

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**2023 GENERAL BASE RATE CASE  
R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)**

**DIRECT TESTIMONY  
STATEMENTS NO. 1-9**

Filed & Received on 11/8/23-AEL-11/8/23

# Statement No. 1

## Everette

**TESTIMONY  
OF  
ASHLEY E. EVERETTE**

**WITH REGARD TO**

**(1) AN OVERVIEW OF PENNSYLVANIA-AMERICAN WATER COMPANY'S RATE FILING AND PRINCIPAL ACCOUNTING EXHIBIT, INCLUDING A SUMMARY OF THE FACTORS DRIVING ITS NEED FOR RATE RELIEF; (2) AFFORDABILITY OF WATER AND WASTEWATER SERVICE; (3) SUPPORT FOR SPECIFIC CLAIMS, INCLUDING ALLOCATION OF A PORTION OF WASTEWATER REVENUE REQUIREMENT TO WATER OPERATIONS, THE COMPANY'S PROPOSED REVENUE DECOUPLING MECHANISM AND ENVIRONMENTAL COMPLIANCE INVESTMENT CHARGE, REQUEST FOR REGULATORY ACCOUNTING AUTHORIZATION TO DEFER DEVIATIONS IN PENSION, OTHER POST-EMPLOYMENT BENEFITS, AND PRODUCTION EXPENSES, AND COMPLIANCE WITH SECTION 1301.1(B) OF THE PENNSYLVANIA PUBLIC UTILITY CODE; (4) COMMITMENTS FROM PRIOR RATE CASE SETTLEMENT; AND (5) PERFORMANCE FACTORS UNDER SECTION 523 OF THE CODE AND THE POLICY STATEMENT AT 69 PA. CODE § 69.711**

**DOCKET NOS.  
R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)**

**DATE: NOVEMBER 8, 2023**

**PENNSYLVANIA-AMERICAN WATER COMPANY**  
**DIRECT TESTIMONY OF ASHLEY E. EVERETTE**

**INTRODUCTION**

1 **Q. Please state your name and business address.**

2 A. My name is Ashley E. Everette, and my business address is 852 Wesley Drive,  
3 Mechanicsburg, Pennsylvania 17055.

4 **Q. By whom are you employed and in what capacity?**

5 A. I am employed by American Water Works Service Company, Inc. (“Service Company” or  
6 “AWWSC”) as the Senior Director of Rates and Regulatory. The Service Company is a  
7 wholly owned subsidiary of American Water Works Company, Inc. that provides services to  
8 Pennsylvania-American Water Company (“PAWC” or “Company”) and its affiliates. I work  
9 in the Mechanicsburg office of PAWC.

10 **Q. Please describe your educational background and business experience.**

11 A. I hold a Bachelor’s degree in Economics and a Master’s degree in Business Administration,  
12 both from the University of Illinois. I have been employed by the Service Company since  
13 September 2019, first as the Director of Rates and Regulatory and now in my current role as  
14 Senior Director of Rates and Regulatory for PAWC. In these positions, I am responsible for  
15 preparing and presenting rate applications as well as certain aspects of the financial, budgeting  
16 and regulatory functions of the Company.

17 Prior to my employment at the Service Company, I was employed by the Pennsylvania  
18 Office of Consumer Advocate (“OCA”) as a Regulatory Analyst from September 2012 to  
19 September 2019.

1 **Q. Have you previously testified before regulatory agencies?**

2 A. Yes. I have testified on behalf of PAWC before the Pennsylvania Public Utility Commission  
3 (“Commission”) in several cases. Additionally, I submitted testimony to the West Virginia  
4 Public Service Commission on behalf of West Virginia American Water in 2021. Prior to my  
5 employment by the Service Company, I testified on behalf of the OCA in approximately  
6 35 proceedings.

7 **Q. What is the purpose of your testimony?**

8 A. The purpose of my testimony is to explain the overall structure of PAWC’s case and to address  
9 certain specific claims being made by the Company to support its proposed rates. My  
10 testimony is divided into several parts.

11 First, I will provide general information about the Company and this rate filing. Next,  
12 I discuss the major drivers of the Company’s request for rate relief in this proceeding, which  
13 is primarily the significant capital investments that the Company has made and plans to make  
14 through June 30, 2025. Second, as part of this discussion, I address the affordability of water  
15 and wastewater service under present and proposed rates and proposals the Company is  
16 making to improve affordability for its customers; explain the sources of the accounting data  
17 that were the starting point for the Company’s rate case presentation; identify the test years  
18 the Company is employing in this case; and give an overview of PAWC’s Exhibit No. 3-A.

19 Third, I will discuss and, together with other PAWC witnesses, support the following  
20 specific parts of the Company’s case:

21 (1) The Company’s use of authority conferred by Act 11 of 2012 (“Act 11”) and Section  
22 1311(c) of the Pennsylvania Public Utility Code (“Code”) to mitigate the impact of

1 revenue increases on wastewater customers by recovering a portion of the Company's  
2 wastewater revenue requirement from its total water and wastewater customer base;

3 (2) The Company's proposal to implement alternative ratemaking mechanisms under  
4 Section 1330 of the Code consisting of a Revenue Decoupling Mechanism and an  
5 Environmental Compliance Investment Charge;

6 (3) The Company's request for regulatory and accounting treatment for the deferral of  
7 pension, other post-employment benefits ("OPEB") and production expenses;

8 (4) The Company's compliance with Section 1301.1(b) of the Code by calculating the  
9 "differential" in tax costs recognized for ratemaking purposes before and after the  
10 enactment of Act 40 of 2016 and identifying how 50% of that differential will be  
11 invested in water and wastewater infrastructure.

12 Fourth, I will discuss, or identify other witnesses who discuss, the Company's  
13 compliance with commitments it made in the Joint Petition for Settlement of Rate  
14 Investigation ("Joint Petition for Settlement") approved by the Commission in the Company's  
15 last base rate case at Docket Nos. R-2022-3031671 and R-2022-3031672.

16 Finally, I will discuss the Company's overall management performance in relation to  
17 the factors identified in Section 523 of the Code and the Commission's Policy Statement at  
18 52 Pa. Code § 69.711 and explain why the Company's superior management performance  
19 supports a rate of return on equity at the upper end of the range determined by PAWC's rate  
20 of return witness, Ms. Ann E. Bulkley, in PAWC Statement No. 13.

21 **Q. Please identify the other witnesses who are providing direct testimony on behalf of**  
22 **PAWC in this proceeding.**

1 A. In addition to me, the following witnesses will be responsible for presenting PAWC’s direct  
2 case:

3 • **PAWC Statement No. 2 - Jim Runzer** is the Vice President of Operations for PAWC.  
4 Mr. Runzer discusses the general operations of the Company; PAWC’s commitment to  
5 supplying high quality water and wastewater service; initiatives taken to increase  
6 efficiency, enhance service and control costs, including efforts to control non-revenue  
7 water; employee and customer safety and employee training and development; PAWC’s  
8 commitment to advanced metering infrastructure (“AMI”) technology; support for  
9 employee levels and compensation; and the Company’s implementation of operations-  
10 related settlement commitments from the last base rate case.

11 • **PAWC Statement No. 3 - Bruce W. Aiton** is the Vice President of Engineering for  
12 PAWC. Mr. Aiton’s testimony discusses the Company’s capital investment planning  
13 process and the challenges posed by new and changed environmental mandates between  
14 rate cases; PAWC’s plant additions to be placed in service during the future test year  
15 (“FTY”) ending June 30, 2024 and fully projected future test year (“FPFTY”) ending  
16 June 30, 2025; operational and regulatory risks associated with maintaining safe and  
17 adequate water quantity and water quality and complying with applicable drinking water  
18 and environmental regulations associated with owning and operating facilities for  
19 supplying water and wastewater services to the public, complying with environmental  
20 regulations applicable to owning and operating facilities for furnishing wastewater service  
21 to the public, and the challenges climate change could create for water and wastewater  
22 utilities; and the bulk treatment service provided to municipal and utility wastewater  
23 systems adjacent to the Company’s York wastewater treatment plant.

- 1           • **PAWC Statement No. 4 - Stacey D. Gress** is Director of Rates and Regulatory for  
2           PAWC. Her testimony discusses the Company’s claims for rate base, depreciation and  
3           amortization, taxes other than income and acquisitions since its last rate case that the  
4           Company has reflected in its proposed rate base in this case, the Company’s claim for rate  
5           case and regulatory expense, proposed tariff changes, the allocation of expenses between  
6           water and wastewater operations, and PAWC’s rate structure and rate design proposals.
- 7           • **PAWC Statement No. 5 - Lori O’Malley** is Senior Manager Regulatory Services for  
8           AWWSC. Her testimony addresses the Company’s claim for labor and labor-related  
9           expenses, Service Company expenses, other operation and maintenance (“O&M”)  
10          expenses, and miscellaneous expenses.
- 11          • **PAWC Statement No. 6 - E. Christopher Abruzzo** is Senior Director of Business  
12          Development for PAWC. His testimony describes various acquisitions that PAWC has  
13          included in this base rate case and provides support for the Company’s request for  
14          acquisition adjustments pursuant to 66 Pa. C.S. § 1327 (relating to acquisition of water  
15          and sewer utilities) and 52 Pa. Code § 69.711 (statement of policy regarding small  
16          nonviable water and wastewater systems).
- 17          • **PAWC Statement No. 7 - Melissa Ciullo** is Vice President of Tax for AWWSC. Her  
18          testimony addresses the Company’s computation of income tax expense in compliance  
19          with Act 40 of 2016, the Pennsylvania state tax rate change, and the Corporate Alternative  
20          Minimum Tax.
- 21          • **PAWC Statement No. 8 - J. Cas Swiz** is Senior Director, Enterprise-Wide Regulatory  
22          Strategy of AWWSC. His testimony discusses PAWC’s claim for uncollectible accounts  
23          expense and amortization of the deferred amounts recorded to the regulatory asset for

1 incremental COVID-19 related financial impacts authorized in the Company’s last base  
2 rate case. His testimony also discusses PAWC’s proposed deferred accounting treatment  
3 for pension, OPEB, and production expenses, as well as the Company’s proposed  
4 Environmental Compliance Investment Charge.

- 5 • **PAWC Statement No. 9 – Deborah A. Degillio** is Vice President and Chief Customer  
6 Officer of AWWSC. Her testimony provides an overview of PAWC’s customer service  
7 function and addresses how the Customer Service Organization (“CSO”) uses customer  
8 feedback to drive customer satisfaction, the CSO’s efforts to improve customer service  
9 and achieve customer service performance objectives, and PAWC’s customer assistance  
10 programs and proposed enhancements to those programs in this base rate case.
- 11 • **PAWC Statement No. 10 - Charles B. Rea** is Senior Director, Enterprise-Wide  
12 Regulatory Pricing & Affordability of AWWSC. His testimony explains the design of  
13 current and proposed tariff rates, presents the Company’s affordability analyses for water  
14 and wastewater service, describes the Company’s analysis of residential, commercial, and  
15 municipal water consumption, discusses the Company’s claimed revenues, and supports  
16 the Company’s proposed Revenue Decoupling Mechanism.
- 17 • **PAWC Statement No. 11 - John J. Spanos** is President of Gannett Fleming Valuation  
18 and Rate Consultants LLC. Mr. Spanos’ testimony explains the development of the  
19 depreciated original cost of the Company’s utility plant in service and its claims for annual  
20 depreciation expense.
- 21 • **PAWC Statement No. 12 - Constance E. Heppenstall** is Senior Project Manager for rate  
22 studies of Gannett Fleming Valuation and Rate Consultants LLC. Ms. Heppenstall’s

1 testimony explains the allocation of the cost of service to customer classifications and the  
2 identification of stormwater-related costs of service of combined sewer systems (“CSSs”).

- 3 • **PAWC Statement No. 13 - Ann E. Bulkley** is a Principal with The Brattle Group.  
4 Ms. Bulkley’s testimony provides a recommendation regarding PAWC’s authorized  
5 return on equity and assesses the reasonableness of its proposed capital structure for  
6 ratemaking purposes.

7 **OVERVIEW: GENERAL INFORMATION ABOUT THE COMPANY AND THIS CASE**  
8 **REASONS FOR RATE RELIEF REQUESTED**

9 **Q. Please summarize the rate increase sought by PAWC in this proceeding.**

10 A. The Company is seeking an increase in the rates of its water and wastewater operations that  
11 will produce additional annual operating revenues of \$203.9 million, or 20.2%, over PAWC’s  
12 annualized total revenues at present rates including Distribution System Improvement Charge  
13 revenue. The key elements of the Company’s rate request are summarized on Schedule AEE-1  
14 to this statement. Schedule AEE-2 to this statement is a more detailed summary that provides  
15 an overview of revenue requirements and revenues at existing and proposed rates on a total-  
16 Company basis.

17 **Q. What are the major drivers of the Company’s request for rate relief?**

18 A. The most significant driver of this request for rate relief is PAWC’s ongoing infrastructure  
19 investment. As explained in Mr. Aiton’s direct testimony (PAWC Statement No. 3),  
20 maintaining PAWC’s facilities requires substantial capital investment. PAWC has made, and  
21 must continue to make, substantial investments in new and replacement plant and equipment  
22 to replace aging infrastructure, comply with mandates imposed by the Safe Drinking Water  
23 Act, the Clean Water Act and the Clean Streams Law and their associated regulations, and

1 meet customers' demands for water and wastewater service. From the end of the FPFTY in  
2 the Company's last base rate case (December 31, 2023) through the end of the FPFTY in this  
3 case (June 30, 2025), the Company will have invested over \$1 billion in new or replacement  
4 plant and equipment, and the overwhelming majority of this investment is and will be in  
5 source of supply, treatment, distribution and collection assets. Part of this investment is also  
6 being used to improve service to small, troubled water and wastewater systems that PAWC  
7 has acquired. While the acquisition of smaller systems will result in increased economies of  
8 scale over time, the Company is currently incurring increased capital investment and an  
9 increase in operating costs.

10 Although PAWC is requesting a rate increase in this case, the Company has been  
11 generally successful in controlling O&M expense over the last decade. Comparing operating  
12 expense levels in 2013 with historic test year ("HTY") operating expenses, a period of  
13 10 years, annual operating costs per customer have increased moderately from an estimated  
14 \$300 to \$336 per customer, a \$36.00 annual increase over the 10-year period. This equates to  
15 an overall increase since 2013 of 11.91%, representing a compound annual growth rate of  
16 1.13%. In comparison, the Gross Domestic Price Deflator,<sup>1</sup> an index measuring inflation,  
17 increased from 101.77 in 2013 to 121.80 for 2023. This equates to a 19.68% increase,  
18 representing a compound annual growth rate of 1.81%. This demonstrates that the Company  
19 has been successful in controlling its O&M costs per customer over the past decade. The  
20 Company's ability to mitigate O&M increases is attributable to the Company's prudent  
21 management of operating costs. Our management initiatives, as explained by Mr. Runzer  
22 (PAWC Statement No. 2), and our prudent capital investments described by Mr. Aiton have

---

<sup>1</sup> The GDP deflator, also called implicit price deflator, is a measure of inflation. It is the ratio of the value of goods and services an economy produces in a particular year at current prices to that of prices that prevailed during the HTY.

1 enabled us to work more efficiently and effectively in managing O&M expenses. However,  
2 like others, the Company is not immune to inflationary pressures. PAWC's requested increase  
3 in O&M expense is driven by increases in production costs, employee-related expenses and  
4 the cost of bringing high quality and reliable water service to additional communities in the  
5 Commonwealth and supports the Company's efforts to continue providing high quality water  
6 and wastewater service in the most cost-effective way to our customers in the long-term.

7 In addition, to address the Company's diverse capital needs, PAWC must raise  
8 substantial amounts of debt and equity capital and, in the process, must demonstrate its ability  
9 to provide a reasonable return for investors to commit their funds to the Company for its use.  
10 On an annual basis, PAWC's capital investment program is greater than its allowance for  
11 depreciation, which results in negative free cash flow. Therefore, the Company needs to seek  
12 financing for its capital investments beyond any internally generated cash flow. As shown in  
13 Schedule AEE-2 and explained in the Statement of Specific Reasons for Proposed Increase in  
14 Rates that accompanies the Company's filing, absent rate relief, the Company's overall rate  
15 of return on an original cost basis will be only 5.78% as of June 30, 2025. More significantly,  
16 the indicated return on common equity is anticipated to be 6.63% as of June 30, 2025, which  
17 is clearly far less than is required.

## 18 **AFFORDABILITY OF WATER AND WASTEWATER SERVICE**

19 **Q. In general, why is PAWC's proposed rate increase reasonable and appropriate?**

20 A. PAWC's proposed rate increase is reasonable and appropriate because, as I previously  
21 discussed, it is driven primarily by investments that keep our water and wastewater service  
22 safe and reliable. Such investments cannot be avoided and are in the long-term best interests  
23 of our customers. If such investment is not made, our customers will be adversely impacted

1 in the long run as costs will increase even more. For example, when mains are not replaced  
2 in a timely fashion, or equipment is neglected, our costs rise, as unanticipated main breaks  
3 create water quality issues, unexpected expenses, and disruption to our customers and  
4 communities. Similarly, equipment in need of replacement makes workers less efficient and  
5 can create safety issues.

6 **Q. Has PAWC evaluated the impact of the proposed rate increases on its customers?**

7 A. Yes, we have. We know our water and wastewater service is critical, and we know how  
8 important it is for that service to remain affordable. A Zone 1 residential customer using 105  
9 gallons of water per day would pay approximately \$2.90 per day for water under our rate  
10 proposal. Therefore, for about \$2.90 per day an average residential customer has all the water  
11 they and their family need to drink, cook, wash, and maintain their general health and well-  
12 being.

13 **Q. Has the Company performed an analysis of the affordability of its water and wastewater  
14 service under the proposed rates?**

15 A. Yes. Mr. Rea (PAWC Statement No. 10) has conducted a detailed analysis of the affordability  
16 of our historical and proposed residential rates and relates the median household income  
17 (“MHI”) for customers in our service territory to our utility bills over time. Mr. Rea’s analysis  
18 demonstrates that our water and wastewater service, overall, has been affordable over time  
19 and will remain affordable for the majority of residential customers under the proposed rates.  
20 His testimony compares historical average monthly water bills to monthly household income  
21 for PAWC customers from 2012 through 2023, both in absolute terms and in terms of bill to  
22 income (“BTI”) ratios. Mr. Rea then analyzed the Company’s proposed bills in this case and  
23 estimated MHI for PAWC customers during the FPFTY. His analysis shows that BTI Ratios

1 for PAWC’s residential customer base have held steady from 2012 to 2023 at levels between  
2 0.8% and 1.0% of MHI and are expected to be 1.12% under the Company’s proposed rates in  
3 this case during the FPFTY. Mr. Rea shows that BTI Ratios for wastewater service have  
4 similarly held steady from 2012 through 2022 at levels between 0.9% and 1.2% of MHI but  
5 rose in 2023 to 1.55% and are expected to be 1.37% under the Company’s proposed  
6 wastewater rates in this case. This is a tangible demonstration that our customer bills will  
7 remain affordable for the majority of customers even with PAWC’s requested rate increase.

8 **Q. How does PAWC maintain the affordability of its water service?**

9 A. As I noted previously, an important way that we maintain affordability is by continuously  
10 seeking to improve our business processes and make investments that improve operational  
11 efficiencies, and we have been very successful in doing so. As Mr. Aiton and Mr. Runzer  
12 explain, we use targeted and proactive investments to permit us to work smarter and more  
13 efficiently as well as leveraging the power of our organization to purchase equipment and  
14 supplies at advantageous terms. All of these help us better manage our cost structure and  
15 mitigate cost increases.

16 **Q. Notwithstanding the overall affordability of PAWC’s rates, are there customers who**  
17 **might face affordability issues?**

18 A. Yes, some of our customers face challenging economic circumstances. Thus, Mr. Rea also  
19 examined the affordability of our rates for customers at different MHI levels. His assessment  
20 compares annualized bills for “basic water and/or wastewater service” (i.e., service that is  
21 necessary and reasonable to meet basic household needs for drinking, cooking, sanitation, and  
22 general health service that does not include seasonal discretionary water use) to measures of  
23 household income for lower income groups. The Company estimates that there are

1 approximately 108,000 residential water customers in its service areas with household  
2 incomes at or below 150% of Federal Poverty Level (“FPL”), or approximately 17% of the  
3 Company’s residential water customer base. For these customers, the Company continues to  
4 offer various assistance programs, which I describe below. The Company is also proposing  
5 in this case to expand its income-based tariff discount program to include customers between  
6 150% and 200% of FPL in order to further address the affordability of water or wastewater  
7 service, as explained in more detail by Mr. Rea.

8 **Q. What customer assistance programs does PAWC offer its low-income customers to**  
9 **maintain the affordability of its service?**

10 A. PAWC offers several customer assistance programs to help our low-income customers. The  
11 Company supports low-income customers through PAWC’s H2O Help to Others Program™  
12 (“H2O”). The H2O program currently offers a three-fold approach, including bill discounts  
13 for water and wastewater service, hardship grants, and water conservation assistance. The  
14 Company also anticipates offering an Arrearage Management Program (“AMP”).

15 The bill discount program currently includes a three-tier discount with discounts on  
16 the total bill ranging from 30% to 80%. I discuss the proposed expansion of the low-income  
17 discount below.

18 The hardship grant assistance program is a bill-paying assistance program funded by  
19 PAWC shareholders and donations from customers and others who want to help our customers  
20 in need. Customers who qualify may receive grants of up to \$500 annually toward their water  
21 bill and \$500 annually toward their wastewater bill. The hardship grant assistance program is  
22 administered by Dollar Energy Fund, an independent, non-profit organization. The Company  
23 currently contributes \$750,000 annually to the hardship fund and anticipates increasing this

1 contribution by \$700,000 annually for the next five years, or a total annual donation of  
2 \$1,450,000.<sup>2</sup> This donation is funded by PAWC’s shareholders and is not recovered from  
3 customers.

4 The water conservation assistance program offers tools and tips to help customers save  
5 water and money. The program includes a leak detection kit to help identify household leaks,  
6 conservation tips and water use calculator.

7 The AMP is a program that will assist low-income customers with arrearages. This  
8 program is described in more detail below. A Settlement of the AMP is currently pending  
9 approval before the Commission. If the Company receives approval of the AMP in 2023, the  
10 Company anticipates the AMP being available to customers in late 2024.

11 In addition, the Company offers its customers who qualify flexible payment  
12 arrangements through installment agreements if they are financially unable to pay a water  
13 and/or wastewater service bill when due. The Company also offers residential customers the  
14 option of paying bills under its budget billing plan. For customers electing budget-billing, the  
15 Company estimates the customer’s total billed amount for service during a succeeding twelve-  
16 month period and, for that period, issues monthly bills based on one-twelfth of the twelve-  
17 month estimate. The Company recently undertook a statewide promotional effort through  
18 emails and bill inserts to educate customers on budget billing and preferred due date options.

19 **Q. Has the Company been able to use American Rescue Plan Act funding to assist**  
20 **customers?**

---

<sup>2</sup> The increased annual donation is a provision of the proposed settlement of the Company’s application to acquire the Butler Area Sewer Authority (“BASA”) wastewater system, which is currently pending at Docket No. A-2022-3037047. If the settlement is approved by the Commission, the increased annual donation will commence upon closing of the BASA acquisition.

1 A. Yes. The Low-Income Household Water Assistance Program (“LIHWAP”), which was  
2 authorized by the federal government pursuant to the American Rescue Plan Act of 2021 and  
3 the Consolidated Appropriations Act, 2021, has provided bill assistance for our qualifying  
4 customers. At the state level, this program was administered by the Pennsylvania Department  
5 of Human Services (“DHS”). PAWC had a vendor agreement with the DHS. Customers could  
6 apply online at [www.compass.state.pa.us](http://www.compass.state.pa.us), call DHS and request an application or apply in  
7 person at a local county assistance office.

8 Prior to the program ceasing in October 2022 due to funds being depleted, PAWC  
9 customers received nearly 13,000 grants totaling over \$7.5 million. When additional funds  
10 were made available in 2023, PAWC customers received over 2,400 additional grants totaling  
11 over \$1.1 million. As explained in more detail later in my testimony, the Company went above  
12 and beyond to promote the availability of these funds to low-income customers to help them  
13 to pay their bills and also undertook efforts to help ensure that additional funds were allocated  
14 to Pennsylvania to be made available to our customers.

15 **Q. Has the Company been able to use other state and federal funding to assist customers?**

16 A. Yes. The Pennsylvania Homeowner Assistance Fund, or PAHAF, is a housing-related  
17 program funded by the U.S. Treasury to assist Pennsylvania homeowners facing financial  
18 hardship as a result of the COVID-19 pandemic. The program provides financial assistance to  
19 homeowners for qualified mortgage and housing-related expenses to address delinquency and  
20 avoid default, foreclosure, or displacement. The Pennsylvania Housing Finance Authority  
21 was allocated \$350 million under the American Rescue Plan Act of 2021 to develop the  
22 PAHAF program to help Pennsylvania homeowners avoid mortgage delinquency, foreclosure,  
23 or displacement. As of October 12, 2023, PAWC has received approximately \$261,000 under

1 the PAHAF program. At this time, the program is not accepting new applications but is  
2 continuing to process applications already received.

3 **Q. You mentioned PAWC is proposing an expanded low-income discount to assist its low-**  
4 **income customers. What is PAWC’s proposal?**

5 A. The Company’s current discount tariff rates are based on the customers’ percentage of federal  
6 poverty level, with three tiers from 0% to 150% of the FPL. The Company is proposing to  
7 expand this tariff to include customers with household incomes between 150% and 200% of  
8 the FPL. As explained by Mr. Rea, the Company’s proposed expansion to the low-income  
9 discount program will improve the affordability of water and wastewater service for this group  
10 of customers.

11 The proposed modification to this tariff would reduce the typical basic water service  
12 (“BWS”) bill as shown in the chart below:

13 *Proposed Low Income Discount Program*

<i>Income Group</i>	<b>BWS Bill Pre-Discount</b>	<b>Pre- Discount BTI Ratio</b>	<b>BWS Bill Post-Discount</b>	<b>Post-Discount BTI Ratio</b>
<i>0% - 50% FPL</i>	\$75.43	16.17%	\$16.45	3.53%
<i>51% - 100% FPL</i>	\$80.29	5.73%	\$38.09	2.72%
<i>101% - 150% FPL</i>	\$81.46	3.55%	\$58.65	2.56%
<i>151%-200% FPL</i>	\$84.69	2.70%	\$71.59	2.28%

14 **Q. Please summarize the Company’s Arrearage Management Plan (“AMP”) that is**  
15 **pending Commission review and approval.**

16 A. In accordance with a stipulation between the Company and the Commission on Economic  
17 Opportunity in the Company’s 2020 base rate case, on August 25, 2021, PAWC filed with the  
18 Commission a Petition of Pennsylvania-American Water Company for Approval of an  
19 Arrearage Management Plan at Docket No. P-2021-3028195. Under this program, qualifying

1 customers will receive \$25 of arrearage forgiveness per month. A Settlement of this  
2 proceeding was filed with the Commission on May 13, 2022 and an amended settlement was  
3 filed on July 27, 2022. On December 28, 2022, the Commission entered an Order remanding  
4 the proceeding to the Office of Administrative Law Judge for further proceedings. The  
5 purpose of the remand was to require income verification for customers seeking to enroll in  
6 the AMP. A further amended settlement was filed on September 11, 2023. Consistent with  
7 the Commission's Order, the further amended settlement establishes a framework for income  
8 verification and periodic income recertification. On October 12, 2023, a Recommended  
9 Decision was entered recommending approval of the further amended settlement without  
10 modification.

11 **Q. When will the Company implement its AMP?**

12 A. The proposed settlement of the AMP proceeding provides that the Company will implement  
13 the plan no later than twelve months after the Commission issues a Final Order in the AMP  
14 proceeding. The Company anticipates implementing the AMP as close to the effective date of  
15 new rates as possible, dependent on when Commission approval of the settlement is received.  
16 The Company has included \$2,864,700 in its expense claims in this case to fund the AMP,  
17 which is consistent with the settlement.

18 **Q. Is the Company's AMP a pilot program?**

19 A. Yes, from a cost recovery standpoint, the AMP is being implemented as a pilot program. The  
20 settlement also provides that during the period that the AMP is considered a pilot program,  
21 the Company will record a regulatory asset or liability for amounts over or under the amount  
22 included in rates for recovery or refund in the next base rate case.

1 **SOURCE OF ACCOUNTING DATA AND THE TEST YEARS EMPLOYED BY THE**  
2 **COMPANY**

3 **Q. What is PAWC’s principal accounting exhibit in this case?**

4 A. PAWC Exhibit No. 3-A is PAWC’s principal accounting exhibit in this case. PAWC Exhibit  
5 No. 3-A includes five separate revenue requirement studies, one of which relates to the  
6 Company’s water operations and four that relate to its wastewater operations.

7 **Q. What is the source of the accounting data used in PAWC Exhibit No. 3-A?**

8 A. The starting point for each of the revenue requirement studies in PAWC Exhibit No. 3-A is  
9 the accounting information recorded in the Company’s books and records for the twelve  
10 months ended June 30, 2023. The Company’s books and records are maintained in conformity  
11 with the National Association of Regulatory Utility Commissioners (“NARUC”) Uniform  
12 System of Accounts for Water Companies, the NARUC Uniform System of Accounts for  
13 Wastewater Companies and generally accepted accounting principles. Because the purpose  
14 of ratemaking is to establish rates to be applied in the future, per-book data were adjusted on  
15 a pro forma basis, as appropriate, to reflect changes in operating conditions that are not fully  
16 reflected in the book data for the HTY, the FTY or the FPPTY.

17 **Q. Why is the Company presenting five separate revenue requirement studies in PAWC**  
18 **Exhibit No. 3-A?**

19 A. The Company is presenting five separate revenue requirement studies in its Exhibit No. 3-A  
20 to comply with the terms set forth in the Joint Petition for Settlement and the terms and  
21 conditions of the anticipated Commission’s approvals of PAWC’s acquisitions of certain  
22 wastewater systems that are included in this case.

23 Paragraph 14 of the Joint Petition for Settlement provides that “in future rate filings,  
24 PAWC will submit one or more separate stormwater and wastewater cost-of-service studies

1 for each of its [CSSs]”<sup>3</sup> and further provides that “the Company is not required to provide a  
2 separate study for each combined sewer system.” Accordingly, PAWC Exhibit No. 3-A  
3 includes a separate revenue requirement study, in aggregate, for the CSSs it currently owns,  
4 which consist of the Scranton, McKeesport, and Kane systems.

5 The Company is also submitting separate cost of service studies for the wastewater  
6 systems that PAWC expects to acquire from the Butler Areas Sewer Authority (“BASA”) and  
7 the Borough of Brentwood, pursuant to the proposed settlement agreement for the BASA  
8 acquisition pending before the Commission and consistent with past practice for systems  
9 acquired pursuant to Section 1329.

10 **Q. In the Company’s last base rate case, it submitted separate revenue requirement studies**  
11 **for Royersford Wastewater Sanitary Sewer System (“SSS”) Operations, Upper**  
12 **Pottsgrove Wastewater SSS Operations, and York Wastewater SSS Operations. Please**  
13 **identify where the information with respect to these systems is included in the**  
14 **Company’s filing in this case.**

15 A. Each of these systems are included in the Wastewater SSS General Operations revenue  
16 requirement.

17 **Q. Briefly explain what is set forth in Exhibit No. 3-A.**

18 A. As previously explained, PAWC Exhibit No. 3-A contains five separate revenue requirement  
19 studies, each of which is set forth at a separate tab within the exhibit, consisting of the  
20 following:

Tab 1	Water Operations
Tab 2	Wastewater Sanitary Sewer Systems General Operations

---

<sup>3</sup> The cost-of-service studies that separately identify and quantify storm water costs are sponsored by Ms. Heppenstall and are explained in her direct testimony (PAWC Statement No. 12).

Tab 3	Butler Wastewater (“WW”) Operations
Tab 4	Brentwood WW Operations
Tab 5	Wastewater Combined Sewer Systems Operations

1 A summary page at the beginning of PAWC Exhibit No. 3-A shows the Company’s  
2 rate request on a consolidated (total Company) basis. Applicable workpapers and supporting  
3 documentation for PAWC Exhibit No. 3-A are set forth in PAWC Exhibit Nos. 3-B and 3-C.  
4 I am responsible for portions of each of these exhibits. Other witnesses are responsible for  
5 other portions of these exhibits as explained in their respective statements. Each page of  
6 PAWC Exhibit No. 3-A identifies the witness responsible for that portion of the exhibit.

7 In order to reflect data for the FPFTY, PAWC Exhibit No. 3-A presents PAWC’s rate  
8 base, revenues, expenses and tax information on the basis of an HTY ended June 30, 2023, a  
9 FTY ending June 30, 2024, and a FPFTY ending June 30, 2025. The support for the  
10 Company’s requested revenue increase is based principally upon the data presented for the  
11 FPFTY. Within PAWC Exhibit No. 3-A, HTY data are generally identified by the title or  
12 heading “Present Rates at June 30, 2023” and FTY data are generally identified by the title or  
13 heading “Present Rates at June 30, 2024.” Data for the FPFTY are generally identified by the  
14 title or heading “Present Rates at June 30, 2025.”

15 **SUPPORT FOR SPECIFIC ELEMENTS OF THE COMPANY’S FILING**

16 **Development of Water and Wastewater Revenue Requirements and the Application of**  
17 **Section 1311(c) of the Code**

18 **Q. Has the Company relied upon provisions of Act 11 in developing its proposed rates in**  
19 **this case?**

20 **A.** Yes, it has. As authorized by Section 1311(c) of the Code, PAWC is proposing to allocate in  
21 the FPFTY approximately \$71 million of its wastewater cost of service to its water operations,

1 which is approximately 7% of total proposed water revenue. Thus, the authority granted by  
 2 Act 11 would be used to mitigate the increases that wastewater customers in certain service  
 3 areas would experience if their rates were established on a stand-alone basis. The Company’s  
 4 proposed rates would also make meaningful progress in moving the rates of its separate  
 5 wastewater rate zones closer to a single consolidated wastewater rate design for all of the  
 6 Company’s wastewater operations.

7 The following table shows the effect on each wastewater operation of allocating a  
 8 portion of wastewater revenue requirement to water operations and developing rates in the  
 9 manner discussed above in summary form for the FPFTY:

<b>Revenue Requirement Allocated from Wastewater to Water Customer Base</b>	
<b>Wastewater Operations</b>	<b>FPFTY June 30, 2025</b>
Wastewater Sanitary Sewer Systems General Operations	\$31,962,411
Butler Wastewater (“WW”) Operations	\$21,552,699
Brentwood WW Operations	\$1,565,232
Wastewater Combined Sewer Systems Operations	\$16,007,052
<b>Total</b>	<b>\$71,087,394</b>

10  
 11 **Q. What is the impact on the Company’s proposed revenue requirement for water and**  
 12 **wastewater customers of allocating a portion of wastewater revenue requirement to**  
 13 **water operations, as shown above?**

14 **A.** Based on the Company’s cost of service and proposed customer class revenue allocation in  
 15 this case, the allocation would increase the monthly water bill of a residential water customer  
 16 by approximately \$6.08 per month at proposed rates. The allocation would decrease the

1 monthly wastewater bill of a residential wastewater customer by approximately \$10 to \$90  
2 per month at proposed rates depending on the rate and location of the customer.

3 **Q. What does Section 1311(c) of the Code state concerning the allocation of wastewater**  
4 **revenue requirement to water customers?**

5 A. Section 1311(c) of the Code states: “The commission, when setting base rates, after notice  
6 and an opportunity to be heard, may allocate a portion of the wastewater revenue requirement  
7 to the combined water and wastewater customer base if in the public interest.”

8 **Q. What is your understanding of the phrase “in the public interest” in Section 1311(c) of**  
9 **the Code?**

10 A. The phrase is not specifically defined in Section 1311(c). However, I am advised by counsel  
11 that the Commission provided guidance on the meaning of “in the public interest” in the  
12 Company’s 2020 base rate proceeding with respect to acquisitions that were approved under  
13 Section 1329 of the Public Utility Code.<sup>4</sup> The Commission held that it is in the public interest  
14 for a utility to recover a portion of the wastewater revenue requirement associated with an  
15 acquired wastewater system from the combined water and wastewater customer base,  
16 “because otherwise, large viable public utilities would be discouraged from acquiring  
17 municipal and wastewater systems and contravene legislative intent and the Commission’s  
18 policy of encouraging consolidation and regionalization.”<sup>5</sup>

19 **Q. Is the public interest served by distributing a portion of the revenue requirement of the**  
20 **Company’s wastewater operations across PAWC’s approximately 780,000 water**  
21 **customers?**

---

<sup>4</sup> *Pa. Pub. Util. Comm’n v. Pennsylvania-American Water Co.*, Docket Nos. R-2020-3019369 and R-2010-3019371  
(Opinion and Order entered Feb. 25, 2021), p. 82.

<sup>5</sup> *Id.*

1 A. Yes, it is. As indicated by the Commission in the Company’s 2020 rate case, it is in the public  
2 interest for the Company to recover a portion of its wastewater revenue requirement associated  
3 with its acquired wastewater systems from its combined water and wastewater customer base.<sup>6</sup>  
4 Distributing a portion of the revenue requirement of the Company’s wastewater operations  
5 across all of the Company’s approximately 780,000 water customers is consistent with  
6 legislative intent and the important policy considerations underlying Sections 1311(c) and  
7 Section 1329, including ameliorating rate impacts on wastewater customers while imposing  
8 only a modest increase on the water bills of the much larger base of water customers, and  
9 promoting the Commission’s policy of encouraging consolidation and regionalization.

10 The amendment Act 11 made to Section 1311(c) has extended to combined water and  
11 wastewater utilities a policy similar to the concept of single tariff pricing, which this  
12 Commission has approved and encouraged water utilities to adopt for nearly forty years. Like  
13 single tariff pricing, allocating a portion of wastewater revenue requirement to the entire  
14 customer base recognizes that: (1) PAWC is an integrated water and wastewater company;  
15 (2) a multitude of functions needed to provide water and wastewater service are performed on  
16 a consolidated basis by PAWC employees and by the Service Company; (3) providing both  
17 water and wastewater service creates opportunities, over time, to capture additional economies  
18 of scale and scope; (4) the need for capital additions in different parts of the Company’s water  
19 and wastewater systems will be higher in some areas and lower in others at any given point in  
20 time, but will average out over time ; (5) “averaging” water and wastewater costs is very much  
21 like the cost averaging that single tariff pricing is explicitly designed to accomplish and  
22 stabilizes rates and mitigates rate impacts for all customers over the long run. Consistent with

---

<sup>6</sup> *Id.*

1 these factors, PAWC’s proposal represents a reasonable approach to allocating revenue  
2 requirement that supports economies of scale over the long term.

3 **Q. You described the pending acquisition of the BASA wastewater system above. Please**  
4 **discuss the hardship fund contribution that will benefit PAWC’s water and wastewater**  
5 **customers.**

6 A. In February 2023, PAWC filed with the Commission an application to acquire the BASA  
7 wastewater assets. On August 14, 2023, PAWC filed with the Commission a Joint Petition for  
8 Unanimous Settlement of All Issues.<sup>7</sup> In this Settlement, the Company agreed to increase its  
9 shareholder donation to its hardship fund by \$700,000 per year for five years, or a total of \$3.5  
10 million. The first donation will be made following closing, which is expected before the end  
11 of 2023. This additional shareholder contribution will nearly double the funds available for  
12 low-income hardship grants, and eligibility will be expanded to include customers between  
13 200%-250% of the federal poverty level.

14 Of this \$700,000 annual donation, the Company anticipates that in 2023, nearly 80%,  
15 or \$555,000, will be made available to the Company’s water customers. In this way, the  
16 Company’s acquisition of the BASA system will provide an immediate benefit to the  
17 Company’s low-income water and wastewater customers.

18 **Proposed Revenue Decoupling Mechanism**

19 **Q. Is the Company proposing a Revenue Decoupling Mechanism in this proceeding?**

20 A. Yes. As outlined in the testimony of Mr. Rea, the Company requests approval of a Revenue  
21 Decoupling Mechanism (“RDM”) for both water and wastewater service as part of this

---

<sup>7</sup> This settlement is currently pending before the Commission, as discussed in more detail by Mr. Abruzzo in Statement No. 6.

1 proceeding. The RDM is an alternative rate design mechanism designed to provide the  
2 Company with the opportunity to more reliably recover its authorized revenue requirement  
3 and the fixed costs authorized in this proceeding. As explained by Mr. Rea, the RDM will  
4 compare the difference between actual revenue collected from eligible customers under the  
5 Commission-approved rates in this case against cost components calculated to recover the  
6 Company's fixed costs of providing service. If actual revenues are higher than would have  
7 been collected under the RDM formula, the difference will be credited to customers in the  
8 subsequent year through the mechanism. If actual revenues are lower than would have been  
9 collected under the RDM formula, the difference will be collected from customers in the  
10 subsequent year through the mechanism.

11 **Q. Does Pennsylvania law allow the Commission to approve a Revenue Decoupling**  
12 **Mechanism as PAWC requests?**

13 A. Yes. 66 Pa. Code C.S. § 1330(b) was added to the Public Utility Code in a 2018 amendment.  
14 I am advised by counsel that Section 1330 allows the Commission to approve an application  
15 by PAWC to establish various forms of alternative ratemaking. One such form of alternative  
16 ratemaking, as identified in Section 1330(b)(i), is a decoupling mechanism.

17 **Q. Does Section 1330 state the policy goals of this alternative ratemaking treatment?**

18 A. Yes. Section 1330(a)(2) states as follows:

19 It is the policy of the Commonwealth that utility ratemaking should encourage and  
20 sustain investment through appropriate cost-recovery mechanisms to enhance the  
21 safety, security, reliability or availability of utility infrastructure and be consistent with  
22 the efficient consumption of utility service.

23 The Commission policy objectives state that the utility's alternative ratemaking proposals:  
24 "should encourage and sustain investment" through mechanisms that (1) "enhance safety,

1 security, reliability or availability of utility infrastructure”, and (2) are “consistent with the  
2 efficient consumption of utility service.”

3 **Q. How does the Company’s proposed RDM meet these policy objectives?**

4 A. The authorized water and wastewater revenue requirements approved by the Commission  
5 represent the amount of revenue the Commission determines that the Company needs to  
6 operate, maintain, and invest in its water and wastewater system in a prudent and efficient  
7 manner. The Company’s investment priorities continue to focus on non-revenue producing  
8 investments (e.g., water efficiency investments, aging infrastructure replacement and  
9 compliance with environmental regulations) (PAWC Statement No. 3). A rate design that  
10 relies heavily on sales volumes means that the Company’s revenues are driven by factors  
11 which are largely outside of its control. The need to recover these significant investments,  
12 including an opportunity to earn a return on those investments, however, does not vary with  
13 usage. The ability to reliably recover the Company’s approved revenue requirement improves  
14 the Company’s ability to plan, manage, maintain, and invest in the facilities necessary to  
15 continue providing safe, reliable, and high-quality water and wastewater service at a  
16 reasonable cost to customers (PAWC Statement No. 3).

17 Further, the volumetric components of the Company’s current rate structure can create  
18 a “throughput incentive”: the more water customers use, the more revenue the Company  
19 collects and, to the extent this revenue exceeds variable costs, the better its financial  
20 performance. Rather than implicitly encouraging water use and penalizing a water utility for  
21 encouraging conservation, an RDM removes a disincentive for utilities to promote end-use  
22 efficiency. Removing the disincentive to improving end-use efficiency is consistent with the  
23 policy objective of “the efficient consumption of utility service.”

1           Just as prudent energy efficiency investments can be the least-cost investments in  
2 energy resources, improving water efficiency reduces operating costs (e.g., energy, treatment  
3 and residuals handling/storage costs) and reduces the need to develop new supplies and  
4 expand our water infrastructure. Thus, both the Company and customers ultimately benefit  
5 from the RDM because it provides a consistent regulatory framework to support long-term  
6 capital investment, properly matches cost incurrence with cost recovery, and facilitates more  
7 consistent and efficient planning and deployment of resources.

8           **Proposed Environmental Compliance Investment Charge**

9   **Q. Is the Company proposing an Environmental Compliance Investment Charge in this**  
10 **proceeding?**

11 A. Yes. As outlined in the testimony of PAWC witness Cas Swiz, the Company requests approval  
12 of an Environmental Compliance Investment Charge (“ECIC”) as part of this proceeding. The  
13 ECIC is a rate adjustment clause designed to reflect and recover, between rate cases, the  
14 capital costs and expenses imposed on the Company to address and comply with new or  
15 changed federal and state environmental mandates. Costs that are recoverable through the  
16 ECIC must be consistent with the set of projects and activities set forth in an annual  
17 environmental compliance plan to be filed by the Company and approved by the Commission.

18 **Q. Does Pennsylvania law allow the Commission to approve an Environmental Compliance**  
19 **Investment Charge as PAWC requests?**

20 A. Yes, the Commission has the express authority to approve the ECIC pursuant to 66 Pa. Code  
21 C.S. § 1330(b)(2), which expressly authorizes automatic adjustment clauses like the ECIC as  
22 a form of alternative ratemaking.

1 **Q. How does the Company’s proposed ECIC meet the policy objectives of Section 1330**  
2 **alternative ratemaking treatment?**

3 A. The Company’s environmental compliance requirements are continuously evolving and this  
4 is one of the drivers that increases the costs of water and wastewater service and the need for  
5 rate relief. As discussed in more detail by PAWC witnesses Aiton and Swiz, the need for and  
6 timing of measures to comply with new or changed government mandates under applicable  
7 environmental laws are outside of the Company’s control. The Company’s proposed ECIC  
8 will provide a reasonable mechanism for adjusting the Company’s rates between base rate  
9 cases to support full and timely rate recognition of PAWC’s costs to comply with new and  
10 updated environmental regulatory mandates in a prudent and efficient manner as they emerge.  
11 The ECIC will also mitigate customer exposure to less frequent but more significant rate  
12 increases in a general base rate case by producing much smaller, gradual increases to customer  
13 bills.

14 **Request for Regulatory and Accounting Treatment**

15 **Q. Please describe PAWC’s request for deferral accounting treatment for pension and**  
16 **OPEB expenses and why it is appropriate.**

17 A. PAWC is requesting Commission authorization to establish regulatory accounts for its  
18 pension and OPEB expenses. These expenses are difficult to predict and can materially  
19 increase or decrease from year-to-year because pension and OPEB costs are based on actuarial  
20 forecasts that take into account a number of economic and demographic factors described by  
21 Mr. Swiz. When the actual outcomes differ from the predicted values for those factors,  
22 pension and OPEB costs can be materially higher or lower than forecasted for recovery in  
23 rates, resulting in under- or over-recovery by the Company and corresponding under- or

1 overpayment by customers. The Company's proposal would compare its actual pension and  
2 OPEB expenses incurred to the amount included within base rates. The differences between  
3 the two would be deferred to a regulatory asset or liability, and the net balance would be  
4 addressed in PAWC's next base rate case.

5 **Q. Please describe PAWC's request for deferred accounting treatment for production**  
6 **expenses and why it is appropriate.**

7 A. The Company's production expenses can materially increase or decrease based on the prices  
8 charged by suppliers from whom the Company purchases water, fuel and power, wastewater  
9 treatment service, and waste disposal services needed to provide safe and reliable water and  
10 wastewater service to customers. As discussed in Mr. Swiz's testimony, the chemical market  
11 has been extremely volatile and fuel and power pricing has experienced significant increases  
12 in recent years. The Company actively manages its chemical and energy use, but external  
13 market forces are outside of the Company's and many of its suppliers' control. The Company  
14 requests deferral in order to protect both the Company's customers and PAWC against this  
15 volatility and ensure that neither customers nor the Company would be required to bear more  
16 than the Company's actual costs incurred for production costs.

17 **Q. Have you reviewed Ms. Ciullo's direct testimony regarding Section 1301.1(b)(1) of the**  
18 **Code and the Company's plan to invest 50% of the "differential" resulting from the**  
19 **implementation of Act 40?**

20 A. Yes, I have. As Ms. Ciullo noted, I will address that issue.

21 **Q. How does the Company plan to invest 50% of the "differential" (approximately**  
22 **\$2.3 million per year) that Ms. Ciullo calculated?**

1 A. The Company plans to invest in projects that will enhance the reliability of the Company’s  
2 systems and may include projects to extend the Company’s mains to address health and safety  
3 issues pursuant to Rule 27.1(F) of its tariff or for infrastructure enhancement projects that will  
4 improve the quality and reliability of service.

5 **2022 RATE CASE SETTLEMENT COMMITMENTS**

6 **Q. Has the Company complied with the terms and conditions of the Joint Petition for**  
7 **Settlement approved by the Commission in its 2022 base rate case?**

8 A. Yes, it has. The Joint Petition for Settlement, together with its attachments and accompanying  
9 exhibits, is a lengthy document setting forth a number of terms and conditions. I will briefly  
10 explain PAWC’s compliance with major commitments in the Joint Petition for Settlement  
11 directly affecting customer rates, customer service and assistance to low-income customers,  
12 which I will reference by the applicable paragraph of the Joint Petition for Settlement.

13 **Paragraph No. 21.** PAWC filed an amendment to its second wastewater Long Term  
14 Infrastructure Improvement Plan for 2024 through 2028 (“Second LTIIIP”) at Docket No.  
15 P-2023-3038874 to include systems acquired under Section 1329 of the Public Utility Code,  
16 which did not re-prioritize other existing commitments in other service areas. Following  
17 Commission approval of the Second LTIIIP on June 15, 2023, the Company filed a compliance  
18 tariff supplement that incorporates the acquired systems into PAWC’s DSIC tariff.

19 **Paragraph No. 25.** On March 31, 2023, PAWC filed updates to PAWC Exhibit 3-A,  
20 pp. 26, 90, 136, 177, 207, and 243 at the dockets for its last base rate case, including actual  
21 plant additions and retirements for the twelve months ending December 31, 2022. PAWC  
22 also committed to provide the actual plant additions and retirements, by account, for the  
23 twelve months ending December 31, 2023, no later than April 1, 2024. Given the timing of

1 the filing of this base rate case, Mr. Aiton’s Direct Testimony, PAWC Statement No. 3  
2 provides an update reflecting plant in service through September 30, 2023.

3 **Paragraph No. 33.** PAWC has proposed to eliminate minimum usage allowances for  
4 all systems.

5 **Paragraph Nos. 40 and 41.** PAWC has proposed in this filing to create a separate  
6 tariff group for current and future CSS customers and submitted a wastewater cost-of-service  
7 study that includes a separate customer class for bulk customers in the York system whose  
8 rates are set by contract.

9 **Paragraph Nos. 43 through 46.** With respect to PAWC’s Bill Discount Program  
10 (“BDP”), the three tier structure was implemented, a system for tracking and reporting on the  
11 subject data has been developed and BDP participation has been made portable for customers  
12 when changing residences.<sup>8</sup>

13 **Paragraph Nos. 47 through 56.** With respect to PAWC’s Hardship Fund and  
14 community outreach, all settlement commitments have been accomplished, including  
15 increasing the annual contribution, reducing the good faith payment requirement, working to  
16 develop a solution so that customers can receive more than one grant each year (up to the  
17 maximum grant amount),<sup>9</sup> and undertaking targeted community outreach efforts in  
18 geographic areas with a higher percentage of low-income customers.

19 **Paragraph Nos. 57 to 58.** PAWC committed to three main extension projects.  
20 Applications for extension of service territory to serve in Project Area 1 (Campbell Road and  
21 Old Steubenville Pike, Robinson and Smith Townships) and Project Area 2 (Donaldson Road,

---

<sup>8</sup> The settlement commitments in Paragraph Nos. 45 and 46 with respect to the Company’s Arrearage Management Plan are not applicable as approval is still pending before the Commission.

<sup>9</sup> Customers cannot currently get more than one grant each year, but Dollar Energy is developing the technology and anticipates having this capability for the 2024-2025 program year.

1 Robinson Township) are currently pending at the Commission and construction will  
2 commence soon after certificates of public convenience are issued. Construction is underway  
3 with respect to Project Area 3.

4 **Paragraph Nos. 59 through 61.** Commitments regarding inspecting storage tanks  
5 over 15 years old, exercising isolation valves on a 5-years cycle and inspecting critical valves  
6 annually,<sup>10</sup> and marking fire hydrants that cannot provide minimum fire flow have all been  
7 met.

8 **Paragraph No. 62.** PAWC has the ability to provide a Complaint Log as agreed  
9 upon, including the final disposition of disputes.

10 **Paragraph Nos. 63 through 69.** PAWC implemented the requirements with respect  
11 to customer service, including training for representatives handling Pennsylvania customer  
12 calls, tariff amendments regarding the process for how prior unpaid debt is handled, reports  
13 to the Customer Assistance Advisory Group (“CAAG”) on the progress of reaching certain  
14 performance objectives, updates to termination notices to inform customers of the right to  
15 make a verbal declaration of a medical emergency, revisions to bills and the Company’s  
16 interactive voice response system to clarify that convenience fees are not charged for  
17 payments by phone and tariff changes to clarify that security deposits will not be charged to  
18 customers who are eligible for the BDP.

19 **PERFORMANCE FACTORS: SECTION 523 OF THE CODE AND 52 PA. CODE § 69.711**

20 **Q. Does the Code authorize the Commission to consider performance factors in arriving at**  
21 **a utility’s allowable revenue requirement in a base rate case?**

---

<sup>10</sup> A small number of valves have yet to be inspected as of the date this testimony was finalized, but the Company anticipates inspection will be complete soon thereafter.

1 A. Yes. Section 523 of the Public Utility Code provides that the Commission “shall consider”  
2 the “efficiency, effectiveness and adequacy of service” of a utility when determining just and  
3 reasonable rates.

4 **Q. What does Section 523 provide regarding performance factors to be considered by the**  
5 **Commission?**

6 A. Section 523(a) requires the Commission to consider performance factors, while Section  
7 523(b) identifies the kinds of factors that are relevant in assessing a utility’s performance.  
8 Section 523(a) and the portions of 523(b) that are relevant to a water and wastewater utility  
9 are set forth below:

10 (a) Considerations. – The Commission shall consider, in addition  
11 to all other relevant evidence of record, the efficiency,  
12 effectiveness and adequacy of service of each utility when  
13 determining just and reasonable rates under this title. On the  
14 basis of the commission’s consideration of such evidence, it  
15 shall give effect to this section by making such adjustments to  
16 specific components of the utility’s claimed cost of service as it  
17 may determine to be proper and appropriate. Any adjustment  
18 made under this section shall be made on the basis of the  
19 specific findings upon evidence of record, which findings shall  
20 be set forth explicitly, together with their underlying rationale,  
21 in the final order of the commission.

22 (b) Fixed Utilities. – As part of its duties pursuant to subsection (a),  
23 the commission shall set forth criteria by which it will evaluate  
24 future fixed utility performance and in assessing the  
25 performance of a fixed utility pursuant to subsection (a), the  
26 commission shall consider specifically the following:

27 (1) Management effectiveness and operating efficiency as  
28 measured by an audit pursuant to Section 516 (relating  
29 to audits of certain utilities) to the extent that the audit  
30 or portions of the audit have been properly introduced  
31 with applicable rules of evidence and procedure.

32 \* \* \*

33 (5) Action or failure to act to encourage cost-  
34 effective conservation by customers of water utilities

35 \* \* \*

1 (7) Any other relevant and material evidence of  
2 efficiency, effectiveness and adequacy of service.

3 **Q. Is the Company proposing that performance factors relating to its “efficiency,**  
4 **effectiveness and adequacy of service” be considered by the Commission in this case?**

5 A. Yes, it is. For the reasons I will discuss later in my direct testimony, the Company strongly  
6 believes, and proposes, that the Commission should implement the terms of Section 523 in  
7 determining the Company’s allowed rate of return on equity in this case. Specifically,  
8 Ms. Bulkley has recommended a range of reasonable rates of return on equity from 10.0% to  
9 11.00%. Both Ms. Bulkley and I recommend that the Commission adopt a rate of return on  
10 equity of 10.95% – at the upper end of Ms. Bulkley’s range – in recognition of PAWC’s  
11 superior management performance based on the factors that apply to water utilities in  
12 Section 523 of the Code. In addition, and for the same reason, if the Commission were to  
13 approve a rate of return on equity that is lower than the upper end of Ms. Bulkley’s  
14 recommended range, it should add no less than 25 basis points to its market-determined rate  
15 of return.<sup>11</sup>

16 **Q. Please summarize the factors demonstrating the Company’s exemplary management**  
17 **performance.**

18 A. I am addressing eight areas: (1) the Company’s industry-leading programs to assist low-  
19 income and payment-troubled customers; (2) the Company’s environmental record and  
20 commitment to water quality; (3) the Company’s strong safety performance; (4) the  
21 Company’s commitment to operational and water efficiency for the benefit of customers;  
22 (5) the Company’s significant infrastructure investment; (6) the Company’s community

---

<sup>11</sup> Of course, if the Commission’s market-determined rate of return on equity is greater than 10.70%, then the performance-based increment could be less than 25 basis points to achieve a final equity return rate of 10.95%.

1 engagement and consumer education initiatives; (7) the Company's efforts to support the  
2 Commission's and the Pennsylvania Department of Environmental Protection's ("DEP")  
3 long-standing policy to eliminate the problems of small, troubled and nonviable water and  
4 wastewater systems by acquiring those systems and making the improvements needed to  
5 assure safe and reliable service; and (8) the Company's efforts to extend service to meet the  
6 needs of customers without access to safe and reliable water service.

7 **Q. Please discuss the Company's industry-leading efforts assisting low-income customers.**

8 A. For more than 30 years, PAWC's H2O program has assisted customers in need. In fact, the  
9 H2O program ranks at the top of Pennsylvania water utility customer assistance programs for  
10 the benefits it provides. To support the H2O hardship grant program, PAWC contributes more  
11 of its shareholders' money, \$750,000 annually, than any other water utility in the  
12 Commonwealth to help customers in need. As discussed above, PAWC anticipates increasing  
13 this donation by \$700,000 in late 2023.

14 The H2O program also includes a low-income bill discount program. In this  
15 proceeding, the Company is proposing to further enhance this program. Specifically, as  
16 further discussed in Mr. Rea's direct testimony (PAWC Statement No. 10), the Company is  
17 proposing to expand the eligibility for the program to include a fourth tier to assist households  
18 with incomes from 150% to 200% of the federal poverty level. It is PAWC's understanding  
19 that no other utility in Pennsylvania has extended bill discounts to customers at this income  
20 level.

21 Moreover, as discussed earlier in my testimony, PAWC is expanding its H2O program  
22 to assist low-income customers by offering arrearage forgiveness through its AMP. Under  
23 this program, qualifying customers will receive \$25 of arrearage forgiveness per month.

1           In addition, in the past two years, PAWC successfully participated in LIHWAP where,  
2           as previously noted, customers have received over \$8 million in relief to assist with unpaid  
3           bills. As of August 2023, all LIHWAP funds have been depleted but PAWC continues  
4           advocacy efforts to support the establishment of a permanent program. For example, the  
5           Company worked to build a coalition of stakeholders who advocated for a state-funded  
6           LIHWAP-like program through a coalition letter signed by 13 supporting organizations,  
7           which was sent to the State Senate and Governor Shapiro in June 2023. When SB 767 was  
8           introduced by Senator Lisa Boscola, the Company continued to ask lawmakers and the  
9           Governor’s office to include funding in the 2023-2024 state budget. The successful  
10          implementation of LIHWAP for PAWC customers is due to PAWC’s proactive engagement  
11          and collaboration with DHS and extensive customer outreach. PAWC attended stakeholder  
12          meetings, webinars and briefings prior to the LIHWAP launch. Additionally, prior to the  
13          LIHWAP launch, PAWC developed a customer communications and outreach plan to help  
14          maximize the impact of the program for customers facing challenges paying their bills. The  
15          Company published a LIHWAP-specific page on its website, prepared talking points and a  
16          one-pager about the program for its customer service, customer advocacy and external and  
17          government affairs teams, included LIHWAP information in a statewide customer email  
18          campaign, and sent information to municipal, county and state elected officials across  
19          PAWC’s service territory. From mid-January to mid-February 2022, the Company sent a bill  
20          enclosure about LIHWAP to all customers statewide, with a second bill image about LIHWAP  
21          running statewide the following month. PAWC continued to actively promote the LIHWAP  
22          program approximately once per week through its various social media channels, reaching  
23          tens of thousands of customers.

1           In addition to these widespread education and outreach efforts, PAWC launched a  
2 targeted LIHWAP email campaign on January 25, 2022 to approximately 10,000 customers  
3 with past-due balances, notifying them that they may qualify for grant assistance. On  
4 March 18, 2022 in advance of the end of the winter moratorium, PAWC launched a targeted  
5 LIHWAP direct mail letter campaign to approximately 31,000 customers with past-due  
6 balances. Additionally, for customers contacting the Company seeking payment  
7 arrangements or assistance to avoid shutoff, PAWC's scripting referred the customer to  
8 LIHWAP. When additional funds were reallocated in July 2023, the Company conducted  
9 additional targeted outreach to customers with past-due balances through a direct mail  
10 campaign to approximately 37,000 customers in July 2023 and two customer email campaigns  
11 in July and August 2023 to 28,000 and 11,000 customers, respectively. PAWC also continued  
12 to promote this LIHWAP grant re-opening on its social media channels until funding was  
13 again depleted.

14           The Company also created customer assistance cards containing information about all  
15 available water/wastewater utility assistance programs for field employees to distribute during  
16 customer interactions in the field. To further assist customers who received bill payment  
17 assistance through LIHWAP, the Company established a process to review each LIHWAP  
18 grant recipient's account and enroll all customers in PAWC's H2O bill discount program,  
19 which optimizes the level of assistance provided to those customers. The established process  
20 also includes sending a letter to each customer informing them of enrollment in the  
21 Company's H2O bill discount program. Over the course of the LIHWAP program, PAWC  
22 enrolled over 8,100 LIHWAP grantees in the Company's bill discount program, meaning they  
23 continue to receive financial relief on their bills every month going forward.

1 **Q. Does the Company’s environmental record and commitment to water quality**  
2 **demonstrate excellent management performance?**

3 A. Yes, it does. The Company has met and continues to meet all federal and state drinking water  
4 regulations. As described in more detail in the testimony of PAWC witness Jim Runzer  
5 (PAWC Statement No. 2), PAWC treatment plants are nationally recognized for optimization  
6 and performance above and beyond regulatory standards. PAWC is a leader in the  
7 Environmental Protection Agency’s (“EPA”) Partnership for Safe Water Treatment Program,  
8 which means the Company treats water to a standard that surpasses the requirements imposed  
9 by EPA and DEP. Part of providing water of the highest quality is starting with quality water  
10 in the first place. As Mr. Runzer shares in his testimony, PAWC is proud of our efforts in  
11 source water protection. Through our participation in these programs and our internal  
12 practices and policies, the Company consistently meets our goal of providing high quality  
13 drinking water to customers.

14 PAWC is also committed to ongoing water quality improvement. To monitor water  
15 quality and improve our processes, the Company relies on its central laboratory in Bellville,  
16 Illinois to process hundreds of process samples in addition to compliance samples. These  
17 process samples contribute to the Company’s ability to continually improve water treatment  
18 and optimize our facilities. As regulatory standards continue to shift, PAWC continues to  
19 remain a leader. For example, the Company often monitors for potential pollutants where  
20 such monitoring is not yet required by regulation. Where issues are identified, treatment  
21 technology is put in place to continue to provide the Company’s customers safe and reliable  
22 service. Finally, to help ensure that water is safe all the way to the tap, PAWC has worked  
23 with the Commission and OCA to develop and institute a lead service line replacement

1 program, which allows the Company to address lead service line concerns ahead of regulatory  
2 changes and remove this health risk for customers as soon as possible.

3 As the Company continues to grow in its provision of wastewater treatment services,  
4 so grows the Company's commitment to ensuring that discharges leaving our plants are not  
5 impacting water quality in streams. Perhaps just as importantly, the Company has undertaken  
6 significant efforts to reduce the inflow of stormwater into our collection systems, thus keeping  
7 clean water clean and reducing treatment costs for customers. As described in more detail in  
8 the testimony of PAWC witnesses Mr. Runzer (PAWC Statement No. 2) and Mr. Aiton  
9 (PAWC Statement No. 3), it is the Company's commitment to water quality, environmental  
10 protection, and our customers that drive our investment in highly effective water treatment  
11 and the attention to detail at all levels of the organization to meet or exceed regulatory  
12 requirements. We are proud of the quality of water and wastewater service that we provide  
13 to our customers and the quality of water that we release back into our streams.

14 **Q. Does the Company's safety record exhibit exemplary management performance?**

15 A. Yes. The health and safety of our customers, communities and employees continues to be our  
16 top priority. In fact, safety is a defined core value and strategy for the Company. The  
17 effectiveness of our commitment to safety is illustrated by our year-over-year safety  
18 performance. The Company's OSHA recordable incident rate ("ORIR") improved from 2.62  
19 in 2018 to 0.85 in 2022. At this point in 2023, PAWC is having its best safety record in its  
20 operational history. Mr. Runzer, in his direct testimony (PAWC Statement No. 2), further  
21 describes the Company's safety initiatives and programs that benefit our customers.

22 **Q. Does the Company's dedication to operational and water efficiency exhibit exemplary**  
23 **management performance?**

1 A. Yes. In PAWC Statement No. 2, Mr. Runzer highlights the Company’s operational and water  
2 efficiency initiatives to mitigate capital and operating costs, while also helping to protect and  
3 preserve our natural resources. Such initiatives include supply-side practices, such as  
4 increased pump efficiency, more accurate meter reading and leak detection, and main  
5 replacement and repair programs, as well as demand-side strategies, such as customer  
6 efficiency and public education programs to support water and energy efficiency. Mr. Runzer  
7 further describes the Company’s (1) use of technology to enhance employee effectiveness and  
8 benefit customers; (2) robust program to reduce non-revenue water; (3) improvements in  
9 energy efficiency and resulting reductions in energy costs; 4) improvements in operational  
10 efficiency including successful efforts to control waste disposal, purchased water and vehicle  
11 fleet expenses; and (5) the Company’s procedures related to the Underground Damage  
12 Prevention Program, which resulted in 99.99% of tickets being responded to timely in 2022.

13 **Q. Do the Company’s significant infrastructure investments in the Commonwealth**  
14 **demonstrate superior management performance?**

15 A. Yes. PAWC has invested, over the past 17 years, more than \$5 billion in PAWC  
16 infrastructure. The Company’s capital investments have resulted in infrastructure reliability  
17 and resilience, which are important priorities for PAWC’s leadership. Resilient infrastructure  
18 allows the Company to avoid or minimize service disruptions during extraordinary events,  
19 such as extreme weather events. As explained in Mr. Aiton’s testimony, the Company uses  
20 its High Risk Asset Management (“HRAM”) process to formulate its Strategic Capital  
21 Expenditure Plan (PAWC Statement No. 3). Through the HRAM process, the Company  
22 identifies facilities or assets that may pose a high risk to the Company’s system and evaluates  
23 facilities and critical assets against risk and consequence of failure. The Company then

1 prioritizes capital investment programs and projects using the HRAM process, leading to  
2 accelerated investments in high risk assets or facilities before problems arise. Mr. Aiton’s  
3 testimony also includes several projects that will continue to improve the safety, reliability,  
4 and resilience of PAWC’s systems (PAWC Statement No. 3).

5 **Q. Has PAWC taken a leadership role in community engagement and consumer education?**

6 A. Yes. Investing in and giving back to the communities we serve is very important to us. In  
7 2022, we donated more than \$560,000 to 330 organizations throughout the communities we  
8 serve through general charitable contributions, grants, sponsorships and programming  
9 support. The Company primarily directs its giving to community sustainability, food  
10 insecurity, environmental programs, fire departments, health and wellness, education and  
11 workforce development, and Inclusion, Diversity & Equity initiatives. Through the American  
12 Water Charitable Foundation, an additional \$373,000 was donated to non-profit organizations  
13 in PAWC’s service territory as part of the Foundation’s “Keep Communities Flowing” grant  
14 programs as well as its employee matching gift program. In 2022, PAWC representatives  
15 engaged with customers and community leaders through participation in 210 volunteer  
16 projects, speaking engagements, educational programs and community events, and our  
17 employees spent 2,431 hours volunteering their time at local non-profits. PAWC offers a  
18 robust public education program focused especially on educating the youth of the  
19 Commonwealth. Not only do we conduct water camps for children ages 7-11 during the  
20 summer and teach classes on watershed protection, water treatment, the water cycle and water  
21 conservation in the classroom during the school year, we also conduct treatment plant tours  
22 for students and adults alike, judge “Envirothon” competitions, and participate in Earth Day  
23 activities. PAWC’s annual “Protect Our Watershed Art Contest” for 4th, 5th and 6th graders

1 throughout the Commonwealth attracted more than 300 applications this year and serves as  
2 an educational tool about the short- and long-term benefits of protecting the environment and  
3 our critical water resources.

4 The Company also plays a leadership role in educating the workforce of tomorrow.  
5 PAWC offers paid summer internships in its operations, water quality, and engineering  
6 departments to build a future talent pipeline, increase diversity, and bring new perspectives to  
7 the Company while providing important real-life work experience to college students in local  
8 communities. Likewise, the American Water Inclusion and Diversity Scholarship Program  
9 offers 10 renewable scholarships of \$10,000 each to students residing in or attending college  
10 in one of the states where American Water operates, including Pennsylvania.

11 **Q. Is there any other reason why you believe PAWC is entitled to an equity allowance that**  
12 **recognizes exemplary management performance?**

13 A. Yes. The Commission adopted a Policy Statement on Small Nonviable Water and Wastewater  
14 Systems at 69 Pa. Code § 69.711 stating that it will consider regulatory incentives including  
15 “rate of return premiums,” to encourage and reward the continued acquisition of troubled  
16 water and wastewater systems by large, viable utilities.

17 **Q. What does the Commission’s Policy Statement at 52 Pa. Code § 69.711 provide regarding**  
18 **performance-based incentives?**

19 A. Section 69.711 states in relevant part as follows:

20 (a) *Acquisition incentives.* In its efforts to foster acquisition of  
21 suitable water and wastewater systems by viable utilities when  
22 the acquisitions are in the public interest, the Commission seeks  
23 to assist these acquisitions by permitting the use of a number of  
24 regulatory incentives. Accordingly, the Commission will  
25 consider the following acquisition incentives:

26 (1) *Rate of return premiums.* Under 66 Pa.C.S. § 523  
27 (relating to performance factor considerations),

1 additional rate of return basis points may be awarded for  
2 certain acquisitions and for certain associated  
3 improvement costs, based on sufficient supporting data  
4 submitted by the acquiring utility within its rate case  
5 filing. The rate of return premium as an acquisition  
6 incentive may be the most straightforward and its use is  
7 encouraged.

8 **Q. Has PAWC acted as receiver for and acquired troubled water and wastewater systems?**

9 A. Yes. For more than 25 years, PAWC has been an industry leader in helping resolve the  
10 significant challenges faced by troubled water and wastewater systems. In the last ten years  
11 alone, the Company has completed sixteen acquisitions of very small, less-viable water and  
12 wastewater systems – systems with less than 1,000 customer connections each. Four  
13 additional small water and wastewater acquisitions are contemplated as part of this base rate  
14 filing: Sadsbury Township Municipal Authority wastewater system, Farmington Township  
15 water system, Farmington Township wastewater system, and Audubon Water Company.  
16 None of these were acquired under 66 Pa. Code C.S. § 1329 for fair market value although  
17 Sadsbury and Farmington, as municipal sellers, are eligible. In addition to these small  
18 acquisitions with applications pending before the Commission and included in this base rate  
19 case, PAWC has also executed agreements to acquire several other small non- or less-viable  
20 systems including: Manwalamink (water and wastewater), East Dunkard Water Authority  
21 (water), and Appalachian Utilities, Inc. (water). Similarly, none of these systems are being  
22 acquired under 66 Pa. Code C.S. § 1329 for fair market value, although East Dunkard Water  
23 Authority would be eligible.

24 Over the last few years, the Company has also completed the acquisitions of systems  
25 that were not, at the time of acquisition, providing adequate, efficient, safe and reasonable  
26 service. These systems, which were acquired pursuant to 66 Pa. C.S. § 529, include Delaware  
27 Sewer Company (“Delaware Sewer”) and Winola Water Company. Prior to acquisition, the

1 Company also acted as the receiver for Winola Water Company. The Company has made  
2 capital investments to improve service to customers of these systems and increase  
3 environmental compliance. The Company also acted as the receiver for Indian Springs Water  
4 Company (“Indian Springs”) during the pendency of the Commission’s proceeding under  
5 66 Pa.C.S. § 529. As a resolution for the Commission’s Section 529 investigation into Indian  
6 Springs, the Company coordinated a plan for all customers to have an adequate alternative  
7 supply of water from private wells. PAWC offset all of its receivership costs and a significant  
8 portion of the costs that customers had to pay for private wells by negotiating a sale of land  
9 owned by Indian Springs, to the benefit of PAWC and Indian Springs customers. The land  
10 was sold back to the community to be preserved for the recreation and enjoyment of the  
11 residents.

12 In addition to providing solutions for small, troubled systems, PAWC has also had a  
13 positive impact on communities through acquisitions of larger systems such as in McKeesport,  
14 Scranton and York where significant investment has and continues to address environmental  
15 challenges and aging infrastructure.

16 **Q. Please explain PAWC’s recent willingness and efforts to provide an emergency solution**  
17 **for the customers of the East Dunkard Water Authority.**

18 A. The East Dunkard Water Authority (“EDWA”) is a municipal water authority which owns,  
19 operates and maintains a municipal drinking water system that serves approximately 1,800  
20 households, businesses and schools and a population of approximately 4,200 in the following  
21 municipalities in Greene County: Dunkard Township, Greene Township, and portions of  
22 Monongahela, Cumberland, Perry and Whiteley Townships (“EDWA System”). Although  
23 PAWC has a signed agreement to acquire the EDWA System and is currently conducting due

1 diligence and preparing an application pursuant to Section 1102 of the Public Utility Code for  
2 approval from the Commission for that acquisition, EDWA is facing current and dire  
3 challenges that are in need of a more immediate solution. Since July 2021, DEP has conducted  
4 numerous inspections and issued multiple Orders to EDWA for violations of the Safe  
5 Drinking Water Act and Regulations. Since September 2023, the EDWA System has been  
6 without a certified water operator and on October 23, 2023, DEP issued a boil water order due  
7 to elevated levels of turbidity above the regulatory limits. On October 24, 2023, the EDWA  
8 System experienced a major upset resulting from operational failure of the filters at the water  
9 treatment plant and the clarifier system at the water treatment plant ceased proper operation.  
10 The EDWA System's water treatment plant ceased producing water and all customers were  
11 without even non-potable water for several days for basic sanitary and hygienic purposes,  
12 including bathing, dishwashing, and toilet flushing. Water service was eventually restored  
13 but all customers remained under a boil water advisory and had to continue to boil their water  
14 before consumption. Because EDWA has made representations to DEP that it does not have  
15 the financial resources to effectively and properly operate the EDWA System, comply with  
16 DEP Orders and a Commonwealth Court Order, and employ a Certified Operator and because  
17 EDWA's actions threaten immediate harm to public health and safety, DEP prepared an  
18 application to be filed in the Commonwealth Court to seek the appointment of a receiver for  
19 the EDWA System. When DEP reached out to the Company regarding its intention to seek  
20 appointment of a receiver for EDWA by the Commonwealth Court and asked that PAWC  
21 agree to be appointed as such receiver the Company was willing to provide a solution for the  
22 approximately 4,200 residents who were without adequate service, provided that it had the  
23 Commission's approval as it is not customary for a jurisdictional utility to be appointed

1 receiver of a municipal authority. Shortly before this base rate case was filed, DEP and PAWC  
2 jointly requested that the Commission take emergency action to permit PAWC to be appointed  
3 as receiver of EDWA by the Commonwealth Court and the Commission entered an Order  
4 providing PAWC with the necessary authorization.<sup>12</sup> If appointed as receiver of EDWA by  
5 the Commonwealth Court, PAWC will take the steps necessary for EDWA to provide water  
6 that complies with relevant safe drinking water standards.

7 The Company remains committed to helping DEP and the Commission resolve the  
8 issues posed by the many troubled water and wastewater systems that still exist across the  
9 state. Consistent with 52 Pa. Code § 69.711, a rate of return premium is appropriate to  
10 recognize the Company's efforts with respect to troubled systems.

11 **Q. In addition to acquisitions of troubled systems and acting as a receiver for troubled**  
12 **systems, how else has PAWC provided a solution for customers in need of safe and**  
13 **reliable service?**

14 A. PAWC routinely extends service to customers who are in need of water and/or wastewater  
15 service. For example, the Company recently broke ground on a \$21 million water main  
16 extension project that will bring high-quality, reliable drinking water and fire service to the  
17 Avella School District and portions of surrounding communities in Washington County.

18 The Company has also filed an application to extend its service territory for a public  
19 groundwater project in Dimock, Pennsylvania. In late 2021, the Office of then Attorney  
20 General Josh Shapiro reached out to PAWC to ask if the Company would assist in helping to  
21 find a drinking water solution for a community of approximately 21 Dimock properties that

---

<sup>12</sup> *Joint Petition of Pennsylvania-American Water Company and the Pennsylvania Department of Environmental Protection Requesting an Ex Parte Emergency Order in Regard to Receivership of East Dunkard Water Authority*, Docket No. P-2023-3043950 (Order entered November 1, 2023).

1 have not had access to safe well water due to unsafe levels of methane and other contaminants  
2 for approximately 15 years. In recognition of the severe water quality problems facing this  
3 community, the Company worked to develop a plan for the most effective public drinking  
4 water system for Dimock residents. In November 2022, the Company and the Office of  
5 Attorney General presented the proposed system design to Dimock residents who expressed  
6 strong support for the project. Subsequently, the Office of Attorney General and Coterra  
7 Energy entered into a Plea Agreement under which PAWC's construction of this project is  
8 fully funded, and thus provides the benefit of public water to these residents without a cost to  
9 other PAWC customers. PAWC projects that the new drinking water system in Dimock will  
10 be in service by the end of 2026. The Company remains committed to being a community  
11 partner throughout the Commonwealth and providing solutions for those in need of safe and  
12 reliable water and wastewater service.

13 **Q. What should the Commission conclude from all of the evidence PAWC has presented on**  
14 **its performance factors?**

15 A. The well-documented exemplary performance of the Company's management discussed  
16 above fully justifies approving a rate of return at the upper end of Ms. Bulkley's recommended  
17 range – namely, 10.95% – and, in any event, an increment of at least 25 basis points to a lesser  
18 market-determined rate of return on equity approved by the Commission, up to 10.95%.

19 **CONCLUSION**

20 **Q. Does this conclude your direct testimony at this time?**

21 A. Yes, it does. However, I reserve the right to supplement my testimony as additional issues  
22 and facts arise during the course of the proceeding. Thank you.

