Minimum bill = 1 ERU

13

Understanding Stormwater & Impervious Area

- Impervious surfaces are hard surfaces that rain cannot pass through
- Examples:
 - Roofs
 - Driveways and parking lots
 - Sidewalks
- Impervious area mapping of Geographic Information System (GIS) data is generated to determine unique impervious area for each customer
- PWSA will have a process for property owners to appeal or correct impervious surface area calculations

14

Understanding Stormwater & Impervious Area

The amount of impervious surface is related to the quantity and quality of runoff to the stormwater system

- *Impervious surfaces cause increased stormwater volumes and higher peak flows*

Stormwater that flows over paved and hard surfaces, collects trash, sediment, and chemicals (like motor oil and fertilizer) and so is also more polluted

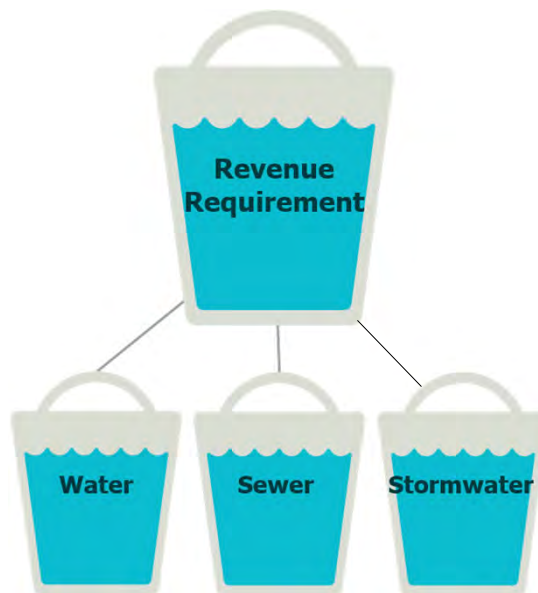

Impervious area based rate structures are the industry standard

- *92% of stormwater utilities*

15

Cost of Service Allocation

- Costs must now be allocated between 3 utilities (instead of two)
- Some are straightforward
 - Water Only / Sewer Only / Stormwater Only
- Others are more challenging and must be allocated among the utilities
 - Shared services (i.e. customer service, engineering, etc.)

16

Rate Revenue Increase

- Estimated increase required to meet revenue requirement
- Assumes 5% DSIC on water and sewage only
- Includes City phase-in for water and sewage
- Includes SW only and 100% City SW

Category	Increase (\$M)	Increase (%)
Water	\$23.3M	19.7%
Sewage	(\$14.8M)	-21.3%
Stormwater*	\$23.7M	n/a
Subtotal: Base Rates	\$32.2M	17.1%

*Reflects gradualism for stormwater revenue requirements

17

Gradualism

- Why Gradualism:
 - New Fee, change in cost recovery
 - Previous Experience
 - Customers Impacts for certain customers
 - Reasonableness
- Based on 1/3 of costs

Category of Cost	Stormwater Revenue Requirement
Revenue Requirement	\$37.4M
Gradualism Adjustment	\$(12.4M)
BDE, BDP, and SW Credit Savings	\$(1.3M)
Total	\$23.7M

18

Phase-In over Two Years

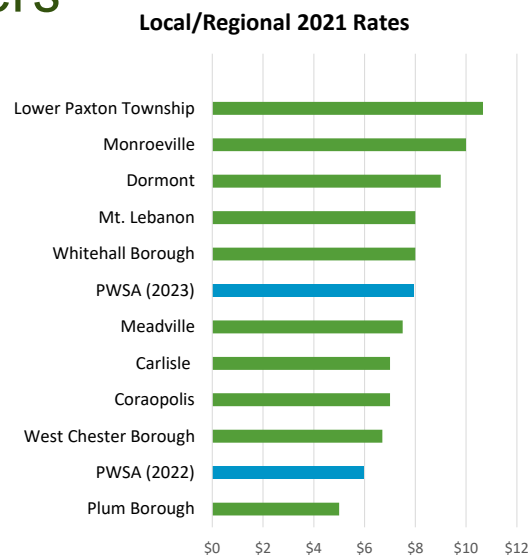

Category	Total Increase (\$M)	Year 1 Increase (\$M)	Year 2 Increase (\$M)
Water	\$23.3M	\$11.7M	\$11.7M
Sewage	(\$14.8M)	(\$7.4M)	(\$7.4M)
Stormwater	\$23.7M	\$17.8M	\$5.9M
Total Base Rates	\$32.2M	\$22.0M	\$10.2M

19

Understanding Our Peers

Monthly Stormwater Fees (per ERU)

- All stormwater programs are different
- Unique operational, infrastructure, climate, and funding challenges
- Locally and nationally, fees vary significantly

20

Activities the stormwater fee will fund

- **Capital Costs:** design and construction of stormwater projects identified in PWSA's Capital Program
- **Direct Costs:** Day-to-day maintenance
 - Cleaning catch basins
 - Weeding and maintenance of PWSA raingardens and stormwater infrastructure
 - Meeting state water quality requirements
- **Indirect Costs:** Shared functions that support stormwater, water, and wastewater services

21

Stormwater Fee Credits

- Credits available for both residential and non-residential customers
- Incentivizes property owners to help reduce the impact of stormwater runoff from a property on PWSA's stormwater management system and our rivers and streams
- **Non-residential customers** – must meet the City of Pittsburgh's 2019 or 2016 stormwater standards
- **Residential customers** –
 - Control at least ¾-inch of runoff from impervious surfaces using solutions such as raingardens
- **Credit Manual and Application** www.pgh2o.com/stormwater-fee

22

Customer Assistance for Stormwater

Bill Discount Program

- Eligible customers, at or below 150% of federal poverty level and enrolled in the Bill Discount Program, will receive an 85% discount on their applicable stormwater rate each month

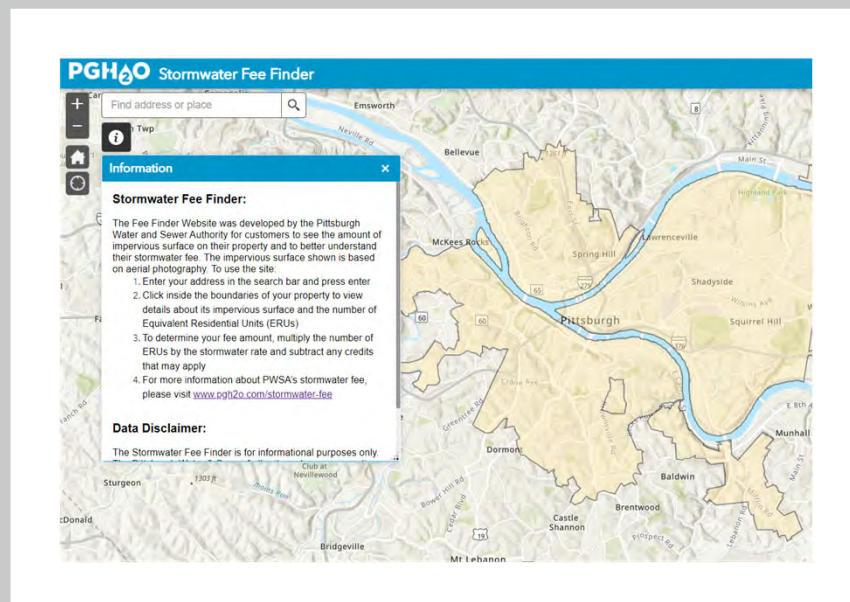

Customers eligible for a stormwater rate discount are eligible for other benefits in the Bill Discount Program

- 100% discount on the water minimum charge
- 100% discount on the wastewater minimum charge
- Annual hardship grant up to \$300

Visit www.pgh2o.com/CAP for more information about our Customer Assistance Programs

23

Fee Finder Website

24

Dispute Process

- Customers contact Customer Service with questions about stormwater fee
- Provide
 - Name, Telephone Number, and Email Address
 - Property Address
 - Parcel Number
- Engineering Reviews the Dispute
- Once determination is made, customer is notified

25

Reporting Basement Backups and Flooding

-
- *Call PWSA's 24/7 Emergency Dispatch (412) 255-2423*
 - *Dispatch uses intake form to collect information from caller*
 - *Send crews to investigate*
 - *Use data to inform future projects*

26

Stormwater Strategic Planning

- **Purpose:** Help to address climate change and prioritize future projects over the next five years and into the future.
- **Schedule:** Planning process anticipated to conclude in June 2022
- **Milestones:**
 - Held peer review workshop
 - Conducted Focus Groups with stakeholders
 - Forming Ambassador Program: establish local network to inform and educate
- **Next Steps:** Identify priority area where design work will take place
 - Will help to illustrate 4P's: People, Planet, Place, & Performance

For more information review our FAQ www.pgh2o.com/stormwater-strategic-plan

27

Ongoing Communication

- Expanding Community Partnerships
- Utilizing EngagePGH online public engagement platform
- Organizing community meetings with Council Offices
- Developing Business Roundtable Series
- Continuing conversation with Faith-based organizations
- Organizing watershed walks
- Producing video series and expanding digital marketing opportunities

28

Subject: Re: Pittsburgh Public Schools Stormwater Discrepancies

CAUTION: This email originated from outside the authority. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hi James

Thank you so much for getting back to me on these account discrepancies. I appreciate all of the leg work you all at PWSA have done to get some of the kinks worked out on our accounts.

I appreciate you confirming the need to adjust the ERU's on our field accounts at Perry, Oliver, and Langley/Greenway as that is where the bulk of our concern lies. So moving forward, can we expect a credit on these field accounts where we had been paying for the excess ERUs until some further determinations could be made? I know you mention that PWSA's billing department will make the adjustments on future bills, I just want to ensure we will be credited back for paying for those extra units in the interim several months it took to get everyone on the same page.

Again I want to thank you all for your time and consideration on these matters. Please don't hesitate to reach out if you have any questions or concerns at all, or you are in need of more information that I could potentially provide.

Thanks again!

Kelly

[External] This email originated from outside of the Pittsburgh Public Schools. Even if you are familiar with the sender, do not click links or open attachments unless you expected to receive them.

Hi Kelly,

I've been working with Beth to sort through the list of concerns you have expressed. I have been able to confirm the changes in impervious area at Field Houses and have asked our GIS team to update the IA layer to reflect the removal of the bleachers as well as the correction to the ball field area. Our billing operations team has been notified and will be making the updates. The attached spreadsheet indicates the revised ERU calcs.

Date	PIN	Initial Impervious	Initial Tier	Initial ERU	End Impervious	End Tier	End ERU
9/12/2022	0115F00048000000	130638	N/A	80	108468.8957		14
9/12/2022	0020E00099000000	402181	N/A	244	9133.56676		239
9/12/2022	0045P00225000000	263303	N/A	160	9015.951322		155

Also, I reviewed the billing/calculation concerns you listed on the "Needs Addressed" sheet. My analysis and recommendations are attached and highlighted in blue on your sheet. If you have any questions after you have reviewed the list, Beth and I would be happy to meet and expand upon our responses.

The request for additional Child parcels are currently still under review before we can finalize any changes to the aggregations.

Best,
James

[Info for PWSA Regarding Stormwater Fees.xlsx](#)

Good Morning Beth

I apologize for my delay in getting back to you after you left the message earlier in the week, it has been a crazy busy week for me!

Please see the attached link for a spreadsheet (I hope you are able to view it?) outlining the few remaining loose ends we have on our accounts regarding stormwater charges. Primarily, my only real concerns now are (details in the spreadsheet):

- Updating the Field House ERU numbers for Oliver, Langley and Perry. At all three locations, some or all bleachers present in the photos on the Stormwater website have since been removed, and additionally at Perry, the entire grass surface of the field is erroneously categorized as impermeable surface.
- I'd like to get some clarity on the 6 excess ERUs on the collective Cupples Stadium accounts that I cannot account for when trying to reconcile what shows on the website vs what we are being billed for.
-
- I'd like to get some clarity on the 12 excess ERUs on the collective Pioneer/South Brook/West Liberty campus accounts that I cannot account for when trying to reconcile what shows on the website vs what we are being billed for.
- I'd like to get some clarity on the 0.5 excess ERUs on the collective Milliones/UPrep and associated field accounts that I cannot account for when trying to reconcile what shows on the website vs what we are being billed for.
- I believe because the way the parcels are distributed and rounded up on at our collective Student Achievement Center account is unfair, as the total Impermeable Surface at that location according to PWSAs website is 56,552 sq ft or an equivalent of approx. 35 ERUS. But because of the way each individual parcel is rounded, we are being charged for 44 ERUs.

I understand that this is a process, so no rush from my end on this. I just want to make sure we keep in communication on getting this worked out.

As always, I am very grateful to you all for your patience and understanding with this sizable change to our billing structure, and for the excellent level of communication we have received from PWSA on these matters. If you need anything else from me at all or have any questions or concerns you would like to discuss, please feel free to reach out via phone or email.

Thanks again and have a great weekend!

Kelly

Thanks Kelly, I will send to our GIS Dept to see if the county's parcel boundary inadvertently included the paper street. If so, we can trim the dirt road from your impervious surface. Just confirming this is the property, as 0 Worthington isn't an official address.

Thanks,

Beth

3 A. My name is Julie A. Mechling. My position with The Pittsburgh Water and Sewer
4 Authority (“PWSA” or “Authority”) is Director of Customer Service.

5 **Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?**

6 A. Yes. I submitted Direct Testimony on May 9, 2023 pre-marked PWSA St. No. 6, which
7 accompanied the rate filing package.

8 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

9 A. The purpose of my testimony is to respond to the testimony of Office of Consumer
10 Advocate (“OCA”) Witnesses Barbara Alexander, Roger Colton, and Terry Fought. I
11 will also respond to the testimony of Pittsburgh United’s our Water Table (“United”)
12 Witnesses Harry Geller. The topics I will be addressing include these witnesses’
13 recommendations related to:

- 14 • PWSA Customer Service Performance;
- 15 • Payment Responsibility for Convenience Fees;
- 16 • Returned Mail
- 17 • Use of Collection Agencies;
- 18 • Low-Income Customer Assistance Programs including proposals to address
19 enrollment, proposed modifications to the Bill Discount, Hardship Grant, and
20 Stormwater Credit Programs; and,
- 21 • Public Input Hearing and filed public comment customer service follow-up.

22
23 **Q. ARE YOU SPONSORING ANY EXHIBITS?**

24 A. Yes, I am sponsoring PWSA Exhibits JAM-17 through JAM-24, which are described in
25 the Table of Exhibits included with the Table of Contents.

1 **Q. BASED UPON YOUR REVIEW OF THE DIRECT TESTIMONY THAT YOU**
2 **WILL BE ADDRESSING HERE, DO YOU HAVE ANY HIGH-LEVEL**
3 **OBSERVATIONS THAT YOU WOULD LIKE TO SHARE?**

4 A. Yes. I would like to point out that PWSA recently wrapped up an extensive proceeding
5 related to its compliance with the Commission’s regulations and expectations regarding
6 Customer Service.¹ That proceeding considered and evaluated every aspect of PWSA’s
7 customer service operations to include operational processes, internal training materials,
8 and customer facing materials. In addition, issues specific to PWSA as a municipal
9 authority with the power to pursue liens for non-payment of utility services were
10 addressed alongside the development of various PWSA customer service processes and
11 materials. I am personally proud of what we were able to accomplish, largely on a
12 collaborative basis, with the input of Commission staff and the parties during the
13 Compliance Plan – Stage 2 proceeding. I would also note that this is PWSA’s fourth
14 base rate case since coming under the jurisdiction of the Commission in 2018. Again,
15 mostly through collaborative efforts as part of those proceedings, PWSA has continued to
16 enhance its low-income customer assistance programs and other customer service related
17 issues. I would also like to be clear that appropriately addressing the issues facing low-
18 income customers continues to remain a priority for PWSA. PWSA’s Board of Directors
19 and the Low-Income Assistance Advisory Committee (“LIAAC”), as described in my

¹ *Implementation of Chapter 32 of the Public Utility Code Regarding Pittsburgh Water and Sewer Authority – Stage 2 Docket Nos. M-2018-2640802 (water) and M-2018-2640803 (wastewater), Order entered July 14, 2022, adopting as own action the Recommended Decision dated May 18, 2022 which recommended approval of the Joint Petition for Settlement dated March 14, 2022. The specific issues addressed in the Stage 2 customer service proceeding included: (1) The language, format and method of providing suspension and termination notice pursuant to Chapter 14 of the Public Utility Code and Chapter 56 of the Commission’s regulations; (2) PWSA’s compliance with the Discontinuance of Service to Leased Premises Act (“DSLPA”), 66 Pa.C.S. §§ 1521-1533; and, (3) PWSA’s plan for collections (to include strategies to reduce overall uncollectible charges to ensure collections practices for residential customers are consistent with legal requirements).*

1 direct testimony, are regularly reshaping and retooling our customer assistance programs
2 to make certain that the most vulnerable and recently unemployed customers receive
3 appropriate financial support with respect to managing their PWSA charges. (PWSA St.
4 No. 6 at 35-36).

5 **Q. DO THE PARTIES RECOGNIZE ALL THIS EFFORT IN THEIR DIRECT**
6 **TESTIMONY?**

7 A. Yes, they do. There is a lack of recognition, however, that in implementing all these
8 customer service and low income assistance programs, PWSA has always been careful
9 not to levy excess costs on other ratepayers or put at risk the ability to adequately fund its
10 significant capital budget – the backbone of our ability to provide safe and reliable
11 service. As I have testified in prior cases, recommendations to enhance our low income
12 customer assistance programs (whether through more significant revenue loss or
13 increased programming and implementation costs) must be balanced with the ability of
14 PWSA to receive the revenues needed to continue to provide adequate, efficient, safe and
15 reasonable service and the need to avoid excessive rate burdens on customers who are not
16 participating in our assistance programs and who ultimately pay for these programs. I am
17 concerned that the recommendations of the other parties, and particularly I&E, would
18 seriously threaten PWSA’s ability to maintain its service at current levels.

19 **Q. DO YOU BELIEVE THAT OCA AND UNITED HAVE ADEQUATELY**
20 **CONSIDERED THE COST IMPACTS TO PWSA AND ITS RATEPAYERS IF**
21 **THEIR RECOMMENDATIONS WERE ADOPTED?**

22 A. No, I do not. In discovery, Mr. Colton confirms that he did not prepare any cost estimate
23 for programming or other staffing costs.² Mr. Geller similarly confirmed that he did not

² See PWSA Exh. JAM-17 OCA Response to PWSA-I-44.

1 “perform an independent analysis of the cost to PWSA related to the provision of utility
2 services” but, rather, focused his analysis on the “affordability of rates for low income
3 residential ratepayers.”³ While I recognize that Mr. Colton attempted to calculate costs
4 associated with his proposals which OCA has factored into its revenue requirements, Mr.
5 Colton’s cost proposal is inadequate for the reasons I will discuss later. I cannot stress
6 enough that the cost impacts of program modifications of PWSA’s customer service
7 operations will be borne by all of PWSA’s ratepayers since PWSA does not have any
8 shareholders and is regulated on the cash flow methodology of ratemaking. An inability
9 of PWSA to collect revenue for services rendered due to the implementation of
10 significant costly programs would divert resources from other projects.

11 **Q. CAN YOU FURTHER EXPLAIN HOW THE LACK OF SHAREHOLDERS**
12 **REQUIRES ALL COSTS TO BE BORNE BY PWSA’S RATEPAYERS IF PWSA**
13 **IS UNABLE TO COLLECT REVENUE?**

14 A. Yes. There are costs to PWSA to provide service. As a public authority, PWSA has no
15 investors and must rely on revenues collected from its ratepayers to fund its operations.
16 While the cost of supporting the ability of low-income customers to receive utility
17 services may be appropriately shared among all other ratepayers, there is a risk of
18 nonpayment from these other ratepayers if such costs become unreasonable. If PWSA is
19 unable to recover the costs to provide service, then PWSA will lack the funding
20 necessary to continue to address aging (and previously neglected) infrastructure issues,
21 and to upgrade systems to satisfy compliance with regulatory requirements and
22 expectations of the Commission and other regulators.

³ See PWSA Exh. JAM-18 United Response to PWSA-I-9.

1 **Q. HAS PWSA OFFERED A REASONABLE BALANCING OF THESE ISSUES**
 2 **THAT THE COMMISSION SHOULD APPROVE?**

3 A. Yes. Even though I am advised by counsel that there are no Commission regulations or
 4 statutory requirements requiring PWSA to offer *any* low-income customer assistance
 5 programs, PWSA has implemented robust low income customer assistance programs,
 6 which we continue to refine and enhance as we are able. The proposals in this
 7 proceeding are examples of our efforts to continue to enhance these programs based on
 8 the needs of our customers from our experience with operating the programs over the past
 9 five years. PWSA, however, also has an obligation to be mindful of the cost impacts of
 10 both: (1) programmatic changes; and, (2) reducing the amounts consumers are required to
 11 pay for services rendered, because unreasonably increasing the rates that customers who
 12 are not qualified for these programs must pay could jeopardize PWSA’s revenue stream.
 13 In my opinion, the recommendations PWSA has offered in this proceeding to enhance
 14 our low-income customer assistance programs are reasonably tailored in consideration of
 15 expected costs and the continuing impacts on collections resulting from our inability to
 16 terminate service for non-payment during the pandemic and during the conversion to a
 17 new Customer Information System in 2022.

18 **II. PWSA CUSTOMER SERVICE PERFORMANCE**

19 **A. Continuing To Meet Reasonable Customer Service and Service Quality**
 20 **Performance as Condition of Approving Multiyear Rate Increase**

21 **Q. PLEASE DESCRIBE MS. ALEXANDER’S CONCERNS RELATED TO PWSA’S**
 22 **COMMITMENT TO MEETING REASONABLE CUSTOMER SERVICE AND**
 23 **QUALITY PERFORMANCE METRICS IF A MULTIYEAR RATE INCREASE**
 24 **WERE APPROVED.**

25 A. Ms. Alexander expresses concern that not identifying specific customer service and
 26 service quality performance metrics which PWSA would be required to achieve as a

1 condition of receiving approval for its rate request is an “unreasonable bargain for
 2 consumers.” (OCA St. No. 5 at 7-8). Ms. Alexander further misrepresents the direct
 3 testimony of William Pickering, PWSA’s Chief Executive Officer, which notes that
 4 approval of its multiyear rate request would place PWSA “in a solid position to continue
 5 making progress toward enhancing the quality and effectiveness of customer service,” as
 6 support for her view that the multiyear rate increase must be tied to specific performance
 7 standards. (OCA St. No. 5 at 6).

8 **Q. ARE YOU AWARE OF ANY REQUIREMENT THAT PWSA’S RATE REQUEST**
 9 **CAN ONLY BE APPROVED UPON THE CONDITIONING OF ACHIEVING A**
 10 **SPECIFIC PERFORMANCE STANDARD?**

11 A. No. In fact, I am advised by counsel that, following a litigated rate case proceeding, the
 12 Commission has not directed performance standard measures as a condition of approving
 13 a rate case.⁴ Counsel further informs me that the statutory authority permitting multiyear
 14 rate plans has no specific requirements regarding performance standard measures.

15 **Q. DO YOU AGREE WITH OCA WITNESS BARBARA ALEXANDER THAT,**
 16 **“...PWSA HAS NOT PROVIDED ANY MEANINGFUL ASSURANCE OR**
 17 **MECHANISM TO MEET REASONABLE CUSTOMER SERVICE AND**
 18 **SERVICE QUALITY PERFORMANCE.” (OCA ST. NO. 5 AT 6)?**

19 A. I firmly disagree with the above statement. While Ms. Alexander points to Chief
 20 Executive Officer, Will Pickering’s testimony to make her argument, she fails to
 21 acknowledge his clear determination that, actually, “the six drivers for the rate increase
 22 are capital costs, inflationary operating budget costs; Wet Weather Consent Decree costs;

⁴ While I recognize that other utilities may have voluntarily agreed to such terms as part of a settlement of their base rate cases, I understand from counsel that a settlement approved by the Commission is different from a Commission directive after a litigated proceeding. I also understand from counsel that cases where utilities voluntarily agreed to performance standards as a condition of settlement and most on a forward looking basis agreeing to various reporting requirements. It is my understanding that if a party wanted to challenge any of these utilities’ performance, they would have to file a separate proceeding seeking to enforce the terms of settlement.

1 environmental compliance; decreased consumption; and funds to meet financial
2 obligations/metrics that affect the bond rating.” (PWSA St. No. 1 at 13). To be clear,
3 PWSA is not suggesting that this rate increase is a necessary condition of continuing to
4 enhance and improve our customer service and service quality performance. On the
5 contrary, PWSA is fully committed to continuing to meet and/or exceed its established
6 Headwaters Metrics, PUC Compliance Plan commitments, and is on track to deliver the
7 two PUC Audit Implementation Plan items assigned to Customer Service by the due date
8 of September 30, 2023. I believe PWSA has demonstrated its sincere commitment in this
9 regard, throughout all the Commission proceedings⁵ I discussed above, by steadfastly
10 working on refining and enhancing our customer service processes since coming under
11 the Commission’s jurisdiction in 2018. Not only has PWSA demonstrated its ability to
12 continually meet its established metrics, PWSA Customer Service leadership has created
13 a fact sheet to highlight strategic enhancements to elevate its customer experience. See
14 PWSA Exhibit JAM-19. There is no basis on which to conclude that PWSA would halt
15 its progress toward becoming a highly responsive and trusted public utility if a multiyear
16 rate plan were approved. Likewise, there is no support for Ms. Alexander’s view that the
17 Commission needs to impose some type of “consequences” on PWSA if it does not meet
18 its internal standards to incentivize a commitment to providing superior customer
19 service.⁶ (OCA St. No. 5 at 7). To the contrary, the stability of a known revenue stream

⁵ In my direct testimony, I included a three-page listing of all the Customer Service accomplishments for just one year, 2022. See PWSA St. No. 6 at 16-18.

⁶ While Ms. Alexander appears to take the view that a condition of approving a rate increase request for PWSA should include the requirement to meet certain performance standards, she does not offer any suggestions for the “consequences” she is recommending to PWSA if, after approval of the rate request with such conditions, PWSA does not meet its targets. Any such consequence which jeopardizes the ability of PWSA to pursue collection of revenue for Commission approved rates would be totally unreasonable because it would create doubt about the revenue that might be received to support PWSA’s capital projects and operating budgets. It would also create confusion for customers and increase PWSA’s costs related to

1 which would be available as a result of the certainty of rates for a three year period
 2 (without the need to utilize staff time and costs to engage in rate case litigation) would
 3 stabilize customer services interactions with PWSA’s customers regarding various
 4 initiatives by building customer confidence in planned improvements to their services.

5 **Q. ON WHAT BASIS DOES MS. ALEXANDER SUPPORT HER VIEW THAT**
 6 **PWSA’S CUSTOMER SERVICE PERFORMANCE IS UNSATISFACTORY?**

7 A. Ms. Alexander considers PWSA’s call center internal targets related to average speed of
 8 answer and abandonment rate through March 2023 and concludes that there is “a
 9 relatively high abandonment rate of 3% or more for calls that reflect the most common
 10 call purposes, including billing and metering and stormwater issues.” As a result, Ms.
 11 Alexander proposes that “as a condition of any rate increase adopted by the Commission,
 12 that PWSA be required to confirm to its own internal quarterly call center performance
 13 standards of a call answering rate of 1 minute (60 seconds) or less and an abandonment
 14 rate of 3% or less for each of its call center queues.” (OCA St. No. 5 at 9-12).

15 **Q. IS MORE UP-TO-DATE INFORMATION AVAILABLE THAN MS.**
 16 **ALEXANDER USED IN HER ANALYSIS?**

17 A. Yes. PWSA reports these statistics on a quarterly basis in its Compliance Plan Progress
 18 Reports filed at docket number M-2018-2640802.⁷ In its July 28, 2023 quarterly status
 19 report, PWSA reported the information through June 30, 2023 which provides an

noticing rate changes. Finally, I am advised by counsel, that there is no Commission precedent requiring future customer service performance targets to be met as a condition of a utility being permitted to pursue collection of rates previously approved by the Commission.

⁷ These reports are publicly available on the Commission’s website and served to the parties of PWSA’s Compliance Plan proceeding including counsel for OCA.

1 additional data beyond that analyzed by Ms. Alexander for her testimony. Ms. Alexander
 2 does not include this updated information in her testimony.⁸

3 **Q. DOES THE DATA THROUGH AUGUST 21, 2023 INDICATE THE CONTINUED**
 4 **STABILITY OF THE CONTACT CENTER METRICS?**

5 A. Yes. Please see the below graphs and data that support the stabilization of average speed
 6 of answer of one minute and four seconds and an average abandonment rate of less than
 7 3% for January 1 – August 31, 2023.

8
 9 **Q. WHAT FACTORS TEMPORARILY AFFECTED PWSA’S DELIVERY OF**
 10 **THESE METRICS BEGINNING IN AUGUST 2022?**

11 A. On August 8, 2022, PWSA launched a new billing system, SAP, and a customer self-
 12 service portal, Customer Advantage. The Contact Center handled 30,104 more calls in
 13 2022 than in 2021 as a result of these system changes. While the Customer Advantage
 14 portal allows customers to view and pay bills, monitor usage and receive leak alerts, and
 15 start and stop service all under one username and password, it was the transition to a new
 16 account number and to the new portal that primarily drove call volumes. These data
 17 make clear that there is no basis on which to conclude that PWSA is providing

⁸ These reports are publicly available on the Commission’s website and served to the parties of PWSA’s Compliance Plan proceeding including counsel for OCA.

1 inadequate or unreasonable service in violation of the Public Utility Code or Commission
2 regulations.

3 **Q. DO YOU AGREE WITH MS. ALEXANDER’S PROPOSED REQUIREMENT**
4 **THAT PWSA SHOULD APPLY ITS CALL HANDLING INTERNAL**
5 **STANDARDS OF AVERAGE SPEED OF ANSWER OF 1 MINUTE OR LESS**
6 **AND AVERAGE ABANDONMENT RATE TO EACH CALL QUEUE,**
7 **INDIVIDUALLY (OCA ST. NO. 5 AT 12)?**

8 A. I do not. Ms. Alexander’s proposed requirement assumes that smaller amounts of data in
9 certain queues should be given the same consideration as queues with larger amounts of
10 data and that PWSA’s average of all calls received and handled versus customers who
11 choose to hang up before their call is answered is somehow flawed or insufficient.

12 **Q. HOW DOES PWSA MEASURE CUSTOMER SATISFACTION?**

13 A. As explained more fully in my direct testimony, PWSA developed a program of routine
14 customer service satisfaction surveys and provided an analysis of the results from 2022 in
15 PWSA Exh. JAM-3. (PWSA St. No. 6 at 18-19).

16 **Q. BASED ON THESE AFTER CALL SURVEYS WITH THE CONSUMERS WHO**
17 **ARE ACTUALLY INTERFACING WITH PWSA, HAVE YOU RECEIVED ANY**
18 **FEEDBACK ABOUT CALL WAIT TIMES?**

19 A. Yes I can testify that not one of PWSA’s customers who recorded an after call survey
20 voicemail in 2023 has complained of a long hold or wait time in the queue. In fact,
21 customers are most normally exuding praise of PWSA’s customer experience. A
22 transcript of an after survey call is provided as PWSA Exhibit JAM-20 as one example.⁹
23 This supports my conclusion that neither Ms. Alexander nor any other witness in this
24 proceeding has demonstrated that PWSA is currently providing inadequate or
25 unreasonable service.

⁹ A link to the audio file of this after call survey is also being served with this testimony.

1 **B. Root Cause Analysis**

2 **Q. PLEASE DESCRIBE MS. ALEXANDER’S CRITICISMS OF PWSA’S “ROOT**
 3 **CAUSE ANALYSIS” AND HER RESULTING RECOMMENDATION.**

4 A. Ms. Alexander unreasonably concludes that PWSA “failed to implement” the root cause
 5 analysis consistent with the settlement of the last rate case. Her sole basis for this
 6 conclusion is her view that the root cause analysis “failed to include or evaluate the root
 7 cause of complaints filed with BCS and resulting infractions.” (OCA St. No. 5 at 16,
 8 emphasis added). Based on this, Ms. Alexander recommends that “PWSA be required to
 9 conduct the required root cause analysis of all customer complaints, including those
 10 informally or formally appealed to the Commission and BCS findings about potential
 11 infractions within 6 months at no additional costs to customers.” Ms. Alexander
 12 recommends that this “revised and corrected root cause analysis should be reviewed with
 13 stakeholders and possible reforms implemented promptly.” (OCA St. No. 5 at 17
 14 emphasis added).

15 **Q. DO YOU AGREE WITH MS. ALEXANDER’S PREMISE THAT PWSA’S ROOT**
 16 **CAUSE ANALYSIS “FAILED” TO SATISFY PWSA’S PRIOR SETTLEMENT**
 17 **COMMITMENT?**

18 A. Absolutely not. I described, at great length, the root cause analysis that was conducted,
 19 the nine recommendations received and PWSA’s follow-up work to date to address the
 20 recommendations in my direct testimony. (PWSA St. No. 6 at 39-45). Ms. Alexander
 21 does not acknowledge or consider any of this in her testimony. Rather, she focuses on
 22 her analysis of BCS reports associated with informal complaints and PWSA’s
 23 information regarding the infractions cited by BCS. (OCA St. No. 5 at 13-14, 16). From
 24 her analysis, Ms. Alexander makes the conclusion that PWSA’s root cause analysis did

1 not also evaluate this data and, therefore, failed to satisfy prior settlement commitments.
 2 (OCA St. No 5 at 17).

3 **Q. DO YOU AGREE WITH MS. ALEXANDER’S PREMISE THAT PWSA’S ROOT**
 4 **CAUSE ANALYSIS DID NOT CONSIDER THE SAME DATA RELIED UPON**
 5 **BY BCS REGARDING INFORMAL COMPLAINTS AND INFRACTIONS?**

6 A. No, I do not. PWSA’s root cause analysis was conducted at the dispute level. Per 52 Pa.
 7 Code §56.162(6), if the complainant has not contacted the utility, the Commission shall
 8 direct the complainant to the utility. Because informal and formal complaints cannot be
 9 filed prior to a complainant first contacting PWSA to report their issue, the analysis at the
 10 dispute level encompasses all customer disputes, which may or may not be escalated to
 11 the informal or formal complaint level. PWSA’s internal records indicate that the volume
 12 of disputes received are more substantial than the number of informal and/or formal
 13 complaints received. Ms. Alexander acknowledges this point in her testimony explaining
 14 that “Customer complaints typically form a hierarchy or pyramid from a large volume of
 15 disputes to a smaller group of informal complaints to the BCS and a relatively small
 16 number of formal complaints filed with the Commission.” (OCA St. No. 5 at 15). By
 17 evaluating all disputes received by PWSA, the analysis allowed for a larger pool of data
 18 to be reviewed. All recommendations provided within the analysis would be applicable
 19 to disputes, informal complaints, and formal complaints.

20 **Q. DO YOU AGREE WITH MS. ALEXANDER’S RECOMMENDATIONS TO**
 21 **CONDUCT A FURTHER ROOT CAUSE ANALYSIS?**

22 A. No, I do not. For the reasons I just highlighted, I disagree that the root cause analysis
 23 was “deficient” and needs to be “redone.” Ms. Alexander’s proposal would not be a
 24 productive or valuable use of PWSA Customer Service management personnel’s time;
 25 rather, it would actually be a misuse and waste of ratepayer money. Moreover, while Ms.

1 Alexander’s recommendation is that the analysis be performed “at no additional cost to
 2 ratepayers,” such recommendation is not possible for a cash flow regulated utility. Any
 3 costs to be expended by PWSA to redo the analysis – whether through use of a consultant
 4 or a diversion of staff resources – would have to be recovered through ratepayers as
 5 PWSA has no shareholders or other funding sources.

6 **Q. DOES PWSA SEEK TO MINIMIZE COMPLAINTS, AND, IF SO, HOW DOES**
 7 **PWSA MEASURE ITS PROGRESS IN THIS REGARD?**

8 A. Yes, PWSA seeks to minimize complaints by ensuring that the consumers with whom it
 9 interacts are satisfied with the level of service that they receive. PWSA does not measure
 10 this level of satisfaction in terms of the complaints received (as Ms. Alexander does) but
 11 rather by the customer satisfaction rate (which is included on a monthly basis in the
 12 Quarterly Compliance Plan Report) and the results of our After Call Surveys. Moreover,
 13 as I discussed in my direct testimony, PWSA engaged Probolsky Research to gauge
 14 overall customer satisfaction and perceptions of PWSA, measure awareness of programs
 15 and services, and to understand customers’ preferred methods of communication. The
 16 key findings of this survey are summarized in my direct testimony. (PWSA St. No. 6 at
 17 19-22).

18 **Q. WHY DO YOU BELIEVE MENTIONING THIS AGAIN IS IMPORTANT IN**
 19 **THE CONTEXT OF MS. ALEXANDER’S RECOMMENDATIONS REGARDING**
 20 **THE ROOT CAUSE ANALYSIS?**

21 A. I mention this again for several reasons. First, PWSA’s efforts in this regard demonstrate
 22 its strong desire to understand the actual needs of its customers and to determine how to
 23 best serve them. Second, investing in outreach to our actual customers to learn about
 24 their experiences provides significant useful data that can inform our processes going
 25 forward. While I do not disagree with Ms. Alexander’s premise that analyzing our past

1 interactions with customers who raised disputes is also important, I do not believe she is
 2 giving significant weight to all our customer service satisfaction processes or the work
 3 that we have already done regarding the disputes analyzed in the root cause analysis in
 4 making her recommendations for us to expend more staff resources and ratepayer money
 5 to unnecessarily “redo” work that has already been done. For all these reasons, I do not
 6 support her recommendation that PWSA “redo” the root cause analysis.

7III. PAYMENT RESPONSIBILITY FOR CONVENIENCE FEES

8 **Q. ON WHAT BASIS DOES MS. ALEXANDER OPPOSE PWSA’S PROPOSAL TO**
 9 **REQUIRE RESIDENTIAL CUSTOMERS ELECTING A BILL PAYMENT**
 10 **OPTION THAT INCLUDES A CONVENIENCE FEE TO PAY SUCH FEE?**

11 A. Ms. Alexander opposes PWSA’s proposal on several basis. First, she states that “there is
 12 no indication that the costs associated with eliminated credit/debit card fees has
 13 increased.” (OCA St. No. 5 at 18). Second, she is concerned that “imposing a fee on
 14 these vulnerable customers after agreeing to eliminate these fees only one year ago is
 15 unreasonable.” (OCA St. No. 5 at 19). Finally, she expresses concern about the “likely
 16 adverse impact” to “lower income and fixed income customers who will see the higher
 17 bills and payment difficulties if this significant rate increase is approved.” (OCA St. No.
 18 5 at 19).

19 **Q. DOES MR. GELLER, ON BEHALF OF UNITED, EXPRESS SIMILAR**
 20 **CONCERNS REGARDING PAYMENT RESPONSIBILITY FOR**
 21 **CONVENIENCE FEES?**

22 A. Yes. Mr. Geller states that he is “concerned that eliminating pass-through treatment of
 23 convenience fees will increase the overall amount that customers must devote to their
 24 monthly PWSA bills.” (United St. No. 1 at 47). He also claims that PWSA “currently
 25 still charges a \$1.49 fee for cash payment at a third party location, such as a 7-11, CVS,

1 Dollar General, Walgreens, or Walmart Super Center” which are locations more likely to
 2 be relied upon by lower income customer out of “necessity.” (United St. No. 1 at 48).

3 Accordingly, Mr. Geller recommends “that PWSA pass through all third-party bill
 4 payment fees for residential customers – including fees for cash payments at a third party
 5 location.” (United St. No. 1 at 48).

6 **Q. IS PWSA WILLING TO REVERSE ITS PROPOSAL IN THIS PROCEEDING**
 7 **RELATED TO PAYMENT RESPONSIBILITY FOR CONVENIENCE FEES?**

8 A. No. Mr. Barca also addresses this topic more fully in his rebuttal testimony, PWSA St.
 9 No. 2-R. I would like to point out that whether PWSA’s convenience fees¹⁰ are paid by
 10 individual customers using these payment options with a fee or all ratepayers, it is an
 11 incurred cost that needs to be recovered. While I understand the concern that these fees
 12 may be more likely incurred by “vulnerable” customers, the result of removing the cost
 13 recovery for these fees from all ratepayers’ rates is to lessen the amount of rate increase
 14 that is necessary. Finally, I am advised by counsel that the presence of a related prior
 15 settlement commitment does not somehow bar PWSA from making a new proposal
 16 related to the same issue for the Commission’s consideration in a future case.

17 **Q. IS PWSA PROPOSING ANY CHANGE REGARDING THE PAYMENT OF FEES**
 18 **CHARGED BY THIRD PARTY RETAILERS?**

19 A. No. These third party fees are not assessed by PWSA nor are they paid by PWSA for any
 20 customer. They have never been recovered in rates because they are not costs to PWSA.
 21 Rather, they are charges assessed and collected by the third party retailers at the time of
 22 payment within their establishments. These fees are never submitted to PWSA, and we
 23 have never recovered the costs of them from all ratepayers through rates. I am advised

¹⁰ To be clear, the fees assessed at third party locations are not paid by PWSA ratepayers in rates.

1 by counsel that there are no legal requirements for public utilities to pay these third party
2 fees for customers. Moreover, implementation of such a process would be extremely
3 difficult, costly and time consuming given the various locations where such payments
4 may be made and the coordination with the third party retailers that would need to be
5 established. I do not view this as a reasonable use of ratepayer money. For all these
6 reasons, PWSA does not support reversing its original proposal to shift payment
7 responsibility for PWSA's convenience fees to the customer electing the payment option
8 rather than to all ratepayers.

9 **IV. RECOMMENDATION REGARDING RETURNED MAIL**

10 **Q. WHAT CONCERNS ARE RAISED BY OCA WITNESS COLTON REGARDING**
11 **RETURNED MAIL?**

12 A. Mr. Colton expresses concern about the "extent of hardships imposed by mail that is
13 returned as undeliverable as addressed ("UAA")." (OCA St. No. 4 at 76-77). Mr. Colton
14 references the U.S. Postal service ("USPS") procedures manual and identifies the reasons
15 examined therein why mail may be UAA. (OCA St. No. 4 at 77-78). Mr. Colton notes
16 that the reasons for UAA "may have nothing to do with factors within the control of a
17 PWSA customer" while stating that "the only party to the transaction who would know
18 that something is awry would be PWSA, who receives the returned UAA mail returned to
19 it." (OCA St. No. 4 at 80). Accordingly, Mr. Colton recommends that: (1) "PWSA be
20 directed to place a collection hold on all accounts for which bills and/or disconnection
21 notices are returned UAA;" and, (2) "PWSA be directed to adopt a procedure which
22 would create an exception if multiple pieces of mail are returned as undeliverable within
23 a certain period for a customer service representative to follow up with the customer."
24 (OCA St. No. 4 at 82-83).

1 **Q. DO YOU FIND THE NUMBER OF RETURNED MAIL PIECES THAT PWSA**
 2 **PROCESSES TO BE “SUBSTANTIAL” AS MR. COLTON PURPORTS?**

3 A. PWSA receives as undeliverable less than 2% of the monthly bills that it issues to its
 4 116,200 customers. Each of these returned bills is researched for a more accurate address
 5 that is then populated on the customer’s account in the Customer Information System
 6 (CIS) to be utilized for all future mailings.

7 **Q. HOW DOES PWSA ENSURE THAT EACH MAILING IS PROPERLY**
 8 **ADDRESSED?**

9 A. PWSA partners with Kubra for its electronic billing, payment, and presentment services.
 10 Kubra utilizes a National Change of Address (NCOA) software that reads every potential
 11 mailing address in a PWSA bill, letter and notice file. When a more accurate address is
 12 discovered, Kubra utilizes it to ensure that the mail piece reaches the PWSA customer.

13 **Q. DO YOU BELIEVE THAT ANY ADDITIONAL REVISIONS TO PWSA’S**
 14 **CURRENT PROCESSES FOR HANDLING UNDELIVERABLE AS ADDRESSED**
 15 **(UAA) ARE NECESSARY IN LIGHT OF MR. COLTON’S TESTIMONY?**

16 A. No. As stated, the issue of UAA is not significant for PWSA and, when it does occur, we
 17 already have processes in place to identify a more current address. I strongly disagree
 18 with Mr. Colton’s proposal to create an “exception” in our normal collection processes to
 19 place a hold when mail is UAA. I would note that there is a significant process in place
 20 before service is terminated for non-payment which includes personal notice of pending
 21 termination. All of these procedures are consistent with Commission requirements. I am
 22 also advised by counsel that Commission processes and regulations generally recognize
 23 the act of mailing as sufficient for providing consumer notice and there are no additional
 24 regulatory requirements addressing UAA. For all these reasons, I believe Mr. Colton’s
 25 recommendations to halt terminations based on this issue are unnecessary and
 26 unreasonable.

1 **V. USE OF COLLECTION AGENCIES**

2 **Q. DOES PWSA VIEW ITS COLLECTIONS PROCESS AS AN IMPORTANT**
3 **TOOL IN ITS ABILITY TO OFFER ADEQUATE, EFFICIENT, SAFE AND**
4 **REASONABLE SERVICE?**

5 A. Yes, absolutely. PWSA cannot offer adequate, efficient, safe, and reasonable service if it
6 lacks the funds needed to operate and to maintain its systems. While PWSA fully
7 understands and agrees with OCA and United that the availability of water and
8 wastewater conveyance services for all people in its service territory is important, and
9 PWSA is committed to taking the appropriate steps to assist those with an inability to
10 pay, we cannot ignore our concomitant obligation to ensure that we are receiving
11 sufficient revenue to offer adequate, efficient, safe, and reasonable service for the benefit
12 of all our customers. To do this, customers must pay their bills.¹¹ Our collections
13 activities play a critical role here because they hold customers accountable for paying for
14 services rendered, and, if they do not do so, then we can stop providing the service which,
15 in turn, reduces our costs. If customers have an inability to pay for services, then they
16 can receive financial assistance through participation in our low income customer
17 assistance programs. Ensuring that all possible efforts are taken to collect unpaid debt is
18 crucial to a successful collections effort.

¹¹ Both Mr. Colton and Mr. Geller acknowledge this point. In response to discovery, Mr. Colton agreed that participants in PWSA's low income customer assistance programs should share in the costs of any Commission approved rate increase. See PWSA Exh. JAM-17 OCA Response to PWSA-I-37. Similarly, Ms. Alexander agreed that "the optimal path for PWSA to provide service is by receiving as much payment for services rendered as possible." See PWSA Exh. JAM-17 OCA Response to PWSA-I-55. Mr. Geller agreed in discovery that all customers, including those who do not qualify or are not participating in PWSA's low income customer assistance program, benefit when BDP participants pay for services rendered. See PWSA Exh. JAM-18 United Responses to PWSA-I-13.

1 **Q. PLEASE PROVIDE AN UPDATE REGARDING PWSA’S EFFORTS TO**
 2 **ENGAGE THE SERVICES OF A COLLECTION AGENCY.**

3 A. As discussed in my direct testimony, PWSA was targeting July 2023 to issue a Request
 4 for Proposals (RFP) for Debt Collection Services in order to solicit the services of,
 5 potentially, more than one collection agency. (PWSA St. No. 6 at 15). The concept of
 6 engaging a collection agency was discussed with stakeholders and Commission staff in
 7 prior proceedings to maximize the ability of PWSA to receive payment for services
 8 rendered.¹² The RFP was issued on August 6, 2023, and September 7, 2023 is the
 9 deadline for submissions.¹³

10 **WHY WAS ISSUANCE OF THE RFP DELAYED?**

11 **Q.** PWSA delayed issuance of the RFP, in part, to give parties in our Compliance Plan Stage
 12 **A.** 2 proceeding an opportunity to review the draft language and provide feedback. I am
 13 pleased to report that we received some very insightful feedback during this process from
 14 the Parties and were able to incorporate it into the RFP and Scope of Services that was
 15 finally issued.

16 **WHAT FEEDBACK FROM PARTIES TO THE COMPLIANCE PLAN STAGE 2**

17 **Q. PROCESS WAS INCORPORATED INTO THE FINAL RFP THAT PWSA**
 18 **ISSUED ON AUGUST 6, 2023?**

19 **A.** Most significantly, through the collaborative process, PWSA narrowed the scope of
 20 potential placements to a collection agency such that only *inactive* customer accounts
 21 where services are no longer being provided to former customers will be placed with the
 22 collection agency. Additionally, again recognizing the concern of the parties, PWSA

¹² PWSA’s plans to issue an RFP to facilitate collection are set forth on pages 6-7 of its Final Collections Plan dated September 12, 2022 which was filed on September 12, 2022 in accordance with the final Order entered July 14, 2022 at Docket Nos. M-2018-2640802 and M-2018-2640803. A copy of the filing is available at <https://www.puc.pa.gov/pcdocs/1758529.pdf>.

¹³ A copy of the RFP is provided in PWSA Exh. JAM-21

1 removed any placements of active customer accounts and instead decided to share these
2 accounts along with the following instructions to the bidders to perform skip tracing and
3 deliver leads to PWSA to directly contact those active customers:

4 “Additionally, PWSA will provide a separate file of 1) landlord accounts where
5 PWSA is accepting tenant payments of current charges only, and 2) accounts
6 scheduled for termination and all regulated notices were mailed/posted by PWSA;
7 however, a curb stop is unable to be located and/or operated, thereby eliminating
8 the option to shut the service at the curb, for responsive Vendors to perform skip
9 tracing and deliver viable leads to PWSA for collection.”

10 Furthermore, PWSA committed to producing and providing training to the
11 successful bidder(s) and any employee or individuals authorized to conduct collection
12 activities on their behalf in the off chance that they should interact with a customer who
13 is still receiving services from PWSA. The relevant section of the Scope of Services is as
14 follows:

15 “PWSA will provide training to the chosen Vendor, and any employee or
16 individuals authorized to conduct collection activities on behalf of the Vendor, in
17 the form of an interactive session where PowerPoint slides are shared and the
18 following are explained: 1) the protections that are afforded to customers with
19 unpaid charges as required under 52 Pa. Code Chapter 56, and 2) the procedures
20 that must be followed under DSLPA 66 Pa.C.S. Ch. 15 Subch. B for situations
21 during debt collection when a previously unidentified tenant is reached on a
22 terminated/inactive landlord account. Said training will be provided prior to the
23 launch of any debt collection services, will be updated to communicate any
24 changes in the regulations, and will be provided to the chosen Vendor for use in
25 retraining their staff and in training newly hired employees and/or independent
26 contractors. Additionally, responsive Vendors agree to add to their scripting
27 questions that PWSA will provide to be asked by the Vendor in every collection
28 call, mailing, or email interaction to determine if the individual resides in a
29 property that is serviced by PWSA, is eligible for a medical, has a PFA or other
30 court order that is indicative of domestic violence, or are confirmed low income.
31 Said scripting will include the directive that such individuals must be warm
32 transferred to PWSA Customer Service personnel by calling 412-255-2423 and
33 choosing Option #5.”

1 **Q. WHAT IS MS. ALEXANDER’S POSITION REGARDING THE RFP?**

2 A. Ms. Alexander does not appear to have reviewed the RFP that was formally issued and,
 3 therefore, raises general concerns “about the application and implementation of essential
 4 Chapter 56 rights that are not the typical qualifications for private debt collection
 5 agencies.” (OCA St. No. 5 at 20). She also raises concerns about how a debt collection
 6 agency could achieve a 10% increase in its monthly collection rate compared to the
 7 collection rate achievable by PWSA employees. (OCA St. No. 5 at 20-21). Ultimately,
 8 though, Ms. Alexander “reserves the right to file supplemental direct testimony when
 9 PWSA submits the finalized RFP and scope of services.” (OCA St. No. 5 at 21).

10 **Q. AS OF THE DATE OF THIS REBUTTAL TESTIMONY, HAS MS. ALEXANDER**
 11 **SUBMITTED SUPPLEMENTAL DIRECT TESTIMONY TO ADDRESS THIS**
 12 **ISSUE?**

13 A. No. However, I believe that the issued RFP addresses Ms. Alexander’s concerns. Ms.
 14 Alexander has been an active participant in this all-party process and may have lacked
 15 confidence that PWSA’s final approach would encompass the majority of parties’
 16 concerns with the exception of the concern that PWSA is engaging with any collection
 17 agency. Nonetheless, I wish to be absolutely clear that PWSA has an obligation to ensure
 18 that its consumer protection policies and practices are consistent with Commission
 19 requirements, and that does not change whether or not we handle debt collection
 20 activities with our staff or enter into a third party contract. PWSA also has an obligation
 21 to all its ratepayers to continue to evaluate its operations and the effectiveness of its
 22 collections activities and has determined that costs can be streamlined and collections
 23 improved by seeking assistance from expert debt collectors (who are required to comply
 24 with Commission requirements).

1 **Q. DOES PWSA’S LIEN AUTHORITY LESSEN THE NEED FOR A THIRD PARTY**
 2 **DEBT COLLECTION AGENCY AS MS. ALEXANDER APPEARS TO**
 3 **SUGGEST? (OCA ST. NO. 5 AT 21).**

4 A. No. Ms. Alexander highlights PWSA’s lien authority and seems to give credence to its
 5 usefulness as lessening the need to pursue additional collection paths. (OCA St. No. 5 at
 6 12). While I completely agree that PWSA’s ability to lien is a significant collections
 7 tool, I find it necessary to point out that success of collecting as a result of exercising our
 8 authority to pursue liens is limited to 1) an individual’s response to an Intent to Lien
 9 Notice to avoid a lien filing, and 2) the sale of a property with a clear title. Thus, while
 10 PWSA may pursue enforcement of a lien on a property for unpaid water, wastewater
 11 conveyance and/or stormwater management charges, such pursuit does not ensure that the
 12 owed money will actually be collected. If PWSA does not receive payment directly from
 13 the property owner, then it is forced to await the sale of the property, which may or may
 14 not occur or may occur many years in the future. Thus, exercise of PWSA’s lien
 15 authority by no means ensures that PWSA will be paid or paid timely, in all matters
 16 where its lien authority is pursued.

17 **Q. WHY DOES PWSA CONTINUE TO VIEW ENGAGING A THIRD PARTY**
 18 **COLLECTION AGENCY AS IMPORTANT?**

19 A. Since returning all collections back to PWSA, we have gained significant experience
 20 regarding collections, including the safeguarding of all Chapter 14 and Chapter 56
 21 customer rights and termination processes. Based on all this experience, we now see an
 22 appropriate role – within our current regulatory scheme – for a third party debt collection
 23 agency or agencies which will supplement our efforts while also ensuring that Chapter 14
 24 and Chapter 56 customer rights are safeguarded. A failure of PWSA to collect billed
 25 charges negatively impacts all ratepayers as the costs to provide service are increased.

1 Moreover, as a cash flow regulated public utility, the only way for PWSA to recover its
 2 costs is through ratepayers, potentially in the form of future rate increases. For all these
 3 reasons, PWSA continues to support its path forward regarding the use of a collection
 4 agency or agencies to supplement its current collection activities.

5 **VI. LOW INCOME CUSTOMER ASSISTANCE PROGRAMS**

6 **A. Proposals to Address Concerns Related to Enrollment**

7 **Q. ARE OCA WITNESS COLTON AND UNITED WITNESS GELLER**
 8 **CONCERNED ABOUT CUSTOMER ENROLLMENT IN PWSA’S LOW**
 9 **INCOME CUSTOMER ASSISTANCE PROGRAMS?**

10 A. Yes. According to Mr. Geller, “PWSA’s low income customer assistance programs
 11 remain woefully undersubscribed reaching just a fraction of PWSA’s 20,000 estimated
 12 low income customers.” (United St. No. 1 at 23). Similarly, Mr. Colton posits that
 13 nearly one third of PWSA’s customers live within the lowest income bracket and “those
 14 customers are not served proportionately by the Company’s BDP.” (OCA St. No. 4 at
 15 14, 21).

16 **Q. ARE YOU AWARE OF ANY SPECIFIC COMMISSION REQUIREMENTS**
 17 **RELATED TO LOW INCOME CUSTOMERS ASSISTANCE PROGRAMS FOR**
 18 **WATER, WASTEWATER CONVEYANCE OR STORMWATER UTILITIES?**

19 A. No; the Commission does not require water, wastewater conveyance or stormwater
 20 utilities to implement low income customer assistance programs such as it does for
 21 natural gas and electric distribution utilities. I am also advised by counsel that, even
 22 where required, the Commission has not conditioned the approval of a utility’s rate
 23 request on meeting specific low income customer assistance program enrollment targets.
 24 Moreover, I am advised by counsel that the Commission has not deemed rates to be

1 unjust and unreasonable based on the number of customers enrolled in a natural gas or
 2 electric utility’s low income customer assistance program.

3 **Q. DO YOU AGREE THAT ENROLLMENT LEVELS ARE AN APPROPRIATE**
 4 **MEASURE TO DETERMINE WHETHER OR NOT PWSA’S ASSISTANCE**
 5 **PROGRAMS ARE ACHIEVING THEIR PURPOSE?**

6 A. No. While I do not dispute that there are likely more low-income customers in PWSA’s
 7 service territory than are enrolling in our low-income customer assistance programs, I do
 8 not agree that the appropriate conclusion to reach from this is that PWSA’s programs are
 9 not serving their purpose. I understand that the number of eligible customers enrolling in
 10 utility customer assistance programs is a common hurdle faced by other utilities under the
 11 Commission’s jurisdiction. While PWSA is willing to consider all reasonable
 12 suggestions as to how to improve our enrollment levels, ultimately, the customer needs to
 13 take action to enroll in PWSA’s programs and this is not something over which PWSA
 14 has control.

15 **Q. ARE THE CRITICISMS OF PWSA’S ENROLLMENT RATES PERSUASIVE?**

16 A. No; the core premise of both Mr. Colton and Mr. Geller’s view is that there are many
 17 more eligible customers in PWSA’s service territory who are not enrolled in PWSA’s
 18 programs and that PWSA is somehow at fault for this. This obfuscates the fact that the
 19 enrollment levels in PWSA’s Bill Discount Program have continually trended upward.
 20 As detailed in my direct testimony, PWSA increased 2021 enrollment levels by 20% in
 21 2022. (PWSA St. No. 6 at 36). An additional 746 enrollees have been added year to date
 22 for 2023. I respectfully submit that both OCA and United are unreasonably failing to
 23 recognize that these numbers show PWSA’s impressive achievement, which resulted
 24 only due to the significant amount of work by our PGH2O Cares team. I believe this is

1 good evidence that PWSA’s currently structured programs, and commitment to them, are
 2 yielding positive results.

3 **Q. ARE YOU TESTIFYING THAT THESE ISSUES ARE NOT WORTHY OF**
 4 **CONSIDERATION?**

5 A. No, of course not. I do not disagree with Mr. Colton’s point that well-designed low
 6 income customer assistance programs “not only addresses the social problems faced by
 7 PWSA’s low-income customers” but can also address “the business programs faced by
 8 PWSA when it finds that it cannot collect in a complete, regular, and timely fashion the
 9 bills which it renders to customers who cannot afford to pay them.” (OCA St. No. 4 at
 10 13). Designing such programs, however, is complicated. There is much outside the
 11 control of PWSA, including how to ensure that customers with the ability to pay actually
 12 pay and how to incentivize customers to take action to enroll in our programs. PWSA, as
 13 a public authority with no shareholders, also has to balance the impacts to ratepayers who
 14 are not participating in the programs with increasing the cost of the programs whether
 15 through program design or “forgiving” more debt. All of these costs need to be
 16 recovered from other ratepayers as PWSA relies on its revenues to fund operations and
 17 care for its infrastructure. On balance, PWSA’s low income customer assistance
 18 programs are well-designed and, while we are always looking to further enhance our
 19 programs, we are unable to agree that the proposals offered here by OCA and United are
 20 necessary or cost-effective to implement at this time.

21 **Q. WHAT RECOMMENDATIONS ARE OFFERED BY MR. GELLER TO**
 22 **ADDRESS UNITED’S CONCERNS ABOUT ENROLLMENT IN PWSA’S**
 23 **CURRENT LOW INCOME CUSTOMER ASSISTANCE PROGRAMS?**

24 A. Mr. Geller takes the view that “more systematic approaches are needed to augment the
 25 efforts of the PGH2O Cares Team” and recommends that: (1) PWSA be directed “to

1 develop and submit a comprehensive Universal Service Plan for periodic Commission
 2 review and approval (United St. No. 1 at 25); (2) PWSA “develop a detailed consumer
 3 education and outreach plan (United St. No. 1 at 26); (3) PWSA “be required to update its
 4 estimated low income customer count and, in turn, its formal needs assessment within
 5 one year of the final order in this proceeding” (United St. No. 1 at 27); (4) PWSA
 6 implement screening measures for all new and moving customers as well as during any
 7 non-emergency contacts for low income status (United St. No. 1 at 27-28); (5) PWSA be
 8 required to “update its confirmed low income count to accurately reflect the various ways
 9 in which low income customers are identified” (United St. No. 1 at 28-29); and (6)
 10 PWSA should “begin to track cross-program referrals and enrollment.” (United St. No. 1
 11 at 29).

12 **Q. WHAT RECOMMENDATIONS ARE OFFERED BY MR. COLTON TO**
 13 **ADDRESS OCA’S CONCERNS ABOUT ENROLLMENT IN PWSA’S CURRENT**
 14 **LOW INCOME CUSTOMER ASSISTANCE PROGRAMS?**

15 A. Mr. Colton recommends that PWSA: (1) engage in “geo-targeted outreach” (OCA St. No.
 16 4 at 21); (2) “adopt a performance-based incentive program for community-based
 17 organizations” (OCA St. No. 4 at 22); (3) collaborate with other municipal offices
 18 serving the City of Pittsburgh to “cross-enroll customers” (OCA St. No. 4 at 22); and, (4)
 19 “submit to its LIAAC the question of how enhanced technology could increase the
 20 enrollment and retention of low-income customers in BDP.” (OCA St. No. 4 at 23).

21 **Q. WHAT IS YOUR OVERALL VIEW OF THESE RECOMMENDATIONS?**

22 A. I appreciate the feedback offered by both Mr. Colton and Mr. Geller in their testimony in
 23 this litigated proceeding and want to be clear that each recommendation has been
 24 thoughtfully considered. However, PWSA’s low income customer assistance program is
 25 *voluntarily offered*, and the Commission has not established any standards or

1 requirements for outreach (or anything else) regarding water, wastewater conveyance or
2 stormwater utilities. Therefore, it is axiomatic that PWSA has not violated any statute,
3 regulation or policy statement of the Commission in voluntarily offering this program and
4 therefore the Commission may not force PWSA to dramatically extend its program.
5 Seeking to impose arbitrary requirements is inappropriate and unreasonable. With this
6 said, however, I would strongly encourage that these ideas be brought forward during
7 PWSA's LIAAC meetings so that they can be further discussed and considered in a
8 collaborative manner. In each of these meetings, the PWSA team provides significant
9 data about its low income customer assistance programs, statistics and outreach efforts.
10 We also actively seek feedback and suggestions from the participants. PWSA has
11 implemented many suggestions brought to the table by LIAAC members such as
12 including program flyers in food bank boxes and developing new community
13 partnerships. I believe the LIAAC process is a far superior way for PWSA to hear
14 suggestions like those raised in the testimony of Mr. Geller and Mr. Colton so that they
15 can be thoughtfully considered in a process that does not have so many moving parts and
16 time sensitive priorities as found in a major rate case that involves a multitude of
17 interrelated issues relating to nearly every aspect of PWSA's operations. Also, given my
18 experience with LIAAC and the working relationships that have been developed, I do not
19 support mandating specific reporting requirements for future LIAAC meetings that
20 members may or may not find of interest and which would require additional staff time
21 and resources to prepare as part of this rate case. Lastly, I am providing PWSA Exhibit
22 JAM-22 and PWSA Exhibit JAM-23 as evidence that the PGH2O Cares team has tracked
23 since January 2022, and will continue to track, cross-enrollments of its Bill Discount and

1 Hardship Grant programs.¹⁴ This tracking data is limited to two assistance programs;
 2 however, it is important to note that the PGH2O Cares team consistently vets all
 3 potentially eligible customers for all of PWSA’s assistance programs at every interaction.

4 **Q. REGARDING LIAAC, IS IT NECESSARY – AS RECOMMENDED BY MR.**
 5 **COLTON – THAT THE COMMISSION DIRECT PWSA TO SUBMIT SPECIFIC**
 6 **QUESTIONS TO THE COMMITTEE FOR CONSIDERATION?**

7 A. Absolutely not. PWSA welcomes any and all questions and feedback from committee
 8 members and each member is invited to identify issues that they wish to be discussed
 9 #113901348v1any question for the committee’s consideration without the need for
 10 PWSA to be directed by the Commission to do so. I do think Mr. Colton’s suggestion to
 11 consider how enhanced technology could increase enrollment and retention of low-
 12 income customers in the BDP is an excellent issue for LIAAC to explore but, again, do
 13 not agree it is necessary or proper for the Commission to direct PWSA to include it as a
 14 topic of discussion with the committee members.

15 **1. Proposal To File for Commission Approval a Universal Service Plan**

16 **Q. DO YOU AGREE WITH PITTSBURGH UNITED’S OUR WATER TABLE**
 17 **WITNESS HARRY GELLER THAT PWSA SHOULD FILE A UNIVERSAL**
 18 **SERVICE PLAN?**

19 A. No, for two important reasons. First, I see Witness Geller’s recommendation that PWSA
 20 file a Universal Service Plan prior to receiving thoughtful Commission direction,
 21 particularly with regard to water, wastewater and stormwater utilities who currently have
 22 no statutory requirement to develop a universal service plan, to be premature. PWSA
 23 intends to be an active participant in the Commission’s Universal Service Plan Working
 24 Group, whose initial meeting will be held on September 21, 2023 in Harrisburg. It would

¹⁴ Customer identifying information has been redacted in these two exhibits.

1 be a waste of valuable resources to impose requirements on PWSA in this proceeding that
 2 may differ or be unrequired of other similarly situated utilities as a part of the working
 3 group process.

4 Second, I am advised by counsel that the current Commission review and approval
 5 process for natural gas and electric utilities is cumbersome and does not lend itself to a
 6 collaborative process as PWSA has developed through the LIAAC. As such, I question
 7 how requiring PWSA to expend staff resources and time to undertake a brand new
 8 regulatory obligation benefits ratepayers. Mr. Geller’s proposed solution for this to
 9 “expand its capacity”¹⁵ fails to consider both the cost impacts and the resource drain on
 10 existing staff members. I would note that this view is also based on my personal
 11 experience with the Commission’s Compliance Plan proceeding for PWSA, which took a
 12 significant amount of time to work through, and, in my opinion, slowed down the ability
 13 of PWSA to reach definitive closure on issues which could then be implemented. While I
 14 appreciated the input and collaboration in the Compliance Plan proceeding, it was not the
 15 best way to move forward in a timely manner, and I am concerned the requirement to file
 16 a Universal Service Plan would fall prey to the same difficulties.

17 **Q. DO YOU AGREE WITH MR. GELLER THAT THE REQUIREMENT TO FILE**
 18 **A UNIVERSAL SERVICE PLAN FOR COMMISSION APPROVAL WOULD**
 19 **HELP CONSUMERS BETTER “DETERMINE IMPORTANT PROGRAM**
 20 **RULES, POLICIES, AND PROCEDURES?” (UNITED ST. NO. 1 AT 25-26).**

21 **A.** No; I do not see where there is a deficiency in this regard. Mr. Geller laments that the
 22 requirement to file “periodic plans related to” low income customer assistance programs
 23 would obviate the need for “consumers and utility advocates” to rely on PWSA’s tariffs

¹⁵ See PWSA Ex. JAM-18 United Response to PWSA-I-14 (“as stated in Pittsburgh United St 1, Mr. Geller recommends that PWSA expand its capacity to submit a comprehensive Universal Service Plan, while conducting appropriate and necessary outreach related to PWSA’s low income programming.”).

1 and “the information that can be pieced together from PWSA’s website to determine
 2 important program rules, policies and procedures.” (United St. No. 1 at 26). Consumers,
 3 and particularly customers of PWSA who have only been introduced to the Commission
 4 since 2018, are not likely looking to filings at the Commission to understand PWSA’s
 5 low income customer assistance programs. Moreover, Mr. Geller does not point to any
 6 specific examples of information PWSA provides on its website or other customer facing
 7 materials which fail to adequately educate our customers about the available programs. If
 8 he has such examples in mind, then I would encourage that they be brought to LIAAC for
 9 review and consideration.¹⁶ While I share Mr. Geller’s goal of transparency regarding
 10 our available program options, I do not agree that burdening PWSA staff and resources
 11 with additional layers of Commission review is justified or reasonable to achieve the
 12 results desired.

13 **2. Recommendation to Update Estimate of Low Income Customers, Add Additional**
 14 **Income Screening, and Update Needs Assessment**

15 **Q. PLEASE DESCRIBE MR. GELLER’S RECOMMENDATIONS TO ADDRESS**
 16 **HIS CONCERNS REGARDING THE NUMBER OF ESTIMATED LOW**
 17 **INCOME CUSTOMERS.**

18 A. Mr. Geller posits that “recent economic pressures likely mean that increased numbers of
 19 customers may be classified as low income and are in need of assistance.” (United St.
 20 No. 1 at 27). Accordingly, Mr. Geller recommends that “PWSA be required to update its
 21 estimated low income customer count and, in turn, its formal needs assessment within
 22 one year of the final order in this proceeding.” (United St. No. 1 at 27). Mr. Geller also
 23 recommends that PWSA implement “more systematic approaches” to identify customers

¹⁶ Mr. Geller agreed in discovery that important information about PWSA’s rules, policies and procedures on PWSA’s low income assistance programs is made available during its LIAAC meetings. See PWSA Exh. JAM-18 United Response to PWSA-I-15.

1 who may be eligible, including screening for low income status for all: (1) new and
 2 moving customers; and, (2) any non-emergency calls. (United St. No. 1 at 27-28). To
 3 support his recommendations, Mr. Geller proposes that PWSA “develop call scripting
 4 and checklists for its Customers Service Representatives.” (United St. No. 1 at 28).

5 **Q. DOES PWSA SUPPORT IMPLEMENTATION OF THESE PROPOSALS?**

6 A. Not at this time, and primarily because I am concerned about the cost impacts and also
 7 potential confusion for customers of adding questions about their income in the flow of
 8 interactions with our customer service representatives. I am concerned that questioning
 9 every customer who calls about his or her income could be viewed as offensive and
 10 would not engender the spirit of trust with our customers that we are working to achieve.
 11 I would note, too, that if our proposals in this case are approved, we will need to
 12 undertake a process of considering how to relay to customers the changes coming from
 13 this proceeding including, *inter alia*, the rate increases, new customers assistance
 14 program features, and the rate structure change to remove the minimum charge.

15 **Q. DO YOU SUPPORT UPDATING THE 2019 HOUSEHOLD AFFORDABILITY**
 16 **STUDY UPON WHICH PWSA RELIES TO PLOT ITS LOW-INCOME**
 17 **CUSTOMER ENROLLMENT CANVASSING EFFORTS?**

18 A. Not at this time. I do not disagree with Mr. Geller that it may be appropriate to update
 19 the study in the future. However, I do not agree that now is the right time given the other
 20 initiatives being undertaken by PWSA and the attendant costs and staff resources that
 21 will be necessary to accomplish them. In my view, PWSA’s efforts and resources are
 22 better focused on current initiatives, including its internal working group of PGH2O
 23 Cares, IT, and GIS personnel who are developing interactive customer account mapping
 24 that the Cares team can utilize when canvassing in neighborhoods of need.

1 **3. Recommendations Regarding Outreach and Cross Enrollments**

2 **Q. PLEASE DESCRIBE MR. COLTON’S SPECIFIC OUTREACH AND CROSS**
 3 **ENROLLMENT RECOMMENDATIONS.**

4 A. Mr. Colton recommends that PWSA be directed to: (1) engage in “geo-targeted” outreach
 5 concentrating outreach efforts toward geographic areas with high concentrations of
 6 PWSA’s lowest income consumers (OCA St. No. 4 at 21); (2) “adopt a performance-
 7 based incentive program for community-based organizations to identify the lowest
 8 income customers and to facilitate enrollment of such customers in the BDP” (OCA St.
 9 No. 4 at 22); (3) work with the City of Pittsburgh to identify and utilizes those municipal
 10 programs that would assist PWSA in identifying its lowest income customers and
 11 enrolling those customers in its BDP: (OCA St. No. 4 at 22-23); and, (4) “submit to its
 12 LIAAC the question of how enhanced technology could increase the enrollment and
 13 retention of low-income customers in BDP.”¹⁷ (OCA St. No. 4 at 23-25).

14 **Q. DO YOU SUPPORT IMPLEMENTATION OF MR. COLTON’S OUTREACH**
 15 **AND CROSS-ENROLLMENT PROPOSALS?**

16 A. No, I do not, on the basis that they are unnecessary given PWSA’s current processes.
 17 PGH2O Cares Coordinator, Sarah Viszneki has reported extensively on the success of the
 18 Cares team’s outbound cold calling campaigns and neighborhood canvassing efforts in
 19 the quarterly LIAAC meetings. Ms. Viszneki is in a PWSA working group that is
 20 developing GIS mapping to identify neighborhoods of need to 1) focus canvassing
 21 efforts, and 2) access customer account information in real time to streamline the
 22 enrollment process. The PGH2O Cares team is positioned to perform the entire
 23 enrollment process with low-income customers in the most effective and least costly

¹⁷ PWSA’s views regarding the lack of necessity for this particular recommendation were discussed previously in this testimony.

1 manner possible. What Mr. Colton may not understand is that there are also numerous
 2 back-office functions that must be performed to ensure that our most vulnerable
 3 customers received the program benefits that they are eligible to receive. If PWSA were
 4 to allocate ratepayer money to pay third-party Community Based Organizations to enroll
 5 PWSA low-income customers directly, which I am not at all endorsing and vehemently
 6 oppose, PWSA personnel would still need to perform data entry into PWSA’s Customer
 7 Information System. This would include manually reviewing the enrollment application
 8 for accuracy, updating customer contact information, updating the Enrollment Date and
 9 FPIG fields, adding an interaction record to the account, adding the account and any
 10 missing information to the Daily Tracking spreadsheet, and forwarding the account to
 11 Billing to update the billing rate.

12 **Q. HOW IS MR. COLTON’S SUGGESTION REGARDING CBO’S FLAWED?**

13 A. Mr. Colton fails to realize, or completely ignores, the fact that the PGH2O Cares team
 14 has built partnerships with numerous community organizations and works closely with
 15 the following to regularly hold customer assistance program enrollment opportunities in
 16 the community:

- 17 1. Allegheny County Area Agency on Aging
- 18 2. Bike PGH
- 19 3. Borough of Homestead
- 20 4. Casa San Jose
- 21 5. City of Pittsburgh
- 22 6. County of Allegheny YMCA
- 23 7. Friends of Mellon Park
- 24 8. Friends of Riverview Park
- 25 9. Friends of Spring Hill
- 26 10. Greater Pittsburgh Community Food Bank
- 27 11. Hazelwood Initiative
- 28 12. Jewish Family and Community Services
- 29 13. Kingsley Association Community Center
- 30 14. Kiwanis Club of Sheraden
- 31 15. Latino Community Center

- 1 16. Pittsburgh United
- 2 17. Project Destiny
- 3 18. Promise Center of Homewood
- 4 19. Representative Dan Deasy’s Senior Wellness Expos
- 5 20. Woods Run Library
- 6
- 7

8 The suggestion to pay outside agencies with ratepayer money to do what the 5
 9 member PGH2O Cares team is already paid to do, resulting in 10,400 productive labor
 10 hours per year, is egregious in that it is counterproductive to assisting PWSA’s most
 11 vulnerable customers. Approaches to spending ratepayer money in this manner would
 drive PWSA’s rate request even higher.

12 **Q. PLEASE DESCRIBE MR. GELLER’S SPECIFIC OUTREACH AND CROSS**
 13 **ENROLLMENT RECOMMENDATIONS.**

14 A. While Mr. Geller commends PWSA’s “concerted effort to increase education about and
 15 enrollment in PWSA’s low income assistance program,” he recommends that “PWSA be
 16 directed to develop a detailed consumer education and outreach plan” with input from
 17 LIAAC and include “how PWSA will specifically promote and coordinate each of its low
 18 income programs” “tailored to the demographics of PWSA’s service territory.” (United
 19 St. No. 1 at 25-26). Mr. Geller also recommends that PWSA be directed to “track cross-
 20 program referrals and enrollments by month and identify what programs collaborated in
 21 these efforts” with the results to be shared with LIAAC “on, at least a semi-annual basis
 22 so that LIAAC members can provide important feedback about how to improve or
 23 augment current cross-program enrollment efforts.” (United St. No. 1 at 29). Finally,
 24 Mr. Geller recommends that PWSA “set additional target enrollment benchmarks for the
 25 BDP” including: (1) an enrollment target of 20% per year of estimated low income
 26 customers until 75% enrollment is reached; and, (2) quantitative goals related to

1 affirmative customer contacts with the purpose of enrolling them. (United S. No. 1 at
2 34).

3 **Q. DO YOU SUPPORT ADOPTION OF ANY OF THESE RECOMMENDATIONS**
4 **OF UNITED?**

5 A. No, for the same reasons that I do not support adoption of Mr. Colton's similar
6 recommendations. PWSA is already laser focused on its outreach efforts, reporting the
7 results to the LIAAC and soliciting feedback and suggestions from committee members
8 for future enhancements. PWSA also reports to its LIAAC members on its cross-
9 program efforts with other utilities and its work with numerous community organizations
10 to support its outreach and enrollment efforts. As discussed previously, I do not see what
11 value is gained for PWSA's customers by adding a requirement that PWSA "develop a
12 detailed consumer education and outreach plan" that is memorialized in a document to be
13 reviewed and approved by the Commission. I also do not support specific enrollment
14 targets or quantitative enrollment goals at this time especially in consideration of the
15 difficulty of reaching agreement on an accurate count of estimated low income customers
16 in our service territory. Moreover, successful enrollment relies on customer
17 responsiveness to PWSA's outreach attempts. While PWSA is still working to find even
18 more effective means of increasing enrollment, it is not feasible to set quantitative
19 enrollment goals at this time. While I understand Mr. Geller's effort to identify ways to
20 reach more eligible customers for PWSA's low income customer assistance programs, I
21 do not view his recommendations as offering any specific new, concrete, actionable items
22 that will assist in achieving his goals of enrolling these customers. The requirement to
23 prepare a Universal Service Plan for Commission review or to devise appropriate
24 enrollment and quantitative goals will only drive up costs for PWSA's ratepayers and

1 divert valuable resources away from engaging in the outreach to consumers that all
 2 support doing. Again, none of these recommendations are made in the context of
 3 correcting a PWSA violation of the law, a regulation or a policy statement of the
 4 Commission. They are simply demands that PWSA do far more than it has already
 5 voluntarily agreed to do, even though there are numerous water and wastewater
 6 companies that have no or only rudimentary low income customer assistance programs.

7 **B. Proposed Modifications for Bill Discount Program (Including Arrearage**
 8 **Forgiveness Program) Proposed Modifications**

9 **1. Proposed Revisions to Bill Discount Program (“BDP”) Structure**

10 **Q. PLEASE DESCRIBE HOW PWSA’S BDP IS CURRENT STRUCTURED.**

11 A. PWSA’s BDP provides residential customers with an annual income of equal to or less
 12 than 150% of the Federal Poverty Level (“FPL”) a 100% discount on the fixed monthly
 13 water and wastewater conveyance charges and an 85% discount on stormwater charges.
 14 BDP participants with an annual income of equal to or less than 50% of FPL also receive
 15 an additional 50% discount on their volumetric charges which are usage charges over the
 16 monthly minimum charges. Additionally, BDP participants may also be eligible to
 17 participate in PWSA’s Arrearage Forgiveness Program which provides a \$30 credit to
 18 reduce past due balances so long as the customer is on an active payment plan and makes
 19 on-time payments. (PWSA St. No. 6 at 34-35).

20 **Q. DID PWSA PROPOSE ANY CHANGES TO THE CURRENT BDP STRUCTURE?**

21 A. No; the same program structure for 2024 will remain, but we are proposing to reach more
 22 potentially eligible customers by expanding the eligibility from $\leq 150\%$ FPL to $\leq 200\%$
 23 FPL. Effective in 2025, to coincide with PWSA’s proposal to remove the minimum
 24 charge from its rate structure, the BDP will transition to a fixed bill discount, which will

1 provide a specific dollar amount credit to the bills based on FPL and type of utility
 2 charge. (PWSA St. No. 6 at 37-38). Also, effective in 2025, PWSA is proposing to offer
 3 a 50% reduction of the new Infrastructure Improvement Charge (“IIC”) and a 100%
 4 reduction of the new Customer Assistance Charge (“CAC”) for BDP participants.
 5 (PWSA St. No. 6 at 37).

6 **Q. DOES UNITED RECOMMEND ANY REVISIONS TO THE CURRENT BDP**
 7 **PROGRAM STRUCTURE?**

8 A. No. While United Witness Geller expresses his on-going support for a percentage of
 9 income program (“PIP”) structure, which would target benefits based on individual
 10 households’ income, he concludes that “in the context of the present rate increase
 11 proposal,” PWSA’s proposed revisions to the BDP’s structure and discount levels “merit
 12 approval.” (United St. No. 1 at 31-33).

13 **Q. WHAT DOES MR. COLTON RECOMMEND REGARDING THE BDP**
 14 **PROGRAM STRUCTURE?**

15 A. While Mr. Colton finds “it is reasonable and appropriate to expand the BDP maximum
 16 income eligibility to 200% FPL,” he recommends that PWSA offer a 30% discount to the
 17 volumetric charges for customers with incomes greater than 50% of FPL but at or below
 18 100% FPL. (OCA St. No. 4 at 32, 43-44). He also recommends that the current
 19 volumetric discount of 50% for customers at or below 50% of FPL be increased to 60%.
 20 (OCA St. No. 4 at 49-50). Regarding PWSA’s proposed fixed bill discount with the
 21 removal of the minimum charge effective 2025, Mr. Colton recommends “a modest
 22 increase in the monthly bills credit proposed by PWSA.” (OCA St. No. 4 at 39).

23 **Q. BEFORE CONSIDERING EACH OF THESE OCA RECOMMENDATIONS ON**
 24 **THEIR MERIT, DID MR. COLTON ATTEMPT TO QUANTIFY THE**

1 **ADDITIONAL COSTS OF HIS PROPOSALS WHICH WOULD NEED TO BE**
 2 **RECOVERED IN RATES?**

3 A. Yes. According to Mr. Colton, the total cost impact of these proposals for 2024 would be
 4 \$560,915, which Mr. Mugrace has included with his calculation of revenue requirements.
 5 (OCA St. No 4 at 73-75; OCA St. No. 1 at 13). No cost impact has been included by
 6 OCA for any other years, as OCA does not support implementation of PWSA’s multiyear
 7 rate proposal for 2025 and 2026 (OCA St. No. 1 at 5).

8 **Q. DOES PWSA AGREE WITH MR. COLTON’S PROJECTED COST IMPACTS**
 9 **OF HIS BDP PROPOSALS?**

10 A. No. As a threshold matter, recommending changes for the BDP for 2025 and 2026 while
 11 at the same time not factoring in the proposed impacts of those costs for those years due
 12 to lack of support for a multiyear rate plan, does not provide sufficient data upon which
 13 to determine true cost impacts for those years. In addition, measuring the potential cost
 14 impact of Mr. Colton’s proposals related to providing specific discounts for customers
 15 who have incomes at FPL breakpoints different than utilized by PWSA now is not
 16 possible, due to the lack of information regarding income prior to 2022. As explained in
 17 PWSA’s amended discovery response to United-1-II (served after the non-company
 18 direct testimony was due), PWSA did not initiate tracking of customers’ percentages of
 19 FPL until March 2022. Then, in the transition to PWSA’s current customer information
 20 system in August of 2022, the information related to enrollment date and percent of FPL
 21 for accounts with listed tenants was omitted, further negatively affecting the quality of
 22 those two data points after July 2022. As a result, the accurate data available to indicate
 23 FPL of BDP enrollees is limited and does not provide information about the over 6,700
 24 current BDP enrollees. As such, current available data is insufficient to determine the
 25 potential cost impacts of Mr. Colton’s BDP recommendations. PWSA cannot reasonably

1 support recommendations that will increase the costs to other ratepayers when the data
 2 does not offer a way to reasonably project accurate impacts. To be clear, these data
 3 tracking issues have been addressed in our billing system; however, it will take a period
 4 of time before PWSA has detailed FPL data for its BDP participants. I would also like to
 5 point out that, in our current structure, there was no reason to focus on FPL breakpoints
 6 beyond those necessary to qualify customers for the BDP.

7 **a. Proposals to Increase the Current Volumetric Discount and Expand Availability**
 8 **to Higher Income Brackets**

9 **Q. DOES PWSA SUPPORT MR. COLTON’S PROPOSALS TO INCREASE THE**
 10 **CURRENT VOLUMETRIC DISCOUNT FROM 50% TO 60% AND TO OFFER A**
 11 **NEW 30% VOLUMETRIC DISCOUNT FOR CUSTOMERS 50% - 100% OF**
 12 **FPL?**

13 A. No. Mr. Colton’s proposal results in PWSA asking these customers to pay less for
 14 services rendered while requiring all other ratepayers to make up that difference. By
 15 increasing the current volumetric discount by 10% and adding a new 30% volumetric
 16 discount to a wider array of customers, Mr. Colton’s proposal is increasing costs though,
 17 as I noted previously, projecting by how much is not reasonably possible given the FPL
 18 data currently available.

19 **Q. DO YOU HAVE OTHER CONCERNS ABOUT MR. COLTON’S PROPOSED**
 20 **INCREASE TO THE VOLUMETRIC DISCOUNTS?**

21 A. Yes. I am concerned about how incentivizing conservation can be achieved by providing
 22 greater discounts for more usage. Mr. Colton’s recommendation, based upon an average
 23 household consumption of 4,000 gallons amongst Bill Discount Program enrollees,
 24 illustrates that customers who are already receiving 1,000 gallons of free
 25 water/wastewater conveyance service(s) are less inclined to conserve what is arguably the
 26 most essential natural resource, water. Without the appropriate nexus between usage and

1 cost, high consumption bills will be meaningless because the consumer will not be
 2 required to fully pay for the charges. Without attention paid to high consumption bills,
 3 leaks will go undetected, and conservation will suffer. This is a further reason why
 4 PWSA cannot support OCA’s recommended increases to the volumetric discounts.

5 **b. Proposals Regarding BDP Fixed Bill Credit Effective 2025 With Removal of**
 6 **Minimum Charge**

7 **Q. WHAT PROPOSAL DOES OCA WITNESS COLTON MAKE REGARDING THE**
 8 **LEVEL OF THE CREDIT FOR BDP PARTICIPANTS EFFECTIVE 2025 WITH**
 9 **THE REMOVAL OF THE MINIMUM CHARGE?**

10 A. Mr. Colton proposes to increase the dollar amount of the credits as displayed below on
 11 the basis that increasing the credits is necessary “to achieve continuity in impacts and
 12 avoid large spikes in bills.” (OCA St. No. 4 at 39-40).

PWSA Proposal vs. OCA Recommended Modification							
Utility Service	FPL	PWSA Proposal	OCA Proposal	OCA Proposed Adjustment	PWSA Proposal	OCA Proposal	OCA Proposed Adjustment
		2025	2025	2025	2026	2026	2026
Water	> 50%-200%	\$17.00	\$22.00	↑\$5.00	\$20.00	\$25.00	↑\$5.00
Water	≤ 50%	\$10.00	\$15.00	↑\$5.00	\$12.00	\$17.00	↑\$5.00
Wastewater Conveyance	> 50%-200%	\$5.00	\$8.00	↑\$3.00	\$6.00	\$9.00	↑\$3.00
Wastewater Conveyance	≤ 50%	\$3.00	\$6.00	↑\$3.00	\$4.00	\$7.00	↑\$3.00

13
 14 **Q. DOES PWSA AGREE THAT THESE PROPOSED INCREASES TO THE BDP**
 15 **CREDITS TO BE EFFECTIVE IN 2025 ARE REASONABLE?**

16 A. No. Mr. Colton mischaracterizes the goal of PWSA with its proposal, which was not to
 17 avoid any price increases but to avoid large spikes in bills in relation to residential rates.
 18 As demonstrated by Mr. Colton’s Table 8, that goal has been achieved. I understand that
 19 Mr. Colton’s view is that more significant discounts are preferable; however, he does
 20 recognize that participants in PWSA’s low income customer assistance programs should

1 share in the costs of Commission approved rate increases.¹⁸ In PWSA’s judgment, Mr.
2 Colton’s proposed discounting of the amounts they will be asked to pay in the future
3 results in too high a cost for the other ratepayers. I would also note that his Table 8 relies
4 on assessing future year rates based on 2023 rates rather than recognizing the rate
5 increase of the preceding year. This has the impact of overstating the number of
6 discounts that would be provided by his proposal.

7 **c. Proposed Restructuring of the Arrearage Forgiveness Program**

8 **Q. HOW DOES OCA WITNESS COLTON PROPOSE PWSA RESTRUCTURE ITS**
9 **ARREARAGE FORGIVENESS PROGRAM?**

10 A. Mr. Colton takes the view that the current structure “is not effectively operating to
11 address the pre-existing arrears of low-income customers.” (OCA St. No. 4 at 50). To
12 address this, Mr. Colton proposes that: (1) remove the requirement that a customer must
13 enter into a payment arrangement for pre-existing arrears and be current on such
14 payments to receive the credit (OCA St. No. 4 at 58); (2) PWSA apply retroactive
15 arrearage forgiveness for late payments (OCA St. No. 4 at 59); (3) revise the current
16 structure to completely forgive pre-existing arrears over a 24-month period at the rate of
17 1/24th of the pre-existing arrears for each full payment received (OCA St. No. 4 at 64-65).
18 Mr. Colton calculates that the costs of implementing his proposals would be \$275,815 for
19 water customers and \$373,646 for wastewater conveyance customers. (OCA St. No. 4 at
20 75-76). OCA Witness Mugrace includes \$631,461 as part of OCA’s proposed revenue
21 requirements to reflect Mr. Colton’s calculations of the costs of his proposals for the
22 Arrearage Forgiveness Program. (OCA St. No. 1 at 13).

¹⁸ See PWSA Exh. JAM-17 OCA Response to I-37.

1 **Q. HOW DOES UNITED WITNESS GELLER RECOMMEND THAT PWSA**
 2 **RESTRUCTURE ITS CURRENT ARREARAGE FORGIVENESS PROGRAM?**

3 A. Mr. Geller makes recommendations similar to Mr. Colton based on his view that the
 4 program “does not adequately address the high levels of arrears faced by many low
 5 income customers.” (United St. No. 1 at 35). Accordingly, Mr. Geller recommends that
 6 “for each in-full payment that a customer makes while enrolled in the BDP, 1/36th of a
 7 customer’s pre-program arrears are forgiven.” (United St. No. 1 at 39).

8 *i. Proposals for Complete Arrearage Forgiveness Over a Defined Period*
 9 *of Time*

10 **Q. DOES PWSA SUPPORT RESTRUCTURING THE ARREARAGE**
 11 **FORGIVENESS PROGRAM TO PROVIDE COMPLETE FORGIVENESS OVER**
 12 **A DEFINED PERIOD OF TIME SUCH AS 24 OR 36 MONTHS?**

13 A. No. As explained in my direct testimony and the direct testimony of Edward Barca,
 14 PWSA undertook a cost-benefit analysis, which concluded that the costs of restructuring
 15 the program as supported by Mr. Geller would result in an estimated loss of \$900,000 in
 16 annual revenue. (PWSA St. No. 6 at 45-47; PWSA St. No. 2 at 51-52). The costs of
 17 granting full arrearage forgiveness over a shorter period of time, 24 months as
 18 recommended by Mr. Colton, would likely be greater as more debt would be forgiven. I
 19 would also note that the distribution of funding for the Low-Income Household Water
 20 Assistance Program (“LIHWAP”) is continuing, and, therefore, it is too soon to project
 21 the impact of the grants received by PWSA. These grants are applied to satisfy overdue
 22 water/wastewater conveyance bills. Given that source of funding provides actual grant
 23 payments to PWSA for services rendered in contrast with a forgiveness program that
 24 attempts to recover those amounts from ratepayers through rates, PWSA does not support
 25 restructuring its Arrearage Forgiveness Program at this time.

ii. Proposal to Remove Requirement that Customer Enter into a Payment Arrangement and Remain Current on Payments

Q. DOES PWSA ALREADY AUTOMATICALLY ENROLL ELIGIBLE CUSTOMERS IN THE ARREARAGE FORGIVENESS PROGRAM?

A. Yes. PWSA is already automatically enrolling customers who are eligible for the Bill Discount Program into the Arrearage Forgiveness Program when they have past due charges and are willing to enter into a payment plan. As such, Mr. Colton’s proposal is not really about automatic enrollment but rather about removing the requirement that the participant enter into a payment plan as a condition of receiving the credit and that they remain current on their payment plan to continue to receive the credit.

Q. DOES PWSA SUPPORT OCA AND UNITED’S RECOMMENDATION TO REMOVE THE REQUIREMENT THAT CUSTOMERS ENTER INTO A PAYMENT ARRANGEMENT AND KEEP CURRENT ON THEIR PAYMENTS AS A CONDITION OF RECEIVING THE ARREARAGE FORGIVENESS PROGRAM CREDIT?

A. No. PWSA’s current Arrearage Forgiveness Program is an incentive for customers to keep paying on their interest free payment arrangements to receive the benefit of a monthly credits off their existing arrearages. I also do not support providing the credits for missed or late payments. Importantly, the existing program permits two missed payments before the customer is removed from the program and enables customers removed from the program to be reenrolled upon full payment. In my judgment, this offers the appropriate balance between providing a reasonable level of financial assistance to those in need while also requiring them to make fair payments recognizing their use of our systems. Any other approach whereby PWSA is required to cover the full costs of services rendered without any incentives to customers to pay is unreasonable and will cause our other ratepayers to unfairly subsidize these costs. For these reasons, PWSA’s Arrearage Forgiveness Program is a valuable tool to incentivize payment.

1 Proposals such as those offered by Mr. Colton and Mr. Geller to remove important
 2 payment incentives for consumers to contribute to the cost of PWSA’s service that they
 3 utilized are not reasonable and I do not support them.

4 **2. Proposals Regarding the Hardship Grant Program**

5 **Q. DOES PWSA PROPOSE TO INCREASE THE AVAILABILITY OF HARDSHIP**
 6 **GRANTS TO CUSTOMERS AS PART OF THIS PROCEEDING?**

7 A. Yes. Currently, PWSA provides grants up to \$300 per year to be allocated to customers at
 8 or below 150% of the FPL. As explained in my direct testimony, PWSA proposes to
 9 allocate two, separate \$300 annual grants one to be distributed to eligible water customers
 10 and one to be distributed to eligible wastewater conveyance customers. (PWSA St. No. 6
 11 at 37).

12 **Q. PLEASE DESCRIBE UNITED WITNESS GELLER’S PROPOSALS**
 13 **REGARDING THE HARDSHIP GRANT PROGRAM.**

14 A. Mr. Geller identifies a “need to improve access to grants through the Hardship Fund” and
 15 recommends that PWSA increase the maximum grant of \$300 to \$500 and allow
 16 households to apply for grant assistance twice a year regardless of whether a customer
 17 elects to apply either or both of the grants to water or wastewater charges. (United St. No.
 18 1 at 43). Mr. Geller also expresses concern about the administration of the Hardship
 19 Grant Program by the Dollar Energy Fund (“DEF”) and recommends that “within one
 20 year of the final Order in this matter, PWSA [be] required to submit a report to the
 21 Commission related to DEF’s administration” of the Hardship Grant Program. (United
 22 St. No. 1 at 44).

1 **Q. DO YOU SUPPORT UNITED’S PROPOSAL TO INCREASE THE AMOUNT OF**
 2 **THE HARDSHIP GRANT AND TO MAKE IT AVAILABLE TWICE A YEAR?**

3 A. I do not. While PWSA continues to fund Hardship Grants with resources outside of
 4 ratepayer funding (i.e., civil litigation settlement fund and donations received from
 5 employees, PWSA Board members, and customers), PWSA anticipates that, based on
 6 historical granting, the non-ratepayer funding sources will be exhausted in late 2024. As
 7 such, PWSA remains mindful of ensuring that there is available grant funding for eligible
 8 customers at the current and proposed future program amounts and is concerned that Mr.
 9 Geller’s proposal would deplete funding sources prematurely.

10 **Q. DO YOU SUPPORT UNITED’S PROPOSAL THAT PWSA BE REQUIRED TO**
 11 **REPORT TO THE COMMISSION ABOUT DEF’S ADMINISTRATION OF THE**
 12 **HARDSHIP GRANT PROGRAM?**

13 A. I do not. PWSA is obligated to ensure that its programs are offered appropriately and
 14 within the requirements we have established. Whether or not the program is administered
 15 internally or by an outside vendor, this obligation remains. Therefore, if there are issues
 16 with DEF’s administration of PWSA’s Hardship Grant Program, then PWSA will address
 17 them. I would note that Mr. Geller’s concern that DEF can “unilaterally modify program
 18 requirements without review and approval by PWSA or the Commission” is mistaken.
 19 (United St. No. 1 at 43). PWSA remains in control of ensuring that the terms of the
 20 program are administered properly. Mr. Geller also acknowledged in discovery that he is
 21 unaware of any Commission finding expressing concerns about the administration by
 22 DEF of any other utility low income customer assistance program and that he is unaware
 23 of any guidelines or established standards regarding account handling errors of a low

1 income customer assistance program fund administrator.¹⁹ As such, there has been no
 2 showing of any specific issue related to DEF, no past concerns expressed by the
 3 Commission regarding DEF, and no Commission standards or guidelines about an
 4 administrator's handling of a low income customer assistance program. For these
 5 reasons, PWSA opposes United's recommendations regarding this issue.

6 **C. Proposed Modification of Stormwater Credit Program**

7 **Q. PLEASE DESCRIBE UNITED WITNESS GELLER'S CRITICISMS AND**
 8 **PROPOSAL REGARDING PWSA'S STORMWATER FEE AND LOW-INCOME**
 9 **CUSTOMERS.**

10 A. According to Mr. Geller, "PWSA fails to provide additional ways for low-income
 11 customers to adopt green stormwater mitigation." (United St. No. 1 at 45). He testifies
 12 that the current discount for eligible customers of an 85% reduction on the stormwater fee
 13 "is not the same thing as having the ability to adopt green mitigation strategies and
 14 receive other critical benefits as a result of those strategies." (United St. No. 1 at 45.)
 15 Accordingly, Mr. Geller proposes that PWSA be required to allocate \$100,000 annually
 16 in rates to permit low-income customers access to green mitigation measures at no cost to
 17 the low income customer. (United St. No. 1 at 46). He also proposes that low-income
 18 customers who engage in green mitigation measures, at no cost to them, also be eligible
 19 to receive the \$40 credit PWSA is offering to residential customers who purchase rain
 20 barrels. (United St. No. 1 at 46).

21 **Q. DO YOU SUPPORT THESE RECOMMENDATIONS?**

22 A. No; I am firmly opposed to these recommendations. Unlike the existing customer
 23 assistance programs that either regularly or intermittently reduce low-income customers'

¹⁹ PWSA Exh. JAM-18 United Responses to PWSA-I-24 and I-25.

1 financial obligations to pay, Mr. Geller’s idea is short-sighted in that all green
 2 infrastructure improvements will require maintenance from the customer. I am
 3 concerned that low-income customers will not be able to devote the time, resources or
 4 financial requirements necessary to perform regular maintenance of the “free” green
 5 infrastructure improvements to their properties. If unmaintained, then other ratepayers
 6 who have financed the projects through rates will not receive any return on their
 7 investment in terms of stormwater mitigation. I also view the cost proposal as
 8 unreasonably using ratepayer money to increase some customers’ property values.
 9 Finally, PWSA’s \$40 rain barrel credit proposal first requires that a customer purchase a
 10 rain barrel to be eligible for the credit. In Mr. Geller’s scenario, other ratepayers would
 11 be required to pay for the cost of installation of the mitigation project and to pay for the
 12 costs of financial credits, such as the \$40 credit, provided to the low-income consumer.
 13 This is not a reasonable or justifiable use of ratepayer money and, therefore, I do not
 14 support Mr. Geller’s recommendations regarding stormwater mitigation.

15 **VII. PUBLIC INPUT HEARING TESTIMONY AND FILED PUBLIC COMMENTS**
 16 **(CUSTOMER SERVICE ISSUES)**

17 **Q. DID YOU REVIEW THE TESTIMONY PROVIDED AT THE PUBLIC INPUT**
 18 **HEARINGS IN THIS PROCEEDING ON JULY 25, JULY 27, AND AUGUST 29,**
 19 **2023, AS WELL AS THE PUBLIC COMMENTS AND RATE COMPLAINTS**
 20 **FILED WITH THE COMMISSION?**

21 A. Yes, I did.

22 **Q. PLEASE SUMMARIZE THE TESTIMONY FROM THE PUBLIC INPUT**
 23 **HEARINGS, COMMENTS AND RATE COMPLAINTS TO WHICH YOU WILL**
 24 **RESPOND.**

25 A. I will broadly respond to concerns raised about: (1) affordability of the proposed rate
 26 increase; (2) suggestions that PWSA should exhaust all other funding and financing

1 options before implementing a rate increase; (3) outreach regarding the availability of
2 assistance programs; and (4) notice of the public input hearings. I will also specifically
3 address service issues raised by customers, as also noted by OCA witness Terry Fought.

4 **Q. PLEASE RESPOND TO THE COMMENTS RECEIVED ABOUT**
5 **AFFORDABILITY OF RATES.**

6 A. PWSA understands and appreciates customers' concerns about affordability of rates. As
7 I discussed in my direct testimony, PWSA has carefully considered the impact of the
8 proposed rate increase on future affordability and has offered several proposals to
9 mitigate the impacts. *See* PWSA St. No. 6 at 22-38. This includes proposals to enhance
10 PWSA's customer assistance programs (which, as discussed above, it has voluntarily
11 offered to assist customers in need), provide additional stormwater rate mitigation
12 measures, gradually remove the minimum allowance, and increase rates through a
13 multiyear rate plan. In his direct and rebuttal testimonies, Mr. Pickering also explains the
14 necessity of the proposed rate increase, which is essential to address decades of deferred
15 infrastructure investment and meet numerous regulatory requirements.

16 **Q. HAS PWSA PURSUED OTHER FUNDING OR FINANCING OPPORTUNITIES**
17 **BEFORE PROPOSING THE RATE INCREASE?**

18 A. Yes. PWSA's efforts are discussed in detail in Mr. Barca's testimony, which explains
19 that PWSA has received hundreds of millions of dollars in low-interest loans and grants
20 from PENNVEST since 2018, as well as WIFIA loans, and continues to apply for
21 additional funding. Mr. Pickering's rebuttal testimony also describes funding PWSA has
22 received from local foundations to support development of PWSA's Stormwater Strategic
23 Plan and other stormwater projects. PWSA has diligently pursued all funding
24 opportunities; however, the Authority's capital improvement program efforts simply
25 cannot be funded without additional rate increases.

1 **Q. PLEASE RESPOND TO COMMENTS REGARDING OUTREACH ON THE**
 2 **AVAILABILITY OF PWSA’S CUSTOMER ASSISTANCE PROGRAMS.**

3 A. As discussed in my direct testimony, PWSA is doing significant outreach to low-income
 4 customers to inform them about the available customer assistance programs and help
 5 them enroll. For example, in 2021, the PGH2O Cares team increased enrollment by 20%.
 6 PWSA also increased staffing of its PGH2O Cares team in 2022 to perform additional
 7 outreach and enrollment. PWSA St. No. 6 at 36. As discussed above in response to
 8 recommendations by Mr. Colton and Mr. Geller, PWSA continues to work closely with
 9 the LIAAC to provide meaningful outreach to low-income customers and to enroll
 10 eligible customers in assistance programs. I would again reiterate that PWSA offers
 11 these assistance programs voluntarily in an effort to assist customers who may be
 12 struggling to afford their bills.

13 **Q. PLEASE DISCUSS THE NOTICE AND OUTREACH PWSA PERFORMED**
 14 **REGARDING THE PUBLIC INPUT HEARINGS.**

15 A. PWSA provided numerous notices regarding the public input hearings, and the hearings
 16 also received significant media attention.

- 17 • For the public input hearings held on July 25, and 27, 2023, notice was published
 18 in the Pittsburgh Post-Gazette on July 16, 2023, and an event listing was
 19 published on PWSA’s website. On July 18, 2023, PWSA issued a press release
 20 regarding the hearings, which was also posted to PWSA’s website, and
 21 information started being shared through the Authority’s social media channels.
 22 On July 20, 2023, PWSA sent a targeted newsletter to community groups that
 23 included information about the hearings. The hearings were promoted on
 24 PWSA’s Twitter and Facebook accounts, with 10 announcements shared via
 25 Twitter from July 18 through July 27, and four announcements shared via
 26 Facebook between July 18 through July 26. These posts included links to the
 27 press release.
- 28 • *Prior to the July hearings, there was media coverage by KDKA (radio, television*
 29 *and website), the Pittsburgh Post-Gazette, Next Pittsburgh, WTAE, and WPXI.*
 30 *Once the hearings were in progress, there was additional coverage by WPXI,*
 31 *KDKA (including radio and the Morning Show), WTAE, WPGH, and WESA.*

- 1 • For the public input hearings held on August 29, 2023, notice was published in
2 the Pittsburgh Post-Gazette on August 13, 2023. PWSA shared the Commission’s
3 press release on social media on August 9, 2023 and made additional social media
4 posts and published an event listing on its website on August 22, 2023.
5 Specifically, the hearings were promoted on PWSA’s Twitter and Facebook
6 accounts, with seven announcements posted to Twitter and four announcements
7 posted to Facebook.
- 8 • *Prior to* the August hearings, there was media coverage by WTAE, Next
9 Pittsburgh, the Pittsburgh Post-Gazette, and KDKA Radio.

10 As such, PWSA provided significant outreach regarding the public input hearings, which
11 also received substantial coverage by major news outlets. This advertisement was in
12 addition to any promotion performed by the Commission or other parties.

13 **Q. HOW DID PWSA ADDRESS OCA WITNESS TERRY FOUGHT’S CONCERNS**
14 **REGARDING PWSA’S RESPONSE TO CUSTOMERS WHO TESTIFIED**
15 **DURING THE PUBLIC INPUT HEARINGS?**

16 A. PWSA addressed issues raised by customers concerning service issues for their own
17 water/wastewater conveyance service in the following manner:

- 18 • State Representative La’Tasha D. Mayes described her office’s active
19 participation in the community that she serves during a Boil Water Advisory that
20 was issued in response to a break on a 20” water main on March 24, 2023.
21 **PWSA Response** PWSA provided water buffaloes at the following locations to
22 provide residents with clean water during the event:

23 Oranmore Street at Summerville Avenue
24 5330 North Aiken Court (The Commons Senior Living)
25 Stanton Avenue at Woodbine Street
26 Hawthorne Street at Amsterdam Avenue
27 Callowhill Street at N. Highland Avenue
28 Heberton Street at Hampton Street

29 The PGH2O Cares team connected with Ms. Mayes and her aide, Tawanda
30 Carlisle, following the hearing, to plan a customer assistance program enrollment
31 event in Ms. Mayes’ district.

- 32 • Richard Marini of 1901 Curranhill Avenue testified that, following PWSA sewer
33 work, his street became impassible due to the driveway being so low that it is not
34 usable.

35 **PWSA Response:** Both I and PWSA Deputy Director of Customer Service,
36 Brittany Schacht, spoke with Mr. Marini following the hearing. We pledged to

1
2
3
4
5
6
7
8
9
10
11
12

look into his complaint. Ms. Schacht and I then communicated with several members of PWSA’s Engineering department to investigate. This investigation led to a meeting between PWSA Customer Service, PWSA Engineering, the City of Pittsburgh Department of Mobility and Infrastructure (DOMI), and Mr. Marini on August 15, 2023. Representatives from DOMI also surveyed the site and Mr. Marini directed them to the problem area. Following this meeting, PWSA Engineering determined that the groundwater that had been present long after their work had been performed had since been mitigated/moved. They mobilized a restoration contractor who completed milling and paving at 1901 Curranhill Avenue on August 29, 2023. Mr. Marini expressed to the contractor that he was pleased with the work. The following are pictures of the site as provided by the contractor.

13

14

1 Lastly, PWSA Engineering added to their process for sites where paving
 2 restoration work cannot occur due to the presence of groundwater the
 3 commitment to regularly scout the location to see if conditions change.

- 4
- 5 • Phyllis Hankins of 644 Hollace Street expressed that PWSA field crews need to
 6 be more accountable for their actions, relating that work did not occur on the date
 7 that was posted on no parking signs and that, when crews did arrive, they stood
 8 around talking at length.

9 **PWSA Response:** I spoke in person with Ms. Hankins at the conclusion of the
 10 public input hearing where she provided her comments. She advised that there
 11 were no service issues at her residence and that the wall that she had referenced
 12 was on a neighbor’s property. I gave Ms. Hankins my business card and asked
 13 her to reach out to me directly if she has any concerns about future work on or
 14 around her property.

- 15 • Melissa McSwiggan spoke about the volumetric aspect of PWSA’s rate structure
 16 and the negative impact that it has on her monthly bill because their household
 17 usage is less than the minimum allowance associated with their meter size.

18 **PWSA Response:** As part of this rate case, PWSA has proposed a new rate
 19 structure that would, if approved by the Commission, remove the volumetric
 20 usage allowance. This would resolve Ms. McSwiggan’s complaint and that of
 21 similarly situated customers.

- 22 • Robert Rubenstein provided commentary on service outages and property
 23 restoration delays. Mr. Rubenstein did not provide the location of these alleged
 24 issues, so PWSA was unable to research them.

- 25 • Caroline West stated that she was speaking on behalf of the Apartment
 26 Association of Metropolitan Pittsburgh and expressed dissatisfaction with only
 27 being advised of the impact of the proposed rates on Residential customers.

28 **PWSA Response:** The following is the section of PWSA’s Notice of Proposed
 29 Rate Changes that was included in all customers’ bills for one month beginning
 30 on the rate request filing date of May 9, 2023:

The typical Commercial customer using 13,000 gallons per month with a 1-inch meter and generating stormwater runoff from 8 ERU's, the total bill would increase from \$356.54 to \$441.19 per month or by 23.7% in 2024, from \$441.19 to \$565.41 per month or by 28.2% in 2025, and from \$565.41 to \$668.24 per month or by 18.2% in 2026 as shown below:

Commercial	Current Rates	2024 Rates	2025 Rates	2026 Rates
Water	\$223.10	\$285.39	\$370.93	\$442.18
Wastewater Conveyance	\$69.84	\$73.72	\$94.48	\$109.10
Stormwater	\$63.60	\$82.08	\$100.00	\$116.96
Total	\$356.54	\$441.19	\$565.41	\$668.24

1 The Notice also provided information about how to contact PWSA to view the
 2 full rate filing or to obtain information about a specific customer class or how the
 3 proposal may impact a particular customer’s bill.

- 4 • Kim Williams testified regarding a high consumption issue she experienced.

5 **PWSA Response:** PWSA’s PUC Compliance Manager, Zachary Larimer,
 6 previously assisted Ms. Williams by investigating her high consumption dispute.
 7 PWSA Exhibit JAM-24 is the Utility Report that Mr. Larimer compiled, shared
 8 with the customer, and filed with the Commission’s Bureau of Consumer Services
 9 in April 2021.²⁰ Mr. Larimer made a sincere attempt to work with Ms. Williams
 10 to help her identify and address the high consumption she was experiencing at her
 11 property.

12 Additionally, I ran Ms. Williams’ address in PWSA’s work order and asset
 13 management system that was implemented on January 14, 2020; no water quality
 14 complaints were received and recorded for this address. Lastly, the PGH2O Cares
 15 team has worked with Ms. Williams to enroll her into the Bill Discount Program
 16 and has facilitated grants that were applied to Ms. Williams’ account.

17 **Q. ARE THERE ANY OTHER CUSTOMERS WHO WERE ASSISTED BY PWSA**
 18 **FOLLOWING THEIR PUBLIC COMMENTS?**

19 A. Yes. Following her public comments, the PGH2O Cares team assisted customer Patrice
 20 McNeely in person on the evening of July 25, 2023. Ms. McNeely is now enrolled in
 21 PWSA’s Bill Discount Program and Winter Moratorium so that she will receive a
 22 monthly bill discount and is protected from termination activities in the winter months.
 23 With a credit account balance, this customer does not have a current need for the
 24 Arrearage Forgiveness or Hardship Grant programs.

25 **Q. DO YOU HAVE OTHER AFTER-HEARING PWSA RESPONSES TO**
 26 **CUSTOMERS TO SHARE CONCERNING THE ADDITIONAL PUBLIC INPUT**
 27 **HEARINGS ON AUGUST 29, 2023?**

28 A. Yes; following the two additional Public Input Hearings on August 29, 2023, the PGH2O
 29 Cares team connected with customer Anita Penn to walk her through the Application for
 30 Service form. Once Ms. Penn completes the form, she can and will be vetted for

²⁰ Since Ms. Williams testified on the record at the public input hearing, this exhibits redacts only her account number, telephone number and email address.

1 eligibility for PWSA's low-income customer assistance programs. The PGH2O Cares
2 team also called and spoke with customer Dorothy Brooks. Based on her reported
3 income, Ms. Brooks did not qualify for the Bill Discount Program, Hardship Grant, or the
4 ALCOSAN Clean Water Assistance Fund; however, she was interested in the Lead Line
5 Replacement Reimbursement Program, so her application was forwarded to PWSA's
6 Lead Help team to confirm her service line material. Finally, Ms. Brooks' account was
7 coded for shut-off protection during the Winter Moratorium.

VIII. CONCLUSION

9 **Q. DOES THAT COMPLETE YOUR REBUTTAL TESTIMONY?**

10 A. Yes; however, I do reserve the right to supplement this testimony as may be appropriate.

Pa. PUC v. PWSA, R-2023-3039920; R-2023-3039921; R-2023-3039919; P-2023-3040678

14. Reference United St. 1 at 25. Would Mr. Geller prefer PWSA staffing resources to focus on (1) developing a Universal Service Plan to be submitted, reviewed and approved by the Commission or (2) customer outreach about its low income customer assistance programs? For purposes of this question, assume resources do not exist to do both.

RESPONSE:

Mr. Geller has based his recommendations toward PWSA meeting the essential elements of an appropriately funded comprehensive universal services program. The hypothetical presented poses an inappropriate choice to be made between (1) and (2) since these actions are each essential to administering a comprehensive suite of accessible, well-administered low income programs. As stated in Pittsburgh United St 1, Mr. Geller recommends that PWSA expand its capacity to submit a comprehensive Universal Service Plan, while conducting appropriate and necessary outreach related to PWSA's low income programming.

PWSA EXHIBIT JAM-19

CUSTOMER EXPERIENCE

Fact Sheet

< 1 Min

PWSA representatives answer customers' calls in less than one minute on average.

Callback Service

If wait times exceed two minutes, customers can opt to receive a call back instead of waiting on hold.

Customer Portal

The Customer Advantage Portal allows customers to view and pay bills, check water usage, set leak alerts, and start and stop service.

Outage Notifications

Customers can view real-time outage status by visiting pgh2o.com. PWSA also shares outage details via recorded hold messaging.

Weekly Call Evaluations

Customer Service Representatives receive weekly customer call evaluation and coaching sessions to ensure consistent excellent service.

Multi-Layered Team

Customers requesting to speak with a supervisor are transferred to a team lead. If the customer's issue is still unresolved, they are connected with PWSA Customer Service management.

After Call Surveys

Customers may score and provide detailed feedback about their PWSA call experience.

Text Updates

Customers are notified via text message when a PWSA Plumber is on the way to upgrade their water meter and when that work is complete.

Smart Email

50% of customer emails are processed via a machine learning tool, which results in expedited resolutions for our customers.

Ongoing Improvements

PWSA regularly surveys our customer base and applies the findings to consistently make service enhancements.

Transcription of After Call Customer Survey Voicemail
(August 1, 2023 – Unidentified Consumer)

Transcription:

I have been very, very happy with the service that I have received from PWSA. I rated a few things lower because I do not understand why it changes from month to month this much when we are not doing that much different. But, I would like to talk to somebody and I'm grateful that your people have – Lance is the last man I just talked with. I am grateful that we have had such wonder people and thank you for all the effort that you folks put forth to help the City of Pittsburgh residents with clean and safe water. And, and we, my husband and are I very, very grateful for all of your help and for the service that we receive from you folks.

Only the best and we'll talk to you soon.

You see my phone number 412-XXX-XXXX. Feel free to call me back if you wish.

Thank you.

PROJECT INTRODUCTION

1. BACKGROUND

General

The Pittsburgh Water and Sewer Authority (PWSA) currently serves 81,000 drinking water connections, 111,000 sewage service connections, and 5,000 stormwater-only properties. In addition, PWSA also provides bulk water sales to municipalities including Reserve Township, Fox Chapel Borough, and Aspinwall Borough, along with being interconnected to several other regional water systems. PWSA's drinking water system consists of five reservoirs, two water treatment plants, 11 pump stations, 11 tanks, and approximately 1,000 miles of water lines. In addition, PWSA's sewer system is comprised of four booster pumping stations and approximately 1,200 miles of sewer lines. PWSA has 400+ employees across six locations with the main headquarters located at 1200 Penn Avenue, Pittsburgh, PA, 15222.

Under the Compliance Plan, Stage 2 settlement as approved by the Pennsylvania Public Utility Commission (PA PUC), PWSA created a Collections Plan. PWSA queried other PA PUC regulated utilities to determine that most contract with one or multiple collection agencies to collect debt that remains unpaid following their application of all other collection tools. As such, PWSA is making this offering to prospective Bidders.

Through the formation of the PGH2O Cares team in February 2021, PWSA is actively offering its [suite of assistance programs](#) to customers. Responsive Bidders must exhibit a willingness to disengage from any aggressive or predatory collection behavior. Additionally, all Bidders must agree to warm transfer any confirmed low income customers to the PGH2O Cares team for assistance with addressing their unpaid service charges. PWSA will offer training to the selected bidder and any employee or individuals authorized to conduct collection activities on behalf of the selected bidder on protections afforded to its customers, and this training is described in the Scope of Services in Attachment 6.

2. PURPOSE

Through the issuance of this RFP, PWSA is seeking qualified firms that are financially and technically qualified to perform the scope of services as described herein. PWSA's goal in partnering with potentially more than one debt collector is to increase PWSA's monthly collection rate by 10%. The scope will include debt collection services for accounts with balances that are past due ≥ 180 days, representing individuals who are no longer customers of PWSA with 52 Pa. Code Chapter 56 protections, *and* meet one or more of the following criteria:

- inactive accounts where 1) PWSA has ceased to provide service, or 2) a previous customer has moved out and the debt is ≥ 90 days,
- inactive accounts that have been final billed and the charges on the final bill are past due ≥ 90 days, or

- accounts where water service is shut at the curb stop.

Also, responsive firms must adhere to the training that PWSA provides to consistently ensure the protections that are afforded to customers with unpaid charges as required under 52 Pa. Code Chapter 56 and DSLPA 66 Pa.C.S. Ch. 15 Subch. B. Additionally, once a customer is determined to be eligible for a medical, PFA, or are confirmed low income, they must be warm transferred to PWSA Customer Service personnel at 412-255-2423 and choose Option #5.

3. CONTRACT TERM

The term of this Agreement shall commence upon the Authority's issuance of a Notice to Proceed and shall continue for two years. Time is of the essence of this Agreement. Thereafter, this Agreement shall not renew, unless agreed upon in writing between the Parties. In the event that the Parties elect to renew the Agreement, the Contract may be extended for three additional one-year Term(s), or any portion thereof, if mutually agreed upon by the Parties in writing. For such renewal Term(s), Consultant agrees that pricing for option renewals shall be submitted to the Authority's Contract Administrator at least 60 days prior to the most current term renewal and shall not exceed 3% annually.

SOLICITATION SCHEDULE

4. SCHEDULE

Task	Date
Advertisement of RFP	08/06/23, 08/10/23
Preproposal Meeting	08/17/23
Deadline for Questions	08/24/23
Proposals Due	09/07/23
Project Award	09/2023

5. PRE-PROPOSAL MEETING

All Bidders interested in submitting a proposal in response to this solicitation are required to attend a Mandatory Pre-Proposal Meeting, to be held on August 17, 2023, at 1:00 p.m. EST via a Microsoft Teams meeting. Meeting information will be provided via the Bonfire Procurement Tool. The purpose of this meeting is to give an overview of the contract requirements and to allow Bidders to ask questions.

6. INQUIRIES

This RFP will be administered by Susan Kemery, Sr. Contract Specialist. All questions pertaining to this RFP prior to selection shall be submitted via the Bonfire Procurement Portal. Questions are due no later than 4:00 p.m. EST on August 24, 2023.

All communication of any nature with respect to this RFP shall be addressed to Susan Kemery, Sr. Contract Specialist. Prospective firms and their staffs are prohibited from

communicating with City and Authority officials, staff, and any Selection Committee member as well as members of City Council and Authority Board of Directors regarding this RFP or submittals. Such contact is prohibited from the time the RFP was released until the selection results are publicly announced. Violation of this provision may lead to disqualification of the firm's submittal for consideration.

7. PRESENTATIONS

PWSA reserves the right to shortlist any number of qualified Firms. The Selection Committee will notify the shortlisted Bidders via e-mail and/or phone in advance to allow time to arrange travel.

Shortlisted Firms may be invited to provide a brief in-person presentation or webinar. The shortlisted Firms will be asked to make formal presentation of their Proposals and respond to questions from the Selection Committee. All costs incurred by the Firm during the presentation shall be the responsibility of the Firm. Following the presentations or webinars, the Selection Committee will make the final selection.

8. NEGOTIATIONS

At the request of PWSA, the Bidder may be required to meet to review the scope of services. The meeting may include review and discussion of:

- Examples of similar work;
- Standards, specifications, manuals, and other practices to be used;
- Policies used by the Authority for the type of work involved;
- A contract in draft form;
- Methods of payment;
- Procedures for invoicing;
- Standard forms to be used;
- Fiscal requirements; and
- Items and/or services to be provided by PWSA.

Where appropriate, the Bidder will prepare a revised cost proposal for performing the required services. The Bidder's original or revised cost proposal shall be supported by a breakdown of the estimated workdays required to perform each of the services contained in the scope of work and the salary range for each of the classifications of personnel to be utilized. The Bidder's original or revised cost proposal must include supporting documentation for payroll additives, direct costs, indirect costs, fixed fee, and overhead. The Designated Chairperson may request further discussion and negotiation to determine the reasonableness of the firm's cost proposal.

9. PROPOSAL WITHDRAWAL OR MODIFICATION

A Bidder Respondent may withdraw or modify its proposal at any time prior to the due date as provided in this RFP, at which time proposals will be considered firm and become the property of the Authority.

10. PUBLIC INFORMATION

Respondent, by submittal of a proposal, acknowledges that all proposals may be considered public information in accordance with the Commonwealth of Pennsylvania Right to Know laws. Subject to award of this RFP, all or part of any submittal may be released to any person or organization who may request it. Therefore, Bidder shall specify in their Cover Letter if any portion of their submittal should be treated as proprietary and not releasable as public information. Respondents should be aware that all such requests may be subject to legal review and challenge. All information considered proprietary should be clearly indicated as such or not included in the response.

ATTACHMENTS

11. SCOPE OF SERVICES

The Bidder shall do all the work and furnish all supervision, labor, materials, equipment, tools, and appurtenances necessary or proper for the performance and completion of the Scope of Services described in Attachment 6.

12. ATTACHMENTS

The following attachments are included as part of this request for proposals. All Bidders must review all attachments and complete where appropriate.

Attachment 1: Professional Service Agreement
Attachment 2: Affidavit under Pittsburgh Code §161.22 (f)
Attachment 3: Supplier Diversity Program and Documents
Attachment 4: Addenda Acknowledgement Form
Attachment 5: Reference Form
Attachment 6: Scope of Services

REQUIREMENTS

13. MANDATORY MINIMUM REQUIREMENTS

Each Firm shall meet the mandatory minimum requirements. Failure to meet these requirements will cause the Firm's Proposal to be deemed non-responsive and will not be considered for award:

- Demonstrate debt service collection experience for other utilities that are also regulated by the Pennsylvania Public Utility Commission.
- Provide a list of staff, including any staff of independent contractors working for Bidder, who would be trained by PWSA.
- Share a plan to regularly monitor staff to ensure non-aggressive collection behaviors.

14. SUPPLIER DIVERSITY PROGRAM

Minority Business Enterprise (MBE), Women Business Enterprise (WBE), Small Business Enterprises (SBE), Veteran Business Enterprise (VBE) (this includes Service Disabled-Veteran Business Enterprises (SDVBE)), Disability-Owned Business Enterprise (DOBE), and LGBT Business Enterprise (LGBTBE) participation is requested in all PWSA contracts.

The PWSA requires that all Bidders demonstrate a good faith effort to obtain the participation of MBEs, WBEs, SBEs, VBEs, DOBEs, LGBTBEs in all work to be performed under PWSA contracts. Such participation may be demonstrated by utilization of MBE/WBE/SBE/VBE/DOBE/LGBTBE firms through the use of subcontracts with such firms in support services, supplies, etc. For many of the services, supplies and equipment for which the PWSA contracts, the PWSA recognizes that the current business pool does not include percentages of minorities, women, veterans, or service-disabled veterans. The PWSA, however, wishes to encourage MBE/WBE/SBE/VBE/DOBE/LGBTBE participation in all business pools.

It is therefore the current goal of the PWSA to encourage increased MBE, WBE, SBE, VBE, DOBE, LGBTBE participation in all business pools. The PWSA's current supplier diversity goal is between ten percent (10%) and twenty-five percent (25%). The PWSA intends to monitor the progress closely, including revising the practices and procedures from time to time as conditions warrant.

- a. The dollar amount of the contract paid to MBEs along with the names and addresses of those MBEs.
- b. The dollar amount of the contract paid to WBEs along with the names and addresses of those WBEs.
- c. The dollar amount of the contract paid to SBEs along with the names and addresses of those SBEs.
- d. The dollar amount of the contract paid to VBE'S along with the names and addresses of those VBE'S.
- e. The dollar amount of the contract paid to DOBE'S along with the names and addresses of those DOBE'S.
- f. The dollar amount of the contract paid to LGBTBE'S along with the names and addresses of those LGBTBE'S.
- g. An explanation of any failure to achieve the goals represented prior to award of the contract.

This Section does not convey a requirement to meet MBE, WBE, SBE, VBE, DOBE, LGBTBE goals and final payment to Vendor shall not be withheld if the PWSA's goal is not achieved, unless Vendor fails to provide an explanation as to why the goals were not met.

15. NON-DISCRIMINATORY PRACTICES AND POLICIES

Bidder shall not discriminate in its employment on the basis of race, color, religion, ancestry, national origin, place of birth, sex, age, disability, non-job-related handicap or sexual orientation. Bidder shall comply with the applicable provisions of the Pittsburgh Code, Title Six - Conduct, Article V - Discrimination, and any amendments thereto. Bidder shall also comply with the applicable provisions of Title I and Title II of the Americans with Disabilities Act, any amendments thereto and any regulations issued thereunder. Bidder shall incorporate in any subcontracts which may be permitted under the terms of this Agreement a requirement that said subcontractors also comply with the provisions of this Section.

Prior to the award, the Authority reserves the right to direct Bidder to submit a statement signed by an authorized officer or agent of any labor union or any agency referring workers or providing or supervising apprenticeship or other training, with which the Bidder deals, with supporting information to the effect that the signer's practices and policies do not discriminate on the grounds of race, sex, color, religion, ancestry, national origin or place of birth. In this statement the signer either will agree to cooperate affirmatively in the implementation of the policy and provisions of the Agreement and the MBE/WBE/VBE/SDVBE Solicitation and Commitment Statement or will agree that recruitment, employment, and the terms and conditions of employment under the Agreement shall be in accordance with the purposes and provisions of the Agreement. In the event that the union, or agency, shall refuse to execute such a statement, the Bidder shall so certify and set forth what efforts have been made to secure such a statement and such additional factual material as the Authority may require.

16. STATEMENT OF AFFILIATION

Successful Bidders must provide PWSA with a statement of affiliation. The statement of affiliation shall include:

- A. a description of the Bidder's qualifications and experience;
- B. a description of any contractual or business relationship with the City of Pittsburgh or PWSA within the past three years; and
- C. an identification of the Bidder's principals, owners, partners or shareholders, or if the Bidder is a public corporation, the officers, members of the board of directors and shareholders holding more than three percent of the corporate stock.

17. EXCLUDE SALES TAX

In computing Proposals, the Bidder shall not include amounts for Pennsylvania Sales or Use Tax on materials and equipment to be incorporated in facilities used directly in rendering public utility service pursuant to 61 PA Code § 31.11 – 31.16. The Bidder

shall ascertain in advance whether such exemption is available, and the Bidder shall, in compliance with such regulation, furnish the supplier with an exemption certificate properly endorsed by PWSA.

The Bidder shall supply PWSA with a statement that Pennsylvania Sales or Use Tax on materials and equipment to be incorporated in facilities used directly in rendering public utility service has not been included in the computation of the proposal.

18. AFFIDAVIT UNDER PITTSBURGH CODE §161.22 (f)

The Bidder will also be required to submit an executed Affidavit of Consultant as required by Pittsburgh Code §161.22(f) which will state, under penalty of perjury, that neither they nor their company, corporation, partnership, or any affiliated individual is prohibited from entering a bid or participating in a City of Pittsburgh or a PWSA contract by reason of debarment or disqualification as defined by Pittsburgh Code §161.22(b). the firm shall be deemed to have represented and warranted that the Proposal is not made in connection with any competing firm submitting a separate response to this RFP and is in all respects fair and without collusion or fraud. Furthermore, the firm certifies that neither it, any of its affiliates or subconsultants, nor any employees of any of the foregoing has bribed or lobbied, or attempted to bribe or lobby, an officer or employee of the City in connection with this RFQ.

19. PROJECT SCHEDULE

The following table provides a list of major milestones that need to be met in order to meet PWSA's need for this project. If the Bidder takes exception to any of these deadlines, Bidder must include any explanation as described in the proposal contents included in this proposal.

Milestone	Date
Launch debt collection services.	Within 30 days of signed agreement
Provide monthly collection activity reports.	On the first business day of each month

PROPOSAL FORMAT AND SUBMITTAL REQUIREMENTS

20. PROPOSAL COMPONENTS

Each response to this RFP shall include all sections described below and, in the order, listed. Failure to include all of the elements specified may be cause for rejection. While there is no page limit, proposals should be succinct and relevant to the scope of work.

A. Cover Letter: The Cover Letter must contain all of the following information

- 1) RFP Title
- 2) Offering firm's legal name, address, and telephone number
- 3) Contact person's name, address, telephone number, and email address

- 4) Confirmation that contact person can legally bind firm to agreements and commit the Bidder to the obligations outlined in this RFP

B. Table of Contents: Each proposal must include a table of contents that clearly indicates the location of the major sections of the proposal.

C. Firm Qualifications & References

- 1) Please provide an overview of your firm's qualifications and experience.
- 2) Three references for projects of similar scope. References must include a brief description of the project and outcome, a contact person along with their address, phone number, and email address. References must be provided using the Reference Form included with this RFP.

D. Project Team

- 1) Identify the primary team members and their roles in the project in an organizational chart.
- 2) Provide each person's name, title, summarized qualifications and related experience, and their resume.

E. Project Approach and Scope of Work: Detail the firm's approach to the Scope of Work attached to this RFP. Highlight alternative solutions, innovations, new technologies, or potential cost savings.

F. Required Statements: Bidder must prepare a Statement of Affiliation as described in this RFP. Bidder must also submit the following completed attachments included with this RFP.

- 1) Affidavit under Pittsburgh Code §161.22 (f)
- 2) Supplier Diversity Program Commitment Form
- 3) Addenda Acknowledgement Form

G. Exceptions: Should Bidder have any exceptions to the sample agreement included with this RFP, Bidder must include them with this proposal.

H. Timeline: Prepare a project timeline that reflects the project schedule described in this RFP and includes all meetings, major deliverables, and milestones. If Bidder believes there is a need for any changes to the project schedule, please explain why such changes are necessary.

I. Schedule of Prices: Please provide your pricing proposal per our "Required Documents" field in the Bonfire procurement tool.

21. REIMBURSABLE PROJECT EXPENSES

The Authority will reimburse for the following, documented expense charges during the course of the project: (a) photocopying at a cost up to a maximum of ten cents per page; (b) reasonable postage; (c) reasonable travel expense, including airline transportation not to exceed coach fares; (d) actual meal allowance not to exceed \$50.00 per day; (e) reasonable rental care expense; (f) reasonable hotel expense; (g) mileage for roundtrips greater than 50 miles; (h) parking expense; and (i) messenger delivery and air freight/courier expense. For all such charges, the Consultant shall provide documentation of the actual expense incurred as part of the invoice(s) submitted to the Authority. In the event that the Consultant does not submit such documentation, the Authority reserves the right to reject the charges set forth in the invoice(s).

22. PROPOSAL EVALUATION

This Contract will be awarded to the highest ranked Bidder, based on the evaluation criteria described herein.

Criteria	Points
Firm Qualifications & References	15
Project Team*	30
Project Approach and Scope of Work	30
Timeline	5
Schedule of Prices	10
Supplier Diversity Program - Participation Plan	10
Total	100

**Firms with a project manager/team located in Pittsburgh are given preference*

23. PROPOSAL SUBMISSION

Proposals will be received electronically via the Bonfire Procurement Portal. Proposals shall not be accepted in person, by U.S. Mail, by private courier service, via oral or e-mail communication, telephone or fax transmission.

Proposals must be submitted in the format described in this RFP. To be considered, the proposal must respond to all requirements in the RFP. The contents of this RFP and your proposal shall become part of any contract(s) entered into as a result of this RFP.

Submission of a Proposal indicates acceptance of the conditions in this RFP. Exceptions and assumptions shall be noted. The PWSA will not reimburse any expenses associated with this proposal. All proposals will become property of the PWSA and will remain firm and effective for 90 days from the closing date of this RFP. PWSA reserves the right to reject any or all Proposals, waive technicalities, and to be the sole judge of the suitability of the proposed services for its intended use and further specifically reserves the right to make the award of this Contract in the best interest of PWSA. Provisions of this RFP and the contents of the successful Proposals are considered available for inclusion in final contractual obligations. Prices quoted in the Proposal shall be firm for the duration of this Contract.

The Authority reserves the right to request additional information which, in the Authority's opinion, is necessary to assure that the proposer's competence, business organization, and financial resources are adequate to perform in accordance with this RFP and any resultant contract.

The Authority may make such investigation as it sees fit to determine the ability of the proposer to perform the work, and the proposer shall furnish the Authority all such information and data for this purpose as requested by the Authority. The Authority reserves the right to reject any proposal if the evidence submitted by, or investigation

of, such proposer fails to satisfy the Authority that such proposer is properly qualified to carry out the obligations of the contract and to satisfactorily perform the work specified.

When asked, proposers shall also include their answers to the questions listed in this RFP using the same answering sequence as put forth in the RFP.

The Authority reserves the right to extend or postpone the date and time for accepting proposals through an addendum.

Issuance of this RFP does not constitute a commitment by The PWSA to award a contract. The opening of a proposal does not constitute the Authority's acceptance of the Bidder as a responsive and responsible Bidder. The PWSA reserves the right to reject any or all proposals received in response to this RFP, or to cancel this RFP if it is in the best interests of the Authority.

All proposals, responses, inquiries, or correspondence relating to or in reference to this RFP, and all electronic media, reports, charts, and other documentation submitted by supplier shall become the property of the Authority when received.

24. PWSA'S RESPONSIBILITIES

It is PWSA's responsibility to:

- A. Ensure appropriate PWSA representation to perform assigned activities, attend meetings, and answer questions;
- B. Ensure that decisions are made in a timely manner;
- C. Designate a Project Manager; and
- D. Provide access to all necessary information to successfully complete the project.
- E. Provide training to Bidder and their staff in the form of an interactive session where PowerPoint slides are shared and the following are explained: 1) the protections that are afforded to customers with unpaid charges as required under 52 Pa. Code Chapter 56, and 2) the procedures that must be followed under DSLPA 66 Pa.C.S. Ch. 15 Subch. B for situations during debt collection when a previously unidentified tenant is reached on a terminated/inactive landlord account.
- F. Provide multiple Collections personnel as points of contact empowered to assist the Bidder and their staff when questions arise that are not addressed in PWSA's training.
- G. Evaluate two, randomly selected recorded calls of conversations between PWSA customers and the Vendor's employee and/or independent contractor working PWSA's account, both weekly and ad hoc, for quality assurance purposes.

CONTRACT AWARD

25. CONDITIONS OF AWARD

The performance of this Contract shall be governed solely by the terms and conditions as set forth in the executed Contract.

26. NOTICE OF AWARD

The successful Bidder(s) will be notified by letter, giving Notice of Award, of PWSA's acceptance of their Proposal.

27. DEBRIEFING OF UNSUCCESSFUL BIDDERS

Upon written request made within 30 calendar days after Contract Award, the Procurement Department shall debrief any unsuccessful Bidder on PWSA's evaluation of his/her proposal, citing the deficiencies and weaknesses. Point-by-point comparisons with the proposals of others will not be made. Debriefings will not include discussions of information contained in other Bidders' proposals.

28. NO CONTRACT WILL BE AWARDED TO PERSONS IN ARREARS TO PWSA

The Contract will not be awarded to any corporation, firm or individual who is, from any cause, in arrears to PWSA.

29. NOTICE TO PROCEED

Upon execution of the Agreement by PWSA and the Bidder, PWSA shall issue Notice to Proceed to the Bidder. The successful Bidder shall not begin any work on this Contract until such time as a Notice to Proceed has been issued by PWSA.

CONTRACT REQUIREMENTS

30. AGREEMENT

Firms shall review and confirm its acceptance of the Professional Services Agreement attached to this solicitation. If a Bidder is unable to agree to any of the terms or conditions of the PSA in the form attached hereto, the Bidder must identify the provisions in question with their proposal and provide an explanation as to why the Bidder cannot comply with such provisions. The final executed Agreement will be mutually agreed upon by PWSA and the Consultant. PWSA reserves the right to renegotiate services deemed necessary to meet the needs of the program according to PWSA's priorities and goals. Renegotiated services outside the scope of the original contract shall require contract amendment prior to commencement of work.

31. INSURANCE REQUIREMENTS

Prior to the beginning of any Services under this Agreement, Consultant shall deliver to the Authority certificates of insurance evidencing the following minimum coverages:

- A. Workers compensation insurance at statutory limits and employer's liability insurance with limits of one million (\$1,000,000.00) dollars. Consultant will have attached to its policy an alternate employer endorsement naming the Authority and will provide a waiver of subrogation in favor of the Authority.
- B. Commercial general liability insurance with limits of one million (\$1,000,000.00) dollars each occurrence and two million (\$2,000,000.00) dollars in the aggregate and containing or endorsed to contain the following coverages: contractual liability; broad form property damage; personal/advertising injury; an endorsement including the Authority as an additional insured and containing no special limitation on the scope of protection afforded the additional insured; waiver of subrogation to the benefit of all additional insureds; no explosion, collapse or underground exclusion; and, for any claims related to the Services, provision that Consultant's insurance shall be primary and non-contributory and any insurance or self-insurance maintained by the Authority shall be excess of Consultant's insurance and not contribute with it.
- C. Automobile liability insurance with limits of one million (\$1,000,000.00) dollars per occurrence and in the aggregate for bodily injury and property damage. Such automobile liability insurance shall cover all owned automobiles as well as non-owned automobiles operated by Consultant. The policy shall be endorsed to include the Authority as an additional insured and to include waiver of subrogation to the benefit of additional insureds.
- D. Professional liability insurance with limits of one million (\$1,000,000.00) dollars per claim or occurrence and annual aggregate. The policy shall be endorsed to include a waiver of subrogation to the benefit of the Authority. If coverage is on a claims-made form, Consultant shall maintain continuous coverage or shall exercise an extended discovery period for at least two (2) years following the expiration or other termination of this Agreement.

Except where stated otherwise above, the policies or coverages required by this Section shall be maintained during the term of this Agreement. All insurance coverages must be placed with insurance carriers having an AM Best rating of A- or higher rating. Each required policy shall be endorsed to state that coverage shall not be suspended, voided, cancelled, reduced, or limits or certificate holder be deleted as an additional insured except after thirty (30) days' prior written notice, by certified mail, return-receipt requested, has been given to the Authority.

All deductibles and self-insured retentions under policies required by this Section 9 shall be the responsibility of Consultant. The failure of the Authority to pursue or obtain any certificate of insurance or endorsement or to point out any non-compliance of any certificate of insurance or endorsement shall not constitute a waiver of any of the insurance requirements of this Agreement or relieve Consultant of any of its obligations hereunder. Self-funded or other non-risk transfer insurance mechanisms are not acceptable to the Authority. If Consultant has such a program, full disclosure must be made to the Authority prior to any consideration being given. These insurance provisions are intended to be a separate and distinct obligation on the part of

Consultant. The Authority's acceptance of insurance submitted by Consultant does not relieve or decrease in any way the liability of Consultant for performance under this Agreement.

32. INDEMNIFICATION

To the fullest extent permitted by law, Consultant shall indemnify, defend, and hold harmless the Authority, its officers, agents and employees, from and against liens, charges, claims, penalties, damages, demands, judgments, liabilities, losses and expenses for bodily injury, personal injury or loss, death or damage or destruction to property (real or personal and regardless of ownership), or the loss of use thereof, caused or allegedly caused by or arising from the performance of Consultant under this Agreement, but only to the extent caused or allegedly caused in part by the negligent acts or omissions of Consultant, its employees, agents or persons for whose acts Consultant may be liable.

To the fullest extent permitted by law, Consultant shall defend, indemnify and hold harmless the Authority, its officers, agents and employees, from and against claims and damages arising out of or resulting from the performance of the professional services of Consultant under this Agreement, but only to the extent caused in whole or in part by the negligent acts or omissions of Consultant, its employees, agents or persons for whose acts Consultant may be liable.

To the fullest extent permitted by law, Consultant shall indemnify, save and hold harmless, and defend the Authority, its officers, agents and employees from all liens, charges, claims, demands, losses, costs, judgments, liabilities and damages of every kind and nature whatsoever, including, but not limited to, court costs and attorney's fees arising from or based upon any violation by Consultant of any applicable laws, regulations, ordinances or codes.

Consultant shall defend, indemnify and hold harmless the Authority, together with its managers, officers, agents, employees and affiliates, from and against any loss, liability, claim, damage (including incidental and consequential damages), expense (including costs of investigation, defense and attorneys' fees) or diminution of value, whether or not involving a third party claim, arising, directly or indirectly, from or in connection with Consultant's infringement on any intellectual property rights of any third party.

The defense and indemnification obligations accepted by Consultant under this Section 10 shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by Consultant, or by Consultant's subcontractors or permitted assigns, pursuant to any applicable workers' compensation statute or disability benefit statute or any other employee benefit law, rule or regulation.

33. COMPLIANCE WITH ALL LAWS

Consultant shall fully obey and comply with all laws, ordinances and administrative regulations made in accordance therewith, which are or shall become applicable to the Services performed under the terms of the Agreement.

34. INDEPENDENT CONSULTANT

The Consultant is and will remain at all times an independent Consultant, and no provision of this Contract is intended to create any relationship of employment, joint venture, partnership, or agency between the Consultant and PWSA. The Consultant will have no authority to bind PWSA in any respect or otherwise execute any documents on behalf of PWSA pursuant to this Contract. The Consultant shall not be eligible to participate in any benefit plans, programs or arrangements made available to employees of PWSA.

35. SUBCONTRACTING AND ASSIGNMENT

None of the Services provided shall be subcontracted or assigned without the prior written approval of the Authority. Such approval or consent will not relieve Consultant of its obligations and Consultant shall remain responsible for any assigned and/or subcontracted obligations. The Authority reserves the right to object and require the replacement of any subconsultant who is hired or retained without the Authority's prior written consent. For any subcontracted Services agreed upon by the Authority in writing, such subcontractor shall be entirely and exclusively under the direction, supervision and control of Consultant.

36. CONFIDENTIALITY

Consultant will not release any information related to the Services or publish any reports or documents related to the Services without the prior written consent of the Authority, which may be withheld or conditioned as deemed appropriate by the Authority in its sole discretion.

Consultant will not, either during or after performance of the Services, except as required in the performance of the Services or with the prior written consent of the Authority, communicate or divulge to, or use for the benefit of Consultant or any other person, firm, association, or corporation, any confidential or proprietary information of the Authority, including but not limited to the project deliverables and other data reviewed or developed during the performance of the Services.

Any information of a restricted nature provided by Consultant by the Authority's Project Manager or his or her designee during the term of this Agreement shall be handled in accordance with restrictions placed thereon by the Project Manager. Information or documents, written or electronic, given to or generated by Consultant during the term of this Agreement shall be considered restricted information and subject to dissemination restrictions as specified herein or by the Project Manager.

37. OWNERSHIP RIGHTS

All Data developed or created pursuant to this Agreement shall be the property of the Authority and the Authority shall have the full right to use such Data for any official purpose and in whatever manner deemed desirable and appropriate, including making it available to the general public. Such use shall be without any additional payment to or approval by Consultant. The Authority shall have unrestricted authority to publish, disclose, distribute and otherwise use, in whole or in part, any Data developed or prepared under the Agreement. However, any reuse of such Data by the Authority on any other project shall be at the sole risk of the Authority.

Consultant hereby relinquishes, or shall cause to be relinquished, any and all copyrights and/or privileges to Data developed or prepared under the Agreement without any additional payment to Consultant therefor. However, Consultant may use copies of Consultant's work products prepared pursuant to this project as part of its record of professional activity. Consultant shall not include in the Data any copyrighted matter unless Consultant obtains the written approval of the Project Manager of the Authority and provides said Project Manager with written permission of the copyright owner for Consultant to use such copyrighted matter in the manner provided herein.

Unless expressly permitted in writing, no Data developed or prepared, in whole or in part, under the Agreement shall be subject to a third party's copyright in the United States of America or in any other country. Further, unless expressly permitted in writing, Consultant, in rendering the Services, represents and warrants that it shall not infringe any intellectual property, brand identity, invention, discovery, development, improvement, innovation or trade secret rights of any third party.

38. PAYMENT

Consultant shall submit, on a monthly basis, properly detailed report(s) setting forth an itemization of the amounts collected from PWSA customers and the amount withheld by the Consultant for full payment of their services to collect those debts.

39. SETTLEMENT OF DISPUTES OR CONTROVERSIES

Should any dispute or controversy whatsoever arise between Consultant and the Authority with respect to the executed Agreement or any Services performed by Consultant or its subconsultants or permitted assigns pursuant to the Agreement, then the complaining party shall give the other party thirty (30) days' written notice of the complaining party's intent to resort to legal action. If Consultant chooses to pursue legal action against the Authority, it must commence such legal action within one (1) year of the accrual of any such alleged claim. In the event that Consultant brings and/or files a lawsuit against the Authority, and does not recover the entire amount sought and/or alleged in its lawsuit against the Authority, Consultant shall compensate the Authority for any and all attorneys' fees and costs incurred by the Authority to defend itself against the Consultant's lawsuit.

40. TERMINATION

Consultant shall have seven (7) days to cure an Event of Default. Should Consultant fail to remedy the Event of Default to the satisfaction of the Authority, the Authority shall have the right:

- A. to remedy the deficiency and deduct the cost thereof from any payment then or thereafter due to Consultant; and/or
- B. to terminate the Agreement and to complete the Services by whatever method the Authority deems expedient; and
- C. to pursue any other remedy available at law or equity

Upon receipt of a termination notice from the Authority, Consultant shall:

- A. stop the performance of all Services, except as may be necessary to carry out the termination;
- B. either terminate or assign to the Authority, as the Authority may direct, any subcontracts or other contracts or purchase orders entered into by Consultant in performing the Services under this Agreement;
- C. deliver to the Authority all documents prepared as part of the Services; and
- D. take such other action toward termination of the Services as the Authority may reasonably direct.

The Authority shall have the right to terminate this Agreement for its convenience upon ten (10) days written notice to Consultant whenever the Authority determines such termination to be in its own best interest. Upon its receipt of notice of a termination for convenience, Consultant shall cease operations as directed by the Authority and shall take all actions as directed by the Authority for the preservation or protection of any of the products of the Services.

Upon a termination for the Authority's convenience, the Authority shall pay Consultant for all Services satisfactorily completed through the date of termination, less the sums Consultant shall have already been paid on account of the Services performed. The Authority shall not pay Consultant, and Consultant shall not be entitled to payment, for any Services not performed or for any anticipated profit for such non-completed Services.

41. AUDIT

At any time up to three years after the day of final payment, Consultant will provide the Authority with access to its records related, in any way, to the Program and/or this Agreement for inspection and audit.

42. DISSEMINATION OF INFORMATION

Consultant agrees to not release any information related to the Services or the performance of Services, nor publish any reports or documents related to the Services with the prior written consent of the Authority. Consultant agrees to hold all materials and information belonging to the Authority or the Authority's agents in the strictest confidence and not to make use thereof other than for the performance of its contractual obligations, to release it or to disclosure it to any other entity and/or

individual. Any information of a restricted nature provided to Consultant by the Authority in the course of the Services shall be handled in accordance with the restrictions placed thereon by the Authority. Information or documents given to or generated by Consultant in the course of the Services shall be considered restricted information and subject to handling and dissemination restrictions as specified herein and/or as specified by the Authority.

Attachment 6: Scope of Services

It is the intent of PWSA to establish a contract with multiple Vendors to provide debt collection services of unpaid water, wastewater, and stormwater charges. The Vendors shall provide all labor, software, and staff necessary to complete the scope of work as required below.

PWSA will issue monthly files to Vendors containing the customer's name, service address, mailing address, telephone number(s) when available, account number and past due balances. PWSA will simultaneously mail a letter to the customer advising them that their account has been turned over to a collection agency. Said letter will include the customer's name, mailing address, service address, account number, the amount due on their account, the collection agency's contact information, as well as language similar to that of PWSA termination notices regarding medicals, PFA's, and confirmed low income, advising affected customers to call PWSA directly. PWSA will also insert the customer assistance program and domestic violence victims flyers with these mailings.

The PWSA file will contain accounts with balances that are past due ≥ 180 days, representing individuals who are no longer customers of PWSA with 52 Pa. Code Chapter 56 protections, *and* meet one or more of the following criteria:

- inactive accounts where 1) PWSA has ceased to provide service, or 2) a previous customer has moved out and the debt is ≥ 90 days,
- inactive accounts that have been final billed and the charges on the final bill are past due ≥ 90 days, or
- accounts where water service is shut at the curb stop.

Responsive Vendors must demonstrate that their collection methods regarding this PWSA data will include outbound telephone, mail, and email contacts *only*. Additionally, PWSA will provide a separate file of 1) landlord accounts where PWSA is accepting tenant payments of current charges only, and 2) accounts scheduled for termination and all regulated notices were mailed/posted by PWSA; however, a curb stop is unable to be located and/or operated, thereby eliminating the option to shut the service at the curb, for responsive Vendors to perform skip tracing and deliver viable leads to PWSA for collection. PWSA will also issue a daily balance file to Vendors so that customer account balances are consistently updated.

Responsive Vendors must have the ability to provide daily payment files to PWSA with any amounts they collect from customers. Said files must contain the customer's name, service address, account number and payment amount along with a check and a spreadsheet that can be utilized to disburse individual payments to customer accounts.

Vendors must make themselves available at any time during normal working hours to respond to PWSA's questions concerning the content of any delivered file.

Responsive Vendors must have the capability of live call translation, and translation of any printed materials, into the following languages previously identified to be used by PWSA customers in addition to English; they are, Spanish, Tigrinya, Mandarin, Ukrainian, Russian, Swahili, Arabic, Dari, and Pashto.

PWSA will provide training to the chosen Vendor, and any employee or individuals authorized to conduct collection activities on behalf of the Vendor, in the form of an interactive session where PowerPoint slides are shared and the following are explained: 1) the protections that are afforded to customers with unpaid charges as required under 52 Pa. Code Chapter 56, and 2) the procedures that must be followed under DSLPA 66 Pa.C.S. Ch. 15 Subch. B for situations during debt collection when a previously unidentified tenant is reached on a terminated/inactive landlord account. Said training will be provided prior to the launch of any debt collection services, will be updated to communicate any changes in the regulations, and will be provided to the chosen Vendor for use in retraining their staff and in training newly hired employees and/or independent contractors. Additionally, responsive Vendors agree to add to their scripting questions that PWSA will provide to be asked by the Vendor in every collection call, mailing, or email interaction to determine if the individual resides in a property that is serviced by PWSA, is eligible for a medical, has a PFA or other court order that is indicative of domestic violence, or are confirmed low income. Said scripting will include the directive that such individuals must be warm transferred to PWSA Customer Service personnel by calling 412-255-2423 and choosing Option #5.

Responsive Vendors must have access to the Allegheny County Department of Court Records portal to identify when a property has a water/sewer lien and must refer customers to contact PWSA directly with any questions, or to satisfy, liens filed by PWSA.

Responsive Vendors must also record all telephone interactions with PWSA customers, make available said recordings for up to one year following the termination of the agreement between the chosen Vendor and PWSA, and provide said recordings to PWSA Customer Service management according to the below schedule *and* upon request by PWSA for quality assurance purposes.

- The Vendor will provide PWSA with their telephone scripting for review and will accept and incorporate constructive feedback in advance of debt collection on behalf of PWSA.
- Two, random, recorded calls of conversations between PWSA customers and each Vendor employee working PWSA's account will be evaluated weekly by PWSA Collections management to ensure PWSA-approved

telephone presence, non-aggressive collection tactics, and customer comfortability with the Vendor's approach are maintained.

- Vendor employees and/or independent contractors failing to deliver in any of the above listed areas will receive retraining from the Vendor with documentation of same to PWSA. Failure to improve by the next weekly PWSA call evaluation will result in the Vendor removing the employee from PWSA's account.

Lastly, Vendors must warm transfer customers requesting to schedule a restoration of their water service to PWSA Customer Service personnel by calling 412-255-2423 and choosing Option #5.

PWSA EXHIBIT JAM-24

UTILITY REPORT

Customer Name: Kim Williams

Date: April 19, 2021

Service Address: 2412 Wylie Avenue

Account Number: [REDACTED]

1. Customer's Dispute: The customer is disputing the accuracy of the water meter.
2. PWSA's Position:

Kim Williams became the owner of record of the single-family residential property located at 2412 Wylie Avenue on October 22, 2003, according to the Allegheny County Real Estate website. PWSA bills the property for water, wastewater conveyance, and sewage treatment services.

On February 8, 2021, PWSA sent Kim Williams a High Consumption notification.

On February 9, 2021, PWSA generated a billing statement for 10,000 gallons of water in the amount of \$282.21. This bill was based on an actual meter reading of 205.

On February 12, 2021, Ms. Williams called Customer Service to dispute the recent consumption on the account. The Customer Service Representative reviewed the consumption history on the account with Ms. Williams and suggested that there may have been a leak at the property. Ms. Williams requested to have the water meter replaced. The Customer Service Representative reviewed the process for having the water meter tested and advised of the applicable \$10.00 meter testing fee. Ms. Williams asked to speak with a manager. The call was transferred to a Senior Customer Service Representative. The Senior Customer Service Representative advised Ms. Williams that the billing was based on actual readings from the water meter and suggested that there may have been a leak at the property. Ms. Williams insisted that there were no leaks at the property. The Senior Customer Service Representative explained the process for having the water meter tested. Ms. Williams requested to be provided with the name of PWSA's Chief Executive Officer as well the time when the Board of Directors meet before ultimately disconnecting the call.

On March 11, 2021, PWSA sent Kim Williams a High Consumption notification.

On March 14, 2021, PWSA generated a billing statement for 19,000 gallons of water in the amount of \$555.20. This bill was based on an actual meter reading of 224.

On March 22, 2021, Ms. Williams called Customer Service to assert that there was no leak at the property. The Customer Service Representative offered to schedule an appointment to have the water meter tested. Ms. Williams asked to speak with a supervisor. The call was transferred to a Senior Customer Service Representative. Ms. Williams explained that she had been billed for 19,000 gallons of consumption, but she did not have any leaks or believe that she had used that much water. The Senior Customer Service Representative reviewed the consumption history on the account with Ms. Williams, providing the dates when the high consumption occurred. Ms. Williams disputed the information provided and expressed that she did not trust PWSA. The Senior Customer Service Representative explained the process for having the water meter tested and scheduled an appointment to pull and test the water meter for March 23, 2021. Ms. Williams stated that she was not employed and was unable to afford the amount of the recent bill. The Senior Customer Service Representative provided Ms. Williams with information pertaining to PWSA's Customer Assistance Programs and advised her that she was already enrolled in PWSA's Bill Discount Program. Ms. Williams requested contact information for PWSA's Lead Department. The Senior Customer Service Representative provided Ms. Williams with the requested information and advised Ms. Williams that it may have been

beneficial for her to contact Dollar Energy Fund to ensure that she is enrolled in all Customer Assistance Programs for which she qualifies. Ms. Williams stated that she still needed more help. The Senior Customer Service Representative advised Ms. Williams that the only remaining option would be to establish a payment arrangement. Ms. Williams stated that she would still not be able to pay the recent bill. The Senior Customer Service Representative explained how to check for a running toilet and how to utilize PWSA's Customer Usage Portal. The Senior Customer Service Representative explained the dispute process to Ms. Williams.

On March 23, 2021, a PWSA Plumber visited the property for the scheduled service visit and removed the water meter with serial number 16174503 and register number B16174503 with a reading of 225,500 gallons, installed meter number 0021026281 with a starting reading of zero gallons, and activated the MXU, meter reading device. The Plumber submitted the removed water meter to PWSA's Central Warehouse for testing.

On March 25, 2021, PWSA tested the water meter with serial number 16174503 and register number B16174503. This meter passed testing with an accuracy rating of 100.36%. PWSA mailed a meter test results letter, and the account was debited for the \$10.00 meter testing fee.

On April 9, 2021, Ms. Williams called Customer Service to request the names of the members of PWSA's Board of Directors, the name of the Chief Executive Officer, and the next meeting time for the Board of Directors. The Customer Service Representative provided Ms. Williams with some of the information requested and advised her that a Compliance Analyst would contact her the following week. Ms. Williams asked to be provided with a specific date when she might expect to be contacted. The Customer Service Representative explained that the Compliance Department must process disputes in the order they are received. Ms. Williams asserted that she would not pay the most recent bill on the account because she had reports provided by multiple plumbers stating that they were unable to detect any leaks at the property.

On April 19, 2021, a Compliance Analyst called the customer to review the results of the recent meter test and recent consumption on the account. The Compliance Analyst attempted to review the information with Ms. Williams, but she was not receptive to any explanation or offer to assist in deducing what may have caused the high consumption. Ms. Williams continued to assert that PWSA was being dishonest before abruptly ending the call.

On April 19, 2021, a Compliance Analyst emailed the Utility Report, a copy of the meter testing results, billing history, daily meter readings, ALCOSAN's One-Time Leak Credit Request Procedure, and information about the Customer Usage Portal to [REDACTED]

PWSA's daily meter reading records indicate that the high consumption occurred between January 30, 2021 and February 19, 2021 on a meter registering at 100.36% accuracy. Based on the PWSA account information, the billing history is correct as rendered. The daily actual meter readings have been attached to indicate the dates of high consumption.

3. We will not shut off your service or cancel your service contract during the dispute process, including both informal and formal complaints, as long as you pay all undisputed bills by the due date.

4. You may make payments to The Pittsburgh Water and Sewer Authority by mail, or get more information by calling us as (412) 255-2423 or writing to us at:

The Pittsburgh Water and Sewer Authority
 Penn Liberty Plaza I
 1200 Penn Avenue
 Pittsburgh, PA 15222

5. If you do not agree with this dispute report, you have the right to file an informal complaint with the Pennsylvania Public Utility Commission (PUC). The PUC office where you could file an informal complaint is:

Pennsylvania Public Utility Commission
 Bureau of Consumer Services
 P.O. Box 3265
 Harrisburg, PA 17105-3265
 1-800-692-7380

PROCEDURE FOR FILING AN INFORMAL COMPLAINT

You can file an informal complaint by calling or writing to the PUC. You must include the following information:

- a. The customer's name.
- b. The customer's address, and if different, the service address.
- c. The telephone number of the ratepayer.
- d. The customer's account number, if there is one.
- e. The utility company's name.
- f. A brief statement of the dispute.
- g. Whether the company has already investigated and reported on the dispute.
- h. Whether you filed the same formal and informal complaint with the PUC in the past.
- i. The proposed shut-off date, if any.
- j. What you want the PUC to do.

6. BILLING DISPUTE:

Attached is an itemized statement of your account showing the amount of credit and the proper amount due. Due = \$1,976.86.

Company Representative: Zachary Larimer

Ms. Williams,

In my review of the account history, I have come across previous instances of high consumption that occurred in June and July 2020. Additionally, I have included hourly data for July 8, 2020 to show that the consumption is occurring steadily over several hours of time in all these circumstances.

Figure 1: Summer 2020 Consumption History

Figure 2: July 8, 2020 Hourly Consumption

Leak Credit Request Procedure

- All leak credits will be reviewed on a case by case basis.
- The determining factor of whether or not a customer will receive a leak credit is whether or not the 'Leak' went into the sanitary sewer.
- The customer must send in a written request for a 'Leak' credit detailing the duration, location and steps taken to repair the leak along with any other pertinent facts.
- To support the customer's request, they must provide all documentation of the leak including but not limited to-plumber/contractor receipts, photos, insurance claim documents, etc.
- Once all the above information is submitted, pending further review by the department supervisor a determination will be made if a "One Time Leak Credit" will be issued.
- You can contact ALCOSAN by telephone at 412-766-6696 or U.S. Postal to ALCOSAN 3101 Preble Ave. Pittsburgh, Pa. 15233 Attn: Leak Credit Request

Customer Portal

Our Customer Usage Portal is live!

This new feature will allow you to monitor your water use in real-time and set customized, automated usage alerts. You can even authorize multiple users, such as tenants, to receive usage alerts. Setting usage alerts can help you to detect costly water leaks in your property.

To sign up for this service:

1. Go to pgh2o.com and click on **USAGE ALERTS**
2. Click "Need to set up an account?"
3. Enter your email address, and click the link provided in an email that you will receive from the portal.
4. Type your full 14-digit account number and meter serial number.
5. Add your cell phone number to receive important alerts via text message, and create a password.
6. Use your email address and password to login.
7. Tour the portal, and set usage thresholds for email and/or text alerts.

For assistance and questions, please call Pittsburgh Water and Sewer Authority Customer Service Monday through Friday 8:00 am to 6:00 pm at 412.255.2423, or email info@pgh2o.com.

VERIFICATION

I, Julie A. Mechling, hereby state that: (1) I am the Director of Customer Service for The Pittsburgh Water and Sewer Authority (“PWSA”); (2) the facts set forth in my rebuttal testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Date: 09/05/2023 | 3:50 PM EDT

Julie A. Mechling
Director of Customer Service
The Pittsburgh Water and Sewer Authority

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

DIRECT TESTIMONY OF

HAROLD J. SMITH

ON BEHALF OF
THE PITTSBURGH WATER
AND SEWER AUTHORITY

Docket Nos.

R-2023-3039920 (Water)
R-2023-3039921 (Wastewater)
R-2023-3039919 (Stormwater)

TOPICS:

Modifications of the CCOSS Model
Allocation of CAP-BDP to Residential Class
Allocation of Administrative Support Costs
Readiness to Serve
Industrial Class Gradualism
Multi-Year Rate Plan

September 8, 2023

1 **I. INTRODUCTION AND PURPOSE OF TESTIMONY**

2 **Q. PLEASE STATE YOUR NAME**

3 A. My name is Harold J. Smith.

4 **Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?**

5 A. Yes, I submitted direct testimony sponsoring Pittsburgh Water and Sewer Authority's
6 ("PWSA" or the "Authority") class cost of service study ("CCOSS") which as pre-
7 marked as PWSA St. No. 7 and filed on May 9, 2023. The primary purpose of my direct
8 testimony was to describe the principles, methodology, and data utilized in PWSA's
9 CCOSS (the "Original CCOSS").

10 **Q. HAVE YOU REVIEWED THE TESTIMONY SUBMITTED BY THE OTHER**
11 **PARTIES IN THIS RATE CASE?**

12 A. Yes, specifically, I have reviewed the testimony submitted by Mr. Cline and Mr.
13 Spadaccio, representing the Bureau of Investigation and Enforcement ("I&E"); Mr.
14 Mierzwa and Mr. Pavlovic, representing the Office of the Consumer Advocate ("OCA"),
15 and Mr. Higgins, representing Office of the Small Business Advocate ("OSBA"). I have
16 also reviewed responses to discovery requests to other parties.

17 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

18 A. In my rebuttal testimony, I will first address the changes to the CCOSS model that have
19 been incorporated as a result of issues identified through the discovery process. I will
20 then respond to the direct testimony of other witnesses in the following areas:

- 21 • Allocation of CAP-BDP costs
- 22 • Allocation of Administrative Support costs
- 23 • Readiness to Serve Component included in minimum charges and fire charges
- 24 during rate design
- 25 • Gradualism for the Industrial Class
- 26 • Multi-Year Rate Plans

1 In the event that an issue raised in the testimony of others is not addressed in my
2 rebuttal testimony, this should not be viewed as my acceptance of their testimony. Rather,
3 it reflects my belief that a further response in this rebuttal testimony is not warranted,
4 either because it was adequately addressed in my direct testimony, is being addressed by
5 the rebuttal testimony of another PWSA witness, or because it is a legal matter that is
6 better addressed by counsel in briefs or other pleadings.

7 **Q. ARE YOU SPONSORING ANY EXHIBITS?**

8 A. Yes, as listed in the Table of Exhibits, I am sponsoring supporting schedules from the
9 rebuttal CCOSS model as described in this rebuttal testimony.

10 **II. MODIFICATIONS OF THE CCOSS MODEL**

11 **Q. PLEASE PROVIDE A BREIF DESCRIPTION OF THE CHANGES MADE TO**
12 **THE CCOSS MODEL.**

13 A. As a result of the discovery and direct testimony of others, we have made several
14 modifications to the originally filed CCOSS model as described below:

- 15 • A formula was calculating total sewer demand for FY 2025 incorrectly, leading to
16 a very minor overestimation of total sewer demand (<1%) in FY 2025. That error
17 has been corrected.
- 18 • The debt coverage calculations in the ‘Sufficiency’ tab did not include the costs of
19 arrearage forgiveness, hardship, and DWSL, among other minor costs. Those
20 calculations have been updated to include all miscellaneous expense items.
- 21 • The formula for developing bad debt expense for FY 2025 and FY 2026 was
22 assigning more bad debt expense to stormwater than necessary because of
23 stormwater only revenue being included in the bad debt calculator for customers
24 that have water meters. That error has been corrected. The two results are added
25 together for a total bad debt figure.
- 26 • The cost for the first year of the stormwater credit program was being calculated
27 with a preliminary stormwater rate. That value has been updated with the final
28 rate.

- 1 • The number of fire hydrants has been revised to match the most recently updated
2 number from PWSA provided in discovery.
- 3 • The line item “Non.City Water Reimburse” in Department 911 should be and is
4 now exclusively allocated to water.
- 5 • The model’s cost of service allocations were not including bills or equivalent
6 meters units of service for wholesale customers. The model formulas have been
7 updated.
- 8 • As a result of discovery, we have updated the model to recover portions of the FY
9 2025-2026 water IIC and CAC charges from the “Private Fire” class.
- 10 • As a result of discovery, we have changed the water construction and engineering
11 allocation factor (W-J in ‘W>Func’) to include distribution and meters/services
12 components.
- 13 • As a result of discovery, we have added system average day, max day, and max
14 hour production from 2018 and 2019 into the model for informational purposes
15 only. The model now contains system production information from 2018-2022,
16 but the three-year average of 2020-2022 is still being used for the peaking factor
17 calculations.
- 18 • As a result of direct testimony by other parties, the ratios of rate revenue increases
19 for individual customer classes to the overall system revenue increase did not
20 factor in existing revenues recovered from DSIC charges. The model has been
21 updated to address this issue, and the gradualism adjustment for the Industrial
22 class has been revised such that the Industrial class’s rate increase is
23 approximately 1.5 times the system average increase. We have also changed the
24 amount of industrial gradualism so that the industrial class revenue increases by
25 1.5x the increase of overall system revenue.
- 26 • As a result of discovery, we fixed a formula reference error that was resulting in
27 incorrect displays of wholesale rates in the ‘W>Results25-26’ tab.

28 **Q. WHAT ARE THE IMPACTS OF THESE CHANGES?**

29 A. The impact of the changes can be seen in the revised CCROSS schedules provided in the
30 PWSA Exhibits as listed in the Table of Exhibits. Ultimately, the overall change to the
31 proposed rates and charges, as well as the proposed allocation of the rate increase to
32 individual rate classes, is minimal.

1 **III. ALLOCATION OF THE CAP-BDP TO THE RESIDENTIAL CLASS**

2 **Q. PLEASE DESCRIBE THE RECOMMENDATION OF THE OSBA TO**
3 **ALLOCATE THE COSTS OF THE CAP-BDP TO THE RESIDENTIAL CLASS.**

4 A. Mr. Higgins recommends that the costs of the CAP-BDP should be recovered solely by
5 the Residential customer class, claiming that the CAP-BDP program only benefits
6 residential customers and citing Commission decisions in previous dockets as the basis
7 for this recommendation.

8 **Q. DO YOU AGREE WITH MR. HIGGIN'S RECOMMENDATION?**

9 A. No, I do not. PWSA has always recovered the costs of its BDP-CAP from all customer
10 classes and should be allowed to continue doing so. The CAP-BDP benefits the entire
11 Pittsburgh community, including businesses, by helping to ensure that all residents
12 located in PWSA's service area are able to afford water for essential uses, such as
13 drinking, cooking, and cleaning. These residents are the workforce that area businesses
14 rely on to keep their businesses running, and the BDP-CAP helps ensure that employees
15 are able to meet their most basic nutrition and hygiene needs. They are also the
16 customers that purchase the goods and services offered by commercial customer
17 businesses and industries. The BDP-CAP enables those potential customers to stay in
18 their homes and continue to purchase the goods and services offered by Pittsburgh
19 businesses, or to use the services of Pittsburgh education and medical firms. Thus, all
20 classes of PWSA customers benefit from the BDP-CAP and it is fair that all classes
21 contribute to the costs of that program.

1 **Q. DO ANY OTHER UTILITIES REGULATED BY THE PA PUC RECOVER THE**
2 **COSTS ASSOCIATED WITH THEIR CUSTOMER ASSISTANCE PROGRAM**
3 **FROM ALL CUSTOMER CLASSES?**

4 A. Yes, Philadelphia Gas Works (PGW) recovers the costs associated with its Customer
5 Responsibility Program through a surcharge assessed to all customer classes (except
6 Interruptible Transportation customers) and has done so through several base rate filings.
7 In fact, OSBA specifically litigated the allocation of customer assistance program costs
8 for a municipal utility in PGW’s 2017 base rate proceeding. (*Pennsylvania PUC v.*
9 *Philadelphia Gas Works*, Docket Nos. R-2017-2586783, Opinion and Order, November
10 8, 2017).

11 **IV. ALLOCATION OF ADMINISTRATIVE SUPPORT COSTS**

12 **Q. PLEASE SUMMARIZE MR. MIERZWA’S POSITION WITH REGARD TO**
13 **ALLOCATING A PORTION OF ADMINISTRATIVE SUPPORT COSTS FOR**
14 **RECOVERY THROUGH THE MINIMUM CHARGE.**

15 A. Mr. Mierzwa asserts that it is inappropriate to recover a portion of PWSA’s
16 administrative support costs through the fixed minimum charge.

17 **Q. DO YOU AGREE WITH HIS ASSERTION?**

18 A. No, I do not. As demonstrated on Schedules HJS 4-W and HJS4-WW and included with
19 my Direct Testimony and updated with this Rebuttal Testimony, Administrative Support
20 costs are allocated for recovery through the fixed minimum or base charges using
21 allocator W-GG for water costs and allocator WW-DD for sewer conveyance costs. This
22 approach is common practice and is consistent with the approach used by PWSA in each
23 of its previous rate filings and also with guidance provided by AWWA Manual M-1.

1 **Q. HAVE YOU USED THIS APPROACH IN OTHER JURISDICTIONS?**

2 A. Yes, in cost of service studies prepared for rate filings submitted to the Rhode Island
3 Public Utilities Commission (RIPUC) on behalf of both Newport Water (RIPUC Docket
4 No. 4933) and the Providence Water Supply Board (Providence Water) (RIPUC Docket
5 No. 4994), a portion of costs associated with administrative support are allocated for
6 recovery through a fixed base charge. Mr. Mierzwa served as an expert witness for the
7 Rhode Island Division of Utilities and Carriers (Division) in both of these cases and did
8 not express any concern with this approach in either case.

9 **V. READINESS TO SERVE COMPONENT THE MINIMUM CHARGE**

10 **Q. PLEASE SUMMARIZE THE COMMENTS ON THE REMOVAL OF THE**
11 **READINESS-TO-SERVE COMPONENT OF THE WATER AND SEWER**
12 **SERVICE MINIMUM CHARGES AND THE FIRE PROTECTION CHARGE.**

13 A. Mr. Cline and Mr. Mierzwa addressed the readiness-to-serve component in the water and
14 sewer minimum charges and the fire protection charge and disagreed with its inclusion.
15 In past PWSA rate cases, witnesses have taken issue with the allocation of costs to a
16 Readiness-To-Serve cost category during the allocation of costs to Base/Extra Capacity
17 cost categories. In response to his criticism, the current model and the COSS model used
18 in PWSA's previous rate case address readiness-to-serve as a rate design issue.

19 **Q. DO YOU AGREE WITH MR. CLINE'S AND MR. MIERZWA'S PROPOSAL TO**
20 **REMOVE THE READINESS-TO-SERVE COMPONENT FROM THE WATER**
21 **SERVICE MINIMUM CHARGES?**

22 A. No. The readiness-to-serve component of the water minimum charges is an important
23 component of the PWSA rate structure. The readiness-to-serve component is a common
24 ratemaking technique that adds numerous key benefits.

1 **Q. IS THE INCLUSION OF A READINESS-TO-SERVE COMPONENT AN**
2 **INDUSTRY-ACCEPTED RATEMAKING PRACTICE?**

3 A. Yes. In fact, the concept of including readiness to serve costs in the fixed charge is
4 addressed in the AWWA M-1 Manual on page 97. It is a recommended practice used to
5 capture “the costs of having a system in place to provide water to the customer regardless
6 of whether the customer consumes any water in a given service period” (AWWA M-1
7 Manual – 7th Edition).

8 **Q. WHAT ARE THE BENEFITS OF THE READINESS-TO-SERVE COMPONENT**
9 **FOR THE WATER SERVICE MINIMUM CHARGES?**

10 A. The benefits of including a readiness-to-serve component in the fixed charge are two-
11 fold. First, a readiness-to-serve component within a fixed charge better aligns revenue
12 recovery with the nature of utility costs, which in PWSA’s case, are largely fixed.
13 Second, the readiness-to-serve component in PWSA’s fixed charge helps to maintain
14 PWSA’s fixed revenue at a level deemed desirable by bond rating agencies. This
15 enhances revenue stability and exposes PWSA to less financial risk, thereby contributing
16 to a better bond rating and a lower cost of capital.

17 **Q. IS 10% OF DEBT SERVICE A COST-JUSTIFIABLE AMOUNT TO INCLUDE**
18 **IN A READINESS-TO-SERVE COMPONENT?**

19 A. Yes. While there are no specific guidelines for the amount of debt service that should be
20 allocated to the readiness-to-serve component, 10% is not unreasonably high. In fact, it is
21 likely that a 10% allocation of debt service is an underestimate of the investment PWSA
22 has made to ensure the water system is in place and has the capacity to meet expected
23 customer demands.

24 Additionally, when you consider PWSA’s cost structure, the majority of the
25 Authority’s costs are fixed. In fact, for water, debt service in FY 2024 accounts for about

1 40% of the allocated net revenue requirements alone. This number grows to almost 43%
2 in FY 2025. Allocating a small portion of the Authority's debt service costs for recovery
3 through the fixed minimum or base charge better aligns the nature of these costs with
4 their recovery.

5 VI. INDUSTRIAL CLASS GRADUALISM

6 **Q. PLEASE SUMMARIZE MR. MIERZWA'S POSITION WITH RESPECT TO**
7 **PWSA'S PROPOSED GRADUALISM ADJUSTMENT FOR THE INDUSTRIAL**
8 **CLASS.**

9 A. Mr. Mierzwa suggests that the increase to the Industrial class rates should be limited to
10 1.75 times the system average increase as opposed to the 1.5 times the system average
11 increase limitation used to develop PWSA's proposed Industrial class rates.

12 **Q. DO YOU AGREE WITH THIS SUGGESTION?**

13 A. No, I do not. As stated on Page 46 of my direct testimony, in PWSA's 2020 Rate Case,
14 PWSA and the parties agreed to impose gradualism adjustments for any customer classes
15 experiencing a 1.5x increase above the system average increase. While I recognize that,
16 as a settlement term, this does not serve as precedent, I believe that threshold is still
17 appropriate and reasonable. The 1.5x system average level for allocation of rate increase
18 to a class is well-accepted in water/wastewater utility ratemaking.

19 **Q. ON PAGE 11 OF HIS TESTIMONY, MR. MIERZWA STATES THAT PWSA**
20 **HAS PROPOSED AN INDUSTRIAL RATE THAT IS 1.40 TIMES THE SYSTEM**
21 **AVERAGE INCREASE. IS THIS STATEMENT CORRECT?**

22 A. Yes, but as discussed earlier in this testimony, during the discovery process, it was
23 discovered that a cell reference error in the COSS model was resulting in an Industrial
24 rate increase that was approximately 1.4 times the system average increase instead of the

1 desired 1.5 times. This error has been corrected and the Industrial rate increase shown in
2 the attached schedules is approximately 1.5 times the system average.

3VII. MULTI-YEAR RATE PLAN

4 **Q. PLEASE SUMMARIZE THE OTHER PARTIES' POSITION WITH RESPECT**
5 **TO PWSA'S REQUEST TO IMPLEMENT A MULTI-YEAR RATE PLAN.**

6 A. Witnesses for OCA and I&E recommend that the Commission reject PWSA's request for
7 a Multi-Year Rate Plan (MYRP), citing a number of specific concerns, including the
8 difficulty associated with forecasting future costs; the alleged non-compliance of
9 PWSA's proposed MYRP with Commission guidance; and PWSA's failure to propose
10 mechanisms to ensure that rates in years 2 and 3 of the MYRP are fair and reasonable and
11 not in excess of cost of service.

12 **Q. DO YOU AGREE WITH THE RECOMMENDATIONS OF THE OTHER**
13 **PARTIES' WITH RESPECT TO THE MYRP?**

14 A. I do not. As discussed in my direct testimony, I have worked with utilities in Rhode
15 Island that have successfully implemented MYRPs that were fair and reasonable and, for
16 that reason, approved by the RIPUC, and believe that if the Pennsylvania Public Utility
17 Commission (PAPUC) were to implement processes similar to those employed by the
18 RIPUC, utility customers in Pennsylvania could reap the benefits of MYRPs as they have
19 done in Rhode Island.

20 **Q. DO YOU AGREE THAT THE DIFFICULTIES ASSOCIATED WITH**
21 **FORECASTING FUTURE COSTS ARE SO GREAT THAT THEY SHOULD**
22 **PRECLUDE THE USE OF A MYRP FOR PWSA?**

23 A. I do not. As discussed in Mr. Barca's rebuttal testimony, all rate filings are based on
24 projections of future costs. In a traditional rate filing, the Fully Projected Future Test
25 Year (FPFTY) is based on forecast costs for a period one year in the future. PWSA's

1 MYRP proposal involves projecting costs for only an additional two years into the future.
 2 While the level of certainty associated with projections of future costs does decline the
 3 further into the future one looks, in the case of PWSA, which is not proposing to make
 4 significant changes to the way in which it performs the daily activities related to
 5 providing water, sewer and stormwater management services, the primary drivers of
 6 O&M cost increases are wage levels and price inflation, two variables for which there is a
 7 wealth of information available on which to base projections of future costs. If, as is the
 8 case with PWSA’s proposed MYRP, future cost projections are for the most part based
 9 on appropriate inflation or escalation factors and the Commission implements reasonable
 10 review mechanisms prior to the final approval of rates in future years, the risk of having
 11 rates that generate revenue that is materially in excess of actual costs is all but eliminated.

12 **Q. DO YOU AGREE WITH MR. CLINE’S INTERPRETATION OF THE REPORT**
 13 **ON MYRPS PREPARED BY THE NATIONAL REGULATORY RESEARCH**
 14 **INSTITUTE (NRRI) THAT HE ATTACHED TO HIS DIRECT TESTIMONY?**

15 A. I believe that Mr. Cline discounts the potential benefits offered by MYRPs that are
 16 presented in the NRRI report and places too much emphasis on the potential drawbacks,
 17 many of which can be addressed by a robust set of oversight mechanisms that can be
 18 mandated by the Commission.

19 It should also be noted that the NRRI report is largely focused on whether
 20 MYRPs provide utilities with inappropriate opportunities to earn a rate of return that is in
 21 excess of what the Commission has determined is appropriate. As such, much of the
 22 discussion in the report is irrelevant to PWSA’s MYRP proposal in that PWSA is a “cash
 23 flow” utility and does not have shareholders that would benefit if rate revenue exceeds
 24 the cost of service. Any excess revenue that is generated by PWSA’s rates would not be

1 distributed as profit but would instead be retained as reserves that would be used to offset
2 future costs, thereby mitigating future rate increases.

3 **Q. ON PAGE 9 OF HIS DIRECT TESTIMONY, MR. PAVLOVIC POINTS OUT**
4 **THAT YOU DID NOT PROPOSE ANY MECHANISMS THAT WOULD HELP**
5 **ENSURE THAT RATES IN YEARS 2 AND 3 OF PWSA’S MYRP ARE JUST**
6 **AND REASONABLE. WHY DIDN’T YOU PROPOSE SUCH A MECHANISM?**

7 A. The discussion of my experience with MYRPs in Rhode Island included in my direct
8 testimony was intended to demonstrate that when appropriate oversight mechanisms are
9 implemented, MYRPs do indeed work and provide many benefits to both the regulated
10 utility and its customers, with one of the greatest benefits being a significant reduction in
11 the amount of effort on the part of utility management and regulators associated with
12 lengthy base rate cases. Thus, I was supporting the implementation of the MYRP with
13 safeguards.

14 **Q. IF YOU WERE GIVEN THE OPPORTUNITY TO ADVISE THE COMMISSION**
15 **WITH RESPECT TO REGULATORY PROCESSES THAT COULD BE**
16 **IMPLEMENTED TO REDUCE THE RISK OF MYRPS RESULTING IN RATES**
17 **THAT WERE NOT JUST AND REASONABLE, WHAT WOULD YOUR**
18 **ADVICE BE?**

19 A. I would suggest that the PAPUC implement review mechanisms similar to those spelled
20 out in the Rhode Island legislation that enables MYRPs in that state. § 39-15.1-4 subpart
21 c of the Rhode Island General Laws, which is attached as HJS-Exhibit A to this
22 testimony, stipulates that

23 “A water supplier with a multiyear plan approved by the commission may change
24 its rates consistent with provisions of the plan, provided that a forty-five (45) day
25 notice is given to the Commission and the Division, which notice shall state the
26 amount of the proposed rate changes, the manner in which the proposed rate is
27 consistent with the approved plan, and the purpose of the proposed rate change.
28 The proposed rate change shall be effective sixty (60) days after the notice to the
29 Commission and the Division unless the Commission shall decide that the
30 proposed rate increase may be unreasonable or inconsistent with the approved

1 plan, in which case the Commission shall hold a hearing on the proposed rate
2 increase and may approve, or reasonably amend the proposed rate increase.”

3 **Q. IN YOUR DIRECT TESTIMONY YOU MENTION THAT IN RHODE ISLAND A**
4 **UTILITY WITH AN APPROVED MYRP MUST SUBMIT A COMPLIANCE**
5 **FILING 90 DAYS PRIOR TO THE PROPOSED DATE FOR**
6 **IMPLEMENTATION OF NEW RATES, BUT THE STATUTE QUOTED ABOVE**
7 **STIPULATES THAT A UTILITY MUST PROVIDE 45 DAYS NOTICE. CAN**
8 **YOU EXPLAIN THIS DISCREPANCY?**

9 A. Yes, I was mistaken in my direct testimony, possibly because the rate case attorneys for
10 Newport Water and Providence Water advise their clients to make their filing 90 days in
11 advance to help ensure that the Commission will have sufficient time to review their
12 filing and approve rates in time for the utility to implement the news rates on the
13 scheduled implementation date. As the statute states, the filing requirement in Rhode
14 Island is 45 days prior to the proposed implementation date; however, if the PAPUC were
15 to stipulate a similar requirement, they could specify a different filing deadline. A
16 ninety-day notice period would certainly not be unreasonable.

17 **Q. THE RHODE ISLAND LEGISLATION ENABLING UTILITIES TO UTILIZE**
18 **MYRPS FOR RATEMAKING DOES NOT PROVIDE SPECIFICS OF THE**
19 **COMPLIANCE FILING THAT UTILITIES MUST SUBMIT PRIOR TO FINAL**
20 **APPROVAL OF RATES IN THE YEARS AFTER THE INITIAL RATE YEAR.**
21 **WHAT INFORMATION IS INCLUDED IN THESE FILINGS?**

22 A. The types of the information submitted in MYRP compliance filing is in large part
23 dependent upon the nature of the expenses that the utility hopes to recover through rates
24 in the later years of a MYRP. For example, if the cost driving the proposed rate increases
25 are limited to debt service on bonds issued after the initial rate year, the utility would
26 only need to provide information that relates to the actual or projected debt service on the
27 new bonds. This information is compared to the debt service assumptions included in the
28 utility’s projection of debt service included in the initial filing and rates are adjusted such
29 that they recover only the actual or revised projection of debt service. If more costs are in

1 play, then the utility provides information about actual costs incurred during the most
2 recent fiscal year and information that confirms that their projections of future costs
3 included in the initial filing are indeed accurate and justifiable.

4 **Q. DO YOU HAVE ANY RECOMMENDATIONS REGARDING THE TYPE OF**
5 **INFORMATION THAT PWSA SHOULD BE ASKED TO PROVIDE IN THEIR**
6 **MYRP COMPLIANCE FILING?**

7 A. I would suggest that all parties to this rate case work together to develop specific
8 requirements of the compliance filing such that all parties are confident that they have
9 sufficient evidence to support the proposed rate increases, but take care to ensure that the
10 compliance filing requirements are not so onerous as to negate the administrative
11 efficiency benefits provided by a MYRP. For example, since PWSA's O&M expense
12 projections for the second and third year of their MYRP are largely based on applying an
13 inflation factor to expenses in the FPFTY, it would be appropriate for PWSA to include
14 data relating to the actual expenses incurred in the most recent fiscal year along with
15 revised inflation factors that reflect the most current inflation conditions. I recommend
16 that the PUC adopt PWSA's MYRP and order a workshop be scheduled in which any
17 interested party could participate. That workshop would attempt to arrive at the
18 procedure and substance of the compliance filings that would be made prior to the
19 implementation of 2025 and 2026 rates. For example, the Parties would seek to arrive at
20 a list of specific costs or items, such as debt service costs, that would subject to review
21 and potential revision in the compliance filing proceeding. The PUC would then review
22 and approve any consensus terms or rule on any terms for which a consensus was not
23 possible. This should all be done fairly quickly after the Commission's decision in this
24 case.

1 **Q. ON PAGES 8 AND 9 OF HIS DIRECT TESTIMONY, MR. SPADACCIO**
2 **ENUMERATES HIS REASONS FOR NOT SUPPORTING PWSA’S PROPOSED**
3 **MYRP AND IMPLIES THAT APPROVING A MYRP WOULD RESULT IN**
4 **PWSA BEING SUBJECT TO LESS OVERSIGHT THAN THEY WOULD BE IF**
5 **THE COMMISSION APPROVED A SINGLE SET OF RATES BASED ON A**
6 **SINGLE FPPTY. DO YOU AGREE WITH THIS IMPLICATION?**

7 A. I do not. If the Commission mandates review mechanisms similar to those used by the
8 RIPUC, PWSA’s revenue requirement projections and rates would face scrutiny each
9 year prior to final approval of its proposed rates for the upcoming rate year. Under a
10 traditional scenario in which the Commission approves rates based on a single FPPTY,
11 PWSA would only be subject to a thorough review of its projected revenue requirements
12 and rates during the initial rate case and would not face serious scrutiny until it submits
13 its next rate filing which could be several years in the future.

14 **Q. IN YOUR EXPERIENCE HAS THE RIPUC EVER MODIFIED THE RATES**
15 **THAT IT INITIALLY APPROVED BASED ON REVIEW OF A UTILITIES**
16 **COMPLIANCE FILING?**

17 A. Yes, in RIPUC Docket No. 4994, after reviewing Providence Water’s compliance filing
18 for the second step in its MYRP, the RIPUC called for a hearing where it heard testimony
19 from representatives of Providence Water and based on that testimony, they reduced
20 Providence Water’s proposed revenue requirements for both labor costs and electricity
21 costs and approved rates reflective of the reduction in revenue requirements. In my
22 experience, this is an unusual occurrence, but it is a demonstration that the mechanisms
23 that the RIPUC has implemented are effective in ensuring that rates approved through a
24 MYRP filing are just and reasonable and based on prudent projections of the costs that a
25 utility is likely to incur.

26 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

27 A. Yes, it does.

HJS – Exhibit A

§ 39-15.1-4. Optional multiyear rate plans.

(a) Water suppliers may, at their discretion, file with the commission a rate plan for a period not to exceed six (6) years, which rate plans shall set forth proposed rates:

(1) That are adequate, as described in § 39-15.1-3(a), to pay for all reasonable costs of service associated with water supply during the period of the plan, and may include projections of cost increases, and are equitable as described in § 39-15.1-3(b);

(2) That attribute the cost of increased seasonal demand to customers who or that contribute to increased seasonal demand and that may include conservation pricing pursuant to § 39-15.1-3(d);

(3) That provide for infrastructure maintenance, repair, and replacement, especially in order to meet goals for reduction of leakage and the accounting of non-billed water, that are included in a water supply systems management plan; and

(4) That provide for the establishment and maintenance of operating reserves, capital reserves, and debt-service reserves as described in § 39-15.1-3(a).

(b) The commission shall approve or reasonably amend the plan and the rates proposed therein.

(c) A water supplier with a multiyear plan approved by the commission may change its rates consistent with provisions of the plan, provided that a forty-five (45) day notice is given to the commission and the division, which notice shall state the amount of the proposed rate changes, the manner in which the proposed rate is consistent with the approved plan, and the purpose of the proposed rate change. The proposed rate change shall be effective sixty (60) days after the notice to the commission and the division, unless the commission shall decide that the proposed rate increase may be unreasonable or inconsistent with the approved plan, in which case the commission shall hold a hearing on the proposed rate increase and may approve, or reasonably amend the proposed rate increase. Notwithstanding the foregoing notice provision, the commission shall be bound by the suspension period set forth in § 39-3-11.

(d) A water supplier may petition the commission for a modification to an approved plan, and the commission in hearing and deciding the petition need only consider those portions or elements of the plan affected by the proposed modification. The commission shall approve or reasonably modify the proposed modification. An

EXHIBIT A

approved modification shall become part of the plan for purposes of subsection (c) of this section.

(e) Each water supplier with an approved plan shall report annually to the commission and the division with regard to performance under the plan, including rates, revenues derived from rates, expenditures necessary to pay for all reasonable costs of service; and the level and status of operating reserves, capital reserves, and debt-service reserves.

VERIFICATION

I, Harold J. Smith, hereby state that: (1) I am a Vice President of Raftelis Financial Consultants, Inc.; (2) I have been retained by The Pittsburgh Water and Sewer Authority (“PWSA”) and am authority to present rebuttal testimony on its behalf; (3) the facts set forth in my rebuttal testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (4) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Dated: 09/05/2023 | 1:33 PM PDT

TABLE OF EXHIBITS

Exhibit KR-3	River Development Corporation's Response to PWSA-I-6
--------------	--

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Keith Readling. My business address is 807 E Main Street, Suite 6-050,
4 Durham, NC 27701.

5 **Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?**

6 A. Yes. I provided Direct Testimony on May 9, 2023. (PWSA St. No. 8).

7 **Q. WHAT TOPICS DID YOU ADDRESS IN DIRECT TESTIMONY?**

8 A. I addressed PWSA’s stormwater program revenue requirements, the identification of
9 impervious area, stormwater rate structure, stormwater billing and stormwater credit
10 program.

11 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

12 A. The purpose of my Rebuttal Testimony is to respond to certain issues related to
13 stormwater charges that were raised in the Direct Testimony submitted by Michael J.
14 McNamara and Eric M. Callocchia on behalf of the Pittsburgh School District (“School
15 District”) (School District St. Nos. 1 and 2, respectively); the Direct Testimony submitted
16 by Robert Strauss and Cheryl McAbee on behalf of River Development Corporation
17 (“River Development” or “RDC”) (RDC St. Nos. 1 and 2, respectively); and the Direct
18 Testimony of Harry S. Geller on behalf of Pittsburgh United’s Our Water Table
19 (“Pittsburgh United”) (Pittsburgh United St. 1). Other stormwater issues raised by these
20 witnesses will be addressed in Rebuttal Testimony submitted by William J. Pickering and
21 Tony Igwe, respectively. (PWSA St. Nos. 1-R and 5-R).

22 **Q. ARE YOU SPONSORING ANY EXHIBITS?**

1 A. Yes. I am sponsoring Exhibit KR-3, which is the response of River Development to
2 discovery propounded by PWSA at I-6.

3 **II. RESPONSE TO SCHOOL DISTRICT**

4 **Q. PLEASE RESPOND TO THE SCHOOL DISTRICT’S WITNESS MICHAEL J.**
5 **MCNAMARA’S STATEMENT THAT PWSA HAS NOT INSTALLED ANY**
6 **METERS OR OTHER DEVICES ON THE SCHOOL DISTRICT’S PROPERTIES**
7 **TO MEASURE THE ACTUAL AMOUNT OF STORMWATER RUNOFF.**
8 **(SCHOOL DISTRICT ST. NO. 1 AT 13).**

9 A. By its nature, stormwater service is a non-metered utility service. The Commission
10 recognized this in approving PWSA’s stormwater tariff, which permits charges to
11 customers for stormwater service based on the number of equivalent residential units
12 (“ERUs”) of impervious area found on a property, as well as by approving PWSA’s
13 Stormwater Compliance Plan.

14 In fact, the School District’s other witness, Eric M. Callocchia, explicitly
15 acknowledged in his Direct Testimony that he is not aware of any entity that meters
16 stormwater service for the purpose of billing customers because doing so would be “too
17 difficult, if not impossible...” (School District St. No. 2 at 23). As I explained in my
18 Direct Testimony, impervious surface area is the most commonly used metric across the
19 United States to charge for costs related to stormwater service. (PWSA St. No. 8 at 7).
20 PWSA’s stormwater charge is properly based on a property’s impervious area, as
21 previously approved by the Commission.

22 **Q. WHAT DOES SCHOOL DISTRICT WITNESS MR. CALLOCCHIA ARGUE**
23 **REGARDING COST OF SERVICE ALLOCATION FOR STORMWATER?**

24 A. Mr. Callocchia argues that rather than calculating a system-wide stormwater rate per
25 ERU and applying it to all stormwater customers, PWSA should instead distribute all
26 adjustments except gradualism based on class contribution, which he argues would better

1 reflect cost causation. Doing so would increase the residential charge per ERU and
2 decrease the non-residential charge per ERU. (School District St. No. 2 at 12-17).

3 **Q. DO YOU AGREE WITH MR. CALLOCCHIA’S POSITION ON COST**
4 **ALLOCATION?**

5 A. No, I do not. Cost allocations for stormwater are not done by class. Impervious area
6 among different classes of property creates similar runoff and places similar demand on
7 PWSA’s system. It is not industry practice to do intraclass allocations for stormwater
8 service.

9 **Q. WHAT IS MR. CALLOCCHIA’S POSITION REGARDING THE STRUCTURE**
10 **OF PWSA’S STORMWATER RATES?**

11 A. Mr. Callocchia argues that, since PWSA considers a tiered rate structure for residential
12 customers to be “equitable,” PWSA should define what it means by intra-class equity and
13 investigate whether a tiered rate structure for non-residential customers would be more
14 equitable than charging per ERU. (School District St. No. 2 at 18-21). Additionally, Mr.
15 Callocchia claims that for non-residential customers, PWSA should round the number of
16 ERUs up or down to the nearest half ERU for billing purposes. (School District St. No. 2
17 at 20-21).

18 **Q. WHEN PWSA SAYS THAT ITS STORMWATER RATE STRUCTURE IS**
19 **“EQUITABLE,” WHAT DOES THE AUTHORITY MEAN BY THAT?**

20 A. In this context, “equitable” means that the stormwater charge is commensurate with the
21 demand for service. While stormwater is a non-metered service, we use impervious area
22 as a surrogate for measuring the demand a parcel places on PWSA and its system for
23 stormwater management. This is more equitable than the previous approach in which
24 stormwater costs were included within wastewater rates, since wastewater rates are based
25 on water consumption, and water consumption has no relationship to the demand for

1 stormwater management service. Of note, as Mr. Igwe’s Rebuttal Testimony explains,
 2 stormwater costs need to be recovered by PWSA, and if they are not recovered through a
 3 separate stormwater charge, PWSA would have to return to the inequitable approach of
 4 recovering them through wastewater rates.

5 **Q. DID PWSA CONSIDER OTHER APPROACHES TO ITS STORMWATER RATE**
 6 **STRUCTURE, SUCH AS A TIERED RATE STRUCTURE FOR NON-**
 7 **RESIDENTIAL CUSTOMERS, AS MR. CALLOCCHIA SUGGESTS?**

8 A. Yes. PWSA carefully considered its stormwater rate structure as established in its
 9 previous rate case. PWSA determined that a three-tiered rate structure for residential
 10 customers is appropriate because the range of impervious area on those properties is
 11 fairly narrow, with more than 96% of the residential properties having less than 4,000
 12 square feet of impervious area. This type of tiered approach for residential customers is
 13 the industry standard and made sense given the characteristics of residential properties in
 14 PWSA’s service territory. I am aware that courts in other states have endorsed the use of
 15 impervious area as the basis for calculating stormwater charges or measuring stormwater
 16 runoff.¹

17 For non-residential customers, each ERU of impervious area (1,650 square feet) is
 18 a step up in the stormwater charge. These bills have effectively been parsed out based on
 19 impervious area in increments of 1,650 square feet.

20 **Q. DO YOU AGREE WITH MR. CALLOCCHIA’S POSITION REGARDING**
 21 **ROUNDING ERUS FOR NON-RESIDENTIAL CUSTOMERS?**

22 A. No, I do not. First, by arguing that PWSA should round to the nearest half ERU, Mr.
 23 Callocchia is effectively arguing that PWSA should charge by smaller units of 825 square

¹ See *Maryland Department of the Environment v. Anacostia Riverkeeper*, 447 Md. 88 (2016); *Tukwila School District No. 406 v. City of Tukwila*, 140 Wash. App. 735, 167 P3d 1167, 1172 (2007); *City of Lewistown v. Gladu*, 40 A.3d 964 (2012).

1 feet, as opposed to 1,650 square feet as is the current approach. This is inadvisable, as
 2 the smaller unit makes it harder to accurately bill. This will impose additional costs on
 3 PWSA and is not consistent with the quality of data.

4 Second, while Mr. Callocchia argues that PWSA should round up and down,
 5 PWSA only rounds up because this results in more accurate bills. Impervious area is
 6 captured by humans who are most likely to under-capture. Mapping of impervious area
 7 results in boundaries being clipped in a way that also underestimates impervious area,
 8 and small or skinny slivers of impervious area may be ignored in the tally of impervious
 9 area if their polygonal area falls below a minimum mapping unit. Further, if PWSA were
 10 to round up and down as Mr. Callocchia argues, I estimate that this would result in a 4%
 11 revenue decrease for PWSA. At the end of the day, this will lead to another rate increase
 12 and will ultimately cost the School District more money in stormwater charges than
 13 under PWSA's current practice. As such, Mr. Callocchia's argument regarding rounding
 14 must be rejected.

15 **Q. DOES MR. CALLOCCHIA ACCEPT THE USE OF IMPERVIOUS AREA AS**
 16 **THE BASIS FOR PWSA'S STORMWATER CHARGE?**

17 A. No, he does not. Mr. Callocchia argues that metrics such as an Intensity of Development
 18 Factor ("IDF") and Equivalent Hydraulic Area ("EHA") consider both pervious and
 19 impervious area of a parcel, and may provide a more equitable stormwater rate than an
 20 ERU calculation based only on impervious area. (School District St. No. 2 at 21-23).

21 **Q. WHY IS PWSA'S STORMWATER CHARGE BASED ON IMPERVIOUS AREA,**
 22 **RATHER THAN ON IDF OR EHA AS MR. CALLOCCHIA SUGGESTS?**

23 A. Using IDF would be similar to calculating a percentage of impervious area, and
 24 employing EHA will result in a similar approach to using impervious area. These
 25 methods would result in similar numbers but would be overly complicated and more

1 expensive for PWSA to implement. Impervious area is the more straightforward and
 2 transparent approach that is most commonly used throughout the United States and
 3 results in charges that are commensurate with demand for stormwater service.

4 **Q. IN YOUR OPINION, WOULD BASING PWSA’S STORMWATER CHARGE ON**
 5 **IDF OR EHA RESULT IN A MORE EQUITABLE STORMWATER RATE?**

6 A. No. These methods would not result in charges that are any more equitable than
 7 impervious area. Additionally, these methods would only primarily benefit properties
 8 with 100% impervious area. The School District’s properties tend to have green space,
 9 so these methods would not have Mr. Callocchia’s desired effect of reducing the School
 10 District’s stormwater bills.

11 **Q. WHAT DOES MR. CALLOCCHIA RECOMMEND REGARDING PWSA’S**
 12 **STORMWATER CREDIT PROGRAM?**

13 A. Mr. Callocchia argues that PWSA should identify simple credit mechanisms that can
 14 mitigate the financial impact of the stormwater charges. For example, he claims that the
 15 School District should be eligible for a 10% to 20% credit for educating students on the
 16 importance of stormwater management. (School District St. No. 2 at 27).

17 **Q. HOW DO YOU RESPOND REGARDING STORMWATER CREDITS?**

18 A. I do not agree with Mr. Callocchia’s specific proposal. The purpose of the stormwater
 19 credit program is not to simply give a discount on stormwater charges. Rather, the
 20 purpose is to recognize when customers take tangible steps to reduce an appreciable
 21 amount of stormwater runoff that reduces the demand on PWSA’s stormwater system.
 22 While PWSA supports educating students about the importance of stormwater
 23 management, PWSA must consider the costs of the credits it implements and ensure that
 24 the credit is provided in exchange for a measurable benefit to the system. PWSA’s

1 current tariffed requirements to receive a credit are sufficiently accessible and do not
2 require any modification beyond the changes proposed in PWSA's rate filing.

3 While some places offer the types of educational credits that Mr. Callocchia
4 describes, I am not aware of any *regulated* stormwater utility that offers such credits.
5 The bar is higher for regulated utilities that cannot simply implement credits as a "policy
6 decision" or due to political pressures. PWSA views stormwater credits as a refinement in
7 the computation of demand for service to recognize when a customer takes tangible steps
8 to reduce runoff. While it may be beneficial to society to educate students about
9 stormwater, it does not directly reduce stormwater runoff. To receive a credit requires
10 that a customer actually reduce runoff, and thus reduce demand on the system.

11 **III. RESPONSE TO PITTSBURGH UNITED**

12 **Q. PLEASE SUMMARIZE PITTSBURGH UNITED WITNESS GELLER'S**
13 **TESTIMONY REGARDING THE STORMWATER CREDIT PROGRAM.**

14 A. Mr. Geller claims that PWSA does not provide sufficient ways for low-income customers
15 to adopt "green stormwater mitigation" measures. He argues that PWSA should be
16 required to allocate \$100,000 annually to allow low-income customers to install green
17 mitigation measures at no cost. (Pittsburgh United St. 1 at 47).

18 **Q. HOW DO YOU RESPOND?**

19 A. An overarching goal of PWSA's stormwater credit program is to strike a balance between
20 recognizing customers' actions that meaningfully reduce stormwater runoff while also
21 imposing a minimal administrative burden on PWSA and its ratepayers. Mr. Geller's
22 recommendation would essentially require PWSA to administer a grant program for
23 stormwater mitigation measures. This would inherently increase the complexity and
24 costs of administering the credit program (and thus costs to other ratepayers).

1 Additionally, this proposal would essentially require that PWSA pay for the reduced
 2 runoff associated with such measures *twice* – once by providing the grant to fund the
 3 mitigation measure, and once more by providing a credit.

4 Mr. Geller’s proposal is also addressed in Ms. Mechling’s Rebuttal Testimony
 5 (PWSA St. No. 6-R).

6 **IV. RESPONSE TO RIVER DEVELOPMENT CORPORATION**

7 **Q. DOES RIVER DEVELOPMENT ACCEPT THE USE OF HARD OR**
 8 **IMPERVIOUS AREA FOR THE CALCULATION OF STORMWATER**
 9 **CHARGES?**

10 A. No. Dr. Strauss testifies that the surface area of parking lots and roofs is “not reasonably
 11 related to specific or general benefits of stormwater mitigation.” (RDC St. No. 1 at 11).
 12 In his view, the impervious area is not related to the amount of stormwater runoff on a
 13 property. Dr. Strauss also discusses the horizontal design of the roof of the building on
 14 the RDC property and states that it is used to assist in cooling in the summer and
 15 retaining heat in the winter. He further testifies that wide variations occurred in
 16 precipitation throughout Pittsburgh in recent years, bringing into question the
 17 equitableness of PWSA’s stormwater charges. Finally, he believes that measuring an
 18 area without regard to water runoff caused by the slope of the terrain leads to inaccurate
 19 designations of responsibility for stormwater runoff. (RDC St. No. 1 at 11-12).

20 In addition, testifying for River Development, Dr. McAbee opines that the use of
 21 impervious area is an “inefficient and impractical method of calculating stormwater
 22 runoff.” (RDC St. No. 2 at 4). Claiming that the use of square feet of impervious surface
 23 is “too imprecise,” Dr. McAbee testifies that stormwater calculations should be “based on
 24 formulas including the number of smokestacks, the number of violations for exceeding
 25 air and water emissions, the number of actual exceedances etc.” (RDC St. No. 2 at 5).

1 **Q. WHAT DOES RIVER DEVELOPMENT RECOMMEND WITH RESPECT TO**
 2 **USE OF A METHOD OTHER THAN THE IMPERVIOUS AREA METHOD?**

3 A. Dr. Strauss does not offer an alternative method other than impervious area that should be
 4 used as a basis for PWSA’s stormwater charges. In fact, in response to discovery
 5 provided on September 7, 2023 to PWSA-I-6, Dr. Strauss indicated that he has not
 6 finalized his reasons for asserting that the impervious area of a property is unrelated to the
 7 management of stormwater runoff. This response, which demonstrates the shortcomings
 8 of Dr. Strauss’ testimony, is attached as Exhibit KR-3. And, Dr. McAbee recommends
 9 that PWSA and intervenors in this proceeding should jointly create an equitable formula
 10 based on “science.” (RDC St. No. 2 at 11, 15). It is not clear from the testimony of either
 11 witness what alternative method River Development is proposing that the Commission
 12 should adopt for PWSA’s calculation of stormwater charges.

13 **Q. PLEASE RESPOND TO RIVER DEVELOPMENT’S CRITICISMS OF USING**
 14 **IMPERVIOUS AREA AS A BASIS FOR STORMWATER CHARGES.**

15 A. The use of impervious area has been contemplated by PWSA and discussed with
 16 stakeholders over a number of years. Further, it is an appropriate method to use for
 17 calculating stormwater charges because impervious area is a hard surface that prevents or
 18 significantly impedes precipitation or snowmelt from soaking into the ground. When
 19 precipitation falls on an impervious area, it runs off the property rather than being
 20 absorbed into the ground. Impervious surfaces include areas such as rooftops and paved
 21 areas, which the River Development witnesses acknowledge exists on its property. As to
 22 the other factors suggested by River Development for use in calculating stormwater
 23 charges, PWSA recognizes that a number of characteristics of a property can affect the
 24 actual amount of stormwater runoff, but they are difficult to measure, and it is not
 25 feasible to visit and assess these properties to consider such nuances. Rate structures for

1 stormwater management do not typically consider factors that came with the land itself.
2 Further, the design of the roof, while it is used by RDC to assist in cooling in the summer
3 and retaining heat in the winter, does not affect the management of stormwater runoff.

4 **Q. WHY IS IMPERVIOUS AREA IMPORTANT TO THE DEVELOPMENT OF A**
5 **STORMWATER CHARGE?**

6 A. As I explained in my Direct Testimony, impervious surface area is the most commonly
7 used metric across the United States to charge for costs related to stormwater services
8 like flood control and water quality management. Of note, according to a recent Black
9 and Veatch Stormwater Utility Survey, 92% of entities charging a stormwater rate use
10 this method.² Impervious surfaces, like sidewalks, rooftops and driveways, prevent or
11 significantly impede water's ability to infiltrate into the ground. Therefore, the more
12 impervious area on a property, the more runoff the property generates and the greater the
13 demand for the utility's stormwater services. I see no reason to use a different method, as
14 suggested by Dr. McAbee, for Pittsburgh than is used for other communities, including
15 those she discusses as being agricultural communities. Her testimony relating to the
16 development of a formula based on "science" and recommending the inclusion of the
17 number of smokestacks, violations for exceeding air and water emissions, and the number
18 of actual exceedances is not persuasive because those factors do not relate to stormwater
19 runoff. While many considerations could be included in the calculation of a stormwater
20 charge, PWSA has opted to implement the industry standard, which the Commission has
21 approved. Basing the stormwater charges on the amount of impervious area on a

² https://www.wichita.edu/academics/fairmount_college_of_liberal_arts_and_sciences/hugowall/efc/news/meramec-funding-source-pages/stormwater-fee.php.

1 property is simple to calculate, transparent, and results in the imposition of equitable
 2 charges across PWSA’s customer base.

3 **Q. DOES RIVER DEVELOPMENT RAISE ANY OTHER ISSUES ABOUT PWSA’S**
 4 **STORMWATER CHARGES THAT YOU WISH TO ADDRESS?**

5 A. Yes. Through the Direct Testimony of Dr. McAbee, River Development alleges that
 6 because PWSA’s stormwater charge for residential customers has a three-tier rating
 7 system and has a one-tier rating system for nonresidential customers, the charge is
 8 unreasonable and discriminatory. (RDC St. No. 2 at 9-11).

9 **Q. DO YOU AGREE?**

10 A. No. As I explain above in response to a similar assertion made by Mr. Callocchia on
 11 behalf of the School District, the range of impervious area is fairly narrow for residential
 12 customers, which makes the use of a three-tiered approach reasonable. What that means
 13 is that residential customers fall into one of three buckets, depending on the range of
 14 impervious area that is on their property. Residential customers with 400 square feet to
 15 less than 1,015 square feet of impervious area pay a “Tier 1” stormwater charge in 2023
 16 that is based on 0.5 Equivalent Residential Units (“ERUs”), or currently \$3.98 per month.
 17 For property with 1,015 square feet of impervious area but less than 2,710 square feet of
 18 impervious area, residential customers pay a “Tier 2” stormwater charge in 2023 that is
 19 based on 1 ERU, or currently \$7.95 per month. Residential customers with impervious
 20 area greater than or equal to 2,710 square feet pay a stormwater charge that is based on 2
 21 ERUs, or currently \$15.90 per month. This approach acknowledges variability in
 22 demand but also limits the administrative burden of maintaining, calculating,
 23 communicating, and providing customer service for individualized charges for the
 24 majority of parcels.

1 However, due to a much wider range of impervious areas on nonresidential
2 properties, a tiered approach for nonresidential properties is not feasible due to the
3 number of tiers that would be needed. Importantly, “tier” is term of convenience and is
4 not intended to convey differences in rate structure. It simply means that without the
5 three tiers that are used for residential customers, PWSA uses an infinite number of units
6 for nonresidential properties. Stated differently, instead of using a tiered approach, all
7 nonresidential customers in 2023 pay the monthly amount of \$7.95 per ERU, which is the
8 same rate that is paid by residential customers in the “Tier 2” category, using 1 ERU. In
9 this way, nonresidential customers have unlimited tiers, as their charges are equitably
10 based on a simple calculation using their precise number of ERUs.

11 PWSA witness Igwe testifies in his Rebuttal Testimony that River Development’s
12 property contains 202,589 square feet, or 123 ERUs. (PWSA St. No. 5 at 17). The
13 current monthly stormwater charge billed to River Development is \$977.85, which is 123
14 ERUs multiplied by \$7.95 per ERU. Given the wide variation among nonresidential
15 customers, and the significant amount of impervious area that is on River Development’s
16 property, it is difficult to understand how a tiered approach for nonresidential customers
17 would benefit River Development. Requiring nonresidential customers to pay only for
18 the exact amount of their impervious areas is an equitable approach since it avoids a
19 situation where a nonresidential customer’s impervious area falls at the low end of a
20 much larger range than is used for residential customers but pays the same rate that is
21 charged to a nonresidential customer whose impervious area falls in the higher end of the
22 range. Also, it is likely that River Development’s rate would not change with the use of

1 tiers since it would still be based on the amount of impervious area. PWSA's approach is
2 precise and produces a reasonable result.

3 As to Dr. McAbee's claims regarding discrimination between residential and
4 nonresidential customers, I am advised by counsel that variations in the treatment of
5 different customer classes is unlawful under the Public Utility Code only if it is
6 unreasonable.³ Here, because PWSA has chosen a method for residential customers that
7 is simple to explain and implement, it is reasonable due to the range of fairly narrow
8 range of impervious area, and results in the same charge for any customer class with 1
9 ERU of impervious area. By contrast, given the wide range of impervious area among
10 nonresidential customers, PWSA's approach properly calculates the stormwater charges
11 on the basis of each customer's specific amount of impervious area.

12 **V. CONCLUSION**

13 **Q. DOES THAT COMPLETE YOUR REBUTTAL TESTIMONY?**

14 **A.** Yes. However, I reserve the right to supplement it, as appropriate.

³ 66 Pa. C.S. § 1304.

PWSA Exhibit KR-3

Respondent:

Cheryl R. McAbee, President, River Development Corporation

Date: September 7, 2023

8. Refer to RDC St. No. 1 at 12. Have you compared the annual precipitation over a 5- or 10-year period throughout the Pittsburgh area? If so, please provide the results.

RESPONSE:

Robert Strauss – Dr. Robert Strauss has not developed the requested precipitation results.

9. Refer to RDC St. No. 1 at 12. Please explain the assertion that the slope of terrain skews the measurement of impervious surface area and how that affects the number of ERUs on which the RDC stormwater fee is based.

RESPONSE:

Robert Strauss – Dr. Robert Strauss has not developed the requested terrain but will supply such at a later date.

VERIFICATION

I, Keith Readling, hereby state that: (1) I am the Executive Vice President, Raftelis Financial Consultants, Consultant to The Pittsburgh Water and Sewer Authority (“PWSA”); (2) the facts set forth in my rebuttal testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

CF-10	Moody’s Investors Service, 29 May 2023: Pittsburgh Water & Sewer Authority, PA, Update to credit opinion following outlook revised to positive
CF-11	S&P Global Ratings, May 17, 2023: Summary: Pittsburgh Water and Sewer Authority; Water/Sewer
CF-12	Moody’s Investors Service, 12 June 2023: Water and Sewer Utilities – US Medians – Steady revenue growth, strong coverage and robust liquidity boost sector
CF-13	S&P Global Ratings, February 24, 2022: U.S. Municipal Water and Sewer Sector Medians Held Strong In 2021

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND POSITION FOR THE RECORD.**

3 A. Christine M. Fay. I am a Senior Managing Director and Partner with Public Resources
4 Advisory Group, Inc. (“PRAG”).

5 **Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?**

6 A. Yes, I submitted Direct Testimony, PWSA St. No. 9 on May 9, 2023, which accompanied
7 the rate filing.

8 **Q. WHAT IS YOUR ROLE WITH THE PWSA?**

9 A. My firm, PRAG, is the Registered Municipal Advisor to the PWSA and as a Municipal
10 Advisor Representative, I provide the PWSA fiduciary advice and recommendations
11 related to the issuance of municipal securities.

12 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

13 A. The purpose of my Rebuttal Testimony is to respond to certain portions of the direct
14 testimony submitted by the Bureau of Investigation and Enforcement (“I&E”), the Office
15 of Consumer Advocate (“OCA”) and the Office of Small Business Advocate (“OSBA”)
16 (collectively the “Intervenors” or the “Parties”). Specifically, my Rebuttal Testimony will
17 respond to the various revenue requirement recommendations, address the financial
18 metrics implications, review credit rating and capital markets considerations and benefits
19 of a Multi-Year Rate Plan (“MYRP”).

20 **Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.**

21 A. My Rebuttal Testimony responds to the testimony and the approach that the Intervenors
22 have taken to assess the reasonableness of the PWSA’s rate request and the specific
23 recommendations of Mr. Spadaccio, the witnesses for I&E, Mr. Mugrace, the witness for
24 the OCA and Mr. Higgins, the witness for the OSBA.

1 It provides further evidence that their recommendations should not be adopted and
2 PWSA should be awarded all or substantially all of the rate increase it has requested and
3 the PUC should approve the Authority's request for a MYRP.

4 **Q. ARE YOU SPONSORING ANY EXHIBITS?**

5 A. Yes. I am sponsoring the following exhibits:

- 6 • **Exh. CF-10:** Moody's Investors Service, 29 May 2023: Pittsburgh Water &
7 Sewer Authority, PA, Update to credit opinion following outlook revised to
8 positive
- 9 • **Exh. CF-11:** S&P Global Ratings, May 17, 2023: Summary: Pittsburgh Water
10 and Sewer Authority; Water/Sewer
- 11 • **Exh. CF-12:** Moody's Investors Service, 12 June 2023: Water and Sewer Utilities
12 – US Medians – Steady revenue growth, strong coverage and robust liquidity
13 boost sector
- 14 • **Exh. CF-13:** S&P Global Ratings, February 24, 2022: U.S. Municipal Water and
15 Sewer Sector Medians Held Strong In 2021

16 **II. REVENUE REQUIREMENT RECOMMENDATIONS OF OTHER PARTIES**

17 **Q. CAN YOU SUMMARIZE THE TESTIMONY OF THE OPPOSING PARTIES**
18 **REGARDING THE RECOMMENDED REVENUE REQUIREMENT AND**
19 **RESULTING FINANCIAL METRICS?**

20 A. Mr. Spadaccio claims that I&E's proposed revenue of \$195.76 million (which is a \$6.9
21 million decrease to current rates) results in senior debt service coverage of 1.70x and total
22 debt service coverage of 1.11x. (I&E St No. 1 (Spadaccio) at 18) which he believed are
23 levels that will allow "PWSA to at least maintain, if not provide support for the
24 consideration to improve, its credit rating." This conclusion is fundamentally incorrect,
25 in fact a total debt service of 1.11x is only slightly higher than the Authority's rate

1 covenant that requires a minimum total coverage of 1.10x leaving the Authority only a
2 slight margin before being in violation of a bond covenant with its investors which would
3 be very alarming to the rating agencies. Further, Mr. Spadaccio recommends a revenue
4 requirement that is \$6.9 million less than existing rates which if approved by the
5 Commission would come with scrutiny from the rating agencies about the Authority's
6 ability to maintain utility operations and fund its capital plan with reduced rates during a
7 time of elevated inflation. The financial metrics included in Mr. Spadaccio's testimony
8 were only able to be achieved by significantly cutting allowed operating expenses and
9 capital costs which would also attract scrutiny from the rating agencies and jeopardize the
10 Authority's continued financial progress. I understand that there were mistakes in the
11 I&E calculation and as summarized in the table below the corrected debt service
12 coverage calculations are at a reduced level to the ones provided in Mr. Spadaccio's
13 testimony and are in direct violation to the Authority's rate covenant which would have
14 serious consequences to the Authority's credit rating and could jeopardize its access to
15 the bond market.

16 Mr. Mugrace claims that the OCA's \$239.067 million recommended revenue requirement
17 (OCA St. 1 (Mugrace) at 10, 24), would produce a debt service coverage ratio of 1.65x
18 on PWSA's senior debt and 1.21x on total debt, however after the adjustment to
19 \$234.249 million to account for uncollectible revenues and reduced DSIC and unadjusted
20 operating expenses all in coverage drops to 1.05x which is in direct violation of the
21 Authority's rate covenant and drops DCOH to an unacceptable level of 203. OSBA's
22 recommendation produces similar results. Further the Intervenors who discuss it are also
23 recommending against approving a MYRP.

1 The table below shows that each of the Intervenor are proposing rate increases which do
 2 not permit PWSA to meet its annual rate covenant or its Additional Bonds Test (“ABT”)
 3 because the “Total Coverage” is less than 1.10x.

4

FPFTY	Recommended Revenue Requirement and Financial Metrics					
	PWSA 2023	PWSA FPFTY	I&E FPFTY	I&E (Corrected) FPFTY	OCA (Adjusted) FPFTY	OSBA FPFTY
Total Revenues	\$208.811M	\$255.319M	\$201.912M	\$230.999M	\$239.067M	\$242.041M
Total Revenues (after uncollectibles)	\$202.659M	\$249.17M	\$195.76M*	\$224.847M	\$234.249M	\$235.889M
Change from Existing Rates	\$-	\$46.507M	(\$6.898M)	\$22.187M	\$31.590M	\$33.230M
Change from Requested Rate Increase	\$-	\$-	(\$53.406M)	(\$24.319M)	(\$14.921M)	(\$13.278M)
Debt Service Coverage						
Senior (1.25 Requirement)	1.45x	1.65x	0.90x	1.31x	1.44x	1.46x
Total (1.10 Requirement)	1.13x	1.21x	0.6x	0.95x	1.05x	1.07x
Days Cash on Hand	283	247	102	181	203	211
Days Cash on Hand with ALCOSAN	160	145	60	106	119	123

5

6 **Q. DO YOU AGREE WITH THE APPROACH THE INTERVENORS HAVE**
 7 **TAKEN TO EVALUATE THE NEEDS OF THE UTILITY?**

8 A. No. While the Intervenor would undoubtedly support granting a for-profit utility
 9 company a rate increase that includes a “rate of return” that would permit the firm to
 10 maintain and attract capital, they have opposed the Authority from obtaining an adequate
 11 “rate of return for reinvestment” back into the system. For municipal utilities, the rate of
 12 return for reinvestment means generating debt service coverage and liquidity (cash on
 13 hand). Debt service coverage above 1x gives the municipal entity the cash it needs to pay

1 items that are not included in the coverage calculation (annual operating expenses less
2 annual debt service) as well as provides the Authority with funds to improve flexibility,
3 reduce risk, reduce adding to its already high debt load by having pay-go funds, the
4 ability to react quickly to unanticipated opportunities and challenges, improve its credit
5 position, lower its cost of doing business, etc. For these reasons, the PUC should be
6 striving to grant rates that will provide coverage levels and liquidity at levels consistent
7 with similar municipal systems.

8 Additionally, the intervenors do not account for the financial resources needed for the
9 Authority to pass an ABT in order to access the capital market. The annual operating
10 revenue level needed to satisfy the ABT can be seen as the absolute minimum amount
11 that can be awarded as capital market access is essential to the Authority's ability to fund
12 its capital plan. As demonstrated by Mr. Barca's Rebuttal Testimony, PWSA St. No. 2-R,
13 I&E, OCA and OSBA recommended revenues requirements with proposed operating
14 expenses fail this test. It is important to caution here that if the rating agencies perceive a
15 lack of market access and inability to issue additional debt to maintain its facilities there
16 would likely be significant negative credit implications.

17 **Q. WHAT WERE THE MAJOR FACTORS THAT CONTRIBUTED TO PWSA**
18 **COMING UNDER PUC SUPERVISION AND WHAT WAS THE EXPECTATION**
19 **FOR A SUCCESSFUL OUTCOME?**

20 A. The major factors that contributed to the PWSA's past financial, operational and health
21 and safety issues were related the lack of investment in operations, maintenance, capital
22 and inadequate management caused by the lack of will to generate sufficient revenue for
23 reinvestment into the system. Inadequate investment resulted in equipment failures,
24 water quality and safety issues, a general public concern about the Authority's utility
25 systems and various problems with billing that ranged from errors or inaccuracies to

1 delays in rendering bills. A successful outcome to the market, rating agencies and
 2 Authority is based on the expectation that the PUC would fully support and facilitate
 3 PWSA's reinvestment into the system.

4 **Q. IN YOUR OPINION, ARE THE RECOMMENDATIONS OF THE**
 5 **INTERVENING PARTIES CONSISTENT WITH THESE EXPECTATIONS FOR**
 6 **PUC SUPERVISION?**

7 A. No. I&E is proposing to significantly reduce PWSA's allowed operating and capital
 8 expense budget based on historical average calculations taking into account the
 9 differences between the established budget and actual spending which enables
 10 Intervenors to propose reducing the corresponding proposed rate increase. This is not a
 11 valid approach. The Intervenors are ignoring the fact that in a financial and operating
 12 turnaround situation, it takes time to ramp up spending and operational improvements.
 13 Per Mr. Barca's Rebuttal Testimony, PWSA St. No. 2, I&E is proposing a \$6.9 million
 14 **decrease** from PWSA's existing revenues for the FPFTY (\$22.187 million increase on an
 15 adjusted for error basis). Even on an adjusted basis this is \$24.3 million less than the
 16 Authority's requested rate increase and deficient in meeting the minimum debt service
 17 coverage requirements pursuant to the rate covenant for the Authority's outstanding
 18 bonds. OCA's proposal is \$14.9 million less than the Authority's requested rate increase
 19 and OSBA is \$13.3 million less and both violate the Authority's required rate covenant.
 20 The Intervenors consistent objection to the level of proposed rate increase in each filing
 21 situation has had the effect of disrupting PWSA's planning and implementation of
 22 operational, maintenance, regulatory and supervisory improvements. Also, as outlined in
 23 Mr. Barca's Rebuttal Testimony, PWSA St. No. 2-R, none of the opposing Parties
 24 seriously considered the ABT when determining their overall revenue requirement
 25 recommendation. Following the Intervenors revenue recommendations would require

1 PWSA to substantially cut its operating budget to a point that would seriously threaten
2 PWSA's ability to continue to provide safe and reliable services in order to achieve
3 sufficient net operating revenue to meet the ABT. The Intervenor's recommendations have
4 the effect of undermining PWSA management's effort to maintain financial health in
5 order to continue its efforts to modernize its system and improve safety, reliability, and
6 professional business processes. It is of utmost importance to understand that the Parties'
7 approach is in direct conflict with what is expected from the rating agencies from the
8 Commission's oversight – that PUC would support and facilitate PWSA's efforts to
9 generate sufficient resources that will be reinvested into the system to enable PWSA to
10 make financial and operational improvements.

11 **Q. WHAT IF THE INTERVENORS ARE WRONG AND OPERATING EXPENSES**
12 **ARE SIGNIFICANTLY HIGHER THAN THE INTERVENORS CLAIM?**

13 A. The answer is critical operations would not be funded, maintenance would not be
14 accomplished, certain proposed capital projects would have to be cancelled and/or
15 delayed, additional regulatory efforts would be disrupted, and the operational level of
16 service would be reduced. The Authority would also not be able to demonstrate
17 resources available to meet its ABT or its Annual Rate Covenant so it would be
18 precluded from accessing the capital markets to issue debt and would require the
19 Authority to proceed with an emergency rate filing with the PUC which would have long-
20 term negative effects for PWSA and the PUC. These factors most certainly would lead to
21 a credit rating downgrade and increased borrowing costs for the Authority.

22 **Q. WHAT IF THE INTERVENORS ARE RIGHT AND PWSA'S OPERATIONAL**
23 **EXPENSES ARE MUCH LOWER THAN BUDGETED IN THE FPFTY?**

24 A. The fact is that the Authority has no shareholders and every dollar of revenue collected
25 from ratepayers is used to benefit the system, which ultimately benefits ratepayers. If the

1 expenditures projected in PWSA’s operating budget do not entirely materialize the
 2 Authority will have more funds to reduce its debt, build its reserves, accelerate the timing
 3 for regulatory projects, improve the quality and levels of service and other operational
 4 goals and lower its cost of doing business, among others. The Intervenors are not taking
 5 in account that PWSA is a municipal utility and all of the revenue that it raises stays in
 6 the utility to be invested into the system.

7 **Q. WHAT DO YOU CONCLUDE RELATIVE TO THE OPPOSING PARTIES**
 8 **REVENUE REQUIREMENT RECOMMENDATIONS?**

9 A. The Commission should reject any implications that the debt service coverages and days
 10 of cash produced by the Intervenors’ proposed rate increase are reasonable levels. In fact,
 11 to be comparable to its peer companies and comparably rated credits, even the levels
 12 proposed by PWSA are too low; the Authority could justify earning much higher
 13 financial metrics. I fear that a substantial reduction in PWSA’s request in the face of
 14 these efforts will not be viewed favorably by the rating agencies or the investment
 15 community.

16
 17 **III. CAPITAL MARKETS AND RATING CONSIDERATIONS**

18 **Q. WHAT IS THE APPROPRIATE RATE OF RETURN FOR REINVESTMENT**
 19 **INTO THE SYSTEM?**

20 A. Currently, an appropriate, reasonable and justifiable level of reinvestment into the utility
 21 is a total debt service coverage level (not senior securities only) of 1.50x, which is
 22 calculated as revenues of the Authority less operating expense divided by annual debt
 23 service on all Authority debt.

1 **Q. WHY IS A REINVESTMENT RATE OF 1.50X TOTAL DEBT SERVICE**
 2 **COVERAGE AN APPROPRIATE RATE?**

3 A. This level is validated by comparing all-in coverage levels to the credit agencies’ rating
 4 methodology and medians and comparison metrics of other municipal utility peer
 5 comparisons as detailed in my testimony that follows.

6 **Q. HOW DOES AN ALL-IN DEBT SERVICE COVERAGE OF 1.50X COMPARE**
 7 **TO MOODY’S RATING AGENCIES CRITERIA?**

8 A. The table below that Mr. Spadaccio used in his testimony supports a rate of return for
 9 reinvestment of 1.50x coverage level of total debt service. The table below is a summary
 10 of Moody’s Investors Service Rating Methodology, US Municipal Utility Revenue Debt
 11 that was included as Exhibit CF-6 to my original testimony PWSA St. No. 9 showing the
 12 “total debt service” coverage subfactor that is part of Moody’s Financial Strength Factor,
 13 which is part of Moody’s Scorecard methodology for water and sewer utilities. The table
 14 illustrates that annual debt service coverage of 1.50x generates an “A” level financial
 15 “score.” PWSA is currently rated A3 by Moody’s which falls in the lower level of the
 16 “A” category rating tier, so maintaining coverage at or near 1.5x is consistent with
 17 maintaining the Authority’s existing Moody’s credit rating and all in debt service
 18 coverage less than 1.25x will pressure the Authority’s Moody’s A3 rating.

<u>Rating Category Score</u>	<u>Total Debt Service Coverage</u>
Aaa	Greater than 2.00x
Aa	Greater than 1.70x but less than or equal to 2.00x
A	Greater than 1.25x but less than or equal to 1.70x
Baa	Greater than 1.00x but less than or equal to 1.25x
Ba	Greater than 0.70x but less than or equal to 1.00x
B and Below	Equal to or less than 0.70x

1 **Q. HOW DOES AN ALL-IN DEBT SERVICE COVERAGE OF 1.50X COMPARE**
 2 **TO S&P’S RATING AGENCIES SCORECARD?**

3 A. S&P outlines their assessment of debt coverage in U.S. Public Finance: U.S. Municipal
 4 Water, Sewer, And Solid Waste Utilities: Methodology and Assumptions, dated April 14,
 5 2022 (Exhibit CF-7) , with the following scale below:

<u>Score</u>	<u>Initial Assessment</u>	<u>“All-in” Coverage</u>
1	Extremely Strong	1.60 or above
2	Very Strong	1.40 to 1.60x
3	Strong	1.20 to 1.40x
4	Adequate	1.10x to 1.20x
5	Vulnerable	1.00x to 1.10x
6	Highly Vulnerable	Below 1.00x

6 The Standard & Poor’s publication presented by Mr. Spadaccio (I&E St. No. 1 at 16)
 7 dated September 15, 2008 is almost fifteen (15) years old, no longer used and is
 8 inconsistent with S&P’s current rating criteria. The report presented by S&P in 2008 has
 9 been updated several times, most recently with the above-cited criteria from 2022. The
 10 Authority’s proposed rates are expected to result in all-in coverage of 1.21x allowing
 11 them to meet the lower bound of the range considered “Strong” coverage but just above
 12 all-in coverage levels considered “Adequate” assessment, or coverage score of “4” in FY
 13 2024. An all-in coverage of 1.50x would equate to a score of “2” or “Very Strong” in this
 14 respective rating factor.

15 **Q. HOW DOES AN ALL-IN DEBT SERVICE COVERAGE OF 1.50X FOR PWSA**
 16 **COMPARE TO S&P’S MEDIANS?**

17 A. S&P publishes their own respective water and sewer median report on a biennial basis
 18 with the most recent report introduced on February 24, 2022 titled U.S. Municipal Water
 19 and Sewer Sector Medians Held Strong. The full report is provided as PWSA Exhibit

1 CF-13. As can be seen within S&P median report and as summarized below, the
 2 justifiable all-in debt service coverage of 1.50x is at the “A-” category of median, which
 3 is two notches below what the Authority currently S&P rating of A+. For an A+ credit,
 4 such as the Authority, S&P medians all in debt service coverage is 1.8x.

S&P	AAA	AA+	AA	AA-	A+	A	A-	BBB+	BBB	BBB-
All-In Debt Service Coverage	2.4x	2.4x	2.2x	2.0x	1.8x	1.6x	1.5x	1.2x	1.2x	1.1x

5 **Q. HOW DOES AN ALL-IN DEBT SERVICE COVERAGE OF 1.50X FOR PWSA**
 6 **COMPARE TO MOODY’S MEDIANS?**

7 A. As can be seen in PWSA Exhibit CF-12: Moody’s Investors Service, 12 June 2023:
 8 Water and Sewer Utilities – US Medians - Steady revenue growth, strong coverage and
 9 robust liquidity boost sector, and discussed further within my Rebuttal Testimony, the
 10 median for all-in (total) debt service coverage is 1.8x for “A” rated municipal water and
 11 sewer utilities and associated days cash on hand is 412 days.

12 **Moody’s Medians for Combined Water and Sewer Utilities**

Rating Category	Aaa	Aa	A	Baa	Ba
All-In Debt Service Coverage	3.7x	2.5x	1.8x	1.8x	NA

Rating Category	Aaa	Aa	A	Baa	Ba
Days Cash on Hand	901	538	412	155	NA

13
 14
 15 The 2023 median report is based on 2021 data. Some highlights of the 2023 report include:

- 16 - **Revenue grew in fiscal 2021, bolstered by independent rate-setting ability and**
 17 **essentiality of services.** Sector wide, more than half of water and sewer utilities we
 18 rate had revenue growth of about 3.5% or greater in fiscal 2021.

1 - **Operating and maintenance (O&M) costs grew slightly slower than revenue.**

2 Most utilities had O&M costs rise by about 3.5% or less in fiscal 2021 versus the
3 prior year.

4 - **Net revenue improved sector wide.** Net revenue rose by at least 2% for most
5 utilities in fiscal 2021, which helped systems maintain strong coverage and bolster
6 liquidity.

7 - **Strong debt service coverage provided a buffer against shocks.** Median coverage
8 held steady at 2.3x in fiscal 2021, indicating good capacity to pay debt even under
9 stressed scenarios.

10 - **Liquidity continued to climb, enhancing financial flexibility.** Total cash grew by
11 more than 9% for most utilities in fiscal 2021, and median days cash on hand rose to a
12 robust 534 days.

13 - **Leverage remained steady.** The median debt-to-revenue ratio remained steady at a
14 modest 2.1x in fiscal 2021. Careful debt management enables utilities to address their
15 most pressing concerns, though projected needs are significant.

16 - **Reported asset condition was stable.** Utilities continued to invest in infrastructure,
17 with median useful life remaining solid at 28 years in fiscal 2021. Usage of aging
18 system components is common and will eventually require significant investment for
19 replacements.

20 **Q. HOW DOES AN ALL-IN DEBT SERVICE COVERAGE OF 1.50X FOR PWSA**
21 **COMPARE TO CERTAIN MUNICIPAL WATER AND SEWER PEERS?**

22 A. In addition, in comparison with peers presented in my Direct Testimony, PWSA St. No.
23 9, a total debt service coverage of 1.50x would still be in the bottom half of peers, as well
24 as below the new medians presented in Moody's Investors Service's Water and Sewer

1 Utilities – US. Medians – Steady revenue growth, strong coverage and robust liquidity
 2 boost sector dated 12 June 2023 (PWSA Exhibit CF-12). Please see below for the
 3 updated chart comparing PWSA to certain peers.

4 **DEBT SERVICE COVERAGE**
 5 **(2021 net revenue divided by 2021 debt service, expressed as a multiple)**

7 * Chicago, Washington DC and Westmoreland County debt service coverage is based on 2020 data.
 8 Sources: Moody’s Investor Service: Water and Sewer Utilities Medians – Steady revenue growth, strong coverage
 9 and robust liquidity boost sector dated 12 June 2023 (2021 data) and Moody’s Investor Service latest rating
 10 reports for each entity (2020 and 2021 data).

11 **Q. HOW DOES THE 1.50X TOTAL DEBT SERVICE COMPARE TO THE**
 12 **PROJECTED TOTAL DEBT SERVICE FOLLOWING THE REQUESTED RATE**
 13 **INCREASE?**

14 **A.** The Authority requested a Multi-Year Rate Plan (MYRP) with a total increase of \$146.1
 15 million over three years with a \$46.5 million increase in FPPTY which results in total all-
 16 in debt service of 1.21x. While this is significantly below the 1.5x coverage deemed to be
 17 justified and appropriate based on rating agency methodologies, medians and peer issuers
 18 as described in my testimony it is understandable that this is a goal to work towards over
 19 a number of years. As demonstrated in the table below, which summarizes the MYRP
 20

1 requested by the Authority, total debt service coverage is projected at 1.4x by FY 26,
 2 nearing the 1.5x reinvestment rate that is appropriate for the Authority.

	FY 2023	FY 2024 FPFTY	FY 2025	FY 2026
Revenue Requirement	\$202.659M	\$249.167M	\$294.567M	\$348.46M
Requested Revenue Increase	-	\$46.5M	\$45.4M	\$53.9M
Senior Debt Service Coverage	1.45x	1.65x	1.87x	2.02x
Total Debt Service Coverage	1.13x	1.21x	1.26x	1.40x

3
 4 **Q. IF PWSA HAD REQUESTED A RATE INCREASE TO PRODUCE A 1.50X ALL-**
 5 **IN DEBT SERVICE COVERAGE, WHAT AMOUNT OF RATE INCREASE**
 6 **WOULD IT HAVE BEEN ABLE TO JUSTIFY?**

7 A. PWSA could have reasonably requested a justifiable revenue requirement of \$283.9
 8 million (\$75.1 million rate increase) that would enable the PWSA to achieve total debt
 9 service coverage of 1.50x in FPFTY and also generate 321 days cash on hand (DCOH),
 10 which is more comparable to its peers. The revenue requirement to achieve the 1.50x
 11 coverage would have required a rate increase of \$28.7 million of additional revenue over
 12 and above the requested \$46.5 million increase, which is an increase of 13.7% over what
 13 the PWSA requested.

14
 15 **Q. HOW DOES THE PROJECTED DCOH OF THE REQUESTED RATE INCREASE**
 16 **COMPARE TO THAT OF THE AUTHORITY’S PEERS?**

17 A. The Authority requested rate increase results in DCOH of 247 for FPFTY which is higher
 18 than past years but still inadequate as compared to peer municipal utilities. In past rating
 19 meetings, the Moody’s rating analyst cited the Authority’s weak DCOH as compared to
 20 its peers as one of the primary reasons the Authority has not been upgraded and continues
 21 to be rated “A3.” Provided below is a peer comparison chart of days cash on hand that

1 compares PWSA to other large city water and sewer entities. In 2021, PWSA had 155
 2 days cash on hand which ranked the Authority as the third lowest liquidity of its peer
 3 utilities and also compared very unfavorably to Moody’s overall and “A” and “Aa” rated
 4 utility medians.

5 **DAYS CASH ON HAND***
 6 **(2021 unrestricted cash and liquid investments times 365 divided by 2021 operating and**
 7 **maintenance expenses, expressed in days)**

8
 9 * Chicago, Washington DC and Westmoreland County debt service coverage is based on 2020 data.

10 Sources: Moody’s Investor Service: Water and Sewer Utilities Medians – Steady revenue growth, strong coverage
 11 and robust liquidity boost sector dated 12 June 2023 (2021 data) and Moody’s Investor Service latest rating
 12 reports for each entity (2020 and 2021 data).
 13

14 **Q. DO YOU AGREE WITH MR. SPADACCIO’S ASSESSMENT OF THE RATING**
 15 **AGENCIES LACK OF CONCERN REGARDING COVERAGE FOR PWSA?**
 16 **(I&E ST. NO. 1 AT 16).**

17 A. No. As addressed in my Direct Testimony, Statement No. 9 (as well as in my testimony
 18 above), it is imperative for municipal utilities to have coverage that far exceed their
 19 minimum requirements. Although the Authority’s meets their rate covenants, Moody’s
 20 still focuses on this particular financial metric. Moody’s most recent report stated that
 21 [PWSA’s] “[i]nability to raise rates sufficiently to meet debt service coverage covenants
 22 while also funding significant deferred capital improvements” is a “[f]actor(s) that could
 23 lead to a downgrade.” In this report Moody’s further details that “PWSA expects all-in

1 coverage to stay in the range of 1.2 times to 1.4 times over the next five years, though the
 2 Authority assumes rather significant rate increases in order to keep coverage stable.
 3 Moody's expects that the PUC will be supportive of rate increases that will allow for
 4 satisfactory coverage levels while PWSA continues to execute its capital plan. Future
 5 reviews will consider whether the Authority is able to maintain satisfactory coverage and
 6 adhere to projected financial performance while supporting increased leverage to execute
 7 the Authority's sizeable capital plan." Moody's is clearly signaling in this report the
 8 importance for the Authority to maintain satisfactory coverage in the coming years. The
 9 Authority's FPFTY rate request is projected to generate 1.21x all in coverage in FY 2024
 10 and grow to 1.40x in 2026 with the MYRP. I note again that the 1.21x coverage is at the
 11 low end of the expected coverage levels referenced in Moody's most recent credit report
 12 and the recommended rate requirements from the Intervenors result in all-in coverage
 13 levels well below these levels which would most certainly cause concern to the rating
 14 agencies.

15 **Q. SIMILARLY, MR. SPADACCIO CLAIMS THAT THE I&E RECOMMENDED**
 16 **RATE DECREASE WOULD NONETHELESS PRODUCE A 1.7X DEBT**
 17 **SERVICE COVERAGE LEVEL ON PWSA'S SENIOR SECURITIES AND 1.11X**
 18 **ON TOTAL DEBT SERVICE, WHICH HE CLAIMS IS CLOSE TO PWSA'S**
 19 **HISTORICAL EXPERIENCE AND THAT THE RATING AGENCIES**
 20 **EXPRESSED NO CONCERN ABOUT PWSA'S DEBT SERVICE COVERAGE IN**
 21 **THE PAST. CAN YOU RESPOND?**

22 A. The debt service coverage ratios expected based in I&E recommended revenue
 23 requirement are inadequate based on the levels that Moody's and S&P expect for a credit
 24 such as PWSA and significantly deficient based on peer comparisons. Moody's rating
 25 report for PWSA dated October 15, 2018 discussed the Authority's downgrade at that
 26 time and listed "narrow coverage and liquidity" as a credit challenge. Coverage at that

1 time was 0.81x, however, Moody's has continued to reference the Authority's coverage
 2 and their expectations for maintaining or continuing to raise coverage.

3 Additionally, Moody's most recent rating report for PWSA, dated May 29, 2023,
 4 discusses the Authority's debt service coverage at 1.8x and total coverage of 1.41x as
 5 "well within covenant requirements and satisfactory versus peers." The report goes on to
 6 discuss that Moody's analysts expect the PUC will be supportive of rate increases that
 7 continue to allow for satisfactory coverage levels, and they will consider whether PWSA
 8 is able to maintain satisfactory coverage levels.

9 Moody's has maintained, since its PWSA rating report dated June 4, 2019, that "sustained
 10 improvements in debt service coverage" could lead to an upgrade. Prior to the
 11 Authority's downgrade by Moody's in 2018 and continuing to their latest rating report for
 12 PWSA dated May 29, 2023, Moody's analysts have noted that narrowing of debt service
 13 coverage could lead to a downgrade.

14 **Q. MR. SPADACCIO ALSO ASSERTS THAT A S&P PUBLICATION DISCUSSING**
 15 **“AT WHAT LEVEL A MUNICIPAL DEBT SERVICE HAS TO BE TO ALLOW**
 16 **IT TO “PAY ITS DEBT” DEMONSTRATES THAT ANYTHING OVER 1.0X IS**
 17 **CONSIDERED “ADEQUATE AND 1.5X IS “STRONG.” IS HE CORRECT?**

18 **A.** No. As I have stated above, Mr. Spadaccio included S&P's criteria for Water and Sewer
 19 Utilities dated September 15, 2008 (I&E Ex. No. 1, Schedule 6, Page 1), and is ignoring
 20 S&P's current rating methodology, dated April 14, 2022 and titled "U.S. Municipal
 21 Water, Sewer, and Solid Waste Utilities: Methodology and Assumptions" (PWSA
 22 Exhibit CF-7). Table 17 in this criteria lists S&P's assessment of all-in coverage. 1.0x
 23 coverage is given a score of '5,' which translates to 'Vulnerable' as outlined in Table 3 of
 24 the criteria, and is on the verge of the lowest category of 'Highly Vulnerable.' An
 25 'Adequate' debt service coverage, according to S&P's criteria, would be between 1.10x

1 and 1.20x and 'Strong' coverage falls between 1.20x and 1.40x. A debt service coverage
 2 of 1.5x is given a score of '2,' which is 'Very Strong.'

3 According to S&P's most recent rating report for PWSA dated May 17, 2023 (PWSA
 4 Exhibit CF-11) , the Authority's "S&P Global Ratings-adjusted all-in DSC" for fiscal
 5 year 2022 was 1.6x, while the median for the 'A+' rating category was 1.8x.

Table 3

Descriptors For Enterprise Risk Profile Factors

Assessment	Description
1	Extremely strong
2	Very strong
3	Strong
4	Adequate
5	Vulnerable
6	Highly vulnerable

6

Table 17

Assessment Of All-In Coverage

Initial assessment	All-in coverage
1	1.60x or above
2	1.40x-1.60x
3	1.20x-1.40x
4	1.10x-1.20x
5	1.00x-1.10x
6	Below 1.00x

7

8 **Q. WHY DO YOU BELIEVE THAT PWSA HAVING A DEBT SERVICE**
 9 **COVERAGE IN THE “VULNERABLE” OR “ADEQUATE” LEVEL IS**
 10 **UNACCEPTABLE?**

11 A. PWSA is already on the low end of the credit spectrum in the single A rating category for
 12 a municipal water and sewer entity and is paying a higher cost of borrowing as compared
 13 to its peers as a result. Setting a revenue requirement at levels that only generate
 14 “vulnerable” or “adequate” coverage further pressure the Authority’s credit rating and
 15 expose the Authority to unforeseen events without appropriate coverage levels to manage
 16 these risks. Additionally, the coverage does not allow for adequate resources to pass the

1 ABT needed for the Authority to issue debt to fund its capital program as demonstrated
 2 by Mr. Barca’s Rebuttal Testimony, PWSA St. No. 2-R.

3 **Q. DO YOU AGREE WITH MR. SPADACCIO’S ASSESSMENT OF THE RATING**
 4 **AGENCIES LACK OF CONCERN REGARDING CASH ON HAND FOR PWSA?**
 5 **(I&E ST. NO. 1 AT 12).**

6 A. No. My Direct Testimony, PWSA Statement No. 9, highlights the importance of cash
 7 reserves and liquidity, as well as summarizes the rating agencies views and opinions of
 8 the Authority’s days cash on hand position historically. Although the Authority’s
 9 liquidity has improved, it is certainly not prudent to believe that the rating agencies do
 10 not have concern for PWSA’s days’ cash on hand. In fact, the Moody’s credit analyst has
 11 attributed the Authority’s weak DCOH as compared to its peers as one of the main
 12 obstacles holding the Authority back from being upgraded from its A3 rating.

13 **Q. IN RESPONSE TO MR. BARCA’S TESTIMONY THAT PWSA’S PRO FORMA**
 14 **YEAR END CASH WAS EXTREMELY LOW IN THE FPFTY AND EVEN**
 15 **NEGATIVE IN THE PERIODS AFTER THAT WITHOUT A RATE INCREASE,**
 16 **MR. SPADACCIO REJECTS THIS AS A CONCERN ON THE GROUNDS**
 17 **THAT, IN HIS VIEW, THE RATING AGENCIES HAVE NOT EXPRESSED**
 18 **CONCERN WITH PWSA’S DCOH (I & E ST. 1 AT 14). DO YOU AGREE WITH**
 19 **MR. SPADACCIO?**

20 A. No. In their most recent rating report for PWSA, dated May 29, 2023 (CF-10), Moody's
 21 noted that PWSA's liquidity is "satisfactory, at 165 days unrestricted cash on hand as of
 22 fiscal year end 2022." The report also notes that PWSA's cash position is "considerably
 23 weaker than national water and sewer system median days cash of 450 days as of 2021."
 24 Moody's report titled "Water and Sewer Utilities - US: Medians - Steady revenue growth,
 25 strong coverage and robust liquidity boost sector" dated June 12, 2023 (PWSA Exhibit
 26 CF-12), shows that the median DCOH for combined water and sewer utilities is the 'A'
 27 rating category is 412. These levels, I believe, show clearly that the rating agencies would
 28 NOT be satisfied with a DCOH as low as I&E’s real recommendations.

1 **Q. MR. SPADACCIO ALSO CLAIMS THAT I&E’S CALCULATED DAYS OF**
 2 **CASH (WITH A DEMANDED \$6.9 MILLION RATE DECREASE) WOULD,**
 3 **NONETHELESS PUT PWSA’S DOCH AT A LEVEL THAT IS CONSISTENT**
 4 **WITH THE AUTHORITY’S CREDIT LEVEL, ACCORDING TO MOODY’S,**
 5 **AND CLOSE TO PWSA’S “TARGET RANGE.” CAN YOU RESPOND?**

6 Yes. The I&E recommendation results in DCOH of 293 for FPFTY, although after
 7 adjusting for the haircut to operating and capital expenses this figure drops significantly
 8 to 181 days which is significantly less than the Moody’s median of 412 for “A’ rated
 9 combined water and sewer utilities and not consistent with the Authority’s target of
 10 achieving 300 DCOH.

11 **Q. HOW WOULD THE RATING AGENCIES REACT TO THE INTERVENOR’S**
 12 **REVENUE REQUIREMENT RECOMMENDATIONS IF THEY WERE**
 13 **ADOPTED BY THE COMMISSION?**

14 A. The rating agencies would react negatively if the Commission, unfortunately, were to adopt
 15 the Parties’ recommendations. The agencies would be concerned about (i) the PUC
 16 adopting the Intervenors indiscriminate “normalizing” operating budget reductions, which
 17 are inconsistent with budgeting best practices, (ii) that neither the Commission nor any of
 18 the opposing Parties seriously considered the ABT when determining their overall revenue
 19 requirement recommendation, (iii) that adopting their recommendations would require the
 20 PWSA to substantially cut its operating and capital budgets to a point that would seriously
 21 threaten the Authority’s ability to continue to provide safe and reliable services in order to
 22 achieve sufficient net operating revenue to meet the Rate Covenant avoid a default, and
 23 (iv) that adopting the recommendations would undermine the existing PWSA management.
 24 Both Moody’s and S&P have in their reports commented on the Commission’s oversight
 25 of the PWSA as a positive since 2018. As Mr. Spadaccio’s testimony states “both [rating
 26 agencies] appear confident that the Authority’s recently established (April 1, 2018)

1 relationship with the Commission and being subjected to regulatory oversight will yield
2 positive results in strengthening its financial position.” However, what the Intervenors are
3 proposing will not strengthen PWSA’s financial position. The rating agencies will continue
4 to support Commission’s oversight so long as the agencies believe that the Commission
5 supports the PWSA’s efforts to raise the needed revenue to continue to improve
6 operationally and make infrastructure improvements. As a note of caution, in one of the
7 Authority’s rating meetings, a senior rating analyst from one of the rating agencies was
8 initially taken aback by the size of the “hair-cut” in the authorized rate increase that PWSA
9 took compared to the PWSA’s request. While I understand that the last two rate cases were
10 settled, the rating agencies may not understand or appreciate the nuances in the settlement
11 process, and may focus on the continued differences between PWSA’s requests and the
12 actual PUC order. The risk is that the rating agencies will see the significant gap between
13 PWSA’s request and the actual rate increase granted as a lack of PUC support for PWSA,
14 leading to concerns about the Commission not allowing PWSA sufficient resources and
15 disrupting PWSA’s planning and implementation of operational, maintenance, regulatory
16 and supervisory improvements and the risk of undermining PWSA’s management and rate
17 making ability.

18 **Q. DO YOU THINK THERE IS A RISK OF THE AUTHORITY BEING**
19 **DOWNGRADED IF IT ACCEPTS THE INTERVENORS**
20 **RECOMMENDATIONS?**

21 Yes. All of the recommended rate increases are below the Authority’s requested rate
22 increase and result in debt service coverage levels that are in violation of the Authority’s
23 rate covenant with bond investors. I would also point out that adoption of the Parties’
24 recommendations could very likely lead to a bond rating downgrade. As signaled by the
25 rating agencies in their most recent reports, they expect the PUC to grant rate increases at

1 or near the requested levels and at levels sufficient (i) to fund its future capital needs and
2 (ii) provide debt service coverages and liquidity at levels consistent with industry
3 medians and PWSA’s peers, which are not the case with recommended levels.

4 S&P Global Ratings reports for Pittsburgh Water and Sewer Authority dated May 17,
5 2023 (PWSA Exhibit CF-11):

6 “A very conservative approach to long-term planning has enabled
7 management to successfully get three rate increases from the
8 Pennsylvania Public Utility Commission (PaPUC), with the last
9 being for two years (fiscal years 2022 and 2023). These rate
10 increases have enabled management to continue funding the capital
11 improvement program (CIP) while dealing with rising costs from its
12 suppliers. Additionally, management was successful in getting a
13 new stormwater fee approved to assist in funding those projects.
14 **Given the capital plan, it is important for rating maintenance**
15 **that the recently filed rate case be approved at or near the**
16 **requested levels for fiscal years 2024-2026.” (Emphasis added).**

17
18 Moody’s Investors Service reports for Pittsburgh Water and Sewer Authority dated May
19 29, 2023 (PWSA Exhibit CF-10):

20 “The positive outlook also reflects the expectation that, while the
21 settlement of PWSA’s consent decree with the EPA is still a large
22 unknown, improved governance controls and a continued track
23 record of adequate rate setting with the PUC will enable PWSA to
24 readily and reasonably manage its future capital plans.”

25
26 **Q. AT THE AUTHORITY’S EXISTING A3 MOODY’S CREDIT RATING ARE YOU**
27 **CONCERNED ABOUT THE REPERCUSSIONS TO THE AUTHORITY OF A**
28 **RATING DOWNGRADE?**

29 A. As can be seen in the graphic below, PWSA’s current Moody’s rating of “A3” of the 292
30 combined municipal water and sewer utilities that Moody’s rates, only 8 utilities are rated
31 lower than PWSA. The Authority still ranks in the bottom 5% of all governmental water
32 and sewer utilities that are rated by Moody’s. Being downgraded below the single-A
33 category rating would add significant interest expense to rates and reduce the Authority’s

1 ability to efficiently access the capital market during challenging times. For example,
 2 during the great recession, single-A credits were at times unable to efficiently issue
 3 publicly offered bonds and credit spreads made accessing the bond market expensive
 4 compared to higher rated credits. More recently during the COVID-pandemic single-A
 5 credits experienced significant liquidity premiums and reduced market access.

6 **Distribution of Moody’s Ratings for Combined Municipal Water and Sewer**

10
 11

12 **Q. WHAT WOULD BE THE IMPACT OF A RATING DOWNGRADE?**

13 A. As addressed in my Direct Testimony, PWSA St. No. 9, a rating downgrade would lead
 14 to several negative circumstances. One result that would undoubtedly occur is an
 15 increase in the cost of capital to PWSA and, ultimately, and the cost to its ratepayers.

1 My Direct Testimony, PWSA St. No. 9 emphasizes a difference of 45 basis points
 2 between an “A” rated credit versus a “Baa” rated credit. This higher “credit spread” of
 3 45 basis points would increase annual debt service by an additional \$3.6 million or more
 4 than \$108.3 million over the life of the bond issue with the Authority’s plan to issue \$1.8
 5 billion in revenue bond debt over the next five years. It’s important to weigh this risk
 6 when considering the costs of denying PWSA’s rate increase claim.

7 **Q. DO THE INTERVENORS RECOMMENDATION PRODUCE FINANCIAL**
 8 **METRICS THAT WILL BE CONCERNING TO THE RATING AGENCIES?**

9 A. Yes. On an adjusted basis the I&E recommendation of produces all in debt service
 10 coverage of .95x and the OCA recommendation produces all in debt service coverage of
 11 1.05x, both of which are below the rate covenant requirements and significantly below
 12 the 1.8x median for municipal water and sewer utilities. Also on an adjusted basis the
 13 I&E recommendation results in DCOH of 181 and OCA recommendation results in
 14 DCOH of 207 both of which are far below the median DCOH for combined water and
 15 sewer utilities is the 'A' rating category is 412.¹

16
 17 **IV. CONCLUSION**

18 **Q. WHAT DO YOU BELIEVE THE COMMISSION SHOULD CONCLUDE?**

19 A. That PWSA has not only fully justified a rate award that grants all or substantially all of
 20 its request, it could have, in my view justified a much higher rate award based on the
 21 median debt service coverages for similar municipal water and sewer utilities. The risk
 22 of granting the Intervenor’s rate recommendation is the material risk that critical
 23 operations would not be funded, maintenance would not be accomplished, certain

¹ The OSBA witness did not recommend financial metrics; his results would be similar to OCA’s.

1 proposed capital projects would have to be cancelled and/or delayed, additional
2 regulatory efforts would be disrupted and the operational level of service would be
3 reduced and the Authority would also not be able to demonstrate resources available to
4 meet its ABT or its Annual Rate Covenant so it would be precluded from accessing the
5 capital markets to issue debt, which would require the Authority to proceed with an
6 emergency rate filing with the PUC which would have long-term negative effects for
7 PWSA and the PUC. These factors most certainly would lead to a credit rating
8 downgrade and increased borrowing costs for the Authority. The risk of granting
9 PWSA's rate recommendation is that every dollar of revenue collected from ratepayers is
10 used to benefit the system, which ultimately benefits ratepayers. If the expenditures
11 projected in PWSA's operating budget do not entirely materialize the Authority will have
12 more funds to reduce its debt, build its reserves, accelerate the timing for regulatory
13 projects, improve the quality and levels of service and other operational goals and lower
14 its cost of doing business, among others. Disregarding these facts and refusing to permit
15 PWSA to increase its rates to levels needed to continue to fund its substantial
16 modernization and improvement efforts would not be reasonable and jeopardize the
17 Authority's credit ratings.

18 **Q. DOES THAT COMPLETE YOUR REBUTTAL TESTIMONY?**

19 A. Yes; however, I do reserve the right to supplement this testimony as may be appropriate.

Pittsburgh Water & Sewer Authority, PA

Update to credit opinion following outlook revised to positive

Summary

[The Pittsburgh Water and Sewer Authority](#) ("PWSA" or "the Authority") ([A3 positive](#)) benefits from a large and diverse service area, primarily serving the city of [Pittsburgh \(A1 stable\)](#), with notably stable top customers primarily in education and healthcare industries. The Authority has also benefitted from proactive steps to strengthen two key credit areas - its management and governance and its financial position. PWSA's governance structure has been materially improved by oversight from the Pennsylvania Public Utility Commission (PUC), initiated in 2018. Though the PUC's rate approval process is a lengthy 270 days, the commission has committed to allowing for rate increases that will both satisfy bond covenants and allow for needed capital improvements. Further, the PUC has helped to ensure timely system maintenance and routine capital investment, in line with broad industry standards. At the same time, PWSA has taken steps to strengthen its internal management structure and build its workforce; also a credit positive.

The Authority's financial position has also improved considerably over the past several years and continues to strengthen. Liquidity has reached a satisfactory 165 days cash on hand as of fiscal 2022 year-end, up from just 23 days cash in 2017. Debt service coverage has likewise strengthened, to 1.49 times when all liens of debt are considered. These metrics compare well to peers and also to the Authority's own past performance.

Yet certain credit challenges persist and high leverage will be a continued headwind for the Authority going forward. The Authority's current debt burden is significant and material additional debt is expected as the Authority progresses on its capital improvement plan. The Authority's current five year plan assumes an additional \$1 billion in debt, before consideration of a yet-to-be-determined consent order for combined sewer overflow remediation. The Authority's ability to maintain a healthy financial position while increasing leverage will be key to future credit reviews. Future reviews will also consider the potential challenges associated with the expected consent order and its impact on overall leverage and customer affordability.

Credit strengths

- » Diverse, urban Pittsburgh service area, supported by strong "eds & meds" presence
- » Considerable size; system assets include water conveyance and treatment, and sewer conveyance that ties to ALCOSAN
- » Significant, recently implemented rate increases boost revenues; PUC oversight brings improvements and controls

Credit challenges

- » Substantial debt burden; debt ratio is 96% and will continue to grow
- » Narrow, though improved, liquidity versus similarly sized peers
- » Projected \$1.8 billion in capital needs over the next five years, to be primarily funded with debt
- » Consent decree to remediate combined sewer overflows not yet finalized

Rating outlook

The positive outlook reflects the expectation of continued improvement to liquidity and coverage as PWSA progresses in its capital plans and continues to mature in its internal governance structure and relationship with the PUC. The positive outlook also reflects the expectation that, while the settlement of PWSA's consent decree with the EPA is still a large unknown, improved governance controls and a continued track record of adequate rate setting with the PUC will enable PWSA to readily and reasonably manage its future capital plans.

Factors that could lead to an upgrade

- » Substantial improvement in liquidity that is maintained over several reporting periods
- » Meaningful reduction of debt
- » Sustained improvements in debt service coverage

Factors that could lead to a downgrade

- » Material narrowing of debt service coverage and liquidity position
- » Inability to raise rates sufficiently to meet debt service coverage covenants while also funding significant deferred capital improvements
- » Failure to effectively deploy new revenues to address near term infrastructure and operating needs
- » Substantial new or worsening long-term environmental concerns

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the issuer/deal page on <https://ratings.moody's.com> for the most updated credit rating action information and rating history.

Source: Moody's Investors Service, Pittsburgh Water & Sewer Authority

Profile

PWSA is an authority of the city of Pittsburgh, providing water treatment and conveyance to 84% of the city's population of roughly 305,000 residents and sewer conveyance for the entire city.

Detailed credit considerations

Service area and system characteristics: large, stable customer base in Pittsburgh

The Authority provides water distribution and wastewater collection and conveyance for the city of Pittsburgh and neighboring municipalities. The city's diverse economy is a credit positive for the Authority. Favorably, PWSA reported strong revenue collections throughout the coronavirus pandemic and did not experience large scale delinquencies that effected some regional peers, signaling resiliency in the customer base. The Authority's 10 largest customers (3.7% of revenues) include major Pittsburgh institutions, such as the Fox Chapel Water Authority, [Allegheny County \(Aa3 stable\)](#) and the [University of Pittsburgh \(Aa1 stable\)](#). All of the Authority's five largest customers have been in the system for at least 75 years. Notably, given a renegotiated cooperation agreement with the city of Pittsburgh in 2019, most city buildings are now metered for water, with the city paying for water usage - something it had not done previously.

The Authority continues to maintain an ample water supply, providing water to a population of approximately 305,000. The system is permitted to draw up to 100 million gallons per day (MGD) from the Allegheny River, its sole water source, though average demand for water is well below that level, at 70 MGD. The Authority treats drinking water at one plant located on the river, as well as a microfiltration plant at one of its reservoirs. The Authority has capacity to store approximately 3 days' worth of finished water for uninterrupted supply to its customers.

The Authority does not treat wastewater. It transmits all of its sewage to the [Allegheny County Sanitary Authority \(Aa3 stable\)](#). There is no contractual limit to the amount of sewage that can be conveyed, however, during wet weather events, the existing system frequently overflows. ALCOSAN is projecting annual rate increases over the next twenty years that will pass through to PWSA customers.

PWSA has made significant strides in improving its governance and management of its organization as well as its physical assets. Ordinary system updates and routine infrastructure improvements had been sorely lacking at PWSA and years of deferred maintenance have led to cost inefficiencies and exacerbated the natural wear and tear on an already aged system. PUC oversight since 2018 has already served to remediate some of this by establishing guidelines for system improvements based on industry-wide standards. The Authority has also hired more than 167 employees over the last five years - a 68% increase, and has filled key management roles with qualified personnel. This is a significant improvement over Authority operations of just a few years ago where management was mostly outsourced and employment was insufficient to provide for the day to day operations.

The additional operational oversight by the PUC is expected to be a credit positive going forward. Whereas the Authority had used capital deferment as a tool to maintain satisfactory finances and rate increases were heavily influenced by local politics in the past, the PUC has ensured that rate increases are less politicized. Further, while certain capital projects may be slowed to accommodate softening revenue if necessary, a complete sidelining of the capital plan and required maintenance is unlikely.

Debt service coverage and liquidity: recent history of satisfactory financial performance

The Authority's net revenues have been fairly stable since 2018, averaging a net take-down (net revenue / gross revenue) of about 35% over the past five years, as increased revenues have been matched by increased spending for maintenance and capital improvements. PWSA's operating margins are well in line with peers and are expected to remain stable as rate increases and further revenue growth is used to fund needed capital spending and a growing workforce payroll.

At fiscal 2022 year-end, the Authority reported senior debt service coverage of 1.8 times and total coverage of 1.41 times, well within covenant requirements and satisfactory versus peers. Moody's reports a slightly higher 1.87 times senior lien debt service coverage and 1.49 times all-in coverage, based on a net income figure that includes non-operating grant revenue. Favorably, coverage has continually improved since 2018, when PUC rate oversight went into effect, signaling that rate increases have been effective to maintain sufficient coverage while providing for more normalized operations and investment in system infrastructure.

The Authority is expecting an operating surplus of about \$6 million for 2023. PWSA expects all-in coverage to stay in the range of 1.2 times to 1.4 times over the next five years, though the Authority assumes rather significant rate increases in order to keep coverage stable. Moody's expects that the PUC will be supportive of rate increases that will allow for satisfactory coverage levels while PWSA continues to execute its capital plan. Future reviews will consider whether the Authority is able to maintain satisfactory coverage and adhere to projected financial performance while supporting increased leverage to execute the Authority's sizeable capital plan.

Liquidity

The Authority's liquidity is satisfactory, at 165 days unrestricted cash on hand as of fiscal year end 2022, equating to about \$84 million. PWSA's cash position is considerably weaker than national water and sewer system median days cash of 450 days as of 2021, though continues to strengthen. Further, when pass-through revenues and expenditures attributable to ALCOSAN are excluded from O&M, the Authority's days cash metric strengthens to 306 days cash, which is a somewhat more accurate view of liquidity relative to PWSA's own expenditure needs.

Debt and pensions: elevated debt burden continued credit challenge

The Authority continues to face material pressure to improve its infrastructure given years of disinvestment. Coupled with its own consent decree pertaining to combined sewer overflows during wet weather events, which is in negotiation since 2021, the Authority will necessarily add to its already elevated debt burden in the near term. PWSA anticipates roughly \$1.8 billion in capital spending over the next five years, largely funded by debt. This will add to leverage substantially and future credit reviews will focus on the Authority's ability to manage additional debt while maintaining satisfactory cash and coverage metrics; largely dependent on PWSA's ability to increase rates as needed. The Authority's total debt is equal to 96% of fixed assets as of 2022 year-end, well above similarly sized peers. The outstanding debt amortizes slowly, with only 36% of principal scheduled to be repaid in the next 10 years.

Legal security

PWSA's first lien revenue debt benefits from a limited obligation revenue pledge backed by a first lien security interest in and to the revenues of the authority after payment of current expenses.

Debt structure

The majority - 49% - of Authority debt benefits from a first lien pledge on net revenues. Another 7% is subordinate-lien bonds, and the remainder is backed by a third lien, which is shared on a parity basis between PennVest and PNC Bank, NA (A2) which provides a revolving credit facility to PWSA. Roughly 14% of the Authority's current debt outstanding (as of May 2023) is hedged variable rate.

The Authority introduced a new indenture in 2017, which strengthened the rate covenant. The requirement is now 125% of senior debt service coverage plus 110% of subordinate debt service coverage. Free cash is no longer used in the coverage calculation. The debt service reserve is funded at the lesser of the three-pronged test.

The Authority materially reduced its variable rate debt outstanding with its Series 2019 A&B issuance. Variable rate debt has been reduced to 14% of the total debt portfolio today, down from 44% prior to 2019. There is one variable rate issuance outstanding currently - the Authority's senior lien Series 2017C bonds, which were last remarketed in December 2020 and are subject to mandatory tender in December 2023. The bonds were remarketed with a rate indexed to SIFMA. Since the fixed-to-floating rate swaps associated with the 2017C bonds were LIBOR-based, the Authority layered on a basis swap alongside the remarketing in order to convert the variable rate received on the swaps to SIFMA from LIBOR, creating an effective hedge for the bonds. The Series 2023 ABCD issuance eliminates the basis swap, as both the variable rate debt and associated swaps will now be indexed to SOFR. Further the 2023 issuance contemplates a private placement of two-thirds of the variable rate debt with a soft put in 2028. The remaining one-third of variable rate debt will either be fixed for a five-year period or will be refinanced as fully fixed rate bonds with a full swap termination.

[Assured Guaranty Municipal Corp. \(A1 stable insurance financial strength\)](#) insures the Authority's variable rate bonds and all of the Authority's swaps, except the 2020 basis swap, and provides the surety policy for all debt service reserve funds, except the reserve associated with PWSA's 2013 bonds, which is cash funded. This counterparty concentration may adversely impact the Authority should AGM's credit quality deteriorate.

The Authority maintains \$535 million in outstanding PennVest loans as of May 2023 and an \$150 million revolving credit facility, of which \$131 million is currently drawn. The Authority will apply proceeds from its Series 2023 A issuance to pay down the credit line. Given an intercreditor agreement, PennVest and PNC Bank, NA share a third lien priority on system revenues.

Debt-related derivatives

The Authority maintains floating-to-fixed rate swaps in support of its Series 2017C issuance under ISDA Master Agreements with JP Morgan Chase Bank N.A. (Aa2 Sr. Unsecured) (64%) and Merrill Lynch Capital Services (36%), whereby the authority pays a fixed interest rate semiannually (3.79% weighted average) and receives 70% of LIBOR. The Authority layered on a basis swap in 2020 to convert the LIBOR received rate to SIFMA.

AGM provides swap insurance for all swaps. The aggregate swap mark to market is a negative (\$20 million) as of fiscal year end 2022.

The floating-to-fixed rate swaps are included in the parameters of a credit support annex (CSA), though there is no collateral posting requirement unless an Insurer Event occurs. The basis swap is excluded from the CSA. The amortization schedule for each swap mirrors that of the corresponding bonds and the swaps terminate at bond maturity. The basis swap terminates in December 2023 with the next mandatory tender of the Series 2017 C bonds. For all of the swaps, per the 2017 indenture, regularly scheduled swap payments are subordinate to subordinate bond debt service. Early termination is optional for the Authority only, and termination by the counterparty depends upon specified termination events, including the downgrade of PWSA's underlying rating below investment grade. An Authority termination payment would be subordinate to first and second lien debt service payments.

Pensions and OPEB

Most of the Authority's employees participate in the city's pension program. The Authority's share of its pension contribution is now accurately provided for through its renegotiated cooperation agreement with the city. Beginning in 2019, all new full time non-union PWSA employees are eligible to participate in a 401(a) retirement plan and do not have the option of enrolling in the city's municipal pension fund plan.

ESG considerations

Environmental

The Pittsburgh metropolitan area faces a high risk of elevated rainfall levels. Demonstrated elevated rainfall levels in the region have directly impacted PWSA, as wet weather events overwhelm the system's current combined sewer infrastructure. This is the reason for the Authority's consent decree related to combined sewer overflows.

Social

Pittsburgh's population is relatively stable at roughly 301,000 and the five year average annual growth rate of the city's full value is a strong 4.5% as of fiscal 2021, well above the US median of -0.5%. Nevertheless, the city's wealth indicators remain below average with median family income at just 89% of the nation. Poverty is also elevated at 20%. As PWSA has increased rates, it has also implemented a rate relief program for qualifying residents, acknowledging this weakness in its rate base.

Governance

The Authority's current management team has developed a comprehensive plan to bring operations to good working order and to proceed with much needed capital improvements. Strong governance controls at the Authority are evidenced by several years of improved financial performance.

Management views its relationship with the PUC as well as the DEP and EPA as an opportunity for partnership and has proactively sought to engage these agencies as PWSA moves forward with its substantial CIP. This is a definitive, positive change from the Authority's prior actions, and informs our stable outlook on PWSA's current credit profile.

The Authority's Board consists of nine members recommended by a nominating committee, appointed by the Mayor, and approved by City Council. Currently, eight of the nine Board seats are filled. Starting in 2020, city water charges were phased in pursuant to a cooperation agreement; the Authority had provided water to the city at no cost prior to 2020. Among other things, the cooperation agreement also provides for payments between the city and the PWSA to be based upon actual, verifiable, direct expenses, and in accordance with customary utility practices under the PUC Code, and importantly, confirms that payments by the PWSA to the city will continue to be subordinate to all debt obligations of the PWSA.

Pennsylvania's Public Utility Commission began oversight of the authority in April 2018. The PUC is responsible for regulating the Authority's rate making, operating effectiveness, and debt issuance. We expect that the PUC will bring standardization and effective governance to the Authority's future operations. The PUC is required to approve rate increases that will ensure PWSA complies with its bondholder covenants, though we note that the approval process for increases can be lengthy.

Credit Highlights

- S&P Global Ratings affirmed its 'A+' rating on the Pittsburgh Water and Sewer Authority's (PWSA) first-lien revenue bonds.
- At the same time, S&P Global Ratings also affirmed its 'A' rating on PWSA's subordinate-lien revenue bonds.
- Additionally, we assigned our 'A+' rating to PWSA's upcoming approximately \$400 million water and sewer system first-lien revenue and revenue refunding bonds series A, B, C (federally taxable), and D bonds and remarketing of the 2017C bonds.
- The outlook is stable.
- Total debt outstanding will be approximately \$1.5 billion.

Security

The first-lien bonds are secured by a senior-lien pledge on the net revenues of the authority's waterworks and sanitary sewer system. Bond provisions are credit neutral.

We have applied our primary utility revenue bond criteria to determine the authority's general creditworthiness, and have applied this rating to its senior-lien issues. We rate PWSA's subordinate lien one notch lower, based on the application of our criteria "Assigning Issue Credit Ratings Of Operating Entities" (published May 20, 2015, on RatingsDirect), given the open status of the senior lien and the likelihood that PWSA will continue to use the senior lien from time to time.

Proceeds of the bonds will be used to fund a portion of the system's capital program and refund the authority's series 2013A and B for interest rate savings, which will allow for the remarketing of the 2017C bonds, finance the partial

termination costs of the fixed payer swap associated with the 2017C bonds, and fund the cost of issuing the bonds.

Of the series 2017C bonds, the subseries 1, 2, and 3 will each be associated with a basis swap to the Securities Industry and Financial Markets Association (SIFMA) index rate. The counterpart for this overlay swap is Merrill Lynch Capital Services Inc., with a notional amount of \$216.72 million of the 2017C bonds that are synthetically fixed with a fixed payer swap with JPMorgan Chase Bank N.A. or Bank of America Merrill Lynch N.A. The authority intends to remarket \$146 million of the 2017C bonds into secured overnight financing rate (SOFR) mode and issue \$72 million series 2023D bonds as fixed-rate premium put bonds, as well as partially terminate the fixed payer swap for five years or upsize the series 2013B refunding bonds to refund \$72 million of the 2017C bonds and pay the termination cost of the associated fixed payer swaps to maturity. The decision whether to terminate fully or partially is subject to market conditions. The outstanding basis overlay swap to the Securities Industry and Financial Markets Association (SIFMA) index rate on the series 2017C bonds will be terminated and related costs will be financed with proceeds of the bonds. Although only a point-in-time snapshot and--barring a termination event such as the rating on PWSA falling below 'BBB-'--not an actual liability, those swaps are currently substantially out of the money. Subseries 4 (\$2 million) and the balance on the PNC Bank capital line of credit (\$132 million) are not hedged.

Credit overview

A very conservative approach to long-term planning has enabled management to successfully get three rate increases from the Pennsylvania Public Utility Commission (PaPUC), with the last being for two years (fiscal years 2022 and 2023). These rate increases have enabled management to continue funding the capital improvement program (CIP) while dealing with rising costs from its suppliers. Additionally, management was successful in getting a new stormwater fee approved to assist in funding those projects. Given the capital plan, it is important for rating maintenance that the recently filed rate case be approved at or near the requested levels for fiscal years 2024-2026.

Other factors that support the rating include:

- Pittsburgh's role as the anchor and economic engine for western Pennsylvania, based on an employment base that has reinvented itself from one that once relied heavily on manufacturing and industrial jobs;
- Rates for service that have been pressured over the past decade by the unfunded mandates, and will need to be reviewed by the state's rate regulator, but remain affordable;
- Operational management assessment (OMA) that we view as good, even despite the above-mentioned challenges;
- Strong coverage levels of all-in debt service historically and projected;
- Strong on-balance-sheet liquidity, supported further by the available credit line; and
- Financial management practices and policies we consider good.

The rating is limited by extremely high leverage, with \$1.8 billion in capital commitments identified through fiscal 2027 that are likely to continue to pressure the financial profile.

Environmental, social, and governance

In our view, PWSA has outsized risks related to each of our environmental, social, and governance (ESG) factors, although each of these are generally trending favorably. In previous years, the authority faced scrutiny from local and

state elected officials who voiced concerns over its operations. An auditor general's opinion, released in November 2017, cited "aging and deteriorating infrastructure issues and financial and operational long-term viability issues," and was an important factor in legislation that ultimately placed PWSA under PaPUC oversight as of April 1, 2018. The PaPUC regulates the authority's rates and fees and must approve additional debt. PWSA's management team has worked closely with regulators and other stakeholders, and has already achieved several measures that are likely to improve operations and financial capacity. This includes recent approval of a distribution system improvement charge that will be dedicated to underground infrastructure rehabilitation.

PWSA has also implemented various socially directed programs, such as lead service-line replacements and customer bill-pay assistance programs. We view the latter as a credit quality stabilizer that could allay affordability concerns. PWSA's own environmental compliance mandates, as well as drinking water efficiency, are key programs in PWSA's capital budget and have been the major generators for the need to consider additional rate adjustments; the authority has the ability to administratively pass through and recover costs from its wholesale wastewater treatment provider. PWSA, under its Green First plan, is also piloting approximately a dozen projects to experiment with different approaches to green infrastructure and overflow reduction that could also present capital budget cost savings.

Outlook

The stable outlook reflects our expectation that when PWSA does need to propose a rate case to the PaPUC, there will generally be a credit-supportive relationship, observed by both the timing and magnitude of rate adjustments that PWSA is likely to request, versus what the PaPUC ultimately grants. We are assuming that the financial profile will be further stabilized by the sufficiency test in the rate covenant, which does not allow for the use of cash transfers. We will also likely keep in place the one-notch distinction between the first- and subordinate-lien debt.

Downside scenario

Should inflationary and supply-chain issues significantly drive up the cost of the CIP, which is expected to be mostly debt funded, and thereby cause additional debt that pressures financial metrics, the rating could be lowered.

Upside scenario

Management has represented that total debt service coverage (DSC) will generally move toward about 1.25x, with on-balance-sheet available reserves equivalent to four to five months' operating expenses. Consistently outperforming financial projections while meeting the long-term challenges presented by an aging system, compounded by regulatory pressures, would be the key to PWSA achieving a higher rating.

Credit Opinion

Enterprise risk

Based on our Operational Management Assessment (OMA), we view PWSA to be good. An assessment of good, in our opinion, implies that overall alignment between the system's operational characteristics and its management is sufficient, although there are areas of opportunity. Management's plans to rehabilitate and build reliability into the operations have improved our view of this assessment. The CIP contains projects that are based on both PWSA's

prioritization and those reflecting consent decrees.

Much of the existing infrastructure was built to serve a much larger population and a workforce different from that of today. While we note, for example, that the city has an essentially unlimited raw-water supply from the Allegheny River and overall system capacity that could support a population several times the size of the current one, it is also the case that the authority's focus remains the renewal and replacement of its aging underground infrastructure. The water distribution system is also an identified area of opportunity, given the high nonrevenue water percentage, which is attributable to line losses. However, under a 2019 cooperation agreement, the city will no longer receive free service, which alone should help improve nonrevenue water. The renegotiated agreement will not affect the capital lease agreement, and PWSA still intends to purchase the system from the city for \$1 in 2025 under the terms of the current agreement.

PWSA can administratively fully pass through and recover Allegheny County Sanitary Authority (ALCOSAN) billings and the surcharge for distribution system improvements. Management instituted stormwater charges in fiscal 2022. For fiscal 2021, the average customer--using 3,000 gallons of both water and sewer service plus ALCOSAN's treatment surcharge--pays about \$121 per month, or 3.3% of median household effective buying income (MHHEBI). As costs increase over time to support the CIP, headroom for affordability, especially for lower-income customers, could diminish.

Financial risk

A Financial Management Assessment (FMA) of good indicates that we consider management's practices currently good, but not comprehensive. The authority maintains many best practices we believe are critical to supporting credit quality, particularly in the finance department. These practices, however, may not be institutionalized or formalized in policy, or may not be as robust as those of comparable utilities with an FMA of strong. The FMA of good includes a long-term financial plan that management intends to implement in partnership with PaPUC to support its identified capital commitments. The authority also has implemented new, more comprehensive, and conservative budgeting assumptions that better capture annual revenue requirements. We understand that the authority's management team regularly tracks budget-to-actual performance, and that the new management team is instituting a number of additional best practices to target consistently higher levels of financial performance.

Water and Sewer Utilities – US

Medians - Steady revenue growth, strong coverage and robust liquidity boost sector

Summary

Municipal water and sewer utilities benefited from steady revenue growth, strong debt service coverage and robust liquidity on a sectorwide basis in fiscal 2021, according to our medians data. And the trend continued into fiscal 2022 based on available audits. Continued improvement in financial results highlights utilities' ability to raise rates and the essentiality of their services. Even as some utilities chose to forego rate increases in the wake of the pandemic, coverage remained strong and led to significant increases in liquidity. Federal COVID-19 relief funds helped utilities fund improvements and manage risks posed by inflation and supply-chain disruption. Data in this report is derived from more than 650 water and sewer utilities we rate; most are enterprises of a city or county. Other water and sewer systems are standalone authorities.

- » **Revenue grew in fiscal 2021, bolstered by independent rate-setting ability and essentiality of services.** Sectorwide, more than half of water and sewer utilities we rate had revenue growth of about 3.5% or greater in fiscal 2021.
- » **Operating and maintenance (O&M) costs grew slightly slower than revenue.** Most utilities had O&M costs rise by about 3.5% or less in fiscal 2021 versus the prior year.
- » **Net revenue improved sectorwide.** Net revenue rose by at least 2% for most utilities in fiscal 2021, which helped systems maintain strong coverage and bolster liquidity.
- » **Strong debt service coverage provided a buffer against shocks.** Median coverage held steady at 2.3x in fiscal 2021, indicating good capacity to pay debt even under stressed scenarios.
- » **Liquidity continued to climb, enhancing financial flexibility.** Total cash grew by more than 9% for most utilities in fiscal 2021, and median days cash on hand rose to a robust 534 days.
- » **Leverage remained steady.** The median debt-to-revenue ratio remained steady at a modest 2.1x in fiscal 2021. Careful debt management enables utilities to address their most pressing concerns, though projected needs are significant.
- » **Reported asset condition was stable.** Utilities continued to invest in infrastructure, with median useful life remaining solid at 28 years in fiscal 2021. Usage of aging system components is common and will eventually require significant investment for replacements.

Revenue grew in fiscal 2021, helped by independent rate-raising authority and essentiality of services

- » Independent rate-setting authority, essentiality of services and fixed charges underpin the stability of utilities' revenue. More than half of utilities we rate experienced revenue growth of about 3.5% or greater in fiscal 2021.
- » Still, there can be practical and political constraints on rate hikes. Some utilities modified their rate plans due to the pandemic and related concerns about affordability. Continued rate increases will be necessary to fund significant capital needs, though a weakening economy and high inflation may present challenges.

Exhibit 1

Revenue improved for water, sewer and combined systems in fiscal 2021

Source: Moody's Investors Service

O&M expenses increased with rising wages and supply costs

- » Most utilities across the sector saw O&M costs rise by about 3.5% or less versus the prior year in fiscal 2021. Still, growth in O&M costs trailed the pace of revenue growth, as well as the national rate of inflation in 2021.
- » Rising costs for construction materials driven by steep inflation led to particularly high costs for repairs and large capital projects for some utilities. Sharp expense increases can strain affordability and hinder capital investment.

Exhibit 2

Operations and maintenance (O&M) expenses grew for all three system types, but trailed revenue growth

Source: Moody's Investors Service

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the issuer/deal page on <https://ratings.moodys.com> for the most updated credit rating action information and rating history.

Improved net revenue highlights financial strength

- » Net revenue improved as growth in revenue outpaced expenses, providing additional capacity to pay debt or build liquidity. Across the sector, fiscal 2021 net revenue rose by at least 2% versus the prior year for most utilities. Median net revenue was up for water and combined utilities but declined modestly for sewer utilities.
- » Net revenue has consistently grown in recent years, highlighting the benefits of the sector's independent rate-raising ability and essentiality of services.

Exhibit 3

Net revenue at the sectorwide level improved as revenue outpaced expenditures

Source: Moody's Investors Service

Strong debt service coverage continued to provide a buffer against shocks

- » Sectorwide debt service coverage — annual net revenue divided by annual debt service — held steady at 2.3x in fiscal 2021. Coverage remained well in excess of standard rate covenants that are usually between 1.0x and 1.5x annual debt service. Debt service coverage remained similarly strong in fiscal 2022 based on available audits.
- » Very strong debt service coverage and liquidity provide utilities with a substantial ability to withstand shocks. While results show that revenue only modestly increased in 2020 and 2021, we [previously reported](#) that even under a stress scenario of a 10% decline in revenue due to the pandemic, the median debt service coverage ratio for water and sewer utilities we rate would remain strong at 1.7x.

Exhibit 4

Debt service coverage continued to top 2.0x across the sector

Source: Moody's Investors Service

Liquidity continued to climb, enhancing flexibility

- » Sectorwide liquidity remains robust and continues to strengthen, providing flexibility to manage potential revenue swings, address unanticipated expenses or fund certain capital projects. Liquidity continued to improve in fiscal 2022 based on available audits.
- » Total cash grew by more than 9% for most utilities in fiscal 2021, and the median days cash on hand rose in fiscal 2021 to a robust 534 days.

Exhibit 5

Liquidity remained strong across the sector with the three system types maintaining more than a year of operating cash

Source: Moody's Investors Service

Leverage remained steady, with good borrowing capacity

- » Leverage from debt remained fairly modest across the sector at a median of 2.1x. The median debt-to-revenue figure for water, sewer and combined utilities all remained fairly steady, and available audits for fiscal 2022 reflect similar results. Some utilities' deferred their borrowing plans because of the pandemic, and others used allocations from the American Rescue Plan Act of 2021 to fund water or sewer projects.
- » Careful management of debt provides utilities with good capacity to address their most pressing needs, though projected costs to address aging infrastructure, remain in compliance with laws and regulations, and mitigate growing environmental risks are significant. Many utilities will likely have to raise rates and issue debt to comply with the Environmental Protection Agency's proposal to [reduce PFAS in drinking water](#).

Exhibit 6

Leverage remained low in fiscal 2021

Source: Moody's Investors Service

Reported asset condition was stable

- » Median sectorwide asset condition — net fixed assets divided by depreciation expense — remained stable at a healthy 28 years, indicating that utilities continue to invest in their systems. Most utilities proceeded with necessary capital projects during the pandemic, though some were postponed for budget savings or supply-chain disruptions.
- » Continued usage of fully depreciated system components, particularly pipes, is common in the sector, but typically not reflected in a utility's reported capital asset figures. The projected cost to replace aging infrastructure is significant and presents a major credit challenge for the sector.

Exhibit 7

Remaining useful life of assets remained largely stable in fiscal 2021

Source: Moody's Investors Service

Basis for medians

This report conforms to our [US Municipal Utility Revenue Debt Methodology](#) published in April 2022. As such, the medians presented here are based on the key metrics outlined in the methodology and the associated scorecard. The appendix of this report provides additional metrics broken out by sector and rating category.

We use data from a variety of sources to calculate the medians, some of which have differing reporting schedules. The median family income data (see below) was derived from the 2021 US Census American Community Survey.

Medians for some rating levels, namely Aaa- and Baa-rated issuers (see below), are based on relatively small sample sizes. These medians may therefore be subject to substantial year-over-year variation.

Our ratings reflect our forward-looking opinion derived partly from forecasts of financial performance and qualitative factors, as opposed to strictly historical quantitative data. Our expectation of future performance, combined with the relative importance of certain metrics on individual utility ratings, account for the range of values that can be found within each rating category.

Key ratios

- » Net revenue: operating revenue minus operating expenditures net of depreciation
- » Debt service coverage: net revenue divided by annual debt service
- » Days cash on hand: unrestricted cash and liquid investments multiplied by 365 and divided by operating and maintenance expenses (net of depreciation), expressed in days
- » Debt to operating revenue: net long-term debt less debt service reserve funds divided by annual operating revenue
- » Asset condition: net fixed assets divided by depreciation expense, expressed in years

MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the credit rating process or in preparing its Publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY CREDIT RATING, ASSESSMENT, OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any credit rating, agreed to pay to Moody's Investors Service, Inc. for credit ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$5,000,000. MCO and Moody's Investors Service also maintain policies and procedures to address the independence of Moody's Investors Service credit ratings and credit rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody's Investors Service, Inc. and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody.com under the heading "Investor Relations — Corporate Governance — Charter Documents - Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJKK or MSFJ (as applicable) for credit ratings opinions and services rendered by it fees ranging from JPY100,000 to approximately JPY550,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

PWSA Exhibit CF-13

U.S. Municipal Water And Sewer Sector Medians Held Strong In 2021

February 24, 2022

Key Takeaways

- U.S. municipal water and sewer utilities entered 2022 on strong financial footing, with median days' cash on hand increasing to 488 days of operating expenses and all-in debt service coverage (DSC) remaining near 1.9x in 2021.
- Capital spending has increased in recent years as utilities replaced aging infrastructure, invested in new sources of supply, and complied with stringent regulations.
- Climate- and cyber-related challenges are key longer-term risks. The consequences of climate change and lack of emergency preparedness could increase operational challenges and potentially have negative credit implications if not managed effectively.
- Steady residential demand and improved revenue gains more recently continue to highlight the sector's overall financial resilience despite the effects of the COVID-19 pandemic on the broader economy.

S&P Global Ratings maintains long-term ratings on over 1,600 municipal water and wastewater utilities in the U.S. Our rated universe includes utilities that use a combined pledge (consisting of both water and sewer revenues), as well as those that issue separately secured utility debt (for example, water-only or sewer-only revenue bonds). Our data set excludes debt issued by either wholesalers or state agencies to fund water and wastewater projects. About 46% of these utilities are in the 'A' category, 44% are in the 'AA' category, 7% are in the 'AAA' category, and fewer than 4% are in the 'BBB' category or lower (see chart 2). The rating distribution reflects the retail utilities' generally very strong enterprise and financial risk profiles supported by strong demographic and financial characteristics.

We base our median ratios on statistical information from our municipal retail water and sewer utility public ratings. These medians are not requirements for any particular rating but rather reflect the sector's general credit trends at the specified levels. As economic conditions and the number of rated utilities change so will the reported medians. Most key financial median ratios including unrestricted liquidity median metrics improved modestly, reflecting the rated municipal water and sewer utility sector's financial resilience despite the effects of the COVID-19 pandemic on the broader economy. In our view, the influence of the pandemic on utility revenue has been relatively muted, as most serve diverse customer bases that are anchored by steady residential

U.S. Municipal Water And Sewer Sector Medians Held Strong In 2021

demand, with the exceptions of those with outsized agricultural or tourism and hospitality sector concentration.

We expect there will likely be continued pressure on rate affordability as the cost of water and wastewater treatment is expected to rise faster than inflation as utilities replace aging infrastructure, invest in new or alternative sources of supply, and respond to more stringent federal and state regulations. Utilities will need to strike a good balance between capital investments and affordability in the long term to preserve credit quality. The \$55 billion allocated by the Infrastructure Investment and Jobs Act to water and sewer projects could alleviate some rate-affordability pressure, considering some projects that would have otherwise been debt financed or rate funded. We anticipate that utilities will seek grant funding opportunities for several capital projects (see "Rate Affordability Could Be Pressured As U.S. Public Utilities Tackle Aging Infrastructure And Climate Considerations," published Dec. 15, 2021, on RatingsDirect).

Every year, we anticipate the key generators of credit quality for the municipal water and sewer utilities in the U.S. While we note that the sector carries relatively very low risk, we add that it is not without risk. We expect credit quality for water and sewer utilities to remain sound in 2022, building upon the strong performance in 2021. Cash balances will be critical in 2022 as utilities face pressures from rising inflation, increased operating expenses, and growing capital needs related to emerging environmental, social, and governance (ESG) risks, potential regulatory changes, and deferred maintenance. For a comprehensive view of the sector, see "Outlook For U.S. Municipal Utilities: Stable, With Expanding Operating Margins," published Jan. 19, 2022.

U.S. Municipal Water And Sewer Sector Medians Held Strong In 2021

In comparison to last year, the ratings distribution generally reflects minimal changes. The largest number of ratings nationally remain at 'A+' and 'AA-'. Collectively, the 'A+' and 'AA-' rating levels account for slightly over 600 ratings, or 40% of the total, reflecting the sector's very low risk and monopolistic provision of essential services. The number of 'AAA' rated issuers has been consistent, representing 7% of ratings in the sector. At the lower end of the scale, ratings 'BBB+' or lower totaled roughly 3% (chart 2).

Chart 2

Ratings Distribution Comparison (as of Dec. 31)

Copyright © 2022 by Standard & Poor's Financial Services LLC. All rights reserved.

As of Dec. 31, 2021, 96% of U.S. municipal water and sewer utility sector ratings have a stable outlook, 3% negative, and the remaining 1% positive (chart 3). These outlook trends have generally remained consistent with prior years. Negative outlooks mostly reflect weakening financial metrics due to weak long-term risk-mitigation strategies with outsized exposure to cyclical economic bases, while positive outlooks reflect service area economic diversification, and improving governance and risk-mitigation strategies.

National And Regional Medians

Financial metrics improved during the pandemic

With higher residential water consumption owing to increased remote work, financial metrics generally strengthened in fiscal year 2020 compared with 2019, offsetting lower revenues from commercial customers. In fact, most utilities saw improved revenue growth year-over-year (4% average operating revenue increase in 2020) supporting improved unrestricted reserves and days' cash on hand, with stable all-in DSC at 1.9x (see chart 4). Nationally, median liquidity and reserves levels for fiscal year 2020 have showed modest improvements, with days' cash on hand increasing to 488 days of operating expenses (or approximately \$8.8 million on an absolute basis). We believe that liquidity at this level will provide utilities with additional flexibility to absorb future operational and capital funding needs.

Leverage ratios (debt-to-capitalization medians) remained largely stable at about 38% nationally, despite significant debt issuance for new money or interest rate savings, largely due to an increase in capitalization fueled by unrestricted reserve growth. In addition, many utilities de-risked their debt portfolios by eliminating variable rate debt given the favorable interest rate environment. Overall, the national medians suggest that utilities tend to fund a greater portion of system capital needs on a pay-as-you-go basis and that they have capacity for additional borrowing for future capital needs.

The Focus On Asset Resilience And Climate-Related Issues Increases

Our view of forward-looking analysis always begins with the capital plan. Strong capital planning is supported by robust asset management programs including understanding critical assets, assessing their condition, and identifying any future regulatory requirements. Most utilities continue to deal with aging infrastructure needs but are also grappling with stringent water quality requirements and the need to prepare for climate resiliency and cybersecurity risks, while maintaining affordable rate structures. In our view, water and sewer utilities growing exposure to physical climate risks will likely require additional capital plan expenditure associated with asset hardening and resiliency.

The National Oceanic and Atmospheric Administration estimated that the 2021 weather and climate disasters exceeded \$145 billion in damage (third highest on record), with 20 separate events that each caused at least \$1 billion in damage (just two events shy of the record set in 2020). Disaster costs over the past five years (2017-2021) exceeded a record \$742 billion, reflecting the increased exposure and vulnerability to extreme weather and climate events. The terms resiliency and risk management can be as broad or as detailed as management needs, but thematically include responding operationally and financially to threats and rapid changes while minimizing effects on service quality and financial performance. Although the risks vary by region, our rating analyses incorporate a utility's mitigation plans through review of long-term financial and capital-planning documents as well as any specific resiliency plans. We expect the already capital-intensive water and sewer utilities to become even more so over the next several years. To the extent that utility leadership demonstrates proactive operational and financial risk management towards addressing challenges such as infrastructure renewals, as well as resiliency to impactful events like climate and cyber risks, credit quality can generally be preserved in our view.

U.S. Municipal Water And Sewer Sector Medians Held Strong In 2021

We rate utility revenue-backed bonds in almost every U.S. state, although the number of ratings depends on many factors, including access to state bond banks, bond issuance restrictions and population. For analytical purposes, we divide the country into 10 regions consistent with the Environmental Protection Agency's categories. These regions share some characteristics such as climate, hydrology, consumption, agriculture, sources of water supply, state and regional environmental regulations, and to some extent, economic attributes.

Table 1

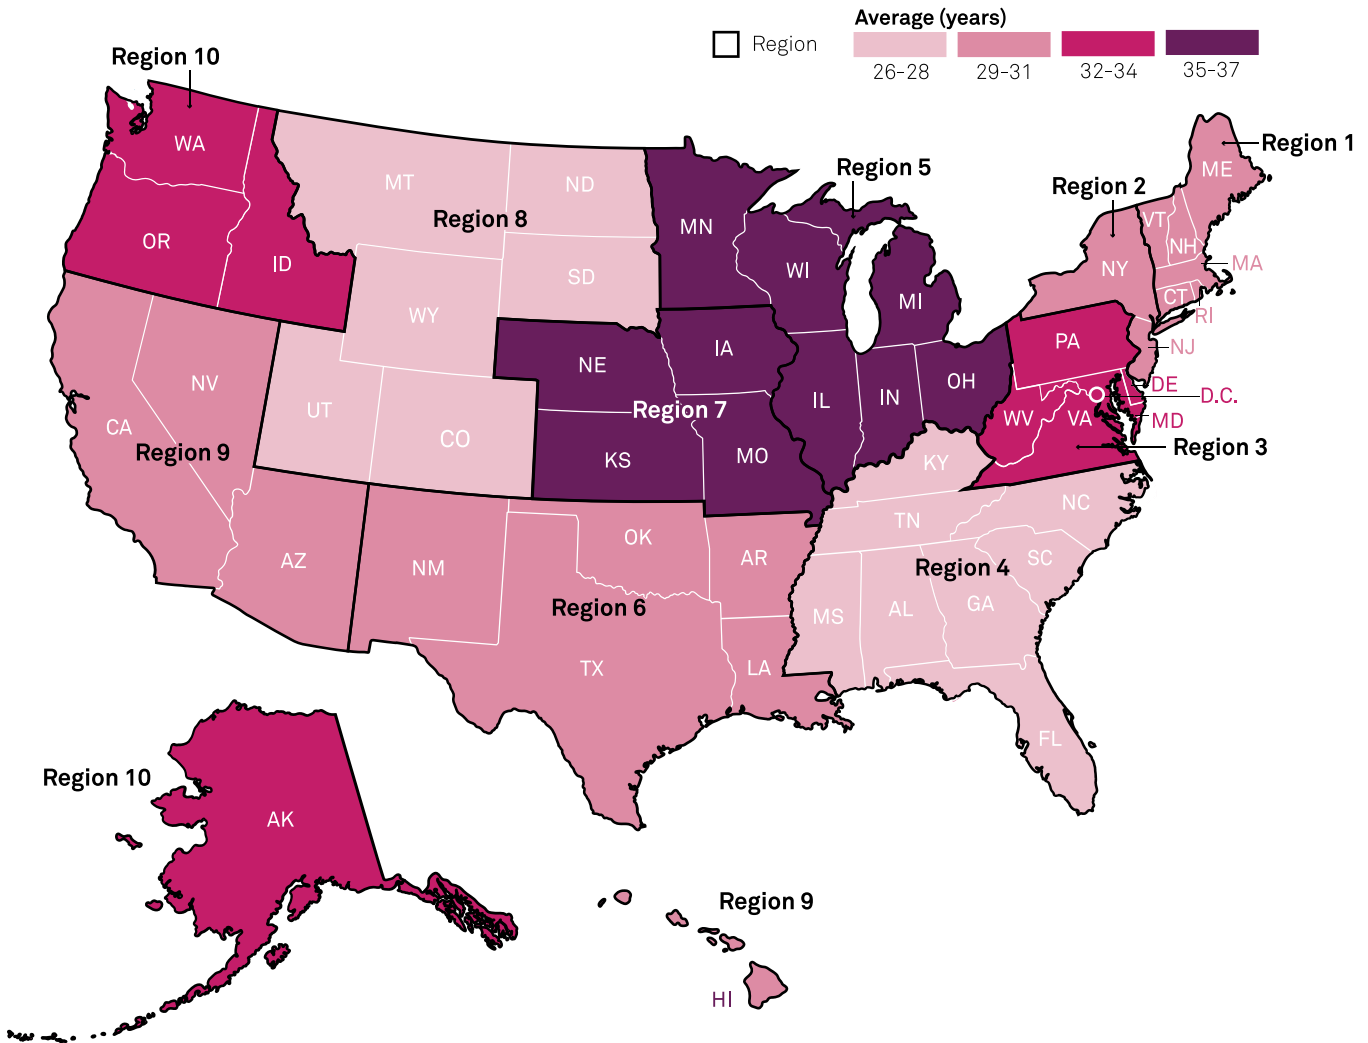

Region Categories

Region	States covered
1 New England	CT MA ME NH RI VT

Chart 6

Median Days' Cash Range By Region

Sources: S&P Global Ratings
 Copyright © 2022 by Standard & Poor's Financial Services LLC. All rights reserved.

Due to aging infrastructure and more stringent regulations, we anticipate forecasted capital spending to primarily focus on infrastructure replacements in most regions (the average useful life of assets is 30 years across the country) and potential growth initiatives in faster population growth regions like the Mountains and some states in the South. National and regional median financial ratios held strong in 2021, which suggest that as capital spending continues to increase, most utilities are well positioned to absorb capital financing costs in the near term. The strong median liquidity (488 days' cash on hand) provides a higher degree of financial flexibility to guard against exposure to climate risks or infrastructure vulnerabilities. However, we expect the cost of building resiliency into operations and infrastructure to address these rising risks to be borne by ratepayers, which may heighten affordability concerns in the long-term.

Operational challenges can vary across regions: utilities east of the Mississippi tend to have ample water supply but deal more with aging infrastructure issues, particularly in the older urban

U.S. Municipal Water And Sewer Sector Medians Held Strong In 2021

areas of New England, Mid-Atlantic, and New York. Utilities west of the Mississippi tend to have a greater focus on water scarcity and supply reliability and diversification. Moreover, many utilities in the Mountain and the Southwest regions face the challenges of a growing population, and a limited and vulnerable supply of water, which necessitates higher investments in diverse supplies and storage. Even as the path to asset resilience may look different for each utility--adopting robust asset management and emergency preparedness policies coupled with ratemaking and budgetary flexibility would improve utilities' ability to react to system challenges which, in our view, would preserve consistent financial performance.

Medians By Rating

We generally see that many of the enterprise and financial risk profile medians tend to improve with credit quality (see chart 7). Not surprisingly, higher rated utilities will have enterprise risk profile and financial risk profile scores at the lower (more favorable) end of the scale. Many highly rated utilities tend to be in major metropolitan areas and therefore can spread fixed costs across a larger customer base; others are newer systems with fewer capital needs associated with maintaining aging infrastructure. Lower-rated utilities have higher (less favorable) enterprise and financial risk profile assessment scores, and the common credit weaknesses include limited economies, low incomes, slim coverage, and lower liquidity levels especially on an absolute basis. They also tend to have below-average operational and financial management assessment scores, stemming from reactive policies and a lack of best practices. Charts 8 and 9 provide more detailed information regarding the specific criteria areas that comprise the broader enterprise and financial risk profile assessments. (Note that '1' is the most favorable assessment score on a six-point scale).

'1' is the most favorable assessment score on a six-point scale

We did not include industry risk in the above table, because we score this factor as extremely strong ('1') for all utilities, and it is not subject to analytic discretion per utility.

Financial profile medians have largely remained stable across rating levels

Our opinion of financial risk profile remains largely in line with our pre-pandemic opinions with no significant change in the number we consider as having extremely strong financial risk profiles at 18%, 50% we consider very strong, 27% we consider strong, and 5% we consider adequate or weaker (chart 10).

Chart 10

Enterprise And Financial Risk Profile Distribution

Enterprise risk	Financial risk					
	1 - Extremely strong	2 - Very strong	3 - Strong	4 - Adequate	5 - Vulnerable	6 - Highly vulnerable
1 - Extremely strong	7%	10%	2%			
2 - Very strong	9%	20%	11%	1%		
3 - Strong	2%	15%	9%	2%	1%	
4 - Adequate		5%	5%	1%		
5 - Vulnerable						
6 - Highly vulnerable

Coverage metrics

Our use of "all-in" coverage metrics allows us to compare systems that are vertically integrated with those that contract for core services, such as water supply or wastewater treatment. The inclusion of off-balance-sheet debt, specifically debt issued by another entity, creates more comparable ratios, though the resulting coverage is often suppressed. Our coverage ratio also includes the amount typically transferred annually from the utility system to another fund, such as a city's general fund. Coverage ratios will vary from year to year, which is one reason our criteria allow for discretionary weighting of historical results and projected outcomes.

Because ratings are designed to be forward-looking opinions of credit quality, when possible, we will consider projected coverage ratios in our analysis. As a result, when we look at the universe of ratings, the coverage ratios will be a combination of historical results and projected outcomes across several fiscal years. So, while the median coverage scores may be valuable and informative, they can't be viewed in isolation.

Liquidity and reserves

Our liquidity and reserve analysis evaluates a utility's financial resources both as a ratio relative to its annual operating expenses and as the absolute dollar amount. For most of our highly rated

U.S. Municipal Water And Sewer Sector Medians Held Strong In 2021

utilities, the absolute cash level is the primary determinant of the liquidity assessment rather than the days' cash ratio metric, and we note that at the lower end of the investment-grade category, a utility's low nominal level of reserves tempers our assessment of its liquidity and reserves.

Debt and liabilities

Our assessment of the debt and liabilities profile correlates strongly with ratings, which reflects lower leverage for credits at the higher end of the investment-grade categories (debt-to-capitalization medians are typically less than 35% for 'AAA' and 'AA' category utilities, and 50% or lesser for 'A' category utilities). As with all-in coverage, higher-rated utilities tend to fund a greater portion of system capital needs on a pay-as-you-go basis, which in turn enables them to maintain lower levels of leverage.

Also, virtually all our rated utilities are making required contributions to their pension funds, and a utility's exposure to pension challenges tends to be more limited than a city's or county's general fund. This is because salaries and benefits are a smaller portion of total operating expenses since utilities typically also have substantial costs for raw water, chemicals, energy, and maintenance.

Financial management assessment

Management and governance is the one factor that can likely stabilize or even relieve utilities of most rating stress. Therefore, we note that higher-rated utilities tend to have enhanced quality of management policies and practices as well as sophisticated long-range financial planning that correlate closely with ratings and the overall FMA median scores.

Looking Ahead

Regardless of whether a utility's system investments are by way of regulatory mandates, crucial asset rehabilitation, or climate-resiliency projects, its capital improvement program remains the main factor in deciding rates, and rate-setting flexibility remain highly correlated with its financial health. We believe that decisions on rates and charges and its effects on affordability will be the long-term determinant of continued sectorwide stability, or lack thereof.

This report does not constitute a rating action.

VERIFICATION

I, Christine Fay hereby state that: (1) I am Senior Managing Director and Partner with Public Resources Advisory Group, Inc.; (2) I have been retained by The Pittsburgh Water and Sewer Authority and am authorized to present rebuttal testimony on its behalf; (3) the facts set forth in my rebuttal testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and (4) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C .S. § 4904 (relating to unsworn falsification to authorities).

EB-15	Task Orders for Wet Weather Consent Decree Program Manager
-------	--

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND POSITION FOR THE RECORD.**

3 A. My name is Edward Barca, and I am the Director of Finance for The Pittsburgh Water
4 and Sewer Authority (“PWSA” or “Authority”).

5 **Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?**

6 A. Yes, I submitted Direct Testimony (PWSA St. No. 2), together with accompanying
7 exhibits EB-1 to EB-9, on May 9, 2023; Rebuttal Testimony (PWSA St. No. 2-R),
8 together with accompanying Exhibits EB-10 to EB-14, on September 8, 2023; and
9 Surrebuttal Testimony (PWSA St. No. 2-SR¹) on September 22, 2023.

10 **Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?**

11 A. My rejoinder testimony responds to the various recommendations including financial
12 metrics, revenue, and expense recommendations contained in portions of the surrebuttal
13 testimony submitted by the Bureau of Investigation and Enforcement (“I&E”), the Office
14 of Consumer Advocate (“OCA”), the Office of Small Business Advocate (“OSBA”),
15 Pittsburgh United’s Our Water Table (“Pittsburgh United”) and the Pittsburgh School
16 District (“School District”) (together, “the Opposing Parties”).

17 I have attempted to respond to the specific statements and recommendations made
18 by the Opposing Parties’ witnesses. In the event that an issue is not addressed, this should
19 not be viewed as my acceptance of their testimony. Rather it reflects my belief that a
20 further response in this rejoinder testimony is not warranted, either because it was
21 adequately addressed in my prior testimony, was addressed by other prior testimony on

¹ See footnote 4, *infra*.

1 behalf of PWSA, or because it is a legal matter that is better addressed by counsel in
2 briefs or other pleadings.

3 **Q. ARE YOU SPONSORING ANY EXHIBITS?**

4 A. Yes. I am sponsoring the following exhibit:

EB-15	Task Orders for Wet Weather Consent Decree Program Manager
-------	--

5
6 **II. I&E’s UPDATED FPPTY REVENUE REQUIREMENT RECOMMENDATION**

7 **Q. DID ANY OF THE OPPOSING PARTIES PROVIDE UPDATED OVERALL**
8 **REVENUE RECOMMENDATIONS FOR THE FPPTY?**

9 A. Yes, Mr. Spadaccio states that I&E’s updated FPPTY total recommended revenue
10 requirement is \$227,685,945 (I&E St. No. 1-SR at 3). This recommended revenue
11 requirement represents an increase of \$25,026,204 (\$227,685,945 - \$202,659,741) to the
12 FPPTY at present rates of \$202,659,741.

13 OCA is not proposing adjustments to its direct testimony and is still
14 recommending an overall FPPTY increase of \$30,584,475 (OCA St. 1SR).

15 The following table shows I&E’s updated recommendation together with the
16 continued recommendations of PWSA, OCA and OSBA:

Recommended Revenue Requirement and <u>Claimed</u> Financial Metrics				
FPFTY	PWSA	I&E (UPDATED)	OCA	OSBA
Recommended Rate Increase	\$46.836 M	\$25.026 M	\$30.584 M	\$34.057 M ²
Debt Service Coverage Ratio (DSCR):				
Senior (1.25x requirement)	1.65	1.64	1.65	--
Total (1.1x requirement)	1.21	1.20	1.21	--
Days of Cash on Hand (DCOH):				
DCOH	247.6	289.2	279.08	--
DCOH with ALCOSAN	145.0	158.3	155.27	--

1 However, the financial metrics claimed to be produced by the Opposing Parties’
2 recommendations are inflated due to their use of “normalization” and other adjustments
3 which artificially lowers PWSA’s expected levels of operating expenses and debt service
4 in the FPFTY. In reality, the financial metrics produced by these recommendations are as
5 follows:

² PWSA claimed revenue at proposed rates less \$7,938,311 for expense adjustments and less \$4,840,624 for DSIC adjustment: \$12,778,935.

1

Opposing Parties Financial Metrics W/O Normalization				
FPPTY	PWSA	I&E (UPDATED)	OCA	OSBA
Recommended Rate Increase	\$46.836 M	\$25.026 M	\$30.584 M	\$34.057 M ³
Debt Service Coverage Ratio (DSCR):				
Senior (1.25x requirement)	1.65	1.35	1.44	--
Total (1.1x requirement)	1.21	0.98	1.05	--
Days of Cash on Hand (DCOH):				
DCOH	247.6	189.0	206.9	--
DCOH with ALCOSAN	145.0	110.7	121.2	--

2

3 **Q. CAN YOU DESCRIBE THE SPECIFIC ADJUSTMENTS PROPOSED BY I&E IN**
4 **ITS UPDATED FPPTY REVENUE REQUIREMENT RECOMMENDATION?**

5 A. Yes, I&E is proposing to reduce the FPPTY debt service requirement by \$1,625,745 and
6 cash-financed capital (DSIC) by \$618,876, for a total capital requirement reduction of
7 \$2,244,621 (I&E Exhibit No. 1-SR, Schedule 1). In addition, I&E has accepted PWSA's
8 full \$780,372 drag bucket and \$763,995 line televising claim in the FPPTY (I&E St. No.
9 1-SR at 15), resulting in a total operating requirement reduction of \$19,236,455. These
10 adjustments result in a total reduction of \$21,481,076 (\$1,625,745 + \$618,876 +
11 \$19,236,455).

³ PWSA claimed revenue at proposed rates less \$7,938,311 for expense adjustments and less \$4,840,624 for DSIC adjustment: \$12,778,935.

1 **Q. MR. SPADACCIO STATES THAT, AS A RESULT OF I&E’S UPDATED**
2 **POSITION, MANY OF PWSA’S CRITICISMS OF I&E’S POSITION IN DIRECT**
3 **TESTIMONY HAVE BECOME OBSOLETE. DO YOU AGREE?**

4 A. No, I do not agree. As described below, PWSA’s criticisms still exist even with I&E’s
5 updated position.

6 **Q. CAN YOU ELABORATE ON I&E’S PROPOSED FPPTY DEBT SERVICE AND**
7 **OTHER FINANCING REDUCTION TO REFLECT A \$32.6 MILLION**
8 **REDUCTION IN PWSA’S CAPITAL SPENDING ALLOWANCE?**

9 A. Yes. As shown in I&E Exhibit No. 1-SR, Schedule 3, I&E split the cost of PWSA’s
10 incremental FPPTY capital funding increases into the categories of senior debt,
11 subordinate debt, and DSIC. A weight was then applied to each category to calculate the
12 total adjustment of \$2,244,612: \$820,281 for senior debt service, \$596,891 for
13 PENNVEST subordinate debt service, \$618,876 for DSIC, \$140,073 for capital line of
14 credit interest subordinate debt service, and \$68,501 for Water Infrastructure Finance and
15 Innovation Act (“WIFIA”) Loan #1 subordinate debt service.

16 **Q. ARE THESE PROPOSED REDUCTIONS IN PWSA’S ALLOWED DEBT**
17 **SERVICE AND DSIC REASONABLE?**

18 A. No. I&E’s proposal to reduce the subordinate debt service claim by \$805,465 (\$596,891
19 + \$140,073 + \$68,501) should be denied since the debt associated with this debt service
20 is already issued – the PENNVEST debt service is related to funding either awarded or
21 closed on, the capital line of credit is an active debt obligation, and PWSA closed on
22 WIFIA Loan #1 in May 2023. To be clear, the failure to permit recovery of these revenue
23 requirements would force PWSA to default on these existing debt obligations or to cut
24 other services to find the cash to pay these existing obligations.

25 Further, I also disagree with the allocations used by I&E for reducing debt
26 service. The 2023 PENNVEST loans and the 2024 WIFIA loan are tied to anticipated

1 spending for specific projects; PWSA is fully committed to spending 100% of that
 2 borrowing for those projects. Any capital budget shortfall will not come from those
 3 borrowings. If PWSA is not able to complete all the debt-financed capital improvements
 4 it has projected for the FPFTY the funds made possible by this debt issuance will be used
 5 in a subsequent period to complete those projects.

6 In addition, PWSA disagrees with reducing capital spending under the DSIC. As I
 7 previously testified, PWSA is fully committed to spending 100% of its DSIC revenues at
 8 the new 7.5% cap that I&E is supporting. PWSA St. No. 2-R at 20. More to the point, if
 9 PWSA fails to spend those DSIC revenues on DSIC-eligible projects they will
 10 automatically be returned to ratepayers via the “e -factor” in the DSIC mechanism. Any
 11 capital budget shortfall will not come from its DSIC.

12 I would also, again dispute the reasonableness of reducing PWSA’s allowed
 13 capital financing in any manner on the ground that the Authority failed to actually meet
 14 the spending levels it had originally projected in its Capital Improvement Plan.

15 **Q. DOES PWSA PASS THE ADDITIONAL BONDS TEST UNDER I&E’S**
 16 **UPDATED FPFTY REVENUE REQUIREMENT?**

17 A. Yes barely, as shown below in Scenario #1. However, as proposed by I&E, Scenario #1
 18 assumes that PWSA’s subordinate debt service revenue requirement is reduced below a
 19 sufficient level to service outstanding obligations, which would cause a default.

20 Calculating the additional bonds test excluding the subordinate debt reductions, as
 21 shown below as Scenario #2 is a better representation of I&E’s updated FPFTY revenue
 22 requirement impact on the additional bonds test. Under Scenario #2, revenue requirement
 23 would need to be increased by at least the \$493,111 shown deficient **plus** the subordinate
 24 debt reduction of \$805,465, totaling \$1,298,576. Note that in both scenarios, the Series A

1 of 2024 Maximum Annual Debt Services includes I&E’s proposed \$820,281 reduction to
 2 senior debt service (\$9,054,184 - \$820,281 = \$8,233,903).

	Scenario 1	Scenario 2
Additional Bonds Test	I & E - Updated Proposed Revenue Requirement	I & E - Updated Proposed Revenue Requirement Excluding Subordinate Debt Reductions
2024 Rate Covenant Net Revenues	\$114,611,246	\$114,611,246
Plus Transfer to Rate Stabilization Fund	\$1,000,000	\$1,000,000
Additional Indebtedness Test Net Revenues	\$115,611,246	\$115,611,246
2024 Rate Covenant First Lien Debt Service	\$61,663,907	\$61,663,907
Series A of 2024 Maximum Annual Debt Service	\$8,233,903	\$8,233,903
First Lien Debt Service for Additional Bonds Test	\$69,897,810	\$69,897,810
First Lien Debt Service for Additional Bonds Test * 125%	\$87,372,263	\$87,372,263
First Lien Revenue Surplus / (Deficiency)	\$28,238,984	\$28,238,984
2024 Rate Covenant Subordinate Lien Debt Service	\$18,448,385	\$18,516,886
Additional PENNVEST	\$3,367,207	\$3,964,098
WIFIA Maximum Annual Debt Service	\$3,639,101	\$3,639,101
Subordinate Lien Debt Service for Additional Bonds Test	\$25,454,693	\$26,120,085
2024 Rate Covenant Subordinate Lien Debt Service * 110%	\$28,000,162	\$28,732,094
125% First + 110% Subordinate Lien Rate Covenant Debt Service	\$115,372,425	\$116,104,356
Subordinate Lien Revenue Surplus / (Deficiency)	\$238,821	(\$493,110)
Total Debt Service for Additional Bonds Test (100%)	\$95,352,503	\$96,017,895
Total Revenue Surplus / (Deficiency)	\$20,258,743	\$19,593,351

3

4 **Q. WHAT CAN YOU CONCLUDE ABOUT I&E’S PROPOSED ADJUSTMENTS TO**
 5 **FPPTY CAPITAL REQUIREMENTS?**

6 A. It remains clear that I&E does not understand PWSA’s capital structure and financial
 7 requirements. Their original FPPTY revenue requirement reduced existing debt service
 8 by \$12,057,362 and failed the additional bonds test. I&E then updated its proposed
 9 FPPTY revenue requirement which reduced existing subordinate debt service by
 10 \$805,465, resulting for a second time in the failure of the additional bonds test. Both of
 11 I&E’s proposals would result in PWSA defaulting on its obligations while
 12 simultaneously stopping all future debt issuances. To be clear, while Scenario #1 appears

1 to be in compliance with the additional bonds test, this is not actually the case since I&E
2 is reducing existing subordinate debt.

3 **Q. AS IT RELATES TO DAYS CASH ON HAND (DCOH), MR. SPADACCIO**
4 **CLAIMS THAT YOUR CONCERN OF NORMALIZING COSTS TO SHOW AN**
5 **ARTIFICIALLY HIGHER DCOH IS NO LONGER RELEVANT DUE TO I&E'S**
6 **UPDATED REVENUE REQUIREMENT (I&E ST. NO. 1-SR AT 17). CAN YOU**
7 **RESPOND?**

8 A. This is false. I&E did not make any changes to its proposed normalization adjustments
9 for the FPFTY. Therefore, PWSA is still of the opinion that I&E is artificially showing a
10 higher DCOH amount. I&E's DCOH recommendation (without ALCOSAN) for the
11 FPFTY is actually 189.0 when the normalization recommendations are removed and the
12 full amount of the cost is assumed to be incurred. If PWSA's rate increase only permits a
13 "normalized" amount of expense to be recovered then PWSA will only be able to incur
14 this normalized amount and will have to reduce services and activities accordingly or
15 incur the projected level of expenses resulting in these inadequate levels of DOCH.

16 **Q. MR. SPADACCIO CLAIMS THAT I&E'S UPDATED REVENUE**
17 **REQUIREMENT RESULTS IN A DEBT SERVICE COVERAGE OF 1.64X FOR**
18 **SENIOR LIENS AND 1.20X FOR TOTAL DEBT SERVICE. (I&E ST. NO. 1-SR**
19 **AT 21). DO YOU AGREE?**

20 A. No. Again, I&E did not make any changes to its proposed normalization in the FPFTY
21 and is therefore overstating the senior and total debt service coverage ratios. As
22 previously stated, I&E's updated revenue requirement also reduces subordinate lien debt
23 service costs for active obligations by \$805,465, which further skews its coverage ratios.
24 I&E's actual debt service coverage recommendation is 1.35x for the senior lien and 0.98
25 for total debt service coverage when the normalization recommendations are removed
26 and the \$805,465 of subordinate debt service is added. Mr. Spadaccio's claim that in his
27 calculation "generally, operating expenses are matched with revenues dollar-for-dollar,

1 so the impact of adjustments to operating expenses on DSCRs is minimal (pg. 22)” is not
2 correct and appears to be based on his elimination of debt service obligations that PWSA
3 cannot in fact avoid.

4 **III. OCA’s FINANCIAL METRICS**

5 **Q. CAN YOU RESPOND TO MR. MUGRACE’S CLAIM THAT YOU ATTEMPTED**
6 **TO MANIPULATE OCA’S DEBT SERVICE COVERAGE CALCULATION TO**
7 **SHOW THAT IT IS IN VIOLATION OF LEGAL REQUIREMENTS (OCA ST.**
8 **1SR AT 6)?**

9 A. This statement is incorrect. I was attempting to show the true impact of OCA’s
10 recommended revenue requirement by eliminating the normalization of expenses. PWSA
11 cannot assume the normalization of costs within its revenue requirement since the full
12 amount of costs must be available to purchase goods or services. The only way in which
13 PWSA will achieve the DSCR that Mr. Mugrace claims his recommended revenue
14 requirement will produce is by cutting back severely on its operating budget so that it
15 actually only expends Mugrace’s “normalized” amounts. But this is a self-fulfilling
16 prophecy that will harm service and reduce PWSA’s ability safely and reliably run the
17 Authority.

18 **Q. ARE YOU, IN MAKING THIS ARGUMENT, CONTENDING THAT THE PUC**
19 **CANNOT MAKE ANY ADJUSTMENTS TO PWSA’S PROPOSED REVENUE**
20 **REQUIREMENT AS MR. MUGRACE CONTENDS (OCA ST. 1SR AT 5-6)?**

21 A. No, of course not. The Parties are free to make proposed adjustments to PWSA’s
22 operating expenses or capital improvement budget based on evidence that those projects
23 or activities are imprudent or unreasonable. But Mr. Mugrace (and I&E) have made
24 adjustments claiming that PWSA should only be permitted an “average” or “normalized”
25 amount of expenditure, based on historic averages. In virtually no case have they
26 claimed that the expenditures are imprudent or that the levels projected are unreasonable

1 (other than because they exceed historic averages).⁴ This simply denies PWSA with the
2 cash it will need to actually meet those expenditures. PWSA therefore will be faced with
3 either realizing a massive regression in the progress it has been making in modernizing
4 the Authority's service and operations or go forward with its plans and realize a massive
5 negative effect on its financials. The latter course would likely lead to the downgrade of
6 its bonds, which would create additional costs for ratepayers for years to come.

7 **Q. MR. MUGRACE ARGUES THAT, EVEN THOUGH REGULATED ON A CASH**
8 **FLOW BASIS, RATEMAKING CONCEPTS, INCLUDING THOSE THAT ARE**
9 **SET UNDER A CASH FLOW METHOD, DO NOT PROVIDE FOR 100%**
10 **GUARANTEED RECOVERY OF ALL COSTS AND EXPENDITURES BUT**
11 **ONLY THE OPPORTUNITY AND THE ABILITY TO RECOVER ALL OF A**
12 **UTILITY'S KNOWN AND MEASURABLE COSTS. CAN YOU COMMENT?**

13 A. Yes. PWSA is not asking for a "guarantee" but a reasonable opportunity to recover its
14 projected expenditures. I submit that providing an allowance that is demonstrably lower
15 than that which PWSA's budgeting team projects it will incur does not provide a
16 reasonable "opportunity." Moreover, I would point out that Mr. Mugrace has taken a
17 standard statement about utilities regulated on a rate of return/rate base basis and tried to
18 apply it here: that a utility is only given the opportunity to earn a fair return on its utility
19 investment – not a guarantee. To the extent that an investor-owned utility expense
20 allowance is based on a "normalized" or average amount it can make up the difference
21 from its profit allowance. PWSA has no such cushion.

⁴ Minor adjustments have been made for lobbying expense on an "unreasonableness" basis.

1 **Q. MR. MUGRACE ALSO CLAIMS THAT IF THE RATE INCREASE PROPOSED**
2 **BY THE OCA IS INADEQUATE PWSA CAN SIMPLY FILE ANOTHER RATE**
3 **CASE. CAN YOU COMMENT?**

4 A. First, this is obviously not a reasonable basis on which to deal with the serious concerns
5 about OCA's proposals that I and the other PWSA witnesses have raised. But, practically
6 speaking, PWSA would not be able to file for and receive another base rate case in time
7 to head off the negative financial and operational consequences of inadequate rate relief
8 in 2024. The only avenue available would be to seek extraordinary rate relief, which, I
9 am informed by counsel, is only available if the Authority was essentially on the brink of
10 default. Even if PWSA were, unfortunately, able to meet such a standard, such a filing
11 would clearly have a very significant negative effect in terms of PWSA's bond rating.

12 **IV. CAPITAL BUDGET; DEBT SERVICE**

13 **Q. MR. CLINE CONTINUES TO ADVOCATE THAT PWSA NOT BE PERMITTED**
14 **A RATE INCREASE NECESSARY TO FULLY FUND ITS PROJECTED**
15 **CAPITAL IMPROVEMENT PROJECTS IN THE FPFTY BECAUSE OF HIS**
16 **ASSERTION THAT PWSA IS NOT CAPABLE OF ACHIEVING THAT LEVEL**
17 **(I&E ST. NO. 3-RS AT 23). CAN YOU RESPOND?**

18 A. Yes, it is reasonable to consider whether capital plans can be achieved and PWSA
19 considers this when formulating its capital improvement plan. However, I would point
20 out that the bulk of what is included in PWSA's capital improvement plan is the result of
21 regulatory mandates. Failure to show the necessary improvements within the specific
22 timelines set by the regulatory agencies could result in fines or further regulatory action.

23 Moreover, by insisting that PWSA's FPFTY capital expenditures be set at prior
24 year averages, Mr. Cline appears to be attempting to punish PWSA for not spending
25 100% of its prior capital budgets. That is obviously unreasonable and inappropriate.

1 **Q. BUT MR. CLINE SAYS THAT YOU HAVEN'T "PROVEN" THAT UNSPENT**
2 **CAPITAL BUDGET FUNDS ARE USED IN SUBSEQUENT YEARS OR TO**
3 **BENEFIT CUSTOMERS IN SOME OTHER WAY. CAN YOU RESPOND?**

4 A. Capital budget funds can only be used for capital projects. If the funds were borrowed,
5 the funds are restricted to capital use. So, they would be used for the same project in the
6 next (or future) capital budget or on a different project (to avoid the need for
7 additional/other borrowing). If the funds were received under the DSIC, the funds are
8 restricted to DSIC-eligible projects and must be refunded if not timely used.⁵ I would
9 also note that neither Mr. Cline nor any other witness has identified any project, either
10 past or pending, that he considers imprudent or even unreasonable. The Opposing Parties
11 were provided data on PWSA's actual spending for the HTY and the FTY. None of the
12 Opposing Parties identified that PWSA used capital budget funds for a non-capital
13 purpose.

14 **Q. CAN YOU RESPOND TO MR. CLINE'S DEPRECIATION CLAIMS (I&E ST.**
15 **NO. 3-RS AT 30)?**

16 A. Yes, I do not contradict my direct testimony as it relates to citing a 2010 Commission
17 Policy Statement at 52 Pa. Code § 69.2702. PWSA interprets the 2010 Commission
18 Policy to allow utilities to include depreciation allowances, if applicable to the utility.
19 Not the presumption that all utilities have depreciation allowances. Furthermore, like all
20 governmental entities, PWSA books completed assets to its balance sheets and
21 depreciates the assets over its useful life. However, since its rates are based on the Cash
22 Flow method of ratemaking, this does not have an impact on PWSA's revenue
23 requirement or any other relevant rate making information.

⁵ Both now and historically, virtually 100% of its non-DSIC capital improvements were financed by long term debt.

1 **V. DSIC; INCREASE**

2 **Q. CAN YOU EXPLAIN OCA WITNESS PAVLOVIC’S RESPONSE (OCA ST. 4SR**
3 **AT 14-17) TO YOUR TESTIMONY REGARDING PWSA’S PROPOSAL TO**
4 **INCREASE THE WATER AND WASTEWATER DSIC FROM 5% TO 7.5%?**

5 A. Yes. As part of my Direct Testimony, I proposed that PWSA’s DSIC cap, currently
6 established at 5% of intrastate operating revenues, be increased to 7.5%. I explained there
7 that the DSIC cap increase would permit PWSA to make a small increase in the amount
8 of PAYGO funding that the DSIC would produce, thereby accelerating PWSA’s capital
9 improvement efforts, providing increased diversification of capital improvement funding
10 sources, reducing financial risk and reducing costs to ratepayers (as, for a Cash-Flow-
11 regulated company, PAYGO funding is actually cheaper for ratepayers than long-term
12 debt funding). I therefore demonstrated that raising the cap would increase PWSA’s
13 ability to ensure and maintain adequate, safe and reliable service. In response to my
14 Direct Testimony, I&E Spadaccio testified in favor of increasing PWSA’s DSIC cap,
15 principally based on his belief that permitting PWSA to fund an additional amount of its
16 Capital Improvement Plan via its DSIC was superior to authorizing an additional amount
17 of PAYGO in base rates. This appeared to be because, in his view, DSIC-financing can
18 only be used to fund projects that have been previously reviewed and approved in
19 PWSA’s LTIP. In his Rebuttal testimony, witness Pavlovic disagreed with I&E witness
20 Spadaccio, claiming, among other things (as he did in his Direct Testimony), that
21 permitting PWSA to recover an increased amount of PAYGO through its DSIC will
22 exacerbate what he claims is a violation of the “regulatory principle of ratable recovery”
23 which he describes as “the over recovery of capital costs from current customers and
24 under recovery of capital costs from later generations in violation of intergenerational
25 equity.” (OCA St. 2R at 6). He also asserts that neither Mr. Spadaccio nor I have shown

1 that the increase in the DSIC cap furthered PWSA's ability to ensure and maintain
 2 adequate, safe and reliable service (*Id.* at 5). Witness Pavlovic reiterated and expanded
 3 his criticisms in his surrebuttal : First, he claims that the increase is not needed to
 4 accelerate the completion rate of LTIIP projects. (OCA St. 4SR at 15-17.) Second, he
 5 states that OCA's prior acceptance of PWSA's DSIC in a settlement has no precedential
 6 value. (OCA St. 4SR at 15). Third, he states that there is no evidence that DSIC PAYGO
 7 should be part of any balanced capital funding program, either generally or specifically,
 8 (OCA St. 4SR at 15). He also asserts that my rebuttal failed to adequately respond to any
 9 of his other criticisms of the DSIC that he set forth in his direct testimony. (OCA St. 4SR
 10 at 16-17).

11 **Q. DO YOU WISH TO RESPOND TO THESE CLAIMS?**

12 A. Yes. Responding to the first criticism , witness Pavlovic is simply wrong when he claims
 13 that my testimony fails to show how increasing the DSIC furthers PWSA's ability to
 14 maintain the adequacy and reliability of its water and wastewater systems.

15 I explained in my Direct that PWSA must invest capital today in order to meet the
 16 needs of the system today, as discussed in PWSA St. Nos. 3 to 5. That capital comes
 17 from increases in base rates (to cover new debt service and coverage) and from the DSIC.
 18 PWSA's DSIC permits the Authority to finance a very modest additional amount of
 19 capital improvements each year without reliance on the issuance of long-term debt. In FY
 20 2023, the 5% DSIC will permit PWSA to use PAYGO financing for some \$8.4 million in
 21 additional distribution improvements.⁶ PWSA's requested increase in the DSIC cap

⁶ Dr. Pavlovic opines that DSIC PAYGO recovery is not an option under Section 1357(c) and is inconsistent with the recovery options set forth in Section 1357(c). OCA St. 2R at 6. Such issues will be addressed in briefing, if necessary, since I am not an attorney. That being said, it is my understanding that, in PWSA's 2020 Rate Proceeding, PWSA was permitted to implement a levelized, 5% DSIC for both water and

1 would result in it being able to bill approximately \$5 million additionally in the FPPTY.
 2 The additional DSIC billings that the cap increase would permit are shown in the
 3 following table.

	2023 (at 5%)	2024	2025	2026	Total (3-yr)
DSIC at 7.5% for Forecast Period					
Annual DSIC Revenue	8,411,120	15,038,462	17,699,369	20,942,857	53,680,687
Incremental increase		6,627,342	2,660,907	3,243,488	
Cumulative increase		6,627,342	9,288,249	12,531,737	28,447,329
DSIC at 5% for Forecast Period					
Annual DSIC Revenue	8,411,120	10,025,641	11,799,579	13,961,905	35,787,125
Incremental increase		1,614,522	1,773,938	2,162,325	
Cumulative increase		1,614,522	3,388,460	5,550,785	10,553,766
Difference between DSIC at 7.5% to 5%					
		5,012,821	5,899,790	6,980,952	17,893,562

4
 5 The improvements made possible by the DSIC cap increase likely will not be
 6 possible without this additional DSIC financing. PWSA’s debt load is already quite large
 7 and it is unlikely that PWSA and its financial advisors would feel comfortable adding to
 8 that burden to replace this DSIC funding through even larger bond issuances. Those
 9 additional DSIC-funded projects will improve the reliability and adequacy of PWSA’s
 10 water and wastewater distribution system without creating a further debt service and debt
 11 service coverage burden on customers. Therefore, PWSA’s DSIC cap increase proposal
 12 will directly expedite PWSA’s existing timeline for completing the projects set out in
 13 PWSA’s LTIP.

14 **Q. DOES THE FACT THAT DSIC PRODUCES PAYGO FINANCING CREATE**
 15 **ADDITIONAL BENEFITS FOR PWSA AND ITS RATEPAYERS?**

16 A. Yes. As I testified in my Rebuttal, PWSA’s current debt to equity ratio is approximately
 17 100%. Financing a small portion of PWSA’s capital improvements with PAYGO on a
 18 consistent basis will at least keep that relationship from becoming any worse. This

wastewater. See *Pa PUC v. Pittsburgh Water and Sewer Authority*, Docket Nos. R-2020-3017951, R-2020-3017970, and P-2020-3019019. While that case was settled, I am informed by counsel that the Commission could not have approved the Settlement if it contained provisions that were illegal.

1 deleveraging will help PWSA to market its bonds and marginally reduce their cost.
 2 Maintaining PWSA’s access to the long-term debt market helps to ensure that it can
 3 continue to modernize its distribution system which, in turn, clearly helps to maintain the
 4 adequacy and reliability of its system. I would also add that, to the extent that PAYGO
 5 financing is cheaper for ratepayers for a Cash Flow regulated utility, as Dr. Pavlovic
 6 appears to admit,⁷ using PAYGO financing means that a greater amount of capital
 7 improvements can be accomplished with the same amount of ratepayer dollars. This,
 8 again, accelerates PWSA’s ability to make those improvements more efficiently,
 9 resulting in a more adequate and reliable water/wastewater system.

10 **Q. PLEASE RESPOND TO WITNESS PAVLOVIC’S CLAIM THAT HE**
 11 **DEMONSTRATED THAT FINANCING A PORTION OF PWSA’S CAPITAL**
 12 **IMPROVEMENT PLAN WITH PAYGO VIOLATES THE PRINCIPLE OF**
 13 **RATABLE RECOVERY AND CREATES “GENERATIONAL INEQUITY” (OCA**
 14 **ST. 4SR AT 14, 17).**

15 **A.** I disagree and believe that these concerns of “generational inequity” are not valid. First, I
 16 question whether the concept even applies to a Cash Flow-regulated company as opposed
 17 to utilities regulated on a rate of return/rate base basis. A rate of return/rate base regulated
 18 company charges a return of and on a capital improvement over the depreciated life of
 19 the property, which is generally assumed to equate to its useful life. Therefore, the cost of
 20 a facility with a 70-year life (for example) will be recovered over 70 years. But for a
 21 cash-flow regulated entity, capital improvements are funded either by long term bonds,

⁷ OCA St. 2R at 6, ln. 19 to 7, ln-2 (“PWSA’s DSICs are not PWSA’s only option for accessing capital asset financing that is less expensive than long term debt.”) I addressed this spurious argument in my Rebuttal testimony in which I pointed out that PWSA is already attempting to access every dollar of available government loans and the existence of or increase in a small amount of PAYGO-financed capital improvements will have absolutely no effect on PWSA’s efforts to obtain those loans. PWSA St. No. 2-R at 22-23.

1 generally with a 30-year life,⁸ or PAYGO. PWSA is in the midst of a massive system
 2 improvement and is replacing all types of assets each year. Those assets have a wide
 3 variety of useful lives, as demonstrated below.

Useful Life of Assets Replaced	2023-2027 Capital Improvement Plan	% of Total
10 Years or Less	\$ 43,119,588	2.4%
15 Years	267,946,161	14.7%
20 Years	49,369,182	2.7%
25 Years	91,099,098	5.0%
30 Years	72,159,260	4.0%
50 Years	37,362,597	2.1%
70 Years	1,258,986,865	69.2%
	\$ 1,820,042,750	

4
 5 As can be seen, only a tiny fraction – 4% – of PWSA’s capital additions have useful lives
 6 that match the life of the bonds used to finance most of those improvements. Some 20%
 7 of PWSA’s additions have lives that are shorter than 30 years, and 71% have lives far
 8 longer than the 30 years. This means that, at any point in time, a ratepayer is paying in
 9 rates for assets that: 1) are currently serving him/her; 2) have been previously taken out
 10 of service; and 3) will go on providing service long after the bonds used to finance the
 11 asset is paid off. For this reason, I conclude that all of PWSA’s asset financing vehicles
 12 have the same “generational equity” issues and, thus, the concept of “generational equity”
 13 simply does not apply here. At least, when an asset is financed from rates (PAYGO) we
 14 can be confident that ratepayers are paying for an asset from which they are currently
 15 receiving service. Therefore, paying for a small portion of capital expenditures with

⁸ Short-term financing exists by way of PWSA’s capital line of credit. PWSA St. No. 2 at 26-27. PWSA issues long-term debt to reduce the balance of its short-term debt when the line of credit nears capacity. *Id.* So, I am using the term long-term debt to refer to all borrowing by PWSA. Also, note that PENNVEST loan terms can range between 20-30 years, but the most recent water loan awards have been for 30 years.

1 PAYGO is actually just as consistent with “generational inequity” as financing most
 2 assets with bonds the life of which has little relation to the useful life of the assets they
 3 finance.

4 Second, under current rates, PWSA is projected to finance just 2.34% of the
 5 Capital Improvement Plan with PAYGO sources, as shown below.

PWSA Capital Improvement Plan Funding Sources (Current Rates)							
Funding Sources	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	Total	% of Total
Debt (Revenue Bonds)	\$ 122,335,310	150,214,517	203,743,270	236,469,077	316,179,204	\$ 1,028,941,377	56.53%
State and Federal Loans (PENNVEST/WIFIA)	165,063,140	190,453,321	186,248,435	145,625,152	50,477,069	737,867,116	40.54%
DSIC - Water (PAYGO)	6,028,526	6,058,669	6,088,962	6,119,407	6,150,004	30,445,568	1.67%
DSIC - Wastewater (PAYGO)	2,359,691	2,371,490	2,383,347	2,395,264	2,407,240	11,917,032	0.65%
American Rescue Plan Act (Grant)	10,582,757	-	-	-	-	10,582,757	0.58%
Cash (PAYGO)	164,400	124,500	-	-	-	288,900	0.02%
Total Funding Sources	\$ 306,533,824	349,222,497	398,464,014	390,608,900	375,213,517	\$ 1,820,042,750	

6
 7 If the DSIC increase to 7.5% is approved, PWSA is projecting that PAYGO
 8 financing will increase to 4.58% of total financing while at the same time providing
 9 approximately \$41 million of additional funding to complete capital projects (with \$17.9
 10 million from the DSIC cap increase to 7.5%) that would otherwise not get done.

PWSA Capital Improvement Plan Funding Sources (Proposed Rates)							
Funding Sources	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	Total	% of Total
Debt (Revenue Bonds)	\$ 122,335,310	150,214,517	203,743,270	236,469,077	316,179,204	\$ 1,028,941,377	56.53%
State and Federal Loans (PENNVEST/WIFIA)	165,063,140	190,453,321	186,248,435	145,625,152	50,477,069	737,867,116	40.54%
DSIC - Water (PAYGO)	6,028,526	11,279,120	13,461,179	16,045,979	16,045,979	62,860,783	3.45%
DSIC - Wastewater (PAYGO)	2,359,691	3,759,342	4,238,190	4,896,878	4,896,878	20,150,979	1.11%
American Rescue Plan Act (Grant)	10,582,757	-	-	-	-	10,582,757	0.58%
Cash (PAYGO)	164,400	124,500	-	-	-	288,900	0.02%
Total Funding Sources	\$ 306,533,824	355,830,800	407,691,074	403,037,086	387,599,130	\$ 1,860,691,912	

11
 12 Therefore, to the extent that Dr. Pavlovic believes that financing with long term
 13 debt is consistent with “ratable recovery” and “intergenerational equity,” the vast
 14 majority of PWSA’s spending creates no problem as perceived by Dr. Pavlovic.

15 Third, any discussion of “equity” should include the fact that, for a Cash-Flow
 16 regulated company, PAYGO financing is cheaper for ratepayers compared to the debt
 17 service and debt service coverage that must be recovered when bond financing is utilized.
 18 As I testified (PWSA St. No. 2 at 27-29), bond financing means that current ratepayers

1 would pay the higher costs associated with issuing and paying back long-term debt for
 2 the DSIC-eligible projects compared to PAYGO. Exclusive use of bond financing also
 3 means that PWSA will have less capacity for project costs, given PWSA's existing high
 4 financial leverage.

5 **Q. REGARDING THE THIRD CRITICISM IN HIS SURREBUTTAL, DR.**
 6 **PAVLOVIC CLAIMS THAT YOU HAVE NOT PRESENTED ANY EVIDENCE**
 7 **THAT DSIC PAYGO NEEDS TO BE PART OF PWSA'S CAPITAL FUNDING**
 8 **PROGRAM. (OCA ST. 4SR AT 15). PLEASE RESPOND.**

9 A. DSIC PAYGO is already a part of PWSA's capital funding program, since PWSA was
 10 permitted to implement a levelized, 5% DSIC for both water and wastewater.⁹ For the
 11 reasons that I have explained, PWSA believes that increasing the water and wastewater
 12 DSIC from 5% to 7.5% will allow PWSA to advance the completion of DSIC-eligible
 13 capital improvement projects which will provide additional benefits for PWSA and its
 14 ratepayers such as reducing financial risk and reducing ratepayer costs I would note that
 15 witness Pavlovic never even addressed the financial leverage benefit or the fact that
 16 PAYGO financing is cheaper for ratepayers compared to long term debt financing.
 17 PWSA has clearly satisfied its burden of going forward with evidence that the proposed
 18 DSIC cap increase is reasonable.

19 **Q. DR. PAVLOVIC ALSO DOES NOT AGREE THAT FINANCING ASSETS**
 20 **THROUGH DSIC IS MORE DESIRABLE THAN FINANCING THOSE ASSETS**
 21 **WITH PAYGO IN BASE RATES (OCA ST. 2R AT 7). CAN YOU RESPOND?**

22 A. I agree with Dr. Pavlovic on this point. Mr. Spadaccio's claim that PAYGO from the
 23 DSIC is somehow better than from base rates is because DSIC financed capital
 24 improvements must be authorized through PWSA's LTIP. But the vast majority of

⁹ See footnote 5, *supra*.

1 PWSA’s assets are not reviewed in the LTIP because they are financed with long-term
 2 debt. Whether financed through debt or PAYGO, PWSA’s capital improvement plans are
 3 completely transparent, extensively detailed and adequately explained.¹⁰ Many of them
 4 have been further scrutinized in this and other base rate cases.

5 **Q. CAN YOU RESPOND TO DR. PAVLOVIC’S STATEMENTS THAT YOU DID**
 6 **NOT DEMONSTRATE THAT INCREASING PWSA’S WATER AND**
 7 **WASTEWATER DSIC CAP PERCENTAGE IS NECESSARY FOR IT TO**
 8 **ENSURE AND MAINTAIN ADEQUATE, EFFICIENT, SAFE, RELIABLE AND**
 9 **REASONABLE SERVICE? (OCA ST. 4SR AT 16-17)?**

10 A. Yes, as I tried to make clear in my direct testimony (and above),¹¹ it is necessary for the
 11 DSIC CAP percentages to be increased to 7.5% in order for PWSA to have all the funds
 12 it needs to finance its entire capital budget. Doing so is therefore necessary to continue to
 13 ensure and maintain adequate, efficient, safe, reliable, and reasonable service. The
 14 additional funding received through the DSIC will allow PWSA to expedite the
 15 replacement of its infrastructure, including its most vulnerable assets – small diameter
 16 water (including lead) and sewer pipe. These additional projects will not happen at this
 17 time without the additional DSIC funding. This clearly meets the applicable standards.

18 **Q. REGARDING THE SECOND CRITICISM IN HIS SURREBUTTAL, DR.**
 19 **PAVLOVIC CLAIMS THAT HE IS NOT PRECLUDED FROM CRITICIZING**
 20 **PWSA’S DSIC PAYGO IN THIS PROCEEDING (OCA ST. 4SR AT 15). CAN**
 21 **YOU RESPOND?**

22 A. While not an attorney, I believe that criticism of PWSA’s DSIC structure itself is not
 23 appropriate, since the DSIC was approved by the Commission in 2020. That being said, I
 24 understand that there is room in this proceeding for Dr. Pavlovic to be critical of the

¹⁰ PWSA’s entire FY 2024 Capital Improvement Plan is an exhibit to my Direct Testimony. *See* PWSA Exh. EB-4.

¹¹ *See* PWSA St. No. 2 at 27-29.

1 proposed increase of the DSIC from 5% to 7.5%. However, in my view, many of Dr.
 2 Pavlovic’s criticisms apply to the DSIC itself as well as the proposed increase. To the
 3 extent that witness Pavlovic’s criticisms are an attack on the existing DSIC (such as the
 4 production of PAYGO) they should be rejected since Dr. Pavlovic has not shown that
 5 circumstances have changed or that the existing DSIC has had negative consequences.

6 **Q. DR. PAVLOVIC EXPRESSED CONCERN OVER THE LACK OF A “RAMP-UP”**
 7 **PERIOD. (OCA ST. 4SR AT 16). PLEASE RESPOND.**

8 A. The Commission approved a levelized DSIC for PWSA, as it has for Philadelphia Gas
 9 Works (“PGW”).¹² As I have explained, the funds received under the DSIC are restricted
 10 to DSIC-eligible projects and must be refunded if not timely used. Given those
 11 protections, I do not see the need for a “ramp up” period either for the DSIC itself or for
 12 the proposed increase to 7.5%.

13 In addition, I would note that PWSA’s DSIC can change on a quarterly basis for
 14 over/under collection. I am not an attorney, but I believe that the DSIC for investor-
 15 owned utilities is also updated on a quarterly basis to reflect eligible property placed in
 16 service by them during the prior three-month period.¹³ The addition of the DSIC-eligible
 17 property allows the investor-owned utilities to begin recovering return on and of their
 18 “new” facilities, so I would not characterize the addition of “new” DSIC-eligible property
 19 as a “ramp-up” of additional revenues for the investor-owned utilities.

20 **Q. MR. SPADACCIO CLAIMS THAT YOU ARE MISSING HIS LARGER POINT**
 21 **ON PAYGO FINANCING BY STATING THAT CAPITAL ASSETS WILL**
 22 **LIKELY OUTLIVE THE CUSTOMERS USAGE OF THEM AND IS THE**

¹² See, e.g., *Petition of Philadelphia Gas Works for Waiver of Provisions of Act 11 to Increase The Distribution System Improvement Charge CAP and to Permit Levelization of DSIC Charges*, Docket Nos. P-2015-2501500; C-2015-2504092, PUC Opinion and Order entered January 28, 2016.

¹³ 66 Pa.C.S. § 1357(a)(2).

1 **REASON WHY CUSTOMERS SHOULD NOT FOOT THE ENTIRE BILL FOR**
2 **THOSE ASSETS (I&E ST. NO. 1-SR AT 14). CAN YOU RESPOND?**

3 A. I understand this point but disagree with the claim that PAYGO financing would result in
4 customers “footing the entire bill” for capital assets purchases. PAYGO, both DSIC
5 PAYGO and rate funded PAYGO, must be part of PWSA’s larger capital financings
6 strategy in order to keep rates as low as possible, while at the same time providing
7 financial flexibility. Mr. Spadaccio would seem to agree with this as he admits PWSA
8 needs to work towards developing the proper balance between long-term debt and
9 PAYGO. (I&E St. No. 1-SR at 14).

10 PWSA acknowledges and appreciates I&E’s support for increasing the DSIC
11 percentage from 5% to 7.5%. However, with a capital improvement plan that is currently
12 funded by over 97% debt, the Authority also needs base rate funded PAYGO.

13 Finally, I do not agree with Mr. Spadaccio’s concerns regarding
14 “intergenerational equity” for the same reasons that I disagree with Dr. Pavlovic’s
15 concerns on that issue. As I have already explained, the vast majority of PWSA’s capital
16 spending is for assets that have useful lives that are either far longer or far shorter than
17 the typical, 30-year life of PWSA’s bonds.

18 **Q. MR. SPADACCIO CLAIMS THAT RECEIVING LOW-INTEREST PENNVEST**
19 **AND WIFIA LOANS IS PREFERABLE AS COMPARED TO RATE FUNDED**
20 **PAYGO/DSIC. (I&E ST. NO. 1-SR AT 15-16). CAN YOU RESPOND?**

21 A. I do not agree with this statement. As demonstrated by the analysis completed in my
22 direct testimony (PWSA St. No 2. at 29), PAYGO funding is cheaper than borrowed
23 funds, either PENNVEST/WIFIA loans or publicly issued Revenue Bonds.

1 **VI. MULTI-YEAR RATE PLAN**

2 **Q. MR. CLINE STATES THAT “EACH WITNESS ONLY MAKES VAGUE**
 3 **REFERENCE TO REDIRECTED FUNDS BENEFITING RATEPAYERS. THEY**
 4 **HAVE PROVIDED NO EVIDENCE OR DETAIL AS TO WHERE EXTRA**
 5 **DOLLARS WILL BE SPENT THAT WOULD BENEFIT RATEPAYERS.” (I&E**
 6 **ST. NO. 3 AT 10). PLEASE RESPOND.**

7 A. PWSA has no shareholders and does not pay a dividend or a rate of return to its owner, as
 8 explained in PWSA St. No. 1 at 6, 17-18. It should be obvious that, without shareholders
 9 or dividends, PWSA can only spend funds to provide safe and reliable service.
 10 Moreover, and as noted above, bond proceeds can only be used for capital expenditures
 11 so any dollars not spent in the year anticipated will be spent the next year. For example,
 12 PWSA will be issuing a new bond in both 2024 and 2025 with additional annual debt
 13 service for each bond of approximately \$9 million for each. If PWSA doesn’t fully
 14 expend the proceeds from those bonds in the year in which the bond is issued it will use
 15 those funds for capital improvements in next year and will adjust the size of future bond
 16 issuances accordingly.

17 **VII. INFRASTRUCTURE IMPROVEMENT CHARGE**

18 **Q. MR. SPADACCIO CLAIMS THAT THE PROPER VENUE FOR THE**
 19 **INFRASTRUCTURE IMPROVEMENT CHARGE WOULD BE A PETITION TO**
 20 **THE COMMISSION WITHIN THE 60 TO 90-DAY WINDOW PRIOR TO THE**
 21 **FIRST ANTICIPATED PRINCIPAL AND INTEREST PAYMENT (I&E ST. NO.**
 22 **1-SR AT 12). CAN YOU RESPOND?**

23 A. Such issues will be addressed in briefing, if necessary, since I am not an attorney. I am
 24 informed by counsel, however, that this section is a PUC Policy, not a regulation, so the
 25 Commission is obligated to mold the policy to fit specific circumstances. Moreover, I
 26 believe that the reference to “filing for relief” refers to submitting data to the Commission
 27 to initiate the recovery of government loan costs, not the establishment of the recovery
 28 mechanism itself. This is the only reasonable interpretation because, as PWSA witness

1 Mechling testifies, the billing software changes and testing necessary to be in a position
 2 to start charging an automatic adjustment charge of this nature would take some 9 months
 3 to complete. Therefore, adopting Mr. Spadaccio’s reading would effectively eliminate
 4 the ability of many companies to be able to implement the surcharge that the PUC has
 5 generally authorized.

6 **Q. MR. SPADACCIO CLAIMS THAT 52 PA CODE § 69.363 MAKES NO MENTION**
 7 **OF WIFIA OBLIGATIONS; THEREFORE, IT CANNOT BE ASSUMED WIFIA**
 8 **SHOULD RECEIVE THE SAME TREATMENT AS PENNVEST LOANS. (I&E**
 9 **ST. NO. 1-ST, AT 12). CAN YOU RESPOND?**

10 A. PWSA agrees that 52 Pa. Code § 69.363 makes no mention of WIFIA. However, this
 11 should not be the basis to deny including WIFIA obligations in the surcharge. WIFIA is
 12 a more recent program that is the federal equivalent of PENNVEST. Given this, PWSA is
 13 proposing to model the proposed Infrastructure Improvement Charge (IIC) after the
 14 PENNVEST surcharge as defined in the section noted above. The only difference would
 15 be the inclusion of WIFIA in addition to PENNVEST obligations. Again, I am informed
 16 by counsel that this section is a PUC Policy, not a regulation, so the Commission may
 17 mold the policy to fit specific circumstances. Here, it clearly would not be reasonable to
 18 permit a surcharge for one type of government loan (PENNVEST) and deny it for the
 19 equivalent program from the federal government.

20 **VIII. EMPLOYEE COUNT; PAYROLL EXPENSES; PAYROLL TAXES;**
 21 **RETIREMENT BENEFITS**

22 **Q. DID I&E, OCA OR OSBA MAKE ANY CHANGES TO THEIR RESPECTIVE**
 23 **RECOMMENDATIONS FOR EMPLOYEE COUNTS, PAYROLL EXPENSE,**
 24 **PAYROLL TAX, AND RETIREMENT BENEFITS EXPENSE?**

25 A. No.

26 **Q. FOLLOWING YOUR REVIEW OF THE SURREBUTTAL TESTIMONY OF**
 27 **I&E, OCA AND OSBA REGARDING THEIR RECOMMENDED**
 28 **ADJUSTMENTS TO EMPLOYEE COUNT, PAYROLL EXPENSE, PAYROLL**

1 **TAX, AND RETIREMENT BENEFITS EXPENSE, DO YOU HAVE ANYTHING**
2 **TO ADD?**

3 A. Yes. In addition to my rebuttal testimony, which responds to their recommendations, I
4 would add that:

5 Mr. Mugrace missed the fundamental point of my rebuttal testimony. I testified
6 that the adoption of Mr. Mugrace's recommendation (of 368 employees for the FPFTY)
7 would unreasonably reduce the level of employees (and the recovery of payroll and
8 employee benefit expenses) for the FPFTY below the current level of employees and
9 expenses (418 as of September 7, 2023). (PWSA St. No. 2-R at 44). That employee
10 number was not contested or rebutted by Mr. Mugrace.

11 That same fundamental point is applicable to OSBA, since Mr. Higgins'
12 recommendations (of 404.5 employees for the FPFTY) would also unreasonably reduce
13 the level of employees (and the recovery of payroll and employee benefit expenses) for
14 the FPFTY below the current level of employees and expenses. That employee number
15 was not contested or rebutted by Mr. Higgins in his surrebuttal.

16 To avoid comparisons with the actual headcount as of September 2023, Mr.
17 Higgins states that PWSA has not reconciled the current headcount with the budgeted
18 projections. (OSBA St. No. 1-SR at 3). There is no need for a reconciliation of
19 projections because PWSA's employee-related expense claims remain the same. The
20 projected headcount for the FPFTY remains the same, 421. The projected headcount for
21 the Forecast period (2025 and 2026) also remains at 440. Mr. Higgins also states that
22 PWSA did not provide any explanation for the difference in employment levels. (OSBA
23 St. No. 1-SR at 3). The explanation is obvious. PWSA has hired, and retained, more
24 employees faster than originally projected.

1 I note my continued disagreement with Mr. Higgins’ roll-out of employees during
 2 a fully-projected future test year for the reasons expressed in my rebuttal testimony.

3 **Q. DO YOU HAVE ANY CHANGES TO PWSA’S EXPENSE CLAIMS FOR**
 4 **EMPLOYEE COUNT, PAYROLL EXPENSE, PAYROLL TAX, AND**
 5 **RETIREMENT BENEFITS EXPENSE FOR THE FPFTY OR THE FORECAST**
 6 **PERIOD?**

7 A. No.

8 **IX. WET WEATHER CONSENT DECREE**

9 **Q. MS. OKUM CONTINUES TO RECOMMEND THAT ALL WET WEATHER**
 10 **CONSENT DECREE COST BE DISALLOWED BECAUSE SUPPORTING**
 11 **DOCUMENTATION (ALLEGEDLY) HAS NOT BEEN PROVIDED TO**
 12 **SUPPORT THE CLAIM. (I&E ST. NO. 2-RS AT 13). CAN YOU RESPOND?**

13 A. Yes, in Direct Testimony, Ms. Okum recommended the disallowance of the entire Wet
 14 Weather Consent Decree costs because “claimed expenses, relevant calculations, or any
 15 other supporting documentation to substantiate its claim related to the Decree” was not
 16 provided by PWSA (I&E. St. No. 2 at 18). Those data were submitted in discovery but,
 17 nevertheless, I provided in rebuttal testimony (as Exhibit EB-10) the active contract for
 18 its Wet Weather Program Manager (Wade Trim). Ms. Okum rejected Exhibit EB-10 as
 19 sufficient justification for the \$7,500,000 Wet Weather Consent Decree expense claimed
 20 in the FPFTY and maintains in I&E’s updated revenue requirement that the entire amount
 21 be disallowed. (I&E St. No. 2-RS at 13). In an effort to further justify these costs,
 22 attached as Exhibit EB-15 are all of the Task Orders that coincide with the phases listed
 23 in the Scope of Work provided in Exhibit EB-10. The Task Orders provide further detail
 24 of the timeline, hours, and costs within each phase. I frankly do not know what more we
 25 could provide to justify a 2024 expense. I submit that these exhibits are adequate
 26 evidence that PWSA is committed to spending at least \$7,500,000 in the FPFTY for
 27 activities related to the Wet Weather Consent Decree and no adjustment is warranted.

1 **Q. MS. OKUM RECOMMENDS THAT RATE CASE EXPENSES BE**
 2 **DISTINGUISHED IN THEIR OWN SPECIFIC EXPENSE ACCOUNT IN**
 3 **FUTURE RATE CASES. (I&E ST. NO. 2-SR AT 21-22). CAN YOU RESPOND?**

4 A. Yes, the reality of this request is not as straight forward as Ms. Okum may think. PWSA
 5 would need to work with its accounting software support vendor to update the current
 6 chart of accounts. This will result in all of PWSA’s canned reports and reporting
 7 processes to also require updating. Additionally, PWSA’s administrative staff would need
 8 to spend the time splitting invoice expenses so they are charged to the correct expense
 9 accounts.

10 PWSA does not agree with Ms. Okum’s recommendation for the reasons stated
 11 above. Rather, PWSA can provide rate case expenses as requested, as per the response to
 12 Discovery Request OCA-XXI-7.

13 **X. DRAG BUCKET AND LINE TELEVISIONING**

14 **Q. DID I&E OR OCA MAKE ANY CHANGES TO THEIR RESPECTIVE**
 15 **RECOMMENDATIONS FOR DRAG BUCKET EXPENSES OR LINE**
 16 **TELEVISIONING EXPENSES?**

17 A. Yes. I&E is no longer recommending adjustments to those expenses. I&E accepted
 18 PWSA explanation that the respective accounts for drag bucket and line televising were
 19 repurposed and the PWSA would incur expenses related to the repurposed accounts.

20 **Q. CAN YOU RESPOND TO MR. MUGRACE’S CLAIM THAT THE NEW**
 21 **CONTRACT, NEW VENDOR, AND THE EFFECTIVE DATE OF THE NEW**
 22 **CONTRACT WAS NOT PROVIDED FOR DRAG BUCKET AND LINE**
 23 **TELEVISIONING COSTS (OCA ST. 1SR AT 9-10)?**

24 A. Yes, this argument is not a basis to deny PWSA’s claim. The solicitation of these new
 25 contracts is dependent upon receiving the necessary funds in this rate case to fund them.
 26 PWSA is not going to commit to a contract and then “hope” that the costs are approved in
 27 this rate case. That would be irresponsible of PWSA. The argument also misses the fact

1 that these accounts were repurposed. The anticipated amounts for these repurposed
2 accounts in the FPFTY are reasonable and it is unreasonable for OCA to divide that
3 amount in half solely because there were no prior costs, as I previously testified.

4 **XI. NORMALIZATION**

5 **Q. MS. OKUM STATES SHE UNDERSTANDS THAT AS A CASH FLOW UTILITY,**
6 **PWSA PAYS FOR ALL EXPENSES WITHIN THE YEAR THEY ARE**
7 **INCURRED, BUT THAT DOES NOT MEAN PWSA IS PROHIBITED FROM**
8 **NORMALIZING EXPENSES OVER INTERVENING PERIODS FOR**
9 **RATEMAKING PURPOSES. (I&E ST. NO. 2-SR AT 21). CAN YOU RESPOND?**

10 A. Ms. Okum misses the point. It is true that PWSA has an obligation to pay its bills when
11 due. To do that, PWSA must have the full amount of cash available at the time of
12 purchase for any item or service. Normalization of expenses threatens PWSA's ability to
13 pay its bills when due. For example, if PWSA anticipates spending \$3.4 million on
14 equipment in the FPFTY (which it does) PWSA will need \$3.4 million in the FPFTY to
15 pay for that equipment. Normalizing the equipment expense means that PWSA will only
16 have \$1,210,116 in the FPFTY to pay for equipment. All else being equal, PWSA will
17 not have the cash to purchase the remaining \$2,201,117 of equipment in the FPFTY –
18 unless PWSA eliminates other purchases or services.

19 **Q. CAN YOU RESPOND TO MR. MUGRACE'S CLAIM THAT PWSA'S DAILY**
20 **CASH BALANCE CAN BE USED TO COVER UNFORESEEN AND**
21 **UNEXPECTED EXPENDITURES DURING AN ANNUAL OPERATING PERIOD**
22 **(OCA ST. 1SR AT 14)?**

23 A. Yes, his claim is only partially correct. While PWSA has limited cash reserves, those
24 reserves are for emergencies and for unexpected obligations. PWSA does not receive a
25 return on and of rate base, and does not have the ability (as do investor-owned utilities) to
26 use the return on and of rate base to pay for normalized or unexpected expenses. The net
27 impact of normalization would be to either force PWSA to rely upon cash reserves to pay

1 obligations when they are due – threatening its ability to respond to emergencies or
 2 unexpected obligations – or to eliminate the necessary service or purchase. Continued
 3 (and mandated) reliance on cash reserves to pay current bills is not a sound financial
 4 practice.

5 Mr. Mugrace also fails to mention that the use of unrestricted cash is excluded
 6 from PWSA’s debt service coverage calculation. This means that relying on unrestricted
 7 cash to make up for lost revenue during an unforeseen event will actually increase that
 8 chance of a debt service coverage default.

9 **XII. INFLATION ADJUSTMENT**

10 **Q. CAN YOU RESPOND TO MR. MUGRACE’S RELIANCE ON THE CONSUMER**
 11 **PRICE INDEX (CPI) AND PRICE INDEX CONSUMPTION EXPENDITURES**
 12 **(PCE) AS APPROPRIATE INFLATIONARY FACTORS (OCA ST. 1SR AT 15-**
 13 **16)?**

14 A. Yes, my criticism of these inflationary factors is that they are a better reflection of the
 15 cost increases experienced by the average consumer rather than a utility in a capital-
 16 intensive industry. Put another way – the cost to replace infrastructure does not correlate
 17 well to a basket of consumer goods. A more fitting inflation measure must be used,
 18 similar to the PWSA proposed construction cost index published by the Engineering
 19 News-Record.

20 **XIII. INCREASED CUSTOMER SERVICE EXPENSES**

21 **A. ARREARAGE FORGIVENESS**

22 **Q. MR. COLTON MAKES A STATEMENT THAT YOUR ONLY RESPONSE TO**
 23 **THE FAILINGS OF HIS COST-BENEFIT ANALYSIS WAS THAT PWSA**
 24 **CUSTOMERS HAVE HISTORICALLY RECEIVED LOW-INCOME**

1 **HOUSEHOLD WATER ASSISTANCE PROGRAM (LIHWAP) FUNDING (OCA**
 2 **ST. 4SR AT 27). CAN YOU RESPOND?**

3 A. First, the failings of my cost-benefit analysis is Mr. Colton’s opinion and one that I
 4 obviously do not share. Second, Mr. Colton’s statement that my response to his criticisms
 5 of “PWSA customers have historically received LIHWAP funding” is not factually
 6 correct. My response was:

7 Mr. Colton claims that the cost-benefit analysis completed by PWSA is flawed
 8 because 1) it assumes that 100% of payments are made by AFP participants, 2) it
 9 assumes a collection rate of 100%, and 3) no effort was made to identify “benefits”.
 10 Using historical information as assumptions, such as the amount of customer arrears
 11 and collectability rate, would not have been accurate because the information is
 12 skewed by the vast amount of aid provided by the LIHWAP program. PWSA would
 13 need multiple years without LIHWAP funding to reflect “accurate” historical
 14 information, which invalidates Mr. Colton’s first two arguments. Mr. Colton’s third
 15 argument is his opinion rather than a fact. PWSA considered the potential benefits
 16 when completing the analysis. The analysis shows that \$3,695,166 in arrearages
 17 would be forgiven - providing a huge benefit to customers. It will also provide
 18 customers a “fresh start” for making on-time payments moving forward, yet another
 19 benefit.

20
 21 In addition, Mr. Colton claims the “fallacy” of PWSA’s analysis is that it does not
 22 connect with the information in the filing. However, this claim is misleading because
 23 PWSA’s cost-benefit analysis was completed in FY 2022 and represents FY 2022,
 24 FY 2023, and FY 2024 while the rate filing analysis was completed in FY 2023 and
 25 represents FY 2024, FY 2025, and FY 2026. Given these facts, it is obvious that the
 26 data sets would not match, dismissing Mr. Colton’s claim.

27
 28 The response above clearly differs from Mr. Colton’s stated claim. It is obvious that he is
 29 misrepresenting statements made by PWSA staff in an attempt to justify his outrageous
 30 arguments.

31 **Q. CAN YOU PROVIDE FURTHER PROOF THAT MR. COLTON IS**
 32 **MISREPRESENTING STATEMENTS MADE BY PWSA STAFF?**

33 A. Certainly. Mr. Colton states “Indeed, it is interesting to note that while I state that
 34 LIHWAP is significant in that it is no longer available, Ms. Mechling asserts LIHWAP is
 35 significant in that it is continuing.” (OCA St. 4SR at 27). This is a misrepresentation of

1 the statements made by PWSA. To be clear, I made a factual statement that Pennsylvania
 2 temporarily reopened the LIHWAP application period until August 18, 2023. Ms.
 3 Mechling’s following statement on September 8, 2023 that LIHWAP distribution “is
 4 coming” was another factual statement. Qualified individuals who submitted an
 5 application prior to the August 18, 2023 deadline will receive a LIHWAP distribution.

6 **B. PROCESSING FEES**

7 **Q. CAN YOU RESPOND TO MS. ALEXANDER’S CLAIM THAT YOU STATED
 8 THAT CUSTOMERS WHO PAY BY CREDIT AND/OR DEBIT CARD HAVE A
 9 BANK ACCOUNT AND COULD UTILIZE THE ACH PAYMENT OPTION FOR
 10 FREE (OCA ST. 5SR AT 9)?**

11 A. Yes. What I stated was “OCA also does not consider the fact that customers currently
 12 paying by **debit card** (*emphasis added*) also have a bank account and could continue to
 13 pay by ACH free of charge” (PWSA. St. No. 2-R at 78). It is very unusual, if not
 14 impossible, to have a debit card without an associated bank account. However, PWSA
 15 does agree that is cannot be assumed that customers with a credit card also have a bank
 16 account.

17 **XIV. COOPERATION AGREEMENT**

18 **Q. PLEASE DESCRIBE MR. FOUGHT’S TESTIMONY REGARDING AN
 19 AMENDMENT OF THE COOPERATION AGREEMENT.**

20 A. Mr. Fought takes issue with Mr. Pickering’s rebuttal testimony explaining although the
 21 City will pay for services on an arms-length transactional basis after expiration of the
 22 Cooperation Agreement, billing may continue to be handled through existing
 23 arrangements. In disagreeing with the plan to handle billing through existing
 24 arrangements, Mr. Fought raises concerns about services for which PWSA would
 25 continue to be responsible. (OCA St. 6SR at 2-3).

1 **Q. PLEASE RESPOND.**

2 A. PWSA is not planning to continue the existing arrangements to own, repair and maintain
3 the City facilities identified by Mr. Fought. Rather, PWSA has a mechanism in place for
4 billing the City for services that it agrees to provide. Those are the “billing
5 arrangements” that PWSA plans to keep in place after expiration of the Cooperation
6 Agreement solely to ease the process for invoicing the City for services rendered.

7 **XV. CONCLUSION**

8 **Q. DOES THAT COMPLETE YOUR REJOINDER TESTIMONY?**

9 A. Yes; however, I do reserve the right to supplement this testimony as may be appropriate.

PWSA Exhibit EB-15

Task Order No. WT-PRGM-16

**Task Order Name: PM Services for Wet Weather Program Manager
Project**

This Task Order Amendment is made as of the Effective Date, by and between **The Pittsburgh Water and Sewer Authority** (the “Authority”) and **Wade Trim, Inc. (Ops)**, (“the Consultant”).

Consultant Firm: Wade Trim, Inc. (Ops)

Contract Name: Wet Weather Program

Agreement between the Authority and the Consultant dated 11.01.2021

Prior Task Order/Amendments Applicable to this Task: N/A

The schedule for the completion of the Services under this Task Order is incorporated herein. The details of the schedule are as follows or as detailed in the separate schedule, attached as Exhibit B. The time limits established by the schedule shall not be exceeded without reasonable cause. The schedule may be amended with the Authority’s written consent as the Task proceeds.

Start Date:	11.01.2021
Completion Date:	10.31.2024

The Authority’s budget is attached hereto as Exhibit C and incorporated herein.

Where the Fee is based on Agreement rates, the Fee may not exceed the budgeted amount. The budget may be amended with the Authority’s written consent.

Fee:	\$3152202.36				
MBE:	0%	WBE:	5%	SDVBE:	%

A detailed Scope is attached hereto as Exhibit A and incorporated herein.

Project Manager:

Ana Flores

Date Approved:

11.09.2021

**PITTSBURGH WATER AND SEWER AUTHORITY
WET WEATHER PROGRAM MANAGER
PWSA PROJECT NO. 2021-OPS-116-0
FINAL SCOPE OF SERVICES**

PROJECT OBJECTIVES

The specific objectives of the Wet Weather Program Manager are as follows:

- Assist in developing PWSA's Long Term Control Plan (LTCP) for the control of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) remediation plan, which will comprise a Wet Weather Plan or one or more similar documents. Provide program management services, advise, and consult with PWSA, its engineering staff, and its legal counsel (including translating technical information into a form useable by counsel) in the negotiation of a consent decree with the United States and Pennsylvania Department of Environmental Protection (DEP) addressing, among other things, the control of CSOs and remediation of SSOs from PWSA's sewer system (a Wet Weather Decree).
- Develop plans for improvements of PWSA sewer system facilities to bring combined sewer overflows into compliance with the CSO Control Policy and to remediate SSOs.
- Perform a level of service peer review and identify the current stormwater level of service the current PWSA system provides.
- Develop a range of alternatives to provide control and management of stormwater and manage basement backups and overland flooding to an appropriate, affordable level of service.
- Assist PWSA and its legal counsel in the coordination of planning, regulatory obligations, and capital improvements with upstream and downstream municipalities and ALCOSAN, where applicable.
- Conduct evaluations to account for the impact of projects implemented under ALCOSAN's consent decree and regionalization program on PWSA's development of CSO and SSO controls, and vice versa.
- Perform engineering and public participation activities in support of the development of a Wet Weather Plan, and obligations arising under municipal orders, enforcement orders, and any Wet Weather Decree entered into by PWSA.
- Develop analyses to assist PWSA's legal counsel in its addressing regulatory and legal issues associated with wet weather planning, including resolution of related enforcement actions.

SUMMARY OF WET WEATHER PLANNING TASKS

Program management services include oversight and coordination of the following activities in support of the development of a Wet Weather Plan or similar planning documents, consisting of a LTCP to control CSOs and a plan to remediate SSOs (collectively, a Wet Weather Plan in connection with the above negotiations), and plans to provide effective stormwater management. The wet weather planning work typically includes those engineering activities required to produce plans and other deliverables to be submitted to regulatory agencies, including the DEP, the Allegheny County Health Department (ACHD), United States Department of Justice,

(DOJ), and the United States Environmental Protection Agency (EPA). Many of the tasks will require familiarity with and the use of guidance documents issued by EPA and DEP. The production of interim work products and the Wet Weather Plan will be in support of negotiating a consent decree, assisting PWSA in complying with the requirements of the Wet Weather Decree and other regulatory requirements arising under the Pennsylvania Clean Streams Law and the federal Clean Water Act (CWA).

The following is a list of the tasks to be performed by the Wet Weather Program Manager.

- Task 1 - Program Management Services
 - Support the negotiation and the development of a consent decree and development of a Wet Weather Plan
 - Provide on-call engineering services
- Task 2 - Data Gathering
 - Review and determine DEP Act 537 Plan update requirements and permitting requirements for conveyance, storage and treatment
 - Review EPA guidance documents relating to CSO and SSO control
 - Review CSO/SSO consent decrees entered by other municipalities, as well as LTCPs and SSO elimination plans developed by other municipalities
 - Map with GIS, delineate and collect field survey data within planning basins.
 - Investigate sewer system and develop a system characterization study for PWSA's combined and sanitary sewer systems
 - Conduct site investigation
 - Evaluate the impact of CSOs on receiving waters
- Task 3 - Model Development and Calibration
 - Monitor flow and hydraulic conditions to inform system characterization and the selection of CSO and SSO controls
 - Develop a hydraulic and hydrologic model for PWSA's combined and sanitary sewers that reflects prior modeling information and additional monitoring data
 - Perform level of service peer review and develop current level of service thematic map
- Task 4 - Alternative identification and prioritization
 - Develop an alternative analysis for the control of CSOs and SSOs, including the development of cost-performance curves to assist in analysis
 - Develop an implementation schedule for CSO and SSO controls informed by and coordinated with a financial impact and affordability analysis
 - Identify CSO and SSO control technical alternatives
- Task 5 - Stakeholder Coordination
 - Coordinate wet weather planning and program development efforts with ALCOSAN and other municipalities in the Pittsburgh Region
 - Coordinate wet weather planning and program development efforts with community outreach and stakeholder engagement initiatives
 - Develop public participation program to inform wet weather planning and program development efforts

- Public participation program
- Task 6 - Final Act 537 Plan and Wet Weather Plan/LTCP and Recommendations
- Task 7 - Conduct environmental impact assessments of projects
- Task 8 – 3rd Party Assessment of Sewer Assets
- Task 9 – Post Construction Evaluation of GI Effectiveness

DETAIL OF WET WEATHER PLANNING TASKS

1. Program Management Services

1.1 Program Management

1.1.1 *General*

- Provide program management services that include oversight and coordination of activities in support of the development of a LTCP to control CSOs and a plan to remediate SSOs.
- A Program Management Plan will be prepared that summarizes the procedures that will be used to manage the program. Our PMP will include Program Scope & Goals, Program Constraints, Program Performance Metrics, Program Organization, Project Controls, Safety, Quality Assurance, Communication Protocols, Environmental & Permits Compliance and Risk Management. A draft Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.
- Ongoing management, coordination with PWSA and team members, communications, and project management activities will be conducted to manage the work.
- Ongoing document management will be conducted to facilitate file sharing between PWSA and our team.
- Develop and manage program schedules. An overall baseline schedule will be developed and updated monthly to reflect the progress of the work.
- Manage quality assurance/quality control of programs. A QA/QC plan will be developed and documented in the PMP. Quality reviews will be documented and conducted on all deliverables.
- Prepare and present periodic status program and project reviews, including establishing formal and informal milestones and performance metrics. Performance metrics will be developed and documented in the PMP. Monthly progress reports that include a summary of work activities completed during the previous period, planned activities for the next period, and critical action items will be prepared and submitted to PWSA as part of our monthly invoicing.
- Conduct meetings with PWSA, its engineering staff, and its legal counsel as needed to discuss the progress of the project and review key deliverables. These meetings may include a project kickoff meeting, as well as meetings with the executive PWSA team to present an executive summary of the progress of the project and key decisions needed to be made. Agendas and presentation materials will be prepared. Meeting summaries will be submitted following the meetings. **A total of 72 progress meetings, 12 miscellaneous meetings and 6 executive sessions have been assumed.**

- Provide planning-level risk management in accordance with industry standards and guidelines. A risk management plan will be prepared and included within the PMP. An initial risk development workshop will be held to review and provide input on the plan and risk register. The risk register will be updated on a quarterly basis and discussed within the regular progress meetings.

Deliverables: Draft and Final Project Management Plan; Meeting Agendas, Presentations and Summaries; Monthly Progress Reports, Schedule and Invoicing; Risk Registers

1.1.2 Regulatory Support

- The purpose of this task will be to advise and consult with PWSA, its engineering staff, and its legal counsel in the negotiation of a consent decree. Meetings will be held to prepare for EPA meetings, discuss matters with EPA and debrief on follow-up items. Agendas, technical work, presentation materials, and meeting summaries will be developed for all meetings.
- **A total of 108 meetings have been assumed over a 36-month period at an average level of effort of 16 hours/meeting for regulatory team preparation and attendance and 100 hours/month for technical support time to develop content, review, documents, and address questions from EPA or others.**
- The purpose of this task is to establish compliance priorities and to provide support to PWSA in the ongoing discussions with US EPA and PA DEP to work towards acceptance of required compliance deliverables, an LTCP 1080+approach as it is developed. We will provide technical support and guidance for the ongoing negotiations with USEPA and PA DEP under this task by helping to gain regulatory acceptance for PWSAs compliance strategy.
- The goal of this task will be to define strategies to develop the various work approaches, programs, descriptions for capital projects, capital costs/benefits, and schedule implications for presentation to regulatory agencies. We will also review and evaluate any deliverables or documents submitted to US EPA, PA DEP and others as directed that may have impact on the CSO update / Integrated Plan and schedules.
- This task will be managed on a time and material basis as directed by the PWSA and working in conjunction with the legal and rate consulting teams to develop specific products to support regulatory discussion.
- The focus of this task will center on meetings and staff work on development of documents to support the negotiation process and work to gain acceptance for compliance documentation. Much of the work will be driven by evaluation of existing compliance documents, development of PWSA LTCP goals and guiding deliverables to build a case for technical acceptance by US EPA and PA DEP.

Deliverables: Meeting Agendas, Presentations and Summaries; Various correspondence needed to support ongoing discussions

1.1.3 Other Services

A. CMOM Program

The purpose of this task is to develop and document a Capacity, Management, Operation and Maintenance (CMOM) program. We will review existing information on CMOM activities, meet with PWSA to understand the program and develop a recommended plan for PWSA.

PWSA's Capacity, Management, Operations and Maintenance (CMOM) Program forms the foundation for PWSA to meet its customer service demands, sustain infrastructure performance, comply with regulatory requirements, and manage its resources. The objectives of this task are:

- Compile PWSA's current CMOM documentation and assess the program components against industry best practices, PWSA's organizational goals, and applicable regulatory requirements
- Develop a set of priority improvements to address potential gaps identified in the assessment
- Establish a Program Document that, when implemented, provides a proactive defense from regulatory enforcement action and leads to improved system performance and cost savings.

CMOM assessment will benchmark PWSA's current program against likely EPA Region 3 expectations, regulatory precedence, and utility best practices. This review will be focused on the sanitary sewer service area of PWSA and the capacity assurance, management, operations, and maintenance activities specific to that portion of the system. It is assumed that the Nine Minimum Controls (NMC) activities of PWSA cover similar aspects for the combined sewer system and are outside the scope of this effort.

We will assess current programs, policies, and practices. Existing documentation will be compiled and evaluated to establish priority areas for improvement. The assessment will include evaluation of SSO causes, review of existing CMOM documentation, interviews, and field observations.

We will evaluate PWSA's SSO data to develop an understanding of the number and volume of sanitary sewer overflows by cause over the past 5 years (2016-2020). SSOs will also be plotted in GIS to identify any geographic trends. The SSO cause and spatial analysis will allow us to consider how PWSA's CMOM Programs are structured to solve system-specific needs.

We will submit an information request to PWSA to gather existing CMOM-related program documentation, policies and procedures. We will review existing documentation, assess the completeness of the program, and identify potential gaps with accepted best utility practices in the following areas:

- Goals, Visions and Support
- Organization
- System Knowledge
- Capacity Management

- Engineering and Construction
- Asset Inspection and Condition Assessment
- Rehabilitation and Replacement Program
- Maintenance Programs and Procedures
- FOG Program
- SSO Tracking, Analysis and Reporting
- Overflow Emergency Response
- Budgeting
- Training
- Safety
- Customer Service
- Information Management
- Information Systems

We will conduct interviews with PWSA staff over a 5-day period, including personnel from management, engineering, planning, operations and maintenance. During the interviews we will discuss policies and practices related to organizational structure/communications, work management processes, information management processes, inspections; rehabilitation (pipeline, manhole, and removal of illegal connections); fats, oils, and grease (FOG) control; new construction standards and inspections; Emergency Response Procedures; preventative, predictive, and corrective maintenance practices including sewer cleaning; and staff training, knowledge skills, and abilities.

Observation of the operations and maintenance (O&M) crew work practices will validate what was heard during the interview process and identify additional opportunities for improvement. A senior collection system operations expert will spend 2 days in the field observing the way in which crews accomplish O&M tasks such as inspections, CCTV, line cleaning, point repair, root control, pump station maintenance, and emergency response where possible.

The results of the CMOM Program assessment will be presented to PWSA in a workshop with recommendations for improvements. Based on PWSA's feedback and input, an Implementation Plan will be established that identifies areas for improvement, the scope of effort involved by both our and PWSA staff, estimated labor-hours and schedule. The Implementation Plan will focus on improvement that provide maximum benefit to PWSA.

- Describe the Gap Assessment framework including regulatory requirements and effective industry business practices
- Present the SSO cause analysis results
- Confirm PWSA's CMOM Program goals
- Gain input on our assessment of current business practices and programs
- Prioritize areas for improvement. The prioritization process will consider the current program status, as well as the importance of the various programs and practices in meeting PWSA's specific CMOM Program goals
- Develop consensus on improvement areas and priorities.

Based on the results of the workshop, we will develop a CMOM Program Summary, documenting the CMOM assessment, and a Work Plan for high impact improvements to current programs and practices. We will conduct a final consensus workshop to validate the draft CMOM Program summary and allow staff to make adjustments before finalizing the Work Plan. We will finalize the CMOM Assessment to include the agreed upon improvement initiatives and proposed timelines. A draft overall CMOM Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.

Ongoing support activities such as training, data review, and development of procedures can also be conducted to assist PWSA in implementation of the plan as an additional service.

Deliverables: Draft and Final CMOM Plan

Level of Effort Assumption:

- **Will conduct two (2) workshops and up to 5 days of interviews and field visits with PWSA Staff.**

B. Assist with PWSA's Nine Minimum Controls (NMCs) program

- We will review existing NMC documentation and provide a Technical Memorandum summarizing review comments and recommendations.
- **Ongoing support activities such as training, data review, and development of procedures can be conducted to assist PWSA in implementation as an additional service.**

Deliverables: Draft and Final NMC Review TM

1.2 On-call Engineering Services

1.2.1 General On-Call

To support the development and ongoing progression of the Wet Weather Plan, various engineering services may be required at the request of PWSA. Specific tasks will be identified and a mutually agreeable scope, budget and schedule to complete the task will be developed by Wade Trim and PWSA. In general, examples of the services that may be performed under this task include:

- Conceptual infrastructure studies
- Design and construction engineering services
- Asset management activities
- Value engineering studies
- Oversight of consultants that may perform design and construction engineering services for wet weather projects.
- Coordinate the design of PWSA system improvements developed as part of the wet weather planning efforts with proposed improvements of the ALCOSAN and upstream/downstream municipal systems

An allowance has been established to support these activities. Work will be performed at the approval of PWSA and up to the limit included in this authorization.

Deliverables: To be determined based on nature of approved task activities.

1.2.2 Sewer Condition Assessment

This task has been removed from the scope.

1.2.3 Asset Management

The general objective of this task is to develop the methodology and best practices to assist PSWA better manage their assets. Asset Management (AM) services will focus on aligning strategic objectives with stakeholder level of service expectations to develop a risk-based approach to manage the entire lifecycle of program assets. Collaboration with PWSA staff will be integral to success and initial efforts will focus on understanding current best AM practices, identifying gaps, and developing an actionable roadmap for AM implementation. Implementation items will be prioritized and quick win and near team activities that achievable and provide the most value to PWSA will be identified. AM implementation assistance will be provided based on PWSA requests for assistance. Planned AM Services include:

- Review and assess the existing AM program and system operational documentation and provide a gap analysis relative to utility best practices and develop recommendations
- Develop or Update the PWSA Asset Management Vision to incorporate key wet weather program priorities
- Form and charter an AM team of PWSA key staff that can build and then take on the implementation of the program
- Develop AM program charter and AM methodology and best practices training content
- Conduct AM program evaluation and gap analysis between current and desired future state
- Prepare actionable AM program implementation roadmap that details prioritized AM activities
- Organize, integrate, and embed overall PWSA strategic goals in the AM framework and corresponding LOS goals and evaluation criteria for alternative evaluation
- Develop and enhance PWSA's use and operation of Innovyze Info Asset Manager including training of existing staff.
- Organize system replacement and future CIP data for use in the alternative evaluation
- Coach and mentor PWSA staff using subject matter experts that can provide guidance on continuous AM program development
- The following strategic and tactical topics will be discussed with each of the groups listed above, as applicable, as part of the assessment:
 - Decision Making and Capital Planning
 - CIP Development and Prioritization
 - Design & Construction
 - Funding
 - Information Systems and Data Management
 - Data Systems Tools
 - Organizational Framework
 - Communications

- Risk Management
 - Operations and Maintenance
 - Inventory/Warehouse
 - Maintenance Strategy
 - Operations Strategy
 - Optimization
 - Culture and Change Management
 - Document Management
 - Leadership and Commitment
 - Levels of Service and Performance Evaluation
 - Resource Management
- This task is intended to establish a program that PWSA can run independently. **Ongoing support beyond the budget for this task can be provided to support activities as an additional service.**

Deliverables:

Information Request, copies of meeting materials, draft and final AM program charter, AM training materials, AM gap analysis, AM roadmap and supporting materials developed as part of implementation activities.

1.2.4 Compliance Review of Selected Sewer Improvement Projects

PWSA has identified two (2) sewer improvements projects (Browns Hill Road Pump Station and 31st Ward Sewer System) that PWSA plans to procure outside consultants and start work 12 months from the NTP of this contract. **PWSA will maintain a project manager to provide administrative oversight of outside consultant activities.**

In general, our activities will include:

- Reviewing and providing input on outside design sewer consultant RFPs.
- Conducting 30%, 60%, and 90% compliance reviews to assess ability of the proposed design to meet regulatory requirements.
- Coordination meetings to discuss reviews and responses.

Deliverables: Technical Review Comments

Level of Effort Assumptions:

- **Attendance at up to 8 project meetings total among 2 projects**
- **Technical review of design discipline work and constructability reviews will be conducted by others.**

2. Data Gathering

2.1 Evaluate existing information and analyses

- Review wet weather-related studies in the region, such as the ALCOSAN Clean Water Plan, 2008 Feasibility Report, 2013 PWSA Feasibility Report, 2016 Citywide Green First Plan, Controlling the Source, RAND Climate Change study, PWSA’s current Stormwater Master Planning initiative, and other documents that PWSA deems appropriate.
- Sections in an Existing Data Review TM will be prepared that summarize important findings and information relative to the current study effort.

Deliverables: Draft Existing Data Review TM Sections

2.2 Gather county, state and PWSA system information (sewer maps, inspection data, hydraulic overload problems, ACHD complaints)

2.2.1 Data Gap Analysis

- Relevant data that Allegheny County and State agencies may have will be requested and reviewed.
- PWSA will provide:
 - Existing GIS system database of existing sewer assets and any required sewer maps (critical information includes pipe diameters, lengths, invert elevations, and rim elevations).
 - Inspection and sewer back up complaint data
 - Information on known sewer hydraulic bottlenecks and surface flooding issues
 - Known areas of heavy inflow and infiltration, SSO and CSO locations
- Data relative to sewer and street flooding will be requested from ACHD and information provided reviewed and incorporated into the project GIS database.
- Additional existing collector sewer system information and reporting data will be reviewed. The Existing Data Review TM will be updated with the findings from other tasks. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- A Data Gap Analysis TM will be prepared that summarizes additional data collection and field investigations needed to support the study along with a level of effort. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Existing Data Review TM; Draft and Final Data Gap Analysis Review TM

Level of Effort Assumption:

- **Assumes that the existing PWSA GIS database of sewer data is of sufficient accuracy to support the planning level activities**
- **Assumes approximately 200 staff hours/month for 6 months**

2.2.2 Determination of Critical Areas

- Complaint records provided by PWSA will be reviewed and screened to identify issues related to documented system problems. A map of complaint locations for sewer backups and street flooding will be developed.
- **A significant number of pipes covering the local systems is not included in the current PWSA hydraulic models. It is anticipated that inclusion of all the sewer elements would be a significant undertaking from a data collection, model upgrade and model run time perspective. Therefore, the base models will be expanded to focus only on critical areas that have experienced historically high levels of sewer back-ups and/or street flooding. All system pipes (storm and sanitary) will not be modeled.**

- A desktop hydraulic analysis will be conducted using the existing hydraulic models for sewers included in the PWSA system for a range of storm events to identify the capacity of the existing sewer lines. Major sewers (>18") not included in the model where adequate physical data is available will also be checked for capacity using existing GIS data (topo, manhole depths); standard pipe capacity calculations; and compared to modeled peak flows adjusted on an area weighted basis. The locations of known complaints will be compared to the capacity check to identify likely areas of concern.
- "Critical portions" of the PWSA system will be identified. "Critical portions" include pump stations, trunk sewers, points of overflow activity, basement back-up areas, surface flooding, or areas of excessive infiltration and inflow (I/I). At the time of this scope preparation, the number of critical areas is unknown. **For the purposes of this task, it is assumed that 20 to 30 sewer backup and 6 to 10 stormwater flooding subsheds will be identified for further analysis.**

Deliverables: Draft and Final Critical Areas Definition TM

2.3 Investigate PWSA sewer system

2.3.1 Stream Inflow and Acid Mine Drainage (AMD) Map

- Identify and locate any stream inflow sources and acid mine drainage discharges along the critical portions of the PWSA sewer system using **existing data sources**. The potential sewersheds for stream inflow sources will be identified from the past and pending regional flow monitoring work, and PWSA input.

Deliverables: Draft and Final Stream Inflow and AMD Map

Level of Effort Assumptions:

- **No field work such as stream walks, sampling, or other investigation will be conducted.**

2.3.2 Field Data Collection Allowance

- Upon approval from PWSA, work to conduct additional field data collection activities identified with Task 2.3.1 will be conducted within the available budget included within the field allowance. Field data will be entered into the appropriate asset management databases. Additional field collection efforts shall be conducted as an additional service.
- The proposed field data allowance was developed based on an assumption of 400 days of field survey intended to collect data on approximately 8,000 structures (based on 20 structures/10 hr-day @\$2,200/day including survey and post processing). This data includes limited spot checks of approximately 10% of existing modeled areas and assumes data can be collected from the surface without the need for confined space entry or significant traffic control procedures. **No LIDAR, detailed topographic and surveys on private property or within homes for purposes of determination of basement inverts or first floor elevations**

- A summary of the data collected will be provided in a draft and final Field Data Collection Summary Technical Memorandum.

Deliverables: Draft and Final Field Data Collection Summary TM, Field notes and database

2.4 Coordinate on System Improvements and Technical Alternatives with Others

- Request and coordinate with ALCOSAN/municipalities to obtain information on proposed system improvements for use in study work. This includes information on proposed tunnels and consolidation sewers, CSO regulator, pumping, storage tanks, RTBs, Green Infrastructure, Source Control, WWTP and other improvements that can impact overflows in the PWSA collection system.
- A review will also be conducted of major development and PWSA projects (that would have an impact on planning efforts) to determine which should be advanced into the model. It is assumed that PWSA will provide the hydraulic, as-built and/or survey data relative to these improvement projects. **Assumed no more than 10 sewer improvement projects will be included.**
- A summary of the proposed major improvements that will be included in a Baseline Model to evaluate additional alternatives will be documented in a System Inventory TM. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Planned ALCOSAN, PWSA and upstream/downstream municipal improvements will be considered in related modeling and cost analysis in subsequent tasks.
- Ongoing coordination with ALCOSAN throughout the project will also be tracked under this item.

Deliverables: Draft and Final System Inventory TM

Level of Effort Assumption:

- **Assumes up to a total of 60 meetings with representatives of ALCOSAN, Point of Connection (POC) Groups with municipal officials, and 3 Rivers Wet Weather**
- **Assume no new Clean Water Plan design changes**

2.5 Determine regulatory permitting requirements for conveyance and storage

- We will participate in meetings with DEP to establish or confirm the regulatory permitting requirements and related design standards and control approach to be used in the sizing, performance, and layout of facilities to be proposed, designed, or built as part of PWSA's wet weather planning program. **Assume up to 6 meetings for coordination.**
- To prepare for the discussions, a Draft Regulatory Permitting Requirements TM will be prepared that summarizes current criteria for sewers and facilities for PWSA and regional entities along with proposed criteria for facilities to be sized and designed under this program. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Regulatory Permitting Requirements TM

3. Develop and calibrate model(s)

3.1 Water Quality Sampling, Analysis Tool Development and Evaluations

3.1.1 Water Quality Data and Information Compilation, Review and Evaluation

- We will compile and review water quality data and related information for the receiving waters impacted by PWSA wet weather discharges and data on sources of pollutants. This will include:
 - Data collected and provided by PWSA as well as publicly available data. We will also develop a request for data collected by ALCOSAN/3RWW. We will compile water quality data in Excel and/or Access for review and evaluation.
 - Information on the receiving streams, their watersheds/drainage areas, and available modeling for these streams and drainage areas.
 - Additional available data on precipitation, climate, and streamflow may be compiled to support the water quality assessments.
 - Listed impairments and available TMDLs for the receiving streams including pollutants and sources. Other available studies on the receiving streams will be compiled and reviewed.
- This scope of work is based on the understanding that the receiving waters that will be studied for this task are the receiving waters that receive discharges from PWSA-owned CSO outfalls that will not be controlled by the ALCOSAN tunnel construction; these include several Tributary Streams (Chartiers Creek, Nine Mile Run, Saw Mill Run, and Becks Run), and the Main Rivers (Ohio River, Monongahela River, Allegheny River). The primary focus of this task will be on the Tributary Streams, but a summary of the conditions of the Main Rivers within the PWSA service area will be included. We will conduct site visits of the Tributary Streams to assess existing conditions, sediment build-up, stream bank stability, flow restrictions, vegetative cover, and other potential characteristics. Photo documentation of the conditions will be collected.
- **Additional Main River Water quality or other data collection will not be conducted.**
- We will evaluate the available information to characterize existing conditions, spatial and temporal trends, dry versus precipitation event-driven conditions, comparison to water quality standards, and potential cause-effect linkages. We will also assess the ability of existing models to characterize water quality conditions and benefits of control alternatives.
- We will summarize the results of the data compilation, review and evaluation in a technical memorandum. The memorandum will include a data gap analysis including recommendations for additional data collection and model development activities, including cost estimates and potential refinements to the original budget estimates provided. We will submit one draft for review and comment. We will address comments and submit one revised draft for submittal to PWSA. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft Water Quality Existing Data Review TM

3.1.2 Sampling and Analysis

- We will prepare a Sampling and Analysis Plan (SAP) and a Quality Assurance Project Plan (QAPP) to guide the collection of water quality samples to support the characterization of the waterways and sources.
- One draft of the SAP and QAPP will be submitted to PWSA for review and comment. Following PWSA review and comments, we will revise the SAP and QAPP for submission to Pennsylvania Department of Environmental Protection (DEP) and/or the United States Environmental Protection Agency (EPA). Following DEP and EPA review and comment, we will prepare the final SAP and QAPP.
- Sampling activities will include training and orientation with our local, on call sampling team. This work will include site visits to discuss procedures and review sampling locations. This will also include coordination on scheduling of sampling events, tracking wet weather events, and making go/no-go decisions on sampling. We will also coordinate with the analytical laboratory to coordinate bottle shipments, sample deliveries, QA/QC data review, and reporting of results.
- For the purposes of this scope of work, the following assumptions have been made to inform the budgeting of this subtask. The scope and budget will be revisited following completion of the data review and evaluation work. Sampling is anticipated to be conducted between April and October 2022 for the following:
 - **6 locations (2 locations in each of Chartiers Creek, Nine Mile Run, and Becks Run)**
 - **72 total samples (3 baseline, 3 wet events – 3 samples each event for each location)**
 - **Parameters for field measurement: Temperature, pH, Dissolved oxygen, Conductivity**
 - **Base assumptions for parameters to be collected for laboratory analysis: E. coli, TSS, Ammonia, TKN, Nitrates + Nitrites, TP, Ortho**
- Following the initial review of the impairments and stream conditions, the need for additional parameters such as metals, and hardness will be assessed. We will review sampling field notes and laboratory reports following each round of sampling to identify problems or issues needing correction. We will coordinate with the sampling consultant and the laboratory to implement corrective actions.
- Two of the subject watersheds do not have USGS flow gages located on them. Additional flow and/or water level monitoring may be required in these watersheds as well. If needed, effort would be authorized separately.
- Following implementation of the sampling plan, we will perform a data validation review and prepare a memorandum documenting the review.
- We will prepare the project-specific SAP and QAPP, as stated earlier. We will update the water quality characterization with the new data. We will summarize the results of the sampling, analysis, data review, and updated characterization in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and

characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit one draft to PWSA. Following PWSA review and comment, we will prepare the final TM.

Deliverables: Draft and Final Water Quality SAP and QAPP TMs

3.1.3 Water Quality Model Updates

- We will update receiving water models to support the evaluation of water quality assessments. We will update model calibrations using the most recent data (April-October 2022) and will validate model performance. The anticipated receiving waters for modeling and the modeling frameworks are listed below:
 - Chartiers Creek, Nine Mile Run watershed/drainage area: PC-SWMM
 - Saw Mill Run watershed/drainage area: HSPF
 - Becks Run watershed/drainage area: no existing model
 - Main Rivers Model: RMA2 (hydrodynamics)/RMA4 (water quality)
- We will develop estimates of upstream flows and pollutant loads for the calibration period (April-October 2022) based on available data. We will develop meteorological inputs for the calibration period based on available data.
- Calibrations will be performed by applying best engineering judgement to make model calculations as representative of observations as possible. The models will be calibrated using both visual and numerical methods. This effort may employ regressions of observations vs. calculations, minimizing the squares of the residuals of observations vs. calculations, minimizing relative error, minimizing differences in observed vs. calculated means, and minimizing root mean square error, among other methods. For simulations having the appropriate temporal scale, published statistical measures of goodness-of-fit (e.g. percent difference, r², PBIAS) will also be considered in evaluating the strength of the hydrology and water quality calibrations.
- Following calibration, the models will be validated using an independent data set to demonstrate that the model is capable of acceptably reproducing the timing and magnitude of observed data without further changes to the model parameters.
- We will summarize the results of the model updates and calibrations in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit a draft to PWSA for review. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Model Update TM

3.1.4 Water Quality Assessments of Benefits of Control Alternatives

- We will develop and apply the updated and calibrated models to support the assessment of existing conditions and the water quality benefits of control alternatives. We will develop the water quality models for the typical year. We will develop the following water quality model inputs for the simulation of existing conditions for the typical year:
 - Upstream boundary flows and pollutant loads
 - Meteorological inputs, and
 - Sources other than overflows.
- We will characterize water quality conditions for the typical year under existing and baseline conditions. We will assess the relative impact of pollutant sources with respect to attainment of water quality standards for those scenarios. We will prepare an interim technical memorandum documenting the characterization of existing and baseline conditions for the Tributary Watersheds.
- We will apply the water quality models to simulate the water quality benefits of control alternatives. **This scope of work assumes ten (10) separate simulations will be run to assess control alternative benefits.** These may include a combination of simplified control scenarios (for example 25%, 50%, 75%, and 100% reductions of overflows) and specific control alternatives with simulated reductions in overflows from the collection system model.
- For each control alternative simulated, we will evaluate the water quality benefit in terms of pollutant load reduction and improvement in ambient water quality. Attainment of water quality standards will be assessed.
- We will also update the typical year simulation with the final recommended control plan and assess the water quality benefits.
- We will summarize the results of the water quality assessments in a technical memorandum. The memorandum will include discussion of the development of the typical year simulation, water quality characterization of the existing conditions, and water quality benefits of select control alternatives and the final recommended control plan. We will submit one draft to PWSA for review and comment. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Assessment TM

3.2 Monitor flow and conduct hydraulic modeling

3.2.1 Review existing flow data and models

- We will review flow data and models previously collected by PWSA and ALCOSAN to identify modeling and data needs to support the wet weather planning process. In general, this review will include locations, durations and quality of available flow monitoring data as well as determination of availability of models and the extent and quality of the calibration/verification of these models. **Up to 10 watershed models are assumed to be reviewed as a part of this effort.**

- An Existing Model Review TM will be created to document the available modeling sources and to identify data needs to expand or improve the models. This memo will also identify the various design storms, typical year precipitation, boundary conditions, and model scenarios (Existing, Baseline, Future, etc.) needed to support the project.
- **It is assumed that the starting model version for this project is the ALCOSAN Existing Conditions 2020 Model developed using SWMM version 5.1.012. This model includes a representation of the WWTP, deep and shallow cut interceptors, all diversion structures, combined sewer overflow outfalls and storm, combined and sanitary tributary areas. This model is anticipated to be expanded using historical and current modeling elements that have been developed under various PWSA efforts.**
- A summary of the available historical rainfall, stream level and flow monitoring data will be prepared and included in an Historical Flow Data Review TM. This TM will also document ongoing permanent precipitation, permanent flow meters, and stream gages that are available to support the work. **PWSA will provide available historical precipitation, stream and flow data.** Available data on high water flooding marks will also be summarized in this memo for critical stormwater flooding areas. **Field work to investigate or identify high water marks will not be collected.**
- During this process, we will develop a Model Data File Management procedure and implement to assist with model input and output file management. Procedures and Protocols will be summarized in a Model Data Management TM.

Deliverables: Draft and Final Existing Model Review TM; Draft and Final Historical Flow Data Review TM; Draft and Final Model Data Management TM

3.2.2 Develop a flow monitoring plan and collect flow data

- A detailed Flow Monitoring Plan TM will be developed to support the model expansion and system characterization effort guided by the approach outlined in this section. The Plan is expected to include proposed methods for flow monitoring in Critical Areas and I&I sewersheds with sections that cover, purpose and objectives, monitoring techniques and procedures, data management approach, QA/QC protocols, and maps of proposed deployment locations.
- **It is assumed that PWSA can provide all necessary radar-rainfall data needed to characterize precipitation in the service area.** The radar rainfall information will provide area-weighted rainfall hyetographs for each model subcatchment using existing regional permanent rain gauges. **To supplement this data, we will deploy up to 20 temporary project rain gauges for no more than 9 months.**
- We will deploy sewer system flow meters to screen and prioritize tributary areas to support expansion of the system hydraulic/hydrologic model (Calibration monitoring) and for further I/I investigations (micromonitoring).
- **To support model expansion into Critical Areas, up to 100 calibration meters (with a total installed duration of no more than 9 months) will be**

installed to provide information for model calibration in areas of known performance problems. Monitored subcatchments are planned to be between 20 and 75 acres in size.

- In support of Task 3.4, micromonitoring will be used to break down areas of roughly 100 acres or less for further I/I investigations. Up to 40 micrometers (with a total installed duration of no more than 3 months) will be deployed simultaneously for one or two significant rainfalls per location to determine tributary area I/I response. Areas showing significant response would then be targeted for further investigations. Areas showing little response would be screened from further consideration. Micromonitoring durations will be adjusted based on observed rainfall events.
- In support of Task 3.4, up to 40 calibration meters (with a total duration of no more than 6 months) will be installed to provide information for model calibration areas in sanitary areas. We will use the Task 3.4 prioritization information and preliminary micromonitoring to assist with calibration meter placement.
- It is assumed that flow monitoring will be conducted in the 2022 season between March and November. All data will be collected and stored in a database for use on the project.

Deliverables: Draft and Final Flow Monitoring Plan TM; Rain and Flow Monitoring Database

3.2.3 Expand and calibrate hydrologic and hydraulic model for use in planning

- The H&H hydraulic model will be extended up into the PWSA collection system to represent know problem areas with clusters of reported basement backup and areal flooding issues.
- Additional detail included in the historical version of the PWSA model included within Infoworks may also be added to the model to support this work along with significant known system changes. **Up to 400 staff hours for addition of existing detailed model elements such as major sewer projects or other detailed models has been assumed.**
- In Critical Areas with street flooding, the H&H model will also be expanded using dual drainage network techniques, to capture the movement and depth of overland flows along the street network. Depending upon the location of the problem area there may be a natural open channel also that will be included in the model. **Up to 2,500 model elements (channel segments and surface nodes) are assumed to be included in this model expansion within no more than 6 to 10 sub areas. It is assumed that existing topographic data is sufficient to characterize the street geometry.**
- With the hydraulic network expanded into the collection system, the lumped or consolidated hydrologic representation included in the current Existing Conditions model will also need to be discretized so that the generated flows can be distributed in the detailed expanded hydraulic network. This more detailed hydrologic representation will need to be calibrated using the collected flow and depth data. **Up to 4,500 model elements (sewer pipes**

and manhole junctions) are assumed to be included in this model expansion within no more than 20 to 30 sub areas.

- Revisions and expansions of the model will be documented in a Model Update TM.
- Sanitary areas within the H&H model will be calibrated to the data collected under Task 3.2. RTK parameters will be updated to reflect the findings of the new data collected.
- Targeted subarea calibration of areas tributary to up to 140 flow meter locations will be conducted based on the flow data collected under task 3.2. Continuous calibration/validation is anticipated to be conducted to compare metered vs. modeled predictions of flow, volume, depth and hydrograph shape. Industry standards for determination of acceptable calibration will be applied to determine the reasonableness of the calibrated parameters.
- A technical memorandum will be developed to summarize the results of the model calibration.
- A model review workshop will be held with PWSA to present the results of the calibration and discuss approval of the model for use on subsequent planning efforts.
- Upon approval of the model, files for various scenarios (Existing Conditions, Baseline Conditions (Near Term Projects that will be constructed) and Future Conditions (with Interim and Select Plans) will be developed to support the next stages of modeling. **Models will be run for up to five (5) design storm conditions to support level of service analysis.** Models will be run continuously for the Typical Year. Sensitivity scenarios for use in assessing the impacts of future climate change will also be run. Overflow statistics and level of service impacts will be quantified.

Deliverables: Draft and Final Model Update TM; Draft and Final Model Calibration TM; Model Support Files; Model Results Summaries

3.3 Perform level of service peer review and develop current level of service and range of alternatives for increasing level of service.

- A peer review will be conducted to identify the level of service of similar regional communities. Findings of the review will be summarized in a technical memorandum.
- Stress-test the current PWSA collection system to identify the current level of service provided and develop a level of service thematic map.
 - The primary level of service will be evaluated using the existing hydrologic and hydraulic model and the expansion into critical areas of observed sewer back-ups and street flooding will be used to assess collection system capacity for the interceptors and selected main line sewers.
 - A secondary level of service evaluation will be conducted on main sewers > 18" in diameter using a simplified method that compares pipe capacity to flows from the model that will be apportioned based on area. **It is assumed that existing GIS/sewer data provided by PWSA is sufficient for this purpose.**
 - A third evaluation will be conducted to assess "neighborhood" level of

service along a street within a city block. **Representative neighborhood areas (up to 6) will be selected and evaluated in detail to understand if general level of service deficiencies can be expected based on typical Pittsburgh sewer design practices.** Areas that have adequate existing data from either GIS or record drawings to support the assessment. **PWSA to provide detailed sewer drawings of the selected areas for use in this analysis.**

- **PWSA will determine what the level of service guiding principles will be used for stormwater under a separate contract**
- An alternatives analysis to determine the best approach to provide for increased levels of service will be conducted. In general, this is expected to include conveyance improvements that would include replacing existing storm or sewer piping to increase capacity and reduce water levels in the system and streets. The type, size and general location of improvements will be identified and included on maps to show the options.
- Provide a concept screening cost estimate (AACE Level 5) for bringing the current system up to the appropriate level of service for stormwater and sewer back-ups. Costs for increased conveyance systems to achieve higher capacities will be developed for various levels of service. **It is assumed that no more than two level of service scenarios will be costed.**
- Findings of the evaluation will be summarized in a technical memorandum.
- Determine how increased level of service impacts other wet weather planning objectives, including controls of CSOs and SSOs. A Typical Year simulation will be conducted to determine the results impacts on overflow statistics.
- Model base files for Level of Service Improvement Alternatives will developed to support the next stage of integrated planning evaluations.

Deliverables: Draft and Final Level of Service Peer Review TM; Draft and Final Level of Service Evaluation TM; Existing Level of Service Map

3.4 Develop a plan to identify significant areas of I/I and a strategic plan on how to prioritize locations to reduce I/I

- The PWSA system is essentially a combined system, but the upper reaches of the collection system have separate sewer areas.
- We will review and update on the approach to prioritize investigations previously by PWSA. Using data collected under other tasks, we will seek to identify sanitary areas without significant problems that would require no further investigation. Prioritization will occur at a relatively higher level and be refined as the project progresses. Early micromonitoring is proposed to help define the investigation prioritization.
- **Field work and subsequent data review for activities such as smoke testing, site assessments, manhole inspections, SSES investigations, dye testing, and CCTV inspection to support this task will be conducted by others or as an additional service.**
- PWSA will provide available data on effectiveness of historical projects in reducing I&I after improvements have been made.
- We will review the data collected and provided and use to identify areas subject to

elevated levels of I&I.

- By layering of existing GIS information, we will perform a Prioritization Analysis to produce a table and map with preliminary priority areas. We will review the proposed prioritization with PWSA to get input on the preliminary prioritization approach, the resulting priorities, and provide direction on any necessary adjustments.
- Based on the work, estimates of a range of potential I&I reductions (low, medium and high) for use in planning purposes will be developed for use with planning scenarios under Task 4.
- We will develop draft and final versions of an I&I Prioritization Approach TM, which will document criteria, data used, estimated effectiveness, and a priority list of areas. We will submit the draft TM to PWSA for review.

Deliverables: Draft and Final I&I Prioritization Approach TM

4. Identify and prioritize alternatives

The alternative evaluation is expected to be conducted at varying levels depending on the location and ownership. The most detailed efforts will be focused on outfalls solely owned by PWSA and jointly owned outfalls discharging to tributary streams (Level 1 and 2).

- Level 1 – 38 Outfalls solely owned by PWSA
- Level 2 – 33 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging into the Tributary Water Bodies

For these outfalls, it is assumed that up to 3 technologies will be evaluated for each outfall, costing to a Level 5, performance determined, and a recommended solution provided. Outfall solutions will either be combined or enhanced in up to 3 alternatives per basin.

A lesser detailed level of planning will be conducted for jointly owned outfalls discharging to the Main Rivers (Level 3 and 4).

- Level 3 – 116 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging to the Main Rivers
- Level 4 – 20 CSO Outfalls co-owned by PWSA/ALCOSAN, discharging to the Main Rivers and controlled by the planned Regional Tunnels

For these outfalls, it is assumed that up to 3 technologies will be evaluated for up to 10% of these outfalls, costing to a Level 5, performance determined, and a recommended solution provided. This is not intended to replace but to enhance or supplement the current ALCOSAN Clean Water Plan for these outfalls.

4.1 Identify and screen technical alternatives

- The goal of this task is to identify potential alternatives that will provide compliance with the goals of the wet weather planning process, taking into consideration the ability to adapt to future conditions.
- An Alternatives Brainstorm workshop will be held with PWSA to discuss potential approaches to controlling CSO and SSO in the PWSA service area. The

- workshop will include a review of the planned ALCOSAN improvements, previously planned control recommendations from PWSA efforts, various technologies and strategies that have been reviewed historically and any new or emerging technologies.
- We will review and assess potential **technologies** for controlling SSO and CSO in the PWSA service area. Optimization techniques will be applied to narrow the field of **solutions**.
 - A Technology Screening TM will be prepared that summarizes the potential technologies such as source control, green infrastructure, regulator modifications, storage and conveyance that conducts a high-level screening for applicability to the various areas and provides recommended **outfall solutions** to advance to the basinwide alternative evaluation stage. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - An integrated planning approach will be applied that considers **solutions** basinwide that meet both water quality and level of service requirements determined under Task 3.3.
 - An Alternatives Development TM will be prepared to summarize the alternatives that were considered in the evaluation for each outfall or groupings of outfalls. This TM will summarize basinwide alternatives and the recommended systemwide alternative. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - **Six (6) additional Alternatives Workshops with PWSA are planned to discuss the progress and findings from the Alternative Evaluations.**
 - The selected alternative based on the results of Task 4.6 will be further defined (<5% project definition). This work will include development of concept layouts and site investigations to further develop the concept and develop an opinion of cost that is consistent with a AACE Class 4 cost estimate.

Deliverables: Draft and Final Technology Screening TM; Draft and Final Alternatives Development TM

4.2 Identify and screen site development and buffer alternatives

- Initially, a Site Opportunity and Enhancements TM will be prepared to summarize the nature and location of potential opportunities. We will conduct a recommended screening to identify areas with a potential to support effective wet weather controls. A draft TM will be submitted to PWSA for review and comment.
- USEPA-defined Environmental Justice demographic indices will be included into screening evaluation. Sites for alternatives will consider the benefits and impacts to environmental justice communities within the PWSA service area. The potential for providing benefits to these communities through improved wet weather management will be considered along with the direct benefits and impacts of feasible technologies within these communities.
- Our team will meet with stakeholders to identify opportunities for siting of control alternative solutions at locations that may be mutually beneficial for redevelopment or community enhancements. **Up to 16 meetings with stakeholders have been included in the scope for this purpose.**
- For the final recommended alternative identified under Task 4.6, we will update the TM to discuss the potential solution and how it may be enhanced with site

improvements, community benefits, green leave behinds or other features that would create or maintain a beneficial relationship with the various City of Pittsburgh departments, authorities, and key stakeholders (including neighborhood organizations).

Deliverables: Draft, Revised, and Final Site Opportunity and Enhancements TM

Level of Effort Assumptions:

- **Assumes enhanced site evaluations will be prepared to better define project location and site conditions and refine the level of accuracy of the Cost estimate to support a AACE Level 4 cost estimate in conjunction with Task 4.3**
- **Does not include topographic survey, easement acquisition, property acquisition support services, geotechnical exploration, environmental site assessments, or subsurface utility exploration to be included with the site evaluations.**

4.3 Perform a present worth analysis of the feasible alternatives

- A cost tool that can provide estimates for various technologies at an **AACE Level 5** will be developed using unit pricing, engineering judgement and input from recent PWSA and regional projects for purposes of initial technology screening.
- A Costing Approach TM will be developed that summarizes the assumption, development and application of the cost methodology. **Two (2) meetings are included to discuss the approach and development of the tool with PWSA.** A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Costs will be developed for overall total project and lifecycle costs and include the following elements: Construction, Operating, Site surface development and restoration, Operation and maintenance requirements, Utilities and Land acquisition and rights-of-way. PWSA to provide input on administrative, legal and contingencies to be applied to the overall program cost development.
- Initial costs will be summarized and provided to PWSA for review. These will also be included in the Alternative Evaluation TM.
- Costs for budgeting for the selected alternatives for CSO and SSO improvements in the final Wet Weather Plan will be developed to an **AACE Level 4**. Additional effort to look at proposed projects and site constraints include the following:
 - Site visit
 - Develop project footprint layout using GIS and available lidar topography
 - Screening for property changes
 - Looking at local bidding data for potential cost escalation factors
 - Determine estimated quantities of facilities

Deliverables: Summary of Costs, Updates to the Draft Alternative Evaluation TM.

4.4 Perform a knee of the curve analysis of wet weather controls and water quality benefits

- An analysis comparing costs to performance metrics will developed to assess the

point of providing a value based recommended alternative. This analysis of the costs of varying CSO, SSO and stormwater control alternatives shall be in conformance with the CSO Control Policy and relevant guidance.

- Varying levels of optimization assistance tools will be used to evaluate alternatives to guide development of performance.
- Areas will be prioritized for optimization. Outfalls with planned improvements (by Others) or minor adjustments needed to meet criteria will not be optimized.
- **An optimization software license covering a 24-month period is included in the current budget. It is expected that advanced optimization will be applied to approximately 40 areas.**
- Performance curves will be included in the Alternative Evaluation TM.

Deliverables: Updates to the Draft Alternatives TM

4.5 Analyze financial affordability

- Coordinate with PWSA's financial rate consultant to determine the financial affordability of the proposed improvements to the PWSA system and forecasting the rate on ratepayers.
- Meetings will be held throughout the development of the wet weather plan to discuss progress, cost impacts, affordability considerations and impacts on required schedules for implementation. Two (2) initial workshops are planned to brainstorm the approaches and steps needed to incorporate the affordability analysis into the planning process.
- Based on discussions at the meeting, a work plan will be developed that will guide the steps needed to assess affordability in support of the Wet Weather Plan development. A draft plan will be submitted to the Rate Consultant and PWSA for review.
- All work related to affordability determination including data collection; rate evaluation; assessment of impacts of wet weather projects; level of service projects; ALCOSAN ongoing charges; PWSA ongoing water and sewer system charges; and other factors will be conducted by Others. PWSA will contract separately with Rate Consultant on these services.
- **Up to twelve (12) additional coordination meetings and two (2) workshops are planned to coordinate the work and discuss findings over the duration of the planning.**
- Rate consultant will provide input on initial affordability prior to the start of alternatives and run scenarios for varying levels of level service improvements and necessary stormwater, CSO and SSO control improvements at various stages of the plan development.
- We will review findings provided by Rate Consultant and summarize how the work will be incorporated into the planning and implementation of the WWP.

Deliverables: Draft and Final Affordability Work Plan TM; Draft and Final Affordability Findings TM.

4.6 Conduct non-monetary analysis of alternatives

- An Alternative Evaluation Approach TM will be prepared that summarizes the overall approach to selecting recommended alternatives. The TM will include a discussion on how to score within each non-monetary category, scoring and weighting approaches, and steps that will be taken to develop the scoring. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- The non-monetary criteria as provided by PWSA are expected to include:
 - Local planning impacts assessment
 - Environmental justice and community flood resiliency impacts
 - Floodplain impact assessment
 - Odor and noise control assessment
 - Preliminary environmental site assessment
 - Site surface restoration/development
 - Impacts of water quality improvements
 - Co-benefits of green infrastructure projects or other control alternatives
- Additional information such as advantages, disadvantages, risks, schedule impacts and other considerations will be identified as supporting information will be prepared for each alternative.
- **Up to three (3) workshops are expected to be needed to review the approach, conduct the scoring and share the results.**
- Information from Tasks 4.3 on costs would be combined with a summary of total benefits for each alternative to support development of a cost-benefit analysis.
- The results of the evaluation will be summarized in an Alternatives Scoring Technical Memorandum.

Deliverables: Draft and Final Alternative Evaluation Approach TM; Draft and Final Alternatives Scoring TM

4.7 Prepare a schedule for implementation of controls selected to address CSOs and SSOs

- An implementation schedule with appropriate milestones for design, bidding, construction, substantial completion and final completion will be prepared for the recommended projects in the Wet Weather Plan.
- The schedule will be adjusted based on input with regards to affordability and cashflow constraints provided under Task 4.5.

Deliverables: Draft and Final Implementation Schedule

5. Stakeholder coordination and presentations

We will take the lead on developing and participating in a public participation program. **PWSA will provide stormwater messaging developed to date and any foundational information. PWSA staff will be lead presenters during community meetings but would rely on Wade Trim to develop materials and set up meetings.**

We will work with PWSA in preparing an overall public participation plan and public outreach protocol that meets the requirements contained EPA CSO planning and DEP Act 537 guidance documents.

Our goal is to work collaboratively with the project team and PWSA to develop and implement a plan that prioritizes clear, consistent, transparent, and equitable communication with the public and stakeholders to generate consensus. We intend to include specific outreach to identified environmental justice communities to develop relationships with community leaders in those areas and encourage their availability, participation and engagement in meetings.

5.1 Develop Public Engagement Plan (PEP)

- In support of PWSA's existing public outreach efforts, we will work to coordinate and communicate with internal and external stakeholders. We will work with PWSA to create an engagement plan that centers around multiple working group meetings, stakeholder inclusion, agency communication and public information and input held throughout the duration of this process. The goal of the plan is to generate buy in, which can be better achieved by engaging stakeholders throughout the process, collecting input and feedback, and incorporating that feedback.
- **Two meetings will be held with PWSA public relations staff to support development of the plan.** An initial brainstorming session and a follow up meeting to discuss the draft PEP. Ongoing coordination on public relations topics will be covered under the regular PWSA progress meetings.
- A plan will be developed that includes a summary of program and objectives, messaging, identification of stakeholder groups, definition of target audiences, communications approaches, communication tools, implementation steps, and timelines. The Draft Public Engagement Plan will be submitted to PWSA, and comments incorporated into the Final Plan.

Deliverables: Draft and Final Public Engagement Plan

Level of Effort Assumptions:

- **Develop Public Engagement Plan assumes a detailed outline, 2 draft and 1 final version for Wade-Trim and PWSA review and approval. Includes the development and refinement of the comprehensive stakeholder engagement list.**
- **Project Coordination / Management – assumes up to 2 coordination meetings a month and 4 hours of project management/coordination with Wade Trim / PWSA for 36 months.**
- **Documentation – assumes 8 hours per month for document control, project controls and documentation of events.**

5.2 Program Messaging and Branding

This item has been removed from the scope.

5.3 Online Public Engagement

- Online engagement is an important method of communication with the general public about the Wet Weather Program. The goals of online engagement are to

increase the ability to reach a more diverse audience, generate more informed participation, invite a broader range of input, and set the stage for sustained participation. PWSA already has an online presence, and this plan will build upon those existing relationships/followers/contacts.

- A Wet Weather Program webpage will be created to serve as a resource for people to access information, share the plan schedule, see a summary of planning activities, make note of engagement opportunities, review background information (Including relevant maps and data), make connections to social media pages, locate project contact information, subscribe to a mailing (contact) list, and access a comment form.
- Our team will develop a proposed outline of online content to consider for a website approach and submit to PWSA for review and discussion.

Deliverables: Web Site and Social Media Pages and Updates

Level of Effort Assumptions:

- **PWSA will host and manage online content via their existing website**
- **Updates to the website are expected to occur on a quarterly basis, assumes 12 hours per quarter of support**

5.4 In-Person Public Engagement

- Public meetings will be used to inform the public of the planning process and to solicit ideas, input and feedback. This will be an opportunity to promote transparency and foster two-way communication with the public. Public meetings will be held at multiple locations throughout the city. We intend to host a proportional amount of in-person meetings within environmental justice communities to promote engagement within these communities and consider the specific needs in these communities relative to wet weather management.
- Meeting times will vary to maximize the number of attendees that will be available. The public will be encouraged to ask questions and voice their ideas and opinions about the program activities. Our plan for a series of meetings is presented below:

Year 1 - Goals and Initial Community Input

The first series of public workshops will be formatted as a city-wide Listening Series as an interactive, hands-on opportunity to create program awareness, present background on the system and known problem areas, gain an understanding of community priorities, values and concerns. **Four (4) interactive, workshop-style sessions will be conducted** and geographically distributed through the service area – to encourage diverse participation. These meetings would occur early in the planning process.

Year 2 - Review of CSO Technologies, Solutions and the Alternatives Process

The second series of public workshops will be formatted as traditional public meetings. The purpose of this series of meetings will be to present and/or demonstrate potential control strategies, discuss water quality assessments and provide an overview of the alternative evaluation process. **Four (4) meetings will be held.**

Year 3 – Wet Weather Plan Recommendations

The third and final public workshop series will be formal public meetings to present the draft Wet Weather Plan. This will be the final opportunity to provide an overview of the draft WWP, to discuss issues, processes and decisions leading to the plan, and to record formal comments that will be considered when finalizing the Wet Weather Plan. **Four (4) meetings will be held.**

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **20 hours/month for coordination and responding to questions from the public**

5.5 Stakeholder Advisory Group

- An existing PWSA Stormwater Advisory Group (SAG) that has provided input on the PWSA stormwater fee will be convened to introduce them to the Wet Weather Program goals and objectives. This group will be expected to share information about how to get involved in, provide input on, and stay up to date with the planning process with the organizations/stakeholder groups they represent. We intend to work with this group to discuss issues of environmental justice and solicit input for how the Wet Weather Program will evaluate environmental justice.
- This advisory group will meet at key decision points throughout the process (**up to 6 meetings**). Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation and prepare summaries of the discussions.
- In between meetings, representatives of these groups will receive regular updates through email and will be empowered to help the program team in its outreach efforts by sending information about engagement opportunities to their respective memberships, communities, networks, and employees.

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **Assumes 4 hours/month monthly coordination and responding to inquiries from SAG.**

5.6 Municipalities/POC Outreach

- Meetings with the existing Saw Mill Run Group and various POC municipality representatives would be convened to discuss issues specific to the municipalities. These meetings will be used to share information about known issues, planned improvements, alternative technologies, and other related matters. **We have assumed up to 24 meetings** with stakeholders in this category over the duration of the program. Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation, and prepare summaries of the discussions.

Deliverables: Agendas, Presentations and Meeting Summaries

6. Provide Wet Weather and Act 537 Plans

6.1 Wet Weather Plan (Long Term Control Plan)

- A Wet Weather Plan document will be developed that includes sections on Introduction, Background, Purpose, Public Engagement and Participation, System Characterization of Current Conditions, Control Approach, Control Technologies and Screening, Development and Evaluation of Alternatives, Financial Capability, Recommendations, Selection and Implementation Schedule, and Post Construction Compliance Monitoring Plan.
- A draft Wet Weather Plan will be submitted to PWSA for review and comment prior to submittal of a final Report.
- Following PWSA review, comment, resolution of comments and approval of the draft Wet Weather Plan, we will facilitate preparation of the plan for submitting to the agencies for review and approval.
- Following agency review, comment, resolution of comments and approval of the plan, a revised final plan will be submitted.