**VERIFICATION**

I, **Ashley E. Everette**, hereby state that the facts set forth in the pre-marked Statement No. 1 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

## Pennsylvania-American Water Company Rate Increase Request

<u>Filing Date:</u>	November 8, 2023
<u>Historic Test Year:</u>	12 Months Ended June 30, 2023
<u>Future Test Year:</u>	12 Months Ending June 30, 2024
<u>Fully Projected Future Test Year:</u>	12 Months Ending June 30, 2025
<u>Increase Requested</u>	\$203.9 Million
<u>Percentage Increase:</u>	20.2% in overall revenues
<u>Effective Date:</u>	August 7, 2024 (based on full suspension)
<u>Rate of Return:</u>	8.17% on rate base; 10.95% ROE

<u>Type of Capital</u>	<u>Proportion of Total</u>	<u>Cost Rate</u>	<u>Weighted Cost</u>
Debt	44.70%	4.72%	2.11%
Common Stock	<u>55.30%</u>	<u>10.95%</u>	<u>6.06%</u>
Total	100%		8.17%

<u>Elements of Increase</u>	<u>Revenue Requirement</u>
Capital Investment	\$93.8 Million
Cost of Capital	\$54.2 Million
Acquisitions	\$25.9 Million
O&M and General Taxes	\$30.0 Million
<b>Total</b>	<b>\$203.9 Million</b>

**PENNSYLVANIA-AMERICAN WATER**

**Docket No. R-2023-3043189**  
**Docket No. R-2023-3043190**

Schedule AEE-2

		Total Company <u>PROPOSED</u>
1.	Revenues at Present Rates	\$1,011,895,862
2.	Amount of Increase (Decrease)	203,945,911
3.	% Increase	20.2%
4.	Revenue	<u>1,215,841,773</u>
5.	O & M Expense	314,072,831
6.	Depreciation	264,341,440
7.	General taxes	22,046,259
8.	Income Taxes	<u>118,173,685</u>
9.	Sub-Total	<u>718,634,215</u>
10.	Utility Operating Income	<u>497,207,558</u>
11.	Interest on Long-Term Debt	126,574,761
12.	Other Interest	1,670,527
13.	Preferred Dividends	0
14.	Other Deductions	0
15.	Sub-Total	<u>128,245,288</u>
16.	Income to Common Stock (Fallout)	<u>\$368,962,270</u>
17.	Original Cost of Rate Base	\$6,096,173,421
 <u>Rate of Return and Return on Common Equity Absent Rate Relief</u>		
	Utility Operating Income	\$351,650,912
	Income to Common Stock (Fallout)	223,391,333
	Original Cost of Rate Base	6,096,852,927
	Common Equity	3,371,559,669
	Rate of Return	5.77%
	Return on Common Equity	6.63%

# Statement No. 2

## Runzer

**DIRECT TESTIMONY  
OF  
JIM RUNZER**

**DESCRIBING  
PENNSYLVANIA-AMERICAN WATER COMPANY'S OPERATIONS, WATER  
QUALITY AND SOURCE WATER MONITORING EFFORTS, SAFETY  
PERFORMANCE, OPERATING AND MAINTENANCE EXPENSE, OPERATING  
EFFICIENCIES, AND EMPLOYEE LEVELS AND COMPENSATION**

**DOCKET NOS.  
R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)**

**DATE: November 8, 2023**

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**DIRECT TESTIMONY OF JIM RUNZER**

1 **Q. Please state your name and business address for the record.**

2 A. Jim Runzer, 852 Wesley Drive, Mechanicsburg, Pennsylvania 17055.

3 **Q. By whom are you employed and in what capacity?**

4 A. I am employed by Pennsylvania-American Water Company (“PAWC” or “Company”) as  
5 the Vice President – Operations.

6 **Q. What are your responsibilities as PAWC’s Vice President - Operations?**

7 A. I am responsible for all the Company’s water and wastewater operations across the  
8 Commonwealth, managing a team of approximately 1,123 professionals, in 63 districts,  
9 serving 2.3 million Pennsylvanians.

10 **Q. Please describe your professional education and experience.**

11 A. I received a bachelor’s degree in education in 1991 from Kean University and a Master of  
12 Business Administration in 2012 from the Keller Graduate School of Management. I also  
13 completed Advanced Water Treatment and Distribution certification from the Camden  
14 County Institute of Technology in 2004 and Advanced Wastewater Collection certification  
15 from the University of Sacramento in 2014.

16 I began my career at American Water Works Company, Inc. (“American Water”)  
17 in 1994 as a bargaining unit employee for New Jersey American Water Company  
18 (“NJAWC”), working in both Production and Field Operations until being promoted to  
19 Operations Supervisor for NJAWC in Mount Holly, New Jersey in 2008. I was promoted  
20 to Field Operations Superintendent in Delran, New Jersey in 2011 and was then promoted

1 to Operations Manager for the Coastal South New Jersey system in 2014 where I was  
2 responsible for Field Operations, Production and Construction Operations. I was named  
3 Director of Operations for Iowa American Water Company in April 2018 and was later  
4 named Vice President of Operations for New York American Water Company in July of  
5 2019. I held that position until taking on my current role as Vice President of Operations  
6 for the Company on June 28, 2021.

7 **Q. What is the purpose of your direct testimony in this proceeding?**

8 A. The purpose of my testimony is to describe PAWC's strong operational performance  
9 throughout the Commonwealth. First, I will describe the Company's water and wastewater  
10 operations and facilities throughout Pennsylvania. Second, I will explain PAWC's  
11 industry leading water quality improvement and source water monitoring efforts. Third,  
12 I will describe our strong safety record and Company commitment to safety for the benefit  
13 of both our customers and employees. Fourth, I will provide information regarding  
14 PAWC's operating and maintenance expenses. Fifth, I will describe several efficiencies  
15 within PAWC's Operations, such as the Company's usage of state-of-the-art technology in  
16 the field, including Geographic Information System ("GIS") platforms and advanced  
17 metering infrastructure ("AMI"). Finally, I will describe the Company's current and  
18 anticipated employee levels, employee compensation philosophy and commitment to  
19 employee development.

20 **Operations and Facilities**

21 **Q. Please describe PAWC's Operations.**

22 A. PAWC owns, operates, and maintains potable water production, treatment, storage,  
23 transmission and distribution systems, and wastewater collection, pumping, and/or

1 treatment systems, for furnishing water and wastewater services to approximately 780,000  
2 residential, commercial, industrial, and governmental customers in communities located in  
3 37 of the 67 counties across Pennsylvania.

4 The Company has recently established three geographically defined operating areas  
5 that collectively serve an estimated population of more than 2.4 million people. The three  
6 operating areas are western, northeast, and central/southeast. The western Pennsylvania  
7 operating area serves an estimated population of 1,100,000 people. Some of the larger  
8 communities served include Butler, New Castle, Ellwood, Indiana, Punxsutawney,  
9 Warren, Kane, portions of the City of Pittsburgh and its southern suburbs, McMurray,  
10 Uniontown, Brownsville, and Connellsville. Large customers include U.S. Steel, the  
11 Western Allegheny County Municipal Authority, AK Steel, Allegheny County Housing  
12 Authority, Koppel Steel, United Refining, Clarion University and Eastman Chemical  
13 Company. The Northeastern Pennsylvania operating area serves an estimated population  
14 of 740,000 people. Some of the larger communities served include Wilkes-Barre, Scranton,  
15 and Nazareth. Several of the large customers served in Northeastern Pennsylvania are  
16 Fairchild Semiconductor, Lion Brewery, SVC Manufacturing, UGI Utilities, and the State  
17 Correctional Institution – Dallas. The Central/Southeast operating area serves an estimated  
18 560,000 people. Some of the larger communities include Camp Hill, Mechanicsburg,  
19 Hershey, Palmyra, Philipsburg, Milton, Norristown, Coatesville, Berwick, Milton,  
20 Yardley, and the suburbs of Reading. Several large customers include ConAgra Grocery  
21 Products Co., Furman Foods Inc., Penn State Hershey Medical Center, and Cleveland-  
22 Cliffs Plate LLC.

1 **Q. Please describe the facilities and property that PAWC uses to provide water and**  
2 **wastewater services to customers.**

3 A. PAWC’s utility plant accounts include land and land rights, structures and improvements,  
4 wells, pumping equipment and associated facilities, purification plant and equipment,  
5 sludge disposal facilities, transmission and distribution mains, collection pipes, distribution  
6 storage facilities, service lines, meters, hydrants, and other facilities, including materials  
7 and supplies. All this plant and property is used to provide safe, adequate, efficient, and  
8 reliable water and wastewater services to PAWC’s customers. A more detailed description  
9 of the source of supply, treatment, storage, and distribution facilities within each district is  
10 provided as Volume 2 of the Company’s responses to the Pennsylvania Public Utility  
11 Commission’s (“PUC”) filing requirements, which is titled *Scope of Operations*.

12 **Water Quality**

13 **Q. Please describe PAWC’s overall commitment to water quality and environmental**  
14 **compliance.**

15 A. Water quality is of paramount importance to the health and well-being of our customers.  
16 PAWC and its predecessor companies have provided water service to customers for  
17 approximately 120 years. We are acutely aware that water is the only utility service  
18 intended for customers to ingest, and that our customers rely on PAWC to provide them  
19 with safe and reliable water service. Beyond health and safety, we know that PAWC’s  
20 customers are also interested in the aesthetic of the water we treat and deliver to them. We  
21 proactively look for ways to optimize treatment capabilities to continue to improve the  
22 overall quality of drinking water delivered to our customers and do so in a way that strives  
23 to create operational efficiencies that also benefit our customers.

1 **Q. Has PAWC been recognized for its water quality achievements?**

2 A. Yes. PAWC has received multiple awards and has been recognized for its dedication to and  
3 achievements in attaining exemplary water quality. PAWC is a participant in the  
4 Partnership for Safe Water treatment plant optimization program and has repeatedly been  
5 recognized for its optimization and water quality achievements. Nationwide, the  
6 Partnership for Safe Water treatment optimization program currently has 501 treatment  
7 plants from 266 utilities in the program. As of 2022, only 44 plants have received one of  
8 the program's highest honors, the Phase IV Presidents Award. To date, PAWC has  
9 received nine Phase IV Presidents Award recognitions. Moreover, each of these nine  
10 PAWC plants was also recognized as a 5-year Presidents Award winner. Only 18 systems  
11 nationally have achieved this level of recognition. Therefore, PAWC accounts for 50% of  
12 these highest-level award-winning treatment plants.

13 Since the Company's last base rate case filing, PAWC's Clarion Water Treatment  
14 Plant was presented with the Directors 15-year Longevity Award, and Shady Lane Water  
15 Treatment Plant was recognized with the Directors 10-year Longevity Award. PAWC has  
16 also made a commitment to optimization and water quality within our wastewater treatment  
17 plants. We are proud to share that PAWC now has 5 wastewater plants (Coatesville, Exeter,  
18 New Cumberland, McKeesport, and Pocono Country Place) currently participating in the  
19 Partnership for Clean Water Program.

20 **Q. Please discuss some of PAWC's water quality initiatives.**

21 A. PAWC is deeply committed to ensuring our customers receive water that meets all  
22 regulatory requirements, and we strive to provide water that exceeds those requirements.

1 To meet these goals, PAWC has developed strict internal metrics to support exemplary  
2 water service.

3 For example, PAWC requires that all sample collection, review of results, and  
4 reporting undergo dual validation internally prior to submittal to the reviewing regulatory  
5 agency. This serves to ensure both data accuracy and that the concerning results are  
6 addressed immediately. The Company also instituted a policy requiring the development  
7 of internal action plans to address testing results that show a contaminant level above 80%  
8 of the established primary maximum contaminant level. The plans will be site specific,  
9 and may include changes to treatment chemicals, distribution system improvements, or  
10 modifications or additions to treatment trains.

11 These efforts are supported by our internal monitoring results program, Sample 1  
12 View (“Sample 1V”). Sample 1V provides a user-friendly dashboard for several critical  
13 water quality measurements that is reflective of real-time sample collection in the field and  
14 includes bacteriological sample information. This is a powerful tool that allows PAWC  
15 staff to ensure all required samples are collected and observe and react to trends in samples.  
16 It is GIS capable, so employees can more easily route themselves to the sampling locations.  
17 In addition, Sample 1V is capable of producing reports for submission to regulating  
18 authorities. Sample 1V is being used by all PAWC staff for the collection and reporting of  
19 compliance samples and has improved staffing efficiency significantly.

20 I would also like to highlight the Company’s environmental near miss program.  
21 I will discuss the Company’s near miss program in greater detail later in my testimony but  
22 included within that program is a specific focus on environmental and water quality issues.  
23 PAWC takes a proactive approach in identifying potential water quality issues and

1 implementing prompt improvements. The environmental near miss program identifies  
2 water quality or environmental vulnerabilities before they can create an adverse impact. In  
3 2022, PAWC employees submitted 197 environmental near miss reports, which identified  
4 and avoided potential customer impacts in those 197 instances. In addition, because near  
5 miss reports, including environmental near misses, are shared statewide for educational  
6 purposes, the impact and positive benefits from such near miss reports is much broader  
7 than the specific near misses identified, as the reports often prompt proactive corrections  
8 for other customers in different areas of PAWC's system.

9 **Q. Please discuss some of the Company's other water treatment effectiveness**  
10 **initiatives.**

11 A. The Company has invested heavily in facility upgrades to meet regulatory requirements  
12 related to the Long Term 2 Enhanced Surface Water Treatment Rule. The Company  
13 continually evaluates new treatment chemicals for improved treatment effectiveness,  
14 safety, and cost efficiencies. As of October 1, 2023, the Company converted 21 treatment  
15 plants from the use of gaseous chlorine for disinfection to liquid sodium hypochlorite or  
16 ultra-violet ("UV") disinfection with three additional plant conversions scheduled for  
17 completion by the end of 2023. The elimination of chlorine gas reduces the risk of toxic  
18 exposure for our employees and the surrounding communities. The Company will continue  
19 to convert its remaining treatment plants that utilize gaseous chlorine to either liquid  
20 sodium hypochlorite or UV disinfection until all of its chlorine gas locations are eliminated.  
21 This conversion process is also now standard practice as new systems are acquired by  
22 PAWC.

1           The Company also employs a proactive approach to protect customers from lead  
2 exposure in the drinking water the Company supplies, consistent with federal and state  
3 regulatory standards established by the United States Environmental Protection Agency  
4 (“USEPA”) and the Pennsylvania Department of Environmental Protection (“PADEP”),  
5 including the Lead and Copper Rule. Several of PAWC’s systems are undergoing  
6 corrosion control studies to review the effectiveness of corrosion control treatment  
7 measures. The Company is also continuing to implement an industry-leading initiative to  
8 replace customer-owned lead service lines to address conditions that may increase the risk  
9 of exposure to lead at the customer’s tap.

10           PAWC also changed coagulant options at several of its treatment plants to provide  
11 improved treatment at reduced costs. One recent example is our Rock Run treatment plant,  
12 which switched to Ferric Chloride-polymer blend in 2021 with approval from PADEP.  
13 PAWC also improved the chemical feed systems at our Stony Garden and Montrose  
14 facilities. We are also addressing potential contaminants of concern, such as the  
15 polyfluoroalkyl substances (“PFAS”) contaminant. Our central laboratory is now certified  
16 to analyze PFAS samples, improving the Company’s ability to test for these contaminants.  
17 Please see the Direct Testimony of Bruce Aiton (PAWC Statement No. 3) for more  
18 information regarding the Company’s PFAS response.

19 **Q. Has the Company made efforts to further improve operations at its wastewater**  
20 **facilities?**

21 A. Yes. With the increasing number of wastewater facilities owned and operated by PAWC,  
22 the Company is making significant efforts to improve effluent quality discharged to  
23 receiving streams. Examples of improvements include the transition to ultra-violet

1 disinfection at numerous wastewater plants and efforts to reduce inflow and infiltration in  
2 our collection systems. The change to UV disinfection also reduces chemical usage and  
3 eliminates the potential for chlorinated water to reach waters of the Commonwealth. This  
4 modification has occurred in 10 systems owned by PAWC, including most recently the  
5 Turbotville and Franklin Township wastewater treatment plants. Additionally, significant  
6 effort to reduce inflow and infiltration has occurred in McKeesport, Dravosburg, Claysville  
7 and Duquesne. Finally, as new systems are acquired by PAWC, the Company acts to  
8 improve effluent quality and return systems to regulatory compliance. Since the last rate  
9 case, construction of the new Turbotville Wastewater Plant was completed, and the plant  
10 put into service. The investment into this new facility has significantly decreased the  
11 amount of end of pipe exceedances for this system.

12 Notably, to aid in improvements in wastewater quality, the Company also recently  
13 created a new specific area of focus within the Water Quality and Environmental  
14 Compliance Department that is dedicated to wastewater facility water quality and  
15 compliance. The Manager of Wastewater Compliance reports directly to the Director of  
16 Water Quality and Environmental Compliance. This organizational structure allows us to  
17 focus on developing and implementing new operating procedures, training, and  
18 optimization programs to continually improve our treated effluent. Some concrete  
19 examples of improvement in our wastewater treatment include improvements and  
20 standardization of our Industrial Pretreatment Program and the development of wastewater  
21 specific curricula to continually improve operator knowledge and plant optimization.

1 **Q. Does the Company have any water quality-related settlement commitments it needs**  
2 **to respond to in this proceeding?**

3 A. Yes. In the Company’s last base rate case, the Company committed to filing its most recent  
4 cost of treatment study for its Coatesville wastewater treatment plant at the time of its next  
5 rate case filing. The Company’s most recent Coatesville cost of treatment study is attached  
6 as PAWC Exhibit JR-1.

7 **Source Water Protection**

8 **Q. Please describe how the Company is demonstrating its commitment to water quality**  
9 **through source water protection.**

10 A. The Company has a dedicated source water protection program, which includes personnel  
11 who lead efforts to identify and mitigate potential threats to raw sources of supply. The  
12 program involves an integrated approach to planning, risk assessment, water quality  
13 monitoring, outreach and education. The Company has deployed and continues to evaluate  
14 and incorporate innovative technologies that support informed decision-making for  
15 changes in raw water quality and corresponding treatment, whether naturally occurring or  
16 related to a potential contamination incident.

17 **Q. Please describe the Company’s source water protection planning efforts.**

18 A. The Company is committed to developing and implementing source water protection plans  
19 for each system with a surface water and/or groundwater source. Each plan consists of the  
20 following six elements: 1) local steering committee and public participation; 2) source  
21 water protection area delineation; 3) contaminant source inventory; 4) management  
22 methods and commitment; 5) contingency planning; and 6) protection of identified new  
23 source sites. This work is done in conjunction with the PADEP Source Water Protection

1 Technical Assistance Program (“SWPTAP”), and all PAWC systems have a source water  
2 protection plan, which includes Small System Plans, in place or under development in  
3 SWPTAP.

4 Source water protection is also a critical component of the Company’s risk and  
5 resilience assessments (“RRAs”) to comply with provisions of the federal Water  
6 Infrastructure Act of 2018. The Company has conducted all required RRAs and developed  
7 plans, strategies, and resources to improve the resiliency of PAWC’s water systems.

8 **Q. Please explain the Company’s outreach and education efforts related to source water  
9 and environmental stewardship.**

10 A. The Company conducts outreach and education to engage the community in protecting  
11 sources of drinking water. Activities include watershed service projects, school programs,  
12 plant tours, and community events. PAWC also engages the community through annual  
13 commitments, such as the Environmental Grant Program, Protect Our Watersheds Art  
14 contest, and the Stream of Learning Scholarship. In addition, PAWC staff represent the  
15 Company and industry on various professional committees at the local and national levels  
16 to share information and practices related to source water protection. These committees  
17 include PA AWWA Water Resources, National AWWA Source Water Protection, Local  
18 Emergency Planning committees, and several other coalitions and advisory groups.

19 **Q. Please describe any other innovative approaches the Company is using to protect  
20 sources of drinking water.**

21 A. The Company partnered with the Natural Resources Conservation Service (“NRCS”) on  
22 one of sixteen source water protection pilot projects initiated in 2019 under the National  
23 Water Quality Initiative. PAWC worked with the State Conservation Office to identify the

1 Swatara Creek Watershed as a candidate for the program. Swatara Creek is a source of  
2 supply for the PAWC G.C. Smith Hershey Water Treatment Plant. The project, funded by  
3 the NRCS, is aimed at improving the watershed by reducing nutrient and sediment loading  
4 from agricultural runoff. This effort has leveraged and directed funding toward water  
5 quality improvements for the entire watershed that will ultimately benefit the whole  
6 community including PAWC customers. We continue to support this initiative by  
7 providing data and resources. We have also partnered with the 1 million trees campaign,  
8 upstream restoration project evaluations at two reservoir locations, and the SolarBee  
9 nutrient column study to remove phosphorus in the water column in one of our reservoirs.

10 **Q. Please describe other ways the Company is demonstrating its commitment to source**  
11 **water quality.**

12 A. The Company has enhanced its source water protection program by taking an integrated  
13 approach to monitoring its source water quality and evaluating risks. The integrated  
14 approach includes source water quality monitoring panels and a map-based information  
15 gathering tool called WaterSuite, both of which support the Company's ability to make  
16 more informed decisions regarding treatment and in responding to potential source water  
17 contamination events.

18 WaterSuite is a GIS map-based tool that collects information about potential  
19 sources of contamination from various sources and integrates that information into a  
20 database for a defined area of concern. The data sources may include publicly available  
21 regulatory databases, aerial imagery analyses, and local knowledge. The database is  
22 updated on a regular basis to include the latest available information and has search and  
23 reporting capabilities, which provides a significant advantage over standard static

1 contaminant assessments. This gives the Company a dynamic tool it can continue to use  
2 over time rather than a paper-based equivalent that captures only the circumstances  
3 present at a single point in time. The database also provides a larger set of data that  
4 is automatically updated on a periodic basis without requiring manual work by PAWC. As  
5 a result, PAWC can access more information more efficiently to address water quality  
6 concerns than in the past. WaterSuite is fully implemented for surface water and  
7 groundwater systems.

8 The Company also implemented the use of SolarBee mixers in five reservoirs to  
9 disrupt algal growth. To support the Company's efforts to combat algal growth, PAWC  
10 purchased a Cyanotoxin Automated Assay System for in-house rapid testing associated  
11 with harmful algal blooms. In addition, the Company continues to evaluate emerging  
12 technologies to help monitor and control algae growth in our reservoirs.

13 **Q. Please describe PAWC's source water quality monitoring panels.**

14 A. The Company has installed an online source water quality monitoring device at each of its  
15 surface water treatment plants as an effective tool for optimizing treatment decisions and  
16 aiding in the detection of potential source water contamination. All surface water treatment  
17 plants will have devices installed and in service by December 31, 2023. The sensors  
18 installed at each location were determined based on risk to the source water and monitor  
19 parameters in the source water that include turbidity, pH, oxygen reduction potential,  
20 temperature, conductivity, dissolved oxygen, dissolved organic carbon, oil, and total  
21 organic carbon. This equipment helps establish baseline water quality data for each  
22 parameter and alert water plant operators to certain changes in water characteristics. The  
23 Company uses this information to better understand the characteristics of its source water

1 and optimize chemical usage. In addition, a change in the baseline characteristics may  
2 indicate an issue that warrants additional investigation.

3 **Q. Does the Company utilize any other sources to obtain source water quality**  
4 **information?**

5 A. The Company also participates in watershed monitoring networks such as the Ohio River  
6 Valley Water Sanitation Commission Organics Detection System, Delaware River Valley  
7 Early Warning System, and the River Alert Information Network. These networks provide  
8 additional information about water quality in the watersheds that contribute water to  
9 sources of supply. The Company is also involved with developing the Southwest PA Water  
10 Network for the Upper Ohio River Basin and partners with the Susquehanna and Delaware  
11 River Basin Commissions.

12 **Q. Please describe how the Company prepares for source contamination events.**

13 A. The Company has developed source water contingency plans to outline the planned  
14 response to contamination of surface water sources of supply. These plans include system-  
15 specific options to consider in a contamination event along with a phased protocol  
16 response. This approach is consistent with National Incident Management System and  
17 USEPA guidance, and augments emergency response plans that cover a wide variety of  
18 potential emergency situations. The Company also developed Cyanotoxin Management  
19 Plans to aid in the identification and response to harmful algal blooms. PAWC employees  
20 receive training on the contingency plans through online learning and emergency response  
21 drills, which are coordinated by Operations and include on site mock drills, tabletop  
22 exercises and after-action reporting.

1 **Q. How does the Company compare to the rest of Pennsylvania drinking water systems**  
2 **for Source Water Protection Plan development?**

3 A. All PAWC systems are in the SWPTAP with approved PADEP Source Water Protection  
4 Plans and Small System Plans or have draft Source Water Protection Plans that are awaiting  
5 PADEP approval. The Company takes the extra initiative in creating, developing, and  
6 implementing Source Water Protection Plans for all their systems. This is a proactive  
7 approach that the Company is proud to demonstrate. The total number of systems and  
8 PAWC systems is reflected in the statistics below:

- 9 ● (PADWIS) Community Water Systems in PA: 1,793 (Non-community/non-  
10 transient are not in this number)
- 11 ● TOTAL number of project systems in SWPTAP: 301
- 12 ● Number of PAWC project systems in SWPTAP: 45
- 13 ● TOTAL number of Small System Projects: 223
- 14 ● Number of PAWC small systems: 18

15 **Commitment to Safety**

16 **Q. Please describe PAWC’s overall commitment to safety.**

17 A. The health and safety of our employees and customers, as well as protecting the quality of  
18 the water we deliver, are the top priorities for our Company and critical to our success. Our  
19 colleagues’, contractors’, and customers’ safety are very important, and we focus on safety  
20 every day. PAWC’s commitment is to ensure that every employee chooses safety, so they  
21 go home each day in the same or better condition than they came to work.

22 The Company is also committed to securing assets across our system and  
23 recognizes the importance of protecting our water sources, treatment plants, infrastructure,  
24 and data from malevolent acts, as demonstrated by our robust security and cyber security

1 programs. American Water has invested in several technology improvements to our  
2 security programs. Investments in a new modernized Video Management System software  
3 and expanded the use of video cameras across American Water facilities improve the  
4 physical security posture of the American Water locations. American Water has invested  
5 heavily in cyber security as well with a focus on Operational Technology (“OT”) or  
6 SCADA security. These investments include replacement of all OT firewalls across the  
7 American Water environment and implementation of Tenable OT, an OT specific  
8 technology to help identify vulnerable OT assets across the organization.

9 Finally, the Company’s emergency response program demonstrates the Company’s  
10 recognition that rapid response and recovery from security incidents are critical to  
11 maintaining resilient water and wastewater systems.

12 **Q. How is safety relevant to operational performance?**

13 A. The Company considers safety to be a core value, as well as a strategy. Employee health  
14 and safety is the responsibility of every PAWC employee, and to that end, every employee  
15 strives for safety. We ask our employees to place safety first in everything they do. We  
16 have a strong commitment to our employees (and their families) to keep them, our  
17 customers, and the public safe. A safe workplace increases employee morale, increases  
18 our commitment to one another, and makes for a more engaged and productive workforce.

19 **Q. Please describe PAWC’s safety program and Operations’ role in promoting safety  
20 and a safe working environment at PAWC.**

21 A. The Company’s safety program includes multiple activities and initiatives to maintain  
22 compliance, support employee engagement, and help ensure the safety of our workforce  
23 and our customers, as well as the public. Operations is responsible for administering the

1 health and safety program, which includes the delivery of all Occupational Safety and  
2 Health Administration (“OSHA”) required training, training and qualification of  
3 employees, physical security, cyber security, business continuity planning, and event  
4 management. We are supported by functional departments within American Water Works  
5 Service Company, Inc., such as Health & Safety, Learning & Development, Security, and  
6 Human Resources, to deliver core operations services.

7 **Q. How do you know the commitment to safety is effective?**

8 A. We are building a strong safety culture at PAWC, which is illustrated by our year-over-  
9 year safety performance. The Company’s OSHA recordable incident rate (“ORIR”)  
10 improved from 2.62 in 2018 to 0.85 in 2022. In the first nine months of 2023, PAWC is  
11 having its best safety record in its operational history at 0.32. The Company has  
12 experienced 6 OSHA recordable injuries as of October 1, 2023 (as compared to 29 injuries  
13 in all of 2018). This reduction has resulted in record rates in two key safety performance  
14 metrics: an ORIR of 0.66 and Days Away Restricted or Transferred (“DART”) rate of 0.32  
15 as of October 1, 2023, demonstrating an 82% reduction in incidents. The ORIR targets  
16 that the Company sets for itself strive for a 20% reduction in injuries and incidents over  
17 the prior year.

18 **Q. What other safety programs does PAWC use?**

19 A. In addition to establishing ORIR targets, the Company’s Near Miss Reporting Program  
20 involves employees identifying hazards that could have resulted in an injury or accident.  
21 For example, if a piece of equipment becomes worn outside of a regular maintenance cycle,  
22 an employee reports this as a “Near Miss” and we can then replace the worn part and avoid  
23 a potential injury from an equipment malfunction. Near Misses improve safety by

1 encouraging employees to look for hazards in the workplace, which improves the  
2 employees' awareness and helps make our workspaces safer. PAWC has continuously  
3 sought improved safety results, which correlates with the increase of Near Miss submittals  
4 that I describe later in my testimony. American Water's health and safety group collects  
5 these Near Misses from operating utilities across the American Water footprint each week  
6 and selects several to highlight in a safety video that is distributed across the business for  
7 use in safety tailgate discussions.

8 PAWC also uses the services of an occupational training and information company  
9 called Work Right ("WR"). WR supplies two (2) athletic trainers, one in eastern PA and  
10 the other in western PA, to provide training, health-related information, on-site first aid  
11 medical services and injury (home/work) consultation to our employees. WR has  
12 developed and implemented ergonomic programs to reduce and eliminate soft tissue  
13 injuries (sprains and strains) for our affected field operations and treatment plant  
14 employees. In 2022, PAWC had 5 injuries classified as "ergonomic" in nature, down from  
15 our 2018 total of 32 ergonomic related injuries. In 2023, PAWC has also utilized WR to  
16 provide First Aid/CPR/AED training for our employees and we now have 95% of our  
17 employees certified.

18 PAWC employees also participated in the American Water "Certified Safe  
19 Worker" program. This program is a self-directed program promoting safety and health  
20 awareness and participation, documenting work, and at-home safety activities. In 2022,  
21 1,129 PAWC employees completed the program, achieving the highest number of Certified  
22 Safe Workers in our history and the highest total in all the American Water subsidiaries.

1 **Q. How did PAWC perform in the Near Miss Reporting Program?**

2 A. PAWC has achieved considerable progress since the program's inception in 2015, with  
3 increasing numbers of "Near Miss" reports. In 2022, PAWC employees reported 1,967  
4 near misses from across the state, far surpassing our goal of 1,200. This is more than triple  
5 the number of Near Misses reported in 2019 and reflects the increased employee awareness  
6 and use of this program. Most Near Miss reports are corrected by an individual employee  
7 identifying the issue and resolving the issue or working with the appropriate people to  
8 obtain resources where necessary. PAWC has also experienced a 59% increase in Near  
9 Miss STOP Work situations from October 1, 2022, to October 1, 2023, a principal indicator  
10 of an advancing safety culture. All employees are encouraged to report unsafe behaviors  
11 or conditions, and we all have the authority as well as a responsibility to stop work until  
12 the safety issue can be resolved. We are a people-powered organization, and the voices of  
13 our employees are essential to our success. Employees must feel comfortable sharing their  
14 experiences and speaking up – that is how we will continue to improve and create a better  
15 organization. Another success is that 99% of all Near Misses reported in 2022 were  
16 corrected within 30 days of the report. In 2023, the Company's goal increased from 1,200  
17 Near Misses submitted for 2022 to 4,892 near misses submitted for 2023. This breaks out  
18 to 1 Near Miss per quarter, per employee. As of October 1, 2023, PAWC has submitted  
19 2,601 Near Misses. We believe that this increased emphasis on safety awareness will  
20 eventually enable PAWC to go a full year without a recordable injury.

21 **Q. How has this benefited PAWC's customers?**

22 A. A strong safety culture is a cornerstone for any high performing organization. A strong  
23 safety culture also improves employee morale, as employees understand a meaningful

1 commitment to them and to their families. In turn, PAWC’s safety culture helps ensure  
2 that our employees are thoughtful in their work, which directly benefits our customers, as  
3 safety is a leading part of our high-performance culture. Lastly, when employees are  
4 healthy at work, they are available for work that benefits the customers.

5 **Q. How does PAWC handle emergency response issues?**

6 A. PAWC maintains emergency response manuals at each operating location. The manuals  
7 are updated each year and include emergency phone numbers for company personnel,  
8 PADEP, the PUC, emergency response services, vendors, suppliers, and critical customers.  
9 In 2022, PAWC conducted five functional water/wastewater treatment plant emergency  
10 response tabletop exercises. These events test each plant’s ability to function during an  
11 emergency, which could include a power outage, chemical supply issues, cyber-attack, or  
12 other similar event. A significant benefit of these sessions is enhancing our cross-functional  
13 communications and also emphasizing the importance of including outside resources such  
14 as County Emergency Response teams and local fire departments. During these exercises  
15 a key element is the discussions held regarding the testing of our communications; both  
16 internally and externally. The exercises included participation from some of our external  
17 partners, including state, county and city regulators and first responders. By strengthening  
18 our relationships with these external partners, we can better understand their expectations  
19 and the support that they may provide during emergencies. Situational awareness is also a  
20 key takeaway from these exercises because we alert participants to some hazards they  
21 might face if responding to our facilities. Additionally, discussions are held to broaden  
22 PAWC’s awareness to the American Water Enterprise Crisis Response Team (“ECRT”)

1 which is available to provide support and guidance to the business during significant and  
2 severe incidents as they occur.

3 Future plans for 2023-24 include a tabletop exercise specific to Dam and Dam  
4 Safety (e.g., car into reservoir, significant storm, boils and seepage, and dam sinkhole) and  
5 tabletop exercises focused on physical security and cybersecurity.

6 **Q. Please describe your Underground Damage Prevention Program as it relates to**  
7 **Act 50.**

8 A. We have over 200 employees that perform underground locate requests in response to  
9 PA811 efforts. In 2022, the Company completed 183,343 One Call tickets. This year, as of  
10 September 1, 2023, the Company has completed 95,732 One Call tickets. Several PAWC  
11 employees perform underground locates as their primary job, and it is imperative to closely  
12 track and monitor performance to keep all parties aligned. We have an Underground  
13 Damage Prevention Committee that meets once per month to discuss performance trends,  
14 alleged violation reports, technical issues and training programs. The cross functional  
15 committee is made up of managers for each operating region, GIS team members, Legal  
16 and Business Performance who administer the program.

17 **Q. What measures are in place to ensure compliance?**

18 A. The Company's performance is very good with over 99.99% of tickets completed in 2022  
19 and a steadily decreasing percentage of tickets that are responded to late of only 0.5%  
20 through October 1, 2023. There are various time frames within which different types of  
21 tickets must be completed. Emergency tickets are to be completed as soon as practical and  
22 routine tickets must be completed within 3 days. We track both completion of tickets and  
23 timeliness, i.e., completed within the applicable statutory time frame for response. Any

1 missed opportunity is discussed with local management, which has enabled the  
2 organization to continually improve.

3 **Operating and Maintenance Expense**

4 **Q. What is PAWC's forecasted O&M expense for the fully projected future test year**  
5 **("FPFTY") ending June 30, 2025?**

6 A. PAWC's total O&M expense for the FPFTY is approximately \$314 million, which is  
7 discussed in more detail in the Direct Testimony of Lori O'Malley (PAWC Statement  
8 No. 5).

9 **Q. What factors contribute to increases in operating expenses?**

10 A. As discussed in the Direct Testimony of Ashley Everette (PAWC Statement No. 1), the  
11 Company has managed to keep the rate of increases in O&M expense below that of  
12 inflation. However, several factors have caused an increase in the Company's O&M  
13 expenses. For example, PAWC has faced higher chemical prices due to volatility in the  
14 chemical supply market driven by both materials and transportation, which in turn results  
15 in chemical suppliers unwilling to commit to long-term agreements. Another example of  
16 an increase in O&M expenses is related to continued cost increases on treatment equipment  
17 and maintenance of our pumps, wells and pressure reducing valves. We have also seen  
18 increased costs due to municipal and state road opening permits and restoration costs.  
19 Increased assets and equipment related to acquisitions have also impacted expenses. We  
20 have also been impacted by the increased costs of fuel for our vehicles and generators. The  
21 Company has also experienced increased O&M expense from employee-related costs  
22 including wage increases, training, and development.

1 perspective, improving water and wastewater efficiency requires achieving a cost-effective  
2 mix of prudent investments and improved operations and maintenance management  
3 capabilities targeting safety, customer satisfaction, sustainability, and system efficiency.  
4 Customers, utilities, businesses, and the environment can all benefit from more efficient,  
5 higher quality service, reduced costs, and sustainable use of natural resources.

6 **Q. Please describe PAWC's efforts to improve water and wastewater efficiency.**

7 A. The Company strives to improve water and wastewater efficiency through operational  
8 excellence, the use of technology, system maintenance, and efforts to manage costs as  
9 efficiently as possible to provide a more cost-effective level of service for our customers over  
10 the long term. The Company also leverages the size and scale of American Water to improve  
11 transactional efficiencies through increased automation, the adoption of more effective  
12 business practices, and a continuous improvement mindset.

13 **Q. How is PAWC using technology to improve employee effectiveness?**

14 A. PAWC is using technology in a number of ways in order to enhance productivity and  
15 efficiency. For example, accurate GIS maps ensure that the Company's institutional  
16 infrastructure knowledge is readily available for use by employees. To that end, PAWC  
17 has loaded its facilities into GIS so that maps of its water and wastewater system assets are  
18 accessible on its internal network. The information available in GIS includes the location  
19 and a short description of the facilities, giving an electronic spatial view of the entire  
20 system. GIS also helps locate customers that might be affected by related service issues  
21 and allows us to communicate with our customers more effectively.

22 PAWC continues to enhance its GIS platform through integration with our  
23 Enterprise Asset Management system, our computer-aided design system, our work

1 management system (“MapCall”) and our fixed asset records. This integration allows  
2 communication across the various platforms that makes data retrieval more efficient. The  
3 Company continues to build the GIS platform by adding new assets and retiring old assets  
4 to ensure our technicians have access to the most current information while working in the  
5 field. In 2022, the Company implemented a ‘Digital As-built Workflow’ that is focused on  
6 standardizing how, what and when GIS is updated as well as facilitating better integration  
7 between GIS and MapCall. This improved the lag time between when the asset was  
8 installed to when GIS and other systems are updated. The goal is to keep our GIS current,  
9 complete and accurate for our end users.

10 **Q. How have PAWC and its customers benefitted from the GIS platform?**

11 A. The location of water quality events, chlorine residuals, maintenance events, and pipe failures  
12 are all plotted on GIS map layers. The spatially presented information can be used to answer  
13 customer water quality inquiries, identify trends, and prioritize water main replacement  
14 projects. GIS also is a tool used to assist compliance with federal and state lead service line  
15 inventory and management. Known customer and Company service line material data has  
16 been loaded into the MapCall service records that is integrated to display on the GIS maps.  
17 This will provide employees and customers with a visual representation of known and  
18 suspected lead service lines within the service territory.

19 **Q. How does PAWC’s work management system improve employee effectiveness?**

20 A. MapCall is a web-based application that enables employees and contractors to complete the  
21 lifecycle of work orders and assets in the field. Employees and contractors can view historical  
22 information, including work order history on an asset, standard operating practices associated  
23 with an asset, maintenance history, O&M manuals, and tap card images. MapCall provides

1 the flexibility to create work orders, configure workflows and report progress while in the  
2 field. For example, a supervisor can create a work order to flush a dozen hydrants in a  
3 particular area. Using MapCall, the field worker can report progress as flushing is performed,  
4 and both the supervisor and others in the field can visually see the progress made toward  
5 completing the identified work in real time through the MapCall interface. The same can be  
6 done to schedule and monitor other routine work, as well as emergency work, such as main  
7 break repairs. MapCall also allows those in the field to communicate water quality and other  
8 events more efficiently through preloaded notifications via email to both internal and external  
9 stakeholders, including regulators, allowing workers to quickly shift back to focusing on the  
10 task at hand and providing quality service to customers. Water main break locations are  
11 continually added to GIS and MapCall to help identify sections of pipe that have outlived  
12 their useful life. This information is used to prioritize water main replacements by  
13 strategically focusing on the pipe with the highest risk of failure.

14 **Q. Are there other technology solutions that have been implemented to improve**  
15 **employee effectiveness?**

16 A. Yes. In addition to GIS and MapCall, PAWC is implementing other technology solutions to  
17 enhance employee effectiveness. MyWater and Work1View (“W1V”) are software  
18 applications that provide more comprehensive and easily accessible information to  
19 employees.

20 **Q. Please describe how MyWater and W1V improve employee effectiveness.**

21 A. MyWater has been implemented by the Company to better serve our customers. MyWater  
22 provides improved access to customer information (e.g., premise and service order history,  
23 meter details, billing and payment information) to field service representatives (“FSRs”), and

1 customer service representatives (“CSRs”) who regularly interact with our customers. This  
2 means that FSRs can view the same information as CSRs. This allows our FSRs to review  
3 customer information that can help them address the customer’s issue and provide customers  
4 information while speaking with them, rather than having to contact the Customer Service  
5 Center (“CSC”) for information or requiring customers themselves to follow up with the  
6 CSC. FSRs can also update customer information and record notes on customer interactions  
7 on the spot, providing other employees that serve our customers timely access to the most  
8 up-to-date information. MyWater is also the customer facing website that allows customers  
9 to view much of the same information in the same format as both our FSRs and our CSRs  
10 are seeing to make for a more seamless discussion when interacting with the customer.  
11 Recent and planned enhancements have and will also improve our customers’ self-service  
12 capabilities and the resiliency and usability of the website.

13 W1V provides employees with a single view for managing customer service order  
14 work in the field, customer information and meter information. W1V includes a real-time  
15 operations map to see work orders with optimized routing, as well as other types of nearby  
16 work and alerts. In addition, using W1V, FSRs can manage their own work based on the  
17 day’s demands by adding or deferring undated work or by putting orders on hold in order to  
18 do emergency work needed at another location. Supervisors can also reroute work as  
19 appropriate. W1V along with MyWater allows for easy access to customer information  
20 during field visits. It has also been integrated with MapCall to provide FSRs one point of  
21 access for all information needs. Taken together, these types of improvements continue to  
22 support improved customer experience and satisfaction.

1 **Q. Is the Company deploying advanced metering infrastructure technology?**

2 A. Yes, advanced metering infrastructure (“AMI”) technology is an integrated system of meters,  
3 communications networks, and data management systems. As of October 1, 2023, the  
4 Company has installed 138,000 AMI meters and smart endpoint systems. The AMI cellular-  
5 network systems utilize smart cellular endpoints installed on each meter to transmit the meter  
6 data via an existing third party cellular infrastructure to a central database system for analysis  
7 and reporting. The smart endpoint utilizes a cell-based network provided by major companies  
8 such as AT&T and Verizon to capture interim customer reads and eliminates the  
9 requirements of a fixed data collector network.

10 **Q. Why is PAWC installing AMI technology?**

11 A. The implementation of AMI increases billing accuracy and reduces the likelihood of  
12 estimated bills (e.g., due to weather events or other obstacles to accessing customer meters)  
13 by automatically providing timely, accurate reads through the network. In addition, AMI  
14 will reduce the need for manual re-reads and improve processes from meter reading through  
15 billing. AMI reduces the number of certain service orders over time by eliminating the need  
16 to drive by premises to collect reads and eliminating the need to roll a truck to complete  
17 certain high volume service orders such as “Move in-Move out orders.” Reducing truck rolls  
18 provides additional environmental benefits related to reduced emissions and safety benefits  
19 to PAWC employees who avoid potential safety hazards associated with in-person meter  
20 reads. PAWC also can use AMI data to uncover irregularities that may signal a leak, meter  
21 tampering or water theft. With the planned implementation of a meter data management  
22 system, the Company will also be able to collect, organize and analyze information, to better  
23 enable smart water use choices, to enhance customer communication regarding customer

1 water consumption patterns, and to improve PAWC's ability to measure and address non-  
2 revenue water more efficiently.

3 **Q. Please describe the Company's AMI deployment progress.**

4 A. The Company is taking an approach that strategically selects areas for concentrated AMI  
5 efforts based on local needs and opportunities. As of August 2023, 31% of the Company's  
6 customers are equipped with AMI technology, with Scranton customers comprising the  
7 majority of our AMI customers. The Company also adopted cellular AMI technology, and  
8 all length of service meter and faulty meter replacements will be upgraded to AMI  
9 throughout the Company's service areas. We expect that 35-40% of the Company's  
10 customers will be equipped with AMI by the end of 2023.

11 **Q. What are PAWC's other efforts to improve water efficiency?**

12 A. In addition to utilizing its Distribution System Improvement Charge ("DSIC") mechanism  
13 to accelerate the replacement of aging infrastructure in the Company's service territory, we  
14 are enhancing our leak detection efforts throughout the state to reduce non-revenue water.

15 **Q. What is non-revenue water)?**

16 A. Non-revenue water ("NRW") is the difference between system delivery and water sales.  
17 Typically, NRW is measured as a volume, or a percentage of system delivery based on a  
18 12-month rolling average. NRW is not just leakage, but also includes water for beneficial  
19 uses such as firefighting, flushing new water mains, flushing to maintain adequate chlorine  
20 levels, and annual hydrant flushing, as well as theft, and meter inaccuracies. To avoid any  
21 ambiguity, American Water, based in part on guidance from the American Water Works  
22 Association ("AWWA"), measures its reduction in water loss in terms of NRW rather than

1 Unaccounted for Water (“UFW”).<sup>1</sup> In contrast to UFW, which can be defined in a variety  
2 of ways across the water industry, NRW is consistently calculated by subtracting the  
3 number of gallons of water sold from the number of gallons of water treated.

4 **Q. Please describe the Company’s program to reduce NRW.**

5 A. As noted, reducing water loss is a complex issue with many contributing factors. To reduce  
6 actual water losses as effectively as possible, we strive to gather standard data from our  
7 operating centers so that we can efficiently and effectively communicate what is working,  
8 what is not working, and how we are progressing on mitigating NRW around the  
9 Commonwealth.

10 The Company rigorously applies water loss reduction practices in the normal course  
11 of business. These practices include regular monthly NRW meetings in both our east and  
12 west divisions that provide target NRW reductions and goals by independent NRW report  
13 cards of activities, routine maintenance, and pursuing and repairing leaks that are  
14 identified. In addition, the Company has several NRW control measures embedded in its  
15 on-going business practice, which consist principally of:

- 16 • Monitoring night flows within the different District Metering Areas (“DMA”) across  
17 its systems (unexpected usage during off-peak periods can indicate leakage).
- 18 • Metering water usage within various parts of a water district as another indicator of  
19 possible leakage; the addition of DMAs working in conjunction with advanced  
20 metering infrastructure customer metering to assist in lost water identification within  
21 an operating district.

---

<sup>1</sup> The AWWA began to discourage the use of the term Unaccounted for Water in 2012 because its definition is inconsistent from organization to organization. There are several opportunities for inconsistency. For example, some organizations may deduct the number of gallons lost during a known main break, while others exclude gallons lost as a result of main breaks altogether.

- 1 • Using NRW-trained crew to find and report leaks daily, which are then promptly  
2 repaired.
- 3 • In conjunction with the state training lead, PAWC provides NRW and leak detection  
4 training for our new and current employees, including hands-on equipment training.
- 5 • Using NRW crews periodically in a “SWAT”-type approach to sweep larger areas of a  
6 particular system for leaks.
- 7 • Implementation of leak detection specialists to help locate leaks throughout PAWC’s  
8 service territory when needed in the case of an emergency.
- 9 • Using the Company’s MapCall work management system to capture all work done by  
10 our crews, including main break repairs so that patterns can be analyzed geographically  
11 (this will allow us to identify future main and service replacement projects).
- 12 • Usage of MapCall for more accurate monthly reporting and monitoring of all NRW  
13 use; and documenting all unaccounted-for water loss and authorized consumption in  
14 total gallons.
- 15 • Training meter readers and other field personnel to identify and report possible theft-  
16 of-service situations (such as evidence of occupancy or other activity in premises with  
17 no registered consumption) and raising public awareness and understanding of the  
18 operational and financial consequences of NRW.
- 19 • Asking local municipalities to develop theft-of-service ordinances and to enlist citizens  
20 and law enforcement to help address this problem.
- 21 • Annual and semi-annual testing and calibration of our production delivery meters per  
22 AWWA M36 manual standards.
- 23 • Metering all automatic blow-offs for water quality flushing and new water main  
24 installation flushing to help account for all authorized consumption water loss.

25 In addition to these operations activities, PAWC has an aggressive capital expenditure  
26 program to reduce the number of small diameter mains, which also helps to reduce water  
27 loss from the system. The Company’s capital expenditures for main replacement and  
28 rehabilitation are described in more detail by Mr. Bruce Aiton (PAWC Statement No. 3).

1 **Q. Please describe the leak detection technology used by the Company to control NRW.**

2 A. Approximately 23,000 leak detection sensors have been installed in the Company's  
3 distribution system since 2016 and around 11,000 of those sensors have been installed since  
4 2022. These active acoustic listening devices are cellular based and can transmit their  
5 findings to us daily for analysis. This transmittal eliminates the need to deploy resources  
6 to patrol the areas to collect the data, which allows for more timely analysis of the collected  
7 data. This technology also allows us to better identify those areas that need the most  
8 attention, resulting in more efficient deployment of repair crews. Since 2022, these leak  
9 detection sensors have helped pinpoint over 2,000 non-surfacing leaks that would have  
10 otherwise been unknown, allowing for quick repair by field operations staff. The Company  
11 plans to install an additional 3,000 acoustic cellular data loggers in 2024 across its service  
12 territory.

13 Our leak detection specialists use a variety of additional state-of-the-art equipment  
14 in the field as well, such as ground listening microphones, leak correlators, and line locating  
15 devices to locate and pinpoint leaks.

16 In 2023, an innovative technology was implemented in our regional Scranton Water  
17 system. The Company has partnered with a third-party vendor, Asterra, a satellite imagery  
18 company that takes photos of water facilities locating the dielectric properties of treated  
19 water in soil and marking points of interest overlaid on Company GIS mapping. This  
20 technology will be used with leak detection sensor technology to help us locate and repair  
21 leaks in remote locations of our operating areas in a more timely way, preventing  
22 substantial amounts of water loss and savings on production costs. PAWC plans to expand

1 the use of this technology to our Philipsburg regional water system in 2023-2024 to further  
2 evaluate the technology.

3 **Q. How has the Company created additional efficiencies with respect to its fleet**  
4 **management?**

5 A. With a fleet of over 1,100 vehicles and other rolling equipment, it is imperative that the  
6 Company has a program to manage its fleet. In 2023, American Water has restructured a  
7 centralized fleet management organization to support the Company in both fleet purchasing  
8 and maintenance. The organization is assisting PAWC with standardizing fleet equipment  
9 and generating savings by working directly with our senior operations managers and the  
10 end-users to optimize both initial cost and lifetime costs for every vehicle in the PAWC  
11 fleet. This process results in continuous improvement to better meet the needs of the end  
12 user. Our fleet management team is focused on reducing expenses, when possible, without  
13 negatively affecting our ability to serve our customers and safety.

14 As part of the capital planning process, we identify vehicles that are nearing the end  
15 of their depreciable life for replacement, targeting smaller replacement vehicles with better  
16 fuel consumption and lower initial and lifecycle costs. The mix of vehicle types varies  
17 year to year based on business need. Our capital program typically replaces over  
18 120 vehicles per year. A summary of the Company's recent historical and planned vehicle  
19 replacements follows:

Year	Capital Spend	Vehicles Replaced
2021	\$12.3M	146
2022	\$11.5M	148

2023 (planned)	\$10.5M	145
2024 (planned)	\$10.8M	113

1  
2

12  
13  
14  
15  
16  
17  
18  
19  
20

In addition, our third-party fleet management company, ARI Inc., provides us with data each month that allows us to look for trends around vehicle repair costs and fuel consumption.

We also have a policy of strategically sharing vehicles across districts to balance the needs of the business, especially when a vehicle is near the end of its depreciable life and in need of repair before its permanent replacement is available.

**Q. Please describe the Company’s energy efficiency initiatives and cost controls.**

A. PAWC is using various strategies to improve energy efficiency and reduce energy costs that include five principal components: (1) competitive energy procurement; (2) upgrading energy efficiency of treatment and pumping facilities; (3) lighting upgrades; (4) energy-use monitoring and demand response; and (5) obtaining rebates made available under electric utility programs implementing Act 129 of 2008 (“Act 129”).

**Q. Please describe some of PAWC’s energy cost mitigation strategies.**

A. **Competitive Energy Procurement.** PAWC actively procures a diverse portfolio of electricity supplies across its operations. The Company uses competitive sourcing to procure electricity supplies for its operations in the West Penn Power, Duquesne Light, Met Ed, PECO, Penelec, Penn Power and PPL service territories. PAWC’s supply contracts currently are based on “shaped” fixed pricing, which offers both competitive and stable pricing over time. The aggregate annual electricity supply covered by a mix of short-

1 and long-term fixed contracts accounts for over 95% of the Company’s annual electricity  
2 consumption.

3 The remaining percentage of the Company’s annual electricity consumption is from  
4 bundled sales service provided by the delivery utility. The Company will continue to  
5 employ all reasonable efforts to obtain competitive electric pricing for the benefit of  
6 customers.

7 ***Energy Efficiency Upgrades.*** The objectives of the Company’s energy efficiency  
8 efforts are to reduce energy costs and greenhouse gas emissions that are associated with  
9 inefficient power consumption. The Company has performed “water-to-wire” efficiency  
10 testing (i.e., the efficiency of a pump and motor together) of its largest pumping facilities  
11 to identify opportunities to improve the efficiency of motors and pumps. The Company  
12 has systematically refurbished and/or replaced pumps at all of the top 20 energy consuming  
13 facilities. The Company continues to monitor these large stations to ensure that pumping  
14 efficiencies remain at acceptable levels and, in the event further upgrades are required to  
15 maintain or efficiently achieve greater efficiencies, PAWC will plan capital projects, as  
16 needed, to implement such upgrades.

17 ***Lighting Upgrades.*** The Company has upgraded the lighting and switches at more  
18 than 55 treatment plants, pumping stations and office buildings/operations centers. These  
19 projects consisted of replacing existing metal halide and T12 fluorescent fixtures with new,  
20 high-efficiency T8 fluorescent and/or LED fixtures, installing high-efficiency lamps,  
21 installing new high-efficiency outdoor LED lighting, and/or installing new switches with  
22 occupancy-sensor controls. The projects have payback periods of about two years and  
23 provide energy savings and improved lighting for workspaces well into the future. The

1 Company continues to look for opportunities during capital upgrade projects to replace  
2 inefficient equipment in order to gain efficiencies and realize savings.

3 ***Energy Use Monitoring and Demand Response.*** PAWC uses an American Water  
4 enterprise-wide application to monitor its energy accounts across the state. This  
5 monitoring tool provides “before and after” benchmarking capabilities to help the  
6 Company assess the success of various efficiency initiatives. The Company has also  
7 installed real-time electricity meters and dashboards at 19 of its largest pumping facilities.  
8 The dashboard provides our operators with real-time visibility of their electricity  
9 consumption and wire-to-water efficiency, and also provides our engineers with discrete  
10 energy efficiency data on these large units to monitor and plan for future efficiency  
11 upgrades.

12 PAWC was also an early adopter of smart-grid technology to help integrate the way  
13 we operate our treatment plants and pumps with electric grid system conditions. PAWC  
14 has installed equipment at three of its largest water pumping stations and one of its largest  
15 wastewater treatment plants that allows those facilities to vary electric usage (up or down)  
16 based on signals from the local grid operator. PAWC receives revenues from participation  
17 in demand response programs at these locations ranging from \$25,000 to \$75,000 annually  
18 that are used to offset electricity expense, but more importantly, we are taking proactive  
19 steps to help ensure the integrity of the electricity grid during peak demand emergencies.

20 ***Act 129 Rebates.*** PAWC has been working with its electric utilities since the  
21 inception of the programs for energy efficiency and conservation (“EE&C”) that those  
22 utilities instituted to comply with Act 129. When electric utilities were developing their  
23 EE&C programs, the Company participated in stakeholder meetings with their service

1 providers to provide input from the water and wastewater industries. As the EE&C  
2 programs were introduced by the electric utilities, PAWC reviewed its capital projects for  
3 eligibility under the rebate programs and applied for, and received, several rebates. As of  
4 October 1, 2023, the Company has received over 40 rebates for more than \$1,020,000.

5 **Q. What are the benefits of PAWC's efforts to improve energy efficiency?**

6 A. The benefits of PAWC's efforts to improve energy efficiency are three-fold. Improved  
7 energy efficiency (1) provides more efficient, higher quality service; (2) reduces operating  
8 costs through reduced energy consumption; and (3) reduces carbon and other emissions.  
9 Through the comprehensive energy efficiency programs outlined above, the Company has  
10 been able to minimize increases to its fuel and power expenses.

11 **Q. Please describe what the Company has done to control waste disposal expenses.**

12 A. The Company has a long history of exploring and implementing cost-effective beneficial  
13 uses for its treatment residuals, rather than relying on costly landfill disposal. The  
14 Company has been able to implement beneficial use practices at 32 of the Company's  
15 35 surface water treatment plants. On a dry weight basis, approximately 95% of the  
16 Company's water treatment residuals are beneficially used across the state, at a cost far  
17 lower than conventional disposal at a landfill. The Company recently implemented capital  
18 improvement projects at the Ellwood City and Norristown water treatment plants and the  
19 Clarion wastewater treatment plant to improve the residuals dewatering process. This  
20 process lowers the overall weight of the product to be transported and disposed of; and  
21 thus, the associated costs as well. A new volute press process at the Clarion wastewater  
22 treatment plant has improved the percentage solids reduction from an original range of  
23 12%-18% to greater than 16%-22%, thus reducing the overall disposal costs. The new

1 centrifuge process in Ellwood City, completed in 2019, has resulted in a disposal cost  
2 saving of over 90%. A residuals improvement project is currently being completed at  
3 PAWC's largest water treatment plant, the Hays Mine Plant in Pittsburgh, which is  
4 expected to result in similar savings.

5 **Q. Please describe what the Company has done to control purchased water expenses.**

6 A. The Company has implemented changes in two districts to control purchased water  
7 expenses. We are currently maximizing all extra capacity from our Brownsville treatment  
8 plant by pumping it to Uniontown to reduce the purchased water load. We also increased  
9 our leak detection activities in Uniontown to minimize purchased water. The Company is  
10 continually investigating potential capital upgrades to be able to shift even more load to  
11 the lower-cost provider in the longer term.

#### 12 **Employee Levels and Compensation**

13 **Q. Please discuss how PAWC staffs its business operations.**

14 A. As a public utility, PAWC is required to provide safe, reliable, and adequate water and  
15 wastewater services. PAWC's employees are responsible for assuring the production of  
16 high-quality drinking water, operating and maintaining the Company's production and  
17 treatment facilities and its distribution and collection systems, monitoring water quality,  
18 providing engineering services, and supporting the efficient management of all the  
19 Company's operations.

20 The Company continually strives to find more efficient and cost-effective ways to  
21 operate and maintain its business. As part of that effort, we strive to manage our cost  
22 structure as efficiently as possible, including employee costs. We recognize our duty to  
23 staff our business in a way consistent with providing safe, reliable and affordable utility

1 service. This requires a constant evaluation of the right mix of internal and contract labor,  
2 straight time versus overtime, training programs, and supplementing or, when prudent,  
3 replacing labor with technology. In this vein, we continue to evaluate costs and expenses  
4 going forward, always looking for the best solution for the unique and changing challenges  
5 we face. A substantial portion of PAWC's cost structure is associated with the Company's  
6 cost of labor, and as a position becomes vacant in our organization, we look to the value of  
7 that position. We review the overall need for that position and consider, among other  
8 things, whether it should be transferred to another area, modified, or even eliminated.  
9 Workforce optimization and improved business performance are the goals of these efforts.  
10 We continue to evaluate the new roles that will be created as new regulatory requirements  
11 are promulgated, and the appropriate positions that PAWC will need to optimize recent  
12 technology and most effectively serve our customers.

13 **Q. What is PAWC's forecasted staffing level in this case?**

14 A. We have identified 1,294 equivalent employees as the appropriate staffing level for the  
15 Company's water and wastewater operations in the FPFTY. The number of employees is  
16 based upon each department and each functional area's need to provide safe, adequate,  
17 efficient, and reliable service to the Company's customers. Service needs and related  
18 resource requirements are consistent with meeting regulatory requirements, tariff  
19 requirements, industry standards, service requests, customer needs, and providing adequate  
20 support to PAWC's business operations.

21 **Q. Please describe PAWC's approach to employee compensation.**

22 A. PAWC aims to offer compensation that allows it to attract and retain customer-committed,  
23 dedicated and highly qualified employees. The Company's overall compensation

1 philosophy is to provide employees with a total compensation package that is market based  
2 and competitive with those of comparable organizations with jobs of similar responsibility.  
3 As part of its compensation philosophy, the Company has chosen to make a portion of its  
4 compensation variable, driving continued performance across the enterprise. Specifically,  
5 PAWC targets its total direct compensation (base and variable compensation) for each role  
6 at the Company near the market median (50th percentile) for that role. By using a  
7 combination of fixed and variable compensation, the Company satisfies a dual objective of  
8 ensuring competitive market-based total compensation for all employees, while continuing  
9 to motivate employees to achieve goals that will improve performance and efficiency for  
10 the benefit of our customers.

11 **Q. Please identify the various employee classifications at PAWC and briefly describe**  
12 **how each group is compensated.**

13 A. There are three classifications of employees: collective bargaining unit (“CBU”) hourly  
14 employees, non-collective bargaining unit (“non-CBU”) hourly employees and exempt  
15 employees. Full-time hourly employees are compensated through base pay, overtime,  
16 performance compensation, and in some instances, shift premium and meal compensation  
17 pursuant to the terms of applicable collective bargaining agreements. Exempt employees  
18 are compensated through base pay and performance compensation.

19 **Q. How is performance compensation provided to PAWC employees?**

20 A. The performance compensation component of the Company’s total direct compensation  
21 may be awarded under two performance plans – the Annual Performance Plan (“APP”) and  
22 the Long-Term Performance Plan (“LTPP”). All full-time employees, including CBU  
23 employees, participate in the APP. Eligibility for the LTPP is limited to certain exempt

1 employees. Copies of the plans, which are marked as confidential and proprietary, are  
2 provided as Filing Requirement III.22 (Volume 6b) of the Company's responses to the  
3 PUC's filing requirements.

4 **Q. Please describe the key performance objectives underlying the APP.**

5 A. The APP is designed to recognize performance against key performance goals and targets  
6 that drive the Company's strategy. For 2023, the APP goals include safety goals related to  
7 reducing the ORIR and DART rates, customer goals related to customer satisfaction,  
8 environmental goals related to avoiding violations, people goals related to improving  
9 diverse representation in the workforce, and growth goals related to the Company's  
10 financial performance.

11 **Q. Please describe the Company's LTTP.**

12 A. American Water provides restricted stock units ("RSUs") and performance stock units  
13 ("PSUs") as long-term variable compensation under the LTTP. American Water's RSUs  
14 and PSUs are based on three-year vesting periods. RSUs are based on time-based vesting  
15 and PSUs are based on performance vesting conditions.<sup>2</sup>

16 **Q. Do the Company's compensation plans benefit customers?**

17 A. Yes. As I mentioned, the plans are designed to provide compensation for performance and  
18 to focus plan participants on delivering safe, reliable and affordable water and wastewater  
19 services. The design of the plans emphasizes customer service, environmental compliance,

---

<sup>2</sup> American Water uses a combination of compounded EPS growth and relative total shareholder return ("TSR") ranking over a three-year performance period as the basis for measuring performance for PSU awards. For the portion of American Water's PSUs that are contingent on relative TSR percentile performance, American Water compares performance to its peer group.

1 a safe work environment, and people, as well as certain financial goals. All of the APP and  
2 LTPP performance objectives – both operational and financial – focus employees’ efforts  
3 in ways that ultimately benefit customers. The use of multiple measures further strengthens  
4 our ability to drive results across the enterprise. The operational components measure  
5 performance that can most directly influence customer satisfaction, health and safety,  
6 environmental performance, and workforce diversity. Customers benefit from the plan  
7 goals because operational performance is improved by controlling costs, capturing  
8 efficiencies, promoting effective safety and risk management practices, enhancing  
9 customer service, and doing so with a diverse workforce that reflects the communities we  
10 serve. Performance is determined by goals that benefit customers by creating a more  
11 productive and engaged workforce that is focused on customer satisfaction and achieving  
12 efficiency, environmental and safety goals. Further, well-grounded financial measures  
13 keep the organization focused on improved performance at all levels of the organization,  
14 particularly in increasing efficiency, decreasing waste, and boosting overall productivity.  
15 Finally, a financially healthy utility focused on efficiency and customer satisfaction can  
16 attract the capital investments necessary to provide safe and reliable service at favorable  
17 rates. Because utilities are capital intensive and must routinely and consistently access the  
18 capital markets, customers ultimately benefit when their utility has the financial health to  
19 do so at reasonable rates. Simply put, a financially healthy utility benefits customers  
20 because it enables the utility to meet its service obligations at reasonable financing costs.

### **Employee Development**

21  
22 **Q. Describe the Company’s commitment to employee development.**

1 A. PAWC values the growth and development of its employees. In support of this, an annual  
2 training goal of 25 hours or more has been set for all employees. LEARN, American  
3 Water’s learning management systems provides a one-stop shop for registering for  
4 instructor-led courses and participating in e-learning. In addition to the Company’s focus  
5 on providing employees with relevant training geared towards their primary job  
6 responsibilities, there are opportunities for technical, professional, management and  
7 leadership development for career advancement opportunities. There are over 200+  
8 eLearning courses around business, leadership, and professional development available in  
9 LEARN.

10 All employees have been assigned the following safety courses for 2023: Blood  
11 Born Pathogens and Fire Safety and Prevention, which are an annual requirement. In  
12 addition, An Employees Right to Know, Slips, Trips and Falls and Stop Work Authority  
13 are on a three-year training recurrence cycle. We consider these courses core to our training  
14 program and additional courses are assigned based on the employee’s specific job tasks.  
15 PAWC has also developed an Operator Training Academy aimed at developing the skills  
16 of our treatment plant operators, which consists of both virtual and live sessions. While  
17 designed for operators, the program is offered to all employees that wish to develop their  
18 understanding of the Production and Treatment processes.

19 **Q. Does this conclude your testimony?**

20 A. Yes, it does.

3	High Strength Wastewater Surcharge Calculations – Fiscal Year 2019

## 1.0 INTRODUCTION

### 1.1 Background

Wastewater discharged from some non-residential (industrial, institutional, or commercial) dischargers can be much higher in strength than domestic wastewater and, as a result, requires additional treatment. These non-residential facilities can discharge wastewater containing high Biochemical Oxygen Demand (BOD<sub>5</sub>), Total Suspended Solids (TSS), Total Phosphorus (TP), or Total Nitrogen (TN). Industrial, institutional, and commercial wastewaters can cost more to treat than residential wastewater because it can have a higher dissolved oxygen demand, create more solids for disposal, or require more chemicals for treatment. A High Strength Wastewater Surcharge Program provides a means to recover the additional treatment costs created by these discharges by charging a surcharge fee (in addition to the quarterly user rate) to dischargers of higher-than-normal strength wastewater. Surcharge rates provide an equitable means of distributing treatment costs among rate payers based on discharge characteristics. They are facility-specific and are calculated based on actual facility operating data. By establishing high strength surcharge rates, wastewater treatment plants (WWTPs) have the ability to distribute treatment costs on the basis of actual discharge strength above an established surcharge “baseline concentration.

Pennsylvania American Water Company (PAWC) has developed and implemented a High Strength Surcharge Program, as outlined in its Pennsylvania Wastewater Tariff. The surcharges for the Coatesville District are outlined under Section T, 1.2 and are summarized in *Table 1-1*. Because high strength surcharges are based on actual operating expenses and treatment efficiencies, these calculations must be updated periodically to better reflect the current operations of the WWTP. For these reasons, the PAWC has decided to update the calculations of their High Strength Surcharge Program for the Coatesville District to ensure the surcharge rates are appropriate and defensible. Additionally, PAWC wishes to establish nutrient surcharge rates for Total Nitrogen (TN) and Total Phosphorus (TP) in addition to Biochemical Oxygen Demand (BOD) and Total Suspended Solids (TSS).

**Table 1-1.** Current Surcharge Rate Schedule

	<b>Cost/Lb.</b>
BOD <sub>5</sub>	\$0.10
TSS	\$0.06

The surcharge study calculations involve establishing a cost per pound for the pollutants of concern (BOD<sub>5</sub>, TSS, TP, and TN) for each of the past three (3) years and then calculating a running 3-year average for each. The calculation tables are set up so that they can be updated periodically to allow the PAWC to establish current treatment costs for each pollutant.

## 1.2 Methodology

This Report sets forth the results of a High Strength Wastewater Surcharge Rate Study based on actual operations and maintenance expenses and actual influent loadings to the PAWC Coatesville WWTP for calendar years 2017, 2018, and 2019. This report contains explanations of the methods and procedures employed to calculate the High Strength Wastewater Surcharge Rate for the PAWC. Operations and maintenance costs were allocated among eleven (11) treatment processes (Influent Pumping Station, Preliminary Treatment, Bioreactors, Secondary Clarification, Chemical P Removal, Secondary Pumping Station, Tertiary Filtration, Disinfection, Solids Thickening, Aerobic Digestion, and Solids Dewatering). The treatment process O&M costs were allocated to the removal of BOD<sub>5</sub>, TSS, TN, and TP. The annual removal (in pounds) of BOD<sub>5</sub>, TSS, TN, and TP were calculated using laboratory data. A treatment cost per pound of pollutant removed was then calculated.

## 2.0 ALLOCATION PROCEDURES

The tables in the appendices of this report represent the step-by-step allocation procedures for the high strength wastewater surcharge calculations. Each appendix contains the calculations for an annual 12-month period, based on the PAWC's fiscal year from January 1 through December 31. The tables for Fiscal Year 2017 are contained in *Appendix 1*, Fiscal Year 2018 in *Appendix 2*, and Fiscal Year 2019 in *Appendix 3*.

### 2.1 Allocation of Operation and Maintenance Costs

The actual operation and maintenance costs related to the treatment of wastewater at the Coatesville WWTP are identified by account for each Fiscal Year. Each account was reviewed to determine the nature of the cost and to allocate those costs among the eleven (11) stages of the treatment process. This review formed the basis for the cost allocation presented in *Table 1* of the respective appendices.

**Pennsylvania American Water Coatesville WWTP  
High Strength Wastewater Surcharge Rate Evaluation** \_\_\_\_\_ **April 2022**

The Electrical expenses were allocated based on the percent of annual kilowatt hours of equipment operated for each treatment process, as summarized in *Table 2* of the respective appendices.

## 2.2 Allocation of Cost Functions to Treatment Processes

As previously indicated, eleven (11) stages of treatment processes were included in this evaluation. In *Table 3* of the respective appendices, the costs to operate each treatment process are allocated among the pollutants of concern (Flow, BOD<sub>5</sub>, TSS, TN, and TP) for each Fiscal Year.

## 2.3 Calculation of Removal Costs

The total annual costs associated with the removal of each pollutant for each Fiscal Year is summarized in *Table 4* of the respective appendices. These costs are based on the total operating costs of each treatment process as established in *Table 1* of the respective appendices. The total annual removal costs were divided by the total annual pounds removed of each pollutant in the respective year, as calculated in *Table 4* of the respective appendices, to establish a cost of removal per pound of pollutant.

The results of the High Strength Wastewater Surcharge Evaluation for each pollutant during each Fiscal Year are summarized in *Table 2-1*. A 3-year average has also been developed based on the annual treatment costs for each pollutant and this long-term average is utilized to normalize any anomalies in the annual average values. These 3-year averages should become the basis for the high strength wastewater surcharge rates.

**Table 2-1. High Strength Surcharge Rate Summary**

Pollutant	Fiscal Year			3-Year Average
	2017	2018	2019	
BOD <sub>5</sub>	\$0.39	\$0.33	\$0.33	\$0.35
TSS	\$0.18	\$0.20	\$0.20	\$0.19
TN	\$1.21	\$1.03	\$1.01	\$1.08
TP	\$2.82	\$2.02	\$2.11	\$2.32

The National Association of Clean Water Agencies (NACWA) periodically surveys municipalities and authorities nationwide to track financial trends. As part of the NACWA's most recent survey in 2017, over 100 municipalities and authorities were surveyed. The 2017 NACWA National Survey of Municipal Wastewater Management and Financing Trends found the average BOD surcharge rate was \$ 0.325 per lb. and the

average TSS surcharge rate was \$0.287 per lb. PAWC Coatesville's calculated BOD rate, as presented in *Table 2-1*, appears to be lower than the national average compiled by the NACWA, although the calculated TSS rate is similar to the national average. Additionally, a survey of thirteen (13) wastewater authorities and agencies in central Pennsylvania revealed an average BOD and TSS surcharge rate of \$0.384 and \$0.381 per lb., respectively. Generally, it appears that the PAWC Coatesville surcharge rates are within the typical range.

Please note that these removal costs are applicable only to discharges into the sewer system that are treated at the Coatesville WWTP. Removal costs for other discharges from different sewer service systems or treated at different wastewater treatment plants cannot be extrapolated from these results.

### **3.0 APPLICABILITY**

#### **3.1 Domestic Strength Wastewater Concentrations**

The high strength wastewater surcharge should only be applied to those sources of wastewaters with average discharge qualities that significantly exceed the typical domestic strength concentrations of the Coatesville WWTP's residential and non-regulated commercial (i.e. domestic) users. PAWC's current High Strength Surcharge Program, as outlined in its Pennsylvania Wastewater Tariff under Section T, 1.2, assumes domestic strength BOD and TSS concentrations of 300 mg/L each.

Establishing the "typical" domestic strength concentration for a particular wastewater collection system is accomplished by routine sampling of select locations throughout the system. Without collection system monitoring results, however, a conservative estimate of the typical domestic strength concentration must be utilized for high strength surcharge purposes.

Oftentimes, the average annual WWTP raw influent concentrations can be used for this purpose. These values include the non-residential components in addition to the residential components and, therefore, will typically exhibit higher concentrations than just the domestic wastewater component. This is especially true for the Coatesville WWTP, which includes a large beverage manufacturer in its service area that contributes a significant organic load. For high strength wastewater surcharging purposes, the historical WWTP raw influent concentrations, as presented in *Table 3-1*, can be utilized as the domestic strength concentrations.

**Table 3-1.** WWTP Raw Influent Characteristics

Pollutant	Year *			3-Year Average
	2017	2018	2019	
BOD <sub>5</sub>	324	257	392	324
TSS	305	367	404	359
TN	41.0	29.1	42.1	37.4
TP	6.8	5.5	8.0	6.8

\* As calculated in *Table 4* of the respective calculations in *Appendices 1* through *3*.

In addition to the residential, commercial, and non-regulated industrial discharges from the collection system, the PAWC Coatesville WWTP receives flows from several significant contributors. Raw influent to the WWTP, therefore, is comprised of four (4) main sources: Collection System (residential, commercial, and non-regulated industrial discharges); Victory Brewing Process Wastewater; Hauled Septage; and Rock Run Water Treatment Plant Residuals. As part of Gannett Fleming's August 2019 WWTP Process Evaluation, each of these components of the WWTP raw influent were estimated. The pollutant concentrations of the domestic strength wastewater (i.e. residential, commercial, and non-regulated industrial discharges) in the Coatesville service area is estimated as presented in *Table 3-2*.

**Table 3-2.** Estimated WWTP Raw Influent Characteristics

Pollutant	Average Annual Concentration*, mg/L
BOD <sub>5</sub>	163
TSS	127
TN	32.2

\* As estimated in *Table 1* of the August 2019 GF WWTP Process Evaluation Report

For high strength wastewater surcharging purposes, the recommended pollutant concentrations in the domestic strength wastewater in the Coatesville service area are estimated as presented in *Table 3-3*. Actual domestic strength wastewater within the collection system is most likely lower than the values in *Table 3-3*, however, it is administratively easier to round up the concentrations for compliance monitoring purposes. Additionally, it is appropriate to maintain the BOD and TSS concentrations the same as historically utilized for continuity of the high strength surcharge program.

**Table 3-3.** Recommended Domestic Strength Wastewater Concentrations

Pollutant	Average Annual Concentration, mg/L
BOD <sub>5</sub>	300
TSS	300
TN	40.0
TP	10.0

### 3.2 Applicability

Dischargers identified through wastewater sampling as contributing wastewater with strengths greater than domestic wastewater for any of the surcharge parameters (BOD, TSS, TN, or TP) shall pay a monthly or quarterly surcharge based on that customer's discharge strength and monthly metered wastewater volume. If metering is impractical, estimates of flow may be used. This surcharge will be in addition to the standard sewer use charge which is based on volume. The surcharge rate applies only to the extra strength (i.e. total concentration minus typical domestic concentration) for each parameter. Parameters with concentrations below typical domestic wastewater concentrations should be assessed the standard sewer use charge. No credit should be given for wastewater with one or more parameter concentrations below the maximum typical domestic concentrations.

A high strength wastewater surcharge should be applied to those sources of wastewater with average discharge qualities that significantly exceed the "Recommended Domestic Strength Wastewater Concentrations" as listed in *Table 3-3*. The high strength wastewater surcharge should be calculated using the 3-year average per pound removal cost as listed in *Table 2-1*. High Strength Wastewater Surcharges shall be calculated in dollars using the following formulas:

BOD	$(\$0.20/\text{lb}) \times (\text{Total Flow, Mgal}) \times (8.34) \times (\text{BOD Concentration} - 300 \text{ mg/L})$
TSS	$(\$0.29/\text{lb}) \times (\text{Total Flow, Mgal}) \times (8.34) \times (\text{TSS Concentration} - 300 \text{ mg/L})$
TN	$(\$0.52/\text{lb}) \times (\text{Total Flow, Mgal}) \times (8.34) \times (\text{TN Concentration} - 40.0 \text{ mg/L})$
TP	$(\$0.73/\text{lb}) \times (\text{Total Flow, Mgal}) \times (8.34) \times (\text{TP Concentration} - 10.0 \text{ mg/L})$

The total high strength surcharge rate is the sum of the surcharge rates for each parameter.

Notes:

- <sup>(1)</sup> Operating costs from *Table 1*.
- <sup>(2)</sup> The costs for BOD and TN removal in the secondary treatment process are based on the rate of oxygen demand assuming 1.5 lbs O<sub>2</sub> / lb BOD and 4.6 lbs O<sub>2</sub> / lb NH<sub>3</sub>-N.
- <sup>(3)</sup> The allocation of secondary clarification cost is distributed between BOD, TSS, NH<sub>3</sub>-N based on the estimated contribution of each to solids production. The costs for BOD and NH<sub>3</sub>-N removal in the secondary clarifiers are based on the rate of oxygen demand while TSS contribution is estimated based on the primary clarifier influent TSS loading.
- <sup>(4)</sup> Solids generated consist of influent solids, excess cell mass production as a direct result of the metabolism of BOD and TN, as well as chemical sludge from TP removal in the secondary treatment process. The allocation of solids handling cost is therefore distributed between BOD, TSS, TN, and TP based on the estimated contribution of each to solids production. Solids production is estimated based on the raw influent TSS loadings and the waste activated sludge loadings as outlined in *Table 4*.