Deliverables: Draft, Final and Revised Wet Weather Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of Plan
- Assume preparation of up to 100 comment responses received on the Plan

6.2 Act 537 Plan

- An Act 537 Plan document will be developed in accordance with the Act 537 Plan Content and Environmental Checklist and will include sections on previous wastewater planning, physical and demographic analysis and mapping, identification of existing sewage facilities and needs, projections of future growth and land development, identification of alternatives, evaluation of alternatives, institutional evaluation, justification and implementation schedule for selected alternatives (technical and institutional) and an environmental report. The Wet Weather Plan will also be used extensively to form the basis of the Act 537 Plan.
- A draft Act 537 Plan will be submitted for PWSA comments.
- Following PWSA review, comment, resolution of comments and approval of the draft 537 Plan, we will facilitate preparation of the plan for submitting to the City of Pittsburgh under Task 6.3 for review and approval.
- Following approval by the City of Pittsburgh, we will submit for agency review, comment, resolution of comments and approval of the plan. A revised final plan will be submitted.

Deliverables: Draft, Final and Revised Act 537 Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of 537 Plan
- Assume preparation of up to 100 comment responses received on the 537 Plan

6.3 City of Pittsburgh Coordination

- Prior to submittal to the agencies, the Act 537 plan will require a signed and sealed Resolution of Adoption from the City of Pittsburgh. We will assist in the preparation of the appropriate submittals, response to comments and consistency documentation that the appropriate agencies have received, review and concurred with the Act 537 plan throughout the entire process.
- Following PWSA approval of the draft Act 537 Plan, the plan will be submitted to City of Pittsburgh and Allegheny County Planning Commissions for consistency review and comment.
- The Act 537 plan is also required to be posted publicly for a 30-day comment period, with proof of the publication, copies of all comments with responses in each comment included in the final submittal to the agencies.

Deliverables: Public Notice

Level of Effort Assumptions:

- Assume 3 coordination meetings with City of Pittsburgh Officials
- Assume preparation of up to 100 comment responses received on the 537 Plan

7. Develop an environmental impact assessment of recommended Wet Weather Plan

- Once conceptual level wet weather plan facilities have been identified, we will conduct a more detailed environmental review in the form of an Environmental Impact Assessment which further evaluates the community impacts identified during the alternative's evaluation. This assessment will serve as the Uniform Environmental Review.
- A report will be proposed that follows the format laid out in PADEP's Technical Guidance Document 381- 5511-11. The report will discuss the environmental consequences and potential mitigation of the proposed facilities for land use, recreational use of land and streams, water and air quality, noise, odor, vehicular and pedestrian traffic, socio-economic issues, miscellaneous environmental considerations, as well as aesthetic and property impact for use in the Act 537 Plan.
- A draft Report will be submitted for PWSA comments.
- **The number of projects to be evaluated has yet to be defined through the wet weather planning work. For this reason, a total of no more than 20 projects has been assumed that will require assessment.**

Deliverables: Draft and Final Environmental Impact Assessment Report.

8. 3rd Party Assessment of Sewer Assets

- Regionalization involves the voluntary transfer selected municipal sewers and sewer facilities in the service area over to ALCOSAN. This is intended to reduce the financial burden on PWSA and allow ALCOSAN to more directly manage and reduce excess flows into the system. **This will be accomplished by ALCOSAN assuming ownership and maintenance of approximately 60 miles of large, multi-municipal trunk sewers and associated facilities (upstream diversion structures).**

- The purpose of this task will be to review PWSA sewer assets that are proposed to be transferred to ALCOSAN via the regionalization initiative. We will review the assets and provide documentation needed to support transfer.
- This is a study and does not include regionalization negotiation support for the ALCOSAN agreement.
- A Draft PWSA Assets Review TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final Assets Review TM; Applicable support documents.

9. Post Construction Evaluation of GI Effectiveness

- We will evaluate the performance of up to **fifteen (15) Green Infrastructure projects** in various states of design and construction that are being constructed with the intent to reduce stormwater inflow to the sewer system. To support estimates of effectiveness of these projects and potential future similar projects, post construction monitoring of the performance of these projects will need to be conducted.
- **Our team will install flow monitors at up to 30 locations for a period of 8 months to collect on performance.**
- **Data from the 3RWW rain gauge network data and up to 6 site specific rain gauges will be used to document precipitation.**
- **PWSA will provide design reports, modeling and plans produced by others along with historical rainfall and flow data collected prior to the start of the projects for use in comparisons.** Post construction data collected on other projects and any related reports will also be provided.
- We will compare the data and provided an evaluation of the resulting effectiveness of the various projects. A Draft GI Project Effectiveness TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final GI Flow Monitoring Plan; Draft and Final GI Project Effectiveness TM

GENERAL ASSUMPTIONS

- All deliverables will be provided electronically
- PWSA will provide comments on most deliverables within 14 calendar days; Task 6 deliverable comments will be provided within 30 calendar days
- Comments will be provided by PWSA electronically using document control software
- Meeting duration assumed to be typically 1 to 2 hrs (50% virtual; 50% in person)
- Workshop duration assumed to be typically 4 to 8 hrs (In person)

SCHEDULE

- The project is expected to cover a three-year period with the potential for up to three one (1) year extensions. Extensions of the schedule may impact level of effort.
- The tasks and their general anticipated duration are provided below:

Task	Anticipated Duration
Task 1	36 Months
Task 2	18 Months
Task 3	30 Months
Task 4	18 Months
Task 5	36 Months
Task 6	12 Months
Task 7	12 Months
Task 8	9 Months
Task 9	12 Months

PWSA TASK ORDER/AMENDMENT EXHIBIT C INSTRUCTIONS

*An additional Exhibit C or D may be used if space provided is not sufficient.

General Instructions

1. **DEFINITION:** A task is a type of service that will be performed in a Task Order or Amendment, for example, it might be Design Engineering, or Construction Management, or Field Inspection. A project budget may contain individual budgets for each type of service. A Task Order or Amendment may provide for one or more type(s) of service. When preparing this Exhibit C, make sure that each type of service is separately annotated, and that the cost of labor and expenses for each type of task (budget code) is distinctly represented. PWSA's goal is to individually track the cost of each type of task or service. Should the amount of staff needed exceed the total number of columns, you may provide an additional completed template for each Exhibit. Just be sure your TO/Amendment Total Fee matches as an accumulative value.
2. See the Budget Codes tab for an explanation of where a Task type should be applied in this Exhibit.
3. Use these Exhibit forms as is. **Do not attempt** to alter them. **If they are altered they will be rejected.** If a change should be considered, discuss with your PWSA point of contact.
4. **Be sure** that all labor rates used in these forms are consistent with the rates used in the Master Services Agreement.

Exhibit C.1

Purpose: Exhibit C.1 identifies the Consultant's staff members who will contribute to each Task type to be provided, their MSA classification, their Task Order role, their anticipated labor hours, and their labor costs.

1. The Consultant's Scope of Services must be defined according to the distinct tasks that apply to a project budget code. The cost to perform each Task must be captured on this Exhibit.
2. On Row 45, enter each Consultant staff member name in a different column.
3. On Row 46, enter each Consultant Staff member's Master Service Agreement classification in a different column.
4. On Row 47, enter each Consultant Staff member's Task Order role in a different column.
5. Enter the hours each staff person will contribute to each task in the rows below each staff person's name. **If it doesn't apply, leave row blank.**
6. Enter the Subconsultant markup as an integer or decimal number (field is coded as a percentage). The spreadsheet will calculate the Total Hours and Total Labor Cost for the Consultant.

Exhibit C.2

Purpose: Exhibit C.2 captures the Consultant's anticipated expenses. **Note that there is a table section for each Task type (budget code).**

1. Exhibit C.1 will auto-populate each staff person's name in the appropriate row.
2. In Column B enter the type of expense that will be invoiced, e.g. mileage, hotel, auto rental. These fields are editable.
3. The spreadsheet will calculate the total costs by person and by task.
4. Repeat 1 - 3 for each Task type.

Exhibit C.3

Purpose: This table captures the Sub Consultants' anticipated costs and MBE/WBE/VBE/SDVBE classification. **Note that the entries in this table are all inclusive of both labor and expenses.**

The details of this data must be reflected in the required attached Sub Consultants' proposals.

1. Enter the name of each Sub Consultant firm in the Columns of the table.
2. Enter the cost **by task** of each Sub Consultant firm.
3. The spreadsheet will calculate the total costs by Sub Consultant and by Task.

Exhibit C.4

Purpose: In this Exhibit C.4, the Consultant should enter into lines 4, 5, and 6, as needed, any stipulations PWSA should consider about the Task Order or Amendment proposed budget.

Note that items 1, 2, and 3 are required by PWSA, and cannot be changed.

EXHIBIT C.1: PROPOSED BUDGET FOR EXHIBIT A SCOPE OF SERVICES

Exhibit C.4: ASSUMPTIONS

LIST OF ASSUMPTIONS RELATED TO BUDGET AND EXPENSES - List any conditions the Consultant places on the Budget and Expenses indicated above.

1	Consultant shall notify the Authority's Representative when expenditures based upon the billing of this Task Order reaches 50, 75 and 90% of the total budget, and an estimate of the time and funds necessary to complete the work. If additional funds are requested and not authorized in writing by the Authority's Representative, the Consultant shall reduce the scope of work to complete within the funds available.
2	In no event shall the Consultant's total billings for the services performed under this Task Order exceed the approved Fee amount without the Authority's written authorization and notice that it has approved an increase in the budget limit and funds available.
3	Should a key or non-key staff person not listed on an approved Task Order get assigned to the task, an Action Item to the project manager will suffice to acknowledge the change without an increase to the overall total fee. This MUST be done within 30 days of the assignment, preferably before PWSA receives the invoice for the time in which work was performed. Project Managers have the right to reject or accept the assignment of a staff person with proper justification. The consultant has the right to appeal that decision to the Director of Engineering and Construction.

Re: R2O Proposal for PWSA Wet Weather Program Manager
PWSA Project No. 2021-OPS-116-0

Dear Mr. McBride:

R2O Consulting LLC is pleased to provide our proposal for professional engineering service in support of the above referenced project. We are a certified DBE and WBE with the State of Pennsylvania and Allegheny County, and we have attached our certificate for your reference.

Per our discussion, R2O anticipates providing 3.17-percent, or \$538,252 of the project in the performance of the following scope items:

- Assist in Regulatory Strategy
- General engineering support
- As-needed assistance in
 - Flow monitoring/modeling
 - Constructability
 - Cost Estimating

The specific scope of our efforts in supporting the above tasks will be developed in collaboration with you upon award of the contract.

The R2O team is ready and available to begin work upon receipt of a notice-to-proceed and executed subcontractor agreement. We appreciate this opportunity to assist you on this critical PWSA infrastructure project and we look forward to collaborating.

Regards,

Kellie Carpenter Rotunno, PE, BCEE
Chief Executive Officer

RE: Pennsylvania Unified Certification Program
DBE Continued Eligibility Letter

Disadvantaged Business Enterprise (DBE) Certification # 10152
Anniversary Date - Annually on Mar 29

Dear Kellie Rotunno:

The Allegheny County Department of Equity and Inclusion, a certifying participant in the Pennsylvania Unified Certification Program (PA UCP), has reviewed your Annual Affidavit as a Disadvantaged Business Enterprise (DBE) and is pleased to inform you that your firm appears to meet the requirements established by the United States Department of Transportation (US DOT) Code of Regulations. Accordingly, your firm can continue as a Disadvantaged Business Enterprise (DBE) to participate in the program in the following classification(s) only:

Provides engineering services including planning, design, and construction management for infrastructure projects. Experience in hydraulic design for stormwater, sanitary, and drinking water systems. Experience in managing projects involving heavy, civil, and underground structures, including tunnels.

NAICS Code(s):
541330
541370

If you wish to expand your status to include another type of business, you must contact the PA UCP for reevaluation prior to undertaking any projects as a DBE in the expanded area.

In the event of a change in circumstances affecting your ability to meet size, disadvantage, ownership, and control requirements of Part 26 or any material change in the information provided; you must inform the PA UCP by means of a sworn affidavit by the owners, describing in detail the nature of such changes.

You must provide this written "Notice of Change" within 30 days of the occurrence of change. Failure to do so will be deemed a failure to cooperate. We would also remind you that the PA UCP reserves the right to review your firm at any time to ensure compliance with the program.

We are pleased to continue to have you as a DBE and wish you continued success in acquiring work within the DBE program. If you have any questions, please contact 412-350-4309.

Sincerely,

Lisa L. Edmonds, MCA
Chief Equity and Inclusion Officer
Department of Equity and Inclusion

Task Order No. WT-PRGM-08

Task Order Name: Data Gathering Services for Wet Weather Program Manager

This Task Order Amendment is made as of the Effective Date, by and between **The Pittsburgh Water and Sewer Authority** (the “Authority”) and **Wade Trim, Inc. (Ops)**, (“the Consultant”).

Consultant Firm: Wade Trim, Inc. (Ops)

Contract Name: Wet Weather Program

Agreement between the Authority and the Consultant dated 11.01.2021

Prior Task Order/Amendments Applicable to this Task: N/A

The schedule for the completion of the Services under this Task Order is incorporated herein. The details of the schedule are as follows or as detailed in the separate schedule, attached as Exhibit B. The time limits established by the schedule shall not be exceeded without reasonable cause. The schedule may be amended with the Authority’s written consent as the Task proceeds.

Start Date:	11.01.2021
Completion Date:	10.31.2024

The Authority’s budget is attached hereto as Exhibit C and incorporated herein.

Where the Fee is based on Agreement rates, the Fee may not exceed the budgeted amount. The budget may be amended with the Authority’s written consent.

Fee:	\$2026696.08		
MBE:	5%	WBE:	49%
		SDVBE:	%

A detailed Scope is attached hereto as Exhibit A and incorporated herein.

PITTSBURGH WATER AND SEWER AUTHORITY
WET WEATHER PROGRAM MANAGER
PWSA PROJECT NO. 2021-OPS-116-0
FINAL SCOPE OF SERVICES

PROJECT OBJECTIVES

The specific objectives of the Wet Weather Program Manager are as follows:

- Assist in developing PWSA's Long Term Control Plan (LTCP) for the control of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) remediation plan, which will comprise a Wet Weather Plan or one or more similar documents. Provide program management services, advise, and consult with PWSA, its engineering staff, and its legal counsel (including translating technical information into a form useable by counsel) in the negotiation of a consent decree with the United States and Pennsylvania Department of Environmental Protection (DEP) addressing, among other things, the control of CSOs and remediation of SSOs from PWSA's sewer system (a Wet Weather Decree).
- Develop plans for improvements of PWSA sewer system facilities to bring combined sewer overflows into compliance with the CSO Control Policy and to remediate SSOs.
- Perform a level of service peer review and identify the current stormwater level of service the current PWSA system provides.
- Develop a range of alternatives to provide control and management of stormwater and manage basement backups and overland flooding to an appropriate, affordable level of service.
- Assist PWSA and its legal counsel in the coordination of planning, regulatory obligations, and capital improvements with upstream and downstream municipalities and ALCOSAN, where applicable.
- Conduct evaluations to account for the impact of projects implemented under ALCOSAN's consent decree and regionalization program on PWSA's development of CSO and SSO controls, and vice versa.
- Perform engineering and public participation activities in support of the development of a Wet Weather Plan, and obligations arising under municipal orders, enforcement orders, and any Wet Weather Decree entered into by PWSA.
- Develop analyses to assist PWSA's legal counsel in its addressing regulatory and legal issues associated with wet weather planning, including resolution of related enforcement actions.

SUMMARY OF WET WEATHER PLANNING TASKS

Program management services include oversight and coordination of the following activities in support of the development of a Wet Weather Plan or similar planning documents, consisting of a LTCP to control CSOs and a plan to remediate SSOs (collectively, a Wet Weather Plan in connection with the above negotiations), and plans to provide effective stormwater management. The wet weather planning work typically includes those engineering activities required to produce plans and other deliverables to be submitted to regulatory agencies, including the DEP, the Allegheny County Health Department (ACHD), United States Department of Justice,

(DOJ), and the United States Environmental Protection Agency (EPA). Many of the tasks will require familiarity with and the use of guidance documents issued by EPA and DEP. The production of interim work products and the Wet Weather Plan will be in support of negotiating a consent decree, assisting PWSA in complying with the requirements of the Wet Weather Decree and other regulatory requirements arising under the Pennsylvania Clean Streams Law and the federal Clean Water Act (CWA).

The following is a list of the tasks to be performed by the Wet Weather Program Manager.

- Task 1 - Program Management Services
 - Support the negotiation and the development of a consent decree and development of a Wet Weather Plan
 - Provide on-call engineering services
- Task 2 - Data Gathering
 - Review and determine DEP Act 537 Plan update requirements and permitting requirements for conveyance, storage and treatment
 - Review EPA guidance documents relating to CSO and SSO control
 - Review CSO/SSO consent decrees entered by other municipalities, as well as LTCPs and SSO elimination plans developed by other municipalities
 - Map with GIS, delineate and collect field survey data within planning basins.
 - Investigate sewer system and develop a system characterization study for PWSA's combined and sanitary sewer systems
 - Conduct site investigation
 - Evaluate the impact of CSOs on receiving waters
- Task 3 - Model Development and Calibration
 - Monitor flow and hydraulic conditions to inform system characterization and the selection of CSO and SSO controls
 - Develop a hydraulic and hydrologic model for PWSA's combined and sanitary sewers that reflects prior modeling information and additional monitoring data
 - Perform level of service peer review and develop current level of service thematic map
- Task 4 - Alternative identification and prioritization
 - Develop an alternative analysis for the control of CSOs and SSOs, including the development of cost-performance curves to assist in analysis
 - Develop an implementation schedule for CSO and SSO controls informed by and coordinated with a financial impact and affordability analysis
 - Identify CSO and SSO control technical alternatives
- Task 5 - Stakeholder Coordination
 - Coordinate wet weather planning and program development efforts with ALCOSAN and other municipalities in the Pittsburgh Region
 - Coordinate wet weather planning and program development efforts with community outreach and stakeholder engagement initiatives
 - Develop public participation program to inform wet weather planning and program development efforts

- Public participation program
- Task 6 - Final Act 537 Plan and Wet Weather Plan/LTCP and Recommendations
- Task 7 - Conduct environmental impact assessments of projects
- Task 8 – 3rd Party Assessment of Sewer Assets
- Task 9 – Post Construction Evaluation of GI Effectiveness

DETAIL OF WET WEATHER PLANNING TASKS

1. Program Management Services

1.1 Program Management

1.1.1 *General*

- Provide program management services that include oversight and coordination of activities in support of the development of a LTCP to control CSOs and a plan to remediate SSOs.
- A Program Management Plan will be prepared that summarizes the procedures that will be used to manage the program. Our PMP will include Program Scope & Goals, Program Constraints, Program Performance Metrics, Program Organization, Project Controls, Safety, Quality Assurance, Communication Protocols, Environmental & Permits Compliance and Risk Management. A draft Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.
- Ongoing management, coordination with PWSA and team members, communications, and project management activities will be conducted to manage the work.
- Ongoing document management will be conducted to facilitate file sharing between PWSA and our team.
- Develop and manage program schedules. An overall baseline schedule will be developed and updated monthly to reflect the progress of the work.
- Manage quality assurance/quality control of programs. A QA/QC plan will be developed and documented in the PMP. Quality reviews will be documented and conducted on all deliverables.
- Prepare and present periodic status program and project reviews, including establishing formal and informal milestones and performance metrics. Performance metrics will be developed and documented in the PMP. Monthly progress reports that include a summary of work activities completed during the previous period, planned activities for the next period, and critical action items will be prepared and submitted to PWSA as part of our monthly invoicing.
- Conduct meetings with PWSA, its engineering staff, and its legal counsel as needed to discuss the progress of the project and review key deliverables. These meetings may include a project kickoff meeting, as well as meetings with the executive PWSA team to present an executive summary of the progress of the project and key decisions needed to be made. Agendas and presentation materials will be prepared. Meeting summaries will be submitted following the meetings. **A total of 72 progress meetings, 12 miscellaneous meetings and 6 executive sessions have been assumed.**

- Provide planning-level risk management in accordance with industry standards and guidelines. A risk management plan will be prepared and included within the PMP. An initial risk development workshop will be held to review and provide input on the plan and risk register. The risk register will be updated on a quarterly basis and discussed within the regular progress meetings.

Deliverables: Draft and Final Project Management Plan; Meeting Agendas, Presentations and Summaries; Monthly Progress Reports, Schedule and Invoicing; Risk Registers

1.1.2 Regulatory Support

- The purpose of this task will be to advise and consult with PWSA, its engineering staff, and its legal counsel in the negotiation of a consent decree. Meetings will be held to prepare for EPA meetings, discuss matters with EPA and debrief on follow-up items. Agendas, technical work, presentation materials, and meeting summaries will be developed for all meetings.
- **A total of 108 meetings have been assumed over a 36-month period at an average level of effort of 16 hours/meeting for regulatory team preparation and attendance and 100 hours/month for technical support time to develop content, review, documents, and address questions from EPA or others.**
- The purpose of this task is to establish compliance priorities and to provide support to PWSA in the ongoing discussions with US EPA and PA DEP to work towards acceptance of required compliance deliverables, an LTCP 1080+approach as it is developed. We will provide technical support and guidance for the ongoing negotiations with USEPA and PA DEP under this task by helping to gain regulatory acceptance for PWSAs compliance strategy.
- The goal of this task will be to define strategies to develop the various work approaches, programs, descriptions for capital projects, capital costs/benefits, and schedule implications for presentation to regulatory agencies. We will also review and evaluate any deliverables or documents submitted to US EPA, PA DEP and others as directed that may have impact on the CSO update / Integrated Plan and schedules.
- This task will be managed on a time and material basis as directed by the PWSA and working in conjunction with the legal and rate consulting teams to develop specific products to support regulatory discussion.
- The focus of this task will center on meetings and staff work on development of documents to support the negotiation process and work to gain acceptance for compliance documentation. Much of the work will be driven by evaluation of existing compliance documents, development of PWSA LTCP goals and guiding deliverables to build a case for technical acceptance by US EPA and PA DEP.

Deliverables: Meeting Agendas, Presentations and Summaries; Various correspondence needed to support ongoing discussions

1.1.3 Other Services

A. CMOM Program

The purpose of this task is to develop and document a Capacity, Management, Operation and Maintenance (CMOM) program. We will review existing information on CMOM activities, meet with PWSA to understand the program and develop a recommended plan for PWSA.

PWSA's Capacity, Management, Operations and Maintenance (CMOM) Program forms the foundation for PWSA to meet its customer service demands, sustain infrastructure performance, comply with regulatory requirements, and manage its resources. The objectives of this task are:

- Compile PWSA's current CMOM documentation and assess the program components against industry best practices, PWSA's organizational goals, and applicable regulatory requirements
- Develop a set of priority improvements to address potential gaps identified in the assessment
- Establish a Program Document that, when implemented, provides a proactive defense from regulatory enforcement action and leads to improved system performance and cost savings.

CMOM assessment will benchmark PWSA's current program against likely EPA Region 3 expectations, regulatory precedence, and utility best practices. This review will be focused on the sanitary sewer service area of PWSA and the capacity assurance, management, operations, and maintenance activities specific to that portion of the system. It is assumed that the Nine Minimum Controls (NMC) activities of PWSA cover similar aspects for the combined sewer system and are outside the scope of this effort.

We will assess current programs, policies, and practices. Existing documentation will be compiled and evaluated to establish priority areas for improvement. The assessment will include evaluation of SSO causes, review of existing CMOM documentation, interviews, and field observations.

We will evaluate PWSA's SSO data to develop an understanding of the number and volume of sanitary sewer overflows by cause over the past 5 years (2016-2020). SSOs will also be plotted in GIS to identify any geographic trends. The SSO cause and spatial analysis will allow us to consider how PWSA's CMOM Programs are structured to solve system-specific needs.

We will submit an information request to PWSA to gather existing CMOM-related program documentation, policies and procedures. We will review existing documentation, assess the completeness of the program, and identify potential gaps with accepted best utility practices in the following areas:

- Goals, Visions and Support
- Organization
- System Knowledge
- Capacity Management

- Engineering and Construction
- Asset Inspection and Condition Assessment
- Rehabilitation and Replacement Program
- Maintenance Programs and Procedures
- FOG Program
- SSO Tracking, Analysis and Reporting
- Overflow Emergency Response
- Budgeting
- Training
- Safety
- Customer Service
- Information Management
- Information Systems

We will conduct interviews with PWSA staff over a 5-day period, including personnel from management, engineering, planning, operations and maintenance. During the interviews we will discuss policies and practices related to organizational structure/communications, work management processes, information management processes, inspections; rehabilitation (pipeline, manhole, and removal of illegal connections); fats, oils, and grease (FOG) control; new construction standards and inspections; Emergency Response Procedures; preventative, predictive, and corrective maintenance practices including sewer cleaning; and staff training, knowledge skills, and abilities.

Observation of the operations and maintenance (O&M) crew work practices will validate what was heard during the interview process and identify additional opportunities for improvement. A senior collection system operations expert will spend 2 days in the field observing the way in which crews accomplish O&M tasks such as inspections, CCTV, line cleaning, point repair, root control, pump station maintenance, and emergency response where possible.

The results of the CMOM Program assessment will be presented to PWSA in a workshop with recommendations for improvements. Based on PWSA's feedback and input, an Implementation Plan will be established that identifies areas for improvement, the scope of effort involved by both our and PWSA staff, estimated labor-hours and schedule. The Implementation Plan will focus on improvement that provide maximum benefit to PWSA.

- Describe the Gap Assessment framework including regulatory requirements and effective industry business practices
- Present the SSO cause analysis results
- Confirm PWSA's CMOM Program goals
- Gain input on our assessment of current business practices and programs
- Prioritize areas for improvement. The prioritization process will consider the current program status, as well as the importance of the various programs and practices in meeting PWSA's specific CMOM Program goals
- Develop consensus on improvement areas and priorities.

Based on the results of the workshop, we will develop a CMOM Program Summary, documenting the CMOM assessment, and a Work Plan for high impact improvements to current programs and practices. We will conduct a final consensus workshop to validate the draft CMOM Program summary and allow staff to make adjustments before finalizing the Work Plan. We will finalize the CMOM Assessment to include the agreed upon improvement initiatives and proposed timelines. A draft overall CMOM Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.

Ongoing support activities such as training, data review, and development of procedures can also be conducted to assist PWSA in implementation of the plan as an additional service.

Deliverables: Draft and Final CMOM Plan

Level of Effort Assumption:

- **Will conduct two (2) workshops and up to 5 days of interviews and field visits with PWSA Staff.**

B. Assist with PWSA's Nine Minimum Controls (NMCs) program

- We will review existing NMC documentation and provide a Technical Memorandum summarizing review comments and recommendations.
- **Ongoing support activities such as training, data review, and development of procedures can be conducted to assist PWSA in implementation as an additional service.**

Deliverables: Draft and Final NMC Review TM

1.2 On-call Engineering Services

1.2.1 General On-Call

To support the development and ongoing progression of the Wet Weather Plan, various engineering services may be required at the request of PWSA. Specific tasks will be identified and a mutually agreeable scope, budget and schedule to complete the task will be developed by Wade Trim and PWSA. In general, examples of the services that may be performed under this task include:

- Conceptual infrastructure studies
- Design and construction engineering services
- Asset management activities
- Value engineering studies
- Oversight of consultants that may perform design and construction engineering services for wet weather projects.
- Coordinate the design of PWSA system improvements developed as part of the wet weather planning efforts with proposed improvements of the ALCOSAN and upstream/downstream municipal systems

An allowance has been established to support these activities. Work will be performed at the approval of PWSA and up to the limit included in this authorization.

Deliverables: To be determined based on nature of approved task activities.

1.2.2 Sewer Condition Assessment

This task has been removed from the scope.

1.2.3 Asset Management

The general objective of this task is to develop the methodology and best practices to assist PSWA better manage their assets. Asset Management (AM) services will focus on aligning strategic objectives with stakeholder level of service expectations to develop a risk-based approach to manage the entire lifecycle of program assets. Collaboration with PWSA staff will be integral to success and initial efforts will focus on understanding current best AM practices, identifying gaps, and developing an actionable roadmap for AM implementation. Implementation items will be prioritized and quick win and near team activities that achievable and provide the most value to PWSA will be identified. AM implementation assistance will be provided based on PWSA requests for assistance. Planned AM Services include:

- Review and assess the existing AM program and system operational documentation and provide a gap analysis relative to utility best practices and develop recommendations
- Develop or Update the PWSA Asset Management Vision to incorporate key wet weather program priorities
- Form and charter an AM team of PWSA key staff that can build and then take on the implementation of the program
- Develop AM program charter and AM methodology and best practices training content
- Conduct AM program evaluation and gap analysis between current and desired future state
- Prepare actionable AM program implementation roadmap that details prioritized AM activities
- Organize, integrate, and embed overall PWSA strategic goals in the AM framework and corresponding LOS goals and evaluation criteria for alternative evaluation
- Develop and enhance PWSA's use and operation of Innovyze Info Asset Manager including training of existing staff.
- Organize system replacement and future CIP data for use in the alternative evaluation
- Coach and mentor PWSA staff using subject matter experts that can provide guidance on continuous AM program development
- The following strategic and tactical topics will be discussed with each of the groups listed above, as applicable, as part of the assessment:
 - Decision Making and Capital Planning
 - CIP Development and Prioritization
 - Design & Construction
 - Funding
 - Information Systems and Data Management
 - Data Systems Tools
 - Organizational Framework
 - Communications

- Risk Management
 - Operations and Maintenance
 - Inventory/Warehouse
 - Maintenance Strategy
 - Operations Strategy
 - Optimization
 - Culture and Change Management
 - Document Management
 - Leadership and Commitment
 - Levels of Service and Performance Evaluation
 - Resource Management
- This task is intended to establish a program that PWSA can run independently. **Ongoing support beyond the budget for this task can be provided to support activities as an additional service.**

Deliverables:

Information Request, copies of meeting materials, draft and final AM program charter, AM training materials, AM gap analysis, AM roadmap and supporting materials developed as part of implementation activities.

1.2.4 Compliance Review of Selected Sewer Improvement Projects

PWSA has identified two (2) sewer improvements projects (Browns Hill Road Pump Station and 31st Ward Sewer System) that PWSA plans to procure outside consultants and start work 12 months from the NTP of this contract. **PWSA will maintain a project manager to provide administrative oversight of outside consultant activities.**

In general, our activities will include:

- Reviewing and providing input on outside design sewer consultant RFPs.
- Conducting 30%, 60%, and 90% compliance reviews to assess ability of the proposed design to meet regulatory requirements.
- Coordination meetings to discuss reviews and responses.

Deliverables: Technical Review Comments

Level of Effort Assumptions:

- **Attendance at up to 8 project meetings total among 2 projects**
- **Technical review of design discipline work and constructability reviews will be conducted by others.**

2. Data Gathering

2.1 Evaluate existing information and analyses

- Review wet weather-related studies in the region, such as the ALCOSAN Clean Water Plan, 2008 Feasibility Report, 2013 PWSA Feasibility Report, 2016 Citywide Green First Plan, Controlling the Source, RAND Climate Change study, PWSA's current Stormwater Master Planning initiative, and other documents that PWSA deems appropriate.
- Sections in an Existing Data Review TM will be prepared that summarize important findings and information relative to the current study effort.

Deliverables: Draft Existing Data Review TM Sections

2.2 Gather county, state and PWSA system information (sewer maps, inspection data, hydraulic overload problems, ACHD complaints)

2.2.1 Data Gap Analysis

- Relevant data that Allegheny County and State agencies may have will be requested and reviewed.
- PWSA will provide:
 - Existing GIS system database of existing sewer assets and any required sewer maps (critical information includes pipe diameters, lengths, invert elevations, and rim elevations).
 - Inspection and sewer back up complaint data
 - Information on known sewer hydraulic bottlenecks and surface flooding issues
 - Known areas of heavy inflow and infiltration, SSO and CSO locations
- Data relative to sewer and street flooding will be requested from ACHD and information provided reviewed and incorporated into the project GIS database.
- Additional existing collector sewer system information and reporting data will be reviewed. The Existing Data Review TM will be updated with the findings from other tasks. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- A Data Gap Analysis TM will be prepared that summarizes additional data collection and field investigations needed to support the study along with a level of effort. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Existing Data Review TM; Draft and Final Data Gap Analysis Review TM

Level of Effort Assumption:

- **Assumes that the existing PWSA GIS database of sewer data is of sufficient accuracy to support the planning level activities**
- **Assumes approximately 200 staff hours/month for 6 months**

2.2.2 Determination of Critical Areas

- Complaint records provided by PWSA will be reviewed and screened to identify issues related to documented system problems. A map of complaint locations for sewer backups and street flooding will be developed.
- **A significant number of pipes covering the local systems is not included in the current PWSA hydraulic models. It is anticipated that inclusion of all the sewer elements would be a significant undertaking from a data collection, model upgrade and model run time perspective. Therefore, the base models will be expanded to focus only on critical areas that have experienced historically high levels of sewer back-ups and/or street flooding. All system pipes (storm and sanitary) will not be modeled.**

- A desktop hydraulic analysis will be conducted using the existing hydraulic models for sewers included in the PWSA system for a range of storm events to identify the capacity of the existing sewer lines. Major sewers (>18") not included in the model where adequate physical data is available will also be checked for capacity using existing GIS data (topo, manhole depths); standard pipe capacity calculations; and compared to modeled peak flows adjusted on an area weighted basis. The locations of known complaints will be compared to the capacity check to identify likely areas of concern.
- "Critical portions" of the PWSA system will be identified. "Critical portions" include pump stations, trunk sewers, points of overflow activity, basement back-up areas, surface flooding, or areas of excessive infiltration and inflow (I/I). At the time of this scope preparation, the number of critical areas is unknown. **For the purposes of this task, it is assumed that 20 to 30 sewer backup and 6 to 10 stormwater flooding subsheds will be identified for further analysis.**

Deliverables: Draft and Final Critical Areas Definition TM

2.3 Investigate PWSA sewer system

2.3.1 Stream Inflow and Acid Mine Drainage (AMD) Map

- Identify and locate any stream inflow sources and acid mine drainage discharges along the critical portions of the PWSA sewer system using **existing data sources**. The potential sewersheds for stream inflow sources will be identified from the past and pending regional flow monitoring work, and PWSA input.

Deliverables: Draft and Final Stream Inflow and AMD Map

Level of Effort Assumptions:

- **No field work such as stream walks, sampling, or other investigation will be conducted.**

2.3.2 Field Data Collection Allowance

- Upon approval from PWSA, work to conduct additional field data collection activities identified with Task 2.3.1 will be conducted within the available budget included within the field allowance. Field data will be entered into the appropriate asset management databases. Additional field collection efforts shall be conducted as an additional service.
- The proposed field data allowance was developed based on an assumption of 400 days of field survey intended to collect data on approximately 8,000 structures (based on 20 structures/10 hr-day @\$2,200/day including survey and post processing). This data includes limited spot checks of approximately 10% of existing modeled areas and assumes data can be collected from the surface without the need for confined space entry or significant traffic control procedures. **No LIDAR, detailed topographic and surveys on private property or within homes for purposes of determination of basement inverts or first floor elevations**

- A summary of the data collected will be provided in a draft and final Field Data Collection Summary Technical Memorandum.

Deliverables: Draft and Final Field Data Collection Summary TM, Field notes and database

2.4 Coordinate on System Improvements and Technical Alternatives with Others

- Request and coordinate with ALCOSAN/municipalities to obtain information on proposed system improvements for use in study work. This includes information on proposed tunnels and consolidation sewers, CSO regulator, pumping, storage tanks, RTBs, Green Infrastructure, Source Control, WWTP and other improvements that can impact overflows in the PWSA collection system.
- A review will also be conducted of major development and PWSA projects (that would have an impact on planning efforts) to determine which should be advanced into the model. It is assumed that PWSA will provide the hydraulic, as-built and/or survey data relative to these improvement projects. **Assumed no more than 10 sewer improvement projects will be included.**
- A summary of the proposed major improvements that will be included in a Baseline Model to evaluate additional alternatives will be documented in a System Inventory TM. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Planned ALCOSAN, PWSA and upstream/downstream municipal improvements will be considered in related modeling and cost analysis in subsequent tasks.
- Ongoing coordination with ALCOSAN throughout the project will also be tracked under this item.

Deliverables: Draft and Final System Inventory TM

Level of Effort Assumption:

- **Assumes up to a total of 60 meetings with representatives of ALCOSAN, Point of Connection (POC) Groups with municipal officials, and 3 Rivers Wet Weather**
- **Assume no new Clean Water Plan design changes**

2.5 Determine regulatory permitting requirements for conveyance and storage

- We will participate in meetings with DEP to establish or confirm the regulatory permitting requirements and related design standards and control approach to be used in the sizing, performance, and layout of facilities to be proposed, designed, or built as part of PWSA's wet weather planning program. **Assume up to 6 meetings for coordination.**
- To prepare for the discussions, a Draft Regulatory Permitting Requirements TM will be prepared that summarizes current criteria for sewers and facilities for PWSA and regional entities along with proposed criteria for facilities to be sized and designed under this program. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Regulatory Permitting Requirements TM

3. Develop and calibrate model(s)

3.1 Water Quality Sampling, Analysis Tool Development and Evaluations

3.1.1 Water Quality Data and Information Compilation, Review and Evaluation

- We will compile and review water quality data and related information for the receiving waters impacted by PWSA wet weather discharges and data on sources of pollutants. This will include:
 - Data collected and provided by PWSA as well as publicly available data. We will also develop a request for data collected by ALCOSAN/3RWW. We will compile water quality data in Excel and/or Access for review and evaluation.
 - Information on the receiving streams, their watersheds/drainage areas, and available modeling for these streams and drainage areas.
 - Additional available data on precipitation, climate, and streamflow may be compiled to support the water quality assessments.
 - Listed impairments and available TMDLs for the receiving streams including pollutants and sources. Other available studies on the receiving streams will be compiled and reviewed.
- This scope of work is based on the understanding that the receiving waters that will be studied for this task are the receiving waters that receive discharges from PWSA-owned CSO outfalls that will not be controlled by the ALCOSAN tunnel construction; these include several Tributary Streams (Chartiers Creek, Nine Mile Run, Saw Mill Run, and Becks Run), and the Main Rivers (Ohio River, Monongahela River, Allegheny River). The primary focus of this task will be on the Tributary Streams, but a summary of the conditions of the Main Rivers within the PWSA service area will be included. We will conduct site visits of the Tributary Streams to assess existing conditions, sediment build-up, stream bank stability, flow restrictions, vegetative cover, and other potential characteristics. Photo documentation of the conditions will be collected.
- **Additional Main River Water quality or other data collection will not be conducted.**
- We will evaluate the available information to characterize existing conditions, spatial and temporal trends, dry versus precipitation event-driven conditions, comparison to water quality standards, and potential cause-effect linkages. We will also assess the ability of existing models to characterize water quality conditions and benefits of control alternatives.
- We will summarize the results of the data compilation, review and evaluation in a technical memorandum. The memorandum will include a data gap analysis including recommendations for additional data collection and model development activities, including cost estimates and potential refinements to the original budget estimates provided. We will submit one draft for review and comment. We will address comments and submit one revised draft for submittal to PWSA. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft Water Quality Existing Data Review TM

3.1.2 Sampling and Analysis

- We will prepare a Sampling and Analysis Plan (SAP) and a Quality Assurance Project Plan (QAPP) to guide the collection of water quality samples to support the characterization of the waterways and sources.
- One draft of the SAP and QAPP will be submitted to PWSA for review and comment. Following PWSA review and comments, we will revise the SAP and QAPP for submission to Pennsylvania Department of Environmental Protection (DEP) and/or the United States Environmental Protection Agency (EPA). Following DEP and EPA review and comment, we will prepare the final SAP and QAPP.
- Sampling activities will include training and orientation with our local, on call sampling team. This work will include site visits to discuss procedures and review sampling locations. This will also include coordination on scheduling of sampling events, tracking wet weather events, and making go/no-go decisions on sampling. We will also coordinate with the analytical laboratory to coordinate bottle shipments, sample deliveries, QA/QC data review, and reporting of results.
- For the purposes of this scope of work, the following assumptions have been made to inform the budgeting of this subtask. The scope and budget will be revisited following completion of the data review and evaluation work. Sampling is anticipated to be conducted between April and October 2022 for the following:
 - **6 locations (2 locations in each of Chartiers Creek, Nine Mile Run, and Becks Run)**
 - **72 total samples (3 baseline, 3 wet events – 3 samples each event for each location)**
 - **Parameters for field measurement: Temperature, pH, Dissolved oxygen, Conductivity**
 - **Base assumptions for parameters to be collected for laboratory analysis: E. coli, TSS, Ammonia, TKN, Nitrates + Nitrites, TP, Ortho**
- Following the initial review of the impairments and stream conditions, the need for additional parameters such as metals, and hardness will be assessed. We will review sampling field notes and laboratory reports following each round of sampling to identify problems or issues needing correction. We will coordinate with the sampling consultant and the laboratory to implement corrective actions.
- Two of the subject watersheds do not have USGS flow gages located on them. Additional flow and/or water level monitoring may be required in these watersheds as well. If needed, effort would be authorized separately.
- Following implementation of the sampling plan, we will perform a data validation review and prepare a memorandum documenting the review.
- We will prepare the project-specific SAP and QAPP, as stated earlier. We will update the water quality characterization with the new data. We will summarize the results of the sampling, analysis, data review, and updated characterization in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and

characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit one draft to PWSA. Following PWSA review and comment, we will prepare the final TM.

Deliverables: Draft and Final Water Quality SAP and QAPP TMs

3.1.3 Water Quality Model Updates

- We will update receiving water models to support the evaluation of water quality assessments. We will update model calibrations using the most recent data (April-October 2022) and will validate model performance. The anticipated receiving waters for modeling and the modeling frameworks are listed below:
 - Chartiers Creek, Nine Mile Run watershed/drainage area: PC-SWMM
 - Saw Mill Run watershed/drainage area: HSPF
 - Becks Run watershed/drainage area: no existing model
 - Main Rivers Model: RMA2 (hydrodynamics)/RMA4 (water quality)
- We will develop estimates of upstream flows and pollutant loads for the calibration period (April-October 2022) based on available data. We will develop meteorological inputs for the calibration period based on available data.
- Calibrations will be performed by applying best engineering judgement to make model calculations as representative of observations as possible. The models will be calibrated using both visual and numerical methods. This effort may employ regressions of observations vs. calculations, minimizing the squares of the residuals of observations vs. calculations, minimizing relative error, minimizing differences in observed vs. calculated means, and minimizing root mean square error, among other methods. For simulations having the appropriate temporal scale, published statistical measures of goodness-of-fit (e.g. percent difference, r², PBIAS) will also be considered in evaluating the strength of the hydrology and water quality calibrations.
- Following calibration, the models will be validated using an independent data set to demonstrate that the model is capable of acceptably reproducing the timing and magnitude of observed data without further changes to the model parameters.
- We will summarize the results of the model updates and calibrations in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit a draft to PWSA for review. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Model Update TM

3.1.4 Water Quality Assessments of Benefits of Control Alternatives

- We will develop and apply the updated and calibrated models to support the assessment of existing conditions and the water quality benefits of control alternatives. We will develop the water quality models for the typical year. We will develop the following water quality model inputs for the simulation of existing conditions for the typical year:
 - Upstream boundary flows and pollutant loads
 - Meteorological inputs, and
 - Sources other than overflows.
- We will characterize water quality conditions for the typical year under existing and baseline conditions. We will assess the relative impact of pollutant sources with respect to attainment of water quality standards for those scenarios. We will prepare an interim technical memorandum documenting the characterization of existing and baseline conditions for the Tributary Watersheds.
- We will apply the water quality models to simulate the water quality benefits of control alternatives. **This scope of work assumes ten (10) separate simulations will be run to assess control alternative benefits.** These may include a combination of simplified control scenarios (for example 25%, 50%, 75%, and 100% reductions of overflows) and specific control alternatives with simulated reductions in overflows from the collection system model.
- For each control alternative simulated, we will evaluate the water quality benefit in terms of pollutant load reduction and improvement in ambient water quality. Attainment of water quality standards will be assessed.
- We will also update the typical year simulation with the final recommended control plan and assess the water quality benefits.
- We will summarize the results of the water quality assessments in a technical memorandum. The memorandum will include discussion of the development of the typical year simulation, water quality characterization of the existing conditions, and water quality benefits of select control alternatives and the final recommended control plan. We will submit one draft to PWSA for review and comment. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Assessment TM

3.2 Monitor flow and conduct hydraulic modeling

3.2.1 Review existing flow data and models

- We will review flow data and models previously collected by PWSA and ALCOSAN to identify modeling and data needs to support the wet weather planning process. In general, this review will include locations, durations and quality of available flow monitoring data as well as determination of availability of models and the extent and quality of the calibration/verification of these models. **Up to 10 watershed models are assumed to be reviewed as a part of this effort.**

- An Existing Model Review TM will be created to document the available modeling sources and to identify data needs to expand or improve the models. This memo will also identify the various design storms, typical year precipitation, boundary conditions, and model scenarios (Existing, Baseline, Future, etc.) needed to support the project.
- **It is assumed that the starting model version for this project is the ALCOSAN Existing Conditions 2020 Model developed using SWMM version 5.1.012. This model includes a representation of the WWTP, deep and shallow cut interceptors, all diversion structures, combined sewer overflow outfalls and storm, combined and sanitary tributary areas. This model is anticipated to be expanded using historical and current modeling elements that have been developed under various PWSA efforts.**
- A summary of the available historical rainfall, stream level and flow monitoring data will be prepared and included in an Historical Flow Data Review TM. This TM will also document ongoing permanent precipitation, permanent flow meters, and stream gages that are available to support the work. **PWSA will provide available historical precipitation, stream and flow data.** Available data on high water flooding marks will also be summarized in this memo for critical stormwater flooding areas. **Field work to investigate or identify high water marks will not be collected.**
- During this process, we will develop a Model Data File Management procedure and implement to assist with model input and output file management. Procedures and Protocols will be summarized in a Model Data Management TM.

Deliverables: Draft and Final Existing Model Review TM; Draft and Final Historical Flow Data Review TM; Draft and Final Model Data Management TM

3.2.2 Develop a flow monitoring plan and collect flow data

- A detailed Flow Monitoring Plan TM will be developed to support the model expansion and system characterization effort guided by the approach outlined in this section. The Plan is expected to include proposed methods for flow monitoring in Critical Areas and I&I sewersheds with sections that cover, purpose and objectives, monitoring techniques and procedures, data management approach, QA/QC protocols, and maps of proposed deployment locations.
- **It is assumed that PWSA can provide all necessary radar-rainfall data needed to characterize precipitation in the service area.** The radar rainfall information will provide area-weighted rainfall hyetographs for each model subcatchment using existing regional permanent rain gauges. **To supplement this data, we will deploy up to 20 temporary project rain gauges for no more than 9 months.**
- We will deploy sewer system flow meters to screen and prioritize tributary areas to support expansion of the system hydraulic/hydrologic model (Calibration monitoring) and for further I/I investigations (micromonitoring).
- **To support model expansion into Critical Areas, up to 100 calibration meters (with a total installed duration of no more than 9 months) will be**

installed to provide information for model calibration in areas of known performance problems. Monitored subcatchments are planned to be between 20 and 75 acres in size.

- In support of Task 3.4, micromonitoring will be used to break down areas of roughly 100 acres or less for further I/I investigations. Up to 40 micrometers (with a total installed duration of no more than 3 months) will be deployed simultaneously for one or two significant rainfalls per location to determine tributary area I/I response. Areas showing significant response would then be targeted for further investigations. Areas showing little response would be screened from further consideration. Micromonitoring durations will be adjusted based on observed rainfall events.
- In support of Task 3.4, up to 40 calibration meters (with a total duration of no more than 6 months) will be installed to provide information for model calibration areas in sanitary areas. We will use the Task 3.4 prioritization information and preliminary micromonitoring to assist with calibration meter placement.
- It is assumed that flow monitoring will be conducted in the 2022 season between March and November. All data will be collected and stored in a database for use on the project.

Deliverables: Draft and Final Flow Monitoring Plan TM; Rain and Flow Monitoring Database

3.2.3 Expand and calibrate hydrologic and hydraulic model for use in planning

- The H&H hydraulic model will be extended up into the PWSA collection system to represent know problem areas with clusters of reported basement backup and areal flooding issues.
- Additional detail included in the historical version of the PWSA model included within Infoworks may also be added to the model to support this work along with significant known system changes. **Up to 400 staff hours for addition of existing detailed model elements such as major sewer projects or other detailed models has been assumed.**
- In Critical Areas with street flooding, the H&H model will also be expanded using dual drainage network techniques, to capture the movement and depth of overland flows along the street network. Depending upon the location of the problem area there may be a natural open channel also that will be included in the model. **Up to 2,500 model elements (channel segments and surface nodes) are assumed to be included in this model expansion within no more than 6 to 10 sub areas. It is assumed that existing topographic data is sufficient to characterize the street geometry.**
- With the hydraulic network expanded into the collection system, the lumped or consolidated hydrologic representation included in the current Existing Conditions model will also need to be discretized so that the generated flows can be distributed in the detailed expanded hydraulic network. This more detailed hydrologic representation will need to be calibrated using the collected flow and depth data. **Up to 4,500 model elements (sewer pipes**

and manhole junctions) are assumed to be included in this model expansion within no more than 20 to 30 sub areas.

- Revisions and expansions of the model will be documented in a Model Update TM.
- Sanitary areas within the H&H model will be calibrated to the data collected under Task 3.2. RTK parameters will be updated to reflect the findings of the new data collected.
- Targeted subarea calibration of areas tributary to up to 140 flow meter locations will be conducted based on the flow data collected under task 3.2. Continuous calibration/validation is anticipated to be conducted to compare metered vs. modeled predictions of flow, volume, depth and hydrograph shape. Industry standards for determination of acceptable calibration will be applied to determine the reasonableness of the calibrated parameters.
- A technical memorandum will be developed to summarize the results of the model calibration.
- A model review workshop will be held with PWSA to present the results of the calibration and discuss approval of the model for use on subsequent planning efforts.
- Upon approval of the model, files for various scenarios (Existing Conditions, Baseline Conditions (Near Term Projects that will be constructed) and Future Conditions (with Interim and Select Plans) will be developed to support the next stages of modeling. **Models will be run for up to five (5) design storm conditions to support level of service analysis.** Models will be run continuously for the Typical Year. Sensitivity scenarios for use in assessing the impacts of future climate change will also be run. Overflow statistics and level of service impacts will be quantified.

Deliverables: Draft and Final Model Update TM; Draft and Final Model Calibration TM; Model Support Files; Model Results Summaries

3.3 Perform level of service peer review and develop current level of service and range of alternatives for increasing level of service.

- A peer review will be conducted to identify the level of service of similar regional communities. Findings of the review will be summarized in a technical memorandum.
- Stress-test the current PWSA collection system to identify the current level of service provided and develop a level of service thematic map.
 - The primary level of service will be evaluated using the existing hydrologic and hydraulic model and the expansion into critical areas of observed sewer back-ups and street flooding will be used to assess collection system capacity for the interceptors and selected main line sewers.
 - A secondary level of service evaluation will be conducted on main sewers > 18" in diameter using a simplified method that compares pipe capacity to flows from the model that will be apportioned based on area. **It is assumed that existing GIS/sewer data provided by PWSA is sufficient for this purpose.**
 - A third evaluation will be conducted to assess "neighborhood" level of

service along a street within a city block. **Representative neighborhood areas (up to 6) will be selected and evaluated in detail to understand if general level of service deficiencies can be expected based on typical Pittsburgh sewer design practices.** Areas that have adequate existing data from either GIS or record drawings to support the assessment. **PWSA to provide detailed sewer drawings of the selected areas for use in this analysis.**

- **PWSA will determine what the level of service guiding principles will be used for stormwater under a separate contract**
- An alternatives analysis to determine the best approach to provide for increased levels of service will be conducted. In general, this is expected to include conveyance improvements that would include replacing existing storm or sewer piping to increase capacity and reduce water levels in the system and streets. The type, size and general location of improvements will be identified and included on maps to show the options.
- Provide a concept screening cost estimate (AACE Level 5) for bringing the current system up to the appropriate level of service for stormwater and sewer back-ups. Costs for increased conveyance systems to achieve higher capacities will be developed for various levels of service. **It is assumed that no more than two level of service scenarios will be costed.**
- Findings of the evaluation will be summarized in a technical memorandum.
- Determine how increased level of service impacts other wet weather planning objectives, including controls of CSOs and SSOs. A Typical Year simulation will be conducted to determine the results impacts on overflow statistics.
- Model base files for Level of Service Improvement Alternatives will developed to support the next stage of integrated planning evaluations.

Deliverables: Draft and Final Level of Service Peer Review TM; Draft and Final Level of Service Evaluation TM; Existing Level of Service Map

3.4 Develop a plan to identify significant areas of I/I and a strategic plan on how to prioritize locations to reduce I/I

- The PWSA system is essentially a combined system, but the upper reaches of the collection system have separate sewer areas.
- We will review and update on the approach to prioritize investigations previously by PWSA. Using data collected under other tasks, we will seek to identify sanitary areas without significant problems that would require no further investigation. Prioritization will occur at a relatively higher level and be refined as the project progresses. Early micromonitoring is proposed to help define the investigation prioritization.
- **Field work and subsequent data review for activities such as smoke testing, site assessments, manhole inspections, SSES investigations, dye testing, and CCTV inspection to support this task will be conducted by others or as an additional service.**
- PWSA will provide available data on effectiveness of historical projects in reducing I&I after improvements have been made.
- We will review the data collected and provided and use to identify areas subject to

elevated levels of I&I.

- By layering of existing GIS information, we will perform a Prioritization Analysis to produce a table and map with preliminary priority areas. We will review the proposed prioritization with PWSA to get input on the preliminary prioritization approach, the resulting priorities, and provide direction on any necessary adjustments.
- Based on the work, estimates of a range of potential I&I reductions (low, medium and high) for use in planning purposes will be developed for use with planning scenarios under Task 4.
- We will develop draft and final versions of an I&I Prioritization Approach TM, which will document criteria, data used, estimated effectiveness, and a priority list of areas. We will submit the draft TM to PWSA for review.

Deliverables: Draft and Final I&I Prioritization Approach TM

4. Identify and prioritize alternatives

The alternative evaluation is expected to be conducted at varying levels depending on the location and ownership. The most detailed efforts will be focused on outfalls solely owned by PWSA and jointly owned outfalls discharging to tributary streams (Level 1 and 2).

- Level 1 – 38 Outfalls solely owned by PWSA
- Level 2 – 33 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging into the Tributary Water Bodies

For these outfalls, it is assumed that up to 3 technologies will be evaluated for each outfall, costing to a Level 5, performance determined, and a recommended solution provided. Outfall solutions will either be combined or enhanced in up to 3 alternatives per basin.

A lesser detailed level of planning will be conducted for jointly owned outfalls discharging to the Main Rivers (Level 3 and 4).

- Level 3 – 116 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging to the Main Rivers
- Level 4 – 20 CSO Outfalls co-owned by PWSA/ALCOSAN, discharging to the Main Rivers and controlled by the planned Regional Tunnels

For these outfalls, it is assumed that up to 3 technologies will be evaluated for up to 10% of these outfalls, costing to a Level 5, performance determined, and a recommended solution provided. This is not intended to replace but to enhance or supplement the current ALCOSAN Clean Water Plan for these outfalls.

4.1 Identify and screen technical alternatives

- The goal of this task is to identify potential alternatives that will provide compliance with the goals of the wet weather planning process, taking into consideration the ability to adapt to future conditions.
- An Alternatives Brainstorm workshop will be held with PWSA to discuss potential approaches to controlling CSO and SSO in the PWSA service area. The

- workshop will include a review of the planned ALCOSAN improvements, previously planned control recommendations from PWSA efforts, various technologies and strategies that have been reviewed historically and any new or emerging technologies.
- We will review and assess potential **technologies** for controlling SSO and CSO in the PWSA service area. Optimization techniques will be applied to narrow the field of **solutions**.
 - A Technology Screening TM will be prepared that summarizes the potential technologies such as source control, green infrastructure, regulator modifications, storage and conveyance that conducts a high-level screening for applicability to the various areas and provides recommended **outfall solutions** to advance to the basinwide alternative evaluation stage. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - An integrated planning approach will be applied that considers **solutions** basinwide that meet both water quality and level of service requirements determined under Task 3.3.
 - An Alternatives Development TM will be prepared to summarize the alternatives that were considered in the evaluation for each outfall or groupings of outfalls. This TM will summarize basinwide alternatives and the recommended systemwide alternative. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - **Six (6) additional Alternatives Workshops with PWSA are planned to discuss the progress and findings from the Alternative Evaluations.**
 - The selected alternative based on the results of Task 4.6 will be further defined (<5% project definition). This work will include development of concept layouts and site investigations to further develop the concept and develop an opinion of cost that is consistent with a AACE Class 4 cost estimate.

Deliverables: Draft and Final Technology Screening TM; Draft and Final Alternatives Development TM

4.2 Identify and screen site development and buffer alternatives

- Initially, a Site Opportunity and Enhancements TM will be prepared to summarize the nature and location of potential opportunities. We will conduct a recommended screening to identify areas with a potential to support effective wet weather controls. A draft TM will be submitted to PWSA for review and comment.
- USEPA-defined Environmental Justice demographic indices will be included into screening evaluation. Sites for alternatives will consider the benefits and impacts to environmental justice communities within the PWSA service area. The potential for providing benefits to these communities through improved wet weather management will be considered along with the direct benefits and impacts of feasible technologies within these communities.
- Our team will meet with stakeholders to identify opportunities for siting of control alternative solutions at locations that may be mutually beneficial for redevelopment or community enhancements. **Up to 16 meetings with stakeholders have been included in the scope for this purpose.**
- For the final recommended alternative identified under Task 4.6, we will update the TM to discuss the potential solution and how it may be enhanced with site

improvements, community benefits, green leave behinds or other features that would create or maintain a beneficial relationship with the various City of Pittsburgh departments, authorities, and key stakeholders (including neighborhood organizations).

Deliverables: Draft, Revised, and Final Site Opportunity and Enhancements TM

Level of Effort Assumptions:

- **Assumes enhanced site evaluations will be prepared to better define project location and site conditions and refine the level of accuracy of the Cost estimate to support a AACE Level 4 cost estimate in conjunction with Task 4.3**
- **Does not include topographic survey, easement acquisition, property acquisition support services, geotechnical exploration, environmental site assessments, or subsurface utility exploration to be included with the site evaluations.**

4.3 Perform a present worth analysis of the feasible alternatives

- A cost tool that can provide estimates for various technologies at an **AACE Level 5** will be developed using unit pricing, engineering judgement and input from recent PWSA and regional projects for purposes of initial technology screening.
- A Costing Approach TM will be developed that summarizes the assumption, development and application of the cost methodology. **Two (2) meetings are included to discuss the approach and development of the tool with PWSA.** A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Costs will be developed for overall total project and lifecycle costs and include the following elements: Construction, Operating, Site surface development and restoration, Operation and maintenance requirements, Utilities and Land acquisition and rights-of-way. PWSA to provide input on administrative, legal and contingencies to be applied to the overall program cost development.
- Initial costs will be summarized and provided to PWSA for review. These will also be included in the Alternative Evaluation TM.
- Costs for budgeting for the selected alternatives for CSO and SSO improvements in the final Wet Weather Plan will be developed to an **AACE Level 4**. Additional effort to look at proposed projects and site constraints include the following:
 - Site visit
 - Develop project footprint layout using GIS and available lidar topography
 - Screening for property changes
 - Looking at local bidding data for potential cost escalation factors
 - Determine estimated quantities of facilities

Deliverables: Summary of Costs, Updates to the Draft Alternative Evaluation TM.

4.4 Perform a knee of the curve analysis of wet weather controls and water quality benefits

- An analysis comparing costs to performance metrics will developed to assess the

point of providing a value based recommended alternative. This analysis of the costs of varying CSO, SSO and stormwater control alternatives shall be in conformance with the CSO Control Policy and relevant guidance.

- Varying levels of optimization assistance tools will be used to evaluate alternatives to guide development of performance.
- Areas will be prioritized for optimization. Outfalls with planned improvements (by Others) or minor adjustments needed to meet criteria will not be optimized.
- **An optimization software license covering a 24-month period is included in the current budget. It is expected that advanced optimization will be applied to approximately 40 areas.**
- Performance curves will be included in the Alternative Evaluation TM.

Deliverables: Updates to the Draft Alternatives TM

4.5 Analyze financial affordability

- Coordinate with PWSA's financial rate consultant to determine the financial affordability of the proposed improvements to the PWSA system and forecasting the rate on ratepayers.
- Meetings will be held throughout the development of the wet weather plan to discuss progress, cost impacts, affordability considerations and impacts on required schedules for implementation. Two (2) initial workshops are planned to brainstorm the approaches and steps needed to incorporate the affordability analysis into the planning process.
- Based on discussions at the meeting, a work plan will be developed that will guide the steps needed to assess affordability in support of the Wet Weather Plan development. A draft plan will be submitted to the Rate Consultant and PWSA for review.
- All work related to affordability determination including data collection; rate evaluation; assessment of impacts of wet weather projects; level of service projects; ALCOSAN ongoing charges; PWSA ongoing water and sewer system charges; and other factors will be conducted by Others. PWSA will contract separately with Rate Consultant on these services.
- **Up to twelve (12) additional coordination meetings and two (2) workshops are planned to coordinate the work and discuss findings over the duration of the planning.**
- Rate consultant will provide input on initial affordability prior to the start of alternatives and run scenarios for varying levels of level service improvements and necessary stormwater, CSO and SSO control improvements at various stages of the plan development.
- We will review findings provided by Rate Consultant and summarize how the work will be incorporated into the planning and implementation of the WWP.

Deliverables: Draft and Final Affordability Work Plan TM; Draft and Final Affordability Findings TM.

4.6 Conduct non-monetary analysis of alternatives

- An Alternative Evaluation Approach TM will be prepared that summarizes the overall approach to selecting recommended alternatives. The TM will include a discussion on how to score within each non-monetary category, scoring and weighting approaches, and steps that will be taken to develop the scoring. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- The non-monetary criteria as provided by PWSA are expected to include:
 - Local planning impacts assessment
 - Environmental justice and community flood resiliency impacts
 - Floodplain impact assessment
 - Odor and noise control assessment
 - Preliminary environmental site assessment
 - Site surface restoration/development
 - Impacts of water quality improvements
 - Co-benefits of green infrastructure projects or other control alternatives
- Additional information such as advantages, disadvantages, risks, schedule impacts and other considerations will be identified as supporting information will be prepared for each alternative.
- **Up to three (3) workshops are expected to be needed to review the approach, conduct the scoring and share the results.**
- Information from Tasks 4.3 on costs would be combined with a summary of total benefits for each alternative to support development of a cost-benefit analysis.
- The results of the evaluation will be summarized in an Alternatives Scoring Technical Memorandum.

Deliverables: Draft and Final Alternative Evaluation Approach TM; Draft and Final Alternatives Scoring TM

4.7 Prepare a schedule for implementation of controls selected to address CSOs and SSOs

- An implementation schedule with appropriate milestones for design, bidding, construction, substantial completion and final completion will be prepared for the recommended projects in the Wet Weather Plan.
- The schedule will be adjusted based on input with regards to affordability and cashflow constraints provided under Task 4.5.

Deliverables: Draft and Final Implementation Schedule

5. Stakeholder coordination and presentations

We will take the lead on developing and participating in a public participation program. **PWSA will provide stormwater messaging developed to date and any foundational information. PWSA staff will be lead presenters during community meetings but would rely on Wade Trim to develop materials and set up meetings.**

We will work with PWSA in preparing an overall public participation plan and public outreach protocol that meets the requirements contained EPA CSO planning and DEP Act 537 guidance documents.

Our goal is to work collaboratively with the project team and PWSA to develop and implement a plan that prioritizes clear, consistent, transparent, and equitable communication with the public and stakeholders to generate consensus. We intend to include specific outreach to identified environmental justice communities to develop relationships with community leaders in those areas and encourage their availability, participation and engagement in meetings.

5.1 Develop Public Engagement Plan (PEP)

- In support of PWSA's existing public outreach efforts, we will work to coordinate and communicate with internal and external stakeholders. We will work with PWSA to create an engagement plan that centers around multiple working group meetings, stakeholder inclusion, agency communication and public information and input held throughout the duration of this process. The goal of the plan is to generate buy in, which can be better achieved by engaging stakeholders throughout the process, collecting input and feedback, and incorporating that feedback.
- **Two meetings will be held with PWSA public relations staff to support development of the plan.** An initial brainstorming session and a follow up meeting to discuss the draft PEP. Ongoing coordination on public relations topics will be covered under the regular PWSA progress meetings.
- A plan will be developed that includes a summary of program and objectives, messaging, identification of stakeholder groups, definition of target audiences, communications approaches, communication tools, implementation steps, and timelines. The Draft Public Engagement Plan will be submitted to PWSA, and comments incorporated into the Final Plan.

Deliverables: Draft and Final Public Engagement Plan

Level of Effort Assumptions:

- **Develop Public Engagement Plan assumes a detailed outline, 2 draft and 1 final version for Wade-Trim and PWSA review and approval. Includes the development and refinement of the comprehensive stakeholder engagement list.**
- **Project Coordination / Management – assumes up to 2 coordination meetings a month and 4 hours of project management/coordination with Wade Trim / PWSA for 36 months.**
- **Documentation – assumes 8 hours per month for document control, project controls and documentation of events.**

5.2 Program Messaging and Branding

This item has been removed from the scope.

5.3 Online Public Engagement

- Online engagement is an important method of communication with the general public about the Wet Weather Program. The goals of online engagement are to

increase the ability to reach a more diverse audience, generate more informed participation, invite a broader range of input, and set the stage for sustained participation. PWSA already has an online presence, and this plan will build upon those existing relationships/followers/contacts.

- A Wet Weather Program webpage will be created to serve as a resource for people to access information, share the plan schedule, see a summary of planning activities, make note of engagement opportunities, review background information (Including relevant maps and data), make connections to social media pages, locate project contact information, subscribe to a mailing (contact) list, and access a comment form.
- Our team will develop a proposed outline of online content to consider for a website approach and submit to PWSA for review and discussion.

Deliverables: Web Site and Social Media Pages and Updates

Level of Effort Assumptions:

- **PWSA will host and manage online content via their existing website**
- **Updates to the website are expected to occur on a quarterly basis, assumes 12 hours per quarter of support**

5.4 In-Person Public Engagement

- Public meetings will be used to inform the public of the planning process and to solicit ideas, input and feedback. This will be an opportunity to promote transparency and foster two-way communication with the public. Public meetings will be held at multiple locations throughout the city. We intend to host a proportional amount of in-person meetings within environmental justice communities to promote engagement within these communities and consider the specific needs in these communities relative to wet weather management.
- Meeting times will vary to maximize the number of attendees that will be available. The public will be encouraged to ask questions and voice their ideas and opinions about the program activities. Our plan for a series of meetings is presented below:

Year 1 - Goals and Initial Community Input

The first series of public workshops will be formatted as a city-wide Listening Series as an interactive, hands-on opportunity to create program awareness, present background on the system and known problem areas, gain an understanding of community priorities, values and concerns. **Four (4) interactive, workshop-style sessions will be conducted** and geographically distributed through the service area – to encourage diverse participation. These meetings would occur early in the planning process.

Year 2 - Review of CSO Technologies, Solutions and the Alternatives Process

The second series of public workshops will be formatted as traditional public meetings. The purpose of this series of meetings will be to present and/or demonstrate potential control strategies, discuss water quality assessments and provide an overview of the alternative evaluation process. **Four (4) meetings will be held.**

Year 3 – Wet Weather Plan Recommendations

The third and final public workshop series will be formal public meetings to present the draft Wet Weather Plan. This will be the final opportunity to provide an overview of the draft WWP, to discuss issues, processes and decisions leading to the plan, and to record formal comments that will be considered when finalizing the Wet Weather Plan. **Four (4) meetings will be held.**

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **20 hours/month for coordination and responding to questions from the public**

5.5 Stakeholder Advisory Group

- An existing PWSA Stormwater Advisory Group (SAG) that has provided input on the PWSA stormwater fee will be convened to introduce them to the Wet Weather Program goals and objectives. This group will be expected to share information about how to get involved in, provide input on, and stay up to date with the planning process with the organizations/stakeholder groups they represent. We intend to work with this group to discuss issues of environmental justice and solicit input for how the Wet Weather Program will evaluate environmental justice.
- This advisory group will meet at key decision points throughout the process (**up to 6 meetings**). Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation and prepare summaries of the discussions.
- In between meetings, representatives of these groups will receive regular updates through email and will be empowered to help the program team in its outreach efforts by sending information about engagement opportunities to their respective memberships, communities, networks, and employees.

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **Assumes 4 hours/month monthly coordination and responding to inquiries from SAG.**

5.6 Municipalities/POC Outreach

- Meetings with the existing Saw Mill Run Group and various POC municipality representatives would be convened to discuss issues specific to the municipalities. These meetings will be used to share information about known issues, planned improvements, alternative technologies, and other related matters. **We have assumed up to 24 meetings** with stakeholders in this category over the duration of the program. Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation, and prepare summaries of the discussions.

Deliverables: Agendas, Presentations and Meeting Summaries

6. Provide Wet Weather and Act 537 Plans

6.1 Wet Weather Plan (Long Term Control Plan)

- A Wet Weather Plan document will be developed that includes sections on Introduction, Background, Purpose, Public Engagement and Participation, System Characterization of Current Conditions, Control Approach, Control Technologies and Screening, Development and Evaluation of Alternatives, Financial Capability, Recommendations, Selection and Implementation Schedule, and Post Construction Compliance Monitoring Plan.
- A draft Wet Weather Plan will be submitted to PWSA for review and comment prior to submittal of a final Report.
- Following PWSA review, comment, resolution of comments and approval of the draft Wet Weather Plan, we will facilitate preparation of the plan for submitting to the agencies for review and approval.
- Following agency review, comment, resolution of comments and approval of the plan, a revised final plan will be submitted.

Deliverables: Draft, Final and Revised Wet Weather Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of Plan
- Assume preparation of up to 100 comment responses received on the Plan

6.2 Act 537 Plan

- An Act 537 Plan document will be developed in accordance with the Act 537 Plan Content and Environmental Checklist and will include sections on previous wastewater planning, physical and demographic analysis and mapping, identification of existing sewage facilities and needs, projections of future growth and land development, identification of alternatives, evaluation of alternatives, institutional evaluation, justification and implementation schedule for selected alternatives (technical and institutional) and an environmental report. The Wet Weather Plan will also be used extensively to form the basis of the Act 537 Plan.
- A draft Act 537 Plan will be submitted for PWSA comments.
- Following PWSA review, comment, resolution of comments and approval of the draft 537 Plan, we will facilitate preparation of the plan for submitting to the City of Pittsburgh under Task 6.3 for review and approval.
- Following approval by the City of Pittsburgh, we will submit for agency review, comment, resolution of comments and approval of the plan. A revised final plan will be submitted.

Deliverables: Draft, Final and Revised Act 537 Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of 537 Plan
- Assume preparation of up to 100 comment responses received on the 537 Plan

6.3 City of Pittsburgh Coordination

- Prior to submittal to the agencies, the Act 537 plan will require a signed and sealed Resolution of Adoption from the City of Pittsburgh. We will assist in the preparation of the appropriate submittals, response to comments and consistency documentation that the appropriate agencies have received, review and concurred with the Act 537 plan throughout the entire process.
- Following PWSA approval of the draft Act 537 Plan, the plan will be submitted to City of Pittsburgh and Allegheny County Planning Commissions for consistency review and comment.
- The Act 537 plan is also required to be posted publicly for a 30-day comment period, with proof of the publication, copies of all comments with responses in each comment included in the final submittal to the agencies.

Deliverables: Public Notice

Level of Effort Assumptions:

- Assume 3 coordination meetings with City of Pittsburgh Officials
- Assume preparation of up to 100 comment responses received on the 537 Plan

7. Develop an environmental impact assessment of recommended Wet Weather Plan

- Once conceptual level wet weather plan facilities have been identified, we will conduct a more detailed environmental review in the form of an Environmental Impact Assessment which further evaluates the community impacts identified during the alternative's evaluation. This assessment will serve as the Uniform Environmental Review.
- A report will be proposed that follows the format laid out in PADEP's Technical Guidance Document 381- 5511-11. The report will discuss the environmental consequences and potential mitigation of the proposed facilities for land use, recreational use of land and streams, water and air quality, noise, odor, vehicular and pedestrian traffic, socio-economic issues, miscellaneous environmental considerations, as well as aesthetic and property impact for use in the Act 537 Plan.
- A draft Report will be submitted for PWSA comments.
- **The number of projects to be evaluated has yet to be defined through the wet weather planning work. For this reason, a total of no more than 20 projects has been assumed that will require assessment.**

Deliverables: Draft and Final Environmental Impact Assessment Report.

8. 3rd Party Assessment of Sewer Assets

- Regionalization involves the voluntary transfer selected municipal sewers and sewer facilities in the service area over to ALCOSAN. This is intended to reduce the financial burden on PWSA and allow ALCOSAN to more directly manage and reduce excess flows into the system. **This will be accomplished by ALCOSAN assuming ownership and maintenance of approximately 60 miles of large, multi-municipal trunk sewers and associated facilities (upstream diversion structures).**

- The purpose of this task will be to review PWSA sewer assets that are proposed to be transferred to ALCOSAN via the regionalization initiative. We will review the assets and provide documentation needed to support transfer.
- This is a study and does not include regionalization negotiation support for the ALCOSAN agreement.
- A Draft PWSA Assets Review TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final Assets Review TM; Applicable support documents.

9. Post Construction Evaluation of GI Effectiveness

- We will evaluate the performance of up to **fifteen (15) Green Infrastructure projects** in various states of design and construction that are being constructed with the intent to reduce stormwater inflow to the sewer system. To support estimates of effectiveness of these projects and potential future similar projects, post construction monitoring of the performance of these projects will need to be conducted.
- **Our team will install flow monitors at up to 30 locations for a period of 8 months to collect on performance.**
- **Data from the 3RWW rain gauge network data and up to 6 site specific rain gauges will be used to document precipitation.**
- **PWSA will provide design reports, modeling and plans produced by others along with historical rainfall and flow data collected prior to the start of the projects for use in comparisons.** Post construction data collected on other projects and any related reports will also be provided.
- We will compare the data and provided an evaluation of the resulting effectiveness of the various projects. A Draft GI Project Effectiveness TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final GI Flow Monitoring Plan; Draft and Final GI Project Effectiveness TM

GENERAL ASSUMPTIONS

- All deliverables will be provided electronically
- PWSA will provide comments on most deliverables within 14 calendar days; Task 6 deliverable comments will be provided within 30 calendar days
- Comments will be provided by PWSA electronically using document control software
- Meeting duration assumed to be typically 1 to 2 hrs (50% virtual; 50% in person)
- Workshop duration assumed to be typically 4 to 8 hrs (In person)

SCHEDULE

- The project is expected to cover a three-year period with the potential for up to three one (1) year extensions. Extensions of the schedule may impact level of effort.
- The tasks and their general anticipated duration are provided below:

Task	Anticipated Duration
Task 1	36 Months
Task 2	18 Months
Task 3	30 Months
Task 4	18 Months
Task 5	36 Months
Task 6	12 Months
Task 7	12 Months
Task 8	9 Months
Task 9	12 Months

PWSA TASK ORDER/AMENDMENT EXHIBIT C INSTRUCTIONS

**An additional Exhibit C or D may be used if space provided is not sufficient.*

General Instructions

1. **DEFINITION:** A task is a type of service that will be performed in a Task Order or Amendment, for example, it might be Design Engineering, or Construction Management, or Field Inspection. A project budget may contain individual budgets for each type of service. A Task Order or Amendment may provide for one or more type(s) of service. When preparing this Exhibit C, make sure that each type of service is separately annotated, and that the cost of labor and expenses for each type of task (budget code) is distinctly represented. PWSA's goal is to individually track the cost of each type of task or service. Should the amount of staff needed exceed the total number of columns, you may provide an additional completed template for each Exhibit. Just be sure your TO/Amendment Total Fee matches as an accumulative value.
2. See the Budget Codes tab for an explanation of where a Task type should be applied in this Exhibit.
3. Use these Exhibit forms as is. **Do not attempt** to alter them. **If they are altered they will be rejected.** If a change should be considered, discuss with your PWSA point of contact.
4. **Be sure** that all labor rates used in these forms are consistent with the rates used in the Master Services Agreement.

Exhibit C.1

Purpose: Exhibit C.1 identifies the Consultant's staff members who will contribute to each Task type to be provided, their MSA classification, their Task Order role, their anticipated labor hours, and their labor costs.

1. The Consultant's Scope of Services must be defined according to the distinct tasks that apply to a project budget code. The cost to perform each Task must be captured on this Exhibit.
2. On Row 45, enter each Consultant staff member name in a different column.
3. On Row 46, enter each Consultant Staff member's Master Service Agreement classification in a different column.
4. On Row 47, enter each Consultant Staff member's Task Order role in a different column.
5. Enter the hours each staff person will contribute to each task in the rows below each staff person's name. **If it doesn't apply, leave row blank.**
6. Enter the Subconsultant markup as an integer or decimal number (field is coded as a percentage). The spreadsheet will calculate the Total Hours and Total Labor Cost for the Consultant.

Exhibit C.2

Purpose: Exhibit C.2 captures the Consultant's anticipated expenses. **Note that there is a table section for each Task type (budget code).**

1. Exhibit C.1 will auto-populate each staff person's name in the appropriate row.
2. In Column B enter the type of expense that will be invoiced, e.g. mileage, hotel, auto rental. These fields are editable.
3. The spreadsheet will calculate the total costs by person and by task.
4. Repeat 1 - 3 for each Task type.

Exhibit C.3

Purpose: This table captures the Sub Consultants' anticipated costs and MBE/WBE/VBE/SDVBE classification. **Note that the entries in this table are all inclusive of both labor and expenses.**

The details of this data must be reflected in the required attached Sub Consultants' proposals.

1. Enter the name of each Sub Consultant firm in the Columns of the table.
2. Enter the cost **by task** of each Sub Consultant firm.
3. The spreadsheet will calculate the total costs by Sub Consultant and by Task.

Exhibit C.4

Purpose: In this Exhibit C.4, the Consultant should enter into lines 4, 5, and 6, as needed, any stipulations PWSA should consider about the Task Order or Amendment proposed budget.

Note that items 1, 2, and 3 are required by PWSA, and cannot be changed.

Exhibit C.4: ASSUMPTIONS

LIST OF ASSUMPTIONS RELATED TO BUDGET AND EXPENSES - List any conditions the Consultant places on the Budget and Expenses indicated above.

1	Consultant shall notify the Authority's Representative when expenditures based upon the billing of this Task Order reaches 50, 75 and 90% of the total budget, and an estimate of the time and funds necessary to complete the work. If additional funds are requested and not authorized in writing by the Authority's Representative, the Consultant shall reduce the scope of work to complete within the funds available.
2	In no event shall the Consultant's total billings for the services performed under this Task Order exceed the approved Fee amount without the Authority's written authorization and notice that it has approved an increase in the budget limit and funds available.
3	Should a key or non-key staff person not listed on an approved Task Order get assigned to the task, an Action Item to the project manager will suffice to acknowledge the change without an increase to the overall total fee. This MUST be done within 30 days of the assignment, preferably before PWSA receives the invoice for the time in which work was performed. Project Managers have the right to reject or accept the assignment of a staff person with proper justification. The consultant has the right to appeal that decision to the Director of Engineering and Construction.

Pittsburgh, PA 15222

RE: Letter of Commitment
PWSA Wet Weather Program Manager

Dear Mr. McBride:

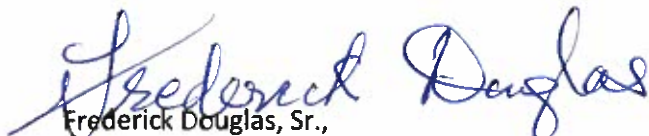

Cosmos Technologies Inc. (Cosmos) is pleased to be part of the team with Wade Trim for the above-referenced project.

We understand that Cosmos will provide General Civil Engineering Support and Field Services Support for flow monitoring. Our contract value is \$338,330.00.

Cosmos is a certified Minority/Disadvantaged Business Enterprise (Certification I.D. 1098).

If you require any additional information, please do not hesitate to contact me or Holly Douglas at (412) 321-3951 (office) or via email at hdouglas@cosmostechnologiesinc.com. Thank you for the opportunity.

Very truly yours,

Frederick Douglas, Sr.,
President

October 25, 2021

Mr. Jason McBride
Wade Trim
Three Gateway Center
401 Liberty Avenue, Suite 1600
Pittsburgh, PA 15222

**Subject: Letter of Commitment – PWSA Project No.: 2021-OPS-116-0
PWSA Wet Weather Program Manager**

Dear Mr. McBride:

Monaloh Basin Engineers thanks you for the opportunity to team with Wade Trim on the Pittsburgh Water & Sewer Authority (PWSA) Sludge Chamber Pump Project Contract. This letter serves as a commitment by Monaloh Basin Engineers, a certified Disadvantaged Business Enterprise (DBE), to participate in a subconsultant role with Wade Trim with a commitment price of \$990,000, which represents 5.84% of the contract.

We welcome the opportunity to provide you with engineering support service for the following types of projects related to this contract:

- Survey
- CAD Support

We look forward to working with you on this project.

Sincerely,

MONALOH BASIN ENGINEERS

Massy Paul
President

Task Order No. WT-PRGM-09

Task Order Name: Model Development and Calibration for Wet Weather Program Manager Project

This Task Order Amendment is made as of the Effective Date, by and between **The Pittsburgh Water and Sewer Authority** (the “Authority”) and **Wade Trim, Inc. (Ops)**, (“the Consultant”).

Consultant Firm: Wade Trim, Inc. (Ops)

Contract Name: Wet Weather Program

Agreement between the Authority and the Consultant dated 11.01.2021

Prior Task Order/Amendments Applicable to this Task: N/A

The schedule for the completion of the Services under this Task Order is incorporated herein. The details of the schedule are as follows or as detailed in the separate schedule, attached as Exhibit B. The time limits established by the schedule shall not be exceeded without reasonable cause. The schedule may be amended with the Authority’s written consent as the Task proceeds.

Start Date:	11.01.2021
Completion Date:	10.31.2024

The Authority’s budget is attached hereto as Exhibit C and incorporated herein.

Where the Fee is based on Agreement rates, the Fee may not exceed the budgeted amount. The budget may be amended with the Authority’s written consent.

Fee:	\$4842049.98				
MBE:	4%	WBE:	14%	SDVBE:	%

A detailed Scope is attached hereto as Exhibit A and incorporated herein.

Exhibit A: Scope of Services

Project Manager:

Ana Flores

Date Approved:

11.09.2021

**PITTSBURGH WATER AND SEWER AUTHORITY
WET WEATHER PROGRAM MANAGER
PWSA PROJECT NO. 2021-OPS-116-0
FINAL SCOPE OF SERVICES**

PROJECT OBJECTIVES

The specific objectives of the Wet Weather Program Manager are as follows:

- Assist in developing PWSA's Long Term Control Plan (LTCP) for the control of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) remediation plan, which will comprise a Wet Weather Plan or one or more similar documents. Provide program management services, advise, and consult with PWSA, its engineering staff, and its legal counsel (including translating technical information into a form useable by counsel) in the negotiation of a consent decree with the United States and Pennsylvania Department of Environmental Protection (DEP) addressing, among other things, the control of CSOs and remediation of SSOs from PWSA's sewer system (a Wet Weather Decree).
- Develop plans for improvements of PWSA sewer system facilities to bring combined sewer overflows into compliance with the CSO Control Policy and to remediate SSOs.
- Perform a level of service peer review and identify the current stormwater level of service the current PWSA system provides.
- Develop a range of alternatives to provide control and management of stormwater and manage basement backups and overland flooding to an appropriate, affordable level of service.
- Assist PWSA and its legal counsel in the coordination of planning, regulatory obligations, and capital improvements with upstream and downstream municipalities and ALCOSAN, where applicable.
- Conduct evaluations to account for the impact of projects implemented under ALCOSAN's consent decree and regionalization program on PWSA's development of CSO and SSO controls, and vice versa.
- Perform engineering and public participation activities in support of the development of a Wet Weather Plan, and obligations arising under municipal orders, enforcement orders, and any Wet Weather Decree entered into by PWSA.
- Develop analyses to assist PWSA's legal counsel in its addressing regulatory and legal issues associated with wet weather planning, including resolution of related enforcement actions.

SUMMARY OF WET WEATHER PLANNING TASKS

Program management services include oversight and coordination of the following activities in support of the development of a Wet Weather Plan or similar planning documents, consisting of a LTCP to control CSOs and a plan to remediate SSOs (collectively, a Wet Weather Plan in connection with the above negotiations), and plans to provide effective stormwater management. The wet weather planning work typically includes those engineering activities required to produce plans and other deliverables to be submitted to regulatory agencies, including the DEP, the Allegheny County Health Department (ACHD), United States Department of Justice,

(DOJ), and the United States Environmental Protection Agency (EPA). Many of the tasks will require familiarity with and the use of guidance documents issued by EPA and DEP. The production of interim work products and the Wet Weather Plan will be in support of negotiating a consent decree, assisting PWSA in complying with the requirements of the Wet Weather Decree and other regulatory requirements arising under the Pennsylvania Clean Streams Law and the federal Clean Water Act (CWA).

The following is a list of the tasks to be performed by the Wet Weather Program Manager.

- Task 1 - Program Management Services
 - Support the negotiation and the development of a consent decree and development of a Wet Weather Plan
 - Provide on-call engineering services
- Task 2 - Data Gathering
 - Review and determine DEP Act 537 Plan update requirements and permitting requirements for conveyance, storage and treatment
 - Review EPA guidance documents relating to CSO and SSO control
 - Review CSO/SSO consent decrees entered by other municipalities, as well as LTCPs and SSO elimination plans developed by other municipalities
 - Map with GIS, delineate and collect field survey data within planning basins.
 - Investigate sewer system and develop a system characterization study for PWSA's combined and sanitary sewer systems
 - Conduct site investigation
 - Evaluate the impact of CSOs on receiving waters
- Task 3 - Model Development and Calibration
 - Monitor flow and hydraulic conditions to inform system characterization and the selection of CSO and SSO controls
 - Develop a hydraulic and hydrologic model for PWSA's combined and sanitary sewers that reflects prior modeling information and additional monitoring data
 - Perform level of service peer review and develop current level of service thematic map
- Task 4 - Alternative identification and prioritization
 - Develop an alternative analysis for the control of CSOs and SSOs, including the development of cost-performance curves to assist in analysis
 - Develop an implementation schedule for CSO and SSO controls informed by and coordinated with a financial impact and affordability analysis
 - Identify CSO and SSO control technical alternatives
- Task 5 - Stakeholder Coordination
 - Coordinate wet weather planning and program development efforts with ALCOSAN and other municipalities in the Pittsburgh Region
 - Coordinate wet weather planning and program development efforts with community outreach and stakeholder engagement initiatives
 - Develop public participation program to inform wet weather planning and program development efforts

- Public participation program
- Task 6 - Final Act 537 Plan and Wet Weather Plan/LTCP and Recommendations
- Task 7 - Conduct environmental impact assessments of projects
- Task 8 – 3rd Party Assessment of Sewer Assets
- Task 9 – Post Construction Evaluation of GI Effectiveness

DETAIL OF WET WEATHER PLANNING TASKS

1. Program Management Services

1.1 Program Management

1.1.1 *General*

- Provide program management services that include oversight and coordination of activities in support of the development of a LTCP to control CSOs and a plan to remediate SSOs.
- A Program Management Plan will be prepared that summarizes the procedures that will be used to manage the program. Our PMP will include Program Scope & Goals, Program Constraints, Program Performance Metrics, Program Organization, Project Controls, Safety, Quality Assurance, Communication Protocols, Environmental & Permits Compliance and Risk Management. A draft Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.
- Ongoing management, coordination with PWSA and team members, communications, and project management activities will be conducted to manage the work.
- Ongoing document management will be conducted to facilitate file sharing between PWSA and our team.
- Develop and manage program schedules. An overall baseline schedule will be developed and updated monthly to reflect the progress of the work.
- Manage quality assurance/quality control of programs. A QA/QC plan will be developed and documented in the PMP. Quality reviews will be documented and conducted on all deliverables.
- Prepare and present periodic status program and project reviews, including establishing formal and informal milestones and performance metrics. Performance metrics will be developed and documented in the PMP. Monthly progress reports that include a summary of work activities completed during the previous period, planned activities for the next period, and critical action items will be prepared and submitted to PWSA as part of our monthly invoicing.
- Conduct meetings with PWSA, its engineering staff, and its legal counsel as needed to discuss the progress of the project and review key deliverables. These meetings may include a project kickoff meeting, as well as meetings with the executive PWSA team to present an executive summary of the progress of the project and key decisions needed to be made. Agendas and presentation materials will be prepared. Meeting summaries will be submitted following the meetings. **A total of 72 progress meetings, 12 miscellaneous meetings and 6 executive sessions have been assumed.**

- Provide planning-level risk management in accordance with industry standards and guidelines. A risk management plan will be prepared and included within the PMP. An initial risk development workshop will be held to review and provide input on the plan and risk register. The risk register will be updated on a quarterly basis and discussed within the regular progress meetings.

Deliverables: Draft and Final Project Management Plan; Meeting Agendas, Presentations and Summaries; Monthly Progress Reports, Schedule and Invoicing; Risk Registers

1.1.2 Regulatory Support

- The purpose of this task will be to advise and consult with PWSA, its engineering staff, and its legal counsel in the negotiation of a consent decree. Meetings will be held to prepare for EPA meetings, discuss matters with EPA and debrief on follow-up items. Agendas, technical work, presentation materials, and meeting summaries will be developed for all meetings.
- **A total of 108 meetings have been assumed over a 36-month period at an average level of effort of 16 hours/meeting for regulatory team preparation and attendance and 100 hours/month for technical support time to develop content, review, documents, and address questions from EPA or others.**
- The purpose of this task is to establish compliance priorities and to provide support to PWSA in the ongoing discussions with US EPA and PA DEP to work towards acceptance of required compliance deliverables, an LTCP 1080+ approach as it is developed. We will provide technical support and guidance for the ongoing negotiations with USEPA and PA DEP under this task by helping to gain regulatory acceptance for PWSA's compliance strategy.
- The goal of this task will be to define strategies to develop the various work approaches, programs, descriptions for capital projects, capital costs/benefits, and schedule implications for presentation to regulatory agencies. We will also review and evaluate any deliverables or documents submitted to US EPA, PA DEP and others as directed that may have impact on the CSO update / Integrated Plan and schedules.
- This task will be managed on a time and material basis as directed by the PWSA and working in conjunction with the legal and rate consulting teams to develop specific products to support regulatory discussion.
- The focus of this task will center on meetings and staff work on development of documents to support the negotiation process and work to gain acceptance for compliance documentation. Much of the work will be driven by evaluation of existing compliance documents, development of PWSA LTCP goals and guiding deliverables to build a case for technical acceptance by US EPA and PA DEP.

Deliverables: Meeting Agendas, Presentations and Summaries; Various correspondence needed to support ongoing discussions

1.1.3 Other Services

A. CMOM Program

The purpose of this task is to develop and document a Capacity, Management, Operation and Maintenance (CMOM) program. We will review existing information on CMOM activities, meet with PWSA to understand the program and develop a recommended plan for PWSA.

PWSA's Capacity, Management, Operations and Maintenance (CMOM) Program forms the foundation for PWSA to meet its customer service demands, sustain infrastructure performance, comply with regulatory requirements, and manage its resources. The objectives of this task are:

- Compile PWSA's current CMOM documentation and assess the program components against industry best practices, PWSA's organizational goals, and applicable regulatory requirements
- Develop a set of priority improvements to address potential gaps identified in the assessment
- Establish a Program Document that, when implemented, provides a proactive defense from regulatory enforcement action and leads to improved system performance and cost savings.

CMOM assessment will benchmark PWSA's current program against likely EPA Region 3 expectations, regulatory precedence, and utility best practices. This review will be focused on the sanitary sewer service area of PWSA and the capacity assurance, management, operations, and maintenance activities specific to that portion of the system. It is assumed that the Nine Minimum Controls (NMC) activities of PWSA cover similar aspects for the combined sewer system and are outside the scope of this effort.

We will assess current programs, policies, and practices. Existing documentation will be compiled and evaluated to establish priority areas for improvement. The assessment will include evaluation of SSO causes, review of existing CMOM documentation, interviews, and field observations.

We will evaluate PWSA's SSO data to develop an understanding of the number and volume of sanitary sewer overflows by cause over the past 5 years (2016-2020). SSOs will also be plotted in GIS to identify any geographic trends. The SSO cause and spatial analysis will allow us to consider how PWSA's CMOM Programs are structured to solve system-specific needs.

We will submit an information request to PWSA to gather existing CMOM-related program documentation, policies and procedures. We will review existing documentation, assess the completeness of the program, and identify potential gaps with accepted best utility practices in the following areas:

- Goals, Visions and Support
- Organization
- System Knowledge
- Capacity Management

- Engineering and Construction
- Asset Inspection and Condition Assessment
- Rehabilitation and Replacement Program
- Maintenance Programs and Procedures
- FOG Program
- SSO Tracking, Analysis and Reporting
- Overflow Emergency Response
- Budgeting
- Training
- Safety
- Customer Service
- Information Management
- Information Systems

We will conduct interviews with PWSA staff over a 5-day period, including personnel from management, engineering, planning, operations and maintenance. During the interviews we will discuss policies and practices related to organizational structure/communications, work management processes, information management processes, inspections; rehabilitation (pipeline, manhole, and removal of illegal connections); fats, oils, and grease (FOG) control; new construction standards and inspections; Emergency Response Procedures; preventative, predictive, and corrective maintenance practices including sewer cleaning; and staff training, knowledge skills, and abilities.

Observation of the operations and maintenance (O&M) crew work practices will validate what was heard during the interview process and identify additional opportunities for improvement. A senior collection system operations expert will spend 2 days in the field observing the way in which crews accomplish O&M tasks such as inspections, CCTV, line cleaning, point repair, root control, pump station maintenance, and emergency response where possible.

The results of the CMOM Program assessment will be presented to PWSA in a workshop with recommendations for improvements. Based on PWSA's feedback and input, an Implementation Plan will be established that identifies areas for improvement, the scope of effort involved by both our and PWSA staff, estimated labor-hours and schedule. The Implementation Plan will focus on improvement that provide maximum benefit to PWSA.

- Describe the Gap Assessment framework including regulatory requirements and effective industry business practices
- Present the SSO cause analysis results
- Confirm PWSA's CMOM Program goals
- Gain input on our assessment of current business practices and programs
- Prioritize areas for improvement. The prioritization process will consider the current program status, as well as the importance of the various programs and practices in meeting PWSA's specific CMOM Program goals
- Develop consensus on improvement areas and priorities.

Based on the results of the workshop, we will develop a CMOM Program Summary, documenting the CMOM assessment, and a Work Plan for high impact improvements to current programs and practices. We will conduct a final consensus workshop to validate the draft CMOM Program summary and allow staff to make adjustments before finalizing the Work Plan. We will finalize the CMOM Assessment to include the agreed upon improvement initiatives and proposed timelines. A draft overall CMOM Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.

Ongoing support activities such as training, data review, and development of procedures can also be conducted to assist PWSA in implementation of the plan as an additional service.

Deliverables: Draft and Final CMOM Plan

Level of Effort Assumption:

- **Will conduct two (2) workshops and up to 5 days of interviews and field visits with PWSA Staff.**

B. Assist with PWSA's Nine Minimum Controls (NMCs) program

- We will review existing NMC documentation and provide a Technical Memorandum summarizing review comments and recommendations.
- **Ongoing support activities such as training, data review, and development of procedures can be conducted to assist PWSA in implementation as an additional service.**

Deliverables: Draft and Final NMC Review TM

1.2 On-call Engineering Services

1.2.1 General On-Call

To support the development and ongoing progression of the Wet Weather Plan, various engineering services may be required at the request of PWSA. Specific tasks will be identified and a mutually agreeable scope, budget and schedule to complete the task will be developed by Wade Trim and PWSA. In general, examples of the services that may be performed under this task include:

- Conceptual infrastructure studies
- Design and construction engineering services
- Asset management activities
- Value engineering studies
- Oversight of consultants that may perform design and construction engineering services for wet weather projects.
- Coordinate the design of PWSA system improvements developed as part of the wet weather planning efforts with proposed improvements of the ALCOSAN and upstream/downstream municipal systems

An allowance has been established to support these activities. Work will be performed at the approval of PWSA and up to the limit included in this authorization.

Deliverables: To be determined based on nature of approved task activities.

1.2.2 Sewer Condition Assessment

This task has been removed from the scope.

1.2.3 Asset Management

The general objective of this task is to develop the methodology and best practices to assist PSWA better manage their assets. Asset Management (AM) services will focus on aligning strategic objectives with stakeholder level of service expectations to develop a risk-based approach to manage the entire lifecycle of program assets. Collaboration with PWSA staff will be integral to success and initial efforts will focus on understanding current best AM practices, identifying gaps, and developing an actionable roadmap for AM implementation. Implementation items will be prioritized and quick win and near team activities that achievable and provide the most value to PWSA will be identified. AM implementation assistance will be provided based on PWSA requests for assistance. Planned AM Services include:

- Review and assess the existing AM program and system operational documentation and provide a gap analysis relative to utility best practices and develop recommendations
- Develop or Update the PWSA Asset Management Vision to incorporate key wet weather program priorities
- Form and charter an AM team of PWSA key staff that can build and then take on the implementation of the program
- Develop AM program charter and AM methodology and best practices training content
- Conduct AM program evaluation and gap analysis between current and desired future state
- Prepare actionable AM program implementation roadmap that details prioritized AM activities
- Organize, integrate, and embed overall PWSA strategic goals in the AM framework and corresponding LOS goals and evaluation criteria for alternative evaluation
- Develop and enhance PWSA's use and operation of Innovyze Info Asset Manager including training of existing staff.
- Organize system replacement and future CIP data for use in the alternative evaluation
- Coach and mentor PWSA staff using subject matter experts that can provide guidance on continuous AM program development
- The following strategic and tactical topics will be discussed with each of the groups listed above, as applicable, as part of the assessment:
 - Decision Making and Capital Planning
 - CIP Development and Prioritization
 - Design & Construction
 - Funding
 - Information Systems and Data Management
 - Data Systems Tools
 - Organizational Framework
 - Communications

- Risk Management
 - Operations and Maintenance
 - Inventory/Warehouse
 - Maintenance Strategy
 - Operations Strategy
 - Optimization
 - Culture and Change Management
 - Document Management
 - Leadership and Commitment
 - Levels of Service and Performance Evaluation
 - Resource Management
- This task is intended to establish a program that PWSA can run independently. **Ongoing support beyond the budget for this task can be provided to support activities as an additional service.**

Deliverables:

Information Request, copies of meeting materials, draft and final AM program charter, AM training materials, AM gap analysis, AM roadmap and supporting materials developed as part of implementation activities.

1.2.4 Compliance Review of Selected Sewer Improvement Projects

PWSA has identified two (2) sewer improvements projects (Browns Hill Road Pump Station and 31st Ward Sewer System) that PWSA plans to procure outside consultants and start work 12 months from the NTP of this contract. **PWSA will maintain a project manager to provide administrative oversight of outside consultant activities.**

In general, our activities will include:

- Reviewing and providing input on outside design sewer consultant RFPs.
- Conducting 30%, 60%, and 90% compliance reviews to assess ability of the proposed design to meet regulatory requirements.
- Coordination meetings to discuss reviews and responses.

Deliverables: Technical Review Comments

Level of Effort Assumptions:

- **Attendance at up to 8 project meetings total among 2 projects**
- **Technical review of design discipline work and constructability reviews will be conducted by others.**

2. Data Gathering

2.1 Evaluate existing information and analyses

- Review wet weather-related studies in the region, such as the ALCOSAN Clean Water Plan, 2008 Feasibility Report, 2013 PWSA Feasibility Report, 2016 Citywide Green First Plan, Controlling the Source, RAND Climate Change study, PWSA's current Stormwater Master Planning initiative, and other documents that PWSA deems appropriate.
- Sections in an Existing Data Review TM will be prepared that summarize important findings and information relative to the current study effort.

Deliverables: Draft Existing Data Review TM Sections

2.2 Gather county, state and PWSA system information (sewer maps, inspection data, hydraulic overload problems, ACHD complaints)

2.2.1 Data Gap Analysis

- Relevant data that Allegheny County and State agencies may have will be requested and reviewed.
- PWSA will provide:
 - Existing GIS system database of existing sewer assets and any required sewer maps (critical information includes pipe diameters, lengths, invert elevations, and rim elevations).
 - Inspection and sewer back up complaint data
 - Information on known sewer hydraulic bottlenecks and surface flooding issues
 - Known areas of heavy inflow and infiltration, SSO and CSO locations
- Data relative to sewer and street flooding will be requested from ACHD and information provided reviewed and incorporated into the project GIS database.
- Additional existing collector sewer system information and reporting data will be reviewed. The Existing Data Review TM will be updated with the findings from other tasks. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- A Data Gap Analysis TM will be prepared that summarizes additional data collection and field investigations needed to support the study along with a level of effort. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Existing Data Review TM; Draft and Final Data Gap Analysis Review TM

Level of Effort Assumption:

- **Assumes that the existing PWSA GIS database of sewer data is of sufficient accuracy to support the planning level activities**
- **Assumes approximately 200 staff hours/month for 6 months**

2.2.2 Determination of Critical Areas

- Complaint records provided by PWSA will be reviewed and screened to identify issues related to documented system problems. A map of complaint locations for sewer backups and street flooding will be developed.
- **A significant number of pipes covering the local systems is not included in the current PWSA hydraulic models. It is anticipated that inclusion of all the sewer elements would be a significant undertaking from a data collection, model upgrade and model run time perspective. Therefore, the base models will be expanded to focus only on critical areas that have experienced historically high levels of sewer back-ups and/or street flooding. All system pipes (storm and sanitary) will not be modeled.**

- A desktop hydraulic analysis will be conducted using the existing hydraulic models for sewers included in the PWSA system for a range of storm events to identify the capacity of the existing sewer lines. Major sewers (>18") not included in the model where adequate physical data is available will also be checked for capacity using existing GIS data (topo, manhole depths); standard pipe capacity calculations; and compared to modeled peak flows adjusted on an area weighted basis. The locations of known complaints will be compared to the capacity check to identify likely areas of concern.
- "Critical portions" of the PWSA system will be identified. "Critical portions" include pump stations, trunk sewers, points of overflow activity, basement back-up areas, surface flooding, or areas of excessive infiltration and inflow (I/I). At the time of this scope preparation, the number of critical areas is unknown. **For the purposes of this task, it is assumed that 20 to 30 sewer backup and 6 to 10 stormwater flooding subsheds will be identified for further analysis.**

Deliverables: Draft and Final Critical Areas Definition TM

2.3 Investigate PWSA sewer system

2.3.1 Stream Inflow and Acid Mine Drainage (AMD) Map

- Identify and locate any stream inflow sources and acid mine drainage discharges along the critical portions of the PWSA sewer system using **existing data sources**. The potential sewersheds for stream inflow sources will be identified from the past and pending regional flow monitoring work, and PWSA input.

Deliverables: Draft and Final Stream Inflow and AMD Map

Level of Effort Assumptions:

- **No field work such as stream walks, sampling, or other investigation will be conducted.**

2.3.2 Field Data Collection Allowance

- Upon approval from PWSA, work to conduct additional field data collection activities identified with Task 2.3.1 will be conducted within the available budget included within the field allowance. Field data will be entered into the appropriate asset management databases. Additional field collection efforts shall be conducted as an additional service.
- The proposed field data allowance was developed based on an assumption of 400 days of field survey intended to collect data on approximately 8,000 structures (based on 20 structures/10 hr-day @\$2,200/day including survey and post processing). This data includes limited spot checks of approximately 10% of existing modeled areas and assumes data can be collected from the surface without the need for confined space entry or significant traffic control procedures. **No LIDAR, detailed topographic and surveys on private property or within homes for purposes of determination of basement inverts or first floor elevations**

- A summary of the data collected will be provided in a draft and final Field Data Collection Summary Technical Memorandum.

Deliverables: Draft and Final Field Data Collection Summary TM, Field notes and database

2.4 Coordinate on System Improvements and Technical Alternatives with Others

- Request and coordinate with ALCOSAN/municipalities to obtain information on proposed system improvements for use in study work. This includes information on proposed tunnels and consolidation sewers, CSO regulator, pumping, storage tanks, RTBs, Green Infrastructure, Source Control, WWTP and other improvements that can impact overflows in the PWSA collection system.
- A review will also be conducted of major development and PWSA projects (that would have an impact on planning efforts) to determine which should be advanced into the model. It is assumed that PWSA will provide the hydraulic, as-built and/or survey data relative to these improvement projects. **Assumed no more than 10 sewer improvement projects will be included.**
- A summary of the proposed major improvements that will be included in a Baseline Model to evaluate additional alternatives will be documented in a System Inventory TM. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Planned ALCOSAN, PWSA and upstream/downstream municipal improvements will be considered in related modeling and cost analysis in subsequent tasks.
- Ongoing coordination with ALCOSAN throughout the project will also be tracked under this item.

Deliverables: Draft and Final System Inventory TM

Level of Effort Assumption:

- **Assumes up to a total of 60 meetings with representatives of ALCOSAN, Point of Connection (POC) Groups with municipal officials, and 3 Rivers Wet Weather**
- **Assume no new Clean Water Plan design changes**

2.5 Determine regulatory permitting requirements for conveyance and storage

- We will participate in meetings with DEP to establish or confirm the regulatory permitting requirements and related design standards and control approach to be used in the sizing, performance, and layout of facilities to be proposed, designed, or built as part of PWSA's wet weather planning program. **Assume up to 6 meetings for coordination.**
- To prepare for the discussions, a Draft Regulatory Permitting Requirements TM will be prepared that summarizes current criteria for sewers and facilities for PWSA and regional entities along with proposed criteria for facilities to be sized and designed under this program. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Regulatory Permitting Requirements TM

3. Develop and calibrate model(s)

3.1 Water Quality Sampling, Analysis Tool Development and Evaluations

3.1.1 Water Quality Data and Information Compilation, Review and Evaluation

- We will compile and review water quality data and related information for the receiving waters impacted by PWSA wet weather discharges and data on sources of pollutants. This will include:
 - Data collected and provided by PWSA as well as publicly available data. We will also develop a request for data collected by ALCOSAN/3RWW. We will compile water quality data in Excel and/or Access for review and evaluation.
 - Information on the receiving streams, their watersheds/drainage areas, and available modeling for these streams and drainage areas.
 - Additional available data on precipitation, climate, and streamflow may be compiled to support the water quality assessments.
 - Listed impairments and available TMDLs for the receiving streams including pollutants and sources. Other available studies on the receiving streams will be compiled and reviewed.
- This scope of work is based on the understanding that the receiving waters that will be studied for this task are the receiving waters that receive discharges from PWSA-owned CSO outfalls that will not be controlled by the ALCOSAN tunnel construction; these include several Tributary Streams (Chartiers Creek, Nine Mile Run, Saw Mill Run, and Becks Run), and the Main Rivers (Ohio River, Monongahela River, Allegheny River). The primary focus of this task will be on the Tributary Streams, but a summary of the conditions of the Main Rivers within the PWSA service area will be included. We will conduct site visits of the Tributary Streams to assess existing conditions, sediment build-up, stream bank stability, flow restrictions, vegetative cover, and other potential characteristics. Photo documentation of the conditions will be collected.
- **Additional Main River Water quality or other data collection will not be conducted.**
- We will evaluate the available information to characterize existing conditions, spatial and temporal trends, dry versus precipitation event-driven conditions, comparison to water quality standards, and potential cause-effect linkages. We will also assess the ability of existing models to characterize water quality conditions and benefits of control alternatives.
- We will summarize the results of the data compilation, review and evaluation in a technical memorandum. The memorandum will include a data gap analysis including recommendations for additional data collection and model development activities, including cost estimates and potential refinements to the original budget estimates provided. We will submit one draft for review and comment. We will address comments and submit one revised draft for submittal to PWSA. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft Water Quality Existing Data Review TM

3.1.2 Sampling and Analysis

- We will prepare a Sampling and Analysis Plan (SAP) and a Quality Assurance Project Plan (QAPP) to guide the collection of water quality samples to support the characterization of the waterways and sources.
- One draft of the SAP and QAPP will be submitted to PWSA for review and comment. Following PWSA review and comments, we will revise the SAP and QAPP for submission to Pennsylvania Department of Environmental Protection (DEP) and/or the United States Environmental Protection Agency (EPA). Following DEP and EPA review and comment, we will prepare the final SAP and QAPP.
- Sampling activities will include training and orientation with our local, on call sampling team. This work will include site visits to discuss procedures and review sampling locations. This will also include coordination on scheduling of sampling events, tracking wet weather events, and making go/no-go decisions on sampling. We will also coordinate with the analytical laboratory to coordinate bottle shipments, sample deliveries, QA/QC data review, and reporting of results.
- For the purposes of this scope of work, the following assumptions have been made to inform the budgeting of this subtask. The scope and budget will be revisited following completion of the data review and evaluation work. Sampling is anticipated to be conducted between April and October 2022 for the following:
 - **6 locations (2 locations in each of Chartiers Creek, Nine Mile Run, and Becks Run)**
 - **72 total samples (3 baseline, 3 wet events – 3 samples each event for each location)**
 - **Parameters for field measurement: Temperature, pH, Dissolved oxygen, Conductivity**
 - **Base assumptions for parameters to be collected for laboratory analysis: E. coli, TSS, Ammonia, TKN, Nitrates + Nitrites, TP, Ortho**
- Following the initial review of the impairments and stream conditions, the need for additional parameters such as metals, and hardness will be assessed. We will review sampling field notes and laboratory reports following each round of sampling to identify problems or issues needing correction. We will coordinate with the sampling consultant and the laboratory to implement corrective actions.
- Two of the subject watersheds do not have USGS flow gages located on them. Additional flow and/or water level monitoring may be required in these watersheds as well. If needed, effort would be authorized separately.
- Following implementation of the sampling plan, we will perform a data validation review and prepare a memorandum documenting the review.
- We will prepare the project-specific SAP and QAPP, as stated earlier. We will update the water quality characterization with the new data. We will summarize the results of the sampling, analysis, data review, and updated characterization in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and

characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit one draft to PWSA. Following PWSA review and comment, we will prepare the final TM.

Deliverables: Draft and Final Water Quality SAP and QAPP TMs

3.1.3 Water Quality Model Updates

- We will update receiving water models to support the evaluation of water quality assessments. We will update model calibrations using the most recent data (April-October 2022) and will validate model performance. The anticipated receiving waters for modeling and the modeling frameworks are listed below:
 - Chartiers Creek, Nine Mile Run watershed/drainage area: PC-SWMM
 - Saw Mill Run watershed/drainage area: HSPF
 - Becks Run watershed/drainage area: no existing model
 - Main Rivers Model: RMA2 (hydrodynamics)/RMA4 (water quality)
- We will develop estimates of upstream flows and pollutant loads for the calibration period (April-October 2022) based on available data. We will develop meteorological inputs for the calibration period based on available data.
- Calibrations will be performed by applying best engineering judgement to make model calculations as representative of observations as possible. The models will be calibrated using both visual and numerical methods. This effort may employ regressions of observations vs. calculations, minimizing the squares of the residuals of observations vs. calculations, minimizing relative error, minimizing differences in observed vs. calculated means, and minimizing root mean square error, among other methods. For simulations having the appropriate temporal scale, published statistical measures of goodness-of-fit (e.g. percent difference, r^2 , PBIAS) will also be considered in evaluating the strength of the hydrology and water quality calibrations.
- Following calibration, the models will be validated using an independent data set to demonstrate that the model is capable of acceptably reproducing the timing and magnitude of observed data without further changes to the model parameters.
- We will summarize the results of the model updates and calibrations in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit a draft to PWSA for review. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Model Update TM

3.1.4 Water Quality Assessments of Benefits of Control Alternatives

- We will develop and apply the updated and calibrated models to support the assessment of existing conditions and the water quality benefits of control alternatives. We will develop the water quality models for the typical year. We will develop the following water quality model inputs for the simulation of existing conditions for the typical year:
 - Upstream boundary flows and pollutant loads
 - Meteorological inputs, and
 - Sources other than overflows.
- We will characterize water quality conditions for the typical year under existing and baseline conditions. We will assess the relative impact of pollutant sources with respect to attainment of water quality standards for those scenarios. We will prepare an interim technical memorandum documenting the characterization of existing and baseline conditions for the Tributary Watersheds.
- We will apply the water quality models to simulate the water quality benefits of control alternatives. **This scope of work assumes ten (10) separate simulations will be run to assess control alternative benefits.** These may include a combination of simplified control scenarios (for example 25%, 50%, 75%, and 100% reductions of overflows) and specific control alternatives with simulated reductions in overflows from the collection system model.
- For each control alternative simulated, we will evaluate the water quality benefit in terms of pollutant load reduction and improvement in ambient water quality. Attainment of water quality standards will be assessed.
- We will also update the typical year simulation with the final recommended control plan and assess the water quality benefits.
- We will summarize the results of the water quality assessments in a technical memorandum. The memorandum will include discussion of the development of the typical year simulation, water quality characterization of the existing conditions, and water quality benefits of select control alternatives and the final recommended control plan. We will submit one draft to PWSA for review and comment. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Assessment TM

3.2 Monitor flow and conduct hydraulic modeling

3.2.1 Review existing flow data and models

- We will review flow data and models previously collected by PWSA and ALCOSAN to identify modeling and data needs to support the wet weather planning process. In general, this review will include locations, durations and quality of available flow monitoring data as well as determination of availability of models and the extent and quality of the calibration/verification of these models. **Up to 10 watershed models are assumed to be reviewed as a part of this effort.**

- An Existing Model Review TM will be created to document the available modeling sources and to identify data needs to expand or improve the models. This memo will also identify the various design storms, typical year precipitation, boundary conditions, and model scenarios (Existing, Baseline, Future, etc.) needed to support the project.
- **It is assumed that the starting model version for this project is the ALCOSAN Existing Conditions 2020 Model developed using SWMM version 5.1.012. This model includes a representation of the WWTP, deep and shallow cut interceptors, all diversion structures, combined sewer overflow outfalls and storm, combined and sanitary tributary areas. This model is anticipated to be expanded using historical and current modeling elements that have been developed under various PWSA efforts.**
- A summary of the available historical rainfall, stream level and flow monitoring data will be prepared and included in an Historical Flow Data Review TM. This TM will also document ongoing permanent precipitation, permanent flow meters, and stream gages that are available to support the work. **PWSA will provide available historical precipitation, stream and flow data.** Available data on high water flooding marks will also be summarized in this memo for critical stormwater flooding areas. **Field work to investigate or identify high water marks will not be collected.**
- During this process, we will develop a Model Data File Management procedure and implement to assist with model input and output file management. Procedures and Protocols will be summarized in a Model Data Management TM.

Deliverables: Draft and Final Existing Model Review TM; Draft and Final Historical Flow Data Review TM; Draft and Final Model Data Management TM

3.2.2 Develop a flow monitoring plan and collect flow data

- A detailed Flow Monitoring Plan TM will be developed to support the model expansion and system characterization effort guided by the approach outlined in this section. The Plan is expected to include proposed methods for flow monitoring in Critical Areas and I&I sewersheds with sections that cover, purpose and objectives, monitoring techniques and procedures, data management approach, QA/QC protocols, and maps of proposed deployment locations.
- **It is assumed that PWSA can provide all necessary radar-rainfall data needed to characterize precipitation in the service area.** The radar rainfall information will provide area-weighted rainfall hyetographs for each model subcatchment using existing regional permanent rain gauges. **To supplement this data, we will deploy up to 20 temporary project rain gauges for no more than 9 months.**
- We will deploy sewer system flow meters to screen and prioritize tributary areas to support expansion of the system hydraulic/hydrologic model (Calibration monitoring) and for further I/I investigations (micromonitoring).
- **To support model expansion into Critical Areas, up to 100 calibration meters (with a total installed duration of no more than 9 months) will be**

installed to provide information for model calibration in areas of known performance problems. Monitored subcatchments are planned to be between 20 and 75 acres in size.

- In support of Task 3.4, micromonitoring will be used to break down areas of roughly 100 acres or less for further I/I investigations. Up to 40 micrometers (with a total installed duration of no more than 3 months) will be deployed simultaneously for one or two significant rainfalls per location to determine tributary area I/I response. Areas showing significant response would then be targeted for further investigations. Areas showing little response would be screened from further consideration. Micromonitoring durations will be adjusted based on observed rainfall events.
- In support of Task 3.4, up to 40 calibration meters (with a total duration of no more than 6 months) will be installed to provide information for model calibration areas in sanitary areas. We will use the Task 3.4 prioritization information and preliminary micromonitoring to assist with calibration meter placement.
- It is assumed that flow monitoring will be conducted in the 2022 season between March and November. All data will be collected and stored in a database for use on the project.

Deliverables: Draft and Final Flow Monitoring Plan TM; Rain and Flow Monitoring Database

3.2.3 Expand and calibrate hydrologic and hydraulic model for use in planning

- The H&H hydraulic model will be extended up into the PWSA collection system to represent know problem areas with clusters of reported basement backup and areal flooding issues.
- Additional detail included in the historical version of the PWSA model included within Infoworks may also be added to the model to support this work along with significant known system changes. **Up to 400 staff hours for addition of existing detailed model elements such as major sewer projects or other detailed models has been assumed.**
- In Critical Areas with street flooding, the H&H model will also be expanded using dual drainage network techniques, to capture the movement and depth of overland flows along the street network. Depending upon the location of the problem area there may be a natural open channel also that will be included in the model. **Up to 2,500 model elements (channel segments and surface nodes) are assumed to be included in this model expansion within no more than 6 to 10 sub areas. It is assumed that existing topographic data is sufficient to characterize the street geometry.**
- With the hydraulic network expanded into the collection system, the lumped or consolidated hydrologic representation included in the current Existing Conditions model will also need to be discretized so that the generated flows can be distributed in the detailed expanded hydraulic network. This more detailed hydrologic representation will need to be calibrated using the collected flow and depth data. **Up to 4,500 model elements (sewer pipes**

and manhole junctions) are assumed to be included in this model expansion within no more than 20 to 30 sub areas.

- Revisions and expansions of the model will be documented in a Model Update TM.
- Sanitary areas within the H&H model will be calibrated to the data collected under Task 3.2. RTK parameters will be updated to reflect the findings of the new data collected.
- Targeted subarea calibration of areas tributary to up to 140 flow meter locations will be conducted based on the flow data collected under task 3.2. Continuous calibration/validation is anticipated to be conducted to compare metered vs. modeled predictions of flow, volume, depth and hydrograph shape. Industry standards for determination of acceptable calibration will be applied to determine the reasonableness of the calibrated parameters.
- A technical memorandum will be developed to summarize the results of the model calibration.
- A model review workshop will be held with PWSA to present the results of the calibration and discuss approval of the model for use on subsequent planning efforts.
- Upon approval of the model, files for various scenarios (Existing Conditions, Baseline Conditions (Near Term Projects that will be constructed) and Future Conditions (with Interim and Select Plans) will be developed to support the next stages of modeling. **Models will be run for up to five (5) design storm conditions to support level of service analysis.** Models will be run continuously for the Typical Year. Sensitivity scenarios for use in assessing the impacts of future climate change will also be run. Overflow statistics and level of service impacts will be quantified.

Deliverables: Draft and Final Model Update TM; Draft and Final Model Calibration TM; Model Support Files; Model Results Summaries

3.3 Perform level of service peer review and develop current level of service and range of alternatives for increasing level of service.

- A peer review will be conducted to identify the level of service of similar regional communities. Findings of the review will be summarized in a technical memorandum.
- Stress-test the current PWSA collection system to identify the current level of service provided and develop a level of service thematic map.
 - The primary level of service will be evaluated using the existing hydrologic and hydraulic model and the expansion into critical areas of observed sewer back-ups and street flooding will be used to assess collection system capacity for the interceptors and selected main line sewers.
 - A secondary level of service evaluation will be conducted on main sewers > 18" in diameter using a simplified method that compares pipe capacity to flows from the model that will be apportioned based on area. **It is assumed that existing GIS/sewer data provided by PWSA is sufficient for this purpose.**
 - A third evaluation will be conducted to assess "neighborhood" level of

service along a street within a city block. **Representative neighborhood areas (up to 6) will be selected and evaluated in detail to understand if general level of service deficiencies can be expected based on typical Pittsburgh sewer design practices.** Areas that have adequate existing data from either GIS or record drawings to support the assessment. **PWSA to provide detailed sewer drawings of the selected areas for use in this analysis.**

- **PWSA will determine what the level of service guiding principles will be used for stormwater under a separate contract**
- An alternatives analysis to determine the best approach to provide for increased levels of service will be conducted. In general, this is expected to include conveyance improvements that would include replacing existing storm or sewer piping to increase capacity and reduce water levels in the system and streets. The type, size and general location of improvements will be identified and included on maps to show the options.
- Provide a concept screening cost estimate (AACE Level 5) for bringing the current system up to the appropriate level of service for stormwater and sewer back-ups. Costs for increased conveyance systems to achieve higher capacities will be developed for various levels of service. **It is assumed that no more than two level of service scenarios will be costed.**
- Findings of the evaluation will be summarized in a technical memorandum.
- Determine how increased level of service impacts other wet weather planning objectives, including controls of CSOs and SSOs. A Typical Year simulation will be conducted to determine the results impacts on overflow statistics.
- Model base files for Level of Service Improvement Alternatives will developed to support the next stage of integrated planning evaluations.

Deliverables: Draft and Final Level of Service Peer Review TM; Draft and Final Level of Service Evaluation TM; Existing Level of Service Map

3.4 Develop a plan to identify significant areas of I/I and a strategic plan on how to prioritize locations to reduce I/I

- The PWSA system is essentially a combined system, but the upper reaches of the collection system have separate sewer areas.
- We will review and update on the approach to prioritize investigations previously by PWSA. Using data collected under other tasks, we will seek to identify sanitary areas without significant problems that would require no further investigation. Prioritization will occur at a relatively higher level and be refined as the project progresses. Early micromonitoring is proposed to help define the investigation prioritization.
- **Field work and subsequent data review for activities such as smoke testing, site assessments, manhole inspections, SSES investigations, dye testing, and CCTV inspection to support this task will be conducted by others or as an additional service.**
- PWSA will provide available data on effectiveness of historical projects in reducing I&I after improvements have been made.
- We will review the data collected and provided and use to identify areas subject to

elevated levels of I&I.

- By layering of existing GIS information, we will perform a Prioritization Analysis to produce a table and map with preliminary priority areas. We will review the proposed prioritization with PWSA to get input on the preliminary prioritization approach, the resulting priorities, and provide direction on any necessary adjustments.
- Based on the work, estimates of a range of potential I&I reductions (low, medium and high) for use in planning purposes will be developed for use with planning scenarios under Task 4.
- We will develop draft and final versions of an I&I Prioritization Approach TM, which will document criteria, data used, estimated effectiveness, and a priority list of areas. We will submit the draft TM to PWSA for review.

Deliverables: Draft and Final I&I Prioritization Approach TM

4. Identify and prioritize alternatives

The alternative evaluation is expected to be conducted at varying levels depending on the location and ownership. The most detailed efforts will be focused on outfalls solely owned by PWSA and jointly owned outfalls discharging to tributary streams (Level 1 and 2).

- Level 1 – 38 Outfalls solely owned by PWSA
- Level 2 – 33 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging into the Tributary Water Bodies

For these outfalls, it is assumed that up to 3 technologies will be evaluated for each outfall, costing to a Level 5, performance determined, and a recommended solution provided. Outfall solutions will either be combined or enhanced in up to 3 alternatives per basin.

A lesser detailed level of planning will be conducted for jointly owned outfalls discharging to the Main Rivers (Level 3 and 4).

- Level 3 – 116 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging to the Main Rivers
- Level 4 – 20 CSO Outfalls co-owned by PWSA/ALCOSAN, discharging to the Main Rivers and controlled by the planned Regional Tunnels

For these outfalls, it is assumed that up to 3 technologies will be evaluated for up to 10% of these outfalls, costing to a Level 5, performance determined, and a recommended solution provided. This is not intended to replace but to enhance or supplement the current ALCOSAN Clean Water Plan for these outfalls.

4.1 Identify and screen technical alternatives

- The goal of this task is to identify potential alternatives that will provide compliance with the goals of the wet weather planning process, taking into consideration the ability to adapt to future conditions.
- An Alternatives Brainstorm workshop will be held with PWSA to discuss potential approaches to controlling CSO and SSO in the PWSA service area. The

- workshop will include a review of the planned ALCOSAN improvements, previously planned control recommendations from PWSA efforts, various technologies and strategies that have been reviewed historically and any new or emerging technologies.
- We will review and assess potential **technologies** for controlling SSO and CSO in the PWSA service area. Optimization techniques will be applied to narrow the field of **solutions**.
 - A Technology Screening TM will be prepared that summarizes the potential technologies such as source control, green infrastructure, regulator modifications, storage and conveyance that conducts a high-level screening for applicability to the various areas and provides recommended **outfall solutions** to advance to the basinwide alternative evaluation stage. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - An integrated planning approach will be applied that considers **solutions** basinwide that meet both water quality and level of service requirements determined under Task 3.3.
 - An Alternatives Development TM will be prepared to summarize the alternatives that were considered in the evaluation for each outfall or groupings of outfalls. This TM will summarize basinwide alternatives and the recommended systemwide alternative. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - **Six (6) additional Alternatives Workshops with PWSA are planned to discuss the progress and findings from the Alternative Evaluations.**
 - The selected alternative based on the results of Task 4.6 will be further defined (<5% project definition). This work will include development of concept layouts and site investigations to further develop the concept and develop an opinion of cost that is consistent with a AACE Class 4 cost estimate.

Deliverables: Draft and Final Technology Screening TM; Draft and Final Alternatives Development TM

4.2 Identify and screen site development and buffer alternatives

- Initially, a Site Opportunity and Enhancements TM will be prepared to summarize the nature and location of potential opportunities. We will conduct a recommended screening to identify areas with a potential to support effective wet weather controls. A draft TM will be submitted to PWSA for review and comment.
- USEPA-defined Environmental Justice demographic indices will be included into screening evaluation. Sites for alternatives will consider the benefits and impacts to environmental justice communities within the PWSA service area. The potential for providing benefits to these communities through improved wet weather management will be considered along with the direct benefits and impacts of feasible technologies within these communities.
- Our team will meet with stakeholders to identify opportunities for siting of control alternative solutions at locations that may be mutually beneficial for redevelopment or community enhancements. **Up to 16 meetings with stakeholders have been included in the scope for this purpose.**
- For the final recommended alternative identified under Task 4.6, we will update the TM to discuss the potential solution and how it may be enhanced with site

improvements, community benefits, green leave behinds or other features that would create or maintain a beneficial relationship with the various City of Pittsburgh departments, authorities, and key stakeholders (including neighborhood organizations).

Deliverables: Draft, Revised, and Final Site Opportunity and Enhancements TM

Level of Effort Assumptions:

- **Assumes enhanced site evaluations will be prepared to better define project location and site conditions and refine the level of accuracy of the Cost estimate to support a AACE Level 4 cost estimate in conjunction with Task 4.3**
- **Does not include topographic survey, easement acquisition, property acquisition support services, geotechnical exploration, environmental site assessments, or subsurface utility exploration to be included with the site evaluations.**

4.3 Perform a present worth analysis of the feasible alternatives

- A cost tool that can provide estimates for various technologies at an **AACE Level 5** will be developed using unit pricing, engineering judgement and input from recent PWSA and regional projects for purposes of initial technology screening.
- A Costing Approach TM will be developed that summarizes the assumption, development and application of the cost methodology. **Two (2) meetings are included to discuss the approach and development of the tool with PWSA.** A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Costs will be developed for overall total project and lifecycle costs and include the following elements: Construction, Operating, Site surface development and restoration, Operation and maintenance requirements, Utilities and Land acquisition and rights-of-way. PWSA to provide input on administrative, legal and contingencies to be applied to the overall program cost development.
- Initial costs will be summarized and provided to PWSA for review. These will also be included in the Alternative Evaluation TM.
- Costs for budgeting for the selected alternatives for CSO and SSO improvements in the final Wet Weather Plan will be developed to an **AACE Level 4**. Additional effort to look at proposed projects and site constraints include the following:
 - Site visit
 - Develop project footprint layout using GIS and available lidar topography
 - Screening for property changes
 - Looking at local bidding data for potential cost escalation factors
 - Determine estimated quantities of facilities

Deliverables: Summary of Costs, Updates to the Draft Alternative Evaluation TM.

4.4 Perform a knee of the curve analysis of wet weather controls and water quality benefits

- An analysis comparing costs to performance metrics will developed to assess the

point of providing a value based recommended alternative. This analysis of the costs of varying CSO, SSO and stormwater control alternatives shall be in conformance with the CSO Control Policy and relevant guidance.

- Varying levels of optimization assistance tools will be used to evaluate alternatives to guide development of performance.
- Areas will be prioritized for optimization. Outfalls with planned improvements (by Others) or minor adjustments needed to meet criteria will not be optimized.
- **An optimization software license covering a 24-month period is included in the current budget. It is expected that advanced optimization will be applied to approximately 40 areas.**
- Performance curves will be included in the Alternative Evaluation TM.

Deliverables: Updates to the Draft Alternatives TM

4.5 Analyze financial affordability

- Coordinate with PWSA's financial rate consultant to determine the financial affordability of the proposed improvements to the PWSA system and forecasting the rate on ratepayers.
- Meetings will be held throughout the development of the wet weather plan to discuss progress, cost impacts, affordability considerations and impacts on required schedules for implementation. Two (2) initial workshops are planned to brainstorm the approaches and steps needed to incorporate the affordability analysis into the planning process.
- Based on discussions at the meeting, a work plan will be developed that will guide the steps needed to assess affordability in support of the Wet Weather Plan development. A draft plan will be submitted to the Rate Consultant and PWSA for review.
- All work related to affordability determination including data collection; rate evaluation; assessment of impacts of wet weather projects; level of service projects; ALCOSAN ongoing charges; PWSA ongoing water and sewer system charges; and other factors will be conducted by Others. PWSA will contract separately with Rate Consultant on these services.
- **Up to twelve (12) additional coordination meetings and two (2) workshops are planned to coordinate the work and discuss findings over the duration of the planning.**
- Rate consultant will provide input on initial affordability prior to the start of alternatives and run scenarios for varying levels of level service improvements and necessary stormwater, CSO and SSO control improvements at various stages of the plan development.
- We will review findings provided by Rate Consultant and summarize how the work will be incorporated into the planning and implementation of the WWP.

Deliverables: Draft and Final Affordability Work Plan TM; Draft and Final Affordability Findings TM.

4.6 Conduct non-monetary analysis of alternatives

- An Alternative Evaluation Approach TM will be prepared that summarizes the overall approach to selecting recommended alternatives. The TM will include a discussion on how to score within each non-monetary category, scoring and weighting approaches, and steps that will be taken to develop the scoring. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- The non-monetary criteria as provided by PWSA are expected to include:
 - Local planning impacts assessment
 - Environmental justice and community flood resiliency impacts
 - Floodplain impact assessment
 - Odor and noise control assessment
 - Preliminary environmental site assessment
 - Site surface restoration/development
 - Impacts of water quality improvements
 - Co-benefits of green infrastructure projects or other control alternatives
- Additional information such as advantages, disadvantages, risks, schedule impacts and other considerations will be identified as supporting information will be prepared for each alternative.
- **Up to three (3) workshops are expected to be needed to review the approach, conduct the scoring and share the results.**
- Information from Tasks 4.3 on costs would be combined with a summary of total benefits for each alternative to support development of a cost-benefit analysis.
- The results of the evaluation will be summarized in an Alternatives Scoring Technical Memorandum.

Deliverables: Draft and Final Alternative Evaluation Approach TM; Draft and Final Alternatives Scoring TM

4.7 Prepare a schedule for implementation of controls selected to address CSOs and SSOs

- An implementation schedule with appropriate milestones for design, bidding, construction, substantial completion and final completion will be prepared for the recommended projects in the Wet Weather Plan.
- The schedule will be adjusted based on input with regards to affordability and cashflow constraints provided under Task 4.5.

Deliverables: Draft and Final Implementation Schedule

5. Stakeholder coordination and presentations

We will take the lead on developing and participating in a public participation program. **PWSA will provide stormwater messaging developed to date and any foundational information. PWSA staff will be lead presenters during community meetings but would rely on Wade Trim to develop materials and set up meetings.**

We will work with PWSA in preparing an overall public participation plan and public outreach protocol that meets the requirements contained EPA CSO planning and DEP Act 537 guidance documents.

Our goal is to work collaboratively with the project team and PWSA to develop and implement a plan that prioritizes clear, consistent, transparent, and equitable communication with the public and stakeholders to generate consensus. We intend to include specific outreach to identified environmental justice communities to develop relationships with community leaders in those areas and encourage their availability, participation and engagement in meetings.

5.1 Develop Public Engagement Plan (PEP)

- In support of PWSA's existing public outreach efforts, we will work to coordinate and communicate with internal and external stakeholders. We will work with PWSA to create an engagement plan that centers around multiple working group meetings, stakeholder inclusion, agency communication and public information and input held throughout the duration of this process. The goal of the plan is to generate buy in, which can be better achieved by engaging stakeholders throughout the process, collecting input and feedback, and incorporating that feedback.
- **Two meetings will be held with PWSA public relations staff to support development of the plan.** An initial brainstorming session and a follow up meeting to discuss the draft PEP. Ongoing coordination on public relations topics will be covered under the regular PWSA progress meetings.
- A plan will be developed that includes a summary of program and objectives, messaging, identification of stakeholder groups, definition of target audiences, communications approaches, communication tools, implementation steps, and timelines. The Draft Public Engagement Plan will be submitted to PWSA, and comments incorporated into the Final Plan.

Deliverables: Draft and Final Public Engagement Plan

Level of Effort Assumptions:

- **Develop Public Engagement Plan assumes a detailed outline, 2 draft and 1 final version for Wade-Trim and PWSA review and approval. Includes the development and refinement of the comprehensive stakeholder engagement list.**
- **Project Coordination / Management – assumes up to 2 coordination meetings a month and 4 hours of project management/coordination with Wade Trim / PWSA for 36 months.**
- **Documentation – assumes 8 hours per month for document control, project controls and documentation of events.**

5.2 Program Messaging and Branding

This item has been removed from the scope.

5.3 Online Public Engagement

- Online engagement is an important method of communication with the general public about the Wet Weather Program. The goals of online engagement are to

increase the ability to reach a more diverse audience, generate more informed participation, invite a broader range of input, and set the stage for sustained participation. PWSA already has an online presence, and this plan will build upon those existing relationships/followers/contacts.

- A Wet Weather Program webpage will be created to serve as a resource for people to access information, share the plan schedule, see a summary of planning activities, make note of engagement opportunities, review background information (Including relevant maps and data), make connections to social media pages, locate project contact information, subscribe to a mailing (contact) list, and access a comment form.
- Our team will develop a proposed outline of online content to consider for a website approach and submit to PWSA for review and discussion.

Deliverables: Web Site and Social Media Pages and Updates

Level of Effort Assumptions:

- **PWSA will host and manage online content via their existing website**
- **Updates to the website are expected to occur on a quarterly basis, assumes 12 hours per quarter of support**

5.4 In-Person Public Engagement

- Public meetings will be used to inform the public of the planning process and to solicit ideas, input and feedback. This will be an opportunity to promote transparency and foster two-way communication with the public. Public meetings will be held at multiple locations throughout the city. We intend to host a proportional amount of in-person meetings within environmental justice communities to promote engagement within these communities and consider the specific needs in these communities relative to wet weather management.
- Meeting times will vary to maximize the number of attendees that will be available. The public will be encouraged to ask questions and voice their ideas and opinions about the program activities. Our plan for a series of meetings is presented below:

Year 1 - Goals and Initial Community Input

The first series of public workshops will be formatted as a city-wide Listening Series as an interactive, hands-on opportunity to create program awareness, present background on the system and known problem areas, gain an understanding of community priorities, values and concerns. **Four (4) interactive, workshop-style sessions will be conducted** and geographically distributed through the service area – to encourage diverse participation. These meetings would occur early in the planning process.

Year 2 - Review of CSO Technologies, Solutions and the Alternatives Process

The second series of public workshops will be formatted as traditional public meetings. The purpose of this series of meetings will be to present and/or demonstrate potential control strategies, discuss water quality assessments and provide an overview of the alternative evaluation process. **Four (4) meetings will be held.**

Year 3 – Wet Weather Plan Recommendations

The third and final public workshop series will be formal public meetings to present the draft Wet Weather Plan. This will be the final opportunity to provide an overview of the draft WWP, to discuss issues, processes and decisions leading to the plan, and to record formal comments that will be considered when finalizing the Wet Weather Plan. **Four (4) meetings will be held.**

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **20 hours/month for coordination and responding to questions from the public**

5.5 Stakeholder Advisory Group

- An existing PWSA Stormwater Advisory Group (SAG) that has provided input on the PWSA stormwater fee will be convened to introduce them to the Wet Weather Program goals and objectives. This group will be expected to share information about how to get involved in, provide input on, and stay up to date with the planning process with the organizations/stakeholder groups they represent. We intend to work with this group to discuss issues of environmental justice and solicit input for how the Wet Weather Program will evaluate environmental justice.
- This advisory group will meet at key decision points throughout the process (**up to 6 meetings**). Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation and prepare summaries of the discussions.
- In between meetings, representatives of these groups will receive regular updates through email and will be empowered to help the program team in its outreach efforts by sending information about engagement opportunities to their respective memberships, communities, networks, and employees.

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **Assumes 4 hours/month monthly coordination and responding to inquiries from SAG.**

5.6 Municipalities/POC Outreach

- Meetings with the existing Saw Mill Run Group and various POC municipality representatives would be convened to discuss issues specific to the municipalities. These meetings will be used to share information about known issues, planned improvements, alternative technologies, and other related matters. **We have assumed up to 24 meetings** with stakeholders in this category over the duration of the program. Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation, and prepare summaries of the discussions.

Deliverables: Agendas, Presentations and Meeting Summaries

6. Provide Wet Weather and Act 537 Plans

6.1 Wet Weather Plan (Long Term Control Plan)

- A Wet Weather Plan document will be developed that includes sections on Introduction, Background, Purpose, Public Engagement and Participation, System Characterization of Current Conditions, Control Approach, Control Technologies and Screening, Development and Evaluation of Alternatives, Financial Capability, Recommendations, Selection and Implementation Schedule, and Post Construction Compliance Monitoring Plan.
- A draft Wet Weather Plan will be submitted to PWSA for review and comment prior to submittal of a final Report.
- Following PWSA review, comment, resolution of comments and approval of the draft Wet Weather Plan, we will facilitate preparation of the plan for submitting to the agencies for review and approval.
- Following agency review, comment, resolution of comments and approval of the plan, a revised final plan will be submitted.

Deliverables: Draft, Final and Revised Wet Weather Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of Plan
- Assume preparation of up to 100 comment responses received on the Plan

6.2 Act 537 Plan

- An Act 537 Plan document will be developed in accordance with the Act 537 Plan Content and Environmental Checklist and will include sections on previous wastewater planning, physical and demographic analysis and mapping, identification of existing sewage facilities and needs, projections of future growth and land development, identification of alternatives, evaluation of alternatives, institutional evaluation, justification and implementation schedule for selected alternatives (technical and institutional) and an environmental report. The Wet Weather Plan will also be used extensively to form the basis of the Act 537 Plan.
- A draft Act 537 Plan will be submitted for PWSA comments.
- Following PWSA review, comment, resolution of comments and approval of the draft 537 Plan, we will facilitate preparation of the plan for submitting to the City of Pittsburgh under Task 6.3 for review and approval.
- Following approval by the City of Pittsburgh, we will submit for agency review, comment, resolution of comments and approval of the plan. A revised final plan will be submitted.

Deliverables: Draft, Final and Revised Act 537 Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of 537 Plan
- Assume preparation of up to 100 comment responses received on the 537 Plan

6.3 City of Pittsburgh Coordination

- Prior to submittal to the agencies, the Act 537 plan will require a signed and sealed Resolution of Adoption from the City of Pittsburgh. We will assist in the preparation of the appropriate submittals, response to comments and consistency documentation that the appropriate agencies have received, review and concurred with the Act 537 plan throughout the entire process.
- Following PWSA approval of the draft Act 537 Plan, the plan will be submitted to City of Pittsburgh and Allegheny County Planning Commissions for consistency review and comment.
- The Act 537 plan is also required to be posted publicly for a 30-day comment period, with proof of the publication, copies of all comments with responses in each comment included in the final submittal to the agencies.

Deliverables: Public Notice

Level of Effort Assumptions:

- Assume 3 coordination meetings with City of Pittsburgh Officials
- Assume preparation of up to 100 comment responses received on the 537 Plan

7. Develop an environmental impact assessment of recommended Wet Weather Plan

- Once conceptual level wet weather plan facilities have been identified, we will conduct a more detailed environmental review in the form of an Environmental Impact Assessment which further evaluates the community impacts identified during the alternative's evaluation. This assessment will serve as the Uniform Environmental Review.
- A report will be proposed that follows the format laid out in PADEP's Technical Guidance Document 381- 5511-11. The report will discuss the environmental consequences and potential mitigation of the proposed facilities for land use, recreational use of land and streams, water and air quality, noise, odor, vehicular and pedestrian traffic, socio-economic issues, miscellaneous environmental considerations, as well as aesthetic and property impact for use in the Act 537 Plan.
- A draft Report will be submitted for PWSA comments.
- **The number of projects to be evaluated has yet to be defined through the wet weather planning work. For this reason, a total of no more than 20 projects has been assumed that will require assessment.**

Deliverables: Draft and Final Environmental Impact Assessment Report.

8. 3rd Party Assessment of Sewer Assets

- Regionalization involves the voluntary transfer selected municipal sewers and sewer facilities in the service area over to ALCOSAN. This is intended to reduce the financial burden on PWSA and allow ALCOSAN to more directly manage and reduce excess flows into the system. **This will be accomplished by ALCOSAN assuming ownership and maintenance of approximately 60 miles of large, multi-municipal trunk sewers and associated facilities (upstream diversion structures).**

- The purpose of this task will be to review PWSA sewer assets that are proposed to be transferred to ALCOSAN via the regionalization initiative. We will review the assets and provide documentation needed to support transfer.
- This is a study and does not include regionalization negotiation support for the ALCOSAN agreement.
- A Draft PWSA Assets Review TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final Assets Review TM; Applicable support documents.

9. Post Construction Evaluation of GI Effectiveness

- We will evaluate the performance of up to **fifteen (15) Green Infrastructure projects** in various states of design and construction that are being constructed with the intent to reduce stormwater inflow to the sewer system. To support estimates of effectiveness of these projects and potential future similar projects, post construction monitoring of the performance of these projects will need to be conducted.
- **Our team will install flow monitors at up to 30 locations for a period of 8 months to collect on performance.**
- **Data from the 3RWW rain gauge network data and up to 6 site specific rain gauges will be used to document precipitation.**
- **PWSA will provide design reports, modeling and plans produced by others along with historical rainfall and flow data collected prior to the start of the projects for use in comparisons.** Post construction data collected on other projects and any related reports will also be provided.
- We will compare the data and provided an evaluation of the resulting effectiveness of the various projects. A Draft GI Project Effectiveness TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final GI Flow Monitoring Plan; Draft and Final GI Project Effectiveness TM

GENERAL ASSUMPTIONS

- All deliverables will be provided electronically
- PWSA will provide comments on most deliverables within 14 calendar days; Task 6 deliverable comments will be provided within 30 calendar days
- Comments will be provided by PWSA electronically using document control software
- Meeting duration assumed to be typically 1 to 2 hrs (50% virtual; 50% in person)
- Workshop duration assumed to be typically 4 to 8 hrs (In person)

SCHEDULE

- The project is expected to cover a three-year period with the potential for up to three one (1) year extensions. Extensions of the schedule may impact level of effort.
- The tasks and their general anticipated duration are provided below:

Task	Anticipated Duration
Task 1	36 Months
Task 2	18 Months
Task 3	30 Months
Task 4	18 Months
Task 5	36 Months
Task 6	12 Months
Task 7	12 Months
Task 8	9 Months
Task 9	12 Months

PWSA TASK ORDER/AMENDMENT EXHIBIT C INSTRUCTIONS

**An additional Exhibit C or D may be used if space provided is not sufficient.*

General Instructions

1. **DEFINITION:** A task is a type of service that will be performed in a Task Order or Amendment, for example, it might be Design Engineering, or Construction Management, or Field Inspection. A project budget may contain individual budgets for each type of service. A Task Order or Amendment may provide for one or more type(s) of service. When preparing this Exhibit C, make sure that each type of service is separately annotated, and that the cost of labor and expenses for each type of task (budget code) is distinctly represented. PWSA's goal is to individually track the cost of each type of task or service. Should the amount of staff needed exceed the total number of columns, you may provide an additional completed template for each Exhibit. Just be sure your TO/Amendment Total Fee matches as an accumulative value.
2. See the Budget Codes tab for an explanation of where a Task type should be applied in this Exhibit.
3. Use these Exhibit forms as is. **Do not attempt** to alter them. **If they are altered they will be rejected.** If a change should be considered, discuss with your PWSA point of contact.
4. **Be sure** that all labor rates used in these forms are consistent with the rates used in the Master Services Agreement.

Exhibit C.1

Purpose: Exhibit C.1 identifies the Consultant's staff members who will contribute to each Task type to be provided, their MSA classification, their Task Order role, their anticipated labor hours, and their labor costs.

1. The Consultant's Scope of Services must be defined according to the distinct tasks that apply to a project budget code. The cost to perform each Task must be captured on this Exhibit.
2. On Row 45, enter each Consultant staff member name in a different column.
3. On Row 46, enter each Consultant Staff member's Master Service Agreement classification in a different column.
4. On Row 47, enter each Consultant Staff member's Task Order role in a different column.
5. Enter the hours each staff person will contribute to each task in the rows below each staff person's name. **If it doesn't apply, leave row blank.**
6. Enter the Subconsultant markup as an integer or decimal number (field is coded as a percentage). The spreadsheet will calculate the Total Hours and Total Labor Cost for the Consultant.

Exhibit C.2

Purpose: Exhibit C.2 captures the Consultant's anticipated expenses. **Note that there is a table section for each Task type (budget code).**

1. Exhibit C.1 will auto-populate each staff person's name in the appropriate row.
2. In Column B enter the type of expense that will be invoiced, e.g. mileage, hotel, auto rental. These fields are editable.
3. The spreadsheet will calculate the total costs by person and by task.
4. Repeat 1 - 3 for each Task type.

Exhibit C.3

Purpose: This table captures the Sub Consultants' anticipated costs and MBE/WBE/VBE/SDVBE classification. **Note that the entries in this table are all inclusive of both labor and expenses.**

The details of this data must be reflected in the required attached Sub Consultants' proposals.

1. Enter the name of each Sub Consultant firm in the Columns of the table.
2. Enter the cost **by task** of each Sub Consultant firm.
3. The spreadsheet will calculate the total costs by Sub Consultant and by Task.

Exhibit C.4

Purpose: In this Exhibit C.4, the Consultant should enter into lines 4, 5, and 6, as needed, any stipulations PWSA should consider about the Task Order or Amendment proposed budget.

Note that items 1, 2, and 3 are required by PWSA, and cannot be changed.

EXHIBIT C.1: PROPOSED BUDGET FOR EXHIBIT A SCOPE OF SERVICES

Exhibit C.4: ASSUMPTIONS

LIST OF ASSUMPTIONS RELATED TO BUDGET AND EXPENSES - List any conditions the Consultant places on the Budget and Expenses indicated above.

1	Consultant shall notify the Authority's Representative when expenditures based upon the billing of this Task Order reaches 50, 75 and 90% of the total budget, and an estimate of the time and funds necessary to complete the work. If additional funds are requested and not authorized in writing by the Authority's Representative, the Consultant shall reduce the scope of work to complete within the funds available.
2	In no event shall the Consultant's total billings for the services performed under this Task Order exceed the approved Fee amount without the Authority's written authorization and notice that it has approved an increase in the budget limit and funds available.
3	Should a key or non-key staff person not listed on an approved Task Order get assigned to the task, an Action Item to the project manager will suffice to acknowledge the change without an increase to the overall total fee. This MUST be done within 30 days of the assignment, preferably before PWSA receives the invoice for the time in which work was performed. Project Managers have the right to reject or accept the assignment of a staff person with proper justification. The consultant has the right to appeal that decision to the Director of Engineering and Construction.

Pittsburgh, PA 15222

Attn: Mr. Jason J. McBride, PE
Northeast Area Lead, Vice President

Subject: Letter of Commitment
Pittsburgh Water and Sewer Authority Wet Weather Program Management
City of Pittsburgh, Allegheny County, Pennsylvania
CE Proposal No. P-21-13016

Dear Mr. McBride:

Collective Efforts, LLC (Collective Efforts) thanks you for the opportunity to team with Wade Trim on the Pittsburgh Water and Sewer Authority (PWSA) Wet Weather Program Management. This letter serves as a commitment by Collective Efforts, a women-owned business and PAUCP-certified Disadvantaged Business Enterprise (DBE), to participate in a subcontract role with Wade Trim if awarded this contract. We will provide Environmental Impact Assessment Support, As Needed Permitting Support and Guidance, General Engineering Support and Field Services – WQ Field Sampling services with a total commitment price of \$437,675 which represents 2.58% of the contract.

We look forward to working with you and the others on the Wade Trim Team on this project.

Sincerely,

Collective Efforts, LLC

Tammi Halapin, PE
Principal

RE: Letter of Commitment
PWSA Wet Weather Program Manager

Dear Mr. McBride:

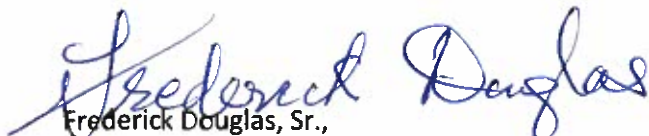

Cosmos Technologies Inc. (Cosmos) is pleased to be part of the team with Wade Trim for the above-referenced project.

We understand that Cosmos will provide General Civil Engineering Support and Field Services Support for flow monitoring. Our contract value is \$338,330.00.

Cosmos is a certified Minority/Disadvantaged Business Enterprise (Certification I.D. 1098).

If you require any additional information, please do not hesitate to contact me or Holly Douglas at (412) 321-3951 (office) or via email at hdouglas@cosmostechnologiesinc.com. Thank you for the opportunity.

Very truly yours,

Frederick Douglas, Sr.,
President

Re: R2O Proposal for PWSA Wet Weather Program Manager
PWSA Project No. 2021-OPS-116-0

Dear Mr. McBride:

R2O Consulting LLC is pleased to provide our proposal for professional engineering service in support of the above referenced project. We are a certified DBE and WBE with the State of Pennsylvania and Allegheny County, and we have attached our certificate for your reference.

Per our discussion, R2O anticipates providing 3.17-percent, or \$538,252 of the project in the performance of the following scope items:

- Assist in Regulatory Strategy
- General engineering support
- As-needed assistance in
 - Flow monitoring/modeling
 - Constructability
 - Cost Estimating

The specific scope of our efforts in supporting the above tasks will be developed in collaboration with you upon award of the contract.

The R2O team is ready and available to begin work upon receipt of a notice-to-proceed and executed subcontractor agreement. We appreciate this opportunity to assist you on this critical PWSA infrastructure project and we look forward to collaborating.

Regards,

Kellie Carpenter Rotunno, PE, BCEE
Chief Executive Officer

RE: Pennsylvania Unified Certification Program
DBE Continued Eligibility Letter

Disadvantaged Business Enterprise (DBE) Certification # 10152
Anniversary Date - Annually on Mar 29

Dear Kellie Rotunno:

The Allegheny County Department of Equity and Inclusion, a certifying participant in the Pennsylvania Unified Certification Program (PA UCP), has reviewed your Annual Affidavit as a Disadvantaged Business Enterprise (DBE) and is pleased to inform you that your firm appears to meet the requirements established by the United States Department of Transportation (US DOT) Code of Regulations. Accordingly, your firm can continue as a Disadvantaged Business Enterprise (DBE) to participate in the program in the following classification(s) only:

Provides engineering services including planning, design, and construction management for infrastructure projects. Experience in hydraulic design for stormwater, sanitary, and drinking water systems. Experience in managing projects involving heavy, civil, and underground structures, including tunnels.

NAICS Code(s):
541330
541370

If you wish to expand your status to include another type of business, you must contact the PA UCP for reevaluation prior to undertaking any projects as a DBE in the expanded area.

In the event of a change in circumstances affecting your ability to meet size, disadvantage, ownership, and control requirements of Part 26 or any material change in the information provided; you must inform the PA UCP by means of a sworn affidavit by the owners, describing in detail the nature of such changes.

You must provide this written "Notice of Change" within 30 days of the occurrence of change. Failure to do so will be deemed a failure to cooperate. We would also remind you that the PA UCP reserves the right to review your firm at any time to ensure compliance with the program.

We are pleased to continue to have you as a DBE and wish you continued success in acquiring work within the DBE program. If you have any questions, please contact 412-350-4309.

Sincerely,

Lisa L. Edmonds, MCA
Chief Equity and Inclusion Officer
Department of Equity and Inclusion

Task Order No. WT-PRGM-10

Task Order Name: Identify and Prioritize Alternatives for Wet Weather Program Manager Project

This Task Order Amendment is made as of the Effective Date, by and between **The Pittsburgh Water and Sewer Authority** (the “Authority”) and **Wade Trim, Inc. (Ops)**, (“the Consultant”).

Consultant Firm: Wade Trim, Inc. (Ops)

Contract Name: Wet Weather Program

Agreement between the Authority and the Consultant dated 11.01.2021

Prior Task Order/Amendments Applicable to this Task: N/A

The schedule for the completion of the Services under this Task Order is incorporated herein. The details of the schedule are as follows or as detailed in the separate schedule, attached as Exhibit B. The time limits established by the schedule shall not be exceeded without reasonable cause. The schedule may be amended with the Authority’s written consent as the Task proceeds.

Start Date:	11.01.2021
Completion Date:	10.31.2024

The Authority’s budget is attached hereto as Exhibit C and incorporated herein.

Where the Fee is based on Agreement rates, the Fee may not exceed the budgeted amount. The budget may be amended with the Authority’s written consent.

Fee:	\$3899998.74				
MBE:	6%	WBE:	0%	SDVBE:	%

A detailed Scope is attached hereto as Exhibit A and incorporated herein.

Date Approved:

11.09.2021

PITTSBURGH WATER AND SEWER AUTHORITY
WET WEATHER PROGRAM MANAGER
PWSA PROJECT NO. 2021-OPS-116-0
FINAL SCOPE OF SERVICES

PROJECT OBJECTIVES

The specific objectives of the Wet Weather Program Manager are as follows:

- Assist in developing PWSA's Long Term Control Plan (LTCP) for the control of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) remediation plan, which will comprise a Wet Weather Plan or one or more similar documents. Provide program management services, advise, and consult with PWSA, its engineering staff, and its legal counsel (including translating technical information into a form useable by counsel) in the negotiation of a consent decree with the United States and Pennsylvania Department of Environmental Protection (DEP) addressing, among other things, the control of CSOs and remediation of SSOs from PWSA's sewer system (a Wet Weather Decree).
- Develop plans for improvements of PWSA sewer system facilities to bring combined sewer overflows into compliance with the CSO Control Policy and to remediate SSOs.
- Perform a level of service peer review and identify the current stormwater level of service the current PWSA system provides.
- Develop a range of alternatives to provide control and management of stormwater and manage basement backups and overland flooding to an appropriate, affordable level of service.
- Assist PWSA and its legal counsel in the coordination of planning, regulatory obligations, and capital improvements with upstream and downstream municipalities and ALCOSAN, where applicable.
- Conduct evaluations to account for the impact of projects implemented under ALCOSAN's consent decree and regionalization program on PWSA's development of CSO and SSO controls, and vice versa.
- Perform engineering and public participation activities in support of the development of a Wet Weather Plan, and obligations arising under municipal orders, enforcement orders, and any Wet Weather Decree entered into by PWSA.
- Develop analyses to assist PWSA's legal counsel in its addressing regulatory and legal issues associated with wet weather planning, including resolution of related enforcement actions.

SUMMARY OF WET WEATHER PLANNING TASKS

Program management services include oversight and coordination of the following activities in support of the development of a Wet Weather Plan or similar planning documents, consisting of a LTCP to control CSOs and a plan to remediate SSOs (collectively, a Wet Weather Plan in connection with the above negotiations), and plans to provide effective stormwater management. The wet weather planning work typically includes those engineering activities required to produce plans and other deliverables to be submitted to regulatory agencies, including the DEP, the Allegheny County Health Department (ACHD), United States Department of Justice,

(DOJ), and the United States Environmental Protection Agency (EPA). Many of the tasks will require familiarity with and the use of guidance documents issued by EPA and DEP. The production of interim work products and the Wet Weather Plan will be in support of negotiating a consent decree, assisting PWSA in complying with the requirements of the Wet Weather Decree and other regulatory requirements arising under the Pennsylvania Clean Streams Law and the federal Clean Water Act (CWA).

The following is a list of the tasks to be performed by the Wet Weather Program Manager.

- Task 1 - Program Management Services
 - Support the negotiation and the development of a consent decree and development of a Wet Weather Plan
 - Provide on-call engineering services
- Task 2 - Data Gathering
 - Review and determine DEP Act 537 Plan update requirements and permitting requirements for conveyance, storage and treatment
 - Review EPA guidance documents relating to CSO and SSO control
 - Review CSO/SSO consent decrees entered by other municipalities, as well as LTCPs and SSO elimination plans developed by other municipalities
 - Map with GIS, delineate and collect field survey data within planning basins.
 - Investigate sewer system and develop a system characterization study for PWSA's combined and sanitary sewer systems
 - Conduct site investigation
 - Evaluate the impact of CSOs on receiving waters
- Task 3 - Model Development and Calibration
 - Monitor flow and hydraulic conditions to inform system characterization and the selection of CSO and SSO controls
 - Develop a hydraulic and hydrologic model for PWSA's combined and sanitary sewers that reflects prior modeling information and additional monitoring data
 - Perform level of service peer review and develop current level of service thematic map
- Task 4 - Alternative identification and prioritization
 - Develop an alternative analysis for the control of CSOs and SSOs, including the development of cost-performance curves to assist in analysis
 - Develop an implementation schedule for CSO and SSO controls informed by and coordinated with a financial impact and affordability analysis
 - Identify CSO and SSO control technical alternatives
- Task 5 - Stakeholder Coordination
 - Coordinate wet weather planning and program development efforts with ALCOSAN and other municipalities in the Pittsburgh Region
 - Coordinate wet weather planning and program development efforts with community outreach and stakeholder engagement initiatives
 - Develop public participation program to inform wet weather planning and program development efforts

- Public participation program
- Task 6 - Final Act 537 Plan and Wet Weather Plan/LTCP and Recommendations
- Task 7 - Conduct environmental impact assessments of projects
- Task 8 – 3rd Party Assessment of Sewer Assets
- Task 9 – Post Construction Evaluation of GI Effectiveness

DETAIL OF WET WEATHER PLANNING TASKS

1. Program Management Services

1.1 Program Management

1.1.1 *General*

- Provide program management services that include oversight and coordination of activities in support of the development of a LTCP to control CSOs and a plan to remediate SSOs.
- A Program Management Plan will be prepared that summarizes the procedures that will be used to manage the program. Our PMP will include Program Scope & Goals, Program Constraints, Program Performance Metrics, Program Organization, Project Controls, Safety, Quality Assurance, Communication Protocols, Environmental & Permits Compliance and Risk Management. A draft Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.
- Ongoing management, coordination with PWSA and team members, communications, and project management activities will be conducted to manage the work.
- Ongoing document management will be conducted to facilitate file sharing between PWSA and our team.
- Develop and manage program schedules. An overall baseline schedule will be developed and updated monthly to reflect the progress of the work.
- Manage quality assurance/quality control of programs. A QA/QC plan will be developed and documented in the PMP. Quality reviews will be documented and conducted on all deliverables.
- Prepare and present periodic status program and project reviews, including establishing formal and informal milestones and performance metrics. Performance metrics will be developed and documented in the PMP. Monthly progress reports that include a summary of work activities completed during the previous period, planned activities for the next period, and critical action items will be prepared and submitted to PWSA as part of our monthly invoicing.
- Conduct meetings with PWSA, its engineering staff, and its legal counsel as needed to discuss the progress of the project and review key deliverables. These meetings may include a project kickoff meeting, as well as meetings with the executive PWSA team to present an executive summary of the progress of the project and key decisions needed to be made. Agendas and presentation materials will be prepared. Meeting summaries will be submitted following the meetings. **A total of 72 progress meetings, 12 miscellaneous meetings and 6 executive sessions have been assumed.**

- Provide planning-level risk management in accordance with industry standards and guidelines. A risk management plan will be prepared and included within the PMP. An initial risk development workshop will be held to review and provide input on the plan and risk register. The risk register will be updated on a quarterly basis and discussed within the regular progress meetings.

Deliverables: Draft and Final Project Management Plan; Meeting Agendas, Presentations and Summaries; Monthly Progress Reports, Schedule and Invoicing; Risk Registers

1.1.2 Regulatory Support

- The purpose of this task will be to advise and consult with PWSA, its engineering staff, and its legal counsel in the negotiation of a consent decree. Meetings will be held to prepare for EPA meetings, discuss matters with EPA and debrief on follow-up items. Agendas, technical work, presentation materials, and meeting summaries will be developed for all meetings.
- **A total of 108 meetings have been assumed over a 36-month period at an average level of effort of 16 hours/meeting for regulatory team preparation and attendance and 100 hours/month for technical support time to develop content, review, documents, and address questions from EPA or others.**
- The purpose of this task is to establish compliance priorities and to provide support to PWSA in the ongoing discussions with US EPA and PA DEP to work towards acceptance of required compliance deliverables, an LTCP 1080+approach as it is developed. We will provide technical support and guidance for the ongoing negotiations with USEPA and PA DEP under this task by helping to gain regulatory acceptance for PWSAs compliance strategy.
- The goal of this task will be to define strategies to develop the various work approaches, programs, descriptions for capital projects, capital costs/benefits, and schedule implications for presentation to regulatory agencies. We will also review and evaluate any deliverables or documents submitted to US EPA, PA DEP and others as directed that may have impact on the CSO update / Integrated Plan and schedules.
- This task will be managed on a time and material basis as directed by the PWSA and working in conjunction with the legal and rate consulting teams to develop specific products to support regulatory discussion.
- The focus of this task will center on meetings and staff work on development of documents to support the negotiation process and work to gain acceptance for compliance documentation. Much of the work will be driven by evaluation of existing compliance documents, development of PWSA LTCP goals and guiding deliverables to build a case for technical acceptance by US EPA and PA DEP.

Deliverables: Meeting Agendas, Presentations and Summaries; Various correspondence needed to support ongoing discussions

1.1.3 Other Services

A. CMOM Program

The purpose of this task is to develop and document a Capacity, Management, Operation and Maintenance (CMOM) program. We will review existing information on CMOM activities, meet with PWSA to understand the program and develop a recommended plan for PWSA.

PWSA's Capacity, Management, Operations and Maintenance (CMOM) Program forms the foundation for PWSA to meet its customer service demands, sustain infrastructure performance, comply with regulatory requirements, and manage its resources. The objectives of this task are:

- Compile PWSA's current CMOM documentation and assess the program components against industry best practices, PWSA's organizational goals, and applicable regulatory requirements
- Develop a set of priority improvements to address potential gaps identified in the assessment
- Establish a Program Document that, when implemented, provides a proactive defense from regulatory enforcement action and leads to improved system performance and cost savings.

CMOM assessment will benchmark PWSA's current program against likely EPA Region 3 expectations, regulatory precedence, and utility best practices. This review will be focused on the sanitary sewer service area of PWSA and the capacity assurance, management, operations, and maintenance activities specific to that portion of the system. It is assumed that the Nine Minimum Controls (NMC) activities of PWSA cover similar aspects for the combined sewer system and are outside the scope of this effort.

We will assess current programs, policies, and practices. Existing documentation will be compiled and evaluated to establish priority areas for improvement. The assessment will include evaluation of SSO causes, review of existing CMOM documentation, interviews, and field observations.

We will evaluate PWSA's SSO data to develop an understanding of the number and volume of sanitary sewer overflows by cause over the past 5 years (2016-2020). SSOs will also be plotted in GIS to identify any geographic trends. The SSO cause and spatial analysis will allow us to consider how PWSA's CMOM Programs are structured to solve system-specific needs.

We will submit an information request to PWSA to gather existing CMOM-related program documentation, policies and procedures. We will review existing documentation, assess the completeness of the program, and identify potential gaps with accepted best utility practices in the following areas:

- Goals, Visions and Support
- Organization
- System Knowledge
- Capacity Management

- Engineering and Construction
- Asset Inspection and Condition Assessment
- Rehabilitation and Replacement Program
- Maintenance Programs and Procedures
- FOG Program
- SSO Tracking, Analysis and Reporting
- Overflow Emergency Response
- Budgeting
- Training
- Safety
- Customer Service
- Information Management
- Information Systems

We will conduct interviews with PWSA staff over a 5-day period, including personnel from management, engineering, planning, operations and maintenance. During the interviews we will discuss policies and practices related to organizational structure/communications, work management processes, information management processes, inspections; rehabilitation (pipeline, manhole, and removal of illegal connections); fats, oils, and grease (FOG) control; new construction standards and inspections; Emergency Response Procedures; preventative, predictive, and corrective maintenance practices including sewer cleaning; and staff training, knowledge skills, and abilities.

Observation of the operations and maintenance (O&M) crew work practices will validate what was heard during the interview process and identify additional opportunities for improvement. A senior collection system operations expert will spend 2 days in the field observing the way in which crews accomplish O&M tasks such as inspections, CCTV, line cleaning, point repair, root control, pump station maintenance, and emergency response where possible.

The results of the CMOM Program assessment will be presented to PWSA in a workshop with recommendations for improvements. Based on PWSA's feedback and input, an Implementation Plan will be established that identifies areas for improvement, the scope of effort involved by both our and PWSA staff, estimated labor-hours and schedule. The Implementation Plan will focus on improvement that provide maximum benefit to PWSA.

- Describe the Gap Assessment framework including regulatory requirements and effective industry business practices
- Present the SSO cause analysis results
- Confirm PWSA's CMOM Program goals
- Gain input on our assessment of current business practices and programs
- Prioritize areas for improvement. The prioritization process will consider the current program status, as well as the importance of the various programs and practices in meeting PWSA's specific CMOM Program goals
- Develop consensus on improvement areas and priorities.

Based on the results of the workshop, we will develop a CMOM Program Summary, documenting the CMOM assessment, and a Work Plan for high impact improvements to current programs and practices. We will conduct a final consensus workshop to validate the draft CMOM Program summary and allow staff to make adjustments before finalizing the Work Plan. We will finalize the CMOM Assessment to include the agreed upon improvement initiatives and proposed timelines. A draft overall CMOM Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.

Ongoing support activities such as training, data review, and development of procedures can also be conducted to assist PWSA in implementation of the plan as an additional service.

Deliverables: Draft and Final CMOM Plan

Level of Effort Assumption:

- **Will conduct two (2) workshops and up to 5 days of interviews and field visits with PWSA Staff.**

B. Assist with PWSA's Nine Minimum Controls (NMCs) program

- We will review existing NMC documentation and provide a Technical Memorandum summarizing review comments and recommendations.
- **Ongoing support activities such as training, data review, and development of procedures can be conducted to assist PWSA in implementation as an additional service.**

Deliverables: Draft and Final NMC Review TM

1.2 On-call Engineering Services

1.2.1 General On-Call

To support the development and ongoing progression of the Wet Weather Plan, various engineering services may be required at the request of PWSA. Specific tasks will be identified and a mutually agreeable scope, budget and schedule to complete the task will be developed by Wade Trim and PWSA. In general, examples of the services that may be performed under this task include:

- Conceptual infrastructure studies
- Design and construction engineering services
- Asset management activities
- Value engineering studies
- Oversight of consultants that may perform design and construction engineering services for wet weather projects.
- Coordinate the design of PWSA system improvements developed as part of the wet weather planning efforts with proposed improvements of the ALCOSAN and upstream/downstream municipal systems

An allowance has been established to support these activities. Work will be performed at the approval of PWSA and up to the limit included in this authorization.

Deliverables: To be determined based on nature of approved task activities.

1.2.2 Sewer Condition Assessment

This task has been removed from the scope.

1.2.3 Asset Management

The general objective of this task is to develop the methodology and best practices to assist PSWA better manage their assets. Asset Management (AM) services will focus on aligning strategic objectives with stakeholder level of service expectations to develop a risk-based approach to manage the entire lifecycle of program assets. Collaboration with PWSA staff will be integral to success and initial efforts will focus on understanding current best AM practices, identifying gaps, and developing an actionable roadmap for AM implementation. Implementation items will be prioritized and quick win and near team activities that achievable and provide the most value to PWSA will be identified. AM implementation assistance will be provided based on PWSA requests for assistance. Planned AM Services include:

- Review and assess the existing AM program and system operational documentation and provide a gap analysis relative to utility best practices and develop recommendations
- Develop or Update the PWSA Asset Management Vision to incorporate key wet weather program priorities
- Form and charter an AM team of PWSA key staff that can build and then take on the implementation of the program
- Develop AM program charter and AM methodology and best practices training content
- Conduct AM program evaluation and gap analysis between current and desired future state
- Prepare actionable AM program implementation roadmap that details prioritized AM activities
- Organize, integrate, and embed overall PWSA strategic goals in the AM framework and corresponding LOS goals and evaluation criteria for alternative evaluation
- Develop and enhance PWSA's use and operation of Innovyze Info Asset Manager including training of existing staff.
- Organize system replacement and future CIP data for use in the alternative evaluation
- Coach and mentor PWSA staff using subject matter experts that can provide guidance on continuous AM program development
- The following strategic and tactical topics will be discussed with each of the groups listed above, as applicable, as part of the assessment:
 - Decision Making and Capital Planning
 - CIP Development and Prioritization
 - Design & Construction
 - Funding
 - Information Systems and Data Management
 - Data Systems Tools
 - Organizational Framework
 - Communications

- Risk Management
 - Operations and Maintenance
 - Inventory/Warehouse
 - Maintenance Strategy
 - Operations Strategy
 - Optimization
 - Culture and Change Management
 - Document Management
 - Leadership and Commitment
 - Levels of Service and Performance Evaluation
 - Resource Management
- This task is intended to establish a program that PWSA can run independently. **Ongoing support beyond the budget for this task can be provided to support activities as an additional service.**

Deliverables:

Information Request, copies of meeting materials, draft and final AM program charter, AM training materials, AM gap analysis, AM roadmap and supporting materials developed as part of implementation activities.

1.2.4 Compliance Review of Selected Sewer Improvement Projects

PWSA has identified two (2) sewer improvements projects (Browns Hill Road Pump Station and 31st Ward Sewer System) that PWSA plans to procure outside consultants and start work 12 months from the NTP of this contract. **PWSA will maintain a project manager to provide administrative oversight of outside consultant activities.**

In general, our activities will include:

- Reviewing and providing input on outside design sewer consultant RFPs.
- Conducting 30%, 60%, and 90% compliance reviews to assess ability of the proposed design to meet regulatory requirements.
- Coordination meetings to discuss reviews and responses.

Deliverables: Technical Review Comments

Level of Effort Assumptions:

- **Attendance at up to 8 project meetings total among 2 projects**
- **Technical review of design discipline work and constructability reviews will be conducted by others.**

2. Data Gathering

2.1 Evaluate existing information and analyses

- Review wet weather-related studies in the region, such as the ALCOSAN Clean Water Plan, 2008 Feasibility Report, 2013 PWSA Feasibility Report, 2016 Citywide Green First Plan, Controlling the Source, RAND Climate Change study, PWSA's current Stormwater Master Planning initiative, and other documents that PWSA deems appropriate.
- Sections in an Existing Data Review TM will be prepared that summarize important findings and information relative to the current study effort.

Deliverables: Draft Existing Data Review TM Sections

2.2 Gather county, state and PWSA system information (sewer maps, inspection data, hydraulic overload problems, ACHD complaints)

2.2.1 Data Gap Analysis

- Relevant data that Allegheny County and State agencies may have will be requested and reviewed.
- PWSA will provide:
 - Existing GIS system database of existing sewer assets and any required sewer maps (critical information includes pipe diameters, lengths, invert elevations, and rim elevations).
 - Inspection and sewer back up complaint data
 - Information on known sewer hydraulic bottlenecks and surface flooding issues
 - Known areas of heavy inflow and infiltration, SSO and CSO locations
- Data relative to sewer and street flooding will be requested from ACHD and information provided reviewed and incorporated into the project GIS database.
- Additional existing collector sewer system information and reporting data will be reviewed. The Existing Data Review TM will be updated with the findings from other tasks. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- A Data Gap Analysis TM will be prepared that summarizes additional data collection and field investigations needed to support the study along with a level of effort. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Existing Data Review TM; Draft and Final Data Gap Analysis Review TM

Level of Effort Assumption:

- **Assumes that the existing PWSA GIS database of sewer data is of sufficient accuracy to support the planning level activities**
- **Assumes approximately 200 staff hours/month for 6 months**

2.2.2 Determination of Critical Areas

- Complaint records provided by PWSA will be reviewed and screened to identify issues related to documented system problems. A map of complaint locations for sewer backups and street flooding will be developed.
- **A significant number of pipes covering the local systems is not included in the current PWSA hydraulic models. It is anticipated that inclusion of all the sewer elements would be a significant undertaking from a data collection, model upgrade and model run time perspective. Therefore, the base models will be expanded to focus only on critical areas that have experienced historically high levels of sewer back-ups and/or street flooding. All system pipes (storm and sanitary) will not be modeled.**

- A desktop hydraulic analysis will be conducted using the existing hydraulic models for sewers included in the PWSA system for a range of storm events to identify the capacity of the existing sewer lines. Major sewers (>18") not included in the model where adequate physical data is available will also be checked for capacity using existing GIS data (topo, manhole depths); standard pipe capacity calculations; and compared to modeled peak flows adjusted on an area weighted basis. The locations of known complaints will be compared to the capacity check to identify likely areas of concern.
- "Critical portions" of the PWSA system will be identified. "Critical portions" include pump stations, trunk sewers, points of overflow activity, basement back-up areas, surface flooding, or areas of excessive infiltration and inflow (I/I). At the time of this scope preparation, the number of critical areas is unknown. **For the purposes of this task, it is assumed that 20 to 30 sewer backup and 6 to 10 stormwater flooding subsheds will be identified for further analysis.**

Deliverables: Draft and Final Critical Areas Definition TM

2.3 Investigate PWSA sewer system

2.3.1 Stream Inflow and Acid Mine Drainage (AMD) Map

- Identify and locate any stream inflow sources and acid mine drainage discharges along the critical portions of the PWSA sewer system using **existing data sources**. The potential sewersheds for stream inflow sources will be identified from the past and pending regional flow monitoring work, and PWSA input.

Deliverables: Draft and Final Stream Inflow and AMD Map

Level of Effort Assumptions:

- **No field work such as stream walks, sampling, or other investigation will be conducted.**

2.3.2 Field Data Collection Allowance

- Upon approval from PWSA, work to conduct additional field data collection activities identified with Task 2.3.1 will be conducted within the available budget included within the field allowance. Field data will be entered into the appropriate asset management databases. Additional field collection efforts shall be conducted as an additional service.
- The proposed field data allowance was developed based on an assumption of 400 days of field survey intended to collect data on approximately 8,000 structures (based on 20 structures/10 hr-day @\$2,200/day including survey and post processing). This data includes limited spot checks of approximately 10% of existing modeled areas and assumes data can be collected from the surface without the need for confined space entry or significant traffic control procedures. **No LIDAR, detailed topographic and surveys on private property or within homes for purposes of determination of basement inverts or first floor elevations**

- A summary of the data collected will be provided in a draft and final Field Data Collection Summary Technical Memorandum.

Deliverables: Draft and Final Field Data Collection Summary TM, Field notes and database

2.4 Coordinate on System Improvements and Technical Alternatives with Others

- Request and coordinate with ALCOSAN/municipalities to obtain information on proposed system improvements for use in study work. This includes information on proposed tunnels and consolidation sewers, CSO regulator, pumping, storage tanks, RTBs, Green Infrastructure, Source Control, WWTP and other improvements that can impact overflows in the PWSA collection system.
- A review will also be conducted of major development and PWSA projects (that would have an impact on planning efforts) to determine which should be advanced into the model. It is assumed that PWSA will provide the hydraulic, as-built and/or survey data relative to these improvement projects. **Assumed no more than 10 sewer improvement projects will be included.**
- A summary of the proposed major improvements that will be included in a Baseline Model to evaluate additional alternatives will be documented in a System Inventory TM. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Planned ALCOSAN, PWSA and upstream/downstream municipal improvements will be considered in related modeling and cost analysis in subsequent tasks.
- Ongoing coordination with ALCOSAN throughout the project will also be tracked under this item.

Deliverables: Draft and Final System Inventory TM

Level of Effort Assumption:

- **Assumes up to a total of 60 meetings with representatives of ALCOSAN, Point of Connection (POC) Groups with municipal officials, and 3 Rivers Wet Weather**
- **Assume no new Clean Water Plan design changes**

2.5 Determine regulatory permitting requirements for conveyance and storage

- We will participate in meetings with DEP to establish or confirm the regulatory permitting requirements and related design standards and control approach to be used in the sizing, performance, and layout of facilities to be proposed, designed, or built as part of PWSA's wet weather planning program. **Assume up to 6 meetings for coordination.**
- To prepare for the discussions, a Draft Regulatory Permitting Requirements TM will be prepared that summarizes current criteria for sewers and facilities for PWSA and regional entities along with proposed criteria for facilities to be sized and designed under this program. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Regulatory Permitting Requirements TM

3. Develop and calibrate model(s)

3.1 Water Quality Sampling, Analysis Tool Development and Evaluations

3.1.1 Water Quality Data and Information Compilation, Review and Evaluation

- We will compile and review water quality data and related information for the receiving waters impacted by PWSA wet weather discharges and data on sources of pollutants. This will include:
 - Data collected and provided by PWSA as well as publicly available data. We will also develop a request for data collected by ALCOSAN/3RWW. We will compile water quality data in Excel and/or Access for review and evaluation.
 - Information on the receiving streams, their watersheds/drainage areas, and available modeling for these streams and drainage areas.
 - Additional available data on precipitation, climate, and streamflow may be compiled to support the water quality assessments.
 - Listed impairments and available TMDLs for the receiving streams including pollutants and sources. Other available studies on the receiving streams will be compiled and reviewed.
- This scope of work is based on the understanding that the receiving waters that will be studied for this task are the receiving waters that receive discharges from PWSA-owned CSO outfalls that will not be controlled by the ALCOSAN tunnel construction; these include several Tributary Streams (Chartiers Creek, Nine Mile Run, Saw Mill Run, and Becks Run), and the Main Rivers (Ohio River, Monongahela River, Allegheny River). The primary focus of this task will be on the Tributary Streams, but a summary of the conditions of the Main Rivers within the PWSA service area will be included. We will conduct site visits of the Tributary Streams to assess existing conditions, sediment build-up, stream bank stability, flow restrictions, vegetative cover, and other potential characteristics. Photo documentation of the conditions will be collected.
- **Additional Main River Water quality or other data collection will not be conducted.**
- We will evaluate the available information to characterize existing conditions, spatial and temporal trends, dry versus precipitation event-driven conditions, comparison to water quality standards, and potential cause-effect linkages. We will also assess the ability of existing models to characterize water quality conditions and benefits of control alternatives.
- We will summarize the results of the data compilation, review and evaluation in a technical memorandum. The memorandum will include a data gap analysis including recommendations for additional data collection and model development activities, including cost estimates and potential refinements to the original budget estimates provided. We will submit one draft for review and comment. We will address comments and submit one revised draft for submittal to PWSA. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft Water Quality Existing Data Review TM

3.1.2 Sampling and Analysis

- We will prepare a Sampling and Analysis Plan (SAP) and a Quality Assurance Project Plan (QAPP) to guide the collection of water quality samples to support the characterization of the waterways and sources.
- One draft of the SAP and QAPP will be submitted to PWSA for review and comment. Following PWSA review and comments, we will revise the SAP and QAPP for submission to Pennsylvania Department of Environmental Protection (DEP) and/or the United States Environmental Protection Agency (EPA). Following DEP and EPA review and comment, we will prepare the final SAP and QAPP.
- Sampling activities will include training and orientation with our local, on call sampling team. This work will include site visits to discuss procedures and review sampling locations. This will also include coordination on scheduling of sampling events, tracking wet weather events, and making go/no-go decisions on sampling. We will also coordinate with the analytical laboratory to coordinate bottle shipments, sample deliveries, QA/QC data review, and reporting of results.
- For the purposes of this scope of work, the following assumptions have been made to inform the budgeting of this subtask. The scope and budget will be revisited following completion of the data review and evaluation work. Sampling is anticipated to be conducted between April and October 2022 for the following:
 - **6 locations (2 locations in each of Chartiers Creek, Nine Mile Run, and Becks Run)**
 - **72 total samples (3 baseline, 3 wet events – 3 samples each event for each location)**
 - **Parameters for field measurement: Temperature, pH, Dissolved oxygen, Conductivity**
 - **Base assumptions for parameters to be collected for laboratory analysis: E. coli, TSS, Ammonia, TKN, Nitrates + Nitrites, TP, Ortho**
- Following the initial review of the impairments and stream conditions, the need for additional parameters such as metals, and hardness will be assessed. We will review sampling field notes and laboratory reports following each round of sampling to identify problems or issues needing correction. We will coordinate with the sampling consultant and the laboratory to implement corrective actions.
- Two of the subject watersheds do not have USGS flow gages located on them. Additional flow and/or water level monitoring may be required in these watersheds as well. If needed, effort would be authorized separately.
- Following implementation of the sampling plan, we will perform a data validation review and prepare a memorandum documenting the review.
- We will prepare the project-specific SAP and QAPP, as stated earlier. We will update the water quality characterization with the new data. We will summarize the results of the sampling, analysis, data review, and updated characterization in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and

characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit one draft to PWSA. Following PWSA review and comment, we will prepare the final TM.

Deliverables: Draft and Final Water Quality SAP and QAPP TMs

3.1.3 Water Quality Model Updates

- We will update receiving water models to support the evaluation of water quality assessments. We will update model calibrations using the most recent data (April-October 2022) and will validate model performance. The anticipated receiving waters for modeling and the modeling frameworks are listed below:
 - Chartiers Creek, Nine Mile Run watershed/drainage area: PC-SWMM
 - Saw Mill Run watershed/drainage area: HSPF
 - Becks Run watershed/drainage area: no existing model
 - Main Rivers Model: RMA2 (hydrodynamics)/RMA4 (water quality)
- We will develop estimates of upstream flows and pollutant loads for the calibration period (April-October 2022) based on available data. We will develop meteorological inputs for the calibration period based on available data.
- Calibrations will be performed by applying best engineering judgement to make model calculations as representative of observations as possible. The models will be calibrated using both visual and numerical methods. This effort may employ regressions of observations vs. calculations, minimizing the squares of the residuals of observations vs. calculations, minimizing relative error, minimizing differences in observed vs. calculated means, and minimizing root mean square error, among other methods. For simulations having the appropriate temporal scale, published statistical measures of goodness-of-fit (e.g. percent difference, r^2 , PBIAS) will also be considered in evaluating the strength of the hydrology and water quality calibrations.
- Following calibration, the models will be validated using an independent data set to demonstrate that the model is capable of acceptably reproducing the timing and magnitude of observed data without further changes to the model parameters.
- We will summarize the results of the model updates and calibrations in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit a draft to PWSA for review. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Model Update TM

3.1.4 Water Quality Assessments of Benefits of Control Alternatives

- We will develop and apply the updated and calibrated models to support the assessment of existing conditions and the water quality benefits of control alternatives. We will develop the water quality models for the typical year. We will develop the following water quality model inputs for the simulation of existing conditions for the typical year:
 - Upstream boundary flows and pollutant loads
 - Meteorological inputs, and
 - Sources other than overflows.
- We will characterize water quality conditions for the typical year under existing and baseline conditions. We will assess the relative impact of pollutant sources with respect to attainment of water quality standards for those scenarios. We will prepare an interim technical memorandum documenting the characterization of existing and baseline conditions for the Tributary Watersheds.
- We will apply the water quality models to simulate the water quality benefits of control alternatives. **This scope of work assumes ten (10) separate simulations will be run to assess control alternative benefits.** These may include a combination of simplified control scenarios (for example 25%, 50%, 75%, and 100% reductions of overflows) and specific control alternatives with simulated reductions in overflows from the collection system model.
- For each control alternative simulated, we will evaluate the water quality benefit in terms of pollutant load reduction and improvement in ambient water quality. Attainment of water quality standards will be assessed.
- We will also update the typical year simulation with the final recommended control plan and assess the water quality benefits.
- We will summarize the results of the water quality assessments in a technical memorandum. The memorandum will include discussion of the development of the typical year simulation, water quality characterization of the existing conditions, and water quality benefits of select control alternatives and the final recommended control plan. We will submit one draft to PWSA for review and comment. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Assessment TM

3.2 Monitor flow and conduct hydraulic modeling

3.2.1 Review existing flow data and models

- We will review flow data and models previously collected by PWSA and ALCOSAN to identify modeling and data needs to support the wet weather planning process. In general, this review will include locations, durations and quality of available flow monitoring data as well as determination of availability of models and the extent and quality of the calibration/verification of these models. **Up to 10 watershed models are assumed to be reviewed as a part of this effort.**

- An Existing Model Review TM will be created to document the available modeling sources and to identify data needs to expand or improve the models. This memo will also identify the various design storms, typical year precipitation, boundary conditions, and model scenarios (Existing, Baseline, Future, etc.) needed to support the project.
- **It is assumed that the starting model version for this project is the ALCOSAN Existing Conditions 2020 Model developed using SWMM version 5.1.012. This model includes a representation of the WWTP, deep and shallow cut interceptors, all diversion structures, combined sewer overflow outfalls and storm, combined and sanitary tributary areas. This model is anticipated to be expanded using historical and current modeling elements that have been developed under various PWSA efforts.**
- A summary of the available historical rainfall, stream level and flow monitoring data will be prepared and included in an Historical Flow Data Review TM. This TM will also document ongoing permanent precipitation, permanent flow meters, and stream gages that are available to support the work. **PWSA will provide available historical precipitation, stream and flow data.** Available data on high water flooding marks will also be summarized in this memo for critical stormwater flooding areas. **Field work to investigate or identify high water marks will not be collected.**
- During this process, we will develop a Model Data File Management procedure and implement to assist with model input and output file management. Procedures and Protocols will be summarized in a Model Data Management TM.

Deliverables: Draft and Final Existing Model Review TM; Draft and Final Historical Flow Data Review TM; Draft and Final Model Data Management TM

3.2.2 Develop a flow monitoring plan and collect flow data

- A detailed Flow Monitoring Plan TM will be developed to support the model expansion and system characterization effort guided by the approach outlined in this section. The Plan is expected to include proposed methods for flow monitoring in Critical Areas and I&I sewersheds with sections that cover, purpose and objectives, monitoring techniques and procedures, data management approach, QA/QC protocols, and maps of proposed deployment locations.
- **It is assumed that PWSA can provide all necessary radar-rainfall data needed to characterize precipitation in the service area.** The radar rainfall information will provide area-weighted rainfall hyetographs for each model subcatchment using existing regional permanent rain gauges. **To supplement this data, we will deploy up to 20 temporary project rain gauges for no more than 9 months.**
- We will deploy sewer system flow meters to screen and prioritize tributary areas to support expansion of the system hydraulic/hydrologic model (Calibration monitoring) and for further I/I investigations (micromonitoring).
- **To support model expansion into Critical Areas, up to 100 calibration meters (with a total installed duration of no more than 9 months) will be**

installed to provide information for model calibration in areas of known performance problems. Monitored subcatchments are planned to be between 20 and 75 acres in size.

- In support of Task 3.4, micromonitoring will be used to break down areas of roughly 100 acres or less for further I/I investigations. Up to 40 micrometers (with a total installed duration of no more than 3 months) will be deployed simultaneously for one or two significant rainfalls per location to determine tributary area I/I response. Areas showing significant response would then be targeted for further investigations. Areas showing little response would be screened from further consideration. Micromonitoring durations will be adjusted based on observed rainfall events.
- In support of Task 3.4, up to 40 calibration meters (with a total duration of no more than 6 months) will be installed to provide information for model calibration areas in sanitary areas. We will use the Task 3.4 prioritization information and preliminary micromonitoring to assist with calibration meter placement.
- It is assumed that flow monitoring will be conducted in the 2022 season between March and November. All data will be collected and stored in a database for use on the project.

Deliverables: Draft and Final Flow Monitoring Plan TM; Rain and Flow Monitoring Database

3.2.3 Expand and calibrate hydrologic and hydraulic model for use in planning

- The H&H hydraulic model will be extended up into the PWSA collection system to represent know problem areas with clusters of reported basement backup and areal flooding issues.
- Additional detail included in the historical version of the PWSA model included within Infoworks may also be added to the model to support this work along with significant known system changes. **Up to 400 staff hours for addition of existing detailed model elements such as major sewer projects or other detailed models has been assumed.**
- In Critical Areas with street flooding, the H&H model will also be expanded using dual drainage network techniques, to capture the movement and depth of overland flows along the street network. Depending upon the location of the problem area there may be a natural open channel also that will be included in the model. **Up to 2,500 model elements (channel segments and surface nodes) are assumed to be included in this model expansion within no more than 6 to 10 sub areas. It is assumed that existing topographic data is sufficient to characterize the street geometry.**
- With the hydraulic network expanded into the collection system, the lumped or consolidated hydrologic representation included in the current Existing Conditions model will also need to be discretized so that the generated flows can be distributed in the detailed expanded hydraulic network. This more detailed hydrologic representation will need to be calibrated using the collected flow and depth data. **Up to 4,500 model elements (sewer pipes**

and manhole junctions) are assumed to be included in this model expansion within no more than 20 to 30 sub areas.

- Revisions and expansions of the model will be documented in a Model Update TM.
- Sanitary areas within the H&H model will be calibrated to the data collected under Task 3.2. RTK parameters will be updated to reflect the findings of the new data collected.
- Targeted subarea calibration of areas tributary to up to 140 flow meter locations will be conducted based on the flow data collected under task 3.2. Continuous calibration/validation is anticipated to be conducted to compare metered vs. modeled predictions of flow, volume, depth and hydrograph shape. Industry standards for determination of acceptable calibration will be applied to determine the reasonableness of the calibrated parameters.
- A technical memorandum will be developed to summarize the results of the model calibration.
- A model review workshop will be held with PWSA to present the results of the calibration and discuss approval of the model for use on subsequent planning efforts.
- Upon approval of the model, files for various scenarios (Existing Conditions, Baseline Conditions (Near Term Projects that will be constructed) and Future Conditions (with Interim and Select Plans) will be developed to support the next stages of modeling. **Models will be run for up to five (5) design storm conditions to support level of service analysis.** Models will be run continuously for the Typical Year. Sensitivity scenarios for use in assessing the impacts of future climate change will also be run. Overflow statistics and level of service impacts will be quantified.

Deliverables: Draft and Final Model Update TM; Draft and Final Model Calibration TM; Model Support Files; Model Results Summaries

3.3 Perform level of service peer review and develop current level of service and range of alternatives for increasing level of service.

- A peer review will be conducted to identify the level of service of similar regional communities. Findings of the review will be summarized in a technical memorandum.
- Stress-test the current PWSA collection system to identify the current level of service provided and develop a level of service thematic map.
 - The primary level of service will be evaluated using the existing hydrologic and hydraulic model and the expansion into critical areas of observed sewer back-ups and street flooding will be used to assess collection system capacity for the interceptors and selected main line sewers.
 - A secondary level of service evaluation will be conducted on main sewers > 18" in diameter using a simplified method that compares pipe capacity to flows from the model that will be apportioned based on area. **It is assumed that existing GIS/sewer data provided by PWSA is sufficient for this purpose.**
 - A third evaluation will be conducted to assess "neighborhood" level of

service along a street within a city block. **Representative neighborhood areas (up to 6) will be selected and evaluated in detail to understand if general level of service deficiencies can be expected based on typical Pittsburgh sewer design practices.** Areas that have adequate existing data from either GIS or record drawings to support the assessment. **PWSA to provide detailed sewer drawings of the selected areas for use in this analysis.**

- **PWSA will determine what the level of service guiding principles will be used for stormwater under a separate contract**
- An alternatives analysis to determine the best approach to provide for increased levels of service will be conducted. In general, this is expected to include conveyance improvements that would include replacing existing storm or sewer piping to increase capacity and reduce water levels in the system and streets. The type, size and general location of improvements will be identified and included on maps to show the options.
- Provide a concept screening cost estimate (AACE Level 5) for bringing the current system up to the appropriate level of service for stormwater and sewer back-ups. Costs for increased conveyance systems to achieve higher capacities will be developed for various levels of service. **It is assumed that no more than two level of service scenarios will be costed.**
- Findings of the evaluation will be summarized in a technical memorandum.
- Determine how increased level of service impacts other wet weather planning objectives, including controls of CSOs and SSOs. A Typical Year simulation will be conducted to determine the results impacts on overflow statistics.
- Model base files for Level of Service Improvement Alternatives will developed to support the next stage of integrated planning evaluations.

Deliverables: Draft and Final Level of Service Peer Review TM; Draft and Final Level of Service Evaluation TM; Existing Level of Service Map

3.4 Develop a plan to identify significant areas of I/I and a strategic plan on how to prioritize locations to reduce I/I

- The PWSA system is essentially a combined system, but the upper reaches of the collection system have separate sewer areas.
- We will review and update on the approach to prioritize investigations previously by PWSA. Using data collected under other tasks, we will seek to identify sanitary areas without significant problems that would require no further investigation. Prioritization will occur at a relatively higher level and be refined as the project progresses. Early micromonitoring is proposed to help define the investigation prioritization.
- **Field work and subsequent data review for activities such as smoke testing, site assessments, manhole inspections, SSES investigations, dye testing, and CCTV inspection to support this task will be conducted by others or as an additional service.**
- PWSA will provide available data on effectiveness of historical projects in reducing I&I after improvements have been made.
- We will review the data collected and provided and use to identify areas subject to

elevated levels of I&I.

- By layering of existing GIS information, we will perform a Prioritization Analysis to produce a table and map with preliminary priority areas. We will review the proposed prioritization with PWSA to get input on the preliminary prioritization approach, the resulting priorities, and provide direction on any necessary adjustments.
- Based on the work, estimates of a range of potential I&I reductions (low, medium and high) for use in planning purposes will be developed for use with planning scenarios under Task 4.
- We will develop draft and final versions of an I&I Prioritization Approach TM, which will document criteria, data used, estimated effectiveness, and a priority list of areas. We will submit the draft TM to PWSA for review.

Deliverables: Draft and Final I&I Prioritization Approach TM

4. Identify and prioritize alternatives

The alternative evaluation is expected to be conducted at varying levels depending on the location and ownership. The most detailed efforts will be focused on outfalls solely owned by PWSA and jointly owned outfalls discharging to tributary streams (Level 1 and 2).

- Level 1 – 38 Outfalls solely owned by PWSA
- Level 2 – 33 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging into the Tributary Water Bodies

For these outfalls, it is assumed that up to 3 technologies will be evaluated for each outfall, costing to a Level 5, performance determined, and a recommended solution provided. Outfall solutions will either be combined or enhanced in up to 3 alternatives per basin.

A lesser detailed level of planning will be conducted for jointly owned outfalls discharging to the Main Rivers (Level 3 and 4).

- Level 3 – 116 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging to the Main Rivers
- Level 4 – 20 CSO Outfalls co-owned by PWSA/ALCOSAN, discharging to the Main Rivers and controlled by the planned Regional Tunnels

For these outfalls, it is assumed that up to 3 technologies will be evaluated for up to 10% of these outfalls, costing to a Level 5, performance determined, and a recommended solution provided. This is not intended to replace but to enhance or supplement the current ALCOSAN Clean Water Plan for these outfalls.

4.1 Identify and screen technical alternatives

- The goal of this task is to identify potential alternatives that will provide compliance with the goals of the wet weather planning process, taking into consideration the ability to adapt to future conditions.
- An Alternatives Brainstorm workshop will be held with PWSA to discuss potential approaches to controlling CSO and SSO in the PWSA service area. The

- workshop will include a review of the planned ALCOSAN improvements, previously planned control recommendations from PWSA efforts, various technologies and strategies that have been reviewed historically and any new or emerging technologies.
- We will review and assess potential **technologies** for controlling SSO and CSO in the PWSA service area. Optimization techniques will be applied to narrow the field of **solutions**.
 - A Technology Screening TM will be prepared that summarizes the potential technologies such as source control, green infrastructure, regulator modifications, storage and conveyance that conducts a high-level screening for applicability to the various areas and provides recommended **outfall solutions** to advance to the basinwide alternative evaluation stage. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - An integrated planning approach will be applied that considers **solutions** basinwide that meet both water quality and level of service requirements determined under Task 3.3.
 - An Alternatives Development TM will be prepared to summarize the alternatives that were considered in the evaluation for each outfall or groupings of outfalls. This TM will summarize basinwide alternatives and the recommended systemwide alternative. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - **Six (6) additional Alternatives Workshops with PWSA are planned to discuss the progress and findings from the Alternative Evaluations.**
 - The selected alternative based on the results of Task 4.6 will be further defined (<5% project definition). This work will include development of concept layouts and site investigations to further develop the concept and develop an opinion of cost that is consistent with a AACE Class 4 cost estimate.

Deliverables: Draft and Final Technology Screening TM; Draft and Final Alternatives Development TM

4.2 Identify and screen site development and buffer alternatives

- Initially, a Site Opportunity and Enhancements TM will be prepared to summarize the nature and location of potential opportunities. We will conduct a recommended screening to identify areas with a potential to support effective wet weather controls. A draft TM will be submitted to PWSA for review and comment.
- USEPA-defined Environmental Justice demographic indices will be included into screening evaluation. Sites for alternatives will consider the benefits and impacts to environmental justice communities within the PWSA service area. The potential for providing benefits to these communities through improved wet weather management will be considered along with the direct benefits and impacts of feasible technologies within these communities.
- Our team will meet with stakeholders to identify opportunities for siting of control alternative solutions at locations that may be mutually beneficial for redevelopment or community enhancements. **Up to 16 meetings with stakeholders have been included in the scope for this purpose.**
- For the final recommended alternative identified under Task 4.6, we will update the TM to discuss the potential solution and how it may be enhanced with site

improvements, community benefits, green leave behinds or other features that would create or maintain a beneficial relationship with the various City of Pittsburgh departments, authorities, and key stakeholders (including neighborhood organizations).

Deliverables: Draft, Revised, and Final Site Opportunity and Enhancements TM

Level of Effort Assumptions:

- **Assumes enhanced site evaluations will be prepared to better define project location and site conditions and refine the level of accuracy of the Cost estimate to support a AACE Level 4 cost estimate in conjunction with Task 4.3**
- **Does not include topographic survey, easement acquisition, property acquisition support services, geotechnical exploration, environmental site assessments, or subsurface utility exploration to be included with the site evaluations.**

4.3 Perform a present worth analysis of the feasible alternatives

- A cost tool that can provide estimates for various technologies at an **AACE Level 5** will be developed using unit pricing, engineering judgement and input from recent PWSA and regional projects for purposes of initial technology screening.
- A Costing Approach TM will be developed that summarizes the assumption, development and application of the cost methodology. **Two (2) meetings are included to discuss the approach and development of the tool with PWSA.** A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Costs will be developed for overall total project and lifecycle costs and include the following elements: Construction, Operating, Site surface development and restoration, Operation and maintenance requirements, Utilities and Land acquisition and rights-of-way. PWSA to provide input on administrative, legal and contingencies to be applied to the overall program cost development.
- Initial costs will be summarized and provided to PWSA for review. These will also be included in the Alternative Evaluation TM.
- Costs for budgeting for the selected alternatives for CSO and SSO improvements in the final Wet Weather Plan will be developed to an **AACE Level 4**. Additional effort to look at proposed projects and site constraints include the following:
 - Site visit
 - Develop project footprint layout using GIS and available lidar topography
 - Screening for property changes
 - Looking at local bidding data for potential cost escalation factors
 - Determine estimated quantities of facilities

Deliverables: Summary of Costs, Updates to the Draft Alternative Evaluation TM.

4.4 Perform a knee of the curve analysis of wet weather controls and water quality benefits

- An analysis comparing costs to performance metrics will developed to assess the

point of providing a value based recommended alternative. This analysis of the costs of varying CSO, SSO and stormwater control alternatives shall be in conformance with the CSO Control Policy and relevant guidance.

- Varying levels of optimization assistance tools will be used to evaluate alternatives to guide development of performance.
- Areas will be prioritized for optimization. Outfalls with planned improvements (by Others) or minor adjustments needed to meet criteria will not be optimized.
- **An optimization software license covering a 24-month period is included in the current budget. It is expected that advanced optimization will be applied to approximately 40 areas.**
- Performance curves will be included in the Alternative Evaluation TM.

Deliverables: Updates to the Draft Alternatives TM

4.5 Analyze financial affordability

- Coordinate with PWSA's financial rate consultant to determine the financial affordability of the proposed improvements to the PWSA system and forecasting the rate on ratepayers.
- Meetings will be held throughout the development of the wet weather plan to discuss progress, cost impacts, affordability considerations and impacts on required schedules for implementation. Two (2) initial workshops are planned to brainstorm the approaches and steps needed to incorporate the affordability analysis into the planning process.
- Based on discussions at the meeting, a work plan will be developed that will guide the steps needed to assess affordability in support of the Wet Weather Plan development. A draft plan will be submitted to the Rate Consultant and PWSA for review.
- All work related to affordability determination including data collection; rate evaluation; assessment of impacts of wet weather projects; level of service projects; ALCOSAN ongoing charges; PWSA ongoing water and sewer system charges; and other factors will be conducted by Others. PWSA will contract separately with Rate Consultant on these services.
- **Up to twelve (12) additional coordination meetings and two (2) workshops are planned to coordinate the work and discuss findings over the duration of the planning.**
- Rate consultant will provide input on initial affordability prior to the start of alternatives and run scenarios for varying levels of level service improvements and necessary stormwater, CSO and SSO control improvements at various stages of the plan development.
- We will review findings provided by Rate Consultant and summarize how the work will be incorporated into the planning and implementation of the WWP.

Deliverables: Draft and Final Affordability Work Plan TM; Draft and Final Affordability Findings TM.

4.6 Conduct non-monetary analysis of alternatives

- An Alternative Evaluation Approach TM will be prepared that summarizes the overall approach to selecting recommended alternatives. The TM will include a discussion on how to score within each non-monetary category, scoring and weighting approaches, and steps that will be taken to develop the scoring. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- The non-monetary criteria as provided by PWSA are expected to include:
 - Local planning impacts assessment
 - Environmental justice and community flood resiliency impacts
 - Floodplain impact assessment
 - Odor and noise control assessment
 - Preliminary environmental site assessment
 - Site surface restoration/development
 - Impacts of water quality improvements
 - Co-benefits of green infrastructure projects or other control alternatives
- Additional information such as advantages, disadvantages, risks, schedule impacts and other considerations will be identified as supporting information will be prepared for each alternative.
- **Up to three (3) workshops are expected to be needed to review the approach, conduct the scoring and share the results.**
- Information from Tasks 4.3 on costs would be combined with a summary of total benefits for each alternative to support development of a cost-benefit analysis.
- The results of the evaluation will be summarized in an Alternatives Scoring Technical Memorandum.

Deliverables: Draft and Final Alternative Evaluation Approach TM; Draft and Final Alternatives Scoring TM

4.7 Prepare a schedule for implementation of controls selected to address CSOs and SSOs

- An implementation schedule with appropriate milestones for design, bidding, construction, substantial completion and final completion will be prepared for the recommended projects in the Wet Weather Plan.
- The schedule will be adjusted based on input with regards to affordability and cashflow constraints provided under Task 4.5.

Deliverables: Draft and Final Implementation Schedule

5. Stakeholder coordination and presentations

We will take the lead on developing and participating in a public participation program. **PWSA will provide stormwater messaging developed to date and any foundational information. PWSA staff will be lead presenters during community meetings but would rely on Wade Trim to develop materials and set up meetings.**

We will work with PWSA in preparing an overall public participation plan and public outreach protocol that meets the requirements contained EPA CSO planning and DEP Act 537 guidance documents.

Our goal is to work collaboratively with the project team and PWSA to develop and implement a plan that prioritizes clear, consistent, transparent, and equitable communication with the public and stakeholders to generate consensus. We intend to include specific outreach to identified environmental justice communities to develop relationships with community leaders in those areas and encourage their availability, participation and engagement in meetings.

5.1 Develop Public Engagement Plan (PEP)

- In support of PWSA's existing public outreach efforts, we will work to coordinate and communicate with internal and external stakeholders. We will work with PWSA to create an engagement plan that centers around multiple working group meetings, stakeholder inclusion, agency communication and public information and input held throughout the duration of this process. The goal of the plan is to generate buy in, which can be better achieved by engaging stakeholders throughout the process, collecting input and feedback, and incorporating that feedback.
- **Two meetings will be held with PWSA public relations staff to support development of the plan.** An initial brainstorming session and a follow up meeting to discuss the draft PEP. Ongoing coordination on public relations topics will be covered under the regular PWSA progress meetings.
- A plan will be developed that includes a summary of program and objectives, messaging, identification of stakeholder groups, definition of target audiences, communications approaches, communication tools, implementation steps, and timelines. The Draft Public Engagement Plan will be submitted to PWSA, and comments incorporated into the Final Plan.

Deliverables: Draft and Final Public Engagement Plan

Level of Effort Assumptions:

- **Develop Public Engagement Plan assumes a detailed outline, 2 draft and 1 final version for Wade-Trim and PWSA review and approval. Includes the development and refinement of the comprehensive stakeholder engagement list.**
- **Project Coordination / Management – assumes up to 2 coordination meetings a month and 4 hours of project management/coordination with Wade Trim / PWSA for 36 months.**
- **Documentation – assumes 8 hours per month for document control, project controls and documentation of events.**

5.2 Program Messaging and Branding

This item has been removed from the scope.

5.3 Online Public Engagement

- Online engagement is an important method of communication with the general public about the Wet Weather Program. The goals of online engagement are to

increase the ability to reach a more diverse audience, generate more informed participation, invite a broader range of input, and set the stage for sustained participation. PWSA already has an online presence, and this plan will build upon those existing relationships/followers/contacts.

- A Wet Weather Program webpage will be created to serve as a resource for people to access information, share the plan schedule, see a summary of planning activities, make note of engagement opportunities, review background information (Including relevant maps and data), make connections to social media pages, locate project contact information, subscribe to a mailing (contact) list, and access a comment form.
- Our team will develop a proposed outline of online content to consider for a website approach and submit to PWSA for review and discussion.

Deliverables: Web Site and Social Media Pages and Updates

Level of Effort Assumptions:

- **PWSA will host and manage online content via their existing website**
- **Updates to the website are expected to occur on a quarterly basis, assumes 12 hours per quarter of support**

5.4 In-Person Public Engagement

- Public meetings will be used to inform the public of the planning process and to solicit ideas, input and feedback. This will be an opportunity to promote transparency and foster two-way communication with the public. Public meetings will be held at multiple locations throughout the city. We intend to host a proportional amount of in-person meetings within environmental justice communities to promote engagement within these communities and consider the specific needs in these communities relative to wet weather management.
- Meeting times will vary to maximize the number of attendees that will be available. The public will be encouraged to ask questions and voice their ideas and opinions about the program activities. Our plan for a series of meetings is presented below:

Year 1 - Goals and Initial Community Input

The first series of public workshops will be formatted as a city-wide Listening Series as an interactive, hands-on opportunity to create program awareness, present background on the system and known problem areas, gain an understanding of community priorities, values and concerns. **Four (4) interactive, workshop-style sessions will be conducted** and geographically distributed through the service area – to encourage diverse participation. These meetings would occur early in the planning process.

Year 2 - Review of CSO Technologies, Solutions and the Alternatives Process

The second series of public workshops will be formatted as traditional public meetings. The purpose of this series of meetings will be to present and/or demonstrate potential control strategies, discuss water quality assessments and provide an overview of the alternative evaluation process. **Four (4) meetings will be held.**

Year 3 – Wet Weather Plan Recommendations

The third and final public workshop series will be formal public meetings to present the draft Wet Weather Plan. This will be the final opportunity to provide an overview of the draft WWP, to discuss issues, processes and decisions leading to the plan, and to record formal comments that will be considered when finalizing the Wet Weather Plan. **Four (4) meetings will be held.**

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **20 hours/month for coordination and responding to questions from the public**

5.5 Stakeholder Advisory Group

- An existing PWSA Stormwater Advisory Group (SAG) that has provided input on the PWSA stormwater fee will be convened to introduce them to the Wet Weather Program goals and objectives. This group will be expected to share information about how to get involved in, provide input on, and stay up to date with the planning process with the organizations/stakeholder groups they represent. We intend to work with this group to discuss issues of environmental justice and solicit input for how the Wet Weather Program will evaluate environmental justice.
- This advisory group will meet at key decision points throughout the process (**up to 6 meetings**). Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation and prepare summaries of the discussions.
- In between meetings, representatives of these groups will receive regular updates through email and will be empowered to help the program team in its outreach efforts by sending information about engagement opportunities to their respective memberships, communities, networks, and employees.

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **Assumes 4 hours/month monthly coordination and responding to inquiries from SAG.**

5.6 Municipalities/POC Outreach

- Meetings with the existing Saw Mill Run Group and various POC municipality representatives would be convened to discuss issues specific to the municipalities. These meetings will be used to share information about known issues, planned improvements, alternative technologies, and other related matters. **We have assumed up to 24 meetings** with stakeholders in this category over the duration of the program. Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation, and prepare summaries of the discussions.

Deliverables: Agendas, Presentations and Meeting Summaries

6. Provide Wet Weather and Act 537 Plans

6.1 Wet Weather Plan (Long Term Control Plan)

- A Wet Weather Plan document will be developed that includes sections on Introduction, Background, Purpose, Public Engagement and Participation, System Characterization of Current Conditions, Control Approach, Control Technologies and Screening, Development and Evaluation of Alternatives, Financial Capability, Recommendations, Selection and Implementation Schedule, and Post Construction Compliance Monitoring Plan.
- A draft Wet Weather Plan will be submitted to PWSA for review and comment prior to submittal of a final Report.
- Following PWSA review, comment, resolution of comments and approval of the draft Wet Weather Plan, we will facilitate preparation of the plan for submitting to the agencies for review and approval.
- Following agency review, comment, resolution of comments and approval of the plan, a revised final plan will be submitted.

Deliverables: Draft, Final and Revised Wet Weather Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of Plan
- Assume preparation of up to 100 comment responses received on the Plan

6.2 Act 537 Plan

- An Act 537 Plan document will be developed in accordance with the Act 537 Plan Content and Environmental Checklist and will include sections on previous wastewater planning, physical and demographic analysis and mapping, identification of existing sewage facilities and needs, projections of future growth and land development, identification of alternatives, evaluation of alternatives, institutional evaluation, justification and implementation schedule for selected alternatives (technical and institutional) and an environmental report. The Wet Weather Plan will also be used extensively to form the basis of the Act 537 Plan.
- A draft Act 537 Plan will be submitted for PWSA comments.
- Following PWSA review, comment, resolution of comments and approval of the draft 537 Plan, we will facilitate preparation of the plan for submitting to the City of Pittsburgh under Task 6.3 for review and approval.
- Following approval by the City of Pittsburgh, we will submit for agency review, comment, resolution of comments and approval of the plan. A revised final plan will be submitted.

Deliverables: Draft, Final and Revised Act 537 Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of 537 Plan
- Assume preparation of up to 100 comment responses received on the 537 Plan

6.3 City of Pittsburgh Coordination

- Prior to submittal to the agencies, the Act 537 plan will require a signed and sealed Resolution of Adoption from the City of Pittsburgh. We will assist in the preparation of the appropriate submittals, response to comments and consistency documentation that the appropriate agencies have received, review and concurred with the Act 537 plan throughout the entire process.
- Following PWSA approval of the draft Act 537 Plan, the plan will be submitted to City of Pittsburgh and Allegheny County Planning Commissions for consistency review and comment.
- The Act 537 plan is also required to be posted publicly for a 30-day comment period, with proof of the publication, copies of all comments with responses in each comment included in the final submittal to the agencies.

Deliverables: Public Notice

Level of Effort Assumptions:

- Assume 3 coordination meetings with City of Pittsburgh Officials
- Assume preparation of up to 100 comment responses received on the 537 Plan

7. Develop an environmental impact assessment of recommended Wet Weather Plan

- Once conceptual level wet weather plan facilities have been identified, we will conduct a more detailed environmental review in the form of an Environmental Impact Assessment which further evaluates the community impacts identified during the alternative's evaluation. This assessment will serve as the Uniform Environmental Review.
- A report will be proposed that follows the format laid out in PADEP's Technical Guidance Document 381- 5511-11. The report will discuss the environmental consequences and potential mitigation of the proposed facilities for land use, recreational use of land and streams, water and air quality, noise, odor, vehicular and pedestrian traffic, socio-economic issues, miscellaneous environmental considerations, as well as aesthetic and property impact for use in the Act 537 Plan.
- A draft Report will be submitted for PWSA comments.
- **The number of projects to be evaluated has yet to be defined through the wet weather planning work. For this reason, a total of no more than 20 projects has been assumed that will require assessment.**

Deliverables: Draft and Final Environmental Impact Assessment Report.

8. 3rd Party Assessment of Sewer Assets

- Regionalization involves the voluntary transfer selected municipal sewers and sewer facilities in the service area over to ALCOSAN. This is intended to reduce the financial burden on PWSA and allow ALCOSAN to more directly manage and reduce excess flows into the system. **This will be accomplished by ALCOSAN assuming ownership and maintenance of approximately 60 miles of large, multi-municipal trunk sewers and associated facilities (upstream diversion structures).**

- The purpose of this task will be to review PWSA sewer assets that are proposed to be transferred to ALCOSAN via the regionalization initiative. We will review the assets and provide documentation needed to support transfer.
- This is a study and does not include regionalization negotiation support for the ALCOSAN agreement.
- A Draft PWSA Assets Review TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final Assets Review TM; Applicable support documents.

9. Post Construction Evaluation of GI Effectiveness

- We will evaluate the performance of up to **fifteen (15) Green Infrastructure projects** in various states of design and construction that are being constructed with the intent to reduce stormwater inflow to the sewer system. To support estimates of effectiveness of these projects and potential future similar projects, post construction monitoring of the performance of these projects will need to be conducted.
- **Our team will install flow monitors at up to 30 locations for a period of 8 months to collect on performance.**
- **Data from the 3RWW rain gauge network data and up to 6 site specific rain gauges will be used to document precipitation.**
- **PWSA will provide design reports, modeling and plans produced by others along with historical rainfall and flow data collected prior to the start of the projects for use in comparisons.** Post construction data collected on other projects and any related reports will also be provided.
- We will compare the data and provided an evaluation of the resulting effectiveness of the various projects. A Draft GI Project Effectiveness TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final GI Flow Monitoring Plan; Draft and Final GI Project Effectiveness TM

GENERAL ASSUMPTIONS

- All deliverables will be provided electronically
- PWSA will provide comments on most deliverables within 14 calendar days; Task 6 deliverable comments will be provided within 30 calendar days
- Comments will be provided by PWSA electronically using document control software
- Meeting duration assumed to be typically 1 to 2 hrs (50% virtual; 50% in person)
- Workshop duration assumed to be typically 4 to 8 hrs (In person)

SCHEDULE

- The project is expected to cover a three-year period with the potential for up to three one (1) year extensions. Extensions of the schedule may impact level of effort.
- The tasks and their general anticipated duration are provided below:

Task	Anticipated Duration
Task 1	36 Months
Task 2	18 Months
Task 3	30 Months
Task 4	18 Months
Task 5	36 Months
Task 6	12 Months
Task 7	12 Months
Task 8	9 Months
Task 9	12 Months

PWSA TASK ORDER/AMENDMENT EXHIBIT C INSTRUCTIONS

**An additional Exhibit C or D may be used if space provided is not sufficient.*

General Instructions

1. **DEFINITION:** A task is a type of service that will be performed in a Task Order or Amendment, for example, it might be Design Engineering, or Construction Management, or Field Inspection. A project budget may contain individual budgets for each type of service. A Task Order or Amendment may provide for one or more type(s) of service. When preparing this Exhibit C, make sure that each type of service is separately annotated, and that the cost of labor and expenses for each type of task (budget code) is distinctly represented. PWSA's goal is to individually track the cost of each type of task or service. Should the amount of staff needed exceed the total number of columns, you may provide an additional completed template for each Exhibit. Just be sure your TO/Amendment Total Fee matches as an accumulative value.
2. See the Budget Codes tab for an explanation of where a Task type should be applied in this Exhibit.
3. Use these Exhibit forms as is. **Do not attempt** to alter them. **If they are altered they will be rejected.** If a change should be considered, discuss with your PWSA point of contact.
4. **Be sure** that all labor rates used in these forms are consistent with the rates used in the Master Services Agreement.