**Table 4**  
PAWC Coatesville Wastewater Treatment Plant  
High Strength Wastewater Surcharge Rate Evaluation

Annual WWTP Operations Summary  
January 1, 2017 through December 31, 2017

Pollutant of Concern	Raw Influent <sup>(1a)</sup>		Hauled Septage <sup>(1b)</sup>		Total Combined Process Loadings <sup>(1c)</sup>		Biological Assimilation <sup>(2)</sup>	Final Effluent <sup>(1)</sup>		Removal <sup>(3)</sup>	
	mg/L	lbs/day	mg/L	lbs/day	mg/L	lbs/day	lbs/day	mg/L	lbs/day	lbs/day	lbs/year
BOD	312	8,196	2,000	874	334	9,070	---	2	58	9,070	3,310,497
TSS	276	7,258	1,000	437	284	7,696	---	4	106	7,696	2,808,897
TN	38.4	1,008	100.0	44	38.7	1,051	651	2.9	75.3	325	118,613
TP	7.0	184	20.0	9	7.1	193	123	0.3	6.9	63	23,011

**Notes:**

(1) Raw Influent and Final Effluent average concentrations and loadings as reported for 2017

- a. Raw Influent concentrations and loadings do not include hauled waste contributions.
- b. Hauled septage average equivalent concentrations are based on literature value estimates. Loadings are estimated using annual average hauled waste volume in 1d.
- c. Total Combined Process Loadings are the sum of the raw wastewater and the hauled septage loadings.
- d. Annual average daily flows utilized to calculate the equivalent process loadings concentrations:

Raw Influent: 3,201 mgd  
Hauled Waste: 0,052 mgd

(2) Biological assimilation is estimated based on the following assumptions:

Parameter	Unit	Input	Calculation
WAS	mgd	0.170	---
WAS TSS	mg/L	8,832	---
WAS	lbs/day	---	12,556
MLVSS/MLSS Ratio	%	0.85	---
Estimated WAS VSS	lbs/day	---	10,673
Pure Biomass/WAS VSS Ratio	%	0.50	---
Estimated Pure Biomass	lbs/day	---	5,336
Nitrogen Assimulated	%	12.2%	---
Nitrogen Assimulated	lbs/day	---	651
Phosphorus Assimulated	%	2.3%	---
Phosphorus Assimulated	lbs/day	---	123

(3) Removal assumes that all BOD and TSS is removed through the treatment process and the final effluent CBOD and TSS are mostly an artifact of cellular debris.

- a. For TN and TP, the annual pounds removed is the raw influent loading minus the final effluent loading. Nutrient assimilation in the biological treatment process is considered part of the removal process.

**Table 5**  
PAWC Coatesville Wastewater Treatment Plant  
High Strength Wastewater Surcharge Rate Evaluation

Cost of Removal Summary  
January 1, 2017 through December 31, 2017

<b>Pollutant of Concern</b>	<b>Annual Cost of Removal <sup>(1)</sup></b>	<b>Annual Pounds Removed <sup>(2)</sup></b>	<b>Cost per Pound Removed <sup>(3)</sup></b>
BOD	\$1,294,920	3,310,497	\$0.39
TSS	\$500,820	2,808,897	\$0.18
TN	\$143,920	118,613	\$1.21
TP	\$64,880	23,011	\$2.82

**Notes:**

- (1) Annual Cost of Removal from *Table 3*.
- (2) Annual Pounds Removed based from *Table 4*.
- (3) Cost of Removal = Yearly Cost of Pollutant Removed / Yearly Pounds of Pollutant Removed.

**Notes:**

- <sup>(1)</sup> Operating costs from *Table 1*.
- <sup>(2)</sup> The costs for BOD and TN removal in the secondary treatment process are based on the rate of oxygen demand assuming 1.5 lbs O<sub>2</sub> / lb BOD and 4.6 lbs O<sub>2</sub> / lb NH<sub>3</sub>-N.
- <sup>(3)</sup> The allocation of secondary clarification cost is distributed between BOD, TSS, NH<sub>3</sub>-N based on the estimated contribution of each to solids production. The costs for BOD and NH<sub>3</sub>-N removal in the secondary clarifiers are based on the rate of oxygen demand while TSS contribution is estimated based on the primary clarifier influent TSS loading.
- <sup>(4)</sup> Solids generated consist of influent solids, excess cell mass production as a direct result of the metabolism of BOD and TN, as well as chemical sludge from TP removal in the secondary treatment process. The allocation of solids handling cost is therefore distributed between BOD, TSS, TN, and TP based on the estimated contribution of each to solids production. Solids production is estimated based on the raw influent TSS loadings and the waste activated sludge loadings as outlined in *Table 4*.

**Table 4**  
PAWC Coatesville Wastewater Treatment Plant  
High Strength Wastewater Surcharge Rate Evaluation

Annual WWTP Operations Summary  
January 1, 2018 through December 31, 2018

Pollutant of Concern	Raw Influent <sup>(1a)</sup>		Hauled Septage <sup>(1b)</sup>		Total Combined Process Loadings <sup>(1c)</sup>		Biological Assimilation <sup>(2)</sup>	Final Effluent <sup>(1)</sup>		Removal <sup>(3)</sup>	
	mg/L	lbs/day	mg/L	lbs/day	mg/L	lbs/day	lbs/day	mg/L	lbs/day	lbs/day	lbs/year
BOD	244	8,635	2,000	954	264	9,589	---	2	75	9,589	3,499,983
TSS	341	12,083	1,000	477	346	12,560	---	4	139	12,560	4,584,501
TN	28.4	1,003	100.0	48	28.9	1,051	594	4.3	145.9	311	113,485
TP	5.3	187	20.0	10	5.4	197	112	0.2	0.0	85	30,900

**Notes:**

(1) Raw Influent and Final Effluent average concentrations and loadings as reported for 2018:

- a. Raw Influent concentrations and loadings do not include hauled waste contributions.
- b. Hauled septage average equivalent concentrations are based on literature value estimates. Loadings are estimated using annual average hauled waste volume in 1d.
- c. Total Combined Process Loadings are the sum of the raw wastewater and the hauled septage loadings.
- d. Annual average daily flows utilized to calculate the equivalent process loadings concentrations:

Raw Influent: 4.300 mgd  
Hauled Waste: 0.057 mgd

(2) Biological assimilation is estimated based on the following assumptions:

Parameter	Unit	Input	Calculation
WAS	mgd	0.156	---
WAS TSS	mg/L	8,822	---
WAS	lbs/day	---	11,462
MLVSS/MLSS Ratio	%	0.85	---
Estimated WAS VSS	lbs/day	---	9,742
Pure Biomass/WAS VSS Ratio	%	0.50	---
Estimated Pure Biomass	lbs/day	---	4,871
Nitrogen Assimulated	%	12.2%	---
Nitrogen Assimulated	lbs/day	---	594
Phosphorus Assimulated	%	2.3%	---
Phosphorus Assimulated	lbs/day	---	112

(3) Removal assumes that all BOD and TSS is removed through the treatment process and the final effluent CBOD and TSS are mostly an artifact of cellular debris.

- a. For TN and TP, the annual pounds removed is the raw influent loading minus the final effluent loading. Nutrient assimilation in the biological treatment process is considered part of the removal process.

**Table 5**  
PAWC Coatesville Wastewater Treatment Plant  
High Strength Wastewater Surcharge Rate Evaluation

Cost of Removal Summary  
January 1, 2018 through December 31, 2018

<b>Pollutant of Concern</b>	<b>Annual Cost of Removal <sup>(1)</sup></b>	<b>Annual Pounds Removed <sup>(2)</sup></b>	<b>Cost per Pound Removed <sup>(3)</sup></b>
BOD	\$1,146,410	3,499,983	\$0.33
TSS	\$896,900	4,584,501	\$0.20
TN	\$116,480	113,485	\$1.03
TP	\$62,300	30,900	\$2.02

**Notes:**

- (1) Annual Cost of Removal from *Table 3*.
- (2) Annual Pounds Removed based from *Table 4*.
- (3) Cost of Removal = Yearly Cost of Pollutant Removed / Yearly Pounds of Pollutant Removed.

**Notes:**

<sup>(1)</sup> Operating costs from *Table 1*.

<sup>(2)</sup> The costs for BOD and TN removal in the secondary treatment process are based on the rate of oxygen demand assuming 1.5 lbs O<sub>2</sub> / lb BOD and 4.6 lbs O<sub>2</sub> / lb NH<sub>3</sub>-N.

<sup>(3)</sup> The allocation of secondary clarification cost is distributed between BOD, TSS, NH<sub>3</sub>-N based on the estimated contribution of each to solids production. The costs for BOD and NH<sub>3</sub>-N removal in the secondary clarifiers are based on the rate of oxygen demand while TSS contribution is estimated based on the primary clarifier influent TSS loading.

<sup>(4)</sup> Solids generated consist of influent solids, excess cell mass production as a direct result of the metabolism of BOD and TN, as well as chemical sludge from TP removal in the secondary treatment process. The allocation of solids handling cost is therefore distributed between BOD, TSS, TN, and TP based on the estimated contribution of each to solids production. Solids production is estimated based on the raw influent TSS loadings and the waste activated sludge loadings as outlined in *Table 4*.

**Table 4**  
PAWC Coatesville Wastewater Treatment Plant  
High Strength Wastewater Surcharge Rate Evaluation

Annual WWTP Operations Summary  
January 1, 2019 through December 31, 2019

Pollutant of Concern	Raw Influent <sup>(1a)</sup>		Hauled Septage <sup>(1b)</sup>		Total Combined Process Loadings <sup>(1c)</sup>		Biological Assimilation <sup>(2)</sup>	Final Effluent <sup>(1)</sup>		Removal <sup>(3)</sup>	
	mg/L	lbs/day	mg/L	lbs/day	mg/L	lbs/day	lbs/day	mg/L	lbs/day	lbs/day	lbs/year
BOD	371	10,364	2,000	1,169	396	11,533	---	2	71	11,533	4,209,699
TSS	379	10,576	1,000	585	384	11,161	---	4	125	11,161	4,073,778
TN	41.8	1,168	100.0	58	42.2	1,227	700	4.6	138.7	388	141,577
TP	7.8	219	20.0	12	7.9	231	132	0.2	6.6	92	33,582

**Notes:**

- (1) Raw Influent and Final Effluent average concentrations and loadings as reported for 2019
- Raw Influent concentrations and loadings do not include hauled waste contributions.
  - Hauled septage average equivalent concentrations are based on literature value estimates. Loadings are estimated using annual average hauled waste volume in 1d.
  - Total Combined Process Loadings are the sum of the raw wastewater and the hauled septage loadings.
  - Annual average daily flows utilized to calculate the equivalent process loadings concentrations:

Raw Influent: 3.419 mgd  
Hauled Waste: 0.070 mgd

- (2) Biological assimilation is estimated based on the following assumptions:

Parameter	Unit	Input	Calculation
WAS	mgd	0.183	---
WAS TSS	mg/L	8,869	---
WAS	lbs/day	---	13,506
MLVSS/MLSS Ratio	%	0.85	---
Estimated WAS VSS	lbs/day	---	11,480
Pure Biomass/WAS VSS Ratio	%	0.50	---
Estimated Pure Biomass	lbs/day	---	5,740
Nitrogen Assimilated	%	12.2%	---
Nitrogen Assimilated	lbs/day	---	700
Phosphorus Assimilated	%	2.3%	---
Phosphorus Assimilated	lbs/day	---	132

- (3) Removal assumes that all BOD and TSS is removed through the treatment process and the final effluent CBOD and TSS are mostly an artifact of cellular debris.
- For TN and TP, the annual pounds removed is the raw influent loading minus the final effluent loading. Nutrient assimilation in the biological treatment process is considered part of the removal process.

**Table 5**  
PAWC Coatesville Wastewater Treatment Plant  
High Strength Wastewater Surcharge Rate Evaluation

Cost of Removal Summary  
January 1, 2019 through December 31, 2019

<b>Pollutant of Concern</b>	<b>Annual Cost of Removal <sup>(1)</sup></b>	<b>Annual Pounds Removed <sup>(2)</sup></b>	<b>Cost per Pound Removed <sup>(3)</sup></b>
BOD	\$1,368,510	4,209,699	\$0.33
TSS	\$794,980	4,073,778	\$0.20
TN	\$142,810	141,577	\$1.01
TP	\$70,810	33,582	\$2.11

**Notes:**

- (1) Annual Cost of Removal from *Table 3*.
- (2) Annual Pounds Removed based from *Table 4*.
- (3) Cost of Removal = Yearly Cost of Pollutant Removed / Yearly Pounds of Pollutant Removed.

Statement No. 3

Aiton

**PAWC STATEMENT NO. 3**

**DIRECT TESTIMONY**

**OF**

**BRUCE W. AITON**

**WITH REGARD TO**

**PENNSYLVANIA-AMERICAN WATER COMPANY'S**

**DOCKET NOS.**

**R- 2023-3043189(WATER)**

**R-2023-3043190 (WASTEWATER)**

**DATE: NOVEMBER 8, 2023**

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**DIRECT TESTIMONY OF BRUCE W. AITON**

1 **Q. What is your name and business address?**

2 A. My name is Bruce W. Aiton and my business address is 852 Wesley Drive, Mechanicsburg,  
3 Pennsylvania 17055.

4 **Q. By whom are you employed and in what capacity?**

5 A. I am employed by Pennsylvania-American Water Company (“PAWC” or the “Company”)  
6 as Vice President of Engineering.

7 **Q. Please describe your educational background and business experience.**

8 A. I have a Bachelor of Science degree in Civil Engineering from California State University,  
9 Sacramento and have been in the engineering and construction field for approximately  
10 forty years. I am a licensed Civil Engineer in the State of California.

11 **Q. Do you belong to any professional or industry associations?**

12 A. Yes, I am a member of American Water Works Association and Water Environment  
13 Federation.

14 **Q. What are your duties and responsibilities in your current position?**

15 A. As Vice President of Engineering for PAWC, I am responsible for the administration of  
16 engineering services, including but not limited to the planning, design and construction of  
17 water and wastewater capital investment projects for PAWC’s systems and facilities.

18 **Q. What is the purpose of your testimony?**

19 A. First, I will discuss the Company’s capital investment planning process. As part of that  
20 discussion, I will explain how implementation of PAWC’s proposed Environmental

1 Compliance Investment Charge (“ECIC”) described by Company witness J. Cas Swiz in  
2 PAWC Statement No. 8 will address the challenges posed by new and changed  
3 environmental mandates between rate cases. Second, I will describe and support the  
4 additions to the Company’s water and wastewater utility plant and equipment that will be  
5 placed in service during the future test year (“FTY”) ending June 30, 2024 and the fully  
6 projected future test year (“FPFTY”) ending June 30, 2025. Third, I will describe the risks  
7 associated with: maintaining safe and adequate water quantity and water quality and  
8 complying with applicable drinking water and environmental regulations associated with  
9 owning and operating facilities for supplying water services to the public; complying with  
10 environmental regulations applicable to owning and operating facilities for furnishing  
11 wastewater service to the public; and the challenges climate change could create for water  
12 and wastewater utilities. Ms. Bulkley, in PAWC Statement No. 13, discusses why  
13 investors’ perceptions of such risks should be considered in establishing a reasonable rate  
14 of return on equity for the Company in this case. Finally, I will address the bulk treatment  
15 service that the Company provides in its York wastewater system.

16 **The Company’s Capital Investment Planning and Governance Process**

17 **Q. Please explain the Company’s capital investment planning and governance process.**

18 A. The Company uses a standardized Capital Program Management (“CPM”) process to  
19 prioritize and manage its capital investments. PAWC conducts planning studies that assess  
20 necessary improvement projects and prioritize those projects. Further, each facility is  
21 evaluated using the Company’s High Risk Asset Management (“HRAM”) process to  
22 identify facilities or individual assets that may pose a high risk to the Company’s system(s)

1 due to either their importance and/or a possibility of failure. All capital investment  
2 programs and projects are then prioritized within an overall strategic planning process,  
3 utilizing the HRAM process. In the HRAM process, facilities and critical assets are  
4 evaluated against risk and consequence of failure to formulate a five-year Strategic Capital  
5 Expenditure Plan (“SCEP”). Following more detailed design engineering, implementation  
6 plans are developed for those projects that are contained in the SCEP. The Company’s  
7 annual capital construction plan is based upon projects and programs contained in the  
8 SCEP. On an annual basis, main replacement projects are prioritized on a state-wide basis.  
9 Numerous factors are considered when determining funding allocations for infrastructure  
10 investment, such as current and future service needs, assessments of the physical condition  
11 of existing plant, economic and risk factors, performance characteristics, regulatory  
12 compliance, and the potential to coordinate with municipalities and other utilities in joint  
13 improvement projects. The CPM governance process provides for formal approvals and  
14 consistent controls that optimize the effectiveness of asset investment and ensures that  
15 capital investment meets the Company’s strategic goals.

16 **Q. How does the Company’s construction planning process impact its claim for plant**  
17 **additions?**

18 A. The Company’s claim for plant additions consists of the projects scheduled for completion  
19 during the FTY and the FPFTY. The overwhelming majority of the Company’s claimed  
20 projects will be constructed and completed as planned. However, as the years progress,  
21 some projects may be substituted for others initially included in the budget due to  
22 unanticipated events requiring an immediate capital addition, such as plant or equipment

1 that has experienced failure and needs to be replaced or delay in permitting of a specific  
2 project. In general, the overall cost of plant construction will be consistent with the values  
3 filed. Often, where one project may lag for a variety of reasons, another may be completed  
4 early, thereby offsetting another project's delay such that the overall program remains  
5 consistent.

6 With timely recovery of its investment, the Company is better able to plan and  
7 deploy capital more efficiently over the long term. The Company employs a proactive  
8 approach to planning construction work and has accelerated investments in replacement of  
9 high risk or poor performing water and wastewater underground infrastructure before  
10 problems arise, such as leaks and main breaks, through its Commission-approved  
11 Distribution System Improvement Charge ("DSIC"). Planned infrastructure replacements  
12 are much less costly on a unit cost basis than the costs of addressing pipe breaks on an ad  
13 hoc basis that can result in service disruptions, property damage, health risks from potential  
14 drinking water contamination exposure during pipe breaks, related community opportunity  
15 costs related to community health and economic development, and the steep increase in  
16 future underground infrastructure investments resulting from prior deferrals of the  
17 replacements. PAWC's above ground assets, such as booster systems and storage tanks,  
18 are not DSIC-eligible property. Therefore, the Commission's approval of the Company's  
19 proposed FTY and FPFTY plant additions will support PAWC's ability to continue  
20 replacing pipes and above ground infrastructure on a planned and proactive basis with  
21 timely recovery of those investments.

1 **Q. Why is PAWC proposing to implement a new ECIC in this case to recover certain**  
2 **environmental compliance costs through an automatic adjustment clause?**

3 A. The Company spends a significant effort evaluating and planning a five-year set of needed  
4 construction improvements. However, emerging regulations or re-interpretations of  
5 existing regulations often result in new environmental compliance obligations that disrupt  
6 the five-year plan of construction work and require the Company to undertake additional  
7 projects on an expedited basis to comply with those changes. Because the timing of these  
8 projects and the need to comply with new environmental mandates are outside PAWC's  
9 control, the Company faces the undesirable situation of complying with these mandates  
10 and potentially having to delay other prudently planned and important projects to stay  
11 within the five-year plan's capital expense forecast. The Company's proposed ECIC would  
12 provide a reasonable rate adjustment mechanism to enable the thorough planning and  
13 execution of a five-year investment plan and support full and timely rate recognition of  
14 PAWC's costs to meet the continuously evolving requirements from the United States  
15 Environmental Protection Agency ("EPA"), Pennsylvania Department of Environmental  
16 Protection ("PADEP"), and other environmental agencies.

17 **Q. Can you provide an example of such a situation with respect to drinking water**  
18 **systems?**

19 A. One example of such a rapidly changing set of regulatory mandates involves the  
20 combination of federal and state regulations concerning per- and polyfluoroalkyl

1 substances (“PFAS”). On March 14, 2023,<sup>1</sup> the EPA issued proposed drinking water  
2 regulations for six PFAS, which will establish legally enforceable levels (Maximum  
3 Contaminant Levels, or “MCLs” and Maximum Contaminant Level Goals (“MCLGs”))  
4 for each of these six PFAS that are known to occur in drinking water. In addition to the  
5 MCLs and enforceable limits for these six PFAS, the EPA is proposing requirements for  
6 the continued monitoring of PFAS, public notification of monitoring results if they exceed  
7 defined limits, and the treatment of drinking water to reduce PFAS to required limits. The  
8 EPA is expected to finalize its PFAS Rule in January 2024 at which point public water  
9 systems will be required to modify their facilities to comply within three years.

10 In addition to these proposed federal regulatory requirements, Pennsylvania has  
11 promulgated state drinking water standards establishing strict MCLs and MCLGs for two  
12 PFAS chemicals, perfluorooctanoic acid (“PFOA”) and perfluorooctanesulfonic acid  
13 (“PFOS”), with compliance monitoring mandates that go into effect January 1, 2024.  
14 Systems with monitored exceedances of these new standards must proceed expeditiously  
15 with corrective actions (in advance of any parallel federal mandates), which in most cases  
16 will require additional or modified treatment systems, modification of sources, or a  
17 combination of actions.

18 Together, these impending federal and state regulations in most cases will require  
19 additional or modified treatment systems, modification of sources, or a combination of  
20 actions. For the Company, these new requirements will require investments in the range

---

<sup>1</sup> US EPA Fact Sheet – *EPA’s Proposal to Limit PFAS in Drinking Water*  
[https://www.epa.gov/system/files/documents/2023-04/Fact%20Sheet\\_PFAS\\_NPWDR\\_Final\\_4.4.23.pdf](https://www.epa.gov/system/files/documents/2023-04/Fact%20Sheet_PFAS_NPWDR_Final_4.4.23.pdf)

1 of \$200 million of work before the end of 2027, based on preliminary estimates; specific  
2 projects and investments will depend on the results of monitoring and pilot testing as  
3 envisioned by the regulations. While the Company believes that certain measures should  
4 be taken proactively in the FPFTY to comply with the EPA's impending MCLs for PFAS,  
5 the ECIC will provide the Company a reasonable opportunity to recover the capital costs  
6 and expenses incurred after June 30, 2025 to comply with the new federal standards.

7 **Q. In the situation you just described, why can't the Company wait until the federal**  
8 **PFAS rules are finalized, and then prudently develop project plans to be incorporated**  
9 **into its five-year investment plan following standard utility procedures?**

10 A. As I mentioned, the proposed federal PFAS drinking water standard rule provides a very  
11 short time frame for compliance, and the state rule contemplates an even faster track.  
12 Although the federal rule is not finalized, the Company cannot wait for final adoption of  
13 the federal regulations before commencing actions and investments. Achieving timely  
14 compliance with the proposed federal rule would require one year of pilot testing, nearly a  
15 year of design, between 6 to 12-months of permitting, and construction over a period of 1-  
16 2 years depending on the scope of treatment modifications necessary. And as noted  
17 previously, the state rules on two of the PFAS chemicals go into effect even before the  
18 federal rules. Thus, to achieve the combined mandates of these requirements, the Company  
19 must begin the work well ahead of the final federal rule.

20 At the same time, counsel has advised me that irrespective of the compliance  
21 timeframes set forth in such regulations, class action lawsuits have been brought in some  
22 states against utilities, seeking to impose liability on utilities under theories of product

1 liability, failure to warn, and negligence for the distribution of drinking water containing  
2 PFAS.<sup>2</sup> We are not commenting on the merits of such claims or the defenses which the  
3 utilities may assert. Suffice it to say that as a utility with a strong commitment to providing  
4 safe, reliable water to our customers, the Company believes it is prudent, appropriate, and  
5 consistent with accepted public utility practice to take proactive steps to address the  
6 challenge of PFAS and other emerging issues, without waiting for either regulatory  
7 deadlines or legal actions.

8 **Q. Do you have an example of potential situations involving wastewater systems that**  
9 **might trigger consideration for use of the ECIC?**

10 A. With respect to wastewater systems, PFAS again poses some impending challenges. The  
11 EPA has proposed and is expected soon to finalize rules designating certain PFAS  
12 chemicals as “hazardous substances” under the Comprehensive Environmental Response,  
13 Compensation and Liability Act (“CERCLA”). The full effect of those regulations is at  
14 this point difficult to forecast with any clarity. Because PFAS chemicals are found in a  
15 range of wastewaters (and even stormwater) entering community wastewater systems, they  
16 may either pass through the treatment plant to discharge to a stream or become entrained  
17 in the residuals (sludges) that are produced by treatment processes. The designation of  
18 PFAS chemicals as hazardous substances is anticipated to impact the manner and method  
19 by which wastewater plants can dispose of sludges and other residuals, and may impose  
20 requirements for both additional residual management investment and significantly

---

<sup>2</sup> *Deborah Vincent, et al. v. Aquarion Water Company*, Connecticut Superior Court, J.D. Fairfield, Docket No. FBT-CV-23-6128205-S (Complaint filed October 16, 2023); *Frances Hoffnagle v. The Connecticut Water Company*, Connecticut Superior Court, J.D. Hartford, Docket No. HHD-CV-23-6175540-S (Complaint filed October 16, 2023).

1 increased operating costs associated with residuals disposition.

2 **Description of Claimed Plant Additions**

3 **Q. Please describe the Company’s claimed plant additions, as shown in Exhibit No. 3-C.**

4 A. The Company has undertaken gross plant additions (including projects funded by customer  
5 advances and contributions) to be completed by June 30, 2024 (FTY), that are estimated to  
6 total \$742,020,740. The Company has also undertaken, or will undertake, gross plant  
7 additions (including projects funded by customer advances and contributions) to be  
8 completed by June 30, 2025 (FPFTY), that are estimated to total \$797,874,110. Thus, the  
9 total gross plant additions for the FTY and FPFTY are \$1,539,894,850. When projected  
10 retirements of \$253,536,706 are considered for the FTY and FPFTY, the combined net  
11 increase in plant additions for those two years is estimated to be \$1,286,358,144.

12 **Q. In general terms, could you explain why the Company is planning to spend over  
13 \$1 billion on infrastructure investment through the fully projected future test year?**

14 A. Pennsylvania’s water and wastewater infrastructure requires significant upgrade and repair.  
15 In its 2021 Report Card for Pennsylvania’s Infrastructure (“Report Card”), the American  
16 Society of Civil Engineers concluded that the Commonwealth’s water and wastewater  
17 infrastructure received grades of D and D-, respectively.<sup>3</sup> With regard to drinking water,  
18 the Report Card provides the following Executive Summary:

19 Most of Pennsylvania’s public drinking water systems are struggling  
20 to fund projects to meet their replacement goals as well as new  
21 regulations. That’s despite recent investment in main replacement  
22 and improvement in identifying vulnerability to failures for

---

<sup>3</sup> Report Card for Pennsylvania’s Infrastructure, Pennsylvania State Council of the American Society of Civil Engineers (available at [https://infrastructurereportcard.org/wp-content/uploads/2020/12/National\\_IRC\\_2021-report.pdf](https://infrastructurereportcard.org/wp-content/uploads/2020/12/National_IRC_2021-report.pdf)).

1 prioritization of repairs. Over the next 10 years, Pennsylvania’s  
2 public water systems are projected to have a \$10.2 billion funding  
3 gap, a number only very slightly offset with recent federal actions  
4 to provide infrastructure funding. In addition, there remain  
5 substantial amounts of lead service lines posing risk to public health,  
6 particularly for underserved communities. Emerging contaminants  
7 such as perfluoroalkyl and polyfluoroalkyl substances (PFAS) pose  
8 growing public health threat. To conquer these issues, water utilities  
9 need to adopt full-cost pricing and find technologies that enable  
10 more efficient operation and emergency response.<sup>4</sup>

11 The Report Card’s Executive Summary for Wastewater is as follows:

12 Aging wastewater management systems discharge billions of  
13 gallons of raw sewage into Pennsylvania’s surface water each year.  
14 The average age of most sewer systems is approaching 75 years with  
15 many pipes over 100 years old. 26% of the state is served by on-lot  
16 systems with nearly one-quarter failure rate. Two-thirds of the  
17 state’s Sewage Facility Plans are over 20 years old. The  
18 Commonwealth has a funding gap of \$8.4 billion over the next 10  
19 years to repair existing systems, upgrade existing systems to meet  
20 regulatory requirements, control Combined Sewer Overflows  
21 (CSOs), address illicit Sanitary Sewer Overflows, and construct new  
22 or expand existing systems to meet increasing demand. Available  
23 funding over that time is estimated to be \$900 million, only about  
24 one-tenth of the required annual investment.<sup>5</sup>

25 Dams fair a bit better with an overall grade of C. However, as pointed out in the

26 Report Card there is still much work to be done:

27 Dams in Pennsylvania manage flood risk, provide fish and wildlife  
28 habitats, recreational opportunities, and drinking water supply. Of  
29 the 1,498 dams in Pennsylvania, over half (54%) are classified as  
30 high-hazard, likely causing death and economic damage under  
31 failure. The average age of Pennsylvania dams is 76 years old,  
32 nearly 20 years older than the national average and well beyond the  
33 typical 50-year design life. The high average age of Pennsylvania  
34 dams makes incorporating resiliency and innovation into the

---

<sup>4</sup> *Id.*, at p. 36.

<sup>5</sup> *Id.*, at p. 146.

1 redesign cost-prohibitive, especially for the 61% of owners who are  
2 private citizens or organizations. Raising the grade on Pennsylvania  
3 dams requires increased funding, perhaps the establishment of a loan  
4 or grant program to financially assist owners with repairs,  
5 abandonment, and removal projects. Supporting modernization of  
6 current federal assistance programs through the passage of the  
7 21<sup>st</sup> Century Dams Act would also serve to benefit Pennsylvanians.<sup>6</sup>

8 Many of the high hazard dams owned by the Company are well beyond 90-years and no  
9 longer fully comply with PADEP regulations, thus requiring significant investment in the  
10 dams to achieve compliance with newer regulations and to prevent failure to the dam and/or  
11 spillways.

12 The Company, while overall better than the grades for the Commonwealth, needs  
13 to increase investment in replacement and improvement of its older and high-risk water  
14 mains to avoid the potential health risks, environmental impacts and financial losses noted  
15 in the Report Card. Substantial investment in PAWC's wastewater systems is also required  
16 to properly address combined and sanitary sewer overflows, repair existing systems,  
17 upgrade systems to meet EPA and PADEP regulatory requirements and build new required  
18 facilities. The Company's planned infrastructure investment through the FPFTY and  
19 beyond is intended to continue to address these infrastructure concerns in the  
20 Commonwealth, as well as to meet several environmental and public health standards  
21 described later in my testimony.

22 **Q. Can you provide an update on the actual plant in service through September 30,**  
23 **2023?**

---

<sup>6</sup> *Id.*, at p. 29.

1 A. The actual plant retirements and additions through September 30, 2023 are listed in  
2 Schedule BWA-1.

3 **Q. What types of projects are included in the Company's total gross plant additions for**  
4 **its FTY and FPFTY?**

5 A. The projects that comprise the Company's claim for plant additions are set forth by  
6 applicable property account and PAWC Project Number in the portion of PAWC Exhibit  
7 No. 3-C that I am sponsoring, along with the estimated completion date and associated  
8 retirement for each project. As shown in Exhibit No. 3-C, the Company's claimed plant  
9 additions vary from what may be characterized as small, routine projects, such as the  
10 installation of individual distribution mains to substantially larger projects, such as the  
11 Curtis Dam Rehabilitation. The Company's claims also include projects necessary to  
12 satisfy new regulations to ensure the removal of cryptosporidium as well as safety and  
13 reliability projects such as the installation of emergency power generation equipment and  
14 pipeline reinforcements; water storage tank projects; and improvements to acquired  
15 systems which I discuss below along with other large projects.

16 **Q. Does Exhibit No. 3-C also reflect the Company's acquisitions in its FTY and FPFTY?**

17 A. Yes. Exhibit No. 3-C reflects the asset cost, reserve, and depreciated cost by plant account  
18 and year for the acquired assets for the systems which the Company will acquire in the  
19 FTY and FPFTY, including Farmington Township and Audubon Water Company's water  
20 systems, as well as the wastewater systems to be acquired from Butler Area Sewer  
21 Authority, the Borough of Brentwood, Sadsbury Township Municipal Authority and  
22 Farmington Township. Additionally, as the Borough of Brentwood has not yet closed,

1 there are no specific projects associated with the interceptors at this time. However,  
2 subsequent to closing, the acquisition there may be work required on the interceptor pipes  
3 that while not owned by the Company are the responsibility of the Company and required  
4 as a component of adequate, reliable service. Therefore, those projects required will be  
5 treated as capital investment by the Company.

6 **Q. Are there any particular projects that, because of their size or importance, you would**  
7 **like to discuss further?**

8 A. Yes. While there are hundreds of individual plant additions detailed in Exhibit No. 3-C,  
9 the larger individual components of the Company's claim for plant additions are described  
10 below. Water system projects are presented first by year of anticipated completion,  
11 followed by wastewater system projects also by year of planned completion. In the  
12 following summary, I will indicate if a project is either a PADEP or EPA requirement.

13 **FTY (July 2023-June 2024) Water Projects**

14 **1. 42" Edgebrook/Brook Street Waterline Replacement (I24-110070):**

15 The Company plans to replace approximately 3,400 linear feet ("LF") of transmission main  
16 with 42-inch zinc coated HDSS ductile iron ("DI") pipe along Edgebrook Avenue and  
17 Minooka Street in the in the Company's Pittsburgh system in Allegheny County. The  
18 existing main has experienced frequent leaks leading to extensive surface damage.  
19 Replacement of the main will enhance system reliability and improve customer service.  
20 The estimated total cost of the project is approximately \$7,990,178.

21 **2. Snowden Road Main Replacement (I24-110071):**

22 The project will replace approximately 3,300 LF of 24-inch high density polyethylene

1 (“HDPE”) pipe that has been pulled through 48-inch concrete lockjoint pipe with 24-inch  
2 zinc coated DI pipe along Snowden Road in South Park, Allegheny County, in the  
3 Company’s Pittsburgh system. The 24-inch HDPE pipe was installed in 2002 and the  
4 exterior 48-inch concrete lockjoint pipe was installed in 1966. Replacement of the existing  
5 main, which has experienced several leaks, will provide better reliability and improved  
6 service to customers. The estimated total cost of the project is approximately \$2,392,545.

7 **3. Steelton Booster Pump Station (“BPS”) Replacement(I24-140002):**

8 The existing Kelker Street BPS serves 660 customers and experiences low pressure issues  
9 during periods of high flow demands, has low fire flow capability, and is not capable of  
10 providing sufficient flows for flushing the distribution system. The project involves  
11 replacing the existing BPS with a new prefabricated BPS with three domestic pumps and  
12 a high flow pump for satisfying system flushing and fire flow demands. The Company will  
13 construct a new utility building on an adjacent site, for storage and protection of equipment  
14 and materials, and to allow for Supervisory Control and Data Acquisition (“SCADA”)   
15 monitoring and control of the system in the event that the water treatment plant (“WTP”)   
16 is inaccessible. The total estimated project cost is \$2,273,231.

17 **4. Hershey-Steelton Regional WTP (I24-14XX03-02):**

18 PAWC plans to acquire new property in the FTY prior to beginning the design and  
19 construction process for a future regional WTP to serve the Hershey and Steelton Districts.  
20 The existing Hershey WTP and Steelton WTP are approaching the end of their useful lives  
21 and it is not feasible to expand or replace either WTP on the existing site due to limited  
22 space and, in the case of the Hershey WTP, additional water allocation is not available

1 from the Swatara Creek. The Company will purchase property in advance of design and  
2 construction of the Hershey-Steelton WTP due to limited inventory adjacent to the  
3 Susquehanna River. The total estimated project cost is \$1,500,000.

4 **5. Steelton WTP Filter Improvements (I24-140003):**

5 As a new acquisition, an assessment was done on the Steelton WTP. A number of  
6 deficiencies were identified that must be addressed to meet safety, reliability, and  
7 regulatory treatment requirements. These deficiencies will be addressed through  
8 improvements to optimize operation of the filters, including a dedicated backwash tank, air  
9 scour system, a filter to waste capability, and associated filter piping improvements. The  
10 existing gas chlorine system will also be replaced with a bulk sodium hypochlorite storage  
11 and feed system including a chemical unloading station with spill containment. The total  
12 estimated project cost is \$4,946,094.

13 **6. Donaldson Road Water Line Extension (I24-210035)**

14 During the course of the Company's 2022 base rate case and, in particular, at the telephonic  
15 public input hearings held on July 19, 2022, six homeowners on Donaldson Road in  
16 Robinson Township, Washington County requested help to resolve ongoing water quality  
17 issues with the well water in the area that they attributed to strip mining operations. The  
18 affected area was identified by the Office of Consumer Advocate ("OCA") witness  
19 Terry L. Fought based on his review of the homeowners' request for service. PAWC  
20 analyzed the problem and determined that it would be feasible to construct extensions from  
21 its existing mains to the affected area. The Company also determined that the main  
22 extension could be constructed pursuant to Rule 27.1(F) of its water tariff, which authorizes

1 main extensions to be installed without customer contributions, subject to Commission  
2 approval, to address public health and safety concerns. Consequently, in Paragraph 57 of  
3 the Joint Petition for Settlement of Rate Investigation in its 2022 rate case (“2022 Rate  
4 Case Settlement”), the Company agreed to construct a water main extension to the six  
5 residences along Donaldson Road delineated by Mr. Fought. The Commission approved  
6 the 2022 Rate Case Settlement in its final order entered on December 8, 2022. The project  
7 will require the installation of 4,000 LF of new 8-inch and 1.5-inch water main along  
8 Donaldson Road and construction commenced in October 2023. The total estimated project  
9 cost is \$1,362,000.

10 **7. Ellwood - Jackson Township Gradient Improvements (I24-310020):**

11 The project is to design and construct a 750,000-gallon elevated tank, 1,200 LF of 12-inch  
12 and 16-inch main, and a 1,500 gallons per minute (“GPM”) BPS to create a new pressure  
13 gradient in Jackson Township, Butler County. This area of the Ellwood system has  
14 experienced high growth which is impacting pressure. The estimated cost of the project is  
15 \$6,974,000.

16 **8. New Castle WTP Improvements (I24-310018):**

17 The project, which is required by the PADEP, will install ultraviolet light (“UV”)   
18 disinfection to comply with the EPA’s Long Term 2 Enhanced Surface Water Treatment  
19 Rule (“LT2”) and the addition of a fifth filter to achieve reliable capacity with one filter  
20 out of service. The total estimated cost of the project is \$11,500,000.

21 **9. Punxsutawney South Main New Elevated Tank (I24-420008-02):**

22 PAWC will install a second 0.50 million gallon (“MG”) elevated storage tank within the

1 South Main gradient of the Punxsutawney system. The second tank will keep the system  
2 in pressure while the existing tank is out of service for maintenance and repainting. The  
3 overall estimated cost of the project is \$4,500,000.

4 **10. Warren 8,300 LF 12-inch Pipe Replacement On Pleasant Drive (I24-45XX03):**

5 The project includes the replacement of approximately 8,300 LF pipe with 12-inch DI pipe  
6 along Pleasant Drive to add reliability and to increase flows and reinforce the south side of  
7 the Company's Warren system. The total estimated project cost is \$2,490,000.

8 **11. Norristown Lafayette Street Pipe Replacement (I24-510031):**

9 The Lafayette Street distribution main services approximately 33,000 customers in the  
10 Norristown area in Montgomery County. This project involves the replacement of  
11 2,800 LF of 4-inch and 6-inch cast iron ("CI") pipe with 12-inch DI pipe to improve  
12 redundancy and flow. The total estimated project cost is \$1,800,000.

13 **12. Lake Montrose Dam Rehabilitation (I24-540007)**

14 The Lake Montrose Dam built in 1919 impounds 160-MG of water and provides a raw  
15 water source to the Company's 0.65 million gallon per day ("MGD") Montrose WTP. It is  
16 classified as a high hazard (Class C-1) dam under current PADEP dam safety regulations,  
17 which requires the structure to safely convey flood flows equal to the Probable Maximum  
18 Flood ("PMF") for the associated watershed. Although the dam was originally designed  
19 to satisfy the safety standards at the time of construction, the dam's spillway is now  
20 considered inadequate because it can pass only 17% of the PMF before water can overtop  
21 the dam. Overtopping could cause the structure to fail and result in the loss of life and  
22 extensive economic impacts. The project will create additional spillway capacity to ensure

1 safe and reliable operation and to meet current PADEP dam safety regulations. The  
2 estimated cost of the project is \$4,866,026.

3 **13. Montrose WTP Improvements (I24-540012)**

4 The purpose of the project is to provide safe accommodations for deliveries, safe off-street  
5 parking for employees and visitors, and adequate storage space for tools and spare parts at  
6 the Montrose WTP. Due to the existing site constraints, deliveries to the plant are not able  
7 to be made in a safe manner and require plant operators to physically stop traffic along  
8 PennDOT Route 29 by entering the roadway and flagging oncoming traffic. The total  
9 estimated cost is \$3,500,000.

10 **14. Stoney Garden Intake Improvements (I24-560007)**

11 The project is a PADEP requirement. Stoney Garden Dam has a severely deteriorated  
12 spillway, seepage issues, potential embankment stability issues and has a 100-year-old  
13 outlet works and piping. Rehabilitation of the dam includes replacing the deteriorated  
14 spillway, adding seepage drainage facilities, flattening downstream dam embankment for  
15 stability and upgrading outlet works, including replacing the 100-year-old CI pipe from the  
16 dam to the WTP. The total estimated cost is \$8,376,706.

17 **15. Pocono Well Improvements (I24-570011)**

18 The existing well building requires significant improvements and has therefore reached the  
19 end of its useful life. This project includes constructing a new well house, adding a chlorine  
20 contact main, and demolishing the existing well house. The total estimated cost of the  
21 project is \$1,500,000.

22 **16. New Water Main in Exeter Township (I24-590003-02)**

1 This project involves the installation of a new main in Exeter Township that will extend  
2 approximately 4,500 LF. The Company agreed to install the new water main as part of its  
3 acquisition of the Exeter water system to provide water service and fire protection to  
4 approximately 50 homes and businesses in parts of Exeter Township without existing  
5 service. The total estimated cost of the project is \$1,550,000.

6 **17. Glen Corrosion Control (I24-59XX02)**

7 The purpose of this project is to install corrosion inhibitors at various entry points in the  
8 Glen water system. The corrosion inhibitor will aid in ensuring the customers are protected  
9 from potential metals dissolving into the water. The total estimated cost of the project is  
10 \$1,100,000.

11 **18. Lead Service Line Inventory (I24-610022)**

12 To meet current EPA and PADEP Lead and Copper Rule (“LCR”) requirements, PAWC  
13 will develop an inventory to identify the material of all service lines connected to the  
14 Company’s water systems, including the customer-owned and Company-owned segments  
15 by October 2024. The purpose of the inventory is to determine the location of lead and  
16 galvanized services in PAWC’s water systems, track progress toward full replacement of  
17 lead service lines (“LSLs”) and inform communications with the public. This inventory  
18 will be publicly available on the Company’s website so that customers can determine which  
19 of the four categories (lead, galvanized requiring replacement, non-lead and lead status  
20 unknown) is in the service line delivering their water. The project requires the physical  
21 examination of virtually all 680,000 services across Pennsylvania often through pothole  
22 excavation in order to develop the required inventory. The total estimated cost for the

1 project is \$11,163,718.

2 **19. West Shore Clearwell Roof (I24-610023)**

3 The West Shore WTP serves the Mechanicsburg area in Cumberland County. The project  
4 includes replacement of the existing Clearwell roof, which has reached the end of its useful  
5 life. The total estimated cost of the project is \$1,517,344.

6 **20. Penn LCR Upgrades (I24-63XX08)**

7 This project involves the installation of corrosion inhibitors at various entry points in the  
8 Penn water system to meet current LCR requirements. The total estimated cost of the  
9 project is \$1,600,000.

10 **21. Royersford System Loop (I24-640015)**

11 The purpose of this project is to install a water main to connect the western ends of the  
12 Company's Royersford distribution system across Route 422. The total estimated cost of  
13 the project is \$2,985,000.

14 **22. Connect Phoenixville Gradient to Merlin Hills/Terry Lane Gradient (I24-  
15 640016)**

16 The purpose of this project is to install main and pressure relief vaults ("PRV") with control  
17 panels to provide two interconnections into a lower pressure service area of the Royersford  
18 system currently served by interconnections with Phoenixville Borough. The total  
19 estimated cost of the project is \$1,500,000.

20 **23. Pine Ridge Well 5 - New Groundwater Supply (I24-680023)**

21 The project will develop a new groundwater well source for the Pine Ridge water system  
22 in the Lehman-Pike District. The system is currently supplied by four wells and does not

1 have adequate capacity to meet average daily demands in the system if the largest well is  
2 out of service. The project will provide an additional groundwater source to augment  
3 existing supplies and enhance system reliability. The estimated cost of the project is  
4 \$1,073,374.

5 **24. Mid-Monroe Groundwater Development (I24-680024)**

6 The purpose of this project is to develop a new groundwater source for the Mid-Monroe  
7 water system in the Lehman-Pike District. This system is supplied by four bedrock wells  
8 that experience recurring problems with reduced yield and decreasing effectiveness of  
9 redevelopment efforts. The current system does not have adequate capacity to meet  
10 maximum day demands and commercial customers are growing at accelerated rates. The  
11 project will provide an additional groundwater source to augment existing supplies,  
12 enhance system resiliency, and provide growth opportunities. The scope of the project  
13 includes hydrogeology field work, pump sizing and treatment design, well drilling, and  
14 existing treatment building and filter modifications. The total estimated cost of this project  
15 is \$1,299,930.

16 **25. Phillipsburg WTP Filter Improvements (I24-720005)**

17 The Phillipsburg WTP provides potable water to approximately 8000 customers in Centre  
18 County. The project will replace filter media installed more than 15 years ago and  
19 associated underdrain equipment that have reached the end of their useful life. The project  
20 was initiated by PADEP requirements after a filter inspection. Other improvements include

1 replacement of a section of deteriorated pipe and check-valves throughout the plant. The  
2 total estimated cost for this project is \$1,330,147.

3 **26. Dunmore No. 7 Dam Rehabilitation (I24-910005)**

4 This project is a PADEP requirement. Dunmore Dam No. 7, built in 1877 impounds  
5 107 MG of water and provides a raw water source to the Company's 33 MGD Scranton  
6 WTP. It is classified as a high hazard dam (Class B-1) under current PADEP dam safety  
7 regulations, which, as previously noted, require the structure to safely convey flood flows  
8 equal to the PMF for the associated watershed. Although the dam was originally designed  
9 to satisfy the safety standards at the time of construction, the dam's spillway is now  
10 considered inadequate because it can pass only 83% of the PMF before water can overtop  
11 the dam. Overtopping could cause the structure to fail and result in the loss of life and  
12 extensive economic impacts. The project will create additional spillway capacity to ensure  
13 safe and reliable operation and to meet current PADEP dam safety regulations. The  
14 estimated cost of the project is \$17,075,370.

15 **27. Griffin Dam Rehabilitation (I24-910068)**

16 The project is a PADEP requirement. Griffin Dam, built in approximately 1887 and  
17 reconstructed in 1890's, impounds 400 MG of water and provides a raw water source to  
18 the Company's 5 MGD Chinchilla WTP. It is classified as a high hazard dam (Class B-1)  
19 under current PADEP dam safety regulations which, as previously noted, require the  
20 structure to safely convey flood flows equal to the PMF for the associated watershed.  
21 Although the dam was originally designed to satisfy the safety standards at the time of  
22 construction, the dam's spillway is now considered inadequate because it can pass only

1 28% of the PMF before water can overtop the dam. Overtopping could cause the structure  
2 to fail and result in the loss of life and extensive economic impacts. The project will create  
3 additional spillway capacity to ensure safe and reliable operation and to meet current  
4 PADEP dam safety regulations. The estimated cost of the project is \$11,272,153.

5 **28. Scranton Main Replacement West Parker to Viewmont Drive (I24-910090)**

6 The purpose of this project is to replace 5,100 LF of parallel 16-inch and 6-inch diameter  
7 CI mains installed in the 1890s along N. Main Ave in the Scranton water system with a  
8 history of breaks and repairs. The existing 16-inch and 6-inch mains will be replaced and  
9 upgraded to 4,500 LF of 20-inch DI pipe and 800 LF of 24-inch DI water main. The total  
10 estimated cost is \$3,700,000.

11 **29. Watres WTP Solids Handling Improvements (I24-910078)**

12 This project will improve the solids handling system at the Watres WTP. The existing  
13 solids handling facilities are undersized to handle plant upsets and the sand drying beds do  
14 not work well during winter months due to the cold climate, and also cause a safety concern  
15 for workers who must chisel out the solids in the winter months. The improvements  
16 include the installation of mechanical dewatering equipment that will be located inside of  
17 a building, providing a more efficient and safer approach during the colder months. The  
18 estimated cost of the project is \$3,350,000.

19 **30. Lake Scranton 3.5 MG Tank No. 3 (I24-910082)**

20 The Scranton Area WTP utilizes two 2.5 MG storage tanks for chlorine contact time (“CT”)  
21 and system storage. However, 5 MG of storage is not sufficient to meet the system's  
22 average daily demand of 20 MGD. A third 3.5 MG storage tank will be installed in parallel

1 with the existing tanks to improve the reliability of service to customers and maintain the  
2 required CT under all operating conditions. The total estimated project cost is \$6,500,000.

3 **31. Dunmore Dam No. 1 Outlet Works Rehabilitation (I24-910072)**

4 Dunmore Dam No. 1 was built in 1877, impounds 66 MG of water, and provides a raw  
5 water source to the Company’s 33 MGD Scranton WTP. It is classified as a high hazard  
6 dam (Class B-1) under current PADEP dam safety regulations, which require inspection of  
7 the dam’s outlets works every 10 years. The project will modify the Dunmore Dam No. 1  
8 outlet works in several respects to complete the required PADEP inspections, including  
9 installing new sluice gates, slip lining the outlet piping, and installing an access portal near  
10 the downstream toe of the dam. The estimated cost of the project is \$3,226,399.

11 **FTY (July 2023-June 2024) Wastewater Projects**

12 **32. Royersford Wastewater Treatment Plant (“WWTP”) Disinfection**  
13 **Improvements (I24-17XX02)**

14 The Royersford WWTP currently uses gaseous chlorine for disinfection, which is a toxic  
15 gas. For safety reasons and for more effective treatment during high wet weather flow, the  
16 plant will be converted to a UV light disinfection system. The existing chlorine and decolor  
17 system will be maintained as a backup disinfection process. The estimated cost of the  
18 project is \$1,350,000.

19 **33. Fairview South Beinhower Lift Station (I24-600007)**

20 The Beinhower Lift Station is the primary lift station conveying wastewater flows to the  
21 Fairview South WWTP. The project will replace the existing lift station that has reached  
22 the end of its useful life with a new lift station with a greater pumping capacity to provide

1 reliable capacity when the largest pump is out of service. The total estimated cost for this  
2 project is \$1,335,540.

3 **34. Fairview WWTP Dewatering and Chemical Feed System Improvements (I24-**  
4 **600008)**

5 Both the Fairview North and Fairview South WWTP use sodium aluminate in the treatment  
6 of wastewater to promote settling during the treatment process. This project will upgrade  
7 the existing storage and feed systems to meet PAWC's standards for safety and reliability,  
8 including chemical unloading containment. The project also includes replacement of the  
9 dewatering belt press at the Fairview South WWTP that has reached the end of its useful  
10 life. The total estimated cost for this project is \$1,249,744.

11 **35. Coatesville WWTP UV Replacement (I24-670013)**

12 The project will replace obsolete UV units that pose safety and reliability concerns at the  
13 Coatesville WWTP. The estimated cost of the project is \$1,600,000.

14 **36. Saw Creek WWTP Equalization Tank Replacement (I24-690006)**

15 The project will replace the existing heavily corroded steel flow equalization tank at the  
16 Saw Creek Estates WWTP. The existing tank will be replaced with a new, similar sized  
17 concrete tank and equipped with a replacement aeration system and pumps to convey  
18 wastewater to the sequence batch reactors. The estimated cost of the project is \$2,367,202.

19 **37. Scranton WWTP Building Improvements - Phase II (I24-920024-02)**

20 The scope of this project is to construct and renovate office and operations space at the  
21 Scranton WWTP. Phase I involved the construction of office, garage, and operating  
22 facilities for the collections department of the wastewater system and was completed in

1 2023. Phase II of the project will construct laboratory and office space at the WWTP. The  
2 total estimated cost for this portion of the project is \$10,000,000.

3 **38. Outfall No. 6 - Gardner Avenue (I24-920038)**

4 The Scranton combined sewer system (“CSS”) is required to maintain compliance with the  
5 Long Term Control Plan (“LTCP”) required by the EPA. One of the main components of  
6 the LTCP is the construction of upstream storage and flow management structures to  
7 alleviate the uncontrolled outflow of the combined wastewater into the Lackawanna River  
8 during wet weather conditions. This project includes the construction of a new offline  
9 780,000-gallon storage system at Outfall #6 to reduce typical year CSO events from 38 to  
10 7 and to reduce discharge to the Lackawanna River by 8.180 MG. In addition to the new  
11 storage facilities, the project includes the installation of a new inlet and  
12 maintenance/diversion structure, new valve and meter chamber including pinch valve and  
13 flow meter, piping, manholes, and a SCADA system at the existing outfall. The estimated  
14 cost of the project is \$10,000,000.

15 **39. Scranton CSO Outfall Access and Safety Improvements (I24-920042)**

16 The Scranton CSS overflows to more than 80 different outfalls along the Lackawanna  
17 River and its tributaries. PAWC is required to clean and inspect the outfalls regularly.  
18 However, ten of the outfalls are unsafe or impossible to access. The project scope is to  
19 remove overgrowth, extend buried pipes, and install stairs or fall arrest systems on steep  
20 embankments at the ten outfall locations to make them safe to inspect and maintain. The  
21 total estimated cost of this project is \$1,150,000.

1           **40. York WWTP Outfall 001 Improvements (I24-940005)**

2           This project is required by the EPA. The existing York WWTP has a stormwater system  
3           that collects and conveys stormwater from Train 2 to Outfall 001, where it is pumped to  
4           Codorus Creek. When the York WWTP influent flows reach 53 MGD, a portion of the  
5           Train 2 final effluent flow is diverted to the stormwater system for conveyance and  
6           disinfected utilizing the original Outfall 001 chlorine contact tank. This project includes  
7           installation of a new dechlorination system and upgraded controls for proper dosing to  
8           ensure the York WWTP can maintain compliance with the National Pollutant Discharge  
9           Elimination System (“NPDES”) Permit requirements for disinfection and total residual  
10          chlorine discharged to the Codorus Creek. The total estimated cost for this project is  
11          \$1,250,000.

12          **41. York WWTP Boiler Replacement (I24-94XX03)**

13          The scope of this project is to replace the existing boilers and underground hot water piping  
14          at the York WWTP that have reached the end of their useful life. The total estimated cost  
15          for this project is \$1,000,000.

16          **42. Scranton Outfall #027 (I24-920022)**

17          The project is required by the EPA. Outfall #027 is a proposed off-line combined  
18          wastewater storage system being designed and constructed as part of Phase C of the  
19          Scranton LTCP. This project will provide a new 211,000 gallon off-line storage facility  
20          system to collect 90% of the combined wastewater storm surges, as opposed to discharging  
21          into the Lackawanna River, and then gradually pump the collected wastewater back into  
22          the CSS after the wet weather event has passed. The project will provide a new inlet

1 structure, three large diameter pipes installed horizontally acting as storage vessels, and a  
2 discharge pump station. The total estimated cost of the project is approximately  
3 \$5,902,000.

#### 4 **FPFTY (July 2024-June 2025) Water Projects**

##### 5 **43. Hays Mine Raw Pipeline (I24-110035)**

6 The Hays Mine WTP is in the Company's Pittsburgh water system. The project will replace  
7 9,500 LF of three parallel 24-inch CI mains with one 42-inch DI main and will replace  
8 6,600 LF of 36-inch raw water main with 42-inch raw water main, which have suffered  
9 catastrophic breaks in the past, to maintain operations at the Hays Mine WTP. The  
10 estimated cost of the project is approximately \$35,240,404.

##### 11 **44. Aldrich WTP Building Replacement (I24-110085)**

12 The scope of this project is to construct a new building at the Aldrich WTP in the Pittsburgh  
13 water system. The new structure will replace an existing building that has reached the end  
14 of its useful life. The new building will house the SCADA and maintenance services  
15 groups and provide a safe and effective work area. The total estimated cost for this project  
16 is \$1,750,000.

##### 17 **45. Hays Mine Ferric and Corrosion Inhibitor (C9) Tank Replacement** 18 **(I24-11XX19)**

19 The project involves the replacement of three ferric chloride bulk tanks, two ferric chloride  
20 day tanks, one corrosion inhibitor bulk tank, one (1) corrosion inhibitor day tank, and  
21 associated equipment that is nearing the end of its useful life at the Hays Mine WTP. One  
22 existing ferric chloride bulk tank also has an identified leak near the lower half of the base

1 of the tank and another is bulging at the bottom. The estimated total cost of the project is  
2 approximately \$3,136,125.

3 **46. Pittsburgh Water System, Madeline Street Main Replacement (I24-11XX08)**

4 The purpose of this project is the replacement of approximately 3,000 LF of 24-inch water  
5 line and 1,800 LF of 6-inch water line in the Company's Pittsburgh system along Madeline  
6 Street from Agnew Street to Brownsville Road due to main breaks. This project will also  
7 increase the reliability of the system and improve customer service. The total estimated  
8 project cost is \$3,500,000.

9 **47. Aldrich WTP No. 1 Clarifier Rehabilitation (I24-110090)**

10 The purpose of this project is to rehabilitate the circular 800,000-gallon No. 1 clarifier at  
11 the Aldrich WTP in the Company's Pittsburgh system. The Aldrich style clarifiers are steel  
12 tanks that corrode over time. The rehabilitation includes replacement of the drive  
13 mechanism, structural steel repairs of the sludge removal components, concrete tank  
14 repairs, replacement of two 8-inch incline grinder pumps and valves, and replacement of  
15 other isolation valves and appurtenances. The estimated total project cost is \$1,200,000.

16 **48. Aldrich WTP Chemical Pumps Upgrades (I24-110088)**

17 This project involves the replacement of piping, valving, and metering pumps for several  
18 liquid chemical feed systems that have reached the end of their useful lives at the Aldrich  
19 WTP. The estimated total cost of the project is \$1,030,000.

20 **49. Carnegie Operations Center Parking Area Expansion (I24-11XX21)**

21 The Carnegie Operations Center is the primary operations location in PAWC's Pittsburgh  
22 System. The existing parking lot is inadequate for full use of the training center or for

1 other visitors to the location. Therefore, PAWC will acquire a parcel in the FPPTY for the  
2 relocation and expansion of the Carnegie office operations storage yard and ultimately the  
3 parking lot. The total estimated project cost is \$1,400,000.

4 **50. Grant Street Booster Station (I24-210030-04)**

5 The project will install a new BPS on Grant Street east of Verner Avenue in the Company's  
6 McMurray system in Washington County to supply high elevation customers and improve  
7 pressures. The estimated total project cost is \$1,004,295.

8 **51. Avella Road Water Line Extension (I24-210034)**

9 In accordance with Paragraph 57 of the 2022 Rate Case Settlement, the Company will be  
10 extending service to the Avella School District in Washington County to address water  
11 quality issues regarding odor and distaste. The project consists of installing approximately  
12 38,000 LF of new water main along Avella Road that will connect the Company's Mt.  
13 Pleasant gradient and the Church Street gradient. The main extension will serve the Avella  
14 School campus and has the potential for approximately 50 new service connections along  
15 the route in Independence Township, Cross Creek Township, and Mt. Pleasant Township.  
16 New fire hydrants and a pressure reducing valve ("PRV") station will be included in the  
17 project. The estimated cost of the project is approximately \$13,100,000.

18 **52. Old Steubenville Pike & Campbell Road Water Line Extension (I-210036)**

19 In accordance with Paragraph 57 of the 2022 Rate Case Settlement, PAWC will be  
20 extending service to twenty-three new customers in Robinson Township, Washington  
21 County to address the concerns of homeowners and businesses in the area regarding  
22 polluted groundwater discussed by OCA witness, Mr. Fought. Similar to the Donaldson

1 Road Extension, PAWC analyzed the problem and determined that it would be feasible to  
2 construct extensions from its existing mains to the affected area. The Company also  
3 determined that the main extension could be constructed pursuant to Rule 27.1(F) of its  
4 water tariff, which authorizes main extensions to be installed without customer  
5 contributions, subject to Commission approval, to address public health and safety  
6 concerns. This project will require installation of approximately 15,000 LF of 6-inch and  
7 8-inch new water main along Old Steubenville Pike and Campbell Road to service these  
8 residents. The project will also include a PRV station and fire hydrants. The estimated total  
9 cost of the project is \$6,360,350.

10 **53. Jack Clutter Dam Removal Project (I24-21XX07)**

11 Jack Clutter Dam is a regulated, high hazard dam in Washington County. The existing dam  
12 does not meet current PADEP regulations for spillway capacity. The portion of the  
13 Company's system which drew water from Jack Clutter Dam can instead receive water  
14 from the McMurray District, and therefore the dam is no longer required and will be  
15 removed. The estimated total cost of the project is \$1,200,000.

16 **54. Replace Hannas Knob Booster Station (I24-210038)**

17 The Hannas Knob BPS serves approximately 40 customers in the Company's McMurray  
18 district. The existing BPS was constructed in 1970's and has reached the end of its useful  
19 life. A new BPS, with a rated capacity of 75 gpm, will be installed adjacent to the existing  
20 pump station and the existing Hannas Knob BPS will be removed from service. The  
21 estimated total project cost is \$1,600,000.

1           **55.     Connellsville – 12-inch Main Across Youghiogheny River (I24-230012)**

2           The west portion of PAWC’s Connellsville system is served by a single 12-inch main  
3           crossing the Youghiogheny River. The existing main was installed in the 1980s and raises  
4           service reliability concerns. The project will install approximately 1,350 LF of 12-inch  
5           main across the Youghiogheny River near US 119 by horizontal directional drilling to  
6           provide a second water feed to the west portion of the Connellsville system. The estimated  
7           total project cost is \$2,321,880.

8           **56.     Brownsville to California Road 16-inch Main River Crossing (I24-250010)**

9           Currently, approximately 9,200 customers in the Company’s Brownsville system are  
10          served by one 16-inch main that was installed in 1986. If the existing feed failed, the area  
11          would not have a water supply. Accordingly, the project will install approximately 3,000  
12          LF of 16-inch main crossing under the Monongahela River to provide a second water feed  
13          to West Brownsville Road and California Road in the Brownsville system. The total  
14          estimated cost of this project is \$3,260,000.

15          **57.     Brownsville WTP Sedimentation Basin Upgrades (I24-250011)**

16          Numerous improvements are needed to the sedimentation basins at the Brownsville WTP  
17          to improve safety and operational efficiency. The project will install automated sludge  
18          removal equipment, new mixers to replace the existing mixers that are beyond their useful  
19          life, and new sluice gates. PAWC will also cover the basins and perform electrical and  
20          control improvements. The estimated project cost is \$2,680,000.

21          **58.     New Castle WTP Residual Improvements (I24-310026)**

22          The New Castle WTP has a design capacity of 8.4 MGD and serves approximately 43,000

1 customers in Lawrence County. The Company will replace the current sludge press that no  
2 longer has maintenance parts available, and also install a new backwash holding tank and  
3 new filter backwash recycle pumps. A new building will be constructed to house two  
4 presses, polymer feed, electrical room, conveyance system for the finished solids and a  
5 new filtrate pump station. The project will also include improvements to the thickener  
6 building including electrical improvements, new lighting and heating, ventilation and air  
7 conditioning equipment, additional instrumentation, and better access to the thickener  
8 dome roof. The total estimated cost of the project is \$7,500,000.

9 **59. New Castle WTP Filter Rehabilitation (I24-310027)**

10 The four existing filters at the New Castle WTP pose concerns because of the age and  
11 condition of the media. The Company regularly evaluates the condition and efficacy of  
12 filter media. The media requires replacement every 15-20 years. The filter work will  
13 consist of the removal and replacement of existing media, upgrades to valving and  
14 instrumentation, and installation of davit arm retrieval mounts. The total estimated cost of  
15 the project is \$2,000,000.

16 **60. Butler WTP Chemical Improvements (I24-330016)**

17 The Butler WTP currently uses gas chlorine and gas ammonia for disinfection, which are  
18 both toxic gases. The project will convert to the use of liquid sodium hypochlorite and  
19 liquid ammonium sulfate, which is much safer for both the public and Company staff. The  
20 total estimated cost of the project is \$3,900,000.

21 **61. Indiana Pleasant Hills Gradient Improvements (I24-410010)**

22 The Company is undertaking the project to improve reliable flow capacity and pressure at

1 the Pleasant Hills BPS. The pumps are being replaced at the existing Pleasant Hills BPS  
2 and a PRV station will be added within the Pleasant Hills gradient of the Company's  
3 Indiana system. The estimated cost of the project is \$1,225,000.

4 **62. Punxsutawney - Install New Storage at West End Reservoir (I24-420008-02)**

5 The existing 100-year old storage tank at the West End Reservoir in the Company's  
6 Punxsutawney system is at the end of its useful life and a second tank is needed to maintain  
7 system pressure while the old tank is removed. The project consists of two parts. In the  
8 first part, the Company will construct a new ground storage tank at the West End Reservoir  
9 site adjacent to the existing tank. Part Two of the project will consist of demolishing the  
10 existing tank and constructing a second tank within the footprint of the existing tank. The  
11 estimated cost of this project is \$2,414,394.

12 **63. Punxsutawney Snyder Hill Rd./Rockland Extension (I24-42XX02)**

13 This project will extend service to approximately 70 new customers along Snyder Hill  
14 Road in Punxsutawney Borough. The extension of water service into Snyder Hill Road will  
15 provide a safe, potable water supply to an area that has poor well quality and quantity  
16 issues, and improve public safety by providing adequate fire protection in the Rockland  
17 gradient. The project will require installation of approximately 11,000 LF of new 6-inch to  
18 12-inch DI water main. In the 4th quarter of 2023, the Company will seek Commission  
19 approval for the service territory expansion. The estimated cost of this project is  
20 \$2,800,000.

21 **64. Clarion Main Across I-80 at Exit 62 to Feed Sligo (I24-43XX01)**

22 This project will install approximately 3,000 LF of a new 12-inch water main across

1 Interstate 80 at Exit 62 to increase fire flows and reliability of service to customers in the  
2 Sligo area of the Company's Clarion system. The total estimated project cost is \$1,500,000.

3 **65. Clarion WTP - Chlorine Gas Elimination (I24-430007)**

4 This project will replace the gaseous chlorine system with a new bulk liquid sodium  
5 hypochlorite system at the Clarion WTP for safety reasons. The project will also include  
6 safety and operational improvements to the Clarion WTP. The estimated total project cost  
7 is \$3,650,000.

8 **66. Kittanning WTP Filter Improvements (I24-44XX06)**

9 The Kittanning WTP provides water for the Company's distribution system serving  
10 5,250 people. Over time, the filter media degrades and requires replacement. During  
11 replacement, the Company reviews and replaces as needed the underdrains and hardware.  
12 The project will rehabilitate the filters and replace the filter media at the Kittanning WTP.  
13 The estimated cost of the project is \$1,500,000.

14 **67. Second 16-inch Main to East Norriton Township (I24-510028-02)**

15 The purpose of this project is to construct a new BPS at the existing East Norriton tank site  
16 and install approximately 3,000 LF of new 16-inch main, which will take water from the  
17 Dekalb pressure zone and transfer water and provide a secondary feed into the Church  
18 Road pressure zone for reliability. The estimated cost of the project is \$2,000,000.

19 **68. Norristown WTP New Blower and Backup (I24-51XX19)**

20 PAWC will replace the Norristown WTP's aging blower system that experienced  
21 operational issues in past years with a new blower and backup system to improve  
22 reliability. The estimated cost of the project is \$1,000,000.

1           **69. Yardley System: Williams Lane Tank BPS and Chemical Feed (I24-520006)**

2           The project will install pump station upgrades, such as moving the altitude valve inside and  
3           adding a redundancy pump, and will replace the 500,000-gallon Williams Lane Tank in the  
4           Yardley system with a new storage tank due to the age and condition of the existing 80-  
5           year old tank. The estimated cost of the project is \$4,006,940.

6           **70. Yardley College Avenue Wells PFAS Treatment (I24-520007)**

7           The Company will proactively deploy treatment processes to remove PFAS at wells along  
8           College Avenue in the Company’s Yardley system to comply with the new MCLs for six  
9           PFAS that are reasonably anticipated to be imposed by the EPA’s proposed rule, which is  
10          expected to be finalized at the end of 2023. The estimated cost of the project is \$6,000,000.

11          **71. Susquehanna Operations Center (I24-540005)**

12          PAWC will purchase land and build a new operations center for its Susquehanna System  
13          to replace the existing facility that has reached the end of its useful life and no longer meets  
14          the needs of the Company. The total estimated cost for this project is \$3,550,000.

15          **72. Pocono District: Pine Hill and Summit Point PFAS Treatment (I24-570012)**

16          The Summit Point and the Pine Hill wells in the Pocono district serving customers in the  
17          Mount Pocono area have PFAS levels that exceed the MCLs under the EPA’s proposed  
18          standards. The project will deploy treatment processes for PFAS removal at those wells to  
19          ensure compliance with those regulations that are expected to be finalized in the near  
20          future. Piping and pump modifications will be needed to connect the new treatment system  
21          to the distribution network. The estimated cost of the project is \$4,000,000.

1           **73.     Glen Alsace District PFAS Treatment for Wells 8 and 9/9A (I24-590005)**

2           Like the projects in the Yardley and Pocono districts described above, PAWC will  
3           proactively deploy treatment processes to remove PFAS at Wells 8 and 9/9A in the  
4           Company’s Glen Alsace system to ensure compliance with MCLs under the proposed rule  
5           that the EPA anticipates finalizing by the end of 2023. The estimated cost of the project is  
6           \$3,800,000.

7           **74.     Hershey District: Manada Creek Intake Project (I24-62xxxx\_)**

8           Siltation at the Manada Creek Intake Dam has reached a level that limits PAWC's ability  
9           to withdraw and pump water from Manada Creek to the Hershey WTP. The project will  
10          remove the sediment behind the dam to restore the capacity of the intake and provide an  
11          improved gate system that will allow for flushing sediment. The estimated cost of the  
12          project is \$1,200,000.

13          **75.     Wyomissing System High Gradient Tank No. 2 (I24-630009-01)**

14          PAWC will construct new concrete ground storage tanks on existing Company property  
15          with a combined capacity of 0.8 MG storage tank to address storage deficits in the  
16          Wyomissing high gradient. The estimated cost of the project is \$2,000,000.

17          **76.     Wyomissing System High Gradient Tank No. 2 System Connection**  
18                   **(I24-630009-02)**

19          This project involves the replacement of 7,700 LF of main to connect the new Wyomissing  
20          High Gradient storage tank into the Wyomissing High Pressure zone. The estimated cost  
21          of this project is \$2,750,000.

1           **77. Penn System Wells 19 and 23 PFAS Treatment (I24-630010)**

2           Like the projects in the Yardley, Pocono, and Glen Alsace districts described above,  
3           PAWC will proactively deploy treatment processes to remove PFAS at Wells 19 and 23 in  
4           the Company's Penn System to ensure compliance with MCLs under the proposed  
5           NPDWR. The estimated cost of the project is \$3,800,000.

6           **78. West Chester BPS Relocation (I24-650010)**

7           The existing West Chester BPS was constructed over 40 years ago and is at the end of its  
8           useful life. The BPS is a below ground station in a roadway that impedes the ability to  
9           maintain and repair the pumping station. The project will relocate the West Chester BPS  
10          above ground and install an emergency generator to improve reliability and safety. The  
11          estimated cost of the project is \$2,000,000.

12          **79. Coatesville System: Rock Run Dam Improvements (I24-650020)**

13          Rock Run Dam, built in the 1920's, impounds 235 MG of water and provides a raw water  
14          source to the Company's 7 MGD Rock Run WTP. The Company performs regular  
15          inspections of its dams across Pennsylvania and PAWC's recent inspection of Rock Run  
16          Dam identified several deficiencies in the dam structure. The project will implement  
17          various improvements to address those deficiencies, including valve replacement, access  
18          improvements, and intake system improvements. The estimated cost of the project is  
19          \$1,624,212.

20          **80. Coatesville System: Route 340 BPS Replacement (I24-650023)**

21          To improve water quality and eliminate water age concerns, the Hill Road water tank is  
22          taken out of service during the summer. The project will replace the existing Route 340

1 BPS with a capacity of 0.29 MGD with a new 1.44 MG BPS to maintain system pressure  
2 when the Hill Road Water Tank is out of service. The estimated cost of the project is  
3 \$2,000,000.

4 **81. Coatesville System Main Replacement and/or Relining (I24-650024)**

5 The existing 24-inch CI main that runs from Parkesburg, PA to Caln, PA adjacent to  
6 Amtrak railway in the Company's Coatesville system dates back to 1903 and has  
7 experienced multiple breaks recently. The project will slipline or replace approximately  
8 7,500 LF of the existing aging and high-risk 24-inch CI main with HDPE or DI pipe  
9 depending on the condition of the existing pipe. The main will be placed further from the  
10 Amtrak right of way to ensure safe replacement and future pipe access. The estimated cost  
11 of the project is \$7,600,000.

12 **82. Coatesville System Raw Water Main Slip Lining (I24-65XX05)**

13 The project will install 16-inch HDPE in approximately 750 LF of existing 16-inch raw  
14 water main that is in poor condition running from Chambers Lake to the Company's Rock  
15 Run WTP in the Coatesville system. The project is estimated to cost \$2,000,000.

16 **83. Rock Run WTP Wastewater Connection to Public Sewer (I24-650022)**

17 The project will install a new main to connect Rock Run WTP to PAWC's Coatesville  
18 sanitary sewer system so that waste solids do not hinder WTP performance. The project is  
19 estimated to cost \$2,000,000.

20 **84. All Seasons Well Replacement (I24-680032)**

21 The All Seasons water system in the Company's Lehman Pike district has only one well  
22 source to supply 51 customers. Additionally, the existing well has a problem with fine

1 sand in the source water that must be removed before treatment. The project will construct  
2 a new second well and will reconstruct the existing well to prevent sand from entering  
3 through it, so the existing well can serve as a reliable back-up source for the All-Seasons  
4 system. The estimated cost of the project is \$1,000,000.

5 **85. Pine Ridge System Well No. 3 PFAS Treatment (I24-680033)**

6 The groundwater supply at Well No. 3 in the Company's Pine Ridge system contains PFOA  
7 and PFOS levels that require removal to meet current PADEP MCLs for those chemicals.  
8 The project will incorporate activated carbon into the treatment process to absorb excess  
9 PFOA, PFOS and other PFAS in the well water supply to provide safe, high-quality water  
10 to customers. The total estimated cost of this project is \$1,700,000.

11 **86. Philipsburg System Well No. 2 (I24-720002)**

12 The Philipsburg District has a current supply deficit of 0.94 MGD during drought  
13 conditions, and a projected 2026 drought supply deficit of 0.89 MGD. This project is part  
14 of a multi-year project to develop an additional 1 MGD of groundwater source of supply  
15 to ensure a reliable service for customers in the Philipsburg district. The estimated cost for  
16 the project is \$1,704,518.

17 **87. Emigh Run BPS Improvements (I24-720003)**

18 The existing Emigh Run BPS in the Philipsburg system serves a large area which includes  
19 twenty-one pressure gradients, and is currently supplied by a single 12-inch pipeline  
20 located in corrosive soils. The project will install approximately 10,500 LF of new 12-  
21 inch pipeline and two BPS in the Philipsburg system to create an alternate supply from the

1 Windy Hill gradient to the Spring Valley gradient and enhance reliability. The total  
2 estimated project cost is \$4,537,070.

3 **88. Philipsburg – Sandy Ridge BPS and Linwood BPS (I24-720007)**

4 The project will install two new booster stations in the Philipsburg district. The existing  
5 Sandy Ridge BPS is an underground pump station that lacks capacity to serve existing fire  
6 hydrants, and it does not have an emergency generator needed to meet PADEP  
7 Uninterrupted System Service Plan requirements. Additionally, underground booster  
8 stations present safety hazards for workers. Given the small site footprint, an on-site  
9 replacement is not feasible. Therefore, PAWC will acquire new property and construct a  
10 new above-ground prefabricated BPS, along with a new emergency generator. The existing  
11 Linwood BPS is also an underground pump station that lacks fire capacity, does not have  
12 an emergency generator, and presents safety hazards for workers. A replacement pump  
13 station with a new emergency generator will be installed on existing property near the  
14 Phillipsburg WTP. The estimated cost of the project is \$2,000,000.

15 **89. Second Storage Tank at Philipsburg WTP (I24-720008)**

16 PAWC will install a new distribution storage tank at the Philipsburg WTP because the  
17 existing distribution storage tank cannot be taken out of service for painting or other  
18 maintenance due to lack of adequate storage in the system. In addition, the project will  
19 install a new small clearwell or additional chlorine contact piping to ensure the Philipsburg  
20 WTP can meet minimum chlorine contact time requirements. Finally, a small pump station  
21 will also be added to provide potable water to the Philipsburg WTP since the plant's current

1 water supply does not meet chlorine contact time requirements. The estimated cost of the  
2 project is \$4,200,000.

3 **90. Berwick - Salem BPS Replacement (I24-730002)**

4 The existing Salem BPS in the Berwick system is in poor condition, located within the 100-  
5 year floodplain, and located in an underground vault that requires confined space entry for  
6 servicing pumps. In addition, the Salem BPS only has one pump and does not have a fire  
7 pump. This project will replace the Salem BPS with a new BPS outside the flood plain to  
8 provide a reliable water supply for existing customers and improve fire flow. A 2,200 LF  
9 main extension is also required to connect the new BPS to the Berwick distribution system.

10 The total estimated project cost is \$1,629,956.

11 **91. Curtis Dam Rehabilitation (I24-910008)**

12 The Curtis Dam, built in 1886-1887, impounds 379 MG of water and provides a raw water  
13 source to the Company's 33 MGD Scranton WTP. It is classified as a high hazard dam  
14 (Class B-1) under current PADEP dam safety regulations, which as previously noted,  
15 require the structure to safely convey flood flows equal to the PMF for the associated  
16 watershed. Although the dam was originally designed to satisfy the safety standards at the  
17 time of construction, the dam's spillway is now considered inadequate because it can pass  
18 only 26% of the PMF before water can overtop the dam. Overtopping could cause the  
19 structure to fail and result in the loss of life and extensive economic impacts. The project  
20 will create additional spillway capacity to ensure safe and reliable operation and to meet  
21 current PADEP dam safety regulations. The estimated cost of the project is 16,491,001.