Exhibit C.1

Purpose: Exhibit C.1 identifies the Consultant's staff members who will contribute to each Task type to be provided, their MSA classification, their Task Order role, their anticipated labor hours, and their labor costs.

1. The Consultant's Scope of Services must be defined according to the distinct tasks that apply to a project budget code. The cost to perform each Task must be captured on this Exhibit.
2. On Row 45, enter each Consultant staff member name in a different column.
3. On Row 46, enter each Consultant Staff member's Master Service Agreement classification in a different column.
4. On Row 47, enter each Consultant Staff member's Task Order role in a different column.
5. Enter the hours each staff person will contribute to each task in the rows below each staff person's name. **If it doesn't apply, leave row blank.**
6. Enter the Subconsultant markup as an integer or decimal number (field is coded as a percentage). The spreadsheet will calculate the Total Hours and Total Labor Cost for the Consultant.

Exhibit C.2

Purpose: Exhibit C.2 captures the Consultant's anticipated expenses. Note that there is a table section for each Task type (budget code).

1. Exhibit C.1 will auto-populate each staff person's name in the appropriate row.
2. In Column B enter the type of expense that will be invoiced, e.g. mileage, hotel, auto rental. These fields are editable.
3. The spreadsheet will calculate the total costs by person and by task.
4. Repeat 1 - 3 for each Task type.

Exhibit C.3

Purpose: This table captures the Sub Consultants' anticipated costs and MBE/WBE/VBE/SDVBE classification. Note that the entries in this table are all inclusive of both labor and expenses.

The details of this data must be reflected in the required attached Sub Consultants' proposals.

1. Enter the name of each Sub Consultant firm in the Columns of the table.
2. Enter the cost **by task** of each Sub Consultant firm.
3. The spreadsheet will calculate the total costs by Sub Consultant and by Task.

Exhibit C.4

Purpose: In this Exhibit C.4, the Consultant should enter into lines 4, 5, and 6, as needed, any stipulations PWSA should consider about the Task Order or Amendment proposed budget.

Note that items 1, 2, and 3 are required by PWSA, and cannot be changed.

Exhibit C.4: ASSUMPTIONS

LIST OF ASSUMPTIONS RELATED TO BUDGET AND EXPENSES - List any conditions the Consultant places on the Budget and Expenses indicated above.

1	Consultant shall notify the Authority's Representative when expenditures based upon the billing of this Task Order reaches 50, 75 and 90% of the total budget, and an estimate of the time and funds necessary to complete the work. If additional funds are requested and not authorized in writing by the Authority's Representative, the Consultant shall reduce the scope of work to complete within the funds available.
2	In no event shall the Consultant's total billings for the services performed under this Task Order exceed the approved Fee amount without the Authority's written authorization and notice that it has approved an increase in the budget limit and funds available.
3	Should a key or non-key staff person not listed on an approved Task Order get assigned to the task, an Action Item to the project manager will suffice to acknowledge the change without an increase to the overall total fee. This MUST be done within 30 days of the assignment, preferably before PWSA receives the invoice for the time in which work was performed. Project Managers have the right to reject or accept the assignment of a staff person with proper justification. The consultant has the right to appeal that decision to the Director of Engineering and Construction.

Jason McBride, P.E.
Northeast Area Lead, Vice President
Wade - Trim
401 Liberty Avenue, Suite 1600
Pittsburgh, PA 15222

RE: PWSA Wet Weather Program Manager

Dear Jason,

Thank you for the opportunity to join the Wade-Trim team to provide public and stakeholder coordination for the PWSA Wet Weather Program Manager pursuit. We are proud to continue developing our partnership as we work to make Pittsburgh a more sustainability designed & modern city. In addition to our PWSA and regional water and wastewater experience and technical capabilities, E. Holdings, Inc. brings commitment and passion of local staff who understand the issues facing our region.

We understand you anticipate our level of effort to be \$615,145 or 3.63% of the total contract. If you have any questions about the enclosed items or require additional documentation, I can be reached at 412.434.6571 x 1011 or janai.smith@eholdingsinc.com.

Sincerely,
E. HOLDINGS, INC

Janai Williams Smith, Managing Director

Task Order No. WT-PRGM-11

Task Order Name: Stakeholder Coordination Services for Wet Weather Program Manager Project

This Task Order Amendment is made as of the Effective Date, by and between **The Pittsburgh Water and Sewer Authority** (the “Authority”) and **Wade Trim, Inc. (Ops)**, (“the Consultant”).

Consultant Firm: Wade Trim, Inc. (Ops)

Contract Name: Wet Weather Program

Agreement between the Authority and the Consultant dated 11.01.2021

Prior Task Order/Amendments Applicable to this Task: N/A

The schedule for the completion of the Services under this Task Order is incorporated herein. The details of the schedule are as follows or as detailed in the separate schedule, attached as Exhibit B. The time limits established by the schedule shall not be exceeded without reasonable cause. The schedule may be amended with the Authority’s written consent as the Task proceeds.

Start Date:	11.01.2021
Completion Date:	10.31.2024

The Authority’s budget is attached hereto as Exhibit C and incorporated herein.

Where the Fee is based on Agreement rates, the Fee may not exceed the budgeted amount. The budget may be amended with the Authority’s written consent.

Fee:	\$744467.70				
MBE:	51%	WBE:	0%	SDVBE:	%

A detailed Scope is attached hereto as Exhibit A and incorporated herein.

Exhibit A: Scope of Services

Wet Weather Program Manager

2021-OPS-116-0

Project Manager:

Ana Flores

Date Approved:

11.09.2021

**PITTSBURGH WATER AND SEWER AUTHORITY
WET WEATHER PROGRAM MANAGER
PWSA PROJECT NO. 2021-OPS-116-0
FINAL SCOPE OF SERVICES**

PROJECT OBJECTIVES

The specific objectives of the Wet Weather Program Manager are as follows:

- Assist in developing PWSA's Long Term Control Plan (LTCP) for the control of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) remediation plan, which will comprise a Wet Weather Plan or one or more similar documents. Provide program management services, advise, and consult with PWSA, its engineering staff, and its legal counsel (including translating technical information into a form useable by counsel) in the negotiation of a consent decree with the United States and Pennsylvania Department of Environmental Protection (DEP) addressing, among other things, the control of CSOs and remediation of SSOs from PWSA's sewer system (a Wet Weather Decree).
- Develop plans for improvements of PWSA sewer system facilities to bring combined sewer overflows into compliance with the CSO Control Policy and to remediate SSOs.
- Perform a level of service peer review and identify the current stormwater level of service the current PWSA system provides.
- Develop a range of alternatives to provide control and management of stormwater and manage basement backups and overland flooding to an appropriate, affordable level of service.
- Assist PWSA and its legal counsel in the coordination of planning, regulatory obligations, and capital improvements with upstream and downstream municipalities and ALCOSAN, where applicable.
- Conduct evaluations to account for the impact of projects implemented under ALCOSAN's consent decree and regionalization program on PWSA's development of CSO and SSO controls, and vice versa.
- Perform engineering and public participation activities in support of the development of a Wet Weather Plan, and obligations arising under municipal orders, enforcement orders, and any Wet Weather Decree entered into by PWSA.
- Develop analyses to assist PWSA's legal counsel in its addressing regulatory and legal issues associated with wet weather planning, including resolution of related enforcement actions.

SUMMARY OF WET WEATHER PLANNING TASKS

Program management services include oversight and coordination of the following activities in support of the development of a Wet Weather Plan or similar planning documents, consisting of a LTCP to control CSOs and a plan to remediate SSOs (collectively, a Wet Weather Plan in connection with the above negotiations), and plans to provide effective stormwater management. The wet weather planning work typically includes those engineering activities required to produce plans and other deliverables to be submitted to regulatory agencies, including the DEP, the Allegheny County Health Department (ACHD), United States Department of Justice,

(DOJ), and the United States Environmental Protection Agency (EPA). Many of the tasks will require familiarity with and the use of guidance documents issued by EPA and DEP. The production of interim work products and the Wet Weather Plan will be in support of negotiating a consent decree, assisting PWSA in complying with the requirements of the Wet Weather Decree and other regulatory requirements arising under the Pennsylvania Clean Streams Law and the federal Clean Water Act (CWA).

The following is a list of the tasks to be performed by the Wet Weather Program Manager.

- Task 1 - Program Management Services
 - Support the negotiation and the development of a consent decree and development of a Wet Weather Plan
 - Provide on-call engineering services
- Task 2 - Data Gathering
 - Review and determine DEP Act 537 Plan update requirements and permitting requirements for conveyance, storage and treatment
 - Review EPA guidance documents relating to CSO and SSO control
 - Review CSO/SSO consent decrees entered by other municipalities, as well as LTCPs and SSO elimination plans developed by other municipalities
 - Map with GIS, delineate and collect field survey data within planning basins.
 - Investigate sewer system and develop a system characterization study for PWSA's combined and sanitary sewer systems
 - Conduct site investigation
 - Evaluate the impact of CSOs on receiving waters
- Task 3 - Model Development and Calibration
 - Monitor flow and hydraulic conditions to inform system characterization and the selection of CSO and SSO controls
 - Develop a hydraulic and hydrologic model for PWSA's combined and sanitary sewers that reflects prior modeling information and additional monitoring data
 - Perform level of service peer review and develop current level of service thematic map
- Task 4 - Alternative identification and prioritization
 - Develop an alternative analysis for the control of CSOs and SSOs, including the development of cost-performance curves to assist in analysis
 - Develop an implementation schedule for CSO and SSO controls informed by and coordinated with a financial impact and affordability analysis
 - Identify CSO and SSO control technical alternatives
- Task 5 - Stakeholder Coordination
 - Coordinate wet weather planning and program development efforts with ALCOSAN and other municipalities in the Pittsburgh Region
 - Coordinate wet weather planning and program development efforts with community outreach and stakeholder engagement initiatives
 - Develop public participation program to inform wet weather planning and program development efforts

- Public participation program
- Task 6 - Final Act 537 Plan and Wet Weather Plan/LTCP and Recommendations
- Task 7 - Conduct environmental impact assessments of projects
- Task 8 – 3rd Party Assessment of Sewer Assets
- Task 9 – Post Construction Evaluation of GI Effectiveness

DETAIL OF WET WEATHER PLANNING TASKS

1. Program Management Services

1.1 Program Management

1.1.1 *General*

- Provide program management services that include oversight and coordination of activities in support of the development of a LTCP to control CSOs and a plan to remediate SSOs.
- A Program Management Plan will be prepared that summarizes the procedures that will be used to manage the program. Our PMP will include Program Scope & Goals, Program Constraints, Program Performance Metrics, Program Organization, Project Controls, Safety, Quality Assurance, Communication Protocols, Environmental & Permits Compliance and Risk Management. A draft Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.
- Ongoing management, coordination with PWSA and team members, communications, and project management activities will be conducted to manage the work.
- Ongoing document management will be conducted to facilitate file sharing between PWSA and our team.
- Develop and manage program schedules. An overall baseline schedule will be developed and updated monthly to reflect the progress of the work.
- Manage quality assurance/quality control of programs. A QA/QC plan will be developed and documented in the PMP. Quality reviews will be documented and conducted on all deliverables.
- Prepare and present periodic status program and project reviews, including establishing formal and informal milestones and performance metrics. Performance metrics will be developed and documented in the PMP. Monthly progress reports that include a summary of work activities completed during the previous period, planned activities for the next period, and critical action items will be prepared and submitted to PWSA as part of our monthly invoicing.
- Conduct meetings with PWSA, its engineering staff, and its legal counsel as needed to discuss the progress of the project and review key deliverables. These meetings may include a project kickoff meeting, as well as meetings with the executive PWSA team to present an executive summary of the progress of the project and key decisions needed to be made. Agendas and presentation materials will be prepared. Meeting summaries will be submitted following the meetings. **A total of 72 progress meetings, 12 miscellaneous meetings and 6 executive sessions have been assumed.**

- Provide planning-level risk management in accordance with industry standards and guidelines. A risk management plan will be prepared and included within the PMP. An initial risk development workshop will be held to review and provide input on the plan and risk register. The risk register will be updated on a quarterly basis and discussed within the regular progress meetings.

Deliverables: Draft and Final Project Management Plan; Meeting Agendas, Presentations and Summaries; Monthly Progress Reports, Schedule and Invoicing; Risk Registers

1.1.2 Regulatory Support

- The purpose of this task will be to advise and consult with PWSA, its engineering staff, and its legal counsel in the negotiation of a consent decree. Meetings will be held to prepare for EPA meetings, discuss matters with EPA and debrief on follow-up items. Agendas, technical work, presentation materials, and meeting summaries will be developed for all meetings.
- **A total of 108 meetings have been assumed over a 36-month period at an average level of effort of 16 hours/meeting for regulatory team preparation and attendance and 100 hours/month for technical support time to develop content, review, documents, and address questions from EPA or others.**
- The purpose of this task is to establish compliance priorities and to provide support to PWSA in the ongoing discussions with US EPA and PA DEP to work towards acceptance of required compliance deliverables, an LTCP 1080+approach as it is developed. We will provide technical support and guidance for the ongoing negotiations with USEPA and PA DEP under this task by helping to gain regulatory acceptance for PWSAs compliance strategy.
- The goal of this task will be to define strategies to develop the various work approaches, programs, descriptions for capital projects, capital costs/benefits, and schedule implications for presentation to regulatory agencies. We will also review and evaluate any deliverables or documents submitted to US EPA, PA DEP and others as directed that may have impact on the CSO update / Integrated Plan and schedules.
- This task will be managed on a time and material basis as directed by the PWSA and working in conjunction with the legal and rate consulting teams to develop specific products to support regulatory discussion.
- The focus of this task will center on meetings and staff work on development of documents to support the negotiation process and work to gain acceptance for compliance documentation. Much of the work will be driven by evaluation of existing compliance documents, development of PWSA LTCP goals and guiding deliverables to build a case for technical acceptance by US EPA and PA DEP.

Deliverables: Meeting Agendas, Presentations and Summaries; Various correspondence needed to support ongoing discussions

1.1.3 Other Services

A. CMOM Program

The purpose of this task is to develop and document a Capacity, Management, Operation and Maintenance (CMOM) program. We will review existing information on CMOM activities, meet with PWSA to understand the program and develop a recommended plan for PWSA.

PWSA's Capacity, Management, Operations and Maintenance (CMOM) Program forms the foundation for PWSA to meet its customer service demands, sustain infrastructure performance, comply with regulatory requirements, and manage its resources. The objectives of this task are:

- Compile PWSA's current CMOM documentation and assess the program components against industry best practices, PWSA's organizational goals, and applicable regulatory requirements
- Develop a set of priority improvements to address potential gaps identified in the assessment
- Establish a Program Document that, when implemented, provides a proactive defense from regulatory enforcement action and leads to improved system performance and cost savings.

CMOM assessment will benchmark PWSA's current program against likely EPA Region 3 expectations, regulatory precedence, and utility best practices. This review will be focused on the sanitary sewer service area of PWSA and the capacity assurance, management, operations, and maintenance activities specific to that portion of the system. It is assumed that the Nine Minimum Controls (NMC) activities of PWSA cover similar aspects for the combined sewer system and are outside the scope of this effort.

We will assess current programs, policies, and practices. Existing documentation will be compiled and evaluated to establish priority areas for improvement. The assessment will include evaluation of SSO causes, review of existing CMOM documentation, interviews, and field observations.

We will evaluate PWSA's SSO data to develop an understanding of the number and volume of sanitary sewer overflows by cause over the past 5 years (2016-2020). SSOs will also be plotted in GIS to identify any geographic trends. The SSO cause and spatial analysis will allow us to consider how PWSA's CMOM Programs are structured to solve system-specific needs.

We will submit an information request to PWSA to gather existing CMOM-related program documentation, policies and procedures. We will review existing documentation, assess the completeness of the program, and identify potential gaps with accepted best utility practices in the following areas:

- Goals, Visions and Support
- Organization
- System Knowledge
- Capacity Management

- Engineering and Construction
- Asset Inspection and Condition Assessment
- Rehabilitation and Replacement Program
- Maintenance Programs and Procedures
- FOG Program
- SSO Tracking, Analysis and Reporting
- Overflow Emergency Response
- Budgeting
- Training
- Safety
- Customer Service
- Information Management
- Information Systems

We will conduct interviews with PWSA staff over a 5-day period, including personnel from management, engineering, planning, operations and maintenance. During the interviews we will discuss policies and practices related to organizational structure/communications, work management processes, information management processes, inspections; rehabilitation (pipeline, manhole, and removal of illegal connections); fats, oils, and grease (FOG) control; new construction standards and inspections; Emergency Response Procedures; preventative, predictive, and corrective maintenance practices including sewer cleaning; and staff training, knowledge skills, and abilities.

Observation of the operations and maintenance (O&M) crew work practices will validate what was heard during the interview process and identify additional opportunities for improvement. A senior collection system operations expert will spend 2 days in the field observing the way in which crews accomplish O&M tasks such as inspections, CCTV, line cleaning, point repair, root control, pump station maintenance, and emergency response where possible.

The results of the CMOM Program assessment will be presented to PWSA in a workshop with recommendations for improvements. Based on PWSA's feedback and input, an Implementation Plan will be established that identifies areas for improvement, the scope of effort involved by both our and PWSA staff, estimated labor-hours and schedule. The Implementation Plan will focus on improvement that provide maximum benefit to PWSA.

- Describe the Gap Assessment framework including regulatory requirements and effective industry business practices
- Present the SSO cause analysis results
- Confirm PWSA's CMOM Program goals
- Gain input on our assessment of current business practices and programs
- Prioritize areas for improvement. The prioritization process will consider the current program status, as well as the importance of the various programs and practices in meeting PWSA's specific CMOM Program goals
- Develop consensus on improvement areas and priorities.

Based on the results of the workshop, we will develop a CMOM Program Summary, documenting the CMOM assessment, and a Work Plan for high impact improvements to current programs and practices. We will conduct a final consensus workshop to validate the draft CMOM Program summary and allow staff to make adjustments before finalizing the Work Plan. We will finalize the CMOM Assessment to include the agreed upon improvement initiatives and proposed timelines. A draft overall CMOM Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.

Ongoing support activities such as training, data review, and development of procedures can also be conducted to assist PWSA in implementation of the plan as an additional service.

Deliverables: Draft and Final CMOM Plan

Level of Effort Assumption:

- **Will conduct two (2) workshops and up to 5 days of interviews and field visits with PWSA Staff.**

B. Assist with PWSA's Nine Minimum Controls (NMCs) program

- We will review existing NMC documentation and provide a Technical Memorandum summarizing review comments and recommendations.
- **Ongoing support activities such as training, data review, and development of procedures can be conducted to assist PWSA in implementation as an additional service.**

Deliverables: Draft and Final NMC Review TM

1.2 On-call Engineering Services

1.2.1 General On-Call

To support the development and ongoing progression of the Wet Weather Plan, various engineering services may be required at the request of PWSA. Specific tasks will be identified and a mutually agreeable scope, budget and schedule to complete the task will be developed by Wade Trim and PWSA. In general, examples of the services that may be performed under this task include:

- Conceptual infrastructure studies
- Design and construction engineering services
- Asset management activities
- Value engineering studies
- Oversight of consultants that may perform design and construction engineering services for wet weather projects.
- Coordinate the design of PWSA system improvements developed as part of the wet weather planning efforts with proposed improvements of the ALCOSAN and upstream/downstream municipal systems

An allowance has been established to support these activities. Work will be performed at the approval of PWSA and up to the limit included in this authorization.

Deliverables: To be determined based on nature of approved task activities.

1.2.2 Sewer Condition Assessment

This task has been removed from the scope.

1.2.3 Asset Management

The general objective of this task is to develop the methodology and best practices to assist PSWA better manage their assets. Asset Management (AM) services will focus on aligning strategic objectives with stakeholder level of service expectations to develop a risk-based approach to manage the entire lifecycle of program assets. Collaboration with PWSA staff will be integral to success and initial efforts will focus on understanding current best AM practices, identifying gaps, and developing an actionable roadmap for AM implementation. Implementation items will be prioritized and quick win and near team activities that achievable and provide the most value to PWSA will be identified. AM implementation assistance will be provided based on PWSA requests for assistance. Planned AM Services include:

- Review and assess the existing AM program and system operational documentation and provide a gap analysis relative to utility best practices and develop recommendations
- Develop or Update the PWSA Asset Management Vision to incorporate key wet weather program priorities
- Form and charter an AM team of PWSA key staff that can build and then take on the implementation of the program
- Develop AM program charter and AM methodology and best practices training content
- Conduct AM program evaluation and gap analysis between current and desired future state
- Prepare actionable AM program implementation roadmap that details prioritized AM activities
- Organize, integrate, and embed overall PWSA strategic goals in the AM framework and corresponding LOS goals and evaluation criteria for alternative evaluation
- Develop and enhance PWSA's use and operation of Innovyze Info Asset Manager including training of existing staff.
- Organize system replacement and future CIP data for use in the alternative evaluation
- Coach and mentor PWSA staff using subject matter experts that can provide guidance on continuous AM program development
- The following strategic and tactical topics will be discussed with each of the groups listed above, as applicable, as part of the assessment:
 - Decision Making and Capital Planning
 - CIP Development and Prioritization
 - Design & Construction
 - Funding
 - Information Systems and Data Management
 - Data Systems Tools
 - Organizational Framework
 - Communications

- Risk Management
 - Operations and Maintenance
 - Inventory/Warehouse
 - Maintenance Strategy
 - Operations Strategy
 - Optimization
 - Culture and Change Management
 - Document Management
 - Leadership and Commitment
 - Levels of Service and Performance Evaluation
 - Resource Management
- This task is intended to establish a program that PWSA can run independently. **Ongoing support beyond the budget for this task can be provided to support activities as an additional service.**

Deliverables:

Information Request, copies of meeting materials, draft and final AM program charter, AM training materials, AM gap analysis, AM roadmap and supporting materials developed as part of implementation activities.

1.2.4 Compliance Review of Selected Sewer Improvement Projects

PWSA has identified two (2) sewer improvements projects (Browns Hill Road Pump Station and 31st Ward Sewer System) that PWSA plans to procure outside consultants and start work 12 months from the NTP of this contract. **PWSA will maintain a project manager to provide administrative oversight of outside consultant activities.**

In general, our activities will include:

- Reviewing and providing input on outside design sewer consultant RFPs.
- Conducting 30%, 60%, and 90% compliance reviews to assess ability of the proposed design to meet regulatory requirements.
- Coordination meetings to discuss reviews and responses.

Deliverables: Technical Review Comments

Level of Effort Assumptions:

- **Attendance at up to 8 project meetings total among 2 projects**
- **Technical review of design discipline work and constructability reviews will be conducted by others.**

2. Data Gathering

2.1 Evaluate existing information and analyses

- Review wet weather-related studies in the region, such as the ALCOSAN Clean Water Plan, 2008 Feasibility Report, 2013 PWSA Feasibility Report, 2016 Citywide Green First Plan, Controlling the Source, RAND Climate Change study, PWSA’s current Stormwater Master Planning initiative, and other documents that PWSA deems appropriate.
- Sections in an Existing Data Review TM will be prepared that summarize important findings and information relative to the current study effort.

Deliverables: Draft Existing Data Review TM Sections

2.2 Gather county, state and PWSA system information (sewer maps, inspection data, hydraulic overload problems, ACHD complaints)

2.2.1 Data Gap Analysis

- Relevant data that Allegheny County and State agencies may have will be requested and reviewed.
- PWSA will provide:
 - Existing GIS system database of existing sewer assets and any required sewer maps (critical information includes pipe diameters, lengths, invert elevations, and rim elevations).
 - Inspection and sewer back up complaint data
 - Information on known sewer hydraulic bottlenecks and surface flooding issues
 - Known areas of heavy inflow and infiltration, SSO and CSO locations
- Data relative to sewer and street flooding will be requested from ACHD and information provided reviewed and incorporated into the project GIS database.
- Additional existing collector sewer system information and reporting data will be reviewed. The Existing Data Review TM will be updated with the findings from other tasks. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- A Data Gap Analysis TM will be prepared that summarizes additional data collection and field investigations needed to support the study along with a level of effort. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Existing Data Review TM; Draft and Final Data Gap Analysis Review TM

Level of Effort Assumption:

- **Assumes that the existing PWSA GIS database of sewer data is of sufficient accuracy to support the planning level activities**
- **Assumes approximately 200 staff hours/month for 6 months**

2.2.2 Determination of Critical Areas

- Complaint records provided by PWSA will be reviewed and screened to identify issues related to documented system problems. A map of complaint locations for sewer backups and street flooding will be developed.
- **A significant number of pipes covering the local systems is not included in the current PWSA hydraulic models. It is anticipated that inclusion of all the sewer elements would be a significant undertaking from a data collection, model upgrade and model run time perspective. Therefore, the base models will be expanded to focus only on critical areas that have experienced historically high levels of sewer back-ups and/or street flooding. All system pipes (storm and sanitary) will not be modeled.**

- A desktop hydraulic analysis will be conducted using the existing hydraulic models for sewers included in the PWSA system for a range of storm events to identify the capacity of the existing sewer lines. Major sewers (>18") not included in the model where adequate physical data is available will also be checked for capacity using existing GIS data (topo, manhole depths); standard pipe capacity calculations; and compared to modeled peak flows adjusted on an area weighted basis. The locations of known complaints will be compared to the capacity check to identify likely areas of concern.
- "Critical portions" of the PWSA system will be identified. "Critical portions" include pump stations, trunk sewers, points of overflow activity, basement back-up areas, surface flooding, or areas of excessive infiltration and inflow (I/I). At the time of this scope preparation, the number of critical areas is unknown. **For the purposes of this task, it is assumed that 20 to 30 sewer backup and 6 to 10 stormwater flooding subsheds will be identified for further analysis.**

Deliverables: Draft and Final Critical Areas Definition TM

2.3 Investigate PWSA sewer system

2.3.1 Stream Inflow and Acid Mine Drainage (AMD) Map

- Identify and locate any stream inflow sources and acid mine drainage discharges along the critical portions of the PWSA sewer system using **existing data sources**. The potential sewersheds for stream inflow sources will be identified from the past and pending regional flow monitoring work, and PWSA input.

Deliverables: Draft and Final Stream Inflow and AMD Map

Level of Effort Assumptions:

- **No field work such as stream walks, sampling, or other investigation will be conducted.**

2.3.2 Field Data Collection Allowance

- Upon approval from PWSA, work to conduct additional field data collection activities identified with Task 2.3.1 will be conducted within the available budget included within the field allowance. Field data will be entered into the appropriate asset management databases. Additional field collection efforts shall be conducted as an additional service.
- The proposed field data allowance was developed based on an assumption of 400 days of field survey intended to collect data on approximately 8,000 structures (based on 20 structures/10 hr-day @\$2,200/day including survey and post processing). This data includes limited spot checks of approximately 10% of existing modeled areas and assumes data can be collected from the surface without the need for confined space entry or significant traffic control procedures. **No LIDAR, detailed topographic and surveys on private property or within homes for purposes of determination of basement inverts or first floor elevations**

- A summary of the data collected will be provided in a draft and final Field Data Collection Summary Technical Memorandum.

Deliverables: Draft and Final Field Data Collection Summary TM, Field notes and database

2.4 Coordinate on System Improvements and Technical Alternatives with Others

- Request and coordinate with ALCOSAN/municipalities to obtain information on proposed system improvements for use in study work. This includes information on proposed tunnels and consolidation sewers, CSO regulator, pumping, storage tanks, RTBs, Green Infrastructure, Source Control, WWTP and other improvements that can impact overflows in the PWSA collection system.
- A review will also be conducted of major development and PWSA projects (that would have an impact on planning efforts) to determine which should be advanced into the model. It is assumed that PWSA will provide the hydraulic, as-built and/or survey data relative to these improvement projects. **Assumed no more than 10 sewer improvement projects will be included.**
- A summary of the proposed major improvements that will be included in a Baseline Model to evaluate additional alternatives will be documented in a System Inventory TM. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Planned ALCOSAN, PWSA and upstream/downstream municipal improvements will be considered in related modeling and cost analysis in subsequent tasks.
- Ongoing coordination with ALCOSAN throughout the project will also be tracked under this item.

Deliverables: Draft and Final System Inventory TM

Level of Effort Assumption:

- **Assumes up to a total of 60 meetings with representatives of ALCOSAN, Point of Connection (POC) Groups with municipal officials, and 3 Rivers Wet Weather**
- **Assume no new Clean Water Plan design changes**

2.5 Determine regulatory permitting requirements for conveyance and storage

- We will participate in meetings with DEP to establish or confirm the regulatory permitting requirements and related design standards and control approach to be used in the sizing, performance, and layout of facilities to be proposed, designed, or built as part of PWSA's wet weather planning program. **Assume up to 6 meetings for coordination.**
- To prepare for the discussions, a Draft Regulatory Permitting Requirements TM will be prepared that summarizes current criteria for sewers and facilities for PWSA and regional entities along with proposed criteria for facilities to be sized and designed under this program. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Regulatory Permitting Requirements TM

3. Develop and calibrate model(s)

3.1 Water Quality Sampling, Analysis Tool Development and Evaluations

3.1.1 Water Quality Data and Information Compilation, Review and Evaluation

- We will compile and review water quality data and related information for the receiving waters impacted by PWSA wet weather discharges and data on sources of pollutants. This will include:
 - Data collected and provided by PWSA as well as publicly available data. We will also develop a request for data collected by ALCOSAN/3RWW. We will compile water quality data in Excel and/or Access for review and evaluation.
 - Information on the receiving streams, their watersheds/drainage areas, and available modeling for these streams and drainage areas.
 - Additional available data on precipitation, climate, and streamflow may be compiled to support the water quality assessments.
 - Listed impairments and available TMDLs for the receiving streams including pollutants and sources. Other available studies on the receiving streams will be compiled and reviewed.
- This scope of work is based on the understanding that the receiving waters that will be studied for this task are the receiving waters that receive discharges from PWSA-owned CSO outfalls that will not be controlled by the ALCOSAN tunnel construction; these include several Tributary Streams (Chartiers Creek, Nine Mile Run, Saw Mill Run, and Becks Run), and the Main Rivers (Ohio River, Monongahela River, Allegheny River). The primary focus of this task will be on the Tributary Streams, but a summary of the conditions of the Main Rivers within the PWSA service area will be included. We will conduct site visits of the Tributary Streams to assess existing conditions, sediment build-up, stream bank stability, flow restrictions, vegetative cover, and other potential characteristics. Photo documentation of the conditions will be collected.
- **Additional Main River Water quality or other data collection will not be conducted.**
- We will evaluate the available information to characterize existing conditions, spatial and temporal trends, dry versus precipitation event-driven conditions, comparison to water quality standards, and potential cause-effect linkages. We will also assess the ability of existing models to characterize water quality conditions and benefits of control alternatives.
- We will summarize the results of the data compilation, review and evaluation in a technical memorandum. The memorandum will include a data gap analysis including recommendations for additional data collection and model development activities, including cost estimates and potential refinements to the original budget estimates provided. We will submit one draft for review and comment. We will address comments and submit one revised draft for submittal to PWSA. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft Water Quality Existing Data Review TM

3.1.2 Sampling and Analysis

- We will prepare a Sampling and Analysis Plan (SAP) and a Quality Assurance Project Plan (QAPP) to guide the collection of water quality samples to support the characterization of the waterways and sources.
- One draft of the SAP and QAPP will be submitted to PWSA for review and comment. Following PWSA review and comments, we will revise the SAP and QAPP for submission to Pennsylvania Department of Environmental Protection (DEP) and/or the United States Environmental Protection Agency (EPA). Following DEP and EPA review and comment, we will prepare the final SAP and QAPP.
- Sampling activities will include training and orientation with our local, on call sampling team. This work will include site visits to discuss procedures and review sampling locations. This will also include coordination on scheduling of sampling events, tracking wet weather events, and making go/no-go decisions on sampling. We will also coordinate with the analytical laboratory to coordinate bottle shipments, sample deliveries, QA/QC data review, and reporting of results.
- For the purposes of this scope of work, the following assumptions have been made to inform the budgeting of this subtask. The scope and budget will be revisited following completion of the data review and evaluation work. Sampling is anticipated to be conducted between April and October 2022 for the following:
 - **6 locations (2 locations in each of Chartiers Creek, Nine Mile Run, and Becks Run)**
 - **72 total samples (3 baseline, 3 wet events – 3 samples each event for each location)**
 - **Parameters for field measurement: Temperature, pH, Dissolved oxygen, Conductivity**
 - **Base assumptions for parameters to be collected for laboratory analysis: E. coli, TSS, Ammonia, TKN, Nitrates + Nitrites, TP, Ortho**
- Following the initial review of the impairments and stream conditions, the need for additional parameters such as metals, and hardness will be assessed. We will review sampling field notes and laboratory reports following each round of sampling to identify problems or issues needing correction. We will coordinate with the sampling consultant and the laboratory to implement corrective actions.
- Two of the subject watersheds do not have USGS flow gages located on them. Additional flow and/or water level monitoring may be required in these watersheds as well. If needed, effort would be authorized separately.
- Following implementation of the sampling plan, we will perform a data validation review and prepare a memorandum documenting the review.
- We will prepare the project-specific SAP and QAPP, as stated earlier. We will update the water quality characterization with the new data. We will summarize the results of the sampling, analysis, data review, and updated characterization in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and

characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit one draft to PWSA. Following PWSA review and comment, we will prepare the final TM.

Deliverables: Draft and Final Water Quality SAP and QAPP TMs

3.1.3 Water Quality Model Updates

- We will update receiving water models to support the evaluation of water quality assessments. We will update model calibrations using the most recent data (April-October 2022) and will validate model performance. The anticipated receiving waters for modeling and the modeling frameworks are listed below:
 - Chartiers Creek, Nine Mile Run watershed/drainage area: PC-SWMM
 - Saw Mill Run watershed/drainage area: HSPF
 - Becks Run watershed/drainage area: no existing model
 - Main Rivers Model: RMA2 (hydrodynamics)/RMA4 (water quality)
- We will develop estimates of upstream flows and pollutant loads for the calibration period (April-October 2022) based on available data. We will develop meteorological inputs for the calibration period based on available data.
- Calibrations will be performed by applying best engineering judgement to make model calculations as representative of observations as possible. The models will be calibrated using both visual and numerical methods. This effort may employ regressions of observations vs. calculations, minimizing the squares of the residuals of observations vs. calculations, minimizing relative error, minimizing differences in observed vs. calculated means, and minimizing root mean square error, among other methods. For simulations having the appropriate temporal scale, published statistical measures of goodness-of-fit (e.g. percent difference, r², PBIAS) will also be considered in evaluating the strength of the hydrology and water quality calibrations.
- Following calibration, the models will be validated using an independent data set to demonstrate that the model is capable of acceptably reproducing the timing and magnitude of observed data without further changes to the model parameters.
- We will summarize the results of the model updates and calibrations in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit a draft to PWSA for review. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Model Update TM

3.1.4 Water Quality Assessments of Benefits of Control Alternatives

- We will develop and apply the updated and calibrated models to support the assessment of existing conditions and the water quality benefits of control alternatives. We will develop the water quality models for the typical year. We will develop the following water quality model inputs for the simulation of existing conditions for the typical year:
 - Upstream boundary flows and pollutant loads
 - Meteorological inputs, and
 - Sources other than overflows.
- We will characterize water quality conditions for the typical year under existing and baseline conditions. We will assess the relative impact of pollutant sources with respect to attainment of water quality standards for those scenarios. We will prepare an interim technical memorandum documenting the characterization of existing and baseline conditions for the Tributary Watersheds.
- We will apply the water quality models to simulate the water quality benefits of control alternatives. **This scope of work assumes ten (10) separate simulations will be run to assess control alternative benefits.** These may include a combination of simplified control scenarios (for example 25%, 50%, 75%, and 100% reductions of overflows) and specific control alternatives with simulated reductions in overflows from the collection system model.
- For each control alternative simulated, we will evaluate the water quality benefit in terms of pollutant load reduction and improvement in ambient water quality. Attainment of water quality standards will be assessed.
- We will also update the typical year simulation with the final recommended control plan and assess the water quality benefits.
- We will summarize the results of the water quality assessments in a technical memorandum. The memorandum will include discussion of the development of the typical year simulation, water quality characterization of the existing conditions, and water quality benefits of select control alternatives and the final recommended control plan. We will submit one draft to PWSA for review and comment. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Assessment TM

3.2 Monitor flow and conduct hydraulic modeling

3.2.1 Review existing flow data and models

- We will review flow data and models previously collected by PWSA and ALCOSAN to identify modeling and data needs to support the wet weather planning process. In general, this review will include locations, durations and quality of available flow monitoring data as well as determination of availability of models and the extent and quality of the calibration/verification of these models. **Up to 10 watershed models are assumed to be reviewed as a part of this effort.**

- An Existing Model Review TM will be created to document the available modeling sources and to identify data needs to expand or improve the models. This memo will also identify the various design storms, typical year precipitation, boundary conditions, and model scenarios (Existing, Baseline, Future, etc.) needed to support the project.
- **It is assumed that the starting model version for this project is the ALCOSAN Existing Conditions 2020 Model developed using SWMM version 5.1.012. This model includes a representation of the WWTP, deep and shallow cut interceptors, all diversion structures, combined sewer overflow outfalls and storm, combined and sanitary tributary areas. This model is anticipated to be expanded using historical and current modeling elements that have been developed under various PWSA efforts.**
- A summary of the available historical rainfall, stream level and flow monitoring data will be prepared and included in an Historical Flow Data Review TM. This TM will also document ongoing permanent precipitation, permanent flow meters, and stream gages that are available to support the work. **PWSA will provide available historical precipitation, stream and flow data.** Available data on high water flooding marks will also be summarized in this memo for critical stormwater flooding areas. **Field work to investigate or identify high water marks will not be collected.**
- During this process, we will develop a Model Data File Management procedure and implement to assist with model input and output file management. Procedures and Protocols will be summarized in a Model Data Management TM.

Deliverables: Draft and Final Existing Model Review TM; Draft and Final Historical Flow Data Review TM; Draft and Final Model Data Management TM

3.2.2 Develop a flow monitoring plan and collect flow data

- A detailed Flow Monitoring Plan TM will be developed to support the model expansion and system characterization effort guided by the approach outlined in this section. The Plan is expected to include proposed methods for flow monitoring in Critical Areas and I&I sewersheds with sections that cover, purpose and objectives, monitoring techniques and procedures, data management approach, QA/QC protocols, and maps of proposed deployment locations.
- **It is assumed that PWSA can provide all necessary radar-rainfall data needed to characterize precipitation in the service area.** The radar rainfall information will provide area-weighted rainfall hyetographs for each model subcatchment using existing regional permanent rain gauges. **To supplement this data, we will deploy up to 20 temporary project rain gauges for no more than 9 months.**
- We will deploy sewer system flow meters to screen and prioritize tributary areas to support expansion of the system hydraulic/hydrologic model (Calibration monitoring) and for further I/I investigations (micromonitoring).
- **To support model expansion into Critical Areas, up to 100 calibration meters (with a total installed duration of no more than 9 months) will be**

installed to provide information for model calibration in areas of known performance problems. Monitored subcatchments are planned to be between 20 and 75 acres in size.

- In support of Task 3.4, micromonitoring will be used to break down areas of roughly 100 acres or less for further I/I investigations. Up to 40 micrometers (with a total installed duration of no more than 3 months) will be deployed simultaneously for one or two significant rainfalls per location to determine tributary area I/I response. Areas showing significant response would then be targeted for further investigations. Areas showing little response would be screened from further consideration. Micromonitoring durations will be adjusted based on observed rainfall events.
- In support of Task 3.4, up to 40 calibration meters (with a total duration of no more than 6 months) will be installed to provide information for model calibration areas in sanitary areas. We will use the Task 3.4 prioritization information and preliminary micromonitoring to assist with calibration meter placement.
- It is assumed that flow monitoring will be conducted in the 2022 season between March and November. All data will be collected and stored in a database for use on the project.

Deliverables: Draft and Final Flow Monitoring Plan TM; Rain and Flow Monitoring Database

3.2.3 Expand and calibrate hydrologic and hydraulic model for use in planning

- The H&H hydraulic model will be extended up into the PWSA collection system to represent know problem areas with clusters of reported basement backup and areal flooding issues.
- Additional detail included in the historical version of the PWSA model included within Infoworks may also be added to the model to support this work along with significant known system changes. **Up to 400 staff hours for addition of existing detailed model elements such as major sewer projects or other detailed models has been assumed.**
- In Critical Areas with street flooding, the H&H model will also be expanded using dual drainage network techniques, to capture the movement and depth of overland flows along the street network. Depending upon the location of the problem area there may be a natural open channel also that will be included in the model. **Up to 2,500 model elements (channel segments and surface nodes) are assumed to be included in this model expansion within no more than 6 to 10 sub areas. It is assumed that existing topographic data is sufficient to characterize the street geometry.**
- With the hydraulic network expanded into the collection system, the lumped or consolidated hydrologic representation included in the current Existing Conditions model will also need to be discretized so that the generated flows can be distributed in the detailed expanded hydraulic network. This more detailed hydrologic representation will need to be calibrated using the collected flow and depth data. **Up to 4,500 model elements (sewer pipes**

and manhole junctions) are assumed to be included in this model expansion within no more than 20 to 30 sub areas.

- Revisions and expansions of the model will be documented in a Model Update TM.
- Sanitary areas within the H&H model will be calibrated to the data collected under Task 3.2. RTK parameters will be updated to reflect the findings of the new data collected.
- Targeted subarea calibration of areas tributary to up to 140 flow meter locations will be conducted based on the flow data collected under task 3.2. Continuous calibration/validation is anticipated to be conducted to compare metered vs. modeled predictions of flow, volume, depth and hydrograph shape. Industry standards for determination of acceptable calibration will be applied to determine the reasonableness of the calibrated parameters.
- A technical memorandum will be developed to summarize the results of the model calibration.
- A model review workshop will be held with PWSA to present the results of the calibration and discuss approval of the model for use on subsequent planning efforts.
- Upon approval of the model, files for various scenarios (Existing Conditions, Baseline Conditions (Near Term Projects that will be constructed) and Future Conditions (with Interim and Select Plans) will be developed to support the next stages of modeling. **Models will be run for up to five (5) design storm conditions to support level of service analysis.** Models will be run continuously for the Typical Year. Sensitivity scenarios for use in assessing the impacts of future climate change will also be run. Overflow statistics and level of service impacts will be quantified.

Deliverables: Draft and Final Model Update TM; Draft and Final Model Calibration TM; Model Support Files; Model Results Summaries

3.3 Perform level of service peer review and develop current level of service and range of alternatives for increasing level of service.

- A peer review will be conducted to identify the level of service of similar regional communities. Findings of the review will be summarized in a technical memorandum.
- Stress-test the current PWSA collection system to identify the current level of service provided and develop a level of service thematic map.
 - The primary level of service will be evaluated using the existing hydrologic and hydraulic model and the expansion into critical areas of observed sewer back-ups and street flooding will be used to assess collection system capacity for the interceptors and selected main line sewers.
 - A secondary level of service evaluation will be conducted on main sewers > 18" in diameter using a simplified method that compares pipe capacity to flows from the model that will be apportioned based on area. **It is assumed that existing GIS/sewer data provided by PWSA is sufficient for this purpose.**
 - A third evaluation will be conducted to assess "neighborhood" level of

service along a street within a city block. **Representative neighborhood areas (up to 6) will be selected and evaluated in detail to understand if general level of service deficiencies can be expected based on typical Pittsburgh sewer design practices.** Areas that have adequate existing data from either GIS or record drawings to support the assessment. **PWSA to provide detailed sewer drawings of the selected areas for use in this analysis.**

- **PWSA will determine what the level of service guiding principles will be used for stormwater under a separate contract**
- An alternatives analysis to determine the best approach to provide for increased levels of service will be conducted. In general, this is expected to include conveyance improvements that would include replacing existing storm or sewer piping to increase capacity and reduce water levels in the system and streets. The type, size and general location of improvements will be identified and included on maps to show the options.
- Provide a concept screening cost estimate (AACE Level 5) for bringing the current system up to the appropriate level of service for stormwater and sewer back-ups. Costs for increased conveyance systems to achieve higher capacities will be developed for various levels of service. **It is assumed that no more than two level of service scenarios will be costed.**
- Findings of the evaluation will be summarized in a technical memorandum.
- Determine how increased level of service impacts other wet weather planning objectives, including controls of CSOs and SSOs. A Typical Year simulation will be conducted to determine the results impacts on overflow statistics.
- Model base files for Level of Service Improvement Alternatives will developed to support the next stage of integrated planning evaluations.

Deliverables: Draft and Final Level of Service Peer Review TM; Draft and Final Level of Service Evaluation TM; Existing Level of Service Map

3.4 Develop a plan to identify significant areas of I/I and a strategic plan on how to prioritize locations to reduce I/I

- The PWSA system is essentially a combined system, but the upper reaches of the collection system have separate sewer areas.
- We will review and update on the approach to prioritize investigations previously by PWSA. Using data collected under other tasks, we will seek to identify sanitary areas without significant problems that would require no further investigation. Prioritization will occur at a relatively higher level and be refined as the project progresses. Early micromonitoring is proposed to help define the investigation prioritization.
- **Field work and subsequent data review for activities such as smoke testing, site assessments, manhole inspections, SSES investigations, dye testing, and CCTV inspection to support this task will be conducted by others or as an additional service.**
- PWSA will provide available data on effectiveness of historical projects in reducing I&I after improvements have been made.
- We will review the data collected and provided and use to identify areas subject to

elevated levels of I&I.

- By layering of existing GIS information, we will perform a Prioritization Analysis to produce a table and map with preliminary priority areas. We will review the proposed prioritization with PWSA to get input on the preliminary prioritization approach, the resulting priorities, and provide direction on any necessary adjustments.
- Based on the work, estimates of a range of potential I&I reductions (low, medium and high) for use in planning purposes will be developed for use with planning scenarios under Task 4.
- We will develop draft and final versions of an I&I Prioritization Approach TM, which will document criteria, data used, estimated effectiveness, and a priority list of areas. We will submit the draft TM to PWSA for review.

Deliverables: Draft and Final I&I Prioritization Approach TM

4. Identify and prioritize alternatives

The alternative evaluation is expected to be conducted at varying levels depending on the location and ownership. The most detailed efforts will be focused on outfalls solely owned by PWSA and jointly owned outfalls discharging to tributary streams (Level 1 and 2).

- Level 1 – 38 Outfalls solely owned by PWSA
- Level 2 – 33 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging into the Tributary Water Bodies

For these outfalls, it is assumed that up to 3 technologies will be evaluated for each outfall, costing to a Level 5, performance determined, and a recommended solution provided. Outfall solutions will either be combined or enhanced in up to 3 alternatives per basin.

A lesser detailed level of planning will be conducted for jointly owned outfalls discharging to the Main Rivers (Level 3 and 4).

- Level 3 – 116 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging to the Main Rivers
- Level 4 – 20 CSO Outfalls co-owned by PWSA/ALCOSAN, discharging to the Main Rivers and controlled by the planned Regional Tunnels

For these outfalls, it is assumed that up to 3 technologies will be evaluated for up to 10% of these outfalls, costing to a Level 5, performance determined, and a recommended solution provided. This is not intended to replace but to enhance or supplement the current ALCOSAN Clean Water Plan for these outfalls.

4.1 Identify and screen technical alternatives

- The goal of this task is to identify potential alternatives that will provide compliance with the goals of the wet weather planning process, taking into consideration the ability to adapt to future conditions.
- An Alternatives Brainstorm workshop will be held with PWSA to discuss potential approaches to controlling CSO and SSO in the PWSA service area. The

- workshop will include a review of the planned ALCOSAN improvements, previously planned control recommendations from PWSA efforts, various technologies and strategies that have been reviewed historically and any new or emerging technologies.
- We will review and assess potential **technologies** for controlling SSO and CSO in the PWSA service area. Optimization techniques will be applied to narrow the field of **solutions**.
 - A Technology Screening TM will be prepared that summarizes the potential technologies such as source control, green infrastructure, regulator modifications, storage and conveyance that conducts a high-level screening for applicability to the various areas and provides recommended **outfall solutions** to advance to the basinwide alternative evaluation stage. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - An integrated planning approach will be applied that considers **solutions** basinwide that meet both water quality and level of service requirements determined under Task 3.3.
 - An Alternatives Development TM will be prepared to summarize the alternatives that were considered in the evaluation for each outfall or groupings of outfalls. This TM will summarize basinwide alternatives and the recommended systemwide alternative. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - **Six (6) additional Alternatives Workshops with PWSA are planned to discuss the progress and findings from the Alternative Evaluations.**
 - The selected alternative based on the results of Task 4.6 will be further defined (<5% project definition). This work will include development of concept layouts and site investigations to further develop the concept and develop an opinion of cost that is consistent with a AACE Class 4 cost estimate.

Deliverables: Draft and Final Technology Screening TM; Draft and Final Alternatives Development TM

4.2 Identify and screen site development and buffer alternatives

- Initially, a Site Opportunity and Enhancements TM will be prepared to summarize the nature and location of potential opportunities. We will conduct a recommended screening to identify areas with a potential to support effective wet weather controls. A draft TM will be submitted to PWSA for review and comment.
- USEPA-defined Environmental Justice demographic indices will be included into screening evaluation. Sites for alternatives will consider the benefits and impacts to environmental justice communities within the PWSA service area. The potential for providing benefits to these communities through improved wet weather management will be considered along with the direct benefits and impacts of feasible technologies within these communities.
- Our team will meet with stakeholders to identify opportunities for siting of control alternative solutions at locations that may be mutually beneficial for redevelopment or community enhancements. **Up to 16 meetings with stakeholders have been included in the scope for this purpose.**
- For the final recommended alternative identified under Task 4.6, we will update the TM to discuss the potential solution and how it may be enhanced with site

improvements, community benefits, green leave behinds or other features that would create or maintain a beneficial relationship with the various City of Pittsburgh departments, authorities, and key stakeholders (including neighborhood organizations).

Deliverables: Draft, Revised, and Final Site Opportunity and Enhancements TM

Level of Effort Assumptions:

- **Assumes enhanced site evaluations will be prepared to better define project location and site conditions and refine the level of accuracy of the Cost estimate to support a AACE Level 4 cost estimate in conjunction with Task 4.3**
- **Does not include topographic survey, easement acquisition, property acquisition support services, geotechnical exploration, environmental site assessments, or subsurface utility exploration to be included with the site evaluations.**

4.3 Perform a present worth analysis of the feasible alternatives

- A cost tool that can provide estimates for various technologies at an **AACE Level 5** will be developed using unit pricing, engineering judgement and input from recent PWSA and regional projects for purposes of initial technology screening.
- A Costing Approach TM will be developed that summarizes the assumption, development and application of the cost methodology. **Two (2) meetings are included to discuss the approach and development of the tool with PWSA.** A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Costs will be developed for overall total project and lifecycle costs and include the following elements: Construction, Operating, Site surface development and restoration, Operation and maintenance requirements, Utilities and Land acquisition and rights-of-way. PWSA to provide input on administrative, legal and contingencies to be applied to the overall program cost development.
- Initial costs will be summarized and provided to PWSA for review. These will also be included in the Alternative Evaluation TM.
- Costs for budgeting for the selected alternatives for CSO and SSO improvements in the final Wet Weather Plan will be developed to an **AACE Level 4**. Additional effort to look at proposed projects and site constraints include the following:
 - Site visit
 - Develop project footprint layout using GIS and available lidar topography
 - Screening for property changes
 - Looking at local bidding data for potential cost escalation factors
 - Determine estimated quantities of facilities

Deliverables: Summary of Costs, Updates to the Draft Alternative Evaluation TM.

4.4 Perform a knee of the curve analysis of wet weather controls and water quality benefits

- An analysis comparing costs to performance metrics will developed to assess the

point of providing a value based recommended alternative. This analysis of the costs of varying CSO, SSO and stormwater control alternatives shall be in conformance with the CSO Control Policy and relevant guidance.

- Varying levels of optimization assistance tools will be used to evaluate alternatives to guide development of performance.
- Areas will be prioritized for optimization. Outfalls with planned improvements (by Others) or minor adjustments needed to meet criteria will not be optimized.
- **An optimization software license covering a 24-month period is included in the current budget. It is expected that advanced optimization will be applied to approximately 40 areas.**
- Performance curves will be included in the Alternative Evaluation TM.

Deliverables: Updates to the Draft Alternatives TM

4.5 Analyze financial affordability

- Coordinate with PWSA's financial rate consultant to determine the financial affordability of the proposed improvements to the PWSA system and forecasting the rate on ratepayers.
- Meetings will be held throughout the development of the wet weather plan to discuss progress, cost impacts, affordability considerations and impacts on required schedules for implementation. Two (2) initial workshops are planned to brainstorm the approaches and steps needed to incorporate the affordability analysis into the planning process.
- Based on discussions at the meeting, a work plan will be developed that will guide the steps needed to assess affordability in support of the Wet Weather Plan development. A draft plan will be submitted to the Rate Consultant and PWSA for review.
- All work related to affordability determination including data collection; rate evaluation; assessment of impacts of wet weather projects; level of service projects; ALCOSAN ongoing charges; PWSA ongoing water and sewer system charges; and other factors will be conducted by Others. PWSA will contract separately with Rate Consultant on these services.
- **Up to twelve (12) additional coordination meetings and two (2) workshops are planned to coordinate the work and discuss findings over the duration of the planning.**
- Rate consultant will provide input on initial affordability prior to the start of alternatives and run scenarios for varying levels of level service improvements and necessary stormwater, CSO and SSO control improvements at various stages of the plan development.
- We will review findings provided by Rate Consultant and summarize how the work will be incorporated into the planning and implementation of the WWP.

Deliverables: Draft and Final Affordability Work Plan TM; Draft and Final Affordability Findings TM.

4.6 Conduct non-monetary analysis of alternatives

- An Alternative Evaluation Approach TM will be prepared that summarizes the overall approach to selecting recommended alternatives. The TM will include a discussion on how to score within each non-monetary category, scoring and weighting approaches, and steps that will be taken to develop the scoring. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- The non-monetary criteria as provided by PWSA are expected to include:
 - Local planning impacts assessment
 - Environmental justice and community flood resiliency impacts
 - Floodplain impact assessment
 - Odor and noise control assessment
 - Preliminary environmental site assessment
 - Site surface restoration/development
 - Impacts of water quality improvements
 - Co-benefits of green infrastructure projects or other control alternatives
- Additional information such as advantages, disadvantages, risks, schedule impacts and other considerations will be identified as supporting information will be prepared for each alternative.
- **Up to three (3) workshops are expected to be needed to review the approach, conduct the scoring and share the results.**
- Information from Tasks 4.3 on costs would be combined with a summary of total benefits for each alternative to support development of a cost-benefit analysis.
- The results of the evaluation will be summarized in an Alternatives Scoring Technical Memorandum.

Deliverables: Draft and Final Alternative Evaluation Approach TM; Draft and Final Alternatives Scoring TM

4.7 Prepare a schedule for implementation of controls selected to address CSOs and SSOs

- An implementation schedule with appropriate milestones for design, bidding, construction, substantial completion and final completion will be prepared for the recommended projects in the Wet Weather Plan.
- The schedule will be adjusted based on input with regards to affordability and cashflow constraints provided under Task 4.5.

Deliverables: Draft and Final Implementation Schedule

5. Stakeholder coordination and presentations

We will take the lead on developing and participating in a public participation program. **PWSA will provide stormwater messaging developed to date and any foundational information. PWSA staff will be lead presenters during community meetings but would rely on Wade Trim to develop materials and set up meetings.**

We will work with PWSA in preparing an overall public participation plan and public outreach protocol that meets the requirements contained EPA CSO planning and DEP Act 537 guidance documents.

Our goal is to work collaboratively with the project team and PWSA to develop and implement a plan that prioritizes clear, consistent, transparent, and equitable communication with the public and stakeholders to generate consensus. We intend to include specific outreach to identified environmental justice communities to develop relationships with community leaders in those areas and encourage their availability, participation and engagement in meetings.

5.1 Develop Public Engagement Plan (PEP)

- In support of PWSA's existing public outreach efforts, we will work to coordinate and communicate with internal and external stakeholders. We will work with PWSA to create an engagement plan that centers around multiple working group meetings, stakeholder inclusion, agency communication and public information and input held throughout the duration of this process. The goal of the plan is to generate buy in, which can be better achieved by engaging stakeholders throughout the process, collecting input and feedback, and incorporating that feedback.
- **Two meetings will be held with PWSA public relations staff to support development of the plan.** An initial brainstorming session and a follow up meeting to discuss the draft PEP. Ongoing coordination on public relations topics will be covered under the regular PWSA progress meetings.
- A plan will be developed that includes a summary of program and objectives, messaging, identification of stakeholder groups, definition of target audiences, communications approaches, communication tools, implementation steps, and timelines. The Draft Public Engagement Plan will be submitted to PWSA, and comments incorporated into the Final Plan.

Deliverables: Draft and Final Public Engagement Plan

Level of Effort Assumptions:

- **Develop Public Engagement Plan assumes a detailed outline, 2 draft and 1 final version for Wade-Trim and PWSA review and approval. Includes the development and refinement of the comprehensive stakeholder engagement list.**
- **Project Coordination / Management – assumes up to 2 coordination meetings a month and 4 hours of project management/coordination with Wade Trim / PWSA for 36 months.**
- **Documentation – assumes 8 hours per month for document control, project controls and documentation of events.**

5.2 Program Messaging and Branding

This item has been removed from the scope.

5.3 Online Public Engagement

- Online engagement is an important method of communication with the general public about the Wet Weather Program. The goals of online engagement are to

increase the ability to reach a more diverse audience, generate more informed participation, invite a broader range of input, and set the stage for sustained participation. PWSA already has an online presence, and this plan will build upon those existing relationships/followers/contacts.

- A Wet Weather Program webpage will be created to serve as a resource for people to access information, share the plan schedule, see a summary of planning activities, make note of engagement opportunities, review background information (Including relevant maps and data), make connections to social media pages, locate project contact information, subscribe to a mailing (contact) list, and access a comment form.
- Our team will develop a proposed outline of online content to consider for a website approach and submit to PWSA for review and discussion.

Deliverables: Web Site and Social Media Pages and Updates

Level of Effort Assumptions:

- **PWSA will host and manage online content via their existing website**
- **Updates to the website are expected to occur on a quarterly basis, assumes 12 hours per quarter of support**

5.4 In-Person Public Engagement

- Public meetings will be used to inform the public of the planning process and to solicit ideas, input and feedback. This will be an opportunity to promote transparency and foster two-way communication with the public. Public meetings will be held at multiple locations throughout the city. We intend to host a proportional amount of in-person meetings within environmental justice communities to promote engagement within these communities and consider the specific needs in these communities relative to wet weather management.
- Meeting times will vary to maximize the number of attendees that will be available. The public will be encouraged to ask questions and voice their ideas and opinions about the program activities. Our plan for a series of meetings is presented below:

Year 1 - Goals and Initial Community Input

The first series of public workshops will be formatted as a city-wide Listening Series as an interactive, hands-on opportunity to create program awareness, present background on the system and known problem areas, gain an understanding of community priorities, values and concerns. **Four (4) interactive, workshop-style sessions will be conducted** and geographically distributed through the service area – to encourage diverse participation. These meetings would occur early in the planning process.

Year 2 - Review of CSO Technologies, Solutions and the Alternatives Process

The second series of public workshops will be formatted as traditional public meetings. The purpose of this series of meetings will be to present and/or demonstrate potential control strategies, discuss water quality assessments and provide an overview of the alternative evaluation process. **Four (4) meetings will be held.**

Year 3 – Wet Weather Plan Recommendations

The third and final public workshop series will be formal public meetings to present the draft Wet Weather Plan. This will be the final opportunity to provide an overview of the draft WWP, to discuss issues, processes and decisions leading to the plan, and to record formal comments that will be considered when finalizing the Wet Weather Plan. **Four (4) meetings will be held.**

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **20 hours/month for coordination and responding to questions from the public**

5.5 Stakeholder Advisory Group

- An existing PWSA Stormwater Advisory Group (SAG) that has provided input on the PWSA stormwater fee will be convened to introduce them to the Wet Weather Program goals and objectives. This group will be expected to share information about how to get involved in, provide input on, and stay up to date with the planning process with the organizations/stakeholder groups they represent. We intend to work with this group to discuss issues of environmental justice and solicit input for how the Wet Weather Program will evaluate environmental justice.
- This advisory group will meet at key decision points throughout the process (**up to 6 meetings**). Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation and prepare summaries of the discussions.
- In between meetings, representatives of these groups will receive regular updates through email and will be empowered to help the program team in its outreach efforts by sending information about engagement opportunities to their respective memberships, communities, networks, and employees.

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **Assumes 4 hours/month monthly coordination and responding to inquiries from SAG.**

5.6 Municipalities/POC Outreach

- Meetings with the existing Saw Mill Run Group and various POC municipality representatives would be convened to discuss issues specific to the municipalities. These meetings will be used to share information about known issues, planned improvements, alternative technologies, and other related matters. **We have assumed up to 24 meetings** with stakeholders in this category over the duration of the program. Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation, and prepare summaries of the discussions.

Deliverables: Agendas, Presentations and Meeting Summaries

6. Provide Wet Weather and Act 537 Plans

6.1 Wet Weather Plan (Long Term Control Plan)

- A Wet Weather Plan document will be developed that includes sections on Introduction, Background, Purpose, Public Engagement and Participation, System Characterization of Current Conditions, Control Approach, Control Technologies and Screening, Development and Evaluation of Alternatives, Financial Capability, Recommendations, Selection and Implementation Schedule, and Post Construction Compliance Monitoring Plan.
- A draft Wet Weather Plan will be submitted to PWSA for review and comment prior to submittal of a final Report.
- Following PWSA review, comment, resolution of comments and approval of the draft Wet Weather Plan, we will facilitate preparation of the plan for submitting to the agencies for review and approval.
- Following agency review, comment, resolution of comments and approval of the plan, a revised final plan will be submitted.

Deliverables: Draft, Final and Revised Wet Weather Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of Plan
- Assume preparation of up to 100 comment responses received on the Plan

6.2 Act 537 Plan

- An Act 537 Plan document will be developed in accordance with the Act 537 Plan Content and Environmental Checklist and will include sections on previous wastewater planning, physical and demographic analysis and mapping, identification of existing sewage facilities and needs, projections of future growth and land development, identification of alternatives, evaluation of alternatives, institutional evaluation, justification and implementation schedule for selected alternatives (technical and institutional) and an environmental report. The Wet Weather Plan will also be used extensively to form the basis of the Act 537 Plan.
- A draft Act 537 Plan will be submitted for PWSA comments.
- Following PWSA review, comment, resolution of comments and approval of the draft 537 Plan, we will facilitate preparation of the plan for submitting to the City of Pittsburgh under Task 6.3 for review and approval.
- Following approval by the City of Pittsburgh, we will submit for agency review, comment, resolution of comments and approval of the plan. A revised final plan will be submitted.

Deliverables: Draft, Final and Revised Act 537 Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of 537 Plan
- Assume preparation of up to 100 comment responses received on the 537 Plan

6.3 City of Pittsburgh Coordination

- Prior to submittal to the agencies, the Act 537 plan will require a signed and sealed Resolution of Adoption from the City of Pittsburgh. We will assist in the preparation of the appropriate submittals, response to comments and consistency documentation that the appropriate agencies have received, review and concurred with the Act 537 plan throughout the entire process.
- Following PWSA approval of the draft Act 537 Plan, the plan will be submitted to City of Pittsburgh and Allegheny County Planning Commissions for consistency review and comment.
- The Act 537 plan is also required to be posted publicly for a 30-day comment period, with proof of the publication, copies of all comments with responses in each comment included in the final submittal to the agencies.

Deliverables: Public Notice

Level of Effort Assumptions:

- Assume 3 coordination meetings with City of Pittsburgh Officials
- Assume preparation of up to 100 comment responses received on the 537 Plan

7. Develop an environmental impact assessment of recommended Wet Weather Plan

- Once conceptual level wet weather plan facilities have been identified, we will conduct a more detailed environmental review in the form of an Environmental Impact Assessment which further evaluates the community impacts identified during the alternative's evaluation. This assessment will serve as the Uniform Environmental Review.
- A report will be proposed that follows the format laid out in PADEP's Technical Guidance Document 381- 5511-11. The report will discuss the environmental consequences and potential mitigation of the proposed facilities for land use, recreational use of land and streams, water and air quality, noise, odor, vehicular and pedestrian traffic, socio-economic issues, miscellaneous environmental considerations, as well as aesthetic and property impact for use in the Act 537 Plan.
- A draft Report will be submitted for PWSA comments.
- **The number of projects to be evaluated has yet to be defined through the wet weather planning work. For this reason, a total of no more than 20 projects has been assumed that will require assessment.**

Deliverables: Draft and Final Environmental Impact Assessment Report.

8. 3rd Party Assessment of Sewer Assets

- Regionalization involves the voluntary transfer selected municipal sewers and sewer facilities in the service area over to ALCOSAN. This is intended to reduce the financial burden on PWSA and allow ALCOSAN to more directly manage and reduce excess flows into the system. **This will be accomplished by ALCOSAN assuming ownership and maintenance of approximately 60 miles of large, multi-municipal trunk sewers and associated facilities (upstream diversion structures).**

- The purpose of this task will be to review PWSA sewer assets that are proposed to be transferred to ALCOSAN via the regionalization initiative. We will review the assets and provide documentation needed to support transfer.
- This is a study and does not include regionalization negotiation support for the ALCOSAN agreement.
- A Draft PWSA Assets Review TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final Assets Review TM; Applicable support documents.

9. Post Construction Evaluation of GI Effectiveness

- We will evaluate the performance of up to **fifteen (15) Green Infrastructure projects** in various states of design and construction that are being constructed with the intent to reduce stormwater inflow to the sewer system. To support estimates of effectiveness of these projects and potential future similar projects, post construction monitoring of the performance of these projects will need to be conducted.
- **Our team will install flow monitors at up to 30 locations for a period of 8 months to collect on performance.**
- **Data from the 3RWW rain gauge network data and up to 6 site specific rain gauges will be used to document precipitation.**
- **PWSA will provide design reports, modeling and plans produced by others along with historical rainfall and flow data collected prior to the start of the projects for use in comparisons.** Post construction data collected on other projects and any related reports will also be provided.
- We will compare the data and provided an evaluation of the resulting effectiveness of the various projects. A Draft GI Project Effectiveness TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final GI Flow Monitoring Plan; Draft and Final GI Project Effectiveness TM

GENERAL ASSUMPTIONS

- All deliverables will be provided electronically
- PWSA will provide comments on most deliverables within 14 calendar days; Task 6 deliverable comments will be provided within 30 calendar days
- Comments will be provided by PWSA electronically using document control software
- Meeting duration assumed to be typically 1 to 2 hrs (50% virtual; 50% in person)
- Workshop duration assumed to be typically 4 to 8 hrs (In person)

SCHEDULE

- The project is expected to cover a three-year period with the potential for up to three one (1) year extensions. Extensions of the schedule may impact level of effort.
- The tasks and their general anticipated duration are provided below:

Task	Anticipated Duration
Task 1	36 Months
Task 2	18 Months
Task 3	30 Months
Task 4	18 Months
Task 5	36 Months
Task 6	12 Months
Task 7	12 Months
Task 8	9 Months
Task 9	12 Months

PWSA TASK ORDER/AMENDMENT EXHIBIT C INSTRUCTIONS

**An additional Exhibit C or D may be used if space provided is not sufficient.*

General Instructions

1. **DEFINITION:** A task is a type of service that will be performed in a Task Order or Amendment, for example, it might be Design Engineering, or Construction Management, or Field Inspection. A project budget may contain individual budgets for each type of service. A Task Order or Amendment may provide for one or more type(s) of service. When preparing this Exhibit C, make sure that each type of service is separately annotated, and that the cost of labor and expenses for each type of task (budget code) is distinctly represented. PWSA's goal is to individually track the cost of each type of task or service. Should the amount of staff needed exceed the total number of columns, you may provide an additional completed template for each Exhibit. Just be sure your TO/Amendment Total Fee matches as an accumulative value.
2. See the Budget Codes tab for an explanation of where a Task type should be applied in this Exhibit.
3. Use these Exhibit forms as is. **Do not attempt** to alter them. **If they are altered they will be rejected.** If a change should be considered, discuss with your PWSA point of contact.
4. **Be sure** that all labor rates used in these forms are consistent with the rates used in the Master Services Agreement.

Exhibit C.1

Purpose: Exhibit C.1 identifies the Consultant's staff members who will contribute to each Task type to be provided, their MSA classification, their Task Order role, their anticipated labor hours, and their labor costs.

1. The Consultant's Scope of Services must be defined according to the distinct tasks that apply to a project budget code. The cost to perform each Task must be captured on this Exhibit.
2. On Row 45, enter each Consultant staff member name in a different column.
3. On Row 46, enter each Consultant Staff member's Master Service Agreement classification in a different column.
4. On Row 47, enter each Consultant Staff member's Task Order role in a different column.
5. Enter the hours each staff person will contribute to each task in the rows below each staff person's name. **If it doesn't apply, leave row blank.**
6. Enter the Subconsultant markup as an integer or decimal number (field is coded as a percentage). The spreadsheet will calculate the Total Hours and Total Labor Cost for the Consultant.

Exhibit C.2

Purpose: Exhibit C.2 captures the Consultant's anticipated expenses. Note that there is a table section for each Task type (budget code).

1. Exhibit C.1 will auto-populate each staff person's name in the appropriate row.
2. In Column B enter the type of expense that will be invoiced, e.g. mileage, hotel, auto rental. These fields are editable.
3. The spreadsheet will calculate the total costs by person and by task.
4. Repeat 1 - 3 for each Task type.

Exhibit C.3

Purpose: This table captures the Sub Consultants' anticipated costs and MBE/WBE/VBE/SDVBE classification. Note that the entries in this table are all inclusive of both labor and expenses.

The details of this data must be reflected in the required attached Sub Consultants' proposals.

1. Enter the name of each Sub Consultant firm in the Columns of the table.
2. Enter the cost **by task** of each Sub Consultant firm.
3. The spreadsheet will calculate the total costs by Sub Consultant and by Task.

Exhibit C.4

Purpose: In this Exhibit C.4, the Consultant should enter into lines 4, 5, and 6, as needed, any stipulations PWSA should consider about the Task Order or Amendment proposed budget.

Note that items 1, 2, and 3 are required by PWSA, and cannot be changed.

EXHIBIT C.1: PROPOSED BUDGET FOR EXHIBIT A SCOPE OF SERVICES

Exhibit C.4: ASSUMPTIONS

LIST OF ASSUMPTIONS RELATED TO BUDGET AND EXPENSES - List any conditions the Consultant places on the Budget and Expenses indicated above.

1	Consultant shall notify the Authority's Representative when expenditures based upon the billing of this Task Order reaches 50, 75 and 90% of the total budget, and an estimate of the time and funds necessary to complete the work. If additional funds are requested and not authorized in writing by the Authority's Representative, the Consultant shall reduce the scope of work to complete within the funds available.
2	In no event shall the Consultant's total billings for the services performed under this Task Order exceed the approved Fee amount without the Authority's written authorization and notice that it has approved an increase in the budget limit and funds available.
3	Should a key or non-key staff person not listed on an approved Task Order get assigned to the task, an Action Item to the project manager will suffice to acknowledge the change without an increase to the overall total fee. This MUST be done within 30 days of the assignment, preferably before PWSA receives the invoice for the time in which work was performed. Project Managers have the right to reject or accept the assignment of a staff person with proper justification. The consultant has the right to appeal that decision to the Director of Engineering and Construction.

Jason McBride, P.E.
Northeast Area Lead, Vice President
Wade - Trim
401 Liberty Avenue, Suite 1600
Pittsburgh, PA 15222

RE: PWSA Wet Weather Program Manager

Dear Jason,

Thank you for the opportunity to join the Wade-Trim team to provide public and stakeholder coordination for the PWSA Wet Weather Program Manager pursuit. We are proud to continue developing our partnership as we work to make Pittsburgh a more sustainability designed & modern city. In addition to our PWSA and regional water and wastewater experience and technical capabilities, E. Holdings, Inc. brings commitment and passion of local staff who understand the issues facing our region.

We understand you anticipate our level of effort to be \$615,145 or 3.63% of the total contract. If you have any questions about the enclosed items or require additional documentation, I can be reached at 412.434.6571 x 1011 or janai.smith@eholdingsinc.com.

Sincerely,
E. HOLDINGS, INC

Janai Williams Smith, Managing Director

Task Order No. WT-PRGM-12

Task Order Name: Act 537 Plan and LTCP for Wet Weather Program Manger Project

This Task Order Amendment is made as of the Effective Date, by and between **The Pittsburgh Water and Sewer Authority** (the “Authority”) and **Wade Trim, Inc. (Ops)**, (“the Consultant”).

Consultant Firm: Wade Trim, Inc. (Ops)

Contract Name: Wet Weather Program

Agreement between the Authority and the Consultant dated 11.01.2021

Prior Task Order/Amendments Applicable to this Task: N/A

The schedule for the completion of the Services under this Task Order is incorporated herein. The details of the schedule are as follows or as detailed in the separate schedule, attached as Exhibit B. The time limits established by the schedule shall not be exceeded without reasonable cause. The schedule may be amended with the Authority’s written consent as the Task proceeds.

Start Date:	11.01.2021
Completion Date:	10.31.2024

The Authority’s budget is attached hereto as Exhibit C and incorporated herein.

Where the Fee is based on Agreement rates, the Fee may not exceed the budgeted amount. The budget may be amended with the Authority’s written consent.

Fee:	\$1203900.00				
MBE:	0%	WBE:	0%	SDVBE:	%

A detailed Scope is attached hereto as Exhibit A and incorporated herein.

Exhibit A: Scope of Services

See Exhibit A

Wet Weather Program Manager

2021-OPS-116-0

Project Manager:

Ana Flores

Date Approved:

11.09.2021

PITTSBURGH WATER AND SEWER AUTHORITY
WET WEATHER PROGRAM MANAGER
PWSA PROJECT NO. 2021-OPS-116-0
FINAL SCOPE OF SERVICES

PROJECT OBJECTIVES

The specific objectives of the Wet Weather Program Manager are as follows:

- Assist in developing PWSA's Long Term Control Plan (LTCP) for the control of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) remediation plan, which will comprise a Wet Weather Plan or one or more similar documents. Provide program management services, advise, and consult with PWSA, its engineering staff, and its legal counsel (including translating technical information into a form useable by counsel) in the negotiation of a consent decree with the United States and Pennsylvania Department of Environmental Protection (DEP) addressing, among other things, the control of CSOs and remediation of SSOs from PWSA's sewer system (a Wet Weather Decree).
- Develop plans for improvements of PWSA sewer system facilities to bring combined sewer overflows into compliance with the CSO Control Policy and to remediate SSOs.
- Perform a level of service peer review and identify the current stormwater level of service the current PWSA system provides.
- Develop a range of alternatives to provide control and management of stormwater and manage basement backups and overland flooding to an appropriate, affordable level of service.
- Assist PWSA and its legal counsel in the coordination of planning, regulatory obligations, and capital improvements with upstream and downstream municipalities and ALCOSAN, where applicable.
- Conduct evaluations to account for the impact of projects implemented under ALCOSAN's consent decree and regionalization program on PWSA's development of CSO and SSO controls, and vice versa.
- Perform engineering and public participation activities in support of the development of a Wet Weather Plan, and obligations arising under municipal orders, enforcement orders, and any Wet Weather Decree entered into by PWSA.
- Develop analyses to assist PWSA's legal counsel in its addressing regulatory and legal issues associated with wet weather planning, including resolution of related enforcement actions.

SUMMARY OF WET WEATHER PLANNING TASKS

Program management services include oversight and coordination of the following activities in support of the development of a Wet Weather Plan or similar planning documents, consisting of a LTCP to control CSOs and a plan to remediate SSOs (collectively, a Wet Weather Plan in connection with the above negotiations), and plans to provide effective stormwater management. The wet weather planning work typically includes those engineering activities required to produce plans and other deliverables to be submitted to regulatory agencies, including the DEP, the Allegheny County Health Department (ACHD), United States Department of Justice,

(DOJ), and the United States Environmental Protection Agency (EPA). Many of the tasks will require familiarity with and the use of guidance documents issued by EPA and DEP. The production of interim work products and the Wet Weather Plan will be in support of negotiating a consent decree, assisting PWSA in complying with the requirements of the Wet Weather Decree and other regulatory requirements arising under the Pennsylvania Clean Streams Law and the federal Clean Water Act (CWA).

The following is a list of the tasks to be performed by the Wet Weather Program Manager.

- Task 1 - Program Management Services
 - Support the negotiation and the development of a consent decree and development of a Wet Weather Plan
 - Provide on-call engineering services
- Task 2 - Data Gathering
 - Review and determine DEP Act 537 Plan update requirements and permitting requirements for conveyance, storage and treatment
 - Review EPA guidance documents relating to CSO and SSO control
 - Review CSO/SSO consent decrees entered by other municipalities, as well as LTCPs and SSO elimination plans developed by other municipalities
 - Map with GIS, delineate and collect field survey data within planning basins.
 - Investigate sewer system and develop a system characterization study for PWSA's combined and sanitary sewer systems
 - Conduct site investigation
 - Evaluate the impact of CSOs on receiving waters
- Task 3 - Model Development and Calibration
 - Monitor flow and hydraulic conditions to inform system characterization and the selection of CSO and SSO controls
 - Develop a hydraulic and hydrologic model for PWSA's combined and sanitary sewers that reflects prior modeling information and additional monitoring data
 - Perform level of service peer review and develop current level of service thematic map
- Task 4 - Alternative identification and prioritization
 - Develop an alternative analysis for the control of CSOs and SSOs, including the development of cost-performance curves to assist in analysis
 - Develop an implementation schedule for CSO and SSO controls informed by and coordinated with a financial impact and affordability analysis
 - Identify CSO and SSO control technical alternatives
- Task 5 - Stakeholder Coordination
 - Coordinate wet weather planning and program development efforts with ALCOSAN and other municipalities in the Pittsburgh Region
 - Coordinate wet weather planning and program development efforts with community outreach and stakeholder engagement initiatives
 - Develop public participation program to inform wet weather planning and program development efforts

- Public participation program
- Task 6 - Final Act 537 Plan and Wet Weather Plan/LTCP and Recommendations
- Task 7 - Conduct environmental impact assessments of projects
- Task 8 – 3rd Party Assessment of Sewer Assets
- Task 9 – Post Construction Evaluation of GI Effectiveness

DETAIL OF WET WEATHER PLANNING TASKS

1. Program Management Services

1.1 Program Management

1.1.1 *General*

- Provide program management services that include oversight and coordination of activities in support of the development of a LTCP to control CSOs and a plan to remediate SSOs.
- A Program Management Plan will be prepared that summarizes the procedures that will be used to manage the program. Our PMP will include Program Scope & Goals, Program Constraints, Program Performance Metrics, Program Organization, Project Controls, Safety, Quality Assurance, Communication Protocols, Environmental & Permits Compliance and Risk Management. A draft Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.
- Ongoing management, coordination with PWSA and team members, communications, and project management activities will be conducted to manage the work.
- Ongoing document management will be conducted to facilitate file sharing between PWSA and our team.
- Develop and manage program schedules. An overall baseline schedule will be developed and updated monthly to reflect the progress of the work.
- Manage quality assurance/quality control of programs. A QA/QC plan will be developed and documented in the PMP. Quality reviews will be documented and conducted on all deliverables.
- Prepare and present periodic status program and project reviews, including establishing formal and informal milestones and performance metrics. Performance metrics will be developed and documented in the PMP. Monthly progress reports that include a summary of work activities completed during the previous period, planned activities for the next period, and critical action items will be prepared and submitted to PWSA as part of our monthly invoicing.
- Conduct meetings with PWSA, its engineering staff, and its legal counsel as needed to discuss the progress of the project and review key deliverables. These meetings may include a project kickoff meeting, as well as meetings with the executive PWSA team to present an executive summary of the progress of the project and key decisions needed to be made. Agendas and presentation materials will be prepared. Meeting summaries will be submitted following the meetings. **A total of 72 progress meetings, 12 miscellaneous meetings and 6 executive sessions have been assumed.**

- Provide planning-level risk management in accordance with industry standards and guidelines. A risk management plan will be prepared and included within the PMP. An initial risk development workshop will be held to review and provide input on the plan and risk register. The risk register will be updated on a quarterly basis and discussed within the regular progress meetings.

Deliverables: Draft and Final Project Management Plan; Meeting Agendas, Presentations and Summaries; Monthly Progress Reports, Schedule and Invoicing; Risk Registers

1.1.2 Regulatory Support

- The purpose of this task will be to advise and consult with PWSA, its engineering staff, and its legal counsel in the negotiation of a consent decree. Meetings will be held to prepare for EPA meetings, discuss matters with EPA and debrief on follow-up items. Agendas, technical work, presentation materials, and meeting summaries will be developed for all meetings.
- **A total of 108 meetings have been assumed over a 36-month period at an average level of effort of 16 hours/meeting for regulatory team preparation and attendance and 100 hours/month for technical support time to develop content, review, documents, and address questions from EPA or others.**
- The purpose of this task is to establish compliance priorities and to provide support to PWSA in the ongoing discussions with US EPA and PA DEP to work towards acceptance of required compliance deliverables, an LTCP 1080+ approach as it is developed. We will provide technical support and guidance for the ongoing negotiations with USEPA and PA DEP under this task by helping to gain regulatory acceptance for PWSA's compliance strategy.
- The goal of this task will be to define strategies to develop the various work approaches, programs, descriptions for capital projects, capital costs/benefits, and schedule implications for presentation to regulatory agencies. We will also review and evaluate any deliverables or documents submitted to US EPA, PA DEP and others as directed that may have impact on the CSO update / Integrated Plan and schedules.
- This task will be managed on a time and material basis as directed by the PWSA and working in conjunction with the legal and rate consulting teams to develop specific products to support regulatory discussion.
- The focus of this task will center on meetings and staff work on development of documents to support the negotiation process and work to gain acceptance for compliance documentation. Much of the work will be driven by evaluation of existing compliance documents, development of PWSA LTCP goals and guiding deliverables to build a case for technical acceptance by US EPA and PA DEP.

Deliverables: Meeting Agendas, Presentations and Summaries; Various correspondence needed to support ongoing discussions

1.1.3 Other Services

A. CMOM Program

The purpose of this task is to develop and document a Capacity, Management, Operation and Maintenance (CMOM) program. We will review existing information on CMOM activities, meet with PWSA to understand the program and develop a recommended plan for PWSA.

PWSA's Capacity, Management, Operations and Maintenance (CMOM) Program forms the foundation for PWSA to meet its customer service demands, sustain infrastructure performance, comply with regulatory requirements, and manage its resources. The objectives of this task are:

- Compile PWSA's current CMOM documentation and assess the program components against industry best practices, PWSA's organizational goals, and applicable regulatory requirements
- Develop a set of priority improvements to address potential gaps identified in the assessment
- Establish a Program Document that, when implemented, provides a proactive defense from regulatory enforcement action and leads to improved system performance and cost savings.

CMOM assessment will benchmark PWSA's current program against likely EPA Region 3 expectations, regulatory precedence, and utility best practices. This review will be focused on the sanitary sewer service area of PWSA and the capacity assurance, management, operations, and maintenance activities specific to that portion of the system. It is assumed that the Nine Minimum Controls (NMC) activities of PWSA cover similar aspects for the combined sewer system and are outside the scope of this effort.

We will assess current programs, policies, and practices. Existing documentation will be compiled and evaluated to establish priority areas for improvement. The assessment will include evaluation of SSO causes, review of existing CMOM documentation, interviews, and field observations.

We will evaluate PWSA's SSO data to develop an understanding of the number and volume of sanitary sewer overflows by cause over the past 5 years (2016-2020). SSOs will also be plotted in GIS to identify any geographic trends. The SSO cause and spatial analysis will allow us to consider how PWSA's CMOM Programs are structured to solve system-specific needs.

We will submit an information request to PWSA to gather existing CMOM-related program documentation, policies and procedures. We will review existing documentation, assess the completeness of the program, and identify potential gaps with accepted best utility practices in the following areas:

- Goals, Visions and Support
- Organization
- System Knowledge
- Capacity Management

- Engineering and Construction
- Asset Inspection and Condition Assessment
- Rehabilitation and Replacement Program
- Maintenance Programs and Procedures
- FOG Program
- SSO Tracking, Analysis and Reporting
- Overflow Emergency Response
- Budgeting
- Training
- Safety
- Customer Service
- Information Management
- Information Systems

We will conduct interviews with PWSA staff over a 5-day period, including personnel from management, engineering, planning, operations and maintenance. During the interviews we will discuss policies and practices related to organizational structure/communications, work management processes, information management processes, inspections; rehabilitation (pipeline, manhole, and removal of illegal connections); fats, oils, and grease (FOG) control; new construction standards and inspections; Emergency Response Procedures; preventative, predictive, and corrective maintenance practices including sewer cleaning; and staff training, knowledge skills, and abilities.

Observation of the operations and maintenance (O&M) crew work practices will validate what was heard during the interview process and identify additional opportunities for improvement. A senior collection system operations expert will spend 2 days in the field observing the way in which crews accomplish O&M tasks such as inspections, CCTV, line cleaning, point repair, root control, pump station maintenance, and emergency response where possible.

The results of the CMOM Program assessment will be presented to PWSA in a workshop with recommendations for improvements. Based on PWSA's feedback and input, an Implementation Plan will be established that identifies areas for improvement, the scope of effort involved by both our and PWSA staff, estimated labor-hours and schedule. The Implementation Plan will focus on improvement that provide maximum benefit to PWSA.

- Describe the Gap Assessment framework including regulatory requirements and effective industry business practices
- Present the SSO cause analysis results
- Confirm PWSA's CMOM Program goals
- Gain input on our assessment of current business practices and programs
- Prioritize areas for improvement. The prioritization process will consider the current program status, as well as the importance of the various programs and practices in meeting PWSA's specific CMOM Program goals
- Develop consensus on improvement areas and priorities.

Based on the results of the workshop, we will develop a CMOM Program Summary, documenting the CMOM assessment, and a Work Plan for high impact improvements to current programs and practices. We will conduct a final consensus workshop to validate the draft CMOM Program summary and allow staff to make adjustments before finalizing the Work Plan. We will finalize the CMOM Assessment to include the agreed upon improvement initiatives and proposed timelines. A draft overall CMOM Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.

Ongoing support activities such as training, data review, and development of procedures can also be conducted to assist PWSA in implementation of the plan as an additional service.

Deliverables: Draft and Final CMOM Plan

Level of Effort Assumption:

- **Will conduct two (2) workshops and up to 5 days of interviews and field visits with PWSA Staff.**

B. Assist with PWSA's Nine Minimum Controls (NMCs) program

- We will review existing NMC documentation and provide a Technical Memorandum summarizing review comments and recommendations.
- **Ongoing support activities such as training, data review, and development of procedures can be conducted to assist PWSA in implementation as an additional service.**

Deliverables: Draft and Final NMC Review TM

1.2 On-call Engineering Services

1.2.1 General On-Call

To support the development and ongoing progression of the Wet Weather Plan, various engineering services may be required at the request of PWSA. Specific tasks will be identified and a mutually agreeable scope, budget and schedule to complete the task will be developed by Wade Trim and PWSA. In general, examples of the services that may be performed under this task include:

- Conceptual infrastructure studies
- Design and construction engineering services
- Asset management activities
- Value engineering studies
- Oversight of consultants that may perform design and construction engineering services for wet weather projects.
- Coordinate the design of PWSA system improvements developed as part of the wet weather planning efforts with proposed improvements of the ALCOSAN and upstream/downstream municipal systems

An allowance has been established to support these activities. Work will be performed at the approval of PWSA and up to the limit included in this authorization.

Deliverables: To be determined based on nature of approved task activities.

1.2.2 Sewer Condition Assessment

This task has been removed from the scope.

1.2.3 Asset Management

The general objective of this task is to develop the methodology and best practices to assist PSWA better manage their assets. Asset Management (AM) services will focus on aligning strategic objectives with stakeholder level of service expectations to develop a risk-based approach to manage the entire lifecycle of program assets. Collaboration with PWSA staff will be integral to success and initial efforts will focus on understanding current best AM practices, identifying gaps, and developing an actionable roadmap for AM implementation. Implementation items will be prioritized and quick win and near team activities that achievable and provide the most value to PWSA will be identified. AM implementation assistance will be provided based on PWSA requests for assistance. Planned AM Services include:

- Review and assess the existing AM program and system operational documentation and provide a gap analysis relative to utility best practices and develop recommendations
- Develop or Update the PWSA Asset Management Vision to incorporate key wet weather program priorities
- Form and charter an AM team of PWSA key staff that can build and then take on the implementation of the program
- Develop AM program charter and AM methodology and best practices training content
- Conduct AM program evaluation and gap analysis between current and desired future state
- Prepare actionable AM program implementation roadmap that details prioritized AM activities
- Organize, integrate, and embed overall PWSA strategic goals in the AM framework and corresponding LOS goals and evaluation criteria for alternative evaluation
- Develop and enhance PWSA's use and operation of Innovyze Info Asset Manager including training of existing staff.
- Organize system replacement and future CIP data for use in the alternative evaluation
- Coach and mentor PWSA staff using subject matter experts that can provide guidance on continuous AM program development
- The following strategic and tactical topics will be discussed with each of the groups listed above, as applicable, as part of the assessment:
 - Decision Making and Capital Planning
 - CIP Development and Prioritization
 - Design & Construction
 - Funding
 - Information Systems and Data Management
 - Data Systems Tools
 - Organizational Framework
 - Communications

- Risk Management
 - Operations and Maintenance
 - Inventory/Warehouse
 - Maintenance Strategy
 - Operations Strategy
 - Optimization
 - Culture and Change Management
 - Document Management
 - Leadership and Commitment
 - Levels of Service and Performance Evaluation
 - Resource Management
- This task is intended to establish a program that PWSA can run independently. **Ongoing support beyond the budget for this task can be provided to support activities as an additional service.**

Deliverables:

Information Request, copies of meeting materials, draft and final AM program charter, AM training materials, AM gap analysis, AM roadmap and supporting materials developed as part of implementation activities.

1.2.4 Compliance Review of Selected Sewer Improvement Projects

PWSA has identified two (2) sewer improvements projects (Browns Hill Road Pump Station and 31st Ward Sewer System) that PWSA plans to procure outside consultants and start work 12 months from the NTP of this contract. **PWSA will maintain a project manager to provide administrative oversight of outside consultant activities.**

In general, our activities will include:

- Reviewing and providing input on outside design sewer consultant RFPs.
- Conducting 30%, 60%, and 90% compliance reviews to assess ability of the proposed design to meet regulatory requirements.
- Coordination meetings to discuss reviews and responses.

Deliverables: Technical Review Comments

Level of Effort Assumptions:

- **Attendance at up to 8 project meetings total among 2 projects**
- **Technical review of design discipline work and constructability reviews will be conducted by others.**

2. Data Gathering

2.1 Evaluate existing information and analyses

- Review wet weather-related studies in the region, such as the ALCOSAN Clean Water Plan, 2008 Feasibility Report, 2013 PWSA Feasibility Report, 2016 Citywide Green First Plan, Controlling the Source, RAND Climate Change study, PWSA's current Stormwater Master Planning initiative, and other documents that PWSA deems appropriate.
- Sections in an Existing Data Review TM will be prepared that summarize important findings and information relative to the current study effort.

Deliverables: Draft Existing Data Review TM Sections

2.2 Gather county, state and PWSA system information (sewer maps, inspection data, hydraulic overload problems, ACHD complaints)

2.2.1 Data Gap Analysis

- Relevant data that Allegheny County and State agencies may have will be requested and reviewed.
- PWSA will provide:
 - Existing GIS system database of existing sewer assets and any required sewer maps (critical information includes pipe diameters, lengths, invert elevations, and rim elevations).
 - Inspection and sewer back up complaint data
 - Information on known sewer hydraulic bottlenecks and surface flooding issues
 - Known areas of heavy inflow and infiltration, SSO and CSO locations
- Data relative to sewer and street flooding will be requested from ACHD and information provided reviewed and incorporated into the project GIS database.
- Additional existing collector sewer system information and reporting data will be reviewed. The Existing Data Review TM will be updated with the findings from other tasks. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- A Data Gap Analysis TM will be prepared that summarizes additional data collection and field investigations needed to support the study along with a level of effort. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Existing Data Review TM; Draft and Final Data Gap Analysis Review TM

Level of Effort Assumption:

- **Assumes that the existing PWSA GIS database of sewer data is of sufficient accuracy to support the planning level activities**
- **Assumes approximately 200 staff hours/month for 6 months**

2.2.2 Determination of Critical Areas

- Complaint records provided by PWSA will be reviewed and screened to identify issues related to documented system problems. A map of complaint locations for sewer backups and street flooding will be developed.
- **A significant number of pipes covering the local systems is not included in the current PWSA hydraulic models. It is anticipated that inclusion of all the sewer elements would be a significant undertaking from a data collection, model upgrade and model run time perspective. Therefore, the base models will be expanded to focus only on critical areas that have experienced historically high levels of sewer back-ups and/or street flooding. All system pipes (storm and sanitary) will not be modeled.**

- A desktop hydraulic analysis will be conducted using the existing hydraulic models for sewers included in the PWSA system for a range of storm events to identify the capacity of the existing sewer lines. Major sewers (>18") not included in the model where adequate physical data is available will also be checked for capacity using existing GIS data (topo, manhole depths); standard pipe capacity calculations; and compared to modeled peak flows adjusted on an area weighted basis. The locations of known complaints will be compared to the capacity check to identify likely areas of concern.
- "Critical portions" of the PWSA system will be identified. "Critical portions" include pump stations, trunk sewers, points of overflow activity, basement back-up areas, surface flooding, or areas of excessive infiltration and inflow (I/I). At the time of this scope preparation, the number of critical areas is unknown. **For the purposes of this task, it is assumed that 20 to 30 sewer backup and 6 to 10 stormwater flooding subsheds will be identified for further analysis.**

Deliverables: Draft and Final Critical Areas Definition TM

2.3 Investigate PWSA sewer system

2.3.1 Stream Inflow and Acid Mine Drainage (AMD) Map

- Identify and locate any stream inflow sources and acid mine drainage discharges along the critical portions of the PWSA sewer system using **existing data sources**. The potential sewersheds for stream inflow sources will be identified from the past and pending regional flow monitoring work, and PWSA input.

Deliverables: Draft and Final Stream Inflow and AMD Map

Level of Effort Assumptions:

- **No field work such as stream walks, sampling, or other investigation will be conducted.**

2.3.2 Field Data Collection Allowance

- Upon approval from PWSA, work to conduct additional field data collection activities identified with Task 2.3.1 will be conducted within the available budget included within the field allowance. Field data will be entered into the appropriate asset management databases. Additional field collection efforts shall be conducted as an additional service.
- The proposed field data allowance was developed based on an assumption of 400 days of field survey intended to collect data on approximately 8,000 structures (based on 20 structures/10 hr-day @\$2,200/day including survey and post processing). This data includes limited spot checks of approximately 10% of existing modeled areas and assumes data can be collected from the surface without the need for confined space entry or significant traffic control procedures. **No LIDAR, detailed topographic and surveys on private property or within homes for purposes of determination of basement inverts or first floor elevations**

- A summary of the data collected will be provided in a draft and final Field Data Collection Summary Technical Memorandum.

Deliverables: Draft and Final Field Data Collection Summary TM, Field notes and database

2.4 Coordinate on System Improvements and Technical Alternatives with Others

- Request and coordinate with ALCOSAN/municipalities to obtain information on proposed system improvements for use in study work. This includes information on proposed tunnels and consolidation sewers, CSO regulator, pumping, storage tanks, RTBs, Green Infrastructure, Source Control, WWTP and other improvements that can impact overflows in the PWSA collection system.
- A review will also be conducted of major development and PWSA projects (that would have an impact on planning efforts) to determine which should be advanced into the model. It is assumed that PWSA will provide the hydraulic, as-built and/or survey data relative to these improvement projects. **Assumed no more than 10 sewer improvement projects will be included.**
- A summary of the proposed major improvements that will be included in a Baseline Model to evaluate additional alternatives will be documented in a System Inventory TM. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Planned ALCOSAN, PWSA and upstream/downstream municipal improvements will be considered in related modeling and cost analysis in subsequent tasks.
- Ongoing coordination with ALCOSAN throughout the project will also be tracked under this item.

Deliverables: Draft and Final System Inventory TM

Level of Effort Assumption:

- **Assumes up to a total of 60 meetings with representatives of ALCOSAN, Point of Connection (POC) Groups with municipal officials, and 3 Rivers Wet Weather**
- **Assume no new Clean Water Plan design changes**

2.5 Determine regulatory permitting requirements for conveyance and storage

- We will participate in meetings with DEP to establish or confirm the regulatory permitting requirements and related design standards and control approach to be used in the sizing, performance, and layout of facilities to be proposed, designed, or built as part of PWSA's wet weather planning program. **Assume up to 6 meetings for coordination.**
- To prepare for the discussions, a Draft Regulatory Permitting Requirements TM will be prepared that summarizes current criteria for sewers and facilities for PWSA and regional entities along with proposed criteria for facilities to be sized and designed under this program. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Regulatory Permitting Requirements TM

3. Develop and calibrate model(s)

3.1 Water Quality Sampling, Analysis Tool Development and Evaluations

3.1.1 Water Quality Data and Information Compilation, Review and Evaluation

- We will compile and review water quality data and related information for the receiving waters impacted by PWSA wet weather discharges and data on sources of pollutants. This will include:
 - Data collected and provided by PWSA as well as publicly available data. We will also develop a request for data collected by ALCOSAN/3RWW. We will compile water quality data in Excel and/or Access for review and evaluation.
 - Information on the receiving streams, their watersheds/drainage areas, and available modeling for these streams and drainage areas.
 - Additional available data on precipitation, climate, and streamflow may be compiled to support the water quality assessments.
 - Listed impairments and available TMDLs for the receiving streams including pollutants and sources. Other available studies on the receiving streams will be compiled and reviewed.
- This scope of work is based on the understanding that the receiving waters that will be studied for this task are the receiving waters that receive discharges from PWSA-owned CSO outfalls that will not be controlled by the ALCOSAN tunnel construction; these include several Tributary Streams (Chartiers Creek, Nine Mile Run, Saw Mill Run, and Becks Run), and the Main Rivers (Ohio River, Monongahela River, Allegheny River). The primary focus of this task will be on the Tributary Streams, but a summary of the conditions of the Main Rivers within the PWSA service area will be included. We will conduct site visits of the Tributary Streams to assess existing conditions, sediment build-up, stream bank stability, flow restrictions, vegetative cover, and other potential characteristics. Photo documentation of the conditions will be collected.
- **Additional Main River Water quality or other data collection will not be conducted.**
- We will evaluate the available information to characterize existing conditions, spatial and temporal trends, dry versus precipitation event-driven conditions, comparison to water quality standards, and potential cause-effect linkages. We will also assess the ability of existing models to characterize water quality conditions and benefits of control alternatives.
- We will summarize the results of the data compilation, review and evaluation in a technical memorandum. The memorandum will include a data gap analysis including recommendations for additional data collection and model development activities, including cost estimates and potential refinements to the original budget estimates provided. We will submit one draft for review and comment. We will address comments and submit one revised draft for submittal to PWSA. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft Water Quality Existing Data Review TM

3.1.2 Sampling and Analysis

- We will prepare a Sampling and Analysis Plan (SAP) and a Quality Assurance Project Plan (QAPP) to guide the collection of water quality samples to support the characterization of the waterways and sources.
- One draft of the SAP and QAPP will be submitted to PWSA for review and comment. Following PWSA review and comments, we will revise the SAP and QAPP for submission to Pennsylvania Department of Environmental Protection (DEP) and/or the United States Environmental Protection Agency (EPA). Following DEP and EPA review and comment, we will prepare the final SAP and QAPP.
- Sampling activities will include training and orientation with our local, on call sampling team. This work will include site visits to discuss procedures and review sampling locations. This will also include coordination on scheduling of sampling events, tracking wet weather events, and making go/no-go decisions on sampling. We will also coordinate with the analytical laboratory to coordinate bottle shipments, sample deliveries, QA/QC data review, and reporting of results.
- For the purposes of this scope of work, the following assumptions have been made to inform the budgeting of this subtask. The scope and budget will be revisited following completion of the data review and evaluation work. Sampling is anticipated to be conducted between April and October 2022 for the following:
 - **6 locations (2 locations in each of Chartiers Creek, Nine Mile Run, and Becks Run)**
 - **72 total samples (3 baseline, 3 wet events – 3 samples each event for each location)**
 - **Parameters for field measurement: Temperature, pH, Dissolved oxygen, Conductivity**
 - **Base assumptions for parameters to be collected for laboratory analysis: E. coli, TSS, Ammonia, TKN, Nitrates + Nitrites, TP, Ortho**
- Following the initial review of the impairments and stream conditions, the need for additional parameters such as metals, and hardness will be assessed. We will review sampling field notes and laboratory reports following each round of sampling to identify problems or issues needing correction. We will coordinate with the sampling consultant and the laboratory to implement corrective actions.
- Two of the subject watersheds do not have USGS flow gages located on them. Additional flow and/or water level monitoring may be required in these watersheds as well. If needed, effort would be authorized separately.
- Following implementation of the sampling plan, we will perform a data validation review and prepare a memorandum documenting the review.
- We will prepare the project-specific SAP and QAPP, as stated earlier. We will update the water quality characterization with the new data. We will summarize the results of the sampling, analysis, data review, and updated characterization in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and

characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit one draft to PWSA. Following PWSA review and comment, we will prepare the final TM.

Deliverables: Draft and Final Water Quality SAP and QAPP TMs

3.1.3 Water Quality Model Updates

- We will update receiving water models to support the evaluation of water quality assessments. We will update model calibrations using the most recent data (April-October 2022) and will validate model performance. The anticipated receiving waters for modeling and the modeling frameworks are listed below:
 - Chartiers Creek, Nine Mile Run watershed/drainage area: PC-SWMM
 - Saw Mill Run watershed/drainage area: HSPF
 - Becks Run watershed/drainage area: no existing model
 - Main Rivers Model: RMA2 (hydrodynamics)/RMA4 (water quality)
- We will develop estimates of upstream flows and pollutant loads for the calibration period (April-October 2022) based on available data. We will develop meteorological inputs for the calibration period based on available data.
- Calibrations will be performed by applying best engineering judgement to make model calculations as representative of observations as possible. The models will be calibrated using both visual and numerical methods. This effort may employ regressions of observations vs. calculations, minimizing the squares of the residuals of observations vs. calculations, minimizing relative error, minimizing differences in observed vs. calculated means, and minimizing root mean square error, among other methods. For simulations having the appropriate temporal scale, published statistical measures of goodness-of-fit (e.g. percent difference, r^2 , PBIAS) will also be considered in evaluating the strength of the hydrology and water quality calibrations.
- Following calibration, the models will be validated using an independent data set to demonstrate that the model is capable of acceptably reproducing the timing and magnitude of observed data without further changes to the model parameters.
- We will summarize the results of the model updates and calibrations in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit a draft to PWSA for review. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Model Update TM

3.1.4 Water Quality Assessments of Benefits of Control Alternatives

- We will develop and apply the updated and calibrated models to support the assessment of existing conditions and the water quality benefits of control alternatives. We will develop the water quality models for the typical year. We will develop the following water quality model inputs for the simulation of existing conditions for the typical year:
 - Upstream boundary flows and pollutant loads
 - Meteorological inputs, and
 - Sources other than overflows.
- We will characterize water quality conditions for the typical year under existing and baseline conditions. We will assess the relative impact of pollutant sources with respect to attainment of water quality standards for those scenarios. We will prepare an interim technical memorandum documenting the characterization of existing and baseline conditions for the Tributary Watersheds.
- We will apply the water quality models to simulate the water quality benefits of control alternatives. **This scope of work assumes ten (10) separate simulations will be run to assess control alternative benefits.** These may include a combination of simplified control scenarios (for example 25%, 50%, 75%, and 100% reductions of overflows) and specific control alternatives with simulated reductions in overflows from the collection system model.
- For each control alternative simulated, we will evaluate the water quality benefit in terms of pollutant load reduction and improvement in ambient water quality. Attainment of water quality standards will be assessed.
- We will also update the typical year simulation with the final recommended control plan and assess the water quality benefits.
- We will summarize the results of the water quality assessments in a technical memorandum. The memorandum will include discussion of the development of the typical year simulation, water quality characterization of the existing conditions, and water quality benefits of select control alternatives and the final recommended control plan. We will submit one draft to PWSA for review and comment. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Assessment TM

3.2 Monitor flow and conduct hydraulic modeling

3.2.1 Review existing flow data and models

- We will review flow data and models previously collected by PWSA and ALCOSAN to identify modeling and data needs to support the wet weather planning process. In general, this review will include locations, durations and quality of available flow monitoring data as well as determination of availability of models and the extent and quality of the calibration/verification of these models. **Up to 10 watershed models are assumed to be reviewed as a part of this effort.**

- An Existing Model Review TM will be created to document the available modeling sources and to identify data needs to expand or improve the models. This memo will also identify the various design storms, typical year precipitation, boundary conditions, and model scenarios (Existing, Baseline, Future, etc.) needed to support the project.
- **It is assumed that the starting model version for this project is the ALCOSAN Existing Conditions 2020 Model developed using SWMM version 5.1.012. This model includes a representation of the WWTP, deep and shallow cut interceptors, all diversion structures, combined sewer overflow outfalls and storm, combined and sanitary tributary areas. This model is anticipated to be expanded using historical and current modeling elements that have been developed under various PWSA efforts.**
- A summary of the available historical rainfall, stream level and flow monitoring data will be prepared and included in an Historical Flow Data Review TM. This TM will also document ongoing permanent precipitation, permanent flow meters, and stream gages that are available to support the work. **PWSA will provide available historical precipitation, stream and flow data.** Available data on high water flooding marks will also be summarized in this memo for critical stormwater flooding areas. **Field work to investigate or identify high water marks will not be collected.**
- During this process, we will develop a Model Data File Management procedure and implement to assist with model input and output file management. Procedures and Protocols will be summarized in a Model Data Management TM.

Deliverables: Draft and Final Existing Model Review TM; Draft and Final Historical Flow Data Review TM; Draft and Final Model Data Management TM

3.2.2 Develop a flow monitoring plan and collect flow data

- A detailed Flow Monitoring Plan TM will be developed to support the model expansion and system characterization effort guided by the approach outlined in this section. The Plan is expected to include proposed methods for flow monitoring in Critical Areas and I&I sewersheds with sections that cover, purpose and objectives, monitoring techniques and procedures, data management approach, QA/QC protocols, and maps of proposed deployment locations.
- **It is assumed that PWSA can provide all necessary radar-rainfall data needed to characterize precipitation in the service area.** The radar rainfall information will provide area-weighted rainfall hyetographs for each model subcatchment using existing regional permanent rain gauges. **To supplement this data, we will deploy up to 20 temporary project rain gauges for no more than 9 months.**
- We will deploy sewer system flow meters to screen and prioritize tributary areas to support expansion of the system hydraulic/hydrologic model (Calibration monitoring) and for further I/I investigations (micromonitoring).
- **To support model expansion into Critical Areas, up to 100 calibration meters (with a total installed duration of no more than 9 months) will be**

installed to provide information for model calibration in areas of known performance problems. Monitored subcatchments are planned to be between 20 and 75 acres in size.

- In support of Task 3.4, micromonitoring will be used to break down areas of roughly 100 acres or less for further I/I investigations. Up to 40 micrometers (with a total installed duration of no more than 3 months) will be deployed simultaneously for one or two significant rainfalls per location to determine tributary area I/I response. Areas showing significant response would then be targeted for further investigations. Areas showing little response would be screened from further consideration. Micromonitoring durations will be adjusted based on observed rainfall events.
- In support of Task 3.4, up to 40 calibration meters (with a total duration of no more than 6 months) will be installed to provide information for model calibration areas in sanitary areas. We will use the Task 3.4 prioritization information and preliminary micromonitoring to assist with calibration meter placement.
- It is assumed that flow monitoring will be conducted in the 2022 season between March and November. All data will be collected and stored in a database for use on the project.

Deliverables: Draft and Final Flow Monitoring Plan TM; Rain and Flow Monitoring Database

3.2.3 Expand and calibrate hydrologic and hydraulic model for use in planning

- The H&H hydraulic model will be extended up into the PWSA collection system to represent know problem areas with clusters of reported basement backup and areal flooding issues.
- Additional detail included in the historical version of the PWSA model included within Infoworks may also be added to the model to support this work along with significant known system changes. **Up to 400 staff hours for addition of existing detailed model elements such as major sewer projects or other detailed models has been assumed.**
- In Critical Areas with street flooding, the H&H model will also be expanded using dual drainage network techniques, to capture the movement and depth of overland flows along the street network. Depending upon the location of the problem area there may be a natural open channel also that will be included in the model. **Up to 2,500 model elements (channel segments and surface nodes) are assumed to be included in this model expansion within no more than 6 to 10 sub areas. It is assumed that existing topographic data is sufficient to characterize the street geometry.**
- With the hydraulic network expanded into the collection system, the lumped or consolidated hydrologic representation included in the current Existing Conditions model will also need to be discretized so that the generated flows can be distributed in the detailed expanded hydraulic network. This more detailed hydrologic representation will need to be calibrated using the collected flow and depth data. **Up to 4,500 model elements (sewer pipes**

and manhole junctions) are assumed to be included in this model expansion within no more than 20 to 30 sub areas.

- Revisions and expansions of the model will be documented in a Model Update TM.
- Sanitary areas within the H&H model will be calibrated to the data collected under Task 3.2. RTK parameters will be updated to reflect the findings of the new data collected.
- Targeted subarea calibration of areas tributary to up to 140 flow meter locations will be conducted based on the flow data collected under task 3.2. Continuous calibration/validation is anticipated to be conducted to compare metered vs. modeled predictions of flow, volume, depth and hydrograph shape. Industry standards for determination of acceptable calibration will be applied to determine the reasonableness of the calibrated parameters.
- A technical memorandum will be developed to summarize the results of the model calibration.
- A model review workshop will be held with PWSA to present the results of the calibration and discuss approval of the model for use on subsequent planning efforts.
- Upon approval of the model, files for various scenarios (Existing Conditions, Baseline Conditions (Near Term Projects that will be constructed) and Future Conditions (with Interim and Select Plans) will be developed to support the next stages of modeling. **Models will be run for up to five (5) design storm conditions to support level of service analysis.** Models will be run continuously for the Typical Year. Sensitivity scenarios for use in assessing the impacts of future climate change will also be run. Overflow statistics and level of service impacts will be quantified.

Deliverables: Draft and Final Model Update TM; Draft and Final Model Calibration TM; Model Support Files; Model Results Summaries

3.3 Perform level of service peer review and develop current level of service and range of alternatives for increasing level of service.

- A peer review will be conducted to identify the level of service of similar regional communities. Findings of the review will be summarized in a technical memorandum.
- Stress-test the current PWSA collection system to identify the current level of service provided and develop a level of service thematic map.
 - The primary level of service will be evaluated using the existing hydrologic and hydraulic model and the expansion into critical areas of observed sewer back-ups and street flooding will be used to assess collection system capacity for the interceptors and selected main line sewers.
 - A secondary level of service evaluation will be conducted on main sewers > 18" in diameter using a simplified method that compares pipe capacity to flows from the model that will be apportioned based on area. **It is assumed that existing GIS/sewer data provided by PWSA is sufficient for this purpose.**
 - A third evaluation will be conducted to assess "neighborhood" level of

service along a street within a city block. **Representative neighborhood areas (up to 6) will be selected and evaluated in detail to understand if general level of service deficiencies can be expected based on typical Pittsburgh sewer design practices.** Areas that have adequate existing data from either GIS or record drawings to support the assessment. **PWSA to provide detailed sewer drawings of the selected areas for use in this analysis.**

- **PWSA will determine what the level of service guiding principles will be used for stormwater under a separate contract**
- An alternatives analysis to determine the best approach to provide for increased levels of service will be conducted. In general, this is expected to include conveyance improvements that would include replacing existing storm or sewer piping to increase capacity and reduce water levels in the system and streets. The type, size and general location of improvements will be identified and included on maps to show the options.
- Provide a concept screening cost estimate (AACE Level 5) for bringing the current system up to the appropriate level of service for stormwater and sewer back-ups. Costs for increased conveyance systems to achieve higher capacities will be developed for various levels of service. **It is assumed that no more than two level of service scenarios will be costed.**
- Findings of the evaluation will be summarized in a technical memorandum.
- Determine how increased level of service impacts other wet weather planning objectives, including controls of CSOs and SSOs. A Typical Year simulation will be conducted to determine the results impacts on overflow statistics.
- Model base files for Level of Service Improvement Alternatives will developed to support the next stage of integrated planning evaluations.

Deliverables: Draft and Final Level of Service Peer Review TM; Draft and Final Level of Service Evaluation TM; Existing Level of Service Map

3.4 Develop a plan to identify significant areas of I/I and a strategic plan on how to prioritize locations to reduce I/I

- The PWSA system is essentially a combined system, but the upper reaches of the collection system have separate sewer areas.
- We will review and update on the approach to prioritize investigations previously by PWSA. Using data collected under other tasks, we will seek to identify sanitary areas without significant problems that would require no further investigation. Prioritization will occur at a relatively higher level and be refined as the project progresses. Early micromonitoring is proposed to help define the investigation prioritization.
- **Field work and subsequent data review for activities such as smoke testing, site assessments, manhole inspections, SSES investigations, dye testing, and CCTV inspection to support this task will be conducted by others or as an additional service.**
- PWSA will provide available data on effectiveness of historical projects in reducing I&I after improvements have been made.
- We will review the data collected and provided and use to identify areas subject to

elevated levels of I&I.

- By layering of existing GIS information, we will perform a Prioritization Analysis to produce a table and map with preliminary priority areas. We will review the proposed prioritization with PWSA to get input on the preliminary prioritization approach, the resulting priorities, and provide direction on any necessary adjustments.
- Based on the work, estimates of a range of potential I&I reductions (low, medium and high) for use in planning purposes will be developed for use with planning scenarios under Task 4.
- We will develop draft and final versions of an I&I Prioritization Approach TM, which will document criteria, data used, estimated effectiveness, and a priority list of areas. We will submit the draft TM to PWSA for review.

Deliverables: Draft and Final I&I Prioritization Approach TM

4. Identify and prioritize alternatives

The alternative evaluation is expected to be conducted at varying levels depending on the location and ownership. The most detailed efforts will be focused on outfalls solely owned by PWSA and jointly owned outfalls discharging to tributary streams (Level 1 and 2).

- Level 1 – 38 Outfalls solely owned by PWSA
- Level 2 – 33 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging into the Tributary Water Bodies

For these outfalls, it is assumed that up to 3 technologies will be evaluated for each outfall, costing to a Level 5, performance determined, and a recommended solution provided. Outfall solutions will either be combined or enhanced in up to 3 alternatives per basin.

A lesser detailed level of planning will be conducted for jointly owned outfalls discharging to the Main Rivers (Level 3 and 4).

- Level 3 – 116 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging to the Main Rivers
- Level 4 – 20 CSO Outfalls co-owned by PWSA/ALCOSAN, discharging to the Main Rivers and controlled by the planned Regional Tunnels

For these outfalls, it is assumed that up to 3 technologies will be evaluated for up to 10% of these outfalls, costing to a Level 5, performance determined, and a recommended solution provided. This is not intended to replace but to enhance or supplement the current ALCOSAN Clean Water Plan for these outfalls.

4.1 Identify and screen technical alternatives

- The goal of this task is to identify potential alternatives that will provide compliance with the goals of the wet weather planning process, taking into consideration the ability to adapt to future conditions.
- An Alternatives Brainstorm workshop will be held with PWSA to discuss potential approaches to controlling CSO and SSO in the PWSA service area. The

- workshop will include a review of the planned ALCOSAN improvements, previously planned control recommendations from PWSA efforts, various technologies and strategies that have been reviewed historically and any new or emerging technologies.
- We will review and assess potential **technologies** for controlling SSO and CSO in the PWSA service area. Optimization techniques will be applied to narrow the field of **solutions**.
 - A Technology Screening TM will be prepared that summarizes the potential technologies such as source control, green infrastructure, regulator modifications, storage and conveyance that conducts a high-level screening for applicability to the various areas and provides recommended **outfall solutions** to advance to the basinwide alternative evaluation stage. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - An integrated planning approach will be applied that considers **solutions** basinwide that meet both water quality and level of service requirements determined under Task 3.3.
 - An Alternatives Development TM will be prepared to summarize the alternatives that were considered in the evaluation for each outfall or groupings of outfalls. This TM will summarize basinwide alternatives and the recommended systemwide alternative. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - **Six (6) additional Alternatives Workshops with PWSA are planned to discuss the progress and findings from the Alternative Evaluations.**
 - The selected alternative based on the results of Task 4.6 will be further defined (<5% project definition). This work will include development of concept layouts and site investigations to further develop the concept and develop an opinion of cost that is consistent with a AACE Class 4 cost estimate.

Deliverables: Draft and Final Technology Screening TM; Draft and Final Alternatives Development TM

4.2 Identify and screen site development and buffer alternatives

- Initially, a Site Opportunity and Enhancements TM will be prepared to summarize the nature and location of potential opportunities. We will conduct a recommended screening to identify areas with a potential to support effective wet weather controls. A draft TM will be submitted to PWSA for review and comment.
- USEPA-defined Environmental Justice demographic indices will be included into screening evaluation. Sites for alternatives will consider the benefits and impacts to environmental justice communities within the PWSA service area. The potential for providing benefits to these communities through improved wet weather management will be considered along with the direct benefits and impacts of feasible technologies within these communities.
- Our team will meet with stakeholders to identify opportunities for siting of control alternative solutions at locations that may be mutually beneficial for redevelopment or community enhancements. **Up to 16 meetings with stakeholders have been included in the scope for this purpose.**
- For the final recommended alternative identified under Task 4.6, we will update the TM to discuss the potential solution and how it may be enhanced with site

improvements, community benefits, green leave behinds or other features that would create or maintain a beneficial relationship with the various City of Pittsburgh departments, authorities, and key stakeholders (including neighborhood organizations).

Deliverables: Draft, Revised, and Final Site Opportunity and Enhancements TM

Level of Effort Assumptions:

- **Assumes enhanced site evaluations will be prepared to better define project location and site conditions and refine the level of accuracy of the Cost estimate to support a AACE Level 4 cost estimate in conjunction with Task 4.3**
- **Does not include topographic survey, easement acquisition, property acquisition support services, geotechnical exploration, environmental site assessments, or subsurface utility exploration to be included with the site evaluations.**

4.3 Perform a present worth analysis of the feasible alternatives

- A cost tool that can provide estimates for various technologies at an **AACE Level 5** will be developed using unit pricing, engineering judgement and input from recent PWSA and regional projects for purposes of initial technology screening.
- A Costing Approach TM will be developed that summarizes the assumption, development and application of the cost methodology. **Two (2) meetings are included to discuss the approach and development of the tool with PWSA.** A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Costs will be developed for overall total project and lifecycle costs and include the following elements: Construction, Operating, Site surface development and restoration, Operation and maintenance requirements, Utilities and Land acquisition and rights-of-way. PWSA to provide input on administrative, legal and contingencies to be applied to the overall program cost development.
- Initial costs will be summarized and provided to PWSA for review. These will also be included in the Alternative Evaluation TM.
- Costs for budgeting for the selected alternatives for CSO and SSO improvements in the final Wet Weather Plan will be developed to an **AACE Level 4**. Additional effort to look at proposed projects and site constraints include the following:
 - Site visit
 - Develop project footprint layout using GIS and available lidar topography
 - Screening for property changes
 - Looking at local bidding data for potential cost escalation factors
 - Determine estimated quantities of facilities

Deliverables: Summary of Costs, Updates to the Draft Alternative Evaluation TM.

4.4 Perform a knee of the curve analysis of wet weather controls and water quality benefits

- An analysis comparing costs to performance metrics will developed to assess the

point of providing a value based recommended alternative. This analysis of the costs of varying CSO, SSO and stormwater control alternatives shall be in conformance with the CSO Control Policy and relevant guidance.

- Varying levels of optimization assistance tools will be used to evaluate alternatives to guide development of performance.
- Areas will be prioritized for optimization. Outfalls with planned improvements (by Others) or minor adjustments needed to meet criteria will not be optimized.
- **An optimization software license covering a 24-month period is included in the current budget. It is expected that advanced optimization will be applied to approximately 40 areas.**
- Performance curves will be included in the Alternative Evaluation TM.

Deliverables: Updates to the Draft Alternatives TM

4.5 Analyze financial affordability

- Coordinate with PWSA's financial rate consultant to determine the financial affordability of the proposed improvements to the PWSA system and forecasting the rate on ratepayers.
- Meetings will be held throughout the development of the wet weather plan to discuss progress, cost impacts, affordability considerations and impacts on required schedules for implementation. Two (2) initial workshops are planned to brainstorm the approaches and steps needed to incorporate the affordability analysis into the planning process.
- Based on discussions at the meeting, a work plan will be developed that will guide the steps needed to assess affordability in support of the Wet Weather Plan development. A draft plan will be submitted to the Rate Consultant and PWSA for review.
- All work related to affordability determination including data collection; rate evaluation; assessment of impacts of wet weather projects; level of service projects; ALCOSAN ongoing charges; PWSA ongoing water and sewer system charges; and other factors will be conducted by Others. PWSA will contract separately with Rate Consultant on these services.
- **Up to twelve (12) additional coordination meetings and two (2) workshops are planned to coordinate the work and discuss findings over the duration of the planning.**
- Rate consultant will provide input on initial affordability prior to the start of alternatives and run scenarios for varying levels of level service improvements and necessary stormwater, CSO and SSO control improvements at various stages of the plan development.
- We will review findings provided by Rate Consultant and summarize how the work will be incorporated into the planning and implementation of the WWP.

Deliverables: Draft and Final Affordability Work Plan TM; Draft and Final Affordability Findings TM.

4.6 Conduct non-monetary analysis of alternatives

- An Alternative Evaluation Approach TM will be prepared that summarizes the overall approach to selecting recommended alternatives. The TM will include a discussion on how to score within each non-monetary category, scoring and weighting approaches, and steps that will be taken to develop the scoring. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- The non-monetary criteria as provided by PWSA are expected to include:
 - Local planning impacts assessment
 - Environmental justice and community flood resiliency impacts
 - Floodplain impact assessment
 - Odor and noise control assessment
 - Preliminary environmental site assessment
 - Site surface restoration/development
 - Impacts of water quality improvements
 - Co-benefits of green infrastructure projects or other control alternatives
- Additional information such as advantages, disadvantages, risks, schedule impacts and other considerations will be identified as supporting information will be prepared for each alternative.
- **Up to three (3) workshops are expected to be needed to review the approach, conduct the scoring and share the results.**
- Information from Tasks 4.3 on costs would be combined with a summary of total benefits for each alternative to support development of a cost-benefit analysis.
- The results of the evaluation will be summarized in an Alternatives Scoring Technical Memorandum.

Deliverables: Draft and Final Alternative Evaluation Approach TM; Draft and Final Alternatives Scoring TM

4.7 Prepare a schedule for implementation of controls selected to address CSOs and SSOs

- An implementation schedule with appropriate milestones for design, bidding, construction, substantial completion and final completion will be prepared for the recommended projects in the Wet Weather Plan.
- The schedule will be adjusted based on input with regards to affordability and cashflow constraints provided under Task 4.5.

Deliverables: Draft and Final Implementation Schedule

5. Stakeholder coordination and presentations

We will take the lead on developing and participating in a public participation program. **PWSA will provide stormwater messaging developed to date and any foundational information. PWSA staff will be lead presenters during community meetings but would rely on Wade Trim to develop materials and set up meetings.**

We will work with PWSA in preparing an overall public participation plan and public outreach protocol that meets the requirements contained EPA CSO planning and DEP Act 537 guidance documents.

Our goal is to work collaboratively with the project team and PWSA to develop and implement a plan that prioritizes clear, consistent, transparent, and equitable communication with the public and stakeholders to generate consensus. We intend to include specific outreach to identified environmental justice communities to develop relationships with community leaders in those areas and encourage their availability, participation and engagement in meetings.

5.1 Develop Public Engagement Plan (PEP)

- In support of PWSA's existing public outreach efforts, we will work to coordinate and communicate with internal and external stakeholders. We will work with PWSA to create an engagement plan that centers around multiple working group meetings, stakeholder inclusion, agency communication and public information and input held throughout the duration of this process. The goal of the plan is to generate buy in, which can be better achieved by engaging stakeholders throughout the process, collecting input and feedback, and incorporating that feedback.
- **Two meetings will be held with PWSA public relations staff to support development of the plan.** An initial brainstorming session and a follow up meeting to discuss the draft PEP. Ongoing coordination on public relations topics will be covered under the regular PWSA progress meetings.
- A plan will be developed that includes a summary of program and objectives, messaging, identification of stakeholder groups, definition of target audiences, communications approaches, communication tools, implementation steps, and timelines. The Draft Public Engagement Plan will be submitted to PWSA, and comments incorporated into the Final Plan.

Deliverables: Draft and Final Public Engagement Plan

Level of Effort Assumptions:

- **Develop Public Engagement Plan assumes a detailed outline, 2 draft and 1 final version for Wade-Trim and PWSA review and approval. Includes the development and refinement of the comprehensive stakeholder engagement list.**
- **Project Coordination / Management – assumes up to 2 coordination meetings a month and 4 hours of project management/coordination with Wade Trim / PWSA for 36 months.**
- **Documentation – assumes 8 hours per month for document control, project controls and documentation of events.**

5.2 Program Messaging and Branding

This item has been removed from the scope.

5.3 Online Public Engagement

- Online engagement is an important method of communication with the general public about the Wet Weather Program. The goals of online engagement are to

increase the ability to reach a more diverse audience, generate more informed participation, invite a broader range of input, and set the stage for sustained participation. PWSA already has an online presence, and this plan will build upon those existing relationships/followers/contacts.

- A Wet Weather Program webpage will be created to serve as a resource for people to access information, share the plan schedule, see a summary of planning activities, make note of engagement opportunities, review background information (Including relevant maps and data), make connections to social media pages, locate project contact information, subscribe to a mailing (contact) list, and access a comment form.
- Our team will develop a proposed outline of online content to consider for a website approach and submit to PWSA for review and discussion.

Deliverables: Web Site and Social Media Pages and Updates

Level of Effort Assumptions:

- **PWSA will host and manage online content via their existing website**
- **Updates to the website are expected to occur on a quarterly basis, assumes 12 hours per quarter of support**

5.4 In-Person Public Engagement

- Public meetings will be used to inform the public of the planning process and to solicit ideas, input and feedback. This will be an opportunity to promote transparency and foster two-way communication with the public. Public meetings will be held at multiple locations throughout the city. We intend to host a proportional amount of in-person meetings within environmental justice communities to promote engagement within these communities and consider the specific needs in these communities relative to wet weather management.
- Meeting times will vary to maximize the number of attendees that will be available. The public will be encouraged to ask questions and voice their ideas and opinions about the program activities. Our plan for a series of meetings is presented below:

Year 1 - Goals and Initial Community Input

The first series of public workshops will be formatted as a city-wide Listening Series as an interactive, hands-on opportunity to create program awareness, present background on the system and known problem areas, gain an understanding of community priorities, values and concerns. **Four (4) interactive, workshop-style sessions will be conducted** and geographically distributed through the service area – to encourage diverse participation. These meetings would occur early in the planning process.

Year 2 - Review of CSO Technologies, Solutions and the Alternatives Process

The second series of public workshops will be formatted as traditional public meetings. The purpose of this series of meetings will be to present and/or demonstrate potential control strategies, discuss water quality assessments and provide an overview of the alternative evaluation process. **Four (4) meetings will be held.**

Year 3 – Wet Weather Plan Recommendations

The third and final public workshop series will be formal public meetings to present the draft Wet Weather Plan. This will be the final opportunity to provide an overview of the draft WWP, to discuss issues, processes and decisions leading to the plan, and to record formal comments that will be considered when finalizing the Wet Weather Plan. **Four (4) meetings will be held.**

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **20 hours/month for coordination and responding to questions from the public**

5.5 Stakeholder Advisory Group

- An existing PWSA Stormwater Advisory Group (SAG) that has provided input on the PWSA stormwater fee will be convened to introduce them to the Wet Weather Program goals and objectives. This group will be expected to share information about how to get involved in, provide input on, and stay up to date with the planning process with the organizations/stakeholder groups they represent. We intend to work with this group to discuss issues of environmental justice and solicit input for how the Wet Weather Program will evaluate environmental justice.
- This advisory group will meet at key decision points throughout the process (**up to 6 meetings**). Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation and prepare summaries of the discussions.
- In between meetings, representatives of these groups will receive regular updates through email and will be empowered to help the program team in its outreach efforts by sending information about engagement opportunities to their respective memberships, communities, networks, and employees.

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **Assumes 4 hours/month monthly coordination and responding to inquiries from SAG.**

5.6 Municipalities/POC Outreach

- Meetings with the existing Saw Mill Run Group and various POC municipality representatives would be convened to discuss issues specific to the municipalities. These meetings will be used to share information about known issues, planned improvements, alternative technologies, and other related matters. **We have assumed up to 24 meetings** with stakeholders in this category over the duration of the program. Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation, and prepare summaries of the discussions.

Deliverables: Agendas, Presentations and Meeting Summaries

6. Provide Wet Weather and Act 537 Plans

6.1 Wet Weather Plan (Long Term Control Plan)

- A Wet Weather Plan document will be developed that includes sections on Introduction, Background, Purpose, Public Engagement and Participation, System Characterization of Current Conditions, Control Approach, Control Technologies and Screening, Development and Evaluation of Alternatives, Financial Capability, Recommendations, Selection and Implementation Schedule, and Post Construction Compliance Monitoring Plan.
- A draft Wet Weather Plan will be submitted to PWSA for review and comment prior to submittal of a final Report.
- Following PWSA review, comment, resolution of comments and approval of the draft Wet Weather Plan, we will facilitate preparation of the plan for submitting to the agencies for review and approval.
- Following agency review, comment, resolution of comments and approval of the plan, a revised final plan will be submitted.

Deliverables: Draft, Final and Revised Wet Weather Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of Plan
- Assume preparation of up to 100 comment responses received on the Plan

6.2 Act 537 Plan

- An Act 537 Plan document will be developed in accordance with the Act 537 Plan Content and Environmental Checklist and will include sections on previous wastewater planning, physical and demographic analysis and mapping, identification of existing sewage facilities and needs, projections of future growth and land development, identification of alternatives, evaluation of alternatives, institutional evaluation, justification and implementation schedule for selected alternatives (technical and institutional) and an environmental report. The Wet Weather Plan will also be used extensively to form the basis of the Act 537 Plan.
- A draft Act 537 Plan will be submitted for PWSA comments.
- Following PWSA review, comment, resolution of comments and approval of the draft 537 Plan, we will facilitate preparation of the plan for submitting to the City of Pittsburgh under Task 6.3 for review and approval.
- Following approval by the City of Pittsburgh, we will submit for agency review, comment, resolution of comments and approval of the plan. A revised final plan will be submitted.

Deliverables: Draft, Final and Revised Act 537 Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of 537 Plan
- Assume preparation of up to 100 comment responses received on the 537 Plan

6.3 City of Pittsburgh Coordination

- Prior to submittal to the agencies, the Act 537 plan will require a signed and sealed Resolution of Adoption from the City of Pittsburgh. We will assist in the preparation of the appropriate submittals, response to comments and consistency documentation that the appropriate agencies have received, review and concurred with the Act 537 plan throughout the entire process.
- Following PWSA approval of the draft Act 537 Plan, the plan will be submitted to City of Pittsburgh and Allegheny County Planning Commissions for consistency review and comment.
- The Act 537 plan is also required to be posted publicly for a 30-day comment period, with proof of the publication, copies of all comments with responses in each comment included in the final submittal to the agencies.

Deliverables: Public Notice

Level of Effort Assumptions:

- Assume 3 coordination meetings with City of Pittsburgh Officials
- Assume preparation of up to 100 comment responses received on the 537 Plan

7. Develop an environmental impact assessment of recommended Wet Weather Plan

- Once conceptual level wet weather plan facilities have been identified, we will conduct a more detailed environmental review in the form of an Environmental Impact Assessment which further evaluates the community impacts identified during the alternative's evaluation. This assessment will serve as the Uniform Environmental Review.
- A report will be proposed that follows the format laid out in PADEP's Technical Guidance Document 381- 5511-11. The report will discuss the environmental consequences and potential mitigation of the proposed facilities for land use, recreational use of land and streams, water and air quality, noise, odor, vehicular and pedestrian traffic, socio-economic issues, miscellaneous environmental considerations, as well as aesthetic and property impact for use in the Act 537 Plan.
- A draft Report will be submitted for PWSA comments.
- **The number of projects to be evaluated has yet to be defined through the wet weather planning work. For this reason, a total of no more than 20 projects has been assumed that will require assessment.**

Deliverables: Draft and Final Environmental Impact Assessment Report.

8. 3rd Party Assessment of Sewer Assets

- Regionalization involves the voluntary transfer selected municipal sewers and sewer facilities in the service area over to ALCOSAN. This is intended to reduce the financial burden on PWSA and allow ALCOSAN to more directly manage and reduce excess flows into the system. **This will be accomplished by ALCOSAN assuming ownership and maintenance of approximately 60 miles of large, multi-municipal trunk sewers and associated facilities (upstream diversion structures).**

- The purpose of this task will be to review PWSA sewer assets that are proposed to be transferred to ALCOSAN via the regionalization initiative. We will review the assets and provide documentation needed to support transfer.
- This is a study and does not include regionalization negotiation support for the ALCOSAN agreement.
- A Draft PWSA Assets Review TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final Assets Review TM; Applicable support documents.

9. Post Construction Evaluation of GI Effectiveness

- We will evaluate the performance of up to **fifteen (15) Green Infrastructure projects** in various states of design and construction that are being constructed with the intent to reduce stormwater inflow to the sewer system. To support estimates of effectiveness of these projects and potential future similar projects, post construction monitoring of the performance of these projects will need to be conducted.
- **Our team will install flow monitors at up to 30 locations for a period of 8 months to collect on performance.**
- **Data from the 3RWW rain gauge network data and up to 6 site specific rain gauges will be used to document precipitation.**
- **PWSA will provide design reports, modeling and plans produced by others along with historical rainfall and flow data collected prior to the start of the projects for use in comparisons.** Post construction data collected on other projects and any related reports will also be provided.
- We will compare the data and provided an evaluation of the resulting effectiveness of the various projects. A Draft GI Project Effectiveness TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final GI Flow Monitoring Plan; Draft and Final GI Project Effectiveness TM

GENERAL ASSUMPTIONS

- All deliverables will be provided electronically
- PWSA will provide comments on most deliverables within 14 calendar days; Task 6 deliverable comments will be provided within 30 calendar days
- Comments will be provided by PWSA electronically using document control software
- Meeting duration assumed to be typically 1 to 2 hrs (50% virtual; 50% in person)
- Workshop duration assumed to be typically 4 to 8 hrs (In person)

SCHEDULE

- The project is expected to cover a three-year period with the potential for up to three one (1) year extensions. Extensions of the schedule may impact level of effort.
- The tasks and their general anticipated duration are provided below:

Task	Anticipated Duration
Task 1	36 Months
Task 2	18 Months
Task 3	30 Months
Task 4	18 Months
Task 5	36 Months
Task 6	12 Months
Task 7	12 Months
Task 8	9 Months
Task 9	12 Months

PWSA TASK ORDER/AMENDMENT EXHIBIT C INSTRUCTIONS

**An additional Exhibit C or D may be used if space provided is not sufficient.*

General Instructions

1. **DEFINITION:** A task is a type of service that will be performed in a Task Order or Amendment, for example, it might be Design Engineering, or Construction Management, or Field Inspection. A project budget may contain individual budgets for each type of service. A Task Order or Amendment may provide for one or more type(s) of service. When preparing this Exhibit C, make sure that each type of service is separately annotated, and that the cost of labor and expenses for each type of task (budget code) is distinctly represented. PWSA's goal is to individually track the cost of each type of task or service. Should the amount of staff needed exceed the total number of columns, you may provide an additional completed template for each Exhibit. Just be sure your TO/Amendment Total Fee matches as an accumulative value.
2. See the Budget Codes tab for an explanation of where a Task type should be applied in this Exhibit.
3. Use these Exhibit forms as is. **Do not attempt** to alter them. **If they are altered they will be rejected.** If a change should be considered, discuss with your PWSA point of contact.
4. **Be sure** that all labor rates used in these forms are consistent with the rates used in the Master Services Agreement.

Exhibit C.1

Purpose: Exhibit C.1 identifies the Consultant's staff members who will contribute to each Task type to be provided, their MSA classification, their Task Order role, their anticipated labor hours, and their labor costs.

1. The Consultant's Scope of Services must be defined according to the distinct tasks that apply to a project budget code. The cost to perform each Task must be captured on this Exhibit.
2. On Row 45, enter each Consultant staff member name in a different column.
3. On Row 46, enter each Consultant Staff member's Master Service Agreement classification in a different column.
4. On Row 47, enter each Consultant Staff member's Task Order role in a different column.
5. Enter the hours each staff person will contribute to each task in the rows below each staff person's name. **If it doesn't apply, leave row blank.**
6. Enter the Subconsultant markup as an integer or decimal number (field is coded as a percentage). The spreadsheet will calculate the Total Hours and Total Labor Cost for the Consultant.

Exhibit C.2

Purpose: Exhibit C.2 captures the Consultant's anticipated expenses. Note that there is a table section for each Task type (budget code).

1. Exhibit C.1 will auto-populate each staff person's name in the appropriate row.
2. In Column B enter the type of expense that will be invoiced, e.g. mileage, hotel, auto rental. These fields are editable.
3. The spreadsheet will calculate the total costs by person and by task.
4. Repeat 1 - 3 for each Task type.

Exhibit C.3

Purpose: This table captures the Sub Consultants' anticipated costs and MBE/WBE/VBE/SDVBE classification. Note that the entries in this table are all inclusive of both labor and expenses.

The details of this data must be reflected in the required attached Sub Consultants' proposals.

1. Enter the name of each Sub Consultant firm in the Columns of the table.
2. Enter the cost **by task** of each Sub Consultant firm.
3. The spreadsheet will calculate the total costs by Sub Consultant and by Task.

Exhibit C.4

Purpose: In this Exhibit C.4, the Consultant should enter into lines 4, 5, and 6, as needed, any stipulations PWSA should consider about the Task Order or Amendment proposed budget.

Note that items 1, 2, and 3 are required by PWSA, and cannot be changed.

EXHIBIT C.1: PROPOSED BUDGET FOR EXHIBIT A SCOPE OF SERVICES

Exhibit C.4: ASSUMPTIONS

LIST OF ASSUMPTIONS RELATED TO BUDGET AND EXPENSES - List any conditions the Consultant places on the Budget and Expenses indicated above.

1	Consultant shall notify the Authority's Representative when expenditures based upon the billing of this Task Order reaches 50, 75 and 90% of the total budget, and an estimate of the time and funds necessary to complete the work. If additional funds are requested and not authorized in writing by the Authority's Representative, the Consultant shall reduce the scope of work to complete within the funds available.
2	In no event shall the Consultant's total billings for the services performed under this Task Order exceed the approved Fee amount without the Authority's written authorization and notice that it has approved an increase in the budget limit and funds available.
3	Should a key or non-key staff person not listed on an approved Task Order get assigned to the task, an Action Item to the project manager will suffice to acknowledge the change without an increase to the overall total fee. This MUST be done within 30 days of the assignment, preferably before PWSA receives the invoice for the time in which work was performed. Project Managers have the right to reject or accept the assignment of a staff person with proper justification. The consultant has the right to appeal that decision to the Director of Engineering and Construction.

Task Order No. WT-PRGM-13

**Task Order Name: Environmental Impact Assessment for Wet
Weather Program Manager Project**

This Task Order Amendment is made as of the Effective Date, by and between **The Pittsburgh Water and Sewer Authority** (the “Authority”) and **Wade Trim, Inc. (Ops)**, (“the Consultant”).

Consultant Firm: Wade Trim, Inc. (Ops)

Contract Name: Wet Weather Program

Agreement between the Authority and the Consultant dated 11.01.2021

Prior Task Order/Amendments Applicable to this Task: N/A

The schedule for the completion of the Services under this Task Order is incorporated herein. The details of the schedule are as follows or as detailed in the separate schedule, attached as Exhibit B. The time limits established by the schedule shall not be exceeded without reasonable cause. The schedule may be amended with the Authority’s written consent as the Task proceeds.

Start Date:	11.01.2021
Completion Date:	10.31.2024

The Authority’s budget is attached hereto as Exhibit C and incorporated herein.

Where the Fee is based on Agreement rates, the Fee may not exceed the budgeted amount. The budget may be amended with the Authority’s written consent.

Fee:	\$266486.55				
MBE:	0%	WBE:	52%	SDVBE:	%

A detailed Scope is attached hereto as Exhibit A and incorporated herein.

Exhibit A: Scope of Services

See Exhibit A

Date Approved:	11.10.2021

Wet Weather Program Manager

2021-OPS-116-0

Project Manager:

Ana Flores

Date Approved:

11.09.2021

**PITTSBURGH WATER AND SEWER AUTHORITY
WET WEATHER PROGRAM MANAGER
PWSA PROJECT NO. 2021-OPS-116-0
FINAL SCOPE OF SERVICES**

PROJECT OBJECTIVES

The specific objectives of the Wet Weather Program Manager are as follows:

- Assist in developing PWSA's Long Term Control Plan (LTCP) for the control of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) remediation plan, which will comprise a Wet Weather Plan or one or more similar documents. Provide program management services, advise, and consult with PWSA, its engineering staff, and its legal counsel (including translating technical information into a form useable by counsel) in the negotiation of a consent decree with the United States and Pennsylvania Department of Environmental Protection (DEP) addressing, among other things, the control of CSOs and remediation of SSOs from PWSA's sewer system (a Wet Weather Decree).
- Develop plans for improvements of PWSA sewer system facilities to bring combined sewer overflows into compliance with the CSO Control Policy and to remediate SSOs.
- Perform a level of service peer review and identify the current stormwater level of service the current PWSA system provides.
- Develop a range of alternatives to provide control and management of stormwater and manage basement backups and overland flooding to an appropriate, affordable level of service.
- Assist PWSA and its legal counsel in the coordination of planning, regulatory obligations, and capital improvements with upstream and downstream municipalities and ALCOSAN, where applicable.
- Conduct evaluations to account for the impact of projects implemented under ALCOSAN's consent decree and regionalization program on PWSA's development of CSO and SSO controls, and vice versa.
- Perform engineering and public participation activities in support of the development of a Wet Weather Plan, and obligations arising under municipal orders, enforcement orders, and any Wet Weather Decree entered into by PWSA.
- Develop analyses to assist PWSA's legal counsel in its addressing regulatory and legal issues associated with wet weather planning, including resolution of related enforcement actions.

SUMMARY OF WET WEATHER PLANNING TASKS

Program management services include oversight and coordination of the following activities in support of the development of a Wet Weather Plan or similar planning documents, consisting of a LTCP to control CSOs and a plan to remediate SSOs (collectively, a Wet Weather Plan in connection with the above negotiations), and plans to provide effective stormwater management. The wet weather planning work typically includes those engineering activities required to produce plans and other deliverables to be submitted to regulatory agencies, including the DEP, the Allegheny County Health Department (ACHD), United States Department of Justice,

(DOJ), and the United States Environmental Protection Agency (EPA). Many of the tasks will require familiarity with and the use of guidance documents issued by EPA and DEP. The production of interim work products and the Wet Weather Plan will be in support of negotiating a consent decree, assisting PWSA in complying with the requirements of the Wet Weather Decree and other regulatory requirements arising under the Pennsylvania Clean Streams Law and the federal Clean Water Act (CWA).

The following is a list of the tasks to be performed by the Wet Weather Program Manager.

- Task 1 - Program Management Services
 - Support the negotiation and the development of a consent decree and development of a Wet Weather Plan
 - Provide on-call engineering services
- Task 2 - Data Gathering
 - Review and determine DEP Act 537 Plan update requirements and permitting requirements for conveyance, storage and treatment
 - Review EPA guidance documents relating to CSO and SSO control
 - Review CSO/SSO consent decrees entered by other municipalities, as well as LTCPs and SSO elimination plans developed by other municipalities
 - Map with GIS, delineate and collect field survey data within planning basins.
 - Investigate sewer system and develop a system characterization study for PWSA's combined and sanitary sewer systems
 - Conduct site investigation
 - Evaluate the impact of CSOs on receiving waters
- Task 3 - Model Development and Calibration
 - Monitor flow and hydraulic conditions to inform system characterization and the selection of CSO and SSO controls
 - Develop a hydraulic and hydrologic model for PWSA's combined and sanitary sewers that reflects prior modeling information and additional monitoring data
 - Perform level of service peer review and develop current level of service thematic map
- Task 4 - Alternative identification and prioritization
 - Develop an alternative analysis for the control of CSOs and SSOs, including the development of cost-performance curves to assist in analysis
 - Develop an implementation schedule for CSO and SSO controls informed by and coordinated with a financial impact and affordability analysis
 - Identify CSO and SSO control technical alternatives
- Task 5 - Stakeholder Coordination
 - Coordinate wet weather planning and program development efforts with ALCOSAN and other municipalities in the Pittsburgh Region
 - Coordinate wet weather planning and program development efforts with community outreach and stakeholder engagement initiatives
 - Develop public participation program to inform wet weather planning and program development efforts

- Public participation program
- Task 6 - Final Act 537 Plan and Wet Weather Plan/LTCP and Recommendations
- Task 7 - Conduct environmental impact assessments of projects
- Task 8 – 3rd Party Assessment of Sewer Assets
- Task 9 – Post Construction Evaluation of GI Effectiveness

DETAIL OF WET WEATHER PLANNING TASKS

1. Program Management Services

1.1 Program Management

1.1.1 *General*

- Provide program management services that include oversight and coordination of activities in support of the development of a LTCP to control CSOs and a plan to remediate SSOs.
- A Program Management Plan will be prepared that summarizes the procedures that will be used to manage the program. Our PMP will include Program Scope & Goals, Program Constraints, Program Performance Metrics, Program Organization, Project Controls, Safety, Quality Assurance, Communication Protocols, Environmental & Permits Compliance and Risk Management. A draft Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.
- Ongoing management, coordination with PWSA and team members, communications, and project management activities will be conducted to manage the work.
- Ongoing document management will be conducted to facilitate file sharing between PWSA and our team.
- Develop and manage program schedules. An overall baseline schedule will be developed and updated monthly to reflect the progress of the work.
- Manage quality assurance/quality control of programs. A QA/QC plan will be developed and documented in the PMP. Quality reviews will be documented and conducted on all deliverables.
- Prepare and present periodic status program and project reviews, including establishing formal and informal milestones and performance metrics. Performance metrics will be developed and documented in the PMP. Monthly progress reports that include a summary of work activities completed during the previous period, planned activities for the next period, and critical action items will be prepared and submitted to PWSA as part of our monthly invoicing.
- Conduct meetings with PWSA, its engineering staff, and its legal counsel as needed to discuss the progress of the project and review key deliverables. These meetings may include a project kickoff meeting, as well as meetings with the executive PWSA team to present an executive summary of the progress of the project and key decisions needed to be made. Agendas and presentation materials will be prepared. Meeting summaries will be submitted following the meetings. **A total of 72 progress meetings, 12 miscellaneous meetings and 6 executive sessions have been assumed.**

- Provide planning-level risk management in accordance with industry standards and guidelines. A risk management plan will be prepared and included within the PMP. An initial risk development workshop will be held to review and provide input on the plan and risk register. The risk register will be updated on a quarterly basis and discussed within the regular progress meetings.

Deliverables: Draft and Final Project Management Plan; Meeting Agendas, Presentations and Summaries; Monthly Progress Reports, Schedule and Invoicing; Risk Registers

1.1.2 Regulatory Support

- The purpose of this task will be to advise and consult with PWSA, its engineering staff, and its legal counsel in the negotiation of a consent decree. Meetings will be held to prepare for EPA meetings, discuss matters with EPA and debrief on follow-up items. Agendas, technical work, presentation materials, and meeting summaries will be developed for all meetings.
- **A total of 108 meetings have been assumed over a 36-month period at an average level of effort of 16 hours/meeting for regulatory team preparation and attendance and 100 hours/month for technical support time to develop content, review, documents, and address questions from EPA or others.**
- The purpose of this task is to establish compliance priorities and to provide support to PWSA in the ongoing discussions with US EPA and PA DEP to work towards acceptance of required compliance deliverables, an LTCP 1080+ approach as it is developed. We will provide technical support and guidance for the ongoing negotiations with USEPA and PA DEP under this task by helping to gain regulatory acceptance for PWSAs compliance strategy.
- The goal of this task will be to define strategies to develop the various work approaches, programs, descriptions for capital projects, capital costs/benefits, and schedule implications for presentation to regulatory agencies. We will also review and evaluate any deliverables or documents submitted to US EPA, PA DEP and others as directed that may have impact on the CSO update / Integrated Plan and schedules.
- This task will be managed on a time and material basis as directed by the PWSA and working in conjunction with the legal and rate consulting teams to develop specific products to support regulatory discussion.
- The focus of this task will center on meetings and staff work on development of documents to support the negotiation process and work to gain acceptance for compliance documentation. Much of the work will be driven by evaluation of existing compliance documents, development of PWSA LTCP goals and guiding deliverables to build a case for technical acceptance by US EPA and PA DEP.

Deliverables: Meeting Agendas, Presentations and Summaries; Various correspondence needed to support ongoing discussions

1.1.3 Other Services

A. CMOM Program

The purpose of this task is to develop and document a Capacity, Management, Operation and Maintenance (CMOM) program. We will review existing information on CMOM activities, meet with PWSA to understand the program and develop a recommended plan for PWSA.

PWSA's Capacity, Management, Operations and Maintenance (CMOM) Program forms the foundation for PWSA to meet its customer service demands, sustain infrastructure performance, comply with regulatory requirements, and manage its resources. The objectives of this task are:

- Compile PWSA's current CMOM documentation and assess the program components against industry best practices, PWSA's organizational goals, and applicable regulatory requirements
- Develop a set of priority improvements to address potential gaps identified in the assessment
- Establish a Program Document that, when implemented, provides a proactive defense from regulatory enforcement action and leads to improved system performance and cost savings.

CMOM assessment will benchmark PWSA's current program against likely EPA Region 3 expectations, regulatory precedence, and utility best practices. This review will be focused on the sanitary sewer service area of PWSA and the capacity assurance, management, operations, and maintenance activities specific to that portion of the system. It is assumed that the Nine Minimum Controls (NMC) activities of PWSA cover similar aspects for the combined sewer system and are outside the scope of this effort.

We will assess current programs, policies, and practices. Existing documentation will be compiled and evaluated to establish priority areas for improvement. The assessment will include evaluation of SSO causes, review of existing CMOM documentation, interviews, and field observations.

We will evaluate PWSA's SSO data to develop an understanding of the number and volume of sanitary sewer overflows by cause over the past 5 years (2016-2020). SSOs will also be plotted in GIS to identify any geographic trends. The SSO cause and spatial analysis will allow us to consider how PWSA's CMOM Programs are structured to solve system-specific needs.

We will submit an information request to PWSA to gather existing CMOM-related program documentation, policies and procedures. We will review existing documentation, assess the completeness of the program, and identify potential gaps with accepted best utility practices in the following areas:

- Goals, Visions and Support
- Organization
- System Knowledge
- Capacity Management

- Engineering and Construction
- Asset Inspection and Condition Assessment
- Rehabilitation and Replacement Program
- Maintenance Programs and Procedures
- FOG Program
- SSO Tracking, Analysis and Reporting
- Overflow Emergency Response
- Budgeting
- Training
- Safety
- Customer Service
- Information Management
- Information Systems

We will conduct interviews with PWSA staff over a 5-day period, including personnel from management, engineering, planning, operations and maintenance. During the interviews we will discuss policies and practices related to organizational structure/communications, work management processes, information management processes, inspections; rehabilitation (pipeline, manhole, and removal of illegal connections); fats, oils, and grease (FOG) control; new construction standards and inspections; Emergency Response Procedures; preventative, predictive, and corrective maintenance practices including sewer cleaning; and staff training, knowledge skills, and abilities.

Observation of the operations and maintenance (O&M) crew work practices will validate what was heard during the interview process and identify additional opportunities for improvement. A senior collection system operations expert will spend 2 days in the field observing the way in which crews accomplish O&M tasks such as inspections, CCTV, line cleaning, point repair, root control, pump station maintenance, and emergency response where possible.

The results of the CMOM Program assessment will be presented to PWSA in a workshop with recommendations for improvements. Based on PWSA's feedback and input, an Implementation Plan will be established that identifies areas for improvement, the scope of effort involved by both our and PWSA staff, estimated labor-hours and schedule. The Implementation Plan will focus on improvement that provide maximum benefit to PWSA.

- Describe the Gap Assessment framework including regulatory requirements and effective industry business practices
- Present the SSO cause analysis results
- Confirm PWSA's CMOM Program goals
- Gain input on our assessment of current business practices and programs
- Prioritize areas for improvement. The prioritization process will consider the current program status, as well as the importance of the various programs and practices in meeting PWSA's specific CMOM Program goals
- Develop consensus on improvement areas and priorities.

Based on the results of the workshop, we will develop a CMOM Program Summary, documenting the CMOM assessment, and a Work Plan for high impact improvements to current programs and practices. We will conduct a final consensus workshop to validate the draft CMOM Program summary and allow staff to make adjustments before finalizing the Work Plan. We will finalize the CMOM Assessment to include the agreed upon improvement initiatives and proposed timelines. A draft overall CMOM Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.

Ongoing support activities such as training, data review, and development of procedures can also be conducted to assist PWSA in implementation of the plan as an additional service.

Deliverables: Draft and Final CMOM Plan

Level of Effort Assumption:

- **Will conduct two (2) workshops and up to 5 days of interviews and field visits with PWSA Staff.**

B. Assist with PWSA's Nine Minimum Controls (NMCs) program

- We will review existing NMC documentation and provide a Technical Memorandum summarizing review comments and recommendations.
- **Ongoing support activities such as training, data review, and development of procedures can be conducted to assist PWSA in implementation as an additional service.**

Deliverables: Draft and Final NMC Review TM

1.2 On-call Engineering Services

1.2.1 General On-Call

To support the development and ongoing progression of the Wet Weather Plan, various engineering services may be required at the request of PWSA. Specific tasks will be identified and a mutually agreeable scope, budget and schedule to complete the task will be developed by Wade Trim and PWSA. In general, examples of the services that may be performed under this task include:

- Conceptual infrastructure studies
- Design and construction engineering services
- Asset management activities
- Value engineering studies
- Oversight of consultants that may perform design and construction engineering services for wet weather projects.
- Coordinate the design of PWSA system improvements developed as part of the wet weather planning efforts with proposed improvements of the ALCOSAN and upstream/downstream municipal systems

An allowance has been established to support these activities. Work will be performed at the approval of PWSA and up to the limit included in this authorization.

Deliverables: To be determined based on nature of approved task activities.

1.2.2 Sewer Condition Assessment

This task has been removed from the scope.

1.2.3 Asset Management

The general objective of this task is to develop the methodology and best practices to assist PSWA better manage their assets. Asset Management (AM) services will focus on aligning strategic objectives with stakeholder level of service expectations to develop a risk-based approach to manage the entire lifecycle of program assets. Collaboration with PWSA staff will be integral to success and initial efforts will focus on understanding current best AM practices, identifying gaps, and developing an actionable roadmap for AM implementation. Implementation items will be prioritized and quick win and near team activities that achievable and provide the most value to PWSA will be identified. AM implementation assistance will be provided based on PWSA requests for assistance. Planned AM Services include:

- Review and assess the existing AM program and system operational documentation and provide a gap analysis relative to utility best practices and develop recommendations
- Develop or Update the PWSA Asset Management Vision to incorporate key wet weather program priorities
- Form and charter an AM team of PWSA key staff that can build and then take on the implementation of the program
- Develop AM program charter and AM methodology and best practices training content
- Conduct AM program evaluation and gap analysis between current and desired future state
- Prepare actionable AM program implementation roadmap that details prioritized AM activities
- Organize, integrate, and embed overall PWSA strategic goals in the AM framework and corresponding LOS goals and evaluation criteria for alternative evaluation
- Develop and enhance PWSA's use and operation of Innovyze Info Asset Manager including training of existing staff.
- Organize system replacement and future CIP data for use in the alternative evaluation
- Coach and mentor PWSA staff using subject matter experts that can provide guidance on continuous AM program development
- The following strategic and tactical topics will be discussed with each of the groups listed above, as applicable, as part of the assessment:
 - Decision Making and Capital Planning
 - CIP Development and Prioritization
 - Design & Construction
 - Funding
 - Information Systems and Data Management
 - Data Systems Tools
 - Organizational Framework
 - Communications

- Risk Management
 - Operations and Maintenance
 - Inventory/Warehouse
 - Maintenance Strategy
 - Operations Strategy
 - Optimization
 - Culture and Change Management
 - Document Management
 - Leadership and Commitment
 - Levels of Service and Performance Evaluation
 - Resource Management
- This task is intended to establish a program that PWSA can run independently. **Ongoing support beyond the budget for this task can be provided to support activities as an additional service.**

Deliverables:

Information Request, copies of meeting materials, draft and final AM program charter, AM training materials, AM gap analysis, AM roadmap and supporting materials developed as part of implementation activities.

1.2.4 Compliance Review of Selected Sewer Improvement Projects

PWSA has identified two (2) sewer improvements projects (Browns Hill Road Pump Station and 31st Ward Sewer System) that PWSA plans to procure outside consultants and start work 12 months from the NTP of this contract. **PWSA will maintain a project manager to provide administrative oversight of outside consultant activities.**

In general, our activities will include:

- Reviewing and providing input on outside design sewer consultant RFPs.
- Conducting 30%, 60%, and 90% compliance reviews to assess ability of the proposed design to meet regulatory requirements.
- Coordination meetings to discuss reviews and responses.

Deliverables: Technical Review Comments

Level of Effort Assumptions:

- **Attendance at up to 8 project meetings total among 2 projects**
- **Technical review of design discipline work and constructability reviews will be conducted by others.**

2. Data Gathering

2.1 Evaluate existing information and analyses

- Review wet weather-related studies in the region, such as the ALCOSAN Clean Water Plan, 2008 Feasibility Report, 2013 PWSA Feasibility Report, 2016 Citywide Green First Plan, Controlling the Source, RAND Climate Change study, PWSA's current Stormwater Master Planning initiative, and other documents that PWSA deems appropriate.
- Sections in an Existing Data Review TM will be prepared that summarize important findings and information relative to the current study effort.

Deliverables: Draft Existing Data Review TM Sections

2.2 Gather county, state and PWSA system information (sewer maps, inspection data, hydraulic overload problems, ACHD complaints)

2.2.1 Data Gap Analysis

- Relevant data that Allegheny County and State agencies may have will be requested and reviewed.
- PWSA will provide:
 - Existing GIS system database of existing sewer assets and any required sewer maps (critical information includes pipe diameters, lengths, invert elevations, and rim elevations).
 - Inspection and sewer back up complaint data
 - Information on known sewer hydraulic bottlenecks and surface flooding issues
 - Known areas of heavy inflow and infiltration, SSO and CSO locations
- Data relative to sewer and street flooding will be requested from ACHD and information provided reviewed and incorporated into the project GIS database.
- Additional existing collector sewer system information and reporting data will be reviewed. The Existing Data Review TM will be updated with the findings from other tasks. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- A Data Gap Analysis TM will be prepared that summarizes additional data collection and field investigations needed to support the study along with a level of effort. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Existing Data Review TM; Draft and Final Data Gap Analysis Review TM

Level of Effort Assumption:

- **Assumes that the existing PWSA GIS database of sewer data is of sufficient accuracy to support the planning level activities**
- **Assumes approximately 200 staff hours/month for 6 months**

2.2.2 Determination of Critical Areas

- Complaint records provided by PWSA will be reviewed and screened to identify issues related to documented system problems. A map of complaint locations for sewer backups and street flooding will be developed.
- **A significant number of pipes covering the local systems is not included in the current PWSA hydraulic models. It is anticipated that inclusion of all the sewer elements would be a significant undertaking from a data collection, model upgrade and model run time perspective. Therefore, the base models will be expanded to focus only on critical areas that have experienced historically high levels of sewer back-ups and/or street flooding. All system pipes (storm and sanitary) will not be modeled.**

- A desktop hydraulic analysis will be conducted using the existing hydraulic models for sewers included in the PWSA system for a range of storm events to identify the capacity of the existing sewer lines. Major sewers (>18") not included in the model where adequate physical data is available will also be checked for capacity using existing GIS data (topo, manhole depths); standard pipe capacity calculations; and compared to modeled peak flows adjusted on an area weighted basis. The locations of known complaints will be compared to the capacity check to identify likely areas of concern.
- "Critical portions" of the PWSA system will be identified. "Critical portions" include pump stations, trunk sewers, points of overflow activity, basement back-up areas, surface flooding, or areas of excessive infiltration and inflow (I/I). At the time of this scope preparation, the number of critical areas is unknown. **For the purposes of this task, it is assumed that 20 to 30 sewer backup and 6 to 10 stormwater flooding subsheds will be identified for further analysis.**

Deliverables: Draft and Final Critical Areas Definition TM

2.3 Investigate PWSA sewer system

2.3.1 Stream Inflow and Acid Mine Drainage (AMD) Map

- Identify and locate any stream inflow sources and acid mine drainage discharges along the critical portions of the PWSA sewer system using **existing data sources**. The potential sewersheds for stream inflow sources will be identified from the past and pending regional flow monitoring work, and PWSA input.

Deliverables: Draft and Final Stream Inflow and AMD Map

Level of Effort Assumptions:

- **No field work such as stream walks, sampling, or other investigation will be conducted.**

2.3.2 Field Data Collection Allowance

- Upon approval from PWSA, work to conduct additional field data collection activities identified with Task 2.3.1 will be conducted within the available budget included within the field allowance. Field data will be entered into the appropriate asset management databases. Additional field collection efforts shall be conducted as an additional service.
- The proposed field data allowance was developed based on an assumption of 400 days of field survey intended to collect data on approximately 8,000 structures (based on 20 structures/10 hr-day @\$2,200/day including survey and post processing). This data includes limited spot checks of approximately 10% of existing modeled areas and assumes data can be collected from the surface without the need for confined space entry or significant traffic control procedures. **No LIDAR, detailed topographic and surveys on private property or within homes for purposes of determination of basement inverts or first floor elevations**

- A summary of the data collected will be provided in a draft and final Field Data Collection Summary Technical Memorandum.

Deliverables: Draft and Final Field Data Collection Summary TM, Field notes and database

2.4 Coordinate on System Improvements and Technical Alternatives with Others

- Request and coordinate with ALCOSAN/municipalities to obtain information on proposed system improvements for use in study work. This includes information on proposed tunnels and consolidation sewers, CSO regulator, pumping, storage tanks, RTBs, Green Infrastructure, Source Control, WWTP and other improvements that can impact overflows in the PWSA collection system.
- A review will also be conducted of major development and PWSA projects (that would have an impact on planning efforts) to determine which should be advanced into the model. It is assumed that PWSA will provide the hydraulic, as-built and/or survey data relative to these improvement projects. **Assumed no more than 10 sewer improvement projects will be included.**
- A summary of the proposed major improvements that will be included in a Baseline Model to evaluate additional alternatives will be documented in a System Inventory TM. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Planned ALCOSAN, PWSA and upstream/downstream municipal improvements will be considered in related modeling and cost analysis in subsequent tasks.
- Ongoing coordination with ALCOSAN throughout the project will also be tracked under this item.

Deliverables: Draft and Final System Inventory TM

Level of Effort Assumption:

- **Assumes up to a total of 60 meetings with representatives of ALCOSAN, Point of Connection (POC) Groups with municipal officials, and 3 Rivers Wet Weather**
- **Assume no new Clean Water Plan design changes**

2.5 Determine regulatory permitting requirements for conveyance and storage

- We will participate in meetings with DEP to establish or confirm the regulatory permitting requirements and related design standards and control approach to be used in the sizing, performance, and layout of facilities to be proposed, designed, or built as part of PWSA's wet weather planning program. **Assume up to 6 meetings for coordination.**
- To prepare for the discussions, a Draft Regulatory Permitting Requirements TM will be prepared that summarizes current criteria for sewers and facilities for PWSA and regional entities along with proposed criteria for facilities to be sized and designed under this program. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Regulatory Permitting Requirements TM

3. Develop and calibrate model(s)

3.1 Water Quality Sampling, Analysis Tool Development and Evaluations

3.1.1 Water Quality Data and Information Compilation, Review and Evaluation

- We will compile and review water quality data and related information for the receiving waters impacted by PWSA wet weather discharges and data on sources of pollutants. This will include:
 - Data collected and provided by PWSA as well as publicly available data. We will also develop a request for data collected by ALCOSAN/3RWW. We will compile water quality data in Excel and/or Access for review and evaluation.
 - Information on the receiving streams, their watersheds/drainage areas, and available modeling for these streams and drainage areas.
 - Additional available data on precipitation, climate, and streamflow may be compiled to support the water quality assessments.
 - Listed impairments and available TMDLs for the receiving streams including pollutants and sources. Other available studies on the receiving streams will be compiled and reviewed.
- This scope of work is based on the understanding that the receiving waters that will be studied for this task are the receiving waters that receive discharges from PWSA-owned CSO outfalls that will not be controlled by the ALCOSAN tunnel construction; these include several Tributary Streams (Chartiers Creek, Nine Mile Run, Saw Mill Run, and Becks Run), and the Main Rivers (Ohio River, Monongahela River, Allegheny River). The primary focus of this task will be on the Tributary Streams, but a summary of the conditions of the Main Rivers within the PWSA service area will be included. We will conduct site visits of the Tributary Streams to assess existing conditions, sediment build-up, stream bank stability, flow restrictions, vegetative cover, and other potential characteristics. Photo documentation of the conditions will be collected.
- **Additional Main River Water quality or other data collection will not be conducted.**
- We will evaluate the available information to characterize existing conditions, spatial and temporal trends, dry versus precipitation event-driven conditions, comparison to water quality standards, and potential cause-effect linkages. We will also assess the ability of existing models to characterize water quality conditions and benefits of control alternatives.
- We will summarize the results of the data compilation, review and evaluation in a technical memorandum. The memorandum will include a data gap analysis including recommendations for additional data collection and model development activities, including cost estimates and potential refinements to the original budget estimates provided. We will submit one draft for review and comment. We will address comments and submit one revised draft for submittal to PWSA. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft Water Quality Existing Data Review TM

3.1.2 Sampling and Analysis

- We will prepare a Sampling and Analysis Plan (SAP) and a Quality Assurance Project Plan (QAPP) to guide the collection of water quality samples to support the characterization of the waterways and sources.
- One draft of the SAP and QAPP will be submitted to PWSA for review and comment. Following PWSA review and comments, we will revise the SAP and QAPP for submission to Pennsylvania Department of Environmental Protection (DEP) and/or the United States Environmental Protection Agency (EPA). Following DEP and EPA review and comment, we will prepare the final SAP and QAPP.
- Sampling activities will include training and orientation with our local, on call sampling team. This work will include site visits to discuss procedures and review sampling locations. This will also include coordination on scheduling of sampling events, tracking wet weather events, and making go/no-go decisions on sampling. We will also coordinate with the analytical laboratory to coordinate bottle shipments, sample deliveries, QA/QC data review, and reporting of results.
- For the purposes of this scope of work, the following assumptions have been made to inform the budgeting of this subtask. The scope and budget will be revisited following completion of the data review and evaluation work. Sampling is anticipated to be conducted between April and October 2022 for the following:
 - **6 locations (2 locations in each of Chartiers Creek, Nine Mile Run, and Becks Run)**
 - **72 total samples (3 baseline, 3 wet events – 3 samples each event for each location)**
 - **Parameters for field measurement: Temperature, pH, Dissolved oxygen, Conductivity**
 - **Base assumptions for parameters to be collected for laboratory analysis: E. coli, TSS, Ammonia, TKN, Nitrates + Nitrites, TP, Ortho**
- Following the initial review of the impairments and stream conditions, the need for additional parameters such as metals, and hardness will be assessed. We will review sampling field notes and laboratory reports following each round of sampling to identify problems or issues needing correction. We will coordinate with the sampling consultant and the laboratory to implement corrective actions.
- Two of the subject watersheds do not have USGS flow gages located on them. Additional flow and/or water level monitoring may be required in these watersheds as well. If needed, effort would be authorized separately.
- Following implementation of the sampling plan, we will perform a data validation review and prepare a memorandum documenting the review.
- We will prepare the project-specific SAP and QAPP, as stated earlier. We will update the water quality characterization with the new data. We will summarize the results of the sampling, analysis, data review, and updated characterization in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and

characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit one draft to PWSA. Following PWSA review and comment, we will prepare the final TM.

Deliverables: Draft and Final Water Quality SAP and QAPP TMs

3.1.3 Water Quality Model Updates

- We will update receiving water models to support the evaluation of water quality assessments. We will update model calibrations using the most recent data (April-October 2022) and will validate model performance. The anticipated receiving waters for modeling and the modeling frameworks are listed below:
 - Chartiers Creek, Nine Mile Run watershed/drainage area: PC-SWMM
 - Saw Mill Run watershed/drainage area: HSPF
 - Becks Run watershed/drainage area: no existing model
 - Main Rivers Model: RMA2 (hydrodynamics)/RMA4 (water quality)
- We will develop estimates of upstream flows and pollutant loads for the calibration period (April-October 2022) based on available data. We will develop meteorological inputs for the calibration period based on available data.
- Calibrations will be performed by applying best engineering judgement to make model calculations as representative of observations as possible. The models will be calibrated using both visual and numerical methods. This effort may employ regressions of observations vs. calculations, minimizing the squares of the residuals of observations vs. calculations, minimizing relative error, minimizing differences in observed vs. calculated means, and minimizing root mean square error, among other methods. For simulations having the appropriate temporal scale, published statistical measures of goodness-of-fit (e.g. percent difference, r^2 , PBIAS) will also be considered in evaluating the strength of the hydrology and water quality calibrations.
- Following calibration, the models will be validated using an independent data set to demonstrate that the model is capable of acceptably reproducing the timing and magnitude of observed data without further changes to the model parameters.
- We will summarize the results of the model updates and calibrations in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit a draft to PWSA for review. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Model Update TM

3.1.4 Water Quality Assessments of Benefits of Control Alternatives

- We will develop and apply the updated and calibrated models to support the assessment of existing conditions and the water quality benefits of control alternatives. We will develop the water quality models for the typical year. We will develop the following water quality model inputs for the simulation of existing conditions for the typical year:
 - Upstream boundary flows and pollutant loads
 - Meteorological inputs, and
 - Sources other than overflows.
- We will characterize water quality conditions for the typical year under existing and baseline conditions. We will assess the relative impact of pollutant sources with respect to attainment of water quality standards for those scenarios. We will prepare an interim technical memorandum documenting the characterization of existing and baseline conditions for the Tributary Watersheds.
- We will apply the water quality models to simulate the water quality benefits of control alternatives. **This scope of work assumes ten (10) separate simulations will be run to assess control alternative benefits.** These may include a combination of simplified control scenarios (for example 25%, 50%, 75%, and 100% reductions of overflows) and specific control alternatives with simulated reductions in overflows from the collection system model.
- For each control alternative simulated, we will evaluate the water quality benefit in terms of pollutant load reduction and improvement in ambient water quality. Attainment of water quality standards will be assessed.
- We will also update the typical year simulation with the final recommended control plan and assess the water quality benefits.
- We will summarize the results of the water quality assessments in a technical memorandum. The memorandum will include discussion of the development of the typical year simulation, water quality characterization of the existing conditions, and water quality benefits of select control alternatives and the final recommended control plan. We will submit one draft to PWSA for review and comment. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Assessment TM

3.2 Monitor flow and conduct hydraulic modeling

3.2.1 Review existing flow data and models

- We will review flow data and models previously collected by PWSA and ALCOSAN to identify modeling and data needs to support the wet weather planning process. In general, this review will include locations, durations and quality of available flow monitoring data as well as determination of availability of models and the extent and quality of the calibration/verification of these models. **Up to 10 watershed models are assumed to be reviewed as a part of this effort.**

- An Existing Model Review TM will be created to document the available modeling sources and to identify data needs to expand or improve the models. This memo will also identify the various design storms, typical year precipitation, boundary conditions, and model scenarios (Existing, Baseline, Future, etc.) needed to support the project.
- **It is assumed that the starting model version for this project is the ALCOSAN Existing Conditions 2020 Model developed using SWMM version 5.1.012. This model includes a representation of the WWTP, deep and shallow cut interceptors, all diversion structures, combined sewer overflow outfalls and storm, combined and sanitary tributary areas. This model is anticipated to be expanded using historical and current modeling elements that have been developed under various PWSA efforts.**
- A summary of the available historical rainfall, stream level and flow monitoring data will be prepared and included in an Historical Flow Data Review TM. This TM will also document ongoing permanent precipitation, permanent flow meters, and stream gages that are available to support the work. **PWSA will provide available historical precipitation, stream and flow data.** Available data on high water flooding marks will also be summarized in this memo for critical stormwater flooding areas. **Field work to investigate or identify high water marks will not be collected.**
- During this process, we will develop a Model Data File Management procedure and implement to assist with model input and output file management. Procedures and Protocols will be summarized in a Model Data Management TM.

Deliverables: Draft and Final Existing Model Review TM; Draft and Final Historical Flow Data Review TM; Draft and Final Model Data Management TM

3.2.2 Develop a flow monitoring plan and collect flow data

- A detailed Flow Monitoring Plan TM will be developed to support the model expansion and system characterization effort guided by the approach outlined in this section. The Plan is expected to include proposed methods for flow monitoring in Critical Areas and I&I sewersheds with sections that cover, purpose and objectives, monitoring techniques and procedures, data management approach, QA/QC protocols, and maps of proposed deployment locations.
- **It is assumed that PWSA can provide all necessary radar-rainfall data needed to characterize precipitation in the service area.** The radar rainfall information will provide area-weighted rainfall hyetographs for each model subcatchment using existing regional permanent rain gauges. **To supplement this data, we will deploy up to 20 temporary project rain gauges for no more than 9 months.**
- We will deploy sewer system flow meters to screen and prioritize tributary areas to support expansion of the system hydraulic/hydrologic model (Calibration monitoring) and for further I/I investigations (micromonitoring).
- **To support model expansion into Critical Areas, up to 100 calibration meters (with a total installed duration of no more than 9 months) will be**

installed to provide information for model calibration in areas of known performance problems. Monitored subcatchments are planned to be between 20 and 75 acres in size.

- In support of Task 3.4, micromonitoring will be used to break down areas of roughly 100 acres or less for further I/I investigations. Up to 40 micrometers (with a total installed duration of no more than 3 months) will be deployed simultaneously for one or two significant rainfalls per location to determine tributary area I/I response. Areas showing significant response would then be targeted for further investigations. Areas showing little response would be screened from further consideration. Micromonitoring durations will be adjusted based on observed rainfall events.
- In support of Task 3.4, up to 40 calibration meters (with a total duration of no more than 6 months) will be installed to provide information for model calibration areas in sanitary areas. We will use the Task 3.4 prioritization information and preliminary micromonitoring to assist with calibration meter placement.
- It is assumed that flow monitoring will be conducted in the 2022 season between March and November. All data will be collected and stored in a database for use on the project.

Deliverables: Draft and Final Flow Monitoring Plan TM; Rain and Flow Monitoring Database

3.2.3 Expand and calibrate hydrologic and hydraulic model for use in planning

- The H&H hydraulic model will be extended up into the PWSA collection system to represent know problem areas with clusters of reported basement backup and areal flooding issues.
- Additional detail included in the historical version of the PWSA model included within Infoworks may also be added to the model to support this work along with significant known system changes. **Up to 400 staff hours for addition of existing detailed model elements such as major sewer projects or other detailed models has been assumed.**
- In Critical Areas with street flooding, the H&H model will also be expanded using dual drainage network techniques, to capture the movement and depth of overland flows along the street network. Depending upon the location of the problem area there may be a natural open channel also that will be included in the model. **Up to 2,500 model elements (channel segments and surface nodes) are assumed to be included in this model expansion within no more than 6 to 10 sub areas. It is assumed that existing topographic data is sufficient to characterize the street geometry.**
- With the hydraulic network expanded into the collection system, the lumped or consolidated hydrologic representation included in the current Existing Conditions model will also need to be discretized so that the generated flows can be distributed in the detailed expanded hydraulic network. This more detailed hydrologic representation will need to be calibrated using the collected flow and depth data. **Up to 4,500 model elements (sewer pipes**

and manhole junctions) are assumed to be included in this model expansion within no more than 20 to 30 sub areas.

- Revisions and expansions of the model will be documented in a Model Update TM.
- Sanitary areas within the H&H model will be calibrated to the data collected under Task 3.2. RTK parameters will be updated to reflect the findings of the new data collected.
- Targeted subarea calibration of areas tributary to up to 140 flow meter locations will be conducted based on the flow data collected under task 3.2. Continuous calibration/validation is anticipated to be conducted to compare metered vs. modeled predictions of flow, volume, depth and hydrograph shape. Industry standards for determination of acceptable calibration will be applied to determine the reasonableness of the calibrated parameters.
- A technical memorandum will be developed to summarize the results of the model calibration.
- A model review workshop will be held with PWSA to present the results of the calibration and discuss approval of the model for use on subsequent planning efforts.
- Upon approval of the model, files for various scenarios (Existing Conditions, Baseline Conditions (Near Term Projects that will be constructed) and Future Conditions (with Interim and Select Plans) will be developed to support the next stages of modeling. **Models will be run for up to five (5) design storm conditions to support level of service analysis.** Models will be run continuously for the Typical Year. Sensitivity scenarios for use in assessing the impacts of future climate change will also be run. Overflow statistics and level of service impacts will be quantified.

Deliverables: Draft and Final Model Update TM; Draft and Final Model Calibration TM; Model Support Files; Model Results Summaries

3.3 Perform level of service peer review and develop current level of service and range of alternatives for increasing level of service.

- A peer review will be conducted to identify the level of service of similar regional communities. Findings of the review will be summarized in a technical memorandum.
- Stress-test the current PWSA collection system to identify the current level of service provided and develop a level of service thematic map.
 - The primary level of service will be evaluated using the existing hydrologic and hydraulic model and the expansion into critical areas of observed sewer back-ups and street flooding will be used to assess collection system capacity for the interceptors and selected main line sewers.
 - A secondary level of service evaluation will be conducted on main sewers > 18" in diameter using a simplified method that compares pipe capacity to flows from the model that will be apportioned based on area. **It is assumed that existing GIS/sewer data provided by PWSA is sufficient for this purpose.**
 - A third evaluation will be conducted to assess "neighborhood" level of

service along a street within a city block. **Representative neighborhood areas (up to 6) will be selected and evaluated in detail to understand if general level of service deficiencies can be expected based on typical Pittsburgh sewer design practices.** Areas that have adequate existing data from either GIS or record drawings to support the assessment. **PWSA to provide detailed sewer drawings of the selected areas for use in this analysis.**

- **PWSA will determine what the level of service guiding principles will be used for stormwater under a separate contract**
- An alternatives analysis to determine the best approach to provide for increased levels of service will be conducted. In general, this is expected to include conveyance improvements that would include replacing existing storm or sewer piping to increase capacity and reduce water levels in the system and streets. The type, size and general location of improvements will be identified and included on maps to show the options.
- Provide a concept screening cost estimate (AACE Level 5) for bringing the current system up to the appropriate level of service for stormwater and sewer back-ups. Costs for increased conveyance systems to achieve higher capacities will be developed for various levels of service. **It is assumed that no more than two level of service scenarios will be costed.**
- Findings of the evaluation will be summarized in a technical memorandum.
- Determine how increased level of service impacts other wet weather planning objectives, including controls of CSOs and SSOs. A Typical Year simulation will be conducted to determine the results impacts on overflow statistics.
- Model base files for Level of Service Improvement Alternatives will developed to support the next stage of integrated planning evaluations.

Deliverables: Draft and Final Level of Service Peer Review TM; Draft and Final Level of Service Evaluation TM; Existing Level of Service Map

3.4 Develop a plan to identify significant areas of I/I and a strategic plan on how to prioritize locations to reduce I/I

- The PWSA system is essentially a combined system, but the upper reaches of the collection system have separate sewer areas.
- We will review and update on the approach to prioritize investigations previously by PWSA. Using data collected under other tasks, we will seek to identify sanitary areas without significant problems that would require no further investigation. Prioritization will occur at a relatively higher level and be refined as the project progresses. Early micromonitoring is proposed to help define the investigation prioritization.
- **Field work and subsequent data review for activities such as smoke testing, site assessments, manhole inspections, SSES investigations, dye testing, and CCTV inspection to support this task will be conducted by others or as an additional service.**
- PWSA will provide available data on effectiveness of historical projects in reducing I&I after improvements have been made.
- We will review the data collected and provided and use to identify areas subject to

elevated levels of I&I.

- By layering of existing GIS information, we will perform a Prioritization Analysis to produce a table and map with preliminary priority areas. We will review the proposed prioritization with PWSA to get input on the preliminary prioritization approach, the resulting priorities, and provide direction on any necessary adjustments.
- Based on the work, estimates of a range of potential I&I reductions (low, medium and high) for use in planning purposes will be developed for use with planning scenarios under Task 4.
- We will develop draft and final versions of an I&I Prioritization Approach TM, which will document criteria, data used, estimated effectiveness, and a priority list of areas. We will submit the draft TM to PWSA for review.

Deliverables: Draft and Final I&I Prioritization Approach TM

4. Identify and prioritize alternatives

The alternative evaluation is expected to be conducted at varying levels depending on the location and ownership. The most detailed efforts will be focused on outfalls solely owned by PWSA and jointly owned outfalls discharging to tributary streams (Level 1 and 2).

- Level 1 – 38 Outfalls solely owned by PWSA
- Level 2 – 33 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging into the Tributary Water Bodies

For these outfalls, it is assumed that up to 3 technologies will be evaluated for each outfall, costing to a Level 5, performance determined, and a recommended solution provided. Outfall solutions will either be combined or enhanced in up to 3 alternatives per basin.

A lesser detailed level of planning will be conducted for jointly owned outfalls discharging to the Main Rivers (Level 3 and 4).

- Level 3 – 116 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging to the Main Rivers
- Level 4 – 20 CSO Outfalls co-owned by PWSA/ALCOSAN, discharging to the Main Rivers and controlled by the planned Regional Tunnels

For these outfalls, it is assumed that up to 3 technologies will be evaluated for up to 10% of these outfalls, costing to a Level 5, performance determined, and a recommended solution provided. This is not intended to replace but to enhance or supplement the current ALCOSAN Clean Water Plan for these outfalls.

4.1 Identify and screen technical alternatives

- The goal of this task is to identify potential alternatives that will provide compliance with the goals of the wet weather planning process, taking into consideration the ability to adapt to future conditions.
- An Alternatives Brainstorm workshop will be held with PWSA to discuss potential approaches to controlling CSO and SSO in the PWSA service area. The

- workshop will include a review of the planned ALCOSAN improvements, previously planned control recommendations from PWSA efforts, various technologies and strategies that have been reviewed historically and any new or emerging technologies.
- We will review and assess potential **technologies** for controlling SSO and CSO in the PWSA service area. Optimization techniques will be applied to narrow the field of **solutions**.
 - A Technology Screening TM will be prepared that summarizes the potential technologies such as source control, green infrastructure, regulator modifications, storage and conveyance that conducts a high-level screening for applicability to the various areas and provides recommended **outfall solutions** to advance to the basinwide alternative evaluation stage. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - An integrated planning approach will be applied that considers **solutions** basinwide that meet both water quality and level of service requirements determined under Task 3.3.
 - An Alternatives Development TM will be prepared to summarize the alternatives that were considered in the evaluation for each outfall or groupings of outfalls. This TM will summarize basinwide alternatives and the recommended systemwide alternative. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - **Six (6) additional Alternatives Workshops with PWSA are planned to discuss the progress and findings from the Alternative Evaluations.**
 - The selected alternative based on the results of Task 4.6 will be further defined (<5% project definition). This work will include development of concept layouts and site investigations to further develop the concept and develop an opinion of cost that is consistent with a AACE Class 4 cost estimate.

Deliverables: Draft and Final Technology Screening TM; Draft and Final Alternatives Development TM

4.2 Identify and screen site development and buffer alternatives

- Initially, a Site Opportunity and Enhancements TM will be prepared to summarize the nature and location of potential opportunities. We will conduct a recommended screening to identify areas with a potential to support effective wet weather controls. A draft TM will be submitted to PWSA for review and comment.
- USEPA-defined Environmental Justice demographic indices will be included into screening evaluation. Sites for alternatives will consider the benefits and impacts to environmental justice communities within the PWSA service area. The potential for providing benefits to these communities through improved wet weather management will be considered along with the direct benefits and impacts of feasible technologies within these communities.
- Our team will meet with stakeholders to identify opportunities for siting of control alternative solutions at locations that may be mutually beneficial for redevelopment or community enhancements. **Up to 16 meetings with stakeholders have been included in the scope for this purpose.**
- For the final recommended alternative identified under Task 4.6, we will update the TM to discuss the potential solution and how it may be enhanced with site

improvements, community benefits, green leave behinds or other features that would create or maintain a beneficial relationship with the various City of Pittsburgh departments, authorities, and key stakeholders (including neighborhood organizations).

Deliverables: Draft, Revised, and Final Site Opportunity and Enhancements TM

Level of Effort Assumptions:

- **Assumes enhanced site evaluations will be prepared to better define project location and site conditions and refine the level of accuracy of the Cost estimate to support a AACE Level 4 cost estimate in conjunction with Task 4.3**
- **Does not include topographic survey, easement acquisition, property acquisition support services, geotechnical exploration, environmental site assessments, or subsurface utility exploration to be included with the site evaluations.**

4.3 Perform a present worth analysis of the feasible alternatives

- A cost tool that can provide estimates for various technologies at an **AACE Level 5** will be developed using unit pricing, engineering judgement and input from recent PWSA and regional projects for purposes of initial technology screening.
- A Costing Approach TM will be developed that summarizes the assumption, development and application of the cost methodology. **Two (2) meetings are included to discuss the approach and development of the tool with PWSA.** A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Costs will be developed for overall total project and lifecycle costs and include the following elements: Construction, Operating, Site surface development and restoration, Operation and maintenance requirements, Utilities and Land acquisition and rights-of-way. PWSA to provide input on administrative, legal and contingencies to be applied to the overall program cost development.
- Initial costs will be summarized and provided to PWSA for review. These will also be included in the Alternative Evaluation TM.
- Costs for budgeting for the selected alternatives for CSO and SSO improvements in the final Wet Weather Plan will be developed to an **AACE Level 4**. Additional effort to look at proposed projects and site constraints include the following:
 - Site visit
 - Develop project footprint layout using GIS and available lidar topography
 - Screening for property changes
 - Looking at local bidding data for potential cost escalation factors
 - Determine estimated quantities of facilities

Deliverables: Summary of Costs, Updates to the Draft Alternative Evaluation TM.

4.4 Perform a knee of the curve analysis of wet weather controls and water quality benefits

- An analysis comparing costs to performance metrics will developed to assess the

point of providing a value based recommended alternative. This analysis of the costs of varying CSO, SSO and stormwater control alternatives shall be in conformance with the CSO Control Policy and relevant guidance.

- Varying levels of optimization assistance tools will be used to evaluate alternatives to guide development of performance.
- Areas will be prioritized for optimization. Outfalls with planned improvements (by Others) or minor adjustments needed to meet criteria will not be optimized.
- **An optimization software license covering a 24-month period is included in the current budget. It is expected that advanced optimization will be applied to approximately 40 areas.**
- Performance curves will be included in the Alternative Evaluation TM.

Deliverables: Updates to the Draft Alternatives TM

4.5 Analyze financial affordability

- Coordinate with PWSA's financial rate consultant to determine the financial affordability of the proposed improvements to the PWSA system and forecasting the rate on ratepayers.
- Meetings will be held throughout the development of the wet weather plan to discuss progress, cost impacts, affordability considerations and impacts on required schedules for implementation. Two (2) initial workshops are planned to brainstorm the approaches and steps needed to incorporate the affordability analysis into the planning process.
- Based on discussions at the meeting, a work plan will be developed that will guide the steps needed to assess affordability in support of the Wet Weather Plan development. A draft plan will be submitted to the Rate Consultant and PWSA for review.
- All work related to affordability determination including data collection; rate evaluation; assessment of impacts of wet weather projects; level of service projects; ALCOSAN ongoing charges; PWSA ongoing water and sewer system charges; and other factors will be conducted by Others. PWSA will contract separately with Rate Consultant on these services.
- **Up to twelve (12) additional coordination meetings and two (2) workshops are planned to coordinate the work and discuss findings over the duration of the planning.**
- Rate consultant will provide input on initial affordability prior to the start of alternatives and run scenarios for varying levels of level service improvements and necessary stormwater, CSO and SSO control improvements at various stages of the plan development.
- We will review findings provided by Rate Consultant and summarize how the work will be incorporated into the planning and implementation of the WWP.

Deliverables: Draft and Final Affordability Work Plan TM; Draft and Final Affordability Findings TM.

4.6 Conduct non-monetary analysis of alternatives

- An Alternative Evaluation Approach TM will be prepared that summarizes the overall approach to selecting recommended alternatives. The TM will include a discussion on how to score within each non-monetary category, scoring and weighting approaches, and steps that will be taken to develop the scoring. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- The non-monetary criteria as provided by PWSA are expected to include:
 - Local planning impacts assessment
 - Environmental justice and community flood resiliency impacts
 - Floodplain impact assessment
 - Odor and noise control assessment
 - Preliminary environmental site assessment
 - Site surface restoration/development
 - Impacts of water quality improvements
 - Co-benefits of green infrastructure projects or other control alternatives
- Additional information such as advantages, disadvantages, risks, schedule impacts and other considerations will be identified as supporting information will be prepared for each alternative.
- **Up to three (3) workshops are expected to be needed to review the approach, conduct the scoring and share the results.**
- Information from Tasks 4.3 on costs would be combined with a summary of total benefits for each alternative to support development of a cost-benefit analysis.
- The results of the evaluation will be summarized in an Alternatives Scoring Technical Memorandum.

Deliverables: Draft and Final Alternative Evaluation Approach TM; Draft and Final Alternatives Scoring TM

4.7 Prepare a schedule for implementation of controls selected to address CSOs and SSOs

- An implementation schedule with appropriate milestones for design, bidding, construction, substantial completion and final completion will be prepared for the recommended projects in the Wet Weather Plan.
- The schedule will be adjusted based on input with regards to affordability and cashflow constraints provided under Task 4.5.

Deliverables: Draft and Final Implementation Schedule

5. Stakeholder coordination and presentations

We will take the lead on developing and participating in a public participation program. **PWSA will provide stormwater messaging developed to date and any foundational information. PWSA staff will be lead presenters during community meetings but would rely on Wade Trim to develop materials and set up meetings.**

We will work with PWSA in preparing an overall public participation plan and public outreach protocol that meets the requirements contained EPA CSO planning and DEP Act 537 guidance documents.

Our goal is to work collaboratively with the project team and PWSA to develop and implement a plan that prioritizes clear, consistent, transparent, and equitable communication with the public and stakeholders to generate consensus. We intend to include specific outreach to identified environmental justice communities to develop relationships with community leaders in those areas and encourage their availability, participation and engagement in meetings.

5.1 Develop Public Engagement Plan (PEP)

- In support of PWSA's existing public outreach efforts, we will work to coordinate and communicate with internal and external stakeholders. We will work with PWSA to create an engagement plan that centers around multiple working group meetings, stakeholder inclusion, agency communication and public information and input held throughout the duration of this process. The goal of the plan is to generate buy in, which can be better achieved by engaging stakeholders throughout the process, collecting input and feedback, and incorporating that feedback.
- **Two meetings will be held with PWSA public relations staff to support development of the plan.** An initial brainstorming session and a follow up meeting to discuss the draft PEP. Ongoing coordination on public relations topics will be covered under the regular PWSA progress meetings.
- A plan will be developed that includes a summary of program and objectives, messaging, identification of stakeholder groups, definition of target audiences, communications approaches, communication tools, implementation steps, and timelines. The Draft Public Engagement Plan will be submitted to PWSA, and comments incorporated into the Final Plan.

Deliverables: Draft and Final Public Engagement Plan

Level of Effort Assumptions:

- **Develop Public Engagement Plan assumes a detailed outline, 2 draft and 1 final version for Wade-Trim and PWSA review and approval. Includes the development and refinement of the comprehensive stakeholder engagement list.**
- **Project Coordination / Management – assumes up to 2 coordination meetings a month and 4 hours of project management/coordination with Wade Trim / PWSA for 36 months.**
- **Documentation – assumes 8 hours per month for document control, project controls and documentation of events.**

5.2 Program Messaging and Branding

This item has been removed from the scope.

5.3 Online Public Engagement

- Online engagement is an important method of communication with the general public about the Wet Weather Program. The goals of online engagement are to

increase the ability to reach a more diverse audience, generate more informed participation, invite a broader range of input, and set the stage for sustained participation. PWSA already has an online presence, and this plan will build upon those existing relationships/followers/contacts.

- A Wet Weather Program webpage will be created to serve as a resource for people to access information, share the plan schedule, see a summary of planning activities, make note of engagement opportunities, review background information (Including relevant maps and data), make connections to social media pages, locate project contact information, subscribe to a mailing (contact) list, and access a comment form.
- Our team will develop a proposed outline of online content to consider for a website approach and submit to PWSA for review and discussion.

Deliverables: Web Site and Social Media Pages and Updates

Level of Effort Assumptions:

- **PWSA will host and manage online content via their existing website**
- **Updates to the website are expected to occur on a quarterly basis, assumes 12 hours per quarter of support**

5.4 In-Person Public Engagement

- Public meetings will be used to inform the public of the planning process and to solicit ideas, input and feedback. This will be an opportunity to promote transparency and foster two-way communication with the public. Public meetings will be held at multiple locations throughout the city. We intend to host a proportional amount of in-person meetings within environmental justice communities to promote engagement within these communities and consider the specific needs in these communities relative to wet weather management.
- Meeting times will vary to maximize the number of attendees that will be available. The public will be encouraged to ask questions and voice their ideas and opinions about the program activities. Our plan for a series of meetings is presented below:

Year 1 - Goals and Initial Community Input

The first series of public workshops will be formatted as a city-wide Listening Series as an interactive, hands-on opportunity to create program awareness, present background on the system and known problem areas, gain an understanding of community priorities, values and concerns. **Four (4) interactive, workshop-style sessions will be conducted** and geographically distributed through the service area – to encourage diverse participation. These meetings would occur early in the planning process.

Year 2 - Review of CSO Technologies, Solutions and the Alternatives Process

The second series of public workshops will be formatted as traditional public meetings. The purpose of this series of meetings will be to present and/or demonstrate potential control strategies, discuss water quality assessments and provide an overview of the alternative evaluation process. **Four (4) meetings will be held.**

Year 3 – Wet Weather Plan Recommendations

The third and final public workshop series will be formal public meetings to present the draft Wet Weather Plan. This will be the final opportunity to provide an overview of the draft WWP, to discuss issues, processes and decisions leading to the plan, and to record formal comments that will be considered when finalizing the Wet Weather Plan. **Four (4) meetings will be held.**

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **20 hours/month for coordination and responding to questions from the public**

5.5 Stakeholder Advisory Group

- An existing PWSA Stormwater Advisory Group (SAG) that has provided input on the PWSA stormwater fee will be convened to introduce them to the Wet Weather Program goals and objectives. This group will be expected to share information about how to get involved in, provide input on, and stay up to date with the planning process with the organizations/stakeholder groups they represent. We intend to work with this group to discuss issues of environmental justice and solicit input for how the Wet Weather Program will evaluate environmental justice.
- This advisory group will meet at key decision points throughout the process (**up to 6 meetings**). Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation and prepare summaries of the discussions.
- In between meetings, representatives of these groups will receive regular updates through email and will be empowered to help the program team in its outreach efforts by sending information about engagement opportunities to their respective memberships, communities, networks, and employees.

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **Assumes 4 hours/month monthly coordination and responding to inquiries from SAG.**

5.6 Municipalities/POC Outreach

- Meetings with the existing Saw Mill Run Group and various POC municipality representatives would be convened to discuss issues specific to the municipalities. These meetings will be used to share information about known issues, planned improvements, alternative technologies, and other related matters. **We have assumed up to 24 meetings** with stakeholders in this category over the duration of the program. Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation, and prepare summaries of the discussions.

Deliverables: Agendas, Presentations and Meeting Summaries

6. Provide Wet Weather and Act 537 Plans

6.1 Wet Weather Plan (Long Term Control Plan)

- A Wet Weather Plan document will be developed that includes sections on Introduction, Background, Purpose, Public Engagement and Participation, System Characterization of Current Conditions, Control Approach, Control Technologies and Screening, Development and Evaluation of Alternatives, Financial Capability, Recommendations, Selection and Implementation Schedule, and Post Construction Compliance Monitoring Plan.
- A draft Wet Weather Plan will be submitted to PWSA for review and comment prior to submittal of a final Report.
- Following PWSA review, comment, resolution of comments and approval of the draft Wet Weather Plan, we will facilitate preparation of the plan for submitting to the agencies for review and approval.
- Following agency review, comment, resolution of comments and approval of the plan, a revised final plan will be submitted.

Deliverables: Draft, Final and Revised Wet Weather Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of Plan
- Assume preparation of up to 100 comment responses received on the Plan

6.2 Act 537 Plan

- An Act 537 Plan document will be developed in accordance with the Act 537 Plan Content and Environmental Checklist and will include sections on previous wastewater planning, physical and demographic analysis and mapping, identification of existing sewage facilities and needs, projections of future growth and land development, identification of alternatives, evaluation of alternatives, institutional evaluation, justification and implementation schedule for selected alternatives (technical and institutional) and an environmental report. The Wet Weather Plan will also be used extensively to form the basis of the Act 537 Plan.
- A draft Act 537 Plan will be submitted for PWSA comments.
- Following PWSA review, comment, resolution of comments and approval of the draft 537 Plan, we will facilitate preparation of the plan for submitting to the City of Pittsburgh under Task 6.3 for review and approval.
- Following approval by the City of Pittsburgh, we will submit for agency review, comment, resolution of comments and approval of the plan. A revised final plan will be submitted.

Deliverables: Draft, Final and Revised Act 537 Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of 537 Plan
- Assume preparation of up to 100 comment responses received on the 537 Plan

6.3 City of Pittsburgh Coordination

- Prior to submittal to the agencies, the Act 537 plan will require a signed and sealed Resolution of Adoption from the City of Pittsburgh. We will assist in the preparation of the appropriate submittals, response to comments and consistency documentation that the appropriate agencies have received, review and concurred with the Act 537 plan throughout the entire process.
- Following PWSA approval of the draft Act 537 Plan, the plan will be submitted to City of Pittsburgh and Allegheny County Planning Commissions for consistency review and comment.
- The Act 537 plan is also required to be posted publicly for a 30-day comment period, with proof of the publication, copies of all comments with responses in each comment included in the final submittal to the agencies.

Deliverables: Public Notice

Level of Effort Assumptions:

- Assume 3 coordination meetings with City of Pittsburgh Officials
- Assume preparation of up to 100 comment responses received on the 537 Plan

7. Develop an environmental impact assessment of recommended Wet Weather Plan

- Once conceptual level wet weather plan facilities have been identified, we will conduct a more detailed environmental review in the form of an Environmental Impact Assessment which further evaluates the community impacts identified during the alternative's evaluation. This assessment will serve as the Uniform Environmental Review.
- A report will be proposed that follows the format laid out in PADEP's Technical Guidance Document 381- 5511-11. The report will discuss the environmental consequences and potential mitigation of the proposed facilities for land use, recreational use of land and streams, water and air quality, noise, odor, vehicular and pedestrian traffic, socio-economic issues, miscellaneous environmental considerations, as well as aesthetic and property impact for use in the Act 537 Plan.
- A draft Report will be submitted for PWSA comments.
- **The number of projects to be evaluated has yet to be defined through the wet weather planning work. For this reason, a total of no more than 20 projects has been assumed that will require assessment.**

Deliverables: Draft and Final Environmental Impact Assessment Report.

8. 3rd Party Assessment of Sewer Assets

- Regionalization involves the voluntary transfer selected municipal sewers and sewer facilities in the service area over to ALCOSAN. This is intended to reduce the financial burden on PWSA and allow ALCOSAN to more directly manage and reduce excess flows into the system. **This will be accomplished by ALCOSAN assuming ownership and maintenance of approximately 60 miles of large, multi-municipal trunk sewers and associated facilities (upstream diversion structures).**

- The purpose of this task will be to review PWSA sewer assets that are proposed to be transferred to ALCOSAN via the regionalization initiative. We will review the assets and provide documentation needed to support transfer.
- This is a study and does not include regionalization negotiation support for the ALCOSAN agreement.
- A Draft PWSA Assets Review TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final Assets Review TM; Applicable support documents.

9. Post Construction Evaluation of GI Effectiveness

- We will evaluate the performance of up to **fifteen (15) Green Infrastructure projects** in various states of design and construction that are being constructed with the intent to reduce stormwater inflow to the sewer system. To support estimates of effectiveness of these projects and potential future similar projects, post construction monitoring of the performance of these projects will need to be conducted.
- **Our team will install flow monitors at up to 30 locations for a period of 8 months to collect on performance.**
- **Data from the 3RWW rain gauge network data and up to 6 site specific rain gauges will be used to document precipitation.**
- **PWSA will provide design reports, modeling and plans produced by others along with historical rainfall and flow data collected prior to the start of the projects for use in comparisons.** Post construction data collected on other projects and any related reports will also be provided.
- We will compare the data and provided an evaluation of the resulting effectiveness of the various projects. A Draft GI Project Effectiveness TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final GI Flow Monitoring Plan; Draft and Final GI Project Effectiveness TM

GENERAL ASSUMPTIONS

- All deliverables will be provided electronically
- PWSA will provide comments on most deliverables within 14 calendar days; Task 6 deliverable comments will be provided within 30 calendar days
- Comments will be provided by PWSA electronically using document control software
- Meeting duration assumed to be typically 1 to 2 hrs (50% virtual; 50% in person)
- Workshop duration assumed to be typically 4 to 8 hrs (In person)

SCHEDULE

- The project is expected to cover a three-year period with the potential for up to three one (1) year extensions. Extensions of the schedule may impact level of effort.
- The tasks and their general anticipated duration are provided below:

Task	Anticipated Duration
Task 1	36 Months
Task 2	18 Months
Task 3	30 Months
Task 4	18 Months
Task 5	36 Months
Task 6	12 Months
Task 7	12 Months
Task 8	9 Months
Task 9	12 Months

PWSA TASK ORDER/AMENDMENT EXHIBIT C INSTRUCTIONS

**An additional Exhibit C or D may be used if space provided is not sufficient.*

General Instructions

1. **DEFINITION:** A task is a type of service that will be performed in a Task Order or Amendment, for example, it might be Design Engineering, or Construction Management, or Field Inspection. A project budget may contain individual budgets for each type of service. A Task Order or Amendment may provide for one or more type(s) of service. When preparing this Exhibit C, make sure that each type of service is separately annotated, and that the cost of labor and expenses for each type of task (budget code) is distinctly represented. PWSA's goal is to individually track the cost of each type of task or service. Should the amount of staff needed exceed the total number of columns, you may provide an additional completed template for each Exhibit. Just be sure your TO/Amendment Total Fee matches as an accumulative value.
2. See the Budget Codes tab for an explanation of where a Task type should be applied in this Exhibit.
3. Use these Exhibit forms as is. **Do not attempt** to alter them. **If they are altered they will be rejected.** If a change should be considered, discuss with your PWSA point of contact.
4. **Be sure** that all labor rates used in these forms are consistent with the rates used in the Master Services Agreement.

Exhibit C.1

Purpose: Exhibit C.1 identifies the Consultant's staff members who will contribute to each Task type to be provided, their MSA classification, their Task Order role, their anticipated labor hours, and their labor costs.

1. The Consultant's Scope of Services must be defined according to the distinct tasks that apply to a project budget code. The cost to perform each Task must be captured on this Exhibit.
2. On Row 45, enter each Consultant staff member name in a different column.
3. On Row 46, enter each Consultant Staff member's Master Service Agreement classification in a different column.
4. On Row 47, enter each Consultant Staff member's Task Order role in a different column.
5. Enter the hours each staff person will contribute to each task in the rows below each staff person's name. **If it doesn't apply, leave row blank.**
6. Enter the Subconsultant markup as an integer or decimal number (field is coded as a percentage). The spreadsheet will calculate the Total Hours and Total Labor Cost for the Consultant.

Exhibit C.2

Purpose: Exhibit C.2 captures the Consultant's anticipated expenses. Note that there is a table section for each Task type (budget code).

1. Exhibit C.1 will auto-populate each staff person's name in the appropriate row.
2. In Column B enter the type of expense that will be invoiced, e.g. mileage, hotel, auto rental. These fields are editable.
3. The spreadsheet will calculate the total costs by person and by task.
4. Repeat 1 - 3 for each Task type.

Exhibit C.3

Purpose: This table captures the Sub Consultants' anticipated costs and MBE/WBE/VBE/SDVBE classification. Note that the entries in this table are all inclusive of both labor and expenses.

The details of this data must be reflected in the required attached Sub Consultants' proposals.

1. Enter the name of each Sub Consultant firm in the Columns of the table.
2. Enter the cost **by task** of each Sub Consultant firm.
3. The spreadsheet will calculate the total costs by Sub Consultant and by Task.

Exhibit C.4

Purpose: In this Exhibit C.4, the Consultant should enter into lines 4, 5, and 6, as needed, any stipulations PWSA should consider about the Task Order or Amendment proposed budget.

Note that items 1, 2, and 3 are required by PWSA, and cannot be changed.

Exhibit C.4: ASSUMPTIONS

LIST OF ASSUMPTIONS RELATED TO BUDGET AND EXPENSES - List any conditions the Consultant places on the Budget and Expenses indicated above.

1	Consultant shall notify the Authority's Representative when expenditures based upon the billing of this Task Order reaches 50, 75 and 90% of the total budget, and an estimate of the time and funds necessary to complete the work. If additional funds are requested and not authorized in writing by the Authority's Representative, the Consultant shall reduce the scope of work to complete within the funds available.
2	In no event shall the Consultant's total billings for the services performed under this Task Order exceed the approved Fee amount without the Authority's written authorization and notice that it has approved an increase in the budget limit and funds available.
3	Should a key or non-key staff person not listed on an approved Task Order get assigned to the task, an Action Item to the project manager will suffice to acknowledge the change without an increase to the overall total fee. This MUST be done within 30 days of the assignment, preferably before PWSA receives the invoice for the time in which work was performed. Project Managers have the right to reject or accept the assignment of a staff person with proper justification. The consultant has the right to appeal that decision to the Director of Engineering and Construction.

Collective Efforts, LLC
Civil and Environmental Engineers

October 25, 2021

Wade Trim
Three Gateway Center
401 Liberty Avenue, Suite 1600
Pittsburgh, PA 15222

Attn: Mr. Jason J. McBride, PE
Northeast Area Lead, Vice President

Subject: Letter of Commitment
Pittsburgh Water and Sewer Authority Wet Weather Program Management
City of Pittsburgh, Allegheny County, Pennsylvania
CE Proposal No. P-21-13016

Dear Mr. McBride:

Collective Efforts, LLC (Collective Efforts) thanks you for the opportunity to team with Wade Trim on the Pittsburgh Water and Sewer Authority (PWSA) Wet Weather Program Management. This letter serves as a commitment by Collective Efforts, a women-owned business and PAUCP-certified Disadvantaged Business Enterprise (DBE), to participate in a subcontract role with Wade Trim if awarded this contract. We will provide Environmental Impact Assessment Support, As Needed Permitting Support and Guidance, General Engineering Support and Field Services – WQ Field Sampling services with a total commitment price of \$437,675 which represents 2.58% of the contract.

We look forward to working with you and the others on the Wade Trim Team on this project.

Sincerely,

Collective Efforts, LLC

A handwritten signature in blue ink that reads "Karen Napoli for".

Tammi Halapin, PE
Principal

Task Order No. WT-PRGM-14

Task Order Name: Third Party Regionalization Validation for Wet Weather Program Manager Project

This Task Order Amendment is made as of the Effective Date, by and between **The Pittsburgh Water and Sewer Authority** (the “Authority”) and **Wade Trim, Inc. (Ops)**, (“the Consultant”).

Consultant Firm: Wade Trim, Inc. (Ops)

Contract Name: Wet Weather Program

Agreement between the Authority and the Consultant dated 11.01.2021

Prior Task Order/Amendments Applicable to this Task: N/A

The schedule for the completion of the Services under this Task Order is incorporated herein. The details of the schedule are as follows or as detailed in the separate schedule, attached as Exhibit B. The time limits established by the schedule shall not be exceeded without reasonable cause. The schedule may be amended with the Authority’s written consent as the Task proceeds.

Start Date:	11.01.2021
Completion Date:	10.31.2024

The Authority’s budget is attached hereto as Exhibit C and incorporated herein.

Where the Fee is based on Agreement rates, the Fee may not exceed the budgeted amount. The budget may be amended with the Authority’s written consent.

Fee:	\$315814.59				
MBE:	0%	WBE:	0%	SDVBE:	%

A detailed Scope is attached hereto as Exhibit A and incorporated herein.

Wet Weather Program Manager

2021-OPS-116-0

Project Manager:

Ana Flores

Date Approved:

11.09.2021

**PITTSBURGH WATER AND SEWER AUTHORITY
WET WEATHER PROGRAM MANAGER
PWSA PROJECT NO. 2021-OPS-116-0
FINAL SCOPE OF SERVICES**

PROJECT OBJECTIVES

The specific objectives of the Wet Weather Program Manager are as follows:

- Assist in developing PWSA's Long Term Control Plan (LTCP) for the control of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) remediation plan, which will comprise a Wet Weather Plan or one or more similar documents. Provide program management services, advise, and consult with PWSA, its engineering staff, and its legal counsel (including translating technical information into a form useable by counsel) in the negotiation of a consent decree with the United States and Pennsylvania Department of Environmental Protection (DEP) addressing, among other things, the control of CSOs and remediation of SSOs from PWSA's sewer system (a Wet Weather Decree).
- Develop plans for improvements of PWSA sewer system facilities to bring combined sewer overflows into compliance with the CSO Control Policy and to remediate SSOs.
- Perform a level of service peer review and identify the current stormwater level of service the current PWSA system provides.
- Develop a range of alternatives to provide control and management of stormwater and manage basement backups and overland flooding to an appropriate, affordable level of service.
- Assist PWSA and its legal counsel in the coordination of planning, regulatory obligations, and capital improvements with upstream and downstream municipalities and ALCOSAN, where applicable.
- Conduct evaluations to account for the impact of projects implemented under ALCOSAN's consent decree and regionalization program on PWSA's development of CSO and SSO controls, and vice versa.
- Perform engineering and public participation activities in support of the development of a Wet Weather Plan, and obligations arising under municipal orders, enforcement orders, and any Wet Weather Decree entered into by PWSA.
- Develop analyses to assist PWSA's legal counsel in its addressing regulatory and legal issues associated with wet weather planning, including resolution of related enforcement actions.

SUMMARY OF WET WEATHER PLANNING TASKS

Program management services include oversight and coordination of the following activities in support of the development of a Wet Weather Plan or similar planning documents, consisting of a LTCP to control CSOs and a plan to remediate SSOs (collectively, a Wet Weather Plan in connection with the above negotiations), and plans to provide effective stormwater management. The wet weather planning work typically includes those engineering activities required to produce plans and other deliverables to be submitted to regulatory agencies, including the DEP, the Allegheny County Health Department (ACHD), United States Department of Justice,

(DOJ), and the United States Environmental Protection Agency (EPA). Many of the tasks will require familiarity with and the use of guidance documents issued by EPA and DEP. The production of interim work products and the Wet Weather Plan will be in support of negotiating a consent decree, assisting PWSA in complying with the requirements of the Wet Weather Decree and other regulatory requirements arising under the Pennsylvania Clean Streams Law and the federal Clean Water Act (CWA).

The following is a list of the tasks to be performed by the Wet Weather Program Manager.

- Task 1 - Program Management Services
 - Support the negotiation and the development of a consent decree and development of a Wet Weather Plan
 - Provide on-call engineering services
- Task 2 - Data Gathering
 - Review and determine DEP Act 537 Plan update requirements and permitting requirements for conveyance, storage and treatment
 - Review EPA guidance documents relating to CSO and SSO control
 - Review CSO/SSO consent decrees entered by other municipalities, as well as LTCPs and SSO elimination plans developed by other municipalities
 - Map with GIS, delineate and collect field survey data within planning basins.
 - Investigate sewer system and develop a system characterization study for PWSA's combined and sanitary sewer systems
 - Conduct site investigation
 - Evaluate the impact of CSOs on receiving waters
- Task 3 - Model Development and Calibration
 - Monitor flow and hydraulic conditions to inform system characterization and the selection of CSO and SSO controls
 - Develop a hydraulic and hydrologic model for PWSA's combined and sanitary sewers that reflects prior modeling information and additional monitoring data
 - Perform level of service peer review and develop current level of service thematic map
- Task 4 - Alternative identification and prioritization
 - Develop an alternative analysis for the control of CSOs and SSOs, including the development of cost-performance curves to assist in analysis
 - Develop an implementation schedule for CSO and SSO controls informed by and coordinated with a financial impact and affordability analysis
 - Identify CSO and SSO control technical alternatives
- Task 5 - Stakeholder Coordination
 - Coordinate wet weather planning and program development efforts with ALCOSAN and other municipalities in the Pittsburgh Region
 - Coordinate wet weather planning and program development efforts with community outreach and stakeholder engagement initiatives
 - Develop public participation program to inform wet weather planning and program development efforts

- Public participation program
- Task 6 - Final Act 537 Plan and Wet Weather Plan/LTCP and Recommendations
- Task 7 - Conduct environmental impact assessments of projects
- Task 8 – 3rd Party Assessment of Sewer Assets
- Task 9 – Post Construction Evaluation of GI Effectiveness

DETAIL OF WET WEATHER PLANNING TASKS

1. Program Management Services

1.1 Program Management

1.1.1 *General*

- Provide program management services that include oversight and coordination of activities in support of the development of a LTCP to control CSOs and a plan to remediate SSOs.
- A Program Management Plan will be prepared that summarizes the procedures that will be used to manage the program. Our PMP will include Program Scope & Goals, Program Constraints, Program Performance Metrics, Program Organization, Project Controls, Safety, Quality Assurance, Communication Protocols, Environmental & Permits Compliance and Risk Management. A draft Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.
- Ongoing management, coordination with PWSA and team members, communications, and project management activities will be conducted to manage the work.
- Ongoing document management will be conducted to facilitate file sharing between PWSA and our team.
- Develop and manage program schedules. An overall baseline schedule will be developed and updated monthly to reflect the progress of the work.
- Manage quality assurance/quality control of programs. A QA/QC plan will be developed and documented in the PMP. Quality reviews will be documented and conducted on all deliverables.
- Prepare and present periodic status program and project reviews, including establishing formal and informal milestones and performance metrics. Performance metrics will be developed and documented in the PMP. Monthly progress reports that include a summary of work activities completed during the previous period, planned activities for the next period, and critical action items will be prepared and submitted to PWSA as part of our monthly invoicing.
- Conduct meetings with PWSA, its engineering staff, and its legal counsel as needed to discuss the progress of the project and review key deliverables. These meetings may include a project kickoff meeting, as well as meetings with the executive PWSA team to present an executive summary of the progress of the project and key decisions needed to be made. Agendas and presentation materials will be prepared. Meeting summaries will be submitted following the meetings. **A total of 72 progress meetings, 12 miscellaneous meetings and 6 executive sessions have been assumed.**

- Provide planning-level risk management in accordance with industry standards and guidelines. A risk management plan will be prepared and included within the PMP. An initial risk development workshop will be held to review and provide input on the plan and risk register. The risk register will be updated on a quarterly basis and discussed within the regular progress meetings.

Deliverables: Draft and Final Project Management Plan; Meeting Agendas, Presentations and Summaries; Monthly Progress Reports, Schedule and Invoicing; Risk Registers

1.1.2 Regulatory Support

- The purpose of this task will be to advise and consult with PWSA, its engineering staff, and its legal counsel in the negotiation of a consent decree. Meetings will be held to prepare for EPA meetings, discuss matters with EPA and debrief on follow-up items. Agendas, technical work, presentation materials, and meeting summaries will be developed for all meetings.
- **A total of 108 meetings have been assumed over a 36-month period at an average level of effort of 16 hours/meeting for regulatory team preparation and attendance and 100 hours/month for technical support time to develop content, review, documents, and address questions from EPA or others.**
- The purpose of this task is to establish compliance priorities and to provide support to PWSA in the ongoing discussions with US EPA and PA DEP to work towards acceptance of required compliance deliverables, an LTCP 1080+approach as it is developed. We will provide technical support and guidance for the ongoing negotiations with USEPA and PA DEP under this task by helping to gain regulatory acceptance for PWSAs compliance strategy.
- The goal of this task will be to define strategies to develop the various work approaches, programs, descriptions for capital projects, capital costs/benefits, and schedule implications for presentation to regulatory agencies. We will also review and evaluate any deliverables or documents submitted to US EPA, PA DEP and others as directed that may have impact on the CSO update / Integrated Plan and schedules.
- This task will be managed on a time and material basis as directed by the PWSA and working in conjunction with the legal and rate consulting teams to develop specific products to support regulatory discussion.
- The focus of this task will center on meetings and staff work on development of documents to support the negotiation process and work to gain acceptance for compliance documentation. Much of the work will be driven by evaluation of existing compliance documents, development of PWSA LTCP goals and guiding deliverables to build a case for technical acceptance by US EPA and PA DEP.

Deliverables: Meeting Agendas, Presentations and Summaries; Various correspondence needed to support ongoing discussions

1.1.3 Other Services

A. CMOM Program

The purpose of this task is to develop and document a Capacity, Management, Operation and Maintenance (CMOM) program. We will review existing information on CMOM activities, meet with PWSA to understand the program and develop a recommended plan for PWSA.

PWSA's Capacity, Management, Operations and Maintenance (CMOM) Program forms the foundation for PWSA to meet its customer service demands, sustain infrastructure performance, comply with regulatory requirements, and manage its resources. The objectives of this task are:

- Compile PWSA's current CMOM documentation and assess the program components against industry best practices, PWSA's organizational goals, and applicable regulatory requirements
- Develop a set of priority improvements to address potential gaps identified in the assessment
- Establish a Program Document that, when implemented, provides a proactive defense from regulatory enforcement action and leads to improved system performance and cost savings.

CMOM assessment will benchmark PWSA's current program against likely EPA Region 3 expectations, regulatory precedence, and utility best practices. This review will be focused on the sanitary sewer service area of PWSA and the capacity assurance, management, operations, and maintenance activities specific to that portion of the system. It is assumed that the Nine Minimum Controls (NMC) activities of PWSA cover similar aspects for the combined sewer system and are outside the scope of this effort.

We will assess current programs, policies, and practices. Existing documentation will be compiled and evaluated to establish priority areas for improvement. The assessment will include evaluation of SSO causes, review of existing CMOM documentation, interviews, and field observations.

We will evaluate PWSA's SSO data to develop an understanding of the number and volume of sanitary sewer overflows by cause over the past 5 years (2016-2020). SSOs will also be plotted in GIS to identify any geographic trends. The SSO cause and spatial analysis will allow us to consider how PWSA's CMOM Programs are structured to solve system-specific needs.

We will submit an information request to PWSA to gather existing CMOM-related program documentation, policies and procedures. We will review existing documentation, assess the completeness of the program, and identify potential gaps with accepted best utility practices in the following areas:

- Goals, Visions and Support
- Organization
- System Knowledge
- Capacity Management

- Engineering and Construction
- Asset Inspection and Condition Assessment
- Rehabilitation and Replacement Program
- Maintenance Programs and Procedures
- FOG Program
- SSO Tracking, Analysis and Reporting
- Overflow Emergency Response
- Budgeting
- Training
- Safety
- Customer Service
- Information Management
- Information Systems

We will conduct interviews with PWSA staff over a 5-day period, including personnel from management, engineering, planning, operations and maintenance. During the interviews we will discuss policies and practices related to organizational structure/communications, work management processes, information management processes, inspections; rehabilitation (pipeline, manhole, and removal of illegal connections); fats, oils, and grease (FOG) control; new construction standards and inspections; Emergency Response Procedures; preventative, predictive, and corrective maintenance practices including sewer cleaning; and staff training, knowledge skills, and abilities.

Observation of the operations and maintenance (O&M) crew work practices will validate what was heard during the interview process and identify additional opportunities for improvement. A senior collection system operations expert will spend 2 days in the field observing the way in which crews accomplish O&M tasks such as inspections, CCTV, line cleaning, point repair, root control, pump station maintenance, and emergency response where possible.

The results of the CMOM Program assessment will be presented to PWSA in a workshop with recommendations for improvements. Based on PWSA's feedback and input, an Implementation Plan will be established that identifies areas for improvement, the scope of effort involved by both our and PWSA staff, estimated labor-hours and schedule. The Implementation Plan will focus on improvement that provide maximum benefit to PWSA.

- Describe the Gap Assessment framework including regulatory requirements and effective industry business practices
- Present the SSO cause analysis results
- Confirm PWSA's CMOM Program goals
- Gain input on our assessment of current business practices and programs
- Prioritize areas for improvement. The prioritization process will consider the current program status, as well as the importance of the various programs and practices in meeting PWSA's specific CMOM Program goals
- Develop consensus on improvement areas and priorities.

Based on the results of the workshop, we will develop a CMOM Program Summary, documenting the CMOM assessment, and a Work Plan for high impact improvements to current programs and practices. We will conduct a final consensus workshop to validate the draft CMOM Program summary and allow staff to make adjustments before finalizing the Work Plan. We will finalize the CMOM Assessment to include the agreed upon improvement initiatives and proposed timelines. A draft overall CMOM Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.

Ongoing support activities such as training, data review, and development of procedures can also be conducted to assist PWSA in implementation of the plan as an additional service.

Deliverables: Draft and Final CMOM Plan

Level of Effort Assumption:

- **Will conduct two (2) workshops and up to 5 days of interviews and field visits with PWSA Staff.**

B. Assist with PWSA's Nine Minimum Controls (NMCs) program

- We will review existing NMC documentation and provide a Technical Memorandum summarizing review comments and recommendations.
- **Ongoing support activities such as training, data review, and development of procedures can be conducted to assist PWSA in implementation as an additional service.**

Deliverables: Draft and Final NMC Review TM

1.2 On-call Engineering Services

1.2.1 General On-Call

To support the development and ongoing progression of the Wet Weather Plan, various engineering services may be required at the request of PWSA. Specific tasks will be identified and a mutually agreeable scope, budget and schedule to complete the task will be developed by Wade Trim and PWSA. In general, examples of the services that may be performed under this task include:

- Conceptual infrastructure studies
- Design and construction engineering services
- Asset management activities
- Value engineering studies
- Oversight of consultants that may perform design and construction engineering services for wet weather projects.
- Coordinate the design of PWSA system improvements developed as part of the wet weather planning efforts with proposed improvements of the ALCOSAN and upstream/downstream municipal systems

An allowance has been established to support these activities. Work will be performed at the approval of PWSA and up to the limit included in this authorization.

Deliverables: To be determined based on nature of approved task activities.

1.2.2 Sewer Condition Assessment

This task has been removed from the scope.

1.2.3 Asset Management

The general objective of this task is to develop the methodology and best practices to assist PSWA better manage their assets. Asset Management (AM) services will focus on aligning strategic objectives with stakeholder level of service expectations to develop a risk-based approach to manage the entire lifecycle of program assets. Collaboration with PWSA staff will be integral to success and initial efforts will focus on understanding current best AM practices, identifying gaps, and developing an actionable roadmap for AM implementation. Implementation items will be prioritized and quick win and near team activities that achievable and provide the most value to PWSA will be identified. AM implementation assistance will be provided based on PWSA requests for assistance. Planned AM Services include:

- Review and assess the existing AM program and system operational documentation and provide a gap analysis relative to utility best practices and develop recommendations
- Develop or Update the PWSA Asset Management Vision to incorporate key wet weather program priorities
- Form and charter an AM team of PWSA key staff that can build and then take on the implementation of the program
- Develop AM program charter and AM methodology and best practices training content
- Conduct AM program evaluation and gap analysis between current and desired future state
- Prepare actionable AM program implementation roadmap that details prioritized AM activities
- Organize, integrate, and embed overall PWSA strategic goals in the AM framework and corresponding LOS goals and evaluation criteria for alternative evaluation
- Develop and enhance PWSA's use and operation of Innovyze Info Asset Manager including training of existing staff.
- Organize system replacement and future CIP data for use in the alternative evaluation
- Coach and mentor PWSA staff using subject matter experts that can provide guidance on continuous AM program development
- The following strategic and tactical topics will be discussed with each of the groups listed above, as applicable, as part of the assessment:
 - Decision Making and Capital Planning
 - CIP Development and Prioritization
 - Design & Construction
 - Funding
 - Information Systems and Data Management
 - Data Systems Tools
 - Organizational Framework
 - Communications

- Risk Management
 - Operations and Maintenance
 - Inventory/Warehouse
 - Maintenance Strategy
 - Operations Strategy
 - Optimization
 - Culture and Change Management
 - Document Management
 - Leadership and Commitment
 - Levels of Service and Performance Evaluation
 - Resource Management
- This task is intended to establish a program that PWSA can run independently. **Ongoing support beyond the budget for this task can be provided to support activities as an additional service.**

Deliverables:

Information Request, copies of meeting materials, draft and final AM program charter, AM training materials, AM gap analysis, AM roadmap and supporting materials developed as part of implementation activities.

1.2.4 Compliance Review of Selected Sewer Improvement Projects

PWSA has identified two (2) sewer improvements projects (Browns Hill Road Pump Station and 31st Ward Sewer System) that PWSA plans to procure outside consultants and start work 12 months from the NTP of this contract. **PWSA will maintain a project manager to provide administrative oversight of outside consultant activities.**

In general, our activities will include:

- Reviewing and providing input on outside design sewer consultant RFPs.
- Conducting 30%, 60%, and 90% compliance reviews to assess ability of the proposed design to meet regulatory requirements.
- Coordination meetings to discuss reviews and responses.

Deliverables: Technical Review Comments

Level of Effort Assumptions:

- **Attendance at up to 8 project meetings total among 2 projects**
- **Technical review of design discipline work and constructability reviews will be conducted by others.**

2. Data Gathering

2.1 Evaluate existing information and analyses

- Review wet weather-related studies in the region, such as the ALCOSAN Clean Water Plan, 2008 Feasibility Report, 2013 PWSA Feasibility Report, 2016 Citywide Green First Plan, Controlling the Source, RAND Climate Change study, PWSA's current Stormwater Master Planning initiative, and other documents that PWSA deems appropriate.
- Sections in an Existing Data Review TM will be prepared that summarize important findings and information relative to the current study effort.

Deliverables: Draft Existing Data Review TM Sections

2.2 Gather county, state and PWSA system information (sewer maps, inspection data, hydraulic overload problems, ACHD complaints)

2.2.1 Data Gap Analysis

- Relevant data that Allegheny County and State agencies may have will be requested and reviewed.
- PWSA will provide:
 - Existing GIS system database of existing sewer assets and any required sewer maps (critical information includes pipe diameters, lengths, invert elevations, and rim elevations).
 - Inspection and sewer back up complaint data
 - Information on known sewer hydraulic bottlenecks and surface flooding issues
 - Known areas of heavy inflow and infiltration, SSO and CSO locations
- Data relative to sewer and street flooding will be requested from ACHD and information provided reviewed and incorporated into the project GIS database.
- Additional existing collector sewer system information and reporting data will be reviewed. The Existing Data Review TM will be updated with the findings from other tasks. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- A Data Gap Analysis TM will be prepared that summarizes additional data collection and field investigations needed to support the study along with a level of effort. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Existing Data Review TM; Draft and Final Data Gap Analysis Review TM

Level of Effort Assumption:

- **Assumes that the existing PWSA GIS database of sewer data is of sufficient accuracy to support the planning level activities**
- **Assumes approximately 200 staff hours/month for 6 months**

2.2.2 Determination of Critical Areas

- Complaint records provided by PWSA will be reviewed and screened to identify issues related to documented system problems. A map of complaint locations for sewer backups and street flooding will be developed.
- **A significant number of pipes covering the local systems is not included in the current PWSA hydraulic models. It is anticipated that inclusion of all the sewer elements would be a significant undertaking from a data collection, model upgrade and model run time perspective. Therefore, the base models will be expanded to focus only on critical areas that have experienced historically high levels of sewer back-ups and/or street flooding. All system pipes (storm and sanitary) will not be modeled.**

- A desktop hydraulic analysis will be conducted using the existing hydraulic models for sewers included in the PWSA system for a range of storm events to identify the capacity of the existing sewer lines. Major sewers (>18") not included in the model where adequate physical data is available will also be checked for capacity using existing GIS data (topo, manhole depths); standard pipe capacity calculations; and compared to modeled peak flows adjusted on an area weighted basis. The locations of known complaints will be compared to the capacity check to identify likely areas of concern.
- "Critical portions" of the PWSA system will be identified. "Critical portions" include pump stations, trunk sewers, points of overflow activity, basement back-up areas, surface flooding, or areas of excessive infiltration and inflow (I/I). At the time of this scope preparation, the number of critical areas is unknown. **For the purposes of this task, it is assumed that 20 to 30 sewer backup and 6 to 10 stormwater flooding subsheds will be identified for further analysis.**

Deliverables: Draft and Final Critical Areas Definition TM

2.3 Investigate PWSA sewer system

2.3.1 Stream Inflow and Acid Mine Drainage (AMD) Map

- Identify and locate any stream inflow sources and acid mine drainage discharges along the critical portions of the PWSA sewer system using **existing data sources**. The potential sewersheds for stream inflow sources will be identified from the past and pending regional flow monitoring work, and PWSA input.

Deliverables: Draft and Final Stream Inflow and AMD Map

Level of Effort Assumptions:

- **No field work such as stream walks, sampling, or other investigation will be conducted.**

2.3.2 Field Data Collection Allowance

- Upon approval from PWSA, work to conduct additional field data collection activities identified with Task 2.3.1 will be conducted within the available budget included within the field allowance. Field data will be entered into the appropriate asset management databases. Additional field collection efforts shall be conducted as an additional service.
- The proposed field data allowance was developed based on an assumption of 400 days of field survey intended to collect data on approximately 8,000 structures (based on 20 structures/10 hr-day @\$2,200/day including survey and post processing). This data includes limited spot checks of approximately 10% of existing modeled areas and assumes data can be collected from the surface without the need for confined space entry or significant traffic control procedures. **No LIDAR, detailed topographic and surveys on private property or within homes for purposes of determination of basement inverts or first floor elevations**

- A summary of the data collected will be provided in a draft and final Field Data Collection Summary Technical Memorandum.

Deliverables: Draft and Final Field Data Collection Summary TM, Field notes and database

2.4 Coordinate on System Improvements and Technical Alternatives with Others

- Request and coordinate with ALCOSAN/municipalities to obtain information on proposed system improvements for use in study work. This includes information on proposed tunnels and consolidation sewers, CSO regulator, pumping, storage tanks, RTBs, Green Infrastructure, Source Control, WWTP and other improvements that can impact overflows in the PWSA collection system.
- A review will also be conducted of major development and PWSA projects (that would have an impact on planning efforts) to determine which should be advanced into the model. It is assumed that PWSA will provide the hydraulic, as-built and/or survey data relative to these improvement projects. **Assumed no more than 10 sewer improvement projects will be included.**
- A summary of the proposed major improvements that will be included in a Baseline Model to evaluate additional alternatives will be documented in a System Inventory TM. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Planned ALCOSAN, PWSA and upstream/downstream municipal improvements will be considered in related modeling and cost analysis in subsequent tasks.
- Ongoing coordination with ALCOSAN throughout the project will also be tracked under this item.

Deliverables: Draft and Final System Inventory TM

Level of Effort Assumption:

- **Assumes up to a total of 60 meetings with representatives of ALCOSAN, Point of Connection (POC) Groups with municipal officials, and 3 Rivers Wet Weather**
- **Assume no new Clean Water Plan design changes**

2.5 Determine regulatory permitting requirements for conveyance and storage

- We will participate in meetings with DEP to establish or confirm the regulatory permitting requirements and related design standards and control approach to be used in the sizing, performance, and layout of facilities to be proposed, designed, or built as part of PWSA's wet weather planning program. **Assume up to 6 meetings for coordination.**
- To prepare for the discussions, a Draft Regulatory Permitting Requirements TM will be prepared that summarizes current criteria for sewers and facilities for PWSA and regional entities along with proposed criteria for facilities to be sized and designed under this program. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Regulatory Permitting Requirements TM

3. Develop and calibrate model(s)

3.1 Water Quality Sampling, Analysis Tool Development and Evaluations

3.1.1 Water Quality Data and Information Compilation, Review and Evaluation

- We will compile and review water quality data and related information for the receiving waters impacted by PWSA wet weather discharges and data on sources of pollutants. This will include:
 - Data collected and provided by PWSA as well as publicly available data. We will also develop a request for data collected by ALCOSAN/3RWW. We will compile water quality data in Excel and/or Access for review and evaluation.
 - Information on the receiving streams, their watersheds/drainage areas, and available modeling for these streams and drainage areas.
 - Additional available data on precipitation, climate, and streamflow may be compiled to support the water quality assessments.
 - Listed impairments and available TMDLs for the receiving streams including pollutants and sources. Other available studies on the receiving streams will be compiled and reviewed.
- This scope of work is based on the understanding that the receiving waters that will be studied for this task are the receiving waters that receive discharges from PWSA-owned CSO outfalls that will not be controlled by the ALCOSAN tunnel construction; these include several Tributary Streams (Chartiers Creek, Nine Mile Run, Saw Mill Run, and Becks Run), and the Main Rivers (Ohio River, Monongahela River, Allegheny River). The primary focus of this task will be on the Tributary Streams, but a summary of the conditions of the Main Rivers within the PWSA service area will be included. We will conduct site visits of the Tributary Streams to assess existing conditions, sediment build-up, stream bank stability, flow restrictions, vegetative cover, and other potential characteristics. Photo documentation of the conditions will be collected.
- **Additional Main River Water quality or other data collection will not be conducted.**
- We will evaluate the available information to characterize existing conditions, spatial and temporal trends, dry versus precipitation event-driven conditions, comparison to water quality standards, and potential cause-effect linkages. We will also assess the ability of existing models to characterize water quality conditions and benefits of control alternatives.
- We will summarize the results of the data compilation, review and evaluation in a technical memorandum. The memorandum will include a data gap analysis including recommendations for additional data collection and model development activities, including cost estimates and potential refinements to the original budget estimates provided. We will submit one draft for review and comment. We will address comments and submit one revised draft for submittal to PWSA. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft Water Quality Existing Data Review TM

3.1.2 Sampling and Analysis

- We will prepare a Sampling and Analysis Plan (SAP) and a Quality Assurance Project Plan (QAPP) to guide the collection of water quality samples to support the characterization of the waterways and sources.
- One draft of the SAP and QAPP will be submitted to PWSA for review and comment. Following PWSA review and comments, we will revise the SAP and QAPP for submission to Pennsylvania Department of Environmental Protection (DEP) and/or the United States Environmental Protection Agency (EPA). Following DEP and EPA review and comment, we will prepare the final SAP and QAPP.
- Sampling activities will include training and orientation with our local, on call sampling team. This work will include site visits to discuss procedures and review sampling locations. This will also include coordination on scheduling of sampling events, tracking wet weather events, and making go/no-go decisions on sampling. We will also coordinate with the analytical laboratory to coordinate bottle shipments, sample deliveries, QA/QC data review, and reporting of results.
- For the purposes of this scope of work, the following assumptions have been made to inform the budgeting of this subtask. The scope and budget will be revisited following completion of the data review and evaluation work. Sampling is anticipated to be conducted between April and October 2022 for the following:
 - **6 locations (2 locations in each of Chartiers Creek, Nine Mile Run, and Becks Run)**
 - **72 total samples (3 baseline, 3 wet events – 3 samples each event for each location)**
 - **Parameters for field measurement: Temperature, pH, Dissolved oxygen, Conductivity**
 - **Base assumptions for parameters to be collected for laboratory analysis: E. coli, TSS, Ammonia, TKN, Nitrates + Nitrites, TP, Ortho**
- Following the initial review of the impairments and stream conditions, the need for additional parameters such as metals, and hardness will be assessed. We will review sampling field notes and laboratory reports following each round of sampling to identify problems or issues needing correction. We will coordinate with the sampling consultant and the laboratory to implement corrective actions.
- Two of the subject watersheds do not have USGS flow gages located on them. Additional flow and/or water level monitoring may be required in these watersheds as well. If needed, effort would be authorized separately.
- Following implementation of the sampling plan, we will perform a data validation review and prepare a memorandum documenting the review.
- We will prepare the project-specific SAP and QAPP, as stated earlier. We will update the water quality characterization with the new data. We will summarize the results of the sampling, analysis, data review, and updated characterization in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and

characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit one draft to PWSA. Following PWSA review and comment, we will prepare the final TM.

Deliverables: Draft and Final Water Quality SAP and QAPP TMs

3.1.3 Water Quality Model Updates

- We will update receiving water models to support the evaluation of water quality assessments. We will update model calibrations using the most recent data (April-October 2022) and will validate model performance. The anticipated receiving waters for modeling and the modeling frameworks are listed below:
 - Chartiers Creek, Nine Mile Run watershed/drainage area: PC-SWMM
 - Saw Mill Run watershed/drainage area: HSPF
 - Becks Run watershed/drainage area: no existing model
 - Main Rivers Model: RMA2 (hydrodynamics)/RMA4 (water quality)
- We will develop estimates of upstream flows and pollutant loads for the calibration period (April-October 2022) based on available data. We will develop meteorological inputs for the calibration period based on available data.
- Calibrations will be performed by applying best engineering judgement to make model calculations as representative of observations as possible. The models will be calibrated using both visual and numerical methods. This effort may employ regressions of observations vs. calculations, minimizing the squares of the residuals of observations vs. calculations, minimizing relative error, minimizing differences in observed vs. calculated means, and minimizing root mean square error, among other methods. For simulations having the appropriate temporal scale, published statistical measures of goodness-of-fit (e.g. percent difference, r^2 , PBIAS) will also be considered in evaluating the strength of the hydrology and water quality calibrations.
- Following calibration, the models will be validated using an independent data set to demonstrate that the model is capable of acceptably reproducing the timing and magnitude of observed data without further changes to the model parameters.
- We will summarize the results of the model updates and calibrations in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit a draft to PWSA for review. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Model Update TM

3.1.4 Water Quality Assessments of Benefits of Control Alternatives

- We will develop and apply the updated and calibrated models to support the assessment of existing conditions and the water quality benefits of control alternatives. We will develop the water quality models for the typical year. We will develop the following water quality model inputs for the simulation of existing conditions for the typical year:
 - Upstream boundary flows and pollutant loads
 - Meteorological inputs, and
 - Sources other than overflows.
- We will characterize water quality conditions for the typical year under existing and baseline conditions. We will assess the relative impact of pollutant sources with respect to attainment of water quality standards for those scenarios. We will prepare an interim technical memorandum documenting the characterization of existing and baseline conditions for the Tributary Watersheds.
- We will apply the water quality models to simulate the water quality benefits of control alternatives. **This scope of work assumes ten (10) separate simulations will be run to assess control alternative benefits.** These may include a combination of simplified control scenarios (for example 25%, 50%, 75%, and 100% reductions of overflows) and specific control alternatives with simulated reductions in overflows from the collection system model.
- For each control alternative simulated, we will evaluate the water quality benefit in terms of pollutant load reduction and improvement in ambient water quality. Attainment of water quality standards will be assessed.
- We will also update the typical year simulation with the final recommended control plan and assess the water quality benefits.
- We will summarize the results of the water quality assessments in a technical memorandum. The memorandum will include discussion of the development of the typical year simulation, water quality characterization of the existing conditions, and water quality benefits of select control alternatives and the final recommended control plan. We will submit one draft to PWSA for review and comment. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Assessment TM

3.2 Monitor flow and conduct hydraulic modeling

3.2.1 Review existing flow data and models

- We will review flow data and models previously collected by PWSA and ALCOSAN to identify modeling and data needs to support the wet weather planning process. In general, this review will include locations, durations and quality of available flow monitoring data as well as determination of availability of models and the extent and quality of the calibration/verification of these models. **Up to 10 watershed models are assumed to be reviewed as a part of this effort.**

- An Existing Model Review TM will be created to document the available modeling sources and to identify data needs to expand or improve the models. This memo will also identify the various design storms, typical year precipitation, boundary conditions, and model scenarios (Existing, Baseline, Future, etc.) needed to support the project.
- **It is assumed that the starting model version for this project is the ALCOSAN Existing Conditions 2020 Model developed using SWMM version 5.1.012. This model includes a representation of the WWTP, deep and shallow cut interceptors, all diversion structures, combined sewer overflow outfalls and storm, combined and sanitary tributary areas. This model is anticipated to be expanded using historical and current modeling elements that have been developed under various PWSA efforts.**
- A summary of the available historical rainfall, stream level and flow monitoring data will be prepared and included in an Historical Flow Data Review TM. This TM will also document ongoing permanent precipitation, permanent flow meters, and stream gages that are available to support the work. **PWSA will provide available historical precipitation, stream and flow data.** Available data on high water flooding marks will also be summarized in this memo for critical stormwater flooding areas. **Field work to investigate or identify high water marks will not be collected.**
- During this process, we will develop a Model Data File Management procedure and implement to assist with model input and output file management. Procedures and Protocols will be summarized in a Model Data Management TM.

Deliverables: Draft and Final Existing Model Review TM; Draft and Final Historical Flow Data Review TM; Draft and Final Model Data Management TM

3.2.2 Develop a flow monitoring plan and collect flow data

- A detailed Flow Monitoring Plan TM will be developed to support the model expansion and system characterization effort guided by the approach outlined in this section. The Plan is expected to include proposed methods for flow monitoring in Critical Areas and I&I sewersheds with sections that cover, purpose and objectives, monitoring techniques and procedures, data management approach, QA/QC protocols, and maps of proposed deployment locations.
- **It is assumed that PWSA can provide all necessary radar-rainfall data needed to characterize precipitation in the service area.** The radar rainfall information will provide area-weighted rainfall hyetographs for each model subcatchment using existing regional permanent rain gauges. **To supplement this data, we will deploy up to 20 temporary project rain gauges for no more than 9 months.**
- We will deploy sewer system flow meters to screen and prioritize tributary areas to support expansion of the system hydraulic/hydrologic model (Calibration monitoring) and for further I/I investigations (micromonitoring).
- **To support model expansion into Critical Areas, up to 100 calibration meters (with a total installed duration of no more than 9 months) will be**

installed to provide information for model calibration in areas of known performance problems. Monitored subcatchments are planned to be between 20 and 75 acres in size.

- In support of Task 3.4, micromonitoring will be used to break down areas of roughly 100 acres or less for further I/I investigations. Up to 40 micrometers (with a total installed duration of no more than 3 months) will be deployed simultaneously for one or two significant rainfalls per location to determine tributary area I/I response. Areas showing significant response would then be targeted for further investigations. Areas showing little response would be screened from further consideration. Micromonitoring durations will be adjusted based on observed rainfall events.
- In support of Task 3.4, up to 40 calibration meters (with a total duration of no more than 6 months) will be installed to provide information for model calibration areas in sanitary areas. We will use the Task 3.4 prioritization information and preliminary micromonitoring to assist with calibration meter placement.
- It is assumed that flow monitoring will be conducted in the 2022 season between March and November. All data will be collected and stored in a database for use on the project.

Deliverables: Draft and Final Flow Monitoring Plan TM; Rain and Flow Monitoring Database

3.2.3 Expand and calibrate hydrologic and hydraulic model for use in planning

- The H&H hydraulic model will be extended up into the PWSA collection system to represent know problem areas with clusters of reported basement backup and areal flooding issues.
- Additional detail included in the historical version of the PWSA model included within Infoworks may also be added to the model to support this work along with significant known system changes. **Up to 400 staff hours for addition of existing detailed model elements such as major sewer projects or other detailed models has been assumed.**
- In Critical Areas with street flooding, the H&H model will also be expanded using dual drainage network techniques, to capture the movement and depth of overland flows along the street network. Depending upon the location of the problem area there may be a natural open channel also that will be included in the model. **Up to 2,500 model elements (channel segments and surface nodes) are assumed to be included in this model expansion within no more than 6 to 10 sub areas. It is assumed that existing topographic data is sufficient to characterize the street geometry.**
- With the hydraulic network expanded into the collection system, the lumped or consolidated hydrologic representation included in the current Existing Conditions model will also need to be discretized so that the generated flows can be distributed in the detailed expanded hydraulic network. This more detailed hydrologic representation will need to be calibrated using the collected flow and depth data. **Up to 4,500 model elements (sewer pipes**

and manhole junctions) are assumed to be included in this model expansion within no more than 20 to 30 sub areas.

- Revisions and expansions of the model will be documented in a Model Update TM.
- Sanitary areas within the H&H model will be calibrated to the data collected under Task 3.2. RTK parameters will be updated to reflect the findings of the new data collected.
- Targeted subarea calibration of areas tributary to up to 140 flow meter locations will be conducted based on the flow data collected under task 3.2. Continuous calibration/validation is anticipated to be conducted to compare metered vs. modeled predictions of flow, volume, depth and hydrograph shape. Industry standards for determination of acceptable calibration will be applied to determine the reasonableness of the calibrated parameters.
- A technical memorandum will be developed to summarize the results of the model calibration.
- A model review workshop will be held with PWSA to present the results of the calibration and discuss approval of the model for use on subsequent planning efforts.
- Upon approval of the model, files for various scenarios (Existing Conditions, Baseline Conditions (Near Term Projects that will be constructed) and Future Conditions (with Interim and Select Plans) will be developed to support the next stages of modeling. **Models will be run for up to five (5) design storm conditions to support level of service analysis.** Models will be run continuously for the Typical Year. Sensitivity scenarios for use in assessing the impacts of future climate change will also be run. Overflow statistics and level of service impacts will be quantified.

Deliverables: Draft and Final Model Update TM; Draft and Final Model Calibration TM; Model Support Files; Model Results Summaries

3.3 Perform level of service peer review and develop current level of service and range of alternatives for increasing level of service.

- A peer review will be conducted to identify the level of service of similar regional communities. Findings of the review will be summarized in a technical memorandum.
- Stress-test the current PWSA collection system to identify the current level of service provided and develop a level of service thematic map.
 - The primary level of service will be evaluated using the existing hydrologic and hydraulic model and the expansion into critical areas of observed sewer back-ups and street flooding will be used to assess collection system capacity for the interceptors and selected main line sewers.
 - A secondary level of service evaluation will be conducted on main sewers > 18" in diameter using a simplified method that compares pipe capacity to flows from the model that will be apportioned based on area. **It is assumed that existing GIS/sewer data provided by PWSA is sufficient for this purpose.**
 - A third evaluation will be conducted to assess "neighborhood" level of

service along a street within a city block. **Representative neighborhood areas (up to 6) will be selected and evaluated in detail to understand if general level of service deficiencies can be expected based on typical Pittsburgh sewer design practices.** Areas that have adequate existing data from either GIS or record drawings to support the assessment. **PWSA to provide detailed sewer drawings of the selected areas for use in this analysis.**

- **PWSA will determine what the level of service guiding principles will be used for stormwater under a separate contract**
- An alternatives analysis to determine the best approach to provide for increased levels of service will be conducted. In general, this is expected to include conveyance improvements that would include replacing existing storm or sewer piping to increase capacity and reduce water levels in the system and streets. The type, size and general location of improvements will be identified and included on maps to show the options.
- Provide a concept screening cost estimate (AACE Level 5) for bringing the current system up to the appropriate level of service for stormwater and sewer back-ups. Costs for increased conveyance systems to achieve higher capacities will be developed for various levels of service. **It is assumed that no more than two level of service scenarios will be costed.**
- Findings of the evaluation will be summarized in a technical memorandum.
- Determine how increased level of service impacts other wet weather planning objectives, including controls of CSOs and SSOs. A Typical Year simulation will be conducted to determine the results impacts on overflow statistics.
- Model base files for Level of Service Improvement Alternatives will developed to support the next stage of integrated planning evaluations.

Deliverables: Draft and Final Level of Service Peer Review TM; Draft and Final Level of Service Evaluation TM; Existing Level of Service Map

3.4 Develop a plan to identify significant areas of I/I and a strategic plan on how to prioritize locations to reduce I/I

- The PWSA system is essentially a combined system, but the upper reaches of the collection system have separate sewer areas.
- We will review and update on the approach to prioritize investigations previously by PWSA. Using data collected under other tasks, we will seek to identify sanitary areas without significant problems that would require no further investigation. Prioritization will occur at a relatively higher level and be refined as the project progresses. Early micromonitoring is proposed to help define the investigation prioritization.
- **Field work and subsequent data review for activities such as smoke testing, site assessments, manhole inspections, SSES investigations, dye testing, and CCTV inspection to support this task will be conducted by others or as an additional service.**
- PWSA will provide available data on effectiveness of historical projects in reducing I&I after improvements have been made.
- We will review the data collected and provided and use to identify areas subject to

elevated levels of I&I.

- By layering of existing GIS information, we will perform a Prioritization Analysis to produce a table and map with preliminary priority areas. We will review the proposed prioritization with PWSA to get input on the preliminary prioritization approach, the resulting priorities, and provide direction on any necessary adjustments.
- Based on the work, estimates of a range of potential I&I reductions (low, medium and high) for use in planning purposes will be developed for use with planning scenarios under Task 4.
- We will develop draft and final versions of an I&I Prioritization Approach TM, which will document criteria, data used, estimated effectiveness, and a priority list of areas. We will submit the draft TM to PWSA for review.

Deliverables: Draft and Final I&I Prioritization Approach TM

4. Identify and prioritize alternatives

The alternative evaluation is expected to be conducted at varying levels depending on the location and ownership. The most detailed efforts will be focused on outfalls solely owned by PWSA and jointly owned outfalls discharging to tributary streams (Level 1 and 2).

- Level 1 – 38 Outfalls solely owned by PWSA
- Level 2 – 33 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging into the Tributary Water Bodies

For these outfalls, it is assumed that up to 3 technologies will be evaluated for each outfall, costing to a Level 5, performance determined, and a recommended solution provided. Outfall solutions will either be combined or enhanced in up to 3 alternatives per basin.

A lesser detailed level of planning will be conducted for jointly owned outfalls discharging to the Main Rivers (Level 3 and 4).

- Level 3 – 116 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging to the Main Rivers
- Level 4 – 20 CSO Outfalls co-owned by PWSA/ALCOSAN, discharging to the Main Rivers and controlled by the planned Regional Tunnels

For these outfalls, it is assumed that up to 3 technologies will be evaluated for up to 10% of these outfalls, costing to a Level 5, performance determined, and a recommended solution provided. This is not intended to replace but to enhance or supplement the current ALCOSAN Clean Water Plan for these outfalls.

4.1 Identify and screen technical alternatives

- The goal of this task is to identify potential alternatives that will provide compliance with the goals of the wet weather planning process, taking into consideration the ability to adapt to future conditions.
- An Alternatives Brainstorm workshop will be held with PWSA to discuss potential approaches to controlling CSO and SSO in the PWSA service area. The

- workshop will include a review of the planned ALCOSAN improvements, previously planned control recommendations from PWSA efforts, various technologies and strategies that have been reviewed historically and any new or emerging technologies.
- We will review and assess potential **technologies** for controlling SSO and CSO in the PWSA service area. Optimization techniques will be applied to narrow the field of **solutions**.
 - A Technology Screening TM will be prepared that summarizes the potential technologies such as source control, green infrastructure, regulator modifications, storage and conveyance that conducts a high-level screening for applicability to the various areas and provides recommended **outfall solutions** to advance to the basinwide alternative evaluation stage. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - An integrated planning approach will be applied that considers **solutions** basinwide that meet both water quality and level of service requirements determined under Task 3.3.
 - An Alternatives Development TM will be prepared to summarize the alternatives that were considered in the evaluation for each outfall or groupings of outfalls. This TM will summarize basinwide alternatives and the recommended systemwide alternative. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - **Six (6) additional Alternatives Workshops with PWSA are planned to discuss the progress and findings from the Alternative Evaluations.**
 - The selected alternative based on the results of Task 4.6 will be further defined (<5% project definition). This work will include development of concept layouts and site investigations to further develop the concept and develop an opinion of cost that is consistent with a AACE Class 4 cost estimate.

Deliverables: Draft and Final Technology Screening TM; Draft and Final Alternatives Development TM

4.2 Identify and screen site development and buffer alternatives

- Initially, a Site Opportunity and Enhancements TM will be prepared to summarize the nature and location of potential opportunities. We will conduct a recommended screening to identify areas with a potential to support effective wet weather controls. A draft TM will be submitted to PWSA for review and comment.
- USEPA-defined Environmental Justice demographic indices will be included into screening evaluation. Sites for alternatives will consider the benefits and impacts to environmental justice communities within the PWSA service area. The potential for providing benefits to these communities through improved wet weather management will be considered along with the direct benefits and impacts of feasible technologies within these communities.
- Our team will meet with stakeholders to identify opportunities for siting of control alternative solutions at locations that may be mutually beneficial for redevelopment or community enhancements. **Up to 16 meetings with stakeholders have been included in the scope for this purpose.**
- For the final recommended alternative identified under Task 4.6, we will update the TM to discuss the potential solution and how it may be enhanced with site

improvements, community benefits, green leave behinds or other features that would create or maintain a beneficial relationship with the various City of Pittsburgh departments, authorities, and key stakeholders (including neighborhood organizations).

Deliverables: Draft, Revised, and Final Site Opportunity and Enhancements TM

Level of Effort Assumptions:

- **Assumes enhanced site evaluations will be prepared to better define project location and site conditions and refine the level of accuracy of the Cost estimate to support a AACE Level 4 cost estimate in conjunction with Task 4.3**
- **Does not include topographic survey, easement acquisition, property acquisition support services, geotechnical exploration, environmental site assessments, or subsurface utility exploration to be included with the site evaluations.**

4.3 Perform a present worth analysis of the feasible alternatives

- A cost tool that can provide estimates for various technologies at an **AACE Level 5** will be developed using unit pricing, engineering judgement and input from recent PWSA and regional projects for purposes of initial technology screening.
- A Costing Approach TM will be developed that summarizes the assumption, development and application of the cost methodology. **Two (2) meetings are included to discuss the approach and development of the tool with PWSA.** A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Costs will be developed for overall total project and lifecycle costs and include the following elements: Construction, Operating, Site surface development and restoration, Operation and maintenance requirements, Utilities and Land acquisition and rights-of-way. PWSA to provide input on administrative, legal and contingencies to be applied to the overall program cost development.
- Initial costs will be summarized and provided to PWSA for review. These will also be included in the Alternative Evaluation TM.
- Costs for budgeting for the selected alternatives for CSO and SSO improvements in the final Wet Weather Plan will be developed to an **AACE Level 4**. Additional effort to look at proposed projects and site constraints include the following:
 - Site visit
 - Develop project footprint layout using GIS and available lidar topography
 - Screening for property changes
 - Looking at local bidding data for potential cost escalation factors
 - Determine estimated quantities of facilities

Deliverables: Summary of Costs, Updates to the Draft Alternative Evaluation TM.

4.4 Perform a knee of the curve analysis of wet weather controls and water quality benefits

- An analysis comparing costs to performance metrics will developed to assess the

point of providing a value based recommended alternative. This analysis of the costs of varying CSO, SSO and stormwater control alternatives shall be in conformance with the CSO Control Policy and relevant guidance.

- Varying levels of optimization assistance tools will be used to evaluate alternatives to guide development of performance.
- Areas will be prioritized for optimization. Outfalls with planned improvements (by Others) or minor adjustments needed to meet criteria will not be optimized.
- **An optimization software license covering a 24-month period is included in the current budget. It is expected that advanced optimization will be applied to approximately 40 areas.**
- Performance curves will be included in the Alternative Evaluation TM.

Deliverables: Updates to the Draft Alternatives TM

4.5 Analyze financial affordability

- Coordinate with PWSA's financial rate consultant to determine the financial affordability of the proposed improvements to the PWSA system and forecasting the rate on ratepayers.
- Meetings will be held throughout the development of the wet weather plan to discuss progress, cost impacts, affordability considerations and impacts on required schedules for implementation. Two (2) initial workshops are planned to brainstorm the approaches and steps needed to incorporate the affordability analysis into the planning process.
- Based on discussions at the meeting, a work plan will be developed that will guide the steps needed to assess affordability in support of the Wet Weather Plan development. A draft plan will be submitted to the Rate Consultant and PWSA for review.
- All work related to affordability determination including data collection; rate evaluation; assessment of impacts of wet weather projects; level of service projects; ALCOSAN ongoing charges; PWSA ongoing water and sewer system charges; and other factors will be conducted by Others. PWSA will contract separately with Rate Consultant on these services.
- **Up to twelve (12) additional coordination meetings and two (2) workshops are planned to coordinate the work and discuss findings over the duration of the planning.**
- Rate consultant will provide input on initial affordability prior to the start of alternatives and run scenarios for varying levels of level service improvements and necessary stormwater, CSO and SSO control improvements at various stages of the plan development.
- We will review findings provided by Rate Consultant and summarize how the work will be incorporated into the planning and implementation of the WWP.

Deliverables: Draft and Final Affordability Work Plan TM; Draft and Final Affordability Findings TM.

4.6 Conduct non-monetary analysis of alternatives

- An Alternative Evaluation Approach TM will be prepared that summarizes the overall approach to selecting recommended alternatives. The TM will include a discussion on how to score within each non-monetary category, scoring and weighting approaches, and steps that will be taken to develop the scoring. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- The non-monetary criteria as provided by PWSA are expected to include:
 - Local planning impacts assessment
 - Environmental justice and community flood resiliency impacts
 - Floodplain impact assessment
 - Odor and noise control assessment
 - Preliminary environmental site assessment
 - Site surface restoration/development
 - Impacts of water quality improvements
 - Co-benefits of green infrastructure projects or other control alternatives
- Additional information such as advantages, disadvantages, risks, schedule impacts and other considerations will be identified as supporting information will be prepared for each alternative.
- **Up to three (3) workshops are expected to be needed to review the approach, conduct the scoring and share the results.**
- Information from Tasks 4.3 on costs would be combined with a summary of total benefits for each alternative to support development of a cost-benefit analysis.
- The results of the evaluation will be summarized in an Alternatives Scoring Technical Memorandum.

Deliverables: Draft and Final Alternative Evaluation Approach TM; Draft and Final Alternatives Scoring TM

4.7 Prepare a schedule for implementation of controls selected to address CSOs and SSOs

- An implementation schedule with appropriate milestones for design, bidding, construction, substantial completion and final completion will be prepared for the recommended projects in the Wet Weather Plan.
- The schedule will be adjusted based on input with regards to affordability and cashflow constraints provided under Task 4.5.

Deliverables: Draft and Final Implementation Schedule

5. Stakeholder coordination and presentations

We will take the lead on developing and participating in a public participation program. **PWSA will provide stormwater messaging developed to date and any foundational information. PWSA staff will be lead presenters during community meetings but would rely on Wade Trim to develop materials and set up meetings.**

We will work with PWSA in preparing an overall public participation plan and public outreach protocol that meets the requirements contained EPA CSO planning and DEP Act 537 guidance documents.

Our goal is to work collaboratively with the project team and PWSA to develop and implement a plan that prioritizes clear, consistent, transparent, and equitable communication with the public and stakeholders to generate consensus. We intend to include specific outreach to identified environmental justice communities to develop relationships with community leaders in those areas and encourage their availability, participation and engagement in meetings.

5.1 Develop Public Engagement Plan (PEP)

- In support of PWSA's existing public outreach efforts, we will work to coordinate and communicate with internal and external stakeholders. We will work with PWSA to create an engagement plan that centers around multiple working group meetings, stakeholder inclusion, agency communication and public information and input held throughout the duration of this process. The goal of the plan is to generate buy in, which can be better achieved by engaging stakeholders throughout the process, collecting input and feedback, and incorporating that feedback.
- **Two meetings will be held with PWSA public relations staff to support development of the plan.** An initial brainstorming session and a follow up meeting to discuss the draft PEP. Ongoing coordination on public relations topics will be covered under the regular PWSA progress meetings.
- A plan will be developed that includes a summary of program and objectives, messaging, identification of stakeholder groups, definition of target audiences, communications approaches, communication tools, implementation steps, and timelines. The Draft Public Engagement Plan will be submitted to PWSA, and comments incorporated into the Final Plan.

Deliverables: Draft and Final Public Engagement Plan

Level of Effort Assumptions:

- **Develop Public Engagement Plan assumes a detailed outline, 2 draft and 1 final version for Wade-Trim and PWSA review and approval. Includes the development and refinement of the comprehensive stakeholder engagement list.**
- **Project Coordination / Management – assumes up to 2 coordination meetings a month and 4 hours of project management/coordination with Wade Trim / PWSA for 36 months.**
- **Documentation – assumes 8 hours per month for document control, project controls and documentation of events.**

5.2 Program Messaging and Branding

This item has been removed from the scope.

5.3 Online Public Engagement

- Online engagement is an important method of communication with the general public about the Wet Weather Program. The goals of online engagement are to

increase the ability to reach a more diverse audience, generate more informed participation, invite a broader range of input, and set the stage for sustained participation. PWSA already has an online presence, and this plan will build upon those existing relationships/followers/contacts.

- A Wet Weather Program webpage will be created to serve as a resource for people to access information, share the plan schedule, see a summary of planning activities, make note of engagement opportunities, review background information (Including relevant maps and data), make connections to social media pages, locate project contact information, subscribe to a mailing (contact) list, and access a comment form.
- Our team will develop a proposed outline of online content to consider for a website approach and submit to PWSA for review and discussion.

Deliverables: Web Site and Social Media Pages and Updates

Level of Effort Assumptions:

- **PWSA will host and manage online content via their existing website**
- **Updates to the website are expected to occur on a quarterly basis, assumes 12 hours per quarter of support**

5.4 In-Person Public Engagement

- Public meetings will be used to inform the public of the planning process and to solicit ideas, input and feedback. This will be an opportunity to promote transparency and foster two-way communication with the public. Public meetings will be held at multiple locations throughout the city. We intend to host a proportional amount of in-person meetings within environmental justice communities to promote engagement within these communities and consider the specific needs in these communities relative to wet weather management.
- Meeting times will vary to maximize the number of attendees that will be available. The public will be encouraged to ask questions and voice their ideas and opinions about the program activities. Our plan for a series of meetings is presented below:

Year 1 - Goals and Initial Community Input

The first series of public workshops will be formatted as a city-wide Listening Series as an interactive, hands-on opportunity to create program awareness, present background on the system and known problem areas, gain an understanding of community priorities, values and concerns. **Four (4) interactive, workshop-style sessions will be conducted** and geographically distributed through the service area – to encourage diverse participation. These meetings would occur early in the planning process.

Year 2 - Review of CSO Technologies, Solutions and the Alternatives Process

The second series of public workshops will be formatted as traditional public meetings. The purpose of this series of meetings will be to present and/or demonstrate potential control strategies, discuss water quality assessments and provide an overview of the alternative evaluation process. **Four (4) meetings will be held.**

Year 3 – Wet Weather Plan Recommendations

The third and final public workshop series will be formal public meetings to present the draft Wet Weather Plan. This will be the final opportunity to provide an overview of the draft WWP, to discuss issues, processes and decisions leading to the plan, and to record formal comments that will be considered when finalizing the Wet Weather Plan. **Four (4) meetings will be held.**

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **20 hours/month for coordination and responding to questions from the public**

5.5 Stakeholder Advisory Group

- An existing PWSA Stormwater Advisory Group (SAG) that has provided input on the PWSA stormwater fee will be convened to introduce them to the Wet Weather Program goals and objectives. This group will be expected to share information about how to get involved in, provide input on, and stay up to date with the planning process with the organizations/stakeholder groups they represent. We intend to work with this group to discuss issues of environmental justice and solicit input for how the Wet Weather Program will evaluate environmental justice.
- This advisory group will meet at key decision points throughout the process (**up to 6 meetings**). Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation and prepare summaries of the discussions.
- In between meetings, representatives of these groups will receive regular updates through email and will be empowered to help the program team in its outreach efforts by sending information about engagement opportunities to their respective memberships, communities, networks, and employees.

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **Assumes 4 hours/month monthly coordination and responding to inquiries from SAG.**

5.6 Municipalities/POC Outreach

- Meetings with the existing Saw Mill Run Group and various POC municipality representatives would be convened to discuss issues specific to the municipalities. These meetings will be used to share information about known issues, planned improvements, alternative technologies, and other related matters. **We have assumed up to 24 meetings** with stakeholders in this category over the duration of the program. Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation, and prepare summaries of the discussions.

Deliverables: Agendas, Presentations and Meeting Summaries

6. Provide Wet Weather and Act 537 Plans

6.1 Wet Weather Plan (Long Term Control Plan)

- A Wet Weather Plan document will be developed that includes sections on Introduction, Background, Purpose, Public Engagement and Participation, System Characterization of Current Conditions, Control Approach, Control Technologies and Screening, Development and Evaluation of Alternatives, Financial Capability, Recommendations, Selection and Implementation Schedule, and Post Construction Compliance Monitoring Plan.
- A draft Wet Weather Plan will be submitted to PWSA for review and comment prior to submittal of a final Report.
- Following PWSA review, comment, resolution of comments and approval of the draft Wet Weather Plan, we will facilitate preparation of the plan for submitting to the agencies for review and approval.
- Following agency review, comment, resolution of comments and approval of the plan, a revised final plan will be submitted.

Deliverables: Draft, Final and Revised Wet Weather Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of Plan
- Assume preparation of up to 100 comment responses received on the Plan

6.2 Act 537 Plan

- An Act 537 Plan document will be developed in accordance with the Act 537 Plan Content and Environmental Checklist and will include sections on previous wastewater planning, physical and demographic analysis and mapping, identification of existing sewage facilities and needs, projections of future growth and land development, identification of alternatives, evaluation of alternatives, institutional evaluation, justification and implementation schedule for selected alternatives (technical and institutional) and an environmental report. The Wet Weather Plan will also be used extensively to form the basis of the Act 537 Plan.
- A draft Act 537 Plan will be submitted for PWSA comments.
- Following PWSA review, comment, resolution of comments and approval of the draft 537 Plan, we will facilitate preparation of the plan for submitting to the City of Pittsburgh under Task 6.3 for review and approval.
- Following approval by the City of Pittsburgh, we will submit for agency review, comment, resolution of comments and approval of the plan. A revised final plan will be submitted.

Deliverables: Draft, Final and Revised Act 537 Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of 537 Plan
- Assume preparation of up to 100 comment responses received on the 537 Plan

6.3 City of Pittsburgh Coordination

- Prior to submittal to the agencies, the Act 537 plan will require a signed and sealed Resolution of Adoption from the City of Pittsburgh. We will assist in the preparation of the appropriate submittals, response to comments and consistency documentation that the appropriate agencies have received, review and concurred with the Act 537 plan throughout the entire process.
- Following PWSA approval of the draft Act 537 Plan, the plan will be submitted to City of Pittsburgh and Allegheny County Planning Commissions for consistency review and comment.
- The Act 537 plan is also required to be posted publicly for a 30-day comment period, with proof of the publication, copies of all comments with responses in each comment included in the final submittal to the agencies.

Deliverables: Public Notice

Level of Effort Assumptions:

- Assume 3 coordination meetings with City of Pittsburgh Officials
- Assume preparation of up to 100 comment responses received on the 537 Plan

7. Develop an environmental impact assessment of recommended Wet Weather Plan

- Once conceptual level wet weather plan facilities have been identified, we will conduct a more detailed environmental review in the form of an Environmental Impact Assessment which further evaluates the community impacts identified during the alternative's evaluation. This assessment will serve as the Uniform Environmental Review.
- A report will be proposed that follows the format laid out in PADEP's Technical Guidance Document 381- 5511-11. The report will discuss the environmental consequences and potential mitigation of the proposed facilities for land use, recreational use of land and streams, water and air quality, noise, odor, vehicular and pedestrian traffic, socio-economic issues, miscellaneous environmental considerations, as well as aesthetic and property impact for use in the Act 537 Plan.
- A draft Report will be submitted for PWSA comments.
- **The number of projects to be evaluated has yet to be defined through the wet weather planning work. For this reason, a total of no more than 20 projects has been assumed that will require assessment.**

Deliverables: Draft and Final Environmental Impact Assessment Report.

8. 3rd Party Assessment of Sewer Assets

- Regionalization involves the voluntary transfer selected municipal sewers and sewer facilities in the service area over to ALCOSAN. This is intended to reduce the financial burden on PWSA and allow ALCOSAN to more directly manage and reduce excess flows into the system. **This will be accomplished by ALCOSAN assuming ownership and maintenance of approximately 60 miles of large, multi-municipal trunk sewers and associated facilities (upstream diversion structures).**

- The purpose of this task will be to review PWSA sewer assets that are proposed to be transferred to ALCOSAN via the regionalization initiative. We will review the assets and provide documentation needed to support transfer.
- This is a study and does not include regionalization negotiation support for the ALCOSAN agreement.
- A Draft PWSA Assets Review TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final Assets Review TM; Applicable support documents.

9. Post Construction Evaluation of GI Effectiveness

- We will evaluate the performance of up to **fifteen (15) Green Infrastructure projects** in various states of design and construction that are being constructed with the intent to reduce stormwater inflow to the sewer system. To support estimates of effectiveness of these projects and potential future similar projects, post construction monitoring of the performance of these projects will need to be conducted.
- **Our team will install flow monitors at up to 30 locations for a period of 8 months to collect on performance.**
- **Data from the 3RWW rain gauge network data and up to 6 site specific rain gauges will be used to document precipitation.**
- **PWSA will provide design reports, modeling and plans produced by others along with historical rainfall and flow data collected prior to the start of the projects for use in comparisons.** Post construction data collected on other projects and any related reports will also be provided.
- We will compare the data and provided an evaluation of the resulting effectiveness of the various projects. A Draft GI Project Effectiveness TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final GI Flow Monitoring Plan; Draft and Final GI Project Effectiveness TM

GENERAL ASSUMPTIONS

- All deliverables will be provided electronically
- PWSA will provide comments on most deliverables within 14 calendar days; Task 6 deliverable comments will be provided within 30 calendar days
- Comments will be provided by PWSA electronically using document control software
- Meeting duration assumed to be typically 1 to 2 hrs (50% virtual; 50% in person)
- Workshop duration assumed to be typically 4 to 8 hrs (In person)

SCHEDULE

- The project is expected to cover a three-year period with the potential for up to three one (1) year extensions. Extensions of the schedule may impact level of effort.
- The tasks and their general anticipated duration are provided below:

Task	Anticipated Duration
Task 1	36 Months
Task 2	18 Months
Task 3	30 Months
Task 4	18 Months
Task 5	36 Months
Task 6	12 Months
Task 7	12 Months
Task 8	9 Months
Task 9	12 Months

PWSA TASK ORDER/AMENDMENT EXHIBIT C INSTRUCTIONS

**An additional Exhibit C or D may be used if space provided is not sufficient.*

General Instructions

1. **DEFINITION:** A task is a type of service that will be performed in a Task Order or Amendment, for example, it might be Design Engineering, or Construction Management, or Field Inspection. A project budget may contain individual budgets for each type of service. A Task Order or Amendment may provide for one or more type(s) of service. When preparing this Exhibit C, make sure that each type of service is separately annotated, and that the cost of labor and expenses for each type of task (budget code) is distinctly represented. PWSA's goal is to individually track the cost of each type of task or service. Should the amount of staff needed exceed the total number of columns, you may provide an additional completed template for each Exhibit. Just be sure your TO/Amendment Total Fee matches as an accumulative value.
2. See the Budget Codes tab for an explanation of where a Task type should be applied in this Exhibit.
3. Use these Exhibit forms as is. **Do not attempt** to alter them. **If they are altered they will be rejected.** If a change should be considered, discuss with your PWSA point of contact.
4. **Be sure** that all labor rates used in these forms are consistent with the rates used in the Master Services Agreement.

Exhibit C.1

Purpose: Exhibit C.1 identifies the Consultant's staff members who will contribute to each Task type to be provided, their MSA classification, their Task Order role, their anticipated labor hours, and their labor costs.

1. The Consultant's Scope of Services must be defined according to the distinct tasks that apply to a project budget code. The cost to perform each Task must be captured on this Exhibit.
2. On Row 45, enter each Consultant staff member name in a different column.
3. On Row 46, enter each Consultant Staff member's Master Service Agreement classification in a different column.
4. On Row 47, enter each Consultant Staff member's Task Order role in a different column.
5. Enter the hours each staff person will contribute to each task in the rows below each staff person's name. **If it doesn't apply, leave row blank.**
6. Enter the Subconsultant markup as an integer or decimal number (field is coded as a percentage). The spreadsheet will calculate the Total Hours and Total Labor Cost for the Consultant.

Exhibit C.2

Purpose: Exhibit C.2 captures the Consultant's anticipated expenses. Note that there is a table section for each Task type (budget code).

1. Exhibit C.1 will auto-populate each staff person's name in the appropriate row.
2. In Column B enter the type of expense that will be invoiced, e.g. mileage, hotel, auto rental. These fields are editable.
3. The spreadsheet will calculate the total costs by person and by task.
4. Repeat 1 - 3 for each Task type.

Exhibit C.3

Purpose: This table captures the Sub Consultants' anticipated costs and MBE/WBE/VBE/SDVBE classification. Note that the entries in this table are all inclusive of both labor and expenses.

The details of this data must be reflected in the required attached Sub Consultants' proposals.

1. Enter the name of each Sub Consultant firm in the Columns of the table.
2. Enter the cost **by task** of each Sub Consultant firm.
3. The spreadsheet will calculate the total costs by Sub Consultant and by Task.

Exhibit C.4

Purpose: In this Exhibit C.4, the Consultant should enter into lines 4, 5, and 6, as needed, any stipulations PWSA should consider about the Task Order or Amendment proposed budget.

Note that items 1, 2, and 3 are required by PWSA, and cannot be changed.

Exhibit C.4: ASSUMPTIONS

LIST OF ASSUMPTIONS RELATED TO BUDGET AND EXPENSES - List any conditions the Consultant places on the Budget and Expenses indicated above.

1	Consultant shall notify the Authority's Representative when expenditures based upon the billing of this Task Order reaches 50, 75 and 90% of the total budget, and an estimate of the time and funds necessary to complete the work. If additional funds are requested and not authorized in writing by the Authority's Representative, the Consultant shall reduce the scope of work to complete within the funds available.
2	In no event shall the Consultant's total billings for the services performed under this Task Order exceed the approved Fee amount without the Authority's written authorization and notice that it has approved an increase in the budget limit and funds available.
3	Should a key or non-key staff person not listed on an approved Task Order get assigned to the task, an Action Item to the project manager will suffice to acknowledge the change without an increase to the overall total fee. This MUST be done within 30 days of the assignment, preferably before PWSA receives the invoice for the time in which work was performed. Project Managers have the right to reject or accept the assignment of a staff person with proper justification. The consultant has the right to appeal that decision to the Director of Engineering and Construction.

Task Order No. WT-PRGM-15

Task Order Name: Evaluation of GSI Effectiveness for Wet Weather Program Manager Project

This Task Order Amendment is made as of the Effective Date, by and between **The Pittsburgh Water and Sewer Authority** (the “Authority”) and **Wade Trim, Inc. (Ops)**, (“the Consultant”).

Consultant Firm: Wade Trim, Inc. (Ops)

Contract Name: Wet Weather Program

Agreement between the Authority and the Consultant dated 11.01.2021

Prior Task Order/Amendments Applicable to this Task: N/A

The schedule for the completion of the Services under this Task Order is incorporated herein. The details of the schedule are as follows or as detailed in the separate schedule, attached as Exhibit B. The time limits established by the schedule shall not be exceeded without reasonable cause. The schedule may be amended with the Authority’s written consent as the Task proceeds.

Start Date:	11.01.2021
Completion Date:	10.31.2024

The Authority’s budget is attached hereto as Exhibit C and incorporated herein.

Where the Fee is based on Agreement rates, the Fee may not exceed the budgeted amount. The budget may be amended with the Authority’s written consent.

Fee:	\$507000.00				
MBE:	15%	WBE:	0%	SDVBE:	%

A detailed Scope is attached hereto as Exhibit A and incorporated herein.

Exhibit A: Scope of Services

Project Manager:

Ana Flores

Date Approved:

11.09.2021

PITTSBURGH WATER AND SEWER AUTHORITY
WET WEATHER PROGRAM MANAGER
PWSA PROJECT NO. 2021-OPS-116-0
FINAL SCOPE OF SERVICES

PROJECT OBJECTIVES

The specific objectives of the Wet Weather Program Manager are as follows:

- Assist in developing PWSA's Long Term Control Plan (LTCP) for the control of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) remediation plan, which will comprise a Wet Weather Plan or one or more similar documents. Provide program management services, advise, and consult with PWSA, its engineering staff, and its legal counsel (including translating technical information into a form useable by counsel) in the negotiation of a consent decree with the United States and Pennsylvania Department of Environmental Protection (DEP) addressing, among other things, the control of CSOs and remediation of SSOs from PWSA's sewer system (a Wet Weather Decree).
- Develop plans for improvements of PWSA sewer system facilities to bring combined sewer overflows into compliance with the CSO Control Policy and to remediate SSOs.
- Perform a level of service peer review and identify the current stormwater level of service the current PWSA system provides.
- Develop a range of alternatives to provide control and management of stormwater and manage basement backups and overland flooding to an appropriate, affordable level of service.
- Assist PWSA and its legal counsel in the coordination of planning, regulatory obligations, and capital improvements with upstream and downstream municipalities and ALCOSAN, where applicable.
- Conduct evaluations to account for the impact of projects implemented under ALCOSAN's consent decree and regionalization program on PWSA's development of CSO and SSO controls, and vice versa.
- Perform engineering and public participation activities in support of the development of a Wet Weather Plan, and obligations arising under municipal orders, enforcement orders, and any Wet Weather Decree entered into by PWSA.
- Develop analyses to assist PWSA's legal counsel in its addressing regulatory and legal issues associated with wet weather planning, including resolution of related enforcement actions.

SUMMARY OF WET WEATHER PLANNING TASKS

Program management services include oversight and coordination of the following activities in support of the development of a Wet Weather Plan or similar planning documents, consisting of a LTCP to control CSOs and a plan to remediate SSOs (collectively, a Wet Weather Plan in connection with the above negotiations), and plans to provide effective stormwater management. The wet weather planning work typically includes those engineering activities required to produce plans and other deliverables to be submitted to regulatory agencies, including the DEP, the Allegheny County Health Department (ACHD), United States Department of Justice,

(DOJ), and the United States Environmental Protection Agency (EPA). Many of the tasks will require familiarity with and the use of guidance documents issued by EPA and DEP. The production of interim work products and the Wet Weather Plan will be in support of negotiating a consent decree, assisting PWSA in complying with the requirements of the Wet Weather Decree and other regulatory requirements arising under the Pennsylvania Clean Streams Law and the federal Clean Water Act (CWA).

The following is a list of the tasks to be performed by the Wet Weather Program Manager.

- Task 1 - Program Management Services
 - Support the negotiation and the development of a consent decree and development of a Wet Weather Plan
 - Provide on-call engineering services
- Task 2 - Data Gathering
 - Review and determine DEP Act 537 Plan update requirements and permitting requirements for conveyance, storage and treatment
 - Review EPA guidance documents relating to CSO and SSO control
 - Review CSO/SSO consent decrees entered by other municipalities, as well as LTCPs and SSO elimination plans developed by other municipalities
 - Map with GIS, delineate and collect field survey data within planning basins.
 - Investigate sewer system and develop a system characterization study for PWSA's combined and sanitary sewer systems
 - Conduct site investigation
 - Evaluate the impact of CSOs on receiving waters
- Task 3 - Model Development and Calibration
 - Monitor flow and hydraulic conditions to inform system characterization and the selection of CSO and SSO controls
 - Develop a hydraulic and hydrologic model for PWSA's combined and sanitary sewers that reflects prior modeling information and additional monitoring data
 - Perform level of service peer review and develop current level of service thematic map
- Task 4 - Alternative identification and prioritization
 - Develop an alternative analysis for the control of CSOs and SSOs, including the development of cost-performance curves to assist in analysis
 - Develop an implementation schedule for CSO and SSO controls informed by and coordinated with a financial impact and affordability analysis
 - Identify CSO and SSO control technical alternatives
- Task 5 - Stakeholder Coordination
 - Coordinate wet weather planning and program development efforts with ALCOSAN and other municipalities in the Pittsburgh Region
 - Coordinate wet weather planning and program development efforts with community outreach and stakeholder engagement initiatives
 - Develop public participation program to inform wet weather planning and program development efforts

- Public participation program
- Task 6 - Final Act 537 Plan and Wet Weather Plan/LTCP and Recommendations
- Task 7 - Conduct environmental impact assessments of projects
- Task 8 – 3rd Party Assessment of Sewer Assets
- Task 9 – Post Construction Evaluation of GI Effectiveness

DETAIL OF WET WEATHER PLANNING TASKS

1. Program Management Services

1.1 Program Management

1.1.1 *General*

- Provide program management services that include oversight and coordination of activities in support of the development of a LTCP to control CSOs and a plan to remediate SSOs.
- A Program Management Plan will be prepared that summarizes the procedures that will be used to manage the program. Our PMP will include Program Scope & Goals, Program Constraints, Program Performance Metrics, Program Organization, Project Controls, Safety, Quality Assurance, Communication Protocols, Environmental & Permits Compliance and Risk Management. A draft Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.
- Ongoing management, coordination with PWSA and team members, communications, and project management activities will be conducted to manage the work.
- Ongoing document management will be conducted to facilitate file sharing between PWSA and our team.
- Develop and manage program schedules. An overall baseline schedule will be developed and updated monthly to reflect the progress of the work.
- Manage quality assurance/quality control of programs. A QA/QC plan will be developed and documented in the PMP. Quality reviews will be documented and conducted on all deliverables.
- Prepare and present periodic status program and project reviews, including establishing formal and informal milestones and performance metrics. Performance metrics will be developed and documented in the PMP. Monthly progress reports that include a summary of work activities completed during the previous period, planned activities for the next period, and critical action items will be prepared and submitted to PWSA as part of our monthly invoicing.
- Conduct meetings with PWSA, its engineering staff, and its legal counsel as needed to discuss the progress of the project and review key deliverables. These meetings may include a project kickoff meeting, as well as meetings with the executive PWSA team to present an executive summary of the progress of the project and key decisions needed to be made. Agendas and presentation materials will be prepared. Meeting summaries will be submitted following the meetings. **A total of 72 progress meetings, 12 miscellaneous meetings and 6 executive sessions have been assumed.**

- Provide planning-level risk management in accordance with industry standards and guidelines. A risk management plan will be prepared and included within the PMP. An initial risk development workshop will be held to review and provide input on the plan and risk register. The risk register will be updated on a quarterly basis and discussed within the regular progress meetings.

Deliverables: Draft and Final Project Management Plan; Meeting Agendas, Presentations and Summaries; Monthly Progress Reports, Schedule and Invoicing; Risk Registers

1.1.2 Regulatory Support

- The purpose of this task will be to advise and consult with PWSA, its engineering staff, and its legal counsel in the negotiation of a consent decree. Meetings will be held to prepare for EPA meetings, discuss matters with EPA and debrief on follow-up items. Agendas, technical work, presentation materials, and meeting summaries will be developed for all meetings.
- **A total of 108 meetings have been assumed over a 36-month period at an average level of effort of 16 hours/meeting for regulatory team preparation and attendance and 100 hours/month for technical support time to develop content, review, documents, and address questions from EPA or others.**
- The purpose of this task is to establish compliance priorities and to provide support to PWSA in the ongoing discussions with US EPA and PA DEP to work towards acceptance of required compliance deliverables, an LTCP 1080+ approach as it is developed. We will provide technical support and guidance for the ongoing negotiations with USEPA and PA DEP under this task by helping to gain regulatory acceptance for PWSA's compliance strategy.
- The goal of this task will be to define strategies to develop the various work approaches, programs, descriptions for capital projects, capital costs/benefits, and schedule implications for presentation to regulatory agencies. We will also review and evaluate any deliverables or documents submitted to US EPA, PA DEP and others as directed that may have impact on the CSO update / Integrated Plan and schedules.
- This task will be managed on a time and material basis as directed by the PWSA and working in conjunction with the legal and rate consulting teams to develop specific products to support regulatory discussion.
- The focus of this task will center on meetings and staff work on development of documents to support the negotiation process and work to gain acceptance for compliance documentation. Much of the work will be driven by evaluation of existing compliance documents, development of PWSA LTCP goals and guiding deliverables to build a case for technical acceptance by US EPA and PA DEP.

Deliverables: Meeting Agendas, Presentations and Summaries; Various correspondence needed to support ongoing discussions

1.1.3 Other Services

A. CMOM Program

The purpose of this task is to develop and document a Capacity, Management, Operation and Maintenance (CMOM) program. We will review existing information on CMOM activities, meet with PWSA to understand the program and develop a recommended plan for PWSA.

PWSA's Capacity, Management, Operations and Maintenance (CMOM) Program forms the foundation for PWSA to meet its customer service demands, sustain infrastructure performance, comply with regulatory requirements, and manage its resources. The objectives of this task are:

- Compile PWSA's current CMOM documentation and assess the program components against industry best practices, PWSA's organizational goals, and applicable regulatory requirements
- Develop a set of priority improvements to address potential gaps identified in the assessment
- Establish a Program Document that, when implemented, provides a proactive defense from regulatory enforcement action and leads to improved system performance and cost savings.

CMOM assessment will benchmark PWSA's current program against likely EPA Region 3 expectations, regulatory precedence, and utility best practices. This review will be focused on the sanitary sewer service area of PWSA and the capacity assurance, management, operations, and maintenance activities specific to that portion of the system. It is assumed that the Nine Minimum Controls (NMC) activities of PWSA cover similar aspects for the combined sewer system and are outside the scope of this effort.

We will assess current programs, policies, and practices. Existing documentation will be compiled and evaluated to establish priority areas for improvement. The assessment will include evaluation of SSO causes, review of existing CMOM documentation, interviews, and field observations.

We will evaluate PWSA's SSO data to develop an understanding of the number and volume of sanitary sewer overflows by cause over the past 5 years (2016-2020). SSOs will also be plotted in GIS to identify any geographic trends. The SSO cause and spatial analysis will allow us to consider how PWSA's CMOM Programs are structured to solve system-specific needs.

We will submit an information request to PWSA to gather existing CMOM-related program documentation, policies and procedures. We will review existing documentation, assess the completeness of the program, and identify potential gaps with accepted best utility practices in the following areas:

- Goals, Visions and Support
- Organization
- System Knowledge
- Capacity Management

- Engineering and Construction
- Asset Inspection and Condition Assessment
- Rehabilitation and Replacement Program
- Maintenance Programs and Procedures
- FOG Program
- SSO Tracking, Analysis and Reporting
- Overflow Emergency Response
- Budgeting
- Training
- Safety
- Customer Service
- Information Management
- Information Systems

We will conduct interviews with PWSA staff over a 5-day period, including personnel from management, engineering, planning, operations and maintenance. During the interviews we will discuss policies and practices related to organizational structure/communications, work management processes, information management processes, inspections; rehabilitation (pipeline, manhole, and removal of illegal connections); fats, oils, and grease (FOG) control; new construction standards and inspections; Emergency Response Procedures; preventative, predictive, and corrective maintenance practices including sewer cleaning; and staff training, knowledge skills, and abilities.

Observation of the operations and maintenance (O&M) crew work practices will validate what was heard during the interview process and identify additional opportunities for improvement. A senior collection system operations expert will spend 2 days in the field observing the way in which crews accomplish O&M tasks such as inspections, CCTV, line cleaning, point repair, root control, pump station maintenance, and emergency response where possible.

The results of the CMOM Program assessment will be presented to PWSA in a workshop with recommendations for improvements. Based on PWSA's feedback and input, an Implementation Plan will be established that identifies areas for improvement, the scope of effort involved by both our and PWSA staff, estimated labor-hours and schedule. The Implementation Plan will focus on improvement that provide maximum benefit to PWSA.

- Describe the Gap Assessment framework including regulatory requirements and effective industry business practices
- Present the SSO cause analysis results
- Confirm PWSA's CMOM Program goals
- Gain input on our assessment of current business practices and programs
- Prioritize areas for improvement. The prioritization process will consider the current program status, as well as the importance of the various programs and practices in meeting PWSA's specific CMOM Program goals
- Develop consensus on improvement areas and priorities.

Based on the results of the workshop, we will develop a CMOM Program Summary, documenting the CMOM assessment, and a Work Plan for high impact improvements to current programs and practices. We will conduct a final consensus workshop to validate the draft CMOM Program summary and allow staff to make adjustments before finalizing the Work Plan. We will finalize the CMOM Assessment to include the agreed upon improvement initiatives and proposed timelines. A draft overall CMOM Plan will be submitted to PWSA for review and comment prior to submittal of a final Plan.

Ongoing support activities such as training, data review, and development of procedures can also be conducted to assist PWSA in implementation of the plan as an additional service.

Deliverables: Draft and Final CMOM Plan

Level of Effort Assumption:

- **Will conduct two (2) workshops and up to 5 days of interviews and field visits with PWSA Staff.**

B. Assist with PWSA's Nine Minimum Controls (NMCs) program

- We will review existing NMC documentation and provide a Technical Memorandum summarizing review comments and recommendations.
- **Ongoing support activities such as training, data review, and development of procedures can be conducted to assist PWSA in implementation as an additional service.**

Deliverables: Draft and Final NMC Review TM

1.2 On-call Engineering Services

1.2.1 General On-Call

To support the development and ongoing progression of the Wet Weather Plan, various engineering services may be required at the request of PWSA. Specific tasks will be identified and a mutually agreeable scope, budget and schedule to complete the task will be developed by Wade Trim and PWSA. In general, examples of the services that may be performed under this task include:

- Conceptual infrastructure studies
- Design and construction engineering services
- Asset management activities
- Value engineering studies
- Oversight of consultants that may perform design and construction engineering services for wet weather projects.
- Coordinate the design of PWSA system improvements developed as part of the wet weather planning efforts with proposed improvements of the ALCOSAN and upstream/downstream municipal systems

An allowance has been established to support these activities. Work will be performed at the approval of PWSA and up to the limit included in this authorization.

Deliverables: To be determined based on nature of approved task activities.

1.2.2 Sewer Condition Assessment

This task has been removed from the scope.

1.2.3 Asset Management

The general objective of this task is to develop the methodology and best practices to assist PSWA better manage their assets. Asset Management (AM) services will focus on aligning strategic objectives with stakeholder level of service expectations to develop a risk-based approach to manage the entire lifecycle of program assets. Collaboration with PWSA staff will be integral to success and initial efforts will focus on understanding current best AM practices, identifying gaps, and developing an actionable roadmap for AM implementation. Implementation items will be prioritized and quick win and near team activities that achievable and provide the most value to PWSA will be identified. AM implementation assistance will be provided based on PWSA requests for assistance. Planned AM Services include:

- Review and assess the existing AM program and system operational documentation and provide a gap analysis relative to utility best practices and develop recommendations
- Develop or Update the PWSA Asset Management Vision to incorporate key wet weather program priorities
- Form and charter an AM team of PWSA key staff that can build and then take on the implementation of the program
- Develop AM program charter and AM methodology and best practices training content
- Conduct AM program evaluation and gap analysis between current and desired future state
- Prepare actionable AM program implementation roadmap that details prioritized AM activities
- Organize, integrate, and embed overall PWSA strategic goals in the AM framework and corresponding LOS goals and evaluation criteria for alternative evaluation
- Develop and enhance PWSA's use and operation of Innovyze Info Asset Manager including training of existing staff.
- Organize system replacement and future CIP data for use in the alternative evaluation
- Coach and mentor PWSA staff using subject matter experts that can provide guidance on continuous AM program development
- The following strategic and tactical topics will be discussed with each of the groups listed above, as applicable, as part of the assessment:
 - Decision Making and Capital Planning
 - CIP Development and Prioritization
 - Design & Construction
 - Funding
 - Information Systems and Data Management
 - Data Systems Tools
 - Organizational Framework
 - Communications

- Risk Management
 - Operations and Maintenance
 - Inventory/Warehouse
 - Maintenance Strategy
 - Operations Strategy
 - Optimization
 - Culture and Change Management
 - Document Management
 - Leadership and Commitment
 - Levels of Service and Performance Evaluation
 - Resource Management
- This task is intended to establish a program that PWSA can run independently. **Ongoing support beyond the budget for this task can be provided to support activities as an additional service.**

Deliverables:

Information Request, copies of meeting materials, draft and final AM program charter, AM training materials, AM gap analysis, AM roadmap and supporting materials developed as part of implementation activities.

1.2.4 Compliance Review of Selected Sewer Improvement Projects

PWSA has identified two (2) sewer improvements projects (Browns Hill Road Pump Station and 31st Ward Sewer System) that PWSA plans to procure outside consultants and start work 12 months from the NTP of this contract. **PWSA will maintain a project manager to provide administrative oversight of outside consultant activities.**

In general, our activities will include:

- Reviewing and providing input on outside design sewer consultant RFPs.
- Conducting 30%, 60%, and 90% compliance reviews to assess ability of the proposed design to meet regulatory requirements.
- Coordination meetings to discuss reviews and responses.

Deliverables: Technical Review Comments

Level of Effort Assumptions:

- **Attendance at up to 8 project meetings total among 2 projects**
- **Technical review of design discipline work and constructability reviews will be conducted by others.**

2. Data Gathering

2.1 Evaluate existing information and analyses

- Review wet weather-related studies in the region, such as the ALCOSAN Clean Water Plan, 2008 Feasibility Report, 2013 PWSA Feasibility Report, 2016 Citywide Green First Plan, Controlling the Source, RAND Climate Change study, PWSA’s current Stormwater Master Planning initiative, and other documents that PWSA deems appropriate.
- Sections in an Existing Data Review TM will be prepared that summarize important findings and information relative to the current study effort.

Deliverables: Draft Existing Data Review TM Sections

2.2 Gather county, state and PWSA system information (sewer maps, inspection data, hydraulic overload problems, ACHD complaints)

2.2.1 Data Gap Analysis

- Relevant data that Allegheny County and State agencies may have will be requested and reviewed.
- PWSA will provide:
 - Existing GIS system database of existing sewer assets and any required sewer maps (critical information includes pipe diameters, lengths, invert elevations, and rim elevations).
 - Inspection and sewer back up complaint data
 - Information on known sewer hydraulic bottlenecks and surface flooding issues
 - Known areas of heavy inflow and infiltration, SSO and CSO locations
- Data relative to sewer and street flooding will be requested from ACHD and information provided reviewed and incorporated into the project GIS database.
- Additional existing collector sewer system information and reporting data will be reviewed. The Existing Data Review TM will be updated with the findings from other tasks. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- A Data Gap Analysis TM will be prepared that summarizes additional data collection and field investigations needed to support the study along with a level of effort. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Existing Data Review TM; Draft and Final Data Gap Analysis Review TM

Level of Effort Assumption:

- **Assumes that the existing PWSA GIS database of sewer data is of sufficient accuracy to support the planning level activities**
- **Assumes approximately 200 staff hours/month for 6 months**

2.2.2 Determination of Critical Areas

- Complaint records provided by PWSA will be reviewed and screened to identify issues related to documented system problems. A map of complaint locations for sewer backups and street flooding will be developed.
- **A significant number of pipes covering the local systems is not included in the current PWSA hydraulic models. It is anticipated that inclusion of all the sewer elements would be a significant undertaking from a data collection, model upgrade and model run time perspective. Therefore, the base models will be expanded to focus only on critical areas that have experienced historically high levels of sewer back-ups and/or street flooding. All system pipes (storm and sanitary) will not be modeled.**

- A desktop hydraulic analysis will be conducted using the existing hydraulic models for sewers included in the PWSA system for a range of storm events to identify the capacity of the existing sewer lines. Major sewers (>18") not included in the model where adequate physical data is available will also be checked for capacity using existing GIS data (topo, manhole depths); standard pipe capacity calculations; and compared to modeled peak flows adjusted on an area weighted basis. The locations of known complaints will be compared to the capacity check to identify likely areas of concern.
- "Critical portions" of the PWSA system will be identified. "Critical portions" include pump stations, trunk sewers, points of overflow activity, basement back-up areas, surface flooding, or areas of excessive infiltration and inflow (I/I). At the time of this scope preparation, the number of critical areas is unknown. **For the purposes of this task, it is assumed that 20 to 30 sewer backup and 6 to 10 stormwater flooding subsheds will be identified for further analysis.**

Deliverables: Draft and Final Critical Areas Definition TM

2.3 Investigate PWSA sewer system

2.3.1 Stream Inflow and Acid Mine Drainage (AMD) Map

- Identify and locate any stream inflow sources and acid mine drainage discharges along the critical portions of the PWSA sewer system using **existing data sources**. The potential sewersheds for stream inflow sources will be identified from the past and pending regional flow monitoring work, and PWSA input.

Deliverables: Draft and Final Stream Inflow and AMD Map

Level of Effort Assumptions:

- **No field work such as stream walks, sampling, or other investigation will be conducted.**

2.3.2 Field Data Collection Allowance

- Upon approval from PWSA, work to conduct additional field data collection activities identified with Task 2.3.1 will be conducted within the available budget included within the field allowance. Field data will be entered into the appropriate asset management databases. Additional field collection efforts shall be conducted as an additional service.
- The proposed field data allowance was developed based on an assumption of 400 days of field survey intended to collect data on approximately 8,000 structures (based on 20 structures/10 hr-day @\$2,200/day including survey and post processing). This data includes limited spot checks of approximately 10% of existing modeled areas and assumes data can be collected from the surface without the need for confined space entry or significant traffic control procedures. **No LIDAR, detailed topographic and surveys on private property or within homes for purposes of determination of basement inverts or first floor elevations**

- A summary of the data collected will be provided in a draft and final Field Data Collection Summary Technical Memorandum.

Deliverables: Draft and Final Field Data Collection Summary TM, Field notes and database

2.4 Coordinate on System Improvements and Technical Alternatives with Others

- Request and coordinate with ALCOSAN/municipalities to obtain information on proposed system improvements for use in study work. This includes information on proposed tunnels and consolidation sewers, CSO regulator, pumping, storage tanks, RTBs, Green Infrastructure, Source Control, WWTP and other improvements that can impact overflows in the PWSA collection system.
- A review will also be conducted of major development and PWSA projects (that would have an impact on planning efforts) to determine which should be advanced into the model. It is assumed that PWSA will provide the hydraulic, as-built and/or survey data relative to these improvement projects. **Assumed no more than 10 sewer improvement projects will be included.**
- A summary of the proposed major improvements that will be included in a Baseline Model to evaluate additional alternatives will be documented in a System Inventory TM. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Planned ALCOSAN, PWSA and upstream/downstream municipal improvements will be considered in related modeling and cost analysis in subsequent tasks.
- Ongoing coordination with ALCOSAN throughout the project will also be tracked under this item.

Deliverables: Draft and Final System Inventory TM

Level of Effort Assumption:

- **Assumes up to a total of 60 meetings with representatives of ALCOSAN, Point of Connection (POC) Groups with municipal officials, and 3 Rivers Wet Weather**
- **Assume no new Clean Water Plan design changes**

2.5 Determine regulatory permitting requirements for conveyance and storage

- We will participate in meetings with DEP to establish or confirm the regulatory permitting requirements and related design standards and control approach to be used in the sizing, performance, and layout of facilities to be proposed, designed, or built as part of PWSA's wet weather planning program. **Assume up to 6 meetings for coordination.**
- To prepare for the discussions, a Draft Regulatory Permitting Requirements TM will be prepared that summarizes current criteria for sewers and facilities for PWSA and regional entities along with proposed criteria for facilities to be sized and designed under this program. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.

Deliverables: Draft and Final Regulatory Permitting Requirements TM

3. Develop and calibrate model(s)

3.1 Water Quality Sampling, Analysis Tool Development and Evaluations

3.1.1 Water Quality Data and Information Compilation, Review and Evaluation

- We will compile and review water quality data and related information for the receiving waters impacted by PWSA wet weather discharges and data on sources of pollutants. This will include:
 - Data collected and provided by PWSA as well as publicly available data. We will also develop a request for data collected by ALCOSAN/3RWW. We will compile water quality data in Excel and/or Access for review and evaluation.
 - Information on the receiving streams, their watersheds/drainage areas, and available modeling for these streams and drainage areas.
 - Additional available data on precipitation, climate, and streamflow may be compiled to support the water quality assessments.
 - Listed impairments and available TMDLs for the receiving streams including pollutants and sources. Other available studies on the receiving streams will be compiled and reviewed.
- This scope of work is based on the understanding that the receiving waters that will be studied for this task are the receiving waters that receive discharges from PWSA-owned CSO outfalls that will not be controlled by the ALCOSAN tunnel construction; these include several Tributary Streams (Chartiers Creek, Nine Mile Run, Saw Mill Run, and Becks Run), and the Main Rivers (Ohio River, Monongahela River, Allegheny River). The primary focus of this task will be on the Tributary Streams, but a summary of the conditions of the Main Rivers within the PWSA service area will be included. We will conduct site visits of the Tributary Streams to assess existing conditions, sediment build-up, stream bank stability, flow restrictions, vegetative cover, and other potential characteristics. Photo documentation of the conditions will be collected.
- **Additional Main River Water quality or other data collection will not be conducted.**
- We will evaluate the available information to characterize existing conditions, spatial and temporal trends, dry versus precipitation event-driven conditions, comparison to water quality standards, and potential cause-effect linkages. We will also assess the ability of existing models to characterize water quality conditions and benefits of control alternatives.
- We will summarize the results of the data compilation, review and evaluation in a technical memorandum. The memorandum will include a data gap analysis including recommendations for additional data collection and model development activities, including cost estimates and potential refinements to the original budget estimates provided. We will submit one draft for review and comment. We will address comments and submit one revised draft for submittal to PWSA. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft Water Quality Existing Data Review TM

3.1.2 Sampling and Analysis

- We will prepare a Sampling and Analysis Plan (SAP) and a Quality Assurance Project Plan (QAPP) to guide the collection of water quality samples to support the characterization of the waterways and sources.
- One draft of the SAP and QAPP will be submitted to PWSA for review and comment. Following PWSA review and comments, we will revise the SAP and QAPP for submission to Pennsylvania Department of Environmental Protection (DEP) and/or the United States Environmental Protection Agency (EPA). Following DEP and EPA review and comment, we will prepare the final SAP and QAPP.
- Sampling activities will include training and orientation with our local, on call sampling team. This work will include site visits to discuss procedures and review sampling locations. This will also include coordination on scheduling of sampling events, tracking wet weather events, and making go/no-go decisions on sampling. We will also coordinate with the analytical laboratory to coordinate bottle shipments, sample deliveries, QA/QC data review, and reporting of results.
- For the purposes of this scope of work, the following assumptions have been made to inform the budgeting of this subtask. The scope and budget will be revisited following completion of the data review and evaluation work. Sampling is anticipated to be conducted between April and October 2022 for the following:
 - **6 locations (2 locations in each of Chartiers Creek, Nine Mile Run, and Becks Run)**
 - **72 total samples (3 baseline, 3 wet events – 3 samples each event for each location)**
 - **Parameters for field measurement: Temperature, pH, Dissolved oxygen, Conductivity**
 - **Base assumptions for parameters to be collected for laboratory analysis: E. coli, TSS, Ammonia, TKN, Nitrates + Nitrites, TP, Ortho**
- Following the initial review of the impairments and stream conditions, the need for additional parameters such as metals, and hardness will be assessed. We will review sampling field notes and laboratory reports following each round of sampling to identify problems or issues needing correction. We will coordinate with the sampling consultant and the laboratory to implement corrective actions.
- Two of the subject watersheds do not have USGS flow gages located on them. Additional flow and/or water level monitoring may be required in these watersheds as well. If needed, effort would be authorized separately.
- Following implementation of the sampling plan, we will perform a data validation review and prepare a memorandum documenting the review.
- We will prepare the project-specific SAP and QAPP, as stated earlier. We will update the water quality characterization with the new data. We will summarize the results of the sampling, analysis, data review, and updated characterization in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and

characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit one draft to PWSA. Following PWSA review and comment, we will prepare the final TM.

Deliverables: Draft and Final Water Quality SAP and QAPP TMs

3.1.3 Water Quality Model Updates

- We will update receiving water models to support the evaluation of water quality assessments. We will update model calibrations using the most recent data (April-October 2022) and will validate model performance. The anticipated receiving waters for modeling and the modeling frameworks are listed below:
 - Chartiers Creek, Nine Mile Run watershed/drainage area: PC-SWMM
 - Saw Mill Run watershed/drainage area: HSPF
 - Becks Run watershed/drainage area: no existing model
 - Main Rivers Model: RMA2 (hydrodynamics)/RMA4 (water quality)
- We will develop estimates of upstream flows and pollutant loads for the calibration period (April-October 2022) based on available data. We will develop meteorological inputs for the calibration period based on available data.
- Calibrations will be performed by applying best engineering judgement to make model calculations as representative of observations as possible. The models will be calibrated using both visual and numerical methods. This effort may employ regressions of observations vs. calculations, minimizing the squares of the residuals of observations vs. calculations, minimizing relative error, minimizing differences in observed vs. calculated means, and minimizing root mean square error, among other methods. For simulations having the appropriate temporal scale, published statistical measures of goodness-of-fit (e.g. percent difference, r², PBIAS) will also be considered in evaluating the strength of the hydrology and water quality calibrations.
- Following calibration, the models will be validated using an independent data set to demonstrate that the model is capable of acceptably reproducing the timing and magnitude of observed data without further changes to the model parameters.
- We will summarize the results of the model updates and calibrations in a technical memorandum. The memorandum will include discussion of data quality and usefulness for model updates and characterization of existing conditions and evaluation of the benefits of control alternatives. We will submit a draft to PWSA for review. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Model Update TM

3.1.4 Water Quality Assessments of Benefits of Control Alternatives

- We will develop and apply the updated and calibrated models to support the assessment of existing conditions and the water quality benefits of control alternatives. We will develop the water quality models for the typical year. We will develop the following water quality model inputs for the simulation of existing conditions for the typical year:
 - Upstream boundary flows and pollutant loads
 - Meteorological inputs, and
 - Sources other than overflows.
- We will characterize water quality conditions for the typical year under existing and baseline conditions. We will assess the relative impact of pollutant sources with respect to attainment of water quality standards for those scenarios. We will prepare an interim technical memorandum documenting the characterization of existing and baseline conditions for the Tributary Watersheds.
- We will apply the water quality models to simulate the water quality benefits of control alternatives. **This scope of work assumes ten (10) separate simulations will be run to assess control alternative benefits.** These may include a combination of simplified control scenarios (for example 25%, 50%, 75%, and 100% reductions of overflows) and specific control alternatives with simulated reductions in overflows from the collection system model.
- For each control alternative simulated, we will evaluate the water quality benefit in terms of pollutant load reduction and improvement in ambient water quality. Attainment of water quality standards will be assessed.
- We will also update the typical year simulation with the final recommended control plan and assess the water quality benefits.
- We will summarize the results of the water quality assessments in a technical memorandum. The memorandum will include discussion of the development of the typical year simulation, water quality characterization of the existing conditions, and water quality benefits of select control alternatives and the final recommended control plan. We will submit one draft to PWSA for review and comment. Following PWSA review and comment, we will prepare the final memorandum.

Deliverables: Draft and Final Water Quality Assessment TM

3.2 Monitor flow and conduct hydraulic modeling

3.2.1 Review existing flow data and models

- We will review flow data and models previously collected by PWSA and ALCOSAN to identify modeling and data needs to support the wet weather planning process. In general, this review will include locations, durations and quality of available flow monitoring data as well as determination of availability of models and the extent and quality of the calibration/verification of these models. **Up to 10 watershed models are assumed to be reviewed as a part of this effort.**

- An Existing Model Review TM will be created to document the available modeling sources and to identify data needs to expand or improve the models. This memo will also identify the various design storms, typical year precipitation, boundary conditions, and model scenarios (Existing, Baseline, Future, etc.) needed to support the project.
- **It is assumed that the starting model version for this project is the ALCOSAN Existing Conditions 2020 Model developed using SWMM version 5.1.012. This model includes a representation of the WWTP, deep and shallow cut interceptors, all diversion structures, combined sewer overflow outfalls and storm, combined and sanitary tributary areas. This model is anticipated to be expanded using historical and current modeling elements that have been developed under various PWSA efforts.**
- A summary of the available historical rainfall, stream level and flow monitoring data will be prepared and included in an Historical Flow Data Review TM. This TM will also document ongoing permanent precipitation, permanent flow meters, and stream gages that are available to support the work. **PWSA will provide available historical precipitation, stream and flow data.** Available data on high water flooding marks will also be summarized in this memo for critical stormwater flooding areas. **Field work to investigate or identify high water marks will not be collected.**
- During this process, we will develop a Model Data File Management procedure and implement to assist with model input and output file management. Procedures and Protocols will be summarized in a Model Data Management TM.

Deliverables: Draft and Final Existing Model Review TM; Draft and Final Historical Flow Data Review TM; Draft and Final Model Data Management TM

3.2.2 Develop a flow monitoring plan and collect flow data

- A detailed Flow Monitoring Plan TM will be developed to support the model expansion and system characterization effort guided by the approach outlined in this section. The Plan is expected to include proposed methods for flow monitoring in Critical Areas and I&I sewersheds with sections that cover, purpose and objectives, monitoring techniques and procedures, data management approach, QA/QC protocols, and maps of proposed deployment locations.
- **It is assumed that PWSA can provide all necessary radar-rainfall data needed to characterize precipitation in the service area.** The radar rainfall information will provide area-weighted rainfall hyetographs for each model subcatchment using existing regional permanent rain gauges. **To supplement this data, we will deploy up to 20 temporary project rain gauges for no more than 9 months.**
- We will deploy sewer system flow meters to screen and prioritize tributary areas to support expansion of the system hydraulic/hydrologic model (Calibration monitoring) and for further I/I investigations (micromonitoring).
- **To support model expansion into Critical Areas, up to 100 calibration meters (with a total installed duration of no more than 9 months) will be**

installed to provide information for model calibration in areas of known performance problems. Monitored subcatchments are planned to be between 20 and 75 acres in size.

- In support of Task 3.4, micromonitoring will be used to break down areas of roughly 100 acres or less for further I/I investigations. Up to 40 micrometers (with a total installed duration of no more than 3 months) will be deployed simultaneously for one or two significant rainfalls per location to determine tributary area I/I response. Areas showing significant response would then be targeted for further investigations. Areas showing little response would be screened from further consideration. Micromonitoring durations will be adjusted based on observed rainfall events.
- In support of Task 3.4, up to 40 calibration meters (with a total duration of no more than 6 months) will be installed to provide information for model calibration areas in sanitary areas. We will use the Task 3.4 prioritization information and preliminary micromonitoring to assist with calibration meter placement.
- It is assumed that flow monitoring will be conducted in the 2022 season between March and November. All data will be collected and stored in a database for use on the project.

Deliverables: Draft and Final Flow Monitoring Plan TM; Rain and Flow Monitoring Database

3.2.3 Expand and calibrate hydrologic and hydraulic model for use in planning

- The H&H hydraulic model will be extended up into the PWSA collection system to represent know problem areas with clusters of reported basement backup and areal flooding issues.
- Additional detail included in the historical version of the PWSA model included within Infoworks may also be added to the model to support this work along with significant known system changes. **Up to 400 staff hours for addition of existing detailed model elements such as major sewer projects or other detailed models has been assumed.**
- In Critical Areas with street flooding, the H&H model will also be expanded using dual drainage network techniques, to capture the movement and depth of overland flows along the street network. Depending upon the location of the problem area there may be a natural open channel also that will be included in the model. **Up to 2,500 model elements (channel segments and surface nodes) are assumed to be included in this model expansion within no more than 6 to 10 sub areas. It is assumed that existing topographic data is sufficient to characterize the street geometry.**
- With the hydraulic network expanded into the collection system, the lumped or consolidated hydrologic representation included in the current Existing Conditions model will also need to be discretized so that the generated flows can be distributed in the detailed expanded hydraulic network. This more detailed hydrologic representation will need to be calibrated using the collected flow and depth data. **Up to 4,500 model elements (sewer pipes**

and manhole junctions) are assumed to be included in this model expansion within no more than 20 to 30 sub areas.

- Revisions and expansions of the model will be documented in a Model Update TM.
- Sanitary areas within the H&H model will be calibrated to the data collected under Task 3.2. RTK parameters will be updated to reflect the findings of the new data collected.
- Targeted subarea calibration of areas tributary to up to 140 flow meter locations will be conducted based on the flow data collected under task 3.2. Continuous calibration/validation is anticipated to be conducted to compare metered vs. modeled predictions of flow, volume, depth and hydrograph shape. Industry standards for determination of acceptable calibration will be applied to determine the reasonableness of the calibrated parameters.
- A technical memorandum will be developed to summarize the results of the model calibration.
- A model review workshop will be held with PWSA to present the results of the calibration and discuss approval of the model for use on subsequent planning efforts.
- Upon approval of the model, files for various scenarios (Existing Conditions, Baseline Conditions (Near Term Projects that will be constructed) and Future Conditions (with Interim and Select Plans) will be developed to support the next stages of modeling. **Models will be run for up to five (5) design storm conditions to support level of service analysis.** Models will be run continuously for the Typical Year. Sensitivity scenarios for use in assessing the impacts of future climate change will also be run. Overflow statistics and level of service impacts will be quantified.

Deliverables: Draft and Final Model Update TM; Draft and Final Model Calibration TM; Model Support Files; Model Results Summaries

3.3 Perform level of service peer review and develop current level of service and range of alternatives for increasing level of service.

- A peer review will be conducted to identify the level of service of similar regional communities. Findings of the review will be summarized in a technical memorandum.
- Stress-test the current PWSA collection system to identify the current level of service provided and develop a level of service thematic map.
 - The primary level of service will be evaluated using the existing hydrologic and hydraulic model and the expansion into critical areas of observed sewer back-ups and street flooding will be used to assess collection system capacity for the interceptors and selected main line sewers.
 - A secondary level of service evaluation will be conducted on main sewers > 18" in diameter using a simplified method that compares pipe capacity to flows from the model that will be apportioned based on area. **It is assumed that existing GIS/sewer data provided by PWSA is sufficient for this purpose.**
 - A third evaluation will be conducted to assess "neighborhood" level of

service along a street within a city block. **Representative neighborhood areas (up to 6) will be selected and evaluated in detail to understand if general level of service deficiencies can be expected based on typical Pittsburgh sewer design practices.** Areas that have adequate existing data from either GIS or record drawings to support the assessment. **PWSA to provide detailed sewer drawings of the selected areas for use in this analysis.**

- **PWSA will determine what the level of service guiding principles will be used for stormwater under a separate contract**
- An alternatives analysis to determine the best approach to provide for increased levels of service will be conducted. In general, this is expected to include conveyance improvements that would include replacing existing storm or sewer piping to increase capacity and reduce water levels in the system and streets. The type, size and general location of improvements will be identified and included on maps to show the options.
- Provide a concept screening cost estimate (AACE Level 5) for bringing the current system up to the appropriate level of service for stormwater and sewer back-ups. Costs for increased conveyance systems to achieve higher capacities will be developed for various levels of service. **It is assumed that no more than two level of service scenarios will be costed.**
- Findings of the evaluation will be summarized in a technical memorandum.
- Determine how increased level of service impacts other wet weather planning objectives, including controls of CSOs and SSOs. A Typical Year simulation will be conducted to determine the results impacts on overflow statistics.
- Model base files for Level of Service Improvement Alternatives will developed to support the next stage of integrated planning evaluations.

Deliverables: Draft and Final Level of Service Peer Review TM; Draft and Final Level of Service Evaluation TM; Existing Level of Service Map

3.4 Develop a plan to identify significant areas of I/I and a strategic plan on how to prioritize locations to reduce I/I

- The PWSA system is essentially a combined system, but the upper reaches of the collection system have separate sewer areas.
- We will review and update on the approach to prioritize investigations previously by PWSA. Using data collected under other tasks, we will seek to identify sanitary areas without significant problems that would require no further investigation. Prioritization will occur at a relatively higher level and be refined as the project progresses. Early micromonitoring is proposed to help define the investigation prioritization.
- **Field work and subsequent data review for activities such as smoke testing, site assessments, manhole inspections, SSES investigations, dye testing, and CCTV inspection to support this task will be conducted by others or as an additional service.**
- PWSA will provide available data on effectiveness of historical projects in reducing I&I after improvements have been made.
- We will review the data collected and provided and use to identify areas subject to

elevated levels of I&I.

- By layering of existing GIS information, we will perform a Prioritization Analysis to produce a table and map with preliminary priority areas. We will review the proposed prioritization with PWSA to get input on the preliminary prioritization approach, the resulting priorities, and provide direction on any necessary adjustments.
- Based on the work, estimates of a range of potential I&I reductions (low, medium and high) for use in planning purposes will be developed for use with planning scenarios under Task 4.
- We will develop draft and final versions of an I&I Prioritization Approach TM, which will document criteria, data used, estimated effectiveness, and a priority list of areas. We will submit the draft TM to PWSA for review.

Deliverables: Draft and Final I&I Prioritization Approach TM

4. Identify and prioritize alternatives

The alternative evaluation is expected to be conducted at varying levels depending on the location and ownership. The most detailed efforts will be focused on outfalls solely owned by PWSA and jointly owned outfalls discharging to tributary streams (Level 1 and 2).

- Level 1 – 38 Outfalls solely owned by PWSA
- Level 2 – 33 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging into the Tributary Water Bodies

For these outfalls, it is assumed that up to 3 technologies will be evaluated for each outfall, costing to a Level 5, performance determined, and a recommended solution provided. Outfall solutions will either be combined or enhanced in up to 3 alternatives per basin.

A lesser detailed level of planning will be conducted for jointly owned outfalls discharging to the Main Rivers (Level 3 and 4).

- Level 3 – 116 CSO Outfalls co-owned by PWSA/ALCOSAN and discharging to the Main Rivers
- Level 4 – 20 CSO Outfalls co-owned by PWSA/ALCOSAN, discharging to the Main Rivers and controlled by the planned Regional Tunnels

For these outfalls, it is assumed that up to 3 technologies will be evaluated for up to 10% of these outfalls, costing to a Level 5, performance determined, and a recommended solution provided. This is not intended to replace but to enhance or supplement the current ALCOSAN Clean Water Plan for these outfalls.

4.1 Identify and screen technical alternatives

- The goal of this task is to identify potential alternatives that will provide compliance with the goals of the wet weather planning process, taking into consideration the ability to adapt to future conditions.
- An Alternatives Brainstorm workshop will be held with PWSA to discuss potential approaches to controlling CSO and SSO in the PWSA service area. The

- workshop will include a review of the planned ALCOSAN improvements, previously planned control recommendations from PWSA efforts, various technologies and strategies that have been reviewed historically and any new or emerging technologies.
- We will review and assess potential **technologies** for controlling SSO and CSO in the PWSA service area. Optimization techniques will be applied to narrow the field of **solutions**.
 - A Technology Screening TM will be prepared that summarizes the potential technologies such as source control, green infrastructure, regulator modifications, storage and conveyance that conducts a high-level screening for applicability to the various areas and provides recommended **outfall solutions** to advance to the basinwide alternative evaluation stage. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - An integrated planning approach will be applied that considers **solutions** basinwide that meet both water quality and level of service requirements determined under Task 3.3.
 - An Alternatives Development TM will be prepared to summarize the alternatives that were considered in the evaluation for each outfall or groupings of outfalls. This TM will summarize basinwide alternatives and the recommended systemwide alternative. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
 - **Six (6) additional Alternatives Workshops with PWSA are planned to discuss the progress and findings from the Alternative Evaluations.**
 - The selected alternative based on the results of Task 4.6 will be further defined (<5% project definition). This work will include development of concept layouts and site investigations to further develop the concept and develop an opinion of cost that is consistent with a AACE Class 4 cost estimate.

Deliverables: Draft and Final Technology Screening TM; Draft and Final Alternatives Development TM

4.2 Identify and screen site development and buffer alternatives

- Initially, a Site Opportunity and Enhancements TM will be prepared to summarize the nature and location of potential opportunities. We will conduct a recommended screening to identify areas with a potential to support effective wet weather controls. A draft TM will be submitted to PWSA for review and comment.
- USEPA-defined Environmental Justice demographic indices will be included into screening evaluation. Sites for alternatives will consider the benefits and impacts to environmental justice communities within the PWSA service area. The potential for providing benefits to these communities through improved wet weather management will be considered along with the direct benefits and impacts of feasible technologies within these communities.
- Our team will meet with stakeholders to identify opportunities for siting of control alternative solutions at locations that may be mutually beneficial for redevelopment or community enhancements. **Up to 16 meetings with stakeholders have been included in the scope for this purpose.**
- For the final recommended alternative identified under Task 4.6, we will update the TM to discuss the potential solution and how it may be enhanced with site

improvements, community benefits, green leave behinds or other features that would create or maintain a beneficial relationship with the various City of Pittsburgh departments, authorities, and key stakeholders (including neighborhood organizations).

Deliverables: Draft, Revised, and Final Site Opportunity and Enhancements TM

Level of Effort Assumptions:

- **Assumes enhanced site evaluations will be prepared to better define project location and site conditions and refine the level of accuracy of the Cost estimate to support a AACE Level 4 cost estimate in conjunction with Task 4.3**
- **Does not include topographic survey, easement acquisition, property acquisition support services, geotechnical exploration, environmental site assessments, or subsurface utility exploration to be included with the site evaluations.**

4.3 Perform a present worth analysis of the feasible alternatives

- A cost tool that can provide estimates for various technologies at an **AACE Level 5** will be developed using unit pricing, engineering judgement and input from recent PWSA and regional projects for purposes of initial technology screening.
- A Costing Approach TM will be developed that summarizes the assumption, development and application of the cost methodology. **Two (2) meetings are included to discuss the approach and development of the tool with PWSA.** A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- Costs will be developed for overall total project and lifecycle costs and include the following elements: Construction, Operating, Site surface development and restoration, Operation and maintenance requirements, Utilities and Land acquisition and rights-of-way. PWSA to provide input on administrative, legal and contingencies to be applied to the overall program cost development.
- Initial costs will be summarized and provided to PWSA for review. These will also be included in the Alternative Evaluation TM.
- Costs for budgeting for the selected alternatives for CSO and SSO improvements in the final Wet Weather Plan will be developed to an **AACE Level 4**. Additional effort to look at proposed projects and site constraints include the following:
 - Site visit
 - Develop project footprint layout using GIS and available lidar topography
 - Screening for property changes
 - Looking at local bidding data for potential cost escalation factors
 - Determine estimated quantities of facilities

Deliverables: Summary of Costs, Updates to the Draft Alternative Evaluation TM.

4.4 Perform a knee of the curve analysis of wet weather controls and water quality benefits

- An analysis comparing costs to performance metrics will developed to assess the

point of providing a value based recommended alternative. This analysis of the costs of varying CSO, SSO and stormwater control alternatives shall be in conformance with the CSO Control Policy and relevant guidance.

- Varying levels of optimization assistance tools will be used to evaluate alternatives to guide development of performance.
- Areas will be prioritized for optimization. Outfalls with planned improvements (by Others) or minor adjustments needed to meet criteria will not be optimized.
- **An optimization software license covering a 24-month period is included in the current budget. It is expected that advanced optimization will be applied to approximately 40 areas.**
- Performance curves will be included in the Alternative Evaluation TM.

Deliverables: Updates to the Draft Alternatives TM

4.5 Analyze financial affordability

- Coordinate with PWSA's financial rate consultant to determine the financial affordability of the proposed improvements to the PWSA system and forecasting the rate on ratepayers.
- Meetings will be held throughout the development of the wet weather plan to discuss progress, cost impacts, affordability considerations and impacts on required schedules for implementation. Two (2) initial workshops are planned to brainstorm the approaches and steps needed to incorporate the affordability analysis into the planning process.
- Based on discussions at the meeting, a work plan will be developed that will guide the steps needed to assess affordability in support of the Wet Weather Plan development. A draft plan will be submitted to the Rate Consultant and PWSA for review.
- All work related to affordability determination including data collection; rate evaluation; assessment of impacts of wet weather projects; level of service projects; ALCOSAN ongoing charges; PWSA ongoing water and sewer system charges; and other factors will be conducted by Others. PWSA will contract separately with Rate Consultant on these services.
- **Up to twelve (12) additional coordination meetings and two (2) workshops are planned to coordinate the work and discuss findings over the duration of the planning.**
- Rate consultant will provide input on initial affordability prior to the start of alternatives and run scenarios for varying levels of level service improvements and necessary stormwater, CSO and SSO control improvements at various stages of the plan development.
- We will review findings provided by Rate Consultant and summarize how the work will be incorporated into the planning and implementation of the WWP.

Deliverables: Draft and Final Affordability Work Plan TM; Draft and Final Affordability Findings TM.

4.6 Conduct non-monetary analysis of alternatives

- An Alternative Evaluation Approach TM will be prepared that summarizes the overall approach to selecting recommended alternatives. The TM will include a discussion on how to score within each non-monetary category, scoring and weighting approaches, and steps that will be taken to develop the scoring. A draft TM will be submitted to PWSA for review and comment prior to submittal of a final TM.
- The non-monetary criteria as provided by PWSA are expected to include:
 - Local planning impacts assessment
 - Environmental justice and community flood resiliency impacts
 - Floodplain impact assessment
 - Odor and noise control assessment
 - Preliminary environmental site assessment
 - Site surface restoration/development
 - Impacts of water quality improvements
 - Co-benefits of green infrastructure projects or other control alternatives
- Additional information such as advantages, disadvantages, risks, schedule impacts and other considerations will be identified as supporting information will be prepared for each alternative.
- **Up to three (3) workshops are expected to be needed to review the approach, conduct the scoring and share the results.**
- Information from Tasks 4.3 on costs would be combined with a summary of total benefits for each alternative to support development of a cost-benefit analysis.
- The results of the evaluation will be summarized in an Alternatives Scoring Technical Memorandum.

Deliverables: Draft and Final Alternative Evaluation Approach TM; Draft and Final Alternatives Scoring TM

4.7 Prepare a schedule for implementation of controls selected to address CSOs and SSOs

- An implementation schedule with appropriate milestones for design, bidding, construction, substantial completion and final completion will be prepared for the recommended projects in the Wet Weather Plan.
- The schedule will be adjusted based on input with regards to affordability and cashflow constraints provided under Task 4.5.

Deliverables: Draft and Final Implementation Schedule

5. Stakeholder coordination and presentations

We will take the lead on developing and participating in a public participation program. **PWSA will provide stormwater messaging developed to date and any foundational information. PWSA staff will be lead presenters during community meetings but would rely on Wade Trim to develop materials and set up meetings.**

We will work with PWSA in preparing an overall public participation plan and public outreach protocol that meets the requirements contained EPA CSO planning and DEP Act 537 guidance documents.

Our goal is to work collaboratively with the project team and PWSA to develop and implement a plan that prioritizes clear, consistent, transparent, and equitable communication with the public and stakeholders to generate consensus. We intend to include specific outreach to identified environmental justice communities to develop relationships with community leaders in those areas and encourage their availability, participation and engagement in meetings.

5.1 Develop Public Engagement Plan (PEP)

- In support of PWSA's existing public outreach efforts, we will work to coordinate and communicate with internal and external stakeholders. We will work with PWSA to create an engagement plan that centers around multiple working group meetings, stakeholder inclusion, agency communication and public information and input held throughout the duration of this process. The goal of the plan is to generate buy in, which can be better achieved by engaging stakeholders throughout the process, collecting input and feedback, and incorporating that feedback.
- **Two meetings will be held with PWSA public relations staff to support development of the plan.** An initial brainstorming session and a follow up meeting to discuss the draft PEP. Ongoing coordination on public relations topics will be covered under the regular PWSA progress meetings.
- A plan will be developed that includes a summary of program and objectives, messaging, identification of stakeholder groups, definition of target audiences, communications approaches, communication tools, implementation steps, and timelines. The Draft Public Engagement Plan will be submitted to PWSA, and comments incorporated into the Final Plan.

Deliverables: Draft and Final Public Engagement Plan

Level of Effort Assumptions:

- **Develop Public Engagement Plan assumes a detailed outline, 2 draft and 1 final version for Wade-Trim and PWSA review and approval. Includes the development and refinement of the comprehensive stakeholder engagement list.**
- **Project Coordination / Management – assumes up to 2 coordination meetings a month and 4 hours of project management/coordination with Wade Trim / PWSA for 36 months.**
- **Documentation – assumes 8 hours per month for document control, project controls and documentation of events.**

5.2 Program Messaging and Branding

This item has been removed from the scope.

5.3 Online Public Engagement

- Online engagement is an important method of communication with the general public about the Wet Weather Program. The goals of online engagement are to

increase the ability to reach a more diverse audience, generate more informed participation, invite a broader range of input, and set the stage for sustained participation. PWSA already has an online presence, and this plan will build upon those existing relationships/followers/contacts.

- A Wet Weather Program webpage will be created to serve as a resource for people to access information, share the plan schedule, see a summary of planning activities, make note of engagement opportunities, review background information (Including relevant maps and data), make connections to social media pages, locate project contact information, subscribe to a mailing (contact) list, and access a comment form.
- Our team will develop a proposed outline of online content to consider for a website approach and submit to PWSA for review and discussion.

Deliverables: Web Site and Social Media Pages and Updates

Level of Effort Assumptions:

- **PWSA will host and manage online content via their existing website**
- **Updates to the website are expected to occur on a quarterly basis, assumes 12 hours per quarter of support**

5.4 In-Person Public Engagement

- Public meetings will be used to inform the public of the planning process and to solicit ideas, input and feedback. This will be an opportunity to promote transparency and foster two-way communication with the public. Public meetings will be held at multiple locations throughout the city. We intend to host a proportional amount of in-person meetings within environmental justice communities to promote engagement within these communities and consider the specific needs in these communities relative to wet weather management.
- Meeting times will vary to maximize the number of attendees that will be available. The public will be encouraged to ask questions and voice their ideas and opinions about the program activities. Our plan for a series of meetings is presented below:

Year 1 - Goals and Initial Community Input

The first series of public workshops will be formatted as a city-wide Listening Series as an interactive, hands-on opportunity to create program awareness, present background on the system and known problem areas, gain an understanding of community priorities, values and concerns. **Four (4) interactive, workshop-style sessions will be conducted** and geographically distributed through the service area – to encourage diverse participation. These meetings would occur early in the planning process.

Year 2 - Review of CSO Technologies, Solutions and the Alternatives Process

The second series of public workshops will be formatted as traditional public meetings. The purpose of this series of meetings will be to present and/or demonstrate potential control strategies, discuss water quality assessments and provide an overview of the alternative evaluation process. **Four (4) meetings will be held.**

Year 3 – Wet Weather Plan Recommendations

The third and final public workshop series will be formal public meetings to present the draft Wet Weather Plan. This will be the final opportunity to provide an overview of the draft WWP, to discuss issues, processes and decisions leading to the plan, and to record formal comments that will be considered when finalizing the Wet Weather Plan. **Four (4) meetings will be held.**

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **20 hours/month for coordination and responding to questions from the public**

5.5 Stakeholder Advisory Group

- An existing PWSA Stormwater Advisory Group (SAG) that has provided input on the PWSA stormwater fee will be convened to introduce them to the Wet Weather Program goals and objectives. This group will be expected to share information about how to get involved in, provide input on, and stay up to date with the planning process with the organizations/stakeholder groups they represent. We intend to work with this group to discuss issues of environmental justice and solicit input for how the Wet Weather Program will evaluate environmental justice.
- This advisory group will meet at key decision points throughout the process (**up to 6 meetings**). Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation and prepare summaries of the discussions.
- In between meetings, representatives of these groups will receive regular updates through email and will be empowered to help the program team in its outreach efforts by sending information about engagement opportunities to their respective memberships, communities, networks, and employees.

Deliverables: Agendas, Presentations and Meeting Summaries

Level of Effort Assumptions:

- **Assumes 4 hours/month monthly coordination and responding to inquiries from SAG.**

5.6 Municipalities/POC Outreach

- Meetings with the existing Saw Mill Run Group and various POC municipality representatives would be convened to discuss issues specific to the municipalities. These meetings will be used to share information about known issues, planned improvements, alternative technologies, and other related matters. **We have assumed up to 24 meetings** with stakeholders in this category over the duration of the program. Our team will coordinate meeting logistics, prepare presentation materials, assist with facilitation, and prepare summaries of the discussions.

Deliverables: Agendas, Presentations and Meeting Summaries

6. Provide Wet Weather and Act 537 Plans

6.1 Wet Weather Plan (Long Term Control Plan)

- A Wet Weather Plan document will be developed that includes sections on Introduction, Background, Purpose, Public Engagement and Participation, System Characterization of Current Conditions, Control Approach, Control Technologies and Screening, Development and Evaluation of Alternatives, Financial Capability, Recommendations, Selection and Implementation Schedule, and Post Construction Compliance Monitoring Plan.
- A draft Wet Weather Plan will be submitted to PWSA for review and comment prior to submittal of a final Report.
- Following PWSA review, comment, resolution of comments and approval of the draft Wet Weather Plan, we will facilitate preparation of the plan for submitting to the agencies for review and approval.
- Following agency review, comment, resolution of comments and approval of the plan, a revised final plan will be submitted.

Deliverables: Draft, Final and Revised Wet Weather Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of Plan
- Assume preparation of up to 100 comment responses received on the Plan

6.2 Act 537 Plan

- An Act 537 Plan document will be developed in accordance with the Act 537 Plan Content and Environmental Checklist and will include sections on previous wastewater planning, physical and demographic analysis and mapping, identification of existing sewage facilities and needs, projections of future growth and land development, identification of alternatives, evaluation of alternatives, institutional evaluation, justification and implementation schedule for selected alternatives (technical and institutional) and an environmental report. The Wet Weather Plan will also be used extensively to form the basis of the Act 537 Plan.
- A draft Act 537 Plan will be submitted for PWSA comments.
- Following PWSA review, comment, resolution of comments and approval of the draft 537 Plan, we will facilitate preparation of the plan for submitting to the City of Pittsburgh under Task 6.3 for review and approval.
- Following approval by the City of Pittsburgh, we will submit for agency review, comment, resolution of comments and approval of the plan. A revised final plan will be submitted.

Deliverables: Draft, Final and Revised Act 537 Plan

Level of Effort Assumptions:

- Assumes two agency coordination meetings to solicit adoption of 537 Plan
- Assume preparation of up to 100 comment responses received on the 537 Plan

6.3 City of Pittsburgh Coordination

- Prior to submittal to the agencies, the Act 537 plan will require a signed and sealed Resolution of Adoption from the City of Pittsburgh. We will assist in the preparation of the appropriate submittals, response to comments and consistency documentation that the appropriate agencies have received, review and concurred with the Act 537 plan throughout the entire process.
- Following PWSA approval of the draft Act 537 Plan, the plan will be submitted to City of Pittsburgh and Allegheny County Planning Commissions for consistency review and comment.
- The Act 537 plan is also required to be posted publicly for a 30-day comment period, with proof of the publication, copies of all comments with responses in each comment included in the final submittal to the agencies.

Deliverables: Public Notice

Level of Effort Assumptions:

- Assume 3 coordination meetings with City of Pittsburgh Officials
- Assume preparation of up to 100 comment responses received on the 537 Plan

7. Develop an environmental impact assessment of recommended Wet Weather Plan

- Once conceptual level wet weather plan facilities have been identified, we will conduct a more detailed environmental review in the form of an Environmental Impact Assessment which further evaluates the community impacts identified during the alternative's evaluation. This assessment will serve as the Uniform Environmental Review.
- A report will be proposed that follows the format laid out in PADEP's Technical Guidance Document 381- 5511-11. The report will discuss the environmental consequences and potential mitigation of the proposed facilities for land use, recreational use of land and streams, water and air quality, noise, odor, vehicular and pedestrian traffic, socio-economic issues, miscellaneous environmental considerations, as well as aesthetic and property impact for use in the Act 537 Plan.
- A draft Report will be submitted for PWSA comments.
- **The number of projects to be evaluated has yet to be defined through the wet weather planning work. For this reason, a total of no more than 20 projects has been assumed that will require assessment.**

Deliverables: Draft and Final Environmental Impact Assessment Report.

8. 3rd Party Assessment of Sewer Assets

- Regionalization involves the voluntary transfer selected municipal sewers and sewer facilities in the service area over to ALCOSAN. This is intended to reduce the financial burden on PWSA and allow ALCOSAN to more directly manage and reduce excess flows into the system. **This will be accomplished by ALCOSAN assuming ownership and maintenance of approximately 60 miles of large, multi-municipal trunk sewers and associated facilities (upstream diversion structures).**

- The purpose of this task will be to review PWSA sewer assets that are proposed to be transferred to ALCOSAN via the regionalization initiative. We will review the assets and provide documentation needed to support transfer.
- This is a study and does not include regionalization negotiation support for the ALCOSAN agreement.
- A Draft PWSA Assets Review TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final Assets Review TM; Applicable support documents.

9. Post Construction Evaluation of GI Effectiveness

- We will evaluate the performance of up to **fifteen (15) Green Infrastructure projects** in various states of design and construction that are being constructed with the intent to reduce stormwater inflow to the sewer system. To support estimates of effectiveness of these projects and potential future similar projects, post construction monitoring of the performance of these projects will need to be conducted.
- **Our team will install flow monitors at up to 30 locations for a period of 8 months to collect on performance.**
- **Data from the 3RWW rain gauge network data and up to 6 site specific rain gauges will be used to document precipitation.**
- **PWSA will provide design reports, modeling and plans produced by others along with historical rainfall and flow data collected prior to the start of the projects for use in comparisons.** Post construction data collected on other projects and any related reports will also be provided.
- We will compare the data and provided an evaluation of the resulting effectiveness of the various projects. A Draft GI Project Effectiveness TM will be submitted to PWSA, and comments incorporated into the Final TM.

Deliverables: Draft and Final GI Flow Monitoring Plan; Draft and Final GI Project Effectiveness TM

GENERAL ASSUMPTIONS

- All deliverables will be provided electronically
- PWSA will provide comments on most deliverables within 14 calendar days; Task 6 deliverable comments will be provided within 30 calendar days
- Comments will be provided by PWSA electronically using document control software
- Meeting duration assumed to be typically 1 to 2 hrs (50% virtual; 50% in person)
- Workshop duration assumed to be typically 4 to 8 hrs (In person)

SCHEDULE

- The project is expected to cover a three-year period with the potential for up to three one (1) year extensions. Extensions of the schedule may impact level of effort.
- The tasks and their general anticipated duration are provided below:

Task	Anticipated Duration
Task 1	36 Months
Task 2	18 Months
Task 3	30 Months
Task 4	18 Months
Task 5	36 Months
Task 6	12 Months
Task 7	12 Months
Task 8	9 Months
Task 9	12 Months

PWSA TASK ORDER/AMENDMENT EXHIBIT C INSTRUCTIONS

**An additional Exhibit C or D may be used if space provided is not sufficient.*

General Instructions

1. **DEFINITION:** A task is a type of service that will be performed in a Task Order or Amendment, for example, it might be Design Engineering, or Construction Management, or Field Inspection. A project budget may contain individual budgets for each type of service. A Task Order or Amendment may provide for one or more type(s) of service. When preparing this Exhibit C, make sure that each type of service is separately annotated, and that the cost of labor and expenses for each type of task (budget code) is distinctly represented. PWSA's goal is to individually track the cost of each type of task or service. Should the amount of staff needed exceed the total number of columns, you may provide an additional completed template for each Exhibit. Just be sure your TO/Amendment Total Fee matches as an accumulative value.
2. See the Budget Codes tab for an explanation of where a Task type should be applied in this Exhibit.
3. Use these Exhibit forms as is. **Do not attempt** to alter them. **If they are altered they will be rejected.** If a change should be considered, discuss with your PWSA point of contact.
4. **Be sure** that all labor rates used in these forms are consistent with the rates used in the Master Services Agreement.

Exhibit C.1

Purpose: Exhibit C.1 identifies the Consultant's staff members who will contribute to each Task type to be provided, their MSA classification, their Task Order role, their anticipated labor hours, and their labor costs.

1. The Consultant's Scope of Services must be defined according to the distinct tasks that apply to a project budget code. The cost to perform each Task must be captured on this Exhibit.
2. On Row 45, enter each Consultant staff member name in a different column.
3. On Row 46, enter each Consultant Staff member's Master Service Agreement classification in a different column.
4. On Row 47, enter each Consultant Staff member's Task Order role in a different column.
5. Enter the hours each staff person will contribute to each task in the rows below each staff person's name. **If it doesn't apply, leave row blank.**
6. Enter the Subconsultant markup as an integer or decimal number (field is coded as a percentage). The spreadsheet will calculate the Total Hours and Total Labor Cost for the Consultant.

Exhibit C.2

Purpose: Exhibit C.2 captures the Consultant's anticipated expenses. Note that there is a table section for each Task type (budget code).

1. Exhibit C.1 will auto-populate each staff person's name in the appropriate row.
2. In Column B enter the type of expense that will be invoiced, e.g. mileage, hotel, auto rental. These fields are editable.
3. The spreadsheet will calculate the total costs by person and by task.
4. Repeat 1 - 3 for each Task type.

Exhibit C.3

Purpose: This table captures the Sub Consultants' anticipated costs and MBE/WBE/VBE/SDVBE classification. Note that the entries in this table are all inclusive of both labor and expenses.

The details of this data must be reflected in the required attached Sub Consultants' proposals.

1. Enter the name of each Sub Consultant firm in the Columns of the table.
2. Enter the cost **by task** of each Sub Consultant firm.
3. The spreadsheet will calculate the total costs by Sub Consultant and by Task.

Exhibit C.4

Purpose: In this Exhibit C.4, the Consultant should enter into lines 4, 5, and 6, as needed, any stipulations PWSA should consider about the Task Order or Amendment proposed budget.

Note that items 1, 2, and 3 are required by PWSA, and cannot be changed.

Exhibit C.4: ASSUMPTIONS

LIST OF ASSUMPTIONS RELATED TO BUDGET AND EXPENSES - List any conditions the Consultant places on the Budget and Expenses indicated above.

1	Consultant shall notify the Authority's Representative when expenditures based upon the billing of this Task Order reaches 50, 75 and 90% of the total budget, and an estimate of the time and funds necessary to complete the work. If additional funds are requested and not authorized in writing by the Authority's Representative, the Consultant shall reduce the scope of work to complete within the funds available.
2	In no event shall the Consultant's total billings for the services performed under this Task Order exceed the approved Fee amount without the Authority's written authorization and notice that it has approved an increase in the budget limit and funds available.
3	Should a key or non-key staff person not listed on an approved Task Order get assigned to the task, an Action Item to the project manager will suffice to acknowledge the change without an increase to the overall total fee. This MUST be done within 30 days of the assignment, preferably before PWSA receives the invoice for the time in which work was performed. Project Managers have the right to reject or accept the assignment of a staff person with proper justification. The consultant has the right to appeal that decision to the Director of Engineering and Construction.

Mr. Jason McBride
Wade Trim
Three Gateway Center
401 Liberty Avenue, Suite 1600
Pittsburgh, PA 15222

RE: Letter of Commitment
PWSA Wet Weather Program Manager

Dear Mr. McBride:

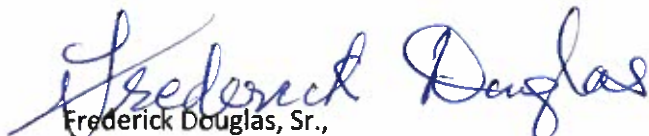

Cosmos Technologies Inc. (Cosmos) is pleased to be part of the team with Wade Trim for the above-referenced project.

We understand that Cosmos will provide General Civil Engineering Support and Field Services Support for flow monitoring. Our contract value is \$338,330.00.

Cosmos is a certified Minority/Disadvantaged Business Enterprise (Certification I.D. 1098).

If you require any additional information, please do not hesitate to contact me or Holly Douglas at (412) 321-3951 (office) or via email at hdouglas@cosmostechnologiesinc.com. Thank you for the opportunity.

Very truly yours,

Frederick Douglas, Sr.,
President

VERIFICATION

I, Edward Barca, hereby state that: (1) I am the Director of Finance for The Pittsburgh Water and Sewer Authority (“PWSA”); (2) the facts set forth in my rejoinder testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

I. INTRODUCTION.....	1
II. CAPITAL BUDGET.....	1
III. MICROFILTRATION PLANT AND HIGHLAND RESERVOIR 1.....	3
IV. CONCLUSION	5

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND POSITION FOR THE RECORD.**

3 A. My name is Barry King and I am the Director of Engineering and Construction for The
4 Pittsburgh Water and Sewer Authority (“PWSA”).

5 **Q. DID YOU PREVIOUSLY PROVIDE TESTIMONY IN THIS PROCEEDING?**

6 A. Yes. I submitted Direct Testimony on May 9, 2023 and Rebuttal Testimony on
7 September 8, 2023. (PWSA St. Nos. 4 and 4-R).

8 **Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?**

9 A. The purpose of my Rejoinder Testimony is to respond to certain statements made in the
10 Surrebuttal Testimony of: Ethan H. Cline on behalf of the Bureau of Investigation and
11 Enforcement (“I&E”) (I&E Statement No. 3-SR); and Terry L. Fought on behalf of the
12 Office of Consumer Advocate (“OCA”) (OCA Statement 6SR).

13 **II. CAPITAL BUDGET**

14 **Q. PLEASE DESCRIBE MR. CLINE’S SURREBUTTAL TESTIMONY**
15 **REGARDING PWSA’S CAPITAL BUDGET.**

16 A. I&E witness Cline continues to recommend that the Commission reduce PWSA’s capital
17 budget by \$32.6 million. The entire basis for this recommendation is Mr. Cline’s review
18 of PWSA’s four-year history of spending less on capital projects than has been budgeted.
19 (I&E Statement No. 3-SR at 20, 28).

20 **Q. PLEASE RESPOND.**

21 A. Using Mr. Cline’s rationale for reducing PWSA’s capital budget by \$32.6 million would
22 mean that the Authority’s capital budget amount, regardless of the level requested, would
23 always be subject to reduction in the event of prior underspending due to factors beyond
24 PWSA’s control. Just because PWSA has not spent its budgeted amounts in prior years

1 does not mean that it should forego planning for future projects, which are included in the
2 Capital Improvement Plan (“CIP”) and are needed to ensure regulatory compliance,
3 operating efficiency, safety, water quality and reliability of service. Of note, in arriving
4 at his recommended reduction, Mr. Cline has not identified any projects in PWSA’s CIP
5 that he believes should be cancelled or delayed. Rather, he opines that PWSA’s plans
6 *may* be too “aggressive.” (I&E Statement No. 3-R at 24). Therefore, presumably, if
7 PWSA had come into this rate case with a \$10 million requested increase in its capital
8 budget, Mr. Cline’s theory of only approving a percentage of that amount – based on
9 prior spending levels – would have equally applied. This rationale is irrelevant to the
10 need for the projects that PWSA is planning for the future. If Mr. Cline believes that
11 PWSA’s capital budget is too high, he should have identified the projects that he views as
12 being on too “aggressive” of a timetable for completion or that he believes PWSA should
13 forego entirely.

14 As I testified in my Rebuttal Testimony, the capital projects that PWSA is
15 planning need to be done. It is not a wish list. The level of capital improvements that
16 PWSA is currently undertaking is necessary and unprecedented due to neglected
17 infrastructure over many years, resigning the program to a “fix as fails” approach to save
18 money in the short term. Spending less than projected over a few years, for unanticipated
19 reasons that were outside of PWSA’s control, is not a valid reason to drastically and
20 arbitrarily reduce the level of spending on capital projects that have been approved by
21 PWSA’s Board. Of note, any unspent monies earmarked for particular improvements do
22 not go into the pockets of shareholders, of which PWSA has none, but rather go back into
23 the water, wastewater and stormwater systems for the benefit of ratepayers, may expedite

1 other capital projects, may pay down debt and may be reserves for a future year, delaying
2 the need for future rate increases. (PWSA St. No. 4-R at 6-10). Therefore, PWSA
3 continues to support its proposed capital budget so that the Authority is able to stay the
4 course in making the necessary improvements and enhancements to its system for the
5 benefit of its customers.

6III. MICROFILTRATION PLANT AND HIGHLAND RESERVOIR 1

7 **Q. PLEASE DESCRIBE MR. FOUGHT’S SURREBUTTAL TESTIMONY**
8 **REGARDING THE MICROFILTRATION PLANT (“MFP”) AND HIGHLAND**
9 **RESERVOIR 1 (“HR1”).**

10 A. Mr. Fought addresses my Rebuttal Testimony regarding his proposal for PWSA to
11 consider covering the Highland 1 Reservoir (“HR1”). In his discussion, he suggests that
12 some of the problems with covering HR1 that were identified in the March 4, 2020
13 memorandum (PWSA Exhibit No. BK-5) have changed or are no longer important.
14 Therefore, he recommends that PWSA’s decision should be reconsidered, to include a
15 neutral, third-party report of covering or not covering HR1 prior to relining HR1. (OCA
16 Statement 6SR at 10-12).

17 **Q. HOW DO YOU RESPOND?**

18 A. At the outset, I note that Mr. Fought simply lists eight problems for which he believes
19 there are now reasonable alternatives or which no longer exist but does not offer any
20 explanation for his views as to why any of those factors have changed. Therefore, I am
21 unable to specifically address his position on each of them. However, I can say that the
22 problems he references from the 2020 memorandum do still remain and there is no
23 reasonable alternative. In fact, as I stated in my Rebuttal Testimony, a decision of
24 whether to cover HR1 is not one that can be made based solely on costs, and that the

1 explanation I offered in 2020 based on the March 4, 2020 memorandum remains true
2 today. (PWSA Statement No. 4-R at 10-11).

3 The feasibility of covering the existing HR1 is not reasonable in terms of
4 constructability, hydraulics, water quality and cost. A particularly compelling factor
5 weighing against Mr. Fought's proposed approach is that the maximum water level in
6 HR1 is too low, so to simply cover it would result in hydraulic pressure issues in the HR1
7 super system. This outcome would require extensive changes to the pressure districts
8 thereby increasing required tank and pump sizes for the super system subdistricts.

9 Further, HR1 is too large. Current industry and environmental standards require a
10 minimum storage of an average day demand plus fire flow and seek to avoid excess
11 storage due to the formation of carcinogenic disinfection by-products ("DBPs"). The
12 total average day demand for the HR1 supersystem is around 28 million gallons.

13 Because the HR1 sub-systems already have storage, the required storage would be less
14 than 28 million gallons. The HR1 is 130 million gallons, which means that potable water
15 would be stored in the reservoir in excess of 10 days before consumption. It is for these
16 reasons that the alternative plan includes the abandonment of HR1 and replacing it with
17 an appropriately sized tank. While the ultimate plan is to replace HR1 with a tank, which
18 also eliminates the need for the MFP, that is a long-term project that falls outside the
19 current five-year CIP.

20 Similarly, relining HR1 is not imminent and will not occur until sometime after
21 2026. I recognize that in OCA Exhibit TLF-2SR, Mr. Fought includes information about
22 the amount of \$704,981 being in PWSA's CIP for the relining of HR1 in 2026.

1 However, that funding was only earmarked for design purposes and the construction
2 project itself will cost millions of dollars.

3 Finally, with respect to Mr. Fought’s comment that the 130.5 million gallons of
4 water in HR1 “may be useful in some system wide emergencies” (OCA Statement 6SR at
5 12), PWSA would not want to have that amount of treated water just sitting in the
6 reservoir due to the health issues associated with excessive water-age and DBPs
7 accumulation.

8 In summary, no need exists for PWSA to devote more ratepayer dollars to
9 studying an issue to which has been fully assessed and addressed. Therefore, PWSA
10 should not be required to obtain a third-party report that addresses the option of covering
11 HR1.

12 **IV. CONCLUSION**

13 **Q. DOES THAT COMPLETE YOUR REBUTTAL TESTIMONY?**

14 **A. Yes; however, I do reserve the right to supplement this testimony as may be appropriate.**

VERIFICATION

I, Barry King, hereby state that: (1) I am the Director of Engineering for The Pittsburgh Water and Sewer Authority (“PWSA”); (2) the facts set forth in my rejoinder testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

V. COMMUNITY-BASED PUBLIC PRIVATE PARTNERSHIPS 6

VI. STORMWATER EXEMPTIONS IN OTHER JURISDICTIONS..... 7

VII. CONCLUSION 8

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND POSITION FOR THE RECORD.**

3 A. My name is Tony Igwe. I am the Senior Group Manager, Stormwater, for The Pittsburgh
4 Water and Sewer Authority (“PWSA”).

5 **Q. HAVE YOU PREVIOUSLY PROVIDED TESTMONY IN THIS PROCEEDING?**

6 A. Yes, I submitted Direct Testimony on May 9, 2023, which accompanied the rate filing
7 (PWSA St. No. 5). I also submitted Rebuttal Testimony on September 8, 2023 (PWSA
8 St. No. 5-R).

9 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

10 A. The purpose of my testimony is to respond to the Joint Surrebuttal Testimony of Michael
11 J. McNamara and Theodore J. Dwyer and the Surrebuttal Testimony of Eric Callocchia
12 on behalf of the Pittsburgh School District (“School District”) (School District St. Nos. 1-
13 SR and 2-SR, respectively) regarding certain stormwater topics. Other stormwater issues
14 raised by these witnesses are being addressed in Rejoinder Testimony submitted by Keith
15 Readling (PWSA St. No. 8-RJ).

16 My failure to respond to a specific statement made by other parties’ witnesses
17 should not be viewed as my acceptance of their testimony. Rather, it reflects my belief
18 that a further response in this rejoinder testimony is not warranted, either because it was
19 adequately addressed in my direct testimony, is being addressed by other rejoinder
20 testimony, or because it is a legal matter that is better addressed by counsel in briefs or
21 other pleadings.

22

1 **II. SCHOOL DISTRICT’S PROPOSED STORMWATER DISCOUNT**

2 **Q. WHAT DOES THE SCHOOL DISTRICT PROPOSE IN ITS SURREBUTTAL**
3 **TESTIMONIES REGARDING A “DISCOUNT” TO ITS STORMWATER**
4 **CHARGES?**

5 A. The School District argues that, as an alternative to a full exemption from stormwater
6 charges, they should receive an 85% discount off of its stormwater charges. This is based
7 on the discount provided to low-income residential customers enrolled in PWSA’s Bill
8 Discount Program. (School District St. No. 1-SR at 16-17; School District St. No. 2-SR
9 at 22).

10 **Q. DO YOU AGREE THAT THE SCHOOL DISTRICT SHOULD RECEIVE AN**
11 **85% DISCOUNT OFF ITS STORMWATER CHARGES?**

12 A. No, I do not. As I previously testified, PWSA understands and appreciates the effect that
13 an increase to the stormwater charge may have on entities like the School District.
14 However, the School District’s mission or the fact that its students include some whose
15 families may be low income does not justify any blanket discount on their stormwater
16 charges. Like all other developed properties, the School District must pay its fair share
17 for stormwater management, in the same way as it must pay its other utility bills.

18 School District witness Callocchia analyzed the impact of their proposed discount
19 and testified that “an 85% reduction in the School District’s stormwater rates will result
20 in a maximum rate increase of 1.3%.” (School District St. No. 1-SR at 22). Mr.
21 Callocchia ignores the fact that the amounts the School District does not pay would have
22 to be absorbed by PWSA’s other customers, which include those same low income
23 families the School District uses to justify this proposed discount. While Mr. Callocchia
24 claims that this is a small increase for others to shoulder, it may be a meaningful amount
25 to those individual customers.

1 Importantly, the School District is not unique. There are many entities in
2 PWSA’s service territory that serve low-income individuals or provide other beneficial
3 services to the public. This includes the City of Pittsburgh itself, which the School
4 District has argued should absorb much of the costs for stormwater service (and which is
5 billed and pays for stormwater charges). It also includes many nonprofit organizations,
6 hospitals, public charter schools, a community college, and others. Based on the School
7 District’s logic, countless entities may be entitled to this massive discount, resulting in an
8 even heavier burden on the remaining stormwater customers – including many low or
9 moderate income customers.

10 The School District’s proposal is inherently unfair to the rest of PWSA’s
11 customers, and would create a “slippery slope” leading to a smaller and smaller customer
12 base being left to absorb more than their fair share of stormwater management costs. I
13 am also advised by counsel that providing this discount to the School District would be
14 discriminatory under Section 1304 of the Public Utility Code. The School District’s
15 proposed 85% discount – as well as the originally proposed exemption – should be
16 rejected.

17 I would highlight that PWSA remains willing to assist the School District in
18 exploring ways to qualify for a credit or otherwise reduce the impervious areas on its
19 properties. This would be a much more productive way to lower its stormwater bills, by
20 reducing runoff and thus the demand for stormwater service. In my opinion, the School
21 District is well positioned to seek funding from foundations or other entities to implement
22 stormwater control measures, and PWSA is willing to provide guidance as needed.

23

1 **III. STORMWATER CHARGES FOR CITY STREETS AND SIDEWALKS**

2 **Q. PLEASE RESPOND TO MR. CALLOCCHIA’S SURREBUTTAL TESTIMONY**
3 **REGARDING THE FACT THAT PWSA DOES NOT CHARGE FOR**
4 **STORMWATER SERVICE TO STREETS, ROADS, OR HIGHWAYS. (SCHOOL**
5 **DISTRICT ST. NO. 2-SR AT 13-15).**

6 A. Mr. Callocchia misunderstands my Rebuttal Testimony on this point. I did not claim that
7 City streets, sidewalks, etc. are part of “PWSA’s system” as Mr. Callocchia alleges.
8 Rather, I stated that PWSA does not charge for impervious area within the public right of
9 way “primarily because these facilities are an integral part of *the drainage infrastructure.*”
10 (PWSA St. No. 5-R at 8) (emphasis supplied). As explained in my Direct Testimony,
11 stormwater primarily enters PWSA’s combined wastewater system (which makes up the
12 majority of the system for collecting and conveying stormwater) through storm grates or
13 inlets located in the streets. It is common knowledge that, in order to reach those storm
14 grates or inlets which are located *in the street*, stormwater flows along streets and
15 sidewalks, thus making them a part of the overall drainage infrastructure.

16 Given this fact, PWSA does not charge the City, County or PennDOT for runoff
17 from streets, roads or highways. This is consistent with PWSA’s PUC-approved
18 stormwater tariff. Additionally, as I explained in my Rebuttal Testimony, most
19 stormwater utilities in the United States do not bill for impervious area in public rights of
20 way, and to my knowledge no stormwater utility in Pennsylvania bills for runoff from
21 roadways. The School District has not pointed to any basis for changing PWSA’s
22 approach, which is consistent with the approach typically used across the country and
23 previously found to be reasonable by the Commission.

1 **Q. PLEASE RESPOND TO MR. CALLOCCHIA'S ARGUMENT THAT THE CITY**
2 **IS THE TRUE CUSTOMER OF PWSA'S STORMWATER SERVICE. (SCHOOL**
3 **DISTRICT ST. NO. 2-SR AT 15-16).**

4 A. Mr. Callocchia argues that the City is the true customer for stormwater service, so PWSA
5 should charge the City for stormwater costs, and the City should recover those costs from
6 citizens via a City-wide tax. (School District St. No. 2-SR at 16). I disagree with this
7 claim.

8 Mr. Callocchia bases this argument on his belief stormwater is only providing
9 public benefits, rather than benefits to individual properties. As I discuss below and in
10 my Rebuttal Testimony (PWSA St. No. 5-R at 5), this is incorrect as individual
11 customers do receive discrete, tangible benefits from PWSA's stormwater management.

12 Additionally, if the City were to implement a tax to pay PWSA stormwater
13 charges, this would result in a much smaller group of customers paying more than their
14 fair share for stormwater services, including many low to moderate income residential
15 customers. Many parcels in the City are owned by large nonprofit or governmental
16 entities, such as hospitals, universities, etc. These properties may create significant
17 demand for stormwater service, but because these entities are tax exempt, they would not
18 pay such a City tax and thus would not pay their share for stormwater service. Further, if
19 stormwater charges were recovered by the City through a tax, low-income customers
20 would not have access to the significant assistance available through PWSA's Bill
21 Discount Program. This is unfair and results in charges that are not related to demand for
22 stormwater service. This proposal is unreasonable and should be rejected.

1 **IV. INDIVIDUAL BENEFITS OF STORMWATER MANAGEMENT**

2 **Q. DOES MR. CALLOCCHIA AGREE WITH YOUR STATEMENT REGARDING**
3 **THE DISCRETE, TANGIBLE BENEFITS OF STORMWATER MANAGEMENT**
4 **FOR INDIVIDUAL CUSTOMERS?**

5 A. Mr. Callocchia says that he does not “entirely” agree with my statement and goes on to
6 differentiate between benefits to a “community” versus benefits to an “individual”
7 (School District St. No. 2-SR at 10-11). Regardless of the semantics that are used – i.e.,
8 whether benefits to a community also benefit individuals or vice versa – the point is that
9 PWSA’s stormwater management does benefit individuals in the City of Pittsburgh.
10 Individual customers in Pittsburgh receive a tangible benefit because PWSA manages
11 and/or conveys stormwater runoff from individual properties, and this stormwater
12 management avoids problems that might cause flooding, property damage and water
13 quality issues.

14 **V. COMMUNITY-BASED PUBLIC PRIVATE PARTNERSHIPS**

15 **Q. PLEASE DESCRIBE MR. CALLOCCHIA’S RECOMMENDATION**
16 **REGARDING THE USE OF COMMUNITY-BASED PUBLIC PRIVATE**
17 **PARTNERSHIPS (“CBP3”).**

18 A. Mr. Callocchia recommends that PWSA “be directed to explore CBP3 relationships
19 between now and the next rate request proceeding and report the results of its efforts to
20 the parties in this proceeding” on at least an annual basis. (School District St. No. 2-SR
21 at 12-13).

22 **Q. HOW DO YOU RESPOND?**

23 A. As I noted in my Rebuttal Testimony, PWSA is willing to explore a CBP3 or similar
24 arrangement at the appropriate time, but these processes work best following the
25 development of specific stormwater alternatives. (PWSA St. No. 5-R at 5-6).

26 Nonetheless, it is important to emphasize that PWSA is under no obligation or duty to

1 pursue these arrangements. Further, it is my understanding that these partnerships would
 2 not necessarily eliminate stormwater management costs but would potentially offer
 3 another source of revenue. As Mr. Pickering’s Rebuttal Testimony stated, PWSA has
 4 secured funds from private entities to help to mitigate stormwater costs. (PWSA St. No.
 5 1-R at 15). As to obtaining funds from other sources, it would seem that for the reasons
 6 set forth in Mr. Callocchia’s Surrebuttal Testimony regarding the mission of and the
 7 population served by the School District, it is in a more favorable (sympathetic) position
 8 than PWSA as a public utility is to make such arrangements. Since PWSA’s draft
 9 Stormwater Strategic Plan currently includes a provision to consider these partnerships,
 10 and the School District has identified no requirement for PWSA to pursue CBP3
 11 arrangements, there is no justification for directing PWSA to explore these alternatives or
 12 report the results to the parties.

13 **VI. STORMWATER EXEMPTIONS IN OTHER JURISDICTIONS**

14 **Q. PLEASE DESCRIBE MR. CALLOCCHIA’S TESTIMONY REGARDING**
 15 **STORMWATER PROGRAMS IN THE CITY OF TAKOMA PARK,**
 16 **MARYLAND AND THE CITY OF JACKSONVILLE, FLORIDA.**

17 A. Mr. Callocchia disagrees with my statement that because the stormwater programs in the
 18 City of Takoma Park, Maryland and the City of Jacksonville, Florida are not operated by
 19 regulated public utilities, they fail to support the exemption of certain customers from
 20 paying stormwater charges. He also characterizes PWSA as being “unreasonably
 21 dismissive” of the School District’s point that these jurisdictions show that there are other
 22 ways to address stormwater charges. (School District No. 2-SR at 13, 19-20).

23 **Q. DO YOU HAVE A RESPONSE?**

24 A. Yes. I note that Mr. Callocchia included two sentences in his Direct Testimony – one for
 25 each program – only offering them as examples of jurisdictions that exempt certain

1 property from the imposition of stormwater charges, without any further discussion.
2 (School District St. No. 2 at 25). For instance, he presented no other details about these
3 programs, how the enabling statutes might differ in those jurisdictions or how these
4 particular exemptions might be relevant to PWSA stormwater program and impact the
5 charges paid by other PWSA customers for stormwater management. These examples,
6 which show nothing other than that a city in one state exempts property owned by the
7 government that is used for public purposes and that a city in another state exempts
8 charitable organizations, have no bearing on how PWSA's stormwater charges are or
9 should be structured. Through PWSA's approach, which was approved by the
10 Commission nearly two years ago, all properties within the City of Pittsburgh (except
11 those that are less than 400 square feet) are assessed stormwater charges consistent with
12 the amount of impervious surface on the properties. Under PWSA's PUC-approved
13 stormwater tariff, PWSA does not offer exemptions, and to the extent that PWSA's
14 stormwater rate structure would be changed to exempt certain customer classes or groups,
15 it would be necessary to recover those costs from other ratepayers. PWSA simply cannot
16 support that outcome.

17 **VII. CONCLUSION**

18 **Q. DOES THAT COMPLETE YOUR REJOINDER TESTIMONY?**

19 A. Yes. However, I reserve the right to supplement this testimony as may be appropriate.

VERIFICATION

I, Tony Igwe, hereby state that: (1) I am the Senior Group Manager, Stormwater for The Pittsburgh Water and Sewer Authority (“PWSA”); (2) the facts set forth in my rejoinder testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

VIII. CONCLUSION	9

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND CURRENT POSITION WITH PWSA.**

3 A. My name is Julie A. Mechling. My position with The Pittsburgh Water and Sewer
4 Authority (“PWSA” or “Authority”) is Director of Customer Service.

5 **Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?**

6 A. Yes. I submitted Direct Testimony on May 9, 2023 pre-marked PWSA St. No. 6, which
7 accompanied the rate filing package. On September 8, 2023, written Rebuttal Testimony
8 on behalf of PWSA was served and pre-marked PWSA St. No. 6-R.

9 **Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?**

10 A. The purpose of my testimony is to respond to the rebuttal testimony of Office of
11 Consumer Advocate (“OCA”) Witnesses Roger Colton and Barbara Alexander;
12 Pittsburgh United’s Our Water Table (“United”) Witness Harry Geller; and, Bureau of
13 Investigation & Enforcement (“I&E”) Witness Anthony Spadaccio. The topics I will be
14 addressing are:

- 15 • Ms. Alexander’s recommendations regarding PWSA’s call abandonment rates
16 and her remaining concerns regarding the use of a third party collection agency.
- 17 • Mr. Colton’s recommendations regarding returned as undeliverable mail and the
18 impact of the Low-Income Water Assistance Program (“LIHWAP”) on proposed
19 changes to PWSA’s Arrearage Forgiveness Program.
- 20 • Mr. Geller’s alternate proposal regarding reimbursement of third party
21 convenience fees for “vulnerable” customers.
- 22 • The practical implementation issues of Mr. Spadaccio’s view that the
23 Commission should not direct PWSA to implement its Infrastructure
24 Improvement Charge as part of this rate case.

25 My failure to respond to a specific statement made by other parties’ witnesses
26 should not be viewed as my acceptance of their testimony. Rather, it reflects my belief
27 that a further response in this rejoinder testimony is not warranted, either because it was

1 adequately addressed in my direct testimony, is being addressed by other rejoinder
2 testimony, or because it is a legal matter that is better addressed by counsel in briefs or
3 other pleadings.

4 **Q. ARE YOU SPONSORING ANY EXHIBITS?**

5 A. No.

6 **II. DETERMINING CALL ABANDONMENT RATES ON AVERAGE**

7 **Q. DOES MS. ALEXANDER CONTINUE TO ADVOCATE THAT PWSA SHOULD**
8 **BE REQUIRED TO IMPLEMENT ITS INTERNAL STANDARDS TO EACH**
9 **QUEUE, INDIVIDUALLY?**

10 A. Yes; PWSA’s current internal standards are applied on an average basis across all call
11 queues consistent with agreements reached in prior rate cases.¹ In this proceeding, Ms.
12 Alexander has evaluated the performance standards of each queue separately and has
13 noted that three of the eight queues,² the collections queue, the permits queue and the
14 stormwater queue, exceeded PWSA’s internal abandonment target rate by a high of 1.8%
15 for the collections queue and a low of .3% for the permits queue. (OCA St. No. 5SR at
16 4). According to Ms. Alexander, she does “not agree that calls from some customers
17 should be handled at a lesser quality of service than calls from other customers on
18 different topics.” (OCA St. No. 5SR at 5).

19 **Q. DO YOU AGREE WITH MS. ALEXANDER’S ASSESSMENT THAT PWSA IS**
20 **TREATING SOME CALLS AT A LESSER QUALITY OF SERVICE?**

21 A. No, I do not. I continue to support the use of an average internal performance metric
22 across all queues because the queues vary in their volume and nature of calls. For

¹ See Section III, E, 7, 1 of Joint Petition for Settlement at Docket No. R-2021-3024773.

² These queues include “General,” “Dispatch,” “Collections,” “Billing and Metering,” “AMI 8920,” “AMI,” “Permits,” and “Stormwater.” See PWSA St. No. 6-R at 9.

1 example, a customer calling with a permitting question may judge that because of the
2 nature of the call, he or she can call back at a more convenient time if the call is not
3 answered immediately. Alternatively, customers with permitting questions have the
4 ability to leave a voice mail message to receive a call back. This option is also enabled in
5 the AMI, Lead Help, and Permits queues. It is important to note that the volume of calls
6 to one queue may be significantly less than another queue, thereby creating an
7 unreasonable standard for the nature of that queue. I continue to support as reasonable
8 PWSA's previously agreed to method of applying its internal performance standards on
9 an average basis across all of the customer queues to account for these differences. Ms.
10 Alexander has not shown how the slight deviation from the overall standard for three
11 specific categories has resulted in inadequate service or a lack of care for some types of
12 calls vs. other types of calls.

13 **III. PAYMENT RESPONSIBILITY FOR CONVENIENCE FEES**

14 **Q. REGARDING THE COST RESPONSIBILITY FOR CONVENIENCE FEES,**
15 **WHAT ALTERNATIVE RECOMMENDATION DOES UNITED WITNESS**
16 **GELLER OFFER IN HIS SURREBUTTAL TESTIMONY?**

17 **A.** PWSA proposed to shift the current responsibility for convenience fees from all
18 ratepayers as a component of our rates to the individual customer when electing an option
19 which charges a convenience fee. In his surrebuttal testimony, Mr. Geller suggests an
20 alternative approach whereby the convenience fees for "vulnerable" low income
21 customers who utilize third party vendors for payment would be reimbursed by PWSA to
22 the individual customer as applied to the customer's bill in the month following incursion
23 of the convenience fee. (United St. No. 1-SR at 17).

1 **Q. DOES PWSA SUPPORT THIS ALTERNATIVE RECOMMENDATION?**

2 A. No. As discussed in my rebuttal testimony, PWSA has never paid or reimbursed
3 customers for fees charged by third party retailers and PWSA does not support changing
4 this process. (PWSA St. No. 6-R at 15). Setting this aside, Mr. Geller’s alternate
5 proposal would be overly burdensome from a technical perspective because PWSA
6 would have to employ a time-consuming manual adjustment process as the operational
7 processes needed to implement such an approach do not exist in PWSA’s current
8 Customer Information System. If we were required to operationalize this approach, it
9 would involve a significant amount of time for our third party billing vendor to
10 implement the process, and the costs of such changes would need to be paid for by
11 PWSA’s ratepayers. Mr. Geller also generally refers to “vulnerable” customers, to the
12 extent he considers this group of customers to include low income customers not
13 participating in PWSA’s Bill Discount Program, PWSA does not have any marker in its
14 current Customer Information System for those customers.

15 **IV. RECOMMENDATION REGARDING RETURNED MAIL**

16 **Q. DOES OCA WITNESS COLTON CONTINUE TO BELIEVE THAT PWSA’S**
17 **MAIL RETURNED AS UNDELIVERABLE IS A SIGNIFICANT CONCERN?**

18 A. Yes, he does. He objects to these characterizations that a returned as undeliverable mail
19 rate of 2% of the monthly bills is not a significant concern. (OCA St. No. 4SR at 2-5).
20 He also clarifies that his proposal would be required when “multiple pieces of mail are
21 returned as undeliverable within a certain time period.” (OCA St. No. 4SR at 5).

1 **Q. IS THERE A REASON WHY “MULTIPLE PIECES OF MAIL” MAY BE**
2 **RETURNED TO PWSA ON A REGULAR BASIS?**

3 A. Yes. In addition to its charges, PWSA is the billing agent for ALCOSAN’s wastewater
4 treatment charges, and PWSA is required to continue to submit these bills each month
5 even for vacant properties or where the owner is deceased. The influx month after month
6 of returned bills for these ALCOSAN charges accounts for a significant portion of the 2%
7 in returned bills that I referenced in my rebuttal testimony. (PWSA St. No. 6-R at 17).
8 As noted in my rebuttal testimony, PWSA has a process in place to search for a more
9 accurate address when bills are returned, and we update the information in our Customer
10 Information System where appropriate; however, we continue to issue bills for
11 ALCOSAN charges even when a property is vacant or the property owner is deceased
12 and the PWSA services are inactive.

13 **V. USE OF COLLECTION AGENCIES**

14 **Q. NOTWITHSTANDING PWSA’S EFFORTS TO ADDRESS CONCERNS**
15 **RELATED TO THE FUTURE USE OF A COLLECTION AGENCY, DOES OCA**
16 **WITNESS ALEXANDER CONTINUE TO NOT SUPPORT THE USE OF THIS**
17 **COLLECTIONS TOOL BY PWSA?**

18 A. Yes. In her surrebuttal testimony, Ms. Alexander posits that the scope of the agreement
19 is too broad based on concerns that a prior customer seeking to re-establish service would
20 be placed in the situation of having to negotiate a payment arrangement of a past debt
21 with the third-party collection agency rather than with PWSA’s in-house customer
22 service representatives. (OCA St. No. 5SR at 10).

23 **Q. DO YOU AGREE THAT THIS POTENTIAL EXISTS?**

24 A. No. I believe Ms. Alexander is thinking of a situation where a prior PWSA customer
25 with an outstanding PWSA debt moves to a new location and attempts to re-establish

1 service at a new location. Because of its lien authority, PWSA keeps all outstanding debt
 2 with the property, not the customer who incurred the debt. Therefore, the collection
 3 agency would only be pursuing debt at a property with the property owner who may or
 4 may not have been the PWSA customer who incurred the debt. The collection agency
 5 would not be working with any active accounts or any applicants for new service.

6 VI. **IMPACT OF LOW-INCOME HOUSEHOLD WATER ASSISTANCE PROGRAM**
 7 **“LIHWAP”) ON PWSA’S ARREARAGE FORGIVENESS PROGRAM**

8 **Q. DOES OCA WITNESS MR. COLTON CONTINUE TO UNDERVALUE THE**
 9 **RECEIPT OF LIHWAP GRANTS AS A REASONABLE BASIS FOR PWSA TO**
 10 **NOT IMPLEMENT CHANGES TO ITS ARREARAGE FORGIVENESS**
 11 **PROGRAM AT THIS TIME?**

12 A. Yes. Mr. Colton appears to undervalue the funding PWSA received through the
 13 LIHWAP to pay for the arrearages of its customers, noting that 12 customers received
 14 grants between January 2023 and May 2023. He also challenges my statement that
 15 LIHWAP funding is continuing. Ultimately, Mr. Colton concludes that the “availability
 16 or non-availability of LIHWAP funding does not affect his modifications.” (OCA St. No.
 17 4SR at 27).

18 **Q. PLEASE EXPLAIN WHY MR. COLTON IS MISTAKEN.**

19 A. As I explained in my rebuttal testimony, LIHWAP grants provide real dollars to PWSA
 20 to satisfy overdue water/wastewater conveyance bills of our customers. This is in
 21 contrast to the modifications of our current program as suggested by Mr. Colton, which
 22 would increase the amount of unpaid charges that would have to be recovered from all
 23 other ratepayers. (PWSA St. No. 6-R at 41). As of September 28, 2023, a total of
 24 \$2,104,851 in LIHWAP grants have been allocated to PWSA to satisfy its customers’
 25 overdue charges. Additional funding may become available as the Department of Human

1 Services (“DHS”) continues to review the applications it has received. There is not a
 2 specific timetable for distribution of the funds based on the applications, and, to date,
 3 DHS processes and distributes the funding on an ongoing basis, even following closure of
 4 the program. Therefore, while DHS is not accepting new applications it continues to
 5 review what it has received and may distribute additional grants to PWSA. Thus, I
 6 strongly disagree with Mr. Colton’s view that this funding source is of no relevance to his
 7 proposal that we modify our existing Arrearage Forgiveness Program consistent with his
 8 suggestions to increase the amount of unpaid arrears that would have to be recovered
 9 from all our ratepayers.

10 **II. IMPLEMENTATION OF INFRASTRUCTURE IMPROVEMENT CHARGE**
 11 **(“ICC”)**

12 **Q. HAVE YOU REVIEWED THE TESTIMONY OF I&E WITNESS SPADACCIO**
 13 **REGARDING IMPLEMENTATION OF THE INFRASTRUCTURE**
 14 **IMPROVEMENT CHARGE?**

15 A. Yes. According to Mr. Spadaccio, the ICC cannot be requested as part of a base rate case
 16 but must be “formally requested outside of the 60 and 90-day window prior to the first
 17 anticipated principal and interest payment.” (I&E St. No. 1-SR at 12).

18 **Q. WHILE PWSA IS ADDRESSING THE MERITS OF THIS CLAIM IN THE**
 19 **REJOINDER TESTIMONY OF MR. BARCA, CAN YOU DISCUSS THE**
 20 **MECHANICS OF CREATING THIS CHARGE?**

21 A. Yes. Separate from the issue of what specific costs are appropriate to bill customers via
 22 PWSA’s proposed ICC, is the issue of undertaking the necessary work within the billing
 23 system and testing to be able to “turn on” the ICC so that approved costs may be billed to
 24 customers via the ICC. PWSA currently does not already have a comparable charge like
 25 the proposed ICC or the CAC which is designed to recover specific costs. The current
 26 Distribution System Improvement Charge (“DSIC”) mechanism is designed to recover a

1 percentage amount of the billed revenue. Because PWSA does not have any existing
2 fixed charge recovery mechanisms in place, it would need to be designed and the billing
3 software changes and testing would need to occur to make the ICC ready to be “turned
4 on”, regardless of whether or not costs are included for recovery in the charge. This is
5 consistent with PWSA’s proposed tariff pages regarding the ICC that show an effective
6 date of February 2024 but an amount of \$0.00 to be charged.³ I would anticipate at least
7 a nine month timeframe necessary to design and have the charge at the ready. I would
8 also note that the Commission approved implementation of our DSIC prior to PWSA
9 receiving approval to begin billing customers for costs via the DSIC. This enabled
10 PWSA to develop the system processes necessary to “turn on” the DSIC and, then, once
11 the Commission approved it as a mechanism to recover the costs of PWSA’s
12 Commission approved Long Term Infrastructure Improvement Plan (“ LTIIP”), PWSA
13 was ready to begin billing customers via the DSIC.⁴ As with the IIC, this approval to
14 have the charge ready to be utilized was necessary from an implementation standpoint.
15 As such, Mr. Spadaccio’s recommendation to wait until some future date to request a
16 recovery of incurred costs on a few months turnaround time is not practical. Thus,
17 regardless of whether or not the Commission determines that a specific timeframe or
18 process is required for PWSA to follow prior to receiving approval for the recovery of
19 specific costs, approval for PWSA to create the mechanism as part of this rate proceeding
20 is necessary and reasonable to enable the opportunity for PWSA to seek future cost
21 recovery through the IIC.

³ See, e.g, PWSA Exh. No. JAM-12 at tariff page 8B.

⁴ PWSA’s Initial Tariff included the Commission approved details regarding PWSA’s DSIC and set the rate at 0% until PWSA received approval in the subsequent rate case to begin assessing a DIC with a 5% cap.

VIII. CONCLUSION

2 Q. **DOES THAT COMPLETE YOUR REJOINDER TESTIMONY?**

3 A. Yes.

VERIFICATION

I, Julie A. Mechling, hereby state that: (1) I am the Director of Customer Service for The Pittsburgh Water and Sewer Authority (“PWSA”); (2) the facts set forth in my rejoinder testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

V. CONCLUSION 5

Table of Exhibits

Exhibit KR-4	PWSA’s Response to School District-V-8 through V-10
Exhibit KR-5	PWSA’s Response to School District-V-6 and V-7

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND POSITION FOR THE RECORD.**

3 A. My name is Keith Readling. I am Executive Vice President of Raftelis Financial
4 Consultants, Inc. (“Raftelis”).

5 **Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?**

6 A. Yes, I submitted Direct Testimony on May 9, 2023, which accompanied the rate filing
7 (PWSA St. No. 8). I also submitted Rebuttal Testimony on September 8, 2023 (PWSA
8 St. No. 8-R).

9 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

10 A. The purpose of my testimony is to respond to the Surrebuttal Testimony of Eric M.
11 Callocchia on behalf of the Pittsburgh School District (“School District”) (School District
12 St. No. 2-SR) regarding certain stormwater topics. Other stormwater issues raised by the
13 School District are being addressed in Rejoinder Testimony submitted by Tony Igwe
14 (PWSA St. No. 5-RJ).

15 My failure to respond to a specific statement made by other parties’ witnesses
16 should not be viewed as my acceptance of their testimony. Rather, it reflects my belief
17 that a further response in this rejoinder testimony is not warranted, either because it was
18 adequately addressed in my direct testimony, is being addressed by other rejoinder
19 testimony, or because it is a legal matter that is better addressed by counsel in briefs or
20 other pleadings.

21 **II. METHODS FOR ADDRESSING IMPERVIOUS AREA**

22 **Q. PLEASE RESPOND TO MR. CALLOCCHIA’S SURREBUTTAL TESTIMONY**
23 **ARGUING THAT PWSA SHOULD “INVESTIGATE” USING THE INTENSITY**
24 **OF DEVELOPMENT FACTOR (“IDF”) AND EQUIVALENT HYDRAULIC**
25 **AREA (“EHA”) METHODOLOGIES RATHER THAN EQUIVALENT**

1 **RESIDENTIAL UNIT (“ERU”) TO DETERMINE STORMWATER BILLS.**
2 **(SCHOOL DISTRICT ST. NO. 2-SR AT 16-17).**

3 A. In his Surrebuttal Testimony, Mr. Callocchia argues that IDF or EHA would be more
4 equitable for assigning stormwater costs to parcels because they consider both the
5 impervious and pervious area of each parcel. Since parcel size varies, he believes that
6 parcels that are mostly impervious will create more demand for stormwater service than a
7 parcel with the same amount of impervious area but with a larger lot size and more
8 pervious area that would absorb runoff. (School District St. No. 2-SR at 17). Mr.
9 Callocchia fails to understand how charges are calculated under IDF or EHA. The result
10 of these approaches would be extremely similar to PWSA’s current approach using
11 impervious area in units of ERUs, while also being much more complicated and
12 expensive for PWSA to implement.¹

13 IDF rate structures typically assign an intensity of development factor to a parcel,
14 then multiply that factor by the parcel’s gross area and a rate to calculate the parcel’s
15 stormwater charge. In response to the School District’s Interrogatory V-8, I provided an
16 example of how IDF is applied in Horry County, South Carolina.² As long as the IDF
17 assigned to a parcel is accurate, the end result will be very similar to the impervious area
18 or ERU approach.

19 EHA rate structures compute a parcel’s charge by: (1) multiplying an impervious
20 area rate by a parcel’s impervious area; (2) multiplying a pervious area rate by a parcel’s
21 pervious area; and (3) adding the two amounts together. Foundational to this approach
22 would be to decide how much of the stormwater costs and revenues should be allocable

¹ See PWSA Exh. KR-4, PWSA’s Response to School District-V-9.

² See PWSA Exh. KR-4, PWSA’s Response to School District-V-8.

1 to impervious area versus pervious area. A thoughtfully crafted EHA rate structure
 2 would allocate zero or very little cost and revenue to pervious area because impervious
 3 area is the paramount variable influencing stormwater runoff. An EHA rate structure that
 4 allocated zero or very little cost and revenue to pervious area will be similar to the
 5 impervious area approach.

6 **Q. DO YOU HAVE ANY OTHER RESPONSE TO THE SCHOOL DISTRICT ON**
 7 **THIS TOPIC?**

8 A. As I have testified previously, PWSA carefully considered the structure and approach of
 9 its stormwater rates. The current approach using impervious area in units of ERUs is by
 10 far the most common approach used across the United States, and the Commission has
 11 already approved PWSA's approach as being reasonable. Mr. Callocchia's IDF and EHA
 12 recommendations are solutions in search of a problem, and would be much more
 13 complex, expensive, and confusing to customers if implemented. As such, Mr.
 14 Callocchia's position should be rejected.

15 **III. ERU ROUNDING**

16 **Q. PLEASE RESPOND TO MR. CALLOCCHIA'S CLAIM THAT PWSA'S**
 17 **APPROACH TO ROUNDING FOR ERUS IS "INCONSISTENT." (SCHOOL**
 18 **DISTRICT ST. NO. 2-SR AT 17-18).**

19 A. Mr. Callocchia refers to PWSA's database and process for capturing impervious area as
 20 "inaccurate" and "flawed." Again, Mr. Callocchia ignores or misunderstands how PWSA
 21 captures impervious area.

22 Mapping of impervious surfaces is done by human delineation of impervious
 23 surfaces via photointerpretation using aerial imagery as a backdrop. These impervious
 24 features are created as polygons, overlaid with parcel polygons and intersected to tally
 25 impervious square footage on a parcel-by-parcel basis across the service area. This

1 approach is more likely to under-capture impervious area than over-capture for three
2 reasons. First, imperfect registration between aerial imagery and the parcel polygons
3 sometimes results in slivers of impervious surface being excluded. Second, the human
4 element of the capture process is more likely to err on the side of mistakenly excluding
5 impervious features rather than wrongly creating impervious features where none exist.
6 And third, features smaller than 100 square feet or linear features narrower than four feet
7 in width are often not captured. Examples of each of these scenarios is provided in
8 PWSA Exhibit KR-5, PWSA's response to School District Interrogatory V-6. PWSA's
9 current practice for rounding ERUs is reasonable and accounts for this tendency to under-
10 capture ERUs.

11 Any process for identifying impervious area will never be perfect, but PWSA's
12 process is quite accurate and has previously been determined by the Commission to be
13 reasonable. PWSA follows the process outlined in its PUC-approved tariff for
14 identifying the tier applicable to residential customers or rounding up to integer ERUs for
15 non-residential customers. PWSA's current practice is fair and reasonable and should be
16 maintained.

17 **IV. PROPERTIES ASSESSED STORMWATER CHARGES**

18 **Q. PLEASE RESPOND TO MR. CALLOCCHIA'S STATEMENTS REGARDING**
19 **THE FACT THAT PROPERTIES WITH LESS THAN 400 SQUARE FEET OF**
20 **IMPERVIOUS AREA ARE NOT CHARGED FOR STORMWATER SERVICE.**

21 A. In his Surrebuttal Testimony, Mr. Callocchia wrongly states that "PWSA is already
22 making policy and other distinctions among customers that provide exemptions or deep
23 discounts on stormwater charges." (School District St. No. 2-SR at 18-19). He assumes
24 that because PWSA does not charge properties with less than 400 square feet of

1 impervious area, this is a type of “exemption” intended to help some unspecified group of
2 customers. (*Id.*).

3 These statements are incorrect. The purpose of the 400 square foot minimum of
4 impervious area is to factor in a margin of error that can be expected when calculating
5 impervious area. This approach is intended to correct for small amounts of impervious
6 area that may have been incorrectly assigned to a property based on the aerial imagery
7 and parcel lines. It is not an “exemption” or “deep discount” but rather a recognition of a
8 margin of error in identifying impervious area using aerial imagery.

9 This approach was addressed in PWSA’s 2021 rate case. The Commission found
10 this to be reasonable and approved it as part of PWSA’s stormwater tariff.

11 V. **CONCLUSION**

12 Q. **DOES THAT COMPLETE YOUR REJOINDER TESTIMONY?**

13 A. Yes. However, I reserve the right to supplement this testimony as may be appropriate.

Exhibit KR-4

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories and Requests for Production of Documents
of The School District of Pittsburgh, Set V**

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919

Re: PWSA witness Readling, PWSA St. No. 8-R

Request: School District -V-8 Reference P.5, lines 23-24 and p. 6, line 1: Identify, describe, explain and support your assertions that using IDF and EHA will result in a similar approach to using impervious area. Provide all Documents in support of your answer.

Response: IDF rate structures typically assign an intensity of development factor (the IDF) to a parcel, then multiply that factor times the parcel’s gross land area to get an impervious area, then multiply that impervious area times a rate to get the parcel’s charge. One well-documented stormwater utility that uses IDF is Horry County, SC. A description of that methodology showing what I describe can be found at <https://www.horrycountysc.gov/departments/stormwater/major-initiatives/utility-fee/>. As long as the IDF assigned to a parcel is accurate, the IDF approach will be similar to the impervious area approach.

Were a rate structure to be established using EHA it would compute a parcel’s charge by multiplying an impervious area rate by a parcel’s impervious area and adding that to the parcel’s pervious area rate times it’s pervious area. Foundational to this approach would be to decide how much of the stormwater costs and revenues should be allocable to impervious area versus to pervious area. A thoughtfully crafted EHA rate structure would allocate zero or very little cost and revenue to pervious area because impervious area is the paramount variable influencing stormwater runoff (see my response to V-1 and earlier testimony about impervious area rate structures). An EHA rate structure that allocated zero or very little cost and revenue to pervious area will be similar to the impervious area approach.

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories and Requests for Production of Documents
of The School District of Pittsburgh, Set V**

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919

Re: PWSA witness Readling, PWSA St. No. 8-R

Request: School District -V-9 Reference P.5, lines 23-24 and p. 6, line 1: Identify, describe, explain and support your assertions that using IDF and EHA will result in similar numbers, be overly complicated and be more expensive for PWSA to implement than using impervious area. Provide all Documents in support of your answer.

Response: My answer to V-8 shows the results of using an IDF or EHA rate structure would be similar.

In terms of complexity, the IDF approach requires the use of an IDF table and parcel gross area to arrive at a parcel’s charge, rather than just one piece of data when using impervious area. This IDF approach is harder to explain to ratepayers as well. The EHA approach requires a cost allocation be developed to allocate some cost to pervious area, then requires the use of both pervious and impervious area values, plus two rates to arrive at a parcel’s charge. This is more complex and harder to explain than an impervious area rate structure.

Both of these approaches would be more expensive to implement because of the increased number of inputs (and associated data maintenance) into the rate computation and because customer service workload would be higher driven by the complexity of the rate formulas.

Response of the Pittsburgh Water and Sewer Authority (“PWSA”) to the Interrogatories and Requests for Production of Documents of The School District of Pittsburgh, Set V

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919

Re: PWSA witness Readling, PWSA St. No. 8-R

Request: School District -V-10 Reference P. 6, lines 7-8: Identify, describe, explain and support your assertions that using IDF and EHA would only primarily benefit properties with 100% impervious area. Provide all Documents in support of your answer.

Response: Many stormwater utilities that use IDF rate structures set the highest IDF value at less than 1.0. For example, Horry County’s highest IDF is 0.95 and Cincinnati MSD’s highest IDF factor is 0.85. A ratepayer in a stormwater utility where their actual percent impervious is higher than the highest factor used for computations will benefit. Since the highest IDF is slightly less than 1.0 in many of these situations, the primary benefit goes to ratepayers at or very near 100% imperviousness.

An EHA rate structure that allocates a percentage of cost and revenue to pervious area, as I described in my response to V-8, will benefit ratepayers at or very near 100% imperviousness, because they will not pay much or anything for pervious area since they have little or none. An EHA rate structure that allocated 5% of cost and revenue to pervious area would benefit a 100% impervious area parcel by 5%.

Re: PWSA witness Reading, PWSA St. No. 8-R

Request: School District -V-6 Reference P. 5, lines 6-9: Identify, describe, explain and support your assertions that mapping of impervious areas results in boundaries being clipped in way that underestimates impervious area or areas might be ignored. Provide all Documents in support of answer.

Response: Mapping impervious surfaces was and is done by human delineation of impervious surfaces via photointerpretation using aerial imagery as a backdrop. These impervious features are created as polygons, overlaid with parcel polygons and intersected to tally impervious square footage on a parcel-by-by parcel basis across the service area. This approach is more likely to under-capture impervious area than over-capture for three reasons:

1. Imperfect registration between aerial imagery and the parcel polygons sometimes results in slivers of impervious surface (shown in transparent blue on all three figures) being excluded. Figure 1 is one such example on Jane Street. Two edges of the building fall outside the parcel footprint and are not captured.
2. The human element of the capture process is more likely to err on the side of mistakenly excluding impervious features than to wrongly create impervious features where none exist. Figure 2 is one such example on Grant Street. The edges of the building are on the parcel but were not captured.
3. Features smaller than 100 square feet in size or linear features narrower than 4 feet in width are often not captured. Figure 3 shows a number of small structures where the impervious area was not captured on a parcel on Dallas Avenue.

Re: PWSA witness Readling, PWSA St. No. 8-R

Request: School District -V-7 Reference P. 5, lines 10-11: Identify, describe and explain how you determined that rounding up and down as suggested by School District witness Callocchia will result in a 4% revenue decrease for PWSA. Provide all Documents in support of answer.

Response: Current annualized billings are about \$24,500,000 at today’s rate of \$7.95 per ERU per month, and there are about 20,900 non-residential parcels being billed. Following Callocchia’s suggested “round up or down to the nearest half ERU” approach, the bill for each of the 20,900 non-residential parcels will either stay the same, drop by half an ERU, or drop by a whole ERU. Assuming the measured impervious area is uniformly distributed within each one ERU band, which it largely is, within any one ERU band, say from N to N+1 ERUs, about ¼ of the parcels will see their charge drop by one ERU because they fall in the N to N+0.25 range and will round down to N ERUs (or 2N half-ERUs). About ¼ will see their charge remain unchanged because they fall in the N+3/4 to N+1 range and will continue to round up to N+1 ERUs. The other half of the parcels will fall in the N+1/4 to N+3/4 ERU range and will round to N+1/2 since the proposed new unit is ½ ERU. In total this would be a loss of 10,450 ERUs per month of revenue, which, at today’s rate is $10,450 * 7.95 * 12$ or \$997,000 per year of lost revenue. That lost revenue is $\$997,000 / \$24,500,000$ or about 4%. The rate increase required to make this revenue neutral would be $\$24,500,000 / (\$24,500,000 - \$997,000)$ which is about a 4.2% rate increase.

To verify these derived results, I also applied Callocchia’s suggested “round up or down to the nearest half ERU” approach to the actual parcel data for each parcel, since we have measured impervious area for each. I computed for each parcel how many half ERUs they would be billed under the suggested approach, and at today’s rates the actual loss would be \$984,000 per year, versus the statistical estimated loss of \$997,000 per year. Using this actual number, the rate increase required to maintain revenues would be 4.2%, the same result as that determined from the statistical approach.

III. CREDIT RATING CONSIDERATIONS.....	3
IV. MYRP.....	4
V. CAPITAL MARKETS CONSIDERATIONS.....	4
VI. CONCLUSION	5

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND POSITION FOR THE RECORD.**

3 A. Christine M. Fay. I am a Senior Managing Director and Partner with Public Resources
4 Advisory Group, Inc. (“PRAG”).

5 **Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?**

6 A. Yes, I submitted Direct Testimony, PWSA St. No. 9, together with accompanying
7 exhibits CF-1 to CF-9 on May 9, 2023, which accompanied the rate filing, and Rebuttal
8 Testimony (PWSA St. 9-R), together with accompanying Exhibits CF-10 to CF-13, on
9 September 8, 2023.

10 **Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?**

11 A. My rejoinder testimony responds to the various recommendations including financial
12 metrics, revenue, and expense recommendations contained in portions of the surrebuttal
13 testimony submitted by the Bureau of Investigation and Enforcement (“I&E”) and the
14 Office of Consumer Advocate (“OCA”) (together, “the Opposing Parties”).

15 I have attempted to respond to the specific statements and recommendations made
16 by the Opposing Parties’ witnesses. In the event that an issue is not addressed, this should
17 not be viewed as my acceptance of their testimony. Rather it reflects my belief that a
18 further response in this rejoinder testimony is not warranted, either because it was
19 adequately addressed in my prior testimony, was addressed by other prior testimony on
20 behalf of PWSA, or because it is a legal matter that is better addressed by counsel in
21 briefs or other pleadings.

22 **Q. ARE YOU SPONSORING ANY EXHIBITS?**

23 A. No, I am not sponsoring any exhibits.

1 **II. I&E's UPDATED FPPTY REVENUE REQUIREMENT RECOMMENDATION**

2 **Q. DO YOU THINK THE RATING AGENCIES WILL HAVE CONCERNS WITH**
3 **I&E'S UPDATED FPPTY REVENUE REQUIREMENT AND RESULTING**
4 **FINANCIAL METRICS?**

5 A. Yes, as discussed in Mr. Barca's rejoinder testimony (Barca No.2-RJ 3-4), I&E's updated
6 FPPTY total recommended revenue requirement is increased to \$227,685,945 (an
7 increase of \$25,026,204 to current rates) and claims to achieve senior debt service
8 coverage of 1.64x, total debt service coverage of 1.2x and days cash on hand of 289.
9 However, it only achieves these financial metrics by significantly haircutting operating
10 expenses and existing debt service expenses. These same financial metrics drop to senior
11 debt service coverage of 1.35x, total debt service coverage of 0.89x and days cash on
12 hand of 189 without the normalization of expenses. These financial metrics (without
13 normalization) directly violate the Authority's rate covenant with bondholders which
14 would be very alarming to the rating agencies and result in credit downgrades.

15 As discussed in my Rebuttal Testimony (Fay No 9-R at 22), the rating agencies
16 signaled in their most recent reports that they expect the PUC to grant rate increases at or
17 near the requested levels in order for the Authority to continue to fund critical operations
18 and to continue to invest in capital needs given the Authority's aged infrastructure and
19 EPA consent decree.

20 Rather than recommending a revenue requirement sufficient to fund the
21 Authority's escalating operational and capital costs, I&E reduced both of these areas
22 which allows it to claim that the Authority will maintain its financial metrics at
23 reasonable levels. This approach is counter to the rating agencies expectations and strong
24 financial management practices of setting rates sufficient to cover projected operating
25 costs and capital investment needs while maintaining strong financial metrics and could

1 lead the agencies to question the Authority's strong governance practices and credit
2 supportive relationship with the PUC.

3 **III. CREDIT RATING CONSIDERATIONS**

4 **Q. DO YOU HAVE CONCERNS REGARDING THE IMPACT TO THE**
5 **AUTHORITY'S CREDIT RATING BASED ON MR. SPADACCIO'S AND MR.**
6 **MUGRACE'S SUGGESTIONS THAT THE AUTHORITY CAN FILE ANOTHER**
7 **RATE CASE IF THE RECOMMENDED FPFTY REVENUE REQUIRMENT IS**
8 **NOT ADEQUATE?**

9 Yes, Mr. Spadaccio states (I&E St. No. 1-SR at 24) that "If the Authority experiences a
10 revenue deficiency to the point it is unable to issue additional bonds, it can file another
11 rate case." Additionally, Mr. Mugrace suggests (OCA St. No. 1SR at 5) that "PWSA can
12 always seek additional rate relief if needed."

13 If the PUC approves a revenue requirement for FPFTY that is not sufficient to fund
14 Authority operations and pass the additional bonds test to allow the Authority to access
15 the capital markets this would be considered a significant credit negative to the rating
16 agencies. Additionally, rate cases are very time intensive and take months of planning
17 and Authority resources to prepare for. If FPFTY revenues were determined to be
18 deficient and preclude the Authority from accessing the capital markets, based on
19 advisement from counsel, there would be little the Authority could do in FPFTY, as
20 likely a new rate case would not produce results until FY 2025. This would result in poor
21 financial metrics for FPFTY and put the Authority at risk of a rating downgrade. If the
22 Authority had to resort to requesting extraordinary or emergency rate relief this too
23 would be viewed extremely negatively by the bond rating agencies. Therefore, relying
24 on another rate case or an extraordinary rate relief case should not be seen as a viable
25 back-up plan as it would certainly expose the Authority to scrutiny from the rating

1 agencies and jeopardize the Authority's operations, capital investment and overall
2 financial progress.

3 **IV. MYRP**

4 **Q. DO YOU SEE A BENEFIT OF THE MYRP GIVEN MR. SPADACCIO'S**
5 **SUGGESTION OF STRIVING FOR IMPORVED DSCR AND DCOH**
6 **FINANCIAL METRICS OVERTIME?**

7 A. Yes. In Mr. Spadaccio's surrebuttal (Spadaccio No 1-SR at 19 and 26) he recognizes that
8 the Authority should be striving towards higher debt service coverages and DCOH
9 financial metrics more in line with its peers, but suggests this needs to be done over time
10 in order to not burden rate payers for many prior years of mismanagement. I believe a
11 MYRP would allow for this incremental improvement of the Authority's financial
12 metrics in a phased approach over time consistent with Mr. Spadaccio's suggestion.
13 Unfortunately, I &E opposes any such multi-year plan.

14 **V. CAPITAL MARKETS CONSIDERATIONS**

15 **Q. HAVE MUNICIPAL BORROWING RATES MATERIALLY CHANGED SINCE**
16 **THE FILING OF THE REQUESTED RATE REQUEST?**

17 A. Yes; since the initial filing of this rate request on May 9, 2023, municipal borrowing rates
18 have increased significantly. I have updated the chart from my original testimony (PWSA
19 St. No. 9, page 17 at 3), and specifically call attention to the red-circled region of the
20 below chart. This shows that borrowing rates for A rated credits in the 5-year through 30-
21 year maturities have increased from 98 to 114 basis points (0.90% to 1.14%) from May 9
22 through market close on September 28 which if rates are sustained at these higher levels
23 will result in increased borrowing costs and interest expense for the Authority. These
24 higher levels are not reflected in PWSA's debt service projections for the FPPTY and
25 further support the reasonableness of granting all or substantially all of the Authority's

1 request in order to permit it to continue its modernization improvements and maintain its
2 financial stability.

3
4 *Municipal Market Data (MMD) is the standard index for municipal bonds. MMD publishes various yield
5 curves (1 to 30 years) for different credits/rating categories.
6

7 **VI. CONCLUSION**

8 **Q. DOES THAT COMPLETE YOUR REJOINDER TESTIMONY?**

9 A. Yes; however, I do reserve the right to supplement this testimony as may be appropriate.

VERIFICATION

I, Christine Fay hereby state that: (1) I am Senior Managing Director and Partner with Public Resources Advisory Group, Inc.; (2) I have been retained by The Pittsburgh Water and Sewer Authority and am authorized to present rejoinder testimony on its behalf; (3) the facts set forth in my rejoinder testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and (4) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C .S. § 4904 (relating to unsworn falsification to authorities).

Pennsylvania Public Utility Commission
v.
Pittsburgh Water and Sewer Authority (PWSA)
Docket Nos. R-2023-3039919 (Stormwater)
R-2023-3039920 (Water)
R-2023-3039921 (Wastewater)
2023 Base Rate Case Proceeding

Responses to PWSA
Interrogatories to OCA Set I

19. Does Dr. Pavlovic agree that, to the extent that PWSA's revenues expenses or capital expenditures levels turn out to be different than those currently projected, any resulting gain or loss will be reflected in PWSA's cash balance and will be reflected in future determinations of PWSA's revenue requirement? If not, why not?

Response: Yes, but Dr. Pavlovic does not agree that the state of PWSA's actual cash balance at the end of the proposed MYRP period (2024-2026) in this proceeding is relevant to whether the rates proposed for 2024 -2026 protect ratepayers against unjust and unreasonable rates.

2023 Base Rate Case Proceeding

Responses to PWSA
Interrogatories to OCA Set I

20. Please refer to OCA St. 2 at 8-9:

- (a) Would the MYRP be acceptable to witness Pavlovic if it included the procedures set forth on pages 8 and 9 of his direct testimony regarding Rhode Island?
- (b) Is there a set of procedures and safeguards that, if mandated along with the MYRP, would make the mechanism acceptable to Dr. Pavlovic? If so, please identify those procedures and/or safeguards.

Response:

- (a) No. While Dr. Pavlovic agrees that including the procedures would provide at least some guardrails on PWSA's MYRP, it would not cure all of the deficiencies identified in his direct testimony.
- (b) No. See response to (a) above.

1 **INTRODUCTION OF WITNESS**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Anthony Spadaccio. My business address is Pennsylvania Public Utility
4 Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA
5 17120.

6
7 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

8 A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the
9 Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

10

11 **Q. WHAT IS YOUR EDUCATIONAL AND EMPLOYMENT BACKGROUND?**

12 A. My educational and employment background is set forth in the attached Appendix A.

13

14 **Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.**

15 A. I&E is responsible for representing the public interest in rate and other proceedings
16 before the Commission. I&E's analysis in this proceeding is based on its
17 responsibility to represent the public interest. This responsibility requires balancing
18 the interests of ratepayers, the utility company, and the regulated community as a
19 whole.

20

21 **Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?**

22 A. The purpose of my direct testimony is to address the revenue requirement, various
23 financial metrics such as debt service coverage ratio (DSCR), days cash on hand

1 (DCOH), Pay As You Go financing (PAYGO), the Rate Stabilization Fund (RSF),
2 and credit ratings, as well as topics such as the Multi-Year Rate Plan (MYRP),
3 Distribution System Improvement Charge (DSIC), and the Infrastructure
4 Improvement Charge (IIC) for Pittsburgh Water & Sewer Authority (PWSA or
5 Authority) as discussed by William J. Pickering, Chief Executive Officer (PWSA
6 Statement No. 1), Edward Barca, Director of Finance (PWSA Statement No. 2), and
7 Christine M. Fay, Senior Managing Director and Partner with Public Resources
8 Advisory Group, Inc. (PRAG) (PWSA Statement No. 9). I will also present I&E's
9 recommended overall revenue requirement.

10
11 **Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?**

12 A. Yes. I&E Exhibit No. 1 contains schedules relating to my testimony.

13
14 **BACKGROUND**

15 **Q. PLEASE PROVIDE SOME BACKGROUND REGARDING THIS**
16 **PROCEEDING.**

17 A. This proceeding represents the fourth time that PWSA has filed a rate case since
18 coming under the Commission's jurisdiction in 2018. The Pennsylvania Public
19 Utility Code was recently amended to add 66 Pa. C.S. §§ 3201-3209 (Chapter 32).
20 Chapter 32 addresses the Commission's jurisdiction over Pennsylvania water and
21 sewer authorities established by cities of the second class under the Municipal
22 Authorities Act. Under Chapter 32, the Commission gained full regulatory

1 jurisdiction over PWSA’s water, wastewater, and stormwater services.¹

2
3 **Q. WHAT IS PWSA REQUESTING IN THIS PROCEEDING?**

4 A. PWSA is requesting the Commission approve its proposal to increase its annual base
5 rates by \$146.1 million over a three-year period. Mr. Pickering opines that although
6 this amount is larger than past requests and may seem like an extraordinary request, it
7 is matched with making extraordinary strides in every area of the Authority’s water,
8 wastewater and stormwater utility operations.² Specifically, the request includes
9 increases of \$46.8 million or 22.5% in the Fully Projected Future Test Year (FPFTY)
10 ending December 31, 2024 (FY 2024), \$45.4 million or 17.8% in FY 2025, and \$53.9
11 million or 17.9% in FY 2026.³ The claimed reasons for this request are capital costs,
12 inflationary budget costs, costs related to the Wet Weather Consent Decree,
13 environmental compliance, decreased consumption, and the ability to meet financial
14 obligations and improve overall financial metrics impacting PWSA’s bond rating.⁴ In
15 addition to the MYRP, PWSA is proposing to increase its internally generated funds
16 by increasing the DSIC cap from 5% of distribution revenues to 7.5% of distribution
17 revenues. Mr. Barca rationalizes this is necessary to accelerate the rate at which
18 Long-term Infrastructure Improvement Plan (LTIIIP) approved capital expenditures
19 can be completed, increase purchasing power that has been negatively impacted by

¹ *Implementation of Chapter 32 of the Public Utility Code Re Pittsburgh Water and Sewer Authority*, M-2018-264802 et al., Final Implementation Order (entered on March 15, 2018) (“Final Implementation Order”), p. 1.

² PWSA Statement No. 1, p. 3, ln. 12 through p. 4, ln. 3.

³ PWSA Statement No. 1, p. 13, lines 12-14.

⁴ PWSA Statement No. 1, p. 13, lines 15-20.

1 inflation, and to reduce financial leverage.⁵ Finally, PWSA is proposing two new
2 adjustment charges including the Infrastructure Improvement Charge (IIC) to recover
3 debt service on its Pennsylvania Infrastructure Investment Authority (PENNVEST)
4 and the Federal loans from the Water Infrastructure Finance and Innovation Act
5 (WIFIA) and the Customer Assistance Charge (CAC) to recover discounts provided
6 to customers pursuant to the Bill Discount Program, the operations costs for the
7 PGH20 Cares team, the costs of PWSA's Hardship Fund, and past due arrearages
8 forgiven pursuant to PWSA's Arrearage Forgiveness Program.⁶

9
10 **Q. WHAT RATEMAKING METHOD DID THE COMMISSION DIRECT PWSA**
11 **TO USE IN ITS BASE RATE PROCEEDINGS?**

12 A. As discussed by Mr. Barca,⁷ the Commission directed that PWSA use a cash flow
13 ratemaking method as detailed in 52 Pa. Code § 69.2703.⁸

14
15 **Q. DID PWSA USE A CASH FLOW RATEMAKING METHOD IN THIS**
16 **PROCEEDING?**

17 A. Yes.

18
19 **Q. PLEASE EXPLAIN WHAT 52 PA. CODE § 69.2703 ENCOMPASSES.**

20 A. Commission regulations at 52 Pa. Code §§ 69.2701-2703 contain the ratemaking

⁵ PWSA Statement No. 2, p. 27, ln. 23 through p. 28, ln. 15.

⁶ PWSA Statement No. 1, p. 14, ln. 19 through p. 15, ln. 11.

⁷ PWSA Statement No. 2, p. 5, ln. 18 through p. 7, ln. 12.

⁸ *Implementation of Chapter 32 of the Public Utility Code Re Pittsburgh Water And Sewer Authority*, Docket Nos. M-2018-2640802 & M-2018-2640803, Final Implementation Order, entered March 15, 2018, p. 27-28.

1 elements, procedures, and factors that the Commission will consider in determining
2 just and reasonable rates for PGW. In particular, 52 Pa. Code § 69.2703, which was
3 drafted with PGW in mind, but which also now translates to PWSA, states the
4 following:

- 5 (a) In determining just and reasonable rate levels for PGW, the
6 Commission will consider, among other relevant factors:
- 7 (1) PGW's test year-end and (as a check) projected future levels of
8 nonborrowed year-end cash.
 - 9 (2) Available short term borrowing capacity and internal generation
10 of funds to fund construction.
 - 11 (3) Debt to equity ratios and financial performance of similarly
12 situated utility enterprises.
 - 13 (4) Level of operating and other expenses in comparison to
14 similarly situated utility enterprises.
 - 15 (5) Level of financial performance needed to maintain or improve
16 PGW's bond rating thereby permitting PGW to access the
17 capital markets at the lowest reasonable costs to customers over
18 time.
 - 19 (6) PGW's management quality, efficiency and effectiveness.
 - 20 (7) Service quality and reliability.
 - 21 (8) Effect on universal service.
- 22 (b) The Commission is obligated to establish rate levels adequate to permit
23 PGW to satisfy its bond ordinance covenants, consistent with 66

1 Pa.C.S. § 2212(e) (relating to securities of city natural gas distribution
2 operations).

3 (c) These financial measures will be considered by the Commission in
4 determining just and reasonable rates for PGW under 66 Pa.C.S.
5 (relating to the Public Utility Code) and are consistent with the PGW
6 Management Agreement Ordinance.

7 In accordance with the Commission directive cited above, these requirements
8 should apply to PWSA in this instant proceeding as well.

9

10 **SUMMARY OF I&E OVERALL POSITION**

11 **Q. WHAT IS I&E'S TOTAL RECOMMENDED REVENUE REQUIREMENT?**

12 A. I&E's total recommended revenue requirement for PWSA is \$195,760,896.⁹ This
13 recommended revenue requirement represents a decrease of \$6,898,845 to the FPFTY
14 revenues at present rates of \$202,659,741, which produces a revenue surplus of
15 \$44,661. This total recommended allowance incorporates the analysis in this
16 testimony as well as the analysis and adjustments made in the testimonies of I&E
17 witnesses Vanessa Okum (I&E Statement No. 2), and Ethan Cline (I&E Statement
18 No. 3). A calculation of the I&E recommended revenue requirement is included in
19 I&E Exhibit No. 1, Schedule 1.

20 In accordance with PWSA's Cost of Service Study,¹⁰ this revenue increase
21 should be allocated 66% to water operations, 17% to wastewater operations, and 17%

⁹ I&E Exhibit No. 1, Schedule 1.

¹⁰ PWSA Cost of Service Study Model 5.9.23, RevReq_Alloc tab, Column R, Rows 25-27.

1 to stormwater operations. Therefore, the I&E recommendation corresponds to a
2 decrease of \$4,553,237 to water operations (-\$6,898,845 x 66%), a decrease of
3 \$1,172,804 to wastewater operations (-\$6,898,845 x 17%), and a decrease of
4 \$1,172,804 to stormwater operations (-\$6,898,845 x 17%).

5
6 **MULTI-YEAR RATE PLAN (MYRP)**

7 **Q. WHAT IS A MULTI-YEAR RATE PLAN?**

8 A. Act 58 of 2018 added Section 1330 to Chapter 13 of the Pennsylvania Public
9 Utility Code allowing utilities to seek approval of alternative rate making
10 mechanisms. Section 1330 of Chapter 13 defines a “Multiyear rate plan” as
11 follows:

12 A rate mechanism under which the commission sets base rates
13 and revenue requirements for a multiyear plan period and
14 authorizes periodic changes in base rates, including, but not
15 limited to, adjustments to account for inflation and capital
16 investments without the necessity for base rate proceedings
17 during the approved plan period.¹¹
18

19 **Q. WHAT IS PWSA PROPOSING IN ITS MYRP?**

20 A. As mentioned above, in addition to its original rate increase request of \$46.8
21 million for the FPFTY, PWSA is proposing that the Commission approve a \$45.4
22 million increase in FY 2025 and another \$53.9 million increase in FY 2026.

23
24 **Q. WHAT IS THE BASIS FOR PWSA’S MYRP PROPOSAL**

25 A. In addition to the rationale for the requested rate increases previously mentioned,

¹¹ 66 Pa. C.S. § 1330(f).

1 Mr. Pickering argues that not only would a multiyear rate plan allow PWSA better
2 access to the capital markets, but it would provide more transparency for
3 customers over the three-year period the increases would be implemented. He
4 also opines that the money saved from litigating rate cases would be allocated to
5 operational expenses and capital projects.¹²

6 Further, Ms. Fay explains why she believes the Rating Agencies would
7 react positively toward the MYRP.¹³

8
9 **Q. DO YOU SUPPORT PWSA’S MYRP PROPOSAL?**

10 A. No. PWSA has only recently been subject to regulation by the Commission and
11 has experienced only three base rate cases in that time. While it is possible that a
12 MYRP may be appropriate for some utilities that have long been regulated with
13 regular rate case filings over many years, PWSA has not faced such scrutiny and is
14 still building a record and developing its rapport with the Commission. As
15 mentioned below in the “*Credit Rating Agencies*” section, the rating agencies see
16 PWSA’s relationship with and oversight from the Commission as credit positive.
17 Although significant improvements have been made, I do not believe it is wise for
18 a system that has been mismanaged for decades and is now playing “catch-up” to
19 pursue a rate plan that spans beyond the FPFTY that would prevent the Authority
20 from receiving beneficial oversight.

¹² PWSA Statement No. 1, p. 14, lines 6-8.

¹³ PWSA Statement No. 9, p. 37, ln. 1 through p. 38, ln. 22.

1 Additionally, there are lingering economic impacts from the pandemic and
2 recent inflation trends. Consideration of PWSA’s enormous capital improvement
3 plan and associated capital costs alone illustrates the need for more regulatory
4 oversight, not less.

5 Finally, I&E witnesses Vanessa Okum (I&E Statement No. 2) and Ethan
6 Cline (I&E Statement No. 3) have submitted testimony discussing various other
7 factors that support I&E’s recommended disallowance of the Authority’s proposed
8 MYRP.

9
10 **CREDIT RATING AGENCIES**

11 **Q. HAVE YOU REVIEWED THE MOST RECENT REPORTS FROM CREDIT**
12 **RATING AGENCIES REGARDING THE FINANCIAL POSITION OF**
13 **PWSA?**

14 A. Yes. I have reviewed PWSA’s Moody’s Investors Service (Moody’s) Credit Opinion
15 reports dated October 20, 2022, and May 29, 2023, as well as PWSA’s S&P Global
16 Ratings (S&P) reports, dated October 12, 2022, March 16, 2023, and May 17, 2023,¹⁴
17 which were the most recent reports available to me at the time of this testimony.

18
19 **Q. PLEASE SUMMARIZE THE MOODY’S INVESTORS SERVICE REPORTS**
20 **REGARDING PWSA.**

21 A. Moody’s credit rating for PWSA was revised upwards from “A3 stable” to “A3

¹⁴ PWSA, Filing Requirement FR VII.18, PWSA Exhibits CF-8 and CF-9, and I&E Exhibit No. 1, Schedules 3 & 4.

1 positive” noting, “The Authority’s financial position has also improved considerably
2 over the past several years”¹⁵ This is demonstrated in Moody’s “Key Indicators”
3 tables which show that the Authority’s DCOH went from 26 days in 2017 before
4 coming under the Commission’s jurisdiction to 165 days in 2022, while the annual
5 debt service coverage went from 0.8x to 1.5x during the same period. The A3
6 positive rating falls into the category of upper medium grade obligations and is
7 considered to have low credit risk. The large size, considerable assets, diverse service
8 area, “significant” recent rate increases, and PUC oversight are considered to be the
9 Authority’s credit strengths, while the substantial debt burden, projected capital needs
10 to be funded with debt, and narrow liquidity versus similarly sized peers are among
11 the credit challenges. Moody’s further notes that PWSA’s governance structure has
12 materially improved as a result of the PUC’s oversight since 2018.

13
14 **Q. PLEASE SUMMARIZE THE S&P GLOBAL RATINGS REPORTS**
15 **REGARDING PWSA.**

16 A. As of the October 12, 2022, report, S&P has upgraded PWSA’s first-lien revenue
17 bonds rating from “A” to “A+”, and its subordinate-lien revenue bonds rating from
18 “A-” to “A”, both with a stable outlook. These rating were affirmed in the more
19 recent report issued May 17, 2023. The investment grade A rating implies a strong
20 capacity to meet its financial obligations. Similar to Moody’s, S&P notes its
21 expectation of a credit-supportive relationship between PWSA and the Commission,

¹⁵ I&E Exhibit No. 1, Schedule 3.

1 yet the credit rating agency expresses concerns over the Authority's high leverage and
2 future capital commitments resulting in pressure on its overall financial profile.¹⁶

3
4 **Q. WHAT ARE YOUR COMMENTS REGARDING THE CREDIT RATING**
5 **AGENCY REPORTS?**

6 A. Both credit rating agencies continue to express concern over PWSA's large debt
7 burden, yet both appear confident that the Authority's recently established (April 1,
8 2018) relationship with the Commission and being subjected to regulatory oversight
9 will yield positive results in strengthening its financial position. Sound financial
10 management remains essential going forward, especially considering the vast amount
11 of planned future debt issuances for capital improvement projects. Notably, the
12 Authority's financial position has been trending favorably since coming under the
13 Commission's jurisdiction, which is illustrated by the improving financial metrics and
14 both Moody's and S&P's bond rating upgrades. The debt service coverage ratios and
15 days cash on hand metrics mentioned in these credit reports are discussed below.

16
17 **DAYS CASH ON HAND (DCOH)**

18 **Q. PLEASE EXPLAIN THE DCOH METRIC.**

19 A. The DCOH metric represents the number of days a company can pay its current level
20 of operating expenses with the amount of cash it has available. The formula to
21 calculate DCOH is as follows:

22
$$\text{Cash Available} \div ((\text{Operating Expenses} - \text{Noncash Expenses}) \div 365)$$

¹⁶ PWSA Exhibit CF-9, S&P Global Ratings, RatingsDirect, October 12, 2022 & March 16, 2023 and I&E Exhibit No. 1, Schedule 4.

1 **Q. WHAT IS PWSA’S TESTIMONY REGARDING DCOH?**

2 A. Mr. Barca opines that at present rates, the DCOH is projected to be 70.9 days in the
3 FPFTY, followed by dramatic declines to -60.5 days in FY 2025, and -230.0 in FY
4 2026. He credits the substantial drop in DCOH to increases in required operational
5 and capital spending.¹⁷

6 Similar to Mr. Barca, Ms. Fay asserts that without an appropriate rate increase,
7 the DCOH metric would fall to unacceptable levels and the Authority would be in
8 jeopardy of a credit downgrade, resulting in increased borrowing costs. She also
9 alleges that PWSA’s level of DCOH is depressed and considerably weaker compared
10 to that of its peer utilities.¹⁸

11
12 **Q. DO THE RATING AGENCIES EXPRESS GREAT CONCERN ABOUT**
13 **PWSA’S NUMBER OF DCOH?**

14 A. No. Even Ms. Fay acknowledges Moody’s comments recognizing the Authority’s
15 significant liquidity improvement, noting that although weaker than its peer utilities,
16 “a satisfactory 165 days cash on hand as of fiscal 2022 year end, up from just 23 days
17 cash in 2017.”¹⁹

¹⁷ PWSA Statement No. 2, p. 40, lines 6-14.

¹⁸ PWSA Statement No. 9, p. 12, ln. 3 through p. 13, ln. 17.

¹⁹ I&E Exhibit No. 1, Schedule 3.

1 **Q. WHAT ARE THE RANGES OF DCOH DESCRIBED BY MOODY’S IN ITS**
2 **RATING METHODOLOGY?**

3 A. Moody’s sets the following ranges for each rating categories:²⁰

Aaa	Greater than 250 days
Aa	Greater than 150 days but less than or equal to 250 days
A	Greater than 35 days but less than or equal to 150 days
Baa	Greater than 15 days but less than or equal to 35 days
Ba	Greater than 7 days but less than or equal to 15 days
B and Below	Equal to or less than 7 days

4

5

6 **Q. WHAT DOES S&P SAY ABOUT PWSA’S NUMBER OF DCOH?**

7 A. The S&P Global Ratings March 16, 2023 credit profile states as follows:²¹

8 The system’s liquidity remains an area of consistency and credit
9 strength...All told, cash and equivalents held by PWSA remains
10 sound, usually equivalent to four-six months of operating
11 expenses.
12

13 **Q. WHAT WOULD PWSA’S DCOH BE AT I&E’S PROPOSED RATES?**

14 A. I&E’s proposed rates would result in approximately 293 days of cash on hand.²² This
15 metric falls within Moody’s range for the ‘Aaa’ rating category, which is notably
16 higher than Moody’s overall ‘A3’ rating for PWSA. The DCOH metric, as well as
17 the annual debt service coverage as discussed below, are subfactors of the “Financial

²⁰ PWSA Exhibit CF-6, Moody’s Investors Service, Rating Methodology, US Municipal Utility Revenue Debt Methodology, p. 8, April 13, 2022.

²¹ PWSA Exhibit CF 9, S&P Global Ratings, RaingsDirect, p. 5, Financial Risk, March 16, 2023.

²² I&E Exhibit No. 1, Schedule 2.

1 Strength” factor used in Moody’s “US Municipal Utility Revenue Debt Scorecard
2 Overview”.²³ The “Financial Strength” factor represents 40% of the total weighting
3 factors when considering a utility’s credit profile.

4 Additionally, the 293 DCOH resulting from I&E’s recommendation far
5 exceeds the 100 days current need and is well on its way to surpassing PWSA’s five-
6 year target goal of 300 days as asserted in its Financial Management Policy.²⁴ Again,
7 it is also important to recognize that the Authority has only recently come under the
8 Commission’s jurisdiction, and as indicated by Moody’s and S&P Global and cited
9 above, the DCOH has steadily been improving ever since. Consequently, any fear of
10 a credit downgrade regarding the level of cash on hand is unjustified.

11

12 **DEBT SERVICE COVERAGE RATIO (DSCR)**

13 **Q. WHAT IS THE DEBT SERVICE COVERAGE RATIO?**

14 A. The DSCR is a commonly used indicator that gauges an entity’s ability to pay its
15 outstanding loan principal and interest in full and on time. The DSCR calculation
16 includes dividing the net operating income by the entity’s debt service payments.
17 This calculation is often done on two levels, once to include only senior debt service,
18 and again to cover the entire debt service.

19

20 **Q. WHAT IS PWSA’S CLAIMED DSCR FOR THE FPFTY?**

21 A. The Authority provides a calculation illustrating that at proposed rates, the DSCR for

²³ I&E Exhibit No. 1, Schedule 5, p. 4.

²⁴ PWSA Exhibit EB-5, p. 2.

1 senior debt service would be 1.65x, 1.87x, and 2.02x for the FPFTY, FY 2025, and
2 FY 2026 respectively. Additionally, the DSCR for total debt service coverage would
3 be 1.21x, 1.26x and 1.40x for the FPFTY, FY 2025, and FY 2026 respectively.²⁵

4 Mr. Barca expresses concern that coverage ratios under present rates would
5 fall well below the legal minimum requirements, and, consequently, the Authority
6 would be unable to fully pay its debt obligations.²⁶ He contends that it is critical for
7 PWSA to maintain adequate coverage to remain in a position to have access to the
8 capital markets on acceptable terms.²⁷ Additionally, Mr. Barca argues that without
9 the appropriate rate increase, the Authority would not be able to satisfy the Additional
10 Bonds Test and would be prohibited from issuing bonds, causing a funding shortfall
11 for necessary capital improvements.²⁸ Further, he claims that any excess of revenues
12 over expenses is invested back into the system, which will benefit ratepayers by
13 offsetting future revenue increases.²⁹

14 Ms. Fay explains that the Authority's Financial Management Policy requires
15 coverage of 1.35x for senior debt and 1.15x for overall debt, which is more stringent
16 than the legal covenant, yet she claims is still below the norm for the overall
17 municipal water and sewer utility sector. She suggests that the target of 1.35x should
18 be viewed not as a goal, but as the minimum. Ms. Fay further rationalizes that it is
19 important for PWSA to increase its coverage levels in excess of the legal
20 requirements in order to reduce its over reliance on debt, protect against unforeseen

²⁵ PWSA Cost of Service Study Model 5.9.23, Sufficiency tab, Column K-M, Rows 115 & 119 and PWSA Statement No. 2, p. 43, ln. 15.

²⁹ PWSA Statement No. 2, p. 37, lines 6-10.

1 expenses and decreases in expected revenue, and to have the funds required
2 throughout the year to satisfy its financial obligations over and above its debt service,
3 including the City's Co-op payment. Finally, Ms. Fay claims that the FY 2023 rate
4 increase was largely absorbed by escalating operational costs driven by inflation,
5 rendering it unavailable to use towards debt service.³⁰

6
7 **Q. DO THE RATING AGENCIES INDICATE CONCERN ABOUT PWSA'S**
8 **DSCR?**

9 A. No. The Moody's Credit Opinion of May 29, 2023 states:³¹

10 At fiscal 2022 year-end, the Authority reported senior debt
11 service coverage of 1.8 times and total coverage of 1.41 times,
12 well within covenant requirements and satisfactory versus peers.
13 ...Favorably, coverage has continually improved since 2018,
14 when PUC rate oversight went into effect, signaling that rate
15 increases have been effective to maintain sufficient coverage
16 while providing for more normalized operations and investment
17 in system infrastructure.

18 This statement clearly indicates that although Moody's acknowledges the
19 Authority's need to maintain appropriate coverage levels, the credit rating
20 agency is aware of PWSA's legal covenants as well as its steadily improving
21 DSCRs that are well above the legal requirements. It also exhibits confidence
22 in the Commission's oversight.

³⁰ PWSA Statement No. 9, p. 8, ln. 21 through p. 12, ln. 2.

³¹ I&E Exhibit No. 1, Schedule 3.

1 **Q. WHAT ARE THE RANGES OF ANNUAL DEBT SERVICE COVERAGE**
2 **DESCRIBED BY MOODY’S IN ITS RATING METHODOLOGY?**

3 A. Moody’s sets the following ranges for each rating categories:³²

Aaa	Greater than 2.00x
Aa	Greater than 1.70x but less than or equal to 2.00x
A	Greater than 1.25x but less than or equal to 1.70x
Baa	Greater than 1.00x but less than or equal to 1.25x
Ba	Greater than 0.70x but less than or equal to 1.00x
B and Below	Equal to or less than 0.70x

4

5

6 **Q. WHAT DOES S&P SAY ABOUT PWSA’S DSCR?**

7 A. The S&P Global Ratings May 17, 2023, credit profile identifies “[s]trong coverage
8 levels of all-in debt service historically and projected” as one of the factors that
9 support its current rating. S&P further remarks on the financial benefits from
10 unloading the financial burden of providing free service to a portion of the City of
11 Pittsburgh via the 2019 Cooperation Agreement, as well as the credit supportive
12 relationship with the Commission.³³

³² I&E Exhibit No. 1, Schedule 5, p. 8.

³³ PWSA Exhibit CF-9 and I&E Exhibit No. 1, Schedule 4.