1           **92. Maple Lake Outlet Works Rehabilitation (I24-910068)**

2           The Maple Lake Dam, built in 1883, impounds 214 MG of water and provides a raw water  
3           source to the Company’s 12 MGD Nesbitt WTP. It is classified as a high hazard dam (Class  
4           B-1) under current PADEP dam safety regulations, which require the outlet works to have  
5           upstream closure. The Maple Lakes Dam does not currently have upstream closure  
6           capabilities on the outlet works as required by PADEP. The Company will rehabilitate the  
7           dam structure to address the outlet works deficiency through several upgrades, including a  
8           new intake, new valves, a trash rack, an access catwalk to the new valves, outlet pipe slip  
9           lining and a downstream energy dissipation structure. The project is estimated to cost  
10          \$5,541,000.

11          **93. Marshwood Dam Outlet Works Rehabilitation (I24-910070)**

12          The Marshwood Dam, built in 1927, impounds 59 MG of water and provides a raw water  
13          source to the Company’s 33 MGD Scranton WTP. It is classified as a high hazard dam  
14          (Class C-1) under current PADEP dam safety regulations, which require the outlet works  
15          to have upstream closure. The Marshwood Dam does not currently have upstream closure  
16          capabilities on the outlet works as required by PADEP. The Company will rehabilitate the  
17          dam structure to address the outlet works deficiency through several upgrades, including a  
18          new intake, new valves, an access catwalk to the new valves, a trash rack, outlet pipe slip  
19          lining and a downstream energy dissipation structure. The estimated cost of the project is  
20          \$4,988,000.

21          **94. Old Boston Third Tank (I24-910087)**

22          This project will add a third 1 MG finished water storage tank at the Old Boston tank site,

1 which is part of the Watres system in the Wilkes-Barre/Scranton district, to address growth  
2 and increased demands in the system. The tank installation project will also require inlet  
3 and outlet piping, valving, and SCADA work. The total estimated cost of the project is  
4 \$4,000,000.

5 **95. Wilkes Barre/Scranton: Sans Souci Parkway Main Interconnection (I24-**  
6 **910088)**

7 Nanticoke City, located in the Company's Wilkes Barre/Scranton system, is currently  
8 served by a single 18-inch CI main crossing under the Susquehanna River. This project  
9 will install new 12-inch DI water main along Sans Souci Parkway from Hanover Township  
10 to Nanticoke City to supply approximately 15,000 customers. The second feed will reduce  
11 the impact to customers and fire protection during main break events. The total estimated  
12 cost of this project is \$2,000,000.

13 **96. Olwen Heights Storage Tank and Hydropneumatic Tank Replacement (I24-**  
14 **910089)**

15 The project will replace the existing 100,000 gallon water storage tank at the Olwen  
16 Heights Well in the Wilkes Barre/Scranton system, along with the existing hydropneumatic  
17 tanks in the well houses, that have surpassed their useful life and are in degrading condition.  
18 The estimated total project cost is \$1,250,000.

19 **97. Homesite Well PFAS Treatment (I24-910093)**

20 Like the projects in the Yardley, Pocono, Glen Alsace, and Penn districts described above,  
21 PAWC will proactively deploy treatment processes to remove PFAS at the Homesite Well

1 in the Company's Wilkes Barre/Scranton system to ensure compliance with MCLs under  
2 the EPA's proposed rule. The total estimated project cost is \$2,000,000.

3 **98. Rushbrook BPS Upgrades and Roadway Improvements (I24-910095)**

4 The Rushbrook BPS in the Wilkes Barre/Scranton system is past its expected useful life  
5 and accessing the site is a safety concern. The project will upgrade the pumps at the  
6 Rushbrook BPS, install a standby generator and implement roadway improvements. The  
7 cost estimate for the project is \$1,500,000.

8 **99. Ceasetown WTP (I24-91XX03) and Huntsville WTP (I24-91XX08) Chlorine**  
9 **Safety**

10 PAWC will convert the disinfection process at the Ceasetown WTP and the Huntsville  
11 WTP in the Wilkes Barre/Scranton system from the use of chlorine gas to bulk sodium  
12 hypochlorite. The project will eliminate safety hazards associated with the use of large  
13 chlorine gas cylinders. The total estimated cost of each project is \$2,500,000 (or  
14 \$5,000,000 total).

15 **100. White Deer WTP Solids Handling (I24-710008)**

16 The current clarifier and sludge drying beds at the White Deer WTP have design limitations  
17 that prevent their operation as hybrid lagoons and drying beds. Under worst case  
18 backwashing conditions, the current solids handling system does not have adequate  
19 wastewater storage to allow the plant to meet PADEP filter-to-waste regulations.  
20 Additionally, upgrades are required to meet more stringent residual chlorine limits in the  
21 new NPDES permit. Project improvements will include modification of the existing sludge  
22 drying beds and wastewater clarifier, addition of a new filter-to-waste holding tank,

1 installation of a dechlorination chemical feed system, a new recycle pump station, and  
2 associated yard piping. The total estimated cost for this project is \$3,600,000.

3 **101. Milton WTP Raw Water Intake Modification (I24-710018)**

4 The existing intake at the Milton WTP encounters freezing issues during the winter when  
5 river levels are low. The wet well also receives a significant build of silt requiring annual  
6 cleaning. In addition, the existing travelling screen at the Milton WTP has reached the end  
7 of its useful life. The project will upgrade the existing intake to prevent icing or install of  
8 a new passive intake screen system. A mixer or bubbler system will be also installed in the  
9 wet well to minimize silt accumulation. The estimated project cost is \$1,575,000.

10 **FPFTY (July 2024-June 2025) Wastewater Projects**

11 **102. Duquesne Clarifier Rehabilitation - First Clarifier (I24-12XX09)**

12 At the Duquesne WWTP, the existing clarifiers are over 40 years old and have never been  
13 maintained below the waterline. Additionally, maintenance parts have become difficult to  
14 find without significant cost. The Company has rehabilitated the majority of the Duquesne  
15 WWTP except for the clarifiers. This project will rehabilitate the first of the two clarifiers  
16 by replacing the clarifier mechanisms and upgrading electrical and controls. The total  
17 estimated project cost is \$1,230,000.

18 **103. Duquesne WWTP Chlorine Gas Conversion (I24-120023)**

19 The Duquesne WWTP currently utilizes gaseous chlorine for disinfection, a toxic gas. In  
20 order to reduce regulatory compliance risk associated with meeting the plant's permitted  
21 low chlorine residual limit and for safety reasons, the project will convert the gas chlorine

1 disinfection system to a UV system and a liquid sodium hypochlorite back-up disinfection  
2 system. The total estimated cost of this project is \$3,000,000.

3 **104. Exeter: Lincoln Road Pump Station Upgrade (I24-13XX08)**

4 PAWC will install new pumps, a wet well, and upgrade specific electrical equipment within  
5 the existing Lincoln Road pump station in the Exeter wastewater system that has  
6 deteriorated due to the corrosive environment. The total estimated cost of this project is  
7 \$1,250,000.

8 **105. Koppel WWTP – Sequence Batch Reactor (“SBR”) Improvements**  
9 **(I24-350004)**

10 PAWC will install a new SBR- Intermittent Cycle Extended Aeration System (“ICEAS”)  
11 and process controls at the Koppel WWTP to address capacity and I&I levels. Structural  
12 inspection and repairs will be made to the concrete tankage. The estimated cost of the  
13 project is \$1,750,000.

14 **106. Sadsbury Pump Station Rehabilitation (I24-150001)**

15 The Sadsbury pump station in the Company’s Chester County, Sadsbury Township  
16 wastewater system is currently undersized and has experienced sanitary sewer overflows  
17 (“SSOs”) in the past. The purpose of this project is to upgrade the Sadsbury pump station  
18 structurally and mechanically. The total estimated cost of this project is \$2,000,000.

19 **107. Kane Wastewater State Route 321 Lift Station (“LS”) (I24-190006)**

20 This project includes the construction of a new LS in the Kane wastewater system at a new  
21 site near the State Route 321 LS in order to eliminate capacity and access issues. Once the

1 new lift station is in service, the existing lift station will be removed from service and  
2 demolished. The estimated cost of the project is \$1,500,000.

3 **108. Kinzua WWTP Solids Handling (I24-190005)**

4 This project will replace the aged belt filter press and solids conveyance system at the  
5 Kinzua Road WWTP in the Kane wastewater system, which will improve solids handling  
6 at the plant. The estimated total project cost is \$1,050,000.

7 **109. Clarion WWTP Outfall Sewer Replacement (I24-47XX03)**

8 PAWC will replace approximately 2,500 LF of existing 12-inch and 18-inch outfall sewer  
9 pipe that is either undersized, damaged, or exposed within the Trout Run Stream before  
10 discharging into the Clarion River. This project will increase the reliability and capacity of  
11 the Clarion WWTP sewer effluent. The total estimated project cost is \$1,600,000.

12 **110. Fairview North Hydraulic Improvements (I24-60XX03)**

13 The Company's Fairview North wastewater system has experienced growth, and its  
14 existing collection system is not capable of handling the projected additional flows. This  
15 project will enable the existing collection system to convey additional wastewater flows to  
16 the Fairview North WWTP for treatment by adding 2,800 LF of force main to the discharge  
17 of the Pin Oak LS. The cost of the project is offset by capacity charges/tapping fees related  
18 to the growth and development in the Fairview North area. The total estimated cost for  
19 this project is \$1,800,000.

20 **111. Timothy Lake Equalization Pump Station Replacement (I24-69XX03)**

21 The existing Timothy Lake equalization pump station in the Lehman Pike wastewater  
22 system consists of two steel tanks that include pumps and an aeration system that require

1 frequent maintenance. Additionally, the steel tanks are corroded and present safety issues  
2 to Company staff. The project will replace the existing Timothy Lake equalization pump  
3 station with a new complete pump station. The total estimated cost of the project is  
4 \$1,000,000.

5 **112. Marcel Lakes WWTP Equalization Tank (I24-690008)**

6 The purpose of this project is to remove the existing clarifier and replace it with separate  
7 influent and effluent equalization tanks. The equalization tanks are to enable dealing with  
8 flow variation. The total estimated cost of this project is \$2,000,000.

9 **113. Scranton WWTP Emergency Generator (I24-91XX07)**

10 The Scranton WWTP has a dual electrical feed into the plant that are both powered by the  
11 same substation, and the plant does not otherwise have comprehensive emergency backup  
12 power. In the event of an extended power outage, the plant's main systems would not be  
13 able to operate. This project scope includes the installation of a new standby generator,  
14 switchgear, and metering work that will address the complexity of the site logistics and  
15 provide sufficient electrical power supply for continual plant operations in the event of a  
16 power outage. The estimated cost of the project is \$3,000,000.

17 **114. Scranton Outfall Nos. 19 and 20 Lackawanna/Linden Valving**  
18 **Reconfiguration (I24-920045)**

19 Outfall Nos. 19 and 20 in the Scranton wastewater system consist of a large combined  
20 sewer overflow ("CSO") storage tank for the two outfall lines that the Company must  
21 regularly access for cleaning and maintenance. PAWC will install valves before the  
22 overflow storage facilities to allow for the isolation of each storage tank. The project will

1 improve safety and improve operation and maintenance of the CSO outfalls. The total  
2 estimated cost of this project is \$1,100,000.

3 **115. York Wastewater Prospect Street Interceptor (I24-94XX01)**

4 The Prospect Street interceptor sewer line located within the York wastewater collection  
5 system conveys flows (primarily from Spring Garden Township) to the York interceptor  
6 sewer line for treatment at the York WWTP. The project will replace 1,300 LF of 12-inch  
7 interceptor sewer located between manhole MYC-83 and manhole MYC-2038 that is  
8 undersized with 18-inch interceptor sewer line. The total estimated cost for this project is  
9 \$3,050,000.

10 **116. York WWTP Dewatering, UV and Tertiary Treatment Improvements (I24-  
11 94XX05)**

12 This project includes improvements at the York WWTP including dewatering,  
13 UV treatment and tertiary treatment. The dewatering centrifuges and UV disinfection units  
14 have reached the end of their useful life and need replacement. Additionally, in accordance  
15 with the EPA Consent Agreement Project 10, the capacity of the Tertiary Treatment Filters  
16 and the UV System will be increased to allow treatment of the entire wastewater flow and  
17 will eliminate diverted flows above 53 MGD. The total estimated cost for this project is  
18 \$4,600,000.

19 **117. Butler Area Sewer Authority (“BASA”) Fischer–Brewster System  
20 Improvements (I24-XXXXXX)**

21 The project is required by the BASA Corrective Action Plan imposed by the PADEP due  
22 to a history of SSOs within the collection system that the Company expects to acquire in

1 2024. The project includes the replacement of two lift stations (Fisher and Brewster) along  
2 with the construction of wet weather tanks at each station. A third station (Brewster  
3 Booster) will also be improved by installing larger capacity pumps to handle the higher  
4 flows from the other stations. The anticipated budget for this project is \$7,000,000.

5 **118. BASA Greenwood-Bryson-Benbrook System Improvements (I24-XXXXXX)**

6 The project is required by the BASA Corrective Action Plan imposed by the PADEP due  
7 to a history of SSOs within the collection system that the Company expects to acquire in  
8 2024. The project includes the replacement of two lift stations (Greenwood and Bryson)  
9 along with the construction of a wet weather tank at one of the Greenwood stations. A  
10 third station (Benbrook), located between the two other stations will be bypassed with a  
11 new force main from the Greenwood station and replaced with a small grinder pump station  
12 to serve the small collection system that currently flows to the Benbrook Station. The  
13 current estimate for this project is \$3,500,000.

14 **Q. Please explain in general terms the other types of improvements that the Company**  
15 **will make in its water and wastewater systems during the FTY.**

16 A. The Company will replace or upgrade approximately 86,395 existing meters at various  
17 points throughout its water distribution system at an estimated cost of approximately \$28.9  
18 million, exclusive of meters associated with projects previously described. Meters are  
19 routinely replaced as they approach 20 years of age in the case of 5/8 inch meters and at  
20 various other ages for larger size meters. Meters are also replaced due to failures or  
21 malfunctions or to incorporate new meter technology.

1           The Company is also planning to replace approximately 2,930 Company-owned  
2 old water service lines and 415 wastewater laterals at an estimated cost of approximately  
3 \$28.7 million, exclusive of services associated with projects previously described. In  
4 conjunction with its main replacement projects in the FTY, PAWC anticipates replacing  
5 customer-owned LSLs under the Company’s LSL Replacement Plan (“Replacement Plan”)  
6 approved by the Commission at Docket No. P-2017-2606100. Additionally, services are  
7 replaced for a variety of reasons, including leakage discovered through the Company’s leak  
8 detection program and other actions to maintain the quality of water service. Pressure and  
9 water quality problems can result from old service lines made from obsolete materials, such  
10 as galvanized iron. When municipal paving projects are being planned, the Company  
11 reviews its records and determines if there are any obsolete services that should be replaced  
12 along the street. Service replacement costs are minimized by doing the service  
13 replacements before repaving occurs.

14           The Company also plans to replace approximately 130 miles of various diameter  
15 water mains and 23 miles of sewer mains at a total cost of approximately \$269.7 million,  
16 exclusive of the larger pipeline investment projects previously described. This construction  
17 is being done for a variety of reasons including improving flow capabilities, preventing  
18 water quality degradation, systematically replacing aging distribution system  
19 infrastructure, enhancing system reliability and minimizing service disruptions to  
20 customers caused by main breaks. The Company anticipates additional developer projects  
21 in the FTY, which will be funded by developer advances.

1 **Q. Please describe in general terms the types of improvements that the Company will**  
2 **make in its water and wastewater systems during the FPFTY.**

3 A. The following routine improvement activities planned for the FPFTY will be conducted  
4 for the same reasons these projects are undertaken in the FTY. The Company will install  
5 approximately 5,200 new meters and replace or upgrade approximately 71,300 existing  
6 meters at various points throughout its distribution system at an estimated cost of  
7 approximately \$27.0 million, exclusive of meters associated with projects previously  
8 described.

9 The Company is also planning to replace approximately 3,300 old water service  
10 lines and 380 wastewater laterals at an estimated cost of approximately \$30.5 million,  
11 exclusive of services associated with projects previously described. In conjunction with  
12 its main replacement projects in the FTY, PAWC anticipates replacing 900 customer-  
13 owned LSLs under the Replacement Plan. The Company plans to replace approximately  
14 88 miles of various diameter water pipes and approximately 15 miles of sewer main at a  
15 cost of approximately \$181 million, exclusive of the larger pipeline investment projects  
16 previously described. The Company anticipates that additional developer projects will  
17 occur in the FTY, which will be funded by advances.

18 **Risks Associated with Furnishing Public Water and Wastewater Service**

19 **Public Water Service**

20 **Q. Please provide an overview of the risks associated with furnishing safe and adequate**  
21 **water quantity and water quality and complying with drinking water and**

1 **environmental regulations that apply to PAWC’s water supply facilities and**  
2 **operations.**

- 3 A. Water supply utilities are subject to a complex array of regulations at the federal, state and  
4 river basin commission levels with respect to water quantity, water quality and other  
5 environmental aspects of their facilities and operations.

6 With respect to water sources and the quantity of water that can be withdrawn,  
7 PAWC’s surface water and groundwater sources are subject to a combination of common  
8 law riparian rights and groundwater rights coupled with regulatory regimes administered  
9 by the PADEP, the Susquehanna River Basin Commission (“SRBC”) and Delaware River  
10 Basin Commission (“DRBC”). These organizations administer the 1939 Water Rights  
11 Act,<sup>7</sup> which requires that public water supply agencies wishing to withdraw water from  
12 surface sources, or to acquire rights in surface sources, first obtain a permit. Water systems  
13 with sources developed prior to 1939 were accorded “orders of confirmation” confirming  
14 grandfathered withdrawals, but subsequent changes to those systems and/or increased  
15 withdrawals may trigger permitting requirements and possible loss of the “order of  
16 confirmation.” Both SRBC and DRBC are empowered to review and approve projects  
17 having a substantial effect on basin water resources.<sup>8</sup> Pursuant to their project review  
18 authority, SRBC and DRBC review proposed surface and groundwater withdrawals that  
19 may have a “substantial effect” on basin waters (which are defined in both basins to include  
20 withdrawals of greater than 100,000 gallons per day from any source or combination of

---

<sup>7</sup> 32 P.S. §§ 631-641.

<sup>8</sup> DRBC Compact § 3.8; SRBC Compact § 3.10(2).

1 sources). Such project review is focused on determining consistency with Commission-  
2 adopted comprehensive plans and “the proper conservation, development, management or  
3 control of the water resources of the basin.” In administering their permitting programs,  
4 the PADEP, SRBC and DRBC apply varying policies imposing limitations on withdrawals  
5 or requirements for conservation releases from reservoirs to protect stream flows.

6 Pennsylvania, overall, does not currently suffer serious constraints on its supply of  
7 usable water.<sup>9</sup> However, that assessment does not apply uniformly to all parts of the  
8 Commonwealth and can change with the climate. This past summer (June to September  
9 2023), the entire Commonwealth experienced uncommonly dry weather. The drier  
10 weather, while not as severe as the Southwest part of the United States, still placed every  
11 county on a drought watch. The potential of having sources compromised and the inability  
12 to provide water is a significant concern. The legacy of coal mining, the effect of oil and  
13 gas drilling, run-off from high-intensity agricultural land use, and contamination from  
14 inadequate or malfunctioning on-lot septic systems create challenges to obtaining adequate  
15 supplies of water in various areas of Pennsylvania. Today, as in the past, these factors  
16 continue to drive requests by homeowners for PAWC to extend its facilities to serve areas  
17 that do not have a public water supply, as is further discussed in Ms. Everette’s testimony  
18 (PAWC Statement No. 1). Under the Commission’s regulations on water utilities’  
19 responsibility for main extensions, PAWC is required to make a significant investment to  
20 extend its facilities to serve bona fide applicants.

---

<sup>9</sup> As explained below, climate change is expected to affect the pattern of precipitation in ways that will challenge water suppliers by increasing the severity of both major storm events and intermittent periods of drought.

1           Additionally, as explained above, there are multiple levels of authorization and  
2 regulation that apply to a water system that wants to add a new source of supply or increase  
3 its withdrawals from existing sources. These factors add to the costs and lead-time for  
4 obtaining new, or increasing existing, water sources to meet new demands that may arise  
5 in portions of the Company's system. These are additional risk factors that can directly  
6 affect PAWC's ability to furnish safe, adequate and reliable service, and increase the costs  
7 PAWC incurs to provide that service.

8           Drinking water quality is addressed by a combination of federal regulation  
9 established under the Safe Drinking Water Act of 1973 coupled with state regulation under  
10 the Pennsylvania Safe Drinking Water Act. The federal act established the EPA as the  
11 federal regulatory authority on drinking water. Under that authority, the EPA has created  
12 standards for contaminant levels in drinking water and a series of mandatory treatment  
13 method standards, coupled with monitoring and reporting requirements, and public  
14 notification mandates in the event of contaminant level or treatment method non-  
15 compliance.<sup>10</sup> In turn, Pennsylvania has adopted the federal regulatory standards, plus  
16 some even more stringent rules, as codified in 25 Pa. Code Ch. 109, which are administered  
17 by the PADEP.

18           In recent years, there has been an increase in public concern over potential  
19 contaminants that laboratories can now identify at levels that, in the past, could not be  
20 detected. Certain experts suggest these contaminants might have health effects. The EPA  
21 and state drinking water regulators have responded by increasing their own research and,

---

<sup>10</sup> See 40 C.F.R. Parts 141-143.

1 in some cases, imposing or proposing more stringent regulatory standards, such as with  
2 respect to PFAS. As discussed in detail earlier in my testimony, the Company is operating  
3 between the current PADEP PFAS rules and the more stringent EPA standards anticipated  
4 to come out later this year. The Company is anticipating a rush on materials as the industry  
5 grapples with new EPA regulations. To mitigate potential supply shortages, the Company  
6 is proactively deploying treatment processes in its water systems to reduce the levels of the  
7 six PFAS covered by the proposed NPDWR to levels below the proposed EPA standards,  
8 even if the levels of these PFAS in the applicable PAWC system comply with the PADEP  
9 MCLs. The Company is proceeding cautiously based on the best available information  
10 and preparing to achieve treatment levels for such compounds that can reasonably be  
11 anticipated based on current research and actions contemplated by regulators, which the  
12 Company carefully studies and monitors. The continued evolution of drinking water  
13 regulations and best practices requires PAWC to operate dynamically and be prepared to  
14 respond to new contaminants of concern quickly, which can create certain business risks  
15 for PAWC. Current studies indicate that in order to remove PFAS from drinking water,  
16 PAWC may need to employ additional treatment technologies at existing water treatment  
17 facilities. A determination of what technologies to employ if PFAS compounds are present  
18 will require a review of the effectiveness of each technology and an analysis of the costs  
19 and operational feasibility for each location.

20 As the result of conditions that arose in Flint, Michigan and other jurisdictions  
21 across the country, increasing scrutiny is being placed at all levels concerning lead  
22 concentrations in water systems and adoption of more stringent requirements under the

1 EPA’s 2021 Revised LCR. The lead issue arises not from constituents in source water, but  
2 rather from the leaching of lead from older pipes and joints into the water as it passes  
3 through the distribution lines and household service lines. While controlling of the  
4 corrosivity of the water can, in many cases, avoid excessive lead concentrations, the fact is  
5 that the plumbing in many older communities (such as those throughout much of PAWC’s  
6 service territory) contain the type of copper and galvanized pipes with solder joints where  
7 lead contamination is an increased risk. Consequently, the Pennsylvania General Assembly  
8 determined in Act 120 that it is in the public interest for water utilities to replace customer-  
9 owned LSLs “concurrent[ly] with a scheduled utility main replacement project.”<sup>11</sup> In  
10 addition, as recognized by the Commission, physical replacement of the entire LSL is  
11 emerging as a best practice in the water utility industry to improve public health protection  
12 from lead in drinking water.<sup>12</sup> To that end, in 2022, the Commission adopted final  
13 regulations implementing Act 120 that require all Pennsylvania water utilities to undertake  
14 LSL replacements as a matter of course to ensure total removal of LSLs in their water  
15 systems within 25 to 30 years (the “LSLR Regulations”).<sup>13</sup> The LSLR Regulations became  
16 effective on July 23, 2022.<sup>14</sup>

---

<sup>11</sup> 66 Pa. C.S. § 1311(b)(2)(i). Section 1311(b)(2) was added to the Pennsylvania Public Utility Code by Act 120, which became law on October 24, 2018. Act 120 authorizes customer-owned LSL replacements that are not performed concurrently with main replacement projects if those replacements are done “under a commission-approved program.”

<sup>12</sup> See *Petition of Pennsylvania-American Water Company for Approval of Tariff Changes and Accounting and Rate Treatment Related to Replacement of Lead Customer-Owned Service Pipes*, Docket No. P-2017-2606100 (Opinion and Order entered Jan. 4, 2019), pp. 6-7.

<sup>13</sup> See 52 Pa. Code §§ 65.51-65.62.

<sup>14</sup> 52 Pa. B. 30 (July 30, 2022).

1           The Company is at the forefront of the water industry in proactively eliminating the  
2 risks posed by the presence of LSLs. PAWC was the first water utility for whom the  
3 Commission approved a plan for replacing LSLs pursuant to Act 120. PAWC's efforts to  
4 eliminate a potential source of elevated lead levels at the customer's tap under its  
5 Replacement Plan require the dedication of management time and resources and the  
6 commitment of significant investment capital. The LSLR Regulations also require the  
7 Company to develop a comprehensive service line inventory that complies with the EPA's  
8 LCR and to modify and resubmit its Replacement Plan to the Commission by July 23,  
9 2024.<sup>15</sup> These factors, in addition to the demands the Company already faces to rehabilitate,  
10 replace, and enhance aging infrastructure and meet evolving regulatory demands, add to  
11 risk factors that PAWC faces to assure that it meets its statutory obligation to furnish safe,  
12 adequate and reliable water service.

13           Finally, upstream releases of chemicals represent a significant risk and concern for  
14 the Company. One recent example of such an event was the train derailment which  
15 occurred early in 2023, just outside East Palestine, Ohio. The train derailment caused the  
16 release of toxic chemicals both into the air and into waterways. The Company received  
17 calls from our concerned customers. While the event did not impact PAWC's source water,  
18 the Company took multiple raw water samples to be certain our customers were protected  
19 and the water the Company was providing was safe. Similarly, a chemical release in a  
20 tributary of the Delaware River caused concern in the Southeast portion of Pennsylvania.  
21 While the releases did not impact PAWC's systems, these incidents illustrate that

---

<sup>15</sup> 52 Pa. Code §§ 65.56 and 65.61.

1 contamination is a significant risk faced by water suppliers and the importance of their  
2 ability to operate dynamically to prepare for and respond to future chemical releases by  
3 third parties.

#### 4 **Public Wastewater Service**

5 **Q. Provide an overview of the risks that environmental regulation poses for PAWC as**  
6 **the owner and operator of public wastewater systems.**

7 A. Like the provision of public water supply service, the operation of wastewater collection  
8 and treatment systems entails a range of environmental regulatory risks. Each of the  
9 wastewater systems acquired by the Company over the past several years came with  
10 significant regulatory compliance challenges. For example, the York wastewater system  
11 acquired by the Company in 2022 is subject to a Consent Agreement with the EPA that  
12 requires system upgrades to address violations of untreated wastewater discharges that  
13 have occurred historically. The Company is required to ensure any high flow events  
14 receive treatment prior to discharge.

15 Wastewater operations are also regulated at both the federal and state levels  
16 pursuant to numerous statutes and voluminous regulations. At the federal level, wastewater  
17 systems are regulated pursuant to the Clean Water Act and numerous regulations adopted  
18 by the EPA under that law. At the state level, the Pennsylvania Clean Streams Law, Sewage  
19 Facilities Act, Solid Waste Management Act, Storage Tank and Spill Prevention Act and  
20 other laws administered by the PADEP, coupled with the regulations adopted under those  
21 statutes, set standards and requirements for virtually every aspect of wastewater system  
22 operations.

1           One risk associated with operating wastewater systems is that effluent limitations  
2 imposed on WWTP discharges are stringent and often become more stringent over time.  
3 The Clean Water Act requires wastewater systems to obtain and comply with NPDES  
4 permits, which, in Pennsylvania, are issued by PADEP. NPDES permits establish stringent  
5 effluent limits based upon the stricter of: (1) technology-based effluent limits; and (2) water  
6 quality-based effluent limits.

7           PAWC has faced significant regulatory compliance challenges with each of the  
8 wastewater systems the Company acquired over the past several years. Every five years,  
9 NPDES permits are up for renewal, and in any such renewal, more stringent limits may be  
10 triggered. One example is the Scranton WW, where the application for NPDES permit was  
11 applied for in June 2021 and has not been approved yet. Similarly, the Long-Term Control  
12 Plan for McKeesport was submitted to PADEP August 2022 with no finalization yet.

13           Another risk for PAWC is that several Pennsylvania streams, including those where  
14 PAWC is operating wastewater systems, are parts of watersheds that are classified as  
15 “impaired,” meaning their instream quality does not meet state standards. Such impaired  
16 waters are subject to the development and imposition of Total Maximum Daily Loads  
17 (“TMDLs”) for parameters that contribute to the instream conditions. A prime example is  
18 the Chesapeake Bay watershed, which includes the entire Susquehanna River Basin, where  
19 a TMDL has been established for sediments (total suspended solids) and nutrients  
20 (phosphorous and nitrogen). Where TMDLs are established by the EPA or the PADEP,  
21 stringent waste load allocations are made to point-source discharges (such as WWTPs),  
22 and allocations are also made to non-point sources, such as agriculture and urban runoff.

1 In the case of the Chesapeake Bay TMDL, for example, every WWTP in the Susquehanna  
2 Basin has been accorded an annual “cap load” for total nitrogen and total phosphorous –  
3 where any cap loading exceedance irrespective of the cause (such as increased flows and  
4 loadings from system customers or high stormwater flows entering the system) – can lead  
5 to stiff penalties and other enforcement actions.

6 Wastewater systems also face significant regulatory and environmental liability  
7 risks. Non-compliance with wastewater system effluent limits and other permit conditions  
8 can result in severe penalties. Regulatory violations open the operator to not only  
9 governmental agency enforcement actions, but also private lawsuits in which both  
10 injunctive relief and civil penalties can be imposed.

11 Another risk arises from PAWC’s Scranton, McKeesport and Kane CSSs where  
12 both storm water and sanitary/industrial wastewaters flow in the same sewer lines. CSSs  
13 incur high flows during and after storms, which may exceed the system conveyance and/or  
14 treatment capacity, with excess untreated wastewater discharged to receiving streams  
15 through CSO outfalls. In many cases, separation of CSSs into separate sanitary and storm  
16 systems is logistically and economically infeasible. While the Company and the  
17 communities it serves did not and do not create the problems facing the treatment of  
18 wastewater, additional costs to address actions by previous dischargers and upstream  
19 polluters and cleanup water ways cannot be avoided.

1 EPA's CSO Control Policy,<sup>16</sup> which applies to publicly owned treatment works  
2 ("POTWs") (i.e., those systems owned or operated by state or local governmental  
3 agencies), seeks to reduce CSOs, while recognizing that CSOs cannot be entirely  
4 eliminated. However, the EPA recently issued an enforcement letter no longer allowing the  
5 Company to own a CSO system without fully eliminating any CSO discharge within five  
6 years. Although the federal Clean Water Act generally requires that all wastewater be  
7 treated with at least secondary treatment prior to discharge, the CSO Control Policy  
8 provides an exception for POTWs. Currently, the CSO Control Policy, by its terms, does  
9 not provide similar exceptions for privately-owned sewage systems. Some utilities  
10 (including PAWC) have obtained the EPA's agreement to continue to apply the CSO  
11 Control Policy's exception to systems that were formerly POTWs and were acquired by  
12 private entities. The EPA's recognition of such exceptions must be obtained by negotiation  
13 on a case-by-case basis and typically entails entering into court-approved consent decrees  
14 or agency consent orders that impose stringent capital improvement and operating  
15 obligations on the non-public owner of the wastewater system. In recent years, EPA has  
16 also not been as willing to agree to those exceptions, even where the Company has  
17 improved the level of discharge from the acquired system and the quality of the associated  
18 waterway.

19 Under the CSO Control Policy and applicable NPDES permits, operators of CSSs  
20 must develop and implement LTCPs, consisting of collection system and treatment plant

---

<sup>16</sup> 59 Fed. Reg. 18687 (April 19, 1994), available at: <https://www.epa.gov/sites/production/files/2015-10/documents/owm0111.pdf>.

1 improvement projects designed to reduce CSOs to no more than four events per year and/or  
2 capture and treatment of 85-90% of annual storm water flows. These LTCP requirements  
3 often involve very substantial multi-year capital expenditure programs.

4 CSS operators must adopt and implement a Nine Minimum Controls Plan,<sup>17</sup>  
5 consisting of a series of actions that address the management of storm water and  
6 constituents in storm water runoff, including regulation of storm water connections,  
7 regulation of land development/erosion and sedimentation activities, control of industrial  
8 and other dischargers, catch basin maintenance, and street sweeping, etc.

9 Moreover, even where systems being acquired do not involve combined sewers,  
10 high rates of I&I<sup>18</sup> during wet weather can surcharge the system and exceed the hydraulic  
11 or treatment capacity of the WWTP. System upgrades to reduce I&I may require major  
12 capital expenditures. Some I&I can be isolated and remedied, however the bulk of I&I  
13 comes in through small defaults and require relining or replacement of the entire pipeline  
14 with services reconnected to the main. The recently acquired York WW system has had  
15 historically high I&I. To overcome the I&I challenge will require both projects at the  
16 WWTP as well as significant upgrades to the collection system in order to get the I&I down  
17 to a level it does not over stress the WWTP.

---

<sup>17</sup>U.S. Environmental Protection Agency, Combined Sewer Overflows Guidance for Nine Minimum Controls, EPA 832-B-95-003 (May 1995), available at: <https://www3.epa.gov/npdes/pubs/owm0030.pdf>.

<sup>18</sup> I&I involves the infiltration of groundwater and stormwater into what is considered to be a sanitary only sewer line, such as through joints and other weaknesses in the pipelines.

1 Challenges Climate Change May Create

2 **Q. Does climate change pose additional risks for water supply and wastewater system**  
3 **utilities such as PAWC?**

4 A. Yes. Whatever the debate may be concerning the causes of climate change, water supply  
5 and wastewater utilities face the reality of changing climatic conditions and attendant  
6 stresses on water resources. “Climate models project that the Commonwealth will see an  
7 increase in average annual precipitation, extreme precipitation events, and drought, as both  
8 “very heavy” precipitation events and consecutive dry days increase.” That means we can  
9 expect more droughts of varying degrees of severity and more frequent and intense high-  
10 flow events and floods – which impact water and wastewater utilities.

11 Water supply systems are fundamentally resource-dependent and, therefore, the  
12 effects of climate change pose a significant on-going risk and create challenges with regard  
13 to maintaining a reliable water supply during the full range of potential future conditions,  
14 including even what might be assumed to be “normal” periods. The safe yields of water  
15 supply sources have historically been evaluated based on historical climatic patterns, data  
16 from so called “droughts of record” or dry period frequency analysis. However, changing  
17 climatic conditions suggest that historical hydrologic data (which in many cases only  
18 reflect 50-100 years of rainfall and stream flow measurement collection – a quite short  
19 period in geologic or climatic time) may not accurately predict future conditions. Thus,  
20 the calculated safe yield of streams, reservoirs and groundwater wells are put in question  
21 as the effects of climate change are experienced across the northeastern United States.  
22 Thus, in response to climate change, water supply systems must address the risks posed to  
23 the reliability and resilience of their sources.

1 WWTP. The York Bulk Customers are sophisticated, knowledgeable, and experienced.  
2 Therefore, they could divert flows to alternative treatment providers or develop a new  
3 treatment system.

4 In the proceeding for approval of PAWC's acquisition of the York wastewater  
5 system at Docket Nos. A-2021-3024681 et al. ("Acquisition Proceeding"), the York Bulk  
6 Customers opposed the transaction and testified that were planning for a competitive  
7 alternative to bulk treatment service from PAWC. As witnesses for the York Bulk  
8 Customers explained in their testimony in the Acquisition Proceeding and discussed in  
9 detail by Company witness Bernard D. Grundusky in Statement No. 7-R submitted on  
10 August 19, 2022 in PAWC's 2022 rate case, unless PAWC entered into the Bulk  
11 Agreements on the terms and rates set forth in those contracts, each of the York Bulk  
12 Customers would leave the York system after PAWC's acquisition and pursue alternative  
13 treatment.

14 **Q. Do you believe it is appropriate and in the public interest for PAWC to continue**  
15 **furnishing wastewater treatment and conveyance services to the York Bulk**  
16 **Customers under the terms and rates set forth in the Bulk Agreements?**

17 A. Yes. The Bulk Agreements create broad public interest benefits, which could not have  
18 been achieved absent a settlement of the Acquisition Proceeding. In fact, that settlement  
19 includes provisions that the Commission would not be authorized to impose unilaterally.  
20 For example, by engaging in rigorous, good faith, arm's length negotiations with the York  
21 Bulk Customers over a six-month period, PAWC was able to secure specific commitments  
22 that it could not have procured otherwise, which include:

- 1           •       The York Bulk Customers agreed that they will not divert flow to other  
2 providers during the 40-year term of the Bulk Agreements. By locking the  
3 York Bulk Customers into a 40-year term, which reasonably encompasses  
4 most of the service life of major treatment and conveyance facilities, PAWC  
5 is able to avoid the possibility that some portion of its investment in those  
6 facilities may become “stranded” by the departure of one or more York Bulk  
7 Customers.
- 8           •       The York Bulk Customers have agreed to use commercially reasonable  
9 efforts to reduce I&I. This provision will enable PAWC to avoid potentially  
10 unforeseen increases in demand on its treatment facilities, which could  
11 adversely affect service and increase costs.
- 12          •       The Bulk Agreements clearly define the services to be provided by PAWC  
13 to the York Bulk Customers by including more carefully delineated terms  
14 and parameters for service than could be set forth in a typical wastewater  
15 service tariff. The more precisely defined terms of service provide for better  
16 metering of service, improved billing, and better identification/tracking of  
17 inter-municipal flows. These improvements help to ensure that the York  
18 Bulk Customers bear the responsibility for the demands and associated costs  
19 they impose on the wastewater treatment and conveyance facilities they use.
- 20          •       As part of the Bulk Agreements, the municipalities agreed to and have  
21 already enacted ordinances/resolutions that require Industrial Pretreatment

- Program (“IPP”) customers within their municipal boundaries to comply with PAWC’s IPP.

**Q. What would be the practical consequences if the York bulk customers exercise their early termination rights under the bulk agreements and left the York wastewater system because of increases to the negotiated contract rate?**

A. The York Bulk Customers represent approximately 54% of the allocated treatment flow at the Company’s York WWTP. If the Bulk Customers left the system, the York WWTP would become uneconomic in the absence of rate increases to retail customers in PAWC’s general sanitary sewer system operations. It would also result in a splintering of the current regional and consolidated wastewater collection and treatment system in the York area, which would be contrary to the Commission policy in favor of regionalization and consolidation. Additionally, the bulk flow from surrounding municipalities is essential to the proper functioning of the York WWTP. The bulk flow from the surrounding municipalities contains additional biological oxygen demand materials that aid in the consumption and digestion of bacteria in the flow stream. The Bulk Agreements also contain provisions that facilitate PAWC’s ability to exchange capacity between the York Bulk Customers, which will help to reduce system peak treatment demand and, in that way, postpone or potentially avoid entirely, the investment in additional treatment capacity.

**Q. Does this conclude your testimony?**

A. Yes, it does.

# Statement No. 4

## Gress

**DIRECT TESTIMONY**

**OF**

**STACEY D. GRESS**

**WITH REGARD TO**

**PENNSYLVANIA-AMERICAN WATER COMPANY'S**

**CLAIMED RATE BASE, DEPRECIATION AND AMORTIZATION, TAXES OTHER  
THAN INCOME, ACQUISITIONS IN RATE BASE, ALLOCATION OF COMMON  
COSTS BETWEEN WATER AND WASTEWATER OPERATIONS, RATE CASE AND  
REGULATORY EXPENSE, PROPOSED TARIFF CHANGES, AND RATE  
STRUCTURE AND RATE DESIGN PROPOSAL**

**DOCKET NOS.**

**R-2023-3043189 (WATER)**

**R-2023-3043190 (WASTEWATER)**

**DATE: November 8, 2023**

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**DIRECT TESTIMONY OF STACEY D. GRESS**

1 **Q. What is your name and business address?**

2 A. My name is Stacey D. Gress, and my business address is 1 Water Street, Camden,  
3 New Jersey 08102.

4 **Q. By whom are you employed and in what capacity?**

5 A. I am employed by American Water Works Service Company (the “Service Company”) as  
6 Director of Rates and Regulatory for Pennsylvania-American Water Company (“PAWC”  
7 or the “Company”). The Service Company is a wholly owned subsidiary of American  
8 Water Works Company, Inc. (“American Water”) that provides services to PAWC and its  
9 affiliates.

10 **Q. Please summarize your educational background and professional experience.**

11 A. I received a Master of Business Administration Degree, with a specialization in Finance,  
12 from Drexel University in 2007. I also hold a Bachelor of Arts Degree in Economics from  
13 Rutgers University, as well as an Associate in Science Degree for Business Administration  
14 from Camden County College. In October 2017, I attended the Utility Rate School  
15 sponsored by the National Association of Regulatory Utility Commissioners.

16 **Q. What are your duties as Director of Rates and Regulatory?**

17 A. My duties as Director of Rates and Regulatory principally include preparing and presenting  
18 rate applications for PAWC. In addition, I am responsible for certain aspects of the  
19 financial, budgeting and regulatory functions of the Company.

1 **Q. Have you previously submitted testimony before the Pennsylvania Public Utility**  
2 **Commission (the “Commission”)?**

3 A. Yes, I prepared and provided testimony in PAWC’s last two base rate cases at Docket Nos.  
4 R-2022-3031672 and R-2020-3019369. In addition, I have testified before the West  
5 Virginia Public Service Commission on behalf of an American Water subsidiary, West  
6 Virginia-American Water.

7 **Q. What is the purpose of your testimony?**

8 A. The purpose of my testimony is to explain the portions of the Company’s principal  
9 accounting exhibit, Exhibit No. 3-A, that I am sponsoring, which relate to the Company’s  
10 claims for rate base, depreciation and amortization, taxes other than income, and  
11 acquisitions in rate base since its last base rate case. Additionally, my testimony supports  
12 the Company’s claim for rate case and regulatory expense, as well as the allocation of  
13 common costs between water and wastewater operations. I will also describe changes that  
14 the Company is proposing to make to its water and wastewater tariffs in this case. Finally,  
15 I will discuss the Company’s rate structure and rate design proposal.

16 **The Development of the Combined**  
17 **Water and Wastewater Revenue Requirement**

18 **Q. Please explain how the Company developed its revenue requirement in this case.**

19 A. The total Company revenue requirement was developed based on five separate revenue  
20 requirements, defined as follows:

- 21 • Water Operations,
- 22 • Wastewater Sanitary Sewer Systems (“SSS”) General Operations,
- 23 • Butler Area Sewer Authority (“BASA”) Wastewater (“WW”) Operations,

- 1 • Brentwood WW Operations, and
- 2 • Wastewater Combined Sewer Systems (“CSS”) Operations.

3 In this case, the Company is distributing a portion of the revenue requirements for its  
4 wastewater operations to the revenue requirements of its water operations as shown on  
5 Exhibit No. 3-A on the Revenue Requirement Summary. The allocation of a portion of  
6 wastewater revenue requirements to water revenue requirements by utilities that provide  
7 both forms of service was authorized by amendments to the Public Utility Code made by  
8 Act 11 of 2012. Those amendments provide the Commission with a reasonable means of  
9 moderating the rate impact of significant investments needed to improve the service,  
10 reliability and environmental compliance of acquired wastewater systems. The  
11 Commission approved the allocation of a portion of the Company’s wastewater revenue  
12 requirements to water revenue requirements in the Company’s last four base rate  
13 proceedings. In the Company’s last base rate case, Docket No. R-2022-3031672, the  
14 Commission approved a settlement that allocated 33% of the Company’s wastewater  
15 revenue requirement increase to the water revenue requirement in the rates that went into  
16 effect on January 28, 2023.

17 For the Company’s five revenue requirements identified above, the Company has prepared  
18 five detailed revenue requirement studies that set forth the Company’s claims for rate base,  
19 depreciation, operating and maintenance expenses, taxes and pro forma revenues for a  
20 historic test year ending June 30, 2023 (“HTY”), a projected future test year ending  
21 June 30, 2024 (“FTY”), and a fully projected future test year ending June 30, 2025  
22 (“FPFTY”). In Exhibit No. 3-A, the historic test year data are generally identified by the  
23 title or heading “Present Rates at June 30, 2023” and the FTY and FPFTY are generally

1 identified by the title or heading “Present Rates at June 30, 2024,” and “Present Rates at  
2 June 30, 2025,” respectively.

3 **Q. Why did the Company prepare separate revenue requirements?**

4 A. The Company developed revenue requirements for its base water, wastewater sanitary  
5 sewer systems and wastewater combined sewer systems, and also developed individual  
6 revenue requirements for wastewater operations in BASA and Brentwood. The Joint  
7 Petition for Settlement (the “Settlement”), which was approved by the Commission in the  
8 Company’s last base rate case, provides that the Company is not required to provide a  
9 separate study for each combined stormwater system. The Company has included one  
10 Wastewater CSS Operation study for Scranton, McKeesport and Kane wastewater systems,  
11 as permitted under the Settlement.<sup>1</sup>

12 **Rate Base**

13 **Q. What are the Company’s rate base claims in this proceeding?**

14 A. The total Company rate base claim in this proceeding is shown below for each of the five  
15 revenue requirements:

<b>Rate Base</b>	<b>2025 Proposed</b>
Water Operations	\$4,704,067,656
Wastewater SSS General Operations	\$649,330,622
BASA WW Operations	\$231,536,917
Brentwood WW Operations	\$22,053,946
Wastewater CSS Operations	\$489,184,280
<b>Total:</b>	<b>\$6,096,173,421</b>

16  
17 The calculations of these amounts are shown in Exhibit No. 3-A under the respective rate  
18 base sections for each revenue requirement.

---

<sup>1</sup> Joint Petition for Settlement of Rate Investigation (“Joint Petition”) at ¶ 14, Docket No. R-2022-3031672.

1 **Q. What are the elements of the Company’s rate base claims?**

2 A. PAWC’s rate base claims consist of several elements. The first and largest element is the  
3 depreciated original cost of net plant in service. To this amount, three items have been  
4 added to each of the rate base claims: (1) materials and supplies; (2) cash working capital;  
5 and (3) accrued taxes net of prepaid taxes.

6 For Water Operations, items four and five described below were added:

7 (4) the unamortized balance of the Commission-approved<sup>2</sup> utility plant acquisition  
8 adjustments associated with the Company’s acquisitions of the water assets of the former  
9 Pennsylvania Gas & Water Company (“PG&W”), Lake Spangenberg Water Company, the  
10 Fernwood Community Water System, and the Olwen Heights Water Service Company,  
11 Inc., as well as the unamortized balance of the Commission-approved acquisition  
12 transaction and closing costs for the Company’s acquisitions of the water assets of the  
13 Steelton Borough Authority, Municipal Authority of the Borough of Turbotville, Valley  
14 Township, SLIBCO Utilities, and Creekside Homeowner’s Association. In addition, the  
15 Company is seeking approval for recovery of the utility plant acquisition adjustments and  
16 transaction and closing costs associated with its planned acquisitions of the water systems  
17 from Farmington Township and Audubon Water Company, which are anticipated to be  
18 completed prior to the end of the FPFTY. As referenced in the testimony of Company  
19 witness Chris Abruzzo, the purchase price of \$5,545,000 for the Farmington acquisition  
20 was allocated in the amounts of \$2,718,300 for water and \$2,826,700 for the wastewater

---

<sup>2</sup> References in this testimony to Commission authorized balances and amortizations of acquisition adjustments can be found at Docket No. R-2022-3031672, Joint Petition for Settlement of Rate Investigation, Appendix D, approved by Order entered December 8, 2022, unless specifically stated otherwise.

1 assets. For the Farmington water system, the depreciated original cost was calculated to  
2 be \$2,502,811, resulting in a proposed utility plant acquisition adjustment (“UPAA”) of  
3 \$215,489. The estimated transaction and closing costs for Farmington are \$54,825. For  
4 Audubon, the difference in the purchase price and depreciated original cost resulted in a  
5 proposed UPAA of \$7,639,771. The estimated transaction and closing costs for Audubon  
6 are \$117,954. The UPAA and acquisition transaction and closing costs are similar to those  
7 that I have discussed above and were previously approved by the Commission for other  
8 water system acquisitions. Please refer to the rate base sections of Exhibit Nos. 3-A and  
9 3-C for more detail on these acquisition adjustments; and

10 (5) the unamortized balance of costs incurred by the Company relative to its  
11 position as receiver of the Winola Water Company, Docket No. P-2018-3006216.

12 For the Wastewater SSS General Operations rate base claim, a fourth item was added: the  
13 unamortized balance of the Commission-approved utility plant acquisition adjustments  
14 associated with the Company’s acquisitions of the wastewater assets of the former Clean  
15 Treatment Sewage Company and Delaware Sewer Company, as well as the unamortized  
16 balance of the Commission-approved acquisition transaction and closing costs for the  
17 Company’s acquisitions of the wastewater assets of the Borough of New Cumberland,  
18 Sadsbury Township, Exeter Township, Delaware Sewer Company, the Borough of  
19 Turbotville, Valley Township, Foster Township, the Borough of Royersford, Upper  
20 Pottsgrove Township, and the City of York. In addition, the Company is seeking approval  
21 for recovery of the estimated acquisition transaction and closing costs associated with the  
22 planned acquisitions of wastewater assets of Farmington Township (\$56,895) and  
23 Sadsbury Township Municipal Authority (“STMA”) (Lancaster County) (\$91,470),

1 Docket Nos. A-2023-3042587 and A-2023-3042058, respectively. As discussed in the  
2 direct testimony of my colleague, Mr. Abruzzo (PAWC Statement No. 6), the planned  
3 acquisitions will be completed prior to the end of the FPFTY. These acquisition transaction  
4 and closing costs are similar to the acquisition transaction and closing costs approved by  
5 the Commission and previously discussed in my testimony.

6 For BASA WW Operations, a fourth item was added: the Company is seeking approval for  
7 recovery of \$1,202,635, the estimated acquisition transaction and closing costs associated  
8 with the Company's planned acquisition of the wastewater assets of BASA, Docket No.  
9 A-2022-3037047, which will be completed prior to the end of the FPFTY. These  
10 acquisition transaction and closing costs are similar to the acquisition transaction and  
11 closing costs discussed previously.

12 For Brentwood WW Operations, a fourth item was added: the Company is seeking  
13 approval for recovery of \$701,935, the estimated acquisition transaction and closing costs  
14 associated with the Company's planned acquisition of the wastewater assets of the Borough  
15 of Brentwood, Docket No. A-2021-3024058, which will be completed prior to the end of  
16 the FPFTY. These acquisition transaction and closing costs are similar to the acquisition  
17 transaction and closing costs discussed previously.

18 For the Wastewater CSS Operations rate base claim, a fourth item was added: the  
19 unamortized balance of the Commission-approved transaction and closing costs associated  
20 with the Company's acquisitions of the wastewater assets of the Sewer Authority of the  
21 City of Scranton, the Municipal Authority of the City of McKeesport, and the Borough of  
22 Kane Authority.

1 For the calculation of the Water Operations rate base claim, seven items have been  
2 deducted: (1) a net offset to cash working capital requirements to reflect the timing of the  
3 payment of interest and preferred dividends; (2) unamortized investment tax credits that  
4 were generated prior to 1971; (3) a thirteen-month average of extension deposits in  
5 suspense; (4) contributions-in-aid-of-construction (“CIAC”) and customer advances for  
6 construction (“CAC”) associated with the Company’s acquisition of the water assets of the  
7 former Citizens Utilities Water Company of Pennsylvania (“Citizens”); (5) balance of the  
8 regulatory liability for the federal income tax savings associated with the 2017 Tax Cuts  
9 and Jobs Act (“TCJA”) for January 1, 2018 through June 30, 2018 (the “Stub Period”) and  
10 the unamortized balance of the Negative Deferred Tax Credit reconciliation from  
11 January 28, 2021 through January 27, 2023; (6) other deductions (as described below); and  
12 (7) accumulated deferred taxes.

13 For the calculation of the Wastewater SSS General Operations and Wastewater CSS  
14 Operations rate base claims, three items have been deducted: (1) a net offset to cash  
15 working capital requirements to reflect the timing of the payment of interest and preferred  
16 dividends; (2) the balance of the regulatory liability for federal income tax savings  
17 associated with the TCJA Stub Period relating to Wastewater SSS General and Scranton  
18 WW CSS Operations; and (3) accumulated deferred taxes.

19 For the calculation of the BASA and Brentwood WW Operations rate base claims, two  
20 items have been deducted: (1) a net offset to cash working capital requirements to reflect  
21 the timing of the payment of interest and preferred dividends; and (2) accumulated deferred  
22 taxes.

1 **Q. Please explain how the depreciated original cost of net plant for the FPFTY was**  
2 **determined.**

3 A. Net plant is the total utility plant in service less CIAC, CAC, and excluded property.  
4 Depreciated original cost is the original cost less accrued depreciation. The original cost  
5 of net utility plant as of the end of the FPFTY consists of the amount recorded in PAWC's  
6 plant accounts at June 30, 2023, plus projected additions, net of retirements, through  
7 June 30, 2024 and 2025, respectively, less CIAC and CAC. The original cost of plant in  
8 service at June 30, 2023, and the original cost of claimed additions and retirements, shown  
9 by detailed plant account, are set forth in Exhibit No. 3-A under the respective rate base  
10 sections for each revenue requirement study. Mr. Aiton discusses the more significant  
11 plant additions in his direct testimony (PAWC Statement No. 3).

12 I will address the pending water and wastewater acquisitions that the Company has  
13 submitted applications for since its last base rate case. The accrued depreciation at June 30,  
14 2024 and 2025, respectively, related to net plant in service was determined by the  
15 Company's depreciation consultant, John J. Spanos (PAWC Statement No. 11), and is  
16 shown in Exhibit No. 3-A under the respective rate base sections for each revenue  
17 requirement study.

18 **Q. Do the continuing property records, as maintained by the Company and augmented**  
19 **by depreciated original cost studies and fair market value appraisals for acquisitions,**  
20 **accurately reflect additions and retirements to plant in service?**

21 A. Yes, they do. The Company's filing for the future fair market value acquisition of the  
22 BASA wastewater assets reflects the net value of the assets at the ratemaking rate base  
23 agreed to by the parties in the Joint Petition for Approval of Unanimous Settlement of All

1 Issues, filed with the Commission on August 14, 2023, Docket No. A-2022-3037047.<sup>3</sup> For  
2 the fair market value acquisition of the Brentwood wastewater system, the Company also  
3 reflects the net value of the ratemaking rate base reflected in the Company's acquisition  
4 application at Docket No. A-2021-3024058.<sup>4</sup> Preliminary depreciated original cost studies  
5 were completed and filed with the Commission for the planned acquisitions of Farmington  
6 Township Water and Wastewater assets (Docket Nos. A-2023-3042587 and A-2023-  
7 3042567). The original cost study will be updated after closing to reflect the original cost  
8 and accumulated depreciation as of the closing date. For the planned acquisition of STMA  
9 wastewater assets (Docket No. A-2023-3042058), the Company performed an analysis of  
10 the original cost and accumulated depreciation of this system, and after closing, will file  
11 with the Commission an original cost study to reflect the original cost and accumulated  
12 depreciation as of the closing date. For the planned acquisition of Audubon Water  
13 Company (Docket No. A-2023-3043194), the Company will not prepare an original cost  
14 study, as Audubon Water Company is a Commission-regulated utility, and it is assumed  
15 that the original cost and accumulated depreciation of Audubon Water Company's assets  
16 have been captured in Audubon Water Company's current rates.

17 **Q. Are the data shown on the Company's continuing property records an accurate basis**  
18 **for developing the original cost of property?**

19 A. Yes, they are.

---

<sup>3</sup> The Commission is expected to enter a final order in this case at its November 9, 2023 public meeting.

<sup>4</sup> The Commission is expected to enter a final order in this case at its March 14, 2024 public meeting.

1 **Q. Do the Company's rate base claims include the cost of water and wastewater assets**  
2 **that are to be acquired during the pendency of this proceeding, but prior to the end**  
3 **of the FPFTY?**

4 A. Yes, the Company's rate base claims include the cost of water assets to be acquired from  
5 Farmington Township and Audubon Water Company, and the wastewater assets to be  
6 acquired from BASA, the Borough of Brentwood, Farmington Township and STMA.

7 **Q. Has the Company made any adjustments to its historic test year end CIAC and CAC**  
8 **balances?**

9 A. Yes, adjustments have been made to the balances for Water Operations, Wastewater SSS  
10 General Operations, and Wastewater CSS Operations. The June 30, 2023 CIAC balance  
11 for Water Operations has been increased to reflect \$2,436,273 of additional contributions  
12 projected to be received through the end of the FPFTY. In addition, the FTY reflects  
13 \$2,147,017 of additional contributions associated with the planned acquisition of  
14 Farmington Water, and the FPFTY reflects \$4,210,372 of additional contributions  
15 associated with the planned acquisition of Audubon Water. The CAC balance has been  
16 adjusted to reflect \$3,789,774 and \$8,464,954 of additional advances projected to be  
17 received through the FTY and FPFTY, respectively, and decreased for \$3,732,642 and  
18 \$6,535,508 of refunds anticipated to be paid during 2024 and 2025 with respect to customer  
19 advances received in prior years.

20 For the Wastewater SSS General Operations, the June 30, 2023 CIAC balance has been  
21 increased to reflect \$752,142 of additional contributions projected to be received through  
22 the FPFTY. In addition, \$925,000 and \$1,970,206 of contributions associated with the

1 planned acquisitions of STMA and Farmington, respectively, have been included for the  
2 FTY.

3 For the Wastewater CSS Operations, the June 30, 2023 CIAC balance has been increased  
4 to reflect \$132,667 of additional contributions projected to be received through the FPFTY.  
5 The Company does not anticipate any changes to the CAC balances for its Wastewater SSS  
6 General Operations or Wastewater CSS Operations. In addition, the Company does not  
7 anticipate any changes to the CIAC and CAC balances for its remaining operations.  
8 Therefore, no adjustments to the June 30, 2023 balances for those operations are required.

9 These calculations are shown in Exhibit No. 3-A under the respective rate base sections for  
10 the revenue requirements of Water Operations, Wastewater SSS General Operations, and  
11 Wastewater CSS Operations.

12 **Q. Has the Company excluded from its rate base certain property recorded in its utility  
13 plant accounts?**

14 A. Yes. The amount of \$1,558,014 has been excluded from the Company's rate base claim  
15 for Water Operations as shown in Exhibit No. 3-A under the corresponding rate base  
16 section. For the most part, the excluded amount represents the original cost of utility plant  
17 in service for which the Company received relocation reimbursement payments from the  
18 Commonwealth of Pennsylvania. The remainder of the excluded amount consists of  
19 certain allowance for funds used during construction ("AFUDC") accruals that the  
20 Company agreed to remove from rate base pursuant to a stipulation approved in the  
21 Company's rate proceeding at Docket No. R-00932670.

1 **Q. Please explain the addition to rate base for materials and supplies.**

2 A. In accordance with procedures previously approved by the Commission, the Company's  
3 materials and supplies claims were determined by averaging the monthly balances of the  
4 materials and supplies account for the thirteen months ended June 30, 2023. The  
5 calculations of the materials and supplies claims are shown in Exhibit No. 3-A under the  
6 respective rate base sections for each revenue requirement study. The Company's  
7 materials and supplies claim for the BASA WW Operations and Brentwood WW  
8 Operations were derived as follows: (1) monthly balances of the materials and supplies  
9 accounts for PAWC's Wastewater SSS General Operations for the thirteen months ended  
10 June 30, 2023 were summed and the total divided by the number of customers in those  
11 wastewater districts to determine the average materials and supplies balance per customer;  
12 and (2) the average materials and supplies balance per customer was multiplied by the total  
13 number of customers served by the water and wastewater systems. The calculation of this  
14 adjustment is shown in Exhibit No. 3-A under the respective rate base sections for materials  
15 and supplies.

16 **Q. Please explain the Company's claim for cash working capital.**

17 A. The cash working capital requirement is calculated by multiplying the net lag days (revenue  
18 lag days less expense lag days) by the average operating expenses per day (total operating  
19 expenses / 365 days). All calculations have been made to two decimal places. In  
20 accordance with Commission policy, uncollectible accounts expense and amortizations  
21 were subtracted from total operating expenses before performing the calculation. The  
22 calculation of the gross cash working capital requirement is shown in Exhibit No. 3-A

1 under the respective rate base sections for cash working capital for each of the Company's  
2 revenue requirements.

3 **Q. How were the revenue and expense lags determined?**

4 A. Revenue and expense lags were determined by a lead-lag study. The revenue lag consists  
5 of three components: (1) the lag from the midpoint of the service period to the end of the  
6 service period, i.e., the meter-read date; (2) the time required for bill preparation and  
7 mailing; and (3) the lag in receipt of payment. The first component was calculated as  
8 follows: the sum of the number of service days relative to each customer bill in the last  
9 quarter of the HTY was calculated. That figure was divided by two to determine the  
10 interval from the midpoint to the end of the service period. The average of the service days  
11 for the period April through June 2023 was then computed, resulting in a service lag period  
12 of 15.30 days.

13 The second component is billing lag. The billing lag of two days used for this calculation  
14 was proposed by a witness for the Commission's Bureau of Investigation and Enforcement  
15 and agreed to by the Company in a prior base rate case at Docket No. R-2013-2355276.

16 The third component, the collection lag, requires a further calculation to determine the  
17 average length of time that revenues are outstanding before payment. This calculation was  
18 performed as follows: (1) daily accounts receivable balances for the twelve months ended  
19 June 30, 2023 were summed and the total divided by the number of days in the same period  
20 to determine the average accounts receivable balance per day; (2) the Company's total  
21 revenue for the twelve months ended June 30, 2023 was divided by the number of days in  
22 the same period to determine the average revenue billed per day; and (3) the average

1 accounts receivable balance per day was divided by the average revenue billed per day.  
2 The result of the division in (3), above, yields the number of days on average that billed  
3 revenue was outstanding prior to receipt of payment, which in the study was 32.52 days.  
4 This is a standard calculation used by other water utilities in Pennsylvania. Finally, 0.79  
5 days of “Lockbox Collection Lag” was added to the revenue lag, which represents the time  
6 between the collection of customer remittances to a post office box and the deposit of those  
7 funds into the Company’s bank account. The total revenue lag for this study, when the  
8 items above are combined, is 50.61 days.

9 The expense lag was based upon a comprehensive lag study. Using procedures approved  
10 by the Commission in prior proceedings and data obtained from the Company’s centralized  
11 accounts payable system, samples of expense vouchers for each category of expense were  
12 analyzed to determine the lag between the receipt of goods or services and the applicable  
13 payment due date. A summary of the expense lags by category is shown in Exhibit No. 3-A  
14 under the corresponding rate base section. These lag calculations reflect an addition for  
15 “Check Float,” which represents the average amount of time that it takes for a vendor to  
16 deposit a payment from the Company. For the Labor and Service Company calculations,  
17 an addition of 0.05 days was included, which has the same purpose as the “Check Float,”  
18 but is instead calculated by taking a weighted average of direct deposit and check payments  
19 to employees. The detailed calculations of the revenue and expense lag days appear in the  
20 response to Question No. FR V. 8 of the Commission’s Standard Filing Requirements.

21 **Q. Please explain the addition to rate base for accrued and prepaid taxes.**

22 A. This addition to rate base reflects the fact that, on balance, taxes are paid in advance. The  
23 lead/lag in payment of Pennsylvania corporate net income tax is based on payments

1 throughout the test year. The General Assessment tax lead was calculated based upon  
2 actual payment dates in 2022, for the tax period of July 1, 2022 through June 30, 2023 and  
3 a payment in 2023, for the tax period of July 1, 2023 through June 30, 2024. The lead/lag  
4 day calculations for the payment of taxes imposed by the Public Utility Realty Tax Act  
5 (“PURTA”) and federal income tax were based upon statutory payment schedules. The  
6 lag for local property taxes was determined using the regular expense lag calculation,  
7 which was discussed above. Payments are made by check, and the average payment was a  
8 lead of (23.52) days, adjusted to (13.96) when Check Float was accounted for. The  
9 calculations of the lead/lag days for the aforementioned taxes are set forth in Exhibit No.  
10 3-A in the respective rate base sections for each of the Company’s revenue requirements.  
11 The net lead/lag days for each tax are then applied to the pro forma tax amounts, as shown  
12 in the applicable section of Exhibit No. 3-A, to calculate the overall working capital effect  
13 which, in this instance, is positive for all operations. Thus, the average net lead in payment  
14 of these taxes constitutes an addition to cash working capital requirements and, therefore,  
15 is reflected as a rate base addition.

16 **Q. Please explain the addition to rate base for acquisition adjustments.**

17 A. There are two types of acquisition adjustments claimed by the Company in this case. The  
18 first type represents utility plant acquisition adjustments. The second type represents  
19 acquisition transaction and closing costs. These are further broken down to the  
20 unamortized balance of adjustments that were approved in prior base rate cases and  
21 adjustments that the Company is seeking approval for in this case. The applicable rate base  
22 claims and docket numbers are shown on Exhibit No. 3-A under the rate base section  
23 entitled Acquisition Adjustments. Exhibit No. 3-C provides additional support, including

1 a copy of Appendix E of the Joint Petition for Settlement at Docket No. R-2022-3031672,  
2 for those acquisition adjustments approved in the Company's last base rate case. In this  
3 case, as discussed above, the Company is seeking approval of the estimated acquisition  
4 transaction and closing costs for the planned acquisitions of the Farmington Township  
5 water and wastewater systems, the Audubon Water Company water system, the STMA  
6 wastewater system, the Borough of Brentwood wastewater system and the BASA  
7 wastewater system.

8 **Q. Please describe the adjustments made to the transaction cost balances approved in**  
9 **the last rate case for the Creekside Homeowner's Association water acquisition.**

10 A. The total transaction and closing cost estimates at December 31, 2023 approved by the  
11 Commission were reconciled to the actual balance on the Company's books at the time of  
12 this filing. This resulted in an increase to the originally authorized balances by \$11,512  
13 for Creekside water. Supporting detail for this adjustment can be found in the Company's  
14 Exhibit No. 3-A and Exhibit No. 3-C pages for Water Operations.

15 **Q. Please explain other rate base additions for water.**

16 A. The fifth addition to Water Operations, shown in Exhibit No. 3-A in the corresponding rate  
17 base section, is the continued amortization of the Company's receivership costs related to  
18 Winola Water Company, as approved by the Commission in the Company's last base rate  
19 case at Docket No. R-2022-3031672.

20 **Q. Please explain the items that were deducted from rate base for the Company's water**  
21 **and wastewater operations.**

1 A. Three items were deducted from rate base for the Company's water and wastewater  
2 operations. The first deduction, which offsets cash working capital requirements, relates  
3 to the average net lag in payment of interest on long-term debt and dividends on preferred  
4 stock. The deduction was calculated using procedures previously approved by the  
5 Commission and is set forth in Exhibit No. 3-A in the corresponding rate base section for  
6 each of the Company's revenue requirements.

7 The second deduction is for the balance of the regulatory liability for the federal income  
8 tax savings associated with the TCJA for the Stub Period and the unamortized balance of  
9 the Negative Deferred Tax Credit reconciliation from January 28, 2021 through  
10 January 27, 2023. This deduction only relates to Water, Wastewater SSS and Wastewater  
11 CSS operations.

12 The third deduction is for accumulated deferred taxes as addressed by Company Witness  
13 Melissa Ciullo in her direct testimony, PAWC Statement No. 7.

14 **Q. Please describe the adjustment to the Rate Base deduction for the Negative Deferred**  
15 **Tax Credit.**

16 A. In accordance with PAWC Tariff Water-PA P.U.C. No. 5, page 40 (Negative Surcharge  
17 for Deferred Tax Credit), the Company filed, on April 30, 2023, a reconciliation of the  
18 difference between the total credits provided to customers for bills rendered from  
19 January 1, 2022 through January 27, 2023 in the amount of \$11,440,000. The calculated  
20 difference of \$719,248, plus applicable interest has been added to the unamortized balance  
21 approved at Docket No. R-2022-3031672 of \$208,073, plus applicable interest, and is  
22 included as an addition to rate base offsetting the balance of the regulatory liability for

1 federal income tax savings associated with the TCJA Stub Period for Water Operations.  
2 The Company is seeking approval of this adjustment with an amortization period of two  
3 years.

4 **Q. Were additional items deducted from rate base for the Company's water operations?**

5 A. Yes. Four rate base deductions apply only to the Company's water operations. The first  
6 item is unamortized investment tax credits generated prior to 1971. These amounts are  
7 shown in Exhibit No. 3-A under the respective rate base sections. Investment tax credits  
8 accrued in 1971, and thereafter, are amortized to income and are not permitted to be  
9 deducted from rate base under the requirements of Section 46(f) of the Internal Revenue  
10 Code.

11 Another item deducted from rate base for water operations, shown in Exhibit No. 3-A under  
12 the respective rate base sections, is a thirteen-month average of extension deposits in  
13 suspense. The Company requires applicants for water service to advance a portion of the  
14 cost to construct main extensions needed to serve them under specified conditions, as more  
15 fully set forth in the Company's tariff. At the completion of the project, accounting entries  
16 are made to adjust the estimated costs of construction to the actual costs of construction.  
17 The difference is recorded in the extension deposit in suspense account until it is either  
18 refunded to the party that made the advance, or an additional amount owed is collected. In  
19 its final Order at Docket No. R-891208, the Commission agreed with the Office of  
20 Consumer Advocate ("OCA") that an average balance of such funds should be reflected in  
21 rate base, and the Company has made this adjustment, shown in Exhibit No. 3-A, to comply  
22 with that determination.

1 The third rate base offset for Water Operations comprises CIAC and CAC booked by  
2 Citizens prior to its acquisition by PAWC. The Joint Petition for Settlement at Docket No.  
3 R-2009-2097323 (“Citizens Joint Petition for Settlement”), as approved by the  
4 Commission for ratemaking purposes, provided as follows:

5 (i) \$14,147,208, or 40%, of the December 31, 2009, balance of  
6 the net customer advances for which Citizens retained the refund  
7 liability upon the Company’s acquisition of Citizens’ water  
8 utility assets will be deemed deducted from the Company’s rate  
9 base; (ii) \$8,895,830 (100%) of the December 31, 2009 balance  
10 of the net contributions in aid of construction the OCA proposed  
11 to attribute to PAWC from its acquisition of Citizens’ water  
12 assets will be deducted from PAWC’s rate base; (iii) in future  
13 base rate cases, the foregoing balances, adjusted to reflect  
14 accumulated amortization, will be deducted for ratemaking  
15 purposes until such balances are fully amortized; and (iv) the  
16 applicable depreciation rate for PAWC’s transmission and  
17 distribution mains will be used to calculate the amortization of  
18 such balances for ratemaking purposes to offset the portion of  
19 depreciation expense on gross plant in service that is related to  
20 these advances and contributions.

21 The adjustments that were made to implement the terms of the Citizens Joint Petition for  
22 Settlement, set forth above, are detailed in Exhibit No. 3-A under the rate base section.

23 The final rate base deduction is for the Commission-approved amortization associated with  
24 an equipment discount.

25 **Q. Do the adjustments explained above constitute all of the adjustments necessary to**  
26 **establish the Company’s rate base?**

27 **A. Yes, they do.**

1 **Depreciation And Amortization Expense**

2 **Q. Have adjustments been made to the annual depreciation expense recorded on the**  
3 **Company's books at June 30, 2023?**

4 A. Yes. Adjustments to booked amounts were made to a full annual amount of the  
5 depreciation accrual for the Company's plant in service as of June 30, 2023 and for plant  
6 to be added during 2024 and 2025. The annual accrual was determined largely on a  
7 Straight-Line Average Remaining Life basis. The adjustments to reflect the annual accrual  
8 for depreciation related to plant in service in 2023, 2024, and 2025 are shown in Exhibit  
9 No. 3-A under the respective rate base sections, and, as noted previously, are explained  
10 and sponsored by Mr. Spanos.

11 For Water Operations, a reduction to depreciation was made for CIAC and CAC associated  
12 with the Company's acquisition of the water assets from Citizens Joint Petition for  
13 Settlement at Docket No. R-2009-2097323.

14 Additionally, for each of the operational areas, a reduction to depreciation was made for  
15 the capitalized portion of depreciation on vehicles.

16 **Q. Please explain the Company's claim for "Amortizations" that appears in Exhibit**  
17 **No. 3-A.**

18 A. The amortization claims for each of the revenue requirements are described as follows and  
19 are reflected in Exhibit Nos. 3-A and 3-B under the respective operational sections:

20 For Water Operations, nine amortization claims are made:

21 (1) amortization of the UPAA amounts as previously approved by the Commission  
22 which include the Commission-approved utility plant acquisition adjustments associated

1 with the Company's acquisition of the water assets of the former PG&W, Lake  
2 Spangenberg Water Company, the Fernwood Community Water System, the Olwen  
3 Heights Water Service Company, Inc., Indian Rocks Property Owners Association, North  
4 Fayette County Municipal Authority, the Wildcat Park Corporation, the Municipal  
5 Authority of the Borough of Turbotville, and Creekside Homeowner's Association, plus  
6 the proposed UPAA adjustment for the planned Farmington Township and Audubon Water  
7 Company acquisitions. The Company is proposing to extend the amortization period for  
8 those amortizations which are currently due to end at December 31, 2025 in order to reflect  
9 a more appropriate ongoing annual level of expense in proposed rates. The detail of the  
10 amortizations can be found in Exhibit No. 3-A. Additionally, the Company has included  
11 the previously Commission approved amortizations of the transaction and closing costs  
12 associated with the acquisitions of the Borough of Turbotville, Steelton Borough  
13 Authority, Valley Township, SLIBCO Utilities, and Creekside Homeowner's Association,  
14 as well as the proposed amortization of the transaction and closing costs associated with  
15 the water system acquisitions of Farmington Township and Audubon Water Company as  
16 part of this claim;

17 (2) amortization of the previously Commission-approved equipment discount  
18 noted earlier in my testimony;

19 (3) amortization of SFAS 109 regulatory assets – AFUDC as previously approved  
20 by the Commission;

21 (4) amortization of receivership costs for Winola Water Company, Docket No. R-  
22 2022-3031672 as previously discussed in my testimony;

1 (5) amortization of the TCJA Stub Period and deferred taxes, as previously  
2 discussed in my testimony. The Company is proposing a new two-year amortization period  
3 for the TCJA Stub Period June 30, 2024 balance, which is currently due to end at  
4 December 31, 2025, in order to reflect a more appropriate ongoing annual level of expense  
5 in proposed rates. Additionally, as previously discussed in my testimony, the Company  
6 has included the two-year amortization of the reconciliation of the negative surcharge for  
7 deferred tax credits as required under the PAWC Tariff Water – PA P.U.C. No. 5, page 40.  
8 This reconciliation covers the period from January 28, 2021 through January 27, 2023;

9 (6) Commission-approved amortization of DEP Safe Drinking Water fees,  
10 reflecting an updated amortization period of two years on the balance as of June 30, 2024;

11 (7) post-in-service AFUDC for new plant additions made after the acquisition of  
12 Steelton Borough Authority. *See* 66 Pa.C.S. §1329(f), reflecting an updated amortization  
13 period of two years on the balance as of June 30, 2024;

14 (8) deferred depreciation associated with the Steelton acquisition (*see* 66 Pa.C.S.  
15 §1329(f)), as approved at Docket No. R-2020-3019369, reflecting an updated amortization  
16 period of two years on the balance as of June 30, 2024; and

17 (9) Commission-approved amortization of the deferred financial impacts  
18 authorized in the Commission’s September 15, 2021 Order at Docket No. P-2020-3022426  
19 associated with the COVID-19 emergency response. As part of the settlement of the  
20 Company’s last rate case at Docket No. R-2022-3031672, the Company agreed it would  
21 cease the deferral of carrying costs and uncollectible expense as of December 31, 2022.  
22 The balance of the deferral at June 30, 2023 reflects a reduction to the deferred settlement  
23 balance in the amount of \$3,627,490. The Company proposes to amortize the revised

1 balance of the \$1,555,253 liability, as of June 30, 2024, over a period of two years.  
2 Company witness Cas Swiz further discusses the COVID-19 emergency response deferral  
3 in his testimony (PAWC Statement No. 8).

4 For Wastewater SSS General Operations, five amortization claims are made:

5 (1) Commission-approved utility plant acquisition adjustments associated with the  
6 Company's acquisition of the wastewater assets of the former Clean Treatment Sewage  
7 Company, Delaware Sewer Company, and the Borough of Turbotville, and Foster  
8 Township, plus the proposed Negative UPAA, that will be recorded as a regulatory  
9 liability, for STMA. For the former Clean Treatment Sewage Company, the Company is  
10 proposing a new two-year amortization period, which is currently due to end on  
11 December 31, 2025, in order to reflect a more appropriate ongoing annual level of expense  
12 in proposed rates. Additionally, the Company has included the previously approved  
13 amortizations of the transaction and closing costs associated with the acquisitions of the  
14 Borough of New Cumberland, the Borough of Turbotville, Sadsbury Township, Exeter  
15 Township, Delaware Sewer Company, Valley Township, Foster Township, the Borough  
16 of Royersford, Upper Pottsgrove Township, and City of York. In addition, the Company  
17 is proposing a 10-year amortization of the acquisition transaction and closing costs  
18 associated with the planned acquisition of the wastewater assets of Farmington Township  
19 and STMA;

20 (2) Commission-approved amortization of post-in-service AFUDC for new plant  
21 additions made after the acquisition for Exeter Township. The Company also proposes a  
22 new two-year amortization period, similar to what was proposed for the amortization of  
23 the Steelton Borough Authority post-in-service AFUDC;

1           (3) Commission-approved amortization of deferred depreciation associated with  
2 the acquisition Exeter Township. The Company also proposes a new two-year  
3 amortization period, similar to what was proposed for the amortization of the Steelton  
4 Borough Authority deferred depreciation;

5           (4) Commission-approved amortization of the deferred financial impacts  
6 authorized in the Commission’s September 15, 2021 Order at Docket No. P-2020-3022426  
7 associated with the COVID-19 emergency response, as described above; and

8           (5) amortization of the TCJA Stub Period and deferred taxes, as described above.