1 **Q. ARE YOU AWARE OF ANY ADDITIONAL LITERATURE THAT**
2 **INDICATES WHAT AN IDEAL DSCR SHOULD BE FOR MUNICIPALLY-**
3 **OWNED WATER AND SEWER UTILITIES?**

4 A. Yes. I have provided a Standard & Poor's article³⁴ that illustrates at what level a
5 municipal water and or sewer utility has the ability to repay its debt. The article
6 presents the following analysis regarding what the range of DSCR indicates:

<1.0x	= Insufficient
1.0x to 1.25x	= Adequate
1.26x to 1.50x	= Good
>1.50x	= Strong

7
8

9 **Q. WHAT WOULD PWSA'S DSCRs BE AT I&E'S PROPOSED RATES?**

10 A. I&E's proposed rates would result in DSCRs of 1.70x for senior debt service and
11 1.11x for total debt service coverage.³⁵ These ratios exceed both the legal covenant
12 requirements of 1.25x for senior debt service and 1.10³⁶ for total debt service as well
13 as the requirement from the Authority's Financial Management Policy as mentioned
14 above. I&E's recommendation for senior debt service coverage would be considered
15 'Strong' by the Standard & Poor's analysis above, while the recommendation for total

³⁴ I&E Exhibit No. 1, Schedule 6, p. 4.

³⁵ I&E Exhibit No. 1, Schedule 2.

³⁶ Filing Requirement VII.7, Amended and Restated Trust Indenture Between The Pittsburgh Water and Sewer Authority and The Bank of New York Mellon Trust Company, N.A., Amended and Restated as of November 1, 2017, p. 58, Section 7.01(c)(ii).

1 debt service coverage would be considered ‘Adequate.’ This allows PWSA to at least
2 maintain, if not provide support for the consideration to improve, its credit rating.

3
4 **Q. ARE THERE ADDITIONAL REQUESTS TO CONSIDER THAT WILL**
5 **AFFECT THE OVERALL CLAIMED DSCR AND REQUESTED REVENUE**
6 **INCREASE OTHER THAN STANDARD OPERATING EXPENSES AND**
7 **DEBT SERVICE?**

8 A. Yes. PWSA is claiming continued financing of its Rate Stabilization Fund as well as
9 PAYGO funding and an Infrastructure Improvement Charge, all of which are
10 discussed below.

11
12 **RATE STABILIZATION FUND (RSF)**

13 **Q. WHAT IS THE AUTHORITY’S CLAIM REGARDING ITS RSF?**

14 A. PWSA proposes to add \$25.0 million to its RSF, which is currently funded at \$9.9
15 million.³⁷ This proposal includes adding \$1.0 million in the FPFTY, \$7.0 million in
16 FY 2025, and \$17.0 million in FY 2026.³⁸

17
18 **Q. WHAT IS THE BASIS FOR PWSA’S RSF CLAIM?**

19 A. Mr. Barca explains that this fund is a standard feature of municipal ratemaking and is
20 designed to provide flexibility to meet minimum DSCRs and demonstrate financial
21 stability to the financial community.³⁹

³⁷ PWSA Statement No. 2, p. 41, lines 3-16.

³⁸ PWSA Exhibit WJP-1, p. 1.

³⁹ PWSA Statement No. 2, p. 41, lines 8-10.

1 **Q. DO YOU ACCEPT PWSA’S CLAIM FOR THE RSF IN THIS PROCEEDING?**

2 A. Partially. I believe it is reasonable for PWSA to maintain a small RSF as a financial
3 cushion to deal with unforeseen circumstances and potential debt service deficiencies
4 that could result from those circumstances. Although the RSF is currently funded at
5 \$9.9 million, I support the Authority’s recommendation to add \$1 million to the RSF
6 in the FPFTY. As outlined by Ms. Fay, excess funds after all required payments may
7 be transferred to the RSF, Debt Service Fund, or the Operating Fund to pay for
8 construction or capital projects.⁴⁰ However, as in PWSA’s previous rate cases, I
9 continue to recommend that the funding of PWSA’s RSF be reevaluated in each of
10 PWSA’s subsequent rate cases to determine whether it is prudent and reasonable as
11 PWSA’s operations evolve under the Commission’s jurisdiction. Notably, the
12 Authority’s project unrestricted cash balance at the beginning of the FPFTY (before
13 any potential rate increase), which can be used to support debt service coverage
14 deficiencies, fund capital projects, assist with unexpected operating expenses, etc. is
15 currently \$89.7 million.⁴¹

16

17 **PAYGO**

18 **Q. EXPLAIN PWSA’S CLAIM REGARDING ITS PAYGO FUND.**

19 A. PWSA is requesting \$2.0 million in FY 2025 and another \$10.0 million in FY 2026
20 (for a total of \$12.0 million) from base rates to provide additional funding for capital
21 assets.⁴²

⁴⁰ PWSA Exhibit CF-1.

⁴¹ PWSA Exhibit WJP-1, p. 1.

⁴² PWSA Statement No. 2, p. 23, lines 6-8.

1 **Q. WHAT IS THE BASIS FOR PWSA’S PAYGO CLAIM?**

2 A. Mr. Barca explains that PAYGO funds are internally generated funds that are used to
3 finance capital assets with current year revenues. He argues PAYGO funding is often
4 used in lieu of long-term debt to fund capital assets with shorter useful lives. Further,
5 he claims that PAYGO funding provides financial flexibility within the capital
6 program, is cheaper than the debt service associated with long-term debt, and it can
7 help prevent an overleveraged debt position.⁴³

8

9 **Q. DO YOU ACCEPT PWSA’S CLAIM REGARDING THE PAYGO FUND FOR**
10 **THIS PROCEEDING?**

11 A. No. I recommend the Commission reject the entire PAYGO claim in this proceeding.

12

13 **Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION TO REJECT**
14 **PWSA’S PAYGO FUNDING CLAIM?**

15 A. First, I must note that I&E is recommending the rejection of PWSA’s MYRP proposal
16 and there is no PAYGO request in the FPFTY; therefore, there is no dollar amount to
17 reject. Second, it is important to recognize that I&E is supporting the proposal to
18 increase the Authority’s DSIC, which was established in PWSA’s 2020 base rate case
19 from 5% of distribution revenues to 7.5% of distribution revenues. This provides an
20 additional approximately \$15 million⁴⁴ in the FPFTY allowing for additional
21 internally generated funds to support planned infrastructure investments. Further, the

⁴³ PWSA Statement No. 2, p. 27, lines 6-18.

⁴⁴ I&E Exhibit No. 1, Schedule 1.

1 Long-term Infrastructure Improvement Plan (LTIP), which is required for the DSIC,
2 provides a clear picture of how ratepayer funds are being used to fund capital
3 projects, which is a level of spending accountability that is not provided with
4 PAYGO.

5 Third, the Authority has not only continued to secure extremely low-cost
6 (PENNVEST) funding, but it has also been able to secure WIFIA funding, which is
7 the federal equivalent to PENNVEST via the U.S. Environmental Protection Agency.
8 Specifically, Mr. Barca touts the Authority's success in obtaining low-cost funding by
9 noting PENNVEST has granted the Authority \$610.8 million in low-interest loans
10 and \$35.7 million in grants since 2018.⁴⁵ Similarly, Mr. Pickering also mentions the
11 Authority's success in securing PENNVEST funding by pointing out that in April of
12 this year, the Authority received a \$59.1 million low-interest loan which supports the
13 2023-2025 Small and Large Sewer Rehabilitation programs.⁴⁶ Additionally, PWSA
14 has closed on a \$52.5 million WIFIA loan this year⁴⁷ and is estimating to close on
15 \$104.7 million and \$28.5 million WIFIA loans in June of 2024 and June of 2025,
16 respectively. Mr. Barca claims these loans will be used to fund approximately 49% of
17 PWSA's Water Reliability Plan initiative, which includes replacing the clearwell at
18 the Water Treatment Plant.⁴⁸ Further, at the beginning of last year, PWSA was
19 awarded a \$17.5 million grant to replace lead service lines from the City of Pittsburgh

⁴⁵ PWSA Statement No. 2, p. 33, lines 1-4.

⁴⁶ PWSA Statement No. 1, p. 9, lines 1-19.

⁴⁷ I&E Exhibit No. 1, Schedule 7.

⁴⁸ PWSA Statement No. 2, p. 25, lines 9-12.

1 as part of the American Rescue Plan funding.⁴⁹ While I acknowledge that the types of
2 low-cost funding identified above may not always be guaranteed, the use of these
3 funds provides major cost savings to the Authority's ratepayers and is preferable over
4 unrestricted funds such as the Authority's PAYGO requests and should be utilized as
5 much as possible.

6 Finally, as recommended in the testimony of I&E witness Okum (I&E
7 Statement No. 2), normalization of equipment costs for shorter life capital equipment
8 over the anticipated equipment life provides an ongoing level of funding in base rates
9 that is intended to fund these needs prospectively, thereby invalidating the need for a
10 separate unrestricted PAYGO fund.

11
12 **Q. ARE THERE ANY OTHER REASONS TO DENY THE PAYGO CLAIM?**

13 A. Yes. Finally, and perhaps most importantly, as recommended in prior rate cases, the
14 capital expenditures that cannot be funded through the DSIC should be tied to actual,
15 identified expenditures in the FPFTY rather than simply having no restrictions over
16 available funds. To address this concern, the expenditures that Mr. Barca
17 references,⁵⁰ meters, pumps, HVAC equipment, crane equipment, and tank
18 improvements just to name a few, can be normalized over the estimated useful life
19 and included in rates. This same strategy is ideal for recovery of the capital assets
20 previously mentioned.

⁴⁹ PWSA Statement No. 2, p. 20, lines 4-6 and <https://www.pgh2o.com/news-events/news/newsletter/2022-01-28-engineering-report-water-main-lead-service-line-replacement>.

⁵⁰ I&E Exhibit No. 1, Schedule 8.

1 Notably, as cited above, excess funds after all required payments may be
2 transferred to the RSF, Debt Service Fund, or the Operating Fund to pay for
3 construction or capital projects. I&E’s recommendation yields a revenue surplus of
4 \$44,661 which contributes to an ending *Unrestricted* Cash Balance of \$90,792,056⁵¹
5 that can be used accordingly.

6
7 **INFRASTRUCTURE IMPROVEMENT CHARGE (IIC)**

8 **Q. PLEASE SUMMARIZE THE AUTHORITY’S PROPOSED IIC.**

9 A. Mr. Pickering explains that the IIC is intended to expedite the Authority’s ability to
10 obtain additional low-cost loans via PENNVEST and WIFIA by stabilizing the
11 revenue source to ensure the required debt covenants and additional bonds tests can
12 be met in addition to having funds available to pay the annual debt service.⁵²

13 Mr. Barca describes the mechanics of the IIC, claiming it is intended to
14 recover debt service associated with new PENNVEST and WIFIA loans beginning in
15 FY 2025. He claims the charge would be calculated separately, reconciled on a semi-
16 annual basis on filings of supporting schedules with the Commission, and added to
17 the base charges to be combined as one charge on the customer bills. Mr. Barca
18 additionally states that the charge will automatically adjust as PWSA obtains
19 additional funding and debt service increases, and once the loans have reached their
20 full amortization schedule, they will be rolled into the Authority’s base rates in future
21 rate case proceedings.⁵³

⁵¹ I&E Exhibit No. 1, Schedule 1.

⁵² PWSA Statement No. 1, p. 14, ln. 23 through p. 15, ln. 3.

⁵³ PWSA Statement No. 2, p. 48, ln. 18 through p. 49, ln. 9.

1 Similar to Mr. Barca, Ms. Fay notes that the IIC is intended for timely
2 recovery of debt obligations from PENNVEST and WIFIA loans between rate case
3 filings.⁵⁴ Further, she identifies some of the reasons why the IIC is beneficial for
4 PWSA's ratepayers, including transparency of costs and that actual incurred costs will
5 be recovered in place of potentially inaccurate debt service estimates.⁵⁵

6
7 **Q. DO YOU SUPPORT THE AUTHORITY'S IIC PROPOSAL?**

8 A. No. Under advice of counsel, this mechanism lacks the necessary checks and
9 balances and transparency to ratepayers. Specifically, 52 Pa. Code § 69.363(d)
10 dictates:

11 Rate recovery under a 66 Pa.C.S. § 1307(a) PENNVEST
12 automatic adjustment by means of a sliding scale or rates or
13 other method may be approved only after the receipt of the
14 following:

15 (i) DEP inspection.

16 (ii) Final PENNVEST amortization schedule.

17 Further, the explanation Ms. Fay provides to avoid a separate line item(s) to
18 record these loans/charges on customer bills,⁵⁶ is not only contrary to her own claims
19 of the transparency benefit, but also what is required by 52 Pa. Code § 69.363(e),
20 which specifically states:

21 When approved by the Commission, the PENNVEST obligations
22 should be listed on customers' bills as a separate line item.
23 Amounts collected under the Section 1307(a) PENNVEST
24 automatic adjustment by means of sliding scale of rates or other
25 method are subject to reconciliation and refund. Revenues should

⁵⁴ PWSA Statement No. 6, p. 27, lines 18-22.

⁵⁵ PWSA Statement No. 6, p. 30, lines 3-16.

⁵⁶ PWSA Statement No. 6, p. 31, ln. 13 through p. 32, ln. 3.

1 be listed in a separate account dedicated for PENNVEST
2 repayment only. Commingling of funds is discouraged.

3 For the various reasons identified above, I recommend the Commission
4 disallow implementation of the IIC as proposed by PWSA in this proceeding.
5

6 **OVERALL RECOMMENDATION**

7 **Q. WHAT IS I&E'S RECOMMENDATION FOR PWSA'S DSCR AND** 8 **OVERALL REVENUE REQUIREMENT?**

9 A. As a result of the recommended adjustments from I&E witnesses Okum (I&E
10 Statement No. 2) and Cline (I&E Statement No. 3), I&E recommends a decrease in
11 revenues of \$6,898,845 (\$195,760,896 – \$202,659,741)⁵⁷ from the FPFTY revenues
12 at present rates, which results in DSCRs of 1.70x on senior debt and 1.11x on total
13 debt.⁵⁸

14 Due to limitations in the functionality of the PWSA revenue spreadsheet with
15 respect to certain adjustments, certain general adjustments were required in order to
16 develop the I&E overall recommendation. These adjustments are detailed in the
17 footnotes to I&E Exhibit No. 1, Schedule 1. There are pending responses to I&E
18 interrogatories that may alter how these adjustments are reflected, and any changes as
19 to how these adjustments are reflected will be addressed in my surrebuttal testimony.
20

21 **Q. WHAT IS THE BASIS OF I&E'S RECOMMENDATION?**

22 A. The most significant impacts on the recommended revenue requirement are the I&E

⁵⁷ I&E Exhibit No. 1, Schedule 1.

⁵⁸ I&E Exhibit No. 1, Schedule 2.

1 adjustments mentioned above, which are largely due to PWSA's continued variances
2 between projected and actual expenditures.

3 PWSA's bond covenant requires DSCRs of 1.25x on senior debt service and
4 1.10x on total debt service while the Authority's Financial Management Policy
5 requires coverage of 1.35x for senior debt and 1.15x for total debt. I&E's
6 recommended coverage ratios exceed the bond covenant requirements and provide
7 PWSA the opportunity to build financial stability to lessen risks associated with being
8 highly leveraged, increase liquidity, and maintain its credit quality. The I&E
9 recommended revenue decrease of \$6,898,845 results in a total revenue requirement
10 \$195,760,896.⁵⁹

11 As previously indicated, this revenue decrease should be allocated 66% to
12 water operations, 17% to wastewater operations, and 17% to stormwater operations.
13 Therefore, the I&E recommendation corresponds to a decrease of \$4,553,237 to water
14 operations ($-\$6,898,845 \times 66\%$), a decrease of \$1,172,804 to wastewater operations ($-\$6,898,845 \times 17\%$), and a decrease of \$1,172,804 to stormwater operations ($-\$6,898,845 \times 17\%$).

17 Finally, I believe the DSCRs and DCOH, along with the increase in DSIC
18 revenues, will afford PWSA the opportunity to cover necessary expenses, pay its
19 debt, and continue to improve its current financial position and credit ratings. As
20 evidenced by the credit rating agencies discussed above, PWSA's recently established
21 relationship with the Commission as well as its strengthened management team have

⁵⁹ I&E Exhibit No. 1, Schedule 1.

1 allowed the Authority to make notable improvements to these financial metrics in
2 working towards putting the Authority more in line with its peer utilities.

3

4 **Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

5 A. Yes. However, I reserve the right to supplement my testimony or to revise
6 recommendations if additional issues or facts arise during this proceeding.

Pittsburgh Water & Sewer Authority, PA

Update to credit opinion following outlook revised to positive

Summary

[The Pittsburgh Water and Sewer Authority](#) ("PWSA" or "the Authority") ([A3 positive](#)) benefits from a large and diverse service area, primarily serving the city of [Pittsburgh](#) ([A1 stable](#)), with notably stable top customers primarily in education and healthcare industries. The Authority has also benefitted from proactive steps to strengthen two key credit areas - its management and governance and its financial position. PWSA's governance structure has been materially improved by oversight from the Pennsylvania Public Utility Commission (PUC), initiated in 2018. Though the PUC's rate approval process is a lengthy 270 days, the commission has committed to allowing for rate increases that will both satisfy bond covenants and allow for needed capital improvements. Further, the PUC has helped to ensure timely system maintenance and routine capital investment, in line with broad industry standards. At the same time, PWSA has taken steps to strengthen its internal management structure and build its workforce; also a credit positive.

The Authority's financial position has also improved considerably over the past several years and continues to strengthen. Liquidity has reached a satisfactory 165 days cash on hand as of fiscal 2022 year-end, up from just 23 days cash in 2017. Debt service coverage has likewise strengthened, to 1.49 times when all liens of debt are considered. These metrics compare well to peers and also to the Authority's own past performance.

Yet certain credit challenges persist and high leverage will be a continued headwind for the Authority going forward. The Authority's current debt burden is significant and material additional debt is expected as the Authority progresses on its capital improvement plan. The Authority's current five year plan assumes an additional \$1 billion in debt, before consideration of a yet-to-be-determined consent order for combined sewer overflow remediation. The Authority's ability to maintain a healthy financial position while increasing leverage will be key to future credit reviews. Future reviews will also consider the potential challenges associated with the expected consent order and its impact on overall leverage and customer affordability.

Credit strengths

- » Diverse, urban Pittsburgh service area, supported by strong "eds & meds" presence
- » Considerable size; system assets include water conveyance and treatment, and sewer conveyance that ties to ALCOSAN
- » Significant, recently implemented rate increases boost revenues; PUC oversight brings improvements and controls

Credit challenges

- » Substantial debt burden; debt ratio is 96% and will continue to grow
- » Narrow, though improved, liquidity versus similarly sized peers
- » Projected \$1.8 billion in capital needs over the next five years, to be primarily funded with debt
- » Consent decree to remediate combined sewer overflows not yet finalized

Rating outlook

The positive outlook reflects the expectation of continued improvement to liquidity and coverage as PWSA progresses in its capital plans and continues to mature in its internal governance structure and relationship with the PUC. The positive outlook also reflects the expectation that, while the settlement of PWSA's consent decree with the EPA is still a large unknown, improved governance controls and a continued track record of adequate rate setting with the PUC will enable PWSA to readily and reasonably manage its future capital plans.

Factors that could lead to an upgrade

- » Substantial improvement in liquidity that is maintained over several reporting periods
- » Meaningful reduction of debt
- » Sustained improvements in debt service coverage

Factors that could lead to a downgrade

- » Material narrowing of debt service coverage and liquidity position
- » Inability to raise rates sufficiently to meet debt service coverage covenants while also funding significant deferred capital improvements
- » Failure to effectively deploy new revenues to address near term infrastructure and operating needs
- » Substantial new or worsening long-term environmental concerns

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the issuer/deal page on <https://ratings.moody's.com> for the most updated credit rating action information and rating history.

Source: Moody's Investors Service, Pittsburgh Water & Sewer Authority

Profile

PWSA is an authority of the city of Pittsburgh, providing water treatment and conveyance to 84% of the city's population of roughly 305,000 residents and sewer conveyance for the entire city.

Detailed credit considerations

Service area and system characteristics: large, stable customer base in Pittsburgh

The Authority provides water distribution and wastewater collection and conveyance for the city of Pittsburgh and neighboring municipalities. The city's diverse economy is a credit positive for the Authority. Favorably, PWSA reported strong revenue collections throughout the coronavirus pandemic and did not experience large scale delinquencies that effected some regional peers, signaling resiliency in the customer base. The Authority's 10 largest customers (3.7% of revenues) include major Pittsburgh institutions, such as the Fox Chapel Water Authority, [Allegheny County \(Aa3 stable\)](#) and the [University of Pittsburgh \(Aa1 stable\)](#). All of the Authority's five largest customers have been in the system for at least 75 years. Notably, given a renegotiated cooperation agreement with the city of Pittsburgh in 2019, most city buildings are now metered for water, with the city paying for water usage - something it had not done previously.

The Authority continues to maintain an ample water supply, providing water to a population of approximately 305,000. The system is permitted to draw up to 100 million gallons per day (MGD) from the Allegheny River, its sole water source, though average demand for water is well below that level, at 70 MGD. The Authority treats drinking water at one plant located on the river, as well as a microfiltration plant at one of its reservoirs. The Authority has capacity to store approximately 3 days' worth of finished water for uninterrupted supply to its customers.

The Authority does not treat wastewater. It transmits all of its sewage to the [Allegheny County Sanitary Authority \(Aa3 stable\)](#). There is no contractual limit to the amount of sewage that can be conveyed, however, during wet weather events, the existing system frequently overflows. ALCOSAN is projecting annual rate increases over the next twenty years that will pass through to PWSA customers.

PWSA has made significant strides in improving its governance and management of its organization as well as its physical assets. Ordinary system updates and routine infrastructure improvements had been sorely lacking at PWSA and years of deferred maintenance have led to cost inefficiencies and exacerbated the natural wear and tear on an already aged system. PUC oversight since 2018 has already served to remediate some of this by establishing guidelines for system improvements based on industry-wide standards. The Authority has also hired more than 167 employees over the last five years - a 68% increase, and has filled key management roles with qualified personnel. This is a significant improvement over Authority operations of just a few years ago where management was mostly outsourced and employment was insufficient to provide for the day to day operations.

The additional operational oversight by the PUC is expected to be a credit positive going forward. Whereas the Authority had used capital deferment as a tool to maintain satisfactory finances and rate increases were heavily influenced by local politics in the past, the PUC has ensured that rate increases are less politicized. Further, while certain capital projects may be slowed to accommodate softening revenue if necessary, a complete sidelining of the capital plan and required maintenance is unlikely.

Debt service coverage and liquidity: recent history of satisfactory financial performance

The Authority's net revenues have been fairly stable since 2018, averaging a net take-down (net revenue / gross revenue) of about 35% over the past five years, as increased revenues have been matched by increased spending for maintenance and capital improvements. PWSA's operating margins are well in line with peers and are expected to remain stable as rate increases and further revenue growth is used to fund needed capital spending and a growing workforce payroll.

At fiscal 2022 year-end, the Authority reported senior debt service coverage of 1.8 times and total coverage of 1.41 times, well within covenant requirements and satisfactory versus peers. Moody's reports a slightly higher 1.87 times senior lien debt service coverage and 1.49 times all-in coverage, based on a net income figure that includes non-operating grant revenue. Favorably, coverage has continually improved since 2018, when PUC rate oversight went into effect, signaling that rate increases have been effective to maintain sufficient coverage while providing for more normalized operations and investment in system infrastructure.

The Authority is expecting an operating surplus of about \$6 million for 2023. PWSA expects all-in coverage to stay in the range of 1.2 times to 1.4 times over the next five years, though the Authority assumes rather significant rate increases in order to keep coverage stable. Moody's expects that the PUC will be supportive of rate increases that will allow for satisfactory coverage levels while PWSA continues to execute its capital plan. Future reviews will consider whether the Authority is able to maintain satisfactory coverage and adhere to projected financial performance while supporting increased leverage to execute the Authority's sizeable capital plan.

Liquidity

The Authority's liquidity is satisfactory, at 165 days unrestricted cash on hand as of fiscal year end 2022, equating to about \$84 million. PWSA's cash position is considerably weaker than national water and sewer system median days cash of 450 days as of 2021, though continues to strengthen. Further, when pass-through revenues and expenditures attributable to ALCOSAN are excluded from O&M, the Authority's days cash metric strengthens to 306 days cash, which is a somewhat more accurate view of liquidity relative to PWSA's own expenditure needs.

Debt and pensions: elevated debt burden continued credit challenge

The Authority continues to face material pressure to improve its infrastructure given years of disinvestment. Coupled with its own consent decree pertaining to combined sewer overflows during wet weather events, which is in negotiation since 2021, the Authority will necessarily add to its already elevated debt burden in the near term. PWSA anticipates roughly \$1.8 billion in capital spending over the next five years, largely funded by debt. This will add to leverage substantially and future credit reviews will focus on the Authority's ability to manage additional debt while maintaining satisfactory cash and coverage metrics; largely dependent on PWSA's ability to increase rates as needed. The Authority's total debt is equal to 96% of fixed assets as of 2022 year-end, well above similarly sized peers. The outstanding debt amortizes slowly, with only 36% of principal scheduled to be repaid in the next 10 years.

Legal security

PWSA's first lien revenue debt benefits from a limited obligation revenue pledge backed by a first lien security interest in and to the revenues of the authority after payment of current expenses.

Debt structure

The majority - 49% - of Authority debt benefits from a first lien pledge on net revenues. Another 7% is subordinate-lien bonds, and the remainder is backed by a third lien, which is shared on a parity basis between PennVest and PNC Bank, NA (A2) which provides a revolving credit facility to PWSA. Roughly 14% of the Authority's current debt outstanding (as of May 2023) is hedged variable rate.

The Authority introduced a new indenture in 2017, which strengthened the rate covenant. The requirement is now 125% of senior debt service coverage plus 110% of subordinate debt service coverage. Free cash is no longer used in the coverage calculation. The debt service reserve is funded at the lesser of the three-pronged test.

The Authority materially reduced its variable rate debt outstanding with its Series 2019 A&B issuance. Variable rate debt has been reduced to 14% of the total debt portfolio today, down from 44% prior to 2019. There is one variable rate issuance outstanding currently - the Authority's senior lien Series 2017C bonds, which were last remarketed in December 2020 and are subject to mandatory tender in December 2023. The bonds were remarketed with a rate indexed to SIFMA. Since the fixed-to-floating rate swaps associated with the 2017C bonds were LIBOR-based, the Authority layered on a basis swap alongside the remarketing in order to convert the variable rate received on the swaps to SIFMA from LIBOR, creating an effective hedge for the bonds. The Series 2023 ABCD issuance eliminates the basis swap, as both the variable rate debt and associated swaps will now be indexed to SOFR. Further the 2023 issuance contemplates a private placement of two-thirds of the variable rate debt with a soft put in 2028. The remaining one-third of variable rate debt will either be fixed for a five-year period or will be refinanced as fully fixed rate bonds with a full swap termination.

[Assured Guaranty Municipal Corp. \(A1 stable insurance financial strength\)](#) insures the Authority's variable rate bonds and all of the Authority's swaps, except the 2020 basis swap, and provides the surety policy for all debt service reserve funds, except the reserve associated with PWSA's 2013 bonds, which is cash funded. This counterparty concentration may adversely impact the Authority should AGM's credit quality deteriorate.

The Authority maintains \$535 million in outstanding PennVest loans as of May 2023 and an \$150 million revolving credit facility, of which \$131 million is currently drawn. The Authority will apply proceeds from its Series 2023 A issuance to pay down the credit line. Given an intercreditor agreement, PennVest and PNC Bank, NA share a third lien priority on system revenues.

Debt-related derivatives

The Authority maintains floating-to-fixed rate swaps in support of its Series 2017C issuance under ISDA Master Agreements with JP Morgan Chase Bank N.A. (Aa2 Sr. Unsecured) (64%) and Merrill Lynch Capital Services (36%), whereby the authority pays a fixed interest rate semiannually (3.79% weighted average) and receives 70% of LIBOR. The Authority layered on a basis swap in 2020 to convert the LIBOR received rate to SIFMA.

AGM provides swap insurance for all swaps. The aggregate swap mark to market is a negative (\$20 million) as of fiscal year end 2022.

The floating-to-fixed rate swaps are included in the parameters of a credit support annex (CSA), though there is no collateral posting requirement unless an Insurer Event occurs. The basis swap is excluded from the CSA. The amortization schedule for each swap mirrors that of the corresponding bonds and the swaps terminate at bond maturity. The basis swap terminates in December 2023 with the next mandatory tender of the Series 2017 C bonds. For all of the swaps, per the 2017 indenture, regularly scheduled swap payments are subordinate to subordinate bond debt service. Early termination is optional for the Authority only, and termination by the counterparty depends upon specified termination events, including the downgrade of PWSA's underlying rating below investment grade. An Authority termination payment would be subordinate to first and second lien debt service payments.

Pensions and OPEB

Most of the Authority's employees participate in the city's pension program. The Authority's share of its pension contribution is now accurately provided for through its renegotiated cooperation agreement with the city. Beginning in 2019, all new full time non-union PWSA employees are eligible to participate in a 401(a) retirement plan and do not have the option of enrolling in the city's municipal pension fund plan.

ESG considerations

Environmental

The Pittsburgh metropolitan area faces a high risk of elevated rainfall levels. Demonstrated elevated rainfall levels in the region have directly impacted PWSA, as wet weather events overwhelm the system's current combined sewer infrastructure. This is the reason for the Authority's consent decree related to combined sewer overflows.

Social

Pittsburgh's population is relatively stable at roughly 301,000 and the five year average annual growth rate of the city's full value is a strong 4.5% as of fiscal 2021, well above the US median of -0.5%. Nevertheless, the city's wealth indicators remain below average with median family income at just 89% of the nation. Poverty is also elevated at 20%. As PWSA has increased rates, it has also implemented a rate relief program for qualifying residents, acknowledging this weakness in its rate base.

Governance

The Authority's current management team has developed a comprehensive plan to bring operations to good working order and to proceed with much needed capital improvements. Strong governance controls at the Authority are evidenced by several years of improved financial performance.

Management views its relationship with the PUC as well as the DEP and EPA as an opportunity for partnership and has proactively sought to engage these agencies as PWSA moves forward with its substantial CIP. This is a definitive, positive change from the Authority's prior actions, and informs our stable outlook on PWSA's current credit profile.

The Authority's Board consists of nine members recommended by a nominating committee, appointed by the Mayor, and approved by City Council. Currently, eight of the nine Board seats are filled. Starting in 2020, city water charges were phased in pursuant to a cooperation agreement; the Authority had provided water to the city at no cost prior to 2020. Among other things, the cooperation agreement also provides for payments between the city and the PWSA to be based upon actual, verifiable, direct expenses, and in accordance with customary utility practices under the PUC Code, and importantly, confirms that payments by the PWSA to the city will continue to be subordinate to all debt obligations of the PWSA.

Pennsylvania's Public Utility Commission began oversight of the authority in April 2018. The PUC is responsible for regulating the Authority's rate making, operating effectiveness, and debt issuance. We expect that the PUC will bring standardization and effective governance to the Authority's future operations. The PUC is required to approve rate increases that will ensure PWSA complies with its bondholder covenants, though we note that the approval process for increases can be lengthy.

Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the credit rating process or in preparing its Publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY CREDIT RATING, ASSESSMENT, OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any credit rating, agreed to pay to Moody's Investors Service, Inc. for credit ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$5,000,000. MCO and Moody's Investors Service also maintain policies and procedures to address the independence of Moody's Investors Service credit ratings and credit rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody's Investors Service, Inc. and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody.com under the heading "Investor Relations — Corporate Governance — Charter Documents - Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJKK or MSFJ (as applicable) for credit ratings opinions and services rendered by it fees ranging from JPY100,000 to approximately JPY550,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Credit Highlights

- S&P Global Ratings affirmed its 'A+' rating on the Pittsburgh Water and Sewer Authority's (PWSA) first-lien revenue bonds.
- At the same time, S&P Global Ratings also affirmed its 'A' rating on PWSA's subordinate-lien revenue bonds.
- Additionally, we assigned our 'A+' rating to PWSA's upcoming approximately \$400 million water and sewer system first-lien revenue and revenue refunding bonds series A, B, C (federally taxable), and D bonds and remarketing of the 2017C bonds.
- The outlook is stable.
- Total debt outstanding will be approximately \$1.5 billion.

Security

The first-lien bonds are secured by a senior-lien pledge on the net revenues of the authority's waterworks and sanitary sewer system. Bond provisions are credit neutral.

We have applied our primary utility revenue bond criteria to determine the authority's general creditworthiness, and have applied this rating to its senior-lien issues. We rate PWSA's subordinate lien one notch lower, based on the application of our criteria "Assigning Issue Credit Ratings Of Operating Entities" (published May 20, 2015, on RatingsDirect), given the open status of the senior lien and the likelihood that PWSA will continue to use the senior lien from time to time.

Proceeds of the bonds will be used to fund a portion of the system's capital program and refund the authority's series 2013A and B for interest rate savings, which will allow for the remarketing of the 2017C bonds, finance the partial

termination costs of the fixed payer swap associated with the 2017C bonds, and fund the cost of issuing the bonds.

Of the series 2017C bonds, the subseries 1, 2, and 3 will each be associated with a basis swap to the Securities Industry and Financial Markets Association (SIFMA) index rate. The counterpart for this overlay swap is Merrill Lynch Capital Services Inc., with a notional amount of \$216.72 million of the 2017C bonds that are synthetically fixed with a fixed payer swap with JPMorgan Chase Bank N.A. or Bank of America Merrill Lynch N.A. The authority intends to remarket \$146 million of the 2017C bonds into secured overnight financing rate (SOFR) mode and issue \$72 million series 2023D bonds as fixed-rate premium put bonds, as well as partially terminate the fixed payer swap for five years or upsize the series 2013B refunding bonds to refund \$72 million of the 2017C bonds and pay the termination cost of the associated fixed payer swaps to maturity. The decision whether to terminate fully or partially is subject to market conditions. The outstanding basis overlay swap to the Securities Industry and Financial Markets Association (SIFMA) index rate on the series 2017C bonds will be terminated and related costs will be financed with proceeds of the bonds. Although only a point-in-time snapshot and--barring a termination event such as the rating on PWSA falling below 'BBB-'--not an actual liability, those swaps are currently substantially out of the money. Subseries 4 (\$2 million) and the balance on the PNC Bank capital line of credit (\$132 million) are not hedged.

Credit overview

A very conservative approach to long-term planning has enabled management to successfully get three rate increases from the Pennsylvania Public Utility Commission (PaPUC), with the last being for two years (fiscal years 2022 and 2023). These rate increases have enabled management to continue funding the capital improvement program (CIP) while dealing with rising costs from its suppliers. Additionally, management was successful in getting a new stormwater fee approved to assist in funding those projects. Given the capital plan, it is important for rating maintenance that the recently filed rate case be approved at or near the requested levels for fiscal years 2024-2026.

Other factors that support the rating include:

- Pittsburgh's role as the anchor and economic engine for western Pennsylvania, based on an employment base that has reinvented itself from one that once relied heavily on manufacturing and industrial jobs;
- Rates for service that have been pressured over the past decade by the unfunded mandates, and will need to be reviewed by the state's rate regulator, but remain affordable;
- Operational management assessment (OMA) that we view as good, even despite the above-mentioned challenges;
- Strong coverage levels of all-in debt service historically and projected;
- Strong on-balance-sheet liquidity, supported further by the available credit line; and
- Financial management practices and policies we consider good.

The rating is limited by extremely high leverage, with \$1.8 billion in capital commitments identified through fiscal 2027 that are likely to continue to pressure the financial profile.

Environmental, social, and governance

In our view, PWSA has outsized risks related to each of our environmental, social, and governance (ESG) factors, although each of these are generally trending favorably. In previous years, the authority faced scrutiny from local and

state elected officials who voiced concerns over its operations. An auditor general's opinion, released in November 2017, cited "aging and deteriorating infrastructure issues and financial and operational long-term viability issues," and was an important factor in legislation that ultimately placed PWSA under PaPUC oversight as of April 1, 2018. The PaPUC regulates the authority's rates and fees and must approve additional debt. PWSA's management team has worked closely with regulators and other stakeholders, and has already achieved several measures that are likely to improve operations and financial capacity. This includes recent approval of a distribution system improvement charge that will be dedicated to underground infrastructure rehabilitation.

PWSA has also implemented various socially directed programs, such as lead service-line replacements and customer bill-pay assistance programs. We view the latter as a credit quality stabilizer that could allay affordability concerns. PWSA's own environmental compliance mandates, as well as drinking water efficiency, are key programs in PWSA's capital budget and have been the major generators for the need to consider additional rate adjustments; the authority has the ability to administratively pass through and recover costs from its wholesale wastewater treatment provider. PWSA, under its Green First plan, is also piloting approximately a dozen projects to experiment with different approaches to green infrastructure and overflow reduction that could also present capital budget cost savings.

Outlook

The stable outlook reflects our expectation that when PWSA does need to propose a rate case to the PaPUC, there will generally be a credit-supportive relationship, observed by both the timing and magnitude of rate adjustments that PWSA is likely to request, versus what the PaPUC ultimately grants. We are assuming that the financial profile will be further stabilized by the sufficiency test in the rate covenant, which does not allow for the use of cash transfers. We will also likely keep in place the one-notch distinction between the first- and subordinate-lien debt.

Downside scenario

Should inflationary and supply-chain issues significantly drive up the cost of the CIP, which is expected to be mostly debt funded, and thereby cause additional debt that pressures financial metrics, the rating could be lowered.

Upside scenario

Management has represented that total debt service coverage (DSC) will generally move toward about 1.25x, with on-balance-sheet available reserves equivalent to four to five months' operating expenses. Consistently outperforming financial projections while meeting the long-term challenges presented by an aging system, compounded by regulatory pressures, would be the key to PWSA achieving a higher rating.

Credit Opinion

Enterprise risk

Based on our Operational Management Assessment (OMA), we view PWSA to be good. An assessment of good, in our opinion, implies that overall alignment between the system's operational characteristics and its management is sufficient, although there are areas of opportunity. Management's plans to rehabilitate and build reliability into the operations have improved our view of this assessment. The CIP contains projects that are based on both PWSA's

prioritization and those reflecting consent decrees.

Much of the existing infrastructure was built to serve a much larger population and a workforce different from that of today. While we note, for example, that the city has an essentially unlimited raw-water supply from the Allegheny River and overall system capacity that could support a population several times the size of the current one, it is also the case that the authority's focus remains the renewal and replacement of its aging underground infrastructure. The water distribution system is also an identified area of opportunity, given the high nonrevenue water percentage, which is attributable to line losses. However, under a 2019 cooperation agreement, the city will no longer receive free service, which alone should help improve nonrevenue water. The renegotiated agreement will not affect the capital lease agreement, and PWSA still intends to purchase the system from the city for \$1 in 2025 under the terms of the current agreement.

PWSA can administratively fully pass through and recover Allegheny County Sanitary Authority (ALCOSAN) billings and the surcharge for distribution system improvements. Management instituted stormwater charges in fiscal 2022. For fiscal 2021, the average customer--using 3,000 gallons of both water and sewer service plus ALCOSAN's treatment surcharge--pays about \$121 per month, or 3.3% of median household effective buying income (MHHEBI). As costs increase over time to support the CIP, headroom for affordability, especially for lower-income customers, could diminish.

Financial risk

A Financial Management Assessment (FMA) of good indicates that we consider management's practices currently good, but not comprehensive. The authority maintains many best practices we believe are critical to supporting credit quality, particularly in the finance department. These practices, however, may not be institutionalized or formalized in policy, or may not be as robust as those of comparable utilities with an FMA of strong. The FMA of good includes a long-term financial plan that management intends to implement in partnership with PaPUC to support its identified capital commitments. The authority also has implemented new, more comprehensive, and conservative budgeting assumptions that better capture annual revenue requirements. We understand that the authority's management team regularly tracks budget-to-actual performance, and that the new management team is instituting a number of additional best practices to target consistently higher levels of financial performance.

US Municipal Utility Revenue Debt Methodology

This rating methodology replaces the *US Municipal Utility Revenue Debt* methodology published in October 2017. We have added a section on "Other Considerations." We have also made editorial changes to enhance readability. These updates do not change our methodological approach.

Introduction

In this rating methodology, we explain our general approach to assessing credit risk of essential service US municipal utility revenue bonds, including the qualitative and quantitative factors that are likely to affect rating outcomes in this sector.

The primary factors that drive our credit analysis of revenue bonds issued by municipal utilities that provide essential services are the size and health of the system and its service area, the financial strength of its operations, the legal provisions governing its management, and the strength of its rate management and regulatory compliance.

We discuss the scorecard used for this sector. The scorecard¹ is a relatively simple reference tool that can be used in most cases to approximate credit profiles in this sector and to explain, in summary form, many of the factors that are generally most important in assigning issuer-level ratings to issuers in this sector. The scorecard factors may be evaluated using historical or forward-looking data or both.

We also discuss other considerations, which are factors that are assessed outside the scorecard, usually because the factor's credit importance varies widely among the issuers in the sector or because the factor may be important only under certain circumstances or for a subset of issuers. In addition, some of the methodological considerations described in one or more cross-sector rating methodologies may be relevant to ratings in this sector.² Furthermore, since ratings are forward-looking, we often incorporate directional views of risks and mitigants in a qualitative way.

As a result, the scorecard-indicated outcome is not expected to match the actual rating for each issuer.

¹ In our methodologies and research, the terms "scorecard" and "grid" are used interchangeably.

² A link to a list of our sector and cross-sector methodologies can be found in the "Moody's Related Publications" section.

Our presentation of this rating methodology proceeds with (i) the scope of this methodology; (ii) the sector overview; (iii) the scorecard framework; (iv) a discussion of the scorecard factors; and (v) other considerations not reflected in the scorecard. The appendix shows the full view of the scorecard factors, sub-factors, weights and thresholds.

Scope

This methodology is used to assign ratings to debt instruments where the primary pledge and source of repayment are revenues generated by US municipal utilities providing monopolistic services essential to public health and functional economies. The approach described in this methodology applies to six basic categories of US municipal utilities: water distribution, gas distribution,³ electric distribution,⁴ sanitary sewerage, stormwater disposal, and solid waste disposal.

This methodology does not apply to debt issued by regulated water utilities, regulated electric and gas utilities and networks, electric generation and transmission cooperatives, power generation projects; nor does it apply to other types of public utilities, such as telephone, cable television, or parking. This methodology also does not apply to utility revenue debt whose rating is based on a general promise of a state or local government to pay the debt (e.g., a general obligation pledge or a full faith and credit pledge).⁵

Sector Overview

The pledge and source of repayment for a municipal utility revenue bond is typically defined in a bond resolution or a trust indenture, which acts as a contract between the utility and its bondholders. The resolution or indenture most often includes a lien on the net revenues of the utility system after the payment of regular operating and maintenance expenses.

US municipal utilities provide many different services whose rates or fees are pledged to the repayment of debt. The utilities mostly fall into one or more of six basic categories:

- » **Water utilities** take water from the ground, a river, a lake, or in special cases the ocean, treat it to a potable standard, and distribute it to customers for drinking, cleaning, and commercial, industrial, or agricultural use. These utilities can be involved in any or all of the functions of water supply: water treatment, long-distance transmission and retail water distribution. Some water utilities have no treatment capacity and purchase potable water wholesale.
- » **Gas utilities** take natural gas from a wholesale pipeline, odorize it for safety detection and pressurize it for delivery to customers through a pipe network for uses such as heating, cooking or commercial and industrial applications.
- » **Electric utilities** purchase electricity from wholesale suppliers and deliver it to residential, commercial and industrial customers for a wide range of power uses.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moodys.com for the most updated credit rating action information and rating history.

³ This methodology covers municipal gas distribution utilities. These utilities typically purchase their supply from natural gas producers or intermediaries, and the gas is delivered via natural gas pipeline to the municipality's distributions system. A link to a list of our sector and cross-sector methodologies can be found in the "Moody's Related Publications" section.

⁴ Only those municipal electric utilities that generate less than 20% of their own power are rated using this methodology. We rate public power utilities using different methodologies. For information, see our methodology that discusses US public power electric utilities with generation ownership exposure and also our methodology that discusses US municipal joint action agencies. A link to a list of our sector and cross-sector methodologies can be found in the "Moody's Related Publications" section.

⁵ A link to a list of our sector and cross-sector methodologies can be found in the "Moody's Related Publications" section.

- » **Sanitary sewer** utilities collect and treat wastewater, discharging it into a waterway or injecting it underground, and landfilling or incinerating the residual sludge. Some sewer utilities with no treatment capacity gather wastewater and transmit it to another utility that treats it.
- » **Stormwater** utilities collect and treat rainwater before discharging it into a body of water such as an ocean or a river. While every city or county addresses stormwater drainage as an integral element of its streets and highways, the stormwater systems that require capital markets financing are typically large in scale and are necessary to avert flooding from heavy seasonal rainfall.
- » **Solid waste** utilities collect residential or commercial refuse and dispose of it through landfills, waste-to-energy plants, or other waste-disposal processes. A solid waste system can be complete or collection-only, relying on another municipal or private entity for long-haul removal and disposal through landfill or incineration.

Essential-service utilities typically operate as departments, boards or independent authorities of US states or local governments.

States and subdivisions of states, such as counties and cities, often issue bonds where the primary pledge and source of repayment are the net revenues generated by a utility system operated directly under government auspices, such as a city water department. In other cases, states or state subdivisions create an independent authority or special purpose district that operates the system and issues the bonds.

The credit quality of essential-service utility revenue bonds has generally been strong, based on the fundamental strength of utilities, which include the following characteristics:

- » The provision of essential services, usually in a government-protected monopoly;
- » Typically unregulated and independent rate-setting authority;
- » The ability to discontinue service to delinquent accounts and in many cases to put a lien on the property for nonpayment;
- » Utility cost burdens that are typically low relative to household income and to tax burdens;
- » A generally strong federal and state regulatory framework that is designed to keep utilities functioning in order to protect public health and achieve environmental goals;
- » A "special revenue" designation that may insulate a utility from a parent's bankruptcy.

Scorecard Framework

The scorecard in this rating methodology is composed of four factors. All of the sub-factors comprise a number of sub-factors. The scorecard also includes 20 notching factors, also known as below-the-line adjustments, which may result in upward or downward adjustments in half-notch or whole notch increments to the preliminary scorecard-indicated outcome.

EXHIBIT 1

US Municipal Utility Revenue Debt Scorecard Overview

Factor	Factor Weighting	Sub-factor	Sub-factor Weighting
System Characteristics	30%	Asset Condition (Remaining Useful Life)	10%
		System Size (O&M)	7.5%
		Service Area Wealth (Median Family Income)	12.5%
Financial Strength	40%	Annual Debt Service Coverage	15%
		Days Cash on Hand	15%
		Debt to Operating Revenues	10%
Management	20%	Rate Management	10%
		Regulatory Compliance and Capital Planning	10%
Legal Provisions	10%	Rate Covenant	5%
		Debt Service Reserve Requirement	5%
Total	100%	Total	100%

Source: Moody's Investors Service

The scorecard does not include or address every factor that a rating committee may consider in assigning ratings in this sector. We may use the scorecard over various historical or forward-looking time periods. Furthermore, in our ratings we often incorporate directional views of risks and mitigants in a qualitative way. Please see the "Other Considerations" section.

Discussion of the Scorecard Factors

In this section, we explain our general approach for scoring each scorecard factor or sub-factor, and we describe why they are meaningful as credit indicators.

To arrive at a scorecard-indicated outcome, we begin by assigning a score for each weighted sub-factor. Based on the scores and weights for each sub-factor, a preliminary scorecard-indicated outcome before notching factors is produced.

We also assess the notching factors. Our assessment of these notching factors may result in upward or downward adjustments to the preliminary outcome that results from the weighted scorecard factors. The most common notching factors related to each of the weighted scorecard factors are discussed below. In some circumstances, there may be notching for a credit event or trend that is not captured by the weighted scorecard sub-factors or the listed notching factors. We may also choose to make adjustments to the historical inputs to reflect our forward-looking views of how these statistics may change.

Below, we discuss each factor and subfactor, as well as the notching factors that we consider within each category of this methodology.

Why It Matters

This factor on the scorecard assesses a utility's capacity to fund its operations and capital needs based on the health of its capital assets, the size and diversity of its operations, and the strength and resources of its service base.

The scope of this factor is broad. Each of the sub-factors contributes to an analysis of what magnitude of expenditures is necessary to keep the system functioning, and how large, diverse, and flexible the available resources are to meet those expenditures.

Sub-factor: Asset Condition (10%)

Input: Net fixed assets divided by most recent year's depreciation, expressed in years

The condition of a utility's capital assets determines its ability to comply with environmental regulations and continue delivering adequate service with existing resources.

Depreciation is an accounting concept that acts as a proxy for the rate at which a utility's plant and equipment are aging. Central to our analysis of capital adequacy is an assessment of how utilities "fund depreciation," meaning make capital replacements and repairs to address aging plant and equipment.

The consequences of failing to fund depreciation can be costly. Implicit in this measure is the concept of deferred capital investment. Utilities that delay investing in their systems, replacing aging plant and equipment, and modernizing their facilities often find it more expensive to do so later. Capital investments are ordinarily more expensive when deferred.

Further, systems whose facilities deteriorate often run afoul of environmental regulations. The failure to fund depreciation, which will manifest as a declining useful remaining life, can lead to sewage overflows, inflow and infiltration problems, or non-compliant wastewater discharges, resulting in civil fines, litigation, or regulatory consent decrees. These are usually more expensive than funding

depreciation through a prudent multi-year capital plan that replaces assets as they deteriorate or break down.

The inherent differences between types of utilities are manifested in their component parts, which can have very different useful lives. Because a solid waste utility is largely automotive-based, with collection vehicles and earth-moving equipment at the landfill, the useful life of its assets will be well under 20 years, compared to a water utility whose distribution mains and reservoir have useful lives of 40 to 100 years. We generally acknowledge these differences, which may be reflected in our scoring of notching factors.

For utilities whose asset condition ratios are not determinable, such as utilities that utilize cash accounting and do not report net fixed assets or depreciation, we are likely to assess the sufficiency of capital assets based on other available information.

Sub-factor: Service Area Wealth (12.5%)

Input: Median family income of the service area, expressed as a percentage of the US median

Most of the costs of operating a utility and maintaining its capital assets are borne by ratepayers. The income of the residents of the service base conveys the capacity of its rate-payers to bear higher rates to fund operations and capital upgrades.

Utilities that serve lower-income ratepayers may have more difficulty implementing higher rates, if utility costs consume a considerable share of residents' budgets. The US Environmental Protection Agency (EPA) considers wastewater costs exceeding 2% of median household income to be a heavy burden, for example, a threshold that would be reached more quickly for a utility serving lower-income ratepayers.

We believe MFI is the best proxy for the wealth of a service base, but other indicators such as the poverty rate, unemployment, home foreclosures, per capita income, and median home value supplement our analysis of ratepayer capacity.

Sub-factor: System Size (7.5%)

Input: Most recent year operations and maintenance expenditures, expressed in dollars

Larger systems tend to be more diverse and enjoy economies of scale. The size of a system implies the flexibility and resilience not only of its operations, but also of its service base.

Small systems present a number of risks. They are less likely to have redundancies, which allow a system to shut down some of its operations in an emergency or to make repairs without interrupting service. Small standalone water or sewer systems will typically depend upon a single supply of water or a single sewage treatment plant. They are more likely to be exposed to a concentrated customer base. They are more susceptible to the departure of a single large customer. An unexpected capital need is likely to be more costly relative to its annual budget. The collective engineering and scientific expertise is likely to be less robust than a larger system's.

We use different breakpoints for different types of systems in this subfactor, recognizing that not all types of utilities have the same cost structure. For instance, an electric distribution system is more expensive to run than a stormwater system. A distribution-only water system is likely to have a lower,

more predictable cost base, but also depend on an external system for water supply and pay prices largely out of its control.

Utilities that are wholesalers to municipal government customers may exhibit operating stability not captured by size or service area wealth. Many of a utility's risks may be shifted to its municipal customers if their service contracts prevent these customers from switching providers or decreasing payments. If service contracts are so strongly worded and unconditional that municipal customers would have to pay the utility's debt service under any circumstances, then the utility's bonds may effectively represent a claim on the combined credit quality of the municipal governments.

For utilities that are exclusively wholesalers to municipal customers, we typically consider the credit quality of large customers ("participants") and the nature of the participants' pledge to the utility. For bonds secured by a utility's net revenue pledge, we incorporate the strength of the large municipal customers' credit quality as an important factor in the utility's revenue base. For utilities whose pledges are essentially a pass-through of the municipal customers' underlying pledges, we may rate their bonds using our public sector pool programs and financings methodology, recognizing that bondholders enjoy a direct claim on the underlying municipalities' ability and willingness to pay.⁶

Notching Factors Related to System Characteristics

Additional service area economic strength or diversity: We would use this adjustment, upward or downward, if the MFI statistic incompletely or inaccurately depicts that capacity of the service base to bear higher rates.

Significant customer concentration: A large exposure to a single user or industry, or a small number of users, poses substantial risks that might not be captured in MFI. We may notch down if a large share of a utility's revenues comes from one or a small number of customers, or from a single industry. We would be more likely to use this adjustment for volatile, unpredictable, and mobile industries than for longer-standing, more stable ones. We are less likely to consider a wholesale customer as a factor contributing to concentration, as it is purchasing on behalf of end-users.

Revenue per customer greatly over/under regional average: Revenue per customer conveys additional information about users' capacity for higher rates that might not be captured in MFI. We might notch upward or downward if revenue per customer implies higher or lower ability to increase rates than MFI suggests.

Exposure to weather volatility, extreme conditions or market fluctuations: Large amounts of rain that infiltrate pipes or storms that destroy equipment are examples of credit risks that could result in downward notching. Weather can also affect the prices that distribution systems pay third-party providers for electricity or natural gas.

Resource vulnerability: Water, gas, and electric distribution utilities sell a product whose availability can be limited or expensive in some cases. For instance, a water provider in a drought-stricken region may have to purchase expensive third-party water, resulting in declines in billable flow due to conservation efforts. We may notch down if the availability of water, an adequate gas supply, or a dependable source of electricity is vulnerable or in doubt.

Sizeable or insufficient capacity margin: Our useful remaining life calculation is designed to assess the quality of existing capital assets, but it does not measure the adequacy of a system's capacity relative

⁶ A link to an index of our sector and cross-sector methodologies can be found in the "Moody's Related Publications" section.

to demand. Areas that are growing need more water, gas, and electricity, and place greater demands on wastewater and trash disposal utilities. Systems that are close to capacity may face greater capital costs to expand in the future, suggesting larger debt burdens and posing additional risks that may result in downward notching. Alternately, systems with ample capacity may be notched up, given the lack of capital spending requirements implied by the excess capacity. Further, excess capacity can sometimes imply a revenue-generating opportunity, since utilities can often sell their product or service to other parties. We are less likely to view excess capacity as a positive if it is caused by a declining user base.

Unusual depreciation practices relative to industry norms: Utilities typically have some flexibility to determine the depreciation schedules of their assets. Utilizing unreasonably long useful lives or employing other practices that distort depreciation schedules would also distort our remaining useful life calculation. We may notch down if an unreasonable depreciation schedule is inflating a utility's remaining useful life. Likewise, we may notch up if an unusually rapid depreciation schedule understates remaining useful life.

Factor: Financial Strength (40%)

EXHIBIT 3

Financial Strength (40%)	Aaa	Aa	A	Baa	Ba	B and Below
Annual Debt Service Coverage (15%)	> 2.00x	2.00x ≥ n > 1.70x	1.70x ≥ n > 1.25x	1.25x ≥ n > 1.00x	1.00x ≥ n > 0.70x	≤ 0.70x

Why It Matters

The financial health of a utility determines its flexibility to respond to contingencies, resilience against potential short-term shocks, and cushion against a long-term unfavorable trend.

We measure or estimate utilities' financial health by looking at cash and other liquid reserves, the burden that debt places on operations, and the magnitude by which revenues are sufficient to meet expenditures.

Sub-factor: Annual Debt Service Coverage (15%)

Input: Most recent year's net revenues divided by most recent year's debt service, expressed as a multiple

Debt service coverage is a core statistic assessing the financial health of a utility revenue system. The magnitude by which net revenues are sufficient to cover debt service shows a utility's margin to tolerate business risks or declines in demand while still assuring repayment of debt. Higher coverage levels indicate greater flexibility to withstand volatile revenues, unexpected outflows, or customer resistance to higher rates.

Utilities usually enter into a rate covenant under which they pledge to achieve a given level of debt service coverage each year. The covenant helps ensure that the utility utilizes its assets to generate sufficient income to pay bondholders.

The analysis of a utility system's debt service coverage demands ample context. If debt service escalates in future years, then the utility's current net revenues may be sufficient to cover debt service this year, but not in the future. Systems with greater revenue stability can operate comfortably at lower coverage levels. Systems with greater capital needs are likely to incur more debt, which will lead to increased debt service and decreased coverage. The debt service coverage calculation is the basis for a comprehensive analysis of a utility's financial flexibility and trend over the long term.

Rate covenants define a calculation method. These calculation methods vary, for example in the inclusion or exclusion of connection fees. Our coverage calculation will frequently differ from the coverage utilities report for purposes of complying with their rate covenants. Frequently, our analysis will consider several types of coverage, including maximum annual debt service (MADS) coverage, annual debt service coverage, coverage with and without connection fees, and coverage as calculated for the rate covenant. For entry on the scorecard, we include connection fees (when pledged) in revenues, recognizing that these are pledged revenues that are usually generated annually and are an important source of funding for expansion. If connection fees are particularly volatile, or if they represent an inordinate share of revenues, we may adjust below the line.

Sub-factor: Days Cash on Hand (15%)

Input: Unrestricted cash and liquid investments times 365 divided by operating and maintenance expenses, expressed in days

Cash is the paramount resource utilities have to meet expenses, cope with emergencies, and navigate business interruptions. Utilities with a lot of cash and cash equivalents are able to survive temporary disruptions and cash flow shortfalls without missing important payments. A large cash balance can also partially compensate for the lack of a debt service reserve fund. A low cash balance indicates poor flexibility to manage contingencies.

We include in this measure any cash or cash-equivalent that is both unrestricted and liquid. The measure does not include cash held in a debt service reserve fund, unspent bond proceeds, or cash that is restricted for capital.

Sub-factor: Debt to Operating Revenues (10%)

Input: Net debt divided by most recent year's operating revenues, expressed as a multiple

A utility's debt profile determines its leverage and fixed costs. Systems that carry a lot of debt have less ability to reduce costs if demand shrinks, and are generally more challenged to achieve higher debt service coverage.

A greater debt burden may also prohibit a utility from funding necessary capital upgrades, if a covenant prevents the issuer from incurring the debt necessary to fund those upgrades.

"Net debt" is a utility's long-term debt minus its debt service reserve funds.

Notching Factors Related to Financial Strength

Debt service coverage (annual or MADS) below key thresholds: A debt service coverage ratio below 1 times is an important threshold, because coverage below 1 times indicates the utility is not fully covering debt service with income generated from operations. If a utility fails to achieve 1 times coverage, we may notch down to reflect the financial imbalance of the utility's operations. Another key

threshold that would likely prompt us to notch down is if coverage were to fall below the utility's coverage covenant, even if that covenant is higher than 1 times. Management's willingness and ability to operate the system for bondholders' benefit is a crucial credit consideration, and a breach of covenant calls that willingness and ability into question. A coverage level that impedes the issuance of additional bonds under the utility's additional bonds covenant could also prompt us to notch score down, if we think it would prevent the utility from funding necessary capital upgrades.

Constrained liquidity position due to oversized transfers: It is common for utilities to transfer cash to their general governments regularly, either to share overhead costs, make payments in lieu of taxes for occupied property, or to help fund shared infrastructure. It is also common for parent governments to tap utilities' cash to fund General Fund operations. We may notch down if these types of transfers are large and begin to strain its own liquidity. We are more likely to make this adjustment if the general government is operationally reliant on utility transfers and has the authority to increase them, particularly if the general government is struggling financially. Even if a utility has never transferred cash to its parent, such transfers remain a possibility,⁷ one of the reasons for the relationship between a revenue rating and the GO rating of its general government.

Outsized capital needs: A utility with significant capital needs will likely need to incur additional debt not communicated in the existing debt metric. We may notch downward for utilities under regulatory consent decree, or otherwise with great capital needs, that are likely to increase their debt levels.

Oversized adjusted net pension liability relative to debt, or significant actuarial required contribution underpayment: Employees of public utilities are usually members of a municipal pension plan. Most utilities either sponsor their own plan or participate in another entity's plan and are responsible for funding their share of the plan's pension liabilities. We may notch down if this liability is especially large, or if the utility has underfunded its contributions.⁸

Significant exposure to puttable debt and/or swaps, or other unusual debt structure: The risks of a debt portfolio can be magnified if it is significantly composed of puttable debt. Utilities generally set rates with the intention of covering operating expenses and debt service in the current year. A debt put, accelerated amortization under a term-out, or other unexpected calls on a utility's resources can impose immediate and substantial, unbudgeted cash outflows and upend that intention. We may notch down, potentially by several notches, if the composition of a debt portfolio, or cash-flow demands or unfavorable valuation of a swap, indicates a greater degree of risk than the scorecard debt metric.

⁷ Unless the utility's flow of funds is closed-loop. A closed-loop flow of funds is stronger than an open one for this reason.

⁸ For a description of how we calculate or estimate adjusted net pension liability, please see our cross-sector methodology that describes our adjustments to pension data reported by Governmental Accounting Standards Board (GASB) issuers.

Factor: Management (20%)

EXHIBIT 4

Management (20%)	Aaa	Aa	A	Baa	Ba	B and Below
Rate Management (10%)	Excellent rate-setting record; no material political, practical, or regulatory limits on rate increases	Strong rate-setting record; little political, practical, or regulatory limits on rate increases	Average rate-setting record; some political, practical, or regulatory limits on rate increases	Adequate rate-setting record; political, practical, or regulatory impediments place material limits on rate increases	Below average rate-setting record; political, practical, or regulatory impediments place substantial limits on rate increases	Record of insufficiently adjusting rates; political, practical, or regulatory obstacles prevent implementation of necessary rate increases
Regulatory Compliance and Capital planning (10%)	Fully compliant OR proactively addressing compliance issues; Maintains sophisticated and manageable Capital Improvement Plan that addresses more than a 10-year period	Actively addressing minor compliance issues; Maintains comprehensive and manageable 10-year Capital Improvement Plan	Moderate violations with adopted plan to address issues; Maintains manageable 5-year Capital Improvement Plan	Significant compliance violations with limited solutions adopted; Maintains single year Capital Improvement Plan	Not fully addressing compliance issues; Limited or weak capital planning	Not addressing compliance issues; No capital planning

Source: Moody's Investors Service

Why It Matters

While the legal provisions of the indenture or other bond documents may establish the minimum level of financial margin at which a utility must be run, the utility's management determines the actual level at which it is run.

Utility management refers to the dynamics of setting rates, planning for capital spending, budgeting for annual expenditures, and complying with environmental regulations. All of these factors interplay with one another to determine the credit strength of a utility system.

The scorecard captures two crucial aspects of management: rate-setting and capital planning. These two aspects encompass most of what is important in running a utility: keeping the system in good working order, and paying for it.

Sub-factor: Rate Management (10%)

User rates are the primary, and sometimes only, mechanism utilities employ to pay for their operations.

Ideally, rates increase marginally and steadily, rather than choppily. It is common for utilities to split their rates into a "base" charge (flat rate charged to all users) plus a "volumetric" charge (per unit costs based on flow/usage). Utilities funded to a greater extent by the volumetric charge face greater risks, since volume can be economically sensitive or decline because of a shift in consumption patterns.

Management's track record at setting rates appropriately and increasing them when necessary drives this score. We tend to give higher scores to utilities that set rate structures under which increases are automatic, and do not require annual approval for implementation.

Embedded into this factor is the length of time required to implement a rate increase. Many public utilities enjoy the authority to set their own rates and can enact a rate increase in short order by majority vote of the governing board. Some utilities must give the public a few weeks' or months' notice before increasing rates, or choose to do so by policy or practice. Some utilities require state approval to increase rates. Utilities that need state approval often have to file a rate case subject to public objection, and in some cases the state takes a long time to approve them or denies the full rate increase.

The longer it takes a utility to implement a rate increase, the less flexibility it has to quickly generate new revenues when faced with cash flow shortfalls.

Sub-factor: Regulatory Compliance and Capital Planning (10%)

The public utility sector is heavily regulated. Most public utilities are regulated by federal as well as state agencies.

The EPA enforces the Safe Drinking Water Act for water distribution utilities, the Clean Water Act for sanitary sewer and stormwater utilities, the Resource Conservation and Recovery Act for solid waste disposal systems, and the Clean Air Act for electric utilities. These statutes, and the methods employed to enforce them, are continually evolving, often intensifying over time. Additionally, many states have passed their own environmental regulations and are active enforcers.

This scorecard factor assesses utilities' compliance with relevant regulations and their plans for the capital expenditures required to comply in the future.

In addition to achieving environmental compliance, proper capital planning ensures the continued delivery of the product or service and the ongoing generation of revenues.

In our assessment, we look for indications of potential compliance gaps, such as environmental litigation, a delay in renewing a permit, or a consent decree with a state or federal enforcement body.

Notching Factors Related to Management

Unusually strong or weak capital planning: Continued violations of environmental laws and the associated litigation can impose extraordinary costs on utilities. We may notch down if these costs threaten to overwhelm a system's resources, in the form of a large consent decree, lawsuit, or other costs. Alternately, we may notch up if a utility's capital planning is particularly sophisticated or forward-looking. More sophisticated and forward-looking capital management is more important for systems facing resource vulnerability or extreme weather volatility.

Factor: Legal Provisions (10%)

EXHIBIT 5						
Legal Provisions (10%)	Aaa	Aa	A	Baa	Ba	B and Below
Rate Covenant (5%)	> 1.30x	1.30x ≥ n > 1.20x	1.20x ≥ n > 1.10x	1.10x ≥ n > 1.00x		≤ 1.00x

Source: Moody's Investors Service

Why It Matters

The legal provisions of a public utility revenue bond form the backbone of its security.

When a municipality assigns its General Obligation pledge to a bond, it has promised to use any revenues or resources at its disposal to pay debt service.

A utility revenue bond enjoys no such open-ended pledge, making the legal edifice of the bond critical to bondholder security. Most commonly, the pledge for municipal utility revenue bonds is a lien on the net revenues of the system. Occasionally, bondholders enjoy a lien on the gross revenues of a system. We ordinarily do not consider a gross revenue pledge as materially stronger than a net revenue pledge, because systems need to pay operating and maintenance costs in order to remain functional.

The linchpin of a bond's legal structure is its covenants: the contractual compulsions the municipal utility agrees to when issuing the bonds.

Utilities abide by many different types of covenants. We consider three to be the most important: the rate covenant, the additional bonds test, and the debt service reserve fund. Also crucial in the analysis of a revenue bond's legal structure is whether the flow of funds is open-loop (accessible by another government entity) or closed-loop.

Strong covenants bind the utility to utilize its assets to benefit bondholders by operating with a comfortable financial margin, not taking on too much debt, and maintaining adequate cash available to pay debt service. Weak or nonexistent covenants allow the utility to operate on a thin margin or even at a net loss, incur a lot of leverage, transfer its money to other government entities, or maintain inadequate cash, in ways that are detrimental to bondholders.

Covenants specify the minimum factors management must contractually abide by. Utilities frequently exceed the minimum. Many of our ratings represent the expectation of performance at levels that exceed the covenants.

Sub-factor: Rate Covenant (5%)

Input: Covenant governing net revenues (operating revenues minus operating expenditures net of depreciation) divided by annual debt service, expressed as a multiple

The rate covenant is a pledge to set rates such that net revenues will be sufficient to cover debt service at a prescribed level. For example, a covenant may bind a utility to ensure that net revenues cover debt

service by 1.2 times. If net revenues fall short of this covenant in one year, the utility must raise rates to achieve a compliant coverage level the following year.

The rate covenant takes many forms. Some utilities pledge for net revenues to cover current year annual debt service by a given level. Others pledge to cover average annual debt service throughout the life of the bonds at that level. A strong coverage requirement would be for net revenues to cover maximum annual debt service (MADS) by a certain level.

Some rate covenant formats are materially weaker than this. Some utilities allow a “rolling” calculation, which includes outstanding cash from prior years' surpluses as part of the resources available to cover debt service. Many rate covenants allow connection fees to be included in available operating revenues.

The rate covenant coverage thresholds are based on a covenant that is an annual debt service coverage calculation. Using the notching factors described below, we may adjust, upward or downward, for any departures from this format.

Sub-factor: Debt Service Reserve Requirement (5%)

Input: Debt service reserve requirement

Many issuers agree to hold a specified amount of cash or other resources in a debt service reserve fund (DSRF), which the trustee can tap to pay debt service in the event that net revenues are inadequate. The DSRF covenant ordinarily requires the utility to replenish any draws from the DSRF.

The DSRF protects bondholders by assuring the payment of debt service even if net revenues fall short in one year.

DSRF funds can be funded with cash, or with surety policies from an insurer. We generally consider cash to be superior to a surety, although this is unlikely to materially affect the assigned rating as long as the surety provider is rated investment grade.

One commonly used DSRF requirement is known as the “three-pronged test.” Under tax law, the Internal Revenue Service limits the earning of interest on proceeds of a tax-exempt bond unless the invested proceeds comply with the three-pronged test. Under that test, the DSRF must be the lesser of 10% of principal, MADS, or 1.25 times average annual debt service. A DSRF set at the three-pronged test is usually weaker than one funded at MADS.

Revenue bonds have been issued without a DSRF in the past. This has resulted in a number of utilities with some bonds secured by a DSRF and other parity bonds secured by the same lien but no DSRF. We have rarely distinguished ratings between these parity bonds. The DSRF is a last-resort security measure, and most utilities comply with their coverage covenants and never have to tap their DSRF. We are most likely to distinguish between DSRF-secured bonds and bonds with no DSRF if the system holds narrow liquidity. A system operating with abundant liquidity can use its operating cash to meet debt service shortfalls, effectively executing a similar function to the DSRF. The combination of narrow liquidity and no DSRF exposes bondholders to greater risks of interrupted debt service payments and is therefore more likely to be reflected in ratings.

For a utility whose debt is mostly, but not all, secured by a DSRF, we will still enter the DSRF requirement into the scorecard. For a utility whose debt is mostly not secured by a DSRF, we will adjust the DSRF entry downward.⁹

Notching Factors Related to Legal Provisions

Coverage covenant other than annual debt service: The thresholds for the rate covenant sub-factor is based on net revenue coverage of annual debt service. A “rolling” coverage covenant that includes outstanding cash, or some other modification that weakens the meaning of the covenant, may prompt us to notch down. Conversely, a MADS coverage covenant may prompt us to notch up.

Structural enhancements/complexities: The scorecard is designed to capture covenants as they are most commonly constituted but cannot account for the myriad structures and complexities that arise in bond transactions throughout the sector. Enhancements such as a lock-box structure for debt service may lead us to notch up. Other shortcomings, such as a weak additional bonds test or the inclusion of cash in a coverage covenant, may lead us to notch down. Any characteristic of the legal provisions of a bond transaction may lead us to conclude that the scorecard does not adequately capture its risk profile, resulting notching or on a rating that is different from the scorecard-indicated outcome.

Other Considerations

Ratings may reflect consideration of additional factors that are not in the scorecard, usually because the factor's credit importance varies widely among the issuers in the sector or because the factor may be important only under certain circumstances or for a subset of issuers. Such factors include financial controls and the quality of financial reporting; the quality and experience of management; assessments of governance as well as environmental and social considerations; and possible interference from other levels of government. Regulatory, litigation, liquidity and technology risk as well as changes in demographic and macroeconomic trends also affect ratings.

Following are some examples of additional considerations that may be reflected in our ratings and that may cause ratings to be different from scorecard-indicated outcomes.

Environmental, Social and Governance Considerations

Environmental, social and governance (ESG) considerations may affect the ratings of municipal utilities. For information about our approach to assessing ESG issues, please see our methodology that describes our general principles for assessing these risks.¹⁰

Municipal utilities may be directly exposed to extreme weather events due to climate change, such as flooding or droughts, and this may affect credit quality. Government facilities or investments in physical assets could be affected by physical risks and by other sources of environmental risk. Utility systems providing service to coastal communities or communities that are greatly susceptible to drought are highly exposed to environmental risks. Environmental hazards, such as hurricanes, can result in significant system damage requiring unexpected capital spending for repairs, while longer-term environmental trends, such as rising sea levels or prolonged drought conditions, can cause more prolonged pressure on system budgeting and spending priorities.

⁹ For example, if 1/3 of a utility's debt is secured by a DSRF funded at MADs and 2/3 is not secured by a DSRF at all, we may enter the DSRF requirement as a Baa.

¹⁰ A link to a list of our sector and cross-sector methodologies can be found in the “Moody's Related Publications” section.

Social considerations such as staff turnover, aging workforce, labor shortages or unrest or changes in the demographics of a municipal utility's service area, the income level of its customers and the affordability of housing may influence credit strength.

Some governance considerations are reflected in the Rate Management and Regulatory Compliance and Capital Planning qualitative sub-factors, including revenue-raising flexibility and capital planning. Additional considerations may include debt management, multi-year fiscal planning and the timeliness of information disclosure. Weak or opaque governance can negatively affect a municipal utility's performance, which can reduce customer willingness to support rate increases and can also constrain a municipal utility's access to capital markets. Conversely, very strong governance can lead to high customer satisfaction that reduces public resistance to rate increases and capital investment.

ESG considerations are not always negative, and they can be a source of credit strength in some instances. For example, access to clean water, options for the safe disposal of wastewater, and a strong labor market and generally affordable housing can drive strong revenue trends and foster utility system growth. External support, such as state or federal government funds for natural disaster relief, can help mitigate the credit impact of ESG exposures.

Regulatory Considerations

Issuers in the municipal utility sector are subject to varying degrees of regulatory oversight. Effects of these regulations may entail limitations on operations, higher costs, and higher potential for technology disruptions and demand substitution. Regional differences in regulation, implementation or enforcement may advantage or disadvantage particular issuers.

Our view of future regulations plays an important role in our expectations of future financial metrics as well as our confidence level in the ability of an issuer to generate sufficient cash flows relative to its debt burden over the medium and longer term. Regulatory considerations also play a role in our assessment of an issuer's cost recovery framework, competitiveness and willingness to recover costs with sound financial metrics. In some circumstances, regulatory considerations may also be a rating factor outside the scorecard, for instance when regulatory change is swift.

Likelihood of Receiving Extraordinary or Ongoing Support

Some municipal utilities receive extraordinary support from their component local government or a higher level of government, such as the state, typically to help the municipal utility avoid a default on debt obligations. The circumstances surrounding extraordinary support for a municipal utility are often specific to the situation. In some cases, a state or local government may provide meaningful financial or managerial support to a municipal utility undergoing stress, thereby bolstering a weak fundamental credit profile and materially lowering the risk of a payment default. Conversely, a temporary infusion of funds may bolster financial performance in the short term but leave a municipal utility exposed to rapid financial deterioration if the aid does not continue. We typically assess whether the support will be ongoing and sufficient to stabilize the municipal utility. We also consider the associated benefits or risks of dependence on such support. Alternatively, many municipal utilities receive annual funding or low-interest loans from the federal, state or local government. This type of funding is often earmarked, and we do not consider it to be extraordinary support.

Parent Government Credit Quality

While some public utility systems are independent of a particular municipality,¹¹ municipally-owned utility systems typically have enduring credit linkages with their parent government. Important linkages often include a legal structure that could draw the utility system into a general government municipal bankruptcy, combined or intermingled financial operations, shared debt or pension obligations, and mutual or affiliated governance or management. Additional linkages that typically pertain to municipally-owned utility systems, including common boundaries, a common economic environment, and common demographics and income levels, may also apply to some independent utilities. As a result of these credit linkages, the credit quality of a municipally-owned utility's parent government and that government's ability to meet its general obligations are important considerations in the rating assigned to a municipally-owned utility.

Shared credit characteristics between a municipality and an owned utility often affect the metrics used to assess scorecard factors, including the notching factors. For example, a utility system's practice of transferring excess funds to its parent government is likely to be reflected in the assessment of its financial strength, especially in the Days Cash on Hand sub-factor. However, there can be credit linkages between a utility and its parent government that are not fully reflected in the scorecard. Based on these linkages, a municipally-owned utility's revenue rating is typically not higher than two notches above the issuer or general obligation rating of the parent government. Scenarios where a utility's revenue rating may exceed the issuer or general obligation rating of the parent government would be in cases where there is clear information indicating a de-linkage of credit profiles, for example in a distress scenario where it is clear that debt service will continue to be paid on the revenue debt despite a default or impending default of the municipality's general obligation debt. An additional potential example could be a case where a utility has a meaningfully larger service territory than the parent government's boundaries and benefits from a more robust economic environment than the parent.

Financial Controls

We rely on the accuracy of audited financial statements to assign and monitor ratings in this sector. The quality of financial statements may be influenced by internal controls, including the proper tone at the top, centralized oversight of operations, and consistency in accounting policies and procedures. Auditors' reports on the effectiveness of internal controls, auditors' comments in financial reports and unusual restatements of financial statements or delays in regulatory filings may indicate weaknesses in internal controls.

Additional Metrics

The metrics included in the scorecard are those that are generally most important in assigning ratings to issuers in this sector; however, we may use additional metrics to inform our analysis in specific cases. These additional metrics may be important to our forward view of metrics that are in the scorecard or other rating factors.

Event Risk

We also recognize the possibility that an unexpected event could cause a sudden and sharp decline in a municipal utility's fundamental creditworthiness, which may cause actual ratings to be lower than the scorecard-indicated outcome. Event risks — which are varied and can include natural disasters, sudden changes in state law or regulation, material litigation, pandemics or cybercrime events — can have a material credit impact on even a stable municipal utility.

¹¹ For example, we typically consider a stand-alone utility authority or special purpose district utility system that is not directly owned by a state or local government to be independent of a municipality.

Treatment of Different Liens on a US Municipal Utility's Net Revenues

It is common for utilities to issue debt secured by different liens on their net revenues. Senior bonds are secured by a first lien on net revenues, and subordinate bonds or loans secured by a subordinate, or junior, lien. Sometimes, utilities will issue debt secured by a third lien or lower.

Our practice is to evaluate the likelihood of default and the expected recovery in the event of default for each lien independently.

This will most commonly result in a rating distinction of one notch for each lien of subordination. In other words, if a municipal utility's senior lien is rated Aa3, its subordinate lien will most likely be rated A1 and the third lien will most likely be rated A2.

The reason for the typical one-notch-per-lien distinction is that subordinate liens are marginally more likely to default than senior liens, and subordinate liens' expected recovery in the event of default would be lower. Senior liens are typically afforded stronger legal protections under utilities' indentures, senior-lien debt service is usually paid earlier in the flow of funds, and the first lien would likely enjoy a better claim in bankruptcy.

For most investment grade municipal utilities, the probability of default for any lien is small, and so the notching distinction is driven primarily by a greater expected loss severity in the unlikely event of a default. This is comparable to our approach for ratings distinctions for different debt classes of investment grade corporations, where ratings distinctions are driven by differences in expected loss severities.¹² In contrast to corporates, however, there often is not an explicit cross-default of senior municipal debt in the event of a subordinate payment default.

In some instances, we may conclude that an investment grade municipal utility's subordinate lien has a default probability and expected loss severity that is nearly as low or just as low as the senior lien (in which case we may not make a ratings distinction), or a default probability and expected loss severity that is materially higher than the senior lien (in which case we may make a ratings distinction of more than one notch).

Such a conclusion would be based on the municipal utility's management of its system with respect to its liens, and the characteristics of the legal framework governing the liens: rate covenants, additional debt provisions, and cross-default and acceleration provisions in a senior lien's variable rate debt resulting from a default on the subordinate lien, for example. If a utility has only a very small amount of senior lien debt, we may choose not to distinguish between liens.

The distinctions among a municipal utility's liens become starker when it faces a material likelihood of default or bankruptcy. For these situations, the different characteristics of the liens are likely to drive greater disparities in default probabilities and expected recoveries for disparate liens. Thus, we are more likely to employ ratings distinctions other than one notch for speculative grade municipal utilities' different liens as the Loss Given Default approach drives more of the analysis.

In nearly all instances, the ratings on the different liens of the same utility will remain closely related. The reason for this is that municipal utilities are actively managed enterprises that continually need to generate net revenues sufficient not only to cover debt service but also to fund capital needs. Even if senior lien coverage is strong, a utility that is unable to pay its junior lien debt service is not generating excess funds for capital investment and does not have capacity for capital borrowing. Thus, while subordinate liens face greater default probability and higher loss expectations based on their first-loss positions, an increased likelihood of default on a subordinate lien implies an increased likelihood of insolvency for the utility as a whole.

For this reason, we enter the debt-oriented inputs into the scorecard on a consolidated basis. For the debt to revenues factor, we enter total debt (senior and junior). For the debt service coverage factor, we enter total debt service coverage. It is the municipal utility's ability to cover all of its debt service with net revenues that determines its viability as a going concern. Even for a senior lien with a large coverage factor by net revenues, a narrow coverage of all debt service implies pressure to maintain healthy operations and generate funds sufficient for capital reinvestment.

¹² For more information, see our cross-sector methodology that describes the alignment of corporate instrument ratings based on differences in security and priority of claim. A link to a list of our sector and cross-sector methodologies can be found in the "Moody's Related Publications" section.

Limitations

In the preceding sections, we have discussed the scorecard factors and many of the other considerations that may be important in assigning ratings. In this section, we discuss limitations that pertain to the scorecard and to the overall rating methodology.

» Limitations of the Scorecard

There are various reasons why scorecard-indicated outcomes may not map closely to actual ratings.

The scorecard in this rating methodology is a relatively simple tool focused on indicators for relative credit strength. Credit loss and recovery considerations, which are typically more important as an issuer gets closer to default, may not be fully captured in the scorecard. The scorecard is also limited by its upper and lower bounds, causing scorecard-indicated outcomes to be less likely to align with ratings for issuers at the upper and lower ends of the rating scale.

The weights for each factor and sub-factor in the scorecard represent an approximation of their importance for rating decisions across the sector, but the actual importance of a particular factor may vary substantially based on an individual issuer's circumstances.

Factors that are outside the scorecard, including those discussed above in the "Other Considerations" section, may be important for ratings, and their relative importance may also vary from issuer to issuer or from instrument to instrument. In addition, certain broad methodological considerations described in one or more cross-sector rating methodologies may be relevant to ratings in this sector.¹³ Examples of such considerations include the following: how sovereign credit quality affects non-sovereign issuers, the assessment of credit support from other entities, and the assignment of short-term ratings.

We may use the scorecard over various historical or forward-looking time periods. Furthermore, in our ratings we often incorporate directional views of risks and mitigants in a qualitative way.

» General Limitations of the Methodology

This methodology document does not include an exhaustive description of all factors that we may consider in assigning ratings in this sector. Municipal utilities may face new risks or new combinations of risks, and they may develop new strategies to mitigate risk. We seek to incorporate all material credit considerations in ratings and to take the most forward-looking perspective that visibility into these risks and mitigants permits.

Ratings reflect our expectations for an issuer's future performance; however, as the forward horizon lengthens, uncertainty increases and the utility of precise estimates, as scorecard inputs or in other considerations, typically diminishes. Our forward-looking opinions are based on assumptions that may prove, in hindsight, to have been incorrect. Reasons for this could include unanticipated changes in any of the following: the macroeconomic environment, general financial market conditions, disruptive technology, or regulatory and legal actions. In any case, predicting the future is subject to substantial uncertainty.

¹³ A link to a list of our sector and cross-sector methodologies can be found in the "Moody's Related Publications" section.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any credit rating, agreed to pay to Moody's Investors Service, Inc. for credit ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$5,000,000. MCO and Moody's Investors Service also maintain policies and procedures to address the independence of Moody's Investors Service credit ratings and credit rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody's Investors Service and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody's.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJKK or MSFJ (as applicable) for credit ratings opinions and services rendered by it fees ranging from JPY100,000 to approximately JPY550,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Criteria | Governments | U.S. Public Finance: Key Water And Sewer Utility Credit Ratio Ranges

Municipally-owned utilities continue to demonstrate rating stability and solid-investment-grade financial metrics despite concern about current economic conditions and the impact on local governments (see the article, "U.S. Public Finance Report Card: Water Supply Pressures Could Test The Stability Of Providers," dated Feb. 4, 2008, on RatingsDirect).

The representative ranges of ratios for water and/or sewer utility revenue bond issuers below provides an indication, through the use of descriptors, of what constitutes a high to low ratio from an analytical credit perspective. The selected ratios represent key factors Standard & Poor's Ratings Services uses in the credit rating process.

Municipalities may also own and/or operate other enterprises such as electric utilities, solid waste or other systems. While many of the metric addressed below also are part of the analysis for these other enterprises, Standard & Poor's will address key ratios specifically for those enterprises at a later date.

The ratios complement Standard & Poor's periodic updates of historical median ratios for rated utilities. (These medians represent measures of economic, financial, and system indebtedness characteristics.) The statistics will drift up and down during economic cycles because Standard & Poor's analysis is forward looking. In recent years, the medians have tended to outperform analytical guidelines.

However, it is not the case that an issuer must attain certain financial metrics in order to guarantee a certain rating or rating level. Financial condition -- historical, current, and likely future -- is only one of the criteria points for a water and sewer utility revenue bond rating.

Reading Behind The Numbers

Means, particularly for lesser-weighted ratios, may give a false impression in certain cases that deviations from the means may imply the need for a rating change, when in fact we may believe there is analytical comfort in a broad band of numbers for a particular ratio.

Examples of this phenomenon are evident when comparing key ratio ranges to the means for similar ratios. While a credit with a liquidity of six months' cash on hand would be technically "below average," relative to the rated universe of issuers, regardless of system size, we would nevertheless likely view it as having strong cash reserves.

Similarly, an issuer with total debt service coverage of all obligations of 1.4x, meaning pledged revenues are 40% greater than the revenue requirements, would likely be characterized as "good," all other things being equal.

Key Rating Factors

The relative weight of each factor is discussed in detail in Standard & Poor's Criteria section on RatingsDirect (the most recent article was published June 25, 2007). When evaluating water and sewer systems, Standard & Poor's examines six main factors:

- Economic considerations;
- Financial data/capital improvement plan;
- Rate criteria;
- Operational characteristics;
- Management; and
- Legal provisions.

Variation in the relative strengths or weaknesses of any of these factors can influence our opinion of creditworthiness and, accordingly, our ratings. Additionally, there is no dependent relationship between a general obligation (GO) rating and the revenue rating of the same entity. Due to the significance of the service area and economic base in our analysis and the frequent overlap of senior staff at the government and utility levels, the ratings of GO bonds and revenue bonds tend to be close, but there is also significant room for divergence, as seen in the case of Jefferson County, Ala.

A Note of Caution

Ratios do not tell the whole story -- they are only a portion of what Standard & Poor's uses in its analysis. Economic, administrative, structural, and other qualitative factors may outweigh any of these ratios when a rating is assigned. Numbers alone cannot determine an entity's willingness to meet its financial obligations, nor can they reveal a history of reactive or nonexistent rate adjustments or the operating restraints presented by the state/local framework.

The key ratios below do not represent a complete set of the ratios Standard & Poor's uses in its analysis. We also incorporate information from many internal and external databases. Depending on various credit conditions, certain ratios can take on more significance than others. In addition, a municipal entity's trends in any of these ratios may be more important to us than the historical ratios. A rating, after all, is prospective in nature.

Key Ratios

Income Levels – Household/Per Capita Effective Buying Income As A Percentage Of U.S. Level

As is the case with GO debt ratings, wealth and income levels are an important credit factor in our analysis, as they provide insight regarding the economic resources of a utility's service area. It does not necessarily imply the rate base's ability to pay a utility bill or a utility's willingness to make rate adjustments, but we believe it is still one of many important factors. One way to evaluate wealth and income levels is to look at the household/per capita effective buying income of the locality relative to the average U.S. level.

Below 65% Low

65% - 90% Adequate

90% - 110% Good

110% - 130% Strong

Above 130% Very Strong

Debt Service Coverage

Given that there usually are legal covenants that require an issuer to provide some transparent level of security to the bondholders, Standard & Poor's views the minimum level of operating revenues (excluding impact fees and other nonrecurring revenues) available for debt service as generally sufficient, i.e. 1.0x, for all liens. A ratio of less than 1.0x may indicate a mismatch between revenues and revenue requirements, and, possibly, a technical default by the bondholder that may compel further action such as a review of the appropriateness of the current rate schedule and structure.

Wholesale or regional systems, or joint action agencies, which typically provide water or sewer services on a cost-of-service-based rate schedule, will typically have lower coverage, although the criteria for wholesale utilities -- which typically includes an analysis of the system's participants' general creditworthiness -- allows less emphasis to be paid to the wholesaler's financial metrics.

<1.0x Insufficient

1.0x to 1.25x Adequate

1.26x to 1.50x Good

>1.50x Strong

Liquidity

A typical water utility earns most of its revenues -- often more than half -- from May through August. While sanitary sewer systems typically have more constant revenue flows, it is increasingly common for sewer billings to be either tied to water demand, or even be a flat, fixed rate. Because there is usually some fluctuation in cash flows due to seasonal demands, the amount of precipitation, or other economic or customer base trends, we look to whether a utility has some reasonable level of unrestricted cash or equivalents for working capital. In our analysis, Standard & Poor's also gives credit to cash and investments that may be designated, but ultimately available for any lawful purpose such as a renewal and replacement fund or a rate stabilization fund. Generally speaking, a system that simply distributes a third party's treated water to its retail customers, or collects and conveys its sewer flows to a regional sewer treatment facility operated by another entity, has less operating and financial risk, in our view, and may therefore require less working capital.

30 to 60 days Adequate

60 to 120 days Good

>120 days Strong

Total Debt To Net Property, Plant And Equipment

Simply referred to as "debt to plant," this ratio is an approximation that can be used as a proxy for total system indebtedness. A ratio of 0% means the system has no debt outstanding and 100% means there is as much debt outstanding as net depreciable value of the system's assets, although it is certainly possible for the number to be greater than 100%. Total debt per retail customer account is another useful measure in our view, but when the issuer is a regional or wholesale system, the number of ultimate water meters is not always discernable. System indebtedness is useful for a number of reasons: it can give insight into, for example, whether the system is in the middle of a large growth- or rehabilitation-driven capital program (in which case the debt to plant number is high). It can also be closely tied to the system's rates and capacity for additional debt.

<40% Low

40% to 60% Moderate

60% to 80% Moderately high

>80% High

Top 10 Customers As A Percentage Of Total Operating Revenues

A system's high dependence on one or more of its principal customers for revenue need not constrain its rating. However, the fact a system's business could be affected by the changing fortunes of one of its principal customers should not be overlooked either. Therefore, Standard & Poor's looks at the relative diversity or concentration of operating revenues derived from sales to customers to gain insight into this potential vulnerability.

Examples might include a water-intensive food processor shuttering operations, the expiration of the contract of a large wholesale customer, or a major local employer relocating a facility to somewhere outside the service area. Conversely, if revenue distribution among the principal customers is relatively evenly dispersed, concentration concerns are more likely to be mitigated even if in totality the top customers comprise a large portion of total revenues.

<15% Very diverse

15% to 25% Diverse

26% to 40% Moderately concentrated

>40% Concentrated

Fixed-Charge Coverage

Similar to debt service, fixed-charge coverage is Standard & Poor's internally adjusted coverage calculation that factors into account that some utility systems are distribution-only and/or collection-only, with capital-intensive treatment plants built, owned and operated by another entity. Obligations to those third parties are typically off-balance sheet and often treated as operating expenses, not debt. These may also include raw-water purchases or

other contractual obligations or participation in a joint action agency.

We believe fixed-charge coverage allows a more realistic comparison between "pipes-only" systems and those that also include treatment plants. Standard & Poor's treats any recurring long-term obligation as fixed, especially capacity payments or other minimum demand costs that the system must pay regardless of whether the service is delivered. The adjusted debt service coverage calculation, therefore, removes these fixed charges from operating expenses and instead treats them as if they were debt, allowing for a more meaningful quantitative comparison between these systems and those with actual on-balance sheet debt.

<1.0x Insufficient

1.0x to 1.20x Adequate

1.21x to 1.40x Good

>1.40x Strong

**Response of Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Bureau of Investigation and Enforcement (“I&E”)
RR-3 to RR-17
in Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RR-14-D Reference PWSA Statement No. 2, p. 25, lines 11-12:

- A. Confirm whether the WIFIA Loan #1 of \$52.5 million closed as planned.
- B. If the answer to Part A above is yes, provide the specific terms of the loan.

Response:

- A. Yes
- B. The terms of the loan are below:
 - Loan amount: \$52,475,722
 - Loan Term: 30 years
 - Fixed interest rate of 3.98%
 - Draw down loan as expenses are incurred (similar to a PENNVEST loan)
 - Issued lien: Subordinate
 - PWSA has the option to make interest only payments until 2030 or take advantage of the capitalized interest period until 2030.
 - Both principal and interest payment begin in 2031 with the final payment made in 2060.

Response provided by: Edward Barca, Director of Finance

Date Response provided June 14, 2023

**Response of Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Bureau of Investigation and Enforcement (“I&E”)
RR-3 to RR-17
in Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RR-3-D Reference PWSA Statement No. 2, p. 27, lines 6-18. Identify the specific capital assets PWSA intends to acquire with PAYGO funds, not including assets identified in the Long-Term Infrastructure Improvement Plan to be funded with the Distribution System Improvement Charge.

Response: All capital assets included in PWSA’s Capital Improvement Plan that are planned to be funded by Debt (Revenue Bonds) are eligible to be funded with PAYGO funds. If additional PAYGO funding is granted in this rate case, PWSA would use the funding to replace capital assets that have a shorter useful life (5-15 years) with a secondary focus on assets with a longer useful life (16+ years). Examples of capital assets that PWSA intends to replace with PAYGO funds includes, but is not limited to, the following:

- Rail siding
- Bioswales and other stormwater infrastructure
- Gutter and roofing materials
- Meters
- Boilers
- Pumps
- HVAC equipment
- Crane equipment
- Tank improvements
- Water intakes
- Large diameter water mains
- Large diameter sewer mains

Response provided by: Edward Barca, Director of Finance

Date Response provided: June 14, 2023

INFRASTRUCTURE IMPROVEMENT CHARGE.....	11
PAYGO.....	13
DAYS CASH ON HAND	16
DEBT SERVICE COVERAGE RATIO	20
SUMMARY OF I&E'S OVERALL POSITION.....	26

1 **INTRODUCTION OF WITNESS**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Anthony Spadaccio. My business address is Pennsylvania Public
4 Utility Commission, Commonwealth Keystone Building, 400 North Street,
5 Harrisburg, PA 17120.

6

7 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

8 A. I am employed by the Pennsylvania Public Utility Commission (Commission) in
9 the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial
10 Analyst.

11

12 **Q. ARE YOU THE SAME ANTHONY SPADACCIO WHO IS RESPONSIBLE**
13 **FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT**
14 **NO. 1 AND THE SCHEDULES IN I&E EXHIBIT NO. 1?**

15 A. Yes.

16

17 **Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?**

18 A. The purpose of my surrebuttal testimony is to address the rebuttal testimony of
19 Pittsburgh Water & Sewer Authority (PWSA or Authority) witnesses William J.
20 Pickering (PWSA Statement No. 1-R), Edward Barca (PWSA Statement No. 2-R),
21 Harold J. Smith (PWSA Statement No. 7-R), and Christine M. Fay (PWSA
22 Statement No. 9-R). Additionally, I will address the rebuttal testimony of Office

1 of Consumer Advocate (OCA) witness Karl Richard Pavlovic (OCA Statement
2 No. 2R).

3 Finally, I will present I&E's updated recommended revenue requirement
4 for PWSA.

5

6 **Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?**

7 A. Yes. I&E Exhibit No. 1-SR contains schedules that support my surrebuttal
8 testimony.

9

10 **Q. SUMMARIZE THE AUTHORITY'S REBUTTAL TESTIMONY AS IT**
11 **RELATES TO YOUR RECOMMENDATIONS IN DIRECT TESTIMONY.**

12 A. Collectively, the Authority witnesses criticize I&E's overall recommended
13 revenue requirement, my recommended debt service coverage ratios (DSCR),
14 proposed days cash on hand (DCOH), and the witnesses take issue with my
15 discussion regarding credit ratings. Further, they condemn my recommended
16 disallowance of Pay As You Go (PAYGO) financing, the proposed Infrastructure
17 Improvement Charge (IIC), and the proposed Multi-Year Rate Plan (MYRP).

18

19 **Q. SUMMARIZE OCA WITNESS PAVLOVIC'S REBUTTAL TESTIMONY**
20 **AS IT RELATES TO YOUR DIRECT TESTIMONY.**

21 A. Dr. Pavlovic opines that I have not justified my acceptance of the Authority's
22 proposal to increase the Distribution System Improvement Charge (DSIC) cap

1 from 5% of distribution revenues to 7.5% of distribution revenues.

2
3 **UPDATED I&E POSITION**

4 **Q. HAS THE I&E OVERALL RECOMMENDED REVENUE**
5 **REQUIREMENT CHANGED FROM DIRECT TESTIMONY?**

6 A. Yes. I&E's updated total recommended revenue requirement for PWSA is
7 \$227,685,945.¹ This recommended revenue requirement represents an increase of
8 \$25,026,204 (\$227,685,945 - \$202,659,741) to the FPPTY revenues at present
9 rates of \$202,659,741, which produces a revenue surplus of \$44,661. This total
10 recommended allowance incorporates the analysis in this testimony as well as the
11 analysis and adjustments made in the testimonies of I&E witnesses Vanessa Okum
12 (I&E Statement Nos. 2 and I&E Statement No. 2-SR), and Ethan Cline (I&E
13 Statement No. 3 and I&E Statement No. 3-SR). A calculation of the updated I&E
14 recommended revenue requirement is included in I&E Exhibit No. 1-SR, Schedule
15 1.

16
17 **Q. PLEASE EXPLAIN THE BASIS FOR I&E'S UPDATED REVENUE**
18 **REQUIREMENT RECOMMENDATION FOR PWSA.**

19 A. Following a review of the Authority's direct testimony and workpapers, a
20 conference call with the Authority, and a follow up interrogatory, I&E continued

¹ I&E Exhibit No. 1-SR, Schedule 1.

1 to find the rate case tables² and the Cost of Service Study³ spreadsheets provided
2 by PWSA to be unworkable, and therefore impossible to make the desired
3 adjustments to financing associated with the capital improvement plan. As a result
4 of the inability to make adjustments to these spreadsheets, I&E's recommendation
5 in direct testimony was based on a dollar-for-dollar reduction to the financing of
6 I&E witness Cline's (I&E Statement No. 3) recommended reduction of
7 \$32,625,303 to the Authority's capital improvement plan budget,⁴ as well as the
8 adjustments to O&M expenses presented by I&E witness Okum (I&E Statement
9 No. 2).

10 After working through the difficulties and becoming aware of relevant
11 information, I&E believes its updated adjustment and position properly and more
12 accurately reflect the intent to reduce the necessary financing associated with the
13 recommended reduction to the capital spending budget recommendation. I&E's
14 new adjustment is based on the response to OCA-XVIII-2, which correlates the
15 FPPTY budgeted capital requirements to the required funding sources and debt
16 service.⁵

17 In summary, I&E's updated recommended revenue increase is
18 \$31,925,049⁶ higher than it was in direct testimony. As a result of this updated

² PWSA Exhibit WJP-1.

³ PWSA Cost of Service Study and Rate Design Model as shared on 5.9.23.

⁴ I&E Statement No. 3, p. 20, lines 6-9 and I&E Exhibit No. 3, Schedule 3.

⁵ I&E Exhibit No. 1-SR, Schedule 2.

⁶ Difference between the recommend revenue rollback of -\$6,898,845 in direct testimony and \$25,026,204 recommended revenue increase in I&E's updated surrebuttal position.

1 position, many of PWSA's criticisms of I&E's position in direct testimony are
2 now obsolete.

3
4 **Q. PLEASE EXPLAIN THE UPDATED ADJUSTMENT REGARDING THE**
5 **REDUCTION TO FINANCING ASSOCIATED WITH MR. CLINE'S**
6 **REDUCTION TO THE AUTHORITY'S CAPITAL SPENDING PLAN**
7 **BUDGET.**

8 A. Instead of a dollar-for-dollar reduction to the financing of I&E witness Cline's
9 (I&E Statement No. 3) recommended reduction of \$32,625,303 to the Authority's
10 capital improvement plan budget, I have determined the percentage of the funding
11 source amount to the total capital requirement amount for the FPFTY and applied
12 that result to Mr. Cline's adjustment. I then adjusted each source of capital
13 according to its weighted percent of the total, which results in a total combined
14 reduction to the financing of capital projects of \$2,244,621,⁷ as opposed to the
15 original reduction of \$32,625,303.

⁷ I&E Exhibit No. 1-SR, Schedule 3.

1 **MYRP**

2 **Q. SUMMARIZE THE AUTHORITY’S REBUTTAL TESTIMONY**
3 **REGARDING YOUR RECOMMENDATION TO REJECT THE**
4 **PROPOSED MYRP.**

5 A. Mr. Pickering argues that the MYRP offers the Authority financial security to
6 move forward with its capital improvement projects, allows for better access to the
7 capital markets and would allow PWSA to avoid filing additional rate cases and
8 the efforts and costs associated with the filings.⁸ Additionally, he claims my
9 position that PWSA needs more, not less, regulatory oversight does not fit within
10 any of the criteria set forth by the Commission in the Policy Statement to
11 implement Section 1330 of the Public Utility Code. However, he insists that the
12 Authority has faced unprecedented scrutiny via base rate cases, its Compliance
13 Plan and a Management Audit.⁹ Finally, Mr. Pickering notes that prior to coming
14 under the Commission’s jurisdiction, the Authority regularly approved three-year
15 rates that PWSA customers have become accustomed to.¹⁰

16 Mr. Barca acknowledges my reasoning that PWSA has only recently come
17 under the Commission’s jurisdiction, however, he argues there are no minimum
18 regulatory requirements to implement an MYRP in the Commission’s regulations
19 or Orders,¹¹ implying it should not be of concern. Mr. Barca’s main point seems

⁸ PWSA Statement No. 1-R, p. 7, ln. 4 through p. 8, ln. 16.

⁹ PWSA Statement No. 1-R, p. 10, ln. 17 through p. 11, ln. 5.

¹⁰ PWSA Statement No. 1-R, p. 11, lines 10-13.

¹¹ PWSA Statement No. 2-R, p. 29, lines 17-20.

1 to be that myself as well as the other parties in this proceeding appear to oppose
2 the use of projected data to set rates via an MYRP. He argues that this objection is
3 contrary to the use of a FPPTY.¹²

4 Mr. Smith argues that if the Commission were to mandate review
5 mechanisms, similar to those used by the Rhode Island Public Utilities
6 Commission (RIPUC) in MYRP filings, the revenue requirement claims in each of
7 the forecasted years would face proper scrutiny.¹³

8
9 **Q. PLEASE COMMENT ON THE AUTHORITY'S WITNESSES'**
10 **COLLECTIVE REBUTTAL TESTIMONY REGARDING I&E'S**
11 **RECOMMENDATION TO REJECT THE PROPOSED MYRP.**

12 A. First, I agree with Mr. Pickering that implementing an MYRP would reduce the
13 efforts and costs associated with filing annual base rate filings, and that the
14 Authority has faced much scrutiny in its brief tenure under the Commission's
15 jurisdiction. However, I continue to believe, as explained in my direct
16 testimony,¹⁴ that PWSA would benefit from continued Commission oversight via
17 regular base rate proceedings especially considering its past mismanagement and
18 ambitious capital improvement plan. In response to Mr. Pickering's claim that
19 customers have become accustomed to the Authority's three-year rate plans prior
20 to coming under the Commission's jurisdiction, I believe it was made clear during

¹² PWSA Statement No. 2-R, p. 30, lines 8-17.

¹³ PWSA Statement No. 7-R, p. 14, lines 1-13.

¹⁴ I&E Statement No. 1, p. 8, ln. 9 through p. 9, ln. 8.

1 the public input hearings that PWSA customers were in fact concerned with the
2 number and amount of future rate increases proposed by PWSA. It is my
3 interpretation that while the customers largely agreed that the system was in need
4 of significant upgrades, they universally rejected the proposed significant and
5 burdensome rate increases designed to address decades of mismanagement in a
6 short timeframe.

7 Next, while I partially agree with Mr. Barca that there are no regulatory
8 minimum requirements in order to propose an MYRP plan, any proposed rate
9 increase must still be just and reasonable. Further, I don't believe an MYRP is
10 currently in the best interest of the Authority or its customers for the reasons
11 discussed above and in my direct testimony. Regarding Mr. Barca's point about
12 using projected data to set rates, there is a significant difference between
13 forecasting for the FPFTY alone versus forecasting for the FPFTY as well as two
14 years beyond, since the further into the future projections are made, the less likely
15 they are to be accurate and the more likely they are to be more speculation than
16 projections. As evidenced by I&E witnesses Okum and Cline in both their direct
17 and surrebuttal testimonies, the Authority has had trouble accurately forecasting
18 O&M and capital expenditures year after year. Therefore, forecasting even further
19 into the future is not reliable.

20 Finally, regarding Mr. Smith's argument that the Commission should
21 mandate review mechanisms similar to those used by the RIPUC in rate filings, it
22 is my understanding that PWSA has not included similar review mechanisms in its

1 MYRP proposal. Instead, Mr. Smith suggests that the parties involved in this
2 proceeding should work together to develop a compliance filing after the
3 completion of this proceeding.¹⁵
4

5 **DSIC**

6 **Q. SUMMARIZE OCA’S REBUTTAL TESTIMONY REGARDING I&E’S**
7 **ACCEPTANCE OF PWSA’S REQUEST TO RAISE THE DSIC CAP**
8 **FROM 5% TO 7.5% OF DISTRIBUTION REVENUES.**

9 A. Dr. Pavlovic opines that I have not properly scrutinized PWSA’s arguments for an
10 increase in the DSIC cap. He claims that I have not explained how an increase
11 would help to ensure and maintain adequate, efficient, safe, reliable, and
12 reasonable service to customers. Additionally, he argues that DSIC PAYGO
13 recovery is not an option under 66 Pa. C.S. § 1357(c). Finally, Dr. Pavlovic
14 expresses concern over “intergenerational equity,” explaining that an increase in
15 the DSIC cap would result in an increase of the over recovery of capital costs from
16 current customers and under recovering from future customers.¹⁶
17

18 **Q. PLEASE COMMENT ON DR. PAVLOVIC’S CRITICISMS OF YOUR**
19 **ACCEPTANCE OF THE AUTHORITY’S PROPOSED DSIC INCREASE.**

20 A. First, I may be unclear on the point Dr. Pavlovic is trying to make, but considering

¹⁵ PWSA Statement No. 7-R, p. 13, lines 7-24.

¹⁶ OCA Statement No. 2R, p. 4, ln. 1 through p. 7 ln. 15.

1 PWSA already has a Commission-approved DSIC, I believe his argument that
2 DSIC PAYGO recovery is not an option under 66 Pa. C.S. § 1357(c) is invalid.
3 Second, I believe that Dr. Pavlovic is minimizing the point that DSIC spending
4 must be approved via the Long-Term Infrastructure Improvement Plan (LTIIP).
5 Contrary to what he argues,¹⁷ I believe an increase in the DSIC funding is justified
6 by the very fact that Pa. 52 Code § 121.1 states,

7 The LTIIP must show the acceleration of the replacement of
8 aging infrastructure by the utility and be sufficient to ensure
9 and maintain adequate, efficient, safe, reliable and reasonable
10 service to customers.

11 PWSA has submitted DSIC reconciliations for the twelve months ended
12 December 31, 2022 for both water and wastewater¹⁸ that identify the specific
13 capital project expenditures. I continue to believe that this additional level of
14 accountability is preferable over the alternative of non-DSIC PAYGO funding.

15 Additionally, it seems that Dr. Pavlovic prefers funding capital projects
16 through either long-term debt or internally generated funds.¹⁹ However, what he
17 fails to realize is that DSIC PAYGO and unrestricted PAYGO funds are both
18 collected through base rates and are considered internally generated funds. The
19 difference between the two is accountability as previously discussed.

20 Finally, while I appreciate Dr. Pavlovic's concern regarding
21 "intergenerational equity," I believe it is short-sighted not to consider DSIC

¹⁷ OCA Statement No. 2R, p. 7, lines 12-15.

¹⁸ I&E Exhibit No. 1-R, Schedule 4.

¹⁹ OCA Statement No. 2R, p. 7, lines 5-10.

1 funding and rely entirely on long-term debt to fund capital projects. The DSIC
2 increase would have a positive impact on the Authority's overall debt ratio, which
3 is an important financial metric to show gradual improvement to maintain and
4 improve PWSA's credit rating.

5
6 **INFRASTRUCTURE IMPROVEMENT CHARGE**

7 **Q. SUMMARIZE PWSA'S REBUTTAL TESTIMONY REGARDING I&E'S**
8 **RECOMMENDATION TO REJECT THE IMPLEMENTATION OF THE**
9 **IIC AS PROPOSED BY PWSA IN THIS PROCEEDING.**

10 A. Mr. Barca testifies that I opposed PWSA's implementation of the surcharge
11 simply because PWSA did not specifically state in its proposed tariff language that
12 the Authority would not use the IIC until the required DEP inspection and final
13 PENNVEST amortization schedule were complete, and because PWSA was not
14 proposing to show the IIC as separate line items on customer bills. Mr. Barca
15 explains that PWSA did not mention the requirements above because they are a
16 prerequisite before even receiving funds. He adds that PWSA is willing to
17 explicitly state these terms to the Tariff as pre-conditions to including a loan in the
18 IIC. Finally, he states, although PWSA is concerned with complicating the
19 customer bills, if it is the Commission's will, PWSA will agree to present a
20 separate IIC line item.²⁰

²⁰ PWSA Statement No. 2-R, p. 35, ln. 18 through p. 36, ln. 20.

1 **Q. PLEASE RESPOND TO MR. BARCA’S REBUTTAL TESTIMONY**
2 **REGARDING YOUR RECOMMENDATION TO REJECT THE**
3 **IMPLEMENTATION OF THE IIC AS PROPOSED BY PWSA IN THIS**
4 **PROCEEDING.**

5 A. Under advice from counsel, it is my current understanding that this surcharge
6 cannot be formally requested outside of the 60 to 90-day window prior to the first
7 anticipated principal and interest payment. PWSA witness Mechling claims that
8 this charge will not be in effect until 2025,²¹ which is well outside of that window.
9 Additionally, it is my understanding that this proceeding is not the proper venue to
10 request relief via the IIC surcharge, and the proper avenue would be a petition to
11 the Commission within the 60 to 90-day window as mentioned above.

12 Furthermore, regarding this specific issue, 52 Pa. Code § 69.363 makes no
13 mention of WIFIA obligations; therefore, it cannot be assumed they should receive
14 the same treatment as PENNVEST loans. Specifically, 52 Pa. Code § 69.363(a)
15 states,

16 Water and wastewater companies with outstanding
17 PENNVEST obligations that have not been reflected in rates
18 or future PENNVEST obligations, may establish under 66 Pa.
19 C.S. § 1307(a) (relating to sliding scale of rates; adjustments)
20 an automatic adjustment by means of a sliding scale of rates or
21 other method limited *solely* (emphasis added) to recovery of
22 the company’s PENNVEST principal and interest obligations.

23 Finally, if and/or when the IIC is implemented, I&E believes that, not only

²¹ PWSA Statement No. 6, p. 56, lines 6-7.

1 is it a requirement, but a separate line item on customer bills provides a desired
2 level of transparency. I&E acknowledges PWSA’s willingness to oblige this
3 request.²²
4

5 **PAYGO**

6 **Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY**
7 **REGARDING PWSA’S PROPOSED PAYGO FUNDING CLAIM.**

8 A. In direct testimony, I recommended rejecting PWSA’s entire PAYGO claim in this
9 proceeding.²³
10

11 **Q. WHAT WAS PWSA’S RESPONSE TO YOUR RECOMMENDED**
12 **REJECTION OF THE PROPOSED PAYGO FUNDING IN ITS**
13 **ENTIRETY?**

14 A. Mr. Barca opines that funding capital projects through PAYGO has a number of
15 advantages including the reduction of reliance on long-term debt and overall debt
16 ratio and that it is cheaper than other forms of financing. Additionally, he argues
17 that since PWSA will be issuing bonds every year for the foreseeable future,
18 any “intergenerational inequity” is nullified by the fact that current ratepayers will
19 be forced to pay for system improvements on schedules that will likely extend
20 many years beyond the customers’ use of the assets.²⁴

²² PWSA Statement No. 2-SR, p. 36, lines 15-20.

²³ I&E Statement No. 1, p. 21, lines 9-11.

²⁴ PWSA Statement No. 2-R, p. 23, ln. 22 through p. 24, ln. 4.

1 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA’S REBUTTAL**
2 **TESTIMONY REGARDING YOUR PAYGO RECOMMENDATION?**

3 A. First, as explained in my direct testimony, I&E is recommending the rejection of
4 PWSA’s MYRP proposal and there is not a PAYGO claim in the FPFTY,
5 therefore, there is no dollar amount to reject.²⁵

6 Regarding “intergenerational equity,” although I&E is supporting the
7 proposed increase to the DSIC cap (DSIC PAYGO funding), I think Mr. Barca is
8 missing the larger point. The fact that the assets will likely outlive the customers’
9 usage of them is precisely why current customers should not foot the entire bill for
10 those assets. Capital improvement financed by long-term debt are both used by
11 and paid for by several generations over the life of the loan and life of the asset.
12 In other words, when projects are funded with long-term debt, there is some
13 alignment between the plant life and the repayment period so that customers added
14 and removed over the life of that project all share in the cost of the plant that
15 serves them. Therefore, I think it is important to work toward developing the
16 proper balance between long-term debt funding and PAYGO funding which can
17 be achieved by reassessing the PAYGO requests in each base rate case. I believe
18 the proposed increase in DSIC PAYGO funding is a step in the right direction as it
19 allows the Authority a portion of the cash-financed capital it seeks and comes with
20 the desired accountability via the LTIP and DSIC reconciliation filings.

²⁵ I&E Statement No. 1, p. 21, lines 15-17.

1 Finally, as stated in my direct testimony,²⁶ the Authority has continued to
2 secure extremely low-cost (PENNVEST) funding, as well as WIFIA funding,
3 which is the federal equivalent to PENNVEST via the U.S. Environmental
4 Protection Agency. Mr. Barca exhibits the Authority’s success in obtaining low-
5 cost funding by noting PENNVEST has granted the Authority \$610.8 million in
6 low-interest loans and \$35.7 million in grants since 2018.²⁷ Mr. Pickering also
7 mentions the Authority’s success in securing PENNVEST funding by explaining
8 that in April of this year, the Authority received a \$59.1 million low-interest loan
9 which supports the 2023-2025 Small and Large Sewer Rehabilitation programs.²⁸
10 Additionally, PWSA has closed on a \$52.5 million WIFIA loan this year²⁹ and is
11 estimating to close on \$104.7 million and \$28.5 million in WIFIA loans in June
12 2024 and June 2025, respectively. Mr. Barca claims these loans will be used to
13 fund approximately 49% of PWSA’s Water Reliability Plan initiative, which
14 includes replacing the clearwell at the Water Treatment Plant.³⁰ Further, at the
15 beginning of last year, PWSA was awarded a \$17.5 million grant to replace lead
16 service lines from the City of Pittsburgh as part of the American Rescue Plan
17 funding.³¹ As in my direct testimony, I acknowledge that the types of low-cost
18 funding identified above may not always be guaranteed, however, the use of these

²⁶ I&E Statement No. 1, p. 22, ln. 5 through p. 23, ln. 5.

²⁷ PWSA Statement No. 2, p. 33, lines 1-4.

²⁸ PWSA Statement No. 1, p. 9, lines 16-19.

²⁹ I&E Exhibit No. 1, Schedule 7.

³⁰ PWSA Statement No. 2, p. 25, lines 9-12.

³¹ PWSA Statement No. 2, p. 20, lines 4-6 and <https://www.pgh2o.com/news-events/news/newsletter/2022-01-28-engineering-report-water-main-lead-service-line-replacement>.

1 funds provides major cost savings to the Authority's ratepayers and is preferable
2 over unrestricted funds such as the Authority's PAYGO requests and should be
3 utilized as much as possible.
4

5 **Q. HAS YOUR RECOMMENDATION REGARDING THE AUTHORITY'S**
6 **PAYGO CLAIM IN THIS PROCEEDING CHANGED?**

7 A. No. I still recommend rejecting PWSA's entire PAYGO claim.
8

9 **DAYS CASH ON HAND**

10 **Q. SUMMARIZE YOUR POSITION REGARDING DCOH IN DIRECT**
11 **TESTIMONY.**

12 A. In direct testimony I explained that I&E's proposed rates would result in
13 approximately 293 DCOH. I indicated that this metric falls within Moody's range
14 for the 'Aaa' rating category, which is higher than Moody's overall 'A3' rating for
15 PWSA, therefore showing support for its current credit rating. Additionally, I
16 noted that the approximately 293 DCOH resulting from I&E's recommendation
17 far exceeds the 100 days current need and is very much on track to surpass
18 PWSA's five-year target goal of 300 days as asserted in its Financial Management
19 Policy.³²

³² I&E Statement No. 1, p. 12, ln. 12 through p. 14, ln. 18.

1 **Q. WHAT WAS PWSA’S RESPONSE TO YOUR DCOH ANALYSIS?**

2 A. Mr. Barca disagrees with my methodology in calculating the number of DCOH as
3 he claims it is based on normalized expenses rather than PWSA’s approved
4 projected operating budget. He provides a recalculation claiming my
5 recommendation actually results in a much lower 181.3 DCOH.³³ Further, he
6 comments on the impact of I&E’s approximate \$6.9 million reduction to PWSA’s
7 present rates made in direct testimony.³⁴ However, his concerns regarding the
8 rollback are no longer relevant due to I&E’s updated revenue requirement as
9 presented above.

10 Ms. Fay disagrees with my position that the fear of a credit downgrade
11 specifically regarding the level of DCOH is unjustified and continues to compare
12 the Authority’s DCOH to that of its peers.³⁵ Echoing Mr. Barca, she implies that
13 my DCOH calculation, which employs the Authority’s own formula within its
14 provided rate case tables,³⁶ is incorrect as a result of “the haircut to operating and
15 capital expenses.”³⁷

16
17 **Q. HAS YOUR DCOH ANALYSIS CHANGED FROM YOUR DIRECT**
18 **TESTIMONY?**

19 A. Yes. As a result of I&E’s updated revenue requirement and a reduction to I&E

³³ PWSA Statement No. 2-R, p. 14, lines 10-17.

³⁴ PWSA Statement No. 2-R, p. 15, lines 12-20.

³⁵ PWSA Statement No. 9-R, p. 19, lines 3-28.

³⁶ PWSA Exhibit WJP-1.

³⁷ PWSA Statement No. 9-R, p. 20, lines 1-10.

1 witness Okum's (I&E Statement No. 2-R) O&M adjustments from her direct
2 testimony, the DCOH is slightly reduced to approximately 289 days.³⁸

3
4 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA'S CLAIM REGARDING**
5 **YOUR DCOH ANALYSIS?**

6 A. I&E's updated recommended revenue requirement results in 289 DCOH as
7 opposed to PWSA's calculation of approximately 248 DCOH.³⁹ These projections
8 are, of course, highly dependent on the actual experienced level of expenditures.
9 As apparent by I&E witness Okum's testimony,⁴⁰ PWSA has recently had
10 significant miscalculations regarding the experienced operating expenses, which is
11 largely where we differ in our DCOH calculations. Whether some expenses are
12 normalized or not, Ms. Okum has thoroughly analyzed the level of actual
13 experienced O&M expenses, which ultimately is what filters into my DCOH
14 calculation.

15
16 **Q. DO YOU BELIEVE YOUR DETERMINATION OF 289 DCOH PUTS**
17 **PWSA IN JEOPARDY OF A CREDIT DOWNGRADE AS MS. FAY**
18 **SEEMINGLY SUGGESTS?**

19 A. No. First, as mentioned above, my DCOH calculation is a direct result of I&E
20 witness Okum's reduction to PWSA's O&M expenses. Additionally, Ms. Fay and

³⁸ I&E Exhibit No. 1-SR, Schedule 1, p. 2.

³⁹ PWSA Exhibit WJP-1.

⁴⁰ I&E Statement No. 2, p. 4, ln. 15 through p. 6, ln. 20.

1 I both cite to Moody's May 29, 2023 report which notes the Authority's liquidity
2 has improved significantly from the critically low 23 DCOH in 2017 to 165 days
3 DCOH at the end of fiscal year 2022.⁴¹ Obviously, my calculation of 289 DCOH
4 is well above that metric and is a continuation of PWSA's increasing DCOH trend.
5 Again, as discussed in my direct testimony,⁴² PWSA's DCOH at I&E's proposed
6 rates falls within Moody's range for the 'Aaa' rating category, which is higher
7 than Moody's overall 'A3' rating for PWSA.

8 Further, I must reiterate that the approximately 289 DCOH resulting from
9 I&E's recommendation far exceeds the 100 days current need and is very much on
10 track to surpass PWSA's five-year target goal of 300 days as asserted in its
11 Financial Management Policy.

12 Finally, I accept that PWSA must strive to achieve a level of DCOH closer
13 to that of its peers. Clearly, the more cash on hand a utility has the better;
14 however, it is important to strike a balance between improving financial metrics
15 and the impact on customers. Unfortunately, the current situation caused by poor
16 financial management of PWSA over so many years cannot be instantaneously
17 remedied by putting an immediate and overwhelming burden on its ratepayers.

⁴¹ I&E Exhibit No. 1, Schedule 3, p. 1.

⁴² I&E Statement No. 1, p. 13, ln. 13 through p. 14, ln. 10.

1 **DEBT SERVICE COVERAGE RATIO**

2 **Q. SUMMARIZE YOUR DSCR RECOMMENDATION IN DIRECT**
3 **TESTIMONY.**

4 A. In direct testimony, I explained that I&E’s proposed rates would result in DSCRs
5 of 1.70x for senior debt service and 1.11x for total debt service coverage.⁴³

6
7 **Q. WHAT WAS PWSA’S RESPONSE TO YOUR RECOMMENDED DSCRs?**

8 A. Mr. Barca largely relies upon the testimony of Ms. Fay, however, he claims my
9 recommendation would lead to a failure to pass the “Additional Bond Test”⁴⁴ and
10 he opines that the only way I can claim PWSA will attain my recommended levels
11 of debt service coverage is to “pretend” that I&E’s other witnesses are correct,
12 particularly in their analysis of operating expenditures.⁴⁵

13 Ms. Fay claims that PWSA could have justified a rate increase above its
14 actual request based upon targeted financial metrics comparable to the Authority’s
15 peers,⁴⁶ and subsequently spends much of her rebuttal testimony attempting to
16 justify a total DSCR of 1.50x. Additionally, Ms. Fay disagrees with my
17 discussion regarding the Authority’s bond rating and suggests if I&E’s
18 recommendations are adopted, PWSA may be in danger of a credit rating
19 downgrade which could lead to increased borrowing costs.⁴⁷ Further, she

⁴³ I&E St. No. 1, p. 18, lines 9-11 and I&E Exhibit No. 1, Schedule 2.

⁴⁴ PWSA Statement No. 2-R, p. 8, lines 13-16.

⁴⁵ PWSA Statement No. 2-R, p. 12, lines 3-7.

⁴⁶ PWSA Statement No. 9-R, p. 14, lines 4-13.

⁴⁷ PWSA Statement No. 9-R, p. 21, ln. 18 through p. 24, ln. 15.

1 criticizes my use of Standard & Poor's rating criteria from 2008 claiming it is no
2 longer consistent with S&P's current rating criteria.⁴⁸

3
4 **Q. HAS YOUR DSCR ANALYSIS CHANGED FROM YOUR DIRECT**
5 **TESTIMONY?**

6 A. Yes. As a result of I&E's updated revenue requirement due to my adjustment to
7 the original capital improvement plan funding combined with Ms. Okum's
8 updated O&M adjustments, my DSCR for senior liens has decreased to 1.64x⁴⁹
9 from 1.70x, while my DSCR for total debt service increased to 1.20x⁵⁰ from
10 1.11x. Notably, these updated I&E DSCR recommendations are in line with the
11 Authority's claim of 1.65x for senior liens and 1.21x for total debt service.⁵¹

12
13 **Q. DO YOU AGREE WITH THE AUTHORITY'S CONCLUSIONS**
14 **REGARDING YOUR DSCR RECOMMENDATIONS?**

15 A. No. Again, I have employed the analysis of I&E witnesses Okum (I&E Statement
16 No. 2 and I&E Statement No. 2-SR) and Ethan Cline (I&E Statement No. 3 and
17 I&E Statement No. 3-SR) in determining the appropriate levels of forecasted
18 expenditures and revenues for PWSA in the FPFTY. My recommended DSCRs
19 resulting from I&E's proposed rates exceed both the legal covenant requirements

⁴⁸ PWSA Statement No. 9-R, p. 10, lines 6-14.

⁴⁹ I&E Exhibit No. 1-SR, Schedule 1, p. 2.

⁵⁰ I&E Exhibit No. 1-SR, Schedule 1, p. 2.

⁵¹ PWSA Statement No. 2-R, p. 4, ln. 1 and PWSA Exhibit WJP-1.

1 of 1.25x for senior debt service and 1.10x for total debt service.⁵² Further, my
2 recommendation also exceeds the Authority’s own Financial Management Policy
3 requirements of 1.35x for senior debt and 1.15x for debt service including
4 subordinate debt. Notably, the policy states that these levels have been set “to
5 provide a margin of safety and flexibility in the PWSA’s financial affairs...”⁵³ and
6 I&E’s recommendation surpasses its requirements.

7
8 **Q. MR. BARCA ASSERTS THAT THE ONLY WAY PWSA CAN ATTAIN**
9 **YOUR RECOMMENDED LEVELS OF DEBT SERVICE COVERAGE IS**
10 **TO “PRETEND” THAT I&E’S OTHER WITNESSES ARE CORRECT IN**
11 **THEIR ANALYSES, PARTICULARLY WHEN IT COMES TO**
12 **NORMALIZING OPERATING EXPENDITURES. IS HE CORRECT?**

13 A. Partially. I do rely upon the analyses of the other I&E witnesses for the inputs that
14 impact the recommendations I present. However, generally, operating expenses
15 are matched with revenues dollar-for-dollar, so the impact of adjustments to
16 operating expenses on DSCRs is minimal. The operating expense adjustments
17 recommended by I&E, combined with the recommended adjustments to the capital
18 improvement plan financing associated with I&E witness Cline’s \$32.6 million
19 recommended reduction to the Authority’s overall capital improvement plan

⁵² Filing Requirement VII.7, Amended and Restated Trust Indenture Between The Pittsburgh Water and Sewer Authority and The Bank of New York Mellon Trust Company, N.A., Amended and Restated as of November 1, 2017, p. 58, Section 7.01(c)(ii).

⁵³ PWSA Exhibit EB-5, p. 1.

1 budget⁵⁴ are what is causing the small variance between the I&E and PWSA
2 DSCRs.

3
4 **Q. PLEASE COMMENT ON THE “ADDITIONAL BONDS TEST” MR.
5 BARCA MENTIONS WHEN DETERMINING APPROPRIATE DSCRs.**

6 A. First, I must concede, as Mr. Barca demonstrates,⁵⁵ that my response to an
7 interrogatory regarding the use of unrestricted cash to support debt service was in
8 fact incorrect. However, it must also be recognized that I&E’s updated position
9 results in an increase of almost \$32 million from its position in direct testimony,
10 largely eliminating this concern. Accordingly, I agree with Mr. Barca’s summary
11 that the “Additional Bonds Test requires that PWSA meet its required debt service
12 coverage ratios (i.e., Rate Covenant) taking into account the current rates and the
13 maximum annual debt service of a proposed series of bonds prior to issuing
14 additional bonds.”⁵⁶ This simply prevents the Authority from over-extending
15 itself from including *potential revenues* to justify issuing new bonds, which is a
16 very reasonable standard.

17 Importantly, the DSCRs resulting from I&E’s updated revenue requirement
18 are almost identical to the Authority’s claim, therefore, any concerns regarding the
19 levels of debt service resulting from I&E’s recommendations are unwarranted.

⁵⁴ I&E Statement No. 3, p. 20, lines 6-9 and I&E Exhibit No. 3, Schedule 3.

⁵⁵ PWSA Statement No. 2-R, p. 12, ln. 18 through p. 13, ln. 33.

⁵⁶ PWSA Statement No. 2-R, p. 6, lines 9-12.

1 Finally, it is I&E’s duty to review revenues, expenditures, financial metrics,
2 etc. for the FPPTY. If the Authority experiences a revenue deficiency to the point
3 it is unable to issue additional bonds, it can file another rate case. Given that
4 PWSA is still relatively new to the Commission’s jurisdiction, a high level of
5 Commission oversight in the form of regular rate filings is encouraged as
6 explained in the MYRP section above.

7
8 **Q. DO YOU BELIEVE YOUR RECOMMENDED DSCRs FOR PWSA WILL**
9 **BE VIEWED UNFAVORABLY BY CREDIT RATING AGENCIES AS MS.**
10 **FAY SUGGESTS?**

11 A. No. In direct testimony, I cited to the most recent rating reports from both
12 Moody’s and S&P Global.⁵⁷ Both rating agencies noted the continued
13 improvement in the Authority’s DSCRs. Any DSCRs that are higher than what is
14 legally mandated and exceed the Authority’s own policies, as my
15 recommendations do, should be viewed as favorable by the rating agencies.
16 Further, as mentioned above, PWSA has been successful in continuing to secure
17 low-cost PENNVEST loans and grants that significantly aid in keeping its
18 borrowing costs from increasing.

⁵⁷ I&E Statement No. 1, p. 16, ln. 7 through p. 17, ln. 12.

1 **Q. PLEASE COMMENT ON MS. FAY’S CRITICISM OF YOUR RELIANCE**
2 **ON AN OUTDATED PUBLICATION REGARDING S&P’S RATING**
3 **CRITERIA.**

4 A. Ms. Fay seemingly attempts to discredit my recommended DSCRs, by claiming
5 the Standard & Poor’s rating criteria from 2008 is no longer consistent with S&P’s
6 current rating criteria issued most recently in 2022. In response to PWSA-I&E-
7 III-8,⁵⁸ I explain that the guidance in both publications parallel one another. In
8 fact, the newer guidance appears to slightly lower the standards for what is
9 considered a “Strong” all-in coverage ratio. Ultimately, the concern of which
10 publication was cited to is inconsequential especially when paired with the fact
11 that it was utilized in tandem with the most recent credit rating reports from both
12 Moody’s and S&P.

13
14 **Q. MS. FAY CLAIMS THAT PWSA COULD HAVE JUSTIFIED A HIGHER**
15 **RATE INCREASE, ARGUING THAT THE APPROPRIATE “ALL-IN”**
16 **DSCR IS 1.50X BASED ON COMPARISON WITH ITS PEERS. HOW DO**
17 **YOU RESPOND TO THESE CLAIMS?**

18 A. First, to be clear, it is PWSA that requested and provided support for a 1.21x “all-
19 in” or total DSCR. It is important to understand that approximately 90% of I&E’s
20 total adjustments to the requested revenue increase were dollar-for-dollar O&M

⁵⁸ I&E Exhibit No. 1, Schedule 5.

1 expense adjustments, meaning there is minimal impact to the DSCR calculations.
2 Ms. Fay suggests that PWSA would have required a rate increase of an additional
3 \$28.7 million on top of the requested approximate \$46.5 million increase in the
4 FPFTY to achieve the 1.50x total DSCR.⁵⁹ It would be unreasonable and unjust to
5 require the Authority's ratepayers to take on that burden so quickly. Like my
6 argument in the DCOH section, I agree with Ms. Fay that it is ideal for PWSA to
7 strive to achieve higher DSCRs that are more in line with its peers. Again,
8 however, it is unreasonable to think ratepayers should be overwhelmed with such
9 a large rate increase to correct the many years of financial mismanagement by the
10 Authority.

11 12 **SUMMARY OF I&E'S OVERALL POSITION**

13 **Q. PLEASE REITERATE I&E'S OVERALL UPDATED RECOMMENDED** 14 **REVENUE REQUIREMENT.**

15 A. I&E's recommended revenue requirement has been updated from its direct
16 testimony position due to changes to the original capital improvement plan
17 funding and O&M expense adjustments. As a result of these changes, I&E's total
18 recommended revenue increase to the FPFTY revenues at present rates has risen
19 from a decrease of \$6,898,845⁶⁰ in direct testimony to an increase of \$25,026,204

⁵⁹ PWSA Statement No. 9-R, p. 14, lines 4-13.

⁶⁰ I&E Statement No. 1, p. 6, lines 12-13 and I&E Exhibit No. 1, Schedule 1.

1 (\$227,685,945 - \$202,659,741) which results in an updated overall I&E revenue
2 requirement recommendation of \$227,685,945.⁶¹

3 Similar to my direct testimony, this revenue increase should be allocated
4 66.11% to water operations, 17.22% to wastewater operations, and 16.67% to
5 stormwater operation.⁶² Therefore, the I&E recommendation corresponds to an
6 increase of \$16,544,823 ($\$25,026,204 \times 66.11\%$) to water operations, an increase
7 of \$4,309,513 ($\$25,026,204 \times 17.22\%$) to wastewater operations, and an increase
8 of \$4,171,868 ($\$25,026,204 \times 16.67\%$) to stormwater operations.

9
10 **Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?**

11 A. Yes. However, I reserve the right to supplement my testimony if additional issues
12 or facts arise which may impact my recommendation.

⁶¹ I&E Exhibit No. 1-SR, Schedule 1.

⁶² I&E Statement No. 1, p. 7, lines 1-6. *Rounding was changed to be consistent with I&E witness Vanessa Okum's table in I&E Statement Nos. 2 and 2-SR.

Response of the Pittsburgh Water and Sewer Authority (“PWSA”) to the Interrogatories of the Office of Consumer Advocate (“OCA”), Set XVIII (18)

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919

Request: OCA-XVIII-2 Refer to PWSA Statement No. 2 page 22. (Capital Requirements for FY 2024, FY 2025 and FY 2026). Please provide a schedule that correlates the proposed capital requirements in each year to the required debt service needed (i.e. Senior Debt, Subordinate Debt, etc.) to support the Capital Requirements in each year of the MYP.

Response: See below. The capital requirements and associated funding sources represent how the CIP will be funded but does not represent the amount of the revenue requirement. The revenue requirement is shown below with the debt liens identified.

Capital Requirements	FY 2024	FY 2025	FY 2026
	\$349,222,497	\$398,464,014	\$390,608,900
Funding Sources			
Public Debt	\$150,000,000	\$150,000,000	\$200,000,000
PENNVEST Loans	134,701,157	145,909,293	86,356,336
Capital Line of Credit	38,209,537	42,706,704	3,587,415

WIFIA Loan #3 Debt Service – Subordinate Lien	-	-	231,052
	\$24,036,933	\$27,905,353	\$28,636,872

Response provided by: Edward Barca, Director of Finance

Date response provided: July 27, 2023

***Refer to PWSA's response to OCA-XVIII-2 -> I&E Exhibit 1-SR, Schedule 2**

\$349,222,497 = Capital Requirement for FY 2024

\$24,036,933 = Associated Funding Sources for FY 2024

The total of \$24,036,933 = \$6,627,342 DSIC funding increase + \$17,409,591 increase in FPFTY debt service.

$\$24,036,933 / \$349,222,497 = 6.88\%$ Funding source as a percent of the capital requirement

$\$32,625,303$ (CIP adjustment as illustrated in I&E Statement No. 3) $\times 6.88\% = \$2,244,621$

Funding Source	FY 2024	Weighted % of Total	Adjustment
Senior	\$8,784,124	0.365442796	\$820,281
Subordinate	\$6,391,916	0.265920615	\$596,891
DSIC	\$6,627,342	0.275714959	\$618,876
Subordinate	\$1,500,000	0.062403968	\$140,073
Subordinate	\$733,551	0.030517662	\$68,501
	\$24,036,933		
	Total Adjustment	2244621	<u><u>\$2,244,621</u></u>

Total Adjustment By Funding Source

Senior Lien Adjustment	\$820,281
Subordinate Lien Adjustment	\$805,465
DSIC/Cash Financed Capital Adjustment	\$618,876
	<u><u>\$2,244,621</u></u>

Total Senior Debt + Subordinate Debt \$1,625,745

**Pennsylvania Public Utility Commission v.
The Pittsburgh Water and Sewer Authority
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

**Responses of the Bureau of Investigation and Enforcement to the
Interrogatories of The Pittsburgh Water and Sewer Authority – Set III
Witness: Anthony Spadaccio**

PWSA-I&E-III-8 I&E Statement No. 1, page 18 at 4-8, is Mr. Spadaccio aware of S&P Global Ratings most recent U.S. Municipal Water, Sewer and Solid Water Utilities; Methodology and Assumptions dated April 14, 2022 that includes very different DSCR than the ones provided in his Direct testimony which came from methodology published in 2008? In S&P’s most recent methodology for All-in Coverage levels as summarized in the table below with 1 = extremely strong, 2= very strong, 3=strong, 4=adequate, 5=vulnerable, 6= very vulnerable

Table 17

Assessment Of All-In Coverage

Initial assessment	All-in coverage
1	1.60x or above
2	1.40x-1.60x
3	1.20x-1.40x
4	1.10x-1.20x
5	1.00x-1.10x
6	Below 1.00x

RESPONSE

Mr. Spadaccio is aware of the S&P Global Ratings most recent U.S. Municipal Water, Sewer and Solid Water Utilities; Methodology and Assumptions dated April 14, 2022 as he provided the publication in response to PWSA-I&E-I-12. However, Mr. Spadaccio disagrees that the DSCR ranges in the two publications in question are “very different.” Instead, he believes they reasonably parallel one another. If anything, the newer guidance lowers the standards to meet each level. For example, in the 2008 publication, a DSCR above 1.50x was considered “Strong,” while in the 2022 guidance, the ratio can be as low as 1.20x and still be considered “Strong.”

1 **INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Vanessa Okum. My business address is Pennsylvania Public Utility
4 Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg,
5 PA 17120.

6

7 **Q. IN WHAT CAPACITY ARE YOU EMPLOYED?**

8 A. I am employed as a Fixed Utility Financial Analyst in the Pennsylvania Public Utility
9 Commission's (Commission) Bureau of Investigation and Enforcement (I&E).

10

11 **Q. PLEASE DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL
12 BACKGROUND.**

13 A. Appendix A, which is attached to my testimony, describes my educational
14 background and professional experience.

15

16 **Q. DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.**

17 A. I&E is responsible for protecting the public interest in proceedings before the
18 Commission. The I&E analysis in this proceeding is based on its responsibility to
19 represent the public interest. This responsibility requires balancing the interests of
20 the ratepayers, the regulated utility, and the regulated community as a whole.

1 **Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?**

2 A. The purpose of my direct testimony is to review the base rate filing of the
3 Pittsburgh Water and Sewer Authority (PWSA or Authority) and make
4 recommended adjustments to PWSA’s proposed operating and maintenance
5 (O&M) expense claims for the fully projected future test year (FPFTY) ending
6 December 31, 2024.

7
8 **Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?**

9 A. Yes. I&E Exhibit No. 2 contains schedules relating to my testimony.

10

11 **Q. DO YOU HAVE ANY COMMENTS REGARDING THE OVERALL SCOPE**
12 **OF YOUR DIRECT TESTIMONY?**

13 A. Yes. PWSA came under the Commission’s jurisdiction for regulation and oversight
14 effective April 1, 2018, and there are various compliance requirements of utility
15 statute, regulations, and Commission Orders with which the Authority must comply.
16 Since then, PWSA has filed three base rate cases: in 2018 (at Docket Nos. R-2018-
17 3002645 and R-2018-3002647), in 2020 (at Docket Nos. R-2020-3017951 and
18 R-2020-3017970), and in 2021 (at Docket Nos. R-2021-3024773, R-2021-3024774,
19 and R-2021-3024779). The Authority also filed Stage 1 of its mandated Compliance
20 Plan in 2018 (at Docket Nos. M-2018-2640802 and M-2018-2640803) and Stage 2
21 in 2021. PWSA continues to file quarterly updates to its Compliance Plan to track its
22 progress toward total compliance.

1 In this testimony, I address some of the issues from the current base rate case
2 filing. However, with respect to issues I have not addressed, I&E does not waive its
3 right to address those issues in future base rate proceedings or in any other
4 proceeding. Further, issues not addressed in this proceeding should not be construed
5 as I&E's agreement to PWSA's position on those issues. Lastly, I&E reserves the
6 right to make further recommendations in future proceedings for any issue addressed
7 in this testimony.

8
9 **Q. WHAT TEST YEARS DOES PWSA USE IN THIS PROCEEDING?**

10 A. PWSA uses the calendar year ended December 31, 2022 as the historic test year
11 (HTY), the year ending December 31, 2023 as the future test year (FTY), and the
12 year ending December 31, 2024 as the FPFTY in this rate case proceeding. PWSA
13 claims a multi-year rate increase, also referring to the forecast year ending
14 December 31, 2025 as Fiscal Year (FY) 2025 and the forecast year ending
15 December 31, 2026 as FY 2026.¹

16
17 **Q. WHAT IS PWSA'S REQUESTED REVENUE INCREASE IN THIS**
18 **PROCEEDING?**

19 A. PWSA has requested a total multi-year revenue increase of \$146.1 million over a
20 three-year period. This includes an increase of \$46.8 million or 22.5% in the

¹ PWSA Statement No. 2, p. 8.

1 FPPTY, \$45.4 million or 17.8% in FY 2025, and \$53.9 million or 17.9% in FY
2 2026.²

3 It should be noted that I&E witness Anthony Spadaccio is addressing
4 I&E's overall recommended revenue requirement in this proceeding.³

5

6 **Q. HOW DOES PWSA EXPLAIN ITS BUDGETING PROCESS?**

7 A. PWSA explains that its O&M expense claims are based on results derived through
8 a utility-wide budgeting process using a zero-based budgeting method for the FTY
9 and FPPTY. In this process, the previous years' budgets are referenced, but each
10 cost is individually considered when developing the annual operating budget.⁴
11 However, for FY 2025 and FY 2026, the traditional budgeting method is
12 employed, applying escalation factors to groups of expenses in anticipation of
13 increased cost of service.⁵

14

15 **Q. DO YOU HAVE ANY OVERALL COMMENTS ABOUT THE ACCURACY**
16 **OF PWSA'S PREVIOUS BUDGETED DIRECT O&M EXPENSE CLAIMS**
17 **MADE IN ITS PRIOR BASE RATE CASES?**

18 A. Yes. In response to I&E-RE-19-D, PWSA provided a comparative statement of
19 budgeted expenses for the fiscal years 2020, 2021, and 2022, as presented in the

² PWSA Statement No. 2, p. 4.

³ I&E Statement No. 1.

⁴ PWSA Statement No. 2, p. 9.

⁵ PWSA Statement No. 2, p. 14.

1 last rate case filing versus the actual expense incurred. The information was
2 presented in side-by-side columns for each year by line item of expense in a
3 similar schedule to that provided in PWSA's current filing requirement FR-III.1
4 for the FPFTY.⁶ Based on this information, I summarized O&M expenses by
5 major expense category.⁷ Although overall it appears that PWSA has been very
6 close to its budget in 2021 and 2022, the data at the account level and expense
7 category level shows large variances. For example, the Authority has consistently
8 underspent its budget for the overall Payroll Expense category, with an average of
9 10.6% under budget from 2020 through 2022. Additionally, the number of
10 individual accounts that were significantly over or under budget (defined as at
11 least 10% and \$25,000 variance) increased from 29% in 2022, to 30% in 2021,
12 and 32% in 2022.

13
14 **Q. HAS PWSA ATTEMPTED TO EXPLAIN THE SUBSTANTIAL**
15 **VARIANCES BETWEEN ITS BUDGET PROJECTIONS AND ACTUAL**
16 **EXPENSES?**

17 A. Yes, but its explanations only raise reliability concerns regarding PWSA's O&M
18 projections. Specifically, throughout its response to I&E-RE-19-D, PWSA briefly
19 states various one-line reasons for each expense line item's variance, such as "did
20 not meet hiring projections," "did not meet projections," "exceeded projections,"
21 etc. This response reveals that PWSA's FTY and FPFTY O&M expense budgeting

⁶ I&E Exhibit No. 2, Schedule 1.

⁷ I&E Exhibit No. 2, Schedule 2.

1 and claim amounts are not fully reliable and raises concerns about the
2 reasonableness of the FTY and FPFTY budgeted amounts in this proceeding.

3
4 **Q. DO THE VARIANCES BETWEEN BUDGETED AND ACTUAL EXPENSES**
5 **RAISE CONCERNS ABOUT PWSA'S REQUEST FOR A MULTI-YEAR**
6 **RATE INCREASE?**

7 A. Yes. Although PWSA has not been significantly over or under on its overall
8 budget in the past two fiscal years, the Authority seems to be shifting expenses
9 from one area to another to accommodate inflation, increased usage, and other
10 changes affecting expenditures. While it is admirable that PWSA has been able to
11 stay close to the overall budget, this does not negate the fact that the Authority's
12 ability to reliably budget at the account level has yet to be proven.

13 Furthermore, although PWSA claims to use a zero-based budgeting
14 approach in the FTY and FPFTY, the Authority admits to using a traditional
15 forecasting method for fiscal years 2025 and 2026, where unsupported blanket
16 inflation increases are applied to groups of expenses. In the current economic
17 environment, conditions are too uncertain to confidently project inflation rates for
18 any expense category two and three years into the future. Due to these concerns, I
19 recommend the Commission disallow the requested multi-year rate increases for
20 FY 2025 and FY 2026.

1 **SUMMARY OF ADJUSTMENTS**

2 **Q. PLEASE SUMMARIZE YOUR ADJUSTMENTS.**

3 A. The following table summarizes my recommended O&M expense adjustments in
4 the FPFTY for the combined water, wastewater, and stormwater operations:

O&M Issue	PWSA FPFTY Claim	I&E Allowance	I&E Adjustment
1. Total Payroll Expense	\$ 41,932,394	\$ 34,600,930	\$ (7,331,464)
2. Payroll Tax Expense	\$ 3,240,779	\$ 2,674,161	\$ (566,618)
3. Retirement Benefits	\$ 899,208	\$ 516,671	\$ (382,537)
4. Operating Contracts Other	\$ 8,866,242	\$ 1,366,242	\$ (7,500,000)
5. Drag Bucket	\$ 780,372	\$ -	\$ (780,372)
6. Line Televising	\$ 763,995	\$ -	\$ (763,995)
7. Office Rent	\$ 1,975,659	\$ 916,176	\$ (1,059,483)
8. Legal Expense	\$ 2,251,857	\$ 2,153,595	\$ (98,262)
9. Equipment Expense	\$ 3,411,233	\$ 1,210,116	\$ (2,201,117)
10. COVID-19 Expenses	\$ 263,215	\$ 166,241	\$ (96,974)
Total O&M Expense Adjustments			\$ (20,780,822)

5
6 It should be noted that although I recommend the Commission disallow the
7 multi-year rate increases, within my testimony I will address each adjustment with
8 respect to FY 2025 and FY 2026 in the event the Commission decides to allow any
9 part of the multi-year rate increase.

10

11 **Q. HOW DO YOU ALLOCATE YOUR EXPENSE ADJUSTMENTS**
12 **BETWEEN THE WATER, WASTEWATER, AND STORMWATER**
13 **SYSTEMS?**

14 A. I allocate the above O&M expense adjustments among water, wastewater, and
15 stormwater using ratios from PWSA's FPFTY 2024 Cost of Service Study and

1 Rate Design spreadsheet as shown in the table below:⁸

		Water	Wastewater	Stormwater
	Total adj.	66.11%	17.22%	16.67%
1. Total Payroll Expense	(7,331,464)	(4,846,831)	(1,262,478)	(1,222,155)
2. Payroll Tax Expense	(566,618)	(374,591)	(97,572)	(94,455)
3. Retirement Benefits	(382,537)	(252,895)	(65,873)	(63,769)
4. Operating Contracts Other	(7,500,000)	(4,958,250)	(1,291,500)	(1,250,250)
5. Drag Bucket	(780,372)	(515,904)	(134,380)	(130,088)
6. Line Televising	(763,995)	(505,077)	(131,560)	(127,358)
7. Office Rent	(1,059,483)	(700,424)	(182,443)	(176,616)
8. Legal Expense	(98,262)	(64,961)	(16,921)	(16,380)
9. Equipment Expense	(2,201,117)	(1,455,158)	(379,032)	(366,926)
10. COVID-19 Expenses	(96,974)	(64,110)	(16,699)	(16,166)
	(20,780,822)	(13,738,201)	(3,578,458)	(3,464,163)

2

3

4 **Q. WERE THERE ANY RECENT COURT DECISIONS THAT COULD**
5 **CHANGE THE BREAKDOWN OF YOUR RECOMMENDED**
6 **ADJUSTMENTS?**

7 A. Yes. I am advised by counsel that in a recent decision, the Commonwealth Court
8 held that a “Stormwater Charge constitutes a general tax, as opposed to a special
9 assessment, because the work funded thereby does not benefit individual
10 properties”⁹ Therefore, if it is deemed the stormwater charge is a tax and it is
11 eliminated by virtue of PWSA being required to refile a modified cost of service
12 with the stormwater portion rolled into wastewater rates or otherwise changed, the

⁸ PWSA filing, FPFTY 2024 Cost of Service and Rate Design, RevReq Allocation tab, Column R, lines 25-27.

⁹ *Borough of West Chester v. Pennsylvania State System of Higher Education and West Chester University of Pennsylvania of the State System of Higher Education*, 291 A.3d 455 (Pa. Cmwlth. 2023), *appeal docketed*, 9 MAP 2023 (Pa. 2023).

1 recommended adjustments in my table above for stormwater would require
2 modification.

3
4 **PAYROLL EXPENSE**

5 **Q. WHAT IS INCLUDED IN PWSA’S CLAIM FOR PAYROLL EXPENSE?**

6 A. PWSA’s payroll expense claim includes salaries and wages for regular payroll,
7 overtime premium pay, bonus pay, vacation pay, holiday pay, and other
8 pay/compensation as shown in the breakdown provided in the filing.¹⁰

9
10 **Q. WHAT IS PWSA’S CLAIM FOR PAYROLL EXPENSE?**

11 A. PWSA is claiming payroll expense of \$41,932,394 in the FPFTY,¹¹ \$44,008,104 in
12 FY 2025, and \$46,226,239 in FY 2026.¹²

13
14 **Q. WHAT IS THE BASIS FOR PWSA’S CLAIM?**

15 A. Per PWSA’s response to I&E-RE-24-D, the year-over-year increases in budgeted
16 payroll expense claims include workforce expansion and annual cost-of-living
17 increases.¹³ More specifically, per the response to I&E-RE-3-D, PWSA provided
18 actual and projected employee additions for FY 2020 through FY 2026,¹⁴ as well

¹⁰ PWSA filing, FPFTY 2024 Cost of Service and Rate Design, FR-III.1.

¹¹ PWSA Second Revised FR-III.1 as filed 7.12.23.

¹² I&E Exhibit No. 2, Schedule 3, p. 1.

¹³ I&E Exhibit No. 2, Schedule 4.

¹⁴ I&E Exhibit No. 2, Schedule 5, p. 1.

1 as a monthly employee count consisting of actuals and projections for FY 2020
2 through FY 2026.¹⁵

3
4 **Q. DO YOU AGREE WITH PWSA'S PAYROLL EXPENSE CLAIM?**

5 A. No.

6
7 **Q. WHAT DO YOU RECOMMEND?**

8 A. I recommend a FPFTY allowance of \$34,600,930 for payroll expense, or a
9 reduction of \$7,331,464 (\$41,932,394 - \$34,600,930) to PWSA's claim.

10 Additionally, if the Commission decides to allow any part of the multi-year rate
11 plan, I recommend an allowance of \$37,247,367 or a decrease of \$6,760,737
12 (\$44,008,104 - \$37,247,367) in FY 2025, and \$38,364,788 in FY 2026 or a
13 decrease of \$7,861,451 (\$46,226,239 - \$38,364,788).

14
15 **Q. WHAT IS THE BASIS OF YOUR RECOMMENDATION?**

16 A. My recommendation uses a zero-based budgeting approach by adjusting HTY
17 payroll expense for projected employee additions and annual cost-of-living
18 increases for the FTY, FPFTY, FY 2025, and FY 2026. However, as stated above,
19 as for this expense and every expense addressed in this direct testimony below, I
20 recommend disallowance of the FY 2025 and FY 2026 claims, and I am showing

¹⁵ I&E Exhibit No. 2, Schedule 5, pp. 2-4.

1 those recommended allowances to be considered only in the event the
2 Commission disagrees with that recommendation.

3
4 **Q. PLEASE EXPLAIN YOUR RECOMMENDED ADDITIONAL EMPLOYEE**
5 **ADJUSTMENT.**

6 A. My recommended adjustment regarding additional employees is based on year-
7 over-year changes to average annual headcount multiplied by average payroll
8 expense per employee (total annual payroll expense/average employee count).¹⁶

9
10 **Q. PLEASE EXPLAIN YOUR RECOMMENDED COST-OF-LIVING**
11 **ADJUSTMENT.**

12 A. My recommended cost-of-living adjustment is based on PWSA's responses to
13 I&E-RE-5-D and I&E-RE-6-D, which include data regarding union contractual
14 cost-of-living increases (across three separate unions) as well as non-union cost-
15 of-living increases.¹⁷ In the FTY, increases are between 3% and 4%; however, as
16 I do not have a breakdown of how many employees are in each union or non-
17 union, I based my analysis on a 4% cost-of-living increase for that year to
18 moderate my adjustment. In the FPFTY, FY 2025, and FY 2026, all increases
19 were 3% so I applied this cost-of-living increase accordingly.¹⁸

¹⁶ I&E Exhibit No. 2, Schedule 6.

¹⁷ I&E Exhibit No. 2, Schedule 7.

¹⁸ I&E Exhibit No. 2, Schedule 6.

1 **Q. SUMMARIZE YOUR RATIONALE FOR THESE RECOMMENDED**
2 **ADJUSTMENTS.**

3 A. In response to I&E-RE-3-D, PWSA states that headcount is projected to remain
4 stable in the FTY, yet total payroll expenses increase 19% over the HTY. This
5 increase from HTY to FTY is unreasonable based on a 3-4% cost-of-living
6 increase and relatively flat headcount projections. The Authority has not provided
7 an explanation for this increase aside from a vague statement in its response to
8 I&E-RE-24-D relating rising payroll expenses to workforce expansion and annual
9 cost-of-living increases from FY 2020 through FY 2026. Since payroll expenses
10 for FPFTY, FY 2025, and FY 2026 build on the expenses projected in the FTY, an
11 adjustment is necessary for this expense. My adjustment is supported by the data
12 provided by PWSA regarding employee count and cost-of-living increases.

13
14 **PAYROLL TAX EXPENSE**

15 **Q. WHAT IS INCLUDED IN PWSA’S CLAIM FOR PAYROLL TAX**
16 **EXPENSE?**

17 A. PWSA’s payroll tax expense claim includes the cost for payroll related taxes such
18 as the Federal Insurance Contribution Act (FICA) tax, Medicare tax, and state
19 unemployment taxes as shown in the breakdown provided in the filing.¹⁹

¹⁹ PWSA filing, FPFTY 2024 Cost of Service and Rate Design, FR-III.1.

1 **Q. WHAT IS PWSA’S CLAIM FOR PAYROLL TAX EXPENSE?**

2 A. PWSA is claiming payroll tax expense of \$3,240,779 (\$2,596,466 + \$607,233 +
3 37,100) in the FPFTY,²⁰ \$3,401,549 (\$2,724,939 + \$637,284 + \$39,326) in FY
4 2025, and \$3,562,437 (\$2,853,419 + \$667,332 + \$41,686) in FY 2026.²¹

5

6 **Q. WHAT IS THE BASIS FOR PWSA’S CLAIM?**

7 A. PWSA’s claim for payroll tax is estimated by applying the statutory tax rates to
8 the budgeted total payroll expense.²²

9

10 **Q. DO YOU AGREE WITH PWSA’S PAYROLL TAX EXPENSE CLAIM?**

11 A. No.

12

13 **Q. WHAT DO YOU RECOMMEND FOR PAYROLL TAX EXPENSE?**

14 A. I recommend a FPFTY allowance of \$2,674,161 for payroll tax expense, or a
15 reduction of \$566,618 (\$3,240,779 - \$2,674,161) to PWSA’s claim. Additionally,
16 if the Commission decides to allow the multi-year rate plan, I recommend a FY
17 2025 allowance of \$2,878,987, or a decrease of \$522,562 (\$3,401,549 -
18 \$2,878,987), and a FY 2026 allowance of \$2,956,592, or a decrease of \$605,845
19 (\$3,562,437 - \$2,956,592).

²⁰ PWSA Second Revised FR-III.1 as filed 7.12.23.

²¹ I&E Exhibit No. 2, Schedule 3, p. 1.

²² I&E Exhibit No. 2, Schedule 8.

1 **Q. WHAT IS THE BASIS OF YOUR RECOMMENDATION?**

2 A. I recommend adjusting payroll tax expense to align with my payroll expense
3 adjustment. Since payroll taxes are calculated based on total payroll expense,
4 when total payroll expense decreases it is necessary to calculate a corresponding
5 decrease in payroll taxes. I calculated the adjustment by multiplying PWSA's total
6 payroll tax rate by the amount of my payroll expense deduction for each projected
7 year as shown in the table below:

PAYROLL TAX:	FPFTY	FY2025	FY2026
FICA and Medicare taxes	\$ 3,203,679	\$ 3,362,223	\$ 3,520,751
Unemployment taxes	\$ 37,100	\$ 39,326	\$ 41,686
Total PWSA Payroll Tax Claim	\$ 3,240,779	\$ 3,401,549	\$ 3,562,437
Payroll Tax Rate	7.73%	7.73%	7.71%
IE Payroll Expense Adjustment	\$ (7,331,464)	\$ (6,760,737)	\$ (7,861,451)
Payroll Tax Adjustment	\$ (566,618)	\$ (522,562)	\$ (605,845)

8
9

10 **RETIREMENT BENEFITS EXPENSE**

11 **Q. WHAT IS PWSA'S CLAIM FOR RETIREMENT BENEFITS?**

12 A. PWSA is claiming retirement benefits of \$899,208 in the FPFTY,²³ \$895,514 in
13 FY 2025, and \$934,399 in FY 2026.²⁴

14

15 **Q. WHAT IS THE BASIS FOR PWSA'S CLAIM?**

16 A. According to PWSA's response to I&E-RE-26-D, the FTY is based on historical

²³ PWSA Second Revised FR-III.1 as filed 7.12.23.

²⁴ I&E Exhibit No. 2, Schedule 3, p. 1.

1 actuals, while the FPFTY, FY 2025, and FY 2026 are based on a 4% inflationary
2 factor.²⁵

3
4 **Q. DO YOU AGREE WITH PWSA'S RETIREMENT BENEFITS CLAIM?**

5 A. No.

6
7 **Q. WHAT DO YOU RECOMMEND FOR RETIREMENT BENEFITS
8 EXPENSE?**

9 A. I recommend an allowance of \$516,671 in the FPFTY, or a reduction of \$382,537
10 (\$899,208 - \$516,671). Additionally, if the Commission decides to allow the
11 multi-year rate plan, I recommend a FY 2025 allowance of \$556,189, or a decrease
12 of \$339,325 (\$895,514 - \$556,189), and a FY 2026 allowance of \$572,874, or a
13 decrease of \$361,525 (\$934,399 - \$572,874).

14
15 **Q. WHAT IS THE BASIS OF YOUR RECOMMENDATION?**

16 A. My recommendation is based on PWSA's response to I&E-RE-47 containing year-
17 to-date actuals through June 2023.²⁶ Because six out of twelve months in the FTY
18 are known, I calculated the FTY allowance by extrapolating the year-to-date
19 amount through the end of the year $[(\$232,332/6) \times 12 = \$464,664]$. I then applied

²⁵ I&E Exhibit No. 2, Schedule 9.

²⁶ I&E Exhibit No. 2, Schedule 10, p. 1.

1 a percentage increase year over year in line with the increase in the I&E adjusted
 2 total payroll as shown below:

	FTY	FPFTY	FY2025	FY2026
Average Employee Payroll:				
IE Adjusted Total Payroll	\$ 31,118,062	\$ 34,600,930	\$ 37,247,367	\$ 38,364,788
Year over Year change	6%	11%	8%	3%
RETIREMENT BENEFITS:				
PWSA Claim	\$ 862,000	\$ 899,208	\$ 895,514	\$ 934,399
Allowance	\$ 464,664	\$ 516,671	\$ 556,189	\$ 572,874
Adjustment		\$ (382,537)	\$ (339,325)	\$ (361,525)

3
 4
 5 **Q. HOW IS SUCH A SIGNIFICANT ADJUSTMENT APPROPRIATE FOR**
 6 **RETIREMENT BENEFITS?**

7 A. It should be noted that historic expenses are much less than the future year claim
 8 amounts. For example, in 2020, 2021, and 2022, PWSA’s actual retirement
 9 benefits expenses were \$90,138, \$89,797, and \$313,439.²⁷ My recommended
 10 allowance amount for the FPFTY is more in line with this actual experience, even
 11 though it is higher than all three of these historic amounts. The Authority’s large
 12 increases in the future years is not properly supported and should be rejected.

13
 14 **OPERATING CONTRACTS EXPENSE**

15 **Operating Contracts Other**

16 **Q. WHAT IS PWSA’S CLAIM FOR OPERATING CONTRACTS OTHER?**

17 A. PWSA’s claim for operating contracts other is \$8,866,242 in the FPFTY,²⁸

²⁷ I&E Exhibit No. 2, Schedule 3, p. 1.

²⁸ PWSA Second Revised FR-III.1 as filed 7.12.23.

1 \$11,198,217 in FY 2025, and \$14,210,110 in FY 2026.²⁹

2

3 **Q. WHAT IS THE BASIS FOR PWSA'S CLAIM?**

4 A. According to the response to I&E-RE-33-D, PWSA's claim for operating contracts
5 other primarily includes contracts for work such as reservoir cleaning and tank
6 cleaning, but the largest driver of the increase in this account is directly related to
7 anticipated work resulting from PWSA's Wet Weather Consent Decree
8 (\$7,500,000 in the FPFTY, \$9,750,000 in FY 2025, and \$12,675,000 in FY
9 2026).³⁰

10

11 **Q. DO YOU AGREE WITH PWSA'S CLAIM?**

12 A. No.

13

14 **Q. WHAT DO YOU RECOMMEND FOR OPERATING CONTRACTS
15 OTHER?**

16 A. I recommend a FPFTY allowance of \$1,366,242 for operating contracts other or a
17 reduction of \$7,500,000 (\$8,866,242 - \$1,366,242). If the Commission decides to
18 allow a multi-year rate plan, I recommend a FY 2025 allowance of \$1,448,217 or a
19 reduction of \$9,750,000 (\$11,198,217 - \$1,448,217) and a FY 2026 allowance of

²⁹ I&E Exhibit No. 2, Schedule 3, p. 3.

³⁰ I&E Exhibit No. 2, Schedule 11, p. 2.

1 \$1,535,110 or a reduction of \$12,675,000 (\$14,210,110 - \$1,535,110) to PWSA's
2 claim.

3
4 **Q. WHAT IS THE BASIS OF YOUR RECOMMENDATION?**

5 A. My recommendation is based on disallowance of the entire amount for the Wet
6 Weather Consent Decree, or a reduction of \$7,500,000 in the FPFTY, \$9,750,000
7 in FY 2025, and \$12,675,000 in FY 2026 due to the speculative nature of PWSA's
8 claim related to the Wet Weather Consent Decree. As discussed in PWSA witness
9 Edward Barca's testimony, the Decree is not yet finalized and is not expected to be
10 finalized until 2024.³¹ Additionally, the Authority has not provided a breakdown
11 of claimed expenses, relevant calculations, or any other supporting documentation
12 to substantiate its claims relating to the Decree. Due to this lack of support, I
13 recommend disallowance of the entire amount.

14
15 **Drag Bucket**

16 **Q. WHAT IS PWSA'S CLAIM FOR DRAG BUCKET EXPENSE?**

17 A. PWSA is claiming drag bucket expenses of \$780,372 in the FPFTY.³² No amounts
18 were claimed for FY 2025 or FY 2026.³³

³¹ PWSA Statement No. 2, p. 16.

³² PWSA Second Revised FR-III.1 as filed 7.12.23.

³³ I&E Exhibit No. 2, Schedule 3, p. 3.

1 **Q. WHAT IS THE BASIS FOR PWSA’S CLAIM?**

2 A. In PWSA’s response to I&E-RE-46, the Authority states that there are no budgeted
3 expenses for this account included in the FTY or FPFTY.³⁴ However, PWSA
4 appears to have based the FPFTY expense on a 6% inflation rate over the FTY
5 amount of \$736,200. Let it be noted that the HTY expense was \$1,867 as shown
6 below:

	Drag Bucket
HTY	\$ 1,867
FTY	\$ 736,200
FPFTY	\$ 780,372

7
8
9 **Q. DO YOU AGREE WITH THE AUTHORITY’S CLAIM?**

10 A. No.

11

12 **Q. WHAT DO YOU RECOMMEND FOR DRAG BUCKET EXPENSE?**

13 A. I recommend disallowance of the entire amount of \$780,372.

14

15 **Q. WHAT IS THE BASIS FOR THIS RECOMMENDATION?**

16 A. Despite its claims in response to I&E-RE-46, the Authority’s most recent revision
17 to FR-III.1 includes this amount in the FPFTY. Although I suspect the Authority
18 may have been looking at a previous version when compiling this response,

³⁴ I&E Exhibit No. 2, Schedule 12.

1 PWSA failed to provide adequate support for this claim. Therefore, I recommend
2 disallowance of the entire claim.

3

4 **Line Televising**

5 **Q. WHAT IS PWSA’S CLAIM FOR LINE TELEVISIONING EXPENSE?**

6 A. PWSA is claiming line televising expenses of \$763,995 in the FPFTY.³⁵ No
7 amounts were claimed for FY 2025 or FY 2026.³⁶

8

9 **Q. WHAT IS THE BASIS FOR PWSA’S CLAIM?**

10 A. In PWSA’s response to I&E-RE-46, the Authority states that there are no budgeted
11 expenses for this account included in the FTY or FPFTY.³⁷ However, PWSA
12 appears to have based the FPFTY expense on a 6% inflation rate over the FTY
13 amount of \$720,750. It should be noted that the HTY expense was zero as shown
14 below:

	Line Televising
HTY	\$ -
FTY	\$ 720,750
FPFTY	\$ 763,995

15

16

17 **Q. DO YOU AGREE WITH THE AUTHORITY’S CLAIM?**

18 A. No.

³⁵ PWSA Second Revised FR-III.1 as filed 7.12.23.

³⁶ I&E Exhibit No. 2, Schedule 3, p. 3.

³⁷ I&E Exhibit No. 2, Schedule 12.

1 **Q. WHAT DO YOU RECOMMEND FOR LINE TELEVISIONING EXPENSE?**

2 A. I recommend disallowance of the entire amount of \$763,995.

3

4 **Q. WHAT IS THE BASIS FOR THIS RECOMMENDATION?**

5 A. Despite its claims in response to I&E-RE-46, the Authority's most recent revision
6 to FR-III.1 includes this amount in the FPPTY. Although I suspect the Authority
7 may have been looking at a previous version when compiling this response,
8 PWSA failed to provide adequate support for this claim. Therefore, I recommend
9 disallowance of the entire claim.

10

11 **OFFICE RENT EXPENSE**

12 **Q. WHAT IS PWSA'S CLAIM FOR OFFICE RENT?**

13 A. PWSA is claiming office rent expense of \$1,975,659 in the FPPTY,³⁸ \$2,094,199
14 in FY 2025, and \$2,219,851 in FY 2026.³⁹

15

16 **Q. WHAT IS THE BASIS FOR PWSA'S CLAIM?**

17 A. Per its response to I&E-RE-36-D and I&E-RE-13-D, the projected increase in
18 office rent is based on leasing expenses for an anticipated new PWSA
19 headquarters location.⁴⁰

³⁸ PWSA Second Revised FR-III.1 as filed 7.12.23.

³⁹ I&E Exhibit No. 2, Schedule 3, p. 5.

⁴⁰ I&E Exhibit No. 2, Schedule 13.

1 **Q. DO YOU AGREE WITH PWSA’S CLAIM?**

2 A. No.

3

4 **Q. WHAT DO YOU RECOMMEND FOR OFFICE RENT EXPENSE?**

5 A. I recommend an allowance of \$916,176, or a reduction of \$1,059,483 (\$1,975,659
6 - \$916,176) for office rent expense. If the Commission decides to allow the multi-
7 year rate increase, I recommend this allowance remain the same in FY 2025 and
8 FY 2026, which results in a FY 2025 reduction of \$1,178,023 (\$2,094,199 -
9 \$916,176) and a FY 2026 reduction of \$1,303,675 (\$2,219,851 - \$916,176) to
10 PWSA’s claim.

11

12 **Q. WHAT IS THE BASIS OF YOUR RECOMMENDATION?**

13 A. As stated above, because PWSA intends to move its headquarters location, the
14 Authority claimed an increase in its FPFTY office rent claim. While I accept that
15 PWSA may need more space to accommodate an increase in headcount, the
16 Authority has not provided any supporting documentation (timing, location,
17 square footage, price per square foot, new lease, etc.) in its response to data
18 requests regarding this increase.

19 Therefore, to remove the unsupported and speculative rent expense for the
20 new headquarters, I recommend using a three-year average of actual office rental

1 expense to calculate the FPFTY allowance of \$916,176 as shown below:

Office Rent	
2020	\$ 971,698
2021	\$ 866,472
2022	\$ 910,359
	\$ 2,748,529
Average	\$ 916,176

2

3

4 **LEGAL EXPENSE**

5 **Q. WHAT IS INCLUDED IN PWSA’S CLAIM FOR LEGAL EXPENSE?**

6 A. The Authority’s claim for legal expense includes legal costs for regulatory
7 compliance, legal services, and rate case expenses.⁴¹

8

9 **Q. WHAT IS PWSA’S CLAIM FOR LEGAL EXPENSE?**

10 A. PWSA is claiming legal expense of \$2,251,857 in the FPFTY,⁴² \$2,386,968 in FY
11 2025, and \$2,530,187 in FY 2026.⁴³

12

13 **Q. WHAT IS THE BASIS FOR PWSA’S CLAIM?**

14 A. PWSA projects an increase in legal expense in the FTY, FPFTY, FY 2025 and FY
15 2026 due to regulatory compliance, rate case expenses, and inflation for legal
16 services as briefly described in PWSA’s response to I&E-RE-37-D.⁴⁴

⁴¹ I&E Exhibit No. 2, Schedule 14, p. 2.

⁴² PWSA Second Revised FR-III.1 as filed 7.12.23.

⁴³ I&E Exhibit No. 2, Schedule 3, p. 5.

⁴⁴ I&E Exhibit No. 2, Schedule 14, p. 2.

1 **Q. YOU MENTION THAT RATE CASE EXPENSE IS INCLUDED IN LEGAL**
2 **EXPENSE. IS THE ENTIRE RATE CASE EXPENSE REPRESENTED**
3 **WITHIN LEGAL EXPENSE?**

4 A. No. In its response to I&E-RE-2-D, the Authority has identified two accounts that
5 contain rate case related expenses: legal (7370) and consultants (7323).⁴⁵
6

7 **Q. IS IT APPROPRIATE FOR THE AUTHORITY TO INCLUDE RATE CASE**
8 **EXPENSE IN THESE ACCOUNTS RATHER THAN TRACKING IT**
9 **SEPARATELY?**

10 A. No. There is a lack of transparency surrounding rate case expense when the
11 Authority embeds the expense within accounts containing non rate case related
12 expenses. Additionally, PWSA combines rate case expense with DISC expense in
13 much of its reporting. This lack of transparency seems to be the cause of
14 discrepancies in the data provided by PWSA between the filing requirements in
15 Volume I of the filing, the testimony in Volume II of the filing, and PWSA's
16 response to I&E-RE-2-D. In Volume I, PWSA combines rate case expense with
17 DSIC expense for a total of \$2,565,895 claimed in the FPFTY.⁴⁶ However, in
18 response to I&E-RE-2-D (part D), PWSA claims only \$495,000 to be related to
19 rate case and \$55,000 related to DSIC expense for a total of \$550,000 in the
20 FPFTY.⁴⁷ Furthermore, Mr. Barca's testimony states that the Authority has

⁴⁵ I&E Exhibit No. 2, Schedule 15, p. 2.

⁴⁶ PWSA filing, FR-III.4.

⁴⁷ I&E Exhibit No. 2, Schedule 15, p. 2.

1 budgeted approximately \$1.5 million for this rate case in the FPFTY and proposes
2 to include this entire amount in its revenue requirement rather than normalizing
3 the expense over a period of time.⁴⁸

4
5 **Q. DO YOU AGREE WITH MR. BARCA’S ASSERTION THAT PWSA**
6 **SHOULD BE ABLE TO CLAIM THE ENTIRE RATE CASE EXPENSE IN**
7 **ITS REVENUE REQUIREMENT?**

8 A. No. Mr. Barca states that as a cash flow regulated municipal utility, PWSA
9 reflects costs that it actually incurs in a year and that collecting those costs in rates
10 over two or three years is not reasonable. He further states that PWSA has been
11 involved in rate-related activity on an annual basis since coming under the
12 jurisdiction of the Commission.⁴⁹ However, Mr. Barca’s assertions that PWSA
13 should be entitled to collect the full rate case expense in the year it is actually
14 incurred, and his contention that it is involved in rate-related activity on an annual
15 basis are not supported by the Authority’s historic rate case filing frequency as
16 shown below:

	Filing Date	Months	Average
R-2023-3039920 (W), 3039921 (WW), 3039919 (SW)	5/9/2023	25	19.33
R-2021-3024773 (W), 3024774 (WW), 3024779 (SW)	4/13/2021	13	
R-2020-3017951 (W), 3017970 (WW)	3/6/2020	20	
R-2018-3002645 (W), 3002647 (WW)	7/2/2018		

17

⁴⁸ PWSA Statement No. 2, pp. 18-19.

⁴⁹ PWSA Statement No. 2, pp. 18-19.

1 Additionally, in response to I&E-RE-2-D (Part H), PWSA states that the
2 timing of its next base rate case filing is yet to be determined.⁵⁰ If PWSA is
3 allowed to include the full rate case expense in the FPFTY, it would continue to
4 collect the full cost of its current rate case filing in rates each year, regardless of
5 how many years may pass until the next rate case filing.

6
7 **Q. DO YOU PROPOSE AN ADJUSTMENT TO RATE CASE EXPENSE?**

8 A. Due to the discrepancies in the data, I am unable to make an adjustment at this
9 time. However, I do recommend that PWSA be required in all future rate case
10 proceedings to account for rate case expense in a separate account to provide the
11 needed transparency around this expense and to establish an appropriate
12 normalized expense for prospective recovery of future rate case activities.

13
14 **Q. IS THERE ANYTHING ELSE INCLUDED IN LEGAL EXPENSE THAT IS**
15 **NOT APPROPRIATE?**

16 A. Yes. PWSA has included some lobbying expenses.

17
18 **Q. WHAT ARE LOBBYING EXPENSES?**

19 A. Lobbying expenses include the cost for services to influence government or
20 legislation in matters that affect a company or industry.

⁵⁰ Exhibit No. 2, Schedule 15, p. 3.

1 **Q. WHAT AMOUNT DID PWSA CLAIM IN LEGAL EXPENSE**
2 **ATTRIBUTED TO LOBBYING?**

3 A. As identified in PWSA’s response to I&E-RE-14-D, the Authority is claiming
4 lobbying expense of \$98,262 in the FPPTY, \$104,158 in FY 2025, and \$110,407
5 in FY 2026, as budgeted in the legal expense account.⁵¹

6
7 **Q. DO YOU AGREE WITH PWSA’S CLAIM FOR LEGAL EXPENSE?**

8 A. No.

9
10 **Q. WHAT DO YOU RECOMMEND FOR LEGAL EXPENSE?**

11 A. I recommend an allowance of \$2,153,595, or a reduction of \$98,262 (\$2,251,857 -
12 \$98,262) in the FPPTY. If the Commission decides to allow the multi-year rate
13 increase, I recommend a FY 2025 allowance of \$2,282,810, or a reduction of
14 \$104,158 (\$2,386,968 - \$2,282,810), and a FY 2026 allowance of \$2,419,780, or a
15 reduction of \$110,407 (\$2,530,187 - \$2,419,780), to PWSA’s claim.

16
17 **Q. WHAT IS THE BASIS OF YOUR RECOMMENDATION?**

18 A. In response to I&E-RE-14-D, PWSA identifies the work of Saxton & Stump as
19 lobbying expense. I am advised by counsel that no public utility may charge to its
20 consumers, as a permissible operating expense for ratemaking purposes, any direct

⁵¹ I&E Exhibit No. 2, Schedule 16.

1 or indirect expenditure by the utility for political advertising.⁵² Political
2 advertising includes money spent for lobbying unless it is spent for appearances
3 before regulatory or other governmental bodies in connection with a public
4 utility's existing or proposed operations.⁵³ PWSA is not exempt from this rule
5 based on its municipal status. Although Mr. Barca points out that this work results
6 in benefits for ratepayers, lobbying expenses are not necessary for the utility to
7 provide safe and reliable service, and therefore, should not be funded by
8 ratepayers. Thus, I recommend disallowance of the entire amount of lobbying
9 expense.

11 **EQUIPMENT EXPENSE**

12 **Q. WHAT IS INCLUDED IN PWSA'S CLAIM FOR EQUIPMENT?**

13 A. PWSA's claim for equipment includes computers and peripherals, computer
14 networking, furniture and fixtures, laboratory equipment, machinery, and vehicles
15 as shown in the breakdown provided in the filing.⁵⁴

17 **Q. WHAT IS PWSA'S CLAIM FOR EQUIPMENT?**

18 A. PWSA is claiming equipment expense of \$3,411,233 in the FPFTY,⁵⁵ \$3,552,424
19 in FY 2025, and \$3,765,569 in FY 2026.⁵⁶

⁵² 66 Pa. C. S. § 1316.

⁵³ 66 Pa. C. S. § 1316(d).

⁵⁴ PWSA filing, FPFTY 2024 Cost of Service and Rate Design, FR-III.1.

⁵⁵ PWSA Second Revised FR-III.1 as filed 7.12.23.

⁵⁶ I&E Exhibit No. 2, Schedule 3, p. 2.

1 **Q. WHAT IS THE BASIS FOR PWSA’S CLAIM?**

2 A. Since PWSA's revenue requirement calculation is based on the cash flow
3 method,⁵⁷ PWSA reports and claims the entire equipment cost in its operating
4 expenses in the year in which the expense is occurred or projected to be incurred.

5
6 **Q. DO YOU AGREE WITH PWSA’S CLAIM?**

7 A. No.

8
9 **Q. WHAT DO YOU RECOMMEND FOR EQUIPMENT?**

10 A. I recommend an allowance of \$1,210,116 for equipment in the FPFTY, or a
11 reduction of \$2,201,117 (\$3,411,233 - \$1,210,116) to PWSA’s claim. If the
12 Commission decides to allow the multi-year rate increase, I recommend the
13 continued allowance of \$1,210,116 in FY 2025, or a reduction of \$2,342,308
14 (\$3,552,424 - \$1,210,116), and FY 2026, or a reduction of \$2,555,453 (\$3,765,569
15 - \$1,210,116), to PWSA’s claim.

16
17 **Q. WHAT IS THE BASIS OF YOUR RECOMMENDATION?**

18 A. My recommendation is based on annualizing the cost of certain equipment over
19 the useful service life of the respective equipment as shown in the table below:

⁵⁷ PWSA Statement No. 2, pp. 5-7.

	PWSA Claim	Useful Life	Allowable Expense	Adjustment
Computer & Peripherals	\$ 290,691	3	\$ 96,897	\$ (193,794)
Lab Equip	\$ 106,000	3	\$ 35,333	\$ (70,667)
Machinery	\$ 352,980	5	\$ 70,596	\$ (282,384)
Vehicles	\$ 2,067,840	5	\$ 413,568	\$ (1,654,272)
	\$ 2,817,511		\$ 616,394	\$ (2,201,117)
Total Equipment	\$ 3,411,233		\$ 1,210,116	\$ (2,201,117)

1
2 The equipment's useful life was provided by PWSA in response to I&E-
3 RE-31-D,⁵⁸ and to keep my adjustment reasonable, I have used the lower end of
4 the useful life range for each type of equipment. Due to the speculative nature of
5 the increases to the claims in FY 2025 and FY 2026, I recommend keeping the
6 expense flat in these years if the Commission allows a multi-year rate increase.

7
8 **Q. EXPLAIN WHY YOU RECOMMEND ANNUALIZING THE EQUIPMENT**
9 **COSTS.**

10 A. Equipment is typically categorized as a capital expenditure because it is useful for
11 providing service for a period longer than one year (beyond the FPFTY) and is not
12 consumable or perishable. Such costs are one-time expenditures and generally
13 non-recurring in nature during the normal useful life span of the equipment.
14 Therefore, including the full cost of equipment in the FPFTY unreasonably
15 burdens ratepayers since the benefits of the equipment will continue to be
16 experienced during the useful life of the equipment, a period longer than the

⁵⁸ I&E Exhibit No. 2, Schedule 17.

1 FPPTY, and the cost of replacing that equipment in its entirety continues to be
2 embedded in rates each year using PWSA's method.

3 Furthermore, had the equipment been acquired by leasing, the lease
4 payments would have spread over more than one year. Thus, spreading the cost of
5 the equipment over its normal useful life is more appropriate and moderates the
6 cost impact in rates, while still providing an ongoing funding source for future
7 replacements.

8
9 **COVID-19 EXPENSE**

10 **Q. WHAT IS INCLUDED IN PWSA'S CLAIM FOR COVID-19 EXPENSE?**

11 A. In PWSA Statement No. 2, Mr. Barca states that the majority of this claim was
12 used to pay for personal protection equipment during the pandemic, specifically
13 between March 2020 and March 2021.⁵⁹

14
15 **Q. WHAT IS PWSA'S CLAIM FOR COVID-19 EXPENSE?**

16 A. PWSA is claiming \$263,215 for COVID-19 expenses in the FPPTY.⁶⁰ The entire
17 amount is proposed for recovery in the FPPTY.

18
19 **Q. HAS PWSA PREVIOUSLY ATTEMPTED TO RECOVER THESE COSTS?**

20 A. No. Consistent with the settlement of PWSA's most recent rate case in 2021, the

⁵⁹ PWSA Statement No. 2, p. 19.

⁶⁰ PWSA Statement No. 2, p. 19.

1 claim was deferred in that case and is now being included in the instant
2 proceeding.⁶¹

3

4 **Q. HAS PWSA RECEIVED ANY EXTERNAL FUNDING FOR COVID-19**
5 **RELATED EXPENSES?**

6 A. Yes. The Authority received a COVID-related grant from the City of Pittsburgh in
7 the amount of \$17.5 million as part of the American Rescue Plan. However, the
8 total amount of this funding was specified toward lead service line replacements.⁶²

9

10 **Q. DO YOU AGREE WITH PWSA’S CLAIM FOR COVID-19 EXPENSE?**

11 A. No.

12

13 **Q. WHAT DO YOU RECOMMEND FOR COVID-19 EXPENSE?**

14 A. I recommend an allowance of \$166,241, or a reduction of \$96,974 (\$263,215 -
15 \$166,241) in the FPPTY. If the Commission allows the multi-year rate increase, I
16 recommend an allowance of the remaining balance of \$96,974 in FY 2025 and
17 zero in FY 2026 as the amount will have been fully amortized in FY 2025.

18

19 **Q. WHAT IS THE BASIS OF YOUR RECOMMENDATION?**

20 A. My recommendation is based on amortization of the full amount over a period

⁶¹ PWSA Statement No. 2, p. 19.

⁶² PWSA Statement No. 2, p. 20.

1 consistent with the Authority’s rate case filing frequency. Based on the timing of
 2 the current proceeding and the previous three rate cases, I have calculated a 19-
 3 month average filing frequency, as shown below:

	Filing Date	Months	Average
R-2023-3039920 (W), 3039921 (WW), 3039919 (SW)	5/9/2023	25	19.33
R-2021-3024773 (W), 3024774 (WW), 3024779 (SW)	4/13/2021	13	
R-2020-3017951 (W), 3017970 (WW)	3/6/2020	20	
R-2018-3002645 (W), 3002647 (WW)	7/2/2018		

4
 5 Amortization allows for full recovery of the expense no matter when a
 6 utility makes a subsequent base rate case filing. If PWSA is permitted to recover
 7 the full amount in the FPFTY, assuming the multi-year rate plan is not allowed,
 8 this would result in over-recovery of the expense if the Authority does not file
 9 another rate case in one year. Therefore, I recommend PWSA be required to
 10 amortize the expense over 19 months, resulting in a FPFTY allowance of
 11 \$166,241 [(\$263,215/19 months) x 12 months], or a reduction of \$96,974
 12 (\$263,215 - \$166,241).
 13

14 **CUSTOMER ASSISTANCE CHARGE**

15 **Q. PLEASE SUMMARIZE PWSA’S PROPOSED CUSTOMER ASSISTANCE**
 16 **CHARGE.**

17 A. PWSA proposes to implement a Customer Assistance Charge (CAC) beginning in
 18 FY 2025. The CAC would recover discounts provided to customers pursuant to
 19 the Bill Discount Program, operating costs for the PGH2O Cares team, the costs of
 20 PWSA’s Hardship Funding, and past due arrearages forgiven pursuant to PWSA’s

1 Arrearage Forgiveness Program. The charge would be calculated separately but
2 combined with other charges on customer bills. PWSA proposes to reconcile the
3 charge on a semi-annual basis.⁶³

4
5 **Q. WHAT IS THE BASIS FOR PWSA’S PROPOSAL?**

6 A. PWSA states that its cost projections will likely be inaccurate, leading to under-
7 recovery of customer assistance program costs and operations. PWSA witness
8 Julie Mechling further states that the CAC would be a way to avoid either under-
9 recovery or over-recovery, as well as provide greater transparency into the costs
10 ratepayers are recovering.⁶⁴

11
12 **Q. DO YOU AGREE WITH PWSA’S PROPOSAL TO IMPLEMENT A CAC**
13 **BEGINNING IN FY 2025?**

14 A. No. This proposed surcharge is problematic for several reasons. First, while I
15 agree that the cost projections for PWSA’s customer assistance programs will
16 likely prove inaccurate, I disagree that a CAC is the best way to combat this issue.
17 If the Commission agrees with my recommended disallowance of any multi-year
18 rate increases, PWSA would need to file another rate case in order to attempt to
19 implement any such surcharge in the future.

⁶³ PWSA Statement No. 2, pp. 49-50.

⁶⁴ PWSA Statement No. 6, pp. 27-32.

1 Second, although PWSA asserts the surcharge will create greater
2 transparency into the associated costs, it appears to do the opposite. Since the
3 CAC is proposed to be combined with other charges on customer bills, ratepayers
4 will not see the underlying charges and what they represent.

5 Additionally, regarding Commission oversight, the proposed reconciliation
6 of this surcharge would be completed outside the parameters of a base rate case,
7 disrupting the ability of the Commission to review the data in the context of the
8 total impact to ratepayers and with respect to other expenses that may be
9 increasing or decreasing between rate cases, which constitutes single-issue
10 ratemaking. While the witnesses allude to the surcharge having the ability to
11 refund overcharges for expenses above what is included in base rates, it is
12 apparent from Mr. Barca's testimony that the anticipation is that customer
13 assistance costs will continue to increase. With the implementation of this charge
14 not proposed before FY 2025, the expectation is that this charge will simply serve
15 as an opportunity to add new revenues between base rate cases, which further
16 supports my contention that this charge represents single-issue ratemaking and
17 should be rejected. Furthermore, Mr. Barca states in his testimony that PWSA
18 plans to reconcile the charge on a semi-annual basis,⁶⁵ but Ms. Mechling's
19 testimony contradicts that statement, asserting that PWSA proposes to adjust the

⁶⁵ PWSA Statement No. 2, pp. 49-50.

1 CAC on a semi-annual basis but reconcile annually.⁶⁶ This contradiction results in
2 a lack of clarity surrounding the proposed surcharge.

3 Due to the above reasons, I recommend that the implementation of the
4 proposed CAC in FY 2025 be disallowed.

5
6 **Q. ARE THERE OTHER COMMISSION DECISIONS FOR**
7 **WATER/WASTEWATER UTILITIES WHERE THE COMMISSION**
8 **DISAGREED WITH RECONCILABLE RECOVERY OUTSIDE OF BASE**
9 **RATES FOR SUCH A PROGRAM?**

10 A. Yes. In the 2021 Aqua Pennsylvania, Inc. (Aqua) base rate case, the Commission
11 required Aqua to recover such costs via base rates.⁶⁷ In its May 2022 Order, the
12 Commission noted “that the use of a Section 1307(a) reconcilable rider ... is the
13 exception, rather than the rule ...” and “how few times the use of this mechanism
14 has been either legislatively mandated ... or directed by the Commission ...”⁶⁸
15 The Commission agreed with the OCA that “Section 1307(a) of the Code does not
16 authorize the Commission to approve surcharges other than in limited
17 circumstances.”⁶⁹ Specifically, the Commission noted in the May 2022 Order that
18 similar energy riders “that were approved under legislative mandate for the
19 Peoples Companies and other energy companies are not appropriate models upon

⁶⁶ PWSA Statement No. 6, p. 28.

⁶⁷ *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 311-320 (Order entered May 16, 2022) (May 2022 Aqua Order).

⁶⁸ May 2022 Aqua Order, p. 314.

⁶⁹ May 2022 Aqua Order, p. 314.

1 which to base the cost recovery for Aqua’s low-income water programs because
2 there has been no legislative carve-out for water companies such as that which
3 exist for energy companies.”⁷⁰

4
5 **Q. DO YOU BELIEVE SINCE PWSA IS A CASH FLOW FILER FOR**
6 **RATEMAKING PURPOSES THAT RECONCILABLE RECOVERY IS**
7 **APPROPRIATE FOR THE PROPOSED CAC?**

8 A. No. PWSA has presented no convincing rationale for such treatment. And in
9 contradiction to Aqua’s proposal, PWSA does not propose to keep all program
10 costs within the rider but, instead, to use it to adjust for over or under recoveries of
11 the amount included in base rates. As previously discussed, this lacks
12 transparency and represents single-issue ratemaking.

13
14 **Q. IF THE COMMISSION DECIDES TO ALLOW SUCH RECONCILABLE**
15 **RECOVERY, DO YOU HAVE ANY RECOMMENDATIONS?**

16 A. Yes. If the Commission decides to grant permission to use such treatment in this
17 proceeding, PWSA should be required to identify and deduct any related amounts
18 from base rates and include all customer assistance costs within the rider in the
19 manner that the universal service riders operate for energy companies and as was

⁷⁰ May 2022 Aqua Order, pp. 314-315.

1 proposed by Aqua. Further, it should not be combined with any other charge so
2 that transparency and Commission oversight can be maintained.

3

4 **Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

5 A. Yes.

 Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RE-24-D Reference PWSA Volume I, FR-III.1 and the 2024 Cost of Service Study and Rate Design - FR-III.1 Excel file concerning operating expenses by account. Explain in detail any year-over-year increases of \$25,000 and 10% or greater in the following sub-categories of Wages and Salaries Expense for each calendar year from 2020 through 2026 and provide the detailed basis, calculation, and supporting documentation for these expense projections in the FTY, FPFTY, FY 2025 and FY 2026:

- A. Salary and Wages (4001).
- B. OT Premium Pay (4005).
- C. Shift Differential (4010).
- D. Bonus (4025).
- E. Holiday Pay (4030).
- F. Vacation Pay (4035).
- G. Personal Time Pay (4050).

Response:

The two underlying factors that are causing year-over-year increases in the GL accounts listed above is 1) workforce expansion and 2) annual cost of living increases.

PWSA has increased its workforce by approximately 60 employees between 2020 and 2023 with the plans to add an additional 52 positions between the FPFTY and FY 2026. The chart below demonstrates the cost of living increases from 2020 through 2026 by non-union and union employees.

	Actual				Projected		
	FY 2020	FY 2021	FY 2022	FY 2023	FY 2024	FY 2025	FY 2026
Non-Union	3%	3%	3%	3%	3%	3%	5%
PJCBC	3%	3%	3%	3%	3%	3%	5%
AFSCME 2719	3%	2%	0%	4%	3%	3%	5%
AFSCME 2037	3%	3%	3%	3%	3%	3%	5%

Response provided by: Edward Barca, Director of Finance

Date Response provided: June 27, 2023

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Bureau of Investigation and Enforcement (“I&E”)
Set RE-1 to RE-20
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

- Request: I&E-RE-3-D** Reference PWSA Volume I, FR-III.5 concerning payroll and benefits expense, provide the following:
- A. Budgeted and actual total employee counts by month for the calendar years 2020, 2021, 2022, and projected for the FTY, FPFTY, FY 2025, and FY 2026.
 - B. Number of positions that have been eliminated in 2020, 2021, and 2022 and that are expected to be eliminated during the FTY, FPFTY, FY 2025, and FY 2026.
 - C. Number of new employee additions made in 2020, 2021, 2022, and the projected new employee additions in the FTY, FPFTY, FY 2025, and FY 2026.
 - D. Job title and budgeted salary by position regarding the 33 new additions in the FPFTY (PWSA Statement 2, p. 18).
 - E. Number of actual vacant positions by month for the calendar years 2020, 2021, 2022, and in the FTY to date.
 - F. Number of vacant positions projected by month for the FTY, FPFTY, FY 2025, and FY 2026.

Response:

- A. See attached I&E RE-3Da.
- B. No active positions were eliminated in FY 2020, 2021, and 2022 and PWSA does not have plans to eliminate any active positions in FTY, FPFTY, FY 2025, and FY 2026.
- C. There were 13 new employee additions made in 2020, 23 in 2021, 25 in 2022, the headcount is projected remain stable in 2023, increase by 33 in 2024, increase by 19 in 2025, and the remain flat in 2026.
- D. See attachment I&E RE-D-3Dd.
- E. PWSA does not keep records of vacancies per month. PWSA has 102 vacancies at the beginning of 2020, 73 vacancies at the beginning of 2021, 89 vacancies at the beginning of 2022, and 48 at the beginning of 2023.
- F. PWSA does not keep track of vacancies per month. Also, it is difficult for PWSA to project vacant positions per year without knowing the result of this rate case.

Set RE-1 to RE-20
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RE-6-D Reference PWSA Volume I, FR-III.5c concerning payroll expense:

- A. Provide supporting documentation for all pay increases for non-union employees (supervisory/management) indicating effective dates for the FTY, FPFTY, FY 2025, and FY 2026.
- B. Clarify whether any pay increases have been implemented since December 2020 for non-union employees. Include specific dates and dollar amounts of any pay increases since December 2020.

Response:

- A. All non-union employees received a 3% cost of living increase in the FTY. PWSA budgeted a 3% cost of living increase in the FPFTY and FY 2025 and a 5% cost of living increase in FY 2026 for non-union employees.
- B. Yes, PWSA provided cost of living increasing for non-union employees since 2020. The cost of living adjustments are effective January 1 of the following year with the table below showing the increase per year.

	Actual				Budgeted within the 2023 Rate Case

Request: I&E-RE-7-D Reference PWSA Volume I, FR-III.5d concerning increases to salaries and benefits expense, provide the following:

- A. Total annual payroll increases in HTY 2022.
- B. Basis and calculation of HTY, FTY, FPFTY, FY 2025, and FY 2026 increases broken down by salaries and wages, overtime, other compensation, and benefits expense.

Response:

- A. See attachment I&E RE-7D.
- B. See percentage increase assumptions below.

	FY 2020	FY 2021	FY 2022	FY 2023	FY 2024	FY 2025	FY 2026

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Bureau of Investigation and Enforcement (“I&E”)
Set RE Nos. 21-44
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RE-26-D Reference PWSA Volume I, FR-III.1 and the 2024 Cost of Service Study and Rate Design - FR-III.1 Excel file concerning operating expenses by account. Explain in detail any year-over-year increases of \$25,000 and 10% or greater in the following sub-categories of Employee Benefits Expense for each calendar year from 2020 through 2026 and provide the detailed basis, calculation, and supporting documentation for these expense projections in the FTY, FPFTY, FY 2025 and FY 2026:

- A. Medical Health Insurance (4135).
- B. Short Term Disability (4145).
- C. Dental Insurance (4165).
- D. Tuition Reimbursement (4180).
- E. Retirement Benefit (4185).

Response: See below.

- A. Medical Health Insurance (4135) – The increases in FY 2020, FY 2021, and FY 2022 are the result of a combination of increased insurance premiums and staffing. The FTY is based on historical actuals and the FPFTY increase is 13% per PWSA’s agreement with Highmark Health. An increase of 18% is assumed in FY 2025 and 20% in FY 2026. The 2022 health insurance renewal saw all bids with over 20% increases to the premium. PWSA negotiated hard to get the increase well under 20% in the FTY and FPFTY. However, there is not guarantee that this will happen in FY 2025 and FY 2026.
- B. Short Term Disability (4145) – The increases in FY 2020, FY 2021, and FY 2022 are the result of a combination of increased insurance premiums and staffing. The FTY budget is based on historical actuals. The FPFTY, FY 2025, and FY 2026 increase 4% per year as an inflationary factor.
- C. Dental Insurance (4165). - The increases in FY 2020, FY 2021, and FY 2022 are the result of a combination of increased insurance premiums and staffing. The FTY budget is based on historical actuals. The FPFTY, FY 2025, and FY 2026 increase 1% per year as an inflationary factor.
- D. Tuition Reimbursement (4180). – The increases in FY 2020, FY 2021, and FY 2022 are the result of increase employee utilization of PWSA’s tuition benefit. The FTY and FPFTY budget is based on historical actuals. The FY 2025 and FY 2026 increase 4% per year as an inflationary factor.
- E. Retirement Benefit (4185). – The increases in FY 2020, FY 2021, and FY 2022 are the result of increased staffing. The FTY budget is based on historical actuals. The FPFTY, FY 2025, and FY 2026 increase 4% per year as an inflationary factor.

DIRECT OPERATING EXPENSES 51,919,822

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Bureau of Investigation and Enforcement (“I&E”)
Set RE Nos. 21-44
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RE-33-D Reference PWSA Volume I, FR-III.1 and the 2024 Cost of Service Study and Rate Design - FR-III.1 Excel file concerning operating expenses by account. Explain in detail any year-over-year increases of \$25,000 and 10% or greater in the following sub-categories of Operating Contracts Expense for each calendar year from 2020 through 2026 and provide the detailed basis, calculation, and supporting documentation for these expense projections in the FTY, FPFTY, FY 2025 and FY 2026:

- A. Annual Sewer Contract (5305).
- B. Manhole & Point Repair Contract (5343).
- C. Pump & Motor Contract (5344).
- D. Inspection Field (5347).
- E. Landscape (5355).
- F. Meters (5360).
- G. Operating Contract Other (5370).
- H. Radionuclides (5375).
- I. Intr-Gov Proj Panther Hollow (5380).

Response: See below.

- A. Annual Sewer Contract (5305) – The increases in FY 2020, FY 2021, FY 2023, FPFTY, FY 2025, and FY 2026 is related to urgent sewer line brakes. In addition, pricing increases are also driving the increases in FPFTY – FY 2026.
- B. Manhole & Point Repair Contract (5343) – The increases in FTY, FPFTY, FY 2025, and FY 2026 are driven by anticipated pricing increases to continue necessary manhole & point repair work.
- C. Pump & Motor Contract (5344) - The increases in FTY, FPFTY, FY 2025, and FY 2026 are driven by anticipated pricing increases to continue necessary pump and motor repair work.
- D. Inspection Field (5347). - The increases in FY 2020, FY 2021, FY 2022, FTY, FPFTY, FY 2025, and FY 2026 are driven by anticipated pricing increases to continue necessary field inspection work that is associated with repair and maintenance contracts.
- E. Landscape (5355). - The increases in FY 2020, FY 2021, FY 2022, FTY, FPFTY, FY 2025, and FY 2026 are driven by anticipated pricing increases to continue necessary landscaping work.
- F. Meters (5360). – This GL account has been repurposed for flagging work. The increases in the FTY, FPFTY, FY 2025, and FY 2026 are driven by anticipated pricing increases to continue necessary flagging work.

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Bureau of Investigation and Enforcement (“I&E”)
Set RE Nos. 21-44
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

- G. Operating Contract Other (5370). The increases in FY 2020 – FY 2022 and FPFTY – FY 2026 are driven by price increases to continue operating contract work, such as reservoir cleaning and tank cleaning, along with the anticipated work resulting from PWSA’s Wet Weather Consent Decree. The costs included to fund the Wet Weather Consent Decree are \$7,500,000 in the FPFTY, \$9,750,000 in FY 2025, and \$12,675,000 in FY 2026.
- H. Radionuclides (5375). – This GL account has been repurposed for external security guards. The increases in the FTY, FPFTY, FY 2025, and FY 2026 are driven by anticipated pricing increases to continue providing security at both of PWSA’s water treatment plants.
- I. Intr-Gov Proj Panther Hollow (5380). – This GL account has been repurposed for Line Locating services. The increases in the FTY, FPFTY, FY 2025, and FY 2026 are driven by anticipated pricing increases to continue line locating services.

Set RE Nos. 21-44
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RE-36-D Reference PWSA Volume I, FR-III.1 and the 2024 Cost of Service Study and Rate Design - FR-III.1 Excel file concerning operating expenses by account. Explain in detail any year-over-year increases of \$25,000 and 10% or greater in the following sub-categories of Leases and Rents Expense for each calendar year from 2020 through 2026 and provide the detailed basis, calculation, and supporting documentation for these expense projections in the FTY, FPFTY, FY 2025 and FY 2026:

- A. Office Rent (7255).
- B. Pagers (7260).

Response: See below:

- A. Office Rent (7255). – The increases in FY 2022 and FY 2023 are the result of increased rent costs for PWSA’s headquarter location at 1200 Penn Avenue. The increases in the FPFTY, FY 2025, and FY 2026 are attributable to leasing costs for an anticipated new PWSA headquarter location.
- B. Pagers (7260). – This GL account has been repurposed for the portion of parking costs that is covered for employees. The increase in FTY, FPFTY, FY 2025, and FY 2026 reflect increased parking costs and the increased employee headcount.

Response provided by: Edward Barca, Director of Finance

Date Response provided: June 27, 2023

 Set RE-1 to RE-20
 Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

I&E-RE-13-D Reference the PWSA Volume I, FR-III.9 and 2024 Cost of Service Study and Rate Design – FR-III.1 concerning lease and rent expenses, provide the following:

- A. Mathematic reconciliation of leases discussed in FR-III.9 versus 2024 Cost of Service Study and Rate Design – FR-III.1 Leases & Rents line item (line 280).
- B. Dollar amount by individual lease in the FTY, FPFTY, FY 2025, and FY 2026.
- C. Copy of lease agreements identifying the annual lease amounts that support the FTY, FPFTY, FY 2025, and FY 2026 claims.

Response:

A. Based on the assumption this question is referring to FR-III.7 and not FR-III.9. See below for the GL associated with each lease listed in FR-III.7. Note that the Sensus USA, Inc. lease is captured under 7375 (Meter Services) since it is the lease for PWSA’s metering infrastructure.

Lease	GL Account
The Buncher Corporation	7255
Public Parking Authority of Pittsburgh	7260
Pitney Bowes	7210
Sensus USA, Inc.	7375

B. See below.

Lease	GL Account	FTY	FPFTY	FY 2025	FY 2026
The Wilson Group	7210	\$54,522	\$57,901	\$61,487	\$65,290
The Buncher Corporation	7255	\$960,530	-	-	-
New Corporation Headquarter Lease	7255	-	\$1,975,659	\$2,094,199	\$2,219,851
Pitney Bowes	7210	\$3,600	\$3,708	\$3,819	\$3,934
Sensus USA, Inc.	7375	\$666,307	\$686,296	\$706,885	\$728,091
Public Parking	7260	\$60,000	\$63,600	\$67,416	\$71,461

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RE-37-D Reference PWSA Volume I, FR-III.1 and the 2024 Cost of Service Study and Rate Design - FR-III.1 Excel file concerning operating expenses by account. Explain in detail any year-over-year increases of \$25,000 and 10% or greater in the following sub-categories of Professional Services Expense for each calendar year from 2020 through 2026 and provide the detailed basis, calculation, and supporting documentation for these expense projections in the FTY, FPFTY, FY 2025 and FY 2026:

- A. Advertising (7305).
- B. Billing Contract (7315).
- C. Consultants (7323).
- D. Construction Management (7330).
- E. Consulting Engineers (7332).
- F. Misc Serv NonCapital (7335).
- G. Insurance Commercial Property (7348).
- H. Insurance General Liability (7353).
- I. Insurance Officers Director (7359).
- J. Legal (7370).
- K. Professional Services Other (7383).
- L. Water Liens (7390).

Response: See below.

- A. Advertising (7305). – The increases in FY 2021 and FTY are the result of the increase in the number of public bid advertisements for PWSA projects.
- B. Billing Contract (7315). – The increase in FY 2022 was the result of one-time implementation costs for the billing vendor to integrate with SAP.
- C. Consultants (7323). – The increase in FY 2022 and FTY are the result of hiring a consultant to help negotiate the forthcoming Wet Weather Consent Decree and rate case costs.
- D. Construction Management (7330). – The increases in FTY, FPFTY, FY 2025, and FY 2026 are the result of increased costs associated with providing construction management service for PWSA’s operating contracts.
- E. Consulting Engineers (7332). – The increases in FY 2021 and FTY are the result of PWSA’s consulting engineer having to complete a facilities assessment as part of the required consulting engineers annual report.
- F. Misc Serv NonCapital (7335). – There are no increases of \$25,000 or greater than 10%.
- G. Insurance Commercial Property (7348). – The increases in FY 2022, FTY, FY 2025, and FY 2026 are the resulting of an increase in the market rate of insurance and increased assessed value as the result of improvements.

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)

Set RE Nos. 21-44
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

- H. Insurance General Liability (7353). – This GL account has been repurposed for PWSA’s cyber insurance policy. The increases in FY 2020, FY 2021, FY 2022, FTY, FPFTY, FY 2025, and FY 2026 are the result of an increase in the market rate of insurance.
- I. Insurance Officers Director (7359). – The increases in FY 2020, FY 2021, and FY 2022 are the result of an increase in the market rate of insurance.
- J. Legal (7370). – The increases in FY 2020, FY 2021, FTY, FY 2025, and FY 2026 are the result of a combination of legal cost for regulatory compliance, inflation rate for legal services, and rate case expenses.
- K. Professional Services Other (7383). – The increases in FPFTY and FY 2026 are attributable to the PUC Assessment Fee.
- L. Water Liens (7390). – The increase in FY 2021 and FTY are the result of an increase the amount to file a lien and an increase in the number of liens that are filed.

1 **INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Vanessa Okum. My business address is Pennsylvania Public Utility
4 Commission (Commission), Commonwealth Keystone Building, 400 North Street,
5 Harrisburg, PA 17120.

6
7 **Q. ARE YOU THE SAME VANESSA OKUM WHO SUBMITTED DIRECT**
8 **TESTIMONY IN I&E STATEMENT NO. 2 AND I&E EXHIBIT NO. 2?**

9 A. Yes.

10

11 **Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?**

12 A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of
13 the following Pittsburgh Water and Sewer Authority (PWSA or Authority)
14 witnesses:

- 15 • Edward Barca (PWSA Statement No. 2-R) regarding PWSA's operating
16 and maintenance (O&M) expenses, the claimed multi-year rate plan, and
17 proposed Customer Assistance Charge (CAC).
- 18 • Mr. King (PWSA Statement No. 4-R) regarding the Wet Weather Consent
19 Decree.

1 **Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?**

2 A. No. However, I refer to my direct testimony and accompanying exhibit in this
3 surrebuttal testimony (I&E Statement No. 2 and I&E Exhibit No. 2).
4

5 **Q. WHAT CHANGES DID PWSA MAKE TO ITS CLAIMED REVENUE**
6 **INCREASE AND TOTAL O&M EXPENSES IN REBUTTAL**
7 **TESTIMONY?**

8 A. PWSA submitted a revision to its rate case tables showing a slight change in the
9 fully projected future test year (FPFTY) total annual revenue increase request
10 from \$46,507,280 to \$46,506,381. However, PWSA did not make any revisions to
11 its FPFTY gross total operating expenses of \$135,911,272.¹
12

13 **MULTI-YEAR RATE PLAN**

14 **Q. SUMMARIZE YOUR DISCUSSION FROM DIRECT TESTIMONY**
15 **ABOUT THE RELIABILITY AND REASONABLENESS OF PWSA'S**
16 **FPFTY O&M EXPENSE CLAIMS IN THIS PROCEEDING.**

17 A. As discussed in my direct testimony, although overall it appears that PWSA's
18 actual expenses have been very close to its budget amounts in fiscal years (FY)
19 2021 and 2022, the data at the account level and expense category level shows
20 large variances. The number of individual accounts that were significantly over or
21 under budget (defined as at least 10% and \$25,000 variance) increased from 29%

¹ Exhibit WJP-4, Updated rate case tables.

1 in 2020, to 30% in 2021, and 32% in 2022. PWSA has not supplied sufficient
2 explanations to support these variances, raising concerns about the reliability and
3 reasonableness of the future test year (FTY) and FPFTY claims in this proceeding.
4 Coupled with the use of a traditional forecasting method for FY 2025 and FY
5 2026, where unsupported blanket increases are applied to groups of expenses,
6 these concerns have led to my recommended disallowance of the proposed multi-
7 year rate plan.²

8
9 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATION?**

10 A. Yes. PWSA witness Edward Barca disagrees with my comments about the
11 reliability and reasonableness of the FPFTY budgeted claims in this proceeding.

12
13 **Q. SUMMARIZE MR. BARCA'S RESPONSE.**

14 A. Mr. Barca states that the account-level variances are not a reason to reject a multi-
15 year rate plan, but in fact are a basis of support for its reasonableness. He asserts
16 that there is no Commission regulation mandating budget accuracy at the account
17 level as a requirement for a multi-year rate plan, therefore PWSA's accuracy in
18 projecting its operating expenses at the budget level is a significant reason for
19 acceptance of PWSA's projections for FY 2025 and FY 2026.

20 Additionally, Mr. Barca asserts that requiring a utility to show budget
21 accuracy on an account level feels like an argument designed to reject any multi-

² I&E Statement No. 2, pp. 4-6.

1 year rate plan proposed by PWSA or any other utility. He continues that in his
2 vast experience formulating budget projections, no entity can project to the dollar,
3 but rather focuses on accuracy on an overall basis. He concludes that it is unfair to
4 require account-level accuracy for approval of a multi-year rate plan.³

5
6 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA'S COMMENT**
7 **REGARDING THE BUDGETING PROCESS AND REASONABLENESS**
8 **OF THE FPFTY O&M EXPENSE CLAIMS?**

9 A. Budgeting is commonly completed at the account level, and surely PWSA
10 appreciates the value of an account-level budget since its own FPFTY budget uses
11 a zero-based approach at the account level. Accuracy is important on an overall
12 basis, but one cannot claim to be sticking to the plan when costs in one area are
13 significantly over budget, forcing the entity to find cost savings elsewhere. With a
14 multi-year rate plan, there would be no opportunity for adjustments to be made in
15 such a situation where the shifting of expenses in year one will have an ongoing
16 impact on the budget in the later years of the plan.

17 Additionally, Mr. Barca mischaracterizes my statement regarding the multi-
18 year rate plan. I did not state there were any official requirements for approval of
19 a multi-year rate plan, I simply stated that the high level of PWSA's unexplained
20 variances is concerning. Combined with the fact that years two and three of the
21 multi-year rate plan are not analyzed through a zero-based budgeting approach,

³ PWSA Statement No. 2-R, pp. 28-29.

1 but a much less analytical approach where unsupported blanket inflation increases
2 are applied, I recommend rejection of the multi-year rate plan.

3 Finally, Mr. Barca's argument that entities strive for accuracy only at the
4 overall budget level is not categorically true for utilities regulated by the
5 Commission. A relatively accurate account-level budget is essential for evaluation
6 and recommendation for approval of any rates in a base rate case filing, especially
7 when a multi-year rate plan is requested.

8
9 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?**

10 A. No. I continue to recommend disallowance of the multi-year rate plan. For this
11 reason, the adjustments in my surrebuttal testimony below will focus primarily on
12 the FPFTY. If the Commission decides to allow PWSA's proposed multi-year
13 rate plan, then I refer you to my direct testimony regarding my FY 2025 and FY
14 2026 recommendations (I&E Statement No. 2).

15
16 **SUMMARY OF RECOMMENDED ADJUSTMENTS**

17 **Q. PLEASE SUMMARIZE YOUR RECOMMENDED ADJUSTMENTS AS**
18 **SHOWN HEREIN.**

19 A. I recommend O&M expense adjustments for the FPFTY as shown below:

1

	PWSA Updated Claim	I&E Updated Recommended Allowance	I&E Updated Adjustment
Payroll Expense	\$41,932,394	\$34,600,930	(\$7,331,464)
Payroll Tax Expense	\$3,240,779	\$2,674,161	(\$566,618)
Retirement Benefits	\$899,208	\$516,671	(\$382,537)
Operating Contracts Other	\$8,866,242	\$1,366,242	(\$7,500,000)
Office Rent	\$1,975,659	\$916,176	(\$1,059,483)
Legal Expense	\$2,251,857	\$2,153,595	(\$98,262)
Equipment Expense	\$3,411,233	\$1,210,116	(\$2,201,117)
COVID-19 Expense	<u>\$263,215</u>	<u>\$166,241</u>	<u>(\$96,974)</u>
Total O&M Expense Adjustments			<u>(\$19,236,455)</u>

2

3 **Q. SUMMARIZE YOUR RECOMMENDED ALLOCATION OF UPDATED**
4 **EXPENSE ADJUSTMENTS BETWEEN THE WATER, WASTEWATER,**
5 **AND STORMWATER SYSTEMS.**

6 A. I continue to allocate the above O&M expense adjustments using a ratio of
7 66.11% for water, 17.22% for wastewater, and 16.67% for stormwater based on
8 PWSA’s FPFTY 2024 Cost of Service Study and Rate Design as shown in the
9 table below:⁴

⁴ PWSA filing, FPFTY 2024 Cost of Service and Rate Design, RevReq Allocation tab, Column R, lines 25-27.

1

	<u>I&E Updated Adjustment</u>	<u>Water (66.11%)</u>	<u>Wastewater (17.22%)</u>	<u>Stormwater (16.67%)</u>
Payroll Expense	(\$7,331,464)	(\$4,846,831)	(\$1,262,478)	(\$1,222,155)
Payroll Tax Expense	(\$566,618)	(\$374,591)	(\$97,572)	(\$94,455)
Retirement Benefits	(\$382,537)	(\$252,895)	(\$65,873)	(\$63,769)
Operating Contracts Other	(\$7,500,000)	(\$4,958,250)	(\$1,291,500)	(\$1,250,250)
Office Rent	(\$1,059,483)	(\$700,424)	(\$182,443)	(\$176,616)
Legal Expense	(\$98,262)	(\$64,961)	(\$16,921)	(\$16,380)

COVID-19 Expense	(\$96,974)	(\$64,110)	(\$16,699)	(\$16,166)
Total O&M Expense Adjustments	<u>(\$19,236,455)</u>	<u>(\$12,717,220)</u>	<u>(\$3,312,518)</u>	<u>(\$3,206,717)</u>

2

3 **PAYROLL, PAYROLL TAX, AND RETIREMENT BENEFITS EXPENSE**

4 **Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY**
5 **FOR PAYROLL EXPENSE.**

6 A. I recommended an allowance of \$34,600,930 for payroll expense, or a reduction of
7 \$7,331,464 (\$41,932,394 - \$34,600,930) to PWSA’s FPFTY claim. My
8 recommendation for payroll expense used a zero-based budgeting approach by
9 adjusting the historic test year (HTY) payroll expense for projected employee
10 additions and annual cost-of-living increases.⁵

⁵ I&E Statement No. 2, p. 10.