9 For BASA WW Operations, the only amortization claim being made is the acquisition  
10 transaction and closing costs associated with the Company’s planned acquisition of the  
11 wastewater assets of the BASA, Docket No. A-2022-3037047. These costs are based on  
12 the estimates at the time of the application filing and will be updated with actual costs after  
13 closing.

14 For Brentwood WW Operations, the only amortization claim being made is the acquisition  
15 transaction and closing costs associated with the Company’s planned acquisition of the  
16 wastewater assets of the Borough of Brentwood, Docket No. A-2021-3024058. These  
17 costs are based on the estimates at the time of the application filing and will be updated  
18 with actual costs after closing.

19 For Wastewater CSS Operations, four amortization claims are made:

20           (1) Commission-approved acquisition transaction and closing costs associated with  
21 the Company’s acquisitions of the wastewater assets of Sewer Authority of the City of

1 Scranton, the Municipal Authority of the City of McKeesport, and the Borough of Kane  
2 Authority;

3 (2) deferred depreciation associated with the acquisition of the Municipal  
4 Authority of the City of McKeesport. The Company proposes a new two-year amortization  
5 period, similar to what was proposed for the amortization of the Steelton Borough  
6 Authority deferred depreciation; and

7 (3) Commission-approved amortization of the deferred financial impacts  
8 authorized in the Commission’s September 15, 2021 Order at Docket No. P-2020-3022426  
9 associated with the COVID-19 emergency response, as described above; and

10 (4) amortization of the TCJA Stub Period and deferred taxes, as described above.

11 **Q. Please describe the adjustments made to the UPAA approved in the Company’s last**  
12 **rate case for the Creekside Homeowner’s Association water acquisition and Foster**  
13 **Township wastewater acquisition.**

14 A. The UPAA based on the depreciated original cost (“DOC”) studies filed with the  
15 Company’s acquisition applications, and approved by the Commission, for the Creekside  
16 water and Foster wastewater systems were reconciled to the final DOC studies received at  
17 the time of closing for each acquisition. This resulted in an increase to the originally  
18 authorized Negative UPAA, recorded as a regulatory liability, by \$205,184 for Creekside  
19 water and a decrease of \$13,848 for Foster wastewater. Supporting detail for these  
20 adjustments can be found in the Company’s Exhibit No. 3-A and Exhibit No. 3-C pages  
21 for Water Operations and Wastewater SSS Operations for Creekside and Foster,  
22 respectively.

1 **Q. Please describe the proposed claim for the amortization of the balance of the deferred**  
2 **expense related to the Arrearage Management Plan (“AMP”).**

3 A. In the proceedings involving the Company’s petition for approval of an arrearage  
4 management plan (“AMP”),<sup>5</sup> the Further Amended Joint Petition for Full Settlement filed  
5 with the Commission on September 11, 2023, states in Paragraph 46.c that “During the  
6 period that the AMP is considered a pilot program, the Company will record a regulatory  
7 asset or liability for amounts over or under the amount included in rates for recovery or  
8 refund in the next base rate case.” The AMP has not yet been approved by the Commission;  
9 thus, no credits have been given related to the AMP. As a result of expenses claimed in  
10 the Company’s last base rate case at Docket No. R-2022-3031672, a regulatory liability  
11 was recorded in the amount of \$3,091,875 through June 30, 2024. The Company proposes  
12 to refund the annual amount of \$1,545,937 through amortization expense over a period of  
13 two years.

14 **Property Taxes and General Assessments**

15 **Q. Please explain the adjustments to claims for property taxes.**

16 A. PURTA tax is imposed on certain real property dedicated to utility water service in  
17 Pennsylvania based upon the fair market value of such property, as determined by applying  
18 per-county common level ratios to the assessed values of the property. In Pennsylvania,  
19 property taxes imposed on real property not subject to PURTA are administered at the  
20 county level. In every county, the sum of local tax rates (school taxes, municipal taxes and  
21 county taxes) is applied to the assessed value of each property. However, each county has

---

<sup>5</sup> *See* Petition of Pennsylvania-American Water Company for Approval of an Arrearage Management Plan, Docket No. P-2021-3028195.

1 its own system for determining assessed value. The Company's claims for its Water  
2 Operations, Wastewater SSS General Operations, and Wastewater CSS Operations were  
3 calculated based on the ratio of actual 2022/2023 tax liability to tax base. This ratio was  
4 applied to the Company's pro forma claim for property tax eligible utility plant at June 30,  
5 2024 and June 30, 2025. These calculations are detailed in Exhibit No. 3-A, Pennsylvania  
6 Property Tax under the section for Taxes, Other Than Income. The Company's claim for  
7 its BASA and Brentwood WW operations is included as part of the Acquisition O&M  
8 Adjustments in Exhibit No. 3-A, and are described by Company Witness Lori O'Malley  
9 (PAWC Statement No. 5).

10 **Q. Please explain the adjustment for General Assessments.**

11 A. The General Assessments are imposed on regulated utilities to provide funding for the  
12 Commission and Damage Prevention Committee, the Office of Consumer Advocate, and  
13 the Office of Small Business Advocate. The General Assessment rates are applied to a tax  
14 base consisting of revenue from water and wastewater service. To calculate pro forma  
15 General Assessments, the current assessment rates from the fiscal year July 1, 2023 to  
16 June 30, 2024 were applied to a tax base consisting of pro forma sales revenue under  
17 present and proposed rates as shown on Exhibit No. 3-A under the respective rate base  
18 sections. The Company will update these adjustments with the new General Assessment  
19 rates once they are available. Backup for the calculation of these adjustments is provided  
20 in the Company's Exhibit No. 3-A under the respective rate base sections.

21 **Rate Case and Regulatory Expense**

22 **Q. Please explain the adjustment for regulatory and rate case expense.**

1 A. These adjustments are being made to reflect and normalize the costs related to this rate case  
2 and to recover the annual amounts necessary to amortize other regulatory expenses that  
3 were incurred by the Company with the Commission’s prior approval.

4 The costs for preparing and litigating this rate filing consist of the costs associated with the  
5 Company’s consultants and outside legal counsel. Costs for customer communications,  
6 mailings, legal notices, administrative fees, and miscellaneous expenses associated with  
7 this application are also part of the regulatory expense adjustment. Some of these costs  
8 have already been incurred. The Company’s claim reflects its total costs, both incurred to  
9 date and estimated to be incurred through the completion of this case. PAWC proposes  
10 that these costs be normalized over a two-year period, which reflects the average period of  
11 time in between the Company’s last three base rate filings. Detail of the cost categories  
12 included in the projected rate case expense can be found in the Rate Case Expense section  
13 of Exhibit No. 3-B.

14 **Q. Please identify the additional claims for regulatory expense the Company is making**  
15 **in this case.**

16 A. The Company is claiming for recovery three other categories of regulatory expense. First,  
17 the Company is continuing the ten-year amortization of the costs it incurred for a Customer  
18 Class Demand Study performed in accordance with the terms of the Commission-approved  
19 settlement of PAWC’s rate proceeding at Docket No. R-2011-2232243. The costs of that  
20 study were approved for recovery via a ten-year amortization, beginning in January 2018,  
21 as part of the Company’s 2017 base rate case at Docket No. R-2017-2595853. Second, the  
22 Company is continuing the ten-year amortization of the costs incurred for the preparation,  
23 filing, litigation and resolution by settlement of the Company’s petition at Docket

1 No. P-2017-2606100 for approval of a plan to replace customer-owned lead service pipes.  
2 Those costs were approved for recovery via a ten-year amortization, beginning in January  
3 2021, as part of the Company's 2020 base rate case, Docket No. 2020-3019369. Third, the  
4 Company is updating the amortization period for the Commission-approved amortization  
5 of the costs associated with performing a stormwater fee feasibility study, which was  
6 conducted in order to assess potential recovery and rate methodology options for  
7 stormwater costs of combined sewer systems, as required under the approved settlement at  
8 Docket No. R-2020-3019369. The Company is proposing to amortize those costs over two  
9 years, in order to reflect a more appropriate ongoing annual level of expense in proposed  
10 rates.

11 **Q. Has the Company allocated the pro forma rate case and regulatory expense?**

12 A. Yes. The Company uses an allocation factor based on customer counts to apportion the  
13 projected rate case and regulatory expense to the individual water and wastewater  
14 operations for which separate revenue requirement studies have been provided in Exhibit  
15 No. 3-A. The allocation factor will be explained in more detail below. The Rate Case  
16 Expense section of Exhibit No. 3-B shows the costs allocated to each separate revenue  
17 requirement study from applying this allocation factor.

18 **Allocation of Costs Between Water and Wastewater Operations**

19 **Q. Please describe the Company's approach to allocating costs between water and**  
20 **wastewater operations in this rate proceeding.**

21 A. The Company is proposing to allocate costs between water and wastewater operations  
22 utilizing the same allocation methodology the Company used in its last base rate case at  
23 Docket No. R-2022-3031672.

1 **Q. Please describe the cost categories that fall under the term “common costs”.**

2 A. The costs classified as “common costs” include Service Company expenses (including  
3 postage and customer accounting costs), insurance other than group, rate case expense and  
4 regulatory expense, and the costs associated with the PAWC Corporate Headquarters  
5 (Capital Campus) located in Mechanicsburg, Pennsylvania.

6 **Q. What is the methodology used by the Company to allocate common costs between its  
7 water and wastewater operations?**

8 A. The Company allocates the above categories based on four different factors, as shown in  
9 Schedule SDG-1.

10 Factor 1 – Customers (for Service Company and Customer Accounting). This factor was  
11 calculated based on the number of customers as of June 30, 2023. In allocating costs to  
12 PAWC, the Service Company identifies customers that receive both water and wastewater  
13 service from the Company. These accounts are not treated as two separate customers in  
14 the customer-count used to allocate Service Company costs. Instead, each dual service  
15 customer is assigned the value of 1.05 in the count of total Company customers and the  
16 value of 0.05 in the count of wastewater customers. PAWC used the same convention in  
17 allocating costs between water and wastewater operations. The dual service customers  
18 counted in the manner explained above plus wastewater-only customers are summed to  
19 arrive at the wastewater customer count used for the customer-based allocation.

20 Factor 2 – Customers (for Rate Case and Regulatory Expense). This calculation is based  
21 on the total number of customers for each water or wastewater system and allows for  
22 subsets of allocations based on water and wastewater SSS, water and wastewater SSS and

1 wastewater CSS customers. The breakdown of this level is necessary, as there are certain  
2 rate case expense components which only relate to specific customer types. For example,  
3 cost of service and rate design activities are completed for water and wastewater SSS  
4 customers, but separately for wastewater CSS customers. The application of this allocation  
5 factor is shown in the Rate Case Expense section of Exhibit No. 3-B.

6 Factor 3 – Customers (for PAWC’s Corporate Headquarters (Capital Campus)). This  
7 allocation is based on each water or wastewater system’s percentage of the Company’s  
8 total customers as of June 30, 2023.

9 Factor 4 – Depreciated Cost of Utility Plant in Service (for Insurance Other Than Group).

10 This factor is based on the depreciated original cost of total net utility plant in service as of  
11 June 30, 2023 for each water or wastewater system. The percentages of utility plant are  
12 applied to the pro forma Insurance Other Than Group expenses claimed by the Company  
13 to determine the portion of total expenses allocated to water and wastewater operations.  
14 The Company’s expense for Insurance Other than Group consists of property, vehicle and  
15 general liability, which closely aligns with plant assets.

### 16 **Proposed Water and Wastewater Tariffs**

17 **Q. Please discuss the proposed changes shown in the proposed Water Tariff.**

18 A. The Company is proposing changes to its Water Tariff, which include the following:

- 19 1. In the Schedule of Rates, the Company’s low-income discounts have been modified  
20 to add an additional tiered discount for 151%-200% of FPL, as discussed in the  
21 testimony of Charles Rea, (PAWC Statement No. 10). Additionally, the actual  
22 discount rate will be reflected in the tariff as opposed to the billed rate.

- 1           2. The Company proposes including a new Revenue Decoupling Mechanism  
2           ("RDM") as further discussed by Company witnesses Everette and Rea in PAWC  
3           Statement Nos. 1 and 10, respectively.
- 4           3. The Company proposes including a new Environmental Compliance Investment  
5           Charge ("ECIC"), as further discussed by Company witnesses Everette, Aiton, and  
6           Swiz in PAWC Statement Nos. 1, 3, and 8, respectively.
- 7           4. In Rule 3.2 – Application for Street Service Connection, the Company proposes  
8           additional language regarding the installation of additional or replacement  
9           connections to clarify that, following the installation of an initial street service  
10          connection, the customer will be responsible for the costs of installation of new  
11          service connections, including in instances where one property is converted into  
12          multiple premises.
- 13          5. In Rule 4.1 – Right to Reject, the Company proposes language to explicitly permit  
14          the Company to refuse to connect to service lines where (1) a customer-side service  
15          line is made of lead, (2) where a customer-side galvanized service line was or is  
16          downstream of a lead service line or a service line made of unknown material, or  
17          (3) if a customer either refuses or fails to respond to the Company's request to  
18          replace a customer-owned lead service pipe through the Company's Lead Service  
19          Pipe replacement plan.
- 20          6. In Rule 4.9 – Customer Responsibility for Service Pipe, the Company proposes a  
21          clarification that the Company may require documentation to establish the  
22          existence of repaired leaks.

1           7. In Rule 12.1 – Termination by Company, the Company proposes to specifically  
2           allow for termination pursuant to the terms of an agreement with a non-Company  
3           wastewater provider.

4           8. In Rule 27.1 – General Provisions under Main Extensions for Bona Fide Service  
5           Applicants, the Company proposes removing the description of residential service  
6           applicant(s) to clarify that a service applicant may be either residential or non-  
7           residential.

8   **Q.    Please discuss the proposed changes shown in the proposed Wastewater Tariff.**

9    A.    The Company is proposing changes to its Wastewater Tariff, which include the following:

10           1. In the Schedule of Rates, the Company is adding back into Rate Zone 1b-Metered  
11           a section identifying Special Rate Charges that apply to bulk wastewater contract  
12           customers in the York service territory. In the Company’s 2022 rate case, the  
13           entirety of the Special Rate Charges section, which would govern in the absence of  
14           a valid contract for bulk wastewater customers, was removed because the customers  
15           did in fact have valid contracts. It was an oversight that the filing did not instead  
16           include a Special Rate Charges section permitting the Company to charge bulk  
17           wastewater customers in the York service territory the rates set forth in their  
18           respective contracts with the Company. This change corrects that section.

19           2. In the Schedule of Rates, the Company’s low-income discounts have been modified  
20           to add an additional tiered discount for 151%-200% of FPL, as discussed in the  
21           testimony of Charles Rea, (PAWC Statement No. 10).

- 1           3. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes  
2           to add “or water usage” on page 14 to correlate to the updated definition for  
3           Equivalent Dwelling Unit (or EDU) definition on page 22.
- 4           4. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes  
5           to delete the references to special capacity charges applicable to McKeesport.
- 6           5. In the Schedule of Rates, Miscellaneous Fees and Charges, the Company proposes  
7           to correct the Rate Zone 1 Sludge Discharge Fee to replace “Above 12%” with  
8           “Above 10%,” consistent with the hauler agreement.
- 9           6. The Company proposes to include a new RDM as further discussed by Company  
10          witnesses Everette and Rea in PAWC Statement Nos. 1 and 10, respectively.
- 11          7. The Company proposes to include a new ECIC as further discussed by Company  
12          witnesses Everette, Aiton, and Swiz in PAWC Statement Nos. 1, 3, and 8,  
13          respectively.
- 14          8. In the Rules and Regulations, Section A – Definitions, the Company proposes  
15          modifications to the definitions of “Combined Sewer” (No. 12) and “Sanitary  
16          Sewer” (No. 73).
- 17          9. In the Rules and Regulations, Section A – Definitions, the Company proposes  
18          modifications to the calculation described in the definition of “Equivalent Dwelling  
19          Units” (or “EDU”).
- 20          10. In the Rules and Regulations, Section C – Applications for Service, the Company  
21          proposes adding language to Section C.1 – Service Application Required.
- 22          11. In the Rules and Regulations, Section C – Applications for Service, the Company  
23          proposes a new Section C.7, which reflects a change to the tariff consistent with the

1 pro forma tariff submitted for approval as part of the Company's Application  
2 seeking approval of the acquisition of the Brentwood wastewater system at Docket  
3 No. A-2021-3024058.

4 12. In the Rules and Regulations, Section C – Applications for Service, the Company  
5 proposes new Sections C.8, C.9 and C.10, adding language regarding Meter  
6 Installation, Meter Space and Location, and Meter Removal.

7 13. In the Rules and Regulations, Section F – Billing and Collection, the Company adds  
8 a new Section F.9 Calculation of Winter Average Consumption, proposing to use a  
9 winter average consumption to be applied to volume of sewer use for specified  
10 meter reads, as discussed by Company Witness Mr. Rea, (PAWC Statement  
11 No. 10).

12 14. In the Rules and Regulations, Section M.E(2) – Main Extensions for Bona Fide  
13 Service Applicants, the Company proposes to remove the description of residential  
14 service applicant(s) to clarify that a service applicant may be either residential or  
15 non-residential.

16 15. In the Rules and Regulations, Section P – Grinder Pumps for Paint-Elk Wastewater,  
17 the Company proposes to add a section applying to Farmington Wastewater.

18 16. In the Rules and Regulations, Section T.2.1(b)(iii) – Prohibited Discharge  
19 Standards, the Company proposes to add clarifying language to describe exceptions  
20 to substances such as grease, which may cause obstruction to the flow in the sewer  
21 system.

- 1 17. In the Rules and Regulations, Section T – Wastewater Control and Industrial  
2 Pretreatment Regulations, the Company proposes to correct heading and subpart  
3 lettering and numbering on pages 62, 67, and 70.
- 4 18. In the Rules and Regulations, Sections T.2.13 – Grease Traps and T.3.7 –  
5 Additional Pretreatment Measures, the Company proposes to add language  
6 requiring that cleaning and maintenance records for the interceptor or traps must be  
7 made available upon Company request.
- 8 19. In the Rules and Regulations, Sections T.6.8 – Notice of Violation/Repeat  
9 Sampling and Reporting, the Company proposes to add clarifying language that  
10 was unintentionally omitted from the section.
- 11 20. In Rules and Regulations, Section T.6.13 – Certification Statements, the Company  
12 proposes to delete language that applies to Publicly Owned Treatment Works, but  
13 not to the Company.
- 14 21. In Rules and Regulations, Section T.7 – Fees and Charges, the Company proposes  
15 to add language clarifying that the general and specific fees charged in this section  
16 are billed on a quarterly basis.
- 17 22. In Rules and Regulations, Section T.7.2 – Specific Fees parts (a) and (b), the  
18 Company proposes to add defining language for measured pollutant concentrations  
19 as part of the industrial loading fee calculation, as well as excess loading fee.
- 20 23. In Rules and Regulations, Section U – Industrial Pretreatment Program – Pollutant  
21 Removal Costs, the Company proposes to update the BOD5 removal cost price per  
22 pound in the Coatesville district consistent with the settlement in the Company’s  
23 prior base rate case.

1 **Q. Please summarize the rate zones that have been created since the last rate case.**

2 A. Since the last case, no new rate zones have been created. The Company will, upon  
3 completion of the planned acquisitions I described previously in my testimony, add an  
4 additional two water rate zones for the Farmington and Audubon water acquisitions and an  
5 additional four wastewater rate zones for the BASA, STMA, Brentwood and Farmington  
6 wastewater system acquisitions.

7 **Q. Has the Company created separate tariff groups for SSS and CSS customers?**

8 A. In the settlement of the Company's last base rate case at Docket No. R-2022-3031672,  
9 PAWC committed to creating a separate tariff group for current and future CSS customers.  
10 The Company's proposed wastewater tariff reflects the use of Rate Zone 1 for the  
11 consolidation rates of SSS customers, using subparts such as 1a, 1b, 1c, etc., for those SSS  
12 customers who are currently on separate rates, but moving towards consolidation in the  
13 future. Rate Zone 2 will be used for the consolidation rates of CSS customers, using  
14 subparts such as 2a, 2b, 2c, etc., for those CSS customers who are currently on separate  
15 rates, but moving towards consolidation in the future. In addition, the Company created a  
16 Rate Zone 3 for Brentwood, which is a collection only system, whose rates will be derived  
17 from the cost of service for collection services rather than treatment costs.

18 **Q. Does the Company propose the consolidation of water and wastewater rates in this**  
19 **proceeding?**

20 A. Yes. The Company proposes consolidation of certain water and wastewater rate zones and  
21 changes to the current water and wastewater rate structure. Please refer to the direct  
22 testimony of Company witness Charles Rea (PAWC Statement No. 10) for a detailed  
23 explanation of the Company's proposals.

1 **Q. Did the Company employ any of the authority provided by amendments to the Public**  
2 **Utility Code made by Act 11 of 2012 in developing its rate design in this case?**

3 A. Yes, in this case the Company is proposing to incorporate wastewater revenue requirements  
4 into its water revenue requirement. Combining water and wastewater revenue  
5 requirements and the resulting rate design are discussed in the direct testimony of Company  
6 witness Ashley Everette (PAWC Statement No. 1) and the direct testimony of Company  
7 witness Charles Rea (PAWC Statement No. 10).

8 **Q. Please summarize the Company's commitments regarding rate increases for certain**  
9 **prior acquisitions.**

10 A. The Scranton system, acquired by the Company in 2016, is subject to rate increase  
11 requirements or limitations. In the Scranton acquisition proceeding, the Commission  
12 approved the Amended Asset Purchase Agreement ("APA"), which provided that PAWC  
13 would not propose rate increases that would be equal to an amount greater than a 1.9%  
14 Compounded Annual Growth Rate ("CAGR") increase in annual revenues over a ten-year  
15 period relative to the starting amount of annual revenues. As part of the resolution of the  
16 Company's last base rate case, revenues from the Company's Scranton operations were  
17 increased by 63.55%. The pro forma revenues at present rates exceed the level of increase  
18 PAWC is permitted to propose under the CAGR provision during the ten years following  
19 closing of the acquisition. As such, and in compliance with the APA, the Company is not  
20 proposing an increase to the wastewater rates of the Scranton system. However, the  
21 Company does reflect the roll in of the Distribution System Improvement Charge ("DSIC")  
22 at present rate revenues, therefore changing the actual rate being charged to Scranton  
23 customers, while the average monthly bill will remain unchanged.

1 The York wastewater system was acquired by the Company in 2022. Section 6.04 of the  
2 York APA provides as follows:

3 Buyer shall, subject to PaPUC approval in a future base rate proceeding, maintain  
4 base rates for System customers for a minimum period of three (3) years from the  
5 Closing Date.

6 The Foster Township wastewater system was also acquired by the Company in 2022.  
7 Section 4.1 of the Foster APA provides as follows:

8 After Closing, Buyer will begin charging Seller's current rates (as of the date of this  
9 Agreement) as Buyer's base rates (but not other charges, including those discussed  
10 below) within Seller's service area (such service area being consistent with  
11 Schedule 1), which shall not be increased by the Buyer until after December 31,  
12 2024.

13 **Q. Please summarize the Company's commitments regarding rate increases for the**  
14 **pending acquisitions included in this filing and since the last rate case.**

15 A. The Company expects to close on its acquisitions of the BASA wastewater assets in 2023  
16 and the Brentwood wastewater assets in 2024.

17 In the BASA application proceedings, a unanimous Settlement was reached and filed with  
18 the Commission on August 14, 2023 ("BASA Settlement"). The BASA Settlement (p. 7)  
19 provided for the following regarding the proposed rate increase:

20 PAWC will propose to move the System to 1.4x the current System rate or PAWC's  
21 proposed Rate Zone 1 system-average wastewater rates, whichever is lower, upon  
22 the later of (a) the first anniversary of Closing or (b) January 1, 2025.

23 For the Brentwood acquisition, Section 7.03 of the APA provides as follows:

24 The Base Rate shall not be increased until after the second anniversary of the  
25 Closing Date.

26 **Q. Please summarize how the Company has complied with the above-referenced BASA**  
27 **Settlement.**

1 A. The Company proposes rates for the BASA system consistent with the revenue increases  
2 outlined in the Settlement. Please refer to the testimony of Charles Rea (PAWC Statement  
3 No. 10) for detail on the proposed increases.

4 **Q. Please summarize the Company's proposal with respect to the systems for which the  
5 Company has agreed to not increase rates for a certain period of time.**

6 A. For Foster, York, BASA, and Brentwood, the Company requests that the Commission  
7 permit the Company to implement the proposed changes to rates consistent with the  
8 Company's agreements with each of these systems. The Company's pro forma tariff  
9 supplement reflects this proposal by showing each system's current rates as continuing to  
10 be effective and proposed rates taking effect on the date indicated on the pro forma tariff  
11 supplement.

12 **Conclusion**

13 **Q. Does this conclude your direct testimony at this time?**

14 A. Yes, it does.

**VERIFICATION**

I, **Stacey D. Gress**, hereby state that the facts set forth in the pre-marked Statement No. 4 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Date: November 8, 2023

**Q. What is your name and business address?**

A. My name is Lori O'Malley. My business address is 1 Water Street, Camden, New Jersey 08102.

**Q. By whom are you employed and in what capacity?**

A. I am employed by American Water Works Service Company, Inc. ("AWWSC" or the "Service Company") as Senior Manager Regulatory Services. The Service Company is a wholly owned subsidiary of American Water Works Company, Inc. ("American Water") that provides services to Pennsylvania-American Water Company ("PAWC", "Pennsylvania-American" or "Company") and its affiliates.

**Q. What are your responsibilities as Senior Manager Regulatory Services?**

A. My responsibilities include the review, preparation and presentation of regulatory filings and related activities for Pennsylvania-American and West Virginia-American Water Company. In addition, my responsibilities include the preparation of written testimony, exhibits and workpapers in support of rate applications and other regulatory filings, as well as responses to data requests related to filing requirements. In this role, I stay apprised of regulatory developments and policy initiatives that may impact regulated water utilities and support the analysis and coordination of process improvements of rates and regulatory processes and services.

1 **Q. Please summarize your educational background.**

2 A. I received a Bachelor of Science Degree in Business Administration with a specialization  
3 in Accounting from Rowan University in 1995. I have also attended the Utility Rate School  
4 sponsored by the National Association of Regulatory Utility Commissioners.

5 **Q. Please outline your business experience.**

6 A. I began my employment with the Service Company as an Accountant for the Regional  
7 Companies in July 1996. At the time, the Regional Companies included American Water  
8 affiliates located in the states of Iowa, Maryland, Michigan, Missouri, Ohio, Tennessee and  
9 Virginia. In October 1998, I was promoted to Senior Accountant and then Accounting  
10 Supervisor in March 1999. In May 2004, I accepted a position in the Regulatory Services  
11 group. From 2004 to today, I have held increasing levels of responsibility as an  
12 Intermediate Financial Analyst, Senior Financial Analyst, Principal Regulatory Analyst,  
13 and my current position as Senior Manager Regulatory Services.

14 **PURPOSE OF TESTIMONY**

15 **Q. What is the purpose of your testimony?**

16 A. The purpose of my testimony is to support and explain the Company's claim for: (1) labor  
17 and labor-related expenses; (2) Service Company expenses; (3) production costs; (4) other  
18 operation and maintenance ("O&M") expenses; (5) miscellaneous expense adjustments;  
19 and (6) acquisition O&M expenses.

20 **Q. What methodology did the Company use in calculating its pro forma expense levels  
21 in this case?**

22 A. In this case, the Company is presenting supporting data for a historic test year ended  
23 June 30, 2023 ("HTY"), a future test year ending June 30, 2024 ("FTY"), and a fully

1 projected future test year (“FPFTY”) ending June 30, 2025. The Company began with the  
2 expenses recorded on its books of account for the HTY and made various adjustments to  
3 reflect known and measurable changes that occurred during the HTY. For the FTY and  
4 FPFTY, the Company made specific adjustments to certain expenses or categories of  
5 expenses based on known and measurable changes (e.g., collective bargaining  
6 agreements), projected changes in expenses or, in some cases for expenses that are variable,  
7 relied upon historical averages to reflect a normalized level of expense. All adjustments  
8 are detailed in PAWC Exhibit Nos. 3-A and 3-B.

9 **Q. Please provide a brief overview of the Company’s O&M expense levels.**

10 A. The Company is requesting \$314,072,831 in O&M expense for the FPFTY. As Company  
11 witness Ashley Everette explains, the Company has managed to keep the rate of increases  
12 in O&M expense below that of inflation. This demonstrates that the Company has been  
13 successful in controlling its O&M costs per customer over the past decade or so and is  
14 continuing to do so. The requested increases in O&M expense over these periods support  
15 the Company’s efforts to continue providing high quality water and wastewater service in  
16 the most cost-effective way to our customers in the long-term.

17 There are numerous factors that contribute to the increase in operating expenses, including  
18 those associated with production costs and employee related expenses discussed by  
19 Company witness Jim Runzer, as well as the addition of multiple acquired systems since  
20 the last base rate case, as addressed in the testimony of Company witness E. Christopher  
21 Abruzzo.

1 **Q. Please explain how the adjustments you describe below apply to the revenue**  
2 **requirement studies set forth in PAWC Exhibit No. 3-A.**

3 A. The adjustments I describe below apply to the expenses reflected in each of the five revenue  
4 requirement studies that are set forth in PAWC Exhibit No. 3-A. Because the adjustments  
5 apply to the expense claims set forth in each revenue requirement study, I will describe  
6 those adjustments generally and not address the specific adjustments reflected in each  
7 study.

8 **LABOR AND LABOR RELATED EXPENSES**

9 **Q. Please describe PAWC’s labor and labor-related expenses.**

10 A. PAWC’s labor and labor-related expenses are associated with employees who support  
11 PAWC exclusively and, therefore, are on the payroll of PAWC. As Mr. Runzer explains,  
12 PAWC’s labor force is responsible for the production of high-quality drinking water,  
13 operating and maintaining the Company’s production and treatment facilities and its  
14 distribution and collection systems, monitoring water quality, providing engineering  
15 services, and generally supporting the efficient management of all of the Company’s  
16 operations.

17 There are three classifications of PAWC employees: collective bargaining unit (“CBU”)  
18 hourly employees, non-collective bargaining unit (“non-CBU”) hourly employees and  
19 exempt employees. CBU hourly employees receive base pay, overtime pay, and, in some  
20 cases, other compensation (such as shift premiums and meal allowances) and are also  
21 eligible for performance pay. Non-CBU hourly employees receive base pay and overtime  
22 pay and are eligible for performance pay. Exempt employees receive base pay and are

1 eligible for performance pay. Therefore, total wages or salaries for each classification of  
2 employees includes fixed pay (base pay) and some form(s) of variable pay (e.g. overtime,  
3 shift pay and performance pay) for eligible employees.

4 The labor and labor-related expenses that are discussed in my testimony include:

5 (1) Salaries and wages (including Annual and Long-Term Performance Pay)

6 (2) Group Insurance

7 (3) Other benefits, including:

8 a. 401k

9 b. Defined Contribution Plan (“DCP”)

10 c. Pension and Other Post-Employment Benefits (“OPEBs”) for certain  
11 eligible employees

12 d. Employee Stock Purchase Plan (“ESPP”)

13 (4) Payroll Taxes

14 These costs are described further in my testimony below.

15 **Q. Please describe the overall approach the Company has used to calculate labor and**  
16 **labor-related expenses.**

17 A. PAWC’s proposed labor and labor-related expenses are reflected in the labor and labor-  
18 related sections of Exhibit Nos. 3-A and 3-B. Pro forma labor and labor-related expenses  
19 were calculated on a position-by-position basis, based on the Company’s HTY actual  
20 number of employees, consisting of 1,219 full-time positions and one part-time position.  
21 The labor expenses claimed for the FTY and the FPFTY reflect a full complement of  
22 employees for each of the Company operations, as set forth in the table below:

<b>PAWC Operations Employee Levels</b>	<b>2023</b>	<b>2024</b>	<b>2025</b>
Water Operations	1,046	1,076	1,076
Wastewater SSS General Operations	76	75.1	75.1
Butler Area Sewer Authority WW Operations	0	33.9	33.9
Brentwood WW Operations	0	1	1
Wastewater CSS Operations	98	99	99
Farmington Water	0	1	1
Farmington WW	0	1	1
Audubon Water	0	7	7
Total Company	1,220	1,294	1,294

2 The HTY labor hours were annualized and adjusted to a normalized level. These hours  
3 were then multiplied by the actual 2023 wage rates by employee position to determine an  
4 annualized level of expense. This amount was then adjusted using a historic three-year  
5 average (2021-2023) of base pay increases for non-CBU employees. To adjust the level  
6 of expense for CBU employees, the most recent collective bargaining agreements  
7 (“CBAs”) that remain in effect were used to determine costs for each of the FTY and  
8 FPFTY. For those bargaining units for which CBAs expired, a historic three-year average  
9 (2021-2023) of contract wage increases was used to determine projected costs for the FTY  
10 and FPFTY. The Company’s FPFTY annualizes the effects of the increases calculated  
11 using the methodologies described above. The details of these calculations, by employee  
12 position, are set forth in Exhibit No. 3-B.

13 Some labor and labor-related costs are capitalized and added to the costs of utility plant.  
14 Therefore, a capitalization percentage is applied to total labor and labor-related costs to  
15 calculate the portion of those costs that are recorded as capital costs. The Company has

1 calculated capitalization percentages based on the historic three-year average ratio (2021-  
2 2023) of direct labor dollars charged to capital to total direct labor costs. The capitalization  
3 percentages calculated in that manner are 39.55% for the Company's water operations and  
4 22.14% for its wastewater operations. The complement of those percentages represents  
5 the portion of labor and labor-related costs recorded as an expense.

### 6 **Salaries and Wages**

7 **Q. Please describe how the various components of pro forma salaries and wages are**  
8 **calculated.**

9 A. Salary and wage expense has four components: (1) base pay; (2) overtime; (3) shift  
10 premium and meal compensation pursuant to the terms of applicable CBAs; and (4) annual  
11 and long-term performance compensation for eligible employees. Each component is  
12 discussed in further detail below.

13 **Base Pay** – Base pay was calculated for the FTY by applying a three-year average (2021-  
14 2023) of the historical percentage increases to the annualized HTY wage rates for non-  
15 CBU employees. The wage rate projected to be in effect for each month of the FTY is  
16 applied to the working hours for each month. Regular working hours total 2,088 for all  
17 full-time hourly employees and 2,080 for all full-time non-hourly employees. Wage rates  
18 for CBU employees were based on CBAs for each month of the FTY and FPFTY. If wage  
19 rates have not been established by CBAs that will be in effect the end of the FPFTY, the  
20 wage rates were adjusted using an annual increase percentage equal to the historical three-  
21 year average (2021-2023) of contracted increases. Non-CBU employees' wage rates were  
22 based on the rates that became effective on March 6, 2023. Those rates were adjusted

1 through the FPFTY based on a three-year average (2021-2023) of the historical percentage  
2 increases and were annualized as of the end of FPFTY.

3 **Overtime** – Overtime was calculated by starting with the total HTY overtime hours by  
4 position and multiplying those hours by the projected overtime wage rate for each  
5 employee position.

6 **Shift Premium** – CBU employees’ CBAs provide wage premiums for employees working  
7 on uncommon shifts or when employees obtain certain licenses or complete certain  
8 training. The actual total HTY amounts of shift premiums, licensing and training premiums  
9 were determined on a per-employee basis and included in salary and wage expense for the  
10 FTY and FPFTY.

11 **Meal Compensation** – CBU employees’ CBAs provide compensation for meals during  
12 extended shifts and, therefore, meal compensation is included in salaries and wage expense.  
13 A historical three-year average (2021-2023) of meal compensation was determined on a  
14 per-employee basis and included in salary and wage expense for the FTY and FPFTY.

15 **Performance Pay** – The last component of labor expense is the annual and long-term  
16 performance compensation for eligible employees. Performance pay was calculated on a  
17 position-by-position basis for eligible employees based on each position’s target percent,  
18 or percentage of base salary that is provided if program goals are achieved, under both the  
19 Annual Performance Plan (“APP”) and Long Term Performance Plan (“LTPP”). The  
20 target percentage was multiplied by each eligible employee’s pro forma base salary in the  
21 FTY and FPFTY, to determine the cost of compensation under the APP and LTPP. In

1 PAWC Statement No. 2, Mr. Runzer describes the performance pay program in more  
2 detail.

3 **Group Insurance**

4 **Q. Please describe the components of the Company’s group insurance expense.**

5 A. Group insurance includes several insurance coverages that PAWC provides its employees.  
6 These can be grouped into two primary categories: (1) basic life, short-term disability,  
7 long-term disability and accidental death and disability insurance (“AD&D”); and  
8 (2) medical, dental, prescription and vision insurance.

9 **Q. How was the pro forma adjustment for group insurance expense calculated?**

10 A. Costs were calculated for the pro forma adjustment as follows:

- 11 • Basic life, short- and long-term disability and AD&D. The starting point is the  
12 2023 premium rates for each position under the applicable insurance plans for CBU  
13 and non-CBU positions.
- 14 • Medical, dental, and vision insurance. The Company’s cost for this category of  
15 insurance is net of employee contributions. The total costs and employee  
16 contributions vary by plan type (e.g. family, employee, or employee plus spouse).  
17 Costs and contributions were calculated using the 2024 plan rates, on a position-  
18 by-position basis, taking into account actual employee plan selections.

19 Once the 2024 cost level was established, a historical three-year average of the change in  
20 Company costs for group insurance between 2021 and 2024 was applied to the annualized

1 amount for 2024 in order to adjust the insurance expense to the level appropriate for the  
2 FPFTY.

3 **Q. What steps in general has American Water taken to manage the group insurance**  
4 **benefit costs?**

5 A. Group insurance is obtained for employees of PAWC and its affiliates based on benefit  
6 plans administered by American Water. American Water has been proactive in seeking  
7 changes that improve how healthcare is delivered in order to control the costs of providing  
8 health insurance to its employees. These efforts have included offering high-deductible  
9 health plans and a telemedicine option, which lower the overall cost of health insurance  
10 programs. For example, instead of an office or urgent care visit, for which providers charge  
11 \$100 or more, employees have the option to consult with a physician remotely, at a cost to  
12 the insurer of \$59 per visit. American Water also became a founding member of the Health  
13 Transformation Alliance (“HTA”) in 2016 to help achieve the goal of providing higher  
14 quality care at lower cost by identifying facilities and physicians that have better outcomes,  
15 using American Water’s purchasing power to keep costs down, and helping every  
16 employee become a more engaged consumer. Additionally, by joining the HTA pharmacy  
17 coalition, the Company has mitigated cost increases through the pharmacy/prescription  
18 drug program, which includes specialty pricing and rebates.

19 **Q. What is HTA and why is it better than the traditional approach to obtaining**  
20 **healthcare coverage for employees?**

21 A. HTA is a cooperative comprising 50 major corporations that have come together to drive  
22 change in the healthcare system. In addition to American Water, its members include

1 American Express Company, JPMorgan Chase, IBM Corporation, Verizon and Marriott  
2 International Inc., and many more. Acting on its own, any single HTA member is unlikely  
3 to change the trends in healthcare that are driving up costs. By working together, however,  
4 HTA members can create more transparency to drive changes in the way healthcare is  
5 delivered, and those changes can result in lower prices for prescription medicine and  
6 medical services and produce better outcomes, which make health care more affordable.  
7 To that end, the HTA has developed value-driven solutions in the areas of data and  
8 analytics, pharmacy and medical services and consumer engagement specifically designed  
9 to improve patient care and economic value. Lastly, American Water will review current  
10 plan options, and when it is possible, add additional services to its plans to drive claims  
11 down and lower rates. Because the Company's health and welfare plans are self-funded,  
12 when claims are lower, everyone saves. For example, in 2022, American Water added the  
13 PrudentRx Copay program in partnership with CVS Caremark. This allows our active  
14 employees and retirees to get any specialty medications that are on our Exclusive Specialty  
15 Drug List for \$0 out-of-pocket cost to the employee and discounts to American Water.

16 **Other Benefits**

17 **Q. Please describe the components of other benefits the Company provides and how the**  
18 **costs of those benefits were calculated.**

19 A. Other benefits PAWC provides include savings programs, such as 401k plans, DCP,  
20 pension benefits, OPEBs, and the Company's ESPP. The costs of these benefits were

1 calculated on a position-by-position basis. The calculations of the costs included in the  
2 Company's labor-related expense claims are described below.

3 **401k** – PAWC incurs 401k expense when it matches employee contributions to 401k  
4 retirement accounts. The matching amounts are determined by each employee's benefit  
5 group or hire date. For employees whose benefit group falls into an "original" category  
6 (including CBU employees hired before 2001 and non-CBU employees hired before 2006),  
7 the Company matches 50% of the first 5% of the employee's contribution (for a maximum  
8 of 2.5%). For the remaining employees, the Company matches 100% of the first 3%, and  
9 50% of the next 2% of the employee's contributions (for a maximum of 4%). Pro forma  
10 401k costs were calculated for each position based on FTY wages, current employee  
11 contribution levels, and the level of match for the benefit group.

12 **DCP** – DCP, or Defined Contribution Plan, is a retirement savings program for employees  
13 not eligible for the defined benefit pension program. Under the DCP, PAWC contributes  
14 an amount equal to 5.25% of an employee's base pay into a retirement account. The pro  
15 forma DCP expense was calculated by multiplying the FTY and FPFTY regular time pay  
16 of each eligible position by 5.25%.

17 **Pension** – Certain Company employees, upon retirement, are eligible for pension benefits  
18 under a defined benefit plan. Covered employees include non-CBU employees hired  
19 before January 1, 2006, and CBU employees hired before January 1, 2001. Consistent with  
20 PAWC's calculation of pension expense in its last base rate case, the Company calculated  
21 its pension expense claim in this case in accordance with Financial Account Standards Board  
22 Accounting Standards Codification Topic 715 or "ASC 715" (formerly Statement of

1 Financial Accounting Standards 87). The Company started with the report furnished by its  
2 actuary, Willis Towers Watson, that furnished pension costs for 2023 determined in  
3 accordance with ASC 715. From that report, the Company identified the service and non-  
4 service cost components of its pension costs. The service cost portion was reduced by the  
5 capitalization rate of 39.55% described above to determine the portion of total pension  
6 costs recorded as an expense.

7 In addition to the pro forma pension expense determined in the manner described above, the  
8 Company's claim reflects a credit for the annual amortization of a deferred pension asset that  
9 was created when the Company began using the accrual method of accounting, based on  
10 ASC 715, to calculate pension expense for ratemaking purposes in its 2020 base rate case.  
11 Prior to the 2020 case, the Company's pension expense claimed for ratemaking purposes  
12 had been based on its cash contributions to its pension plan. The amortization of the deferred  
13 pension asset is being continued at the level approved in R-2017-2595853. The ten-year  
14 amortization began with the effective date of the rates set in that case and, therefore, will  
15 expire in 2028.

16 **OPEB** – Certain PAWC employees are eligible for OPEBs upon their retirement  
17 depending on their employment start date. Only non-CBU employees hired before  
18 January 1, 2002, and CBU employees hired before January 1, 2006 are eligible for OPEBs.  
19 The investments made to fund OPEBs are divided into three Voluntary Employees  
20 Beneficiary Association Plans (“VEBAs”): Post-Retirement Medical Benefits/Bargaining  
21 Unit, Post-Retirement Medical Benefits/Non-Bargaining Unit, and Life Insurance

1 Benefits. In 2016 and 2018, American Water negotiated a cap on benefits in the Non-  
2 Bargaining Unit and Bargaining Unit VEBAs, respectively.

3 OPEB expense is based on the accrual cost recognized under ASC 715, as projected by  
4 Willis Towers Watson for 2023. The 39.55% capitalization rate was applied the service  
5 cost component that will be charged to capital.

6 In addition, for active bargaining unit employees covered under American Water's  
7 National Benefits Agreement who are not eligible for retiree medical benefits under the  
8 OPEB plan, the Company makes an annual contribution of \$600 per employee to a separate  
9 VEBA plan that is administered by the Utility Workers Union of America. That plan is  
10 designed to reimburse eligible participants for certain health care expenses they incur in  
11 retirement. A pro forma adjustment to reflect these contributions on behalf of eligible  
12 employees of the Company's Water Operations, Wastewater Sanitary Sewer Systems  
13 ("SSS"), and Wastewater Combined Sewer System ("CSS") Operations has been made to  
14 the Company's OPEB expense claim in this case.

15 **ESPP** – ESPP expense is incurred to fund the 15% discount on purchases of American  
16 Water stock by employees who are enrolled in the ESPP. This expense was calculated  
17 based on the FTY and FPFTY salaries and wages for each employee who participates in  
18 the plan. The employees' forecasted base compensation is multiplied by the percentage of  
19 base compensation each employee has selected to devote to purchasing American Water  
20 stock. That amount was then multiplied by the 15% discount on stock purchases to  
21 determine the pro forma expense for the ESPP.

1 **Q. Please describe the Company’s payroll tax expense.**

2 A. Payroll tax expense consists of the federal and state taxes the Company pays based on its  
3 employee’s salaries and wages. The Federal Insurance Contributions Act imposes taxes  
4 on employers for Old Age Survivors and Disability Insurance (“OASDI,” or more  
5 commonly “FICA”) and Hospital Insurance (or more commonly “FICA Medicare”). The  
6 Company is also required to pay Federal Unemployment Tax (“FUTA”) and State  
7 Unemployment Tax (“SUTA”). Pro forma payroll taxes were calculated on a position-by-  
8 position basis using current 2023 tax rates and pro forma wages for the FTY and FPFTY.  
9 The current 6.2% FICA tax rate will apply to wages of up to \$160,200 in 2023. The wage  
10 ceiling for applying the FICA tax rate is estimated to increase to \$168,543 for the FTY and  
11 \$177,321 for the FPFTY, based on a three-year average (2021-2023) of historical actual  
12 increases in the wage ceiling for FICA tax. For the FTY and FPFTY, the Company applied  
13 the FICA Medicare tax rate of 1.45% to all wages, applied the SUTA tax rate of 2.18% to  
14 the first \$10,000 of wages, and applied the FUTA tax rate to the first \$7,000 in wages.

15 **SERVICE COMPANY COSTS**

16 **Q. What kinds of services does PAWC obtain from the Service Company?**

17 A. The services provided by the Service Company include customer service, water quality  
18 testing, environmental compliance, human resources, communications, information  
19 technology, finance, accounting, legal, engineering, supply chain, and risk management.  
20 As part of the broad range of services summarized above, the Service Company provides  
21 a variety of financial and accounting services for Pennsylvania-American that include  
22 payroll, human resources data management, utility plant accounting, cash management,  
23 general accounting and reporting, accounts payable, and tax accounting. As part of its

1 customer-service function, the Service Company handles customer calls, billing, and  
2 collection activities for PAWC and American Water’s other public utility subsidiaries. The  
3 customer service function, which is discussed further by Company witness Deborah  
4 Degillio, also handles customer inquiries and correspondence and processes service order  
5 requests.

6 In addition, the Service Company provides Field Resource Coordination which is  
7 responsible for tracking and dispatching service orders for PAWC’s field representatives  
8 and distribution crews. The Service Company also operates the Central Laboratory located  
9 in Belleville, Illinois, which employs chemists, laboratory technicians, analysts, and  
10 support employees to perform water quality testing and research. The Central Laboratory  
11 is certified by the United States Environmental Protection Agency, the Commonwealth of  
12 Pennsylvania Department of Environmental Protection (“PADEP”) and the regulatory  
13 agencies of other states in which American Water’s subsidiaries provide service. The  
14 Central Laboratory owns and uses state-of-the-art water testing equipment to test source  
15 water and finished water for all American Water’s subsidiaries, including PAWC.

16 **Q. How do Pennsylvania-American’s customers benefit from obtaining the services you**  
17 **described from AWWSC?**

18 A. The Service Company provides PAWC access to highly trained professionals who possess  
19 expertise in various specialized areas, whose background, experience and training are  
20 focused on water and wastewater utility operations and who work exclusively for American  
21 Water’s subsidiaries. Furthermore, the size of AWWSC and the scope of its operations  
22 have enabled it to assemble a uniquely qualified group of professionals who, through

1 AWWSC, have a platform for sharing their extensive knowledge, expertise, and experience  
2 across the American Water system to the benefit of all of American Water's state-regulated  
3 utilities and their customers. The Company benefits from getting these services and  
4 tapping into the expertise of AWWSC's personnel at cost. The Company also benefits  
5 from the size and breadth of American Water, which affords the Company increased  
6 purchasing power that it could not obtain on its own, and provides access to discounts on  
7 equipment and supplies needed for utility operations, including, for example, pipe, fittings,  
8 and water treatment chemicals. In this way, Pennsylvania-American achieves costs savings  
9 that it could not obtain if it were a stand-alone water company.

10 **Q. How does the Service Company charge PAWC for its services?**

11 A. The Service Company provides its services to PAWC at cost and issues monthly invoices.  
12 Under the Service Company's billing system, costs can be billed as direct charges to a  
13 single company or as charges reflecting an allocation among several companies. If the  
14 Service Company can identify costs that relate exclusively to PAWC, 100% of those costs  
15 are charged directly to Pennsylvania-American. Costs the Service Company incurs in  
16 rendering services in common to a group of companies and not exclusive to Pennsylvania-  
17 American are charged to each service recipient in the relevant group based on an allocation.

18 **Q. How are Service Company costs allocated to PAWC?**

19 A. Service Company costs are charged to PAWC and its affiliates using Tier One or Tier Two  
20 allocation factors. The Tier One allocation factor represents the allocation of costs between  
21 regulated and non-regulated companies. The allocation factors are based on cost-causation  
22 drivers for a particular service and include operating revenues, net property, plant and

1 equipment and number of employees. The allocation is calculated using one or an  
2 applicable combination of these allocation factors. If a combination of allocation factors  
3 is used, each factor is equally weighted in the calculation. The Tier Two allocation factor  
4 is used to allocate regulated company costs to the regulated businesses that benefit from a  
5 service. Tier Two factors are primarily based on the number of customers served in the  
6 immediately preceding calendar year.

7 **Q. What level of Service Company expense is Pennsylvania-American seeking in this**  
8 **case and how was it calculated?**

9 A. The Company is seeking recovery of an expense of Service Company charges of  
10 \$63.6 million for the FPFTY. The expense is divided into two categories consisting of  
11 labor and labor-related expenses and all other expenses. For the labor and labor-related  
12 portion, the expenses incurred for the HTY have been adjusted to annualize a base pay  
13 increase in March 2023 of 3.2% for non-CBU employees of the Service Company, and  
14 annual contract increases of 2.75% for CBU employees of the Service Company. For non-  
15 CBU employees, the HTY level of base pay was further adjusted to annualize base pay  
16 increases of 3.14% to calculate the base pay for the FTY and FPFTY. The FTY and FPFTY  
17 percentage was calculated using a historical three-year average (2021-2023). For CBU  
18 employees, the HTY level of base pay was further adjusted to annualize annual contract  
19 increases of 2.60% to calculate the base pay for the FTY and FPFTY. Additionally,  
20 adjustments were made to eliminate severance expense, to normalize pension and OPEB  
21 costs, adjust LTPP based on the latest compensation information, and to reflect the  
22 movement of employees between PAWC and the Service Company.

1 **Q. Please explain the adjustment for employee movements between PAWC and**  
2 **AWWSC.**

3 A. Two PAWC positions in Fleet Management and one in Business Development were  
4 transferred to the Service Company during the HTY. The difference is reflected as an  
5 addition to Service Company expense to annualize the salary and benefits for those  
6 employees to reflect a full year of compensation. The three transferred employees are not  
7 reflected in PAWC's HTY employee numbers.

8 **Q. What other adjustments were made to Service Company expense?**

9 A. Costs pertaining to lobbying, charitable contributions, penalties, and injuries and damages  
10 have been removed and, therefore, are not included in the pro forma expenses reflected in  
11 the Company's expense claim in this case. Additional adjustments were made for  
12 depreciation, interest associated with capital leases, postage, operating expenses for office  
13 space, removal of one-time sales tax refund, and removal of costs related to the Customer  
14 Service Centers in Alton, Illinois and Pensacola, Florida. Finally, an adjustment for  
15 changes in expense was applied to the FTY and FPFTY non-labor cost items excluding  
16 depreciation and capital lease interest. This adjustment was based on a three-year average  
17 (2021-2023) change in expense for the non-labor expense accounts.

18 **PRODUCTION COSTS**

19 **Purchased Power Expense**

20 **Q. Please explain the methodology used to forecast purchased power expense.**

21 A. Purchased power expense is incurred for treating, pumping and delivering water and  
22 collecting and treating wastewater. In order to forecast purchased power expense, HTY

1 expenses were adjusted to remove closed accounts and credit balances, to annualize  
2 electricity expense for active accounts, and to reflect known changes in the prices charged  
3 by the Company's electricity generation suppliers ("EGSs") and in the rates of the electric  
4 distribution companies ("EDCs") that furnish distribution service. Changes experienced  
5 during the HTY and projected to occur during the FTY and FPFTY were used to derive the  
6 expense levels for those years.

7 The Company has contracted with multiple EGSs to supply the Company's electric  
8 generation. The contract prices that were used to calculate electric expense for the FTY  
9 and FPFTY were from contracts that the Company successfully obtained through its  
10 competitive energy procurement process described by PAWC witness Jim Runzer in  
11 PAWC Statement No. 2. For the distribution and transmission portions of the Company's  
12 bills, the applicable EDC's distribution and transmission rates and applicable riders and  
13 surcharges/credits in effect as of June 30, 2023, were reflected to determine total purchase  
14 power expense. The purchased power adjustments are summarized in Exhibit No. 3-A,  
15 and supporting workpapers are provided in Exhibit No. 3-B.

## 16 **Purchased Water Expense**

17 **Q. Please explain the methodology used to forecast purchased water expense.**

18 A. Purchased water expense is composed of two components: contractual usage and  
19 diversion rights. The annualized usage levels from all contracted suppliers in the HTY  
20 were priced at the applicable supplier's rates effective in the FTY, and those rates were  
21 used to annualize purchased water expense for the FTY. For the FPFTY, contractual  
22 usage and diversion rights as of the FTY were increased by a three-year average (2021-

1 2023) change in expense. The purchased water adjustments are summarized in Exhibit  
2 No. 3-A and supporting workpapers are provided in Exhibit No. 3-B.

### 3 **Chemical Expense**

#### 4 **Q. Please explain the methodology used to forecast chemical expense.**

5 A. PAWC uses various chemicals for water and wastewater treatment. In order to obtain the  
6 best available pricing, the Company participates in American Water's system-wide  
7 competitive bidding process and enters into unit-price contracts with the successful bidders  
8 for the chemicals needed at its water and wastewater treatment facilities throughout  
9 Pennsylvania. Chemical usage levels were adjusted in three respects. First, adjustments  
10 were made to eliminate the chemicals that are no longer being used as of June 2023 and to  
11 add chemicals the Company will begin using for the first time starting in or after July 2023.  
12 Then, usage levels were adjusted based on known and measurable changes that occurred  
13 in the HTY or changes that are projected to occur in the FTY and FPFTY.

14 Contract prices effective on July 1, 2023, were applied to the adjusted levels of chemical  
15 usage to project the FTY expense claim. Due to current volatility in the market for  
16 chemicals, many vendors have deviated from annual contracts and have moved to quarterly  
17 or semi-annual contracts. To determine chemical expense for the FTY and FPFTY,  
18 chemical costs were increased by a percentage for each chemical family each year based  
19 on input from our suppliers and indexes related to current volatility in the market. Over  
20 the last two years, the chemical market has seen unprecedented price increases, driven by  
21 many factors such as inflationary increases in commodity and transportation prices, volatile  
22 energy prices caused by, among other factors, the conflict in Ukraine, high labor costs, and  
23 overall supply pressure within a consolidating chemical market. If the Company enters

1 into new unit-price chemical contracts before the close of the record in this case, it will  
2 update its claims to reflect any material price changes. The adjustments for chemical  
3 expenses for all of the Company's water and wastewater systems are summarized in  
4 Exhibit No. 3-A, and supporting workpapers are included in Exhibit No. 3-B.

5 **Change in Consumption**

6 **Q. Please explain the adjustment necessary to account for changes in customer water**  
7 **consumption.**

8 A. PAWC Exhibit No. 3-A sets forth an adjustment to operating expenses to reflect changes  
9 in power and chemical costs due to changes in pro forma water consumption, including the  
10 decline in residential and commercial usage discussed in detail by Mr. Rea in PAWC  
11 Statement No. 10. The adjustment was calculated by computing the ratio of HTY power  
12 and chemical costs to actual HTY consumption. This ratio was then applied to the  
13 projected change in consumption between the HTY and FTY, and the FTY and FPFTY.  
14 The adjustment was applied to both existing water and wastewater operations. Supporting  
15 details are included in Exhibit No. 3-B.

16 **Waste Disposal**

17 **Q. Please explain the methodology used to forecast waste disposal expense.**

18 A. The Company's claims for waste disposal expenses are based on the HTY level of expense,  
19 increased by a three-year average (2021-2023) change in expense for the FTY and FPFTY.  
20 The waste disposal adjustments are summarized in Exhibit No. 3-A. Supporting  
21 workpapers are included in Exhibit No. 3-B.

1 **OTHER OPERATION AND MAINTENANCE EXPENSES**

2 **Transportation Expense**

3 **Q. Please explain the methodology used to forecast transportation expense.**

4 A. Transportation expense includes the fleet management cost per vehicle, costs for fuel,  
5 titling and registration fees, maintenance expense, and reimbursement for Company use of  
6 personal vehicles. The forecast of the fleet management expense is based on the number  
7 of vehicles claimed in FTY and FPFTY. The changes in the number of vehicles from the  
8 HTY level are reflected in the forecast of costs for fuel expense, titling and registration  
9 fees, and maintenance expense. Additionally, these costs, along with the reimbursement  
10 for personal use of Company vehicles, were adjusted by using a three-year average (2021-  
11 2023) CPI Transportation Services factor for the FTY and FPFTY (9.21%).<sup>1</sup> A portion of  
12 the transportation costs is capitalized and, therefore, excluded from O&M expense. The  
13 Company's adjustments to transportation expense are shown in Exhibit No. 3-A. Detailed  
14 supporting calculations are provided in Exhibit No. 3-B.

15 **Insurance Other Than Group**

16 **Q. Please explain the methodology used to forecast insurance other than group**  
17 **insurance.**

18 A. PAWC incurs costs related to several types of insurance, including Auto Liability, General  
19 Liability, Excess Liability and Workers' Compensation. The Company also has other  
20 policy coverages such as Directors and Officers Liability, Employment Practices and  
21 Cyber Crime policies. The FTY expense represents an increase from the HTY based upon

---

<sup>1</sup> [http://data.bls.gov/timeseries/CUSR0000SAS4?data\\_tool=XGtable](http://data.bls.gov/timeseries/CUSR0000SAS4?data_tool=XGtable)

1 a number of drivers. The HTY was adjusted using insurance premiums actually incurred,  
2 and projected to occur, during the twelve months ending June 30, 2024, adjusted by the  
3 five-year average of actual retroactive adjustments. The FTY expenses were then adjusted  
4 by applying a five-year average expense increase of 6.53% with exception of claims  
5 amounts which were held at 2023 levels to arrive at the FPFTY costs. Next, the new  
6 Workers' Compensation premium costs were multiplied by the capitalization rate to  
7 eliminate the portion of that cost not charged to operating expenses. The insurance other  
8 than group expense for FTY and FPFTY was allocated between water and wastewater  
9 operations based on allocation Factor 4 (Depreciated Utility Plant in Service). The  
10 development of the capitalization percentage is discussed above in the Labor and Labor  
11 Related section. The factors used to allocate common costs between water and wastewater  
12 operations are discussed in further detail by Company witnesses Gress (PAWC Statement  
13 No. 4). The Company's adjustments to insurance other than group expense are shown in  
14 Exhibit No. 3-A. Detailed supporting calculations are provided in Exhibit No. 3-B.

15 **Rent Expense**

16 **Q. Please explain the Company's adjustment to rent expense.**

17 A. The Company's specific adjustments to rent expense reflect changes projected to occur in  
18 the FTY and FPFTY in current lease agreements for water and combined sewer system  
19 operations. The Company's adjustment to rent expense is shown in Exhibit No. 3-A.  
20 Detailed supporting calculations are provided in Exhibit No. 3-B.

1 **MISCELLANEOUS EXPENSES**

2 **Q. Please explain what is included in the Miscellaneous Expense Adjustment.**

3 A. Exhibit No. 3-A sets forth items that are being adjusted or eliminated from the Company's  
4 O&M claim in this proceeding.

5 First, I will discuss deductions reflected in the Miscellaneous Expense Adjustment.  
6 The Company eliminated duplicative expense items such as pension and OPEB that have  
7 been included in the development of the Company's claim for the ongoing water expense  
8 levels (Exhibit No. 3-A Water Operations). Additionally, donations, lobbying expenses,  
9 and fines incurred during the HTY were removed. Costs associated with temporary  
10 employees were excluded from the Company's claim because the need for these employees  
11 will be significantly reduced by the full-time staffing levels reflected in the salary and wage  
12 claim in this case. This part of the adjustment assumes recognition in this proceeding of  
13 the requested staffing levels. The Company has reduced per-book severance costs, as well  
14 as injuries and damages, to reflect a normalized level that is based on a three-year average  
15 (2021-2023). An adjustment to the cost of credit card and e-check transaction fees has been  
16 calculated using the projected residential customers as of the FTY and FPFTY.

17 For Water Operations, the Company removed a one-time cost for legal fees, as well  
18 as trade show expenses. In addition, the Company removed the annual level of Industrial  
19 Pretreatment Program ("IPP") expenses that are currently being billed to the PAWC  
20 Oneida Valley Treatment Plant by the Butler Area Sewer Authority ("BASA"), since these  
21 will no longer be expensed once the BASA acquisition is completed. The Company has  
22 adjusted per book injuries and damages to reflect a normalized level that is based on a  
23 historic three-year average (2021-2023). Additionally, the Company has included an

1 adjustment in Exhibit No. 3-A to reflect the allocation of a portion of the cost of the Capital  
2 Campus in Mechanicsburg from Water Operations to Wastewater SSS General Operations,  
3 BASA Wastewater Operations, Brentwood Wastewater Operations, and Wastewater CSS  
4 Operations.

5 Second, the Miscellaneous Expense Adjustment also includes additions to the  
6 Company's O&M claim for water operations. The Company added costs associated with  
7 the revolving line of credit because the costs were reclassified from interest expense to  
8 operating costs.

9 An adjustment to General Facility Maintenance expense is shown in Exhibit  
10 No. 3-A to reflect the projected ongoing level of maintenance expense. For Wastewater  
11 SSS General Operations and Wastewater CSS Operations, the Company participates in the  
12 Nutrient Credit Trading program facilitated by PADEP. The program provides a cost-  
13 efficient way for National Pollutant Discharge Elimination System (NPDES) permittees in  
14 the Chesapeake Bay Watershed to meet their effluent cap load limits for nutrients. The  
15 need to purchase nutrient credits fluctuates from year to year, therefore the Company has  
16 adjusted the per book costs to reflect a normalized level that is based on a historic five-year  
17 average (2019-2023).

18 Finally, and as discussed by Ashley Everette in PAWC Statement No. 1, the  
19 Company has included costs related to the Arrearage Management Plan ("AMP") currently  
20 pending before the Pennsylvania Public Utility Commission and the H2O Bill Discount  
21 Program. The total cost of discounts and arrearage forgiveness is based on the average  
22 number of H2O Discount customers in the HTY with arrears multiplied by the annual  
23 credits, assuming 100% participation rate. The adjustment also includes monthly and start-

1 up costs provided by Dollar Energy who will facilitate the AMP and H2O Bill Discount  
2 Program.

3 **ACQUISITION O&M EXPENSES**

4 **Q. Please explain what is included in the Acquisition O&M Adjustment.**

5 A. The Company made adjustments to annualize the O&M expenses not fully recognized in  
6 the HTY for the Company's acquisitions, as follows:

7 **Water Operations:** the water assets of Farmington Township (anticipated  
8 acquisition in 2024) and Audubon (anticipated acquisition in 2024)

9 **Wastewater SSS General Operations:** the wastewater assets of Farmington  
10 Township (anticipated acquisition in 2024) and Sadsbury Township (anticipated  
11 acquisition in 2024)

12 **BASA Wastewater Operations:** the wastewater assets of Butler Area Sewer  
13 Authority (anticipated acquisition in 2023)

14 **Brentwood Wastewater Operations:** the wastewater assets of Brentwood  
15 Borough (anticipated acquisition in 2024)

16 Details supporting these adjustments are provided in Exhibit No. 3-B.

17 **Q. Does this conclude your direct testimony at this time?**

18 A. Yes, it does.

# Statement No. 6

## Abruzzo

**PAWC STATEMENT NO. 6**

**DIRECT TESTIMONY  
OF  
E. CHRISTOPHER ABRUZZO, ESQ.**

**WITH REGARD TO  
PENNSYLVANIA-AMERICAN WATER COMPANY'S ACQUISITIONS**

**DOCKET NOS.  
R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)**

**DATE: November 8, 2023**

**PENNSYLVANIA-AMERICAN WATER COMPANY**  
**DIRECT TESTIMONY OF E. CHRISTOPHER ABRUZZO, ESQ.**

1 **Q. What is your name and business address?**

2 A. My name is E. Christopher Abruzzo, Esq., and my business address is 852 Wesley Drive,  
3 Mechanicsburg, PA 17011.

4 **Q. By whom are you employed and in what capacity?**

5 A. I am employed by Pennsylvania-American Water Company (“PAWC” or the “Company”)  
6 as Senior Director of Business Development.

7 **Q. What are your responsibilities as Senior Director of Business Development?**

8 A. I develop and maintain necessary contacts to stay abreast of new business opportunities.  
9 I manage the acquisition from initial contact, responding to Requests for Qualifications,  
10 Requests for Proposals, Requests for Bids, preparation of the Application for submission  
11 to the Pennsylvania Public Utility Commission (“Commission”) and manage the  
12 workflows required to close the acquisition. These responsibilities necessitate that  
13 I maintain a working knowledge of regulatory and technical developments, new  
14 technologies and current trends as they affect the water and wastewater utility industries,  
15 and that I be familiar with legislation, regulations and public policy affecting business  
16 opportunities.

17 **Q. Please describe your professional education and experience.**

18 A. I received a Bachelor of Science (B.S.) degree in Food Marketing from St. Joseph’s  
19 University in May of 1988 and my Juris Doctor (J.D.) from the Widener University School  
20 of Law in 1992. I was employed as a criminal prosecutor by the Dauphin County District  
21 Attorney’s Office and the Pennsylvania Office of Attorney General for approximately

1 20 years. In January 2011, I was appointed deputy chief of staff to Governor Tom Corbett.  
2 In that role, I served as the Governor's chief liaison to the Pennsylvania Public Utility  
3 Commission and the Pennsylvania Department of Environmental Protection. I held that  
4 role for two years before being appointed the acting Secretary of the Pennsylvania  
5 Department of Environmental Protection in April of 2013. I was nominated by Governor  
6 Corbett and then confirmed by the Senate of Pennsylvania in December of 2013 as  
7 Secretary of the Department of Environmental Protection. In 2015, I began my  
8 employment with PAWC as the Director of Water Quality and Environmental Compliance.  
9 In that capacity, I participated on the due diligence teams associated with numerous  
10 acquisitions. I held that role for five years before being promoted to the role of Senior  
11 Director of Business Development in September of 2020.

12 **Q. Have you previously testified before the Commission?**

13 A. Yes. I submitted testimony on behalf of PAWC's proposed acquisition of the wastewater  
14 collection and treatment system of the Township of Towamencin, Docket No. A-2023-  
15 3039900 *et al.* and in the Company's base rate cases at Docket Nos. R-2020-3019369 and  
16 R-2017-2595853.

17 **Q. What is the purpose of your direct testimony?**

18 A. I will discuss the water and wastewater system acquisitions that PAWC has included in  
19 this base rate case and provide support for the Company's request for acquisition  
20 adjustments pursuant to 66 Pa. C.S. § 1327 (relating to acquisition of water and sewer  
21 utilities) and 52 Pa. Code § 69.711 (statement of policy regarding small nonviable water  
22 and wastewater systems).

1 **ACQUISITIONS INCLUDED IN THIS BASE RATE CASE**

2 **Q. What acquisitions are being included for the first time in base rates in this base rate**  
3 **case?**

4 A. PAWC has included the following acquisitions in this base rate case:

- 5 (1) Butler Area Sewer Authority (wastewater);
- 6 (2) Borough of Brentwood (wastewater);
- 7 (3) Sadsbury Township Municipal Authority (wastewater)
- 8 (4) Farmington Township (water and wastewater)
- 9 (5) Audubon Water Company (water).

10 At the time of filing this rate case, PAWC provided notice of this rate case to  
11 customers of those entities, even though closing on those acquisitions has not yet occurred.  
12 PAWC also completed the following water and wastewater acquisitions since it filed its  
13 last base rate case: Upper Pottsgrove Township (wastewater), York City Sewer Authority  
14 (wastewater), Foster Township (wastewater), and Creekside Homeowners Association  
15 (water). However, those acquisitions were reflected in the base rates established by the  
16 Commission-approved settlement of PAWC’s 2022 base rate case.<sup>1</sup>

17 **Q. Please provide a detailed description of these acquisitions.**

18 A. **Butler Area Sewer Authority (“BASA”):** On August 14, 2023, PAWC filed a unanimous  
19 settlement of all issues with all active parties to this acquisition proceeding. Administrative  
20 Law Judge Marta Guhl issued a Recommended Decision on September 14<sup>th</sup>, 2023,  
21 recommending that the Commission deny the Joint Petition for Settlement and deny the

---

<sup>1</sup> See *Pa. Pub.Util.Comm’n. v. Pennsylvania-American Water Company*, Docket Nos. R-2022-3031672 and R-2022-3031673 (Joint Petition for Settlement of Rate Investigation approved by Order entered December 8, 2022), Appendix E (Amortizations).

1 Application. PAWC and certain other signatories to the Settlement filed Exceptions on  
2 September 21, 2023. Reply Exceptions were filed on September 26, 2023. The  
3 Commission is expected to enter a final order in this case at its November 9, 2023 public  
4 meeting. If the Commission approves the application, as modified by the settlement, the  
5 transaction is expected to close shortly after the Commission’s order becomes final and  
6 unappealable.

7 As discussed below, PAWC has included this acquisition in the instant base rate  
8 case because this proceeding is PAWC’s “next” base rate case after the expected closing  
9 on the acquisition. If the Commission approves the acquisition, its Order will establish the  
10 amount that PAWC is to include in its rate base in its “next” base rate case as a result of  
11 the acquisition. Additionally, it is prudent and fair for the Commission to integrate the  
12 BASA system into the larger PAWC system, and to address expenses associated with the  
13 operation and maintenance of the system, as soon as reasonably possible to avoid  
14 regulatory lag. If the Commission disapproves the acquisition, PAWC reserves the right  
15 to pursue all available legal remedies.

16 The BASA system is a regional wastewater service provider, providing wastewater  
17 service to the City of Butler, the Township of Butler, and portions of the Townships of  
18 Center, Summit, Connoquenessing, and Oakland, as well as the Borough of East Butler.  
19 As of June 30, 2023, the BASA system furnished wastewater service to approximately  
20 14,755 customers. It has no bulk service agreements with any contributing municipalities.

21 The BASA system is a sanitary-only system; there are no combined sewers in the  
22 system. The system consists of 224 miles of interceptor sewers, eight miles of force mains,  
23 twenty-three pump stations, seven flow equalization tanks, and a wastewater treatment

1 plant (“WWTP”) that has a design and permitted average daily flow capacity of  
2 10.0 million gallons per day (“MGD”) and a rated maximum flow capacity of 28.0 MGD.  
3 BASA also owns nearly 6,500 manholes.

4 Public benefits of the transaction include: promotion of the Commission’s policy  
5 favoring regionalization and consolidation of water/wastewater systems and the General  
6 Assembly’s policy goals when it enacted Section 1329; Commission regulation of the  
7 system, giving BASA’s customers access to the Commission, the OCA, the OSBA and  
8 I&E; and enhanced customer assistance programs for all of PAWC’s customers (including  
9 expanded eligibility for hardship grants and a \$3,500,000 Company contribution, over five  
10 years, to its hardship grant program, which would not be recoverable in rates). PAWC will  
11 also make capital improvements to the system to address long-standing environmental  
12 issues.

13 In the settlement, the parties ask the Commission to approve the addition of  
14 \$228,000,000 to PAWC’s rate base, as a result of the acquisition. Including the BASA  
15 acquisition in the instant proceeding will significantly reduce regulatory lag, thereby  
16 mitigating one factor that hinders municipal acquisitions pursuant to Section 1329.

17 **Borough of Brentwood (“Brentwood”):** PAWC’s application to acquire the Brentwood  
18 wastewater system was finally accepted for filing on September 14, 2023. Consequently,  
19 the Commission is required to enter a final decision in the proceeding by March 14, 2024,  
20 which is expected to be prior to the close of the record in this proceeding. If the acquisition  
21 is approved, the transaction is expected to close shortly thereafter.

22 As discussed below, PAWC has included this acquisition in the instant base rate  
23 case because this proceeding is PAWC’s “next” base rate case after closing on the

1 acquisition. The Commission Order approving the acquisition will establish the amount  
2 that PAWC is to include in its rate base in its “next” base rate case as a result of the  
3 acquisition. Additionally, it is prudent and fair for the Commission to integrate the  
4 Brentwood system into the larger PAWC system, and to address expenses associated with  
5 the operation and maintenance of the system, as soon as reasonably possible to avoid  
6 regulatory lag.

7 The Brentwood system is a collection system that collects and ultimately conveys  
8 wastewater to the Allegheny County Sanitary Authority (“ALCOSAN”) wastewater  
9 treatment facility. It serves customers located in the Borough of Brentwood. The  
10 Brentwood system is comprised of gravity sewers, manhole structures and service laterals.  
11 As of June 30, 2023, the Brentwood system furnished wastewater service to approximately  
12 3,974 customers.

13 Public benefits of the transaction include: promotion of the Commission’s policy  
14 favoring regionalization and consolidation of water/wastewater systems and the General  
15 Assembly’s policy goals when it enacted Section 1329; Commission regulation of the  
16 system, giving Brentwood’s customers access to the Commission, the OCA, the OSBA and  
17 I&E; and enhanced customer service for Brentwood’s customers. In addition, PAWC will  
18 make capital improvements to the system to address long-standing environmental issues  
19 due to excessive inflow and infiltration.

20 The Commission’s decision, which should be entered while the record is still open  
21 in this proceeding, will establish the amount that the Company is to include in rate base as  
22 a result of the acquisition. The application requests that the amount to be added to PAWC’s  
23 rate base as a result of the acquisition be \$19,364,443 (the purchase price of the system).

1 Including the Brentwood acquisition in the instant proceeding will significantly reduce  
2 regulatory lag, thereby mitigating one factor that hinders municipal acquisitions pursuant  
3 to Section 1329.

4 **Sadsbury Township Municipal Authority (“STMA”):** Currently pending before the  
5 Commission is PAWC’s application to acquire the STMA wastewater collection and  
6 conveyance system pursuant to 66 Pa. C.S. § 1102. The STMA wastewater system serves  
7 approximately 226 residential and 26 commercial customers in Sadsbury Township,  
8 Lancaster County. Treatment service is provided by Christiana Borough Authority and the  
9 Township of Salisbury. The STMA has no employees and its governing board desires to  
10 exit the business of managing a wastewater system.

11 PAWC filed an application for Commission approval of the STMA acquisition on  
12 August 3, 2023 at Docket No. A-2023-3042058. STMA filed a Petition to Intervene, and  
13 the Office of Small Business Advocate (“OSBA”) and the Office of Consumer Advocate  
14 (“OCA”) filed protests. The matter is currently pending in the Office of Administrative  
15 Law Judge.

16 Public benefits of the transaction include:

- 17 • STMA’s customers will receive service from a large, financially  
18 sound company with the employees and equipment to ensure that  
19 customers receive high quality wastewater service meeting federal  
20 and state requirements;
- 21 • PAWC’s experience in operating wastewater systems will result in  
22 efficiencies;
- 23 • Other efficiencies will result from economies of scale, due to  
24 PAWC’s greater purchasing power;
- 25 • PAWC offers customer assistance programs, whereas STMA does  
26 not; and
- 27 • PAWC’s customers will benefit from an expanded customer base,  
28 allowing the Company to spread costs among a larger number of  
29 customers, which helps to stabilize or reduce per-customer costs  
30 over the long term.

1           The purchase price for the system is \$990,000. PAWC has performed an analysis  
2 of the original cost and accumulated depreciation of the STMA system. After closing,  
3 PAWC will file with the Commission an original cost study to reflect the original cost and  
4 accumulated depreciation as of the closing date. The depreciated original cost of the assets  
5 included in this case is more than the purchase price, therefore, PAWC is proposing to  
6 amortize the difference between what was paid and the cost of the assets, thus lowering  
7 expenses for the Company's existing customers.

8           PAWC has included this acquisition in the instant base rate case because the  
9 transaction is expected to close no later than the end of the FPFTY. Additionally, it is  
10 prudent and fair for the Commission to integrate the STMA system into the larger PAWC  
11 system, and to address expenses associated with the operation and maintenance of the  
12 system, as soon as reasonably possible to avoid regulatory lag.

13       **Farmington:** PAWC filed the application to acquire Farmington Township's wastewater  
14 collection, conveyance and treatment system (Docket No. A-2023-3042587) and water  
15 distribution system (Docket No. A-2023-3042567) on August 28, 2023, pursuant to 66 Pa.  
16 C.S. § 1102. The OSBA filed a Notice of Intervention and OCA filed a Protest. The  
17 matter is currently pending in the Office of Administrative Law Judge.

18           The Farmington Township wastewater system serves approximately 448 customers  
19 in Farmington Township, Clarion County. The wastewater treatment plant has an average  
20 daily flow of 0.1 MGD. The system consists of the treatment plant, four pumping stations,  
21 approximately 340 grinder pumps and 14 miles of collection mains. The water distribution  
22 system serves approximately 464 customers in Farmington Township and consists of  
23 16 miles of water mains, 70 water hydrants and one storage tank. Farmington Township

1 employs one operator who shares responsibility for both the wastewater system and the  
2 water distribution system. The township board desires to exit the business of managing  
3 both systems.