1 **Q. PLEASE SUMMARIZE YOUR RELATED PAYROLL TAX AND**
2 **RETIREMENT BENEFITS EXPENSE ADJUSTMENTS.**

3 A. I recommended an allowance of \$2,674,161 for payroll tax expense, or a reduction
4 of \$566,618 (\$3,240,779 - \$2,674,161) to PWSA's FPFTY claim. This adjustment
5 was based on the corresponding decrease to payroll expense and was calculated by
6 multiplying PWSA's total payroll tax rate by the amount of my payroll expense
7 deduction.⁶

8 I recommended an allowance of \$516,671 for retirement benefits, or a
9 reduction of \$382,537 (\$899,208 - \$516,671) to PWSA's FPFTY claim. This
10 adjustment was also based on the corresponding payroll expense adjustment and
11 was calculated by annualizing the FTY year-to-date amount and applying a year-
12 over-year increase in line with the percentage increase in the I&E adjusted total
13 payroll expense.⁷

14
15 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATION?**

16 A. Yes. PWSA witness Edward Barca disagrees with my recommended payroll
17 expense adjustment and therefore also with my payroll tax and retirement benefits
18 expense adjustments.

⁶ I&E Statement No. 2, pp. 12-14.

⁷ I&E Statement No. 2, pp. 14-16.

1 **Q. SUMMARIZE MR. BARCA’S RESPONSE TO YOUR PAYROLL,**
2 **PAYROLL TAX, AND RETIREMENT BENEFITS EXPENSE**
3 **ADJUSTMENTS.**

4 A. Mr. Barca states that my recommendation for these expenses would result in an
5 FPFTY budget amount that is \$425,776 lower than PWSA’s FTY amount. He
6 asserts that this recommendation does not allow PWSA to: (1) recover increased
7 expenses for additional employees in the FPFTY; (2) fund the nondiscretionary
8 3% cost of living adjustment for union employees; and (3) fund increases in health
9 insurance costs.⁸

10

11 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA’S ASSERTIONS**
12 **REGARDING PAYROLL, PAYROLL TAX, AND RETIREMENT**
13 **BENEFITS EXPENSE.**

14 A. First, I reiterate from my direct testimony that PWSA did not explain the
15 significant increase in budgeted payroll expenses from the HTY to the FTY,
16 considering that headcount remained relatively flat. As shown in the table below,
17 the FTY budget for total payroll and benefits expense was 23% higher than HTY
18 actuals:

19

	HTY Actuals	FTY Budget	% Change
Total Payroll and Benefits	\$37,699,936	\$46,438,518	23% 20

⁸ PWSA Statement No. 2-R, pp. 42-43.

1 Additionally, PWSA’s response to I&E-RE-47 containing year-to-date
 2 actuals⁹ shows that the Authority is on track to underspend the FTY budget by
 3 12%:

	FTY Budget	FTY Annualized Actuals	% Change
Total Payroll and Benefits	\$46,438,518	\$40,775,658	-12%

5 When considering the annualized actual FTY data, my recommendation is
 6 13% above the FTY amount, which is reasonable:

	FTY Annualized Actuals	I&E FPFTY Allowance	% Change
Total Payroll and Benefits	\$40,775,658	\$46,012,742	13%

8 My recommended adjustment is specifically designed to allow PWSA to
 9 recover increased expenses for additional employees and fund a 3-4% cost of
 10 living adjustment. I did not make any recommended adjustments to the budget
 11 regarding health insurance costs.

13 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR**
 14 **PAYROLL EXPENSE, PAYROLL TAX, AND RETIREMENT BENEFITS**
 15 **EXPENSE?**

16 A. No. I continue to recommend an allowance of \$34,600,930 for payroll expense, or
 17 a reduction of \$7,331,464 (\$41,932,394 - \$34,600,930) to PWSA’s FPFTY claim,
 18 \$2,674,161 for payroll tax expense, or a reduction of \$566,618 (\$3,240,779 -

⁹ I&E Exhibit No. 2, Schedule 10, p. 1.

1 \$2,674,161) to PWSA's FPFTY claim, and \$516,671 for retirement benefits, or a
2 reduction of \$382,537 (\$899,208 - \$516,671) to PWSA's FPFTY claim. This
3 results in a total reduction of \$8,280,619 to PWSA's payroll and benefits claim.
4

5 **OPERATING CONTRACTS - OTHER**

6 **Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY**
7 **FOR OPERATING CONTRACTS - OTHER.**

8 A. I recommended an allowance of \$1,366,242 for operating contracts - other or a
9 reduction of \$7,500,000 (\$8,866,242 - \$1,366,242). My recommendation was
10 based on disallowance of the entire amount for the Wet Weather Consent Decree
11 (Decree) due to the speculative nature of PWSA's claim. The Decree is not
12 expected to be finalized until 2024, and no supporting documentation was
13 provided to substantiate PWSA's claim.¹⁰
14

15 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATION?**

16 A. Yes. PWSA witnesses Edward Barca and Barry King both disagree with my
17 recommended adjustment to operating contracts - other.
18

19 **Q. PLEASE SUMMARIZE THE WITNESSES' RESPONSES TO YOUR**
20 **RECOMMENDED ADJUSTMENT.**

21 A. Mr. Barca asserts that there are existing purchase order commitments outstanding

¹⁰ I&E Statement No. 2, pp. 17-18.

1 for wet weather modeling, negotiations, and data gathering that will require
2 payment of \$7.5 million in the FPFTY. He states further that PWSA must incur
3 these costs to properly design the Decree. He continues that not allowing recovery
4 of these costs would hinder PWSA's ability to honor its commitments and raise
5 environmental compliance issues.¹¹

6 Mr. King states that the Decree will result in hundreds of millions of dollars
7 in required improvements, with a significant portion being paid out of the
8 operating budget. He continues that the Decree is the culmination of a series of
9 allegations made by various state and federal government agencies claiming that
10 PWSA is out of compliance with both state and federal environmental laws and
11 that the options for resolving such allegations are: (1) a lawsuit against the
12 Authority resulting in a Consent Order; or (2) a negotiated settlement resulting in a
13 Consent Decree. Mr. King points out that if PWSA is not successful in
14 negotiating a settlement, ratepayers would be required to shoulder litigation costs
15 and civil penalties that would result from litigation, which could exceed the level
16 of penalties in the Decree.

17 Mr. King also points out that PWSA has already committed to \$7.5 million
18 in planning aimed at reducing sewer overflows. He states that upon issuance of
19 the Decree, PWSA will need to begin incurring expenses for action items in FY
20 2024. These action items include development of multiple plans which will
21 require a calibrated and verified hydrologic and hydraulic model, data collection

¹¹ PWSA Statement No. 2-R, p. 45.

1 and analysis, evaluation of alternatives, cost estimates, and a robust stakeholder
2 involvement process.¹²

3
4 **Q. WHAT IS YOUR RESPONSE TO THESE WITNESSES?**

5 A. As discussed in my testimony, the budgeted amount provided with respect to the
6 Wet Weather Consent Decree is speculative in nature. Mr. Barca provided an
7 action plan and a service contract in PWSA Exhibit EB-10. However, this
8 documentation supports neither the amount nor the timing of expenditures. I
9 maintain that the Authority has not provided a breakdown of claimed expenses,
10 relevant calculations, or any other supporting documentation to substantiate its
11 claims relating to the Decree. Simply stating that you are attempting to negotiate a
12 settlement is not enough to support a claim.

13
14 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR**
15 **OPERATING CONTRACTS - OTHER?**

16 A. No. I continue to recommend an allowance of \$1,366,242 for operating contracts -
17 other, or a reduction of \$7,500,000 (\$8,866,242 - \$1,366,242) to PWSA's FPFTY
18 claim.

¹² PWSA Statement No. 4-R, pp. 1-3.

1 **OPERATING CONTRACTS - DRAG BUCKET AND LINE TELEVISIONING**

2 **EXPENSES**

3 **Q. DID YOU MAKE ANY OTHER RECOMMENDATIONS TO OPERATING**
4 **CONTRACTS IN DIRECT TESTIMONY?**

5 A. Yes. I made recommended adjustments for drag bucket and line televising
6 expenses.

7

8 **Q. PLEASE SUMMARIZE THESE ADJUSTMENTS.**

9 A. I recommended disallowance of the entire amount of \$780,372 for the drag bucket
10 claim, as well as the entire \$763,995 claim for line televising. Both accounts
11 increased significantly in the FPFTY, and upon request for documentation of these
12 claimed expenses in I&E-RE-46,¹³ the Authority responded that no expenses were
13 budgeted in these accounts for the FPFTY.¹⁴

14

15 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATION?**

16 A. Yes. PWSA witness Edward Barca disagrees with my recommendations for the
17 drag bucket and line televising claims.

18

19 **Q. PLEASE SUMMARIZE MR. BARCA'S RESPONSE.**

20 A. Mr. Barca points out that both accounts have been repurposed and the budgets
21 were previously located in different accounts. He outlined the prior amounts for

¹³ I&E Exhibit No. 2, Schedule 12.

¹⁴ I&E Statement No. 2, pp. 18-21.

1 each account to show historical costs as compared with the current budget.¹⁵

2

3 **Q. DO YOU ACCEPT THIS EXPLANATION?**

4 A. Yes.

5

6 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?**

7 A. Yes. I withdraw my recommended adjustments to both accounts and accept the
8 full \$780,372 drag bucket claim and \$763,995 for the line televising claim in the
9 FPPTY based on PWSA's explanation.

10

11 **OFFICE RENT EXPENSE**

12 **Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY**
13 **FOR OFFICE RENT EXPENSE.**

14 A. I recommended an allowance of \$916,176, or a reduction of \$1,059,483
15 (\$1,975,659 - \$916,176) for office rent expense. My recommendation was based
16 on a three-year average of actual office rental expense rather than accepting the
17 Authority's claim which was based on an unsupported move to a new location.¹⁶

18

19 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATION?**

20 A. Yes. PWSA witness Edward Barca disagrees with my recommended adjustment
21 for office rent expense.

¹⁵ PWSA Statement No. 2-R, pp. 45-49.

¹⁶ I&E Statement No. 2, pp. 22-23.

1 **Q. SUMMARIZE MR. BARCA’S RESPONSE.**

2 A. Mr. Barca states that sufficient information was provided to support PWSA’s
3 claim for higher rent in the FPFTY. He continues that details are not known at
4 this time, but the ability to find a proper space in the City of Pittsburgh is limited
5 and the Authority must have funds available to act quickly should PWSA find a
6 suitable location.

7 Mr. Barca opines that my adjustment rests on the assumption that PWSA
8 can replace its existing headquarters with a new location for the same amount of
9 rent. He claims that it is unreasonable to only look to past lease expenses since
10 this does not project future lease expenses at a new location.¹⁷

11
12 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA’S CLAIM REGARDING**
13 **OFFICE RENT EXPENSE?**

14 A. PWSA’s FPFTY claim is more than 100% higher than its FTY claim, yet it is clear
15 from Mr. Barca’s testimony that PWSA has not identified a new location for the
16 proposed leasing of a new headquarters. Therefore, PWSA’s claim is purely
17 speculative. The Authority has not provided any data in support of its claim.
18 Consequently, the only solid data to rely on is historical data. My recommended
19 allowance based on historic rental expense is appropriate and reasonable in the
20 absence of information demonstrating a cost basis for a new space, timing of
21 relocation, or a lease that PWSA has not yet pursued.

¹⁷ PWSA Statement No. 2-R, pp. 49-50.

1 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR**
2 **OFFICE RENT EXPENSE?**

3 A. No. I continue to recommend an allowance of \$916,176 for office rent expense, or
4 a reduction of \$1,059,483 (\$1,975,659 - \$916,176) to PWSA's FPFTY claim.
5

6 **LEGAL EXPENSE**

7 **Lobbying Expense:**

8 **Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY**
9 **FOR LEGAL EXPENSE.**

10 A. I recommended an allowance of \$2,153,595, or a reduction of \$98,262
11 (\$2,251,857 - \$2,153,595) in the FPFTY for legal expense. My recommendation
12 was based on disallowance of the entire lobbying expense of \$98,262.¹⁸
13

14 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATION?**

15 A. Yes. PWSA witness Edward Barca disagrees with my recommendation for legal
16 expense.
17

18 **Q. SUMMARIZE MR. BARCA'S RESPONSE.**

19 A. Mr. Barca states that he understands and acknowledges the Commission's general
20 rule with respect to lobbying expenses, but he submits that this claim is reasonable
21 for PWSA as a municipal authority. Mr. Barca also claims that PWSA has an

¹⁸ I&E Statement No. 2, pp. 26-28.

1 obligation to maintain lines of communication with other parts of government.
2 Moreover, he states that PWSA's government relations professionals assist in
3 obtaining information and appropriate funding from PENNVEST, and
4 accordingly, these expenditures are not so much "lobbying" but government
5 relations expense. He continues that since PWSA has no shareholders, the
6 benefits of all lobbying efforts accrue directly to customers. Therefore, Mr. Barca
7 concludes that it is inappropriate to exclude PWSA's claim for lobbying expense
8 in its entirety and that I&E's adjustment should be rejected.

9 Additionally, Mr. Barca asserts that normal regulatory treatment of
10 lobbying expenses is not appropriate for PWSA since it is not an investor-owned
11 utility. He then states that he is informed by counsel that the Commission can
12 waive provisions of the Public Utility Code if such a waiver would be reasonable
13 considering PWSA's special circumstances.¹⁹

14
15 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA'S ASSERTIONS**
16 **REGARDING LOBBYING EXPENSE?**

17 A. As discussed in my direct testimony, I reiterate that the lobbying expense claim of
18 \$98,262 (included in the legal expense claim of \$2,251,857) is not necessary for
19 the utility to provide safe and reliable service; therefore, it should not be funded by
20 ratepayers. As advised by counsel, the provision of 66 Pa. C.S. § 1316 prohibits

¹⁹ PWSA Statement No. 2-R, pp. 74-75.

1 claims for lobbying expense in ratemaking, and PWSA is not exempt from this
2 rule based on its municipal status.

3
4 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR**
5 **PROFESSIONAL SERVICES?**

6 A. No. I continue to recommend an allowance of \$2,153,595 for legal expense, or a
7 reduction of \$98,262 (\$2,251,857 - \$2,153,595) to PWSA's FPFTY claim.

8
9 **Rate Case Expense:**

10 **Q. DID YOU PRESENT ANY OTHER RECOMMENDATIONS REGARDING**
11 **LEGAL EXPENSE IN YOUR DIRECT TESTIMONY?**

12 A. Yes. I made a few recommendations regarding rate case expense, which is
13 partially included in both legal expense and consulting expense.

14
15 **Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS WITH REGARD**
16 **TO RATE CASE EXPENSE.**

17 A. Due to discrepancies in the data between the rate case filing and interrogatory
18 responses, I did not make a numeric adjustment. However, I did recommend that
19 PWSA be required in all future rate case proceedings to account for rate case
20 expense in a separate account to provide the needed transparency around this

1 expense and to establish an appropriate normalized expense for prospective
2 recovery of future rate case activities.²⁰

3
4 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATIONS**
5 **REGARDING RATE CASE EXPENSE?**

6 A. Yes. PWSA witness Edward Barca disagreed with my recommendations.

7
8 **Q. PLEASE SUMMARIZE MR. BARCA'S RESPONSE.**

9 A. Mr. Barca asserts that he does not agree with my statement that PWSA did not
10 properly track rate case expenses. He emphasizes that PWSA requires consultants
11 and external legal staff to indicate rate case expense on invoices to easily track
12 these expenses. Thus, he asserts that it is unnecessary to track these expenses in a
13 separate account since this information is already being captured and can be
14 provided to the Commission.

15 Mr. Barca also states that, as a cash flow company, PWSA cannot be
16 expected to normalize expenses because it must have the full amount available at
17 the time of purchase for any item or service. He asserts that to act as if the
18 Authority can recover these costs over multiple years is not realistic.²¹

19
20 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA'S ASSTERTIONS?**

21 A. First, Mr. Barca misrepresents my statement regarding proper tracking of rate case

²⁰ I&E Statement No. 2, pp. 24-26.

²¹ PWSA Statement No. 2-R, p. 51.

1 expense. I did not claim the Authority did not properly track the expense. I
2 simply stated that there is confusion and a lack of transparency regarding this
3 expense. I would also argue that PWSA's tracking system for this expense is not
4 as clear cut as Mr. Barca claims since the Authority's original filing reported a
5 total FPFTY rate case expense which included non-rate case related amounts in
6 the legal and consulting accounts. Specifically, in Volume I, PWSA reports rate
7 case expense of \$2,565,895 claimed in the FPFTY.²² However, in response to
8 I&E-RE-2-D (part D), PWSA claims only \$550,000 of that total to be related to
9 rate case expenses.²³

10 Additionally, I understand that as a cash flow utility, PWSA pays and
11 accounts for all expenses within the year they are incurred for accounting
12 purposes, but that does not mean PWSA is prohibited from normalizing expenses
13 over intervening periods for ratemaking purposes. As stated in my direct
14 testimony, if PWSA is allowed to include the full rate case expense in the FPFTY,
15 it would continue to collect the full cost of its current rate case filing from
16 ratepayers each year, regardless of how many years may pass until the next rate
17 case filing.

18
19 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?**

20 **A.** No. I continue to recommend a simplified approach to tracking rate case expenses

²² PWSA filing, FR-III.4.

²³ I&E Exhibit No. 2, Schedule 15, p. 2.

1 by distinguishing them in a specific rate case expense account, reporting a clear
2 rate case expense claim in each future rate case filing, and establishing an
3 appropriate normalization of the expense for prospective recovery of future rate
4 case activities.

5
6 **EQUIPMENT EXPENSE**

7 **Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY**
8 **FOR EQUIPMENT EXPENSE.**

9 A. I recommended an allowance of \$1,210,116 for equipment expense, or a reduction
10 of \$2,201,117 (\$3,411,233 - \$1,210,116) to PWSA's FPFTY claim. My
11 recommendation was based on normalizing the cost of each type of equipment
12 over the useful service life of the respective equipment in contrast to PWSA's
13 claim that reflects the entire projected equipment expense in the FPFTY.²⁴

14
15 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATION?**

16 A. Yes. PWSA witness Edward Barca disagrees with my recommended
17 normalization of equipment expense.

18
19 **Q. SUMMARIZE MR. BARCA'S RESPONSE.**

20 A. First, Mr. Barca asserts that as a cash flow utility, PWSA fully pays for all
21 expenses incurred within the year they are incurred and must have the funds

²⁴ I&E Statement No. 2, pp. 29-31.

1 available to do so. Additionally, he asserts that from an accounting and budgeting
2 perspective, normalization is not feasible for PWSA. Moreover, he states that
3 while these items of equipment have useful lives that are longer than one year,
4 PWSA expects to experience the same level of equipment expenditures in each
5 subsequent year. Secondly, Mr. Barca states that I assumed all the expenses
6 within equipment expense are eligible to be capitalized per PWSA's Capital Asset
7 Policy.²⁵

8
9 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA'S ASSERTIONS**
10 **REGARDING EQUIPMENT?**

11 A. First, equipment costs are typically capital expenditures because they are useful
12 for providing service over a period longer than one year and are not consumable or
13 perishable items like inventory or commodities. This fundamental fact does not
14 change for a cash flow utility. Second, from an accounting and budgeting
15 perspective, normalization may not be feasible for PWSA as a cash flow utility;
16 however, for ratemaking purposes, PWSA can claim equipment expense after
17 normalizing it over its useful service life to mitigate an unreasonable impact on
18 rates. Third, the fact that PWSA expects to experience the same level of
19 equipment expenditures in each subsequent year does not mean that PWSA is
20 prohibited from normalizing all such equipment costs for ratemaking purposes. I
21 disagree with Mr. Barca's unsupported statement that PWSA expects to

²⁵ PWSA Statement No. 2, p. 53.

1 experience the same level of equipment expenditures in each subsequent year,
2 when equipment bought in the previous years have longer useful service lives until
3 they are disposed of or removed from service.

4 Considering the above and as discussed in my direct testimony, spreading
5 the cost of equipment over the normal useful life of the equipment for ratemaking
6 purposes is more appropriate and moderates the cost impact on rates.

7 Furthermore, Mr. Barca seems to continue to confuse normalization with
8 amortization in that including a normalized amount of an expense in rates is not
9 done so for the purpose of recovering a historic expenditure but to build a
10 levelized amount into rates to continue to fund future equipment expenditures as
11 those equipment needs occur. Allowing the full amount of any equipment
12 expenditure in an individual rate year, which then remains in rates at that full
13 amount until the equipment is replaced at the end of its useful life, does not result
14 in just and reasonable rates for ratepayers.

15
16 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR**
17 **EQUIPMENT?**

18 A. No. I continue to recommend an allowance of \$1,210,116 for equipment expense,
19 or a reduction of \$2,201,117 (\$3,411,233 - \$1,210,116) to PWSA's FPFTY claim.

1 **COVID-19 EXPENSE**

2 **Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY**
3 **FOR COVID-19 EXPENSE.**

4 A. I recommended an allowance of \$166,241 for COVID-19 expense, or a reduction
5 of \$96,974 (\$263,215 - \$166,241) to PWSA’s FPFTY claim. My recommendation
6 was based on amortization of the full amount over a period consistent with the
7 Authority’s rate case filing frequency.²⁶

8
9 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATION?**

10 A. Yes. PWSA witness Edward Barca disagrees with my recommendation to
11 amortize COVID-19 expense.

12
13 **Q. SUMMARIZE MR. BARCA’S RESPONSE.**

14 A. Mr. Barca states that PWSA voluntarily deferred recovery of COVID-19 expenses
15 in the previous rate case to benefit ratepayers but now is being punished for that
16 decision through my recommendation to recover costs over a period longer than
17 one year. He continues that as a cash flow company, this is untenable.²⁷

18
19 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA’S ASSERTIONS?**

20 A. PWSA’s status as a cash flow company does not prohibit amortization of costs.
21 Failure to amortize such expenses may lead to over-collection and therefore is

²⁶ I&E Statement No. 2, pp. 32-33.

²⁷ PWSA Statement No. 2-R, p. 52.

1 excessive to ratepayers. By amortizing the expense using historic rate case filing
2 frequency, PWSA will be allowed to recover the entire expense over this period.
3 If the Authority is allowed to collect the entire amount each year, ratepayers will
4 continue to overpay in rates until new rates go into effect following a subsequent
5 base rate proceeding. Additionally, Mr. Barca's own argument against
6 normalization where he argues that as a cash flow utility, PWSA must receive
7 reimbursement for the full amount of any expenditure in rates in the year it occurs
8 would deny his own claim for recovery of COVID-19 expenses as the utility does
9 not actually have any out-of-pocket expenses in the test year as this money was
10 spent in a historic period.

11
12 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?**

13 A. No. I continue to recommend an allowance of \$166,241 for COVID-19 expenses,
14 or a reduction of \$96,974 (\$263,215 - \$166,241) to PWSA's FPFTY claim.

15
16 **CUSTOMER ASSISTANCE CHARGE**

17 **Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY**
18 **REGARDING THE PROPOSED CUSTOMER ASSISTANCE CHARGE.**

19 A. I recommended that the proposed implementation of a Customer Assistance
20 Charge (CAC) in FY 2025 be disallowed and stated that since the charge was not
21 being implemented immediately, it should not be considered as part of the instant
22 proceeding but rather a future rate case filing. My recommendation was also

1 based on the lack of transparency of the charge on customer billing, the lack of
2 Commission oversight of the imbedded costs within the context of a rate case
3 filing, and the intended use of this charge to collect additional revenues between
4 rate cases, classifying the charge as single-issue ratemaking.²⁸

5
6 **Q. DID ANY PWSA WITNESS RESPOND TO YOUR RECOMMENDATION?**

7 A. Yes. PWSA witness Edward Barca disagrees with my recommendation.

8
9 **Q. SUMMARIZE MR. BARCA'S RESPONSE.**

10 A. Mr. Barca asserts that PWSA believes the CAC will be beneficial for all affected
11 parties. First, he opines it would benefit customers enrolled in assistance
12 programs by ensuring that the Authority would have the funds to expand and
13 enhance these programs between rate cases. Second, he asserts, it would benefit
14 the remainder of PWSA's customers by ensuring that PWSA would collect only
15 the amount that it expends. Third, and lastly, he says it would benefit the
16 Authority because it ensures that PWSA will receive the cash it needs to fund its
17 assistance programs.²⁹

²⁸ I&E Statement No. 2, pp 34-38.

²⁹ PWSA Statement No. 2-R, p. 38.

1 **Q. DID MR. BARCA COMMENT ON A SIMILAR REQUEST BY ANOTHER**
2 **WATER COMPANY THAT WAS RECENTLY REJECTED BY THE**
3 **COMMISSION?**

4 A. Yes. Mr. Barca opines that the Commission’s decision in the 2021 Aqua
5 Pennsylvania, Inc. proceeding to require the utility to recover such costs in base
6 rates, as referenced in my direct testimony, is not determinative because: (1) the
7 need for recovery of costs for a cash flow company is greater than for a utility
8 regulated on a rate of return/rate base basis; and (2) he is informed by counsel that
9 Chapter 32 of the Public Utility Code contains a provision that permits the
10 Commission to alter or amend any section of the Code to accommodate PWSA’s
11 special circumstances.³⁰

12
13 **Q. WHAT IS YOUR RESPONSE TO MR. BARCA REGARDING THE CAC?**

14 A. I maintain that the CAC lacks transparency, hinders Commission oversight of
15 costs, and constitutes single-issue ratemaking, as stated above and in my direct
16 testimony. I disagree that the Authority’s status as a cash flow company equates
17 to a special circumstance that should prompt the Commission to approve such a
18 charge.

³⁰ PWSA Statement No. 2-R, p. 39.

1 **Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION**
2 **REGARDING THE CAC?**

3 A. No. I continue to recommend that the implementation in FY 2025 of the proposed
4 CAC be denied.

5

6 **Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?**

7 A. Yes.

**I&E Statement No. 3 - Revised
Witness: Ethan H. Cline**

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

PITTSBURGH WATER AND SEWER AUTHORITY

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919

Direct Testimony

of

Ethan H. Cline

Bureau of Investigation and Enforcement

Concerning:

**Stormwater Rates
Multi-Year Rate Plan
Capital Improvement Projects
Unaccounted-for Water
Class Cost of Service Study
Water and Wastewater Rate Structure
Fire Protection Rates
Scale Back of Rates**

SCALE BACK OF RATES 34

SUMMARY OF RECOMMENDATIONS 35

1 **INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Ethan H. Cline. My business address is Pennsylvania Public Utility
4 Commission, 400 North Street, Harrisburg, PA 17120.

5

6 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

7 A. I am employed by the Pennsylvania Public Utility Commission (“Commission”) in
8 the Bureau of Investigation and Enforcement (“I&E”) as a Fixed Utility Valuation
9 Engineer.

10

11 **Q. WHAT IS YOUR EDUCATIONAL AND EMPLOYMENT EXPERIENCE?**

12 A. An outline of my education and employment experience is attached as
13 Appendix A.

14

15 **Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.**

16 A. I&E is responsible for representing the public interest in rate and other
17 proceedings before the Commission. I&E's analysis in this proceeding is based on
18 its responsibility to represent the public interest. This responsibility requires the
19 balancing of the interests of ratepayers, the utility company, and the regulated
20 community as a whole.

1 **Q. WHAT ISSUES DO YOU ADDRESS IN YOUR DIRECT TESTIMONY?**

2 A. I will be addressing Pittsburgh Water and Sewer Authority’s (“PWSA”) class cost
3 of service study and providing a scale back recommendation if the Commission
4 grants less than the full requested increase. I will also be addressing the issues of
5 the proposed the stormwater rates, multi-year rate plan, proposed capital
6 improvement projects, unaccounted-for water, the proposed transition from a
7 usage allowance and minimum charge to a base charge, and fire protection rates.

8
9 **Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?**

10 A. Yes. I&E Exhibit No. 3 contains schedules relating to my testimony.

11

12 **Q. DESCRIBE PWSA’S FILING.**

13 A. PWSA has requested a \$46.8 million overall revenue increase in the Fully
14 Projected Future Test Year (“FPFTY”) ending December 31, 2024. PWSA is also
15 proposing to enact a multi-year rate plan (“MYRP”) with an additional increase of
16 \$45.8 million in the year ended December 31, 2025 (“FY 2025”) and a further
17 increase of \$53.9 million in the year ended December 31, 2026 (“FY 2026”). This
18 results in a total requested increase of \$146.1 million (PWSA St. No. 1, p. 13).

1 **STORMWATER RATES**

2 **Q. DOES PWSA CURRENTLY BILL ITS CUSTOMERS FOR**
3 **STORMWATER SERVICE?**

4 A. Yes. As described on page 3 of PWSA Statement No. 5, PWSA’s stormwater
5 tariff and rates were approved by the Commission and became effective in January
6 2022. Since then, the Company has been charging customers a stormwater rate.

7
8 **Q. DID PWSA PROPOSE TO INCREASE ITS STORMWATER RATES IN**
9 **THE PRESENT PROCEEDING?**

10 A. Yes. PWSA proposed to increase its stormwater rates in the FPPTY based on a
11 cost of service study included as and PWSA Exhibits HJS-1SW through HJS-
12 13SW attached to PWSA Statement No. 7. PWSA is also proposing to increase its
13 stormwater rates in 2025 and 2026 as part of its Multi-Year Rate Plan proposal as
14 discussed on page 31 of PWSA Statement No. 5.

15
16 **Q. HAVE THERE BEEN ANY RECENT COURT RULINGS THAT MAY**
17 **AFFECT PWSA’S STORMWATER RATES?**

18 A. Yes. I am advised by counsel that the Pennsylvania Commonwealth Court
19 recently ruled that charging a stormwater fee constitutes a tax and not a fee¹
20 (“West Chester Order”). I am further advised by counsel that the West Chester

¹ *The Borough of West Chester v. Pennsylvania State System of Higher Education and West Chester University of Pennsylvania of the State System of Higher Education*, 260 M.D. 2018, 291 A3d 455 (Pa. Cmwlth. 2023), *appeal docketed* 9 MAP 2023 (Pa. 2023).

1 Order states that “the Stormwater Charge constitutes a general tax ... because the
2 work funded thereby does not benefit individual properties, but rather, yields a
3 common benefit shared by residents of the Borough generally.”² Finally, counsel
4 has advised me that the West Chester Order has been appealed to the Pennsylvania
5 State Supreme Court and that the results of the West Chester Order has been
6 stayed. Therefore, this case currently does not affect PWSA’s proposals regarding
7 its stormwater fees, but that may change in the future and will need to be
8 addressed at that point.

9
10 **MULTI-YEAR RATE PLAN**

11 **Q. WHAT IS A MULTI-YEAR RATE PLAN?**

12 A. Section 1330 of the Pennsylvania Public Utility Code (“Code”) defines an MYRP
13 as follows:

14 A rate mechanism under which the commission sets base rates
15 and revenue requirements for a multiyear plan period and
16 authorizes periodic changes in base rates, including, but not
17 limited to, adjustments to accounts for inflation and capital
18 investments without the necessity for base rate proceedings
19 during the approved plan period.

20 Act 58 of 2018 added Section 1330 to Chapter 13 of the Code to allow utilities to
21 seek approval of alternative rate making mechanisms, such as an MYRP.

² *West Chester Order*, p. 19.

1 **Q. IS PWSA PROPOSING AN MYRP?**

2 A. Yes. PWSA is proposing a three-year rate increase which would increase
3 revenues by \$46.8 million in the FPFTY (FY 2024), \$45.4 million in FY 2025,
4 and \$53.9 million in FY 2026 (PWSA St. No. 2, p. 44).

5

6 **Q. WHAT SUPPORT DOES PWSA PROVIDE REGARDING ITS PROPOSED**
7 **MYRP?**

8 A. PWSA witness Barca, on pages 45-46 of PWSA Statement No. 2, provided
9 responses to certain questions that the Commission set forth in a Policy Statement
10 after Section 1330, regarding alternative rate mechanisms, was added to the Public
11 Utility Code. Mr. Barca also claimed that an MYRP increases administrative
12 efficiency and reduces costs and stated that “[n]ot knowing what the revenue
13 levels will be for the following year forces PWSA to ‘guess’ what levels to assume
14 when creating” its annual operating and capital budgets (PWSA St. No. 2, p. 47).
15 PWSA witnesses Pickering and Mechling also claimed that a multiyear rate
16 request provides more transparency for customers over the three-year period as to
17 the increases that will be implemented (PWSA St. No. 1, p. 14 and PWSA St. No.
18 6, p. 26). Mr. Smith, on PWSA Statement No. 7, pages 34 and 47, provided a
19 discussion of how MYRPs are implemented in Rhode Island.

20

21 **Q. DO YOU SUPPORT THE PROPOSED MULTI-YEAR RATE PLAN?**

22 A. No. Based on my review of this case, recent history of PWSA’s revenue, and the

1 testimony of other I&E witnesses, the Commission cannot prudently determine
2 that the MYRP PWSA proposed would result in just and reasonable rates in FY
3 2025 and FY 2026.

4
5 **Q. DO ANY OTHER I&E WITNESSES PROVIDE TESTIMONY**
6 **REGARDING THE MYRP?**

7 A. Yes. In I&E Statement No. 1, I&E witness Spadaccio, and I&E Statement No. 2,
8 I&E witness Okum, both provide an additional discussion on this topic.

9
10 **Q. WHAT INFORMATION DID YOU CONSIDER WHEN YOU ASSESSED**
11 **PWSA’S PROPOSAL OF A MULTI-YEAR RATE PLAN?**

12 A. I considered information from several sources to determine whether PWSA’s
13 proposed MYRP is reasonable. Specifically, I considered PWSA’s history and
14 current rate filing, including the associated testimony and data responses. I also
15 considered an article from the National Regulatory Research Institute (“NRRI”)
16 “Multiyear Rate Plans and the Public Interest” by Ken Costello, Report No. 16-08,
17 October 2016 (“Costello Report”). I have attached the Costello Report as I&E
18 Exhibit No. 3, Schedule 1.

19
20 **Q. WHY DID YOU TAKE THE NRRI ARTICLE INTO CONSIDERATION**
21 **DURING YOUR ANALYSIS?**

22 A. As I indicated above, to my knowledge, MYRPs have not been used before in

1 Pennsylvania utility ratemaking. The Costello Report, which has a stated
2 objective of attempting to educate state utility commissions on multiyear rate
3 plans, provides a discussion of the pros and cons that regulators should consider
4 when assessing whether an MYRP is in the public interest. The pros listed in the
5 article include some of the benefits discussed by PWSA's witnesses listed above.
6 The Costello Report also listed the cons, and I will assess which cons presented in
7 the report apply to PWSA's proposal and whether those cons outweigh the pros
8 regarding the public interest. Importantly, the Costello Report presented
9 arguments for and against MYRPs from an unbiased perspective that did not
10 attempt to sway regulators one way or the other.

11
12 **Q. WHY DO YOU BELIEVE THE COSTELLO REPORT PRESENTED**
13 **ARGUMENTS FROM AN UNBIASED PERSPECTIVE?**

14 A. As explained in the Costello Report, NRRI was founded by and continues to be
15 linked to the National Association of Regulatory Utility Commissioners. (I&E Ex.
16 No. 3, Sch. 1, p. ii). Therefore, it primarily serves the interests of state utility
17 commissions, which do not represent any specific biased interest.

18
19 **Q. ARE YOU ASSESSING WHETHER MYRPS IN GENERAL ARE A**
20 **REASONABLE RATEMAKING ALTERNATIVE?**

21 A. No. As I stated above, the ability of a utility to propose an MYRP is in the Code,
22 and it is not subject to dispute. Therefore, I am not assessing whether MYRPs in

1 general are a reasonable ratemaking alternative. I am also not assessing whether
2 PWSA can or cannot propose an MYRP in a future proceeding. Alternative
3 ratemaking proposals must be evaluated on a case-by-case basis, and, as such, my
4 recommendation is that PWSA’s MYRP in the present proceeding must be denied.
5

6 **Q. WHY IS IT IMPORTANT TO CONSIDER PWSA’S HISTORY WHEN**
7 **CONSIDERING ITS PROPOSED MYRP?**

8 A. It is important to consider its history because the MYRP is based on an estimation
9 of data and conditions four years past the current, known information contained in
10 the Historic Test Year (“HTY”). According to the Costello Report, “[c]hecking
11 for the accuracy of past forecasts is essential. Since regulation is a repeated game,
12 regulators can learn about the credibility of past utility forecasts and a utility’s
13 attributes as regulators observes the utility’s actions and performance over time.”
14 (I&E Ex. No. 3, Sch. 1, p. 36). Therefore, the only way to assess the reliability of
15 PWSA’s future estimations for the MYRP is to determine the historical accuracy
16 of PWSA’s previous projections.
17

18 **Q. WHICH OF PWSA’S PREVIOUS PROJECTIONS DID YOU ASSESS**
19 **WHEN CONSIDERING THE MYRP?**

20 A. I assessed the accuracy of PWSA’s capital improvement budget compared to its
21 actual capital improvements from 2019 through 2022.

1 **Q. WERE PWSA’S HISTORICAL CAPITAL IMPROVEMENT BUDGETS AS**
2 **COMPARED TO ITS ACTUAL CAPITAL IMPROVEMENTS**
3 **ACCURATE?**

4 A. No, PWSA’s historical capital improvement budgets were not accurate. In its
5 response to I&E RS-1, attached as I&E Exhibit No. 3, Schedule 2, PWSA
6 provided a spreadsheet that shows a comparison of its budgeted capital
7 improvement projects versus its actual capital improvements for the years 2019
8 through 2022 broken down by the following categories: Water Treatment Plant,
9 Water Pumping and Storage, Water Distribution, and Wastewater System. As
10 shown in that response, during the four years in question PWSA only managed to
11 meet or exceed its capital budget for Water Treatment Plant and Wastewater
12 System in FY 2019 and Water Distribution in FY 2021. I&E Exhibit No. 3,
13 Schedule 3, column M shows that on average over the four-year period PWSA
14 underperformed its budget by approximately \$54,794,440. This large level of
15 inaccuracy in projecting its capital improvements does not support PWSA’s
16 MYRP.

17
18 **Q. DOES PWSA HAVE A HISTORY OF NOT MEETING ITS PROPOSED**
19 **BUDGETS EVEN WITHOUT THE RECENT PROBLEMS OF THE**
20 **PANDEMIC AND INFLATION?**

21 A. Yes. PWSA’s historic problems with meeting its proposed budgets were

1 addressed by I&E witnesses in PWSA's rate cases in both 2020 and 2021 (R-
2 2020-3017951 I&E Statement No. 2 and R-2021-3024773 I&E Statement No. 2).

3
4 **Q. HOW DID PWSA WITNESS BARCA SUPPORT THE PROPOSED MYRP?**

5 A. PWSA witness Barca, on pages 45-46 of PWSA Statement No. 2, provided
6 responses to certain questions that the Commission set forth in a Policy Statement
7 after Section 1330, regarding alternative rate mechanisms, was added to the Public
8 Utility Code.

9
10 **Q. DO YOU WISH TO ADDRESS MR. BARCA'S RESPONSES TO THE**
11 **COMMISSION'S QUESTIONS?**

12 A. Yes. Specifically, I will address Mr. Barca's responses to the following questions:
13 1) How the ratemaking mechanism and rate design align with cost causation
14 principles as to both fixed and variable costs.
15 3) Whether the ratemaking mechanism and rate design reflect the level of
16 demand associated with the customer's anticipated consumption levels.
17 12) Whether the alternative ratemaking mechanism and rate design include
18 appropriate consumer protections.
19

20 **Q. HOW DID MR. BARCA RESPOND TO QUESTION 1?**

21 A. Mr. Barca, on page 45 of PWSA Statement No. 2, stated the following in response
22 to question 1:

23 One of the principal benefits of a multi-year rate plan is that it
24 permits a better alignment of fixed and variable costs with
25 revenues. Rates based upon a static test year – even a fully
26 projected future test year – will necessarily diverge from the
27 costs and revenues actually experienced by the utility in

1 subsequent years when the rate award is still in place.
2 Determinations of revenues and expenses in the rate case may
3 be higher or lower than the levels subsequently experienced.
4 A multi-year filing permits a better alignment with the levels
5 of expenses and revenues that are reasonably expected to be
6 experienced in the years following the fully projected future
7 test year.
8

9 **Q. DO YOU AGREE WITH MR. BARCA’S RESPONSE TO QUESTION 1?**

10 A. No. Mr. Barca’s claim that “one of the principal benefits” of a multi-year rate
11 plan is that it permits a better alignment of fixed and variable costs with revenues
12 is not true in the case of PWSA’s proposal. This is because PWSA did not
13 specifically project fixed and variable costs through the two extra years of the
14 multi-year rate plan. Instead, as stated in response to OCA VI-31, attached as I&E
15 Exhibit No. 3, Schedule 4, PWSA “utilized historical actuals and a 6% inflationary
16 factor to develop the revenue requirements in FY 2025 and FY 2026.”
17

18 **Q. HOW DID MR. BARCA RESPOND TO QUESTION 3?**

19 A. Mr. Barca, in response to question 3 stated “[a] multi-year rate plan permits a better
20 alignment with the customer’s anticipated consumption level.” (PWSA St. No. 2,
21 p. 45).
22

23 **Q. DO YOU AGREE WITH MR. BARCA’S RESPONSE TO QUESTION 3?**

24 A. No. Mr. Barca’s claim that a multi-year rate plan permits a better alignment with
25 the customer’s anticipated consumption level only applies in this case to FY 2025

1 because the consumption levels remain the same in FY 2026 for all customers as
2 they were in FY 2025, as shown on PWSA Exhibit HJS-18W and PWSA Exhibit
3 HJS-17WW.

4
5 **Q. HOW DID MR. BARCA RESPOND TO QUESTION 12?**

6 A. Mr. Barca, in response to question 12 stated “[t]he revenue requirement in each
7 year of the multi-year rate plan will be set after an examination of PWSA’s
8 projected revenues, expenses and cash needs for those years. Accordingly,
9 customers will be assured that the rate increases placed into effect will be just and
10 reasonable. If actual costs turn out to be less than projected those revenues will be
11 used to fund future operations and investment.” (PWSA St. No. 2, p. 45).

12
13 **Q. DO YOU AGREE WITH MR. BARCA’S RESPONSE TO QUESTION 12?**

14 A. No. What Mr. Barca described in his response to question 12 is in no way related
15 to consumer protections. Whether or not revenues will be used to fund future
16 operations and investments is immaterial to customers whose bills will not change
17 despite PWSA’s projected costs being incorrect. In fact, Mr. Barca’s statement
18 that PWSA will just use any excess revenues to fund other requirements reflects
19 PWSA’s own uncertainty in its projections as I specifically pointed out as a
20 concern in my review of PWSA’s budgeted versus actual capital spending above.

1 **Q. DID MR. BARCA INCLUDE ANY OTHER CLAIMS IN HIS DIRECT**
2 **TESTIMONY THAT YOU WOULD LIKE TO ADDRESS REGARDING**
3 **THE MYRP?**

4 A. Yes. I would like to address Mr. Barca’s claim on page 47 of PWSA Statement
5 No. 2 that PWSA does not know what its revenue levels are on a yearly basis and
6 that this causes PWSA to be in a “state of uncertainty until rates are finalized.”
7 Specifically, it is unclear why PWSA would not know what its revenue levels are
8 on a yearly basis, and I am unsure what Mr. Barca means by “until rates are
9 finalized.”

10
11 **Q. WHY IS IT UNCLEAR WHY PWSA WOULD NOT KNOW WHAT ITS**
12 **REVENUE LEVELS ARE ON A YEARLY BASIS?**

13 A. Revenues are a function of number of customers, usage, and rates. As shown on
14 PWSA Filing Requirement II.9 historically PWSA’s overall number of customers
15 and usage has largely remained consistent since 2020 and PWSA has projected
16 that will continue in 2024. Furthermore, since the only reason that rates will
17 change for regulated utilities, barring changes to adjustable riders, are through rate
18 cases filed with the Commission, the only reason why PWSA would not know
19 what its revenue levels should be on a yearly basis would be if its projections of
20 usage and number of customers were wrong. If this were the case, extending those
21 projections an additional four years beyond actual data contained in the HTY by

1 implementing a multi-year rate plan would not help PWSA be more sure of its
2 revenues on an annual basis.

3
4 **Q. WHY ARE YOU UNSURE OF THE MEANING BEHIND MR. BARCA’S**
5 **STATEMENT THAT PWSA IS IN A STATE OF UNCERTAINTY “UNTIL**
6 **RATES ARE FINALIZED?”**

7 A. As I stated above, the only reason rates will change for regulated utilities are
8 through rate cases filed with the Commission. During those Commission
9 proceedings the effective date and final rates can generally be at issue, but that
10 uncertainty would only last through the timing of the base rate case and should
11 only affect PWSA’s planning for one year. Rates would then remain the same
12 until the time of the next base rate case. The level of uncertainty claimed by Mr.
13 Barca is concerning for a utility that is requesting an MYRP.

14
15 **Q. PLEASE ADDRESS THE STATEMENT MADE BY PWSA WITNESSES**
16 **PICKERING AND MECHLING REGARDING THE MYRP PROVIDING**
17 **MORE TRANSPARENCY TO CUSTOMERS?**

18 A. The statement made by PWSA witnesses Pickering and Mechling that an MYRP
19 provides more transparency for customers over the three-year period as to the
20 increases that will be implemented is misleading. An MYRP does not add any
21 additional transparency for customers as to rate increases that will be
22 implemented. Customers of PUC regulated utilities are generally provided notice

1 of rate increases before they go into effect. Adding additional annual increases to
2 the notice does not add or detract from transparency. Nor does transparency
3 assure any level of justness and reasonableness.

4
5 **Q. PLEASE SUMMARIZE PWSA WITNESS SMITH'S EXPERIENCE OF**
6 **PREPARING MYRPS FOR OTHER JURISDICTIONS.**

7 A. On page 5 of PWSA Statement No. 7, Mr. Smith stated that he has prepared multi-
8 year filings for two municipal regulated utilities in Rhode Island. First was a four-
9 year plan filed in April of 2011 and the second was a two-year rate plan filed in
10 February 2019.

11
12 **Q. WHAT ARE THE DIFFERENCES BETWEEN FILING AN MYRP IN**
13 **RHODE ISLAND VERSUS PENNSYLVANIA?**

14 A. The first difference between the two jurisdictions is that, as PWSA identified in its
15 response to I&E RS-3, Rhode Island bases its first rate year on an HTY and the Pa
16 PUC generally bases the first year of new rates on an FPPTY (I&E Ex. No. 3, Sch.
17 5). The second difference is that Rhode Island, according to Mr. Smith, approves
18 rates for the first year and grants tentative approval for each of the following years
19 and, prior to each step of the multi-year plan, utilities must submit a compliance
20 filing at least 90 days prior to the proposed effective date of the new rates (PWSA
21 St. No. 7, pp. 5-6).

1 **Q. WHY IS IT NOTABLE THAT RHODE ISLAND BASES ITS FIRST RATE**
2 **YEAR ON A HTY RATHER THAN AN FPFTY?**

3 A. The examples that Mr. Smith gave of the MYRP filings that he has taken part in
4 are notable because the first, four-year rate plan would be approximately
5 equivalent to an MYRP in Pennsylvania that extends one year past the FPFTY
6 while the second, two-year rate plan would be equivalent to an FTY filing.
7 Therefore, Mr. Smith has not been involved in a filing that has extended four full
8 years (future test year, FPFTY, plus two additional rate years) beyond any known
9 actual data. Generally speaking, projections can become less accurate the further
10 removed they are from actual data.

11

12 **Q. WHY IS RHODE ISLAND'S 90-DAY COMPLIANCE FILING**
13 **REQUIREMENT IMPORTANT?**

14 A. The compliance filing requirement 90 days before each rate year goes into effect
15 distinguishes Rhode Island from Pennsylvania and is important because it provides
16 Rhode Island regulators an opportunity to check the projections in costs versus
17 recent, actual data and make adjustments to rates that would ensure customer rates
18 remain just and reasonable for both the utility and its customers.

1 **Q. IS PWSA PROPOSING TO PROVIDE COMPLIANCE FILINGS PRIOR**
2 **TO THE EFFECTIVE DATE OF EACH OF ITS PROPOSED RATE**
3 **YEARS?**

4 A. No. PWSA stated in its response to I&E RS-2 that it is not proposing to file
5 compliance filings 90 days prior to the rate increases in 2025 and 2026. While
6 PWSA stated that it is willing to have discussions regarding this process or other
7 alternatives, it is not proposing to enact this protection at this time. (I&E Ex. No.
8 3, Sch. 6).

9
10 **Q. ARE THERE ANY OUTSIDE FACTORS THAT WILL AFFECT THE**
11 **ABILITY OF PWSA WASTEWATER CUSTOMERS TO BE AWARE OF**
12 **THE CHANGES TO RATES THAT WILL BE IMPLEMENTED OVER**
13 **THE NEXT SEVERAL YEARS?**

14 A. As I discussed above, PWSA's ability to charge stormwater rates has been
15 changed due to the recent ruling of the Commonwealth Court in the West Chester
16 Order. I have been advised by counsel that this ruling has been appealed to the
17 Supreme Court of Pennsylvania. Therefore, the ability for PWSA to charge a
18 stormwater fee remains undecided until that appeal is decided.

1 **Q. EVEN IF THE STORMWATER ISSUE YOU RAISE ABOVE WERE NOT**
2 **AN ISSUE, DO YOU GENERALLY AGREE THAT HAVING MORE**
3 **TRANSPARENCY IS JUSTIFICATION FOR AN MYRP?**

4 A. No. As I explained above, and I&E witnesses Spadaccio and Okum explain in
5 their direct testimonies, several of the assumptions embedded in PWSA's MYRP
6 may be inaccurate. For these reasons, while the MYRP may result in predictable
7 rates, predictability will not mean much if the rates produced are not just,
8 reasonable, and sufficient to enable PWSA to provide safe and effective service.

9
10 **Q. BASED ON THE INFORMATION YOU HAVE REVIEWED; CAN THE**
11 **COMMISSION RELIABLY DETERMINE THAT THE RATES**
12 **PROPOSED IN THE MYRP WOULD BE JUST AND REASONABLE?**

13 A. No. As I discussed above, and including the arguments set forth by I&E witnesses
14 Spadaccio in I&E Statement No. 1 and Okum in I&E Statement No. 2, the
15 Commission cannot reliably determine that PWSA's proposed rates in FY 2025
16 and FY 2026 would be just and reasonable. The projections are too far away with
17 too little information, with estimations that are too unreliable to create rates that
18 are reliably just and reasonable. Further, the historical data provided by PWSA
19 shows that their past attempts at budgeting have been subpar. Therefore, I
20 recommend the Commission deny in full the proposed revenue increases for FY
21 2025 and FY 2026.

1 **CAPITAL IMPROVEMENT PROJECTS**

2 **Q. WHAT LEVEL OF CAPITAL IMPROVEMENTS IS PWSA PROJECTING**
3 **FOR THE FPFTY?**

4 A. As shown on Figure 4 on page 7 of PWSA Statement No. 4, PWSA is projecting a
5 total capital requirement in the FPFTY of \$349,222,497. This total capital
6 requirement amount is broken out into \$26,885,665 for Water Treatment Plant,
7 \$115,127,475 for Water Pumping and Storage, \$125,439,446 for Water
8 Distribution, \$31,442,487 for Wastewater System, \$34,827,423 for Stormwater,
9 and \$15,500,000 for Miscellaneous.

10

11 **Q. DO YOU AGREE WITH THE LEVEL OF CAPITAL IMPROVEMENT**
12 **PROJECTS THAT PWSA IS PROJECTING FOR ITS FPFTY?**

13 A. No. As I discussed above, PWSA has shown a historic tendency to fall short of
14 meeting the capital budget that it sets on an annual basis. PWSA’s response to
15 I&E RS-1 shows that, on average, PWSA has fallen approximately 35% short of
16 its budget projections on a total basis (I&E Ex. No. 3, Sch. 3). This shortfall in
17 completing capital projects is significant because, as a cash flow utility using an
18 FPFTY, PWSA recovers the cost of its projected capital improvement projects
19 through customer rates rather than the costs of projects actually completed.
20 Furthermore, while Mr. Barca stated on page 46 of PWSA Statement No. 2 in his
21 discussion of the MYRP that “[i]f actual costs turn out to be less than projected
22 those revenues will be used to fund future operations and investment,” PWSA’s

1 historical actual capital improvements show that when its capital improvement
2 budget is not met in one year, that does not necessarily translate to additional
3 projects being completed in the next year. Therefore, I believe a more
4 conservative projection of capital improvement projects is warranted.

5
6 **Q. WHAT DO YOU RECOMMEND REGARDING PWSA'S CAPITAL**
7 **IMPROVEMENT PROJECTIONS IN THE FPFTY?**

8 A. I recommend that PWSA's proposed increase to its capital budget in the FPFTY
9 be reduced by \$32,625,303 from \$42,688,673 to \$10,063,371.

10
11 **Q. HOW DID YOU DETERMINE YOUR RECOMMENDED REDUCTION IN**
12 **PWSA'S CAPITAL BUDGET IN THE FPFTY?**

13 A. As shown on I&E Exhibit No. 3, Schedule 3, lines 6-11, I first determined
14 PWSA's proposed capital budget increases for the FPFTY by subtracting the FY
15 2024 budget from the FY 2023 budget. I then determined I&E's adjustment by
16 multiplying the water treatment plant increase by 25% and the water pumping and
17 storage increase by 50%. Finally, I subtracted those adjustments from PWSA's
18 proposed increases to determine I&E's recommended increase.

1 **Q. WHY DID YOU RECOMMEND THE WATER TREATMENT PLANT**
2 **INCREASE BE REDUCED BY 25% AND THE WATER PUMPING AND**
3 **STORAGE PROJECTION BE REDUCED BY 50%?**

4 A. As shown on I&E Exhibit No. 3, Schedule 3, the average difference between the
5 budgeted and actual amounts for the capital improvement for water treatment plant
6 is approximately 37% and the average difference between the budgeted and actual
7 amounts for the capital improvement for water pumping and storage is
8 approximately 75%. Therefore, in order to recognize both PWSA's need for
9 improvements in its system as well as PWSA's history of not completing the full
10 amount of capital projects that are budgeted, I made a downward adjustment of
11 25% for the water treatment plant budget increase and a downward adjustment of
12 50% of the water pumping and storage system budget increase.

13
14 **Q. WHY DID YOU NOT RECOMMEND REDUCING THE PROPOSED**
15 **INCREASE BY THE FULL 37% AND 50% DESCRIBED ABOVE?**

16 A. I selected to reduce the proposed capital budget increases for the water treatment
17 plant and water pumping and storage by 25% and 50% rather than the full 37%
18 and 75%, respectively, in recognition of PWSA's ongoing capital improvement
19 needs and to recognize possible capital improvement impacts related to the
20 pandemic and supply issues. Therefore, despite evidence that would support a
21 larger adjustment, my recommendation is both moderate and reasonable.

1 **Q. WHY DID YOU NOT RECOMMEND AN ADJUSTMENT FOR THE**
2 **WATER DISTRIBUTION SYSTEM AND THE WASTEWATER /**
3 **STORMWATER SYSTEMS?**

4 A. I did not recommend an adjustment for the water distribution system because the
5 average difference between budget and actual for those projects was just 11%.
6 Therefore, it is more likely that PWSA will be able to meet its FPFTY projections
7 for the water distribution system. I did not recommend an adjustment to the
8 wastewater / stormwater systems because PWSA is proposing a reduction in that
9 budget, as shown on I&E Exhibit No. 3, Schedule 3, column C, and this budget
10 could further be impacted by the ultimate impact of the West Chester Order
11 discussed previously.

12
13 **Q. SHOULD THERE BE ANY FURTHER ADJUSTMENTS MADE AS A**
14 **RESULT OF YOUR RECOMMENDED REDUCTION IN CAPITAL**
15 **IMPROVEMENT PROJECTS?**

16 A. Yes. There should be a commensurate reduction in depreciation expense that
17 would occur as a result of my adjustment to the proposed capital improvement
18 projects. However, based on the information provided by PWSA to date, I am
19 unable to calculate that adjustment. I am currently waiting for a response to
20 recently served discovery that will provide this information.

1 **UNACCOUNTED FOR WATER**

2 **Q. WHAT IS UNACCOUNTED FOR WATER?**

3 A. The Commission’s definition of unaccounted-for water is as follows:

4 *PUC v. Total Environmental Solutions, Inc.*, Docket No. R-
5 00072493, et al., Opinion and Order entered July 30, 2008;
6 2008 Pa. PUC LEXIS 1227: Unaccounted-for-water is the
7 difference between the total system output and the amount of
8 metered water that is billed, plus an estimate used for fire
9 service, testing, main flushing and company use. Unaccounted-
10 for-water is commonly caused by under registration of meters,
11 system leaks, theft, and natural losses. Although the
12 Commission permits a reasonable amount of unaccounted-for-
13 water, its policy statement on water conservation cautions that
14 it has found levels above 20% to be excessive. 52 Pa Code
15 §65.20(4). *See also Pennsylvania Public Utility Commission v.*
16 *Dauphin Consolidated Water Supply Company*, 55 Pa.P.U.C.
17 202 (1981) (Unaccounted-for water is water that is acquired,
18 goes into the distribution plant and never reaches a customer
19 meter).
20

21 **Q. WHAT IS PWSA’S MOST RECENT LEVEL OF UNACCOUNTED-FOR**
22 **WATER?**

23 A. In its response to OCA V-3, PWSA identified its unaccounted-for water level in
24 2021 as 42.4% and 2022 as 53.0% (I&E Ex. No. 3, Sch. 7). These levels of
25 unaccounted-for water are extremely concerning.
26

27 **Q. ARE YOU RECOMMENDING AN ADJUSTMENT AS A RESULT OF**
28 **PWSA’S DISTURBING UNACCOUNTED-FOR WATER LEVELS?**

29 A. Not at this time. However, I would like to put PWSA on notice that an adjustment
30 to certain expenses, such as purchased power and chemicals, will be likely in the

1 next base rate case if progress is not shown in reducing the unaccounted-for water
2 levels.

3
4 **CLASS COST OF SERVICE STUDY**

5 **Q. WHAT IS A CLASS COST OF SERVICE STUDY?**

6 A. A Class Cost of Service Study (“CCOSS”) is an analysis of costs that allocates or
7 assigns to each customer or rate class its proportionate share of a company’s total
8 cost of service (i.e., the company’s total revenue requirement). The results of
9 these studies can be utilized to determine the relative cost of service for each class
10 and help determine the individual class revenue requirements and, to the extent a
11 particular class is above or below the system average rate of return, show the
12 subsidy each class receives or conversely the additional revenues that class or
13 classes contribute to a company’s overall revenues.

14
15 **Q. DID PWSA PROVIDE A CLASS COST OF SERVICE STUDY IN ITS**
16 **BASE RATE FILING?**

17 A. Yes. PWSA provided a CCOSS in PWSA Exhibits HJS-1 and HJS-2 HJS-1W
18 through HJS-25W, HJS-1WW through HJS-24WW and HJS-1SW through HJS-
19 13SW to support its proposed revenue requirement and cost allocations for the
20 water, wastewater, and stormwater systems. The CCOSS is described in PWSA
21 Statement No. 7.

1 **Q. WHAT METHODOLOGY DID PWSA USE TO DEVELOP ITS CCOSS?**

2 A. As stated on page 18 of PWSA Statement No. 7, PWSA used the Base/Extra
3 Capacity cost allocation methodology to determine its water division allocations.
4 PWSA witness Smith described, on page 34 of PWSA Statement No. 7, the three
5 steps that PWSA uses to allocate wastewater conveyance costs: 1) assigning costs
6 to functional categories; 2) assigning the costs from each functional category to
7 cost categories; and 3) allocating the costs from each cost category to customer
8 classes based on customer class demand patterns.

9

10 **Q. IS THE BASE/EXTRA CAPACITY A REASONABLE METHODOLOGY**
11 **TO ALLOCATE COSTS IN THIS PROCEEDING?**

12 A. Yes. In general, PWSA's proposal to use the Base/Extra Capacity methodology to
13 develop its CCOSS model is reasonable.

14

15 **Q. DID PWSA AGREE TO ADDRESS ADDITIONAL ISSUES AS PART OF**
16 **THE SETTLEMENT OF ITS LAST BASE RATE CASE?**

17 A. Yes. As noted by witness Harold Smith on page 7 of PWSA Statement No. 7, part
18 of the resolution of the most recent PWSA base rate case (Docket Nos. R-2021-
19 3024773, R-2021-3024774 and R-2021-3024779) was that PWSA would consider
20 the removal of minimum usage allowances.

1 **Q. DID PWSA ADDRESS THE REMOVAL OF MINIMUM USAGE**
2 **ALLOWANCES?**

3 A. Yes. PWSA witnesses Smith and Mechling indicated that PWSA is proposing to
4 eliminate the minimum usage allowance and introduce two new reconcilable
5 charges for the rates proposed for Fiscal Year (“FY”) 2025, which is the year after
6 the FPFTY (PWSA St. No. 7, p. 29, PWSA St. No. 6, pp. 24-25). I will address
7 the proposed elimination of the minimum usage allowance below.

8

9 **WATER AND WASTEWATER RATE STRUCTURE**

10 **Q. WHAT RATE STRUCTURE IS PWSA PROPOSING IN THIS**
11 **PROCEEDING FOR WATER AND WASTEWATER CUSTOMERS?**

12 A. PWSA’s rate structure for water and wastewater were initially presented on
13 PWSA Exhibit Nos. HJS-13W and HJS-11WW. The water and wastewater rates
14 each include a minimum charge determined by meter size and a usage rate that
15 varies based on customer class. The minimum charge includes a water or
16 wastewater allowance that is based upon the size of the meter or connection.
17 (PWSA St. No. 7, pp. 28, 41).

18

19 **Q. IS PWSA PROPOSING TO MAKE CHANGES TO ITS EXISTING RATE**
20 **STRUCTURE?**

21 A. Yes. PWSA is proposing to eliminate the minimum allowance and introduce two
22 new reconcilable charges for the rates proposed for the year that begins when the

1 FPPTY ends, or FY 2025 (PWSA St. No. 7, p. 29, 41). PWSA is proposing to
2 charge a Base Charge to the water and wastewater customers that contains the
3 same components as the previous minimum charge (Billing component,
4 Meters/Services component, and adjustments) while leaving out any usage
5 component (PWSA St. No. 7, p. 47).

6
7 **Q. WHAT ADJUSTMENTS DID PWSA INCLUDE IN ITS BASE CHARGE**
8 **CALCULATION?**

9 A. As shown on PWSA HJS-21W, the adjustments for Water customers include
10 additions for public fire and readiness-to-serve and a reduction for CAP-BDP for
11 those specific residential customers. As shown on PWSA HJS-21WW, the
12 adjustments for Wastewater customers include only an addition for readiness-to-
13 serve (“RTS”) and a reduction for CAP-BDP for the applicable customers.

14
15 **Q. HOW DOES PWSA CALCULATE ITS RTS ADJUSTMENT?**

16 A. The RTS adjustment for the water base charge is 10% of PWSA’s debt service
17 cost allocated to water and for the wastewater base charge is 10% of PWSA’s debt
18 service cost allocated to wastewater (PWSA St. No. 7, pp. 30, 42).

1 **Q. DO YOU AGREE WITH PWSA INCLUDING THE RTS ADJUSTMENT IN**
2 **ITS CALCULATIONS OF THE BASE CHARGE FOR WATER AND**
3 **WASTEWATER?**

4 A. No. I do not agree with PWSA including the RTS adjustment in its calculations of
5 the base charge for water and wastewater.

6

7 **Q. WHY DO YOU NOT AGREE WITH PWSA INCLUDING THE RTS**
8 **ADJUSTMENT IN ITS CALCULATIONS OF THE BASE CHARGE FOR**
9 **WATER AND WASTEWATER?**

10 A. I do not agree with the proposal to include the RTS adjustment in the calculation
11 for the water and wastewater base charges because the RTS does not meet the
12 standards of what costs should be included in a fixed monthly charge.

13

14 **Q. WHAT COSTS SHOULD BE INCLUDED WHEN DETERMINING A**
15 **FIXED MONTHLY CHARGE?**

16 A. A customer cost analysis should include the cost of meters, meter installation,
17 services, billing, and certain Operations and Maintenance expenses, and exclude
18 the cost of mains, or any other upstream plant such as filtration or storage.

1 **Q. IS THERE AN EXAMPLE OF ANOTHER CASH FLOW UTILITY THAT**
2 **DETERMINES ITS PROPOSED CUSTOMER CHARGES THROUGH**
3 **THE USE OF A CUSTOMER COST ANALYSIS?**

4 A. Yes. PGW, a cash flow natural gas distribution company located in the
5 Philadelphia region, regularly uses a customer cost analysis to assist in
6 determining its proposed customer charge. I have included, as I&E Exhibit No. 3,
7 Schedule 8, the customer cost analysis submitted by PGW in its most recent base
8 rate case at Docket No. R-2023-3037933 PGW Exhibit CEH-1, Schedule G.

9
10 **Q. DOES PWSA’S RTS INCLUDE COSTS THAT SHOULD NOT BE**
11 **INCLUDED IN A FIXED MONTHLY CHARGE?**

12 A. Yes. As I discussed above, PWSA’s RTS includes 10% of all debt service costs
13 allocated to water and wastewater. This would undoubtedly include costs of
14 mains, pumping, filtration, storage, and other upstream costs that should not be
15 included in a fixed monthly charge.

16
17 **Q. ARE YOU AWARE OF ANY OTHER PENNSYLVANIA UTILITIES THAT**
18 **INCLUDE AN RTS COMPONENT WHEN CALCULATING ITS FIXED**
19 **MONTHLY CHARGE?**

20 A. No. I am unaware of any other Pennsylvania utility that includes an RTS
21 component when calculating a fixed monthly charge.

1 **Q. IS PWSA AWARE OF ANY OTHER PENNSYLVANIA UTILITIES THAT**
 2 **INCLUDE AN RTS COMPONENT WHEN CALCULATING THE FIXED**
 3 **MONTHLY CHARGE?**

4 A. No. In a response to OCA XIV-19, PWSA witness Smith indicated that he is not
 5 aware of any other utility that includes a readiness-to-serve component of the
 6 customer charge (I&E Ex. No. 3, Sch. 9).

7
 8 **Q. WHAT DO YOU RECOMMEND REGARDING PWSA’S PROPOSED**
 9 **BASE CHARGE?**

10 A. I recommend that the Commission remove the RTS adjustment from the
 11 calculation of the water base charge as shown in the table below:

Meter Size	Present Rate Minimum Charge	Proposed Rate Minimum Charge	PWSA Proposed Base Charge	I&E Recommended Base Charge
5/8"	\$26.52	\$32.43	\$16.82	\$14.41
3/4"	\$46.47	\$54.74	\$23.96	\$20.35
1"	\$102.08	\$113.88	\$38.25	\$32.22
1 1/2"	\$201.85	\$225.41	\$73.97	\$61.92
2"	\$337.28	\$373.78	\$116.84	\$97.56
3"	\$766.42	\$832.40	\$231.14	\$192.58
4"	\$1,313.93	\$1,408.27	\$359.74	\$299.49
6"	\$3,174.80	\$3,332.70	\$716.95	\$596.44
8"	\$5,784.48	\$5,968.71	\$1,145.60	\$952.79
10" & Above	\$9,582.36	\$9,753.09	\$1,645.69	\$1,368.53

12

1 I recommend that the Commission remove the RTS adjustment from the
 2 calculation of the wastewater base charge as shown in the table below:

Meter Size	Present Rate Minimum Charge	Proposed Rate Minimum Charge	PWSA Proposed Base Charge	I&E Recommended Base Charge
5/8"	\$7.32	\$7.42	\$3.98	\$3.19
3/4"	\$11.70	\$11.43	\$4.69	\$3.61
1"	\$24.27	\$22.50	\$6.12	\$4.45
1 1/2"	\$46.19	\$42.56	\$9.69	\$6.55
2"	\$76.29	\$69.68	\$13.98	\$9.08
3"	\$173.03	\$155.24	\$25.41	\$15.81
4"	\$297.52	\$264.10	\$38.26	\$23.38
6"	\$725.62	\$632.71	\$73.97	\$44.42
8"	\$1,330.48	\$1,148.40	\$116.83	\$69.66
10" & Above	\$2,218.44	\$1,896.72	\$166.82	\$99.11

3
 4
 5 **Q. DO YOU HAVE ANY OTHER RECOMMENDATIONS REGARDING THE**
 6 **CALCULATION OF PWSA’S PROPOSED BASE CHARGE?**

7 A. Yes. I recommend that PWSA, in its next base rate case, perform and provide a
 8 customer cost analysis as part of its cost of service study so that an accurate
 9 customer charge can be determined.

1 **Q. DO YOU AGREE WITH PWSA’S PROPOSAL TO CHANGE FROM**
2 **BILLING CUSTOMERS USING A MINIMUM CHARGE TO A BASE**
3 **CHARGE IN FY 2025?**

4 A. Yes. Despite I&E’s recommendation to deny the MYRP, I believe that the change
5 from minimum charge to base charge should occur on the first day of FY 2025 on
6 a revenue neutral basis (subject to my recommendations). This means that, despite
7 the rate change, customers would be generating the same level of revenue in FY
8 2025 as is approved for the FPFTY ending December 31, 2024, but under a
9 different rate structure.

10

11 **Q. WHY DO YOU RECOMMEND THE CHANGE FROM A MINIMUM**
12 **CHARGE TO A BASE CHARGE BE DELAYED UNTIL FY 2025?**

13 A. When eliminating a minimum charge, and more specifically a minimum usage
14 allowance, in favor of a fixed monthly charge such as a customer charge or base
15 charge, the average bill of certain customers can be negatively impacted by the
16 additional usage accounted for in their bill. This negative impact would be
17 exacerbated by any additional revenue added to increase rates. Therefore, despite
18 I&E’s recommendation to deny the base rate increases proposed for FY 2025 and
19 FY 2026, I believe it is reasonable to delay the change from a base charge to a
20 minimum charge in order to lessen the impact on customers’ average bill.

1 **FIRE PROTECTION RATES**

2 **Q. WHAT RATES IS PWSA PROPOSING TO CHARGE FOR FIRE**
3 **PROTECTION IN THE FPFTY?**

4 A. As shown on PWSA Exhibit HJS-13W, PWSA is proposing to increase the
5 minimum charge for the Fire Protection customers by a range of 101.4% to
6 110.9% while proposing to decrease the Fire Protection usage rate by 18.6%.

7
8 **Q. DO YOU AGREE WITH THE COMPANY’S PROPOSAL REGARDING**
9 **THE FIRE PROTECTION RATES IN THE FPFTY?**

10 A. No. It is not reasonable to increase the minimum charge by over 100% while
11 providing a rate decrease to the usage rate. This is particularly true when
12 considering the Company’s proposal to increase the fire protection usage rate by
13 57.4% in FY 2025 as shown on PWSA Exhibit HJS-23W.

14
15 **Q. WHAT DO YOU RECOMMEND REGARDING THE FIRE PROTECTION**
16 **RATES IN THE FPFTY?**

17 A. I recommend that the fire protection usage rate remain at the present rate level of
18 \$39.05 per kgal and reduce the fire protection minimum charges in order to
19 maintain the same level of revenue as originally proposed in the FPFTY. It should
20 be noted that, based on the information provided by PWSA I am unable to use the
21 existing COSS to adjust the minimum charges at this time. I sent additional
22 discovery to PWSA in order to solve this issue but, as of the writing of this

1 testimony, I have yet to receive a response. Finally, my recommendation does not
2 exclude the fire protection minimum charge from being included in any scale
3 back.

4
5 **Q. DO YOU HAVE ANY RECOMMENDATIONS REGARDING THE FIRE**
6 **PROTECTION BASE CHARGE IN FY 2025?**

7 A. Yes. For the reasons described above, I recommend that the fire protection base
8 charge in FY 2025 be calculated without an RTS adjustment. The resulting rates,
9 prior to the application of any scale back, are shown in the following table:

Meter Size	PWSA FPFTY Rate	PWSA FY 2025 Proposed Rate	I&E FY 2025 Proposed Rate
1" or Less	\$31.38	\$29.82	\$23.79
1 1/2" – 3"	\$97.59	\$92.07	\$72.79
4"	\$314.86	\$299.49	\$239.24
6" or Greater	\$654.53	\$628.51	\$508.01

10
11
12 **SCALE BACK OF RATES**

13 **Q. WHAT SCALE BACK DO YOU RECOMMEND IF THE COMMISSION**
14 **GRANTS LESS THAN THE FULL INCREASE?**

15 A. Should the Commission grant an increase less than the full increase requested by
16 PWSA in the FPFTY, I recommend that rates be scaled back based on the CCROSS
17 approved by the Commission. Once the revenue level and rates are determined for

1 the FPFTY, then the revenue neutral transition to the base charge and usage rates
2 can be determined for FY 2025.

3
4 **SUMMARY OF RECOMMENDATIONS**

5 **Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.**

6 A. My recommendations are summarized as follows:

- 7 • The Commission should deny in full the proposed revenue increases for FY
8 2025 and FY 2026.
- 9 • The Water Treatment Plant FPFTY capital improvement FPFTY increase
10 should be reduced by \$2,713,863, or 25%, from \$10,885,454 to \$8,141,591.
- 11 • The Water Pumping and Storage FPFTY capital improvement PFTY
12 increase should be reduced by \$29,911,439, or 50%, from \$59,822,878 to
13 \$29,911,439.
- 14 • Put PWSA on notice that an adjustment to certain expenses, such as
15 purchased power and chemicals, will be likely in the next base rate case if
16 progress is not shown in reducing the unaccounted-for water levels.
- 17 • The Readiness-to-Serve adjustment should be removed from the calculation
18 of the base charge.
- 19 • The fire protection usage rate should remain \$39.05 per kgal and the fire
20 protection minimum charge should be reduced in the FPFTY.

- 1 • Should the Commission grant less than the full increase requested by
2 PWSA in the FPFTY, rates should be scaled back based on the CCOSS
3 approved by the Commission.
- 4 • Once the revenue level and rates are determined for the FPFTY, then the
5 revenue neutral transition to the base charge and usage rates can be
6 determined for FY 2025.

7

8 **Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

9 A. Yes.

ETHAN H. CLINE

PROFESSIONAL EXPERIENCE AND EDUCATION

EXPERIENCE:

03/2009 - Present

**Bureau of Investigation and Enforcement, Pennsylvania Public Utility Commission -
Harrisburg, Pennsylvania**

Fixed Utility Valuation Engineer – Assists in the performance of studies and analyses of the engineering-related areas including valuation, depreciation, cost of service, quality and reliability of service as they apply to fixed utilities. Assists in reviewing, comparing and performing analyses in specific areas of valuation engineering and rate structure including valuation concepts, original cost, rate base, fixed capital costs, inventory processing, excess capacity, cost of service, and rate design.

06/2008 – 09/2008

Akens Engineering, Inc. - Shiremanstown, Pennsylvania

Civil Engineer – Responsible, primarily, for assisting engineers and surveyors in the planning and design of residential development projects

10/2007 – 05/2008

J. Michael Brill and Associates - Mechanicsburg, Pennsylvania

Design Technician – Responsible, primarily, for assisting engineers in the permit application process for commercial development projects.

01/2006 – 10/2007

CABE Associates, Inc. - Dover, Delaware

Civil Engineer – Responsible, primarily, for assisting engineers in performing technical reviews of the sewer and sanitary sewer systems of Sussex County, Delaware residential development projects.

EDUCATION:

Pennsylvania State University, State College, Pennsylvania
Bachelor of Science; Major in Civil Engineering, 2005

- Attended NARUC Rate School, Clearwater, FL
- Attended Society of Depreciation Professionals Annual Conference and Training

TESTIMONY SUBMITTED:

I have testified and/or submitted testimony in the following proceedings:

About NRRI

NRRI was founded in 1976 by the National Association of Regulatory Utility Commissioners (NARUC). While corporately independent, NARUC and NRRI are linked in multiple ways to ensure accountability. NARUC, as the association of all state regulators, is invested in quality research serving its members. NRRI coordinates its activities to support NARUC's policy, research, educational and member-support service to state commissions.

Mission Statement

To serve state utility regulators by producing and disseminating relevant, high-quality applied research that provides the analytical framework and practical tools necessary to improve their public interest decision-making. In all its activities, NRRI embodies the following values: relevance, excellence, objectivity, creativity, independence, fiscal prudence, ethics, timeliness and continuous improvement.

Board of Directors

Chair: Hon. **ToNola D. Brown-Bland**, Commissioner, North Carolina Utilities

Vice Chair: Hon. **John Rosales**, Commissioner, Illinois Commerce Commission

Treasurer: Hon. **Betty Ann Kane**, Chairman, District of Columbia Public Service Commission

Secretary: **Rajnish Barua**, Ph.D., Executive Director, NRRI

Hon. **John W. Betkoski, III**, Vice Chairman, Connecticut Public Utilities Regulatory Authority

Hon. **David W. Danner**, Chairman, Washington Utilities and Transportation Commission

Hon. **Elizabeth B. Fleming**, Commissioner, South Carolina Public Service Commission

Hon. **Sarah Hofmann**, Commissioner, Vermont Public Service Board

Hon. **John E. Howard**, Commissioner, South Carolina Public Service Commission

Hon. **Mike Huebsch**, Commissioner, Public Service Commission of Wisconsin

Hon. **Greg White**, Executive Director, NARUC

Acknowledgments

The author wishes to thank **Robert Harding**, Minnesota Public Utilities Commission; **Dr. Mark Newton Lowry and Matt Makos**, Pacific Economics Group; and NRRI colleague **Dr. Rajnish Barua**. Any errors in the paper remain the responsibility of the author.

About the Author

Mr. Ken Costello is Principal Researcher, Natural Gas Research and Policy, at the National Regulatory Research Institute. He received B.S. and M.A. degrees from Marquette University and completed two years of doctoral work in economics at the University of Chicago. Mr. Costello previously worked for the Illinois Commerce Commission, the Argonne National Laboratory, Commonwealth Edison Company, and as an independent consultant. Mr. Costello has conducted extensive research and written widely on topics related to the energy industries and public utility regulation. His research has appeared in books, technical reports and monographs, and scholarly and trade publications. Mr. Costello has also provided training and consulting services to several foreign countries.

Executive Summary

Regulatory experts generally agree that ratemaking should strive to achieve high economic efficiency by utilities, fairness, and reasonable regulatory costs. These three outcomes have characterized good ratemaking going back to the beginning of public utility regulation. Economic efficiency requires utilities to create or adopt new technologies, achieve excellent operating performance, and set rates that correspond to marginal cost. All of these outcomes benefit the long-term economic well-being of utility customers in addition to advancing the public interest. Fairness means that neither customers nor utility shareholders unduly shoulder risks or retain the benefits of utility activities. Fairness is essential for the public credibility of the regulatory process and regulation itself. A large part of regulatory costs are the expenses incurred by utilities and other stakeholders during the course of general rate cases.

Traditional rate-of-return ratemaking has undergone critical review at least since the early 1960s. Various stakeholders and academic economists have offered proposals to improve, replace, or supplement it with mechanisms that attempt to redress the supposed deficiencies underlying traditional ratemaking. The primary question for utility regulators is whether these mechanisms are compatible with the objective of setting just and reasonable rates.

One such mechanism is multiyear rate plans (MRPs). MRPs are a price mechanism that sets a utility's base rates and revenue requirements for longer than a single 12-month period. MRPs specify rates beyond the rate effective year of a rate case by applying a formula or index, or detailed forecasts for allowable rate changes over the duration of the plan. For example, instead of a utility filing a new general rate case when conditions change, an MRP may forecast what these conditions are and adjust rates within a single rate case.

More state utility regulators, for example Georgia, Minnesota and Washington, in recent years have either approved MRPs or have expressed interest in them. The issues surrounding MRPs are more complex than what first meets the eye. Whether MRPs are in the public interest is the ultimate question for regulators to answer, but one that has no clear answer. Since MRPs involve so many facets of regulation, their merits come down to the features of a specific plan. Other countries, for example Australia, Canada and Great Britain, have relied on MRPs more than the U.S., often citing the deficiencies of traditional rate-of-return ratemaking.

The major supporter of MRPs in the U.S., electric utilities, have advanced different arguments. Their main one is that MRPs would improve the regulatory process and their financial condition (e.g., from less regulatory lag). From a regulatory perspective, their arguments seem to fall short of making a compelling case for how their customers would benefit. For example, utilities have emphasized the need for MRPs to facilitate recovery of capital costs between general rate cases. While this may benefit customers, MRPs have other effects on utility customers, either positive or negative. The mixed results from MRPs preclude a *prima facie* case for their approval by regulators.

This paper lays out a general approach for regulators in evaluating MRPs as a ratemaking mechanism with the potential to advance the public interest. It first discusses the expected benefits and outcomes of MRPs over traditional ratemaking practices. The paper then takes a more critical approach by accounting for the downsides of MRPs. The fact that relatively few

utilities are currently operating under an MRP suggests that like most other mechanisms it has its costs as well as benefits. An overall evaluation therefore requires a cost-benefit review, which is not part of this research paper.

Utility customers can potentially benefit from MRPs in four major ways:

1. Lower prices;
2. More moderate price changes over time;
3. Utility supply of more services;
4. Higher reliability and improved customer service; and,
5. More immediate price benefits from improved utility performance.

For regulators, the question is: What would it take to produce these benefits? This paper attempts to answer this question, although some issues are beyond the scope of this paper.

This paper suggests that conceptually MRPs have attractive features that warrant serious attention by regulators. They represent a potentially sound approach to ratemaking that can improve the regulatory process and benefit utility customers. Having said that, a caveat is that the benefits to utility customers come down to on how MRPs are structured and executed. Certain features should be in place, for example to protect customers from excessive rates, to give utilities incentives for cost-efficiency, and to ensure customers that utilities are performing satisfactorily in vital areas such as service quality. When badly structured or implemented, MRPs can wipe out the benefits that potentially would flow to customers. As a crucial factor, when regulators are unable to determine whether a utility's revenue requirement forecasts reflect prudent management and are unbiased, they should discount the capability of MRPs to benefit customers. A positive public-interest outcome, in the end, turns to the details, which this paper identifies. A number of things can go wrong that would jeopardize the efficacy of MRPs to promote the public interest. That might, at least partly, explain why MRPs are relatively uncommon in the U.S.

Finally, although this paper does not definitely answer the ultimate question of whether MRPs are in the public interest, it aims to move ahead the dialogue on a ratemaking mechanism that represents a major if not radical departure from traditional ratemaking. More than anything, this paper attempts to educate state utility commissions on MRPs. It hopes to guide them by identifying those key elements of MRPs that are most crucial in affecting the long-run well-being of utility customers. Appendix A contains a list of generic questions about MRPs, some of which this paper tries to answer. Appendix B lists specific questions that regulators can ask about MRPs when initiated by them or proposed by stakeholders.

Multiyear Rate Plans and the Public Interest

I. Introduction

The main objective of this paper is to educate state utility commissions on multiyear rate plans (MRPs). An MRP is a price mechanism that sets a utility's rates or revenue requirements for longer than a single 12-month period. It specifies rates¹ beyond the rate effective year of a rate case² by applying a formula or index, or detailed forecasts for allowable rate changes over the duration of the plan. Instead of a utility filing a new general rate case³ when conditions change, for example, an MRP may forecast what these conditions are and adjust rates within a single rate case. One common practice is to allow rates to automatically change for a specified post-test year period.⁴

MRPs differ from traditional rate-of-return (ROR) ratemaking (hereafter called "traditional ratemaking") in that they specify rates or revenues for future years applying data and other information beyond the rate effective year following a rate case. For example, if a rate case sets rates for 2017, a three-year MRP may specify that rates can further increase 3 percent in 2018 and 1 percent in 2019. Traditional ratemaking would determine, a rate increase of, say, 5 percent starting in 2017. Unless the utility files another general rate case, the new rate stays fixed. One perception of MRPs is that they are more of an adaptation to traditional rate-of-return ratemaking, rather than as a radically different ratemaking paradigm. For example, by forecasting revenue requirements out to 3 years, an MRP is just an extension of setting rates based on a future test year.

Many analysts view MRPs as superior to traditional ratemaking in advancing economic efficiency and other areas of utility performance. As discussed later, this outcome depends on how rates are set in the "out years".

¹ Rates in this context refer to base rates. Some MRPs specify allowable revenue changes, which has a different effect on utility behavior than specifying allowable rate changes. The former specification,

² A rate effective year is the first year that new rates go into effect, which could coincide with a future test year.

³ A general rate case also typically covers a multimonth review period over which several parties participate. It is usually initiated at the utility's request, involves large sums of dollars, encompasses all rates, and includes a scrutiny of a utility's costs and revenues by different parties. In a general rate case, the regulator authorizes the rates that a utility could charge its customers. It uses a test year that matches revenues with costs, at least for the first year of new rates.

⁴ A test year is an actual or hypothetical 12-month period over which a utility calculates its costs, including both operating and capital costs, and revenues to determine the need for a rate change. At the core of a test year is the "matching principle" for achieving consistency between costs and revenues. The utility would thus account for both revenue requirements and billing determinants in setting new rates.

As this paper examines, MRPs come in various versions with different expected outcomes and underlying objectives (e.g., price cap regulation).⁵ One extreme example is to set a rate moratorium where rates are fixed for, say, three years. The outcomes of an MRP depend on not only its basic structure but also on its supplemental features and implementation. This paper concludes that strong analytical support exists for MRPs, but regulators need to be aware of pitfalls that can jeopardize their ability to benefit utility customers and advance the public interest. Political considerations might also prevent MRPs from operating at maximum performance in serving customers and the public interest.

Over the past several years, electric utilities have proposed MRPs in a number of states, for example Georgia, Minnesota and Washington. Regulators have applied MRPs in different industries.⁶ MRPs are more common in other countries that regulate public utilities.⁷ One rationale for MRPs in the U.S. is that they modify the timing and surety of capital cost recovery for new investments. This objective differs from the primary goals found in the economics literature for MRPs, which is to provide utilities with better incentives for cost control and more flexibility in their operations and marketing strategies.

The focus of regulators should be on whether MRPs represent good ratemaking. Since its beginning, state utility regulators have strived to balance different interests for the public good. Regulatory experts generally agree that good ratemaking leads to utilities performing at high economic efficiency, fairness, and reasonable regulatory costs. *Economic efficiency* requires utilities to adopt new technologies when economical, achieve excellent operating performance, and set rates that correspond to marginal cost. *Fairness* means that neither customers nor utility

⁵ Under price cap regulation, allowable price changes between general rate cases depend on exogenous input prices and performance benchmarks (e.g., total factor productivity for a peer group of utilities). For example, the maximum price that a utility can charge during a period t equals the base price plus the accumulated changes since the base period, determined by the change in the selected price index (e.g., Gross Domestic product Price Index) minus an X-factor, which commonly relates to a measure of total factor productivity plus a “stretch factor”. Price caps have good incentives for high cost performance, but they can lead to a utility earning high profits. In the absence of an earnings sharing mechanism, in other words, a utility’s actual rate of return could be much higher than the authorized rate of return. This possible outcome derives from periodic price adjustments based on parameters external to an individual utility’s conditions. [One benefit of price caps to customers is that they receive the benefits of productivity growth plus a “stretch factor”, as they are built into the allowable rate changes between rate cases.] A tradeoff exists between giving a utility a strong incentive to control its costs and achieving a rate of return that is within a tolerable range of the utility’s authorized rate of return. See, for example, Mark Lowry and Lawrence Kaufmann, *Price Cap Regulation of Power Distribution*, prepared for the Edison Electric Institute, June 1998; and Wayne P. Olson and Kenneth W. Costello, "Electricity Matters: New Incentives in a Changing Electric Services Industry," *The Electricity Journal*, Vol. 8 (January-February 1995): 28-40.

⁶ These industries include railroads, oil pipelines, and telecommunications. See Mark Newton Lowry et al., *Alternative Regulation for Emerging Utility Challenges: 2015 Update*, prepared for the Edison Electric Institute, 35. In other countries, regulators and other policymakers have usually initiated MRPs.

⁷ Ibid, 35.

shareholders unduly shoulder risks or retain the benefits of utility activities.⁸ A large part of *regulatory costs* is the expenses the utility and other groups (including the regulatory agency) incur over the course of a general rate case.⁹ Frequent rate cases, for example, can impose substantial costs on utility management and regulatory staff resources.

This paper will discuss MRPs from different angles:

1. The rationales for MRPs (e.g., traditional ratemaking creating new problems or magnifying current ones);
2. The different versions of MRPs (e.g., price caps);
3. Why stakeholders have shown more interest in MRPs over the past few years;
4. The contrast between traditional cost-recovery practices, especially for capital costs, and MRPs in terms of mechanics;
5. The advantages and disadvantages of MRPs, compared with other ratemaking options, in achieving different regulatory objectives to advance the public interest¹⁰;
6. Utility incentives under an MRP to control operating and capital costs;
7. How MRPs affect a utility's performance in different areas (e.g., operations costs, reliability, energy efficiency);
8. How MRPs can benefit customers;
9. How MRPs can protect customers from subpar utility performance and utilities earning a rate of return far above the authorized level;
10. The conditions under which MRPs become more justified in setting just and reasonable rates;
11. The different ways to structure MRPs (e.g., core features and add-ons); and
12. How MRPs can hold utilities accountable for costs and other areas of performance (e.g., service reliability).

⁸ Fairness is essential for the public credibility of the regulatory process and regulation itself.

⁹ The initial costs of MRPs to regulators and stakeholders may be high.

¹⁰ These alternatives include cost trackers, infrastructure surcharges, and deferred accounting.

II. Features of Traditional Ratemaking

One motive for MRPs is their ability to reduce both the frequency of general rate cases¹¹ and strengthen utility incentives for cost efficiency. As one example, a major reason for the Washington Utilities and Transportation Commission (WUTC) approving Puget Sound Energy (PSE) multiyear plan was to reduce the frequency of rate cases.¹² PSE agreed to a stay-out period and the Commission in return allowed an annual escalation factor of three percent for certain costs, i.e., an attrition allowance.¹³ The WUTC approved a “stretch goal” that required PSE to achieve cost reductions at a rate greater than historically to reach its authorized rate of return. One objective was to challenge PSE to earn its authorized rate of return. The PSE plan also includes an earnings test that has a 50-50 sharing arrangement for utility returns exceeding the authorized return. In its order, the WUTC cited the landmark *Hope* decision by remarking that it is the “end result”, rather than the means of getting to it, that is the test for whether proposed rates are just and reasonable. The WUTC also articulated that one objective of an MRP is to provide a utility with good incentives to control costs, which allows it to earn a rate of return above its authorized return. It emphasized that even to earn its authorized rate of return, a utility should demonstrate efficient behavior that saves costs.

In other jurisdictions such as Florida, Minnesota, New Jersey, and Virginia, utilities have pushed for MRPs to facilitate their recovery of capital costs for new investments. Relative to traditional ratemaking, MRPs allow utilities to recover their capital costs earlier without having to file multiple general rate cases.¹⁴ This paper advises regulators to view MRPs from a broader public-interest perspective, taking into account the cost efficiency, “fairness”, and other core regulatory objectives.

¹¹ In a general rate case, the regulator determines what rates a utility could charge its customers for a future period. That determination relies on a “test year” *estimate* of future utility expenses, sales, and investment, as well as the cost of debt (interest on loans) and the cost of equity (the cost of attracting shareholders), with debt and equity funding the capital projects necessary to fulfill the utility’s service obligation.

¹² The WUTC used an adjusted historical test year, rather than a future test year, to set initial-year rates. Washington Utilities and Transportation Commission, *In the Matter of the Petition of Puget Sound Energy, Inc. and Northwest Energy Coalition for an Order Authorizing PSE to Implement Electric and Natural Gas Decoupling Mechanisms and to Record Accounting Entities associated with the Mechanisms, Final Order Authorizing Rates*, Dockets UE-130137 and UG-130138, June 25, 2013.

¹³ With price, or average revenue fixed between rate cases, an increase in average cost inevitably leads to the lowering of a utility’s earnings or profits. This creates what analysts called *earnings attrition* which makes it less likely that a utility would earn its authorized rate of return beyond the test year. Attrition is more likely under an historical test year but can occur under a future test year when cost increases dominate sales increases to produce a lower rate of return. On the opposite side of the spectrum is the term accretion, which refers to a utility “overearning” between rate cases.

¹⁴ Utilities have proposed other rate mechanisms to facilitate recovery of capital costs, including formula rates and capital cost trackers.

A. The regulatory objective of “just and reasonable” rates

Some proponents of MRPs have contended that they are compatible with setting “just and reasonable” rates and the “balancing act” of regulation.¹⁵ This paper later elaborates on the validity of this argument, which depends on the structure, details, and implementation of an MRP.

For now, an evaluation of the rates established under an MRP, in terms of the universal regulatory mantra of “just and reasonable”, involves five major items:

1. Rates reflect the costs of an efficient and prudent utility;
2. Rates reflect the cost of serving different customers and providing different services and different levels of service;
3. Rates avoid undue price discrimination;
4. Rates must be fair among customer groups, and between utility shareholders and customers; and,
5. Rates allow a prudent utility a reasonable opportunity to receive sufficient revenues to cover its cost of capital so as to attract new capital and not encounter serious financial problems.¹⁶

Overall, “just and reasonable” rates entail giving a utility a fair chance of earning its authorized rate of return as long as it is performing prudently. Some utilities have argued that when attrition occurs they have no reasonable opportunity to earn their authorized rate of return.¹⁷ Other regulatory objectives for ratemaking include public acceptability, rate stability and gradualism, affordable utility service, efficient consumption, efficient competition, moderate regulatory burden, and promotion of specified social goals (e.g., facilitate recovery of capital

¹⁵ The “balancing act” tries to avoid the extreme positions of parties, whether they are utilities or interveners. It requires regulators to make trade-offs between various ratemaking objectives in reaching an outcome that best serves the general public. For example, although an MRP could help utilities financially, it may expose customers excessively to the risks of forecasting error and bias. Cost trackers also benefit utilities but, in the absence of adequate oversight, can lead to inflated costs that utilities recover from customers.

¹⁶ The U.S. Supreme Court has stated: “The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.” *Bluefield Waterworks v. PSC of WV* 262 U.S. 679 (1923).

Some analysts favor the requirement that if a utility wants to earn its authorized rate of return, it would have to improve its productivity or cost efficiency. This is a more stringent condition for a utility to earn its authorized rate of return and one that stresses the objective of an MRP to enhance a utility’s cost efficiency.

¹⁷ Attrition is the result of revenue growth falling short of revenue-requirement growth, causing erosion in the utility’s rate of return over time in the absence of a rate change.

costs to promote certain social objectives). Any evaluation of MRPs should entail determining whether they perform better or worse than alternative rate mechanisms in advancing these objectives.

From a legal perspective, regulators must set reasonable rates that allow a prudent utility to operate successfully, maintain its financial integrity, attract capital, and compensate its investors in line with actual risks.¹⁸ The emphasis is then on the results reached, not on the methods used. One obvious implication is that the merits of a ratemaking mechanism depend on its likelihood of setting “just and reasonable” rates. Whether rates established under an MRP are just and reasonable is not obvious. As discussed later, MRPs have some downsides that can jeopardize this objective, but other mechanisms have shortcomings as well in achieving just and reasonable rates.

B. The evolution of traditional ratemaking

Traditional ratemaking is the default method that state utility regulators have relied on for decades in setting utility rates. It is also the benchmark used by U.S. regulators to assess other ratemaking practices. Even though some industry observers have written off traditional ratemaking as an anachronism, it remains the core ratemaking paradigm in state utility regulation, notwithstanding the onslaught of alternative rate mechanisms proposed by diverse interest groups over the past two decades.

Typically, the onus is on utilities and other stakeholders to demonstrate the superiority of an alternative approach to traditional ratemaking. A proactive regulator would initiate, or at least consider, other alternative rate mechanisms on its own when conditions change to cast doubt on the efficacy of existing ratemaking methods.

Throughout its history, state utility regulation has had to grapple with finding the “right” ratemaking mechanism that is most compatible with the public good. Back in the late 1960s and 1970s, for example, regulators gave approval to new rate mechanisms and concepts such as future test years, fuel adjustment mechanisms, special rates to certain industrial customers, seasonal rates, construction work in progress in rate base, and phase-ins of new expensive power plants.¹⁹

One lesson from the past is that regulators do adapt to a changed environment, although cautiously, when discord becomes heightened. They tend to depart from traditional practices, including ratemaking ones, only when continuation of the status quo would disrupt the political equilibrium.²⁰ Whether regulators/legislatures have supported MRPs for this reason requires

¹⁸ The U.S. Supreme Court outlined these conditions in its order for *FPC v. Hope Natural Gas Co.*, 320 U.S. 591, 605 (1944).

¹⁹ Paul L. Joskow, “Inflation and Environmental Concern: Structural Changes in the Process of Public Utility Regulation,” *Journal of Law and Economics*, Vol. 17 (1974): 291-327.

²⁰ Two relatively recent examples are revenue decoupling and capital cost trackers. The former mechanism tries to appease those who believe that utilities should promote energy efficiency without being penalized financially.

more detailed study, although it seems that they have. One possible concern triggering MRPs is the frequency of general rate cases that (1) weaken utility performance incentives and (2) place a strain on both the regulator's and utility's resources. Another "distress" situation would be the continuous inability of utilities to earn their authorized rate of return, especially when an efficient utility is engaged in major capital expenditures.

C. Relevant features of traditional ratemaking for evaluating MRPs

Traditional ratemaking has several features that are pertinent to comparing it with MRPs. First, in a general rate case parties closely examine a utility's costs to determine whether proposed rates reflect prudent utility management. While cost disallowances for imprudence are rare, just the threat probably motivates utilities to become less cost inefficient and more mindful of their actions on cost. One of the impetuses for MRPs is that they can motivate utilities to be cost efficient without having to rely on prudence reviews. This is arguably easier to do under an historical test year than a future test year.²¹

Second, the regulator's intent is to give utilities a reasonable opportunity to recover their authorized rate of return, but no assurance that they will. A general practice is for regulators to set rates so that a prudent utility has the opportunity to earn a reasonable (or "fair") return on equity. Under traditional ratemaking, the regulator considers just the first year that new rates go into effect. If the dynamics change, then the expected rate of return would differ from what was expected from the rate case decision. In other words, the regulator cannot guarantee that utilities earn their authorized rate of return. Actual returns, for various reasons, inevitably vary from what is authorized. Reasons may be cost inflation, and sales declines, beyond the test year. Some of them are exogenous to a utility's control while others are subject to utility-management discretion. The regulator's obligation is only to create a reasonable opportunity for utilities to earn the authorized level.

Third, the utility has an incentive to improve its cost efficiency once the regulator sets new rates until the next general rate case. Regulatory lag accounts for this incentive, which is more of a consequence of the impracticability of continuous rate reviews and changing economic conditions than by design. This incentive diminishes in a dynamic environment where utilities frequently file general rate cases. For example, if a utility achieves cost savings in 2016 and files a general rate case in 2017, those savings would normally start to flow back to customers when new rates go into effect. The reason lies with the mechanics of traditional ratemaking in setting the price, not the actual earnings of a utility. To the extent that utilities are able to hold down costs, their earnings and rate of return are higher. Customers do not receive the benefits, however, of lower utility costs until regulators include them in new rates after the next general rate case.

Fourth, rate levels are set based on costs and sales estimates for at most a one-year future period. In the past a utility could absorb unexpected cost increases because of increased sales and revenues relative to those for the test year. Especially during a time, such as now, where sales and revenue growth is much more constrained, a utility may have to file a general rate case

²¹ Ken Costello, *Future Test Years: Challenges Posed for State Utility Commissions*, NRRI 13-08, July 2013.

to recover increased cost lying outside the test-year calculation. Low general inflation over the past several years has lessened this possibility, however.

Fifth, base-rate changes require a utility to file a general rate case. Because utilities usually initiate rate cases under traditional ratemaking, they can file for new rates, for example, when their costs rise because of lax management. This ability to file rate cases whenever they like would seem to weaken utilities' incentive to control costs. Such filings are expensive and time-intensive for all participants. Their opportunity costs are the beneficial activities that participants would otherwise engage in the absence of general rate cases. Regulatory staff, for example, could devote more time to workshops and other investigations that focus on important issues (e.g., utility planning, cyber security, distributed generation).

Sixth, outside of a rate case, cost recovery occurs only under restrictive conditions; for example, a large cost item, hard-to-predict costs, costs largely outside the control of a utility. Such recovery normally happens by way of a rider, tracker or surcharge, which can diminish a utility's incentive for cost management. The most common riders apply to changes in fuel costs for electric utilities and purchased gas for natural gas utilities. In recent years, riders have grown to include cost recovery for a wide array of utility functions. Regulators have departed from past practices of approving cost trackers only under "extraordinary circumstances."²²

Overall, under traditional ratemaking regulators try to balance the interests of different stakeholders in achieving just and reasonable rates.²³ The implication for MRPs is that they should avoid being one-sided, unduly favoring utilities or certain customers and other non-utility stakeholders that would compromise the public interest.²⁴ Allowing utilities to recover their capital costs without regulatory review would be an imbalanced decision. Authorizing excessive subsidies to promote a certain energy resource would also violate the "balancing act" of regulation.

D. Criticisms of traditional ratemaking

Traditional ratemaking has its problems that MRPs advocates say should disqualify it as the default ratemaking paradigm. As some readers recall, back in the 1990s when the electric

²² See Ken Costello, *How Should Regulators View Cost Trackers?* NRRI 09-13, September 2009.

²³ Balancing means that a regulator has reached an equilibrium outcome in which different stakeholders, although not completely satisfied with a decision, are not willing to expend much effort in either the legislative or regulatory arena to contest the decision or to take other major action. One interpretation of balance is the utility having strong incentives to control its costs without earning unreasonably high profits or unable to attract capital or maintain financial health required to make investments that benefit customers.

²⁴ State utility regulators attempt to balance the rights of utilities and their customers by accounting for three main factors: (a) *legal constraints*—for example, utilities have a right to a reasonable opportunity to be financially viable, and customers have a right to just and reasonable prices; (b) *the regulator's perception of fairness*; and (c) *compatibility with a broader interest*. Regulators try to balance the interests of the different stakeholders with the overall objective of promoting the general good.

industry went through major restructuring, many experts believed that traditional ratemaking would not survive.²⁵ They thought that price caps or more flexible ratemaking mechanisms would replace it because they were more in conformance with the new market environment; but this did not happen. One reason was that regulators were not willing to give up traditional ratemaking as the basic paradigm, although they were willing to modify it around the edges. In accordance with several electric-industry restructuring plans, regulators require utilities to operate under lengthy multiyear rate freezes. Also in the 1990s, several newly privatized utilities in other countries operated under price-cap and other multiyear rate plans.²⁶

The perceived deficiencies of traditional ratemaking have evolved over the years, some of which MRPs are able to address:

1. *Weak incentives for long-term cost efficiency.*

X-inefficiency, a term used by economists, refers to the situation where utilities waste resources by operating above their cost frontier. While X-inefficiency occurs in

²⁵ While several states contemplated restructuring of the electric industry within their respective state boundaries (or known as retail choice), ultimately only 14 states kept retail choice by 2007 and one additional one in the last two years. Also, some of these states limited the number of customers or classes of customers who could avail retail choice. Therefore, all retail choice programs were not the same.

²⁶ One example of an MRP is the Revenue set to deliver strong Incentives, Innovation and Outputs (RIIO), created by the Office of Gas and Electricity Markets (Ofgem), which is the electricity and natural gas regulator in Great Britain. The RIIO model contains the following features: (a) A detailed set of outputs expected of the utility based on a comprehensive business plan, (b) an 8-year rate plan, (c) explicit incentives for achieving certain performance targets, (d) extensive stakeholder involvement, (e) external benchmarking of costs, (f) a total expenditure concept, and (g) uncertainty mechanisms.

RIIO represents a radically different ratemaking paradigm than what U.S. regulators apply to their electric utilities. It focuses less on the utility's earned rate of return and more on the utility's performance. RIIO uses the mantra "value for money." It incorporates an incentive system with rewards and penalties tied to operational efficiencies, as well as funding for innovation and opportunities for utilities to include third parties in the delivery of energy services. Regulators can use the RIIO framework to monitor a utility's performance in serving its customers. If the evidence shows subpar performance, for example, the regulator could impose a penalty. Likewise, the utility could receive rewards for exceptionally good performance in meeting the needs of its customers. For example, the utility may support a platform that accommodates DG and provide real-time information to customers.

Whether RIIO is feasible for the U.S. is highly doubtful at this time. Would state utility regulators be willing to accept a radically new approach to utility regulation, like the UK has? U.S. regulators typically make changes incrementally rather than boldly. Even if not adopted in the U.S., RIIO contains some commendable ideas that state regulators might want to consider in any new ratemaking approach that they adopt. Especially attractive is the notion that a primary criterion for utility revenue is its correlation with *the value that customers receive* from utility service. Benchmarking, which state utility regulators rarely do, rightly shifts the focus from inputs to outputs and holds utilities accountable for subpar performance. See, for example, Peter Fox-Penner et al., "A Trip to RIIO in Your Future," *Public Utilities Fortnightly*, October 2013: 60-5; and Ofgem, "Handbook for Implementing the RIIO Model," October 4, 2010.

every industry, it is probably more severe in utility industries by the fact that utilities lack the strong incentives of non-regulated firms to control costs on a sustainable basis. From a long-term perspective, traditional ratemaking resembles a cost-plus contract.²⁷

2. *Weak incentives for innovation, especially under tight price regulation.*

Tight regulation means that changes in rates occur soon after a utility's costs change, allowing the utility little opportunity to profit. Various features of public utility regulation affect how much and how utilities make R&D/innovation investments. They include regulatory commitment, degree of information symmetry, cost recovery, allocation of the benefits, and risk incidence. For example, depreciation policy can help ensure recovery of invested funds over the economic life of the physical capital. The economics literature has devoted relatively little attention to regulated firms' incentive to engage in R&D, and develop and adopt new technologies. Nevertheless, the conventional thinking is that regulation tends to make utilities cautious about innovating and taking risks. Utilities therefore fall short in their R&D activities and deployment of new technologies.²⁸

3. *Fixed base rates between general rate cases, which strengthen incentives for cost efficiency but its rigidity could result in extremely high or low rates of return under dynamic conditions.*

Base rates under traditional ratemaking have two characteristics: (a) the regulator sets them in a formal rate case, and (b) they remain fixed until the utility files a new rate case and the regulator makes a subsequent decision. The costs represent those calculated for a designated test year and exclude those costs recovered in trackers and other mechanisms. Under traditional ratemaking, no matter how much the actual utility's costs and revenues deviate from their test-year levels, base rates remain fixed until the regulator approves new ones in a future rate case. The exception is when a regulator allows for interim rate relief under abnormal conditions that jeopardize a utility's financial condition.

A utility's costs can vary radically from year-to year, for example from ongoing capital expenditures and large unexpected costs such as from severe storm damage, jeopardizing its ability to earn the authorized rate of return or allowing it to earn an excessively high rate of return.

²⁷ See Harvey Leibenstein, "Allocative Efficiency vs. 'X-Efficiency,'" *American Economic Review* 56 (June 1966): 392-412; and Paul L. Joskow and Nancy L. Rose, "The Effects of Economic Regulation," in *Handbook of Industrial Organization, Volume II*, Richard Schmalensee and Robert D. Willig, eds., 1449-1506 (New York: Elsevier Science Publishers, Inc., 1989).

²⁸ See Elizabeth E. Bailey, "Innovation and Regulation," *Journal of Public Economics*, Vol. 3 (August 1974): 285-95; and Stanford V. Berg and John Tschirhart, *Natural Monopoly Regulation: Principles and Practice* (Cambridge, UK: Cambridge University Press, 1988).

4. *Excessive regulatory lag, for example under conditions of new investment needs and stagnant sales growth, that makes it hard if not possible for utilities to earn their authorized rate of return.*

Regulatory lag can either benefit or harm utilities, depending on whether average cost is decreasing or increasing relative to average revenue. [Average cost is a utility's total cost divided by billing determinants such as sales volumes. It therefore rises with cost inflation and lower sales.] Over the history of state utility regulation, regulatory lag has benefited utilities during some periods while hurting them in other periods. For example, utilities generally benefit when prices remain fixed over several years while their average cost is declining. Regulatory lag can cause severe cash-flow problems for utilities. If the costs are substantial and utility recovery of those costs occurs several years after they incurred, they can weaken a utility's financial condition to increase its cost of capital or make it more difficult to attract capital. Problems from delays in a utility's recovery of capital costs for large projects could also jeopardize its cash flow and financial viability.

5. *Regulatory lag deferring the benefits of efficiency gains to customers.*

Customers benefit from cost savings only after the new base rates go into effect. If a utility, for example, does not file a general rate case for several years, it has strong incentive for controlling its costs. Customers are deprived, however, of the benefits for an extended period, which actually occurred for electric utilities until around the late 1960s.

6. *High regulatory costs.*

The regulatory costs of traditional ratemaking include the expenses incurred by utilities, interveners, and regulators for rate filings, rulemakings, and other matters falling under regulatory jurisdiction. Traditional ratemaking requires regulators to have access to a great deal of information, which they demand from utilities, for making informed decisions. The difficult job for regulators is to take the conflicting information provided by different parties, "unscramble" it, and ultimately reach a decision balancing the welfare of the various interest groups.

7. *Frequent rate cases in a dynamic environment (i.e., a changing relationship between revenues, costs and rate base) where the utility's average cost increases.*

Average cost increases whenever the combined growth in input prices and levels exceeds the growth in billing determinants such as sales volumes. Under a condition of moderate to high inflation, large investments in new facilities and slow sales growth, average cost would likely rise. Average cost equals total cost divided by

billing determinants. Total cost, in turn, equals the sum of the product of input prices and input levels.²⁹

8. *Rigid prices that preclude a utility from offering discount or special rates to certain customers dictated by market conditions.*

Pricing rigidity prevents a utility from responding in a timely fashion to changing market conditions. These conditions can arise from general inflation, new technological developments, and changes in the intensity of competitive forces and in consumer demand. Allocative inefficiencies result because of effective prices moving farther away from marginal costs and consumers' willingness to pay for utility service.

9. *Cost-shifting and affiliate abuses that are more likely to occur when utilities operate in mixed competitive-non-competitive markets (e.g., a regulated utility that has an affiliate selling coal in the open market).*

This suggests that price caps may be attractive to regulators if only because of their ability to mitigate these problems.³⁰

10. *Incentive for excessive capital investments, under certain conditions (e.g., the Averch-Johnson effect).³¹*
11. *Disincentive to embrace cost-effective energy efficiency, peak demand management, distributed generation, and other distributed energy resources (DER).*

E. Four primary goals of ratemaking

Regulators have assigned four major objectives to ratemaking:

1. Foster economic efficiency;
2. Ensure that a prudent utility is financially healthy;

²⁹ Expressed differently from rearranging terms,

$$\text{Average Cost (AC)} = \text{price of inputs} / \text{total factor productivity}$$

Thus, $\% \Delta \text{AC}$ equals $\% \Delta$ price of inputs minus $\% \Delta$ total factor productivity, or $\% \Delta$ price of inputs plus $\% \Delta$ inputs minus $\% \Delta$ output. As an example, if input prices increase by an average three percent, input levels by one percent and output by two percent, average cost would rise by two percent.

³⁰ There is evidence that this partly explains the widespread use of price caps in the U.S. telecom industry.

³¹ What analysts call the Averch-Johnson (A-J) effect says that a utility would use excessive capital input relative to other inputs such as labor, fuel, and materials. This outcome assumes that a utility faces a binding rate-of-return constraint on its rate base and its allowed rate of return exceeds its actual cost of capital. See Harvey Averch and Leland L. Johnson, "Behavior of the Firm Under Regulatory Constraint," *American Economic Review* 52 (December 1962): 1052-69.

3. Achieve fairness not only between utility customers and shareholders, but also among the different customer classes; and,
4. Advance social objectives or public benefits.

Economic efficiency takes into account: (a) the cost to society from satisfying the demands of utility consumers (i.e., productive efficiency) and (b) the value that consumers place on utility service (i.e., allocative efficiency). Key actions for achieving economic efficiency are setting rates based on marginal cost principles, and providing utilities strong incentives to operate efficiently. Economic efficiency involves maximizing total net economic value, while equity or fairness involves the distribution of net value among producers and consumers. Another way to look at the two concepts is that what matters to economic efficiency is maximizing the size of the pie, while equity or fairness cares about the slicing of the pie. Ratemaking involves treating these two concepts interdependently as maximizing the size of the pie requires efficient pricing to consumers, which inevitably encompasses slicing the pie as well. MRPs have a more direct effect on the latter component, which is discussed in a later section of this paper.

To ensure that a prudent utility is financially healthy may require that a utility recovers its capital costs in a timely manner to avoid severe cash-flow problems. It may also involve regulators making some sort of commitment to a utility's capital project so as to moderate risk to the utility. Regulatory commitment can be full, partial or none. Partial may involve, for example, the regulator pre-approving a capital project. Any imprudence in utility decision-making affecting completion of the project is still subject to disallowance. Completely eliminating the risk to utility shareholders would tend to overly blunt utilities' incentive to contain the costs of projects and carefully evaluate their economics. In general, regulators typically satisfy their duty to protect customers from excessive costs through substantial oversight of capital projects and the traditional regulatory prerogative to examine a utility's books and management and potentially disallow imprudently incurred costs.

To achieve fairness has to be not only between utility customers and shareholders, but also among the different customer classes. The term "fairness" and its derivative, "fair," appear commonly in regulatory circles. We often hear of a "fair rate of return," "fair and reasonable rates," "fair value," and a "fair process." Because fairness is elusive and enters the domain of philosophy, it becomes difficult to know what is fair and to say that one action is fairer than another is.³² Since stakeholders perceive fairness differently, the regulator's job is to balance them so as to best advance the public interest. Balancing interests may satisfy the regulator's own interests (e.g., achieving political equilibrium), rather than the public interest. Achieving this goal may result in regulatory approval of a ratemaking mechanism that shares features of different mechanisms. One example is an MRP that contains an earnings sharing component.

Advancing social objectives or public benefits are relatively recent and not presently universally accepted as legitimate objectives to be pursued by state utility regulation. They can include energy efficiency, affordability, and clean energy.

³² It is probably easier to know when something is unfair, at least from a preliminary reaction.

F. Widespread interest in new ratemaking mechanisms

The recent surge of new ratemaking mechanisms stems from shortcomings of traditional ratemaking like those we previously discussed. The relevant question for regulators is: Should regulation change around the edges or at the core?³³

Much of the push for non-traditional rate mechanisms such as MRPs comes from stakeholders (e.g., utilities, environmentalists, consumer advocates) with diverse interests.³⁴ While some economists find MRPs appealing, its strongest supporters in the U.S. have been utilities. It does not seem to be so much because utilities desire stronger incentives for cost efficiency, which certain MRPs can provide; but more because they prefer fewer rate cases, more prompt recovery of cost, especially capital costs.³⁵ Some utilities view new market and operating conditions, for example, rising average costs and the slowdown of demand growth, as *prima facie* reasons for MRPs.

Utilities would find MRPs especially appealing in that they are forward looking and reflect a multiyear commitment by regulators. They can involve regulatory preapproval of capital projects and accelerated recovery of capital costs. This gives utilities greater certainty over cost recovery. Whether or not this benefits utility customers in the long run is the question that regulators should ask.

G. Current status of MRPs

Interest in various variations of MRPs has slowly spread across states. Conditions are favorable to MRPs, specifically with low or no growth in sales for electric utilities along with increasing demand for capital expenditures. According to one study by Lowry and Woolf,

In the U.S. electric utility industry, MRPs [multiyear rate plans] were first used extensively in California, where a Rate Case Plan was established in the 1980s that, with modifications, has limited the frequency of general rate cases to this day. Iowa, Maine, Massachusetts and New York have also been MRP innovators. An MRP for Central Maine Power afforded the company considerable flexibility in marketing to price-sensitive paper mill customers. MidAmerican Energy operated under a lengthy rate freeze that extended to its energy costs but permitted the company to keep margins from its off-system sales. The use of MRPs in the United States has recently spread to

³³ Incidentally, throughout the history of public utility regulation, stakeholders have petitioned commissions to revisit old rate mechanisms and consider new ones (e.g., late 1960s and early 1970s).

³⁴ Added regulatory objectives over the past three decades have included the advancement of energy efficiency and renewable energy, and utility service affordability.

³⁵ Although utilities may argue that an MRP being proposed would improve cost efficiency, their motivation seems to lie more with improving their financial condition.

vertically integrated utilities in a diverse collection of other states that includes Colorado, Florida, Georgia, Virginia and Washington.³⁶

Recent studies and other investigations have examined different forms of MRPs, such as rate freezes, revenue caps, formula rate plans³⁷, and price caps. While the evidence from these mechanisms do not indicate any serious problems, most utility regulators appear reluctant to part with traditional ratemaking, which determines rates solely from a test year.

³⁶ Mark Newton Lowry and Tim Woolf, *Performance-Based Regulation in a High Distributed Energy Resources Future*, LBL-1004130, January 2016, 30.

³⁷ Formula rate plans can function as a safety net for regulators by preventing utilities from earning extremely high or low profits between formal rate reviews. They do this by adjusting base rates between general rate cases, which in that sense falls under the meaning of an MRP. Also like some other MRPs, formula rate plans specify how a utility can change its base rates for periods beyond the rate effective year. A utility can adjust rates, for example, when its rate of return fall outside some predetermined range. Some analysts place formula rate plans outside the category of MRPs. One study, for example, considers a formula rate plan as a comprehensive cost tracker. *Ibid.*, 9. *See also supra* note 6. Other analysts would contend that formula rates differ fundamentally from MRPs.

Formula rate plans can allow customers to benefit visibly and directly when conditions favor a utility to earn high profits. Economic analyses have shown that compared to a pure price-cap regime, earnings-sharing-type mechanisms may better improve the long-term economic welfare of consumers. [*See, for example, Richard Schmalensee, "Good Regulatory Regimes," Rand Journal of Regulation* 20 (Autumn 1989): 417-36; and Thomas P. Lyon, "A Model of Sliding-Scale Regulation," *Journal of Regulatory Economics* 9 (May 1996): 227-47.] Formula rate plans attempt to balance both an economic and political test, which pure price-cap regulation does not attempt to do. Some regulatory plans in the U.S. add an earnings-sharing component to an MRP, which try to give utilities strong incentive for cost efficiency while placing bounds on their profits. These bounds recognize the possibility that a utility can earn extreme profits that can conflict with both "equity" and political standards. The challenge in structuring earnings sharing is to not seriously diminish the utilities' cost efficiency.

III. Objectives of MRPs

A common motive for MRPs is to reduce regulatory cost and improve the regulatory process.³⁸ The presumption is that under traditional ratemaking utilities would file continuous rate cases because of their costs growing faster than sales.

A. Utility perspective

Supporters of multiyear rate plans in the U.S., typically utilities, point to six benefits:

1. More predictable revenues for utilities, bolstering their financial health;
2. Spreading of rate increases over a longer period;
3. More predictable rates for customers;
4. Stronger performance incentives;
5. Timely recovery of costs for new capital projects; and
6. Fewer general rate cases over time.³⁹

These benefits, although at first glance they may not seem terribly impressive from the perspective of utility customers, can dominate any downsides, making multiyear rate plans worthwhile to consider.

Supporters contend that MRPs avoid “earnings” attrition by preventing the erosion of a utility’s rate of return that could occur under an historical test year with the past relationship between revenues, expenses and rate base not relevant for the future. Some proponents of MRPs argue that since they ease the financial burden on utilities when they invest in new infrastructure, customers stand to benefit in the long run.⁴⁰

³⁸ It is imperative that a more efficient regulatory process does not compromise transparency and oversight. By shortcutting certain regulatory activities, for example, the regulator may be slighting some activities that are essential to its duty. One prime example is rubber stamping some costs that the regulator should expend time in reviewing their prudence. An alternative is for the regulator to provisionally allow a utility to recover all of its costs but then in, say, the next general rate case perform a prudence review. One practical problem is that several years may have passed between when the utility made the expenditures and when the regulator carries out the prudence review.

³⁹ Regulators do not like frequent rate cases: They expose regulators to public scrutiny and confront them with the difficult task of balancing the interests of politically charged stakeholders. Besides, rate cases are time consuming and expensive, leaving the regulators with less resources to pursue other activities integral to their duties. Another negative effect from frequent rate cases is that they tend to diminish the incentive of utilities to control their costs, since the benefits to them get more quickly passed on to customers.

⁴⁰ See, for example, Toby Brown et al., “Incentive-Based Ratemaking: Recommendations to the Hawaiian Electric Companies,” prepared for the Hawaiian Electric Companies, May 20, 2014, 23.

From a utility's perspective, the biggest benefit from MRPs probably comes from an improved opportunity to earn its authorized rate of return. That is, the mitigation of regulatory lag that can jeopardize a utility's financial health

In a dynamic environment, utilities also find appealing that MRPs allow their revenues to change in post-test years to reflect the costs of new investments and other additional expenses between rate cases. That is MRPs allow more prompt recovery of costs associated with investments. Otherwise, as some utilities have argued, they would be hard pressed to earn their authorized rate of return between rate cases.

B. Improving utility performance

From a public-interest perspective, the most positive aspect of MRPs derives from improving utility performance, which goes beyond a utility's financial health.⁴¹ After all, regulation has an obligation to induce high-quality utility performance, whether it is customer service, physical operation of the utility system, service reliability, cost controls, or the adoption of new technologies. The economics literature shows that public utilities left unregulated, or regulated ineffectively, would perform poorly. They would set prices too high, price discriminate among customers, provide an inferior quality of service, deploy a nonoptimal mix of inputs, and devote deficient effort to control costs and innovate.⁴²

MRPs have the potential to enhance utility performance through different means:

1. *For a utility to earn its authorized rate of return, the regulator could require the utility to improve cost efficiency:* The Washington Utilities and Transportation Commission, for example, agreed in a settlement that Puget Sound Energy should achieve lower-than-historical cost increases in certain categories to earn its authorized rate of return.⁴³
2. *Facilitation of cost recovery for capital projects can mitigate a utility's disincentive to make socially desirable investments and has other benefits to customers:* By spreading capital cost recovery over a longer period of time than what is the traditional practice, an MRP can also mitigate rate shock⁴⁴, lower a utility's risk, improve utilities' cash flow during construction, and avoid delays in capital cost

⁴¹ Utility performance derives from two distinct factors: *internal efficiencies and external conditions*. The first factor encompasses utility competence in combining and deploying labor, capital, and other resources to manage performance. The second factor accounts for market, operational, business, and other conditions over which an individual utility has minimal control.

⁴² See, for example, *supra* notes 27 and 31.

⁴³ *Supra* note 12.

⁴⁴ An MRP, for example, can levelize rate changes by spreading a \$100 million rate increase over three years instead of placing all of it in the rate-case test year, which begins soon right after the end of a rate case. Rate moderation mechanisms, however, only defer and do not eliminate the need for rate relief. Customer frequently have to pay the utility a carrying charge for stretching cost recovery out over time to achieve more stable year-to-year rate changes.

recovery; these investments can include supporting DER and other new technologies that would benefit utility customers and are compatible with state or federal energy policies.⁴⁵

3. *An automatic rate adjustment mechanism not linked to a utility's actual cost changes can motivate it to achieve higher cost efficiency:* In setting revenue requirements beyond the test year, utilities can either rely on forecasts of their actual costs or use an index for determining allowable cost changes in rates. Because the index does not track a utility's actual cost changes, the utility benefits financially when it achieves cost changes below the index level. For example, if an index for O&M costs allows a utility to increase its revenues by a certain amount, the extent to which the utility "beats" the index, it profits at least until the general rate case.
4. *Performance metrics to evaluate and take appropriate action can provide utilities with an added incentive to improve their performance in non-cost functions:* Most MRPs in operation contain separate performance metrics to ensure customers that a utility has not allowed its performance in reliability or customer service to deteriorate during the course of an MRP.
5. *Price flexibility, which some MRPs allow, gives utilities the ability to vary their price to different customers based on economic and other circumstances.*
6. *A "fair" share of benefits from improved utility performance between the utility and its customers can occur before the next general rate case.*

From a regulatory-process perspective, MRPs can help consolidate different rate mechanisms, making it more efficient and holistic/systematic. A utility could eliminate some riders and surcharges, as certain costs are recoverable under an MRP whereas they were not previously. Riders, where a utility can recover cost changes for certain items outside of a rate case, can cause problems.⁴⁶ By including these costs in base rates, they are likely to receive closer regulatory review, and utility incentives for managing them become more compatible with other costs.

MRPs can also avoid "extreme" utility financial outcomes. By including an earnings-sharing component, they can confine a utility's actual earnings within a tolerably acceptable range. The structure of earnings sharing affects a utility incentive for cost control; a poor structure, for example, could lead to cost-plus-type incentives that would tend to inflate a utility's costs and be detrimental to utility customers.

Finally, as contended by some observers, MRPs can bolster a utility's incentive for supporting energy efficiency and DER.⁴⁷ For example, by limiting revenue changes over a

⁴⁵ See *supra* note 36.

⁴⁶ *Supra* note 22.

⁴⁷ *Supra* note 36.

multiyear period, an MRP can motivate a utility to focus less on increasing sales and discouraging customers from self-generation.⁴⁸

⁴⁸ The intent is to steer utilities away from allowing utilities to profit from increased sales and capital expenditures and toward maximizing value that their customers receive from utility services.

IV. Core and Add-On Features of MRPs

MRPs have a core structure supplemented by secondary features or add-ons. This section will identify and discuss them. MRPs come in different forms depending on such factors as their objectives, the political landscape, and the bargaining strengths of the various stakeholders. In the U.S., MRPs for utilities tend to reflect compromises that make them less than ideal from a theoretical perspective, for example, in terms of maximizing a utility's incentive for cost efficiency.

A. Core structure

The primary structure of MRPs has three components. The first is the starting base rate or revenue, which derives from test year cost and revenue statistics. Most plans use a future test year. Alternatives include an historical test year and a benchmarking method⁴⁹ that reflects the costs of an efficient utility.

As an illustration, an historical test year (HTY) could be 2015, in which the utility would have actual data for the 12-month period. An HTY uses data for a 12-month period that ends prior to a rate filing. In contrast, a partially future or hybrid test year could cover the last six months of 2015 and the first six months of 2016. A future test year (FTY) could be the calendar year 2017. An HTY uses only costs and sales statistics that are known and measurable, unlike a FTY that uses estimates. The tradeoff is that while an HTY uses exact data, it may reflect poorly the conditions during the period over which new rates are in effect. Even if the utility makes *pro forma* adjustments to historical data, in practice they are usually limited to known and measurable changes.

The second component relates to changes in base rates or revenues outside the test year. This is where MRPs are most distinct from traditional ratemaking. A utility can apply detailed cost forecasts or escalation factors attached to the base rate or revenue. An escalation factor acts as an attrition adjustment. An MRP can allow rate changes to be independent of actual cost changes. As discussed later, this gives utilities an incentive to control their costs. Alternatively, rate changes can be a function of a predetermined amount (or value); for example, an amount forecasted during the previous rate case. Forecasts can derive from detailed cost of service analysis, a utility's budget, or a combination of both.

The third component is the duration of an MRP. When an MRP predetermines the time for a future general rate case, the length of regulatory lag becomes known to the utility and other

⁴⁹ The generic definition of *benchmarking* is the comparison of an individual utility's performance against some predefined reference (e.g., peer group). This definition focuses on outcomes, for instance the services provided by a utility per unit of labor or capital, or the level of reliability. An alternate definition of benchmarking would center on a utility's practices and uses of different technologies: Has the utility adopted "best practices" in the form of state-of-the-art technologies and management processes?

stakeholders.⁵⁰ The longer is the duration the more incentive a utility has to control its costs.⁵¹ The duration determines the length of regulatory lag, which affects both cost incentives and the likely range of a utility's rate of return until the next general rate case. A longer duration would tend to increase the likelihood that a utility's rate of return will fall within a wider range.

B. Add-ons

1. Optional but important

The noncore elements of an MRP are practical features needed for political acceptability and the prevention of "extreme" outcomes that might jeopardize the future of an MRP. One reason for add-ons is to protect customers from outcomes during the duration of the plan that were not anticipated at the beginning of an MRP. Such outcomes can include poor performance in service quality, exceptionally high rates of return, grossly forecasted capital costs, and imprudent utility costs. Examples of protections are refunds for an excessive rate of return, caps on recoverable capital costs, monitoring of utility performance, and detailed audits to determine appropriate cost recovery.⁵²

One common component of MRPs is performance metrics for non-cost utility functions, such as reliability and customer service.⁵³ A concern is that utilities under an MRP may jeopardize the quality of its service in the process of controlling costs to increase their rate of return. Some MRPs have performance standards or incentives for service quality and other outcomes.⁵⁴

⁵⁰ Sometimes the end of an MRP may not predetermine the timing of the next rate case. Utilities have been able to have an MRP end and stay out of a rate case. Central Maine Power is one example of such a utility

⁵¹ Regulatory lag is a less-than-ideal method for rewarding an efficient, and penalizing an inefficient, utility. Some of the additional costs could fall outside the control of a utility (e.g., increase in the price of materials), and any cost declines might not correlate with a more managerially efficient utility (e.g., deflationary conditions in the general economy). Experience has shown that state utility regulators are more receptive to mitigating regulatory lag when it causes a substantial downward movement in a utility's rate of return between rate cases. This in part explains the proliferation of trackers and surcharges in recent years.

⁵² Utility cost recovery in the absence of regulatory oversight would ostensibly (a) be unfair to customers and (b) create a "moral hazard" problem that diminished a utility's incentive to manage its costs.

⁵³ Developing metrics can be particularly challenging.

⁵⁴ When the utility receives additional revenues from higher performance, a natural question is what benefits go to customers. Do these benefits at least cover the additional revenues that customers have to pay the utility? Do the benefits of improved performance to customers, for example, coincide with the additional revenues to the utility? Although in many instances the benefits to consumers are non-quantifiable, the regulator should be able to make an informed decision on whether the benefits to consumers from improved utility performance correspond to the additional revenues that the utility receives. The problem with customer benefits falling short of additional revenues is that the utility receives a windfall gain in its profits at a cost to customers.

The following is a litany of add-ons that regulators have either approved or required:

1. “Off-ramps” (i.e., conditions for plan suspension or termination);
2. Cap or floor (“collar”) on annual rate increases;
3. Earnings test;
4. True-ups/deferrals⁵⁵;
5. Stay-out period;
6. Refunds to customers (e.g., from an unexpected cancelled or delayed capital project; from imprudent utility costs identified by an *ex post* review)⁵⁶;
7. Rate design as part of an MRP⁵⁷;
8. Efficiency carryover (e.g., counter ratchet effect⁵⁸); and
9. Utility pricing flexibility (designating a price floor and ceiling)

2. Discussion

Under traditional ratemaking, the utility receives the benefits of “exceptional” performance between rate cases. The earnings test can allocate some of those benefits to customers prior to the next rate case.⁵⁹ It can prevent the utility from earning an extremely high or low rate of return. The biggest challenge with earnings sharing is to avoid compromising a utility’s incentive to control costs. The essential features of earnings sharing are the dead band

⁵⁵ True-ups and earnings tests can substitute for each other in the sense of protecting customers from excessive utility profits because of inaccurate or biased forecasts.

⁵⁶ Such refunds would have to fall outside the realm of retroactive ratemaking.

⁵⁷ The general rate case can address issues related to rate design and cost allocation in addition to the revenue requirement. This is one reason for why the duration of an MRP should have an upper limit, say, three to five years.

⁵⁸ What analysts call the ratchet effect affects the resetting of rates at the next general rate review (i.e., prior actual outcomes affects future rate determination). If the utility knows that the regulator will use the information about its realized costs as a factor in resetting future rates, this will affect its behavior *ex ante*, as discussed later. The utility may have an incentive, for example, to engage in less cost reduction to mislead the regulator into thinking that it is a high cost utility in the latter years of an MRP so that it can justify a higher new base rate or revenues.

⁵⁹ Reasons for excessive/deficient earnings include (a) abnormal costs and revenues from temporary factors like high inflation, a slowdown in the economy, weather), (b) normal costs and revenues differing from levels used in setting base rates in the last general rate case because of systematic forecasting problems like forecasts of normal levels susceptible to large error and inaccurate forecasting, and (c) exceptionally good or bad utility-management competence.

region⁶⁰, the sharing ratio, and the post-adjustment rate of return relative to the authorized return.⁶¹ Regulators should avoid resetting annual rates based on a utility's actual cost in the absence of a prudence review, and on its authorized rate of return in the last general rate case.

Regulators generally apply a three-part test for expense deferral: (1) the cost is material and extraordinary in nature, (2) the cost was incremental to what was allowed in rates, and (3) the utility is not over-earning. Regulators should have strict guidelines on what costs a utility can defer.

As a matter of policy, true-ups should only apply to those expenses that are difficult to forecast and over which the utility has little or no control. Customers receive protection when actual expenses are less than forecasted and the utility receives protection when actual expenses exceed the expected level. A key challenge for the regulator is to determine when the utility should have reasonably foreseen the variance.

In line with theory, some evidence shows that utilities tend to aggressively reduce costs during the early part of an MRP but then to inflate costs at the end of the plan so as to better justify a higher revenue requirement for the plan's next cycle.⁶² Efficiency carryover would mitigate this in addition to allowing utilities to retain for a longer period the benefits of superior performance; or to absorb for a longer time the costs associated with inferior performance, each of which would strengthen their incentive to control cost. Efficiency carryover works by trueing-up the revenue requirement in the next rate case at less than 100 percent.

"Off-ramps" gives the regulator the discretion to terminate or amend an MRP when things go really bad.⁶³ It acts as a safety net, but one that regulators should exercise with caution. By excessively relying on "off-ramps" when outcomes are less than satisfactory, regulators create an aura of uncertainty that could jeopardize a utility's behavior to control costs and take other actions that are in the public interest. The same outcome could come from a utility filing an interim rate case during the MRP period when its rate of return drops to what it

⁶⁰ The dead band determines the range of the rate of return within which no rate adjustment takes place. It recognizes the effects of unexpected outside factors or random events on the actual rate of return. Within this range, the utility has strong incentives for cost efficiency similar to that under traditional ratemaking between general rate cases. In theory, the range should include: (a) a lower value that does not place the utility in a "difficult" financial situation and (b) a higher value that does not reflect "exorbitant" earnings for the utility.

⁶¹ In sharing the earnings outside the dead band region, the utility might adjust rates to bring the rate of return to either the "boundary point" or the authorized rate of return (e.g., the midpoint of the band). These adjustments provide the utility with less robust incentives for cost efficiency than if the regulator adjusts rates so that the utility earns a return outside the dead band region. The tradeoff is that the utility is more likely to experience financial problems, or is able to retain a higher share of the gains from superior cost efficiency.

⁶² Paul L. Joskow, "Incentive Regulation in Theory and Practice: Electricity Distribution and Transmission Networks," working paper, January 21, 2006, 15.

⁶³ The regulator may subsequently reset rates to whatever level it deems just and reasonable.

would consider a critically low level. A stay-out provision would avoid this by prohibiting a utility from requesting an adjusted rate change for the duration of a plan.

V. Specific Issues for Regulators

A. Articulating a rationale

State utility regulators should articulate their rationale for supporting MRPs. One rationale is that traditional ratemaking makes it improbable for a utility to recover its prudent costs. Beyond a future test year, for example, attrition may erode a utility's rate of return to an unacceptable level.⁶⁴ Using this rationale solely says that regulators should support an MRP only when there are unusual, extraordinary, and significant concerns about cost recovery.⁶⁵ This view seems excessively narrow, since other reasons can justify MRP as a ratemaking mechanism that has the potential to benefit utility customers and the public at large. These reasons include lowering of regulatory costs, increased incentives for cost control from less frequent general rate cases, and moderate rate changes compared with one-time large increases. Another rationale that utilities have stressed is that MRPs would allow for more timely recovery of capital costs for new investments, which could benefit customers in addition to themselves.

One issue is whether regulators should establish regulatory guidelines or standards to articulate their criteria for reviewing and approving an MRP. Guidelines can steer utilities and other stakeholders toward particular aspects of an MRP that the regulator would view as either favorable or unfavorable. A regulator can convey its views on MRPs in a policy statement, rules and regulations, or an order. Each of these has different effects. A policy statement, for example, has less import than rules, but it still can be effective in reducing the uncertainty over how a regulator would respond to a particular proposal for an MRP.⁶⁶

Regulators should demand that utilities justify an MRP proposal over alternative ratemaking mechanisms. For example, a utility could articulate the advantages that an MRP has over alternative approaches in addressing the underlying problems with traditional ratemaking.

B. What are the issues?

MRPs pose several questions for regulators, some being more difficult and more important to address than others. The major ones are:

1. Length of the multiyear period;

⁶⁴ A future test year uses projections of costs and revenues usually over a twelve-month period during which new rates would apply, as the basis for determining the annual revenue requirement. If the projections are accurate, and if costs continue to grow more than sales do, a future test year compared with an historical test year would increase the likelihood of a utility earning its authorized rate of return. It achieves this outcome by reducing regulatory lag.

⁶⁵ A counterargument is that if utilities believe that they will under-earn in the near future, they can always file a rate case. Because utilities initiate rate cases under traditional ratemaking, they can file for new rates, for example, when their costs rise because of lax management. This ability to control the timing of rate cases would somewhat weaken utilities' incentive to control costs. See, for example, Ellen M. Pint, "Price-Cap versus Rate-of-Return Regulation in a Stochastic-Cost Model," *RAND Journal of Economics*, Vol. 23, No. 4 (Winter 1992): 564-78.

⁶⁶ A policy statement also may not bind a future commission.

2. Base period revenues and costs;
3. Allowed costs in base rates;
4. Focus on rate changes or revenue changes;
5. Attrition allowance for post-test year rates or revenues;
6. Cost escalation by forecasting or indexing⁶⁷;
7. Conditions for recovery of capital costs⁶⁸;
8. Capital cost included in MRP (e.g., actual, projected)⁶⁹;
9. Adjustments to customer charge or volumetric charge;
10. Inclusion of a “stretch factor” (e.g., motivating a utility to achieve higher cost-efficiency than in the recent past);
11. Additional rate adjustments during a multiyear period (e.g., true-ups for individual costs, earnings sharing⁷⁰): rationale⁷¹; and

⁶⁷ As expressed by one Minnesota utility:

A fundamental consideration of any MRP [multiyear rate plan] proposal is whether rates will be established for each year of the plan within the rate case or, alternatively, a formula (or annual adjustment mechanism) will be established in the rate case by which rates can be adjusted for each year of the multiyear period based on a set of predetermined inputs. While both approaches have merit, the Company recommends that the Commission allow the latter approach because it may provide the greatest amount of benefits to stakeholders in the regulatory process, including customers. While multiple forecasted test years could be used to establish rates for each year of an MRP during a rate case, determining a formula by which rates will be set for each year of the MRP could be administratively more efficient. Nevertheless, the determination of whether an MRP establishes rates for each year of the plan at the time of the general rate case or instead sets a formula to calculate the annual MRP rate adjustments should be made based upon the specific needs, business environment, and MRP proposal of each individual utility.

[CenterPoint Energy, *Comments of CenterPoint Energy, In the Matter of the Minnesota Office Of the Attorney General – Antitrust and Utilities Division’s Petition for a Commission Investigation Regarding Criteria and Standards For Multiyear Rate Plans under Minn. Statute §216B.16, subd. 19; Docket No.: E,G999/M-12-587, October 15, 2012, 8.*]

⁶⁸ For example, should a utility be able to recover capital costs for a project during the duration of an MRP even if the in-service date falls beyond the last year of the MRP?

⁶⁹ An MRP allows a utility to recover capital costs based on a formula, a budget forecast or a fixed escalation rate, or a combination of these factors.

⁷⁰ Earnings sharing can allow customers to share in the benefits of lower utility costs earlier in time. It has the problem of weakening a utility’s incentive to control costs.

12. Adjustments to the authorized rate of return (e.g., for reduced risk imposed on the utility and accelerated utility recovery of capital costs) and changes in the rate of return during the course of a plan⁷².

C. Discussion of major issues

1. Procedural questions

One fundamental question is whether a utility has the discretion to use an MRP, or whether the decision is solely in the hands of the regulator. Should an MRP, for example, be relied on as a ratemaking tool only as a last resort? One sensible view is that regulators should have the discretion to choose the test year, assuming they have the authority. The preferred ratemaking mechanism, whether traditional ratemaking or an MRP, from a public-interest perspective depends on the actual utility's conditions.

Why should regulators allow utilities to select the ratemaking mechanism when they should expect a utility to choose one that best advances the utility's interest rather than the public interest? What happens, for example, if a utility proposes an MRP and the regulator's staff believes it is incapable of evaluating the forecasts? In this instance, the utility would have a distinct incentive to inflate its costs and hopes that the regulator would not detect it. This utility prerogative is akin to allowing the utility to choose rate design or a cost-of-service methodology, with the regulator relegated to a secondary role in fine-tuning a proposal. Most regulators would understandably find this status unacceptable. Legislatures threaten the independence of regulators, and overstep their authority, when they mandate the use of a specific ratemaking mechanism, no matter the circumstances or actual conditions that a utility faces.

Another issue is the filing requirements for an MRP proposal. Should an MRP be part of a rate case, or a separate proceeding? The last alternative may be appropriate, for example, when a utility requests recovery of costs for a major capital project. In its filing, a question is whether post-test year revenues should derive from a detailed cost of service analysis or just represent incremental changes from test year costs.⁷³ In Minnesota, for example, the Public Utilities Commission ruled that during the second and third years of an MRP, utilities can recover costs

⁷¹ Reopeners can occur as a request for recovery of "certain, limited cost items" (like in Wisconsin) in a streamlined filing, or as a full-rate-case-type filing (like in Minnesota). One criterion for reopeners is extremely high or low utility earnings resulting from factors beyond management control.

⁷² Does the use of an MRP, for example, have any material effect on a utility's current risk compared to its peers? One argument is that a utility's cost of capital would decrease because of the reductions in regulatory lag and cost-recovery risk for the utility.

⁷³ Where MRPs involve forecasts, utilities should provide complete documentation to allow a thorough review by the regulator's staff and interveners of the forecasting methodology, data sources, assumptions, and the past forecasting record of the utility. These parties should have access to transparent information from the utility that allows them to understand and verify the forecasts. Only then can a regulator rule on the validity of the utility's forecasts in setting new rates.

that relate to “specific, clearly identified capital projects and, to the extent appropriate, related to non-capital costs.”⁷⁴

2. Treatment of capital costs

a. Five sub-issues

There are five areas of interest about capital projects in the context of MRPs: (1) capital projects allowed in base rates and to be tracked, (2) estimate of the in-service date, (3) projected annual capital costs, (4) ratemaking treatment of forecasting error (hard cap⁷⁵, soft cap⁷⁶, deferral, cost sharing of overruns with dead bands to account for exogenous factors), and (5) ratemaking treatment of changes in the in-service date, project status and costs. Variances between actual and budgeted costs can occur because of changes in project scope and costs, as well as from plant cancellation or postponement.

b. How utilities can recover capital costs

Over the history of public utility regulation, utilities have recovered their capital costs from customers in various ways. They include:

1. The utility requests cost recovery in the following rate case once a project has been completed.⁷⁷
2. The utility provides forecasts of capital costs and after approval the regulator allows cost recovery on an ongoing basis prior to completion.⁷⁸
3. The regulator pre-approves a project but not its capital costs (i.e., partial regulatory commitment).
4. The regulator allows construction work in progress (CWIP) in rate base.

⁷⁴ Minnesota Public Utilities Commission, *In the Matter of the Minnesota Office of the Attorney General – Antitrust and Utilities Division’s Petition for a Commission Investigation Regarding Criteria and Standards for Multiyear Rate Plans under Minn. Stat. § 216B.16, subd. 19, Docket No. E,G-999/M-12-587, Order Establishing Terms, Conditions, and Procedures for Multiyear Rate Plans*, June 17, 2013, 5.

⁷⁵ A problem with a hard cap is that when a utility reaches it or comes close to it, it may defer capital expenses to the following years, which may delay the completion of a project depriving customers of its benefits.

⁷⁶ A soft cap gives the utility an opportunity to justify any costs that exceed it. It is more appropriate when the performance metric (e.g., capital expenses for a large project) is difficult to predict and partially outside the control of utility management.

⁷⁷ The scenario is that all costs are already expended and the project is benefitting customers.

⁷⁸ One issue is how to allocate cost overruns and underruns between utility shareholders and customers.

5. The regulator applies a used and useful standard (i.e., cost recovery requires completion of a project and its operation that benefits customers).
6. The regulator allows phase-in of capital costs (i.e., longer delay of cost recovery) subsequent to the in-service date.⁷⁹

In recent years, state utility regulators have approved mechanisms (for example, cost recovery riders and surcharge mechanisms) that allow utilities to recover their costs on an “interim” basis outside of a general rate case. These mechanisms attempt to balance (a) the concern of utilities for waiting several years before recovering capital costs and (b) consumer interests in ensuring that recovered costs are just and reasonable or prudent. Regulators can protect customers from excessive utility costs by scrutinizing a utility’s costs in a rate case or by approving an incentive mechanism (with explicit rewards and penalties) that motivates a utility to act efficiently in project management.

Ratemaking practices can affect the propensity of a utility to perform efficiently. Cost riders (such as an infrastructure surcharge), especially when they preclude certain costs from undergoing a thorough review by regulators, can compromise a utility’s incentive to control those costs, all else being equal.⁸⁰ Although regulators may approve a utility’s investment plan, the actions of utility management will ultimately determine the final costs and the benefits to customers from the investment.

One option is to allow “interim” recovery of costs for new investments, through a MRP, which will later undergo a prudence review, say, every three years in a general rate case.⁸¹ Utilities will therefore not have to wait several years to receive cost recovery and consumers will get the assurance of a prudence review prior to permanent recovery of costs.

Some state utility regulators have tied cost recovery for investments to utility performance in terms of cost and construction milestones. They have also required a utility to develop a comprehensive strategy, as well as a short-term action plan. Some regulators also conduct a retrospective review to assure customers, for example, that the previous year’s or years’ costs are consistent with the utility’s action plan and prudent construction practices.⁸²

Some regulators also cap the amount that the utility can recover through a surcharge. Finally, it is common for utilities to convert cost recovery from the “surcharge” account to base rates in the next general rate case. In the context of an MRP, the regulator can cap the annual capital expenditures that a utility is able to recover. In the next general rate case, the regulator

⁷⁹ The objective is to spread out cost recovery after project operation so as to moderate rate changes over future periods.

⁸⁰ Lack of an adequate review causes a utility to worry less about the regulator disallowing recovery some of its costs in rates.

⁸¹ Three years could be the duration of an MRP.

⁸² The intent is to assure that the surcharge charge passed through to customers equals only the prudent portion of the costs incurred by the utility.

would determine whether the utility can recover (or refund) any variance of actual expenditures from expenditures that the utility already collected (via the MRP).

Most state utility regulators have approved surcharges, or cost trackers or riders, or MRPs for qualified investments.⁸³ The usual rationales are that they would:

1. Avoid cash-flow problems and other financial risks for utilities from large investments;
2. Reduce the number of general rate cases;
3. Mitigate short-term high rate increases (i.e., rate shock);
4. Allow regulators to periodically (e.g., annually) review the prudence of a project; and
5. Eliminate any disincentive that a utility would otherwise have to undertake economical investments.

Overall, capital cost surcharges, riders and MRPs can help to avoid drastic one-time rate increases from large projects and mitigate cash flow for utilities by reducing the accumulation of financing costs and regulatory lag. They allow for more timely (“interim”) cost recovery during construction outside of a general rate case. On the downside, these mechanisms can result in less-than-satisfactory cost performance by utility management when the regulator exercises inadequate oversight by failing to conduct, for example, a prudence review prior to permanent cost recovery (e.g., rate basing).⁸⁴ They also inherently shift risk to utility customers by requiring them to pay for new projects before completion and operation.⁸⁵

3. Challenges with performance targets

Regulators can set either a hard or a soft target for determining the financial effect on a utility from its performance. A hard target results in a penalty when the utility fails to meet the predetermined target, without exceptions, no matter the circumstance. As an example, a utility could recover the actual cost of a capital project, as long as it does not exceed 110 percent of the forecasted cost. One presumption is that costs above this level reflect utility imprudence in managing the project. Setting a target as the threshold for utility prudence, however, can convey a false precision to how regulators are able to interpret different levels of an activity’s cost or outcome.

⁸³ A prominent one for the natural gas industry is new pipes replacing old pipes, especially for safety reasons. A major justification is that investments in replacing aging pipelines (e.g., cast-iron and bare-steel pipes) by themselves do not generate additional revenues for the utility.

⁸⁴ Regulatory tools for controlling investment costs include: (a) regulatory monitoring and oversight, (b) mandatory utility reporting of costs, (c) retrospective review, (d) regulatory lag in cost recovery, (e) symmetric incentives, and (f) cost caps (hard or soft).

⁸⁵ The risk derives from customers paying for a project before it becomes used and useful. Conceivably, a project could encounter problems that make its completion, and thus its benefits to customers, less imminent.

A dubious practice is to hold a utility to a hard standard or target based, for example, on a peer group of utilities or even on the utility's previous performance. It is presumptuous to conclude that anytime a utility fails to achieve its target, it has acted imprudently. This policy might be unfair to the utility because, say, an "excessive" project cost might come from factors outside its control; or that a relatively low reliability level for a utility might derive from severe weather causing unavoidable outages.⁸⁶

On the other hand, regulators should assume that utilities have some control over the capital cost of a project or their performance in other areas of operation. A perception to the contrary inevitably leads to an open-ended invitation for the utility to pass through all costs to customers with minimal regulatory oversight. Both of these extreme positions seem to make false assumptions that inevitably would lead to inefficient and inequitable outcomes.

A "stretch factor" might be justified if the regulator believes that the utility has a history of being cost-inefficient and has opportunities under better management to improve its efficiency over time. The stretch factor has the benefit of motivating a utility to become more efficient if it hopes to earn its authorized rate of return, which would benefit customers in the long run from lower rates.

Performance evaluation could penalize a utility for not meeting certain threshold levels of performance as measured by selected metrics.⁸⁷ Regulators should require utilities to perform well in return for more timely cost recovery and diminished utility risk. They would want to assure the public that the utility does not underperform in any one area, especially when it jeopardizes customer welfare.

⁸⁶ Regulators can legitimately ask, however, if a prolonged outage was the utility's fault. Bad outcomes do not necessarily signify an imprudent utility. Penalizing the utility without conducting a retrospective review presumes imprudence when other reasons may explain an unexpectedly bad outcome. Most observers would probably conclude that, besides giving utilities incentives for distorted behavior, this regulatory practice is also unfair.

⁸⁷ A poorly structured incentive mechanism can have unintended consequences. Specifically, strategic behavior or gaming by a utility can result in a zero-sum outcome or, worse, distortive utility behavior. The former outcome allocates all the benefits to the utility while producing no real gains to its customers. Distortive utility behavior reduces efficiency as the utility over-allocates its resources to improving the targeted performance area, which decreases the overall performance of the utility. An incentive mechanism can also unfairly harm the utility when (a) its design understates the penalties relative to the rewards or (b) the benchmark is set at a value or range of values that makes it overly easy or difficult for the utility to surpass or even achieve them.

D. Regulators should focus on outcomes

1. Which are most important?

Regulators should focus on certain outcomes in evaluating an MRP, both *ex ante* and *ex post*.⁸⁸ The principal ones are:

1. Changes in the efficiency and the cost of the regulatory process;
2. Utility incentives for cost efficiency (e.g., controlling capital costs);
3. Customer benefits in the form of lower, more predictable and moderate changes in rates;
4. Timing and allocation of efficiency gains between the utility and its customers;
5. Ratchets (i.e., resetting new rates relying on past utility costs); and
6. Avoidance of extreme outcomes to strengthen regulatory commitment to an MRP (e.g., via earnings sharing and performance monitoring).

Enhancement of incentives for cost-efficiency can result from no updating of rates between general rate cases⁸⁹ and the determination of the allowed revenues for the post-test years beforehand. Incentives for cost control on capital investments depend on (1) regulatory oversight, (2) mandatory reporting of costs and (3) the risk of imprudent allowance. Disincentives for general cost control can come from true-ups that automatically allow utilities to recover unforeseen or under-forecasted costs and to refund customers for over-forecasted costs.

Incentives almost always require some kind of regulatory lag and differences between actual revenues and cost of service revenues. The challenge for regulators is to create a balance between effective incentives and prevention of politically unacceptable high profitability levels or the threat of utility financial suppression jeopardizing capital attraction and other utility activities.

Ratchets dull incentives for cost efficiency.⁹⁰ With a three-year plan, for example, a dollar of cost savings in year one is worth more to the utility than a cost savings of one dollar in year two, since the utility retains the cost savings for a longer period until the next rate reset

⁸⁸ *Ex ante* evaluation helps to determine whether the regulator should approve an MRP. *Ex post* evaluation monitors the outcomes to determine whether the plan performed as expected and how the regulator can improve the plan to achieve better outcomes in the future.

⁸⁹ This can occur with a rate freeze, a stay-out provision or the absence of an earnings sharing component.

⁹⁰ Ratchets involve the regulator's adjustment of future forecasts based on past forecasting errors. The regulator observes the utility's actual costs *ex post* to reset a future price. The "ratchet effect" reflects dynamic strategic behavior that analysts and practitioners often ignore in predicting the actions of public utilities and their regulators.

occurs. The regulator would presumably look at a utility's costs and deduct from them the amount that the utility over-forecasted in a prior period. Since regulation is a repeated game, regulators can learn about a utility's true cost attributes as they observe its behavior and performance over time. A utility would tend to inflate costs during the test year, so that it can better justify higher costs in future years. This assumes that the utility expects future earnings to depend on the calculation of test-year costs and revenues. The lower the test-year costs are, for example, the lower future rates will be and, other things held constant, a utility's earnings.

2. Expected outcomes from MRPs

What should regulators expect from MRPs in terms of utility performance? The answer depends on the combination of the core features and add-ons that we previously discussed, and the execution of an MRP. One critical factor is the calculation of revenues during the post-test year period. The calculation can represent forecasts of a utility's costs or indices based on some general or industry-specific price index. Another crucial element relates to which capital costs get included in an MRP.

One positive feature of MRPs, relative to traditional ratemaking, is that they return sooner in time to customers the benefits of improved utility operating efficiency. Lengthening regulatory lag or otherwise strengthening incentives postpones the ultimate objective of passing on benefits to customers. This tradeoff is also inevitable in any incentive plan where the regulator attempts to balance the strength of an incentive and customers benefitting from improved utility performance.⁹¹

MRPs have a distinct advantage over traditional ratemaking in alleviating the likelihood of the utility's encountering financial difficulties. For example, MRPs provide for quicker and more certainty of utility recovery of capital costs.

Yet, the ultimate question for regulators comes down to how customers would benefit. Benefits to customers largely depend on whether the utility becomes more cost-efficient and that customers receive some of those benefits through lower rates. A financially stronger utility also benefits customers in the long run. For example, facilitating utility recovery of project costs may reduce the cost of capital for new investments and the hesitance of a utility to invest in projects that can benefit customers.⁹²

Fewer general rate cases can benefit both utilities and regulators. For customers with a longer duration between general rate cases, utilities should have more incentive to control their costs. Fewer rate cases also drive down the regulatory costs for utilities and other stakeholders.

⁹¹ A tradeoff exists between providing a strong incentive for the utility to manage its costs and ensuring an adequate distribution of the gains to customers. Any incentive mechanism would need to balance these two objectives, implicitly setting a value for s that reflects the relative weights assigned by a regulator to creating "high-powered" incentives and assuring sufficient benefits to customers.

⁹² Otherwise, a utility may not undertake socially desirable capital projects in the absence of an MRP. Whether this premise is true requires regulators to conduct a case-by-case review.

MRPs can increase the predictability of rates to customers. Still, the presence of riders and surcharges may prevent customers from knowing with complete certainty what rates they will pay over, say, the next three to five years.

To the extent that the test-year concept under traditional ratemaking is incapable of setting rates for a multi-year period, some alternative way for utilities to recover costs becomes necessary. The term “incapable” here refers to the inability of test-year costs and revenues to reasonably reflect conditions during the effective periods of new rates. Piecemeal approaches such as cost trackers for individual functions (e.g., investments in new projects) and revenue trackers only partially address some of these problems. MRPs could more effectively and comprehensively overcome them, especially in a dynamic environment, with a “static” test-year approach featured under traditional ratemaking.

VI. Major Concerns with MRPs

A. Challenges in evaluating utility forecasts

Regulators may find it difficult enough to check the accuracy of baseline costs and revenues under a future test year.⁹³ Checking the accuracy of forecasts three or more years out into the future, which some MRPs require, poses even more challenges.

1. Information asymmetry

Forecasts, whether multiyear or single-year, have intrinsic problems. One is information asymmetry in which regulators observe only a utility's performance, not the separate effect of management effort on cost, service quality and other outcomes affecting customers' well-being.⁹⁴

It becomes difficult for regulators to know whether the utility's forecasts are reasonable and objective.⁹⁵ Utilities should have the burden to support their forecasts.⁹⁶ An example of information asymmetry is what economists call the "market for lemons." In that market, the party with the better information will leverage its favorable position to its advantage. A seminal economics article says that in markets plagued by information asymmetry, the market participant holding an information advantage will likely dominate the outcome at the expense of others.⁹⁷ For multiyear forecasts, the implication is that any outcome would be favorable to the utility and harmful to its customers.⁹⁸ This possibility raises a serious concern that may partly explain why most state utility regulators have withheld their support for MRPs and even for future test years.

Supporters of MRPs (largely utilities and Wall Street investment houses) seem to understate the seriousness of information asymmetry. Information asymmetry reflects the relatively less knowledge that a regulator has (relative to the utility's) on the correlation between

⁹³ *Supra* note 21.

⁹⁴ *Supra* note 62.

⁹⁵ Consumer groups and others may argue that forecasts of capital investments are not "known and measurable."

⁹⁶ Although the utility may have the burden to demonstrate the reasonableness of its forecasts, any proposed adjustments by other parties would require an evaluation showing the forecasts' inaccuracies. The utility has a big advantage over other parties in knowing its prudent costs. It is difficult for a regulator's staff and interveners to either (a) show that the utility's costs are excessive or (b) produce their own forecasts that reflect efficient utility management. For the regulator, it comes down to a judgment call in determining the appropriate cost under an MRP.

⁹⁷ George A. Akerlof, "The Market for 'Lemons': Quality Uncertainty and the Market Mechanism," *The Quarterly Journal of Economics*, Vol. 84, No. 3 (August 1970): 488-500.

⁹⁸ As a rule, regulators should apply caution in interpreting information that is asymmetrical, insufficient, and uncertain.

forecasted costs and utility-management competence.⁹⁹ When a utility files a cost forecast, how does the regulator know whether it reflects competent management? The analyst or auditor can evaluate the forecast applying state-of-the-art techniques; still, however, a level of uncertainty remains that leaves unknown the utility's level of managerial competence embedded in the forecast.

2. Biased forecasts

Knowing whether utility forecasts under an MRP are objective and unbiased is essential for protecting customers from unreasonable rates. Utilities would have an incentive to overstate their costs and understate revenues.¹⁰⁰ They may also have subpar forecasting capability and some costs or revenue items may just be inherently difficult to forecast.

One approach to eliminating forecasting bias comes from the United Kingdom. The country's distribution utilities can choose from various plans that have different combinations of revenue requirements and earnings-sharing arrangements. A utility can opt for a plan that has a high revenue requirement for which it retains a low share of the cost savings; or a plan that has a lower revenue requirement for which the utility keeps a higher share of the cost savings. The benefit of this approach is that the utility would select the option that reveals its own unbiased estimate of future costs, thereby mitigating if not avoiding the over-forecasting of costs.¹⁰¹

Checking for the accuracy of past forecasts is essential. Since regulation is a repeated game, regulators can learn about the credibility of past utility forecasts and a utility's attributes, as regulators observe the utility's actions and performance over time.¹⁰²

⁹⁹ Asymmetry comes from the absence of the regulator's knowledge about the utility's cost opportunities and managerial effort. Because of this reality, the utility has a strategic advantage over the regulator and non-utility stakeholders.

¹⁰⁰ A utility would be more inclined to overstate costs than to understate costs. The utility expects the regulator to lower its cost forecasts, so it would tend to initially file inflated costs. There is little payback for a utility that hedges on the low side. The likelihood of the utility's actual costs being higher would increase, thus jeopardizing its rate of return and penalizing its shareholders.

¹⁰¹ *Supra* note 40.

¹⁰² Regulators can require utilities to measure the accuracy of their past forecasts. They can then compare the actual costs and revenues with what the utility forecasted during the previous rate cases. If a utility applied a model to derive these forecasts, it should identify the different causes of forecast errors. To what extent were errors the result of (a) wrong assumptions for specific predictors or (b) model estimation errors? The legitimacy of applying the same model to predict the future partially depends on the model's historical forecasting performance.

A regulator can also view whether forecast errors occurred predominantly in one direction: Were cost forecasts consistently high or sales forecasts consistently low? A regulator can also rely on past forecasting errors as a guide to set a tolerance level for an MRP. If past forecasts exhibited large errors, a regulator might want to consider alternatives to using an MRP for setting future rates.

3. Generic issues with forecasts

Reliance on multiyear forecasts raises the legitimate question: Are forecasts sufficiently accurate for setting rates? For sales and large cost components, the forecasting error in percentage terms could be small and still have a non-trivial effect on the utility's earnings. As a general matter, forecasters tend to overstate the accuracy of their predictions even when based on sound techniques.¹⁰³ When adding the "bias" element intrinsic to a utility's forecasts, one can easily imagine why forecasts might fail to adequately reflect the utility's cost, operating and other conditions over the test year and beyond.

For many items forecasts are not robust, in that they are highly sensitive to future scenarios of the world. Electricity sales for next year, for example, depend on economic conditions, price, weather, and customer behavior. Arguments over the numerical value for each predictor—and how it affects electricity sales—would be contentious and time consuming in a rate case. The regulator has the tricky task of selecting what it considers the most accurate single-point forecast. Basing a decision solely on a single-point or "best guess" forecast is risky. Usually in different contexts it is valid only when (1) the decision maker places a high degree of confidence in a single-point forecast, and (2) the consequences of an incorrect forecast are small.

To elaborate, forecasters typically express their predictions as a range of values within which an event (e.g., future sales) has a high probability of occurring. The uncertainty of predicting costs and sales gives theoretical support for regulators to look at a range of possible future scenarios, rather than focusing only on the most probable future state (i.e., the "best guess" forecast). Regulators should therefore not base their decisions on a single-point forecast, even if that forecast is more defensible than all the other forecasts. Yet in setting rates, whether from a future test year or an MRP, regulators have no choice but to select a single-point forecast, knowing with almost absolute certainty that it will contain a margin of error. In some instances, forecasts are no more than an educated guess, which makes them especially suspect for setting rates. The policy question ultimately reduces to: Are forecasts sufficiently accurate for use in setting rates to avoid an "extreme" rate of return, especially on the high side? If regulators have any doubt, they should seriously consider an earnings-sharing add-on to an MRP.

4. Questions with forecasts from budget data

Utilities often use budget data to forecast costs in a future test year or an MRP filing. Several questions arise as to their validity:

1. Does the utility use a "best practice" budgeting process?
2. Does the utility adequately document its budget?
3. How does budgeting link to the utility's long-range planning?
4. Does the utility provide supporting analyses?

¹⁰³ Nate Silver, *The Signal and the Noise: Why So Many Predictions Fail—But Some Don't* (New York: The Penguin Press, 2012).

5. Do budgets satisfy the “matching principle”?
6. Are budgets forecasts or, instead, goals that do not represent “best guess” cost estimates?
7. What assumptions does the utility make?
8. What are the cost drivers?

Often, a utility’s actual spending may not coincide with its budgets. Should a utility then develop separate forecasts for their future costs? Utilities will often forecast their O&M costs based on budget data. Some analysts consider budgets “wish lists” and not best-guess cost estimates for specific utility functions. Budgets may not always align with sales or other costs, violating the “matching principle” that is essential for setting rates.¹⁰⁴ For example, if a utility develops a budget for each function separately and not jointly with other budgets, inconsistency among different budget items can occur.

B. Dubious incentives for cost efficiency

Three reasons explain why a utility’s costs may inflate its costs. One reason is self-fulfilling forecasts to avoid a “ratchet effect.” What we mean here is that a utility may intentionally increase its costs to make its forecasts seem more accurate. Another possibility is the utility imputing in an MRP forecasted cost increases that are yet to be determined. A utility, for example, might have a weaker incentive to negotiate wage increases below the amount already included in rates. A third, and probably most important, reason lies with information asymmetry, in which the regulator would find it difficult to identify imprudent costs in a utility’s rate filing. As such, the threat of disallowed costs lessens, thereby removing an important regulatory tool to control a utility’s costs. Overall, an MRP might score poorly in achieving cost efficiency.

On the other hand, regulators can strengthen a utility’s incentives to control costs by allowing recovery of cost changes beyond the effective rate year based on indexes that do not track an individual utility’s actual costs.¹⁰⁵ By removing this cost-plus feature of traditional ratemaking, utilities would earn higher profits from reducing their costs.

Overall, the strength of utility incentives depends on the MRP’s structure. An MRP provides utilities with differing performance incentives, depending on whether allowed rate adjustments derive from (1) forecasted costs for a utility or (2) indexes that are exogenous to an individual utility’s actual costs. The latter approach provides a utility with stronger performance incentives. Nearly all of the real-world plans have “stay out” provisions that provide an additional utility incentive for cost efficiency, as well as reduce the frequency of rate cases.

¹⁰⁴ Two core features of a test year are (a) that the calculations of revenues, expenses, and rate base occur over the same time period and (b) the presence of consistency among the different costs and sales elements. The latter requires, for example, that the O&M forecasts are compatible with the sales forecasts and that operating costs account for new facilities added to the rate base.

¹⁰⁵ See, for example, *supra* note 5.

C. The problem of premature utility recovery of capital costs

Under traditional ratemaking, the utility would have to file a new rate case before recovering any of the costs for a new capital project completed outside the test year. Exceptions are when the utility has a special surcharge or tracker that allows it to recover costs in the absence of a general rate case.¹⁰⁶

MRPs pose a special problem for regulators in how they should address unexpected delays, cost overruns, and even cancellations of new capital projects. If the utility's forecast turns out to be overly optimistic, customers may end up paying for new projects prior to in-service status. As an example, a regulator may approve an MRP that ends in 2019 that included costs for a new electric transmission line expected to be in service by June of 2019. Assume that the line encounters delays that set a revised expected completion date of early 2020. Customers are then paying for the line without receiving any benefits from it. This prepayment might not pose a problem in states that allow, for example, CWIP in rate base, but for other states it would.

MRPs, in addition to infrastructure surcharges, can erode utility incentives for capital-cost management if the regulator less scrutinizes those costs. Such an outcome is conceivable when a utility recovers those capital costs from customers before regulators review them. MRPs, in addition to infrastructure surcharges, also have the problem of requiring customers to pay for capital projects that are not yet used and useful, which violates the beneficiary-pays principle because no benefits can flow from a facility before its construction is complete. Overall, utility shareholders seem to benefit at the hands of customers. Yet, customers may in the end benefit when a utility would only undertake investments for which customers prepay.

¹⁰⁶ A regulator may consider appropriate a so-called negative tracker or rider in the event customers are paying for a new plant that unexpectedly encountered delays in completion and thus not providing them with any benefits. The rider, which would involve the utility crediting customers, could continue until the time that the plant actually goes into service.

VII. When Can MRPs Be in the Public Interest?

A. Three steps for evaluating MRPs

A rational process for evaluating MRP involves regulators ordering and interpreting the information they have available to best advance the public interest. This approach requires that regulators: (1) define the public interest in terms of the objectives they ascribe to ratemaking, (2) understand the effect of alternative ratemaking proposals on advancing and impeding the different objectives, and (3) process all the information logically and systematically.

An idealized vision of regulation is as a social institution that makes reasoned (i.e., rational and systematic) decisions based on expert and objective assessment of all the relevant information, and is driven to advancing the public interest. This inevitably requires regulators to exercise judgment by processing the information for decision making.

What this all means is that in evaluating MRPs, regulators need to fulfill their duty to serve the public interest by being well-informed and logical in interpreting the information they have available. Even if an MRP bolsters the financial health of a utility, it may still fail to serve the public good if customers become worse off.

B. Different perceptions of the public interest

What constitutes the public interest is subjective but regulators over time have associated it with just and reasonable rates. A different perception of the public interest is the composite indicator of the public well-being that “adds up” the individual effects of an action on stakeholders and other societal interests.¹⁰⁷ A third perception relates the public interest to the stakeholders’ collective consent to a regulatory action. The idea is that the aggregate interest of society overrides the well-being of special interest groups.

While few would dispute that advancing the public interest is an admirable goal, little consensus exists on how to define and achieve it. Many state utility regulators associate the public interest with meeting minimum fairness requirements; for example, the fair treatment of utility investors and protection of core customers. Even though fairness is a subjective term, regulators must establish bounds and rules to distinguish between fair and unfair actions.

A narrow definition of “the public interest,” more in line with traditional regulation, is the long-term interests of utility customers.¹⁰⁸ After all, the original rationale for public utility

¹⁰⁷ This definition, which state utility regulators have increasingly ascribed to over the past several years, would include outcomes related to energy efficiency, clean air, and affordability.

¹⁰⁸ Economists refer to consumer welfare in terms of what they call “consumer surplus,” which measures the value customers received from a product or service minus the monetary and nonmonetary (e.g., search costs) outlays. With an MRP, for example, consumer surplus, conceivably, could increase because of (a) reduced prices, (b) the availability of additional services (e.g., value-added services), and (c) an increase in the quality of service.

Technically, consumer surplus is the area under the demand curve and above the price. When customers pay a higher utility rate, their consumer surplus decreases by the sum of (a) the loss in net

regulation was to protect customers from the monopoly power of utilities. The “long-term” aspect means that holding rates down in a pending rate case may jeopardize the ability of the utility to fund new investments benefiting customers.

Long-term customer welfare, arguably, is one of the least represented interests in the regulatory and political arena. Utilities look out for their financial interests,¹⁰⁹ and consumer advocates tend to take a short-term view. An apparent gap in adequate representation for the long-term interests of customers demands regulators to fill that void, notwithstanding the intense pressure they face to appease individual stakeholders with the most clout.

In sum, these are all guideposts for regulators to consider in evaluating an MRP. As this paper stresses, regulators should look at the totality of an MRP in what effects it will have on the different stakeholders, especially utility customers from a long-term perspective.

C. Desirable outcomes taking into account the economics and politics

It is not clear whether MRPs are in the public interest. The term “social welfare” or “the public interest” is multidimensional in nature. A regulatory review of alternative rate mechanisms such as MRPs therefore requires consideration of fairness, economic, utility, financial health, and other outcomes. All rate mechanisms have mixed outcomes from the perspective of the public interest, and MRPs are no different. Regulators must use judgment to assess their overall effect, combined with the best information available to them. Much depends on the details and implementation.

From a theoretical perspective, MRPs have especially attractive features in a dynamic world. They should have three essential features to enhance customer benefits. One is that utilities have good incentives for cost efficiency. The second is that utilities are held accountable for their performance.¹¹⁰ A third, which is more debatable, is that for political purposes an MRP should have a safety net or set boundaries for outcomes. Earnings sharing is one prime example.¹¹¹ Otherwise, opposition from stakeholders or from regulators themselves would make the duration of an MRP fragile. This political reality has the downside of diluting the potential

benefits from less consumption and (b) the additional payment for consuming at the actual level compared with what they would have paid at the same consumption level under a lower rate. When the higher rate is above the utility’s prudent costs, it results in what economists call a “deadweight loss” (i.e., aggregate economic-welfare loss).

¹⁰⁹ Utility management could have different interest than their shareholders. Management might place greater emphasis, for example, on immediate or short-term financial performance whereas shareholders might have a longer-term horizon (e.g., the average rate of return over a ten-year period).

¹¹⁰ Without accountability, a utility operates in a “moral hazard” environment in which it becomes indifferent to actions that would benefit customers. An unwillingness to expend additional effort to reduce O&M costs and to suffer no consequences from this inaction is an example.

¹¹¹ Inherent forecasting problems, which we previously discussed, is a rationale for earnings sharing. It can temper the extreme effects that could result from large forecasting errors (e.g., exorbitantly high or excessively low utility profits), jeopardizing the regulatory commitment to MRP.

total benefits (e.g., robust incentives for utility cost efficiency) that an MRP can offer.¹¹² This tradeoff is inevitable and should enter the regulator’s decision-making process for determining the desirability of an MRP. A challenge, as previously discussed, is to avoid a utility’s earnings from being extreme while also providing the utility with good incentives to be cost-efficient.¹¹³

D. Cardinal principles for cost recovery

One additional question relates to how well MRPs align with the major principles for cost recovery applied by state utility regulators over the years. Namely, cost recovery should:¹¹⁴

1. Reflect, in a reasonable way, the prudent costs of a utility, either incurred in the past or projected for the future;
2. Avoid rate shock that can especially burden low-income households who would find it difficult to afford utility services and other necessities;
3. Avoid jeopardizing a prudent utility’s financial health; a regulator may want, in special circumstances, to mitigate cash flow problems by allowing a utility quicker cost recovery; and
4. Avoid placing onerous burdens on either utility customers or shareholders; this balance may require a tradeoff between immediate cost recovery (or before-project-completion) and delay of cost recovery until after the next rate case.¹¹⁵

Where a utility has much discretion over costs, regulation should consider (1) providing the utility with either a robust incentive to control them, (2) establishing performance standards, or (b) monitoring and conducting prudence reviews.¹¹⁶ Allowing for “automatic” cost recovery

¹¹² The upside for customers is that they will reap the benefits of unexpected efficiency gains prior to the next general rate case.

¹¹³ An earnings sharing structure requires both the utility and customers to share both the risks and rewards.

¹¹⁴ How regulators frame cost recovery is critical in examining (a) what costs they should allow utilities to recover, (b) how utilities should recover them, and (c) when they should recover them. Utilities sometimes convey the misleading impression that they have a right to recover any costs they incurred, even before the regulator has assessed their reasonableness. Their position seems to be that “we expend money to satisfy mandates or serve our customers, so regulators should allow us recovery of this money in rates even with little scrutiny.” It presumes that regulators should trust that utilities will always act in the public interest. Good regulation would question the prudence and legitimacy of any costs; it owes that much to utility customers. As in other situations, regulators should not expect utility interests to coexist with the public interest, which after all is the rationale for public utility regulation.

¹¹⁵ The balancing act of regulation, long practiced by state utility regulators, requires the setting of rates to not excessively burden utility customers while allowing a prudent utility to sustain financial health.

¹¹⁶ One criticism of the prudence standard for evaluating a utility’s performance is that a utility can satisfy it without performing at an above-average level. It establishes a threshold of minimum acceptable performance; it does not distinguish acceptable performance from exceptional performance. A

or recovery with minimal scrutiny would weaken utility accountability to manage costs, thereby shifting excessive risk to utility customers. Regulators would want to avoid such a practice under an MRP or other ratemaking mechanisms.

E. The benefit of merging different ratemaking mechanisms

Consolidation of different rate mechanisms is a potential benefit of MRPs. It can simplify and make more efficient the regulatory process. We have seen a proliferation of new ratemaking methods that try to advance certain objectives (e.g., energy efficiency) and facilitate recovery of costs for utilities (e.g., cost trackers, riders and infrastructure surcharges). These are largely piecemeal approaches that focus on some narrow area of a utility's operation.

An MRP can substitute for some cost trackers. As a comprehensive ratemaking mechanism, an MRP can eliminate the need for different cost trackers.¹¹⁷ Cost trackers can diminish the positive aspects of regulatory lag and retrospective reviews.¹¹⁸ They can also create distorted incentives because of dissimilar cost-recovery methods across a utility's functional areas.¹¹⁹ With non-uniform treatment of different costs, for example, the utility might find it profitable *not* to pursue cost-minimizing objectives.¹²⁰ The rationale for cost trackers is to prevent a utility from suffering serious financial problems between rate cases. The question is whether a rate-of-return-driven mechanism such as an MRP or a formula rate plan has the potential to better achieve this objective than myriad cost trackers.

In sum, MRPs are a comprehensive approach for setting base rates that varies in major ways from traditional ratemaking.¹²¹ MRP offers a holistic approach to setting rates that can

commission in effect grades and evaluates utility performance dichotomously: The utility's behavior is either acceptable or unacceptable; there are no intermediary levels of utility-management competence.

¹¹⁷ The reader may ask whether revenue trackers such as revenue decoupling could also not be eliminated. One answer is that it may be preferred to continue with revenue decoupling to remove the disincentive that a utility may have toward energy efficiency, even with an MRP that has earnings sharing.

¹¹⁸ An important incentive for cost efficiency by regulated utilities is the threat of cost disallowance from a retrospective review. To the extent that an MRP reduces the effectiveness of these reviews, incentives for cost management further erodes. With less regulatory oversight and auditing, which often accompany rate cases, a utility might have less concern over its costs. Regulators have long recognized the importance of retrospective reviews in motivating a utility to control costs. Many regulatory experts view retrospective reviews as dissuading a utility from poor decisions with the threat of a penalty, making the utility more diligent and careful in its planning and operations, for instance.

¹¹⁹ *Supra* note 22.

¹²⁰ An MRP applying indexes for attrition adjustments also has more robust incentives for cost control than trackers that follow changes in a utility's actual or report costs.

¹²¹ We have observed over time more diversity and dissimilarity of ratemaking methods across states. One explanation may be that some states have expanded the objectives they assign to regulation while others have stuck to core objectives, which include financially healthy utilities, high service quality and reasonable rates. Another explanation is the differences in relative strengths that various stakeholders

obviate the need for many of the trackers that currently exist. One benefit is that a regulator can review different rates on more of a level playing field and mitigate the problems with one-issue ratemaking.

(e.g., utilities, consumer groups, renewable energy and energy efficiency advocates) have across the states.

VIII. Summary and Final Thoughts

The basic question posed in this paper is how MRPs rank with other ratemaking mechanisms in advancing the public interest. In some U.S. applications, MRPs are more of an adaptation to traditional ratemaking (e.g., applying the future test-year concept over more than one year) in setting base rates. The version of MRPs widely used in other countries – price cap regulation – represents more of a radical departure from traditional U.S. ratemaking, with good qualities that merit serious consideration by U.S. utility regulators. But other versions tainted by politics and dominance by a single interest group contain elements that make them suspect for serving the public interest.

This paper discusses how MRPs in theory can advance the public interest, but the proof of their social desirability hinges on real-world constraints (e.g., political, relative stakeholder dominance) and their implementation. MRPs therefore have attractive features that can benefit customers and the public interest. But, as it is true with other ratemaking paradigms, the “devils are in the details”. The real test is whether MRPs improve the performance of utilities so as to benefit their customers in the long run.

Regulators need to balance strong utility incentives to control costs and healthy finances for a prudent utility. This may require adjusting rates between general rate cases to account for changing costs and sales. Even when traditional ratemaking uses a future test year, which reduces the time lag between changes in rates and costs relative to an historical test year, it fails to update base rates for the attrition that may occur after the rate effective year. Utilities have argued that attrition reduces their ability to earn the authorized rate of return. Riders, trackers and surcharges can allow for rate adjustments between general rate cases, but they have their own special problems that MRPs can help to mitigate.

Because MRPs can have uncertain and unexpected outcomes, regulators may want to initially consider them as a pilot program. As such, post-evaluation becomes imperative, in deciding whether to continue with MRP permanently. It can also lead to tinkering with the structure of an MRP to improve future utility performance and enhance customer benefits.

Why MRPs are not more popular for U.S. energy utilities is somewhat puzzling, given their attractive features – although perhaps not. Possible explanations include inertia, perceived/real problems with MRPs (e.g., forecasts of three years or so into the future), opposition by non-utility stakeholders, utilities seeing little gains, and recent regulatory and public policy stressing environmental and energy efficiency goals.¹²² MRPs have been much more common in the telecom industry than in the energy utility industries. One explanation is that the energy utilities have had fewer opportunities to offer discretionary services.¹²³ In the

¹²² Price cap regulation, for example, encourages utilities to increase their sales in order to recover their fixed costs, which is at odds with the policy goals of energy efficiency and clean air.

¹²³ See, for example, David E.M. Sappington and Dennis L. Weisman, “The Disparate Adoption of Price Cap Regulation in the U.S. Telecommunications and Electricity Sectors,” *Journal of Regulatory Economics*, Vol. 49 (2016): 250-64. Another explanation may be the nature of costs in the telecom industry compared to the electric industry. In the electric industry, costs may be increasing, are lumpier, and more capital intensive. From the utility perspective, other available alternatives like CWIP and cost-

implicit agreement between the regulators and the telecom companies, regulators imposed little regulatory oversight of discretionary services in return for protecting customers of local telephone service via price caps. The fact that price caps are uncommon in the energy utility industry also suggests that economic efficiency has not held a high standing in those industries.¹²⁴

Utilities to date have made less-than-compelling arguments in support of MRPs.¹²⁵ Their main argument is that MRPs would improve the regulatory process and their financial condition (e.g., from less regulatory lag).¹²⁶ They seem to have fallen short in convincing regulators how their customers would benefit. Utilities have recently emphasized the need for an MRP to facilitate recovery of capital costs between general rate cases; specifically, to allow utilities to recover their capital costs more promptly and with more certainty. One circumstance justifying an MRP is when a utility is embarking on several large capital projects with the projects coming into service in successive years. An MRP could allow a utility to include in rate base projects completed in each year of the covered period, so that it could avoid filing back-to-back traditional general rate cases. Regulators guaranteeing a certain revenue stream, as some utilities have argued, is critical for efficient planning. While these desirable outcomes may well transpire, the downside is the lack of opportunity that a regulator may have to review the prudence of costs that utilities want to recover from customers.

Perhaps the biggest challenge for regulators lies with knowing whether under a proposed MRP the utility's forecasts over a three- or five-year period are reasonably accurate. Poor forecasts can lead to extreme utility earnings, either on the high side or low side; but information asymmetry would tend to favor utilities by allowing them to receive high earnings. These plans also require more time expended by a regulator's staff and other parties to evaluate them, in addition to increasing the complexity of rate cases.

In the end, regulators will need to address three broad questions in evaluating MRPs.

1. Given a regulator's objectives of ratemaking and their relative importance, how do MRPs stack up with alternative ratemaking methods, including traditional ratemaking?

recovery riders for capital projects may act as suitable substitutes for MRPs. Another possible explanation for the lack of popularity for MRPs that rely heavily on forecasts is the difficulty of showing the benefits to customers and suspicion by regulators that the forecasts are biased and difficult to review.

¹²⁴ Another reason may be that regulators feared that price caps would jeopardize service reliability because of the strong incentive to control costs.

¹²⁵ In other countries, the initiator of MRPs has been the utility regulator or other policymakers.

¹²⁶ One possible exception to this is when a utility spends on large capital projects whose commitment by the utility could cause financial difficulties with long delays in cost recovery.

2. What ratemaking mechanism or group of mechanisms would be most effective in achieving those objectives? “Effective” can mean attaining some outcome at least cost or with minimal inefficiencies.
3. Perhaps most important, what ratemaking mechanism would be both fair to the utility and most beneficial to customers? How can an MRP produce a non-zero-sum outcome, i.e., result in benefits to both the utility and its customers? The key to advancing the public interest is to make someone better off without making anyone worse off. If MRPs can accomplish that, they should become part of a utility regulator’s rate setting portfolio.

In conclusion, utility regulators may want to take the initiative in advancing MRPs oriented toward the public interest, rather than just the narrow interests of individual stakeholders. This paper suggests that their efforts can produce dividends for utility customers and society at large.

Appendix A: General Questions on MRPs

1. Should rates and revenues be determined beforehand or should a formula determine post-test year rates?
2. What are the benefits of regularized regulatory lag (i.e., known and fixed periods between general rate cases)?
3. What should be main rationales for MRPs?
4. What can go wrong with MRPs from the perspective of utility customers?
Bad forecasts and poor incentives are two examples that come to mind. A worst case scenario is when a utility earn excessive returns while performing below par; or the opposite where a high performing utility has deficient earnings.
5. Why are MRPs not more common in the U.S.?
6. How are MRPs theoretically superior to traditional rate-of-return ratemaking?
7. How can MRPs improve the performance of a utility?
8. How do the incentives under an MRP affect a utility's performance?
Ironically, while an MRP reduces regulatory lag, it can increase a utility's incentive for cost efficiency.
9. Are MRPs the most effective and efficient approach to addressing the problems underlying traditional ratemaking?
10. Which out-of-test-year costs should a utility forecast based on its costs, and which should be subject to an index or formula?
11. How do MRPs promote core and other regulatory objectives?
12. What essential features should an MRP have in promoting the public interest?
13. To what extent should actual utility earnings remain unadjusted between general rate cases?
Some analysts would argue that MRPs without earnings sharing would fail to produce an optimal outcome given asymmetric information and uncertainty over future costs.
14. How would MRPs affect energy efficiency and distributed energy resources?
15. What are the main arguments against MRPs?
16. What outcomes can we expect from MRPs?
17. How can MRPs benefit customers?
18. How can MRPs benefit a utility?
19. What are the major features that regulators should review to determine whether an MRP advances the public interest?

Appendix B: Questions for Regulators to Ask about MRPs

1. What special conditions warrant rate or revenue adjustments outside of a general rate case? In other words, what makes a general rate case unique?
2. Should a proposal for an MRP coincide with a general rate case or with major capital expenditures?
3. In addition to an MRP, what other mechanisms exist to allow a utility to adjust rates between rate cases? Examples are cost trackers, capital surcharges and revenue trackers.
4. What evidence should a utility present to show the justification for an MRP?
5. From the perspective of the public good, how should a regulator weigh the benefits of an MRP relative to its costs? Under what conditions would the benefits dominate the costs to justify an MRP?
6. How would an MRP affect the utility's incentive to improve its cost performance?
7. How can the regulator assure customers that they are paying only for prudent and efficient costs, or for costs that benefit customers? This is essential for determining whether rates are just and reasonable. Specifically, how can the cost-review process assure that the utility is unable to recover excess costs from customers?
8. How would an MRP affect the utility's non cost-related performance? Should an MRP include standards for utility performance?
9. Should costs for capital projects be recovered during an MRP even if the in-service dates are beyond the last year of the plan?
10. If the concept of an MRP is deemed appealing, how can a regulator structure it to mitigate potential problems that would cause harm to customers?
11. How long should an MRP operate (i.e., its duration) before the utility has to file a general rate case? This question relates to: What are the costs and benefits of shortening or lengthening the duration of an MRP?
12. What criteria should regulators use, if any, to determine the range of rate of return within which no rate adjustment would occur? Should regulators, for example, even adjust the utility's actual rate of return between rate cases?
13. How should regulators decide between general rate cases on the sharing of excessive or deficient rate of return between shareholders and customers?
14. What should regulators determine as the utility's post-rate adjustment rate of return (i.e., the targeted rate of return)? Options include the lower and higher bounds of a specified dead band region, the authorized rate of return established at the last general rate case, and some portion of the difference between the pre-adjusted actual rate of return and the boundary points.
15. What have been the experiences of MRPs in different jurisdictions? As an example, Xcel's Colorado multiyear rate plan was approved in a 2011 electric rate case as a result of an uncontested settlement agreement among all of the parties in that rate case. The plan ended when new legislation required the Commission to implement other ratemaking mechanisms.

The MRP contained the following components:

- (a) new, higher base revenue amounts (i.e. rate increases) are implemented in January 1 during the term of the MRP;
- (b) the overall dollar amount of the base rate increases are set for the term of the plan; there is, however, an annual reconciliation between the amounts authorized and actually recovered in base due to variations between actual and forecasted sales; additional adjustments are allowed for variations of more than two percent;
- (c) the Commission handles annual adjustments to base rates through letter (or compliance-like) filings; and,
- (d) additional increases in base rates are prohibited during the term of the plan.

As part of the rate case settlement, and for the duration of the MRP, Xcel agreed to forgo recovery of CWIP; a reduced rate of return; and no changes to the allocation and design of its base rates, a sharing mechanism in which customers share in the Company's earnings that are in excess of the Commission's authorized rate of return on equity. In 2013 and 2014, the utility refunded \$8.4 million and \$66.5 million, respectively, to customers. In discussions with the author, certain staff members of the Colorado Public Utilities Commission indicated their lack of enthusiasm for MRPs mainly because of the difficulty in verifying the forecasted costs.

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Bureau of Investigation and Enforcement (“I&E”)
RS-1 to RS-3
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RS-1 Reference PWSA Statement No. 2, p. 22 regarding PWSA’s capital budget. Provide a schedule that shows a comparison of projected capital improvements to actual capital improvements by account number for the water and wastewater systems, separately, on an annual basis for the years ended 2018, 2019, 2020, 2021, and 2022.

Response: See attachment I&E-RS-1.

*There was no formal Capital Improvement Plan in FY 2018.

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Office of Consumer Advocate (“OCA”), Set VI**

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919

Request: OCA-VI-31 Does PWSA have any contracts, invoices, or other documentation to substantiate its requested revenue requirement for FY 2025 and FY 2026? If so, for each of those years, please provide the supporting documentation and indicate how it factored into the revenue requirement. If there is no documentation, explain why not.

Response:

The prices included within the contracts that are in effect during FY 2025 and FY 2026 are based on services and materials purchased rather than a flat dollar amount per year. Due to this, PWSA utilized historical actuals and a 6% inflationary factor to develop the revenue requirements in FY 2025 and FY 2026.

PWSA has hundreds of contracts for all the various services and materials that it purchases. Specific contracts can be provided upon request.

Response provided by: Edward Barca, Director of Finance

Date response provided: June 22, 2023

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Bureau of Investigation and Enforcement (“I&E”)
RS-1 to RS-3
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RS-3 Reference PWSA Statement No. 7, p. 5 regarding the Multi-Year Rate Plan process in Rhode Island. Are the rates set in the filing for the first year based upon a future test year or fully projected future test year?

Response:

The terminology used in Rhode Island is different from that used in Pennsylvania. In the case of a multi-year filing in Rhode Island, the rates in the first year are based on a Rate Year which is based on a historical Test Year. The Rate Year is developed by making known and measurable adjustments to the Test Year.

Response provided by: Harold J Smith, Vice President, Raftelis

Date Response provided: July 5, 2023

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Bureau of Investigation and Enforcement (“I&E”)
RS-1 to RS-3
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919**

Request: I&E-RS-2 Reference PWSA Statement No. 7, p. 6 regarding the Multi-Year Rate Plan process in Rhode Island. Is PWSA intending to file compliance filings 90 days prior to the rate increases in 2025 and 2026 consistent with the process in Rhode Island?

Response:

PWSA is not proposing to file compliance filings 90 days prior to the rate increases in 2025 and 2026. However, PWSA is open to discussing this process or other alternatives with the PUC parties.

Response provided by: Edward Barca, Director of Finance

Date Response provided: July 5, 2023

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Office of Consumer Advocate (“OCA”), Set V**

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919

Request: OCA-V-3 Please provide copies of PWSA’s unaccounted for water based on the PUC Section 500 Method for the calendar years 2021 and 2022. Include the procedure for estimating non-revenue water such as water used for blow-offs, street sweeping, flushing, firefighting, main breaks, and Highland Reservoir overflows and evaporation, etc. Explain all assumptions used in the calculations.

Response: See Attachment OCA-V-3. The “Notes” tab within the OCA-V-1 describes our methodologies and assumptions for estimating non-revenue water in a narrative format and are summarized as follows:

- Blow-offs: The PWSA elected to estimate this volume by multiplying the total water consumption with the water audits suggested default rate of 0.25%.
- Street Sweeping: The PWSA provided meters to the City of Pittsburgh to record water usage associated with street sweeping. Each meter was installed with an attached MXU unit, therefore the flow data is being transmitted remotely and billed accordingly. Based on the foregoing, water usage associated with street sweeping is categorized as Billed Metered Authorized Consumption, rather than Unbilled Unmetered Authorized Consumption.
- Flushing: The PWSA elected to estimate this volume by multiplying the total water consumption with the water audits suggested default rate of 0.25%.
- Firefighting: The PWSA elected to estimate this volume by multiplying the total water consumption with the water audits suggested default rate of 0.25%.
- Main Breaks: The PWSA estimates this volume by recording the characteristics of known breaks (area of break, size of main, pressure of main, estimated leak time, etc.) and calculating the estimated water loss. The 2021 and 2022 “SpryMobileLeakReporting_PWSA” spreadsheets are available, upon request.
- Clearwell leakage/overflows and Highland Reservoir Evaporation: These are located prior to the system delivery meters and are therefore not included in the unaccounted for water estimation.
- Reservoir Draining: In 2021, the PWSA drained the Herron Hill Reservoir (North Cell) and Lanpher Reservoir (East Cell). The work was required for inspection, operation and maintenance and/or construction purposes. The PWSA recorded the pre-drain water surface elevation and post-drain water surface elevation. In 2022 Highland No. 2 Reservoir was drained for replacement of the liner and cover. Based on historical records, we created a spreadsheet to estimate the volume of water discharged for each reservoir.
- Rising Main Inspection and Disinfection: The PWSA drained Rising Main 4 in December 2021 for the start of the 2019 Large Diameter Water Main Improvements Project. In addition, the PWSA drained, flushed and disinfected the Lanpher Rising Main between August and December 2021. In 2022 Rising Main 3 was drained, flushed, and disinfected.
- City Properties: On October 3, 2019, the PWSA and the City of Pittsburgh (City) entered into an updated cooperation agreement. The updated cooperation agreement was created under PUC oversight and includes provisions to completely transition the City accounts to be billed and metered. In 2019, the PWSA began metering the remainder of the City

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Office of Consumer Advocate (“OCA”), Set V**

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919

accounts. The PWSA continues to install meters on the City accounts. As of June 6th, 2023, there are 2 City accounts without a meter, and thus, are still considered Unbilled Unmetered. Please note that the number of unmetered City accounts is a fluctuating number, as we continue to locate unknown services which require a meter.

WATER AND WASTEWATER RATE STRUCTURE 31

FIRE PROTECTION RATES 36

SCALE BACK OF RATES 38

1 **INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Ethan H. Cline, and my business address is Pennsylvania Public
4 Utility Commission, Commonwealth Keystone Building, 400 North Street,
5 Harrisburg, PA 17120.

6

7 **Q. ARE YOU THE SAME ETHAN H. CLINE THAT SUBMITTED DIRECT**
8 **TESTIMONY ON AUGUST 9, 2023?**

9 A. Yes. I submitted I&E Statement No. 3 and I&E Exhibit No. 3 on August 9, 2023.

10

11 **Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?**

12 A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony
13 submitted by witnesses on behalf of Pittsburgh Water and Sewer Authority
14 (“PWSA”) by William J. Pickering (PWSA St. No. 1-R), Edward Barca (PWSA
15 St. No. 2-R), William J. McFaddin (PWSA St. No. 3-R), Barry King, P.E. (PWSA
16 St. No. 4-R), and Harold J. Smith (PWSA St. No. 7-R) regarding issues related to
17 stormwater rates, the Multi-Year Rate Plan (“MYRP”), capital improvement
18 budgets, unaccounted-for water, rate design, and scale back of rates.

19

20 **Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?**

21 A. No. However, I will reference I&E Exhibit No. 3, which is attached to my direct
22 testimony I&E Statement No. 3.

1 **Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.**

2 A. My recommendations are summarized on pages 35-36 of I&E Statement No. 3 and
3 as follows:

- 4 • The Pennsylvania Public Utility Commission (“Commission” or “PUC”)
5 should deny in full the proposed revenue increases for FY 2025 and FY
6 2026.
- 7 • The Water Treatment Plant FPFTY capital improvement FPFTY increase
8 should be reduced by \$2,713,863, or 25%, from \$10,885,454 to \$8,141,591.
- 9 • The Water Pumping and Storage FPFTY capital improvement PFTY
10 increase should be reduced by \$29,911,439, or 50%, from \$59,822,878 to
11 \$29,911,439.
- 12 • Put PWSA on notice that an adjustment to certain expenses, such as
13 purchased power and chemicals, will be likely in the next base rate case if
14 progress is not shown in reducing the unaccounted-for water levels.
- 15 • The Readiness-to-Serve adjustment should be removed from the calculation
16 of the base charge.
- 17 • The fire protection usage rate should remain \$39.05 per kgal and the fire
18 protection minimum charge should be reduced in the FPFTY.
- 19 • Should the Commission grant less than the full increase requested by
20 PWSA in the FPFTY, rates should be scaled back based on the CCOSS
21 approved by the Commission.

- 1 • Once the revenue level and rates are determined for the FPFTY, then the
2 revenue neutral transition to the base charge and usage rates can be
3 determined for FY 2025.

4
5 **STORMWATER RATES**

6 **Q. DID YOU MAKE ANY RECOMMENDATIONS REGARDING PWSA’S**
7 **STORMWATER RATES?**

8 A. No. I did not make any specific recommendations regarding PWSA’s stormwater
9 rates. However, I did address a recent ruling of the Pennsylvania Commonwealth
10 Court that may affect PWSA’s stormwater rates in the future and put the parties on
11 notice that this issue would need to be addressed at that time (I&E St. No. 3, pp. 3-
12 4).

13
14 **Q. DID ANY PARTIES RESPOND TO YOUR TESTIMONY REGARDING**
15 **STORMWATER RATES AND THE PENNSYLVANIA**
16 **COMMONWEALTH COURT RULING?**

17 A. Yes. Similar to I&E’s position, PWSA witness Pickering indicated on page 16 of
18 PWSA Statement No. 1-R that this is a legal issue that will be addressed in briefs,
19 if necessary.

1 **MULTI-YEAR RATE PLAN**

2 **Q. WHAT DID YOU RECOMMEND REGARDING THE PROPOSED**
3 **MULTI-YEAR RATE PLAN?**

4 A. I recommended the Commission deny in full the proposed revenue increases for
5 FY 2025 and FY 2026. As I discussed on pages 5-6 of I&E Statement No. 3, and
6 including the arguments set forth by I&E witnesses Spadaccio in I&E Statement
7 No. 1 and Okum in I&E Statement No. 2, I determined that the Commission
8 cannot reliably determine that PWSA’s proposed rates in FY 2025 and FY 2026
9 would be just and reasonable.

10

11 **Q. DID PWSA DISAGREE WITH YOUR RECOMMENDATION?**

12 A. Yes. PWSA witnesses Pickering, Barca, and Smith each disagreed with my
13 recommendation.

14

15 **Q. WHY DID MR. PICKERING DISAGREE WITH YOUR**
16 **RECOMMENDATION?**

17 A. Mr. Pickering claimed my testimony was “misleading” and “misses the point”
18 because customers would have the benefit of knowing what their rates will be over
19 a three-year period, well in advance of those rates being implemented where
20 customers traditionally have nine months of notice under traditional ratemaking.
21 He added that the MYRP grants PWSA the ability to avoid filing additional base
22 rate cases to obtain the needed level of revenue. He points to Section 1330 of the

1 Public Utility Code’s mention of a MYRP as a ratemaking alternative to support
2 his claim that it is the legislature and not the parties in a base rate case that
3 establish the Commonwealth’s policies. Mr. Pickering also claimed that I give lip
4 service to Section 1330 and suggested that the article I referenced on page 6 of
5 I&E Statement No. 3, National Regulatory Research Institute (“NRRI”)
6 “Multiyear Rate Plans and the Public Interest” by Ken Costello, Report No. 16-08,
7 October 2016 (“Costello Report”), is a better determinant of the policies that
8 should be in place for Pennsylvania. He claims that Parties can only review
9 alternative ratemaking proposals based on the criteria outlines in the
10 Commission’s Policy Statement at 52 Pa. Code §§ 69.3301-3302 (“Policy
11 Statement”). Finally, Mr. Pickering referenced the custom of PWSA’s Board to
12 approve three-year rates prior to coming under the Commission’s jurisdiction as
13 support for the MYRP because customers are accustomed to an MYRP. (PWSA
14 St. No. 1-R, pp. 7-11).

15
16 **Q. DO YOU AGREE WITH MR. PICKERING’S STATEMENT ON PAGE 7**
17 **OF PWSA STATEMENT NO. 1-R THAT “THROUGH THE PROPOSED**
18 **MYRP, PWSA’S CUSTOMERS WOULD HAVE THE BENEFIT OF**
19 **KNOWING WHAT THEIR RATES WILL BE OVER A THREE-YEAR**
20 **PERIOD, WELL IN ADVANCE OF THOSE RATES BEING**
21 **IMPLEMENTED.”?**

22 **A.** No. Though I do agree with Mr. Pickering that an MYRP would allow customers

1 additional time to know when rate increases will go into effect, I do not agree that
2 this would provide additional transparency, which was the original topic to which
3 Mr. Pickering's testimony was responding. I do not believe that additional lead
4 time makes rates more transparent. Additionally, as I stated on page 15 of I&E
5 Statement No. 3, transparency does not assure any level of justness and
6 reasonableness.

7
8 **Q. DO YOU AGREE THAT THE ABILITY TO AVOID FILING**
9 **ADDITIONAL BASE RATE CASES FOR RATE RELIEF IS A BENEFIT**
10 **THAT CAN BE AFFORDED BY THE MYRP?**

11 A. In some instances, yes. However, this benefit can only be realized when the rates
12 are determined to be just and reasonable. For the reasons described by I&E
13 witnesses Spadaccio, Okum, and myself in I&E Statements No. 1, 2, and 3, as well
14 as in this testimony, it is not possible to determine that the rates proposed by
15 PWSA in its MYRP will be just and reasonable.

16
17 **Q. PLEASE RESPOND TO MR. PICKERING'S CLAIM THAT SECTION**
18 **1330 OF THE PENNSYLVANIA PUBLIC UTILITY CODE REQUIRES**
19 **THAT PWSA BE PERMITTED TO ENACT A MYRP.**

20 A. It appears that Mr. Pickering's position is that Section 1330 of the Pennsylvania
21 Public Utility Code ("Code") requires that PWSA be permitted to enact an MYRP
22 regardless of the justness or reasonableness of those rates. Mr. Pickering's

1 interpretation of Section 1330 of the Public Utility Code is entirely incorrect. As I
2 described on page 4 of I&E Statement No. 3, Section 1330 of the Code allows
3 utilities to seek approval of alternative rate making mechanisms, such as an
4 MYRP. The Code does not guarantee approval of those mechanisms and they will
5 still be subjected to the requisite scrutiny.

6
7 **Q. DOES MR. PICKERING APPEAR TO MISUNDERSTAND THE ROLE OF**
8 **THE PARTIES IN A BASE RATE CASE?**

9 A. Yes. Mr. Pickering, on page 9 of PWSA Statement No. 1-R, claimed that I&E and
10 the Office of Consumer Advocate are attempting to establish the Commonwealth's
11 policies because they opposed the proposed MYRP. What Mr. Pickering
12 apparently fails to understand is that the role of the Parties is not to "set policy," as
13 he erroneously claims, but instead to analyze and scrutinize a utility's base rate
14 filing and make recommendations to the Commission so that it can set rates that
15 are just, reasonable, and in the public interest. It is I&E's recommendation to the
16 Commission that the proposed MYRP does not meet the criteria of being just,
17 reasonable, and in the public interest.

1 Q. DOES MR. PICKERING APPEAR TO HAVE A MISUNDERSTANDING
2 OF THE CODE WITH RESPECT TO THE CRITERIA SET FORTH IN
3 THE COMMISSION’S POLICY STATEMENT AT 52 PA. CODE §§
4 69.3301-3302?

5 A. Yes. Mr. Pickering stated on page 9 of PWSA Statement No. 1-R that I add
6 “factors not identified by the PUC as being germane of a review of a particular
7 alternative ratemaking mechanism proposed by a public utility.” He then points to
8 my assessment of PWSA’s history of failure when applied to its forecasted capital
9 costs compared to actual expenditures. Based on this testimony, Mr. Pickering
10 seems to believe that Parties can only assess an alternative ratemaking mechanism,
11 such as the MYRP, based on the criteria set forth in the Commission’s Policy
12 Statement. However, this belief is entirely contrary to the text of the Policy
13 Statement itself which states “[i]n determining just and reasonable alternative
14 distribution ratemaking mechanisms and rate designs that promote the purpose and
15 scope of this statement of policy and the objectives of 66 Pa. C.S. § 1330 (relating
16 to alternative ratemaking for utilities), the Commission may consider *among other*
17 *relevant factors*, the following:” (*emphasis added*). It is clear that the Policy
18 Statement does not limit the criteria or factors that the Commission can use to
19 consider whether a proposed MYRP is in the public interest. PWSA’s history of
20 inaccurate capital budget projections, despite Mr. Pickering’s attempt to claim
21 otherwise, is extremely relevant in the assessment of PWSA’s proposed MYRP.

1 **Q. IS MR. PICKERING CORRECT THAT YOU SUGGESTED THAT THE**
2 **COSTELLO REPORT IS A BETTER DETERMINANT OF THE**
3 **POLICIES THAT SHOULD BE IN PLACE FOR PENNSYLVANIA?**

4 A. No. Mr. Pickering is misrepresenting my testimony. On pages 6-7 of I&E
5 Statement No. 3, I stated that the Costello Report, which has a stated objective of
6 attempting to educate state utility commissions on multiyear rate plans, provides a
7 discussion of the pros and cons that the regulators should consider when assessing
8 whether an MYRP is in the public interest. I recognized that the benefits of
9 MYRPs championed by PWSA witnesses align with the pros listed in the Costello
10 Report and stated that my analysis consisted of which cons presented in the report
11 apply to PWSA's proposal and whether those cons outweigh the pros regarding
12 the public interest. I also noted that the Costello Report represented arguments for
13 and against MYRPs from an unbiased perspective and that it did not attempt to
14 sway regulators one way or the other. I also clearly stated that the ability to
15 propose an MYRP is in the Code, and it is not subject to dispute. Therefore, Mr.
16 Pickering's claim is without merit.

17
18 **Q. IS PWSA'S HISTORY OF MULTIYEAR RATE INCREASES PRIOR TO**
19 **COMING UNDER COMMISSION JURISDICTION A REASON TO**
20 **APPROVE AN MYRP?**

21 A. No. It is a well-established fact that, prior to coming under Commission
22 jurisdiction, PWSA's water and wastewater systems were extremely mismanaged.

1 PWSA reverting back to policies that it held prior to Commission jurisdiction is
2 not likely to engender positive feelings for its customer base and has no bearing on
3 any Commission decision.
4

5 **Q. DO MULTIPLE PWSA WITNESSES REFER TO PWSA EXPENDING**
6 **EXTRA FUNDS IN A WAY THAT THEY CLAIM WILL BENEFIT**
7 **CUSTOMERS?**

8 A. Yes. Mr. Pickering, on page 9 of PWSA Statement No. 1-R, and Mr. Barca, on
9 page 25 of PWSA Statement No. 2-R, each claim that, as a cash flow utility with
10 no shareholders, PWSA will expend, or attempt to expend, any dollars it failed to
11 spend in a particular year in a way that benefits ratepayers.
12

13 **Q. DID THE PWSA WITNESSES PROVIDE ANY SPECIFIC EVIDENCE**
14 **FOR HOW EXCESS DOLLARS WILL BE SPENT TO BENEFIT**
15 **RATEPAYERS?**

16 A. No. Each witness only makes vague references to redirected funds benefiting
17 ratepayers. They have provided no evidence or detail as to where extra dollars
18 will be spent that would benefit ratepayers. Additionally, as I explain in additional
19 detail below, PWSA's history of not meeting its annual capital budget
20 expenditures calls into question just how these ratepayer funded dollars are spent.
21 Further, rather than supporting PWSA's base rate filing, this testimony raises red
22 flags.

1 **Q. WHY DID MR. BARCA DISAGREE WITH YOUR RECOMMENDATION?**

2 A. Mr. Barca disagreed with my recommendation for several reasons. First, he
3 disagreed with my analysis of PWSA's actual performance compared to its capital
4 budget. Second, he provided his opinion on what the Parties should be permitted
5 to review when considering an MYRP. Third, he claimed I am demanding a level
6 of precision of PWSA's projections that has not been required by the Commission.
7 Fourth, Mr. Barca stated that he fails to see why a multi-year process would
8 require more extensive consumer protections. Finally, Mr. Barca attempted to
9 provide further clarification in response to my testimony regarding PWSA's
10 uncertainty in its revenues until rates are finalized. (PWSA St. No. 2-R, pp. 24-
11 27).

12
13 **Q. IS MR. BARCA CORRECT THAT TWO OF THE YEARS INCLUDED IN**
14 **YOUR ANALYSIS OF THE ACCURACY OF PWSA'S PROJECTIONS**
15 **INCLUDED YEARS AFFECTED BY THE COVID-19 PANDEMIC?**

16 A. Yes. I do not deny that PWSA's capital expenditures and operations have been
17 significantly affected by the COVID-19 pandemic in 2020 and the resulting
18 problems and issues that followed in 2021 nor do I deny that PWSA is still being
19 affected by those issues as claimed by Mr. Barca on page 25 of PWSA Statement
20 No. 2-R. However, what Mr. Barca does not explain is why an MYRP is
21 appropriate when PWSA's ability to accurately predict its capital improvement
22 costs is still being affected by the COVID-19 pandemic let alone any other event

1 that may occur between now and 2027 that has not factored into the current base
2 rate case.

3
4 **Q. WHAT DOES MR. BARCA CLAIM SHOULD BE EXAMINED IN**
5 **DETERMINING AN MYRP?**

6 A. Mr. Barca claims that, rather than determining whether past budgets project actual
7 experience “exactly,” the issue that should be examined in determining an MYRP
8 is whether the utility has a “rigorous and well developed” process for making
9 projections of all the elements that make up a cash flow utility’s revenue
10 requirement (PWSA St. No. 2-R, p. 25).

11
12 **Q. DO YOU AGREE WITH MR. BARCA’S CLAIM?**

13 A. Not at all. First, Mr. Barca purposefully misstates my position in his claim that I
14 am requiring PWSA’s actual capital improvement results match their budgets
15 “exactly.” My position is that PWSA’s history shows that its track record of
16 meeting its capital budget projects is poor to the point that the average four-year
17 difference between budget and actual improvements is nearly \$55 million, or 35%
18 (I&E Ex. No. 3, Sch. 3). Second, Mr. Barca does not provide any detail into what
19 he considers a “rigorous and well developed process.” Third, Mr. Barca’s claim
20 on page 26 of PWSA Statement No. 2-R that “I would note that the demands the
21 consumers not have to pay a rate that contains allegedly inaccurate estimates of
22 revenue requirement is not an element of a conventional ‘single year’ rate

1 increase” is entirely incorrect. Utilities in Pennsylvania are regulated based on the
2 projection of actual data and trends projected into future years. The ability to be
3 confident in the accuracy of those projections is what allows the Commission to
4 determine whether rates can be considered just and reasonable. Finally, contrary
5 to Mr. Barca’s claim, it does not matter how rigorous or well-developed a process
6 is if it consistently provides results that are not accurate. It is disturbing that Mr.
7 Barca is advocating that the accuracy of PWSA’s projections should be discounted
8 in favor of its process despite PWSA being a regulated utility since 2018.

9
10 **Q. DO YOU AGREE WITH MR. BARCA THAT THERE IS NO**
11 **REGULATION OR DIRECTION FROM THE PUC AS TO HOW THE**
12 **REVENUE REQUIREMENT IN THE FUTURE YEARS OF A MYRP**
13 **SHOULD BE CALCULATED (PWSA ST. NO. 2-R, P. 26)?**

14 A. Yes. The PUC has provided no regulation or direction as to how the revenue
15 requirement in the future years of a MYRP should be calculated beyond the need
16 for rates to be just, reasonable, and in the public interest. As I discuss further
17 below, it is not reasonable for the Commission to approve an MYRP prior to
18 setting forth any regulation, direction, or customer protections.

1 **Q. IS MR. BARCA CORRECT THAT YOU ARE DEMANDING A LEVEL OF**
2 **PRECISION OF PWSA'S PROJECTIONS THAT HAS NOT BEEN**
3 **REQUIRED (PWSA ST. NO. 2-R, P. 26)?**

4 A. No. I am recommending that the Commission require the same level of precision
5 as it does for the FPPTY. Simply applying a 6% inflationary factor to projections
6 that have questionable accuracy is not a reasonable method for determining just
7 and reasonable rates, especially when the projections are more speculation than
8 reasonable projections.

9
10 **Q. ON PAGE 26 OF PWSA STATEMENT NO. 2-R, MR. BARCA STATED**
11 **THAT HE FAILS TO SEE WHY A MULTI-YEAR PROCESS WOULD**
12 **REQUIRE MORE EXTENSIVE CONSUMER PROTECTIONS. PLEASE**
13 **RESPOND.**

14 A. Based on Mr. Barca's previous testimony, it is not surprising that he does not see
15 why an MYRP would require more extensive consumer protections since he does
16 not think that PWSA's projections need to be accurate. It is a fact that as
17 projections move farther away from the actual, historic data they are based upon,
18 the less reliable those projections are. In fact, they become more speculation than
19 projections. Therefore, it is reasonable to provide a greater level of consumer
20 protections to protect consumers from paying rates that no longer reflect the
21 circumstances they were originally based upon. On pages 26 and 27 of PWSA
22 Statement No. 2-R, Mr. Barca referenced the testimony of PWSA witness Smith

1 regarding additional consumer protections that could be put in place before the
2 subsequent year rate increases could be implemented. I will discuss this proposal
3 below.

4
5 **Q. DID MR. BARCA ATTEMPT TO PROVIDE FURTHER CLARIFICATION**
6 **IN RESPONSE TO YOUR TESTIMONY ON PAGES 13-14 OF I&E**
7 **STATEMENT NO. 3 THAT IT IS UNCLEAR WHY PWSA WOULD NOT**
8 **KNOW WHAT ITS REVENUE LEVELS SHOULD BE ON A YEARLY**
9 **BASIS?**

10 A. Yes. Mr. Barca explained that PWSA creates a budget each year for the following
11 fiscal year and that it will not budget a certain amount of expenditures unless it has
12 reasonable assurance that it will have sufficient revenue to cover those
13 expenditures. He further explained that PWSA is not able to project what its level
14 of revenues will be for future periods because it must go through an intensive,
15 nine-month process where the results cannot be predicted and are only in place for
16 the initial year after the rate decision. An MYRP would significantly reduce the
17 uncertainty for the additional years included in the rate proposal.

18
19 **Q. DO YOU AGREE WITH MR. BARCA'S EXPLANATION?**

20 A. Partially. I agree that PWSA would have uncertainty in the year prior to when the
21 rate increase goes into effect as the results of the base rate process is not known
22 until the Commission's Order is filed. However, as I stated on page 13 of I&E

1 Statement No. 3, the only reason why PWSA would not know what its revenue
2 levels should be on a yearly basis would be if its projections of usage and numbers
3 of customers were wrong. This is because, outside of changes to adjustable riders
4 and changes due to base rate cases, PWSA's base rates remain the same.

5 Therefore, if PWSA has a reliable projection of its usage levels and number of
6 customers, it should be able to make an accurate projection of the annual revenue
7 levels for the following year. An MYRP does not change that ability to predict its
8 revenue levels; it only provides higher rates and additional revenues.