4 Public benefits of the acquisition include:

- 5 • Farmington Township’s residents will receive service from a large,  
6 financially sound company with the employees and equipment to  
7 ensure that customers receive high quality wastewater and water  
8 services meeting federal and state requirements.
- 9 • The water distribution system will be folded into the Clarion water  
10 system which will create cost-savings.
- 11 • PAWC’s experience in operating wastewater systems will result in  
12 proper adherence to environmental regulations; Farmington is  
13 currently operating the wastewater system with an expired NPDES  
14 permit.
- 15 • Farmington’s wastewater plant is projected to be hydraulically  
16 overloaded within the next 5 years. PAWC has the necessary capital  
17 and expertise to reduce or eliminate the stormwater infiltration and  
18 inflow which reduces the potential for overloading.
- 19 • Farmington does not have the necessary personnel or financial  
20 resources to maintain the water distribution system or wastewater  
21 system. Currently, one full-time operator handles all of the  
22 maintenance and operations of both systems.
- 23 • Other efficiencies will result from economies of scale, due to  
24 PAWC’s greater purchasing power.
- 25 • PAWC offers customer assistance programs, whereas Farmington  
26 Township does not.
- 27 • PAWC’s customers will benefit from an expanded customer base,  
28 allowing the Company to spread costs among a larger number of  
29 customers, which helps to stabilize or reduce per-customer costs  
30 over the long term.
- 31 • Farmington will be able to use the proceeds of the sale to retire all  
32 debt associated with both systems, thus eliminating a significant  
33 burden from the township budget.

34 The total purchase price for both systems is \$5,545,000. The allocation of the  
35 purchase price between the water and wastewater systems is shown in PAWC Exhibit  
36 No. 3-C. PAWC has filed an original cost study to determine the original cost and  
37 accumulated depreciation of the Farmington Township water and wastewater assets. The  
38 original cost study will be updated after closing to reflect the original cost and accumulated

1 depreciation as of the closing date. PAWC will pay slightly more than the depreciated  
2 original cost of the assets, therefore PAWC is requesting an acquisition adjustment on the  
3 water system pursuant to 66 Pa. C.S. § 1327 (relating to acquisition of water and sewer  
4 utilities) and 52 Pa. Code § 69.711 (statement of policy regarding small nonviable water  
5 and wastewater systems).

6 PAWC has included this acquisition in the instant base rate case because the  
7 Company anticipates that the transaction will close no later than the end of the FPFTY.  
8 Additionally, it is prudent and fair for the Commission to integrate the Farmington systems  
9 into the larger PAWC systems, and to address expenses associated with the operation and  
10 maintenance of the system, as soon as reasonably possible to avoid regulatory lag.

11 **Audubon Water Company (“AWC”):** PAWC filed the application to acquire AWC on  
12 September 21, 2023, pursuant to 66 Pa. C.S. § 1102. The AWC system is located in  
13 Montgomery County and serves approximately 2,651 residential customers,  
14 167 commercial customers, 90 private fire customers, 29 multi-family dwelling customers,  
15 3 public customers, and 1 public fire customer primarily located within Lower Providence  
16 Township. The AWC system consists of two water systems that are not interconnected  
17 with each other. The main system supplies the town of Audubon and the second system  
18 supplies the Valley Forge Crossing Trailer Park. AWC’s primary source of supply is from  
19 15 groundwater wells located within its service area. There are a total of 12 active wells  
20 in the main AWC system. An additional three wells are located in the Valley Forge  
21 Crossing Trailer Park. The main AWC system consists of five pressure gradients and has  
22 six storage tanks, five booster pump stations, 160 fire hydrants and a distribution network

1 of approximately 40 miles of water mains. There are a total of 13 water treatment facilities  
2 associated with the ground water systems for the AWC system.

3 AWC has 12 full-time employees and one part-time employee. The proposed  
4 acquisition of AWC by PAWC will be accomplished by merger; therefore all current AWC  
5 employees will become PAWC employees at the time of close.

6 AWC and American Water Works Company, Inc. (“American Water”) entered into  
7 a Merger Agreement, pursuant to which all issued and outstanding shares of the capital  
8 stock of AWC will be cancelled and converted to the right to receive American Water  
9 Common Stock equal to a pro rata portion of the merger consideration identified in the  
10 Merger Agreement. The issued and outstanding shares of AWC’s capital stock will be  
11 surrendered to American Water in exchange for American Water Common Stock in  
12 accordance with the Merger Agreement.

13 Pursuant to the Merger Agreement, AWC will first merge with American Water’s  
14 AWC Acquisition Company, LLC, with AWC as the surviving corporation; then AWC  
15 will merge with PAWC.

16 At closing, a number of shares of American Water Common Stock equal to the  
17 Contingent Escrowed Shares identified in the Merger Agreement (value of \$2,000,000)  
18 will be held in escrow. The Merger Agreement provides that PAWC will seek distressed  
19 utility treatment under 66 Pa. C.S. § 1327(a) for the AWC system in its next rate case. If  
20 the Commission grants 1327(a) treatment and some or all of the difference between the  
21 depreciated original cost of the assets and the purchase price is approved for inclusion in  
22 rate base, American Water will release the Contingent Escrowed Shares to AWC in a  
23 corresponding percentage in an amount up to \$2,000,000 upon entry of a final, non-

1           appealable Commission order. If the Commission does not grant the request for 1327(a)  
2           treatment, the purchase price for AWC will be \$6,000,000 and the Contingent Escrowed  
3           Shares will be returned to American Water.

4           PAWC has included in this case the original cost and accumulated depreciation of  
5           the AWC system. As explained in the testimony of PAWC witness Ms. Gress, the  
6           Company proposes to amortize the difference between the depreciated original cost and  
7           the purchase price over a ten-year period.

8           Public benefits of the acquisition include:

- 9           •       AWC's customers will receive service from a large, financially  
10           sound company with the employees and equipment to ensure that  
11           customers receive high quality water service meeting federal and  
12           state requirements.
- 13           •       The water distribution system can eventually be interconnected to  
14           PAWC's Norristown and/or Royersford systems to eliminate the  
15           need to draw water from their insufficient and contaminated wells.
- 16           •       PAWC's experience in operating water systems will result in proper  
17           adherence to environmental regulations.
- 18           •       AWC will have to borrow tens of millions of dollars to remediate  
19           the PFAS contaminated wells it currently relies upon for source  
20           water.
- 21           •       If the transaction does not occur, the capital investment needed in  
22           this system will significantly increase rates for AWC customers.
- 23           •       Other efficiencies will result from economies of scale, due to  
24           PAWC's greater purchasing power.
- 25           •       PAWC offers customer assistance programs, whereas AWC does  
26           not.
- 27           •       PAWC's customers will benefit from an expanded customer base,  
28           allowing the Company to spread costs among a larger number of  
29           customers, which helps to stabilize or reduce per-customer costs  
30           over the long term.

31           PAWC has included this acquisition in the instant base rate case because the  
32           Company anticipates that the transaction will close no later than the end of the FPFTY.  
33           Additionally, it is prudent and fair for the Commission to integrate the AWC system into

1 the larger PAWC system, and to address expenses associated with the operation and  
2 maintenance of the system, as soon as reasonably possible to avoid regulatory lag.

3 **Q. Please describe any settlement commitments for the BASA acquisition that relate to**  
4 **the instant base rate filing and your understanding of how the filing complies with**  
5 **those commitments.**

6 A. At the outset, it should be noted that, in the settled Section 1329 BASA proceeding  
7 discussed above, PAWC, the statutory advocates, and the other parties to the proceeding  
8 agreed that PAWC could include \$228,000,000 in rate base in this proceeding as a result  
9 of the Section 1329 acquisition. Customer notice was provided to the acquired customers  
10 and PAWC's legacy customers in the application proceeding. As a result, rate base issues  
11 related to the BASA acquisition should not be re-litigated in this proceeding.

12 On other issues resolved in the BASA proceeding (such as transaction and closing  
13 costs, accrual of Allowance for Funds Used During Construction ("AFUDC") for post-  
14 acquisition improvements not recovered through the Distribution System Improvement  
15 Charge ("DSIC") for book and ratemaking purposes, and deferred depreciation related to  
16 post-acquisition improvements not recovered through the DSIC for book and ratemaking  
17 purposes), PAWC, the statutory advocates and the other parties to the BASA proceeding  
18 only agreed that PAWC could include a claim for those expenses in this proceeding. On  
19 those issues, the parties reserved their rights to litigate the reasonableness of those claimed  
20 expenses. Nevertheless, I note that Section 1329 expressly permits the recovery of such  
21 expenses.

22 The instant base rate filing also includes a cost-of-service study that removes all  
23 costs and revenues associated with the operations of the BASA system, as well as a cost-

1 of-service study for the BASA system. The instant base rate case also reflects claims for  
2 rate recovery of the BASA transaction and closing costs delineated on PAWC Exhibit No.  
3 3-C, as well as PAWC's outside legal fees associated with the BASA acquisition identified  
4 on PAWC Exhibit No. 3-C.

5 In the settlement, PAWC agreed that it would not propose an increase in BASA's  
6 base rates if the rates would become effective before the later of: (a) the first anniversary  
7 of closing or (b) January 1, 2025. PAWC also agreed that it would propose to move the  
8 system to 1.4x the current system rate or PAWC's proposed Rate Zone 1 system-average  
9 wastewater rates, whichever is lower, upon the later of (a) the first anniversary of Closing  
10 or (b) January 1, 2025. The instant base rate case complies with these provisions by  
11 proposing an increase for BASA system customers as discussed in PAWC Statement No. 4,  
12 the Direct Testimony of Stacey D. Gress, to take effect on the later of the first anniversary  
13 of Closing or January 1, 2025.

14 In addition, PAWC agreed that, in its first base rate case that includes the BASA  
15 system assets, if PAWC proposes a different effective date for new rates for BASA  
16 customers beyond the effective date of new rates for other customers, PAWC would  
17 calculate its proof of revenue as if the BASA customers were paying proposed rates without  
18 any delay to the effective date. PAWC has calculated its proof of revenues in compliance  
19 with this agreement.

20 **Q. Will the Company pay any of Brentwood's legal or engineering fees incurred as part**  
21 **of the transaction?**

22 A. Yes. PAWC will reimburse up to \$70,000 as reimbursement for engineering and legal fees  
23 incurred related to the transaction.

1 **Q. Is the Company seeking to recover the engineering and legal fees reimbursed to**  
2 **Brentwood?**

3 A. Yes. Brentwood's engineering and legal fees are part of the transaction and closing costs  
4 of the acquisition and are appropriately included in rate base as a cost of organization of  
5 newly acquired service territory. Refer to PAWC Exhibit No. 3-C.

6 **SECTION 1327**

7 **Q. What is your understanding of Section 1327?**

8 A. I am advised by counsel that Section 1327 creates a rebuttable presumption that a purchase  
9 price in excess of the original cost less depreciation of an acquired system is reasonable  
10 and should be included in rate base if certain conditions are met. Those conditions are:  
11 (1) the property is used and useful in providing water or wastewater service; (2) the  
12 acquired system had 3,300 or fewer customer connections or was not viable; (3) the  
13 acquired system was not providing adequate, efficient, safe and reasonable service and  
14 facilities; (4) reasonable and prudent investments will be made to provide adequate,  
15 efficient, safe and reasonable service and facilities; (5) the acquired entity agrees to the  
16 acquisition and the negotiations were conducted at arm's length; (6) the actual purchase  
17 price is reasonable; (7) the acquiring public utility is not affiliated with the acquired entity;  
18 (8) the rates charged to the acquiring utility's preacquisition customers will not increase  
19 unreasonably because of the acquisition; and (9) the excess of the acquisition cost over  
20 depreciated original cost will be added to rate base to be amortized over a reasonable period  
21 with corresponding reductions in the rate base.

22 **Q. You testified earlier that the Company is requesting that the Commission grant**  
23 **Section 1327 treatment for the AWC system. Please explain why.**

1 A. The system satisfies each of the nine criteria contained in Section 1327:

2 (1) all of the assets acquired by PAWC are used and useful in the public service;

3 (2) the AWC system has 2,941 customers as of June 30, 2023, which is fewer  
4 than 3,300 customer connections;

5 (3) the AWC system is struggling to provide adequate, efficient, safe and  
6 reasonable service and facilities because the owners of the system are of retirement age  
7 and they are no longer able to properly manage and operate the system. During the spring  
8 of 2023, AWC's system's wells were barely able to meet water demand. Additional  
9 customers are projected to connect in AWC's service area in the near future. With these  
10 additional customers, the system's sources of supply will not be sufficient to meet demand.  
11 In addition, two of the system's wells were tested and found to have elevated levels of  
12 PFAS. As AWC is limited in its sources of supply, AWC will be forced to construct PFAS  
13 treatment for these wells. The cost of constructing and operating these treatment units is  
14 significant, ranging in the tens of millions of dollars, which will cause a significant  
15 financial burden on the system's customers. AWC does not have the ability to spread these  
16 costs over a large customer base nor the technical expertise to properly operate these  
17 complex treatment units. Complicating matters further, the groundwater in the Audubon  
18 area is known or expected to have issues with PFAS. Once the new PFAS regulations take  
19 effect, AWC will be required to test all the wells in its system. These other wells will likely  
20 be impacted by PFAS and any wells not meeting PFAS limits will need additional  
21 treatment, adding to the financial burden placed on the system's customers. In general,  
22 issues with groundwater contamination in the area will limit AWC's ability to develop  
23 additional sources of supply to meet future demands in its service area;

1 (4) PAWC will make reasonable and prudent investments to provide adequate,  
2 efficient, safe and reasonable service and facilities. These investments include:

- 3 • Improvements to provide enhanced safety and security;
- 4 • Remote monitoring and data collection systems;
- 5 • Distribution system improvements to address reliability, water quantity  
6 issues, and to reduce lost water in the system;
- 7 • Improvements to the disinfection systems;
- 8 • Additional interconnections between the AWC system and PAWC's  
9 Royersford and Norristown systems to enhance system reliability,  
10 provide adequate supply for periods of high demand, and to address  
11 future demands in AWC's certificated service area.

12 In addition, PAWC is uniquely suited to acquire the AWC system. PAWC already  
13 has an interconnection with AWC via a pipeline that travels through the system's service  
14 territory. The pipeline connects PAWC's Royersford and Norristown systems, allowing  
15 PAWC to supply the AWC system water from either or both of the PAWC systems. After  
16 acquisition, PAWC will be able to consolidate the sources of supply and halt using any  
17 problematic wells in the AWC system. PAWC has performed PFAS testing on the  
18 Royersford and Norristown sources of supply and has not found any impacts from PFAS.  
19 This acquisition will provide a cost effective solution to the contamination and demand  
20 issues facing the customers of AWC.

21 (5) AWC agreed to the acquisition and the negotiations were conducted at  
22 arm's length;

(6) the purchase price of \$8,000,000 (with the Section 1327(a) contingency) is reasonable. A comparison of AWC’s purchase price per customer (“PP/C”) at a purchase price of \$8,000,000 yields a favorable comparison to the average PP/C for PAWC’s § 1102 transactions over the last five years. AWC’s PP/C of \$2,720 ( $\$8,000,000/2,941$  customers = \$2,720) is almost 20% less than the average § 1102 PP/C during the last five years;

**PAWC § 1102 TRANSACTIONS SINCE 2018**

Date of Closing	System	Purchase Price	Customers	PP/C
7/24/2019	Turbotville Water	\$635,000	330	\$1,900
7/24/2019	Turbotville Wastewater	\$365,000	318	\$1,100
10/27/2022	Foster Township Water	\$3,750,000	456	\$8,200
6/21/2023	Creekside Water	\$171,580	78	\$2,200
Average				\$3,350

(7) PAWC is not affiliated with AWC;

(8) the rates charged to PAWC’s preacquisition customers will not increase unreasonably because of the acquisition. The proposed rate base for this system is \$8 million, which represents less than 0.2% of PAWC’s \$4.7 billion rate base at the end of the FPFTY. The transaction will have a de minimus impact on rates.

(9) the excess of the acquisition cost over depreciated original cost will be added to rate base to be amortized over ten years (a reasonable period) with corresponding reductions in the rate base.

**Q. You also testified earlier that the Company is requesting that the Commission grant Section 1327 treatment for the Farmington water system. Please explain why.**

**A.** Again, the water system satisfies each of the nine criteria contained in Section 1327:

1 (1) all of the assets acquired by PAWC are used and useful in the public service;

2 (2) the Farmington water system has 464 total customers, which is fewer than  
3 3,300 customer connections;

4 (3) the Farmington water system is not providing adequate, efficient, safe and  
5 reasonable service and facilities. The Farmington water system has an extensive history of  
6 recurring violations of the PADEP Safe Drinking Water regulations. The system received  
7 41 Safe Drinking Water violations between 2018 and 2023. As shown below, violations  
8 were received every year during this period and the system has shown no signs of  
9 improvement.

- 10 • 2018 4 violations
- 11 • 2019 10 violations
- 12 • 2020 7 violations
- 13 • 2021 10 violations
- 14 • 2022 5 violations
- 15 • 2023 5 violations

16 Violations include persistent failure to collect weekly water samples, including:  
17 disinfectant residual samples, disinfectant by-product contaminant samples, and lead and  
18 copper samples. The system has also repeatedly failed to collect follow-up disinfectant  
19 residual samples even after initial samples showed residual disinfectant concentrations  
20 below standards. By failing to collect samples, the Farmington system provided inadequate  
21 and unreliable service, exposing customers to the risk of ingesting improperly disinfected  
22 water. Proper water sampling is a basic health and safety function performed by water

1 providers. The failure to properly sample water and provide results to the PADEP is  
2 symptomatic of greater operational problems of a system.

3 The system has also repeatedly failed to issue public notification of its violations  
4 as required by PADEP Safe Drinking Water regulations and failed to issue its EPA  
5 mandated Consumer Confidence Report (CCR) on a timely basis. By failing to inform the  
6 public of critical drinking water alerts and information in a timely manner, the system  
7 provided inadequate and unreasonable service by not communicating public health safety  
8 concerns.

9 (4) PAWC will make reasonable and prudent investments to provide adequate,  
10 efficient, safe and reasonable service and facilities. These investments include an  
11 estimated \$1.04 million of capital improvements in the water system, such as:

- 12 • Security, safety and SCADA improvements at the interconnection/chemical  
13 feed facility and the water storage tank;
- 14 • Automatic flushing units to help maintain water quality at dead end mains;
- 15 • GIS mapping of system;
- 16 • Full meter replacement;
- 17 • Purchase new vehicle to replace old, unreliable vehicle;
- 18 • Leak logger purchase; and
- 19 • Recurring projects (new or relocated mains, capitalized main break repairs,  
20 new/replacement hydrants, new/replacement valves, new/replacement  
21 services, tools & equipment).

22 The following improvements will be made in the wastewater system:

- 23 • Blower-Effluent Sampling-Aeration Building Improvements (IP);

- 1           •     Arc Flash, security, and general safety improvements at plant and all lift
- 2                     stations;
- 3           •     Chemical feed (odor control) systems at Crown and Beer Barn lift stations;
- 4           •     GIS mapping of system;
- 5           •     Disinfection chemical feed system and plant process improvements for
- 6                     diffusers, piping, RAS pumps, decant pumps, etc.;
- 7           •     SCADA installation at plant;
- 8           •     Purchase new vehicle to replace old unreliable vehicle;
- 9           •     System wide I/I study; and
- 10          •     Recurring projects (replacement or relocated mains, capitalized main break
- 11                     repairs, new/replacement manholes, new/replacement services, plant
- 12                     process equipment, tools & equipment).

13           (5)     Farmington agreed to the acquisition and the negotiations were conducted

14           at arm's length;

15           (6)     the allocated purchase price of \$2,718,300 for the water system is

16           reasonable. Farmington Township chose not to pursue a fair market value transaction,

17           despite its ability to do so. The purchase price for the water system was based on the

18           depreciated original cost ("DOC") of the assets of the system. The allocated purchase price

19           of \$2,718,300 is only 8% higher than the water system's DOC of \$2,501,654. Farmington

20           water's PP/C of \$5,858 ( $\$2,718,300/464 \text{ customers} = \$5,858$ ) is 38% less than the average

21           PP/C for PAWC's § 1329 transactions during the last five years:

1

PAWC § 1329 Transactions Since 2018

Date of Closing	System	Purchase Price	Customers	PP/C
11/14/2018	Steelton Water	21,750,000	2325	\$9,354
5/28/2018	Exeter Wastewater	\$93,500,000	9000	\$10,388
9/30/2018	Kane Wastewater	\$17,560,000	2006	\$8,753
12/10/2019	Royersford Wastewater	\$13,000,000	1596	\$8,145
12/17/2019	Valley Water	\$7,325,000	1459	\$5,020
12/17/2019	Valley Wastewater	\$13,950,000	1644	\$8,485
4/28/2020	Upper Pottsgrove WW	\$13,750,000	1428	\$9,628
4/6/2021	York Wastewater	\$235,000,000	158851	\$14,825
Average				\$9,324

**Q. Please explain your understanding of the Pennsylvania Legislature’s intent in enacting Section 1329 of the Code.**

A. The General Assembly supported and encouraged the sale of municipal water and wastewater systems at valuation levels higher than traditional original cost measures. Some communities desire to monetize their assets to address other public needs. Due to the age of many municipal systems, however, traditional original cost measures produced very low sales prices, discouraging many transactions. By enabling the sale of municipal assets to public utilities at higher valuations, the General Assembly intended to encourage these transactions. This result also promotes the regionalization and consolidation of water and wastewater systems. The Legislature also intended to improve the maintenance and replacement of public infrastructure, and to promote environmental stewardship by facilitating transfers to public utilities with extensive technical expertise and financial resources.

**Q. Please explain the rate-making implications of a Section 1329 proceeding.**

A. In a Section 1329 proceeding, the Commission establishes the amount that the acquiring public utility can put into rate base in its next base rate case as a result of the acquisition. In addition, the acquiring utility can include a claim for transaction and closing costs incurred because of the transaction in its next base rate case. The acquiring utility may also accrue AFUDC for post-acquisition improvements not recovered through the DSIC for book and ratemaking purposes and defer depreciation related to post acquisition improvements not recovered through the DSIC for book and ratemaking purposes. Finally,

1 the selling utility’s cost of service is to be incorporated into the revenue requirement of the  
2 acquiring public utility during the acquiring company’s next base rate case.

3 **Q. What is your understanding of the term “next base rate case,” as used in**  
4 **Section 1329?**

5 A. Section 1329(d)(5) states “The selling utility’s cost of service shall be incorporated into  
6 the revenue requirement of the acquiring public utility as part of the acquiring utility's next  
7 base rate case proceeding.” My understanding from PAWC counsel is that the statute  
8 should be construed using the ordinary definition of “next,” which is “in the time, place or  
9 order nearest or immediately succeeding.” Webster’s New Collegiate Dictionary 774  
10 (1977). So, for example, if the BASA acquisition is approved by the Commission on  
11 November 9, 2023, and closes in December, 2023, the instant base rate case would be the  
12 “next” base rate case because PAWC’s 2022 rate case was concluded on December 8, 2022.  
13 Therefore, this is the first base rate case in which PAWC should include BASA’s assets.

14 Similarly, for the Brentwood acquisition, if the Commission approves this  
15 acquisition in March 2024, and closing occurs shortly thereafter, the “next” base rate case  
16 will be the instant rate proceeding – this proceeding is the rate proceeding immediately  
17 following the Commission’s approval of the acquisition and the Company’s closing on the  
18 acquisition. Therefore, this is the first base rate case in which PAWC should include  
19 Brentwood’s assets.

20 **Q. Based on your experience with the implementation of Section 1329 and PAWC’s**  
21 **pending Section 1329 acquisitions, why is it important to avoid delay in including**  
22 **Commission-approved Section 1329 rate base additions in rate base?**

1 A. There can be a considerable delay between the date a public utility closes on a Section 1329  
2 acquisition (expending significant capital) and the date that the public utility is able to place  
3 the Commission-approved rate base addition for that transaction into rate base. The  
4 monetary impact is significant, considering the large investments that public utilities are  
5 not able to recover for years. This regulatory lag provides a disincentive for an acquiring  
6 utility to engage in Section 1329 acquisitions, which undermines the Legislative intent  
7 behind Section 1329. Section 1329 would be ineffective if willing sellers could not find  
8 willing buyers, due to the lengthy delay between closing on a transaction and the recovery  
9 of those costs. The intended public benefits of acquisitions of municipal water and  
10 wastewater systems – including the monetization of municipal assets, regionalization and  
11 consolidation of systems, and remediation of environmental problems – are being impeded.

12 **Q. Does the Commission have the ability to address the problem of lag in rate recovery**  
13 **of Section 1329 acquisitions?**

14 A. Yes. The Commission should interpret Section 1329 to permit recovery for Section 1329  
15 acquisitions that close while a base rate case is pending. For example, with respect to the  
16 Brentwood acquisition (as discussed above), the Commission should consider the instant  
17 base rate proceeding to be the “next base rate case” under Section 1329(c)(1)(i) when rate  
18 base for the acquired system can be incorporated into the public utility’s rate base. If the  
19 Commission does not construe Section 1329 in a way that reduces regulatory lag and does  
20 not permit public utilities to take the steps necessary to reduce regulatory lag, public  
21 utilities may become less willing to engage in acquisitions or they may file base rate cases  
22 more frequently. Neither result advances the public interest and the intent of the  
23 Legislature in implementing Section 1329 would be impeded.

**CONCLUSION**

1  
2  
3  
4

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

A. Yes. However, I reserve the right to supplement my testimony as additional issues or facts arise during the course of this proceeding.

## Ciullo

**PAWC STATEMENT NO. 7**

**DIRECT TESTIMONY  
OF  
MELISSA CIULLO**

**WITH REGARD TO  
PENNSYLVANIA-AMERICAN WATER COMPANY'S  
INCOME TAXES, PENNSYLVANIA STATE TAX RATE CHANGE, CORPORATE  
ALTERNATIVE MINIMUM TAX**

**DOCKET NOS.  
R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)**

**DATE: November 8, 2023**

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**DIRECT TESTIMONY OF MELISSA CIULLO**

1   **Q.    What is your name and business address?**

2    A.    My name is Melissa Ciullo. My business address is 1 Water Street, Camden New Jersey  
3        08102.

4   **Q.    By whom are you employed, and in what capacity?**

5    A.    I am employed by American Water Works Service Company, Inc. as the Vice President of  
6        Tax. I am responsible for management and oversight of the tax function for American  
7        Water Works, Inc. (“AWWC”), and its consolidated subsidiaries, including Pennsylvania-  
8        American Water Company (“PAWC” or the “Company”).

9   **Q.    Please summarize your educational background and professional experience.**

10   A.    I graduated from Stockton College in 2001 with a Bachelor of Science Degree in Business  
11        and a concentration in Accounting. I have a Master of Business Administration Degree in  
12        Accounting and International Business from Rutgers University - Camden. I am a Certified  
13        Public Accountant in the State of New Jersey. I have 20 years of experience as a tax and  
14        accounting professional, including serving utilities with regulated operations in multiple  
15        states. For the 12 years before my employment with American Water, I held various  
16        positions with progressing responsibilities within the tax departments of utility holding  
17        companies Exelon Corporation and PEPCO Holdings Inc. Prior to these roles, I was  
18        employed by the international accounting firm KPMG.

1 **Q. Have you previously testified before any regulatory agencies?**

2 A. I previously provided testimony to the Pennsylvania Public Utility Commission, the  
3 Hawaii Public Utilities Commission, the Indiana Public Utility Commission, the Missouri  
4 Public Service Commission, and the West Virginia Public Service Commission.

5 **Q. What is the purpose of your testimony?**

6 A. My testimony addresses (1) the Company’s computation of income tax expense in  
7 compliance with Act 40 of 2016 (“Act 40”), which added Section 1301.1 to the  
8 Pennsylvania Public Utility Code, (2) a change in Pennsylvania’s corporate tax rate enacted  
9 in July 2022, and (3) the Corporate Alternative Minimum Tax (“CAMT”) adopted as part  
10 of the Inflation Reduction Act (“IRA”), which was enacted in August 2022.

11 **Computation of Income Taxes Consistent With Act 40**

12 **Q. What changes were made by Act 40?**

13 A. Act 40 became law on June 12, 2016, and became effective on August 11, 2016.  
14 Section 1301.1(a) specifies how the Commission is to compute income tax expense for  
15 ratemaking purposes. In addition, Section 1301.1(b) states how any incremental internally  
16 generated funds produced by the application of Section 1301.1(a) should be used by an  
17 affected utility pending the December 31, 2025 “sunset” of Section 1301.1(b).

18 **Q. What does Section 1301.1 direct the Commission to do in calculating income tax  
19 expenses for ratemaking purposes?**

20 A. In summary, Section 1301.1(a) provides that current and deferred income taxes of a  
21 Pennsylvania utility are to be calculated for ratemaking purposes based only on the income,  
22 deductions, and credits of the utility itself. Therefore, the Commission may not calculate  
23 a utility’s current and deferred income taxes for ratemaking purposes by taking into account

1 income, deductions (including taxable losses), or credits of the utility’s parent or affiliated  
2 companies with which it joins in filing a consolidated Federal income tax return. This is  
3 generally referred to as a “stand-alone” computation of income tax expense because it  
4 reflects income tax expense of the utility “standing alone” and without regard to the taxable  
5 income, deductions, or credits of other companies in the same consolidated group.

6 **Q. How does Section 1301.1(a) change prior Commission practice?**

7 A. Section 1301.1(a) terminates the practice of making a “consolidated tax adjustment”  
8 (“CTA”) when calculating a utility’s Federal income taxes for ratemaking purposes in  
9 Pennsylvania. As directed by prior decisions of Pennsylvania appellate courts,<sup>1</sup> the  
10 Commission, until Act 40 became effective, was required to calculate CTAs employing the  
11 “Modified Effective Tax Rate Method,” which the Commission described as follows:

12 [U]nder the Modified Effective Tax Rate Method, which was approved  
13 under *Barasch II, supra*, the consolidated tax savings generated by the non-  
14 regulated companies of a corporate group are allocated to the regulated and  
15 non-regulated members of the group having positive taxable incomes.<sup>2</sup>

16  
17 As calculated under the Modified Effective Tax Rate Method, a CTA captured a portion of  
18 the tax benefits of deductions – including taxable losses – of unregulated affiliates of public  
19 utilities and gave those benefits to the utilities’ customers (as lower income tax expense  
20 than the utilities would have on a “stand-alone” basis), even though the utilities’ customers  
21 did not pay the expenses that gave rise to those tax benefits. With the enactment of Act 40,  
22 Pennsylvania joined the vast majority of other jurisdictions, including the Federal Energy  
23 Regulatory Commission, that do not make CTAs for ratemaking purposes.

---

<sup>1</sup> *Barasch v. Pa. P.U.C.*, 493 A.2d 653 (Pa. 1985) (“*Barasch I*”); *Barasch v. Pa. Pub. Util. Comm’n*, 548 A.2d 1310 (Pa. Commw. Ct. 1988) (“*Barasch II*”).

<sup>2</sup> *Pa. Pub. Util. Comm’n v. Philadelphia Suburban Water Co.*, Docket No. R-00016750, *et al.*, 2002 Pa PUC LEXIS 55, \*90-91 (July 18, 2002).

1 **Q. What does Section 1301.1(b) provide?**

2 A. Section 1301.1(b) states as follows:

3 If a differential accrues to a public utility resulting from applying  
4 the ratemaking methods employed by the commission prior to the  
5 effective date of subsection (a) for ratemaking purposes, the  
6 differential shall be used as follows:

7 (1) fifty percent to support reliability or infrastructure  
8 related to the rate-base eligible capital investment as determined by  
9 the commission; and

10 (2) fifty percent for general corporate purposes.

11 As I previously noted, Section 1301.1(c)(1) provides that Section 1301.1(b) will no longer  
12 apply after December 31, 2025.

13 **Q. Have you calculated the “differential” in income taxes referenced in**  
14 **Section 1301.1(b)?**

15 A. Yes, the confidential response to Filing Requirement (FR) IV.14 sets forth the computation  
16 of a CTA using the Modified Effective Tax Rate Method and data for tax years 2017  
17 through 2021, which are the most recent five years for which tax returns have been filed.  
18 The second page of the calculation shows the “differential” in an amount of approximately  
19 \$2.3 million corresponding to the CTA calculated in the manner I described above. In  
20 addition, PAWC witness Ashley E. Everette (PAWC Statement No. 1) addresses the  
21 Company’s investment of 50% of the differential in a manner that complies with  
22 Section 1301.1(b)(1).

23 **Pennsylvania Corporate Tax Rate Change**

24 **Q. Please explain the Pennsylvania Corporate Tax Rate Change.**

25 A. On July 8, 2022, House Bill (“H.B.”) 1342 was signed into law in Pennsylvania, which  
26 incrementally reduces the Commonwealth’s corporate net income tax (“CNIT”) rate from

1 9.99% to 4.99% over a period of nine years. The rate change reduction became effective  
2 for tax years beginning in 2023, reducing the rate to 8.99%. The CNIT rate will continue  
3 to be reduced each year through 2031, when the CNIT rate will be set at 4.99%.

4 **Q. Does the Company's proposed revenue requirement reflect the changes in the CNIT**  
5 **rate determined by H.B. 1342?**

6 A. Yes. As shown in Exhibit No. 3-A, the Company's proposed revenue requirement is  
7 calculated using the 7.99% CNIT rate that will be in effect at the end of the FPFTY.

8 **Q. Has the Company remeasured its Accumulated Deferred Income Tax ("ADIT") to**  
9 **account for the rate change?**

10 A. Yes, the Company estimated a remeasurement of the ADIT in the 3<sup>rd</sup> Quarter of 2022. The  
11 ADIT balance will be remeasured annually to account for the reductions in the Company's  
12 CNIT rate through 2031.

13 **Q. What is the reason for the annual remeasurement?**

14 A. According to ASU 740, Accounting for Income Taxes, ADIT must be reported on the  
15 balance sheet at the rate at which they are expected to settle with the taxing authority. In  
16 the case of the declining state tax rate, it is difficult to estimate precisely at which rate the  
17 accumulated deferred taxes will settle. Therefore, each year, the Company will remeasure  
18 the deferred taxes based on available information at the time of remeasurement.

19 **Q. How much did the Company's Pennsylvania ADIT change as a result of the CNIT**  
20 **rate change?**

21 A. At the time of the remeasurement, the state ADIT was reduced by \$159M, and a  
22 corresponding regulatory liability was created. These amounts will continue to change  
23 (increase or decrease) each year depending on the timing of the settlement of the deferred

1 income taxes. The excess accumulated ADIT (“EADIT”) will not be finalized until the  
 2 final CNIT rate is set at 4.99% in 2031.

3 **Q. How do you propose to return the Pennsylvania EADIT to customers?**

4 A. The Company proposes to calculate the EADIT for rate-making purposes after each CNIT  
 5 rate change by multiplying the normalized gross temporary difference balance at the end  
 6 of the year before the rate change by the incremental change in the tax rate (net of the  
 7 federal effect of state taxes) for the next year. The resulting EADIT will be amortized over  
 8 20 years as an unprotected EADIT, consistent with the treatment of unprotected Federal  
 9 EADIT. This calculation will be updated each year to reflect changes in the CNIT rate and  
 10 layered into the EADIT balance which will be returned to customers. See below for an  
 11 illustrated example.

Year	Tax Rate	Incremental Rate Change	Incremental Rate Change (Net of Federal)	Gross Temporary Difference Balance*	PA EADIT	Amortization - 20 years									
						Year 1	Year 2	Year 3	...Year 20	Year 21	Year 22				
Year 0	9.99%			20,000,000											
Year 1	8.99%	1.00%	0.79%	21,000,000	165,900	8,295	8,295	8,295	8,295						
Year 2	8.49%	0.50%	0.40%	21,500,000	87,075		4,354	4,354	4,354	4,354					
Year 3	7.99%	0.50%	0.40%	24,000,000	94,800			4,740	4,740	4,740	4,740				
Subtotal						8,295	12,649	17,389	17,389	9,094	4,740				

\* For Demonstration Purposes Only the GTD continues to increase at a rate quicker than GTD is reduced. The actual direction of movement will depend on each year's activity.

12  
 13 Additionally, as a result of the CNIT rate change, the regulatory asset related to the  
 14 PA Flow-through tax depreciation will also be remeasured to the reduced tax rate.

15 **Q. How much Pennsylvania EADIT is included in the rate case to be returned to**  
 16 **customers?**

17 A. The reductions in the CNIT rate from 9.99% in 2023 to 7.99% at the end of the fully  
 18 projected future test year ending June 30, 2025 results in Pennsylvania EADIT in the  
 19 amount of \$28,363,055. As discussed earlier in my testimony, the Company proposes to

1 amortize this amount over 20 years resulting in an annual bill credit of \$1,418,153 that will  
2 be returned to customers.

### 3 **Corporate Alternative Minimum Tax**

#### 4 **Q. How does the enactment of the IRA impact the Company?**

5 A. The IRA implemented a new CAMT beginning in 2023 that imposes a 15% tax on adjusted  
6 financial statement income (“AFSI”), for which applicable corporations will be required to  
7 pay the greater of the 15% of adjusted financial statement income or their calculated regular  
8 federal tax liability. Based on the current interim Internal Revenue Service guidance and  
9 forecasted projections, AWWC and its subsidiaries, including PAWC, will be subject to  
10 CAMT beginning with tax year 2024.

#### 11 **Q. Is AWWC an applicable corporation? If so, how was that determined?**

12 A. Beginning with tax year 2024, AWWC is expected to be considered an applicable  
13 corporation. AWWC meets the AFSI test, which states that if a corporation’s average  
14 annual AFSI exceeds \$1 billion over the preceding three-year period, then the corporation  
15 and its subsidiaries are applicable corporations.

#### 16 **Q. For CAMT purposes, how is AFSI determined?**

17 A. The starting point to calculate AFSI is the net income or loss per the financial statements.  
18 The financial statement net income or loss is then adjusted for federal income taxes, book  
19 and tax depreciation, pension, and other post-employment benefits. As a result, for  
20 purposes of determining AFSI or loss, federal income taxes, accelerated tax depreciation,  
21 pension, and other post-employment benefits are exactly the same with respect to the  
22 regular federal income tax liability calculation.

1 **Q. Why does AWWC's and PAWC's CAMT exceed the regular tax liability?**

2 A. Under tax law, certain expenditures capitalized for financial statement purposes qualify for  
3 accelerated tax deductions, such as tax repairs. These accelerated tax deductions, which  
4 lower regular tax, are not included in the AFSI calculation for determining the CAMT  
5 liability. Therefore, the regular tax is below the CAMT tax liability.

6 **Q. How is PAWC expected to account for the CAMT in its financial statements?**

7 A. For income tax accounting purposes, a current income tax liability and current income tax  
8 expense will be recorded for the CAMT liability but will be equally offset by recording a  
9 deferred tax asset and a reduction to deferred income tax expense to reflect the CAMT  
10 credit carryforward. As a result, there is no net incremental income tax expense associated  
11 with the CAMT; however, a deferred tax asset is established for the minimum tax credit  
12 carryforward. Corporations are entitled to a tax credit equal to the amount by which the  
13 minimum tax liability exceeds the regular tax liability. This amount can be carried forward  
14 indefinitely and used in future years when the regular tax liability exceeds the CAMT  
15 liability.

16 **Q. If PAWC is below the \$1 billion threshold, why is PAWC subject to CAMT?**

17 A. PAWC is a subsidiary of AWWC. Strictly for purposes of determining if AWWC exceeds  
18 the \$1 billion threshold in average profits under the AFSI test, AWWC must include all of  
19 its subsidiaries, including PAWC, because AWWC is considered a "single employer  
20 group" under the applicable tax rules. As previously stated, the CAMT applies to  
21 "applicable corporations." If a "single employer group," in the aggregate, exceeds the  
22 \$1 billion profits threshold, each corporation that is part of that "single employer group" is  
23 considered an "applicable corporation" and separately subject to CAMT. In addition, the

1 applicable tax rules further support recording CAMT at the operating companies. That is  
2 illustrated by the fact that if a subsidiary ceases to be a member of an affiliated group of  
3 corporations, the departing subsidiary is entitled to its CAMT credit carryforward and can  
4 utilize that credit in future tax years when its regular tax exceeds its CAMT liability.

5 **Q. What are the rate-making impacts associated with CAMT?**

6 A. Under the normalization method, for ratemaking purposes, accumulated deferred income  
7 taxes are a reduction to the rate base calculation to reflect the lower cost of capital  
8 attributable to accelerated tax benefits. However, the CAMT reduces the tax benefits  
9 associated with accelerated tax deductions. Therefore, a corresponding deferred tax asset  
10 is included as a rate base increase to reflect the appropriate cost of capital.

11 **Conclusion**

12 **Q. Does that conclude your direct testimony at this time?**

13 A. Yes, it does.

R-2023-3043190 (WASTEWATER)

VERIFICATION

I, **Melissa Ciullo**, hereby state that the facts set forth in the pre-marked Statement No. 7 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

R-2023-3043190 (WASTEWATER)**

**DATE: November 8, 2023**

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**DIRECT TESTIMONY OF J. CAS SWIZ**

1 **Introduction**

2 **Q. What is your name and business address?**

3 A. My name is J. Cas Swiz. My business address is 727 Craig Road, St. Louis, Missouri  
4 63141.

5 **Q. By whom are you employed and in what capacity?**

6 A. I am employed by American Water Works Service Company, Inc. (“Service Company”)  
7 as Senior Director, Enterprise-Wide Regulatory Strategy. Service Company is a wholly  
8 owned subsidiary of American Water Works Company, Inc. (“American Water”) that  
9 provides services to Pennsylvania-American Water Company (“PAWC” or the  
10 “Company”).

11 **Q. Please summarize your educational background and professional experience.**

12 A. I am a 2001 graduate of the University of Evansville with a Bachelor of Science degree in  
13 Accounting, and a 2005 graduate of the University of Southern Indiana with a Master of  
14 Business Administration. From 2001 to 2003, I was employed by ExxonMobil Chemical  
15 as a Product and Inventory accountant. From 2003 through 2020, I was employed by  
16 Vectren Corporation, a CenterPoint Energy Company, in various accounting and  
17 regulatory roles. Most recently, I was Director, Regulatory and Rates with responsibility  
18 for leading and executing the regulatory strategy of CenterPoint Energy’s Indiana and Ohio  
19 electric and gas jurisdictions. In November 2020, I was hired by the Service Company  
20 within Regulatory Services.

1 **Q. What are your duties as Senior Director, Enterprise-Wide Regulatory Strategy?**

2 A. My primary responsibilities consist of the review and preparation of regulatory filings,  
3 proceedings, and related activities for the regulated subsidiaries of American Water. This  
4 includes the preparation of written testimony, exhibits, and workpapers in support of  
5 regulatory proceedings. In addition, I also review regulatory developments and evaluate  
6 alternative strategies that may impact the operations of the American Water regulated  
7 utility entities.

8 **Q. Have you previously submitted testimony before the Pennsylvania Public Utility  
9 Commission (the “Commission” or “PUC”)?**

10 A. Yes, I submitted testimony in the Company’s most recent base rate proceeding at Docket  
11 Nos. R-2022-3031672 (water) and R-2022-3031673 (wastewater) (the “2022 Base Rate  
12 Case”).

13 **Q. Have you previously submitted testimony before other regulated jurisdictions?**

14 A. Yes. I testified on behalf of Missouri-American Water Company in its most recent base  
15 rate case, Case No. WR-2022-0303. During my employment at Vectren, I submitted  
16 testimony before the Indiana Utility Regulatory Commission in various docketed  
17 proceedings supporting accounting and rate design requests, most recently in Cause Nos.  
18 45378, 44429, and 44430. In addition, I submitted testimony on behalf of Vectren before  
19 the Public Utility Commission of Ohio in various docketed proceedings, most recently in  
20 Case Nos. 20-0099-GA-RDR, 20-0101-GA-RDR, and 18-0298-GA-AIR.

21 **Q. What is the purpose of your testimony?**

22 A. First, I will identify and describe PAWC’s claim for uncollectible accounts expense as  
23 presented in the Company’s principal accounting exhibits. Second, I will support the

1 Company's claim to recover the unamortized balance of the deferred amounts recorded to  
2 the regulatory asset account for incremental COVID-19 related financial impacts  
3 authorized by the Commission's September 15, 2021 Order at Docket No. P-2020-3022426  
4 ("COVID-19 Deferral Accounting Order") and the PUC's December 8, 2022 Final Order  
5 approving the settlement of PAWC's 2022 base rate case ("2022 Rate Case Order"). I will  
6 also support the Company's request to defer and record pension, other post-employment  
7 benefits ("OPEB"), and production expenses. Finally, I will support the implementation of  
8 an Environmental Compliance Investment Charge ("ECIC") pursuant to the alternative  
9 ratemaking authority Act 58 of 2018 ("Act 58"), 66 Pa. C.S. § 1330, granted to the  
10 Commission to provide timely rate recognition of the Company's sustained investments  
11 between rate cases to comply with new and changed government-mandated environmental  
12 standards.

### 13 **Uncollectible Accounts Expense**

14 **Q. Please describe the Company's proposed level of uncollectible accounts expense**  
15 **reflected in PAWC's revenue requirement for the fully projected future test year**  
16 **("FPFTY") ending June 30, 2025.**

17 A. PAWC calculated its claim for uncollectible accounts expense using a two-year historic  
18 average ratio of net write-offs as a percentage of sales revenues. As shown in Table 1  
19 below, the uncollectible accounts rate (1.176%) was calculated by using the Company's  
20 actual write-off experience for the July 1, 2021 through June 30, 2023 period divided by  
21 PAWC's total billed revenues for the same two years.

1

**Table 1**

	7/2021-6/2022	7/2022-6/2023	Two-Year Average
Net Write-Off Activity	\$ 10,174,929	\$ 9,374,665	\$ 9,774,797
Total Billed Revenues	\$ 775,900,531	\$ 886,675,101	\$ 831,287,816
<b>Average Write-Off Percentage</b>	<b>1.311%</b>	<b>1.057%</b>	<b>1.176%</b>

2

3

4

5

6

Applying the two-year average rate of net write-offs to the FPPTY level of total Company revenues for water and wastewater operations results in an annual level of uncollectible expense reflected in new base rates established at the conclusion of this proceeding, as shown on Exhibit No. 3-A, Calculation of Uncollectible Accounts Expenses.

7

**Q. Why is it reasonable and appropriate to calculate uncollectible expense in this proceeding using the two-year average percentage of net write-offs ended June 30, 2023?**

8

9

10

11

12

13

14

15

16

17

18

19

A. Using the two-year average of net write-offs presented in Table 1, as opposed to the Company's historical approach of using a three-year average, eliminates the impacts of the COVID-19 emergency on customer collections activities. In response to the COVID-19 emergency, the Company implemented several measures to help customers deal with the financial impact of the pandemic, including ceasing service terminations for non-payment from March 12, 2020 through March 31, 2021. The Company resumed collections activities on April 1, 2021, at which point the customer account was evaluated for disconnection if payment had not been received within 90 days from the last billing period. Because of this timeline, overdue account balances dating back to March 2020 were not written off until summer 2021.

1 In addition, PAWC customers have received relief through the Low-Income  
 2 Household Water Assistance Program (“LIHWAP”) administered by the Pennsylvania  
 3 Department of Human Services to assist with unpaid utility bills. Through June 30, 2023,  
 4 PAWC customers have received over \$7.8 million in funding, which has directly  
 5 contributed to relieving outstanding arrearages and helping to reduce write-offs.

6 In sum, the Company used a two-year historic average for the July 2021 to June  
 7 2023 period to normalize the rate of uncollectible accounts to pre-pandemic levels and  
 8 account for the application of LIHWAP funds to reduce unpaid balances. As shown on  
 9 Table 2 below, PAWC experienced variances in monthly net write-offs in the twelve  
 10 months ended June 30, 2021 and net write-offs have been trending back up toward pre-  
 11 pandemic levels since mid-2021.

12 **Table 2<sup>1</sup>**

Net Write-Offs	2017	2018	2019	2020	2021	2022	2023
Jan	\$ 716,536	\$ 685,641	\$ 912,390	\$ 764,828	\$ 349,586	\$ 830,013	\$ 827,805
Feb	\$ 559,995	\$ 692,680	\$ 618,529	\$ 346,622	\$ 297,714	\$ 747,877	\$ 696,968

Dec	\$ 649,591	\$ 720,657	\$ 876,692	\$ 386,722	\$ 1,103,004	\$ 735,792	
Annual	\$ 7,629,139	\$ 8,772,003	\$ 8,423,765	\$ 4,905,724	\$ 8,632,107	\$ 9,252,122	\$ 4,026,853

13  
 14 **Q. Have the outstanding arrearages for PAWC’s customers stabilized from the**  
 15 **significant increases incurred during the COVID-19 emergency?**

<sup>1</sup> Table 2 presents net write-offs for 2017 through June 2023. The disconnection moratorium period is highlighted in green.

1 A. Yes. During the peak of the COVID-19 emergency, PAWC experienced significant  
 2 increases to its outstanding arrearages, specifically with respect to balances that are more  
 3 than 150 days overdue. This trend continued even after the expiration of the moratorium  
 4 on disconnections. However, with LIHWAP funding and collection activities, the aging  
 5 of PAWC’s unpaid balances has returned to pre-COVID-19 levels.

6 **Table 3**

Receivables Balance as of June 30					
Aging Category	2023	2022	2021	2020	2019
Current	\$ 46,404,037	\$ 36,691,897	\$ 34,369,435	\$ 32,684,188	\$ 37,087,580
31-150 Days	\$ 19,890,869	\$ 15,913,935	\$ 21,197,606	\$ 17,994,123	\$ 15,855,887
>150 Days	\$ 14,747,326	\$ 20,551,028	\$ 24,722,737	\$ 14,067,730	\$ 11,733,612
<b>Total</b>	<b>\$ 81,042,232</b>	<b>\$ 73,156,859</b>	<b>\$ 80,289,777</b>	<b>\$ 64,746,041</b>	<b>\$ 64,677,079</b>

7  
 8 As shown in Table 3 above, accounts receivable aged over 150 days as of June 30, 2023  
 9 represent approximately 18% of the Company’s total arrearages, which is in line with the  
 10 percentage as of June 30, 2019. By comparison, as of June 30, 2021, accounts that were  
 11 more than 150 days overdue represented over 30% of PAWC’s total arrearages.

12 **Q. Does the historic write-off data along with the current status of outstanding accounts**  
 13 **receivable support the Company’s recommendation to use the two-year average**  
 14 **write-off percentage for the determination of the going level of uncollectible expense**  
 15 **in this proceeding?**

16 A. Yes, the Company’s rate of uncollectible accounts over the past two years properly  
 17 excludes the impacts of the COVID-19 emergency on customer collections and reflects a  
 18 reasonable estimation of the going level of bad debt expense.

1 **PAWC’s COVID-19 Regulatory Asset**

2 **Q. Please summarize the COVID-19 Accounting Deferral Order and the ratemaking**  
3 **treatment authorized by the Commission for PAWC’s COVID-19 regulatory asset in**  
4 **the 2022 Base Rate Case.**

5 A. On May 13, 2020, the Commission issued a Secretarial Letter<sup>2</sup> that recognized the  
6 additional costs and other financial impacts that the COVID-19 emergency imposed on  
7 utilities as essential businesses, including the increased costs directly resulting from the  
8 service-termination moratorium established by the Emergency Order issued by PUC  
9 Chairman Gladys Brown Dutrieuille on March 13, 2020.<sup>3</sup> The May 2020 Secretarial Letter  
10 directed utilities to track incremental COVID-19 related expenses and any government  
11 assistance that would offset those expenses and permitted utilities to establish a regulatory  
12 asset for bad debt expense attributable to compliance with the Emergency Order.

13 On October 15, 2020, PAWC filed a Petition at Docket No. P-2020-3022426  
14 requesting PUC approval to defer for accounting purposes specific expenses and revenue  
15 losses PAWC incurred in furnishing essential services during the COVID-19 emergency.  
16 In the COVID-19 Deferral Accounting Order (pp. 12-13, 30-32, 42, 49-50), the PUC  
17 authorized PAWC to record COVID-19 related direct costs and savings as a regulatory  
18 asset, along with incremental uncollectible expense and carrying charges on the deferred  
19 amounts. The Commission found that the Office of Consumer Advocate’s proposal for an  
20 uncollectible expense deferral “baseline” clearly conflicted with the Commission’s

---

<sup>2</sup> *COVID-19 Cost Tracking and Creation of Regulatory Asset*, Docket No. M-2020-3019775 (Secretarial Letter issued May 13, 2020) (“May 2020 Secretarial Letter”).

<sup>3</sup> *Public Utility Service Termination Moratorium Proclamation of Disaster Emergency-COVID-19*, Docket No. M-2020-3019244 (Emergency Order ratified Mar. 26, 2020) (“Emergency Order”).

1 prescribed approach for calculating deferrals in the May 2020 Secretarial Letter based on  
2 all uncollectible expense above the amount currently reflected in PAWC’s approved base  
3 rates. The PUC also declined to establish a “hard cut-off date” after which no further  
4 COVID-19 related amounts could be deferred.

5 In the 2022 Base Rate Case, PAWC proposed to recover the deferred balance of its  
6 COVID-19 regulatory asset accumulated through July 31, 2022 (totaling \$3,409,217), with  
7 an additional \$517,127 of carrying costs calculated on the deferred amounts through  
8 January 1, 2023, amortized over three years. The Company also proposed to continue  
9 deferring incremental uncollectible expense from and after August 1, 2022 under the  
10 existing Commission authorization for possible recovery in PAWC’s next base rate case.  
11 PAWC had already ceased recording COVID-19 related direct costs and savings in its  
12 COVID-19 regulatory asset on February 1, 2022. Under the settlement approved in the  
13 2022 Rate Case Order (“Settlement”), the Company agreed to a December 31, 2022 end  
14 date for the deferral of incremental uncollectible expense and carrying costs recorded to  
15 the COVID-19 regulatory asset. In the Settlement, the parties also stipulated to (1) the total  
16 deferred balance as of July 31, 2022 included in rates (\$3,409,217, Appendix H), (2) the  
17 total carrying costs calculated on the deferred amounts through January 1, 2023 (\$517,127,  
18 Appendix H) and (3) the amortization period for the deferred balance (3 years,  
19 Appendix D).

20 **Q. When did PAWC begin amortization of the deferred balance in the Company’s**  
21 **COVID-19 regulatory asset agreed to in the Settlement?**

22 A. The Company began amortizing the deferred balance of \$3,926,344 over three years (i.e.,  
23 \$109,065 per month) on February 1, 2023. In accordance with 2022 Rate Case Order,

1 PAWC continued to defer incremental uncollectible expense above or below the amounts  
2 embedded in the Company's rates from August 1, 2022 through December 31, 2022. The  
3 Company did not realize any offsetting COVID-19 related direct savings during that same  
4 five-month period.

5 **Q. What is the unamortized deferred balance in the Company's COVID-19 regulatory**  
6 **asset as of June 30, 2023?**

7 A. As of June 30, 2023, PAWC has recorded a net credit balance of \$(246,472). That balance  
8 reflects five-months of amortization of the net debit balance authorized in the 2022 Rate  
9 Case Order (totaling \$545,325 through June 2023) and an aggregate credit of \$(3,627,491)  
10 for uncollectible expense that was below the amount embedded in PAWC's base rates from  
11 August 1, 2022 through December 31, 2022, along with the corresponding adjustments to  
12 the carrying costs on the deferred net credit balance through January 1, 2023.

13 **Q. Please describe the Company's claim for recovery of its COVID-19 regulatory asset**  
14 **in this proceeding.**

15 A. PAWC projects that the unamortized deferred balance in its COVID-19 regulatory asset as  
16 of July 31, 2024, which aligns with the effective date of new base rates approved in this  
17 proceeding, will be a net credit of \$(1,664,318). The Company proposes to include this  
18 projected deferred balance in base rates amortized over two years (24 months), starting on  
19 August 1, 2024.

20 **Q. What is the annual level of amortization expense PAWC will include in its revenue**  
21 **requirement in this proceeding?**

22 A. PAWC will include a credit of \$(832,159) as annual amortization expense in its revenue  
23 requirement in this proceeding, or approximately \$(69,347) per month.

1 **Q. Why is the Company proposing to amortize the COVID-19 deferred balance over two**  
2 **years?**

3 A. An amortization period of two years aligns with the typical time between PAWC's base  
4 rate cases. It also ensures this credit is appropriately returned to customers in a timely  
5 manner.

6 **Q. Is the Company including any additional carrying costs on the deferred balance in its**  
7 **projections?**

8 A. No. In accordance with the 2022 Rate Case Order, PAWC ceased recording carrying costs  
9 to its COVID-19 regulatory asset as of December 31, 2022. As noted previously in my  
10 testimony, the Company did adjust its claim for reductions to the carrying costs as a result  
11 of the credits recorded to the COVID-19 regulatory asset account from August 1, 2022  
12 through December 31, 2022.

13 **Proposed Regulatory and Accounting Treatment**

14 **Q. Please describe the Company's request to establish tracker and deferral accounts for**  
15 **pension, OPEB, and production expenses.**

16 A. Historically, PAWC has experienced material variances between the levels of pension,  
17 OPEB, and production expenses forecasted for recovery in its base rates and the levels of  
18 those expenses it actually incurred. As I explain below, from year-to-year, actual expenses  
19 can be lower or higher than the amounts reflected in the Company's base rates. Therefore,  
20 the Company is asking for Commission permission to defer and record any amounts above  
21 or below the projected level of pension, OPEB, and production expenses into separate  
22 regulatory asset or liability accounts through the conclusion of the Company's next rate  
23 proceeding. In its next base rate case, the Company will address the ratemaking treatment

1 of the deferred amounts and any request to continue deferred accounting treatment for  
2 pension, OPEB, and production expenses beyond that next base rate proceeding.

3 **Q. Is the Company proposing to recover carrying costs on deferred balances?**

4 A. No. The Company is only proposing to defer any variance between the base level  
5 established in this case and the actual level incurred to an asset or liability account.

6 **Q. What is the definition of a regulatory asset according to the National Association of**  
7 **Regulatory Utility Commissioners (“NARUC”) Uniform System of Accounts**  
8 **(“USOA”) for Class A Water Utilities?**

9 A. “Regulatory Assets and Liabilities” are assets and liabilities that result from rate actions of  
10 regulatory agencies. They arise from specific revenues, expenses, gains or losses that  
11 would have been included in determination of net income in one period under the general  
12 requirements of the Uniform System of Accounts but for it being probable that: 1) such  
13 items will be included in a different period(s) for purposes of developing the rates the utility  
14 is authorized to charge for its utility services; or 2) in the case of regulatory liabilities, that  
15 refunds to customers, not provided for in other accounts, will be required. Regulatory  
16 assets and liabilities can also be created in reconciling differences between the  
17 requirements of generally accepted accounting principles (“GAAP”), regulatory practice  
18 and tax laws.

19 **Q. What is the difference between a tracker mechanism and a rate adjustment clause**  
20 **established under Section 1307 of the Code?**

21 A. Under the mechanism proposed by PAWC, the differences between the pension, OPEB,  
22 and production expenses included in the Company’s rates and its actual pension, OPEB,  
23 and production expenses will be tracked and recorded in deferral accounts. The net balance

1 in the accounts would represent a deferral – either as a regulatory liability or regulatory  
2 asset – that would be credited to, or recovered from, customers in a subsequent base rate  
3 case by means of an appropriate amortization. In contrast, a rate adjustment mechanism  
4 established under Section 1307 of the Public Utility Code typically involves billing  
5 customers a charge calculated to recover a projected annual cost. Annually (or more  
6 frequently), the amount billed to customers is reconciled to the utility’s actual cost and the  
7 difference is either recovered from or refunded to customers through the experience or “E”  
8 factor of the formula for the rate adjustment clause. In that way, customer rates are  
9 periodically adjusted to reflect changes in actual costs and the reconciliation of prior period  
10 over or under-collections.

11 Under a rate adjustment clause, customer rates are subject to change between base  
12 rate cases. Under the deferred accounting mechanism, the Company is proposing for  
13 pension, OPEB, and production expenses, variations between projected and actual  
14 expenses to be recorded and deferred, but customer rates will not reflect the net impact of  
15 those variations until new rates are authorized in a future base rate case.

16 **Pension and OPEB Expense Tracker and Deferral Mechanism**

17 **Q. Why is it appropriate that the Company be permitted to record the amount of Pension**  
18 **and OPEB expenses, above or below the amount authorized in rates, to a regulatory**  
19 **asset or liability between base rate cases?**

20 A. Pension and OPEB costs are difficult to predict. Projections of the Company’s pension  
21 and OPEB costs are calculated by WTW (formerly known as Willis Towers Watson), a  
22 national actuarial firm. As discussed by Company witness Lori O’Malley, the pension  
23 costs of \$22,218 and OPEB costs of \$(5,955,515) claimed in PAWC’s revenue requirement

1 for the fully projected future test year ending June 30, 2025 (“FPFTY”) are based upon the  
2 actuary report provided by WTW for calendar year 2023, calculated in accordance with  
3 Accounting Standards Codification Topic 715 (“ASC 715”)<sup>4</sup>. Although WTW uses sound,  
4 well-established actuarial methods, the pension and OPEB costs that it calculates are  
5 subject to material change from year-to-year, as well as within a year, based on a variety  
6 of factors that I discuss later in my testimony. As a consequence, pension and OPEB costs  
7 exhibit volatility because those costs are a function of variables that are subject to change  
8 over time and, therefore, are difficult to forecast.

9 **Q. What are the principal factors that cause pension and OPEB costs to fluctuate from**  
10 **year to year?**

11 A. Pension and OPEB costs calculated in accordance with GAAP<sup>5</sup> can fluctuate from year to  
12 year because of changes in economic or demographic variables used to determine those  
13 costs that are outside of the Company’s control. Actuaries, including the Company’s  
14 actuary, must make reasonable assumptions to supply the values for those variables,  
15 including interest rates, salary increases, inflation, and the performance of the investment  
16 markets. In addition, demographic assumptions related to the composition of the  
17 population that will receive retirement benefits, the behavior of members of that population  
18 (e.g., decisions about when to retire) and the life expectancy of the recipients of retirement  
19 benefits all impact the assumptions and variables of the calculation.

---

<sup>4</sup> The GAAP rules for calculating benefit costs in reporting the income and expense of a business are set forth in Financial Accounting Standards Board Accounting Standards Codification Topic 715, which was formerly Financial Accounting Standard 87.

<sup>5</sup> The GAAP rules for calculating retirement benefit costs in reporting the income and expense of a business are set forth in Financial Accounting Standard Board Accounting Standards Codification Topic 715 (“ASC 715”), which was formerly Financial Accounting Standard 87 (“FAS 87”).

1           Among the primary economic factors that drive fluctuations in retirement costs are:  
2           (1) variations between the returns that are projected on the investments made to fund  
3           current and future retirement costs and returns actually achieved on those investments; and  
4           (2) variations between assumed discount rates and actual discount rates during the period  
5           for which costs are being projected. If investment returns and discount rates increase,  
6           retirement cost obligations measured at year end become smaller (compared to the prior  
7           year end). As a result, current year costs decrease as compared to the prior year. If  
8           investment returns and discount rates decrease, retirement cost obligations measured at  
9           year end become larger, and current year costs increase as compared to the prior period.

10           Although demographic assumptions have exhibited less year-to-year volatility than  
11           investment returns and discount rates, there have been demographic factors that produced  
12           material variations in retirement costs. For example, in 2014, the Society of Actuaries'  
13           Retirement Plans Experience Committee released a report that showed a population-wide  
14           increase in life expectancy, causing many actuarial experts to reassess their populations  
15           and reconsider previous assumptions. Longer life expectancy means that retirement  
16           benefits will be paid for a longer period of time in the future, and therefore the current costs  
17           to fund those future benefits increased.

18           The purpose of the Company's request for deferral accounting authorization is to  
19           protect both customers and the Company from the variations between forecasted and actual  
20           pension and OPEB costs that occur for the reasons I previously explained. This deferral  
21           mechanism is symmetrical. Neither customers nor the Company would be required to bear  
22           more than the Company's actual costs incurred for pension and OPEB expenses.

1 **Q. Please generally describe how the proposed deferred accounting will work for**  
2 **Pension and OPEB expenses.**

3 A. The Company will track the pension and OPEB expenses included for recovery in its  
4 Commission-approved base rates and will also track its actual costs incurred for pension  
5 and OPEB expenses. Each month, one-twelfth (1/12) of the amount authorized for  
6 recovery in base rates (“base level”) will be compared to the Company’s actual monthly  
7 expense. Actual costs incurred in accordance with ASC 715 guidelines above or below the  
8 base level will be credited or debited, as applicable, in separate pension and OPEB deferral  
9 accounts on the Company’s books. The Company will continue to defer the net balance  
10 recorded in those accounts through the end of its next base rate case. In its next base rate  
11 case, the Company may seek rate recovery of the net credit or debit balances in the deferral  
12 accounts, which will represent either regulatory assets or regulatory liabilities as  
13 applicable, amortized to income over an appropriate period as either an increase or  
14 decrease, respectively, to pension and OPEB expense.

15 **Q. Has the Company reviewed how the fluctuations in expense from year to year would**  
16 **have impacted the Company and its customers if tracker and deferral mechanisms**  
17 **for pension and OPEB expenses had been in place previously?**

18 A. Yes. Table 4 and Table 5 below lay out by calendar year the authorized level of Pension  
19 and OPEB expense and the actual amount of expense recorded. In the variance column, a  
20 positive number indicates that the actual expense exceeded the authorized level, and a  
21 negative number indicates that the actual amount was lower than the authorized level.  
22 Significantly, over the eleven years (2012 through 2022) reflected in Table 4 and Table 5,  
23 customers would have realized net benefits (actual costs lower than the rate allowance) in

1 ten years for pension costs and nine years for OPEB costs. In total, over the eleven years  
 2 reflected in my analysis, customers would have realized a net benefit of approximately  
 3 \$76 million for a pension deferral and \$46 million for an OPEB deferral. In 2021 and 2022  
 4 alone, the Company would have recorded a regulatory liability of \$(10,647,622) for  
 5 pension expense and \$(13,308,317) for OPEB expense, which would have been deferred  
 6 and amortized through rates in a subsequent proceeding.

7 **Table 4**

	Pension Expense		
	Authorized Expense	Actual Expense	Variance
2012	\$ 21,675,744	\$ 14,062,463	\$ (7,613,281)
2013	\$ 21,675,744	\$ (3,592,769)	\$ (25,268,513)

3 **Deferred Accounting Treatment - Production Expense**

4 **Q. What is the scope of the “Production Expenses” for which the Company seeks**  
5 **deferral accounting authorization?**

6 A. The Company defines Production Expenses as the costs incurred to provide water and  
7 wastewater services to our customers, including purchased water and wastewater treatment  
8 (NARUC Account 610 and NARUC Account 710), chemicals (NARUC Account 618 and  
9 NARUC Account 718), fuel and power (NARUC Accounts 615-616 and NARUC  
10 Accounts 715-716), and waste disposal (NARUC Account 711). As explained by  
11 Ms. O’Malley, the Company is requesting \$59,989,147 in total Production Expense in its  
12 claimed revenue requirement for the FPFTY, broken out as \$3,098,544 for Purchased  
13 Water and Wastewater Treatment, \$21,276,332 for Fuel and Power, \$27,485,022 for  
14 Chemicals, and \$8,129,249 for Waste Disposal. See Exhibit 3-A, pp. 54-57, 118-120, 238-  
15 240.

1 **Q. Why is PAWC requesting deferred accounting treatment for Production Expenses in**  
2 **this proceeding?**

3 A. Production Expenses are not discretionary and are not driven solely by changes in overall  
4 production volumes. The Company's production expenses can materially increase or  
5 decrease based on the prices charged by suppliers from whom the Company purchases  
6 water, energy, wastewater treatment service, and waste disposal services needed to provide  
7 safe and reliable water and wastewater service to customers. As an example, the chemical  
8 market has been extremely volatile compared to historical levels, driven by many factors  
9 such as impacts from the COVID-19 emergency, global pressures driven by the conflict in  
10 Ukraine, inflationary growth in commodity prices, escalation in energy prices, and overall  
11 supply and demand pressure within a consolidating chemical market. As a result of the  
12 current volatility in the market for chemicals, many vendors have moved from annual  
13 contracts to quarterly or semi-annual contracts. While the Company takes rigorous steps  
14 to ensure that it obtains the best pricing possible when it purchases chemicals, the market  
15 forces that have caused sharp increases in contract pricing in 2022 and 2023 are outside of  
16 the control of the Company and many of its suppliers. The Company anticipates that it  
17 will continue to see chemical price volatility and uncertainty in 2024 and beyond.  
18 Likewise, energy market prices are higher than they have been in many years, and as a  
19 result, PAWC's electric generation suppliers have increased contract rates for power  
20 supply and are less willing to lock in prices for 12-month terms.

21 Market conditions impacting production expenses represent an extraordinary  
22 combination of circumstances that are expected to continue to produce significant price  
23 volatility over the next several years. While the Company actively manages its chemical

1 and energy use through a capital plan that emphasizes efficiency, it cannot avoid incurring  
2 these costs. The accounting deferral for production expenses would protect both the  
3 Company's customers and PAWC against this volatility. PAWC believes its production  
4 expenses are analogous to gas commodity or electric fuel and transmission costs that the  
5 Commission has approved for recovery through automatic adjustment clauses. The only  
6 difference here is that the Company seeks to defer increases or decreases to its Production  
7 Expenses between rate cases for recovery or refund in a future base rate case rather than  
8 implement an automatic rate change currently afforded to our gas and electric counterparts  
9 in the Commonwealth.

10 **Q. Please generally describe how the proposed deferred accounting will work for**  
11 **Production Expenses.**

12 A. The Company would maintain separate regulatory asset and liability accounts for each  
13 production expense category, including (1) Purchased Water and Wastewater Treatment,  
14 (2) Fuel & Power, (3) Chemicals, and (4) Waste Disposal. Beginning the first month after  
15 rates are in effect in this proceeding, the Company will record the difference between the  
16 expense authorized in this case and the actual expense. The amount approved within this  
17 base rate case for all of the Production Expense items will be "unitized" (cost per 1,000  
18 gallons) by taking the total expenses divided by overall water and wastewater usage used  
19 to derive rates and charges in this proceeding. This rate will be multiplied by monthly  
20 usage to determine the authorized amount collected in the current month, which will be  
21 compared to the actual expense for the month. If the actual expense is lower than the  
22 authorized amount in rates, a regulatory liability will be set up to record the difference. If  
23 the actual expense is higher than the authorized amount in rates, a regulatory asset will be

1 recorded. At the time of its next rate case, the Company will present the net amount in  
2 these accounts for return to the customers (in the case of a net credit amount or regulatory  
3 liability) or for collection in rates (in the case of a net debit amount or regulatory asset)  
4 over a reasonable amortization period.

5 **Q. Why is PAWC determining the authorized level of Production Expenses using a**  
6 **“unitized” rate?**

7 A. As I noted earlier, Production Expenses are a function of both supplier prices and  
8 volumetric production. If sales increase in any period, the Company would expect  
9 increases in many of its Production Expenses. By unitizing the amount included in  
10 PAWC’s base rates, any deviation in sales would be contemplated in the authorized level  
11 consistent with the actual expenses.

12 **Q. Would deferred accounting treatment for Production Expenses remove incentives for**  
13 **the Company to reduce costs and improve its efficiency?**

14 A. No. The Company is committed to providing safe and reliable water service to its  
15 customers at affordable rates. This request does not change that; it simply ensures that  
16 customers only pay for the production expenses incurred, nothing more and nothing less,  
17 while allowing the Company to collect the proper revenues to cover production expenses  
18 incurred to continue to provide safe and reliable service. This does not grant the Company  
19 a “free-pass” to mismanage Production Expenses. Any deferred amounts (and offsets to  
20 those amounts) will be subject to detailed ratemaking review to determine prudence and  
21 reasonableness when they are claimed by the Company in its next base rate case.

22 **Q. Have fluctuations in Production Expenses from year to year become significant since**  
23 **volatility in market prices for chemicals, fuel and power began in 2022?**

1 A. Yes. Table 6 below lays out by calendar year the authorized level of Production Expense  
 2 and the actual amount of expense recorded. It is important to note that these figures do not  
 3 represent unitized values, as we are proposing in this case. The Company did not have the  
 4 ability to determine unitized values for historic authorized periods. As shown in Table 6,  
 5 the variance (positive or negative) between the Company’s actual Production Expenses and  
 6 the amount reflected in base rates increased substantially in 2022 in the range of about  
 7 \$7 million to \$9 million compared to the prior ten years.

8 **Table 6**

	Actual Expense				Total Production Expense	Authorized Production Expense	Variance
	Purchased Water	Fuel and Power	Chemicals	Waste Disposal			
2012	\$ 2,802,239	\$ 14,559,776	\$ 8,780,671	\$ 2,407,514	\$ 28,550,200	\$ 27,933,614	\$ 616,586
2013	\$ 2,737,819	\$ 13,087,089	\$ 8,788,867	\$ 2,226,585	\$ 26,840,360	\$ 27,933,614	\$ (1,093,254)
2014	\$ 2,834,201	\$ 13,565,774	\$ 8,739,949	\$ 2,510,009	\$ 27,649,934	\$ 27,762,292	\$ (112,358)
2015	\$ 3,034,120	\$ 13,868,975	\$ 8,971,534	\$ 2,175,025	\$ 28,049,654	\$ 27,762,292	\$ 287,362
2016	\$ 3,108,243	\$ 14,633,813	\$ 9,002,909	\$ 2,844,849	\$ 29,589,813	\$ 27,762,292	\$ 1,827,521
2017	\$ 2,522,714	\$ 15,043,745	\$ 9,278,048	\$ 3,311,148	\$ 30,155,656	\$ 27,762,292	\$ 2,393,364
2018	\$ 2,879,219	\$ 15,961,703	\$ 11,497,503	\$ 4,116,123	\$ 34,454,549	\$ 31,761,277	\$ 2,693,272
2019	\$ 2,578,352	\$ 15,996,797	\$ 11,463,241	\$ 4,280,880	\$ 34,319,270	\$ 31,761,277	\$ 2,557,993
2020	\$ 2,917,143	\$ 14,342,929	\$ 11,520,257	\$ 5,380,249	\$ 34,160,578	\$ 31,761,277	\$ 2,399,301
2021	\$ 3,024,165	\$ 15,334,987	\$ 12,302,485	\$ 5,348,351	\$ 36,009,987	\$ 35,345,221	\$ 664,767
2022	\$ 3,275,530	\$ 19,203,521	\$ 16,777,449	\$ 5,910,418	\$ 45,166,918	\$ 35,631,512	\$ 9,535,406

9  
 10 **Environmental Compliance Investment Charge**

11 **Q. Please generally describe the Company’s proposal to implement a new ECIC.**

12 A. PAWC seeks approval to establish an ECIC pursuant to Sections 1307 and 1330(b)(2) of  
 13 the Public Utility Code. The ECIC is a rate adjustment clause designed to reflect and  
 14 recover, between rate cases, the costs imposed on the Company to address and comply with  
 15 continuously evolving government-mandated environmental standards that are beyond the  
 16 Company’s control and difficult to estimate at any single point in time. As Company  
 17 witness Bruce W. Aiton explains in PAWC Statement No. 3, significant new or changed  
 18 regulatory requirements under a variety of environmental laws create the need for large

1 future investments in the Company’s assets and can impose substantial operations and  
2 maintenance (“O&M”) expenses, often in a short time frame, due to expedited compliance  
3 deadlines required by law or regulation. Under PAWC’s proposal, for inclusion in the  
4 ECIC, the costs must be consistent with the set of projects and activities set forth in an  
5 annual environmental compliance plan (“Environmental Plan”) that is subject to  
6 Commission review and approval as I will discuss later in my testimony.

7 **Q. Why is it appropriate to recover Environmental Plan costs through an alternative**  
8 **ratemaking mechanism under the authority granted to the Commission by Act 58?**

9 A. The Company’s proposed ECIC will provide a reasonable mechanism for adjusting the  
10 Company’s rates between base rate cases to ensure full and timely rate recognition of  
11 PAWC’s investments and measures undertaken to comply with new environmental  
12 regulatory mandates in a prudent and efficient manner as they emerge. PAWC has no  
13 control over the need for and timing of costs to comply with these new or changed  
14 regulatory requirements. The ECIC will also help avoid customer exposure to less frequent  
15 but more significant rate increases in a general base rate case by producing smaller, more  
16 gradual increases to customer bills driven by new regulations. In addition, permitting  
17 PAWC to recover ECIC-eligible capital costs and expenses through an automatic  
18 adjustment clause will reduce a major driver of the need for rate relief that would otherwise  
19 trigger a base rate case filing.

20 In sum, the ECIC helps ensure that PAWC receives adequate revenue to maintain  
21 safe, reliable, and compliant water and wastewater service that both meets government  
22 requirements and advances environmental policy objectives. It is my understanding  
23 through discussions with counsel that the Commission may consider the factors outlined

1 in its Policy Statement at 52 Pa. Code § 69.3302,<sup>6</sup> among any other relevant factors, when  
2 evaluating an alternative ratemaking mechanism. To assist the Commission in its review  
3 of the proposed ECIC, PAWC Exhibit JCS-1 addresses how each of those factors apply to  
4 the ECIC.

5 **Q. Have other jurisdictions approved the use of adjustment clauses for recovery of**  
6 **environmental compliance costs?**

7 A. Yes. As of July 2022, utility commissions in 30 states had approved various forms of  
8 environmental compliance riders or similar alternative ratemaking mechanisms.<sup>7</sup>  
9 Environmental compliance mechanisms are more prevalent for fully-integrated energy  
10 utilities, often for electric utilities with generating assets to comply with Environmental  
11 Protection Agency (“EPA”) mandates under the Clean Air Act. Utilities in other states  
12 have also utilized these recovery mechanisms to address compliance costs as a result of  
13 asbestos removal and manufactured gas plant remediation expenditures. In addition,  
14 another American Water subsidiary, Indiana-American Water Company, has a System  
15 Enhancement Improvement charge that allows for the recovery of environmental  
16 compliance costs imposed on the utility by a federal or state agency.

---

<sup>6</sup> “[T]he proposed policy statement is intended only to give guidance to fixed utilities and interested stakeholders on what is to be considered when investigating alternative ratemaking methodologies in a Section 1308 rate proceeding. While intending to assist utilities and stakeholders, the policy statement does not establish a binding norm, nor does it establish a predicate for the adoption of an alternative rate mechanism by any fixed utility.” *Implementation of Act 58 of 2018 Alternative Ratemaking for Utilities*, Docket No. M-2018-3003269 (Implementation Order entered Apr. 25, 2019).

<sup>7</sup> S&P Global Market Intelligence, *Regulatory Focus Topical Special Report – Adjustment Clauses: A state by state overview* (July 18, 2022).

1 **Q. Is PAWC facing a similar regulatory paradigm to fully-integrated electric utilities**  
2 **that are authorized to recover environmental compliance costs through alternative**  
3 **rate mechanisms in other jurisdictions?**

4 A. Yes. As further discussed in Mr. Aiton’s Direct Testimony in PAWC Statement No. 3, the  
5 EPA issued proposed drinking water regulations for six per- and polyfluoroalkyl  
6 substances (“PFAS”), which will establish legally enforceable levels for each of these six  
7 PFAS that are known to occur in drinking water. In addition to proposing enforceable  
8 limits for these six PFAS, the EPA proposes requirements for the continued monitoring of  
9 PFAS, public notification of monitoring results if they exceed defined limits, and the  
10 treatment of drinking water to reduce PFAS to required limits. Once the PFAS Rule is  
11 finalized, which is expected to occur in the coming months, public water systems will be  
12 required to modify their facilities to comply with the Rule within three years. Similarly,  
13 the Pennsylvania Department of Environmental Protection has also adopted drinking water  
14 standards for PFAS that will require compliance monitoring and the adoption of additional  
15 or modified treatment systems, modification of sources, or a combination of actions.

16 PAWC’s compliance with the federal and state PFAS Rules will require significant  
17 capital investment, currently estimated at over \$1 billion of capital expenditures for all of  
18 American Water’s thirteen (13) regulated jurisdictions, along with ongoing annual  
19 operating expenses estimated at approximately \$50 million related to testing and  
20 treatment.<sup>8</sup> For PAWC, this estimated capital investment is substantial yet difficult to  
21 estimate pending the results of monitoring and completion of certain pilot treatment and

---

<sup>8</sup> American Water Works Company, Inc. SEC 10-Q, July 26, 2023 (page 33)  
<https://www.sec.gov/ix.xhtml?doc=/Archives/edgar/data/1410636/000141063623000116/awk-20230630.htm>

1 other studies. Company witness Bruce W. Aiton provides a more detailed explanation of  
2 the PAWC impacts in PAWC Statement No. 3.

3 **Q. What projects will be eligible for ECIC recovery?**

4 A. ECIC eligible projects will include capital costs and expenses incurred to comply with  
5 significant new or changed legal or regulatory requirements imposed or reasonably  
6 anticipated to be imposed under applicable Environmental Laws. Applicable  
7 Environmental Laws will include, but not be limited to, any statutes, regulations, orders,  
8 and other legal mandates relating to protection of the environment, public health and safety,  
9 or natural resources, such as the EPA's PFAS Rule.

10 **Q. Will the Environmental Plan be approved by the Commission before the associated**  
11 **costs are eligible for recovery through the ECIC?**

12 A. Yes. PAWC is proposing the following review and approval process for Environmental  
13 Plans, which affords due process to interested stakeholders and provides transparency  
14 regarding all ECIC eligible projects.

- 15 • PAWC will file a copy of its Environmental Plan, detailing the specific projects,  
16 estimates, timing, and justification for inclusion within the ECIC.
- 17 • The Commission will publish the Environmental Plan in the Pennsylvania Bulletin.
- 18 • Answers and/or Comments regarding the Environmental Plan will be due 20 days after  
19 Bulletin publication.
- 20 • If no Answers or Comments are filed and the Commission chooses not to institute an  
21 investigation, the Environmental Plan will be deemed effective 21 days after Bulletin  
22 publication.

- 1           • If a party files an Answer or Comments regarding the Environmental Plan within  
2           20 days of Pennsylvania Bulletin publication or the Commission institutes an  
3           investigation regarding the Environmental Plan, the Commission shall rule on the  
4           Environmental Plan no later than 120 days of the date the Environmental Plan was filed  
5           at the Commission.
- 6           • If only Comments are filed, PAWC will file a revised Plan, Reply Comments, or both  
7           20 days after the Comments are submitted.
- 8           • If Answers are filed, the Plan will be assigned to an Administrative Law Judge for a  
9           hearing to be held within 65 days of the Plan’s filing date.
- 10          • Briefs are due 10 days after the hearing.
- 11          • PAWC will have 10 days after Briefs are filed to submit a revised Plan, Reply Brief,  
12          or both.
- 13          • The Administrative Law Judge will certify the Evidentiary Record.
- 14          • The Commission will rule on the Environmental Plan within 120 days of the Plan’s  
15          filing date.

16          PAWC believes this review process is feasible for the Commission and stakeholders  
17          because it is nearly identical to the process followed by the Commission when reviewing  
18          electric distribution companies’ energy efficiency and conservation plans.<sup>9</sup> In recognition  
19          of the urgency of ECIC eligible projects caused by mandatory regulatory compliance  
20          deadlines, an expedited review process for the Company’s annual Environmental Plan is  
21          reasonable.

---

<sup>9</sup> See, e.g., *Petition of PPL Electric Utilities Corporation for Approval of its Act 129 Phase IV Energy Efficiency and Conservation Plan*, Docket No. M-2020-3020824 (Order entered Mar. 25, 2021), pp. 4-5; *Energy Efficiency and Conservation Program*, Docket No. M-2020-3015228 (Implementation Order entered Jun. 18, 2020), pp. 86-91.

1 **Q. How will the ECIC revenue requirement be calculated?**

2 A. The ECIC will capture the fixed costs of the Environmental Plan capital investments placed  
3 in-service after the end of the FPFTY in this case. The fixed costs will include the pre-tax  
4 return on the capital investment, the annual depreciation expense associated with the capital  
5 investments, incremental operating expenses within the Environmental Plan, and any  
6 associated deferrals associated with the capital investments. The fixed costs will be  
7 captured quarterly, with the ECIC effective one month after this date, as shown in the table  
8 below:

Environmental Plan Plant Additions As of	ECIC Rate Effective Date
March 31	May 1
June 30	August 1
September 30	November 1
December 31	February 1

9

10 **Q. How will the pre-tax return applied to ECIC eligible projects be calculated?**

11 A. The pre-tax return will be calculated using the state and federal income tax rates, the  
12 Company's actual capital structure, and actual costs rates for long-term debt and preferred  
13 stock as of the last day for the quarterly period (one-month prior to the ECIC Rate Effective  
14 date). The cost of equity will be the equity return rate approved in the Company's last fully  
15 litigated base rate proceeding for which a final order was entered, not more than two (2)  
16 years prior to the effective date of the ECIC. If more than two (2) years have elapsed  
17 between the entry of a such a final order and the effective date of the ECIC, then the equity  
18 return rate used in the calculation will be the authorized Distribution System Improvement  
19 Charge ("DSIC") Return for Water Utilities calculated by the Commission Staff in the

1 latest Quarterly Report on the Earnings of Jurisdictional Utilities released by the  
2 Commission.

3 **Q. Please describe how the ECIC depreciation expense will be calculated.**

4 A. The ECIC depreciation expense on the original cost of Environmental Plan projects will be  
5 calculated by applying the annual accrual rates employed in the Company's last base rate  
6 case for the plant accounts in which each retirement unit of Environmental Plan projects is  
7 recorded.

8 **Q. Is PAWC requesting authorization to defer any ECIC-related costs until inclusion in  
9 the ECIC rider?**

10 A. Yes. Until such point as the Environmental Plan investments and the associated fixed costs  
11 are included for recovery in the ECIC, PAWC requests authorization to defer depreciation  
12 expense and post-in-service carrying costs ("PISCC") from the period the investment is  
13 placed in-service until it is included in the ECIC rates for recovery. The depreciation  
14 expense deferred will be calculated consistent with the recoverable depreciation expense  
15 in the quarterly revenue requirement. The PISCC will be calculated using the Company's  
16 actual after-tax rate of return for the previous ECIC quarter, applied to the net plant value  
17 (gross plant less accumulated depreciation) of eligible Environmental Plan investments in-  
18 service.

19 **Q. How will these ECIC deferrals be recovered?**

20 A. PAWC will amortize the deferred balances over the remaining life of the investments, with  
21 only the annual amortization expense recovered within the ECIC. The Company will not  
22 seek a return on these deferred balances.

1 **Q. Please describe the schedule for ECIC rider updates.**

2 A. The ECIC will be updated quarterly, with supporting data for each quarterly update filed  
3 with the Commission and served upon the Commission’s Bureau of Investigation and  
4 Enforcement, Commission’s Bureau of Audits, the Office of Consumer Advocate and the  
5 Office of Small Business Advocate at least ten (10) days prior to the effective date of the  
6 update.

7 **Q. How will the ECIC rider be assessed to customers?**

8 A. The ECIC will be expressed as a percentage carried to two decimal places and will be  
9 applied to the total amount billed to each customer for service under the Company’s  
10 otherwise applicable rates and charges, excluding amounts billed for public fire protection  
11 service, the State Tax Adjustment Surcharge (“STAS”), and the DSIC (collectively,  
12 “excluded amounts”). One-fourth of the annual fixed costs associated with the  
13 Environmental Plan projects will be divided by the Company’s projected revenue for sales  
14 for water (including all applicable clauses and riders and less the excluded amounts) for  
15 the quarterly period during which the charge will be collected. The ECIC shall be applied  
16 equally to all customer classes.

17 **Q. Will the ECIC be audited and reconciled?**

18 A. Yes, the ECIC will be subject to audit at intervals determined by the Commission and to  
19 reconciliation annually for the twelve (12) months ending December 31 of each year. With  
20 respect to reconciliation, the revenue received under the ECIC for the reconciliation period  
21 will be compared to the Company’s eligible costs for that period, with any difference  
22 between revenues and costs recouped from or credited to customers, as appropriate, in  
23 accordance with Section 1307(e) over a one-year period commencing on May 1 of each

1 year. The Company may elect to reconcile the ECIC quarterly, but only upon request and  
2 approval by the Commission.

3 Any over- or under-collection of revenues compared to ECIC eligible costs will be  
4 subject to interest, calculated at the residential mortgage lending specified by the Secretary  
5 of Banking in accordance with the Loan Interest and Protection Law (41 P.S. § 101, et  
6 seq.). Interest will be refunded to or collected from customers in the same manner and any  
7 over- or under-recovery collection.

8 **Q. Will the ECIC reset with the implementation of future base rates?**

9 A. Yes. The ECIC will be reset to zero upon application of new base rates to customer billings  
10 that provide for prospective recovery of the annual costs that had theretofore been  
11 recovered under the ECIC.

12 **Q. Will the ECIC be subject to an earnings evaluation?**

13 A. Yes. The ECIC may be reset to zero if, in any quarter, data filed with the Commission in  
14 the Company's then most recent Annual or Quarterly Earnings reports show that the  
15 Company will earn a rate of return that would exceed the allowable rate of return used to  
16 calculate its fixed costs under the ECIC.

17 **Conclusion**

18 **Q. Does this conclude your direct testimony at this time?**

19 A. Yes, it does.

DOCKET NOS. R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)

VERIFICATION

I, **J. Cas Swiz**, hereby state that the facts set forth in the pre-marked Statement No. 8 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Date: November 8, 2023

**Pennsylvania-American Water Company  
Response to Distribution Rates – Statement of Policy  
Proposed Environmental Compliance Investment Charge (ECIC)**

**52 Pa. Code § 69.3302. Distribution rate considerations.**

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa.C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

- (1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

**The ECIC recovers the costs associated with eligible environmental compliance costs from all customer classes via a percentage applied to the total amount billed. The ECIC is thus applied consistent with PAWC's base rates.**

- (2) How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.

**This factor is not applicable to water and wastewater utilities.**

- (3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.

**See the response to item (1).**

- (4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

**The proposed ECIC will be applied equally to all customer classes and will not affect interclass or intraclass cost shifting.**

- (5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

**The proposed ECIC will not impact efficiency programs or incentives.**

- (6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

**See the response to item (5).**

- (7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

**The proposed ECIC does not have any specific impacts on low-income customers that do not apply to residential customers (or other customers) generally. Without the ECIC, the same costs for environmental projects would be borne by the same ratepayers effective after the next base rate case. The ECIC will allow for rates to increase as certain environmental projects are undertaken, and thus those increases will be more gradual than if deferred between base rate cases.**

- (8) How the ratemaking mechanism and rate design impact customer rate stability principles.

**The proposed ECIC, updated quarterly and reconciled annually, will provide gradual changes to customer rates and bills as opposed to more significant increases typically experienced in base rate cases.**

- (9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

**The ECIC, like the Company's existing DSIC mechanism, will be reconciled annually whereby actual recoveries are compared to authorized/required recoveries, with any variances recovered from or credited to customers in subsequent ECIC charges. Specific to any weather variability in customer usage, this reconciliation ensures that no more or less than what the Company is required or authorized to recover is actually recovered in rates and charges to customers.**

- (10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

**The Company's environmental compliance requirements are continuously evolving and is one of the drivers that increases the costs of water and wastewater service and the need for rate relief. As discussed in more detail in PAWC Statement Nos. 3 and 8, the need for and timing of measures to comply with new or changed government mandates under applicable environmental laws are outside of the Company's control. The Company's proposed ECIC will provide a reasonable mechanism for gradually adjusting the Company's rates between base rate cases to ensure full and timely rate recognition of PAWC's investments and related operating costs undertaken to comply with new environmental mandates in a prudent and efficient manner as they emerge. Permitting PAWC to recover ECIC-eligible capital costs and expenses through an automatic adjustment clause will reduce a major driver of the need for rate relief that would otherwise trigger a base rate case filing.**

- (11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9)

(relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).

**The Company's proposed ECIC does not interact with other revenue sources. The proposed ECIC excludes assets that are currently eligible for recovery under the existing DSIC mechanism, and will function similar to the DSIC in design, applicability, and recovery. The proposed ECIC will be reset to zero at the implementation of new base rates in future proceedings.**

- (12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

**The proposed ECIC incorporates consumer protections by:**

- (1) requiring that costs recoverable through the ECIC be consistent with the set of projects and activities set forth in an annual environmental compliance plan to be filed by the Company and approved by the Commission; and**
- (2) requiring the audit and reconciliation annually of the ECIC, to ensure that all costs included for recovery are eligible and appropriate, and that customers in total pay no more or less over the course of a year than the authorized level of costs associated with the Environmental Plan.**

- (13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

**The Company does not anticipate that there would be any issues related to customer confusion over the proposed ECIC. Infrastructure mechanisms like the ECIC exist today and are not new to the utility industry. The ECIC is separate and distinct from other existing mechanisms. An explanatory bill insert will be included with the first billing, and customers will be notified of changes in the ECIC by including appropriate information on the first bill they receive following any change.**

- (14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

**The proposed ECIC will support improvements in the ability of PAWC to continue providing safe, adequate, and reliable water quantity and quality, while complying with applicable drinking water and environmental regulations. The ECIC will support investment in PAWC's water and wastewater system to address emerging contaminants in a cost-effective manner.**

# Statement No. 9

## Degillio

**PAWC STATEMENT NO. 9**

**DIRECT TESTIMONY  
OF  
DEBORAH A. DEGILLIO**

**DESCRIBING  
PENNSYLVANIA-AMERICAN WATER COMPANY'S CUSTOMER SERVICE  
OBJECTIVES, CUSTOMER SERVICE ORGANIZATION AND CUSTOMER  
ASSISTANCE PROGRAMS**

**DOCKET NOS.  
R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)**

**DATE: November 8, 2023**

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**DIRECT TESTIMONY OF DEBORAH A. DEGILLIO**

1 **Q. What is your name and business address?**

2 A. My name is Deborah A. Degillio. My business address is 1 Water Street, Camden NJ.

3 **Q. By whom are you employed and in what capacity?**

4 A. I am employed by American Water Works Service Company, Inc. (“AWWSC” or “Service  
5 Company”) as Vice President and Chief Customer Officer. I am providing testimony on  
6 behalf of Pennsylvania-American Water Company (“PAWC” or the “Company”).

7 **Q. Please summarize your educational background and professional experience.**

8 A. I received a Bachelor of Science degree in Finance and Math from the University of  
9 Wisconsin at LaCrosse in 1995 and a Master of Business Administration from the Stephen  
10 M. Ross School of Business, University of Michigan, with distinction, in 2012. I have  
11 been employed by AWWSC since April 2007. I have held various positions in the finance  
12 organization, including leading Financial Planning and Treasurer, as well as operational  
13 roles including President of New Jersey American Water Company. I became the Chief  
14 Customer Officer in March of 2019. Previous to my employment with AWWSC, I was  
15 employed by MCR Performance Solutions (“MCR”) from 2000 through 2006. MCR is a  
16 management consulting company, working with utility clients. Prior to MCR, I worked  
17 with other management consulting companies and my focus was with utility clients. I have  
18 over twenty-five years of utility experience, mostly in the finance and customer service  
19 aspects.

1 **Q. What are your current employment responsibilities?**

2 A. My primary responsibility in my role as Vice President and Chief Customer Officer is to  
3 focus on further developing and advancing all aspects of the American Water Works  
4 Company, Inc. (“American Water”) customer experience strategy. I lead the Company’s  
5 efforts in building and maintaining programs that leverage technology and advance the  
6 overall customer experience in an effort to better understand and address customer  
7 concerns. I oversee the Customer Service Organization (“CSO”), which includes over  
8 480 employees and almost 350 third-party, fully dedicated contractors who perform  
9 collections and support our inbound call handling team. My team supports all American  
10 Water regulated subsidiary utilities, including PAWC.

11 **Q. What is the purpose of your direct testimony?**

12 A. First, I will provide an overview of American Water’s customer service function and  
13 functions we perform for PAWC customers. Next, I will explain how the CSO uses  
14 customer feedback to drive high levels of customer satisfaction. I will also discuss the  
15 CSO’s efforts in recent years to improve the quality of PAWC’s customer service and  
16 achieve the Company’s customer service performance objectives. Finally, I will discuss  
17 the customer assistance programs offered by PAWC to help low-income and payment-  
18 troubled customers and enhancements to those programs the Company is proposing in this  
19 proceeding.

20 **CUSTOMER SERVICE OVERVIEW**

21 **Q.** Please describe the CSO and the functions it performs for PAWC customers.

22 A. The CSO is operated by AWWSC and supports the customer service needs of PAWC and  
23 the other American Water utility subsidiaries. The CSO responds to customer inquiries,

1 maintains customer information systems and the “myWater” customer self-service portal,  
2 provides billing and collections services and performs other customer service functions.

3 The CSO’s responsibilities include, but are not limited to, the following:

4 Customer Call Handling

- 5 • Establish and maintain customer/account records;
- 6 • Address customer inquiries concerning billing, credit and collections, service  
7 orders, and other matters;
- 8 • Field all inbound phone calls for initial customer queries and, if necessary,  
9 forward matters to appropriate parties for resolution;
- 10 • Create records of customer interactions in the Company’s customer information  
11 system, SAP and in the myWater customer portal;
- 12 • Assist with payment options, taking payments and assistance programs (e.g.,  
13 payment plans);
- 14 • Process move in and move out requests;
- 15 • Forward certain customer inquiries to field operations and water quality team  
16 members for resolution;
- 17 • Update customers who call to inquire about the status of service orders; and
- 18 • Provide assistance to customers with the myWater portal, such as password  
19 resets.

20 Billing

- 21 • Generate bills according to billing schedules and authorized tariffs;

- 1 • Resolve billing disputes and billing exceptions (out-of-range variances) not  
2 requiring field investigations;
- 3 • Issue service orders to resolve billing investigations requiring field  
4 investigations; and
- 5 • Implement and maintain controls to ensure all “active” accounts are billed  
6 according to authorized tariff frequencies.

### 7 Collections

- 8 • Monitor and/or generate and send for printing and distribution all collections-  
9 related notices;
- 10 • Manage services for customers who call to arrange payments to avoid shut-off  
11 notices for delinquent payments and that notify customers if service  
12 discontinuance is scheduled;
- 13 • Monitor and oversee the process to issue shut-off notices and schedule shut-off  
14 for non-payment;
- 15 • Maintain records for extended payment plans;
- 16 • Process bankruptcy claims; and
- 17 • Process refunds.

### 18 Operations Support and Field Resource Control Center

- 19 • Back-office support for billing exceptions, primarily associated with metering;
- 20 • Identify and investigate customer issues related to service orders for 1) zero  
21 consumption on active meters, 2) consumption on meters at premises with no  
22 active account holder, and 3) certain other meter readings;

- Coordinate and dispatch high priority work (e.g., emergencies, escalations and same-day appointments); and
- Coordinate service alerts.

Other Customer Service Functions

- Management of our customer insights program, including all surveys and customer feedback;
- Implementation of all tariff changes in SAP, including price and rate changes and associated testing of any changes to tariffs;
- Training and quality assurance for the CSO; and
- Support PAWC and its regulated utility affiliates with customer issues management, reporting and other information requests, as well as management of information required for effective handling of customer transactions and requests.

**Q. Are there benefits to PAWC to having customer service provided by the comprehensive and centralized CSO?**

A. Yes. The advantages include efficiency, consistency, and resiliency. By consolidating the customer service function of American Water’s regulated utility operating companies, each operating company enjoys greater economies of scale than would be available to individual, stand-alone company customer service departments. Resources such as equipment, training, monitoring, and supervision can be sourced more efficiently on a consolidated basis, which mitigates the costs ultimately borne by customers. A centralized CSO also ensures consistency of customer service quality and training across jurisdictions

1 and that each operating company benefits from the lessons learned and best practices  
2 developed by the CSO. The use of a centralized, common CSO staff to provide service to  
3 multiple operating companies also means that additional staff are available should one  
4 company experience a spike in call volumes due to, for example, an increased number of  
5 main breaks due to local weather conditions. The geographic diversity of the locations of  
6 the customer care agents (“CCAs”) that support the CSO creates resiliency, ensuring  
7 continued service in case of a severe weather event, work stoppage or other contingency in  
8 a single service territory.

9 **Q. How does the CSO ensure that all CCAs comply with Pennsylvania consumer**  
10 **protection regulations and requirements?**

11 A. With a limited exception for agents who work on weekends or overnights when the CSO  
12 handles only emergency calls, CCAs do not take calls from PAWC customers until they  
13 have completed the three-day Pennsylvania-specific training program. The CSO has a  
14 robust quality assurance (“QA”) process that is executed by an internal team of  
15 professionals who are focusing on agents’ adherence with Pennsylvania consumer  
16 protection rules and internal processes, as well as improvement opportunities for customer  
17 experience and employee training and coaching. We record all inbound calls to our toll-  
18 free numbers and utilize customer feedback to prioritize the calls we send to our QA team  
19 in an effort to focus on calls with the lowest customer satisfaction. We include coaching  
20 and training for our agents in weekly discussions, direct interactions with supervisors and  
21 group training tools, which include compliance with Pennsylvania regulations. In 2021,  
22 17% of calls handled by CCAs were from PAWC customers, and in 2022 19% of calls  
23 handled by CCAs were from PAWC customers. As of September 30, 2023, over 47% of

1 CCAs (internal and agency) were certified in Pennsylvania regulations and available to  
2 handle those call volumes.

### 3 **CUSTOMER INSIGHTS AND SATISFACTION DRIVERS**

4 **Q. Is customer satisfaction used as a key performance indicator of the CSO's customer**  
5 **service?**

6 A. Yes. The CSO is focused on providing customers with convenient access to information  
7 and responsive, personal service to drive high satisfaction ratings. However, customer  
8 satisfaction is more than how fast we answer a call. The syndicated J.D. Power U.S. Water  
9 Utility Residential Customer Satisfaction Study ("J.D. Power Study") measures  
10 satisfaction among residential customers of over 90 water utilities across the United States.  
11 The 2023 J.D. Power Study based on 36,833 responses found that residential customer  
12 satisfaction is driven by the following six factors: quality and reliability (29%), price/value  
13 of service (20%), conservation (15%), billing and payment (14%), communications (15%),  
14 and customer service (6%). Only one of thirteen key customer satisfaction indicators  
15 identified in the 2023 JD Power Study – first contact resolution – related to call center  
16 performance. The other twelve major performance factors involved quality and value of  
17 service and conservation. In his direct testimony, Company witness Jim Runzer (PAWC  
18 Statement No. 2) discusses those areas outside of the CSO that drive customer satisfaction,  
19 for example, the Company's efforts to protect water supplies and improve the impact of  
20 operations on the environment, ongoing enhancements to deliver high quality water to  
21 PAWC customers, PAWC's conservation initiatives, and how we provide tips to customers  
22 to conserve.

1 The CSO employs a robust feedback process and tools to determine how well we meet –  
2 or exceed – customer expectations and to develop customer service performance  
3 objectives. PAWC and the CSO leverage multiple sources of customer feedback to  
4 monitor overall customer satisfaction and satisfaction with individual service experiences,  
5 including targeted surveys taken immediately after phone, field and customer portal  
6 interactions and a customer satisfaction survey of all PAWC customers conducted  
7 quarterly. This approach allows the Company and the CSO to stay abreast of changing  
8 customer expectations and align performance goals to meet those customer needs. For  
9 example, in 2022, the Company adopted a performance objective for first contact  
10 resolution based on customer feedback that a timely response to their inquiries improves  
11 satisfaction and reduces customer effort. CSO leadership regularly engages PAWC  
12 leadership regarding customer service performance objectives in an effort to drive higher  
13 customer satisfaction for PAWC customers by, among other things, sharing customer  
14 feedback data in real time through an online dashboard.

15 **Q. How does the CSO rate with respect to customer satisfaction?**

16 A. I believe the CSO rates quite well. In response to our phone-based and web-based  
17 transaction surveys conducted between January 1, 2023 and August 31, 2023, 70% of  
18 PAWC customers served by the CSO rated our CCAs' overall performance as excellent or  
19 very good, and 94% of PAWC customers rated overall service appointment experience as  
20 excellent or very good.

1 **CUSTOMER SERVICE PERFORMANCE OBJECTIVES AND IMPROVEMENT**  
2 **INITIATIVES**

3 **Q. Has the CSO increased staffing to facilitate Company performance objectives in**  
4 **answering calls in a timely manner and avoiding a significant abandonment rate?**

5 A. Yes. The CSO experienced an unusually high level of attrition among CCAs available to  
6 handle customer calls due to the COVID-19 emergency during the 2020-2022 period.  
7 Since the onset of the pandemic, the CSO has added CCAs across the American Water  
8 footprint to reduce wait times for customers. As of September 30, 2023, 355 CCAs were  
9 available to handle customer calls compared to staffing levels as low as 281 CCAs over  
10 2020 and 2021. This increased complement of trained personnel has improved service  
11 levels with CCAs answering 67% of calls within 60 seconds year to date in 2023 (January  
12 through August) compared to 45% in 2022 overall. As shown in Table 1 below, the CSO’s  
13 hiring and recruitment efforts over the past several years has reduced wait times and the  
14 call abandonment rate for customers that do not utilize the courtesy call-back feature in the  
15 CSO’s interactive voice response (“IVR”) system.

<b>Table 1</b>				
<u>Year</u>	<u>Annual Percentage of Calls Answered in 60 Seconds</u>	<u>First Contact Resolution</u>	<u>Average Speed of Answer (minutes)</u>	<u>Abandonment Rate</u>
2020	67%	N/A	4:43	15%
2021	43%	N/A	10:19	24%
2022	45%	53%	7:50	21%
2023 (January through August)	67%	57%	2:37	9%

1 As shown in Table 1, the Company has made substantial progress in 2023 toward its  
2 performance objectives of answering 80% of calls within 60 seconds and achieving a call  
3 abandonment rate of 8%.

4 **Q. Has the CSO implemented enhancements to the Company's myWater customer**  
5 **service portal to help PAWC customers to efficiently manage their accounts online?**

6 A. Yes. Currently, nearly 50% of PAWC customers complete transactions with the Company  
7 online. The CSO and PAWC continue to expand options for customers to communicate  
8 with the Company and access information about their utility service through online self-  
9 service options. The myWater portal allows PAWC customers to effortlessly make  
10 payments, view water usage history, check balances and schedule appointments for some  
11 service items, 24 hours a day, 7 days a week. Through the portal, customers can also enroll  
12 in the Company's free paperless billing program and schedule automatic payments. The  
13 CSO continually refines the myWater portal to expand functionality and improve the  
14 customer experience. Since the myWater portal was launched in 2020, the CSO has  
15 implemented a variety of enhancements, including allowing automatic credit card  
16 payments, allowing customers to apply for a leak adjustment online, and improved  
17 navigation and scrolling.

18 **Q. Please explain the CSO's efforts to increase paperless billing to increase customer**  
19 **engagement and, ultimately, satisfaction.**

20 A. About 25% of PAWC customers are enrolled in paperless billing today. Increasing  
21 adoption of paperless billing is a key CSO initiative to improve customer satisfaction  
22 because it provides a convenient way for customers to access, pay and store their bills.

1 Using the Company's self-service portal to pay bills online reduces the time spent paying  
2 that bill, the clutter that comes with paper bills and a customer's carbon footprint. Paperless  
3 billing also reduces the Company's postage and paper costs by over \$6.75 per bill per year.  
4 Postage rates increased twice in 2023 including a five percent increase in January 2023 and  
5 another five percent increase in July 2023. Postage rates are forecasted to increase twice a  
6 year going forward, so the operational cost savings from paperless billing will only  
7 continue to grow.

8 In 2023, PAWC encouraged customers to learn more about paperless billing and  
9 enroll in several communications, including a bill insert to all customers in August 2023,  
10 two customer emails in August and October 2023 with approximately 495,000 successful  
11 deliveries and three email campaigns where customers could establish a myWater account  
12 and enroll in paperless billing with one click. The Company's myWater users also receive  
13 a web pop-up every six months to remind them about the paperless billing option. PAWC  
14 employs many other tools to encourage customers to consider paperless billing including  
15 social media, website assets, on-bill and bill envelope messaging, and new welcome kits.  
16 The CSO also has scripting for CCAs to encourage, but not require, new customers to sign  
17 up for paperless billing.

18 **Q. Ms. Degillio, what strategies has the CSO pursued in the last two years to maintain**  
19 **high levels of overall customer satisfaction?**

20 A. As stated above, the CSO is always seeking ways to improve the experience of our  
21 customers and to perform our services more efficiently. I will highlight a few notable  
22 improvements made in the past 24 months based on customer feedback and evolving  
23 industry best practices. First, the CSO bolstered quality assurance for call handling.

1 Previously, we listened to at least ten calls per CCA per month that were randomly selected.  
2 The Company's call handling QA process includes reviewing any call where the customer  
3 rated the call as poor in the post-transaction survey. This not only allows us to provide  
4 better and more timely feedback to our CCAs and supervisors, but we are also able provide  
5 prompt and targeted training to ensure overall customer satisfaction with the CCA.

6 In addition to enhancements to the myWater portal, the CSO has streamlined customer  
7 interactions by updating website and IVR content and adding a virtual assistant to answer  
8 frequently asked questions and recurring concerns quickly so there is less need to talk to a  
9 CCA. The CSO also has pursued technological advancements in recent years to streamline  
10 administrative tasks and provide more time for our employees to focus on customer  
11 interactions. For example, in 2022, the CSO automated employee time and attendance.  
12 Prior to this upgrade, supervisors in both our billing and customer care teams had to engage  
13 in a time-consuming manual process to review when employees logged in for work and  
14 when breaks were taken to manage attendance.

15 **Q. Are there any recent CSO improvements pertaining to PAWC's commercial and**  
16 **industrial ("C&I") customers that you would like to highlight?**

17 A. Yes. Over the past 24 months, we have made improvements for our C&I customers and  
18 residential customers with more than one meter. One example is collective billing, which  
19 is where a customer can combine multiple meters into one bill. The same customer can  
20 access all of their accounts with a single sign-on to the myWater portal. We also held  
21 webcasts for major accounts in 2022 on conservation and diversity, equity, and inclusion.  
22 PAWC's major accounts program also now offers personalized service and a single point

1 of contact for the Company’s largest C&I customers to provide value-based solutions and  
2 improve their overall customer experience.

3 **COMMITMENT TO CUSTOMER ASSISTANCE**

4 **Q. How does PAWC provide assistance to customers who may need help paying their**  
5 **water or wastewater bills?**

6 A. Affordability is critical to PAWC and American Water. Company witness Charles Rea  
7 describes how we assess the affordability of water and wastewater service in his direct  
8 testimony (PAWC Statement No. 10). PAWC has multiple ways to help customers in need,  
9 including low-income customer assistance programs, which I discuss below, budget billing  
10 and payment plans.

11 **Q. Please describe the Company’s existing low-income customer assistance programs.**

12 A. Under the H2O Program, PAWC offers a range of financial assistance for qualifying water  
13 and wastewater customers. The H2O Bill Discount Program (“BDP”) provides substantial  
14 bill reduction assistance for both water and wastewater customers with annual household  
15 incomes at or below 150% of the Federal Poverty Level (“FPL”). Additionally, BDP  
16 participants can receive water-saving device kits and educational programming through the  
17 H2O Program to help those customers conserve water and potentially lower their water and  
18 wastewater bills. BDP participation is “portable,” meaning that an otherwise qualified  
19 customer will not be removed from the BDP if the customer changes their service address  
20 to another location within the Company’s service territory.

21 The H2O Program also provides Hardship Grants for qualifying customers with annual  
22 household incomes at or below 200% of the FPL. A customer may receive a Hardship

1 Grant equal to the customer’s total account balance at the time of grant issuance, up to the  
2 maximum annual grant amount of \$500 for water service and \$500 for wastewater service.  
3 H2O Hardship Grants are funded through an annual corporate donation (currently  
4 \$625,000 for water and \$125,000 for wastewater) as well as customer and employee  
5 donations.

6 **Q. Does the Company perform outreach to customers regarding its low-income**  
7 **assistance programs?**

8 A. Yes. PAWC utilizes a variety of tools and methods to inform its customers about the  
9 benefits provided by the H2O Program, including direct customer communication,  
10 participation in PUC consumer education events and local community events, and Dollar  
11 Energy Fund (“DEF”) outreach.

12 *Direct Customer Communications.* PAWC combines broad-based  
13 communications to all residential PAWC customers with more targeted outreach activities  
14 to educate customers about assistance programs. The broader communications strategy  
15 includes bill inserts, email campaigns, the New Customer Booklet and social media (e.g.,  
16 Facebook, Twitter, and YouTube). PAWC customers may also call our toll-free customer  
17 service line or visit PAWC’s website for information on the benefits available under the  
18 H2O Program (with downloadable flyers available in both English and Spanish) and how  
19 to contact the Company to apply for the program. PAWC also employs targeted social  
20 media, direct mail and in-person outreach in zip codes with higher percentages of low-  
21 income customers overall (i.e., household income of 0-150% of FPL) as well as zip codes  
22 with higher percentages of customers with a household income of 0-50% of FPL. For  
23 example, the Company recently promoted its BDP and Hardship Grants via a direct mailing

1 to the 32 zip codes with the highest percentages of customers in the 0-150% of FPL range,  
2 representing approximately 55,000 customers. PAWC has also partnered with community  
3 service organizations such as the Chester County Food Bank and Phillipsburg YMCA to  
4 make customer assistance program fact sheets available to food pantry recipients.

5 ***PUC Events.*** The Commission’s consumer education events are also an important  
6 part of the PAWC’s outreach program. For many years, PAWC has been an active  
7 participant in the PUC Be Utility Wise (“BUW”) consumer education event promoting  
8 consumer awareness, utility education, life management skills and financial literacy. The  
9 BUW events bring together hundreds of representatives from front-line community-based  
10 organizations (“CBOs”) and other key stakeholders to engage, educate and help them better  
11 understand utility customer assistance programs available in their communities. The event  
12 focuses on ways to help low-income households maintain essential services by: (1) sharing  
13 tools and resources about customer assistance program and conservation; (2) reviewing  
14 information and guidelines about support programs; and (3) exchanging ideas on ways to  
15 improve service to at-risk households.

16 ***Local Community Events.*** PAWC also participates in many local events across the  
17 state, including utility fairs and senior fairs, to interact directly with customers. These  
18 events are held in neighborhood schools, churches, community centers, malls/shopping  
19 centers, and other community locations. For example, in the summer months of 2023,  
20 PAWC participated in several utility or customer assistance program fairs in the following  
21 areas, among others: Lackawanna County, Luzerne County, Coatesville, Port Vue,  
22 Duquesne City, Fayette County, Kane Borough, New Castle City, Clarion Borough, and  
23 Warren City. The Company has also focused on communicating low-income program

1 information in Spanish to several of its communities with higher concentrations of Spanish-  
2 speaking customers.

3 **DEF Outreach.** Finally, DEF provides public education about the Company's  
4 H2O Program through public service announcements, press releases, community speaking  
5 engagements, networking, and other methods deemed effective in alerting the public about  
6 the availability of the Company's low-income assistance programs and how the community  
7 can contribute to the Hardship Fund.

8 **Q. Has the Company proposed an arrearage management program ("AMP") for**  
9 **qualifying low-income customers?**

10 A. Yes. In PAWC's 2020 base rate proceeding, the Company agreed that it would present an  
11 AMP to the Commission for review and approval no later than six months after a final  
12 order in that proceeding. PAWC filed a petition to request approval of its AMP with the  
13 Commission on August 25, 2021 at Docket No. P-2021-3028195. The AMP proceeding  
14 is ongoing and a Further Amended Joint Petition for Full Settlement was filed on  
15 September 11, 2023 ("AMP Settlement"). Under the pending AMP Settlement, a customer  
16 is eligible to enroll in the AMP if: (1) they provide documentation establishing a household  
17 income is at or below 150% of the FPL, subject to the income-related provisions in the  
18 AMP Settlement; (2) they are enrolled or seeking enrollment in the BDP; and (3) they have  
19 at least a \$150 arrearage balance (inclusive of water and/or wastewater charges), including  
20 arrearages that are at least 60 days past due. Customers participating in the AMP will  
21 receive \$25 of arrearage forgiveness for each in-full payment of current charges plus the  
22 \$5 co-pay made while the customer is in the program. Participants must recertify their  
23 income according to timelines detailed in the AMP Settlement in order to remain in the

1 program. If the AMP Settlement is approved, the Company will implement the AMP no  
2 later than twelve months after the Final Order in the AMP proceeding.

3 **Q. Is the Company planning to make any enhancements to these low-income customer**  
4 **assistance programs?**

5 A. Yes, the Company intends to make enhancements to the BDP, AMP and Hardship Fund to  
6 provide additional bill assistance to customers and also align program requirements. For  
7 the BDP, as explained in more detail by Mr. Rea in PAWC Statement No. 10, the Company  
8 is proposing to expand eligibility to customers with household income at or below 200%  
9 of the FPL. If approved by the Commission for the Company's BDP, the Company also  
10 intends to offer the AMP to qualifying BDP participants at or below the 200% of the FPL.  
11 In addition, the Company is actively working on implementing income verification  
12 requirements for the BDP that are consistent with the income verification provisions of the  
13 AMP Settlement. Having these requirements up and running will help facilitate the launch  
14 of the AMP after Commission consideration and approval of the AMP Settlement.

15 PAWC also plans to make enhancements to the Hardship Fund in accordance with a  
16 settlement that is pending before the Commission in the proceeding related to the  
17 Company's proposed acquisition of the Butler Area Sewer Authority's wastewater system  
18 assets (the "BASA Settlement").<sup>1</sup> Specifically, if the BASA Settlement is approved by the  
19 Commission, PAWC will expand eligibility to customers with household income at or  
20 below 250% of the FPL and contribute \$3.5 million to the Hardship Fund (\$700,000

---

<sup>1</sup> See *Application of Pennsylvania-American Water Company-Wastewater Section 1329 of the Pennsylvania Public Utility Code, 66 Pa. C.S. § 1329, for the Acquisition of Butler Area Sewer Authority's Wastewater System Assets*, Docket No. A-2022-3037047 (Joint Petition for Settlement filed Aug. 14, 2023, pp. 26-27).

1 annually for 5 years) in addition to PAWC’s annual \$750,000 contribution. This increased  
2 funding level is also expected to provide eligible customers with access to Hardship Fund  
3 dollars year-round regardless of service status. In other words, if the BASA Settlement is  
4 approved, the Company would not likely need to limit Hardship Fund availability during  
5 certain months of the year to only customers at risk of service termination or who are  
6 already disconnected due to non-payment.

7 **Q. What actions does the Company take with regard to Low-Income Household Water**  
8 **Assistance Program (“LIHWAP”) grants?**

9 A. The Company performs targeted customer outreach (e.g., direct mail, e-mail and social  
10 media) about the availability of LIHWAP grants and applies awarded grants to customer  
11 accounts. In the most recent round of LIHWAP funding, for which the application window  
12 closed on August 18, 2023, PAWC has applied over 2,400 grants to customer accounts,  
13 totaling approximately \$1.11 million. In addition, PAWC is automatically enrolling  
14 LIHWAP recipients into its BDP to the extent the customer is not already enrolled.

15 **Q. Have there been any other technology improvements implemented recently to**  
16 **improve customer assistance program delivery?**

17 A. Yes. In 2023, PAWC implemented a customer assistance portal to improve service to our  
18 most vulnerable customers. The overall goal of this tool was to automate the processing  
19 of pledge information from third-party assistance providers, such as DEF, LIHWAP, non-  
20 profits, churches, community groups, etc. Before this tool was implemented, assistance  
21 providers needed to directly contact us with questions about customers and outstanding  
22 balances. If a pledge was approved, the assistance provider then transmitted the amount

1 and account information which was manually added to each account to reflect the pledges.  
2 This new portal automates both the provision of necessary information to the assistance  
3 provider and the loading of the pledge into SAP so that the pledge is reflected in the  
4 customer's account. Overall, this portal improves the efficiency of the pledge-related  
5 activities of the Company and the CSO and delivers more timely pledges to benefit our  
6 customers.

7 **CONCLUSION**

8 **Q. Does this conclude your direct testimony at this time?**

9 **A.** Yes, it does.

DOCKET NOS. R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)

VERIFICATION

I, **Deborah A. Degillio**, hereby state that the facts set forth in the pre-marked Statement No. 9 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Date: November 8, 2023

R-2023-3043190 (WASTEWATER)**

**DATE: November 8, 2023**

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**DIRECT TESTIMONY OF CHARLES REA**

1 **Q. What is your name and business address?**

2 A. My name is Charles B. Rea. My business address is 3409 Research Parkway, Davenport,  
3 Iowa 52806.

4 **Q. By whom are you employed and in what capacity?**

5 A. I am employed by American Water Works Service Company, Inc. (“AWWSC” or “Service  
6 Company”) as Senior Director, Enterprise-Wide Regulatory Pricing & Affordability. I am  
7 providing testimony on behalf of Pennsylvania-American Water Company (“PAWC” or  
8 the “Company”).

9 **Q. Please summarize your educational background and professional experience.**

10 A. I received a Bachelor of Arts degree in Computer Science from the University of Illinois  
11 at Springfield in 1986 and a Master’s degree in Statistics and Operations Research from  
12 Southern Illinois University at Edwardsville in 1990. I have been employed by AWWSC  
13 since January 2018. Prior to my employment with AWWSC, I was employed by  
14 MidAmerican Energy Company (“MidAmerican”) from June 1990 through January 2018.  
15 I have over 30 years of utility experience covering a wide range of issues including electric  
16 system planning, sales and revenue forecasting, electric load research, marketing, rates,  
17 cost of service, and energy efficiency. Most recently, at MidAmerican, I was Director,  
18 Energy Efficiency and Regulatory Analytics. In that position I had responsibility for  
19 planning, evaluation, and operational management of MidAmerican’s energy efficiency  
20 and demand response programs in Illinois, Iowa, and South Dakota, as well as direct  
21 responsibility for electric and natural gas sales and revenue forecasting, electric peak

1 demand forecasting, load research, retail pricing of electric and natural gas products, and  
2 electric and natural gas cost of service and rate design.

3 **Q. What are your current employment responsibilities?**

4 A. My primary responsibility in my role as Senior Director, Enterprise-Wide Regulatory  
5 Pricing & Affordability, is to serve as a subject-matter expert on rate design, revenue  
6 issues, and affordability issues. I am responsible for the development and preparation of  
7 rate design analyses, as well as presenting cost of service and rate design proposals to our  
8 internal and external stakeholders. In addition, I am the Company's subject-matter expert  
9 on forecasting and the statistical analysis of customer usage for rate case purposes and I  
10 am the Company's subject-matter expert on the analysis of the affordability of the  
11 Company's water and wastewater service to its customers.

12 **Q. What is the purpose of your direct testimony?**

13 A. I will sponsor the Company's proposed rate design for both water and wastewater service  
14 and will provide calculations and evidence necessary to support the Company's proposed  
15 rates. I will also present the Company's affordability analyses for water and wastewater  
16 service and PAWC's proposal to expand access to its Bill Discount Program ("BDP"). In  
17 addition, I further present the Company's analysis of residential, commercial, and public  
18 authorities' water consumption as it relates to the impact of the COVID-19 pandemic on  
19 water usage and long-term trends in water usage. I will, further, present the Company's  
20 determination of Test Year revenues at Present Rates and Proposed Rates. Finally, I will  
21 present the basis and rationale for the Company's proposed Revenue Decoupling  
22 Mechanism ("RDM").

23 **Q. Please identify the exhibits you will be sponsoring in this proceeding.**

1 A. I am sponsoring the following Company Exhibits attached to my testimony:

- 2 • Exhibit CBR-1 – Water Affordability Analysis
- 3 • Exhibit CBR-2 – Wastewater Affordability Analysis
- 4 • Exhibit CBR-3 – Proposed Water Rate Design
- 5 • Exhibit CBR-4 – Proposed Wastewater Rate Design
- 6 • Exhibit CBR-5 – Residential Usage Analysis
- 7 • Exhibit CBR-6 – Commercial Usage Analysis
- 8 • Exhibit CBR-7 – Municipal Usage Analysis
- 9 • Exhibit CBR-8 – RDM Cost Component Calculations
- 10 • Exhibit CBR-9 – RDM Projected Results
- 11 • Exhibit CBR-10 – RDM Analysis for Docket No. M-2015-2518883
- 12 • Exhibit CBR-11 – NARUC Resolution

13 I also am sponsoring Exhibit Nos. 10-A through 10-E, which set forth the proof of revenues  
14 from the application of present and proposed rates for each system.

15 **Q. How is your Direct Testimony organized?**

16 A. My Direct Testimony is organized into the following sections:

- 17 • Affordability
- 18 • Expansion of Low-Income Programs
- 19 • Rate Design
- 20 • Wastewater to Water Revenue Requirement Reallocation (Act 11)
- 21 • Analysis of PAWC Usage
- 22 • Revenue Calculations
- 23 • Revenue Decoupling Mechanism

1 **AFFORDABILITY**

2 **Introduction**

3 **Q. Please describe the concept of affordability.**

4 A. The concept of affordability for water and wastewater service is based on the idea that  
5 everyone should have access to drinking water and wastewater service that is (1) safe,  
6 meaning it complies with the U.S. Safe Drinking Water Act and regulations promulgated  
7 by the U.S. Environmental Protection Agency; (2) reliable, so that it is resilient in the face  
8 of floods, droughts, and other climate risks; and (3) affordable.

9 **Q. Why is affordability of water and wastewater service an important issue to the**  
10 **Company?**

11 A. The Company knows that its water and wastewater service is essential, and we know how  
12 important it is for that service to remain affordable. Maintaining affordability of service is  
13 an important objective for PAWC as discussed in the direct testimony of Ashley Everette  
14 in PAWC Statement No. 1 and Deborah Degillio in PAWC Statement No. 9.

15 **Q. How does the Company assess the affordability of its water and wastewater service?**

16 A. The Company assesses the affordability of its water and wastewater service by comparing  
17 annual bills for water and wastewater service to household income in the communities that  
18 we serve. Such an assessment requires at least two data points – the average monthly or  
19 annual bill for water service and some measure of household income for the customer  
20 population. For the broader residential customer base, commonly available household  
21 income measures are measures of income at different percentiles. Median Household  
22 Income (“MHI”), which is household income at a 50th percentile level (50% of households  
23 in a given population have incomes greater than the median and 50% of households have

1 incomes lower than the median), can be measured at a statewide or community level and  
2 can be paired with a data set that provides the number of customers served in each  
3 community to arrive at a weighted number that represents MHI for the Company's entire  
4 service territory.

5 At a more detailed level, individual household income is considered, and  
6 affordability can then be assessed, across a full range of households based on their various  
7 income levels and bills for water and/or wastewater service. A variety of household income  
8 data is readily and publicly available from the U.S. Census Bureau through the American  
9 Community Survey ("ACS") at the state, county, and community levels.

10 **Q. What types of affordability analyses does the Company conduct?**

11 A. The Company conducts two different types of affordability analysis for its water and  
12 wastewater service. The first analysis is an Enterprise-Level analysis of affordability,  
13 which considers affordability of service at a high level over a multi-year period. The  
14 second analysis is a Community-Level analysis of affordability, which takes a deep dive  
15 into the affordability of service at the individual customer level under current or proposed  
16 rates and current economic conditions.

17 **Q. Has the Company provided an affordability analysis of its water and wastewater  
18 service for the proposed rates in this case?**

19 A. Yes. The Company's affordability study for water service is provided in Exhibit CBR-1  
20 and the affordability study for wastewater service is provided in Exhibit CBR-2. Each  
21 exhibit contains both the Enterprise-Level Analysis and a Community-Level Analysis for  
22 the applicable service.

23

1 **Enterprise-Level Analysis**

2 **Q. Please describe the Company’s Enterprise-Level Analysis of affordability of service.**

3 A. The Enterprise-Level Analysis of affordability for water and wastewater service is a  
4 historical comparison of average monthly bills for PAWC residential customers to  
5 household income for the Company’s residential customers. The metric used to describe  
6 affordability is the Bill-to-Income (“BTI”) Ratio, which is defined as annual water bills  
7 divided by estimated annual household income. This view looks at average residential  
8 monthly bills for all customers over time compared to MHI for the Company’s residential  
9 customer base.

10 **Q. What is the purpose of this Enterprise-Level Analysis?**

11 A. The purpose of the Enterprise-Level analysis is to provide a high-level historical  
12 perspective on how the affordability of service has been trending over time and how it is  
13 expected to continue to trend under proposed rates. Although the Company is proposing  
14 to increase customer rates in this proceeding, the important metric to consider is the impact  
15 that proposed rates and bills have on customer finances and how those impacts have  
16 trended over time and are expected to trend going forward. This metric must consider not  
17 only trends in rates and bills but trends in household income. The BTI Ratio proposed by  
18 the Company considers all of these factors. The Company’s BTI Ratio as presented in the  
19 Company’s affordability analyses is the appropriate metric to use when looking at the  
20 impact of the Company’s rates for water and wastewater service on customers.

21 **Q. How do you determine MHI for the customers in the Company’s service territory?**

22 A. The MHI for the Company’s service territory is a weighted average of the number of  
23 customers the Company serves in each community in the service territory and the median

1 household income in each of those communities for owner-occupied and single-unit,  
2 renter-occupied homes as reported by data in the ACS based on the most recent year's  
3 available data (2021 in this proceeding). The relationship between this service territory–  
4 specific figure and the MHI for the Commonwealth of Pennsylvania for 2021 (also  
5 provided at the community level through the ACS) is then applied to historical MHI data  
6 for the Commonwealth of Pennsylvania to arrive at historical MHI data for the PAWC  
7 service territory.

8 **Q. What are the results of your Enterprise-Level analysis of affordability for water**  
9 **service?**

10 A. The charts below compare historical average monthly water bills for water service to MHI  
11 for PAWC customers from 2012 through 2023 stated in absolute terms and stated in terms  
12 of the BTI Ratio, along with estimated average monthly bills under the Company's  
13 proposed rates in this case and the estimated MHI for PAWC water customers for the Fully  
14 Projected Future Test Year ending June 30, 2025 ("FPFTY"). The data shows that the BTI  
15 Ratios for water service for PAWC have held steady from 2012 through 2023 at levels  
16 between 0.8% and 1.0% of MHI. The BTI Ratio at the median income level is expected to  
17 be 1.12% under the Company's proposed water rates in this case.

1 **Q. What are the results of your Enterprise-Level analysis of affordability for wastewater**  
 2 **service?**

3 **A.** The charts below compare historical average monthly water bills for wastewater service to  
 4 MHI for PAWC customers from 2012 through 2023 stated in absolute terms and stated in

1 terms of the BTI Ratio, along with estimated average monthly bills under the Company’s  
 2 proposed rates in this case and estimated MHI for PAWC customers for the FPFTY. The  
 3 data shows that the BTI Ratios for wastewater service for PAWC customers have held  
 4 steady from 2012 through 2022 at levels between 0.9% and 1.2% of MHI and rose to 1.55%  
 5 in 2023. The BTI Ratio at the median income level is expected to be 1.37% under the  
 6 Company’s proposed wastewater rates in this case.

1 **Q. Is there a generally accepted standard for the affordability of water and wastewater**  
 2 **service expressed as a percentage of MHI?**

3 A. There is no definitive standard for affordability as a percentage of MHI. Benchmarks for  
 4 affordability expressed as a total bill’s percentage of MHI is a policy decision. However,  
 5 bills that are less than 2.0% or 2.5% of MHI for water and 4.0% to 4.5% of MHI for  
 6 combined water/wastewater are considered “affordable” by some.<sup>1</sup>

7 **Q. In your opinion can the assessment of affordability of service be reduced to basically**  
 8 **a yes or no answer?**

9 A. No, the affordability of water or wastewater service will never be that simple. One can  
 10 generally measure average water bills against any given benchmark and come up with a  
 11 yes or no answer, but affordability of service is a continuum, and that is what the

<sup>1</sup> Teodoro, Manuel P., “*Measuring Household Affordability for Water and Sewer Utilities*,” Journal AWWA (2018), doi:10.5942/jawwa.2018.110.0002.

1 Company's Community-Level analysis, which I describe next in my Direct Testimony,  
2 shows. There will always be customers for whom water service is more affordable than  
3 for others depending on demographics and income levels. This is true across all of the  
4 communities that PAWC serves, including even the wealthiest communities that the  
5 Company serves.

6 **Community-Level Analysis**

7 **Q. Please describe the Company's Community-Level Analysis of affordability of service.**

8 A. The Community-Level Analysis takes a deeper dive into the affordability of water and  
9 wastewater service at a local level across different customer demographics and proposed  
10 rates for each community that the Company serves. For larger communities, the analysis  
11 is done at a zip-code level.

12 **Q. What is the purpose of this Community-Level Analysis?**

13 A. The purpose of the Community-Level Analysis is to identify, at an individual customer  
14 level, the percentages of household income that bills for water and wastewater service are  
15 expected to take up under the Company's proposed rates, and to identify demographic  
16 trends either by geographic location or by income level for customers where affordability  
17 of service may be an issue based on BTI Ratios measured at the individual customer level.

18 **Q. How is this analysis different from the Enterprise-Level Analysis you previously  
19 presented?**

20 A. The Enterprise-Level Analysis and the Community-Level Analysis are two different but  
21 complementary views of affordability. As previously stated, the purpose of the Enterprise-  
22 Level analysis is to provide a high-level historical perspective on how the affordability of  
23 service has been trending over time and how it is expected to continue to trend under

1 proposed rates. The Community-Level analysis takes a deep dive into the affordability of  
2 service at the individual customer level under current or proposed rates and current  
3 economic conditions.

4 **Q. Is there academic research that supports the Company’s approach to assessing**  
5 **affordability of service at this detailed level?**

6 A. Yes. Cardoso and Wichman<sup>2</sup> outline a framework for assessing affordability of water  
7 service that uses the full distribution of household income at the local level rather than MHI  
8 or some other static representative level of income and uses varying levels of water usage  
9 at the individual household level instead of a static representative level of water usage.  
10 While my methodology differs from Cardoso and Wichman in certain areas, the goal  
11 remains the same, which is to analyze affordability at the individual customer level and  
12 identify customer groups where affordability of service may be an issue.

13 **Q. What information is needed to conduct an analysis of the affordability of service at**  
14 **this detailed level?**

15 A. The following information is used to assess affordability of service at the community and  
16 individual customer level:

- 17 • The number of customers served in each community.
- 18 • The distribution of owner-occupied households and renter-occupied households by  
19 income level in each community.

---

<sup>2</sup> Cardoso, Diego S. and Wichman, Casey J., “*Water Affordability in the United States*,” *Water Resources Research*, vol. 58, issue 12 (2020).

- 1           • The percentage of occupied housing units that are owner-occupied households or  
2           renter-occupied households that are not in multi-dwelling buildings in each  
3           community.
- 4           • The average number of persons per household in each community for both owner-  
5           occupied and renter-occupied households.
- 6           • The distribution of the size of households (one-person, two-person, etc.) for  
7           households of different income levels.
- 8           • The standard definition of Basic Water Service.
- 9           • Current or proposed rate structures.

10           I will return to the Community-Level Analysis after I discuss the concept of Basic Water  
11           Service.

12   **Q.   Please describe the concept of Basic Water Service.**

13   A.   Basic Water Service is a water usage level that reflects the level of water consumption for  
14   basic human services (cooking, cleaning, sanitation, and general health requirements),  
15   which is then assumed to be constant from month-to-month and not subject to significant  
16   seasonality or weather conditions. This standard can be expressed in terms of gallons per  
17   resident per day. This service is different from discretionary seasonal water usage for  
18   filling swimming pools, lawn irrigation, etc. This definition of Basic Water Service can be  
19   used to customize a level of usage that accurately reflects water service for different sizes  
20   of households.

21   **Q.   How do you define Basic Water Service for the purposes of your customer-level**  
22   **affordability analysis?**

1 A. For the purpose of the Company’s affordability analyses, Basic Water Service is defined  
2 to be 40 gallons of water per household member per day. This figure is based on the review  
3 of relevant literature on the subject and a review of Company billing data for residential  
4 customers in months with minimum levels of discretionary water usage, all of which  
5 supports the definition of 40 gallons of water per household member per day.

6 **Q. Why is this definition of Basic Water Service also suitable for wastewater analysis?**

7 A. The definition of Basic Water Service at 40 gallons per household member per day is also  
8 suitable for wastewater analysis because wastewater billings, especially in light of the  
9 Company’s proposal for winter averaging that I describe later in testimony, are based on  
10 the same type of service that Basic Water Service is meant to represent, namely water  
11 consumption for basic human services (e.g., cooking, cleaning, sanitation, and general  
12 health requirements). All of this service effectively is returned through the wastewater  
13 collection system and, therefore, the definition of Basic Water Service serves as an  
14 appropriate benchmark for analysis of affordability for wastewater service.

15 **Q. Have you benchmarked this definition of Basic Water Service against actual  
16 Company residential billing data?**

17 A. Yes. Based on the statistical modeling I described later in my Direct Testimony, current  
18 and projected levels of residential use per customer in non-seasonal months is  
19 approximately 3,000 gallons per month or less. These values are consistent with the  
20 definition of Basic Water Service at 40 gallons of water per household member per day.

21 **Q. What information does your Community-Level Analysis provide?**

22 A. The Company’s Community-Level Analysis provides a complete set of demographic  
23 information for the Company’s customer base in each community and a set of affordability

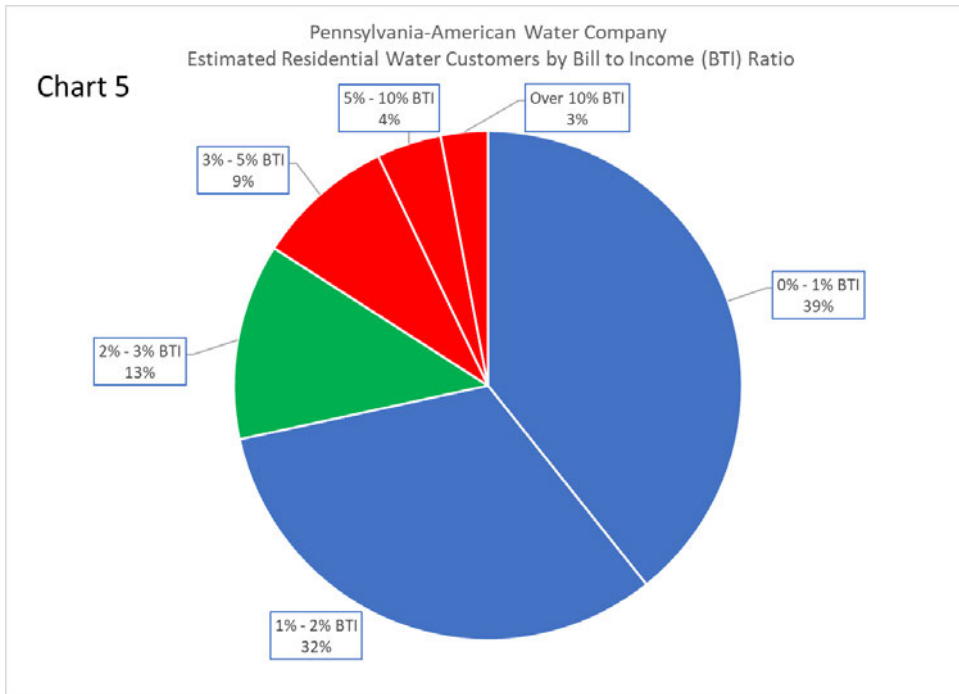

1 data for its service territory in total and for various cross sections of the Company's  
2 customers.

3 **Q. What demographic information does your Community-Level Analysis provide?**

4 A. The demographic information provided by this analysis is primarily economic in nature,  
5 although the analysis can be expanded to provide information on various identifiers such  
6 as race, languages spoken, etc. The primary demographic (economic) information  
7 provided by the analysis is the estimated number of customers at different levels of Federal  
8 Poverty Level ("FPL") and at different levels of household income. FPL is a measurement  
9 set by the U.S. Department of Health and Human Services of the minimum amount of  
10 annual income that is needed for individuals and families to pay for essentials, such as  
11 room and board, clothes, and transportation. The FPL takes into account the number of  
12 people in a household, their income, and the state in which they live. For Pennsylvania,  
13 the FPL guidelines for 2023 are set at \$13,590 for a household size of one and \$4,720 per  
14 year for each additional household member.

15 **Q. What information does your Community-Level Analysis show?**

16 A. Charts 5 and 6 below show, for both water and wastewater service, the relationship between  
17 residential customers' bills for Basic Water Service under the Company's proposed rates  
18 and level of household income.

1 These charts show that under the Company's proposed rate structure, the Affordability  
 2 Index metric (discussed below) for the Company's service territory in total is 71% under  
 3 proposed rates for water service and 65% under proposed rates for wastewater service,

1 meaning that 71% of our residential water customers and 65% of our residential wastewater  
2 customers can expect to see bills for Basic Water Service to be less than 2% of their  
3 household income. The Company estimates that there are approximately 176,900  
4 residential water customers and 38,400 wastewater customers that will see bills for Basic  
5 Water Service above 2% of their household income, which is approximately 29% and 35%  
6 of the total customer population for water and wastewater service, respectively.

7 **Q. Please describe the Affordability Index.**

8 A. The Affordability Index (“AI”) is a metric that reflects the percentage of a group of  
9 customers for whom Basic Water Service is expected to be less than a given percentage of  
10 annual household income. Consistent with my previous discussion in testimony regarding  
11 standards for affordability, the Company uses 2% of household income as the benchmark  
12 for this metric, which is at the conservative end of the range of affordability often cited.  
13 As an example, if, for a certain group of customers, it is estimated that 80% of those  
14 customers will have bills for Basic Water Service less than 2% of annual household  
15 income, the AI value for that group of customers is 80%.

16 The AI metric is designed to reflect the percentage of residential customers in a  
17 state, community, or demographic group for whom Basic Water Service is expected to cost  
18 2% or less of annual household income. An AI value of 100% means that all customers  
19 within a selected group can expect Basic Water Service at less than 2% of household  
20 income. An AI value of 70% means that approximately 70% of customers within a selected  
21 group can expect Basic Water Service at less than 2% of household income, and 30% of  
22 customers in that group can expect Basic Water Service to cost more than 2% of household  
23 income. The AI value is calculated based on modeling of proposed rates and community-

1 level demographic information that I previously described in my testimony, which assesses  
2 affordability across the entire range of customer demographics in each community we  
3 serve.

4 **Q. Why do you use 2% of household income as your benchmark for affordability of**  
5 **water or wastewater service?**

6 A. The 2% benchmark is generally consistent with industry standards for affordability at the  
7 individual household level and is slightly lower than the 4.5% benchmark for combined  
8 water and wastewater service used by Cardoso and Wichman.<sup>3</sup>

9 **Q. Is there a relationship between the data shown in Chart 5 and Chart 6 from the**  
10 **Community-Level Analysis and the data shown in Chart 2 and Chart 4 from the**  
11 **Enterprise-Level Analysis?**

12 A. There is. The data in Chart 2 and Chart 4 shows BTI ratios at the MHI level, which is the  
13 50th percentile household income, meaning that half of all customers have annual  
14 household incomes less than the 50th percentile level and half of all households have  
15 incomes greater than the 50th percentile level. For the 12-month period ending in June  
16 2025, the BTI Ratio is anticipated to be 1.12% for water and 1.37% for wastewater. The  
17 data in Chart 5 and Chart 6 shows the distribution of BTI Ratios for the residential customer  
18 base in total, which inherently includes values for the MHI customer, which lies at the  
19 bottom of the pie chart (6 o'clock) at the point where half of the customers are to the left  
20 and half of the customers are to the right. The bottom point on the pie chart on Chart 5  
21 covers approximately 25% of the 0%-1% BTI Ratio slice, and the bottom point on the pie  
22 chart on Chart 6 covers approximately 50% of the 0%-1% BTI Ratio slice. This data is

---

<sup>3</sup> Cardoso, Diego S. and Wichman, Casey J., *supra* note 2.

1 consistent with the BTI Ratios at the 50th percentile income level in Charts 2 and 4. Charts  
2 5 and 6 show a range of BTI Ratios for the entire distribution of customers at a single point  
3 in time. Charts 2 and 4 show BTI Ratios for the 50th percentile household income level  
4 and also provide a historical perspective on how that value has trended over time and is  
5 expected to trend forward under the Company's proposed rates.

6 **Q. Is affordability of service uniform across the Company's service territory?**

7 A. No, it is not. While the Company's water and wastewater rates (and therefore bills) are the  
8 same for the vast majority of our customers, household income can vary significantly  
9 across the Company's service territory. PAWC has a very diverse service territory and  
10 serves customers in urban, suburban, and rural communities with household incomes that  
11 range from over \$100,000 MHI to as low as \$30,000 - \$50,000 MHI. The Company's  
12 affordability analyses provided in Exhibits CBR-1 and CBR-2 provide information on the  
13 number of customers served in each community, the MHI for each community, and the  
14 BTI Ratios for Basic Water Service in each community.

15 **Q. Do you have information on the Affordability Indices of service by income group?**

16 A. Table 1 below shows AI values for the Company's residential customers by income level  
17 for water and wastewater service.

<b>TABLE 1 Affordability Index by Income Level</b>	<b>Water Affordability Index</b>	<b>Wastewater Affordability Index</b>
Above \$150k	100%	100%
\$100k - \$150k	99%	98%
\$75k - \$100k	93%	87%
\$50k - \$75k	78%	73%
\$35k - \$50k	55%	49%
\$25k - \$35k	39%	34%
\$20k - \$25k	0%	14%
\$15k - \$20k	0%	5%
\$10k - \$15k	0%	1%
\$5k - \$10k	0%	0%
\$0k - \$5k	0%	0%

1 **Q. Does your analysis consider customers who rent in multi-family buildings without**  
2 **individual meters?**

3 A. No. The Company’s Community-Level Analysis only considers customers that are  
4 assumed to be direct customers of the Company, meaning that they are directly responsible  
5 for payment of services to the Company. Direct customers are assumed to be owner-  
6 occupied households and single-family, renter-occupied households as reported by ACS  
7 data.

8 **Q. Why does your Community-Level Analysis only concentrate on customers that are**  
9 **direct customers of the Company?**

10 A. The Company’s affordability analysis concentrates on customers that are direct customers  
11 of the Company for two reasons:

- 1           • The use of an MHI statistic, which best estimates household income for direct  
2           customers of the Company, is consistent with the calculation of the average bill,  
3           which is also based on direct customers.
- 4           • For indirect customers of the Company (e.g., renters in multi-family buildings), it  
5           is impossible to know definitively what these households pay in rent for water or  
6           wastewater service. Presumably, building owners that receive water and/or  
7           wastewater service from PAWC are recovering those costs through rents, but there  
8           is no way to know if owners are overcharging or undercharging renters or if they  
9           are also charging renters for building water or wastewater service that renters are  
10          themselves not actually using.

11 **Q. Will the Company’s proposed change in rates have an impact on people who use the**  
12 **Company’s service but are not direct customers of the Company?**

13 A. It is impossible to know what the impact of the Company’s proposed rates will be on  
14 indirect customers of the Company. Rents may increase in part to recover increases in  
15 water service costs, but rents increase for many reasons, and the extent to which any  
16 increases can be attributable to the Company’s proposed rates and the timing of such  
17 increases cannot be determined.

18 **Q. How is all of this affordability information useful?**

19 A. Assessing affordability information of water and wastewater service for the entire  
20 residential customer population can demonstrate whether customers, in general, are having  
21 or would have difficulty paying their water bills under the Company’s current or proposed  
22 tariff structure. Assessing affordability information of water and wastewater service for  
23 lower-income customers can indicate the number of customers that may be having trouble

1 paying their utility bills, where the customers are in the Company's service territory, and  
2 the extent to which those bills may pose challenges for certain customers. This can, in  
3 turn, inform decision-makers about the size and scope of efforts that may be needed to help  
4 these vulnerable customers better afford water and wastewater service, both in terms of  
5 general rate design proposals that can reduce the cost of Basic Water Service for all  
6 customers, including lower-income customers, and customer assistance programs that may  
7 include customer grants, tariff discounts, levelized billing, and outreach programs.

8 **Q. What conclusions do you draw based on the Company's affordability analyses?**

9 A. There are three conclusions that can be drawn from Company's affordability study:

- 10 • The affordability of the Company's water and wastewater service from 2012  
11 through the forecast test period indicates that the way the Company has invested in  
12 and managed its water and wastewater systems has indeed been for the long-term  
13 benefit of our customers.
- 14 • The Company's water and wastewater service has been, is, and is expected to  
15 continue to be affordable for the majority of its residential customers, including  
16 under the rates proposed in this case.
- 17 • There are, however, groups of customers for whom affordability of water and  
18 wastewater service may be challenging.

19 **Q. How do the Company's affordability analyses and mitigation strategies enhance the**  
20 **value of the Company's water and wastewater service?**

21 A. All stakeholders (regulators, customers, consumer advocates, community leaders,  
22 employees, shareholders, etc.) benefit from a financially sound utility providing safe,  
23 reliable, and affordable service to its customers. The Company's analyses provide

1 important insights into the affordability of its services and can help inform all stakeholders  
2 on strategies for improving affordability for customer groups that may be struggling  
3 financially.

4 **LOW-INCOME PROGRAMS**

5 **Current Program**

6 **Q. Please describe the Company's current BPD for water and wastewater service.**

7 A. The Company's current BPD offers three tiers of discounts for both water and wastewater  
8 service based on different levels of household income, stated as multiples of FPL. The  
9 Company's current discount program is as follows:

<b>TABLE 2 Eligible Customers</b>	<b>Water Service Charge Discount</b>	<b>Water Service Volumetric Discount</b>	<b>Wastewater Total Bill Discount</b>
0% - 50% FPL	80%	80%	80%
51% - 100% FPL	65%	50%	55%
101% - 150% FPL	40%	25%	30%

10 **Q. When was the BDP approved?**

11 A. While the Company's low-income discount programs are well established, the current  
12 program offering different discounts for three tiers of household income was approved by  
13 the Commission in the Company's last base rate case in Docket No. R-2022-3031672.

14 **Q. How many customers are eligible for the BDP?**

15 A. Based on the affordability analysis provided in this case, the number of eligible customers  
16 for the current program by income level is as follows:

**TABLE 3**

<b>Eligible Customers</b>	<b>Water</b>	<b>Wastewater</b>
0% - 50% FPL	21,906	4,743
51% - 100% FPL	35,081	7,877
101% - 150% FPL	51,176	10,859

1 **Expansion Proposal**

2 **Q. Is the Company proposing to make changes to the BDP as a part of this proceeding?**

3 A. Yes. The Company is proposing an expansion of the existing program to include additional  
4 customers whose bills for water or wastewater service are likely to exceed 2% of household  
5 income.

6 **Q. Please describe how the BDP will be expanded .**

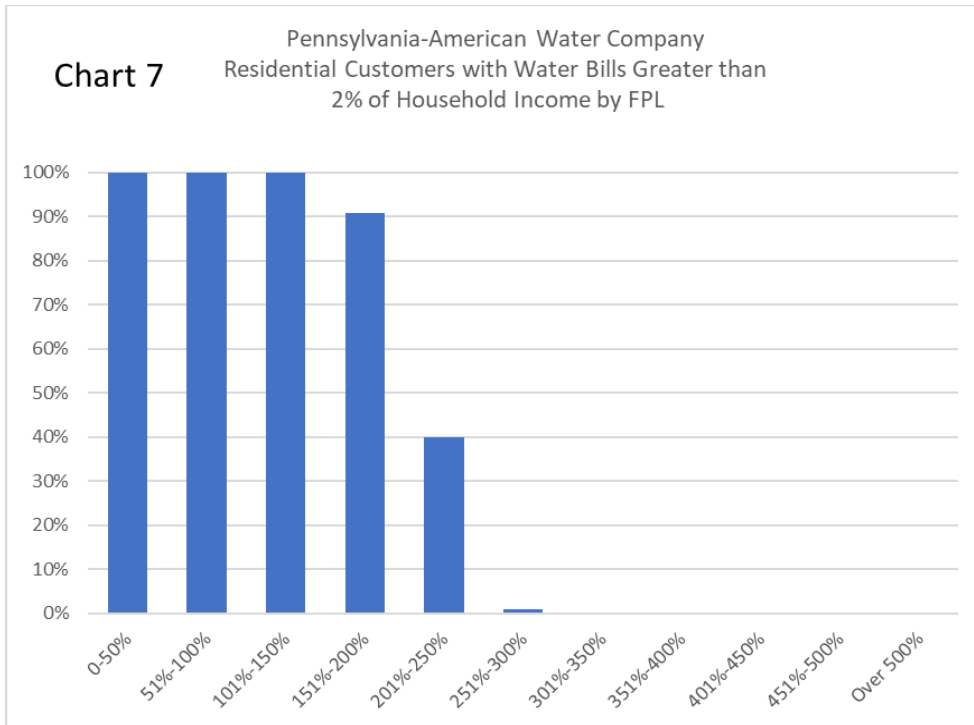

7 A. The Company is proposing in this case to add a fourth tier of eligibility to the current BDP  
8 and expand the program offerings to customers whose household incomes are between  
9 151% and 200% of FPL. For water customers in this fourth tier of eligibility, the Company  
10 is proposing to offer discounts of 30% on the 5/8” meter charge and 15% on the volumetric  
11 rate. For wastewater customers in this fourth tier of eligibility, the Company is proposing  
12 to offer a discount of 20% on the total wastewater bill.

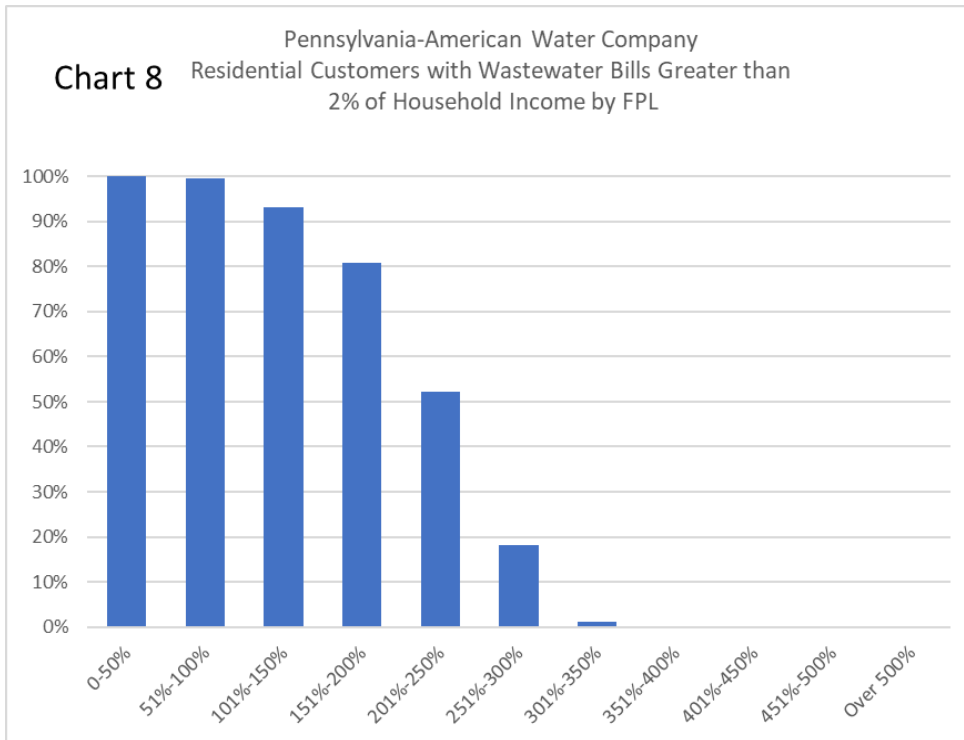

13 **Q. Is the Company proposing any changes to the discounts offered to customers at or  
14 below 0-150% of FPL?**

15 A. No. The Company is not proposing any changes to the programs for existing eligible  
16 customers. The proposed changes are only intended to expand eligibility to customers at  
17 the 151% to 200% FPL level.

1 **Q. Why is the Company proposing to expand the BDP?**

2 A. The Company is proposing to expand the low-income discount tariff to households with  
3 annual household income between 151% and 200% to address affordability issues under  
4 proposed rates in that demographic. The charts below show the percentage of customers  
5 at each interval of annual household income whose water or wastewater bills under the  
6 Company's proposed rates are expected to be more than 2% of household income prior to  
7 any discounts being offered.

1 These charts show that a majority of customers with household incomes between 151%  
 2 and 200% of FPL will have bills for water and/or wastewater service at greater than 2% of  
 3 household income. These customers are currently not eligible for the Company’s low-  
 4 income discount tariff. The Company’s proposal to expand the current low-income  
 5 discount tariff will increase affordability of service for these customers.

6 **Q. If the BDP is expanded as the Company proposes, how many additional customers**  
 7 **would become eligible for the BDP?**

8 A. A substantial number of additional customers would be eligible for the BDP under the  
 9 Company’s proposal. Based on the Company’s affordability analyses, the Company  
 10 estimates that there are 51,252 residential water customers with household incomes  
 11 between 151% and 200% of FPL, and 10,353 residential wastewater customers with  
 12 household incomes between 151% and 200% of FPL.

1 **Customer Impacts**

2 **Q. What will the impact be to newly participating customers in this program?**

3 A. For newly participating customers with average monthly usage, the Company's proposed  
4 discounts in this fourth tier would equate to a bill savings of \$16.23 for water (18% of the  
5 total bill) and approximately \$20.00 per month for wastewater depending on the  
6 customer's specific rate and location.

7 **Q. What participation rate is the Company assuming for the newly eligible 151%-200%**  
8 **FPL block?**

9 A. For the purposes of ratemaking, the Company is assuming the same participation rate for  
10 the 151% to 200% FPL group that the Company observes in the 101% to 150% FPL  
11 group.

12 **Q. Based on the total eligible population of customers and the expected participation**  
13 **rate, what level of additional discounts is the Company assuming in this proceeding?**

14 A. The total associated level of annual discounts offered in this tier is expected to be  
15 approximately \$3 million for water service and approximately \$660,000 for wastewater  
16 service.

17 **Q. How will this additional level of discount be recovered?**

18 A. The additional costs associated with the BDP expansion will be recovered in the same  
19 manner as existing BDP costs – through residential customer base rates.

20 **Q. What overall impact on affordability of service does the Company expect from the**  
21 **proposed expansion of these low-income discount tariffs?**

22 A. The improvement in the affordability of service for participating customers in the 151% to  
23 200% FPL group is expected to be significant. For water service, more than half of the

1 customers in the 151% to 200% FPL group whose bills were expected to be more than 2%  
2 of household income will now be below that threshold. For wastewater service,  
3 approximately one third of the customers in the 151% to 200% FPL group whose bills were  
4 expected to be more than 2% of household income will now be below that threshold.