9
10 **Q. WHY DID MR. SMITH DISAGREE WITH YOUR RECOMMENDATION**
11 **REGARDING THE MYRP?**

12 A. Mr. Smith disagreed with my recommendation regarding the MYRP for several
13 reasons. First, Mr. Smith believes that I discount the potential benefits offered by
14 MYRPs presented in the Costello Report and place too much emphasis on the
15 potential drawbacks. Second, he notes that the Costello Report is largely focused
16 on whether MYRPs provide utilities with inappropriate opportunities to earn a rate
17 of return that is in excess of what the Commission has determined is appropriate
18 and claimed that much of the discussion in the report is irrelevant to PWSA due to
19 it being a cash flow utility. Third, he again references his history with the Rhode
20 Island Public Utility Commission ("RIPUC") and its implementation of MYRPs in
21 its jurisdiction. Finally, Mr. Smith recommends that all parties to this rate case
22 work together to develop specific requirements of a compliance filing such that all

1 parties are confident that they have sufficient evidence to support the proposed
2 rate increases. (PWSA St. No. 7-R, pp. 9-13).

3
4 **Q. DO YOU AGREE YOU DISCOUNT THE BENEFITS OF THE MYRP SET**
5 **FORTH IN THE COSTELLO REPORT?**

6 A. No. As I stated on page 7 of I&E Statement No. 3, the Costello Report listed some
7 of the same benefits discussed by PWSA's witnesses and my analysis included
8 whether the cons outweighed the pros regarding the public interest. I did not
9 discount any of the positives offered by an MYRP. My analysis determined that
10 the cons outweighed those pros and, therefore, the proposed MYRP should be
11 rejected.

12
13 **Q. DO YOU AGREE THAT THE COSTELLO REPORT IS LARGELY**
14 **FOCUSED ON TRADITIONAL RATE OF RETURN RATEMAKING**
15 **WHEN DISCUSSING MYRPS?**

16 A. Yes. The Costello Report does focus on traditional rate of return ratemaking.
17 Despite this, the Costello Report provides insight into topics that can be
18 universally applied regardless of traditional ratemaking versus cash flow
19 ratemaking. As an example, the quote I provided on page 8 of I&E Statement No.
20 3 regarding checking the accuracy of past forecasts is true for both traditional rate
21 of return ratemaking as well as PWSA's cash flow methodology. Those universal

1 insights are helpful in assessing whether an MYRP is in the public interest and
2 should not be ignored.

3
4 **Q. WHY DID MR. SMITH REFERENCE HIS HISTORY WITH MYRPS IN**
5 **THE RIPUC?**

6 A. Mr. Smith stated that he believes that if the Commission were to implement
7 processes similar to those employed by the RIPUC, utility customers in
8 Pennsylvania could reap the benefits of MYRPs as they have done in Rhode Island
9 (PWSA St. No. 7-R, p. 9).

10
11 **Q. WHAT DID MR. SMITH RECOMMEND REGARDING THE MYRP IN**
12 **THE PRESENT PROCEEDING?**

13 A. Mr. Smith recommended that the Commission adopt PWSA's MYRP and order a
14 workshop be scheduled, in which any interested party could participate, which
15 would attempt to arrive at the procedure and substance of the compliance filings
16 that would be made prior to the implementation of the 2025 and 2026 rates
17 (PWSA St. No. 7-R, p. 13).

18
19 **Q. DO YOU AGREE WITH MR. SMITH'S RECOMMENDATION?**

20 A. Partially. I agree that introducing a compliance plan would be a positive addition
21 to any potential MYRP and adds a level of consumer protection that would be
22 beneficial for all Parties involved. I also agree that starting with the RIPUC

1 process would be a good place to start as it appears to be a proven process that
2 works for the utilities and customers in Rhode Island.

3 I do not agree, however, that introducing this process in the rebuttal phase
4 of the current proceeding is the appropriate timing to introduce such a workshop.
5 Any rules that would come from this discussion would likely affect every
6 jurisdictional utility in Pennsylvania that proposes an MYRP in the future.
7 Therefore, those utilities and any other parties that may not be involved in the
8 present proceeding should have an opportunity to be heard. Additionally, tacking
9 this proposal on during the rebuttal phase and expecting the Commission to
10 organize, discuss, decide, and implement the rules surrounding a compliance plan
11 is not reasonable. Finally, it is not reasonable to ask the Commission to approve
12 MYRP rates before the compliance plan procedure has even been discussed. This
13 would be an extreme case of putting the cart before the horse and should be
14 rejected.

15
16 **Q. WHAT DO YOU RECOMMEND REGARDING THE MYRP?**

17 A. I continue to recommend that the MYRP be rejected. However, I would also
18 recommend that if the Commission wants to consider MYRP's, the Commission
19 should organize a collaborative in order to promulgate rules and regulations
20 surrounding a compliance filing that would go with any MYRP proposed in
21 Pennsylvania.

1 **CAPITAL IMPROVEMENT PROJECTS**

2 **Q. WHAT DID YOU RECOMMEND REGARDING PWSA'S CAPITAL**
3 **IMPROVEMENT PROJECTIONS IN THE FPFTY?**

4 A. I recommended that PWSA's proposed increase to its capital budget in the FPFTY
5 be reduced by \$32,625,303 from \$42,688,673 to \$10,063,371 (I&E Statement No.
6 3, p. 20).

7
8 **Q. DO YOU HAVE ANY CORRECTIONS TO YOUR RECOMMENDATION?**

9 A. No. However, while I do not have any corrections to my recommended
10 adjustment to the increase in PWSA's capital budget in the FPFTY, I&E witness
11 Spadaccio, in I&E Statement No. 1-SR, provides a correction to the revenue
12 requirement treatment of my recommendation.

13
14 **Q. DID PWSA RESPOND TO YOUR RECOMMENDATION?**

15 A. Yes. PWSA disagreed with my recommendation to reduce its capital budget in the
16 FPFTY.

17
18 **Q. WHY DID PWSA DISAGREE WITH YOUR RECOMMENDATION TO**
19 **REDUCE ITS CAPITAL BUDGET IN THE FPFTY?**

20 A. PWSA witnesses Barca and King responded to my recommendation to reduce the
21 capital budget in the FPFTY. Mr. Barca claimed that PWSA ratepayers were not
22 overcharged when budgeted projects were not finished, had to reduce its planned

1 capital expenditures to match the allowed revenue requirement from its previous
2 settled base rate cases, and stated that he does not understand how I&E can
3 recommend an adjustment that would force PWSA to cancel or delay needed
4 capital projects (PWSA St. No. 2-R, pp. 16-21).

5 Mr. King responded on pages 4-10 of PWSA Statement No. 4-R by
6 claiming that “four years can hardly be viewed as a ‘historic’ tendency on the part
7 of PWSA,” blamed the deficiency on factors outside of PWSA’s control and could
8 not have anticipated, pointed to the lengthy bidding process established by the
9 Municipal Authorities Act (“MAA”), and claimed that the larger divergences
10 between budgeted and expended amounts that occurred in FY 2020 and FY 2021
11 support his expectation of a greater trend toward accuracy going forward. Mr.
12 King also claimed that my proposed reductions are arbitrary and fail to consider
13 the impact on PWSA’s ability to complete projects that have been identified as
14 being necessary for regulatory compliance, safety, quality of service and operating
15 efficiency. (PWSA St. No. 4-R, pp. 4-7).

16
17 **Q. WHY DOES MR. BARCA CLAIM THAT CUSTOMERS WERE NOT**
18 **OVERCHARGED WHEN BUDGETED PROJECTS WERE NOT**
19 **FINISHED?**

20 A. Mr. Barca listed two reasons for his claim that customers were not overcharged
21 when their budgeted projects were not finished. First, he claimed that PWSA’s
22 budgets were all based on an assumption that PWSA’s full rate request was

1 granted, which has never happened since PWSA has been under the jurisdiction of
2 the Commission. Second, Mr. Barca claimed that, even if the reduced capital
3 budget was not met in a year, the project was moved to the next year and any
4 dollars not utilized were not used in that next year (or years). (PWSA St. No. 2-R,
5 pp. 19-20).

6
7 **Q. PLEASE RESPOND TO MR. BARCA’S CLAIM THAT PWSA HAD TO**
8 **REDUCE ITS PLANNED EXPENDITURES TO MATCH THE ALLOWED**
9 **REVENUE REQUIREMENT AS A RESULT OF BASE RATE CASES?**

10 A. Mr. Barca’s claim that the reason that PWSA did not complete all of its budgeted
11 projects is due to the Commission not providing its fully requested revenue
12 requirement is inconsistent with the testimony of both himself and Mr. King.

13
14 **Q. WHY IS MR. BARCA’S CLAIM ABOUT THE RESULTS OF PREVIOUS**
15 **BASE RATE CASES INCONSISTENT WITH OTHER PWSA**
16 **TESTIMONY?**

17 A. Both Mr. Barca and Mr. King claim that PWSA’s deficiency in meeting its
18 projected capital budgets are due to project delays from factors that PWSA cannot
19 control such as residual effects of the COVID-19 Pandemic, permitting delays,
20 historical review delays, employee and contractor shortages, and supply chain
21 issues (PWSA St. No. 2-R, pp. 16-17 and PWSA St. No. 4-R, pp. 4-6). Mr. Barca
22 also stated that “neither I&E nor any other Party has actually challenged any of

1 PWSA’s projected projects as imprudent or unnecessary” (PWSA St. No. 4-R, p.
2 20). Therefore, because I&E and the other Parties did not challenge any of
3 PWSA’s previous projects, the approved revenue requirements in the previous
4 cases included full funding for those projects and it was either project delays or
5 PWSA’s own decision making that led to the failure to complete the budgeted
6 projects. Furthermore, while I recognize that the factors listed by PWSA that
7 caused delays in the past are valid, PWSA has not indicated that those issues will
8 be less problematic in the future, nor has it shown that it has attempted to adjust its
9 capital budget to deal with those issues. This could result in an increased risk that
10 customers will be funding projects that have a higher likelihood of being delayed.

11
12 **Q. IS MR. BARCA’S STATEMENT THAT PROJECTS THAT ARE NOT**
13 **FINISHED IN ONE YEAR ARE SIMPLY PUSHED TO THE NEXT YEAR**
14 **CONSISTENT WITH THE ACTUAL PROJECT COMPLETION DATA?**

15 A. No. As shown on I&E Exhibit No. 3, Schedule 3, there were only three instances
16 since 2019 of PWSA completing more projects than were projected in its capital
17 budget for that year: Water Treatment Plant and Wastewater System in 2019 and
18 Water Distribution in 2021. In every other year and category, the actual capital
19 improvements are below the budgeted capital improvements. Therefore, by Mr.
20 Barca’s reasoning, each year projects are pushed into the following year, then
21 PWSA continues to fail to complete its budgeted projects and push other projects
22 into future years creating a domino effect of project delays.

1 **Q. IS IT YOUR POSITION THAT PWSA’S PROPOSED PROJECTS ARE**
2 **NOT NEEDED OR REQUIRED?**

3 A. Not at all. I am merely advocating that PWSA not set capital improvement
4 budgets that it appears it is not capable of achieving. As Mr. Barca has noted,
5 PWSA is attempting to remedy decades of deferred maintenance, which is
6 necessary, but the speed at which PWSA is proposing to remedy may be too
7 aggressive and costly.

8
9 **Q. HAVE PWSA’S RATEPAYERS NOTICED PWSA’S AGGRESSIVE**
10 **APPROACH TO ADDRESS THE DEFERRED MAINTENANCE?**

11 A. Yes. Several PWSA ratepayers spoke out acknowledging the need for capital
12 investment, but also noted the deleterious effect it has on rates. Pennsylvania
13 State House Representative La’Tasha Mayes stated, “It is evident to me that
14 Pittsburgh Water and Sewer Authority investment in our water and sewer
15 infrastructure are long overdue, but not on the backs of hardworking ratepayers
16 who can barely afford to pay their water bills already.”¹ Dan Gladis, on behalf of
17 Pennsylvania State Representative Jessica Benham similarly testified, “And while
18 we understand that there are important infrastructural modernization programs that
19 PWSA is undergoing and they are critical to the continued delivery of a vital civic
20 service, a rate increase of this magnitude at this time has the potential to hurt far

¹ Hrg. Tr., p. 69 (July 25, 2023).

1 too many vulnerable Pittsburgh's much more than it helps.”² Ms. Becky Boyle,
2 on behalf of State Senator Lindsey Williams, testified that, “PWSA has taken full
3 advantage of public funding available to them as they work to ensure that every
4 resident has access to clean, safe water and that the waterways of Western
5 Pennsylvania are protected. I applaud their efforts at securing this funding and
6 their continual work to improve the quality of their services. However, asking our
7 families and small businesses to face double digit rate increases five times in
8 under ten years is entirely too much.”³

9
10 **Q. DO YOU AGREE WITH MR. KING THAT FOUR YEARS CAN**
11 **“HARDLY BE VIEWED AS A HISTORIC TENDENCY” ON THE PART**
12 **OF PWSA?**

13 A. Not at all. Four years accounts for nearly the entire history of PWSA as a
14 regulated utility. Prior to Commission regulation, it is a proven fact that PWSA
15 was severely mismanaged and in disrepair. As such, budgeting data from before
16 PWSA became a Pennsylvania regulated utility is not available and would likely
17 not reflect well on the accuracy of PWSA's budgeting process. By claiming that
18 PWSA should not be assessed based on the existing four years of data, Mr. King is
19 essentially claiming that PWSA's capital budgeting process should be exempt
20 from regulation or review. Such a stance is not in the public interest and should be
21 disregarded.

² Hrg. Tr., p. 74 (July 25, 2023).

³ Hrg. Tr., pp. 183-184 (July, 27, 2023).

1 **Q. ARE DELAYS CAUSED BY FACTORS OUTSIDE OF PWSA’S CONTROL**
2 **A REASON TO NOT MODERATE THE AGGRESSIVENESS OF PWSA’S**
3 **CAPITAL BUDGET?**

4 A. No. PWSA has not provided any evidence that the delaying effects of the
5 COVID-19 pandemic have fully abated. Nor has any witness provided evidence
6 supporting that PWSA is in a better position going forward to avoid construction
7 delays due to supply chain issues, and a limited contracting pool with a decreasing
8 number of bidders (PWSA St. No. 4-R, p. 4). Instead, PWSA has set a more
9 aggressive capital improvement schedule that is more costly to ratepayers despite
10 its history of not being able to come close to its capital budgets.

11
12 **Q. WHAT OTHER REASONS DID MR. KING PROVIDE FOR PWSA NOT**
13 **MEETING ITS CAPITAL IMPROVEMENT BUDGET?**

14 A. Mr. King referred to the long bidding process imposed by the MAA, delays in the
15 permitting process of the Pennsylvania Department of Environmental Protection
16 (“DEP”), the length of technical review conducted by the Pennsylvania
17 Department of Transportation (“PennDOT”), and construction delays associated
18 with requirements imposed by the Pennsylvania State Historic Preservation Office
19 (“SHPO”) as reasons for PWSA not meeting its capital budgets. However, Mr.
20 King did state that he “would expect a trend toward greater accuracy to continue
21 going forward as PWSA has gathered important knowledge” regarding the delays
22 caused by DEP, PennDOT, and SHPO’s processes and claimed that PWSA will

1 incorporate those delays into future projections. (PWSA St. No. 4-R, pp. 4-6).

2
3 **Q. DID MR. KING PROVIDE EVIDENCE THAT PWSA INCORPORATED**
4 **THE DELAYS CAUSED BY THE MAA, DEP, PENNDOT, AND SHPO**
5 **INTO THE CAPITAL BUDGETS IT PRESENTED IN THIS**
6 **PROCEEDING?**

7 A. No. Mr. King merely stated that those delays will be incorporated into future
8 projections. Therefore, it is possible that the proposed capital budget will also
9 experience delays due to those factors.

10
11 **Q. WHAT DID MR. KING STATE REGARDING PWSA'S CAPITAL**
12 **BUDGET COMPLETION RATE IN FY 2019 AND FY 2022?**

13 A. Mr. King stated that PWSA completed nearly 80% of its budgeted amount for
14 capital improvements in FY 2019 and approximately 70% of its capital
15 improvement budget in FY 2022.

16
17 **Q. WHAT WERE THE COMPLETION RATES IN 2019 AND 2022 FOR THE**
18 **CATEGORIES FOR WHICH YOU ARE RECOMMENDING**
19 **ADJUSTMENTS?**

20 A. Based on the data shown on I&E Exhibit No. 3, Schedule 3, in FY 2019, PWSA
21 completed 101% (\$15,665,185 / \$15,549,274) of its Water Treatment Plant budget
22 and 37% (\$9,667,165 / \$26,421,559) of its Water Pumping and Storage budget. In

1 FY 2022 PWSA completed 54% (\$3,360,755 / \$6,253,411) of its Water Treatment
2 Plant budget and just 36% (\$20,032,802 / \$55,208,438) of its Water Pumping and
3 Storage budget. Additionally, as was established by Mr. Barca and discussed
4 above, no Parties have opposed any of PWSA's proposed projects. This means
5 that, in FY 2019 and FY 2022, which Mr. King touts PWSA's completion percent,
6 PWSA left \$26,845,826 and \$47,794,105, respectively, in budgeted dollars which
7 were approved by the Commission remained unspent. These amounts support my
8 position that PWSA is proposing an overly aggressive capital budget and my
9 recommendation to reduce PWSA's proposed capital budget.

10
11 **Q. PLEASE RESPOND TO MR. KING'S CLAIM THAT YOUR PROPOSED**
12 **REDUCTIONS ARE ARBITRARY AND FAIL TO CONSIDER THE**
13 **IMPACT ON PWSA'S ABILITY TO COMPLETE PROJECTS THAT**
14 **HAVE BEEN IDENTIFIED AS BEING NECESSARY FOR REGULATORY**
15 **COMPLIANCE, SAFETY, QUALITY OF SERVICE AND OPERATING**
16 **EFFICIENCY.**

17 A. Mr. King's claim that my proposed reductions are arbitrary is without basis. As I
18 described on page 21 of I&E Statement No. 3, my recommended reductions were
19 targeted specifically at the capital budget groups that PWSA has had a historic
20 problem with completing. Additionally, my recommendation to adjust the overall
21 budget rather than specific projects allows PWSA the freedom to assess and

1 prioritize which projects are necessary for regulatory compliance, safety, quality
2 of service and operating efficiency.

3
4 **Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?**

5 A. No. Based on my discussion above, PWSA has not provided any reason or
6 support that would cause me to change my recommendation to reduce the
7 proposed capital budget increase by \$32,625,303 from \$42,688,673 to
8 \$10,063,371.

9
10 **Q. WHAT DID YOU RECOMMEND REGARDING DEPRECIATION
11 EXPENSE?**

12 A. I recommended that there should be a commensurate reduction in depreciation
13 expense as a result of my adjustment to the proposed capital improvement
14 projects. (I&E St. No. 3, p. 22).

15
16 **Q. HOW DID PWSA RESPOND TO YOUR RECOMMENDATION?**

17 A. Mr. Barca stated that depreciation expense is not a relevant expense because
18 PWSA does not file its rate tariff on a rate of return basis and that it is not an
19 element in the Commission's Cash Flow Ratemaking Policy Statement (PWSA St.
20 No. 2-R, p. 21).

1 **Q. DO YOU AGREE WITH MR. BARCA’S STATEMENT?**

2 A. No. Mr. Barca’s statement contradicts his own direct testimony on page 6 of
3 PWSA Statement No. 2 citing to a 2010 Commission Policy Statement at 52 Pa.
4 Code § 69.2702 that reads:

5 *(b) ... Included in that requirement [of establishing just and*
6 *reasonable rates is the subsidiary obligation to provide*
7 *revenue allowances from rates adequate to cover [the utility’s]*
8 *reasonable and prudent operating expenses, **depreciation***
9 ***allowances** and debt service, as well as sufficient margins to*
10 *meet bond coverage requirements and other internally*
11 *generated funds over and above its bond coverage*
12 *requirements, as the Commission deems appropriate and in the*
13 *public interest for purposes such as capital improvements,*
14 *retirement of debt, and working capital. (emphasis added).*

15 Also, despite Mr. Barca’s statement, PWSA clearly maintains some record and
16 accounting of depreciation expense as a depreciation expense claim is shown on
17 Filing Requirement (“FR”) XI.1 under Other Expenses and a calculation of
18 historic Depreciation by PWSA Department and Code as of December 31, 2022 is
19 shown on FR § 53.52(c)(4).

20

21 **Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?**

22 A. No. However, I would like to clarify that, barring any other calculation, PWSA
23 should reduce its calculation of depreciation expense in the FPFTY by 9.34%
24 (\$32,625,303 / \$349,222,496) which is the same percentage of my recommended
25 reduction in capital improvement increase divided by the total proposed capital
26 improvement budget in the FPFTY as shown on I&E Exhibit No. 3, Schedule 3.

1 **UNACCOUNTED FOR WATER**

2 **Q. DID YOU RECOMMEND AN ADJUSTMENT AS A RESULT OF PWSA'S**
3 **DISTURBING UNACCOUNTED-FOR WATER LEVELS?**

4 A. Not at this time. However, on pp. 23-24 of I&E Statement No. 3, I put PWSA on
5 notice that an adjustment to certain expenses, such as purchased power and
6 chemicals, will be likely in the next base rate case if progress is not shown in
7 reducing the unaccounted-for water levels.

8

9 **Q. DID PWSA RESPOND TO YOUR TESTIMONY REGARDING**
10 **UNACCOUNTED-FOR WATER?**

11 A. Yes. PWSA witness McFaddin stated that PWSA expects to see a reduction in
12 unaccounted-for water levels through various measures that are underway (PWSA
13 St. No. 3-R, p. 2).

14

15 **Q. PLEASE RESPOND TO MR. MCFADDIN'S STATEMENT.**

16 A. I&E will continue to monitor PWSA's unaccounted-for water and looks forward
17 to the expected improvement.

18

19 **WATER AND WASTEWATER RATE STRUCTURE**

20 **Q. WHAT DID YOU RECOMMEND REGARDING PWSA'S PROPOSED**
21 **BASE CHARGE?**

22 A. On page 30 of I&E Statement No. 3, I recommended that the Commission remove

1 the Readiness-to-Serve (“RTS”) adjustment from the calculation of the water base
 2 charge as shown in the table below:

3

Meter Size	Present Rate Minimum Charge	Proposed Rate Minimum Charge	PWSA Proposed Base Charge	I&E Recommended Base Charge
5/8”	\$26.52	\$32.43	\$16.82	\$14.41
3/4”	\$46.47	\$54.74	\$23.96	\$20.35
1”	\$102.08	\$113.88	\$38.25	\$32.22
1 1/2”	\$201.85	\$225.41	\$73.97	\$61.92
2”	\$337.28	\$373.78	\$116.84	\$97.56
3”	\$766.42	\$832.40	\$231.14	\$192.58
4”	\$1,313.93	\$1,408.27	\$359.74	\$299.49
6”	\$3,174.80	\$3,332.70	\$716.95	\$596.44
8”	\$5,784.48	\$5,968.71	\$1,145.60	\$952.79
10” & Above	\$9,582.36	\$9,753.09	\$1,645.69	\$1,368.53

4 I also recommended on page 31 of I&E Statement No. 3 that the Commission
 5 remove the RTS adjustment from the calculation of the wastewater base charge as
 6 shown in the table below:

7

Meter Size	Present Rate Minimum Charge	Proposed Rate Minimum Charge	PWSA Proposed Base Charge	I&E Recommended Base Charge
5/8”	\$7.32	\$7.42	\$3.98	\$3.19
3/4”	\$11.70	\$11.43	\$4.69	\$3.61
1”	\$24.27	\$22.50	\$6.12	\$4.45
1 1/2”	\$46.19	\$42.56	\$9.69	\$6.55
2”	\$76.29	\$69.68	\$13.98	\$9.08
3”	\$173.03	\$155.24	\$25.41	\$15.81
4”	\$297.52	\$264.10	\$38.26	\$23.38
6”	\$725.62	\$632.71	\$73.97	\$44.42
8”	\$1,330.48	\$1,148.40	\$116.83	\$69.66
10” & Above	\$2,218.44	\$1,896.72	\$166.82	\$99.11

1 **Q. DID YOU HAVE ANY OTHER RECOMMENDATIONS REGARDING**
2 **THE CALCULATION OF PWSA’S PROPOSED BASE CHARGE?**

3 A. Yes. I recommend that PWSA, in its next base rate case, perform and provide a
4 customer cost analysis as part of its cost of service study so that an accurate
5 customer charge can be determined. (I&E St. No. 3, p. 31).

6

7 **Q. DID YOU AGREE WITH PWSA’S PROPOSAL TO CHANGE FROM**
8 **BILLING CUSTOMERS USING A MINIMUM CHARGE TO A BASE**
9 **CHARGE IN FY 2025?**

10 A. Yes. Despite I&E’s recommendation to deny the MYRP, I believe that the change
11 from minimum charge to base charge should occur on the first day of FY 2025 on
12 a revenue neutral basis (subject to my recommendations). This means that, despite
13 the rate change, customers would be generating the same level of revenue in FY
14 2025 as is approved for the FPFTY ending December 31, 2024, but under a
15 different rate structure. (I&E St. No. 3, p. 32).

16

17 **Q. HOW DID PWSA RESPOND TO YOUR RECOMMENDATIONS?**

18 A. PWSA witness Smith disagreed with my recommendation to remove the RTS
19 component from the calculation of the base charge (PWSA St. No. 7-R, p. 6).

1 **Q. WHY DOES MR. SMITH NOT AGREE WITH YOUR**
2 **RECOMMENDATION TO REMOVE THE RTS COMPONENT FROM**
3 **THE CALCULATION OF PWSA’S BASE CHARGE?**

4 A. Mr. Smith provided several reasons why he disagreed with my recommendations.
5 Specifically, he claimed that inclusion of the RTS component is an industry-
6 accepted ratemaking practice, that a RTS component better aligns revenue
7 recovery with the nature of utility costs and helps to maintain fixed revenue at a
8 level deemed desirable by bond rating agencies, and claims that 10% of debt
9 service is a reasonable level to calculate the RTS component. (PWSA St. No. 7-R,
10 pp. 7-8).

11
12 **Q. WHAT EVIDENCE DOES MR. SMITH PROVIDE TO SUPPORT HIS**
13 **CLAIM THAT THE RTS COMPONENT IS AN “INDUSTRY-ACCEPTED”**
14 **RATEMAKING PRACTICE?**

15 A. The only evidence provided by Mr. Smith to claim that the RTS is an “industry-
16 accepted” ratemaking practice is a short quote from the American Waterworks
17 Association (“AWWA”) M-1 Manual.

18
19 **Q. IS THE QUOTE FROM THE AWWA M-1 MANUAL SUFFICIENT**
20 **EVIDENCE TO CLAIM THAT THE RTS IS AN INDUSTRY-ACCEPTED**
21 **RATEMAKING PRACTICE?**

22 A. No. On page 30 of I&E Statement No. 3, I quoted Mr. Smith in a response to

1 discovery where he stated that he is unaware of any other Pennsylvania utility that
2 includes an RTS component in their customer charge. Therefore, it is clear that
3 including an RTS is not an “industry-accepted” ratemaking practice where
4 Pennsylvania PUC regulated utilities are concerned. Additionally, the AWWA M-
5 1 Manual also acknowledges the balance between the fixed charge and variable
6 charge when it states, “there is a tradeoff between revenue stability from a high
7 customer charge, and affordability and conservation from a low customer charge
8 and higher usage rates.”⁴ This quote favors a more moderate approach to
9 determining a customer charge, which the Commission has historically adopted.

10
11 **Q. DO YOU AGREE THAT AN RTS COMPONENT BETTER ALIGNS**
12 **REVENUE RECOVERY WITH THE NATURE OF UTILITY COSTS AND**
13 **HELPS TO MAINTAIN FIXED REVENUE AT A LEVEL DEEMED**
14 **DESIRABLE BY BOND RATING AGENCIES?**

15 A. No. As I stated on page 29 of I&E Statement No. 3, Philadelphia Gas Works
16 (“PGW”), which is also a cash flow utility, regularly uses a customer cost analysis
17 to assist in determining its proposed customer charge. As far as I am aware, PGW
18 not including an RTS in its customer charge calculation does not have any effect
19 on its bond ratings.

⁴ AWWA Manual of Water Supply Practices M1 Principles of Water Rates, Fees, Charges, Seventh Edition. pp. 154-155.

1 **Q. DO YOU AGREE THAT 10% OF DEBT SERVICE IS A REASONABLE**
2 **METHOD TO CALCULATE AN RTS?**

3 A. No. As I stated on page 29 of I&E Statement No. 3, this method would include
4 the cost of mains, pumping, filtration, storage, and other upstream costs that
5 should not be included in a fixed monthly charge.

6

7 **Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION?**

8 A. No. Pennsylvania has traditionally relied upon a customer cost analysis to assist in
9 determining the appropriate level of customer charge for its utilities. Mr. Smith
10 has provided no evidence that would support suddenly reversing that practice.
11 Therefore, I continue to recommend the RTS component be removed from the
12 base charge calculation and that PWSA perform a customer cost analysis to
13 determine the appropriate customer charge level in its next base rate case.

14

15 **FIRE PROTECTION RATES**

16 **Q. DID YOU AGREE WITH THE COMPANY'S PROPOSAL REGARDING**
17 **THE FIRE PROTECTION RATES IN THE FPPTY?**

18 A. No. It is not reasonable to increase the minimum charge by over 100% while
19 providing a rate decrease to the usage rate. This is particularly true when
20 considering the Company's proposal to increase the fire protection usage rate by
21 57.4% in FY 2025 as shown on PWSA Exhibit HJS-23W. (I&E St. No. 3, p. 33).

1 **Q. WHAT DID YOU RECOMMEND REGARDING THE FIRE**
2 **PROTECTION RATES IN THE FPPTY?**

3 A. I recommended that the fire protection usage rate remain at the present rate level
4 of \$39.05 per kgal and reduce the fire protection minimum charges in order to
5 maintain the same level of revenue as originally proposed in the FPPTY. I also
6 noted that, based on the information provided by PWSA I was unable to use the
7 existing COSS to adjust the minimum charges at this time. PWSA since provided
8 a response to additional discovery that allowed me to determine the resulting
9 minimum charge as follows:

10

Meter Size	PWSA FPPTY Proposed Rate	I&E FPPTY Proposed Rate	Difference
1" or Less	\$31.38	\$28.41	\$2.91
1 1/2" – 3"	\$97.59	\$88.35	\$9.24
4"	\$314.86	\$285.05	\$29.81
6" or greater	\$654.53	\$592.56	\$61.97

11
12 **Q. DID YOU HAVE ANY RECOMMENDATIONS REGARDING THE FIRE**
13 **PROTECTION BASE CHARGE IN FY 2025?**

14 A. Yes. On page 34 of I&E Statement No. 3, I recommended that the fire protection
15 base charge in FY 2025 be calculated without an RTS adjustment. The resulting
16 rates, prior to the application of any scale back, are shown in the following table:

1

Meter Size	PWSA FPPTY Rate	PWSA FY 2025 Proposed Rate	I&E FY 2025 Proposed Rate
1" or Less	\$31.38	\$29.82	\$23.79
1 1/2" – 3"	\$97.59	\$92.07	\$72.79
4"	\$314.86	\$299.49	\$239.24
6" or Greater	\$654.53	\$628.51	\$508.01

2

3 **Q. DID PWSA RESPOND TO YOUR RECOMMENDATIONS REGARDING**
4 **THE FIRE PROTECTION RATES?**

5 A. Beyond Mr. Smith’s opposition to my recommendation regarding the RTS
6 adjustment, addressed above, PWSA did not address my recommendation
7 regarding the fire protection charge.

8

9 **Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION**
10 **REGARDING THE FIRE PROTECTION CHARGE?**

11 A. No. As discussed above, PWSA has not provided evidence to support changing
12 my recommendations.

13

14 **SCALE BACK OF RATES**

15 **Q. WHAT SCALE BACK DID YOU RECOMMEND IF THE COMMISSION**
16 **GRANTS LESS THAN THE FULL INCREASE?**

17 A. Should the Commission grant an increase less than the full increase requested by
18 PWSA in the FPPTY, I recommended that rates be scaled back based on the
19 CCOSS approved by the Commission. Once the revenue level and rates are

1 determined for the FPFTY, then the revenue neutral transition to the base charge
2 and usage rates can be determined for FY 2025. (I&E St. No. 3, pp. 34-35).

3

4 **Q. DID ANY PARTIES RESPOND TO YOUR SCALE BACK**
5 **RECOMMENDATION?**

6 A. No. Therefore, I continue to recommend the scale back methodology described
7 above.

8

9 **Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

10 A. Yes.

Appendix B: Cited Discovery Responses

1 **PREPARED DIRECT TESTIMONY OF HARRY S. GELLER, ESQ.**

2 **I. WITNESS BACKGROUND**

3 **Q: Please state your name, occupation, and business address.**

4 A: My name is Harry Geller. I am an attorney. I am the former Director of the Pennsylvania
5 Utility Law Project. I am currently retired, but serve as Senior Counsel to the Pennsylvania Utility
6 Law Project (PULP) and as a consultant to legal aid programs and their clients. I maintain an office
7 at 118 Locust St., Harrisburg, PA 17101.

8 **Q: Briefly outline your education and professional background.**

9 A: I received my B.A. Degree from Harpur College, State University of New York at
10 Binghamton in 1966, and a J.D. degree from Washington College of Law, American University in
11 1969. Upon graduation from law school, I entered the Volunteers in Service to America (VISTA)
12 program, where I was assigned to the New York University Law School. I took courses in the Law
13 School's Urban Affairs and Poverty Law program and worked with the Community In Action
14 Program on the West Side of Manhattan in New York City from 1969-1971. In 1971, I started as
15 a Staff Attorney for the New York City Legal Aid Society, Criminal Court and Supreme Court
16 Branches in New York County. In 1974, I moved to Pennsylvania and began working for Legal
17 Services, Incorporated (LSI). LSI was a civil legal aid program serving Adams, Cumberland,
18 Franklin and Fulton Counties. I worked at LSI from 1974-1987 first as a Staff Attorney, then as
19 Managing Attorney, and ultimately became Executive Director. Through a restructuring with other
20 legal services programs, LSI became part of what is now known as MidPenn Legal Services and
21 Franklin County Legal Services.

22 In 1988, I was hired to be the Executive Director of PULP, a statewide project dedicated
23 to the rights of low income utility customers. At PULP, I represented low income individuals with

1 utility and energy concerns, and supported organizations advocating for low income households
2 in utility and energy matters. As the Executive Director of PULP, I consulted and co-counseled on
3 a wide variety of individual utility consumer cases, and I participated in task forces, work groups
4 and advisory panels, including the Low Income Home Energy Assistance Program (LIHEAP)
5 Advisory Committee. I frequently trained community organizations, legal aid staff and advocacy
6 groups across Pennsylvania about the various utility and energy matters affecting Pennsylvania's
7 low income population. I retired from PULP on June 30, 2015. Although no longer employed by
8 PULP, I now serve as a Senior Counsel to PULP and as a consultant to legal aid programs and
9 their clients. In sum, I have over 50 years' experience with households in poverty, including over
10 30 years focusing specifically on utility and energy issues affecting low income consumers. My
11 resume is attached as Appendix A.

12 **Q: For whom are you testifying in this proceeding?**

13 A: I am testifying on behalf of Pittsburgh United's Our Water Table (hereinafter, Pittsburgh
14 United).

15 **Q: Please describe the focus of your work over the past fifty years.**

16 A: I have represented low income individuals and organizations serving low income
17 clients in a wide variety of legal matters, including family law, public benefits, unemployment
18 compensation, utility shut-offs, debtor/creditor, and housing related disputes. Over the past 32
19 years, both at PULP and in retirement, my focus has been ensuring that low income households
20 can connect to, afford, and maintain utility and energy services.

21 In all of these legal matters, I worked almost exclusively on behalf of low income
22 individuals and households. Through this work, I have become intimately familiar with the daily
23 lives of countless of our poorest citizens. I have spent thousands of hours assisting clients in

1 combing through their budgets to attempt to assist them to make ends meet. Over the years, I have
2 consistently had to address the issues which have arisen for the significant number of low income
3 families who have an inability to pay for the most basic monthly necessities on the incomes they
4 have. Almost every month, my clients faced the stark necessity of choosing which bills they could
5 forego with the least drastic consequences.

6 In addition to decades of experience working to address the daily monetary struggles facing
7 poor families, I have an extensive knowledge of the array of programs designed to allow low
8 income individuals to afford utility service. While at PULP, I was involved in hundreds of
9 proceedings evaluating the effectiveness of low income assistance program to assist low income
10 families. I have spent thousands of hours identifying issues in Universal Services and making
11 recommendations for changes to Universal Service programming to better serve low income
12 consumers. This advocacy has strongly informed my awareness of the necessity of these programs
13 as well as the recognition that successfully integrated programs for low income consumers were
14 essential to their effectiveness. I have also spent hundreds, if not thousands, of hours identifying
15 other barriers to low income consumers establishing and staying connected to affordable utility
16 services, including in the context of rate proceedings.

17 As director of PULP, I played an instrumental role in the development, oversight, and
18 monitoring of the initial pilots and then the statutorily required low income universal service
19 programs for natural gas and electric utilities, each of which is structured to provide a different
20 and complementary form of assistance to low income customers, such that those customers have
21 the ability to afford and maintain basic utility service. This includes the Customer Assistance
22 Program (CAP), the Low Income Usage Reduction Program (LIURP), and the Customer
23 Assistance, Referral, and Education Services (CARES) Program. These programs were developed

1 to address and remediate increasing unaffordability and are designed work in tandem to ensure
2 that low income households can maintain affordable utility services and safe living environments
3 while reducing utility collection costs, thereby benefitting other ratepayers.

4 Further, over the years I have advocated with utility providers and regulators to improve
5 policies and practices that create barriers for low income customers' ability to access and afford
6 utility service. This includes advocacy to improve how utilities administer universal service
7 programs, as well as advocacy to improve the ways that utilities interface with and respond to the
8 needs of all of their low income customers, including those who are not enrolled in a utility
9 Universal Service Program.

10 **Q: Have you testified in any proceeding before the Pennsylvania PUC?**

11 A: Yes. I have presented testimony in many proceedings before the PUC. A complete list is
12 included in my resume, which is attached as Appendix A.

13 **Q: What information did you rely on in preparing your testimony for this proceeding?**

14 A: In addition to publicly available information, compiled by the PUC and other sources, I
15 relied on information contained in the rate case filing of Pittsburgh Water and Sewer Authority
16 (PWSA or the Authority), other PUC proceedings involving PWSA, and information provided by
17 PWSA in response to discovery requests from Pittsburgh United and the other parties in this
18 proceeding.

19 **Q: What is the purpose of your testimony?**

20 A: Pittsburgh United intervened in this proceeding to ensure that the proposed rate increase
21 and rate design will not adversely affect PWSA's low income customers' ability to connect to,
22 maintain, and afford water, wastewater, and stormwater services, all of which are essential to life,
23 including drinking water, personal hygiene, sanitation, cooking, and even flushing a toilet.

1 **Q: How is your testimony organized?**

2 A: My testimony is divided into seven substantive sections and one section summarizing my
3 proposals and recommendations.

4 In Section I, above, I have described my background and the purpose of my testimony.

5 In Section II, I will summarize PWSA's rate request proposal and my overall position
6 related to PWSA's proposed rate increases.

7 In Section III, I will discuss the impacts of PWSA's proposed rate increases on residential
8 and, in particular, low income customers.

9 In Section IV, I will discuss PWSA's proposed changes to their rate design and structures,
10 and my recommendations related to these proposed revisions.

11 In Section V, I will discuss PWSA's low income assistance programs in detail -- including
12 PWSA's proposals to revise its BDP, AFP, and Hardship Fund Program, and my position related
13 to PWSA's proposed changes to its low income assistance programs. In this Section, I will also
14 detail several recommendations to help improve payment affordability, arrears reduction, and
15 access for PWSA's low income customers.

16 In Section VI, I will discuss PWSA's stormwater fee. In this Section, I will discuss
17 concerns related to whether low income customers can access green mitigation measures, and
18 provide recommendations to improve low income customers access to mitigation measures.

19 In Section VII, I will discuss PWSA's proposal to eliminate its current convenience fee
20 pass through for residential customers, and my concerns and recommendations related to
21 elimination of the pass through.

22 Finally, in Section VIII, I will summarize my recommendations and conclude my direct
23 testimony.

1 **II. RATE INCREASE**

2 **Q: Please summarize PWSA’s proposed residential rate increase.**

3 A: On May 9, 2023, Pittsburgh Water and Sewer Authority (PWSA) submitted a rate filing,
4 Tariff Water- PA. P.U.C. No.1, Supp. No. 12; Tariff Wastewater- PA. P.U.C. No.1, Supp. No. 11;
5 and Tariff Stormwater - PA. P.U.C. No. 3. PWSA is requesting an overall revenue increase of
6 \$146.1 million, which PWSA proposes to phase in over a three-year period. This includes a \$46.8
7 million or 22.5% increase in the FPFTY (FY 2024), \$45.4 million or 17.8% in FY 2025, and \$53.9
8 million or 17.9% in FY 2026.¹ For a residential customer using 3,000 gallons per month, the
9 customer's total bill would increase from \$86.43 to \$103.41 per month (19.6%) in 2024, from
10 \$103.41 to \$123.55 per month (19.5%) in 2025, and from \$123.55 to \$146.12 per month (18.3%)
11 in 2026.² For residential customers enrolled in the Bill Discount Program (BDP) using 3,000
12 gallons per month, a customer’s total bill would increase from \$44.15 to \$51.85 per month (17.4%)
13 in 2024, from \$51.85 to \$60.83 per month (17.3%) in 2024, and from \$60.83 to \$72.17 per month
14 (18.7%) in 2026.³ PWSA is also proposing in the context of its rate request proposal to eliminate
15 its minimum (fixed) customer charge by 2025. PWSA’s minimum (fixed) charge currently
16 includes the first 1,000 gallons of usage.⁴ I will discuss PWSA’s proposal to eliminate its minimum
17 (fixed) charge in detail below.

18 As I will discuss later in my testimony, PWSA’s proposal will substantially increase the
19 price of essential services, and will negatively impact the ability of PWSA’s customers to maintain

¹ Volume I, Statement of Reasons.

² Volume I, Notice of Proposed Rate Changes. These increases assume that the residential customer has a 5/8-inch meter and generates stormwater from one ERU.

³ Id. These increases assume a 5/8-inch meter and a reduced stormwater fee.

⁴ PWSA St. 6 at 25: 10-14.

1 service to their homes. This impact will fall disproportionately on PWSA’s low income customers,
2 who already struggle to afford basic utility services.

3 **Q: Do you support PWSA’s proposed rate increase?**

4 A: No, I do not support PWSA’s proposed rate increase, as it is neither just nor reasonable,
5 and is not in the public interest. PWSA’s current rates are already unaffordable for many PWSA
6 customers, making critical water and wastewater services inaccessible for hundreds of families in
7 PWSA’s service territory each year – in turn creating a cascade of consequences for the household
8 and the surrounding community. Further increasing rates will only exacerbate this existing
9 problem.

10 This is especially true as Pennsylvania’s consumers have struggled profoundly in recent
11 years with the impacts of the COVID-19 pandemic, and more recent economic harms as a result
12 of steep increases in inflation.⁵ Continued access to affordable water and wastewater service is
13 vital to consumers in PWSA’s service territory to staying in their homes and helping to make ends
14 meet. This is made more critical in light of the current economic pressures that have fallen hard
15 on vulnerable consumers – especially low income consumers and communities of color who face
16 disproportionate water and wastewater burden levels and associated rates of payment trouble and
17 termination.

18 As a foundational principle, I do not believe that rates are just and reasonable if they are
19 not reasonably affordable to those seeking service, such that all Pennsylvanians – regardless of
20 income – can maintain safe and affordable water and wastewater to their homes. As I will discuss,

⁵ Paul Davidson, [Inflation is battering lower-income households most as food, housing costs soar. Fed study says](https://www.usatoday.com/story/money/2023/01/18/inflation-hurts-lower-income-households-food-housing-costs-rise/11074945002/), USA Today (Jan. 18, 2023), available at: <https://www.usatoday.com/story/money/2023/01/18/inflation-hurts-lower-income-households-food-housing-costs-rise/11074945002/>. Rachel Siegel and Andrew Van Dam, ‘[Survival mode](https://www.washingtonpost.com/business/2022/02/13/low-income-high-inflation-inequality/)’: [Inflation falls hardest on low-income Americans](https://www.washingtonpost.com/business/2022/02/13/low-income-high-inflation-inequality/) (Feb. 13, 2022), available at: <https://www.washingtonpost.com/business/2022/02/13/low-income-high-inflation-inequality/>.

1 the data shows quite clearly that low income families are unable to afford to maintain service to
2 their home at current rates, and any further rate increase will serve to exacerbate levels of existing
3 rate unaffordability. While PWSA's Bill Discount Program (BDP) provides critical assistance to
4 the poorest households, additional improvements are necessary to ensure that PWSA's low income
5 customers are able to maintain affordable services in light of the substantial, multi-year rate
6 increase proposed by PWSA. I believe it would be both unjust and unreasonable to approve any
7 rate increase at this time, absent additional mitigation measures to address existing rate
8 unaffordability and to fully remediate compounded unaffordability created by PWSA's proposal
9 to substantially increase rates.

10 Throughout my testimony, I provide a number of recommendations for how PWSA can
11 structure its services so that low income customers in its service territory are better able to maintain
12 access to water, wastewater, and stormwater services to their homes. These recommendations are
13 critical to address rate affordability and service access issues regardless of whether rates increase,
14 but it is even more vital to mitigate additional financial harm for economically vulnerable
15 consumers if the Commission allows PWSA to increase its rates.

16 **III. RATE IMPACT ON LOW INCOME HOUSEHOLDS**

17 **Q: How many customers in PWSA's service territory are considered low income?**

18 A: That is a difficult question to answer with specificity, especially in light of the last several
19 years in which the pandemic and financial pressures fell disproportionately on low income
20 families. However, there are a number of metrics to assess poverty levels in PWSA's service
21 territory.

1 Pennsylvania’s large public utilities track and classify their low income customer
2 populations in two ways – estimated low income customers and confirmed low income.⁶ As
3 discussed in greater detail below, a household must have income at or below 150% of the federal
4 poverty level (FPL) to be considered low income. For context, a family of four with household
5 income at or below 150% FPL has a maximum gross annual income of \$56,250 – or \$4,687.50 per
6 month – while a family of four with income at or below 50% FPL has a maximum gross annual
7 income of just \$18,750.⁷

8 When asked through discovery to identify its “estimated low income customer count,”
9 PWSA indicated that it continues to operate under the assumption that approximately 20,000
10 customers are eligible for assistance programs, consistent with its 2019 Household Affordability
11 Analysis.⁸ However, as noted, a series of unprecedented economic pressures have occurred in the
12 intervening years since the Household Affordability Analysis was conducted. These increased
13 economic pressures likely mean additional need within PWSA’s service territory, and additional
14 households who are likely eligible for PWSA’s assistance programs. Further, this estimated low
15 income count is lower than that provided in PWSA’s last rate proceeding, in which PWSA
16 estimated that more than 27% -- 26,681 out of 97,619 – of its residential customers were low
17 income.⁹

⁶ See Pa. PUC, BCS, 2019 Report on Universal Service Programs & Collections Performance, at 2,4 (Sep. 2020) (herein 2019 Universal Service Report).

⁷ See US Dept. of Health & Human Services, HHS Poverty Guidelines for 2023, available at: <https://aspe.hhs.gov/sites/default/files/documents/1c92a9207f3ed5915ca020d58fe77696/detailed-guidelines-2023.pdf>.

⁸ United I-7.

⁹ Pa. PUC v. PWSA, Pittsburgh United Statement 1, Docket Nos. R-2021-3024773, R-2021-3024774, R-2021-30247792021, at 11 (Pittsburgh United St. 1 dated July 8, 2021). (hereinafter, 2021 PWSA Rate Case).

1 PWSA also tracks “confirmed low income customers.” PWSA only began tracking
2 confirmed low income customers when its PGH2O Cares Team was formed in March 2021.¹⁰
3 PWSA indicates that it defines “confirmed low income customers” as any customer identified as
4 having income at or below 150% FPL.¹¹ PWSA identifies confirmed low income customers when
5 the customer (1) enrolls in the BDP; (2) establishes a 60-month payment arrangement; (3) qualifies
6 for any customer assistance program or grant, and/or (4) is experiencing any other circumstances
7 which make it “reasonably likely that the customer is low income.”¹² Further, in response to
8 discovery asking for the number of PWSA’s confirmed low income customers, PWSA referred to
9 its count for BDP enrolled customers.¹³ Based on PWSA referred data – which contradicts
10 PWSA’s own indication of the types of customers included in their confirmed low income
11 customer count – PWSA confirmed low income customers equal 4,751 as of June 2023.¹⁴ These
12 figures are extremely limited and do not provide an accurate assessment of PWSA’s low income
13 population – even outside of BDP participation.

14 For the purpose of evaluating the affordability of PWSA’s rates, the affordability of its low
15 income program participation, and the effectiveness of its outreach, it is more accurate to utilize
16 the estimated low income customer counts. Regardless of the measure, there are a substantial
17 number of low income customers in PWSA’s service territory who need to be considered in any
18 decision regarding just, reasonable, and affordable rates.

¹⁰ Id.

¹² Id.

¹³ United I-3.

¹⁴ United I-9, Attachment.

1 **Q: How much income must a household earn each month to be considered low income?**

2 A: Generally, the Commission considers “low income” customers to be any customers whose
3 income is at or below 150% of the federal poverty level (FPL) assistance.

4 The FPL is the measure of poverty based exclusively on the size of the household, but not
5 on the composition of the household (i.e. whether the household consists of adults or children) or
6 household’s geography. Table 1 shows household income, by FPL and household size:

7 **Table 1: Percentages of Federal Poverty Levels by Household Size and Income¹⁵**

Household Size	25%	50%	75%	100%	125%	150%	200%	250%	300%
1	\$4,553	\$9,105	\$13,658	\$18,210	\$22,763	\$27,315	\$36,420	\$45,525	\$54,630
2	\$6,160	\$12,320	\$18,480	\$24,640	\$30,800	\$36,960	\$49,280	\$61,600	\$73,920
3	\$7,768	\$15,535	\$23,303	\$31,070	\$38,838	\$46,605	\$62,140	\$77,675	\$93,210
4	\$9,375	\$18,750	\$28,125	\$37,500	\$46,875	\$56,250	\$75,000	\$93,750	\$112,500

8
9 For comparison, a full time (40 hours/ week) worker making a minimum wage (\$7.25 per
10 hour) has a gross annual income of \$15,080, assuming no time off. This is substantially less than
11 a household needs to meet their basic expenses in any of the counties that the Authority serves.¹⁶

12 A benchmark often used to assess how much income a household needs to live without
13 assistance in Pennsylvania is called the Self-Sufficiency Standard. This is a tool that measures the
14 income that a family must earn to meet their basic needs and consists of the combined cost of six
15 (6) basic needs – housing, child care, food, health care, transportation, and taxes – without the help
16 of public subsidies.¹⁷ Unlike the federal poverty level, which does not change based on geographic
17 location or family composition, the Self Sufficiency Standard accounts for the varied costs of the

¹⁵ Id.

¹⁶ Self Sufficiency Standard, available at: <http://www.selfsufficiencystandard.org/Pennsylvania>.

¹⁷ See PathWays PA, Overlooked and Undercounted 2019 Brief: Struggling to Make Ends Meet in Pennsylvania, available at: <http://www.selfsufficiencystandard.org/Pennsylvania>.

1 six basic needs in different geographic areas and for differently aged household members.¹⁸ For
2 reference, the average Self Sufficiency Standard in Allegheny County for a family of four with
3 two adults and two school aged children is approximately \$80,484 a year, approximately \$40,734
4 more than a 4-person household with income at 150% FPL makes in a given year.¹⁹

5 **Q: How would PWSA’s proposed rate increase impact low income households?**

6 A: Low income households are struggling to stabilize following profound economic hardship
7 associated with high inflation following the pandemic, especially in low income communities of
8 color.²⁰ Even in relatively good economic times, low income families struggle to make ends meet
9 each month and are often forced to make untenable choices between affording utility services and
10 other basic necessities – such as food, medicine, and housing. Any increases to the cost of essential
11 services, like water and wastewater, will severely impact low income households’ ability to afford
12 and, in turn, maintain these critical life necessities.

13 PWSA’s proposal represents a substantial increase in basic living expenses for low income
14 households -- especially as PWSA’s proposed increase is just one in a series of recent rate increases
15 borne by PWSA’s customers since 2016, the most recent of which was just recently approved by
16 the Commission in late 2021. As shown by the Table below PWSA’s residential customers will
17 see steep increases in their monthly bills between 2023 and 2026 under PWSA’s proposal:

¹⁸ See PathWays PA, Overlooked and Undercounted, How the Great Recession Impacted Household Self-Sufficiency in Pennsylvania, available at: <http://www.selfsufficiencystandard.org/sites/default/files/selfsuff/docs/PA2012.pdf>.

Harvard T.H. Chan School of Public Health, Poll: High U.S. inflation rates are having a more serious impact on Black Americans than white Americans, available at: <https://www.hsph.harvard.edu/news/press-releases/poll-high-u-s-inflation-rates-are-having-a-more-serious-impact-on-black-americans-than-white-americans/>.

1 **Table 2: Rate Impact – Residential Customers (Reproduced from PWSA St. 6 at 24)**

Customer Type	Monthly Bill	2023	2024	2025	2026
Residential	5/8” Meter;	\$86.43	\$103.41	\$123.55	\$146.11
Impact (%)	3 Kgal;		19.6%	19.5%	18.3%
Impact (\$)	1 ERU		\$16.98	\$20.14	\$22.56

2 As the Table above describes, from 2023 to 2026, PWSA residential customers using 3,000
 3 gallons/month will see an increase from approximately \$86.43 in 2023 to \$146.11 by 2026 – or a
 4 total percent increase of more than 69%.

5 Low income customers will be especially burdened by PWSA’s proposed rate increase. A
 6 water and wastewater “burden” is defined as the percentage of income a household pays towards
 7 its water costs.²¹ While there is no statutory or regulatory standard for water and wastewater
 8 affordability in Pennsylvania, currently evolving consensus is that – to be considered affordable –
 9 the combined cost for water and wastewater service should not exceed 2.5-4% of household
 10 income.²²

11 Pittsburgh United Exhibits 1, Exhibit 2, and Exhibit 3, attached to my testimony, show the
 12 relative water and wastewater burden – inclusive of the stormwater fee – for 2, 3, and 4-person
 13 households at 50%, 100%, 150%, and 200% FPL.²³ As these Exhibits show, both current and

²³ See Pittsburgh United Exhibits 1, 2, and 3.

1 proposed rates exceed accepted levels of affordability for many low income households. , most
 2 especially for the lowest income households. In particular, low income customers who are not
 3 enrolled in the BDP will see combined burden levels as high as 22% (assuming a Tier 3 stormwater
 4 rate, at 5,000 gallons/month, and at 50% FPL). As I will discuss below, while enrollment in
 5 PWSA’s BDP substantially improves affordability for many low income households, many
 6 customers have not been able to enroll in the BDP – and thus must face the full force of any rate
 7 increases that is approved.

8 **Q: You mentioned that PWSA’s rates have increased substantially in recent years. How**
 9 **much have PWSA’s rates already increased?**

10 A: Over the last five years, since 2016, PWSA’s rates have increased exponentially – ranging
 11 from 93% to 102% for residential households using between 2,000 and 5,000 gallons of water a
 12 month, respectively.

13 **Table 3: Residential Rates, 2016 vs. Current²⁴**

Residential Water/WW Service	2016	Current	% Increase Since 2016 (Current)	Proposed (2026)	% Increase Since 2016 (Proposed - 2026)
Total Bill (2,000 G)	\$30.25	\$58.27	93%	\$65.42	116%
Total Bill (3,000 G)	\$39.90	\$78.72	97%	\$96.60	142%
Total Bill (4,000 G)	\$49.55	\$99.17	100%	\$127.77	127%
Total Bill (5,000 G)	\$59.20	\$119.62	102%	\$158.95	168%

14
 15 The increases described in this Table represent fast-paced and aggressive increases in basic
 16 costs of water/wastewater services over a short period of years.

²⁴ See PWSA Notice of Rate Change (2016), available at: http://apps.pittsburghpa.gov/pwsa/Rate_Brochure-2016.pdf.

1 **Q: Is there other evidence that PWSA’s low income customers already struggle to afford**
2 **water and wastewater services – even before any rate increase is approved?**

3 A: Yes. There are strong indicators that service is already unaffordable for a significant
4 number of PWSA’s residential customer base.

5 As of May 2023, residential customers were carrying, on average, approximately \$1,041
6 in arrears.²⁵ Low income customers carry a disproportionate level of arrears by comparison. As
7 of June 2023, PWSA had 4,751 customers enrolled in the BDP.²⁶ These customers carry
8 approximately \$1,322.27 in arrears – far higher than the average arrears carried by residential
9 customers as a whole.²⁷

10 Despite Program enrollment, BDP participants also represent a significant portion of
11 residential customers in payment plans. For example, between August 2022 and June 2023, PWSA
12 reported the number of payment plans for BDP customers as 2,548 – representing approximately
13 45% of all residential payment plans over that period (or 2,548 out of 5,657 residential payment
14 plans).²⁸ These numbers underscore that, despite enrollment in the BDP, low income customers
15 continue to struggle to keep up with their monthly bills at present rates. Further, customers being
16 enrolled in the BDP while also having to maintain a payment plan undercuts any affordability
17 provided by BDP discounts, and increases the overall water/wastewater burden borne by low
18 income PWSA customers.

²⁶ United I-9, Attachment.

²⁷ United I-25, Attachment.

²⁸ United I-34, Attachment.

1 **Q: How would PWSA’s proposed rate increase impact vulnerable households?**

2 A: The substantial rate increase proposed by PWSA is likely to cause increased terminations
3 of economically vulnerable consumers or, in the alternative, will cause economically vulnerable
4 households to go without other critical life necessities such as food, medicine, childcare, and other
5 essential services to afford water, wastewater, and stormwater services.

6 Water terminations pose a serious threat to public health and human dignity. Without
7 access to running water, families are unable to cook, bathe, clean, or flush the toilet.²⁹ Access to
8 water service is tied directly to the health and well-being of the household, and the habitability of
9 the home.³⁰ Water terminations are akin to eviction from a home, as the home may be deemed
10 uninhabitable or even condemned following termination of water service, forcing families to
11 vacate with little to no notice.³¹ Termination of service to the home can also jeopardize a parent’s
12 custody of their children, can result in the loss of housing assistance, and is often cited as a catalyst
13 for homelessness.³² Even before COVID-19 and recent historically high levels of inflation,
14 approximately one-third of households experienced income volatility.³³ Analysis of material
15 hardship for low and moderate income consumers experiencing income volatility found much

1 higher rates of inability to afford bills, medical care, housing payments and food,³⁴ and a higher
2 likelihood to resort to expensive payday loans to pay for basic living expenses.³⁵ At PWSA's
3 current rates, many families already must make difficult choices of paying for utility services and
4 other basic necessities – raising rates for such consumers will make their ability to afford such
5 necessities more difficult.

6 **Q: Are low income customers enrolled in the BDP protected from the financial impact**
7 **of the proposed rate increase?**

8 A: To an extent, yes. PWSA's BDP will reduce (though not eliminate) the financial impact
9 of PWSA's rate increase proposal for BDP participants. As discussed below, the effectiveness of
10 PWSA's BDP at offsetting the impact of an approved rate increase is dependent on approval of
11 PWSA's proposed reforms to the structure of its BDP and, in turn, on the ability of low income
12 households to enroll. As it stands, PWSA's BDP enrollment remains very low. Low income
13 customers that are not enrolled in the BDP will shoulder severe financial burdens as a result of
14 PWSA's proposed rate increases.

³⁵ Income Volatility in the Service Sector at p. 9 (almost a quarter of consumers reporting week-to-week volatility report using payday lenders).

1 **IV. RATE DESIGN**

2 **Q: Please describe PWSA’s current rate structure for residential customers.**

3 A: PWSA’s current rate structure for water and wastewater services consists of a monthly
4 minimum (fixed) charge that varies by meter size and a volumetric charge that varies by customer
5 class.³⁶ PWSA’s minimum (fixed) charge includes the first 1,000 gallons of usage.³⁷ The minimum
6 (fixed) charge has been part of PWSA’s rate structure since coming under the jurisdiction of the
7 Pennsylvania Utility Commission (Commission).³⁸

8 PWSA introduced a stormwater fee that was approved by the Commission pursuant to
9 PWSA’s 2021 rate proceeding. PWSA’s stormwater fee is based on the amount of impervious area
10 on a property.³⁹ For residential customers, the stormwater fee is designed as a three-tiered rate
11 structure.⁴⁰ PWSA Expert Witness Keith Reading describes the fee structure as follows:

12 Of the tiering structures considered, PWSA decided on a structure in which the
13 middle tier contains 70% of all the SFR properties, making it by far the largest
14 group. Properties with less than 1,015 square feet of impervious area are considered
15 the low tier and are billed for the median amount of impervious area found on
16 parcels in that tier, which is about 830 square feet of impervious area, or 0.5 ERUs.
17 Properties in the middle tier are billed for 1 ERU. Those properties with 2,710
18 square feet or more of impervious area fall into the high tier and are billed for the
19 median amount of impervious area found on parcels in that tier, which is about
20 3,355 square feet of impervious area, or 2 ERUs.⁴¹

³⁶ PWSA St. 6 at 25: 10-14.

³⁷ Id.

³⁸ Id.

³⁹ PWSA St. 8 at 10: 16-22.

⁴⁰ Id.

⁴¹ PWSA St. 8 at 11.

1 A property is not charged a stormwater fee if the impervious area on the property is less
2 than 400 square feet.⁴² PWSA is not proposing any changes to the current rate structure for its
3 stormwater fees within the context of this proceeding.⁴³

4 **Q: Does PWSA propose to make any changes to its rate structure in its rate filing?**

5 A: Yes. PWSA is proposing in this proceeding to transition away from use of a minimum
6 (fixed) charge. In PWSA’s most recent rate case settlement, PWSA agreed to “provide a plan to
7 transition away from use of minimum usage allowance” within this filing.⁴⁴

8 PWSA is proposing to make this transition in 2025 – year two of its proposed multiyear
9 rate increase.⁴⁵ PWSA Expert Witness Julie Mechling indicates that transitioning within year two
10 will give PWSA sufficient time to prepare for the impacts of eliminating the minimum (fixed)
11 charge on customer billing and various other aspects of PWSA’s operations and developmental
12 work.⁴⁶

13 PWSA is also proposing to implement two new reconcilable surcharges: (1) an
14 Infrastructure Improvement Charge (IIC); and (2) a Customer Assistance Charge (CAC).⁴⁷ As
15 reasoning for the IIC, Witness Mechling explains that PWSA has significant infrastructure projects
16 which take advantage of favorable government-based funding and loan programs.⁴⁸ PWSA is
17 proposing the IIC to recover principal and interest obligations for loans received from PENNVEST

⁴² PWSA St. 8 at 15: 1-7.

⁴³ Id. at 10: 16-22.

⁴⁴ PWSA St. 6 at 25-26, citing Pennsylvania Public Utility Commission v. Pittsburgh Water and Sewer Authority, Docket Nos. R-2021-3024773 (water), R-2021-3024774 (wastewater), and R-2021-3024779 (stormwater), Final Order entered November 18, 2021. (adopting Settlement Section B.3.a).

⁴⁷ Id. at 27: 1-12.

⁴⁸ PWSA St. 6 at 27: 15-22.

1 and the Water Infrastructure Finance and Innovation Act (WIFIA).⁴⁹ As reasoning for the CAC,
2 Witness Mechling explains that PWSA has worked towards expanding eligibility and enrollment
3 in its low income assistance programs, and asserts that its likely cost projections for these programs
4 will be different than actual costs as result of these efforts.⁵⁰

5 PWSA proposes to apply the CAC to all customer classes and adjust bills to reflect actual
6 program costs. Recovery within the CAC would include discounts under the BDP, operating costs
7 of the PGH20 Cares Team, the costs of Hardship Grant funding, and arrearage forgiveness.⁵¹
8 Witness Mechling argues that implementation of the CAC to reconcile these charges will allow
9 PWSA customers to only pay for actual incurred costs, prevent PWSA from having to rely on cost
10 projections, and lessen the need to implement rate filings in order to recover covered costs.⁵²
11 Witness Mechling further argues that implementation of a CAC will ensure that funding is
12 available for PWSA’s proposed Line Repair and Conversation Program – particularly as PWSA
13 agreed to not seek future base rate recovery related to costs of the LRC pilot.⁵³ PWSA is not
14 proposing to include the CAC and IIC as delineated charges on customer bills, but will instead
15 provide the “all-in” rate.⁵⁴

(Approving Line Repair Settlement at 9, B.2.)

⁵⁴ PWSA St. 6 at 31-32.

1 **Q: Do you support PWSA's proposed rate design?**

2 A: Yes and no. In PWSA's last rate proceeding, I recommended that PWSA remove its
3 minimum usage from the fixed residential customer charge but cautioned that it would have a
4 negative impact on the structure of PWSA's current BDP.⁵⁵ I continue to support elimination of
5 the minimum usage charge from PWSA's fixed customer charge, as it can help improve bill clarity,
6 increase transparency, and promote conservation. However, as noted, elimination of the minimum
7 usage charge from PWSA's fixed customer charge will adversely and severely impact the
8 discounts that low income customers receive through PWSA's BDP, as the program is currently
9 designed. If PWSA eliminates its minimum usage charge without overhauling its BDP,
10 participants with income between 51-150% FPL would not receive any rate discount, and BDP
11 enrollees at or below 50% FPL would only receive a 50% discount on volumetric usage. This
12 would eviscerate the purpose of the BDP to provide affordable monthly bills or low income
13 customers, and jeopardize BDP enrollees ability to afford and stay connected to life-sustaining
14 services. Thus, any support of PWSA's proposal to eliminate its minimum usage charge from its
15 fixed customer charge is contingent on PWSA restructuring its BDP in a manner to provide
16 meaningful discounted rates to low-income participants.

⁵⁵ 2021 PWSA Rate Case, Pittsburgh United St. 1 at 23.

1 **V. LOW INCOME ASSISTANCE PROGRAMS**

2 **Q: Please describe PWSA’s low income assistance programs.**

3 A: PWSA operates the following low income programs:⁵⁶

- 4 • *The Bill Discount Program (BDP).* BDP provides a 100% discount on the
5 water/wastewater minimum charge for customers with household income at or below 150%
6 FPL. Customers with income at or below 50% FPL also receive a 50% discount on the
7 volumetric charge.⁵⁷ The BDP also provides an 85% reduction on stormwater charges.
8
- 9 • *The Arrearage Forgiveness Program (AFP).* AFP is available only to BDP customers and
10 provides a \$30 credit towards BDP customers’ arrears for every on-time, in full payment
11 while enrolled in the program.⁵⁸ In order to qualify for AFP credits, customers must also
12 be on an active payment plan.⁵⁹ AFP was approved as part of the Joint Settlement in
13 PWSA’s last rate case, though some of the details of the program were subsequently
14 developed by PWSA without additional Commission review or approval.⁶⁰
15
- 16 • *The Hardship Fund Program.* The Hardship Fund Program provides emergency grant
17 assistance of up to \$300 for households with income at or below 150% FPL who are facing
18 a hardship. Grants are now also available for PWSA’s sewage-only customers for past due
19 wastewater charges. No sincere effort payment is required to receive a grant.⁶¹
20
- 21 • *Winter Shut Off Moratorium.* The Winter Shut Off Moratorium protects low income and
22 moderate income households at or below 300% FPL from termination in the winter months

⁵⁶ PWSA St. 6 at 34-35.

⁵⁸ Id.

⁵⁹ Id.

⁶⁰ Joint Petition for Settlement at 11.

⁶¹ PWSA St. 6 at 34-35.

1 from December 1 through March 31. Between December 31, 2022 and April 1, 2023, 6,531
2 PWSA customers were protected from termination by its Winter Moratorium Program.⁶²
3

- 4 • *Lead Service Line Replacement (LSLR) Reimbursement Program.* In this income-based
5 reimbursement program, eligible low income customers can obtain assistance to hire a
6 private contractor to replace their private side lead service line. The program became
7 available in January 2019.⁶³ PWSA notes that it provides several lead remediation services
8 for low income customers, including providing point-of-use filtering pitchers and filters.⁶⁴
9 While I am generally supportive of PWSA's LSLR programs, I will not specifically address
10 these programs further in my testimony. Nevertheless, I will address overall concerns and
11 recommendations related to PWSA's low income assistance programs, which should be
12 read as inclusive of the LSLR Program; and I reserve the right to provide further comment
13 on this program and/or make recommendations in response to other parties' testimony.

14 **Q: Do you have any overall concerns about PWSA's low income programs?**

15 A: Yes. I am concerned that PWSA's low income assistance programs remain woefully
16 undersubscribed - reaching just a fraction of PWSA's 20,000 estimated low income customers.⁶⁵
17 By comparison, only 4,751 customers were enrolled in the BDP as of June 2023⁶⁶ - just 24% of
18 PWSA's estimated low income population. Further, PWSA reports that, in 2022, 340 customers
19 received a Hardship Fund grant, and between January and June 2023, 295 customers received a
20 Hardship Fund grant.⁶⁷ By comparison, PWSA reported 2,548 BDP customers in payment plans
21 between August 2022 and June 2023.⁶⁸

⁶³ *Id.* at 23: 20-25.

⁶⁴ United IV-10.

⁶⁵ United I-7.

⁶⁶ United I-9, Attachment.

⁶⁷ United II-3, Attachment.

⁶⁸ United I-34, Attachment.

1 PWSA indicates that, in 2022, it conducted a customer survey of 430 customers. This
2 survey was aimed at gauging overall customer satisfaction and perception of PWSA, measure
3 awareness of programs/services, and understand customers' preferred methods of
4 communication.⁶⁹ Of survey respondents, nearly half (44%) said that they were not at all familiar
5 with PWSA's Customer Assistance Programs, and one-quarter (25.8%) indicated that they were
6 only somewhat familiar.⁷⁰ In other words, nearly 70% of survey respondents were either not
7 familiar or only somewhat familiar with PWSA's programs, underscoring the need for further
8 systematic outreach to enroll customers in low income assistance programs. I note that we do not
9 know what percentage of survey respondents who indicate they were unaware of assistance
10 programs are low income customers, as PWSA did not collect income information from survey
11 respondents.⁷¹

12 In her testimony, Witness Mechling explains how PWSA expanded certain outreach efforts
13 in 2022.⁷² Specifically, Witness Mechling describes how the PGH2O Cares Team reached their
14 goal of targeting 6,000 enrollees to increase enrollment in low income assistance programs by 20%
15 in 2022.⁷³ She further describes how PWSA expanded its Cares Team and made 4,201 more calls
16 in 2022 compared to 2021 to educate and enroll customers in assistance programs.⁷⁴ PWSA
17 indicates that it promotes its low income assistance programs in a variety of ways, including
18 through its website, outreach events, printed materials including flyers, press releases and bill

⁶⁹ PWSA St. 6 at 20: 9-21.

⁷⁰ Id. at 21-22.

⁷¹ United III-6.

⁷² PWSA St. 6 at 36.

⁷³ Id.

⁷⁴ Id.

1 graphics.⁷⁵ The PGH2O Cares Team has also canvassed several census tract areas based on its
2 2019 Household Affordability Analysis, and left doorhangers when contact is not achieved.⁷⁶

3 I commend the PGH2O's concerted efforts to increase education about and enrollment in
4 PWSA's low income assistance program. However, despite these notable efforts, I am concerned
5 that PWSA's low income assistance programs nevertheless remain undersubscribed. The test of
6 success must not rest just on effort but on measurable results. PWSA and its PGH2O Cares Team
7 must continue and expand outreach and education efforts to ensure that low income customers in
8 need of assistance both at present and proposed rates are able to enroll in low income assistance
9 programs.

10 **Q: Do you have any overall recommendations to improve PWSA's low income assistance**
11 **programs?**

12 A: Yes. As discussed, the PGH2O Cares Team has made important efforts to conduct
13 outreach and education related to PWSA's low income assistance programs. However, to address
14 the low enrollment rates of PWSA's assistance programs, I believe that more systematic
15 approaches are needed to augment the efforts of the PGH2O Cares Team so increased numbers of
16 customers can enroll in needed assistance.

17 As an overarching matter, I recommend that the Commission require PWSA to develop
18 and submit a comprehensive Universal Service Plan for periodic Commission review and approval.
19 Currently, as a water/wastewater utility, PWSA is not required to submit periodic plans related to
20 their low income assistance programming for Commission review and approval. This leaves a
21 substantial gap for consumers and utility advocates, who must rely on PWSA's tariffs and the

⁷⁵ United II-11, 12.

⁷⁶ United II-17.

1 information that can be pieced together from PWSA’s website to determine important program
2 rules, polices, and procedures for PWSA’s low income assistance programs. This engenders
3 consumer confusion and hampers consumers ability to learn about and ultimately enroll in
4 assistance. I therefore recommend that PWSA be required to file a Universal Service Plan and an
5 accompanying Petition for Commission review and approval within one year of the final Order in
6 this case, and every five years thereafter, in line with the requirements of regulated EDCs and
7 NGDCs in the Commonwealth.

8 I similarly recommend that PWSA be directed to develop a detailed consumer education
9 and outreach plan for inclusion in the Universal Service Plan I recommend above. The continued
10 undersubscription of PWSA’s low income assistance programs, as described, evidences a need for
11 an even more coordinated and comprehensive approach to consumer outreach and education
12 related to PWSA’s low income assistance programs. PWSA’s comprehensive consumer education
13 and outreach plan should be developed with input from parties and stakeholders through PWSA’s
14 LIAAC and should set forth how PWSA will specifically promote and coordinate each of its low
15 income programs. This Plan should be tailored to the demographics of PWSA’s service territory;
16 should include how PWSA will perform targeted outreach to specific at-need consumers and
17 communities – including consumers who have historically faced pervasive unaffordability and
18 barriers to accessing and maintaining utility services, including customers with Limited English
19 Proficiency; and should specifically identify efforts to educate and enroll customers at or below
20 50% FPL in assistance programming.

21 It is also important that PWSA have an accurate and timely count of its low income
22 customers. As discussed, PWSA’s current estimated low income customer count is based on a
23 Household Affordability Analysis conducted in 2019. Additionally, PWSA has not conducted any

1 formal or informal needs assessment of its low income assistance programs since January 2020.⁷⁷
2 This is insufficient, as it fails to account for the additional economic pressures that low income
3 consumers have faced since 2019. These recent economic pressures likely mean that increased
4 number of customers may be classified as low income and are in need of assistance. I therefore
5 recommend that PWSA be required to update its estimated low income customer count and, in
6 turn, its formal needs assessment within one year of the final order in this proceeding.

7 I also recommend that PWSA begin screening all new and moving customers for income
8 level and eligibility for assistance at the time their service is established. When a customer
9 indicates that they are struggling financially or entering into a payment arrangement, PWSA
10 indicates that its Customer Service Representatives (CSRs) briefly describe PWSA's customer
11 assistance programs and ask the customer if they would like to be transferred to the PGH2O Cares
12 Team.⁷⁸ While I am encouraged that customers who affirmatively disclose their financial
13 circumstances are referred for assistance, more systematic approaches must be taken so that
14 customers who may be eligible for these programs can be identified. Thus, I recommend that
15 PWSA implement regular screening for low income status of all new or moving customers, so that
16 low income customers are more routinely identified so that they may enroll in available assistance
17 programming.

18 For existing customers, PWSA should routinely screen for income on any non-emergency
19 calls, and/or should inquire whether there has been updates to any income information already
20 noted on accounts. Customers should be able to opt out of disclosing their income if they so choose,
21 but should first be informed that they may eligible for a lower rate, debt forgiveness, or energy

⁷⁷ United II-1.

⁷⁸ United III-2, Attachment.

1 efficiency measures. When establishing an account, all applicants for new service should be
2 informed of the availability of low income assistance programming and requested to voluntarily
3 self-disclose any changes to income information. All customers identified as low income through
4 this process should be referred for enrollment in PWSA’s low income assistance programs.

5 I similarly recommend that PWSA develop call scripting and checklists for its Customer
6 Service Representatives (CSRs) to assist in screening customers for eligibility in its low income
7 assistance programs, in line with my above recommendation. In response to previous settlement
8 commitments, PWSA recently undertook certain additional training for its CSRs related to
9 “common customer concerns” including issues when assisting customers with higher than usual
10 bills due to high consumption.⁷⁹ While PWSA developed call scripts and checklists related to how
11 customers assess and respond to high usage issues, there is no indication whether PWSA has
12 developed similar call scripts and checklists for its CSRs to prompt customers to enroll in
13 assistance programs.⁸⁰ Developing call scripting and checklists that require CSRs to routinely
14 screen for eligibility in low income assistance programming will help to systematize PWSA’s
15 enrollment efforts for these programs.

16 In conjunction with the additional avenues for identifying low income customers that I
17 have recommended above, I recommend that PWSA update its confirmed low income count. As
18 discussed, despite PWSA indicating that this count includes any customer identified as having
19 income at or below 150% FPL, through (1) BDP enrollment; (2) establishing a 60-month payment
20 arrangement; (3) qualifying for another customer assistance program or grant; and/or (4) any other
21 circumstance that would make it reasonably likely that a customer is low income,⁸¹ PWSA’s

⁷⁹ PWSA St. 6 at 39-40.

⁸⁰ Id.

⁸¹ United I-5.

1 provided low income count refers solely to its BDP customer count.⁸² PWSA should be required
2 to update its confirmed low income count to accurately reflect the various ways in which low
3 income customers are identified. PWSA should be able to track and report its confirmed low
4 income customer count on a monthly basis, by service type – and be able to disaggregate important
5 customer data (such as termination rates and arrearage levels) by confirmed low income customer
6 status.

7 Finally, in addition to enhanced screening and improved low income customer data
8 tracking and reporting, I further recommend that PWSA begin to track cross-program referrals and
9 enrollments. Currently, PWSA does not track cross-program referrals or enrollments.⁸³ Without
10 regular tracking of these metrics, it is difficult to determine whether cross-enrollment efforts
11 undertaken by PWSA are resulting in meaningful increases to enrollment in its low income
12 assistance programs and resultant benefits derived by a coordinated approach, or whether
13 additional reforms are necessary to improve cross-program enrollment processes. I therefore
14 recommend that the Commission require PWSA to track cross-program referrals and enrollments
15 by month and identify what programs collaborated in these efforts. I recommend that PWSA share
16 this data with the LIAAC on, at least, a semi-annual basis so that LIAAC members can provide
17 important feedback about how to improve or augment current cross-program enrollment efforts.

⁸² United I-3.

⁸³ United II-13.

1 **1. Bill Discount Program**

2 **Q: In its current rate filing, does PWSA propose any changes to its BDP?**

3 A: Yes. As currently structured, the discounts provided by PWSA’s BDP are heavily tied to
 4 the minimum (fixed) charge. Elimination of the minimum usage from the fixed customer charge
 5 without restructuring of the structure and discount levels of the BDP would severely undercut BDP
 6 discounts. PWSA is proposing a rehaul of the BDP so that BDP enrollees are provided with a fixed
 7 bill credit, in the following amounts:

8 **Table 4: PWSA Proposed Revisions to BDP Discount and Structure⁸⁴**

	2025	2026
CAP Customers above 50% - 200% FPL	\$17.00 per bill for water charges	\$20.00 per bill for water charges
	\$5.00 per bill for wastewater conveyance charges	\$6.00 per bill for wastewater conveyance charges
CAP Customers at or below 50% FPL	\$10.00 per bill for water charges	\$12.00 per bill for water charges
	\$3.00 per bill for wastewater conveyance charges	\$4.00 per bill for wastewater conveyance charges

9
 10 As noted in the above Table, PWSA’s proposal would increase eligibility for the BDP from
 11 150% FPL to 200% FPL. PWSA is proposing to implement these proposed changes to the BDP in
 12 2025 to coincide with implementation of its proposal to eliminate its minimum usage charge.⁸⁵

⁸⁴ PWSA St. 6 at 37.

⁸⁵ Id. at 37: 15-19.

1 In addition, PWSA proposes to offer a 50% reduction in the IIC and a 100% reduction in
2 the CAC to BDP customers.⁸⁶ These discounts will be in addition to the BDP discounts set forth
3 by Witness Mechling and described above.⁸⁷

4 **Q: Are PWSA's proposed changes to its BDP adequate to offset the financial impact of**
5 **the proposed rate increase?**

6 A: Yes and no. PWSA's proposal will help improve affordability for PWSA's low income
7 customers, and will help to offset the financial impact of the rate increase for many low income
8 households. Currently, there is strong indication that BDP participants are still struggling to
9 afford PWSA services, despite enrollment in the BDP. For example, as of May 2023, the average
10 arrearage level of BDP participants was \$1,322.27.⁸⁸ By contrast, in that same timeframe, the
11 average arrearage of residential customers was only \$1,041.03.⁸⁹ These numbers underscore the
12 need for improved affordability for BDP participants, even at current rates.

13 In the context of previous rate cases filed by PWSA, I have recommended that PWSA
14 transition its BDP to a percentage of income program (PIP), which targets affordability based on
15 individual households' income levels.⁹⁰ Ultimately transitioning PWSA's BDP to a PIP-structure
16 would ensure that those at the lowest levels of the FPL and/or with larger families are not paying
17 a disproportionate level of their incomes for critical water and wastewater services and would
18 improve the ability of low income families to stay connected to water and wastewater services in
19 their homes.

⁸⁶ Id. at 37: 6-12. United III-12.

⁸⁷ United III-12.

⁸⁸ United I-25, Attachment.

⁸⁹ Id.

⁹⁰ 2021 PWSA Rate Case, Pittsburgh United St. 1 at 37-38.

1 Rates for water and wastewater services are likely to continue to rise in the coming years,
2 and it is important that PWSA have a program structure in place capable of delivering accessible,
3 consistent, and equitable levels of affordability to economically vulnerable households. While I
4 continue to support the BDP ultimately being revised to a PIP-structure as the preferred method of
5 targeting and achieving affordability for low income customers, after review of PWSA's proposed
6 revisions to the structure and discounts of the BDP, it appears that PWSA's proposed BDP
7 revisions are an improvement on the current structure in that it will provide reasonably affordable
8 bills to the majority of its program participants.

9 Based on my analysis of PWSA's proposed revisions to the BDP contained at Exhibits 1,
10 2, and 3 of my Direct Testimony, it appears that the majority of customers with households
11 incomes between 50% and 200% FPL will have a combined burden level at or below 4%, inclusive
12 of proposed DSIC charges. As exemplified by these Exhibits, PWSA's BDP proposal will help to
13 lower the burdens for many of PWSA's low income customers. Further, expanding eligibility for
14 the BDP from 150% FPL to 200% FPL will allow more financially-vulnerable customers access
15 the BDP who currently are not eligible for bill discounts through the Program. Thus, in the context
16 of the current rate request, I am generally supportive of PWSA's proposed revisions to the structure
17 and discounts under the BDP.

18 I recognize that PWSA's proposed revisions to the BDP may ultimately require additional
19 improvements in structure and discount levels in order to ensure that low income customers –
20 regardless of family size and usage level, are able to achieve affordable water, wastewater, and
21 stormwater burden levels as water and sewer costs continue to rise. Indeed, based on my analysis,
22 it appears that customers with higher usage levels with incomes at or below 100% FPL may
23 experience combined burden levels of approximately 5-6%, inclusive of DSIC charges and

1 dependent on stormwater Tier. However, in the context of the present rate increase proposal, I
2 believe that PWSA's proposed revisions to the BDP's structure and discount levels will help many
3 BDP participants to achieve reasonably affordable monthly bills. As such, I believe PWSA's
4 proposed revisions to the BDP merit approval.

5 **Q: Do you have any other concerns about the BDP that you would like to raise in the**
6 **context of this proceeding?**

7 A: Yes. While I am supportive of PWSA's proposed revisions to the BDP, I am highly
8 concerned that many of PWSA's low income customers have not been able to learn about and
9 enroll in the BDP. As of June 2023, 4,751 customers were enrolled in the BDP.⁹¹ This remains far
10 behind estimated need – even based on PWSA's outdated Household Affordability Analysis which
11 estimated approximately 20,000 low income customers. If low income customers cannot
12 successfully enroll in the BDP, any affordability that the BDP may theoretically provide will not
13 assist these customers to actually better afford and maintain services. Overall, critical
14 improvements to the BDP are necessary to ensure customers are able to enroll in the Program to
15 meet the needs in PWSA's service territory for bill assistance and increased affordability both at
16 present and proposed rates.

17 **Q: Do you have any recommendations to improve the BDP?**

18 A: Yes. As discussed, the PGH2O Cares Team has done a commendable job improving
19 PWSA's outreach related to its low income assistance programs. However, I believe that additional
20 systematic solutions are needed so that low income customers are routinely informed of about and
21 ultimately enroll in available programs. I have already recommended several systematic

⁹¹ United I-9, Attachment.

1 improvements to expand screening and outreach related to PWSA's low income assistance
2 programs as a whole.

3 In conjunction with these recommendations, I also recommend that PWSA set additional
4 target enrollment benchmarks for the BDP. First, PWSA should be required to establish individual
5 target enrollment levels for the BDP. I recommend enrollment targets be set at 20% per year of
6 PWSA's estimated low income customer count until PWSA reaches at least 75% enrollment for
7 this group. Second, PWSA should be required to establish quantitative goals related to affirmative
8 customer contacts with the purpose of enrolling low income customers in the BDP. These
9 affirmative contacts should include not only telephone contacts and mailing, but also electronic
10 communication and virtual events for both local providers and consumers. PWSA should be
11 required to track and report its progress to its LIAAC, including the number of successful
12 enrollments as a result of its efforts, and should continue to refine its outreach efforts based on
13 community and LIAAC feedback.

14 **2. Arrearage Forgiveness Program**

15 **Q: Does PWSA propose any changes to the Arrearage Forgiveness Program in its**
16 **proposed rate filing?**

17 A: No, PWSA does not propose any changes to its Arrearage Forgiveness Program (AFP) in
18 the present filing.⁹² PWSA is proposing to allocate \$720,000 for the AFP in the context of this
19 proceeding.⁹³ Currently, in order to qualify for the AFP, a PWSA customer must be (1) enrolled
20 in the BDP; (2) on an active payment plan; and (3) make on-time monthly payments of their current
21 charges plus the payment plan amount.⁹⁴

⁹² PWSA St. 6 at 46: 8-18.

⁹³ PWSA St. 2 at 15: 16-18.

⁹⁴ United II-23.

1 **Q: Do you have any concerns about PWSA’s Pilot Arrearage Forgiveness Program?**

2 A: Yes. I am supportive of PWSA’s proposal to continue its AFP. However, I am concerned
3 that the AFP, as currently implemented, does not adequately address the high levels of arrears
4 faced by many low income customers. The level of enrollment in the AFP is also relatively low.
5 As of July 2022, the most recent date reported by PWSA for AFP participants, PWSA reports a
6 total of 261 customers enrolled in the AFP.⁹⁵ By comparison, PWSA reports that 17.95% of its
7 residential customers— or approximately 18,100 of its total 100,838 residential customers – were
8 in arrears as of July 2023.⁹⁶ This high rate of residential customers in active arrears underscores
9 the high number of PWSA customers who may be in need of AFP assistance.

10 I am also concerned that the AFP does not offer adequately structured relief to ensure
11 participants are able to catch up on arrears accrued prior to entry into the BDP and not fall even
12 further behind during participation in BDP. Low income customers carry a substantial level of
13 arrears.⁹⁷ PWSA indicates that, as of May 2023, for BDP customers at or below 50% FPL, carried
14 a total of \$68,986 in preexisting arrears, or \$1,095 per BDP customer.⁹⁸ PWSA indicates that BDP
15 customers above 50% FPL to 150% FPL carry a total of \$136,600 in pre-existing arrears, or \$983
16 per customer, as of May 2023.⁹⁹ As noted, the average arrearage for BDP customers as a whole as
17 of June 2023 had not decreased from preprogram arrears levels, but increased to \$1,322. At this
18 arrearage level, with the current \$30 AFP credit, it would take an average AFP participant
19 approximately 45 months to fully retire their arrears. Many BDP applicants will have arrearage

⁹⁵ United II-20, Attachment. OCA III-1.b, Attachment.

⁹⁶ United I-1, Attachment, OCA III-66 (e,f), Attachment.

⁹⁷ United I-25, Attachment.

⁹⁸ OCA III-15, Attachment.

⁹⁹ OCA III-15, Attachment.

1 amounts exceeding these averages, and thus face even longer periods before they can earn full
2 forgiveness.

3 Further, it appears that other available data further supports the concern that the arrearage
4 levels of low income customers have increased on average since BDP enrollment. For example, in
5 January of 2023 the average arrearage level of new BDP enrollees was reported as \$690.50,
6 compared to the average arrearage level of all BDP enrollees that same month of \$912.15.¹⁰⁰
7 Similarly, in May 2023, the average arrearage of new BDP enrollees was \$792.69, while the
8 average arrearage of all BDP customers was \$1,041.03.¹⁰¹ The increasing arrears of low income
9 customers, even with BDP enrollment, shows the need for robust arrearage forgiveness to address
10 preprogram arrearages accrued by low income customers as a result of underlying rate
11 unaffordability as well as the additional in-program arrears growth as a result of structural flaws
12 in the AFP.

13 As currently structured, the AFP does not provide participants a reasonable way of
14 meaningfully addressing their arrears and earning full forgiveness, as it requires payment over and
15 above the BDP rate – resulting in categorical unaffordability. It is essential that low income
16 consumers are given a reasonable means to catch up on past due bills upon entry into the BDP.
17 Otherwise, the collections benefits associated with universal service programs – in terms of
18 reduced collections expenses and uncollectible expenses – will not be realized.

19 The effectiveness of the AFP is further hampered by the requirement that customers must
20 enter into payment plans related to their past-due arrears in order to enroll in the AFP.¹⁰² In
21 response to discovery, Witness Mechling explains that PWSA customers automatically receive

¹⁰⁰ OCA III-47, Attachment; United I-25, Attachment.

¹⁰¹ Id.

¹⁰² United II-23.

1 AFP credits when they are (1) enrolled in the BDP; (2) are on an active payment plan; and (3)
2 make an on-time payment of their current charges plus the payment plan amount.¹⁰³ In other words,
3 BDP customers must pay *both* the BDP rate in addition to a payment plan installment to earn
4 forgiveness on arrears. Requiring AFP participants to enter into payment plans as a condition of
5 earning AFP credits further increases AFP participants' monthly bills beyond an affordable rate.
6 This undercuts the purpose of the AFP and BDP to provide customers a mechanism of sufficiently
7 addressing accumulated arrearages while providing increased affordability through BDP rates.
8 Improvements are necessary to the AFP to ensure that low income customers can access the
9 Program and have a meaningful opportunity to catch up on arrears accumulated as a result of
10 unaffordability at both present and proposed rates.

11 **Q: Do you have any recommendations to improve the Arrearage Forgiveness Program?**

12 A: Yes. Upon entry into the BDP – and thus the arrearage forgiveness program – BDP
13 customers' pre-program arrears should be frozen. BDP customers should no longer be required to
14 make payments on these arrears while they remain in the program, and the pre-program arrears
15 should be frozen and no longer incur late fees or other associated charges. Customers should not
16 have to enter into a payment plan in order to earn forgiveness on these past due arrears. Rather,
17 consistent with other Customer Assistance Programs across the state, BDP participants should earn
18 arrearage forgiveness by making in-full payments on their discounted monthly bill – without the
19 addition of a payment plan.

20 I also recommend that PWSA revise the discount structure under the AFP to equitably
21 retire pre-program arrears for BDP participants within a reasonable timeframe. I initially note that,
22 pursuant to a settlement requirement from PWSA's 2021 rate proceeding, PWSA was required to

¹⁰³ United II-23.

1 conduct a cost-benefit analysis of the AFP to a percent forgiveness structure based on the following
2 parameters: (1) reduction of participants account balance by 1/36th for each full and timely
3 payment while enrolled in the AFP; (2) at the time of enrollment, separating/freezing customer's
4 total arrears from current and future bills; (3) retroactive arrearage forgiveness for customers who
5 miss monthly bill payment but make a catch-up amount.¹⁰⁴ Based on this analysis, PWSA
6 estimated a loss of \$900,000 and concluded that it was not feasible to restructure the AFP at this
7 time based on these parameters.¹⁰⁵

8 While I appreciate that PWSA undertook this analysis of AFP revisions, I do not believe
9 that these calculations adequately account for certain financial benefits that may result from
10 meaningfully restructuring the AFP. In response to discovery, PWSA indicated that its analysis
11 did not consider a number of factors which may mitigate the projected cost increases, including
12 reduced uncollectible expenses and reduced termination costs.¹⁰⁶ While PWSA Witness Edward
13 Barca argues in response to discovery that there is no guarantee that these costs would be
14 reduced,¹⁰⁷ I believe that it is incorrect to overlook the important benefits resulting from assisting
15 customers to meaningfully address arrearages and stay connected to services. Reduced termination
16 rates and uncollectible expenses financially benefit all ratepayers. Without accounting for these
17 factors, PWSA's analysis is – at best – an incomplete snapshot consisting only of projected costs
18 from restructuring the AFP. Further, while PWSA has not undertaken any mass write-off to date
19 of debt, it is planning to conduct this process during their annual bad debt review in Q1 2024.¹⁰⁸

¹⁰⁴ PWSA St. 2 at 51: 7-16.

¹⁰⁵ Id. at 51: 7-23.

¹⁰⁶ United III-17.

¹⁰⁷ United III-17.

¹⁰⁸ United II-2, Attachment.

1 Based on this analysis, I continue to recommend that PWSA implement a percent
2 forgiveness structure, rather than a flat forgiveness amount. Specifically, I recommend that, for
3 each in-full payment that a customer makes while enrolled in the BDP, 1/36th of a customer's pre-
4 program arrears are forgiven.

5 Similar to other programs, PWSA should allow BDP participants to earn forgiveness on
6 catch-up payments. Failing to provide forgiveness credits for full payments made because they are
7 not within a narrowly prescribed time period fails to incentivize positive payment behaviors and
8 punishes customers who cannot manage to make payments within a strict timeframe due to
9 fluctuations in their monthly incomes, reliance on fixed incomes, or financial emergencies and
10 unforeseen expenses. A properly designed AFP should incentivize full payment – regardless of
11 timeliness – in recognition of the financial realities of low income families. The AFP is an
12 alternative collections program, designed to incentivize low income households with insufficient
13 resources to prioritize their water and wastewater payments. These households – by definition –
14 operate in a state of scarcity, as they have categorically insufficient monthly income to pay for
15 food, rent/mortgage, electricity, heat, childcare, and transportation. Thus, I recommend that
16 PWSA is required to provide arrearage forgiveness credits to AFP participants for catch-up
17 payments.

1 **3. Hardship Fund Program**

2 **Q: Does PWSA propose to make any changes to its Hardship Fund pursuant to the**
3 **present rate filing?**

4 A: Yes. PWSA proposes to allocate two separate \$300 annual grants – one to be distributed
5 to eligible water customers and one to be distributed to eligible wastewater customers.¹⁰⁹ As
6 discussed, PWSA is proposing to fund its Hardship Fund through rates collected through the CAC
7 starting in FY 2025.¹¹⁰ PWSA is also proposing to allocate in rates \$432,640 for its Hardship Fund
8 Program.¹¹¹

9 **Q: Please describe how PWSA’s Hardship Fund is currently funded.**

10 A: The Hardship Fund Program was originally funded with \$500,000.00 received as a result
11 of a Settlement with Veolia.¹¹² Pursuant to the last rate case in this matter, PWSA began efforts
12 related to outreach and fundraising for its Hardship Fund.¹¹³

13 **Q: Do you support PWSA’s proposed changes to its Hardship Fund Program?**

14 A: Yes and no. We are supportive of PWSA’s continued fundraising efforts for its Hardship
15 Fund, as well as PWSA utilizing other potential avenues for Hardship Funding – including
16 settlement funds and state and federal funding opportunities. However, to ensure continued
17 adequate funding is available to meet the needs of low income customers, I am in favor of rate
18 supported funding for PWSA’s Hardship Fund.

¹⁰⁹ PWSA St. 6 at 37: 22-25.

¹¹⁰ Id.

¹¹¹ PWSA St. 2 at 4: 29-31.

¹¹² See Pa. PUC v. PWSA (2018 PWSA Rate Case), Joint Petition for Settlement, Docket Nos. R-2018-3002645, R-2018-3002647 (Joint Petition filed November 29, 2018).

¹¹³ PWSA St. 6 at 25.

1 I am also encouraged that PWSA is seeking to expand availability of its Hardship Fund so
 2 that customers with both water and wastewater services can access \$300 in grant funding twice
 3 during a program year. However, I am concerned that – for customers who are not dual water/
 4 wastewater customers or may have high arrearages accumulated in water *or* wastewater – only
 5 offering a \$300 grant for water and a \$300 grant for wastewater during the year is insufficient to
 6 meet the needs for grant assistance amongst PWSA’s low income customers. The Table below
 7 shows the average arrearage levels of PWSA’s BDP, from 2019 to 2023:

8 **Table 5: Arrearage Levels by Year (BDP Customers), 2019-2023**

Month/Year	BDP Customer Average Arrearage Level
Jan. 2019	\$467.16
Jan. 2020	\$538.81
Jan. 2021	\$582.37
Jan. 2022	\$852.79
Jan. 2023	\$912.15
June 2023	\$1,041.03

9 As shown in the Table above, the average arrearage levels of PWSA’s BDP customers have
 10 increased significantly from an average of \$467.16 in January 2019 to an average of \$1,041.03 –
 11 or by 122%. These are profound increases in average arrearage levels of low income customers,
 12 even with the assistance of the BDP. While PWSA’s proposal would expand eligibility for
 13 combined customers to one water grant and one wastewater grant per year, customers who do not
 14 have combined service will be limited to one \$300 Hardship Fund grant per year.

15 As discussed, I am also concerned about the consistently low numbers of customers who
 16 have been awarded Hardship Grants by PWSA, compared to the high level of arrears carried by
 17 PWSA’s low income customers. The following Table shows the number of customers who
 18 received Hardship Grants awarded by PWSA from 2019 to 2023, disaggregated by year:

1 **Table 6: Customers Receiving Hardship Grants From 2019 to 2023, By Year**¹¹⁴

Year	Number of Customers Receiving a Hardship Grant
2019	177
2020	25
2021	303
2022	340
2023 (through June 2023)	295

2

3 As previously discussed, despite these low numbers, the need for Hardship Fund assistance
 4 remains high – with BDP participants carrying an average of more than \$1,300 in arrears.¹¹⁵
 5 Despite this need, PWSA does not report any months in which Hardship Funding was depleted.¹¹⁶
 6 This data underscores the need to improve access to grants through the Hardship Fund so that low
 7 income customers facing acute financial hardship can obtain needed grant assistance and stay
 8 connected to services.

9 **Q: Do you have any other concerns related to PWSA’s Hardship Fund that you would**
 10 **like to raise in the context of this proceeding?**

11 A: Yes. Through discovery, PWSA was asked to provide details of any and all eligibility
 12 requirements for qualifying for its Hardship Fund, including but not limited to what documentation
 13 and information a customer must provide to qualify for a Hardship Fund grant.¹¹⁷ In response,
 14 PWSA provide an informational flyer for Dollar Energy Fund (DEF) related to its Hardship
 15 Fund.¹¹⁸ This informational flyer provides only basic information regarding the eligibility criteria,
 16 noting generally that information related to gross monthly income must be provided to qualify for

¹¹⁴ United II-3, Attachment

¹¹⁵ United I-25, Attachment.

¹¹⁶ United II-7.

¹¹⁷ United III-14, Attachment.

¹¹⁸ Id.

1 a Hardship Fund grant.¹¹⁹ PWSA also provided its Letter of Agreement with DEF.¹²⁰ In this Letter
2 of Agreement, it appears that DEF has established a number of guidelines related to PWSA's
3 Hardship Fund. These guidelines are purported to be provided in Exhibit A of this Letter of
4 Agreement, which was not attached to provided discovery.¹²¹ However, it appears that DEF has
5 the ability to modify program requirements under certain circumstances.¹²² Without a complete
6 Letter of Agreement, I do not have the benefit of reviewing DEF's steps to modify PWSA's
7 program requirements. However, I am highly concerned that DEF has the ability to unilaterally
8 modify program requirements without review and approval by PWSA or the Commission.

9 **Q: Do you have any recommendations related to PWSA's Hardship Fund?**

10 A: Yes. I have already discussed several recommendations about how PWSA should expand
11 outreach and enrollment related to its low income programs as a whole. These recommendations
12 are inclusive of PWSA's Hardship Fund. I additionally recommend that PWSA increase the
13 maximum grant from \$300 to \$500, and allow households to apply for grant assistance twice a
14 year— regardless of whether a customer elects to apply either or both of these grant amounts to
15 water or wastewater charges. These adjustments will help address customers actual need for grant
16 assistance throughout the program year, regardless of whether they are combined
17 water/wastewater customers. Additionally, increasing the maximum grant amount to \$500 will
18 more closely approximate the average level of arrearages amongst PWSA's low income
19 customers.¹²³

¹¹⁹ Id.

¹²⁰ Id.

¹²¹ United II-14, Attachment, p. 4.

¹²² Id.

¹²³ United I-25, Attachment.

1 As discussed, I am also concerned about PWSA’s oversight of DEF. As indicated by the
2 language of PWSA and DEF’s Letter of Agreement, DEF has established Hardship Fund
3 guidelines – some of which may be unilaterally modified by DEF through the course of their
4 administration.¹²⁴ While I did not have the benefit of seeing the full Letter of Agreement in
5 preparing my direct testimony, including Exhibit A which appears to provide these guidelines, I
6 believe that a thorough review of DEF’s administration of PWSA’s Hardship Fund is required in
7 order to ensure that PWSA is able to exercise appropriate oversight of DEF’s administration of the
8 Hardship Fund, and that DEF is not improperly altering program requirements that require review
9 and approval of PWSA and/or the Commission. As such, I recommend that, within one year of the
10 final Order in this matter, PWSA is required to submit a report to the Commission related to DEF’s
11 administration of PWSA’s Hardship Fund. This report should also be provided to the parties for
12 review and should include specific details about any and all policies, procedures, and training
13 materials that DEF utilizes in its administration of PWSA’s Hardship Fund – including under what
14 circumstances DEF is permitted to alter program requirements.

15 I reserve the right to amend my analysis and recommendations if and when PWSA provides
16 a copy of Exhibit A to its Letter of Agreement with DEF.

¹²⁴ United II-14, Attachment, p. 4.

1 **VI. STORMWATER FEE**

2 **Q: Is PWSA proposing any changes to its stormwater fee?**

3 A: Yes. PWSA is proposing to update its credit program to permit qualifying, lightly-
4 developed non-residential properties access to 45% and 60% credits through passive management
5 of stormwater through the property’s green space.¹²⁵ PWSA is also proposing to provide a one-
6 time \$40 credit for installed rain barrels.¹²⁶

7 **Q: Do you support PWSA’s proposal related to its stormwater fee, as described?**

8 A: No. I am concerned, despite its proposal to significantly raise stormwater rates, PWSA fails
9 to provide additional ways for low income customers to adopt green stormwater mitigation. While
10 I understand and appreciate that PWSA provides a substantial stormwater discount for low income
11 customers, receiving a discounted stormwater rate is not the same as having the ability to adopt
12 green mitigation strategies and receive other critical benefits as a result of those strategies. For
13 example, while PWSA is proposing to provide a one-time \$40 credit for installed rain barrels, low
14 income customers do not have the discretionary income required to install rain barrels to receive
15 these credits. PWSA’s low income customers should be given a reasonable opportunity to
16 participate in green mitigation that would benefit their households and their communities.

17 I am also concerned that PWSA does not appear to have a process for how it intends to
18 train its customer-facing staff to solicit whether customers have installed rain barrels so that they
19 can receive promised credits. Without sufficient outreach, customers who may already practice
20 green mitigation, including installation of rain barrels, may never learn about or be able to access
21 available credits.

¹²⁵ PWSA St. 6 at 32: 8-15.

¹²⁶ Id.

1 **Q: Do you have any recommendations related to PWSA’s stormwater fee?**

2 A: Yes. While PWSA indicates that they provide discounts on stormwater bills to BDP
3 customers,¹²⁷ it does not appear that there is any assistance specific to low income customers who
4 would like to engage in green mitigation, but do not have the financial resources to do so. I
5 recommend that the Commission require PWSA to allocate \$100,000 annually – funded through
6 rates – so that low income customers can access green mitigation measures, including rain barrels
7 at no cost to these customers. Low income customers who agree to engage in green mitigation to
8 their residences should be provided with any credits or benefits available to other customers –
9 including the \$40 credit for installation of rain barrels.

10 I also recommend that the Commission require PWSA, in consultation with its LIAAC, to
11 develop an outreach and education plan related to available assistance and mitigation measures
12 connected to its stormwater fee. This outreach and education plan should include training and call
13 scripting for PWSA’s CSRs so that CSRs (1) prompt stormwater customers about whether they
14 have adopted or have an interest in adopting green stormwater mitigation; (2) discuss the benefits
15 of practicing green stormwater mitigation, including the \$40 credit; and (3) discuss whether the
16 customers are enrolled in, and eligible for, the BDP to take advantage of available stormwater
17 discounts. Additionally, enhanced outreach and education related to stormwater should include a
18 plan for community engagement, crafted in conjunction with the LIAAC and utilizing feedback
19 from previous stormwater strategic plan outreach.¹²⁸

¹²⁷ United III-8.

¹²⁸ United III-9.

1 **VII. ELIMINATION OF CONVENIENCE FEE PASS THROUGH FEE**

2 **Q: Please summarize PWSA’s proposed elimination of their current convenience fee pass**
3 **through.**

4 A: PWSA is proposing to require customers who pay their bills through certain options that
5 include convenience fees to directly pay the costs of any assessed third-party fees.¹²⁹ Pursuant to
6 the 2020 rate case settlement, PWSA agreed to eliminate merchant fees for residential customers
7 who make Interactive Voice Response (IVR) and online payments.¹³⁰ PWSA notes that, by
8 returning the payment responsibility solely to customers paying through certain options, PWSA
9 mitigates costs impacts to all ratepayers and cites to the relaxing of restrictions related to the
10 COVID-19 pandemic.¹³¹

11 **Q: Do you support PWSA’s proposal to eliminate pass through of convenience fees for**
12 **residential customers?**

13 A: No. As described extensively above, PWSA’s residential customers – particularly their low
14 income customers – continue to experience profound difficulties affording their bills and
15 remaining connected to services. I am concerned that eliminating pass-through treatment of
16 convenience fees will increase the overall amount that customers must devote to their monthly
17 PWSA bills. For many residential customers, PWSA’s bills are unaffordable even at present rates.
18 PWSA is proposing an aggressive increase in the rates that residential customers pay for services.
19 To add additional fees on top of these rate increases further exacerbates unaffordability of PWSA
20 rates. Those residential customers who cannot afford these additional fees will be effectively

¹²⁹ PWSA St. 6 at 33.

¹³⁰ Id.

¹³¹ Id. See also United III-10. United III-11.

1 precluded from utilizing IVR and online payment options – thus making it more difficult for these
2 customers to make timely bill payments. This is particularly concerning for certain vulnerable
3 populations who may not have access to transportation or other resources needed to access other
4 payment options.

5 I also note that PWSA currently still charges a \$1.49 fee for making a cash payment at a
6 third party location, such as a 7-11, CVS, Dollar General, Walgreens, or a Walmart Super
7 Center.¹³² Low income customers are more likely to be unbanked or under-banked¹³³ – and, in
8 turn, are more likely to rely on the ability to make cash payments at a local store. This is not a
9 matter of “convenience”, but of necessity.

10 **Q: Do you have any recommendations related to pass through convenience fees?**

11 A: Yes. I recommend that PWSA pass through all third-party bill payment fees for residential
12 customers – including fees for cash payments at a third party location. As discussed, PWSA’s
13 residential customers, and particularly their low income customers, face profound challenges to
14 affordability. Continuing pass-through treatment of convenience fees will save customers who are
15 struggling from having to shoulder additional fees on top of any rate increase that is ultimately
16 approved.

¹³² United III-11.

¹³³ A 2019 Federal Reserve Report found that 6% of US adults are unbanked – and 6% are underbanked. A far greater percentage of low income and minority households fall within these categories – exacerbating financial instability for these households. See Board of Governors of the Federal Reserve System, Report on Economic Well-Being of US Households (May 2019), <https://www.federalreserve.gov/publications/2019-economic-well-being-of-us-households-in-2018-banking-and-credit.htm>.

1 **VIII. SUMMARY OF RECOMMENDATIONS**

2 A: In my direct testimony, I have made several recommendations to address unaffordability
3 of PWSA's rates for water/wastewater services at both present and proposed rates for low income
4 customers. I recommend that the Commission order PWSA to:

- 5 • Submit a Universal Service Plan for Commission review and approval.
- 6 • Develop and file with the Commission a detailed consumer education and outreach plan.
- 7 • Update its estimated low income customer count and, in turn, its formal needs assessment
8 within one year of the final order in this proceeding.
- 9 • Begin screening all new and moving customers for income level and eligibility for
10 assistance at the time their service is established.
- 11 • For existing customers, routinely screen for income on any non-emergency calls, and/or
12 should inquire whether there has been updates to any income information already noted
13 on accounts.
- 14 • Develop call scripting and checklists for its CSRs to assist in screening customers for
15 eligibility in its low income assistance programs.
- 16 • Update its confirmed low income count and improve identification and tracking, as
17 detailed above.
- 18 • Be able to track and report its confirmed low income customer count on a monthly basis,
19 by service type – and be able to disaggregate important customer data (such as termination
20 rates and arrearage levels) by confirmed low income customer status.
- 21 • Track cross-program referrals and enrollments, as detailed above, and share this data be
22 shared with the LIAAC on, at least, a semi-annual basis.
- 23 • With regard to PWSA's AFP:
 - 24 ○ Freeze BDP customers' pre-program arrears upon entry into the program.
 - 25 ○ Eliminate the requirement that BDP participants enter into a payment plan to be
26 eligible for forgiveness.
 - 27 ○ Allow BDP participants to earn forgiveness on their frozen pre-program arrears
28 by making in-full payments on their discounted monthly bill – without the
29 addition of a payment plan.

- 1 ○ Implement a percent forgiveness structure, rather than a flat forgiveness amount. I
2 recommend that, for each in-full payment that a customer makes while enrolled in
3 the BDP, 1/36th of a customer’s pre-program arrears are forgiven.

- 4 ○ Provide arrearage forgiveness credits to AFP participants for catch-up payments.

- 5 ● Increase the maximum Hardship Grant from \$300 to \$500, and allow households to apply
6 for grant assistance twice a year– regardless of whether a customer elects to apply either
7 or both of these grant amounts to water or wastewater charges.

- 8 ● within one year of the final Order in this matter, require PWSA to submit a report to the
9 Commission related to DEF’s administration of PWSA’s Hardship Fund.

- 10 ● Allocate \$100,000 annually to support the provision of green stormwater mitigation
11 measures for low income customers, including rain barrels, at no cost.

- 12 ● In consultation with its LIAAC, develop an outreach and education plan related to
13 available assistance and mitigation measures connected to its stormwater fee.

- 14 ● Pass through all third-party bill payment fees for residential customers, including fees for
15 cash payments at third party locations.

16
17 **Q: Does this conclude your Direct Testimony?**

18 A: Yes; however, I reserve the right to submit rebuttal and surrebuttal testimony in response
19 to testimony submitted by other parties in this proceeding and/or to revise my analysis and
20 recommendations as additional data and information becomes available.

APPENDIX A

RESUME OF HARRY S. GELLER

RESUME OF HARRY S. GELLER

EDUCATIONAL BACKGROUND:

Harpur College, State University of New York at Binghamton, B.A. 1966

Washington College of Law, American University, J.D. 1969

New York University Law School, courses in Urban Affairs and Poverty Law, as part of
Volunteers in Service to America (VISTA) Program 1969-1971

EMPLOYMENT:

1988 – 2015 Executive Director, Pennsylvania Utility Law Project (PULP), a project of the civil non-profit Pennsylvania Legal Aid Network. PULP is dedicated to providing technical support, information sharing, and representation to low-income individuals and organizations, assisting and advocating for the low income in utility and energy matters. Responsibilities include project oversight, case consultation, co-counseling, and participation on task forces, work groups and advisory panels, community education and training in utility and energy matters affecting the low income.

While at PULP, served in the following capacities:

- Chairman, Low-Income Home Energy Assistance Program (LIHEAP) Advisory Committee to the Secretary, Pennsylvania Department of Human Services
- Member, Pennsylvania Public Utility Commission, Consumer Advisory Council Coordinator, Pennsylvania Legal Services Utility/Energy Work Groups
- Member, Weatherization Policy Advisory Committee to the Department of Community and Economic Development
- Member, PECO Universal Service Advisory Committee and LIURP Subcommittee

1974-1987 Staff Attorney, Managing Attorney and ultimately, Executive Director of Legal Services, Incorporated (LSI), a civil legal services program serving Adams, Cumberland, Franklin and Fulton Counties. Through a restructuring with other legal services programs, LSI became part of what is now known as MidPenn Legal Services and Franklin County Legal Services.

1971-1972 Staff Attorney, New York City Legal Aid Society, Criminal Court and Supreme Court Branches, New York County.

1969-1971 Volunteer in Service to America (VISTA) assigned to the New York University Law School Project on Urban Affairs and Poverty Law.

BAR ADMISSIONS

New York State

Commonwealth of Pennsylvania

United States District Court, Middle District of Pennsylvania

Cases in which Harry S. Geller has participated as a witness before the Pennsylvania Public Utility Commission since July 1, 2015

- Pennsylvania Public Utility Commission v. Philadelphia Gas Works, R-2022-3034229, P- 2022-3034264
- Pennsylvania Public Utility Commission v. National Fuel Gas Distribution Corporation, R-2022-3035730
- Pennsylvania Public Utility Commission v. Columbia Gas of Pa., Docket No. R-2022-3031211
- Pennsylvania Public Utility Commission v. Pa. American Water Co., Docket Nos. R-2022-3031672 & -3031673
- Pennsylvania Public Utility Commission v. UGI Utilities, Inc. – Gas Division, R-2021- 3030218.
- Joint Petition of MetEd, Penelec, Penn Power, and West Penn Power for Approval of their Default Service Programs for the Period Commencing June 1, 2023 through May 31, 2027, Docket Nos. P-2021-3030012, -13, -14, -21
- Pennsylvania Public Utility Commission v. Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc., Docket Nos. R-2021-3027385, R- 2021-3027386.
- Pennsylvania Public Utility Commission v. Pittsburgh Water and Sewer Authority, R-2021-3024773, R-2021-3024774, R-2021-3024779.
- Pennsylvania Public Utility Commission v. Duquesne Light Company, R-2021- 3024750.
- Pennsylvania Public Utility Commission v. PECO Energy – Electric Division, R-2021-3024601.
- Pennsylvania Public Utility Commission v. Columbia Gas of Pennsylvania, Inc., R-2021-3024296.
- Tenant Union Representative Network v. PECO Energy Company, C-2020-3021557
- Pennsylvania Public Utility Commission v. Philadelphia Gas Works, R-2020-3017206.
- Petition of PPL Electric Utilities Corporation for Approval of a Default Service Program for the Period of June 1, 2021 through May 31 , 2025, Docket No. P-2020-3019356.
- Petition of PECO Energy Company for Approval of Its Default Service Program for the Period from June 1, 2021 through May 31, 2025, Docket No. P-2020-3019290.
- Petition of Duquesne Light Company For Approval of Default Service Plan For The Period June 1, 2021 Through May 31, 2025, Docket No. P-2020-3019522.
- Joint Application of Aqua America, Inc., Aqua Pennsylvania, Inc., Aqua Pennsylvania Wastewater, Inc., Peoples Natural Gas Company LLC and Peoples Gas Company LLC for all of the Authority and Necessary Certificates of Public Convenience to Approve a Change in Control of Peoples Natural Gas Company LLC, and Peoples Gas Company LLC by way of the Purchase of all of LDC Funding LLC's Membership Interests by Aqua America, Inc., Docket Nos. A-2018-3006061, A-2018-3006062, A-2018-3006063.
- Pennsylvania Public Utility Commission v. Aqua Pennsylvania, Inc. et al. Docket Nos. R2018-3003558 et seq.

- Pennsylvania Public Utility Commission v. Duquesne Light Company, Docket No. R-2018-3000124.
- Pennsylvania Public Utility Commission v. PECO Energy Company- Electric Division, Docket No. R-2018-3000164.
- Joint Petition of MetEd, Penelec, Penn Power, and West Penn Power for Approval of their Default Service Programs for the period commencing June 1, 2019 through May 31, 2023, Docket Nos. P-2017-2637855, P-2017-2637857, P-2017-2637858; P-2017-2637866.
- Pennsylvania Public Utility Commission et al. v. Philadelphia Gas Works, Docket No. R-2017-2586783.
- PECO Energy Company's Pilot Plan for an Advance Payments Program and Petition for Temporary Waiver of Portions of the Commission's Regulations with Respect to that Plan, Docket No. P-2016-2573023.
- Petition of PECO Energy Company for Approval of a Default Service Program for the Period of June 1, 2017 through May 31, 2019, Docket No. P-2016-2534980.

Response of the Pittsburgh Water and Sewer Authority (“PWSA”) to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set I Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919 and P-2023-3040678

Request: United-I-3 From January 2019 until the most recent date available, how many confirmed low income customers did PWSA serve, disaggregated by month and year, as of the last day of the month?

Please provide this data in a live Excel spreadsheet.

Response: See Response to United-I-5 regarding how PWSA defines the term “confirmed low income customer.” PWSA does not separately track information for customers who are not participants in the BDP. See attachment United-I-9 and 10 for number of BCP enrolled customers by service type Jan 2019 – June 2023.

Response provided by: Julie A. Mechling, Director of Customer Service

Date Response provided: August 3, 2023

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set I
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

Request: United-I-5 How does PWSA define the term “confirmed low income customer”? Please also indicate what customer segments are included in PWSA’s designation of “confirmed low income customers”.

Response: PWSA defines the term “confirmed low income customer” as any customer identified as having an income at or below 150% of the Federal Poverty Level (FPL). PWSA will identify a confirmed low income customer when the customer 1) enrolls in the Bill Discount Program, 2) establishes a 60-month payment arrangement, 3) qualifies for any customer assistance program or grant, and/or 4) is experiencing any other circumstance which makes it reasonably likely that the customer is low income.

Response provided by: Julie A. Mechling, Director of Customer Service

Date Response provided: July 17, 2023

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set I
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

Request: United-I-7 As of the most recent date available, how many estimated low income customers does PWSA serve? Please explain how PWSA arrived at these estimates, and provide a copy of any supporting documentation used to determine this estimate.

Response: PWSA continues to operate under the assumption that there are approximately 20,000 customers eligible for its assistance programs per the Household Affordability Analysis released in December 2019. Exhibit JAQ-5 as filed with my direct testimony, PWSA St. No. 8, in the prior rate case, R-2020-3017951 was a copy of the PWSA Household Affordability Analysis – Final Report December 2019. All the direct testimony supporting the prior rate case is available on the Commission’s website at: <https://www.puc.pa.gov/pcdocs/1658682.pdf>

Response provided by: Julie A. Mechling, Director of Customer Service

Response of the Pittsburgh Water and Sewer Authority (“PWSA”) to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set I Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919 and P-2023-3040678

Request: United-I-32 From January 2019 to the most recent date available, please provide PWSA’s number of payment troubled customers (i.e. customers who have failed to maintain one or more payment arrangement in the previous one year period), disaggregated by month and year, as of the last day of the month, for each of the following groups:

- A. All residential customers;
- B. Residential customers, excluding confirmed low income customers;
- C. Confirmed low income customers;
- D. Confirmed low income customers, excluding BDP customers;
- E. BDP customers.

Please provide this data in a live Excel spreadsheet.

Response: A. B. E. See attachment United-I-32.a, .b, and .e.
C. and D. See Response to United-I-5 regarding how PWSA defines the term “confirmed low income customer.” PWSA does not separately track information for customers who are not participants in the BDP.

Request: United-I-34 Please answer.

- A. How many residential customers received a payment arrangement from January 2019 to date, disaggregated by month and year, as of the last day of the month?
- B. For the Responses to United I-34, Subsection A., please disaggregate by month, year, and the service type (e.g. water only; wastewater only; stormwater only; combined, specifying the combined services).
- C. How many confirmed low income customers received a payment arrangement from January 2019 to date, disaggregated by month and year, as of the last day of the month?

Please provide this data in a live Excel spreadsheet.

Response: See attachment United-I-34.a-c See Response to United-I-5 regarding how PWSA defines the term “confirmed low income customer.” PWSA does not separately track information for customers who are not participants in the BDP.

and P-2023-3040678**

Request: United-II-2 From January 2019 to the most recent date available, please provide the total residential accounts that were written off for non-payment and the associated write-offs (in dollars) for those accounts, for each of the following groups:

- A. All residential customers;
- B. Residential customers, excluding confirmed low income customers;
- C. Confirmed low income customers;
- D. Confirmed low income customers, excluding BDP customers;
- E. BDP customers.

Please provide this data in a live Excel spreadsheet.

Response: PWSA has not yet engaged in a mass write-off exercise. Please see the standard operating procedure, see attachment United-II-2, that PWSA is planning to follow during its annual bad debt review in Q1 2024.

Response provided by: Julie A. Mechling, Director of Customer Service

Date Response provided: July 17, 2023

PWSA Standard Operating Procedure

Division: Customer Service; Collections

Scope: How to Process a Write-Off of Uncollectible Charges

Job Title: Senior Collections Manager

Subject: Write-Off Process

PWSA's write-off process is intended to expunge unpaid water/wastewater conveyance/stormwater charges that have been deemed uncollectible through the below described review process. In turn, the outstanding value of bad debts reported and reviewed annually will decrease.

The Senior Collections Manager will review accounts listed in the bad debt analysis spreadsheet annually to determine which balances to write-off. This spreadsheet can be found on the shared drive via this path: <S:\Customer Service\COLLECTIONS TERM LETTER FOLDER\Bad Debt Analysis>.

The following are the criteria that each account must meet to be considered for a write-off.

1. Water service to the property is shut at the curb;
2. Vacant, as confirmed through a) PWSA personnel visiting the property to verify vacancy, and b) PWSA regularly obtaining actual meter readings indicating no water consumption at the property;
3. Unpaid charges aged over four years;
4. Length of time overall that the charges have been outstanding;
5. Amount of outstanding water/wastewater conveyance/stormwater charges;
6. Low property value as compared to the total outstanding charges due to PWSA; and
7. Unpaid taxes per the Allegheny County Real Estate portal (<http://www2.alleghenycounty.us/RealEstate/Search.aspx>).

The Senior Collections Manager will email a spreadsheet of accounts meeting the above write-off criteria to PWSA's Director of Finance and Controller, requesting approval to move forward with the write-off process.

Once approved, the Senior Collections Manager will process write-off adjustments in PWSA's Customer Information System. If the amount of any one write-off adjustment is over \$25,000, the Senior Collections Manager will send an adjustment approval request to the Director of Customer Service. Each write-off adjustment will display a comment indicating "Uncollectible Debt" so that all PWSA personnel will know that the charges met the review criteria.

The write-off spreadsheet will be saved on the shared drive via the below path so as to be easily retrieved for audit purposes: <S:\Customer Service\COLLECTIONS TERM LETTER FOLDER\Bad Debt Analysis>.

Request: United-II-6 Please identify:

- A. The total funding for PWSA’s Hardship Fund from 2019 to date, disaggregated by year and the source of funds (e.g. voluntary ratepayer contributions, redirected fines/penalties, settlements, etc.);
- B. The total funds spent in PWSA’s Hardship Fund from 2019 to date, disaggregated by year.

Please provide this data in a live Excel spreadsheet.

Response:

- A. PWSA’s Hardship Grant program was initially funded by a court-ordered settlement payment from Veolia in the amount of \$500,000 in 2018 and has also funded through customer and employee donation drives. As of July 14, 2023, the available funds to grant are in the amount of \$145,996.
- B. Please see attachment United-II-6.B.

Request: United-II-11 How does PWSA promote its BDP? Please provide a copy of all written correspondence and/or marketing materials used to inform customers about the availability of the BDP since January 2022.

Response: See PWSA Exhibit JAM-4 for PWSA’s customer assistance program flyer, which is updated annually, and is provided to customers at each community event. This flyer is also supplied to customers at the time of personal contact at termination, is inserted into food boxes at Greater Pittsburgh Food Bank drive-up food distribution events, and is available for pick-up at numerous community centers in PWSA’s territory. Each monthly bill to PWSA’s over 100K customers includes the below infographic on the front page of the bill. Additionally, the suite of PWSA customer assistance programs has a searchable page on PWSA’s website at the following web address: pgh2o.com/cap.

The flyer features a central graphic of a blue water drop containing a green dollar sign and a family silhouette, held by two green hands. Below the graphic, the text reads: "Customer Assistance Programs", "Having difficulty paying your PWSA bill?", "Contact PGH2O Cares at 412-255-2457 or cares@pgh2o.com to see if you qualify for:", and a list of four benefits: 1. Relief from your fixed, monthly PWSA charges plus forgiveness on past due balances if you are on an active payment plan; 2. A hardship grant to help pay past due charges; 3. Protection from shut-off in winter months; 4. Reimbursement for private side lead line replacement.

General Information

This letter of agreement made between the **Dollar Energy Fund, Inc.** (Dollar Energy) and **The Pittsburgh Water and Sewer Authority (PWSA)** (the Company) sets forth the operating parameters of the Dollar Energy Fund Hardship Program (Hardship Program) for the 2018 program year (April 1, 2018 to December 31, 2018.)

As described below, both parties will abide by the parameters described and will only deviate from these parameters by mutual agreement confirmed in writing. The written communication should be directed to the individual whose signature appears on this document and should be sent to the following address:

If to Company:

Julie A. Quigley
PWSA
1200 Penn Avenue
Pittsburgh, PA 15222

If to Dollar Energy Fund:

Nick Meddis, CFO
Dollar Energy Fund, Inc.
P.O. Box 42329
Pittsburgh, PA 15203

DRAFT

Program Administrator's Role

In conjunction with the Company, Dollar Energy will manage and administer all phases of the Hardship Program in order to provide utility grant assistance to Company customers who meet grant guidelines.

Dollar Energy is responsible for administration of the application process, general guideline development, application and data management, reporting, training, education, and outreach. In addition, Dollar Energy will conduct fundraising efforts to raise additional funds for the Hardship Program in conjunction with the efforts provided by the Company.

Application Process

Dollar Energy will act as the primary agent for the gathering, processing and approving of applications for the Hardship Program.

Program Guidelines

Dollar Energy has established a basic set of Hardship Program guidelines by which the Company's customers qualify for assistance. The 2018 Hardship Program Guidelines are described in *Exhibit A*, including a list of the guidelines that can be modified and a description of the procedures by which the Company must follow in order to modify such guidelines. Unless the Company adopts a set of modified guidelines and completes the Guideline Tailoring Agreement attached as Exhibit A, the Company agrees to abide by the guidelines established herein.

Application and Data Management

The Company is granted access to Dollar Energy's *iPartner® Grant Management System* to review information regarding fund balances, application processing, application status and standard reports. Access to *iPartner®* is granted only to named users.

It will be the responsibility of Dollar Energy to continue to maintain and upgrade the *iPartner® Grant Management System*. Dollar Energy will also provide and govern system access to all other parties involved in the application process.

Dollar Energy will take all necessary steps to hold non-public customer information and Company information in strict confidence. No information will be released or disclosed to any third party without the express written consent of the party(ies) involved. Dollar Energy will treat non-public information collected from applicants and the Company with the highest level of security at its disposal, in order to prevent any improper or unauthorized use of the information.

Reporting

Reports will be available on all application and grant activities through standard reporting procedures. This will be done through the standard set of reports available through the use of the *iPartner®* system.

The Company may request reports other the standard *iPartner®* reports. Additional fees may be associated with the production of additional reports. Fees for additional reports will be negotiated on a per case basis.

DRAFT

Public Education and Outreach

Dollar Energy will provide public education about the program through public service announcements, press releases, community speaking engagements, networking and other methods deemed effective in alerting the public about the availability of the program as well as how the community can contribute to the Hardship Program.

Community Based Organizations Network

Dollar Energy will manage and train a Network of Community Based Organizations (CBOs). Currently, a network of 160 CBO's is in place to assist in the administration of the program. This training and administration will entail:

- quality assurance activities to ensure proper administration of applications. This will include an annual audit of client files and intake procedures.
- consistent updates on relevant state and federal program and utility programs.
- annual training and as needed training on program guidelines.
- annual feedback sessions with CBO representatives to gain insights on program changes and improvements.
- needs assessments, in conjunction with the Company, to determine accessibility of the program to customers. When and where necessary, Dollar Energy will recruit, train and manage new CBOs.
- consulting with agencies on problem solving and other related management issues.
- referral to LIHEAP, Crisis and other information and referral activities.

Electronic Funds Transfer of Grants to the Company

As an integral part of the basic Hardship Program management, Dollar Energy will make available the option to execute Electronic Funds Transfer (EFT) for the accounting of Hardship Program grants and credits to customer accounts. There are two options available to the Company to enact EFT. (An EFT worksheet will be provided upon request). Any programming to the EFT process outside of the normal scope may result in an extra charge to the Company.

Fundraising Efforts

Dollar Energy Fund, Inc. is a 501(c) (3) non-profit organization and is chartered as a charitable organization in the Commonwealth of Pennsylvania. Dollar Energy complies with all regulations and statutes governing non-profit organizations and maintains registrations with all government bodies as required.

Dollar Energy will make all due efforts to raise funds for the program through a variety of measures including, but not limited to, the Add a Buck program, special events, direct appeals, grant funding, and membership drives.

DRAFT

Allocation of Funds Raised by Dollar Energy

Prior to the start of the program year, Dollar Energy projects the amount of money it believes it will be able to raise for the Hardship Program during the program year. A portion of these funds may be added to the pool of grant funds available to the Company's customers. This decision will be based on a formula using the following factors:

- Customer contributions
- Company matching contributions
- Other Company funds committed to the Hardship Program
- Operating funds for program administration
- Company donated facilities, equipment, materials
- Proceeds from company sponsored fundraising events
- Other programs or services contracted between the Company and Dollar Energy (gross annual receipts)
- Miscellaneous Company contributions to Dollar Energy

Allocations of the Dollar Energy funds will also consider the ability of the company to match any funds raised by Dollar Energy. Should the Company not be able to provide matching funds towards this amount, the Dollar Energy raised funds may not be made available to the Company absent of a match. Allocations of Dollar Energy funds are subject to change based on changes in overall Hardship Program funding. Throughout the year, Dollar Energy will make every effort to match all available company matching funds.

The amount of funding available to the Company is estimated in the Financing Worksheet labeled *Exhibit B*.

DRAFT

The Company's Role

Collection of Customer Donations

The Company will provide the mechanism for the collection, accounting and reporting of customer donations garnered through the use of utility bill check-offs or other measures used to collect funds for the Hardship Program. At least monthly, the company will remit to Dollar Energy the entire amount of customer donations gathered from the previous period.

The Add a Buck Program

The Company will institute a bill check off system that allows each customer to elect to give at least one dollar per month to Dollar Energy. In order to maintain and recruit new Add a Buck donors, the Company will provide a minimum of 2 bill inserts or other similar customer communications during the program year promoting the Dollar Energy and asking customers to financially support Dollar Energy through the program. Dollar Energy's experience shows these inserts to be most effective when delivered to customers between September and March.

The support from the Add A Buck donors is the most consistent and reliable source of funding for the program. The Company is asked to assist in these efforts by holding at least one public opportunity to raise additional awareness for the Hardship Program. Dollar Energy will provide resources and technical assistance as needed for these activities.

On Line Bill Payment Initiative

Customers who receive and pay their utility bills online are more likely to miss Dollar Energy Hardship Program appeals ordinarily mailed with monthly bills. Dollar Energy Fund has created a donor portal available at www.dollarenergyfund.org. If the company currently does not have the ability for customers who desire to pledge funds to the program on a monthly basis electronically, the Company is encouraged to direct customers to the donor portal.

Company Fundraising

The Company is encouraged to raise additional funds for its low income customers by organizing a fundraising event. Funds raised through these efforts are reserved solely for the grant activities of customers of the Company.

Operating Costs

The Company will provide operating funds to cover the management costs of the Hardship Program. The operating funds are comprised of 2 components, operating funds and Community Based Organization (CBO) fees.

Operating funds cover the following expenses and activities of the Hardship Program:

- executive oversight
- accounting
- human resource management
- fundraising and public relations
- access to iPartner®
- technology management
- staff supervision
- Hardship Program coordinators CBO management and training
- material production and distribution
- CBO remuneration and accounting
- utility training and communications
- advertising and promotion
- audit

DRAFT

- insurance
- office supplies and equipment
- postage
- printing and copying
- rent
- utilities
- telephone
- travel
- contracted services
- miscellaneous expense

Company Funding and Financial Worksheets

By answering the following questions, we can manage the Hardship Program in a manner that best fits your needs and expectations. Please complete the funding worksheet and financial summary worksheet, then sign the agreement.

Funding Worksheet

Please answer the following questions so that we can manage the Hardship Program in a manner that best fits your needs and expectations:

1) Will company funding for grants be transferred to Dollar Energy for cash management. Yes No*

2) Does the company intend to use Electronic Funds Transfer (EFT) to receive grant payments for customer accounts. Yes No

If yes, and EFT has not been used in previous years, please provide a name and phone number of the person at your company responsible for coordinating this effort.

Name: RACHEL ROMANO Phone number: (412) 255-8964

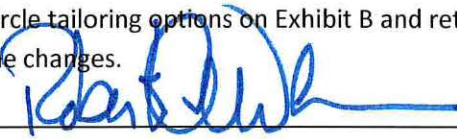

3) Can company contributions that are not matched by customer contributions or Dollar Energy contributions be used unmatched. Yes No

4) If any company contributions remain at the end of the fiscal year would you like the funds to be: rolled over to next year's program returned to company (please check one)

Program Guidelines

Does the company have changes to the proposed program guidelines (outlined on Exhibit A). Yes No

If yes, circle tailoring options on Exhibit B and return the document to Dollar Energy Fund. Sign below to verify the changes.

Signed:  Date: 3.26.18

* DOLLAR ENERGY FUND ALREADY HAS THE FUNDS.

DRAFT

Company Funding Disclosure

By executing this agreement, the company is agreeing to provide a certain and definite amount of funding to the Hardship Program. Dollar Energy expects that the Company will fully honor this agreement.

In the event that the Company is not able to honor all parts of the agreement or becomes aware that it may not be able to fully meet its original monetary obligation, the Company will immediately notify Dollar Energy Fund. If the Company has to reduce funds available to customers and Dollar Energy has expended funds in excess of the reduced amount, the Company agrees to reimburse Dollar Energy fully for all amounts expended.

By signature below, I accept the terms of the Letter of Agreement.

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set II
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

Request: United-II-17 Has PWSA targeted any specific communities in its outreach related to its low income assistance programs since 2022? If the answer is yes or in the affirmative, please indicate what specific communities PWSA has targeted, how PWSA determined it would target such communities, and the steps that PWSA has taken to targeted the specified communities.

Response: Since 2022, the PGH2O Cares team has canvassed in multiple census tract areas, including Glen Hazel, Homewood, Lincoln-Lemington-Belmar and South Oakland, to attempt contact with low income customers for the purposes of enrolment. These census tracts were identified in the 2019 Household Affordability Analysis that PWSA had commissioned as having a large concentration of potentially low income residents. When contact is not achieved, Cares team members leave doorhangers that display program information and the PGH2O Cares team’s contact information.

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set II
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

Request: United-II-19 From January 2019 to date, how many residential customers have received protection of the Winter Shut Off Moratorium, disaggregated by month and year, as of the last day of the month? If unavailable on a monthly basis, please provide annual data and explain in detail why monthly data is unavailable.

Please provide this data in live Excel spreadsheet.

Response: Prior to 2022, PWSA relied almost entirely on DEF’s tracking system, OSCAR; therefore, Winter Moratorium data prior to 2022 is unavailable. It is important to note that all confirmed low income customers, Bill Discount program enrollees, steam heat customers, and tenants receive protection from termination by PWSA during the Winter Moratorium months. When PWSA began to track Winter Moratorium customers who were eligible for protection beyond the 150% of FPL for the Bill Discount program, the total number of customers protected by Winter Moratorium between December 31, 2022 and April 1, 2023 was 6,531.

to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set II
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

Request: United-II-20 From January 2021 to date, disaggregated by month and year, as of the last day of the month, please indicate:

- A. How many customers enrolled in the Arrearage Forgiveness Program;
- B. How many existing BDP customers enrolled in the Arrearage Forgiveness Program;
- C. How many customers simultaneously enrolled in the BDP and the Arrearage Forgiveness Program;
- D. How many customers were removed from the Arrearage Forgiveness Program, disaggregated by reason for removal;
- E. The mean and median dollar amount of forgiveness provided to low income customers through the Arrearage Forgiveness Program;
- F. The number of participants in the Arrearage Forgiveness Program that had their entire arrearage balance forgiven while enrolled in the Arrearage Forgiveness Program.

Please provide this data in a live Excel spreadsheet.

Response:

- A. PWSA does not enroll customers in the AFP as explained in PWSA’s responses to United-II-23 and OCA-III-25.c. The forgiveness program did not begin until February 2021. See attachment OCA-III-1.b for AFP Participants by Tier May 2021-July 2022. Attachment United-II-20.a provides the data in the same format as OCA-III-1.b for February to April 2021.
- B. See Response to A. Only BDP participants may receive the benefits of the Arrearage Forgiveness Program. The forgiveness program did not begin until February 2021 so there will be no data for January 2021. See attachment OCA-III-4.a Legacy CIS and OCA-III-4.a Current CIS for BDP and AFP Participants Disaggregated by Tier May 2021- May 2023. Attachment United-II-20.b provides the data in the same format for February to April 2021.
- C. Only participants of the BDP may receive the benefits of the AFP. See PWSA responses to United-II-23 and OCA-III-25.c.
- D. PWSA does not remove customers from the AFP program. The customer removes themselves by failing to meet the monthly requirements of the program or otherwise exiting the BDP program. Through automated processes, when the

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)

and P-2023-3040678**

CAP rate is removed from the account (no longer income eligible) and/or the payment plan is deactivated (due to failure to pay or pay timely), the AFP ceases to be credited by the CIS.

- E. The program is for customers who meet the criteria. The credit that was issued at the inception of the program, 2/1/2012, was \$15.00. The amount of the credit changed to \$30.00 in February 2022. The mean and median dollar amount of forgiveness credit from February 2021 – January 2022 was \$15.00. Starting February 2022, the mean and median dollar amount of forgiveness credit was \$30.00. See also attachments OCA-III-6.a Dollars AFP Credits Provided to Participants Disaggregated by Tier May 2021 – May 2023.
- F. Based on the legacy data structure, this cannot be derived programmatically.

Response provided by: Julie A. Mechling, Director of Customer Service

Date Response provided: August 4, 2023

Year	Month	Number of Forgiveness Credit Accounts	Dollars of Forgiveness Credit
2021	2	23	345
2021	3	31	465
2021	4	57	855

Year	Month	Number of Forgiveness Credit Accounts	Dollars of Forgiveness Credit
2021	2	45	675
2021	3	47	705
2021	4	71	1065

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set III
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

Request: United-III-2 When a PWSA customer calls in the PWSA’s Contact Center, under what circumstances do PWSA customer service representatives inquire or prompt customers to inquire about its low income assistance programs. Please provide a copy of any policies, procedures, call scripts, training materials, or other documents describing when PWSA’s customer service representatives engage in these inquiries or conversations related to its low income assistance programs.

Response: When a customer expresses to a PWSA Customer Service Representative (CSR) that they are struggling financially or they are entering into a payment arrangement, the CSR is to briefly describe the customer assistance programs and ask the customer if they would like to be warm transferred to the PGH2O Cares team. Attachment United-III-2 is the Collections Fact Sheet that is shared with all CSR’s at the end of each Winter Moratorium and again when any content is updated.

Response provided by: Julie A. Mechling, Director of Customer Service

Date Response provided: July 19, 2023

2023 COLLECTIONS FACT SHEET

- A. Payment Plan Guidelines
- B. Assistance Programs
- C. Medicals, PFA's

A. Payment Plan Guidelines

CUSTOMER CLASS	FPL	MINIMUM # OF MONTHS
Residential	≤ 150%	60
Residential	>150-250%	24
Residential	>250-300%	12
Residential	>300%	6
Commercial	N/A	6

B. Assistance Programs

PROGRAM NAME	FPL	DESCRIPTION & REQUIREMENTS
Bill Discount	150%	Free first 1,000 gallons water/wastewater each month (\$35.53 [includes DSIC] savings if both water and wastewater customer); 50% reduction for usage over 1,000 gallons if ≤ 50% of FPL; 85% reduction of stormwater fee (\$6.76 for tier 2); recertification every 2 years Enrollment Requirements: Verbal confirmation of income

Payment Plans + Arrearage Forgiveness	150%	Customers enrolled in the BDP and in an active payment arrangement will receive a \$30 credit for each on time monthly payment Enrollment Requirements: Same as Bill Discount + payment arrangement enrollment
Hardship Grant	150%	\$300 annual; no sincere effort of payment or termination notice required Enrollment Requirements: Proof of Income (POI), examples below; minimum balance ≥ \$1.00.
Winter Moratorium	300%	December 1 st through March 31 st Enrollment Requirements: Verbal confirmation of income
ALCOSAN CWAF	150%	\$42 quarterly grant to reduce sewage treatment charges Enrollment Requirements: POI, examples below
Lead Service Line Replacement (LSLR) Reimbursement	See Chart	See Reimbursement Levels chart: https://lead.pgh2o.com/leadreimbursement/ Enrollment Requirements: a PWSA–approved plumber’s estimate (prior to the work being completed), and, after the work is a completed, a paid receipt and Allegheny County Health Dept. Inspection. If the applicant is only applying for the \$1K stipend, a plumber’s estimate is not required. If these steps were not followed, customers with replacements on or after January 1, 2019, are still welcome to apply. The property does <u>not</u> need to be occupied.

Acceptable Proofs of Income (POI) for **Grants** include:

- **Salary/Wages:** All paystubs from last 30 days; no bank statements because they do not show gross income
- **Unemployment:** Notice of Determination, Unemployment printout – <http://www.uc.pa.gov>
- **Short/Long Term Disability:** Benefits Statement, Copy of disability check
- **Social Security (SS, SSI, SSD, Veteran’s Benefits):** Copy of letter from Social Security Administration or Pension Board, Current year’s benefit statement, Bank statement showing direct deposit (Last 30 days is sufficient)
- **Workman’s Compensation:** Award or letter of determination

- **Self-Employment:** Statement on letterhead from accountant/Information provided to accountant for tax purposes, 1099 form (within 30 days of received), Tax return (within 30 days of completed), Subcontractors may provide pay stubs; as a last resort for customers unable to provide documented proof, a written note stating monthly income/source of income (for the previous year) may be provided
- **Department of Welfare:** Notice from caseworker, Notice to applicant, Cash recurring benefit inquiry
- **Zero Income:** If reported income for the last 30 days is zero, the Dollar Energy Representative completes a Zero Income Form to be signed by the applicant

Note: The last 30 days' income is the most common length of time used to verify income; however, if the last 30 days is an insufficient length of time to determine an applicant's usual income, a longer time frame (up to one year) may be used. Dollar Energy will no longer ask customers for Social Security Numbers (SSN's). Previously, a SSN was requested, but was not required.

C. Medicals – 3 days for physician to provide letter

Responsibility of the customer while the **Medical Certificate** is active:

- Customer must pay the current bill while the **Medical Certificate** is active. If a customer fails to pay the current bill, PWSA will limit the **Medical Certificate** renewals to a maximum of two. (Three totals First Submittal, First Renewal, Second Renewal) (§ 56.114.2).

A customer may continue to renew a medical certificate beyond the first three certificates if that customer continues to pay any new monthly charges.

D. Protections from Abuse (PFA's) - unlimited plan lengths

Response of the Pittsburgh Water and Sewer Authority (“PWSA”) to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set III Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919 and P-2023-3040678

Request: United-III-6 PWSA St. 6 at 20: 24-25 (indicating that “[m]ore than one-third of the respondents [to the customer satisfaction survey] reported incomes of less than \$35,000...”). Did PWSA collect FPL data or household size data from respondents to its described Customer Satisfaction Survey? If so, please indicate the number of percent of survey respondents at the following FPL ranges: 0-50% FPL; 51-100% FPL; 101-150% FPL; 151-200% FPL; 201-250% FPL; above 250% FPL.

Response: PWSA did collect household income ranges from annual survey respondents; however, their household size was not requested.

to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set III
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

Request: United-III-10 See PWSA St. 6 at 33. For each merchant and/or convenience fee that PWSA is proposing to pass through to residential customers, please:

- a) Specifically describe the fee;
- b) Indicate the amount of the fee;
- c) Specifically describe what portion, if any, of the fee will be required to be paid by low-income customers;
- d) Specifically describe what portion, if any, of the fee will be required to be paid by BDP customers.

Response:

- a) PWSA is proposing to have residential customers pay the \$1.95 per transaction fee when the method of payment is a credit card or debit card. Note that residential customer payments made via ACH would remain transaction fee free.
- b) \$1.95 per transaction fee if the method of payment is a credit card or debit card.
- c) Low-income customers would pay \$1.95 per transaction if the method of payment is a credit card or debit card. Note that all residential customer payments being made via ACH would remain transaction fee free.
- d) See answer c above.

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

Request: United-III-11 See PWSA St. 2 at 20: 11-15. If PWSA is permitted to pass through the costs of credit card convenience fees and/or merchant fees to residential customers, will residential customers be charged a credit card or merchant fee if they pay their PWSA and/or ALCOSAN bill at a local or physical location? If the answer is yes or in the affirmative, please describe under what circumstances residential customers who pay their bill at a local or physical location will be charged a fee, and the projected amount of each fee which they will be charged

Response:

Residential customers are currently charged a \$1.49 fee when making a cash payment of a PWSA bill at 7-11, CVS, Dollar General, Family Dollar, Walgreens, and Walmart Super Center locations.

To be clear, PWSA is proposing that residential customers pay convenience fees when paying online or via telephone using a credit or debit card.

2022 - 2023

Pittsburgh Water and Sewer Authority Hardship Program

The **Pittsburgh Water and Sewer Authority** has partnered with Dollar Energy Fund to administer a Hardship Program to assist customers having difficulty paying their water bill. The **PWSA Hardship Program** provides one-time assistance grants that are applied directly to a limited-income household's utility bill. **Program guidelines and eligibility requirements are subject to change.**

Program Dates:

Open from **October 3, 2022, through September 30, 2023**, for eligible applicants regardless of service status.

Grants are dispersed on a first come, first serve basis to eligible applicants while funding is available.

Balance Requirement:

Applicants must have an outstanding balance on their utility bill of at least **\$100**.

Senior Citizens, age 62 and over, may have a \$0 balance as long as there is no existing credit on the account.

Maximum Grant:

The maximum grant amount an applicant may receive is **\$300**.

Applicants can only receive a grant **once every 12 months**.

Grant awards are based on need and each family's circumstances are different. Grant amounts are determined on a case-to-case basis.

If a customer's utility service is off or in threat of termination when they apply and the maximum grant amount will not restore service or stop termination, the application will be denied. The amount needed to restore service or stop a termination is determined by utility review. Notification will be sent to the customer advising them that their application was denied and that an additional payment is required in order to be considered for assistance.

Additional Guidelines:

- Account must be residential, single home or apartment. No commercial, industrial, or apartments with shared utility service.
- Name on account must be that of an adult who is currently living in the home.
- Dollar Energy Fund grants cannot be used to cover security deposits or reconnection fees.

Application Attachments:

- A copy of your most recent PWSA bill with proof of minimum payment must be attached to all applications.
- Total gross monthly income for all members living in the household.

Income Guidelines:

Total gross household income must be at or below **150%** of the **2023 Federal Poverty Income Guidelines** as shown in the chart below.

Household Size	150% Monthly	150% Yearly
1	\$1,823	\$21,870
2	\$2,465	\$29,580
3	\$3,108	\$37,290
4	\$3,750	\$45,000
5	\$4,393	\$52,710
6	\$5,035	\$60,420
7	\$5,678	\$68,130
8	\$6,320	\$75,840
Each add'l add	\$643	\$7,710

How to Apply:

The best way to start seeking help is by **calling the Pittsburgh Water and Sewer Authority at 412-255-2423**. They will provide you with information on a number of different assistance programs that are available to help low-income customers.

Dollar Energy also partners with a network of Community Based Organizations throughout the state. These dedicated agencies provide application intake services for clients. Find an agency in your area with Dollar Energy Fund's [Agency Finder](#).

to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set III
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

- Request: United-III-17** For the analysis contained at PWSA St. 2, Exhibit EB-9, please indicate whether the projected cost increases of restructuring the Arrearage Forgiveness Program consistent with PWSA St. 2 at 51: 10-16, took into consideration in its calculations the following
- a) Reduced uncollectible expenses as a result of the considered changes to the AFP structure;
 - b) Reduced termination costs as a result of the considered changes to the AFP structure.
 - c) If the Answer to A or B is yes or in the positive, please provide a copy of this analysis, and specifically describe how A and/or B were respectively considered in the analysis described in Exhibit EB-9.

Response:

- a) Reduced uncollectible expenses were not considered because PWSA wanted to provide a conservative estimate. There is no guarantee that uncollectible expenses would be reduced.
- b) Reduced termination costs were not considered because PWSA wanted to provide a conservative estimate. There is no guarantee that termination costs would be reduced.
- c) See United-III-17.a and .b.

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of Pittsburgh United Our Water Table (“United”), Set IV
Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919
and P-2023-3040678**

Request: United-IV-10 Please indicate whether PWSA’s filter replacement program is still operating. If so, please (1) indicate how many customers were served by the filter replacement program in 2022 and 2023, disaggregated by year; (2) the yearly funding for the filter replacement program; and (3) the program rules and eligibility requirements for the program, including what criteria, information, and or documentation a customer must provide to qualify for the program. If the PWSA filter replacement program is not currently operational, please identify the date the program closed, the reason the program closed, and the number of customers the program served in its last year of operation.

Response: PWSA continues to provide point-of-use filtering pitchers and filters in accordance with the prior Joint Petition for Partial Settlement and our Lead Infrastructure Plan. This includes:

- Lead Service Line Replacement (LSLR) locations where lead is detected,
- Locations where meters are replaced and lead is observed adjacent to the meter, and
- Locations where a customer collects a lead sample for analysis by PWSA and the result is 10.0 ppb or above. These include customer requested lead sampling and LCR Compliance sampling locations. In 2022, there were 21 such locations, and thus far in 2023, there have been 8 such locations.

The annual budget for filtering pitchers is largely a factor of the planned LSLR programs for that year. PWSA presently spend between \$100,000 and \$200,000 per year on filtering pitchers and replacement cartridges. Details of where PWSA provides filtering pitchers is shared with the Community Lead Response Advisory Committee (CLRAC) on a quarterly basis within information issued to members after each meeting.

**Response of the Pittsburgh Water and Sewer Authority (“PWSA”)
to the Interrogatories of the Office of Consumer Advocate (“OCA”), Set III**

Docket Nos. R-2023-3039920, R-2023-3039921, & R-2023-3039919

Request: OCA-III-15 Please provide in Excel forma by month for the most recent 24 months available disaggregated by BDP tier:

- a. The number of BDP participants with a pre-existing arrearages (subject to forgiveness) on their account;
- b. The dollars of pre-existing arrearages on BDP participant accounts, which pre-existing arrearages have not yet been forgiven;
- c. The dollars of AFP credits not granted due to a failure of the AFP-only participant to make a full and timely payment;
- d. The dollars of AFP credits not granted due to a failure of a combined BDP-AFP participant to make a full and timely payment.

Response:

- a.-b. See attachment OCA-III-15.a-b.

**REBUTTAL TESTIMONY OF HARRY S. GELLER, ESQ.
ON BEHALF OF
PITTSBURGH UNITED'S OUR WATER TABLE**

September 8, 2023

1 **PREPARED REBUTTAL TESTIMONY OF HARRY S. GELLER, ESQ.**

2 **I. INTRODUCTION**

3 **Q: Please state your name, occupation, and business address.**

4 A: My name is Harry Geller. I am an attorney. I am the former Director of the Pennsylvania
5 Utility Law Project. I am currently retired but serve as Senior Counsel to the Pennsylvania Utility
6 Law Project (PULP) and as a consultant to legal aid programs and their clients. I maintain an office
7 at 118 Locust St., Harrisburg, PA 17101.

8 **Q: Did you previously submit testimony in this proceeding?**

9 A: Yes. I submitted direct testimony that is pre-marked as Pittsburgh United Statement 1.

10 **Q: What is the purpose of your rebuttal testimony?**

11 A: My rebuttal testimony responds to the direct testimonies of Office of Small Business
12 Advocate (OSBA) Expert Witness, Kevin Higgins; the Bureau of Investigation and Enforcement
13 (I&E) Expert Witness Vanessa Okum; Office of Consumer Advocate (OCA) Expert Witnesses
14 Karl R. Pavlovic and Roger D. Colton; and the Expert Witnesses for the School District of
15 Pittsburgh, Michael J. McNamara and Eric M. Callocchia.

16 This rebuttal testimony is not intended to address every issue raised or otherwise discussed
17 by other parties' witnesses in direct testimony. Absence of a response to any specific
18 recommendation or position of any witness does not indicate my agreement. Unless required for
19 context in providing a further response to direct testimony, I will not reiterate the extensive
20 arguments and evidence that I provided in my direct testimony. To the extent an argument raised
21 by any party in rebuttal is already sufficiently addressed in my direct testimony, I do not intend to
22 respond, and stand on the evaluation, analysis, and recommendations contained in my direct
23 testimony.

1 **Q: How is your rebuttal testimony organized?**

2 A: In Section I of my rebuttal testimony, I outline the purpose of my rebuttal testimony.

3 In Section II, I respond to testimony presented by OSBA’s expert witness.

4 In Section III, I respond to testimony presented by I&E’s expert witness.

5 In section IV, I respond to testimony presented by OCA’s expert witnesses.

6 In Section V, I respond to testimony presented by the School District of Pittsburgh’s
7 expert witness.

8 In Section VI, I conclude my rebuttal testimony.

9 **II. RESPONSE TO OSBA EXPERT WITNESS**

10 **Q: How has PWSA proposed to allocate the costs of its BDP?**

11 A: PWSA is proposing to collect FPFTY 2024 CAP costs through base rates, and is proposing
12 a new Customer Assistance Charge (CAC) to collect these costs in FY 2025 and FY 2026.¹ As
13 proposed, the CAC would recover (1) the discounts provided to residential customers pursuant to
14 the BDP; (2) the operating costs for the PGH2O Cares team; (3) the costs of PWSA’s residential
15 Hardship Fund; and (4) forgiveness granted pursuant to PWSA’s Arrearage Forgiveness Program.²

16 **Q: Has the Commission given any directives on this issue?**

17 A: Yes. In its recent Final CAP Policy Statement and Order, the Commission addressed
18 recovery of universal service program costs.³ The Commission did not specifically order utilities
19 to propose a specific allocation, but indicated that it is appropriate to consider recovery of the costs
20 of customer assistance programs from all ratepayer classes because “poverty, poor housing stock,
21 and other factors that contribute to households struggling to afford utility service are not just

¹ OSBA St. 1 at 17: 17-20.

² (Direct testimony of William J. Pickering, pg. 15).

³ Final CAP Policy Statement and Order at 97; see also 52 Pa. Code §§ 69.625(1), 69.266(b).

1 ‘residential class’ problems.” The Commission explained that the provision of universal services
2 to help low income families maintain service to their homes is “a benefit to the economic climate
3 of a community.”⁴ The Commission directed that utilities and stakeholders should be prepared to
4 address CAP cost recovery in utility-specific rate cases and stated that “the Commission will no
5 longer routinely exempt non-residential classes from universal service obligations.”⁵

6 To be clear, in noting the policy guidance set forth in the Commission’s recent Final CAP
7 Policy Statement and Order, I am not arguing a legal position on universal service cost recovery
8 or the applicability of the Commission’s CAP Policy Statement to PWSA – though I am advised
9 by counsel that these legal aspects of the issue will be thoroughly addressed in briefing. Rather,
10 my testimony on this issue is focused on the policy reasons why cross-class recovery of universal
11 service programs is appropriate, as I will explain in further detail below.

12 **Q: Please summarize the direct testimony of OSBA expert Witness Kevin Higgins to**
13 **which you wish to respond.**

14 A: OSBA expert witness Kevin Higgins incorrectly claims that PWSA’s customer assistance
15 program exists solely for the benefit of the residential class and should therefore be recovered
16 solely by residential customers.⁶ Mr. Higgins proposes that all CAP costs (including CAC costs
17 for FY 2025 and FY 2026) should be recovered solely from the residential class.⁷ Mr. Higgins
18 argues that, consistent with cost allocation principles, a customer class should bear the cost of
19 services that directly benefit them.⁸

⁴ Final CAP Policy Statement and Order at 7, 94-96, 107.

⁵ Id.; see also 66 Pa. C.S. § 69.266(b).

⁶ OSBA St. 1 at 6: 1-3.

⁷ Id. at 18: 17-21.

⁸ Id. at 19: 1-5.

1 In support of his recommendation, Mr. Higgins inaccurately argues that the Commission
2 has a longstanding policy of allocating customer assistance program costs only to the residential
3 customer class, whose members are potentially eligible for respective programming.⁹ Mr. Higgins
4 acknowledges that the Commission has indicated it would consider recovering the costs of
5 customer assistance programs from all ratepayer classes in utility-specific proceedings,¹⁰ and that
6 PWSA has recovered low income program assistance costs from all customer classes since coming
7 under the Commission's jurisdiction in 2018.¹¹

8 **Q: How do you respond to the assertion that PWSA's customer assistance program**
9 **costs should be recovered solely from the residential customer class?**

10 A: I disagree. It is inappropriate to require the residential class to alone shoulder the burden
11 of universal service programs meant to remediate the impacts of poverty and utility insecurity, the
12 effects of which impact all customer classes. Poverty is a broad social problem, affecting all
13 customers and requiring holistic societal solutions. Utility insecurity is a pervasive problem with
14 long-term and far-ranging consequences for low income households and the surrounding
15 communities in which they live and work.¹² Families who are unable to afford critical utility
16 services are more prone to a variety of adverse consequences, including increased rates of health
17 complications and hospitalization, eviction, and food insecurity.¹³ For children in low income

1 universal service program participants are employed – yet do not receive a wage that is adequate
2 to afford basic household needs.¹⁷ Many others are retired Seniors or individuals with a disability
3 that do not receive enough in Social Security, disability, or retirement benefits to afford basic life
4 necessities, such as utility services. Moreover, low income customers faced with utility insecurity
5 often struggle to cope with heightened levels of stress, anxiety, and depression, and must take time
6 away from work to arrange payments, locate or apply for assistance programs, and arrange for
7 reconnections¹⁸ – all of which significantly undermine worker productivity, impacting businesses,
8 non-profits, government entities, schools, and other non-residential customer groups. Universal
9 service programs also help utility companies to control uncollectible expenses, helping to bridge
10 the gap in these circumstances, which benefits all customers. Thus, each of us, regardless of rate
11 class, receives the benefits derived by a healthy and productive community – making it sound
12 policy for all customers to share in the cost of providing universal access to our most vulnerable
13 residents.

14 Universal service programs provide not only a safety net for at-need residential customers
15 but also broad societal benefits for all customer classes (industry, business, commerce, educational
16 institutions, hospitals, local and state governments, and other residential customers) in specific and

¹⁷ See, e.g., MIT's Living Wage Calculator for Pennsylvania (a one adult, one child household would need to earn \$24.30/hour to earn a wage that could cover basic expenses in PA, but the average wage for the federal poverty threshold is \$8.13/hour, and the minimum wage in PA is \$7.25/hour), available at <https://livingwage.mit.edu/states/42>.

1 identifiable ways. In turn, the responsibility to provide universal access to life-sustaining utility
2 services should be shared by all utility consumers – not simply residential customers.

3 **Q: Does the fact that PWSA is a publicly owned water utility have any bearing on how**
4 **low income program costs are recovered?**

5 A: Yes, to an extent. The fact that PWSA is a publicly owned and operated utility under the
6 jurisdiction of the Commission is a relevant factor for consideration in this context. PWSA has a
7 public Board of Directors, which operates as the governing body for the Authority. According to
8 PWSA, this Board is responsible, in part, for “providing strategic direction and oversight to the
9 PWSA management team, as well as adopting the Authority’s annual operating and capital
10 budgets, approving contracts, and setting rates.”¹⁹ The decision to recover BDP costs from all
11 ratepayers was a policy decision of a public board. Importantly, the only other publicly owned
12 utility subject to PUC regulation, Philadelphia Gas Works (PGW), also recovers universal service
13 programming from all ratepayers - rather than residential ratepayers alone.²⁰ That said, I must
14 note that the same strong policy reasons supporting cross-class recovery of universal service costs
15 apply regardless of whether a utility is public or private.

16 **Q: What is your recommendation regarding the cost allocation of PWSA’s low income**
17 **programming?**

18 A: I recommend that PWSA continue to recover the cost of its low income assistance
19 programs from both residential and non-residential customer classes.

20 **III. RESPONSE TO I&E EXPERT WITNESS**

21 **Q: Please summarize PWSA’s Customer Assistance Charge.**

¹⁹ PWSA, Board & Board Meetings, available at <https://www.pgh2o.com/about-us/board-board-meetings>.

²⁰ See, e.g., 2018 Report on Universal Service Programs & Collections Performance, at 78.

1 A: As discussed in my direct testimony, PWSA is proposing in the context of this proceeding
2 to implement a CAC beginning in FY 2025. The CAC would recover discounts provided to
3 customers pursuant to the BDP, operating costs for the PGH2O Cares team, the costs of PWSA's
4 Hardship Fund, and past due arrearage forgiven through PWSA's Arrearage Forgiveness Program
5 (AFP).²¹ PWSA indicates that they are proposing the CAC as current cost projections will likely
6 be inaccurate and lead to under-recovery of customer assistance program costs and operations.²²
7 PWSA's Witness Ms. Julie Mechling also argues that the CAC will help to provide greater
8 transparency related to ratepayer costs.²³

9 **Q: Please summarize the direct testimony of I&E Expert Witness Okum to which you**
10 **wish to respond.**

11 A: Ms. Okum disagrees with PWSA's proposal to implement a Customer Assistance Charge
12 (CAC).²⁴ Ms. Okum argues that the proposed CAC is problematic for several reasons.²⁵ First, Ms.
13 Okum argues that the CAC is not the best method to adjust inaccuracies in cost projections related
14 to low income programming.²⁶ Second, Ms. Okum argues that, contrary to Ms. Mechling's
15 assertions, the CAC will hinder cost transparency for ratepayers, as it is proposed to be combined
16 with other charges on customer bills.²⁷ Third, Ms. Okum argues that reconciliation of the CAC
17 would be completed outside of the parameters of a base rate case, disrupting the ability of the
18 Commission to review data and ratepayer impacts.²⁸ While PWSA expert witnesses reference that
19 the CAC would allow for refund of overcharges on expenses above what is included in base rates,

²¹ PWSA St. 6 at 27-32; I&E St. 2 at 33-34.

²² PWSA St. 6 at 27-32; I&E St. 2 at 34.6-11.

²³ Id.

²⁴ I&E St. 2 at 33-37.

²⁵ I&E St. 2 at 34: 14-19.

²⁶ Id.

²⁷ I&E St. 2 at 34-35.

²⁸ Id. at 35: 5-19.

1 Ms. Okum argues that PWSA’s base rates are likely to continue to increase.²⁹ Ms. Okum argues,
2 as the CAC is proposed to be implemented in FY 2025, that this serves as an opportunity to
3 increase revenue outside of rate cases, thus constituting single-issue ratemaking.³⁰ Finally, Ms.
4 Okum notes a discrepancy in PWSA witnesses’ testimonies, as Mr. Edward Barca indicates that
5 PWSA plans to reconcile the CAC on a semi-annual basis, while Ms. Mechling indicates that the
6 CAC would be adjusted on a semi-annual basis but reconciled annually.³¹

7 Ms. Okum also argues that the CAC should be rejected consistent with prior Commission
8 precedent in water/wastewater proceedings, where the Commission disagreed with reconcilable
9 recovery outside of base rates.³² Ms. Okum cites to the 2021 Aqua Pennsylvania Inc. (Aqua) base
10 rate proceeding.³³ In its May 2022 Order pursuant to this proceeding, the Commission noted that
11 “the use of a Section 1307(a) reconcilable rider ... is the exception, rather than the rule ...” and
12 “how few times the use of this mechanism has been either legislatively mandated ... or directed
13 by the Commission”³⁴ The Commission further noted in the May 2022 Aqua Order that similar
14 energy riders approved via a legislative mandate, including for Peoples Companies, were not
15 appropriate models as there was not a legislative carve-out for water companies compared to
16 electric companies.³⁵

17 For these reasons, Ms. Okum argues that the CAC should be rejected – or, in the alternative
18 assuming the Commission grant permission to use such treatment, that PWSA be required to
19 identify and deduct any related amounts from base rates and include all customer assistance costs

³⁵ Id. at 314-315.

1 within the rider in the manner that the universal service riders operate for energy companies, as
2 proposed by Aqua.³⁶ Ms. Okum further recommends that it should not be combined with other
3 charges so that transparency and Commission oversight are maintained.³⁷

4 **Q: What is your response to Ms. Okum's recommendation that the CAC should be**
5 **rejected?**

6 A: I am advised by counsel that the relevancy and weight of prior decisions by the
7 Commission and the Commonwealth Court are legal issues reserved for briefing. However, I am
8 concerned about the impact that Ms. Okum's recommendation to reject the CAC may have on
9 PWSA's low income assistance program funding.

10 As discussed extensively in my direct testimony, there is a tremendous need for rate
11 assistance amongst PWSA's low income customers. For example, PWSA reports that 17.95% of
12 its residential customers were in arrears as of July 2023.³⁸ The average arrearage levels amongst
13 PWSA's low income BDP customers have also grown significantly over recent years. The average
14 arrearage of PWSA's BDP customers have increased from an average of \$467.16 in January 2019
15 to an average of \$1,041.03 – or by 122%.³⁹ These numbers are significant and underscore the
16 need for robust low income assistance programs to ensure PWSA's low income customers can
17 access and maintain essential water and wastewater services to their home.

18 With this high level of need, it is imperative that robust and ongoing funding is available
19 to support PWSA's low income assistance programs, and I continue to stand by my
20 recommendations in direct testimony regarding PWSA's low income assistance programs.⁴⁰ I do

³⁶ I&E St. 2 at 37-38.

³⁷ Id.

³⁸ Pittsburgh United St. 1 at 35.

³⁹ Id. at 41.

⁴⁰ Id.

1 not take a position on whether the continued funding source should ultimately proceed through the
2 mechanism of the CAC. However, regardless of the ultimate mechanism approved, funding for
3 PWSA's low income assistance programs must be adequate to serve the needs of PWSA's low
4 income customers.

5 Finally, I note that I am opposed to Ms. Okum's alternative argument, recommending
6 generally that any approved rider should be specifically itemized on the bill. Universal services
7 should not be singled out for such treatment. The USECP portfolio has been developed for both
8 the public benefit as well as for utility collection cost reduction. It consists of a broad panoply of
9 programs, policies, protections, and benefits to individual customers, the Authority, and to the
10 general public. Many of the direct and indirect benefits such as savings to the Authority of
11 collection and termination costs, benefits occurring by receipt of federal utility grant assistance,
12 and other publicly funded disbursements are not generally included in the cost calculation. and
13 could not easily or practically be quantified to be itemized on the bill. Utilities recover costs for a
14 broad range of operational expenses necessary to deliver safe and affordable services to all
15 consumers, including staff salaries, legal and regulatory expenses, operations, universal services,
16 and a range of infrastructure maintenance costs. Isolating a single cost for itemization on a
17 customer bill may not add transparency but could lead to confusion – obfuscating some charges or
18 credits while highlighting others. Unless and until each of the universal services direct and indirect
19 benefits as well as these other costs are fully itemized, the cost of providing universal service
20 programs should not be isolated on a customer bill.

21 **IV. RESPONSE TO OCA EXPERT WITNESSES**

22 **Q: Please summarize the testimony of OCA's Expert Witness Mr. Pavlovic to which**
23 **you wish to respond.**

1 A: Similar to I&E Expert Witness Okum, OCA expert witness Pavlovic argues against
2 implementation of PWSA's proposed CAC.⁴¹ Mr. Pavlovic argues that the fact PWSA's customer
3 assistance costs are growing and that actual costs may differ from projections is not sufficient
4 reasoning to single out these particular costs through a reconcilable surcharge.⁴² Mr. Pavlovic
5 argues that reconcilable surcharges are cost trackers that are viewed unfavorably in regulatory
6 theory and practice as they allow for automatic pass through of costs to ratepayers and thus weaken
7 utility's incentives to control costs.⁴³ Mr. Pavlovic explains that a cost tracker is appropriate only
8 where costs are largely outside of the utility's control; unpredictable; and substantial and
9 recurring.⁴⁴ Mr. Pavlovic argues that the costs proposed for inclusion in the CAC do not meet these
10 criteria.⁴⁵ Mr. Pavlovic also notes that the Commission recently rejected Aqua's proposed
11 universal service rider.⁴⁶ Mr. Pavlovic recommends that the proposed CAC should be denied.⁴⁷

12 **Q: What is your response to Mr. Pavlovic's testimony related to the CAC?**

13 A: As discussed above, I do not take a position as to the appropriate cost recovery method for
14 PWSA's low income assistance programs – though I strongly agree with Mr. Pavlovic that
15 universal service costs should not be singled out for separate treatment. Regardless of the method,
16 it is critical that the Commission approve adequate funding for PWSA's universal service
17 programming to serve identified need. Such funding is imperative to meet the ongoing and acute
18 need for assistance felt by PWSA's low income customers, both at proposed and present rates.

19 **Q: Please summarize the testimony of OCA's Expert Witness Mr. Coloton to which you**
20 **wish to respond.**

⁴¹ OCA St. 2 at 33-35.

⁴² Id. at 33: 12-15.

⁴³ Id. at 33-34.

⁴⁴ Id. at 34: 1-10.

⁴⁵ Id.

⁴⁶ Id. at 34-35.

⁴⁷ Id.

1 A: In his direct testimony, Mr. Colton reviewed the reasonableness of PWSA's proposal to
2 revise the structure and discount levels of its BDP.⁴⁸ Mr. Colton analyzed PWSA's proposal
3 through the lens of both the *level* of income of BDP participants, but also by *fragility* of income
4 for those low-income customers.⁴⁹ As Mr. Colton explains, low income workers can have their
5 ability to pay utility bills threatened due to unavoidable disruptions in their economic lives.⁵⁰
6 Based on this analysis, Mr. Colton concludes that it is reasonable and appropriate to expand BDP
7 eligibility to 200% FPL.⁵¹

8 Mr. Colton also recommends that PWSA should add a third tier to its BDP, so that its tiers
9 include: (1) Tier 1: at or below 50% FPL; (2) Tier 2: above 50% FPL to 100% FPL; and (3) Tier
10 3: above 100% FPL.⁵² As Mr. Colton explains, there is a substantial difference in the income levels
11 of customers at 50% FPL (i.e. those closer to the bottom of the FPL scale) and those with 200%
12 FPL (i.e. those with the maximum income for BDP eligibility).⁵³ In consideration of these
13 disparities, Mr. Colton recommends that PWSA introduce a new tier for customers with income
14 greater than 50% FPL but at/below 100% FPL.⁵⁴ He recommends that this income tier receive a
15 volumetric discount similar to customers with income at or below 50% FPL.⁵⁵ However, he
16 recommends that this tier with somewhat higher incomes, receive a lower volumetric discount of
17 30%.⁵⁶

⁴⁸ OCA St. 4 at 25-45.

⁴⁹ Id. at 27.

⁵⁰ Id. at 27-31.

⁵¹ Id. at 32.

⁵² Id. at 40.

⁵³ Id. at 41-43.

⁵⁴ Id. at 43.

⁵⁵ Id.

⁵⁶ Id. at 43-45.

1 Mr. Colton also recommends an increase to the volumetric discount provided to the lowest
2 income tier of PWSA's BDP.⁵⁷ At present, customers with income at or below 50% FPL receive
3 a 50% volumetric discount.⁵⁸ Mr. Colton recommends the volumetric discount for customers
4 at/below 50% FPL be increased to 60%.⁵⁹ Mr. Colton reasons that, at a 50% volumetric discount,
5 households at/below 50% FPL would be in danger of exceeding 4% in their burden levels.⁶⁰ Mr.
6 Colton also notes that PWSA indicated that the median usage level of customers at/below 150%
7 FPL was 4,000 gallons/month.⁶¹ Based on PWSA's proposed revisions to the BDP, low income
8 customers at or above this median usage level will experience burden levels that may greatly
9 exceed affordable burden levels.⁶² For example, Mr. Colton estimates that a household with an
10 income of \$5,000 and 4000 gallons/month of usage would see a 12.8% burden as of FY2026.⁶³
11 Based on this analysis, Mr. Colton recommends that BDP customers at/below 50% FPL receive a
12 60% volumetric discount.⁶⁴

13 **Q: What is your response to Mr. Colton's testimony related to revisions of the BDP's**
14 **design and discount levels?**

15 A: I am highly supportive of Mr. Colton's proposed revisions to the design and discount levels
16 of the BDP. In my direct testimony, I analyzed PWSA's proposed revisions to its BDP and
17 concluded that for many low income customers between 50% and 200% FPL, PWSA's proposal
18 would result in combined burden levels at or below 4%.⁶⁵ Based on this analysis, I concluded that,
19 in the context of the present case, I was generally supportive of PWSA's proposed revisions to its

⁵⁷ Id. at 45.

⁵⁸ Id.

⁵⁹ Id.

⁶⁰ Id. at 46-47.

⁶¹ Id. at 48-49.

⁶² Id.

⁶³ Id. at 49.

⁶⁴ Id. at 49-50.

⁶⁵ Pittsburgh United St. 1 at 32.

1 BDP.⁶⁶ However, I also recognized that PWSA’s proposed revisions to the BDP may ultimately
2 require additional improvements to ensure that all BDP participants – regardless of household size
3 and usage level – may achieve affordable burden levels.⁶⁷

4 My recommendation that PWSA’s proposed revisions to the structure and discounts
5 offered through its BDP should be approved in the context of the present proceeding should not
6 be read as precluding the recommendations that Mr. Colton made to improve the BDP. I am highly
7 supportive of Mr. Colton’s revisions to the structure of the BDP, as well as increasing the
8 volumetric discount levels of the BDP for participants at/below 50% FPL. As Mr. Colton points
9 out,⁶⁸ these changes would help markedly improve affordability for BDP participants and would
10 more closely align actual bill burdens for participants – particularly those participants with
11 household income at/below 50% FPL with the greatest financial need – with affordable bill
12 burdens.⁶⁹ These revisions are essential to ensure that low income BDP participants can realize
13 consistent levels of affordability, regardless of income level, household size, or usage levels.

14 I therefore conclude that approval of PWSA’s proposal to improve the structure and
15 affordability of its BDP should be considered the foundation for BDP improvements. I recommend
16 that Mr. Colton’s proposals to adjust the income tiers within PWSA’s BDP proposal and increase
17 the volumetric discount for customers at/below 50% should be approved as necessary revisions to
18 PWSA’s proposal.

1 **V. RESPONSE TO SCHOOL DISTRICT OF PITTSBURGH EXPERT**
2 **WITNESSES**

3 *Exemption of School District From Stormwater Fee.*

4 **Q: Please summarize the testimony of the School District of Pittsburgh related to its**
5 **proposed exemption from PWSA’s stormwater fee to which you wish to respond.**

6 A: In his direct testimony, the School District’s expert witness, Mr. Michael J. McNamara,
7 describes how the School District owns a large number of buildings and facilities equating to
8 almost 6.9 million square feet, which equates to 4,264.5 ERU, or 45% of the School District’s total
9 land area.⁷⁰ Mr. McNamara argues that, despite having a water efficiency plan that includes
10 stormwater mitigation efforts, it does not receive any credits for purported efforts to reduce
11 stormwater run-off.⁷¹ Mr. McNamara argues that PWSA’s stormwater fee may constitute an
12 unlawful tax, and cites to recent decisions by the Pennsylvania Commonwealth Court related to
13 the Borough of West Chester.⁷² While acknowledging that this case is pending appeal before the
14 Pennsylvania Supreme Court, Mr. McNamara argues that the Commonwealth Court may
15 nevertheless view the adverse financial impacts on the School District from the stormwater fee as
16 improper.⁷³ Mr. McNamara further alleges that, to budget for additional stormwater costs to
17 PWSA, it will be forced to cut custodial and maintenance personnel, which would adversely
18 impact operations.⁷⁴

19 The School District’s expert witness, Mr. Eric M. Callocchia, similarly argues that PWSA
20 should also consider several alternative stormwater fee approaches, including models that exempt

⁷⁰ School District St. 1 at 11: 1-9.

⁷¹ Id. at 12-13.

⁷² Id. at 14.

⁷³ Id.

⁷⁴ Id. at 12: 7-11.

1 school districts from payment of stormwater fees.⁷⁵ Mr. Callocchia cites a survey conducted by
2 Black and Veatch in 2021, which found that 16% of survey respondents exempt school districts,
3 and – of those – 45% indicate that this exemption is based on policy rather than enabling
4 legislation.⁷⁶ Mr. Callocchia further cites Maryland municipal law, which exempts certain property
5 owned by the State or State entities.⁷⁷ Mr. Callocchia also cites to the City of Jacksonville, FL,
6 which exempts 501(c)(3) charitable organizations from stormwater fees.⁷⁸

7 Mr. Callocchia argues that exempting the School District from PWSA’s stormwater rates
8 would not cause undue discrimination in rates, would reflect PWSA’s acknowledgment that
9 reducing costs to school districts as quasi-municipal entities focused on educating children, and
10 would result in more resources being spent on education of students, thereby allowing for a net
11 increase to public benefits.⁷⁹ Mr. Callocchia further argues that PWSA is already making certain
12 value judgments in their stormwater rate structure, including the exemption of cemeteries, and
13 City-owned streets and sidewalks by not defining a fee for right-of-ways (which constitute very
14 large contributors to stormwater runoff).⁸⁰ Mr. Callocchia appears to also argue that, in the
15 alternative, credits should be offered to educational customers such as the School District.⁸¹ Mr.
16 Callocchia estimates that the total impacts to rates of my recommendations regarding the reduction
17 in the non-residential stormwater fees. Specifically, Mr. Callocchia estimates that his
18 recommendations, as a whole, would increase stormwater fees for ERU for residential customers

⁷⁵ School District St. 2 at 24: 9-14.

⁸¹ Id. at 27: 12-16.

1 from \$10.26 to \$10.69 in 2024; from \$12.50 to \$13.64 in 2025; and from \$14.62 to \$15.96 in
2 2026.⁸²

3 **Q: What is your response to the School District’s expert witnesses related to their**
4 **recommendations the exempt to School District from payment of stormwater fees?**

5 A: It is important to initially note that I am strongly supportive of and recognize the need for
6 increased funding for public schools, including the Pittsburgh School District. Research suggests
7 that increased spending on education can improve student outcomes, especially amongst low
8 income students, and narrow achievement gaps between social-economic classes.⁸³ An equitable
9 funding system ultimately ensures that schools can adequately meet the myriad of purposes they
10 serve – from academic, to socioemotional, to providing other supportive services – including
11 health and lunch services.⁸⁴ Robust school funding is essential to the continued vitality of
12 Pennsylvania’s families and their communities.

13 Notwithstanding this support, I am concerned with the proposals of Mr. McNamara and
14 Mr. Callocchia that the School District should be *exempted* from PWSA’s stormwater fee – passing
15 costs on to residential consumers. Counsel for Pittsburgh United’s Our Water Table has advised
16 me that issues related to whether PWSA’s stormwater fee constitutes an unlawful tax are legal
17 issues that will be reserved for briefing. With more than 4,000 ERU, the School District’s
18 properties comprise significant amounts of impervious surfaces. Based on the calculations
19 provided by the School District’s expert witnesses, exempting the School District from payment

⁸² *Id.* at 32: 9-11.

⁸⁴ *Id.*

1 of stormwater fee would result in marked increases in residential customers monthly bills, further
2 exacerbating the rate unaffordability borne by residential customers and felt most acutely by low
3 income residential customers. These increases would directly and adversely impact the families
4 that the School District serves and would make it more difficult for Pittsburgh's low income
5 families to make ends meet.

6 According to the U.S. Census Bureau, the City of Pittsburgh currently has a 19.7% poverty rate⁸⁵
7 – well above the national average.⁸⁶ Research indicates that communities of color, single women
8 raising children, and other historically disadvantaged and marginalized populations face poverty
9 at disproportionate rates.⁸⁷ Children in Pittsburgh are also struggling profoundly. The child poverty
10 rate in Allegheny County is estimated to be 15%.⁸⁸ It is further estimated that 14.5% of children
11 in Allegheny County are experiencing child hunger; and 8.6% of children in Allegheny County
12 drop out of school.⁸⁹ These figures underscore the profound need felt amongst Pittsburgh's low
13 income consumers. Mitigation of these impacts, while admittedly important, must, in the
14 ratemaking context, be targeted and designed to ensure that low income families are not ultimately
15 disadvantaged by efforts to remediate these societal ills. While this ratemaking proceeding cannot

⁸⁵ U.S. Census Bureau, [QuickFacts: Pittsburgh City](https://www.census.gov/quickfacts/fact/table/pittsburghcitypennsylvania/AFN120217), available at: <https://www.census.gov/quickfacts/fact/table/pittsburghcitypennsylvania/AFN120217>. Note that the poverty rate is based on households at or below 100% of the federal poverty level, which is lower standard than the Commission's definition of low income households.

⁸⁶ U.S. Census Bureau, [National Poverty in America Awareness Month](https://www.census.gov/newsroom/stories/poverty-awareness-month.html) (Jan. 2023), available at: <https://www.census.gov/newsroom/stories/poverty-awareness-month.html>.

⁸⁹ [Id.](#)

1 ultimately address the need for increased school funding, this proceeding can and should address
2 pervasive utility insecurity felt by PWSA’s low income consumers through the context of rates.

3 From a policy perspective, I do not believe that it is appropriate to *exempt* the School
4 District from payment of stormwater fees, though I would not necessarily oppose alternative
5 proposals to mitigate the cost burden on schools – particularly for schools serving low income
6 communities. Exempting the School District from payment of a stormwater fee, as proposed,
7 would improperly shift the burden of needed additional school funding to residential ratepayers.
8 This is a regressive method of supporting school operations and ultimately places greater onus on
9 low income families who are already contending with steep preexisting levels of unaffordability.
10 While some systems have made the policy decision to shift the burden for stormwater management
11 to residential households, including low income residents, to do so here would be detrimental to
12 the low income families and communities that both PWSA and the School District serve. Placing
13 additional onus on low income customers to bridge the gap in school funding is particularly
14 problematic given the recent funding provided through such sources as the Infrastructure
15 Investment and Jobs Act (IIJA) and Inflation Reduction Act (IRA), which may provide avenues
16 of additional funding so that the School District⁹⁰ can continue to contribute to payment of
17 PWSA’s stormwater management.

18 In sum, while I recognize the need for Pennsylvania to tackle the critical need for expanded
19 public school funding to fully support the cost of providing quality education to all students, I
20 believe that exempting the School District from stormwater fees is simply the wrong method of
21 doing so.

⁹⁰ See The White House, [The Infrastructure Investment and Jobs Act will Deliver for Pennsylvania](https://www.whitehouse.gov/wp-content/uploads/2021/08/PENNSYLVANIA_Infrastructure-Investment-and-Jobs-Act-State-Fact-Sheet.pdf), available at: https://www.whitehouse.gov/wp-content/uploads/2021/08/PENNSYLVANIA_Infrastructure-Investment-and-Jobs-Act-State-Fact-Sheet.pdf.

1 **Q: What is your recommendation related to the proposal of the School District’s expert**
2 **witnesses to exempt to School District from payment of stormwater fees?**

3 A: For the reasons stated above, the Commission should reject the recommendation of Mr.
4 McNamara and Mr. Callocchia to exempt the School District from PWSA’s stormwater fee.

5
6 Allocation of costs of low income customer assistance programs.

7 **Q: Please summarize the testimony of the School District’s expert witnesses related to**
8 **the CAC to which you wish to respond.**

9 A: In his direct testimony, Mr. Callocchia explains that PWSA’s proposed stormwater CAC
10 is calculated by dividing the annual forgone revenue and allocated operations costs by the total
11 number of stormwater ERUs to arrive at a rate per ERU.⁹¹ PWSA proposes that the CAC apply to
12 all stormwater ratepayers in all classes.⁹² Mr. Callocchia argues that the costs of the CAC should
13 apply solely to residential customers.⁹³

14 **Q: What is your response to Mr. Collocchia’s recommendations that the CAC should**
15 **solely apply to residential customers?**

16 A: As discussed above in response to Mr. Higgins recommendations to discontinue PWSA’s
17 long-standing policy of recovering costs of its low income assistance programs across customer
18 classes, it is inappropriate to require residential customers to solely shoulder the burden of low
19 income assistance programs meant to remediate the impact of societal problems of poverty and
20 utility insecurity. Exempting other customer classes from the CAC would ignore the important

⁹¹ Id. at 17: 6-12; PWSA St. No. 7, p. 48.

⁹² Id.

⁹³ Id. at 18: 1-6.

1 social benefit of assistance programs that are also enjoyed by nonresidential ratepayers.⁹⁴ In
2 addition to the benefits to nonresidential ratepayers I have discussed above, unaffordable utility
3 bills increase the forced mobility of children and their families. Frequent moves through childhood
4 hampers positive educational outcomes and leads to increased need for remedial programs.⁹⁵ By
5 contrast, increasing utility affordability for low income families promotes household stability and
6 unity, reduces the need for additional remediation by schools, and ultimately leads to more
7 effective and efficient educational systems.⁹⁶ Thus, I oppose Mr. Collocchia's proposal to exempt
8 non-residential customers from the CAC.

9 **VI. CONCLUSION**

10 **Q: Does this conclude your rebuttal testimony?**

11 **A: Yes.**

SURREBUTTAL TESTIMONY OF HARRY S. GELLER, ESQ.
ON BEHALF OF
PITTSBURGH UNITED'S OUR WATER TABLE

September 22, 2023

1 **PREPARED SURREBUTTAL TESTIMONY OF HARRY S. GELLER, ESQ.**

2 **I. INTRODUCTION**

3 **Q: Please state your name, occupation, and business address.**

4 A: My name is Harry Geller. I am an attorney. I am the former Director of the Pennsylvania
5 Utility Law Project. I am currently retired but serve as Senior Counsel to the Pennsylvania Utility
6 Law Project (PULP) and as a consultant to legal aid programs and their clients.

7 **Q: Did you previously submit testimony in this proceeding?**

8 A: Yes. I submitted direct testimony that is pre-marked as Pittsburgh United Statement 1, and
9 rebuttal testimony, pre-marked as Pittsburgh United Statement 1-R.

10 **Q: What is the purpose of your surrebuttal testimony?**

11 A: My surrebuttal testimony responds to rebuttal testimonies of Pittsburgh Water and Sewer
12 Authority (PWSA) expert witnesses Julie A. Mechling (PWSA St. 6-R), Edward Barca (PWSA
13 St. 2-R), and Keith Redling (PWSA St. 8-R).

14 This surrebuttal testimony is not intended to address every issue raised or otherwise
15 discussed by other parties' witnesses in their rebuttal testimonies. Absence of a response to any
16 specific recommendation or position of any witness does not indicate my agreement. Unless
17 required for context in providing a further response to direct or rebuttal testimony, I will not
18 reiterate the extensive arguments and evidence that I provided in my direct and rebuttal
19 testimonies. To the extent an argument raised by any party in rebuttal is already sufficiently
20 addressed in my direct or rebuttal testimonies, I do not intend to respond, and stand on the
21 evaluation, analysis, and recommendations contained in my direct and rebuttal testimonies.

22

23

1 **Q: How is your surrebuttal testimony organized?**

2 A: In Section I of my surrebuttal testimony (above), I outline the purpose of my rebuttal
3 testimony.

4 In Section II, I respond to rebuttal testimony of PWSA's expert witness related to low
5 income assistance program outreach and enrollment.

6 In Section III, I respond to rebuttal testimony of PWSA's expert witness related to my
7 recommendation that PWSA submit a Universal Service Plan for Commission review and
8 approval.

9 In Section IV, I respond to rebuttal testimony of PWSA's expert witness regarding
10 recommendations to conduct systematic screening of low income customers.

11 In Section V, I respond to rebuttal testimony of PWSA's expert witnesses related to
12 recommendations to restructure PWSA's Arrearage Forgiveness Program (AFP).

13 In Section VI, I respond to rebuttal testimony of PWSA's expert witness related to
14 recommendation to pass through convenience fees for low income customers.

15 In Section VII, I respond to rebuttal testimony of PWSA's expert witnesses related to
16 recommended mitigation measures for stormwater.

17 In Section VIII, I conclude my surrebuttal testimony.

18
19 **II. RESPONSE RE: LOW INCOME ASSISTANCE PROGRAM OUTREACH AND**
20 **ENROLLMENT (PWSA ST. 6-R).**

21 **Q: Please summarize rebuttal testimony of PWSA's expert witness related to the**
22 **undersubscription of PWSA's low income assistance programs to which you wish to respond.**

23 A: Ms. Mechling disagrees with my conclusion that PWSA's low income customer assistance
24 programs remain woefully undersubscribed and only reach a fraction of PWSA's estimated low

1 income customers.¹ Ms. Mechling argues against my recommendations to enhance enrollment in
2 PWSA's low income assistance programs.² Ms. Mechling specifically disagrees with my
3 recommendations that PWSA develop a consumer education and outreach plan; update estimated
4 low income customer count and needs assessment within a year of the final order in this
5 proceeding; implement screening measures for new and moving customers on non-emergency
6 contacts for low income status; update its confirmed low income count; and begin tracking cross-
7 enrollment program referrals and enrollment.³

8 Ms. Mechling also takes exception to my recommendations that the Commission require
9 PWSA to implement enrollment targets for its low income assistance programs.⁴ She argues that
10 the Commission does not require water utilities to implement enrollment targets, and Commission
11 has not deemed rates to be unjust or unreasonable based on enrollment of low income assistance
12 programs.⁵

13 In rejecting my recommendations to improve program enrollment, Ms. Mechling
14 recommends that these ideas be presented during LIAAC meetings to be discussed in an informal
15 collaborative manner.⁶ She opines that the LIAAC process is a far superior way for PWSA to
16 address suggestions related to program enrollment, and that this rate proceeding involves a
17 plethora of interrelated issues that must be considered.⁷ While rejecting consideration of these
18 important issues related to program enrollment through this proceeding, Ms. Mechling also
19 opposes mandating specific reporting requirements for LIAAC meetings to equip LIAAC

¹ PWSA St. 6-R at 23: 16-24; 25-26; United St. 1 at 23.

³ Id. at 26:1-11.

⁴ Id. at 23-24; 34.

⁵ Id. at 23-24.

⁶ Id. at 27: 1-20.

⁷ Id.

1 members with information and data necessary to make meaningful recommendations.⁸ She argues
2 that LIAAC members may not find information of interest, and that reporting requirements would
3 require additional time and resources to prepare.⁹

4 **Q: What is your response to Ms. Mechling’s rebuttal testimony related to continued**
5 **undersubscription of PWSA’s low income assistance programs?**

6 A: As an initial matter, I am advised by counsel for Pittsburgh United’s Our Water Table that
7 issues related to whether universal service enrollment or related universal service program issues
8 are relevant factors for the Commission to investigate in determining whether rates are just and
9 reasonable is a legal issue reserved for briefing.

10 Putting these legal issues aside, I am concerned with Ms. Mechling’s suggestion that issues
11 and recommendations related to enrollment in PWSA’s low income assistance programs should
12 be relegated to consideration in the context of informal LIAAC meetings, rather than considered
13 in the context of the present case. I am supportive of the use of utility advisory group meetings to
14 provide a forum for parties and stakeholders to discuss issues surrounding the design and delivery
15 of low income assistance programming, and to reach consensus where possible. This may help to
16 reduce the number of issues raised through formal litigation and would be beneficial to all parties.

17 Notwithstanding my support of collaborative processes to attempt to resolve issues that
18 affect low income consumers outside of litigation, informal stakeholders meetings and the
19 recommendations put forward are advisory only and subject to PWSA acceptance, veto, or
20 modification. PWSA’s decisions following a collaborative are not appealable or subject to review.

21 A collaborative process is simply not a substitute for a formal examination of the justness and

⁸ Id. at 27: 17-21.

⁹ Id.

1 reasonableness of rates produced by low income assistance programming in the context a rate
2 proceeding.

3 Informal stakeholder processes lack a myriad of tools necessary to meaningfully
4 investigate the adequacy of universal services, including the use of discovery and evidentiary
5 hearing. If parties are relegated to informal processes to advocate for improvements to these
6 programs, there is no mechanism to require PWSA to implement – or even consider – parties’
7 proposals. If PWSA fails to implement recommended improvements, parties would have no clear
8 path to redress PWSA’s decisions. An evaluation of the justness and reasonableness of any
9 proposed rate increase must necessarily analyze the adequacy and design of rate assistance
10 programming to ensure that water, wastewater, and stormwater services are reasonably affordable
11 and universally accessible to households in PWSA’s service territory.

12 To be just and reasonable, it is critical that rates – together with the attendant terms,
13 conditions, and programming – are also affordable for those served. It is inappropriate to raise
14 rates for water, wastewater, and stormwater services without first ensuring that low and moderate
15 income customers are able to receive affordable service under just and reasonable terms.
16 Affordability of rates for low income consumers, and in turn the structure and delivery of low
17 income assistance programming, are key components of determining whether rates are just and
18 reasonable. Precluding consideration of universal service issues in the context of rate proceedings
19 ignores the statutory mandate to ensure that all rates charged are just and reasonable and denies
20 meaningful opportunity of the parties to review the same. Indeed, universal accessibility is a
21 polestar principle of ratemaking for essential, life-sustaining utility services.

22 In short, relegating consideration of improvements to universal service programs solely to
23 informal stakeholder processes severs parties from their rights to investigate the justness and

1 reasonableness of rates for PWSA’s low income customers in the context of a formal proceeding,
2 and denies the right to a meaningful opportunity to be heard by an ALJ and the Commission related
3 to issues affecting low income customers’ ability to access assistance programs critical to affording
4 and staying connected to services. Thus, I oppose Ms. Mechling’s recommendations that the
5 important recommendations I advance in my direct testimony related low income assistance
6 program outreach and enrollment not be addressed in this proceeding and should be relegated to
7 the LIAAC for consideration.

8

9 **III. RESPONSE RE: UNIVERSAL SERVICE PLAN SUBMISSION (PWSA ST. 6-**
10 **R)**

11 **Q: Please summarize PWSA expert witness rebuttal testimony related to your**
12 **recommendations that PWSA submit a Universal Service Plan for Commission review and**
13 **approval.**

14 A: Ms. Mechling opposes the recommendation set forth in my direct testimony that PWSA
15 develop and submit a Universal Service Plan for Commission review and approval.¹⁰ Ms.
16 Mechling argues that there is no statutory requirement that water utilities submit Universal Service
17 Plans.¹¹ She also argues that requiring PWSA to submit a Universal Service Plan would be
18 premature because PWSA intends to participate in the Commission’s upcoming Universal Service
19 Plan Working Group.¹² Ms. Mechling contends that it would be a waste of resources to impose
20 requirements that differ from those developed through that working group process.¹³

¹⁰ PWSA St. 6-R at 28: 16-24.

¹¹ Id.

¹² Id.

¹³ Id. at 29: 1-4.

1 Ms. Mechling further argues that submission of a Universal Service Plan does not “lend
2 itself to a collaborative process as PWSA has developed through its LIAAC.”¹⁴ Ms. Mechling
3 argues that additional Commission requirements would impose improper strain on staff resources
4 and costs.¹⁵ Ms. Mechling bases this assessment on her experience with PWSA’s recent
5 compliance plan proceeding – arguing that the proceeding “slowed down the ability of PWSA to
6 reach definitive closure on issues which could be implemented” and was “not the best way to
7 move forward in a timely manner.”¹⁶ Ms. Mechling argues that submission of a Universal
8 Service Plan would experience similar pitfalls.¹⁷

9
10 **Q: What is your response to Ms. Mechling’s rebuttal testimony that opposes**
11 **requirements that PWSA submit a Universal Service Plan for Commission review and**
12 **approval?**

13 A: As discussed above, I am opposed to relegating important considerations related to
14 PWSA’s low income assistance programming solely to informal stakeholder processes, such as
15 the LIAAC. While informal stakeholder processes serve an important purpose for stakeholders to
16 gain information and provide feedback related to low income assistance programs, they do not
17 substitute for formal Commission review of the policies, procedures, and eligibility requirements
18 of these programs. Again, PWSA is not currently required to submit a Universal Service Plan for
19 Commission review and approval, which forecloses any opportunity for Commission review. As
20 Ms. Mechling points out, these proceedings deal with a multitude of other issues, aside from those
21 impacting low income programming. However, this fact does not negate the need to ensure that

¹⁴ Id. at 29: 4-5.

¹⁵ Id. at 29: 4-16.

¹⁶ Id.

¹⁷ Id.

1 PWSA’s low income programs – which provide critical rate assistance to low income families in
2 PWSA’s service territory – are designed and implemented in a manner that ensures all rates and
3 attendant terms, conditions, and programs are just and reasonable. While low income programs
4 must necessarily be considered in any determination related to the justness and reasonableness of
5 rates, it is essential that additional avenues are provided so that the Commission has the ability to
6 periodically review, and ultimately compel, important changes to PWSA’s low income assistance
7 programming without having to wait for PWSA to exercise its discretion as to when to initiate a
8 rate filing. Requiring PWSA to submit a Universal Service Plan for Commission review and
9 approval would provide this important forum.

10 I also take issue with Ms. Mechling’s assertion that the time and effort required for proceedings
11 such as PWSA’s recent compliance proceedings indicate that informal mechanisms should be used
12 instead. Informal stakeholder processes, like the LIAAC, do not preclude undertaking the essential
13 due process review of low income assistance programs in the context of determining the justness
14 and reasonableness of rates. I acknowledge that due process review, such as that provided in
15 PWSA’s compliance plan review, requires the time and attention of PWSA. Nevertheless, PWSA’s
16 compliance plan proceeding provided important processes to formally evaluate PWSA’s
17 compliance with Commission regulation and order changes.

18 I also firmly deny that the Commission’s upcoming Universal Service Plan Working Group
19 should preclude consideration of important program improvements in the context of the present
20 proceeding. I am highly supportive of the Commission’s collaborative efforts through its Universal
21 Service Plan Working Group to advance statewide policy regarding the coordination and
22 streamlined delivery of universal service programs. However, the mere existence of this statewide
23 policy Working Group does not preclude the Commission from directing PWSA to develop and

1 submit a Universal Service Plan for Commission review and approval. This Plan is specifically
2 geared towards addressing low income customers' ability to learn about and ultimately enroll in
3 assistance programs that are critical to addressing unaffordability at both present and proposed
4 rates in PWSA's service territory. As I understand it, the Working Group is tasked with identifying
5 broad recommendations that will be included in a report to the Commission. It will not be exploring
6 the benefits or the terms and conditions or each utility's individual portfolio of universal service
7 programs. The mere existence of this Working Group does not relieve PWSA of its continuing
8 duty to provide just and reasonable rates to its customers. PWSA should not be permitted to obtain
9 a rate increase in the context of this proceeding to be borne by customers least able to afford it,
10 while avoiding its responsibilities to provide robust review and enhancements to its low income
11 assistance programs. Thus, I stand firmly behind my recommendation that the Commission require
12 PWSA to submit a Universal Service Plan for formal Commission review and approval.

13

14 **IV. RESPONSE RE: SYSTEMATIC SCREENING OF LOW INCOME STATUS**
15 **(PWSA ST. 6-R)**

16 **Q: Please summarize PWSA expert witness rebuttal testimony related to your**
17 **recommendation that PWSA routinely screen customers for low income status.**

18 A: Ms. Mechling disagrees with my recommendations that PWSA implement a systematic
19 approach to identify customers who may be eligible for universal service programs, including
20 screening for low income status for all new and moving customers and any non-emergency calls.¹⁸

21 Ms. Mechling also disagrees with my proposal that PWSA develop associated call scripting and
22 checklists for its Customer Service Representatives to implement my recommended screening for

¹⁸ Pittsburgh United St. 1 at 27-28; PWSA St. 6-R at 30-31.

1 low income status.¹⁹ Ms. Mechling cites vague cost concerns from this proposal,²⁰ and further
2 argues that customers may be confused by questions about income in the flow of interaction with
3 Customer Service Representatives.²¹ She incorrectly reasons that these questions could be viewed
4 as offensive by customers and “would not engender the spirit of trust with customers that [PWSA
5 is] working to achieve.”²²

6 **Q: What is your response to Ms. Mechling’s rebuttal testimony related to your screening**
7 **proposals?**

8 A: As discussed, PWSA’s universal service program enrollment rates are inadequate. It is not
9 sufficient to wait for economically-distressed customers to reach the point of potential loss of
10 essential services before offering information and referral to low income assistance programs.
11 PWSA needs to be more proactive in identifying and enrolling low income customers to actively
12 prevent the unnecessary accrual of arrears, and help low income customers establish important
13 protections – including the PWSA’s winter moratorium on terminations. Being more proactive
14 will help reduce the number of arrearages held by low income customers.

15 I firmly disagree that regular screening for low income status will engender customer
16 confusion or offense. There is a significant difference in a customer’s perception when they are
17 informed that they may be eligible for a discount on their bill if they provide their household
18 income – as opposed to when they are coldly asked their income without further context for why
19 the information is being requested. Simply asking the single question of whether customers would
20 like to provide their income to be screened for eligibility in low income assistance programs will
21 not unduly complicate customer calls. Moreover, Ms. Mechling fails to quantify how this simple

¹⁹ Id.

²⁰ PWSA St. 6-R at 31: 7-14.

²¹ Id.

²² Id.

1 inquiry would result in additional costs for ratepayers. Indeed, the benefit of simply asking
2 customers whether they are interested in being screened for available assistance outweighs these
3 amorphous potential downfalls. Thus, I stand by my recommendation that PWSA should be
4 required to routinely screen for low income status, as outlined in my direct testimony.

5

6 **V. RESPONSE RE: ARREARAGE FORGIVENESS PROGRAM (PWSA ST. 6-R)**

7 **Q: Please summarize the rebuttal testimony of PWSA's expert witnesses concerning**
8 **restructuring of the Arrearage Forgiveness Program (AFP) to which you wish to respond.**

9 A: Ms. Mechling disagrees with the recommendations put forth by myself and OCA expert
10 witness Roger Colton regarding restructuring of the AFP.²³ Specifically, Ms. Mechling disagrees
11 with my recommendation that for each in-full payment that a customer makes while enrolled in
12 the BDP, 1/36th of the customer's preprogram arrears should be forgiven.²⁴ Ms. Mechling similarly
13 opposes OCA expert witness, Roger Colton's, recommendations to restructure the AFP. Ms.
14 Mechling specifically opposes Mr. Colton's recommendations that (1) PWSA eliminate the
15 requirement that AFP participants enter into a payment arrangement, adding to their monthly
16 payment obligation; (2) AFP participants receive forgiveness for each in-full payment, regardless
17 of timeliness; and (3) PWSA apply retroactive AFP credits for late payments.²⁵ Ms. Mechling
18 argues that the AFP is an incentive for customers to keep paying on their payment arrangements
19 to receive AFP credits.²⁶ Ms. Mechling argues that the current AFP parameters are appropriately

²³ PWSA St. 6-R at 41-42.

²⁴ *Id.*; Pittsburgh United St. 1 at 39.

²⁵ PWSA St. 6-R at 41-42. OCA St. 4 at 58-59.

²⁶ PWSA St. 6-R at 43: 16-27.

1 balanced to incentivize payments, as they permit two missed payments before a customer is
2 removed from the program and enables removed customers to reenroll upon full payment.²⁷

3 PWSA expert witness, Edward Barca, similarly argues against recommendations set forth
4 by Mr. Roger Colton and myself related to restructuring the AFP to provide a more robust percent
5 forgiveness structure.²⁸ Mr. Barca disagrees with Mr. Colton's assessment of Mr. Barca's initial
6 cost-benefit analysis related to restructuring of the AFP, and with Mr. Colton's conclusion that the
7 analysis failed to consider several important factors, including the benefits stemming from
8 program enhancements.²⁹ Mr. Barca argues that Mr. Colton's conclusions regarding the
9 effectiveness of PWSA's AFP structure are based in opinion rather than fact, and that AFP
10 participants would see considerable benefits as a result of arrearage forgiveness.³⁰ Mr. Barca
11 briefly notes that PWSA disagrees with my claims for similar reasons as those set forth in response
12 to Mr. Colton's direct testimony.³¹

13 **Q: What is your response to this rebuttal testimony related to restructuring of the AFP?**

14 A: As discussed at length in my direct testimony, failing to provide AFP credits for full
15 payment because they are not within narrowly prescribed timeframes does not correctly recognize
16 low income customer economic realities, fails to incentivize positive full payment behaviors, and
17 punishes customers who cannot make payments within strict timeframes due to financial hardships
18 or fluctuations in their incomes.³² A properly designed AFP should incentivize full payments –
19 regardless of timeliness – in recognition of the financial realities of low income households.³³
20 While Ms. Mechling points to PWSA's policy of allowing two missed payments prior to removal

²⁷ Id.

²⁸ PWSA St. 2-R at 76-77.

²⁹ Id.

³⁰ Id.

³¹ Id.

³² Pittsburgh United St. 1 at 39.

³³ Id.

1 from the AFP, these guidelines speak to whether AFP participants can remain in the Program to
2 earn forgiveness in the *future*, rather than whether they are able to earn forgiveness credits for late
3 or missed payments in the *past*. Thus, I stand firmly by my recommendation that the AFP should
4 be restructured so that, what includes, customers who make full payment while enrolled in the
5 AFP receive arrearage forgiveness credits, regardless of the timeliness of the payments.

6 I also stand by the recommendation in my direct testimony that AFP participants should
7 not have to enter into a payment plan in order to earn forgiveness on past due arrears.³⁴ As I
8 discussed in the context of PWSA’s refusal to provide forgiveness credits for catch-up payments,
9 when properly designed, the AFP is an alternative collections program that is designed to
10 incentivize low income households with insufficient resources to prioritize water/wastewater
11 payments.³⁵ These households – by definition – operate in a state of scarcity, as they have
12 categorically insufficient monthly income to pay for food, rent/mortgage, electricity, heat,
13 childcare, and transportation.³⁶ To properly incentivize payment through the AFP, the Program
14 must be designed in a manner that encourages participants to continue to pay on their regular
15 monthly bills without requiring them to also keep up with an unaffordable payment plan over and
16 above these monthly bill amounts. Thus, I stand by my recommendation that the AFP should be
17 restructured based on the parameters set forth in my direct testimony, without requiring
18 participants to enter into and maintain a payment plan in order to receive arrearage forgiveness
19 credits.³⁷

20 I continue to disagree with Mr. Barca that PWSA appropriately considered the benefits to
21 ratepayers when conducting its cost-benefit analysis of restructuring the AFP. First, Mr. Barca’s

³⁴ *Id.* at 37.

³⁵ *Id.* at 39.

³⁶ *Id.*

³⁷ Pittsburgh United St. 1 at 37.

1 assertion is short-sighted and does not take into consideration the myriad of other benefits that are
2 incurred as a result of a robust AFP structure. As discussed more fully in my direct testimony,
3 robust universal service programs, including a robust, well-structured AFP, helps to reduce
4 collections and uncollectible expenses for all ratepayers.³⁸ Second, even assuming Mr. Barca's
5 assertion that the quantifiable ratepayer benefits from the AFP are relegated to arrearage
6 forgiveness for AFP participants is correct, it does not negate the importance of PWSA developing
7 an appropriately structured and workable AFP. Thus, I stand firmly by my recommendations set
8 forth in my direct testimony to restructure the AFP to provide for each in-full payment that a
9 customer makes while enrolled in the BDP, 1/36th of a customer's pre- program arrears are
10 forgiven.³⁹

11

12 **VI. RESPONSE RE: CONVENIENCE FEE PASS THROUGH (PWSA ST. 6-R)**

13 **Q: Please summarize PWSA expert witness rebuttal testimony related to pass-through**
14 **convenience fees to which you wish to respond.**

15 A: Ms. Mechling disagrees with my recommendation regarding third-party bill payment fees
16 for residential customers – including fees for cash payments at a third-party location.⁴⁰ Ms.
17 Mechling acknowledges that these fees are more likely to be incurred by vulnerable customers,
18 but nevertheless concludes that removing the cost from all ratepayers will lessen the amount of
19 rate increase that is needed.⁴¹ Ms. Mechling argues that there is no legal requirement for PWSA
20 to pass through convenience fees in the manner I recommend.⁴² Ms. Mechling notes that she has

³⁸ Pittsburgh United St. 1 at 36.

³⁹ Id. at 38: 1-4.

1 been advised by counsel that the presence of any related settlement commitments does not bar
2 PWSA from making a new proposal related to this issue.⁴³ Ms. Mechling also argues that PWSA
3 has never recovered the cost of such third-party fees through rates – and that the process would be
4 extremely difficult, costly and time consuming, and not a reasonable use of ratepayer funds.⁴⁴ Ms.
5 Mechling further argues that these fees are charges assessed and collected by third-party retailers
6 at the time of payment, and are not submitted to PWSA.⁴⁵

7 **Q: What is your response to Ms. Mechling’s rebuttal testimony related to pass-through**
8 **convenience fees?**

9 A: As an initial matter, I am advised by counsel for Pittsburgh United’s Our Water Table
10 that issues related to whether PWSA is required to take specific actions related to convenience or
11 third-party fees as a result of settlement obligations is a legal issue that counsel reserves for
12 briefing.

13 I am cognizant of Ms. Mechling’s concern that these fees are collected by third parties at
14 the time of customer payment within certain establishments. However, I disagree with Ms.
15 Mechling’s allegation that it is unreasonable or unduly onerous to ensure that all residential
16 customers have access to cost-free payment options. However, since PWSA concedes that it is
17 primarily vulnerable low income customers who utilize third party vendors for payment, I modify
18 my recommendation so that pass through of fees be limited to that group. PWSA maintains records
19 of residential customers who it has identified as low income. Customers who are identified as low
20 income based on PWSA’s records should be eligible for a fee reimbursement if they utilize a
21 method that incurs these convenience fees. I recommend that this reimbursement be applied to a

1 customer's asked to pay amount in the month following incursion of convenience fee. I further
2 recommend that PWSA instruct vendors that receive payments on its behalf to disclose current
3 convenience fees and any subsequent changes thereto so that PWSA is able to appropriately
4 reimburse for any adjusted amounts.

5

6 **VII. RESPONSE RE: STORMWATER FEE AND MITIGATION (PWSA ST. 6-R**
7 **AND PWSA ST. 8-R).**

8 **Q: Please summarize PWSA expert witness rebuttal testimony related to stormwater**
9 **mitigation measures to which you wish to respond.**

10 A: Ms. Mechling disagrees with my recommendation that PWSA be required to allocate
11 \$100,000 annually in rates to provide access to green mitigation measures at no cost to low income
12 customers.⁴⁶ Ms. Mechling also opposes my proposal that low income customers who adopt green
13 mitigation measures be eligible to receive the \$40 credit PWSA proposes to offer residential
14 customers who purchase rain barrels.⁴⁷ Ms. Mechling argues that my recommendation is short-
15 sighted because all green infrastructure improvements will require maintenance from customers.⁴⁸
16 Ms. Mechling expresses concern that, after initial provision, low income customers will not be
17 able to devote the time, resource, and financial requirements to maintain these mitigation
18 measures.⁴⁹ Ms. Mechling argues that this recommendation would not provide ratepayers with a
19 return on their investment, and improperly increase some customers' property values.⁵⁰ Finally,
20 Ms. Mechling argues that my recommendation that low income customers receive a \$40 rain barrel

1 credit, in addition to other recommended credits, is not a reasonable or justifiable use of ratepayer
2 money.⁵¹

3 PWSA expert witness Keith Readling similarly argues against my proposal to allocate
4 funds to support low income customer adoption of green stormwater mitigation measures.⁵² Mr.
5 Readling argues that my recommendation would essentially require PWSA to administer a grant
6 program for stormwater mitigation measures.⁵³ Mr. Readling argues that this would increase
7 complexity and costs for PWSA's program administration, increasing ratepayer costs.⁵⁴ Like Ms.
8 Mechling, Mr. Readling incorrectly argues that my recommendations would require PWSA to pay
9 for reduced runoff associated with these measures twice – once through a grant to fund mitigation
10 measures, and once through the credit.⁵⁵

11 **Q: What is your response to this rebuttal testimony related to stormwater mitigation**
12 **recommendations?**

13 A: I believe it is just, reasonable, and in the public interest to assist low income customers to
14 adopt green stormwater mitigation measures. Practicing green mitigation of stormwater runoff has
15 numerous community benefits, including stemming local erosion, reduced flooding, and increased
16 capacity of stormwater systems to handle runoff.⁵⁶ Low income customers should be given an
17 opportunity to participate in green mitigation which would benefit their households and their
18 communities. I do not deny that administration of this funding may require some additional
19 administrative costs by PWSA, as Mr. Readling suggests. However, it is reasonable and in the

1 public interest to ensure that low income households and their communities can equitably access
2 and adopt green mitigation measures, and realize the attendant benefits as a result of these
3 practices.

4 Further, I dispute Ms. Mechling's unsupported conclusion that low income consumers are
5 unable to reasonably maintain green stormwater measures, such as rain barrels, once installed. For
6 example, maintenance of rain barrels includes: disconnection, washing out, and storage of the rain
7 barrel during the winter months; opening rain barrel spigots if a household is expected to be away
8 for extended periods; cleaning rain barrels to remove residue; cleaning out downspouts and roof
9 gutters if there is a concern about mosquito control.⁵⁷ It appears that rain barrel maintenance
10 requires rather minimal costs after initial installation. It is unclear based on Ms. Mechling's rebuttal
11 testimony why low income households cannot perform the straightforward cleaning and
12 maintenance required for rain barrels. I acknowledge that, in order to practice green mitigation
13 most effectively, low income households who choose to be part of this initiative may need to install
14 some additional measures, such as downspouts or gutter covers, which may come at some cost to
15 households.⁵⁸ In the event that low income households want to maximize green mitigation on their
16 properties in these manners, I recommend that PWSA include assistance to install these attendant
17 measures as part of the \$100,000 annual funding.

18 Finally, contrary to Ms. Mechling and Mr. Readling arguments, my recommendation would
19 not duplicate the stormwater credits that PWSA is proposing in the context of this proceeding. Low
20 income stormwater credits are not aimed at reducing runoff. Rather, these credits are meant to
21 reduce the financial burden for low income customers who cannot afford to shoulder the full costs

⁵⁷ Chesapeake Bay Foundation, Rain Barrel Maintenance, available at: https://www.cbf.org/document-library/cbf-guides-fact-sheets/CBF_Rainbarrels_011614e420.pdf.

⁵⁸ Id.

1 of PWSA's stormwater rates. By contrast, my recommendation would help to reduce stormwater
2 runoff on low income customers' properties. As discussed, reducing runoff on low income
3 customer's properties has tangible benefits for customers, their communities, and the stormwater
4 system as a whole. Low income families should be given an opportunity to participate in green
5 mitigation efforts through allocation of additional assistance to practice green stormwater
6 mitigation. Thus, I stand firmly by my recommendation that PWSA be required to allocate
7 \$100,000 annually for the provision and installation of green mitigation measures for stormwater
8 runoff for low income customers.

9

10 **VIII. CONCLUSION**

11

12 **Q: Does this conclude your surrebuttal testimony?**

13 **A: Yes.**