## 5 RATE DESIGN

### 6 Introduction

7 **Q. Do you sponsor exhibits that provide the Company's complete proposed rate design**  
8 **in this case?**

9 A. Yes. Exhibits CBR-3 and CBR-4 provide the Company's proposed rate design for water  
10 and wastewater service in this case, which are based on the current rate design as modified  
11 by the proposals discussed below.

12 **Q. Please discuss some of the important guiding principles associated with sound rate**  
13 **design.**

14 A. There are a number of important principles that pricing analysts and policymakers consider  
15 when developing appropriate design mechanisms for retail water and wastewater service:

- 16 • **Cost Causation:** An important goal of rate design is to develop prices for water  
17 and wastewater service to retail customers that are intended to recover the  
18 Company's approved revenue requirement and that reflect the cost of providing  
19 service to retail customers. Cost of service results inform pricing decisions and  
20 guide how rates should be set such that each customer class contributes to the  
21 revenue requirement commensurate with their cost to serve. The principle of cost  
22 causation, which simply states that customers should pay for the costs that they are

1 deemed to cause the Company to incur, reflects the use of cost of service results in  
2 designing rates.

- 3 • **Revenue Stability:** Rates should be designed in a way that provides revenue  
4 stability to the utility and that can be reasonably expected to recover the utility's  
5 revenue requirement over the long run. Consistent recovery of the approved  
6 revenue requirement through well-designed rates helps the utility to prudently  
7 manage and invest in the water and wastewater systems, while poor rate design  
8 decisions can hamper the utility's ability to make investments, operate, and  
9 maintain the water and wastewater systems in a manner consistent with the long-  
10 term interest of its customers.

- 11 • **Efficiency of Use:** Rates should be designed to encourage the efficient use of water  
12 resources by customers. The volumetric charges for water service should  
13 appropriately reflect the variable cost of providing water service while also  
14 providing customers an appropriate incentive to conserve water and manage their  
15 bills. Rates should communicate to customers the full cost of providing water  
16 service.

- 17 • **Gradualism:** Changes in rate design should be made in a manner that avoids  
18 inappropriate levels of rate shock. Rate shock can come both from general  
19 increases in revenues that can affect all customers and from changes in rate designs  
20 that can cause large increases to specific groups of customers. Drastic changes in  
21 rates can cause customer confusion and dissatisfaction and have adverse effects on  
22 the utility's ability to provide quality customer service.

- 1       •     **Avoidance of Discrimination:** Rates should not unduly discriminate between  
2             particular customer groups or provide different price signals to similarly situated  
3             customers taking similar services from the utility.
- 4       •     **Simplicity and Feasibility:** Rate designs should be relatively simple, easy to  
5             understand, easy to communicate and manage, and should result in bills that are  
6             clear and understandable.
- 7       •     **Affordability:** Development of rate designs that enhance the affordability of  
8             service to more vulnerable customers while still adhering to other more established  
9             principles of rate design is an important way that utility providers can enhance and  
10            maintain the value of service.

11 **Q.    How does the Company incorporate these guiding principles in its rate design?**

12 A.    Cost causation is the foundation of the Company’s rate design. Revenue targets for  
13       customer classes, to be recovered through rate design, begin with the results of the  
14       Company’s cost of service analysis, which allocates revenue requirements to customer  
15       class based on cost-causation principles. Cost causation, however, is not the be-all and  
16       end-all of rate design. All of the rate design principles I discuss are important; none more  
17       so than any other, and it is the consideration and balancing of these principles in total that  
18       constitutes the public policy aspect of ratemaking and leads to a determination of just and  
19       reasonable rates. Layered on top of cost causation are the other principles that I previously  
20       discussed (gradualism, revenue stability, avoidance of discrimination, affordability, for  
21       example), which ultimately result in a rate design that is fair to all customer groups and  
22       that is just and reasonable.

1 **Water Rate Design**

2 **Q. Please describe the Company's current tariff structure for water service.**

3 A. The Company currently offers water service in five different rate zones. These rate zones  
4 are as follows:

- 5 • Rate Zone 1 - General Statewide Rate
- 6 • Rate Zone 2 - Valley
- 7 • Rate Zone 3 - SLIBCO
- 8 • Rate Zone 4 - Turbotville
- 9 • Rate Zone 5 - Steelton

10 The largest of these rate zones by far is Rate Zone 1, with over 99% of the Company's total  
11 water revenue.

12 **Q. Please describe the Company's current rate structures for these tariffs for residential  
13 and nonresidential customers in Rate Zone 1.**

14 A. The Rate Zone 1 tariff offers service to all residential and non-residential customer classes  
15 through a monthly fixed charge that varies with the size of the meter (identified in PAWC's  
16 water tariff as a "service charge") and volumetric rates (identified in PAWC's water tariff  
17 as "consumption charges"). There are separate rate structures for each customer class.

- 18 • The residential water service charge for most customers is \$17.50 per month for a  
19 5/8", 3/4", 1" and 1 1/2" meter, and the service charge increases with the size of the  
20 meter beginning with 2" meters. A single volumetric rate of \$1.6108 per hundred  
21 gallons applies to all residential customers.
- 22 • The commercial water service charge begins at \$18.50 per month for a 5/8" meter,  
23 and the service charge increases with the size of the meter beginning with 3/4"

1 meters. A two-block volumetric rate applies to commercial customers of  
2 \$1.5613 per hundred gallons for the first 16,000 gallons per month and \$1.1493 per  
3 hundred gallons for usage over 16,000 gallons per month.

- 4 • The municipal water service charges are the same as the commercial service  
5 charges, but the volumetric rates are different. A two-block volumetric rate applies  
6 to municipal customers of \$1.6700 per hundred gallons for the first 16,000 gallons  
7 per month and \$0.9140 per hundred gallons for usage over 16,000 gallons per  
8 month.
- 9 • The industrial water service charge begins at \$28.00 per month for a 5/8" meter,  
10 and the service charge increases with the size of the meter beginning with  
11 3/4" meters. A three-block volumetric rate applies to industrial customers of  
12 \$1.4200 per hundred gallons for the first 16,000 gallons per month, \$1.0804 per  
13 hundred gallons for the next 584,000 gallons of usage per month, and \$0.8499 per  
14 hundred gallons for usage over 600,000 gallons per month. In addition, the  
15 Company offers industrial curtailment rates that are identical to those described  
16 above, but with an additional rate step of \$0.5110 per hundred gallons for all usage  
17 above 15,000,000 gallons per month and the requirement that the customer meet  
18 specified requirements to qualify for the rate, such as a minimum monthly purchase  
19 volume, a minimum load factor, and on-site water storage for industrial (non-fire  
20 protection) use during periods of curtailment.
- 21 • The Sales to Other Water Utilities service charge begins at \$29.10 per month for a  
22 5/8" meter, and the service charge increases with the size of the meter beginning  
23 with 3/4" meters. The volumetric rates for Group A service is \$0.7950 per hundred

1 gallons for all water service and the volumetric rate for Group B service is \$1.1300  
2 per hundred gallons for all water service.

3 **Q. Does the Company have special rates for larger customers?**

4 A. The Company offers a limited number of special rates designed to retain and attract the  
5 load of larger customers in Rate Zone 1 that have competitive alternatives to service from  
6 the Company. Currently, the Company has customers that are served on two of those rates:  
7 the Demand-Based Industrial Service rate and the Demand-Based Resale Service rate.

8 **Q. Does the Company offer fire protection service?**

9 A. Yes. The Company offers both public and private fire protection service. Public fire  
10 protection rates are based on a monthly hydrant fee that varies depending on where in the  
11 service territory the service is offered and the vintage of the rates. These rates are subject  
12 to the requirement that revenues from fire hydrants can be no more than 25% of the  
13 calculated cost of service for public fire service. Private fire service rates are also offered  
14 and are generally based on the size of the service line used in providing the service. Service  
15 is offered on both a metered and an unmetered service basis.

16 **Q. Please describe the Company's current rate structures in the other pricing zones  
17 where water service is offered.**

18 A. In zones other than Rate Zone 1, the Company's rate structures are as follows:

- 19 • Rate Zone 2 (Valley): Service in Rate Zone 2 is offered to all customers through a  
20 monthly service charge of \$28.12 for all customers, and a volumetric charge that  
21 provides an allowance for the first 3,400 gallons of monthly usage at no additional

1 charge, and a volumetric rate of \$0.8400 per hundred gallons for all water used  
2 above 3,400 gallons per month.<sup>4</sup>

3 • Rate Zone 3 (SLIBCO): Service in Rate Zone 3 is offered to all customers through  
4 service charges that increase with the size of the meter starting at \$63.55 for a 5/8”  
5 and 2” meter and increasing to \$309.90 for an 8” meter. Volumetric rates for all  
6 customers start at \$1.8940 per hundred gallons for the first 20,000 gallons of usage  
7 per month and drop to \$1.6780 per hundred gallons for the next 80,000 gallons of  
8 usage, and \$1.3810 per hundred gallons for all usage above 100,000 gallons per  
9 month.

10 • Rate Zone 4 (Turbotville): Service in Rate Zone 4 is offered to all customers  
11 through a monthly service charge that varies with the size of the meter and  
12 volumetric rates. Service charges are identical to Rate Zone 1. Volumetric rates  
13 are the same as Zone 1, except for the commercial rate, which is \$1.0706 per  
14 hundred gallons for all commercial usage.

15 • Rate Zone 5 (Steelton): Service in Rate Zone 5 is offered to all customers through  
16 a monthly service charge that varies with the size of the meter and volumetric rates.  
17 Volumetric rates are set at \$1.6108 per hundred gallons for the first 20,000 gallons  
18 of usage per month and \$1.2500 per hundred gallons for usage above 20,000 gallons  
19 per month. For all customers except for industrial customers, monthly service  
20 charges are identical to those for Rate Zone 1. For industrial customers, the

---

<sup>4</sup> The Company’s currently approved tariff includes a step-in rate for Valley. The rates shown here will be effective November 19, 2023.

1 monthly service charges are \$24.83 for 5/8" and 3/4" meters and escalate for larger  
2 meter sizes above 3/4".

3 **Q. Is the Company proposing consolidation of rate zones for water service in this case?**

4 A. Yes. The Company is proposing in this case to move Rate Zone 2 Valley, Rate Zone 3  
5 SLIBCO, Rate Zone 4 Turbotville, and Rate Zone 5 Steelton rates to Rate Zone 1 rates.  
6 The Company is also proposing to move Farmington toward consolidation with Rate Zone  
7 1. No changes are proposed for Audubon rates.

8 **Q. Is the Company proposing to change the monthly service charges in this case?**

9 A. Yes. Consistent with the cost-of-service analysis supported by Company witness Connie  
10 Heppenstall in PAWC Statement No. 12, the Company is proposing a 5/8" monthly meter  
11 service charge of \$20.00 per month for residential, commercial, and municipal customers  
12 in Rate Zone 1 and in the other rate zones being combined with Rate Zone 1. The Company  
13 is proposing to increase meter charges for residential, commercial, and municipal  
14 customers for other meter sizes proportionally, except that residential meter charges for  
15 3/4", 1", and 1 1/2" meters will all be set at \$20.00. No increases are proposed to existing  
16 Rate Zone 1 industrial and Other Water Utility ("OWU") meter charges.

17 **Q. Is the Company proposing to change the rate structure associated with its volumetric  
18 rates?**

19 A. The only changes in the volumetric rate structure proposed in this case are changes in the  
20 steps for volumetric rates necessary to move the rate zones I previously mentioned  
21 (Steelton, Valley, and SLIBCO) to Rate Zone 1 rates. No other changes in volumetric rate  
22 structures are being proposed.

1 **Q. Are there any other changes the Company is proposing to its water service rate**  
2 **design?**

3 A. The only other change proposed to the Company's water service rate design is an expansion  
4 of the low-income discount tariff program, as described earlier in my testimony.

5 **Q. Please describe how the Company is proposing to allocate its proposed revenue**  
6 **increase for water service to each customer class.**

7 A. The Company is proposing in this case to set water service rates based on the cost of service  
8 studies sponsored by Ms. Heppenstall, with the exception of the increase to the OWU class,  
9 which is capped at 30%, and the remaining OWU allocated revenue requirements allocated  
10 to other customer classes based on relative levels of cost of service. In addition, the  
11 Company is proposing a reallocation of a portion of its wastewater revenue requirements  
12 to its water service customers consistent with Act 11 of 2012, which I describe later in my  
13 testimony.

14 **Q. Do you have a schedule that shows the Company's current and proposed rate design**  
15 **for water service?**

16 A. Yes. The Company's proposed rate design in this case for water service is provided in  
17 Exhibit CBR-3.

18 **Wastewater Rate Design**

19 **Q. Please describe the Company's current tariff structure for wastewater service.**

20 A. The Company provides wastewater service under a variety of different rate schedules and  
21 in a variety of different rate zones. The categories of rate zones under which the Company  
22 offers wastewater service are as follows:

- 1           • Sanitary Sewer Systems (“SSS”):
  - 2               ○ Rate Zone 1: PAWC Statewide
  - 3               ○ Rate Zone 2: New Cumberland
  - 4               ○ Rate Zone 5: Valley
  - 5               ○ Rate Zone 7: York
  - 6               ○ Rate Zone 8: Foster Township
  - 7               ○ Rate Zone 9: Royersford
- 8           • Combined Sewer Systems (“CSS”):
  - 9               ○ Rate Zone 3: Scranton
  - 10              ○ Rate Zone 4: Kane
  - 11              ○ Rate Zone 6: McKeesport

12 **Q. Please describe the Company’s current rate structures in its SSS rate zones.**

13 **A.** Rate structures differ for the six rate zones in the SSS group as follows:

- 14           • Rate Zone 1 (Statewide Rate): Service in Rate Zone 1 is offered through a single  
15               monthly service charge and volumetric rate for all residential and nonresidential  
16               service. The monthly service charge is \$14.30 for residential customers and \$35.00  
17               per month for nonresidential customers. The volumetric rate applies to all metered  
18               usage and is \$2.8750 per hundred gallons for residential service and \$2.1030 per  
19               hundred gallons for nonresidential service. Unmetered service is offered to  
20               residential customers at \$106.00 per month.
- 21           • Rate Zone 2 (New Cumberland): Service charges in Rate Zone 2 are identical to  
22               service charges in Rate Zone 1, but the volumetric rates for service are slightly

1 lower. In Rate Zone 2, the volumetric rate is \$2.4500 per hundred gallons for  
2 residential service and \$1.9000 per hundred gallons for nonresidential service.

- 3 • Rate Zone 5 (Valley): Rates in Rate Zone 5 are identical to Rate Zone 1.
- 4 • Rate Zone 7 (York): Service in York is offered through a single monthly service  
5 charge for all customers of \$18.00 per month, which includes an allowance of 2,000  
6 gallons, plus a volumetric rate of \$0.9370 per 100 gallons for usage over 2,000  
7 gallons per month. The Company’s currently approved tariff allows for a second  
8 step of rates to be effective May 27, 2025. These rates include a service charge of  
9 \$18.00 per month for residential customers and \$30.00 per month for nonresidential  
10 customers. The volumetric rate effective May 27, 2025, consists of a free  
11 allowance of 2,000 gallons per month and a volumetric charge for service above  
12 the allowance of \$2.7375 per hundred gallons for residential customers and \$1.6380  
13 per month for nonresidential customers. In addition, bulk service will be offered  
14 through a volumetric rate of \$0.3750 per hundred gallons for Rate A bulk customers  
15 and \$0.261 per hundred gallons for Rate B bulk customers.
- 16 • Rate Zone 8 (Foster): Rates in Rate Zone 8 consist of a flat rate of \$85.00 per  
17 equivalent dwelling unit (“EDU”) per month until December 31, 2024. The  
18 Company’s currently approved tariff includes a second step for Foster of a flat rate  
19 of \$106.00 per EDU per month, which is identical to the flat rate in Rate Zone 1.
- 20 • Rate Zone 9 (Royersford): Service in Royersford is offered through a single  
21 monthly service charge for all customers of \$48.00 per month and a volumetric rate  
22 consisting of an allowance for the first 3,000 gallons at no additional charge and a  
23 volumetric charge of \$0.9400 per hundred gallons for service above the allowance.

1 In addition, an unmetered service option is available for \$50.00 per month to  
2 residential customers and \$67.00 to nonresidential customers.

3 **Q. Please describe the Company's current rate structures in its CSS rate zones.**

4 A. The rate structures differ for the three rate zones in the CSS group as follows:

- 5 • Rate Zone 3 (Scranton): Service in Rate Zone 3 is offered through a single monthly  
6 service charge and volumetric rate for all residential and nonresidential service. For  
7 residential customers, the monthly service charge is \$19.50 and the volumetric rate  
8 is \$2.3510 per hundred gallons, respectively, at proposed rates. For nonresidential  
9 customers, the monthly service charge is \$35.00 and the volumetric rate is \$1.7270  
10 per hundred gallons. Unmetered service is offered to residential customers at  
11 \$95.00 per month.
- 12 • Rate Zone 4 (Kane): Service in Rate Zone 4 is offered through a monthly service  
13 charge structure to all customers at \$40.00 per month for customers with a 5/8"  
14 water meter and \$100.00 per month for customers with water meters larger than  
15 5/8" diameter. Volumetric rates are offered through a stepped rate at \$2.10 per  
16 hundred gallons for the first 10,000 gallons of metered water usage per month and  
17 \$1.80 per hundred gallons for all metered water usage above 10,000 gallons per  
18 month. Unmetered service is offered to residential customers at \$110.00 per month.
- 19 • Rate Zone 6 (McKeesport): Service in Rate Zone 6 is offered through a monthly  
20 service charge of \$14.30 per month for residential accounts and \$35.00 per month  
21 for nonresidential accounts. A volumetric rate of \$2.8750 per hundred gallons  
22 applies to residential usage and a volumetric rate of \$2.1416 per hundred gallons  
23 applies to all non-residential usage. Additionally, there is a bulk service rate in

1           McKeesport that consists of a \$86.00 per month service charge and a volumetric  
2           rate of \$1.6680 per hundred gallons.

3 **Q. Please describe the proposed rate structures in the other rate zones in this proceeding.**

4 A. The rate structures for the remaining three rate zones not included in the CSS and SSS  
5 groups are as follows:

- 6           • Brentwood Acquisition: Upon closing, collection service in Brentwood will be  
7           offered through a single monthly service charge for all customers of \$4.57 per  
8           month and a volumetric rate consisting of \$0.8910 per hundred gallons of usage.

9           The Company has proposed in the Brentwood acquisition proceeding that,  
10           consistent with Brentwood’s current practice, PAWC will be the billing agent for  
11           charges for treatment from the Allegheny County Sanitary Authority  
12           (“ALCOSAN”) and such charges will be directly flowed through to Brentwood  
13           customers.

- 14           • BASA Acquisition: Upon closing, service in the BASA territory will be offered on  
15           an unmetered basis only and will be based on EDUs. The EDU rate for the BASA  
16           territory will be \$45.50 per EDU for most customers.

17 **Q. Is the Company proposing to recover all of the revenue requirements for wastewater  
18           service from its wastewater customers?**

19 A. No. The Company is proposing to reallocate a portion of the wastewater revenue  
20 requirement calculated in this case to its water service customers under the provisions of  
21 Act 11 of 2012 (“Act 11”). I will describe this reallocation and provide support for this  
22 reallocation in the next section of my testimony.

1 **Q. Is the Company proposing consolidation of rate zones for wastewater service in this**  
2 **case?**

3 A. Yes. Consistent with the Commission’s goal of single-tariff pricing, the Company is  
4 proposing to move all CSS customers to a single tariff with a single set of rates, with the  
5 exception of the Scranton system, and is proposing to move New Cumberland and Valley  
6 to SSS Wastewater Rate Zone 1. The Company is also proposing to set fixed charges to  
7 be the same for all wastewater customers unless prohibited by prior agreement and move  
8 rates in the SSS group for the York and Royersford system closer to Zone 1 Rates.

9 **Q. What is the Company’s proposal for wastewater service rate design and tariff**  
10 **consolidation in this case?**

11 A. The Company’s proposal for wastewater service rate design and tariff consolidation in this  
12 case includes the following:

- 13 • The Company is proposing to set all residential service charges at \$20 per month  
14 and all non-residential service charges at \$50 per month, with the exception of  
15 (a) BASA where the residential service charge is proposed at \$10 per month,  
16 (b) Brentwood where the residential service charge is proposed at \$10 per month  
17 and the non-residential service charge is proposed at \$20 per month, and Scranton.
- 18 • No changes are proposed for Scranton rates except for the roll-in of the Distribution  
19 System Improvement Charge (“DSIC”) mechanism, which results in the same  
20 percentage increase to all rate components in Scranton.
- 21 • The Company is proposing to merge rates for Kane and McKeesport customers into  
22 a single rate design that results in residential bills at average usage levels of  
23 approximately \$110 per customer, which is approximately \$10 higher per customer

1 than SSS rates, which recognizes the differences in operating systems between CSS  
2 and SSS systems. Volumetric rates for non-residential customers for Kane and  
3 McKeesport are set at \$1.90 per hundred gallons. Port Vue rates are proposed to  
4 be merged into McKeesport/Kane rates, but no increase is proposed for  
5 McKeesport bulk customers.

6 • SSS volumetric rates are increased to a level that brings residential bills for average  
7 levels of usage for Zone 1 customers to approximately \$100 per month, with  
8 proportional increases to non-residential volumetric rates. No increases are  
9 proposed for large industrial contract customers.

10 • The Company is proposing to phase-out the allowance for the first 2,000 gallons in  
11 York rates by setting the volumetric rates for York at \$0.75 per hundred gallons for  
12 the first 2,000 gallons for residential customers, and \$0.40 per gallon for non-  
13 residential customers. Volumetric rates above 2,000 gallons are set equal to Zone  
14 1 rates.

15 • Royersford volumetric rates are increased to a level that results in residential bills  
16 for average usage at approximately \$65 per month, which is a \$15 increase and is  
17 consistent with average bills and increases for York customers. Non-residential  
18 volumetric rates in Royersford are increased to \$0.75 per hundred gallons.

19 **Q. Is the company proposing any changes to its wastewater rate design in this case?**

20 A. Yes. The Company is proposing to change the way that it determines the volumetric  
21 component of bills for residential customers from the method used today, where volumetric  
22 charges are based on total metered water usage for the month, to a methodology referred  
23 to as winter averaging.

1 **Q. Please describe the concept of winter averaging.**

2 A. Winter averaging is a method for determining volumetric components of wastewater bills  
3 that attempts to separate metered water usage that is likely to go through the wastewater  
4 system from water usage that is used for outdoor purposes in the summertime  
5 (e.g., watering lawns, filling pools, etc.). Under winter averaging, a customer's bill in the  
6 winter time is determined by actual metered water usage for the month, and in the  
7 summertime the customer's bill is determined by the lesser of actual metered water usage  
8 for the month or the average water consumption for that customer in the winter months.

9 For example, in the winter period, if a customer's metered water use is 4,000  
10 gallons, the customer is billed for 4,000 gallons of water usage on their wastewater bill. In  
11 the summer period, if a customer's metered water use is 6,000 gallons and their average  
12 winter usage over the previous winter months was 5,000 gallons per month, the customer  
13 would only be billed for 5,000 gallons on their wastewater bill. If that customer's metered  
14 use was 3,000 gallons and their average winter usage over the previous winter months was  
15 5,000 gallons per month, they would be billed for 3,000 gallons of usage on their  
16 wastewater bill.

17 **Q. Is this a common way to design volumetric rates for wastewater service?**

18 A. It is. There are numerous examples of wastewater utilities that bill customers in the  
19 summertime based on this winter averaging method. The Company's affiliates in Illinois  
20 and New Jersey used this method before determining wastewater bills in the summertime.  
21 Illinois-American Water Company, which has a significant wastewater customer base, bills  
22 all of its residential customers across the state using this winter averaging methodology.  
23 New Jersey-American Water Company, which also has a significant wastewater customer

1 base, uses this winter averaging methodology in select tariffs in the New Jersey-American  
2 Water Company service territory.

3 **Q. How is the Company defining winter months under its winter averaging proposal?**

4 A. The Company is defining the winter months for the winter averaging period to be January,  
5 February, and March. These three months are the months for which the baseline usage will  
6 be determined for the purposes of billing for the rest of the year.

7 **Q. Is the winter average calculation the same for every customer?**

8 A. No. The winter averaging calculation will be customized to each individual customer. The  
9 methodology will be the same for all customers, but the calculations will be done on an  
10 individual customer basis so that each individual customer will be billed based on their  
11 winter average usage, not the average winter monthly usage for residential customers in  
12 total.

13 **Q. What happens in cases where the customer is new or otherwise doesn't have any  
14 winter billing history to base a winter average usage on?**

15 A. In cases where the customer is new or there is no winter average billing data upon which  
16 to base a calculation, the Company will assume a standard usage level of 3,000 gallons per  
17 month for a comparison point for billed summer usage.

18 **Q. Why is the Company proposing to move to a winter average rate design for residential  
19 wastewater service?**

20 A. The Company is proposing to move to this winter averaging methodology to more closely  
21 align wastewater bills in the summertime with cost-causation rate design principles. Under  
22 the current rate structure, customers are charged for wastewater service in the summertime  
23 based on metered water usage that is not actually going through the wastewater system.

1 This winter averaging methodology remedies that inconsistency in the Company's  
2 wastewater rate design and better aligns customer usage with the amounts billed.

3 **Q. What effect does this proposed move to winter averaging have on volumetric rates for**  
4 **wastewater service?**

5 A. The effect of this winter average methodology on wastewater volumetric rates is that rates  
6 will be slightly higher than they otherwise would have been for the same revenue  
7 requirement. Volumetric billing determinants for wastewater service will be slightly lower  
8 than they otherwise would have been because usage that would have been included in the  
9 summertime, as water that was being used for outdoor purposes will now be excluded from  
10 the rate calculation.

11 **Q. Do you have a schedule that shows the Company's current and proposed rate design**  
12 **for wastewater service?**

13 A. Yes. The Company's proposed rate design in this case for water service is provided in  
14 Exhibit CBR-4.

15 **Scale-Back Proposal**

16 **Q. In the event that the Commission approves a revenue requirement in this proceeding**  
17 **that is less than that proposed by the Company, either for water service or wastewater**  
18 **service or both, what is the Company's proposal for the scale back of its proposed**  
19 **water and wastewater rates?**

20 A. In the event that the Commission approves a revenue requirement that is less than that  
21 proposed by the Company, the Company proposes to reduce the revenue requirements for  
22 water service and wastewater service, and the proposed amount of reallocation from  
23 wastewater to water under Act 11 to be proportional so that the same relative percentages

1 to the total of water service revenue requirement, wastewater service revenue requirement,  
2 and Act 11 reallocation amounts be maintained at proposed levels. The Company believes  
3 that the rate design proposed in this case is reasonable and that the levels of rates for water  
4 service and wastewater service relative to each other should be maintained as proposed in  
5 the event that a lower revenue requirement is approved by the Commission in this case.

## 6 **REALLOCATION OF WASTEWATER REVENUE REQUIREMENT**

### 7 **Company Proposal**

8 **Q. What is the Company's proposal with respect to wastewater revenue requirement**  
9 **reallocation?**

10 A. The Company is proposing to reallocate a portion of the total calculated wastewater  
11 revenue requirement shown in Exhibit 3-A to water service customers. This reallocation  
12 of wastewater revenue requirement to water customers is provided for in Act 11. Under  
13 Act 11, the Commission may, when approving base rates and after providing notice and an  
14 opportunity to be heard, authorize utilities to allocate a portion of the wastewater revenue  
15 requirement to the combined water and wastewater customer base if in the public interest.

16 **Q. What portion of the wastewater revenue requirement is the Company proposing to**  
17 **reallocate to water customers?**

18 A. The total calculated revenue requirement for wastewater service is \$263,574,897. The  
19 Company is proposing to recover \$192,487,503 of that revenue requirement from  
20 wastewater customers under its proposed rates in this case. This is approximately 73% of  
21 the total. The remaining \$71,087,394 is proposed to be a revenue requirement reduction  
22 for wastewater service customers that will be recovered from water service customers.

1 **Q. Please provide a summary of the amounts of PAWC’s proposed wastewater revenue**  
2 **requirement that it proposed to be reallocated to water customers, by customer class,**  
3 **pursuant to Act 11.**

4 **A.** The reallocation of wastewater revenue requirements by water customer class is as follows:

**TABLE 4**  
**Wastewater Reallocation to**  
**Water Customers by Class**

	<b>Amount</b>
Residential	\$46,505,573
Commercial	\$18,320,153
Municipal	\$3,939,176
Industrial	\$1,635,240
<i>Private Fire</i>	\$341,990
<i>Other Revenue</i>	\$345,262

5 **Q. Please identify the amounts to be reallocated to water customers under Act 11 by**  
6 **wastewater rate zone category.**

7 **A.** The reallocation of wastewater revenue requirement by wastewater pricing group is as  
8 follows

**TABLE 5**  
**Wastewater Reallocation by**  
**Wastewater System**

	<b>Amount</b>
Group SSS	\$31,962,411
Group CSS	\$16,007,052
Brentwood	\$1,565,232
BASA	\$21,552,699

9 **Rationale**

10 **Q. What is the guiding principle behind the Company’s reallocation proposal?**

11 **A.** The guiding principle behind the Company’s reallocation proposal is to target residential  
12 bills for average wastewater usage of approximately \$100 per month for customers in the

1 SSS Zone and \$110 per month for customers in the CSS Zone, subject to the other  
2 constraints I have already noted. This reallocation also results in residential bills for  
3 average water usage of approximately \$90 per month, which brings parity to residential  
4 bills for water service and wastewater service at average usage levels. This also results in  
5 a BTI Ratio for wastewater residential customers that is less than 2023 levels, which in  
6 turn helps to manage the affordability of wastewater service and bring a level of parity to  
7 the affordability of water and wastewater service.

8 **Q. Why is the Company proposing a reallocation of wastewater revenue requirements**  
9 **to water customers under Act 11 in this case?**

10 A. The Company is proposing a reallocation of wastewater revenue requirements to water  
11 customers under Act 11 for three reasons:

- 12 • Rate increases in several wastewater zones would be significant if the full revenue  
13 requirement proposed for those rate zones were to be implemented. Affordability  
14 of wastewater service in those communities would be significantly eroded without  
15 an allocation of a portion of those revenue requirements to water customers.
- 16 • In the BASA system, the parties in that acquisition proceeding have agreed to  
17 propose a 40% increase for BASA customers in the first case in which BASA is  
18 included, which leaves a significant gap between revenues at proposed rates and  
19 the revenue requirements to serve the BASA system proposed by the Company.  
20 After the proposed 40% increase as agreed to in the settlement, there is an  
21 approximate \$21.5 million shortfall the Company proposes to recover from water  
22 customers through the Act 11 reallocation.

- 1 • Similar to the BASA system, the Company in the Brentwood acquisition  
2 proceeding is targeting an 11% bill increase (inclusive of ALCOSAN charges) for  
3 both residential and non-residential customers in the first base rate case in which  
4 Brentwood is included, which leaves a gap of approximately \$1.6 million between  
5 revenues at proposed rates (inclusive of the 11% increase) and the revenue  
6 requirements to serve the Brentwood system proposed by the Company, which the  
7 Company proposes to recover from water customers through the Act 11  
8 reallocation.
- 9 • In the Scranton system, the Company is not permitted to propose increases in rates  
10 that would result in annual revenues of \$26,272,739, as explained in the direct  
11 testimony of Stacey D. Gress (PAWC Statement No. 4). This limitation means that  
12 the proposed revenue requirement increase of approximately \$16 million for the  
13 CSS Group would otherwise have to be recovered from customers in Kane and  
14 McKeesport, which would result in significant increases for those customers.

15 **Q. Is it in the public interest in this proceeding to reallocate a portion of the wastewater**  
16 **revenue requirement to water customers?**

17 A. Yes, the proposed reallocation of wastewater revenue requirement to water service  
18 customers is appropriate and in the public interest from both a rate design and a policy  
19 perspective.

20 **Q. Why is the Company's proposal in the public interest from a rate design perspective?**

21 A. A primary rate design principle that supports the partial reallocation of wastewater cost of  
22 service to water customers is the principle of gradualism. The gradualism principle in rate  
23 design is based on the idea that changes in rates and rate design should be made in a way

1 that avoids rate shock. Rate shock can come both from general increases in revenues that  
2 can affect all customers, as well as from changes in rate designs that can cause large  
3 increases to specific groups of customers. Drastic changes in rates can cause customer  
4 confusion and dissatisfaction and have adverse effects on the utility's ability to provide  
5 quality customer service. The increases that would be applied to certain communities in  
6 the Company's wastewater territory, absent the Company's reallocation proposal, would  
7 certainly fall within this concept.

8 Another important rate design principle is the concept of affordability. As  
9 I mentioned previously, it is certainly in the public interest to have affordable water and  
10 wastewater service for as many customers as possible. Under the Company's proposed  
11 benchmark of 2% of household income at the individual household level, the Company's  
12 proposal seeks to maximize the total number of customers for whom water and wastewater  
13 service will fall below that threshold.

14 **Q. What are the important policy considerations that support the Company's proposal?**

15 A. From a policy perspective, it is important to note that PAWC is an integrated company that  
16 provides both water and wastewater services on a consolidated basis. The Company  
17 provides such services through the efforts of both PAWC employees and the resources of  
18 the Service Company. This consolidation of functions creates opportunities to capture  
19 economies of scale that ultimately will drive down costs to customers, which do not exist  
20 where water and wastewater operations are fragmented. It is in the long-term best interest  
21 of our customers and the Commonwealth of Pennsylvania to adopt policies that encourage  
22 the development of these cost-reducing or mitigating economies of scale. The temporary

1 reallocation of revenue requirement between water and wastewater systems is an important  
2 piece of that equation.

3 Capital expansion plans often drive the need for utility rate increases. As PAWC  
4 witness Bruce Aiton points out in PAWC Statement No. 3, a significant driver of this rate  
5 increase request is PAWC's ongoing infrastructure investment plans. In the short term,  
6 capital additions in different parts of the Company's water and wastewater systems will  
7 exhibit peaks and valleys. This can be especially true in newly acquired systems where  
8 upfront investment needs may be more significant than in other systems where the  
9 Company has been making more modest, annual investments over a longer period of time.  
10 Over time these investment plans will revert to an average long-term investment pattern,  
11 and the associated changes in rates will reflect that long-term investment pattern. The  
12 initial rate changes in newly acquired systems can be extreme, however, if all of the  
13 investments are required to be recovered exclusively from the customers of those systems  
14 upfront. A reallocation of a portion of the revenue requirement to a larger customer base  
15 can ease the burden on new system customers and further the goal of consolidation and  
16 prudent investment in these systems. The long-term benefits of consolidation are already  
17 experienced by existing customers, and this proposal allows those benefits to be extended  
18 to new customers as well.

19 **Impacts to Customers**

20 **Q. What will be the impact of the Company's proposal to reallocate a portion of**  
21 **wastewater revenue requirement to water service customers on the Company's water**  
22 **service bills?**

1 A. Based on the Company’s cost of service and proposed customer class revenue allocation  
2 in this case, this reallocation results in an increase in residential water volumetric rates of  
3 \$0.19 per hundred gallons, which would increase the monthly water bill of a Rate Zone 1  
4 residential water customer with an average usage of 3,200 gallons per month by  
5 approximately \$6.08 per month. In contrast, this reallocation results in lower wastewater  
6 residential bills for approximately the same usage level of anywhere from \$10 to \$90 per  
7 month depending on the rate and location of the customer.

8 **QUANTITATIVE STATISTICAL ANALYSIS OF WATER CONSUMPTION**

9 **Introduction**

10 **Q. Are there revenue adjustments the Company is proposing in this case that require**  
11 **quantitative analysis of water consumption by PAWC’s water customers?**

12 A. Yes. I will explain the modeling used to develop the revenue forecasts for residential,  
13 commercial and municipal customers, and in the next section, I will discuss the  
14 development of the revenue projections for all customer classes (residential, commercial,  
15 industrial, municipal, and sales for resale). For residential, commercial, and municipal  
16 customers, the Company is proposing adjustments for the normalization of the actual  
17 billing determinants for the Historic Test Year ending June 30, 2023 (“HTY”), related to  
18 trends in declining use, weather normalization, and the impact of the COVID-19 public  
19 health emergency on water consumption for PAWC’s water customers. These adjustments  
20 require the Company to analyze water consumption and determine (1) if there is a  
21 significant and pervasive rate of decline in water use per customer over time; (2) if there  
22 are significant relationships between water consumption and weather conditions in the  
23 Company’s service territory, if weather was different from normal in the HTY period, and

1 assuming both of those conditions exist, if a weather normalization adjustment to usage is  
2 appropriate to reflect normal weather conditions for the Future Test Year ending June 20,  
3 2024 (“FTY”), and the FPFTY; and (3) if the COVID-19 public health emergency has had  
4 a significant impact on water consumption for PAWC’s customers, to determine if a  
5 COVID-19–related adjustment to usage is appropriate for the HTY and FPFTY.

6 **Q. How do you determine the parameters and relationships necessary to analyze**  
7 **declining water use, weather impacts on water consumption, and the impact of**  
8 **COVID-19 on water consumption for PAWC’s customers?**

9 A. The parameters and relationships necessary to analyze declining use, weather, and COVID-  
10 19 on water consumption for PAWC’s customers are estimated through the use of statistical  
11 linear regression modeling.

## 12 **Review of Methodologies**

13 **Q. What is a statistical linear regression model?**

14 A. Statistical linear regression modeling is a commonly used type of mathematical predictive  
15 analysis. The overall idea of regression modeling is to examine two things: (1) whether a  
16 set of independent explanatory variables do a good job of predicting an outcome  
17 (dependent) variable, and (2) which independent explanatory variables are significant  
18 predictors of the dependent variable, and in what way in particular do they help predict the  
19 results of the dependent variable.

20 There are three major uses for statistical linear regression analysis. These major  
21 uses are: (1) determining the predictive power of independent explanatory variables;  
22 (2) forecasting the effect that independent variables have on a dependent variable; and  
23 (3) trend forecasting. First, the regression analysis can be used to identify the strength of

1 the effect that independent explanatory variables have on a dependent variable. A typical  
2 question is: “What is the strength of the relationship between summer heat, precipitation,  
3 and water sales?” Second, the regression analysis can be used to forecast effects or impacts  
4 of changes. That is, the regression analysis helps us understand how much the dependent  
5 variable changes with a change in one or more of the independent variables. A typical  
6 question is: “What volume of water sales can the Company expect to lose for each inch of  
7 rainfall above normal in any given period?” Third, regression analysis can predict trends  
8 and future values. The regression analysis can be used to get point estimates of future  
9 values of the dependent variable based on assumed values for the independent variables.  
10 A typical question can be: “Given current trends in water sales, what can we expect water  
11 sales to be each month next year assuming normal weather?”

12 **Q. What does a statistical regression model produce?**

13 A. A statistical linear regression analysis is a way of mathematically validating which  
14 independent variables have a significant impact on the dependent variable – i.e., the main  
15 factor, or the factor you are trying to better understand or predict. A statistical linear  
16 regression model produces an equation that describes a historical relationship between a  
17 set of independent variables and a single dependent variable that can be used to forecast  
18 future values of the dependent variable based on assumed values of the independent  
19 variables. An example of such an equation is shown below:

$$\text{UPC}_n = a_0 + (a_1 \times \text{RAIN}_n) + (a_2 \times \text{CDD}_n) + (a_3 \times \text{HDD}_n) + \\ (a_4 \times \text{COVID}_n) + (a_5 \times \text{TIMEn})$$

22 Where:  $\text{UPC}_n =$  Use per customer in month n

23  $\text{RAIN}_n =$  Rainfall in month n

- 1                    CDD<sub>n</sub> =        Cooling Degree Days (“CDD”) in month n
- 2                    HDD<sub>n</sub> =        Heating Degree Days (“HDD”) in month n
- 3                    COVID<sub>n</sub> =      COVID-19 effect in month n (0% to 100%)
- 4                    TIME<sub>n</sub> =       Year/Month for month n
- 5                    and:            a<sub>0</sub> =            constant term
- 6                                    a<sub>1</sub> =            coefficient for RAIN
- 7                                    a<sub>2</sub> =            coefficient for CDD
- 8                                    a<sub>3</sub> =            coefficient for HDD
- 9                                    a<sub>4</sub> =            coefficient for COVID-19 impact per customer
- 10                                  a<sub>5</sub> =            coefficient for TIME (declining use value)

11                    In this example, use per customer is the dependent variable (outcome) and all other  
 12                    variables are independent variables (predictors).

13    **Q.    Can statistical linear regression models be used to weather normalize historical water**  
 14                    **sales for different customer classes?**

15    A.    Yes. In the statistical model in the example above, the a<sub>1</sub> coefficient for RAIN can be used  
 16                    to estimate the impact of rainfall on use per customer in any given historical period and  
 17                    estimate what the usage per customer would have been if rainfall had been different,  
 18                    especially when actual precipitation was higher or lower than normal. Below is a sample  
 19                    calculation of how weather normalization works with a statistical regression model that  
 20                    uses weather as a strong predictive independent variable that affects the use per customer  
 21                    dependent variable.

1                     $IMPACT_n = a_1 \times (ACTUAL\ RAIN_n - NORMAL\ RAIN_n)$

2                    Where:             $IMPACT_n =$  Weather impact due to abnormal rainfall in period n

3                                     $ACTUAL\ RAIN_n =$  Actual Rainfall (in inches) in period n

4                                     $NORMAL\ RAIN_n =$  Average Rainfall (in inches) in period n

5                    If the value of the a1 coefficient for rainfall is -0.30 in this example, actual rainfall for the  
6                    period is 6 inches and normal rainfall for the period is 4 inches, the weather impact for the  
7                    period due to higher-than-normal rainfall is a negative 600 gallons per customer, meaning  
8                    that the Company sold 600 fewer gallons per customer of water than it otherwise would  
9                    have  $[-0.30 \times (6 - 4) = -0.60]$ . If there are multiple weather variables in the statistical  
10                   regression analysis, this calculation is completed separately for each variable and the sum  
11                   of the calculations is rolled up into a single weather impact. This approach to weather  
12                   normalization allows an analyst to independently assess the impact of each weather  
13                   component, and also allows an analyst to state the weather impacts over time both in terms  
14                   of consumption and in terms of revenues by multiplying the consumption impact by a  
15                   volumetric price.

16 **Q. Can statistical linear regression models be used to estimate the impacts of COVID-19**  
17 **on water sales for different customer classes?**

18 A. Yes. In the statistical model example above, the a4 coefficient for COVID-19 is the  
19 estimate of the impact of the COVID-19 public health emergency on monthly use per  
20 customer. The historical data set contains a variable for each month that indicates the  
21 assumed qualitative level impact from COVID-19 in that month. In all months prior to  
22 April 2020, that value was set at 0%. From April 2020 on, that value is set at 100% when  
23 maximum COVID-19 impacts are observed, or at a level less than 100% where we see

1 reduced COVID-19 impacts on usage. The coefficient for the COVID-19 impact variable  
2 estimates the average monthly use per customer based on the months that have been  
3 designated as COVID-19 months. This coefficient can then be used to (1) identify a normal  
4 level of usage that is not influenced by the impact of COVID-19, in a manner similar to a  
5 normalization calculation that adjusts for the influence on water usage associated with  
6 weather conditions that depart from normal, and (2) reflect estimates of future impacts of  
7 the COVID-19 public health emergency.

8 **Q. Can these models be used to estimate trends in declining use per customer for**  
9 **different customer classes?**

10 A. Yes. In the same statistical model example represented above, the a5 coefficient for TIME  
11 is the estimate of declining use per customer per month. This coefficient measures the rate  
12 of decline in use per customer over the historical data set independent of the effect of any  
13 other variable in the model. The historical data set contains a variable for each month that  
14 is a timestamp that starts at one for the first month in the dataset and increases by one for  
15 every month going forward. This acts as a trend variable for both historical periods in the  
16 dataset and future forecast periods. The coefficient for this trend variable is applied to  
17 future increasing values of the trend which results in decreasing forecasts of use per  
18 customer.

19 **Q. How does one assess the accuracy of a statistical linear regression model?**

20 A. A statistical linear regression model produces a set of statistics that can be used to judge  
21 the accuracy and fitness of the model. The most common statistics are (1) the “R-Squared”  
22 value, which is a statistical measure in a regression model that determines the proportion  
23 of variance in the dependent variable that can be explained by the independent variables,

1 and (2) values and standard deviations for the coefficients, which can be used to determine  
2 “t-statistics” and “p-values,” which tell how accurately and precisely the different  
3 coefficients are being calculated and whether the associated independent variables are  
4 strong predictors of the dependent variable.

5 In the equation described above, the “R-Squared” value is a statistic that measures  
6 the percentage of variation from period to period in the dependent variable (water use per  
7 customer) that is explained by the mathematical relationship with the independent  
8 variables. The R-Squared can range from 0% (no explanatory ability) to 100% (perfect  
9 explanatory accuracy). In general, the higher the R-squared, the better the predictive value  
10 of the model.

11 The second major test involves comparisons of the values of each of the model  
12 coefficients and their associated standard errors. Because a statistical regression model  
13 estimates an explanatory relationship between a dependent variable and a set of  
14 independent variables, there will always be some degree of uncertainty around what that  
15 explanatory relationship actually is. As a result, each model coefficient has a level of  
16 uncertainty around it, and this level of uncertainty is represented by measuring how many  
17 standard errors each coefficient is away from zero, which the model also calculates.

18 Dividing the value of each coefficient by its standard error yields a t-statistic, which  
19 can be used to judge the predictive power of the independent variable that the coefficient  
20 represents. For example, in the case of the generic statistical model described above, if the  
21 value of the  $a_1$  coefficient for rainfall is -0.30 and the standard error for that coefficient is  
22 0.05 (meaning that the real value of the coefficient could be anywhere between -0.35 and  
23 -0.25 with -0.30 being the most likely value), the value of the t-statistic is -6.0 (-0.30

1 divided by 0.05 = 6.0). Generally speaking, t-statistic values greater than 2.0 for positive  
2 coefficients or less than -2.0 for negative coefficients indicate an acceptable predictive  
3 relationship between that independent variable and the dependent variable of interest. The  
4 higher the t-statistic value, the greater the confidence we have in the coefficient as a  
5 predictor. Values between 2.0 and -2.0 indicate that the predictive power of that  
6 independent variable may not be very strong.

7 **Q. Are there other more qualitative ways to determine whether a statistical linear**  
8 **regression model is accurate and produces reasonable results?**

9 A. Yes. There are also several qualitative ways to determine whether a statistical regression  
10 model accurately describes the relationship that a chosen set of independent variables has  
11 with the dependent variable:

- 12 • **Does the model represent reality?** If it is generally known that water consumption  
13 is seasonal and is driven in the summertime by heat and precipitation, it is logical  
14 to assume that a statistical model that attempts to describe and predict seasonal  
15 water consumption would have explanatory variables related to summer heat and  
16 precipitation, and those explanatory variables would be shown to have a strong  
17 predictive value in the model. Models that attempt to accurately describe the  
18 drivers behind water consumption that do not contain statistically significant  
19 coefficients for independent variables that are logically known to drive water  
20 consumption are likely not strong predictive models.
- 21 • **Are the signs of the coefficients for major independent variables correct?** If  
22 water consumption increases in the summertime with increasing heat and decreases  
23 in the summertime with increasing precipitation, it is logical to expect that the

1 coefficients for the independent variables that represent summertime heat and  
2 summertime precipitation would be positive and negative, respectively.

- 3 • **Is the model based on a robust data set?** It is easy for a statistical model with  
4 many independent variables and relatively few observations of the dependent  
5 variable to accurately explain variation in the dependent variable, but that does not  
6 mean that the model has strong predictive power if the data set being analyzed is  
7 small in scope. A statistical model that attempts to describe water consumption and  
8 that has good predictive explanatory power over multiple years of monthly  
9 historical data is very useful and accurate in projecting future trends and in  
10 explaining how changes in strong predictive independent variables will affect levels  
11 of the dependent variable.

- 12 • **Do the impacts on the dependent variable that the model describes make**  
13 **logical sense?** It is possible, outside of a statistical linear regression model, to make  
14 ballpark estimates of other facts like the impact of COVID-19 on water  
15 consumption and long-term trends in declining use. This can be done with a simple  
16 linear plot of annual usage data by year. For example, if a linear plot of annual  
17 usage data suggests that there is a downward trend of approximately 1,000 gallons  
18 per customer per year, one would expect that a statistical model that is measuring  
19 that impact would yield a result that is similar. The same is true when looking at  
20 the potential impacts of COVID-19 on water consumption. If a visual examination  
21 of data suggests that water use per customer for a commercial class has decreased  
22 by 2,000 gallons per customer in 2020 due to the COVID-19 emergency, it is

1 logical to expect a statistical regression model that attempts to statistically measure  
2 that impact to yield estimates consistent with that expectation.

### 3 **Pennsylvania Modeling and Results**

4 **Q. Please describe the statistical linear regression model you are using to analyze water**  
5 **consumption data for PAWC.**

6 A. In this proceeding, we are using multiple regression statistical models to analyze use per  
7 customer for the residential and commercial classes that relate the dependent variable  
8 (i.e., water use per customer) to a collection of independent variables. The models use 120  
9 months of monthly data beginning in July 2013 through June 2023. Each regression model  
10 uses independent variables that can be broken down into four categories to explain monthly  
11 use per customer. The four categories are:

- 12 • **Weather**: The weather variables used in the models are Cooling Degree Days  
13 (“CDDs”), Heating Degree Days (“HDD”), and precipitation. These weather  
14 variables are a weighted average of current month and lagged month weather  
15 readings taken by the National Oceanic and Atmospheric Administration at  
16 Pittsburgh Allegheny County Airport. This weighted average lagged approach is  
17 used to account for the differences between billing month sales and calendar month  
18 weather. Coefficients from these variables show the impact of weather on monthly  
19 use per customer over the 10-year period. Weather variables are modeled as  
20 monthly deviations from normal for each month in the data set (actual weather for  
21 the month less normal weather for the month for each individual weather variable).  
22 Normal weather is calculated for each month of the year based on the weather over  
23 the 10-year period that the historical data spans.

1           • **Time**: The time variable is a trending variable that notes the passage of time in the  
2           model and produces a coefficient that estimates the monthly decline in usage per  
3           customer over the 10-year model. The time variable captures the range of  
4           conservation efforts that have been implemented by customers over time, such as  
5           the installation of more water-efficient fixtures and appliances. Time on its own is  
6           of no consequence, but it is a powerful variable because it is the medium for  
7           capturing the conservation effect.

8           • **COVID-19 indicator**: The COVID-19 indicator variable is set at 0% for months  
9           prior to April 2020, 100% for the months of April 2020 through December 2020,  
10          and 40% for the months from January 2021 through June 2023. The effect of this  
11          variable in the model is to look specifically for increases or decreases in use per  
12          customer for the April 2020 through June 2023 timeframe that may have happened  
13          due to systemic changes in the amounts of water customers use as a result of the  
14          COVID-19 public health emergency.

15          • **Monthly indicators**: The monthly indicator variables in the model measure  
16          structural monthly and/or seasonal changes in use per customer that cannot be  
17          explained by any of the other variables in the model.

18 **Q.    What information do these models provide that is useful for developing pro forma**  
19 **adjustments to revenues that you are sponsoring in your testimony?**

20 A.    Each model produces a set of weather coefficients that can be used to weather-normalize  
21 historical sales for the HTY period, a coefficient that indicates the monthly trend in

1 declining use per customer for each class, and a coefficient that shows for each class the  
2 average use per customer impact associated with changes in usage due to COVID-19.

3 **Q. You mentioned that you have developed models for customer usage relating to the**  
4 **residential, commercial, and municipal classes. Are you also modeling usage for the**  
5 **industrial and sales for resale customer classes?**

6 A. No. The statistical modeling in this case is only for the residential, commercial, and  
7 municipal classes. Usage estimates for the industrial and sales for resale classes are  
8 developed using a simple multi-year average and are described later in the revenue section  
9 of my testimony.

10 **Q. You previously discussed the various statistical tests used for accuracy and**  
11 **predictability. Please discuss the results of these tests for your models and why they**  
12 **are appropriate to use in this proceeding.**

13 A. As shown in Exhibits CBR-5, CBR-6, and CBR-7, the Adjusted R-Squared statistics for  
14 the residential usage model is 85%, the Adjusted R-Squared statistic for the commercial  
15 usage model is 82%, and the Adjusted R-Squared statistic for the municipal model is 77%.  
16 This indicates that in all models, the explanatory variables (weather, COVID-19 impacts,  
17 declining use, etc.) strongly explain the variability in use per customer over time. The  
18 values of the coefficients, standard errors, and t-statistics for the major explanatory  
19 variables in the models are as follows:

**TABLE 6****Residential Model Major Explanatory Variables**

	<b>Coefficient</b>	<b>Standard Error</b>	<b>t-Statistic</b>
Declining Use Trend	-0.0043	0.0004	-10.8213
Precipitation	-0.0333	0.0094	-3.5456
CDD	0.0009	0.0004	2.2482
HDD	0.0004	0.0001	3.0833
COVID-19 Impact	0.2962	0.0498	5.9428

**TABLE 7****Commercial Model Major Explanatory Variables**

	<b>Coefficient</b>	<b>Standard Error</b>	<b>t-Statistic</b>
Declining Use Trend	-0.0180	0.0036	-5.0336
Precipitation	-0.1797	0.0825	-2.1788
CDD	0.0058	0.0037	1.5722
COVID-19 Impact	-2.4496	0.4521	-5.4178

**TABLE 8****Municipal Model Major Explanatory Variables**

	<b>Coefficient</b>	<b>Standard Error</b>	<b>t-Statistic</b>
Declining Use Trend	-0.0055	0.0143	-0.3854
Precipitation	-0.8998	0.3143	-2.8626
CDD	0.0225	0.0136	1.6587
COVID-19 Impact	-18.0782	1.8153	-9.9590

1 The statistics for the individual explanatory independent variables above show a high  
2 degree of explanatory power with all parameters having t-statistics all outside of the +/-  
3 2.00 range apart from the CDD variable for the commercial class, which is marginally not  
4 statistically significant, and the trend variable for the municipal class, which is not  
5 statistically significant. The signs for the precipitation variables are negative as expected,  
6 meaning that more rainfall over a summer period results in less seasonal water usage from  
7 our residential customers. The signs for the CDD variable is positive, which indicates that  
8 the hotter the weather gets in the summer, the more water customers use, which is expected,  
9 and the COVID-19 impact variable indicates that residential usage went up as a result of

1 COVID-19 and commercial and municipal usage went down. The sign for the declining  
2 use variable for the residential and commercial classes are negative and are statistically  
3 significant, which means that there is a pervasive decline in use per customer for residential  
4 and commercial customers over the 10-year historical period.

5 **Q. Please describe specifically how you are modeling the effect of the COVID-19**  
6 **pandemic in your statistical analysis.**

7 A. As stated previously, the COVID-19 indicator variable in each model is set at 0% for  
8 months prior to April 2020, 100% for the months of April 2020 through December 2020,  
9 and 40% for the months from January 2021 through June 2023. The effect of this variable  
10 in the model is to look specifically for increases or decreases in use per customer for April  
11 2020 through June 2023, which may have happened due to systemic changes in the  
12 amounts of water customers used as a result of the COVID-19 public health emergency.  
13 The charts below show estimated impacts by month on use per customer by class associated  
14 with the COVID-19 pandemic as identified by the Company’s modeling.

- 1 **Q. Based on this information, what assumptions are you making going forward**
- 2 **regarding the impacts on customer usage related to the COVID-19 pandemic?**
- 3 **A. The Company’s forecast of use per customer includes no ongoing impacts related to the**
- 4 **COVID-19 pandemic, meaning that forecasted impacts for each of the residential,**

1 commercial, and municipal classes is forecasted to be zero, and usage is expected to revert  
2 back to the underlying trend seen before the pandemic.

3 **Declining Usage Discussion**

4 **Q. Your regression models show a trend of declining use per customer. What is the**  
5 **amount of declining use your models have identified?**

6 A. The annual amount of declining use identified for residential customers is approximately  
7 610 gallons per year per customer. The annual amount of declining use identified for  
8 commercial customers is approximately 2,600 gallons per year per customer. The annual  
9 amount of declining use identified for municipal customers is approximately 800 gallons  
10 per year per customer.

11 **Q. Why do you believe that declining use is a valid trend for residential and commercial**  
12 **customers that will continue?**

13 A. Consumption patterns for the Company's customers are similar to those for other American  
14 Water operating companies, which have experienced a decline in consumption per  
15 customer averaging approximately -2.0% per year over the last 10 years. According to the  
16 2010 Water Research Foundation report, "many water utilities across the United States and  
17 elsewhere are experiencing declining water sales among households." The report further  
18 states: "A pervasive decline in household consumption has been determined at the national  
19 and regional levels."<sup>5</sup>

---

<sup>5</sup> Coomes, Paul et al., *North America Residential Water Usage Trends Since 1992* – Project #4031, p. 1 (Water Research Foundation, 2010).

1 **Q. What is causing the decline in customers' usage?**

2 A. Several factors drive the decline in usage. These factors include the incremental  
3 introduction of low-flow fixtures and appliances, new regulations that lead to further  
4 reductions in fixture flow rates, conservation programs, and public initiatives that have led  
5 to greater consumer water conservation awareness.

6 Plumbing fixtures such as toilets, showerheads, and faucets available to consumers  
7 today are more water-efficient than those fixtures manufactured in the past. Similarly,  
8 appliances such as dishwashers and washing machines are also more water efficient. When  
9 a customer replaces an older toilet, washing machine, or dishwasher with a new unit, the  
10 new unit will almost certainly use less water than the one it replaced. Similarly, the  
11 construction of new homes results in the installation of water-efficient fixtures meeting  
12 new, more efficient, regulatory standards.

13 **Q. How much water do the new fixtures and appliances save?**

14 A. The Energy Policy Act of 1992 mandated the manufacture of water-efficient toilets,  
15 showerheads, and faucet fixtures. For example, a toilet manufactured after 1994 must use  
16 no more than 1.6 gallons per flush, compared to a pre-1994 toilet, which typically used  
17 from 3.5 to 7 gallons per flush. In fact, toilets using only 1.28 gallons per flush or less are  
18 becoming more prevalent in the marketplace. Replacing an old toilet with a new one,  
19 therefore, can save from 2 gallons to nearly 6 gallons per flush.

20 The Energy Independence & Security Act of 2007, which established stringent  
21 efficiency standards for dishwashers and washing machines, has further reduced indoor  
22 water consumption. Dishwashers manufactured after 2009 and washing machines  
23 manufactured after 2010 must use 54% and 30% less water, respectively. All other factors

1 being equal, a typical residential household in a new home constructed in 2015, with water-  
2 efficient toilets, washing machines, dishwashers, and other fixtures, uses approximately  
3 35% less water for indoor purposes than a non-retrofitted home built prior to 1994.

4 **Q. Are there other factors contributing to the continued decline in water consumption**  
5 **patterns?**

6 A. Yes. Programs to raise customer awareness and interest in the benefits of conserving water  
7 and energy continue to increase. As awareness of water and energy efficiency increases,  
8 customers may decide to replace a fixture or appliance even before it has broken.  
9 Additionally, customers may further reduce consumption by changing their household  
10 water use habits in other various ways.

11 **Q. Do you expect the trend of declining usage to continue in the future?**

12 A. Yes. Water-efficient fixtures and other drivers such as conservation education and  
13 government-mandated standards will continue to drive further efficiency into residential  
14 and nonresidential usage per customer. In fact, the trend is well established and continues  
15 to affect water usage on the Company's system, as well as most water utilities across the  
16 United States. The rate of the continued trend is dependent on the pace of fixture  
17 replacement within the Company's footprint, as well as the broadening acceptance of a  
18 conservation ethic through customer and business awareness programs, government  
19 conservation policy, and similar behavior modification-related programs.

20 Technology is now available for newer, more water-efficient products that further  
21 improve on Energy Policy Act levels, and there has been a growing movement to codify  
22 these more stringent specifications. The introduction of progressive code modifications –  
23 such as the International Code Council's International Green Construction Code and the

1 International Association of Plumbing and Mechanical Officials Green Plumbing and  
2 Mechanical Code Supplement (2011) – support uniform implementation of increased water  
3 efficiency standards. An article in the June 2012 issue of the AWWA Journal titled  
4 “Insights into declining single-family residential water demands” recognizes this decline  
5 in water consumption: “[r]educed residential demand is a cornerstone of future urban water  
6 resource management. Great progress has been made in the last 15 years and the industry  
7 appears poised to realize further demand reductions in the future.”<sup>6</sup> The trend of declining  
8 water consumption based on improved water efficiency has continued over time.

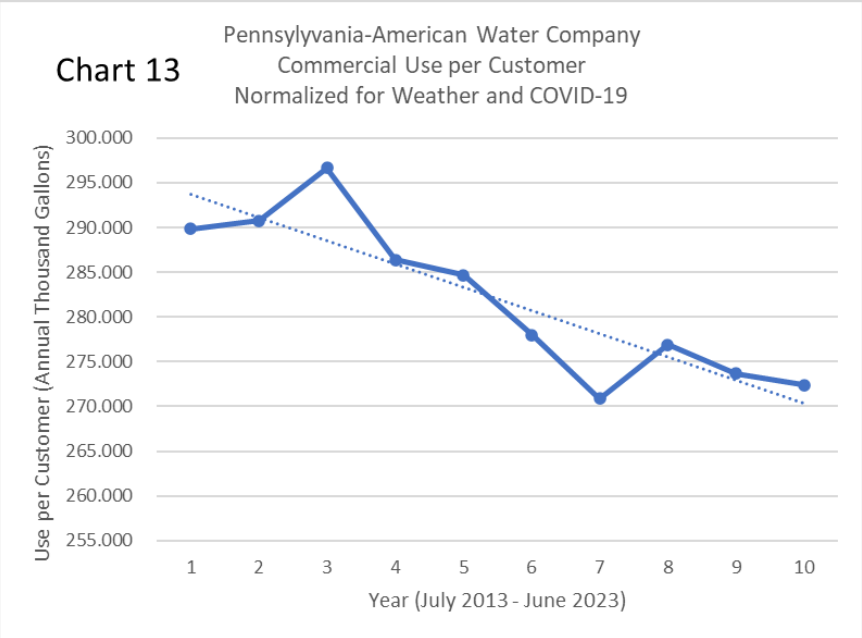

## 9 **Conclusions**

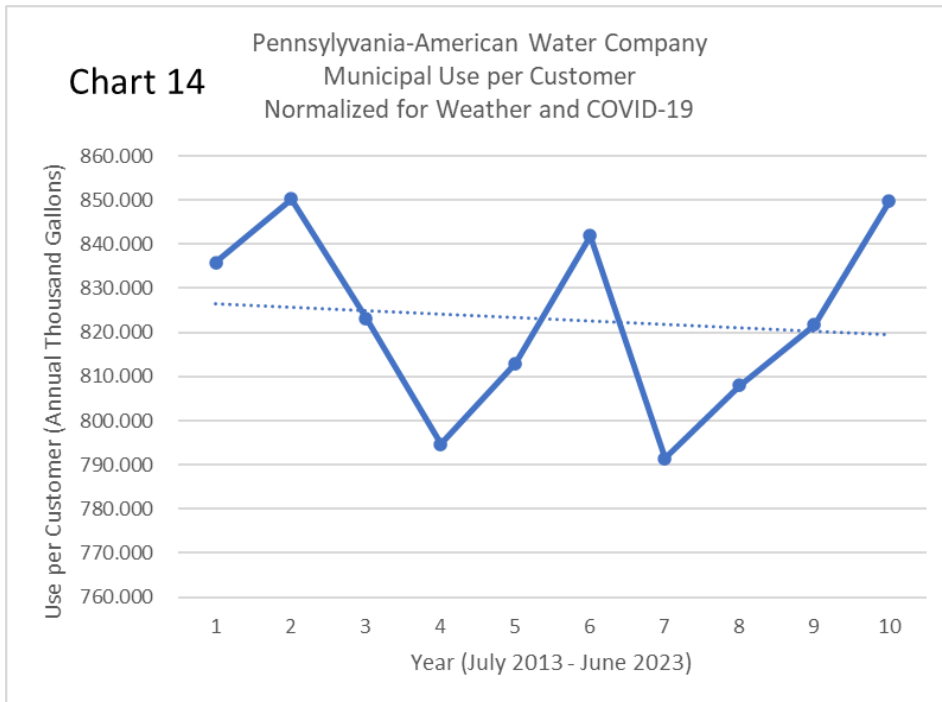

10 **Q. Normalizing historical usage for weather and the COVID-19 emergency, what has the**  
11 **overall trend been for use per customer for the residential, commercial, and**  
12 **municipal classes?**

13 A. The statistical analysis of usage for the residential, commercial, and municipal classes  
14 shows that once weather effects and the one-time effects of COVID-19 have been  
15 accounted for, there is a significant downward trend in usage for these customer classes.  
16 The charts below show use per customer for each class for the 10 years ending June 2023,  
17 adjusted for the weather impacts and COVID-19 impacts that I previously described in my  
18 testimony.

---

6 DeOreo, W. and Mayer, P., American Water Works Association Journal, vol. 104, issue 6 (June 2012),  
[http://apps.awwa.org/WaterLibrary/showabstract.aspx?an=JAW\\_0076117](http://apps.awwa.org/WaterLibrary/showabstract.aspx?an=JAW_0076117).

1 **Q. What conclusions do you draw from this chart and your supporting analysis?**

2 A. The charts and the supporting analysis demonstrate that there has been a significant and  
 3 pervasive decline in normalized use per customer for the residential, commercial and  
 4 municipal customers in the PAWC service territory. The Company’s modeling normalizes  
 5 for weather and COVID-19 and shows that there has been a pervasive decline in usage for  
 6 these classes over the past 10 years. The historical trends in adjusted monthly use per  
 7 customer for the residential, commercial and municipal classes will continue through the  
 8 relevant periods going forward.

9 **REVENUE CALCULATIONS**

10 **General Calculations**

11 **Q. Please explain the development of pro forma revenues as set forth in Exhibit No. 3-A**  
 12 **for Water Operations.**

1 A. The process of developing the Company’s revenue claim begins with revenues recorded  
2 on the Company’s books of account at June 30, 2023, to which various adjustments were  
3 made. Exhibit No. 3-A shows a summary of the development of pro forma revenues for  
4 Water Operations under present and proposed rates for the HTY, FTY, and FPFTY periods.

5 Additionally, for each of the test years, Exhibit No. 3-A includes a schedule  
6 showing operating revenues by customer classification, as well as a schedule showing a  
7 summary of the various adjustments made to book operating revenues to arrive at pro forma  
8 operating revenues under present rates.

9 **Q. Does Exhibit No. 3-A show a similar development of pro forma revenues for revenue**  
10 **requirements other than for water operations?**

11 A. Yes. The revenue schedules described above are also provided for the five wastewater  
12 revenue requirements:

- 13 • SSS Systems
- 14 • CSS Systems
- 15 • Brentford Acquisition
- 16 • BASA Acquisition

17 **Q. Please explain the various adjustments to the Company’s book revenues that were**  
18 **made to develop pro forma sales and revenues under present and proposed rates for**  
19 **the Company’s water and wastewater operations.**

20 A. The following adjustments were made to per book revenues by class:

- 21 • Adjustment 2a: TCJA and EADIT Surcharge Adjustment
- 22 • Adjustment 2b: Unbilled Revenue Adjustment
- 23 • Adjustment 2c: DSIC Annualization Adjustment

- 1           • Adjustment 2d:        AMP Deferred Revenue Adjustment
- 2           • Adjustment 2e:        Annualization of Base Year Rate Changes
- 3           • Adjustment 2f:        Private Fire Adjustment
- 4           • Adjustment 2g:        Public Fire Adjustment
- 5           • Adjustment 2h:        Changes in Customers
- 6           • Adjustment 2i:        Usage Trend Adjustment
- 7           • Adjustment 2j:        Annualization Adjustment for Valley Water
- 8           • Adjustment 2k:        Annualization Adjustment for Valley Wastewater
- 9           • Adjustment 2l:        Shale Gas Commercial Usage Adjustment
- 10          • Adjustment 2m:        Acquisition Adjustment for Creekside Water
- 11          • Adjustment 2n:        Annualization Adjustment for Foster Wastewater
- 12          • Adjustment 2o:        Annualization Adjustment for York Wastewater
- 13          • Adjustment 2p:        Annualization Adjustment for Upper Pottsgrove Wastewater
- 14          • Adjustment 2q:        IPP Adjustment
- 15          • Adjustment 2r:        Rental Income Adjustment
- 16          • Adjustment 2s:        Intercompany Rental Adjustment
- 17          • Adjustment 2t:        Usage Data Revenue Adjustment
- 18          • Adjustment 2u:        Specific Customer Adjustments
- 19          • Adjustment 2v:        Adjustment for Strattanville Borough
- 20          • Adjustment 2w:        Annualization Adjustment for Findlay Township
- 21          • Adjustment 2x:        Acquisition Adjustment for Audubon Water
- 22          • Adjustment 2y:        Acquisition Adjustment for Farmington Water

- 1           • Adjustment 2z:           Acquisition Adjustment for Farmington Wastewater
- 2           • Adjustment 2za:           Acquisition Adjustment for Sadsbury Wastewater
- 3           • Adjustment 2zb:           Acquisition Adjustment for BASA Wastewater
- 4           • Adjustment 2zc:           Acquisition Adjustment for Brentwood Wastewater
- 5           • Adjustment 2zd:           Late Payment Fees

6    **Description of Adjustments**

7    **Q.    Please describe the TCJA and EADIT Surcharge Adjustment in Schedule 2a.**

8    A.    The TCJA and EADIT Surcharge adjustment is made to eliminate booked revenues for the  
9       HTY period associated with the TCJA tax credit and EADIT surcharge revenues. The  
10       amount of the adjustments for water operations is \$6,908,979. The amount of the  
11       adjustment for SSS wastewater operations is \$48,442. The amount of the adjustment for  
12       CSS wastewater operations is \$36,990.

13   **Q.    Please describe the Unbilled Revenue Adjustment in Schedule 2b.**

14   A.    The Unbilled Revenue adjustment is made to eliminate unbilled revenues that were accrued  
15       for the HTY period. The amount of the adjustment for water operations is -\$9,429,136.  
16       The amount of the adjustment for SSS wastewater operations is -\$2,746,186. The amount  
17       of the adjustment for CSS wastewater operations is -\$1,981,963.

18   **Q.    Please describe the DSIC Annualization Adjustment in Schedule 2c.**

19   A.    The DSIC Annualization adjustment is made to eliminate the DSIC revenues per book for  
20       the HTY period, in order to reset the DSIC to zero. The FPFTY pro forma revenue  
21       adjustment is to annualize the DSIC revenues for the FPFTY period based on the  
22       Company's pro forma level rate of 2.30% for water and 1.08% for wastewater. The  
23       adjustments by year and by system are as follows.

**TABLE 9**

<b>DSIC Adjustments</b>	<b>HTY</b>	<b>FPFTY</b>
Water Operations	-\$8,436,657	\$17,839,208
SSS Wastewater Operations	-\$322,710	\$977,043
CSS Wastewater Operations	-\$572,047	\$833,002
<b>Total</b>	<b>-\$9,331,414</b>	<b>\$19,649,253</b>

1 **Q. Please describe the AMP Deferred Revenue Adjustment in Schedule 2d.**

2 A. The AMP Deferred Revenue adjustment is made to remove Arrearage Management  
3 Program (“AMP”) revenue credits booked in residential revenue accounts for the HTY  
4 period. The amount of the adjustments for water operations is \$721,875. The amount of  
5 the adjustment for CSS wastewater operations is \$81,270 and for SSS wastewater  
6 operations is \$106,230.

7 **Q. Please describe the Base Year Rate Annualization Adjustment in Schedule 2e.**

8 A. This revenue adjustment is made to revenues for the HTY period to reflect the  
9 annualization of new base rates for water and wastewater service that took effect on January  
10 28, 2023. The adjustments by customer class and system are as follows:

11

**TABLE 10**

<b>Class Adjustments</b>	<b>Water</b>	<b>SSS Wastewater</b>	<b>CSS Wastewater</b>
Residential	\$48,328,510	\$9,235,949	\$12,211,803
Commercial	\$17,651,547	\$2,343,500	\$4,740,927
Industrial	\$3,118,375	\$399,757	\$365,045
Municipal	\$764,920	\$200,475	\$220,091
Sales for Resale	\$21,538		
Unmetered Sales	\$3,016		
Bulk		\$473,272	\$2,687,597
<b>Total</b>	<b>\$69,887,906</b>	<b>\$12,652,954</b>	<b>\$20,225,463</b>

1 **Q. Please describe Private Fire Adjustment in Schedule 2f.**

2 A. This adjustment is being made to reflect the annualization of private fire revenues for the  
3 HTY, FTY, and FPFTY periods. This revenue adjustment is being made to reflect the  
4 annualization of new rates for private fire service that took effect in January of 2023 based  
5 upon the number of customers receiving such service as of June 30, 2023. The revenue  
6 adjustment for the FTY period includes additional growth in private fire services. The total  
7 adjustment is \$290,447 for the HTY period and \$152,747 for the FTY period.

8 **Q. Please describe the Public Fire Adjustment in Schedule 2g.**

9 A. This adjustment is being made to reflect the annualization of new rates that took effect in  
10 January of 2023 for public fire service based on the number of customers and hydrants as  
11 of June 30, 2023. The revenue adjustment for the FTY period is from the additional  
12 annualized revenues coming from Valley District. The revenue adjustments for the HTY  
13 period is \$368,867 and the adjustment for the FTY period is \$26,309.

14 **Q. Please describe the Customer Change Adjustment in Schedule 2h.**

15 A. This adjustment is being made to reflect expected increases in the number of residential  
16 and commercial customers for water and wastewater service exclusive of acquisitions. The  
17 historic revenue adjustment reflects the change in revenue associated with the average  
18 number of customers for the HTY period. The future and fully forecasted revenue  
19 adjustments reflect customer growth in the residential and commercial classes from the  
20 HTY period and is estimated based on a two-year historical growth pattern in these  
21 customer classes. The revenue adjustments themselves were calculated by applying the  
22 average annual consumption per residential and commercial customer to projected

1 increases in customers for the FTY and FPFTY periods. The total adjustments by class are  
 2 as follows:

**TABLE 11  
 Customer Growth Adjustment  
 Water Service**

	<b>HTY</b>	<b>FTY</b>	<b>FPFTY</b>
Residential	\$1,099,437	\$932,988	\$1,865,976
Commercial	\$1,554,148	\$698,551	\$1,397,102
<b>Total</b>	<b>\$2,653,585</b>	<b>\$1,631,539</b>	<b>\$3,263,078</b>

**TABLE 12  
 Customer Growth Adjustment  
 SSS Wastewater Service**

	<b>HTY</b>	<b>FTY</b>	<b>FPFTY</b>
Residential	\$131,053	\$109,906	\$219,811
Commercial	\$33,724	\$30,352	\$60,704
<b>Total</b>	<b>\$164,777</b>	<b>\$140,258</b>	<b>\$280,515</b>

**TABLE 13  
 Customer Growth Adjustment  
 CSS Wastewater Service**

	<b>HTY</b>	<b>FTY</b>	<b>FPFTY</b>
Residential	\$63,868	\$7,407	\$14,813
Commercial	\$103,860	\$81,867	\$163,736
<b>Total</b>	<b>\$167,528</b>	<b>\$89,274</b>	<b>\$178,549</b>

3 **Q. Please describe the Usage Trend Adjustment in Schedule 2i.**

4 A. This adjustment is being made to reflect changes in usage for residential, commercial, and  
 5 municipal customers that I have described previously in testimony. These changes  
 6 incorporate weather normalization, COVID-19 normalization, and adjustments for trends  
 7 in declining use that I have previously described. The adjustments apply to both water and  
 8 wastewater operations. The revenue adjustments are made by multiplying usage  
 9 adjustments by expected customer counts, breaking out the resulting total adjustments in  
 10 usage for these classes by rate step, and applying rates to the resulting adjustments in order

1 to determine the revenue adjustments for the HTY, FTY, and FPFTY periods. The total  
 2 adjustments by class are as follows:

**TABLE 14**  
**Usage Trend Adjustment**  
**Water Service**

	<b>HTY</b>	<b>FTY</b>	<b>FPFTY</b>
Residential	-\$13,769,762	-\$7,716,775	-\$6,236,951
Commercial	\$2,147,538	-\$1,646,203	-\$1,156,531
Municipal	\$1,520,971	-\$651,058	-\$66,790
<b>Total</b>	<b>-\$10,101,253</b>	<b>-\$10,014,037</b>	<b>-\$7,460,272</b>

**TABLE 15**

	<b>HTY</b>	<b>FTY</b>	<b>FPFTY</b>
Residential		-\$799,671	-\$644,138
Municipal		-\$275,378	-\$192,068
Commercial		-\$32,847	-\$3,370
<b>Total</b>		<b>-\$1,107,896</b>	<b>-\$839,576</b>

3 **Q. Please describe the Annualization Adjustment for Valley Water in Schedule 2j.**

4 A. This adjustment is to annualize the water revenues for the Valley Water operating district  
 5 to reflect the changes in rates that will become effective for Valley Water on November  
 6 19, 2023. The total water adjustment for Valley Water for the FTY period is \$413,150.

1 **Q. Please describe the Annualization Adjustment for Valley Wastewater in Schedule 2k.**

2 A. This adjustment is to annualize the wastewater revenues for the Valley Wastewater  
3 operating district to reflect the changes in rates that will become effective for Valley  
4 Wastewater on November 19, 2023. The total water adjustment for Valley Wastewater for  
5 the FTY period is \$1,426,222.

6 **Q. Please describe the Commercial Shale Gas Adjustment in Schedule 2l.**

7 A. In 2009, the Company began selling water to gas drillers for use in their drilling and  
8 hydraulic fracturing operations. The annual usage for this type of operation can fluctuate  
9 significantly from year to year, and sales for the HTY period for this service were relatively  
10 low compared to previous years. This adjustment normalizes sales for this service  
11 assuming a three-year average of sales from the 12-month periods ended June 2021, June  
12 2022, and June 2023. The total amount of the revenue adjustment for the FTY period is  
13 \$251,438.

14 **Q. Please describe the Acquisition Adjustment for Creekside Water in Schedule 2m.**

15 A. On June 22, 2023, the Company closed on the acquisition of the water utility property of  
16 the Creekside Homeowner's Association and began providing direct service to that entity's  
17 customers. This adjustment annualizes the water revenues associated with this acquisition.  
18 The annualization is based on customer counts and meter counts by customer class as of  
19 June 2023. The total water adjustment includes a residential revenue adjustment and a  
20 private fire protection revenue adjustment. The revenue adjustments for the HTY period  
21 is \$74,094. An additional 40 residential customers are expected to be added during the  
22 FPFTY period. The annualized revenue expected for the FPFTY period is \$33,147.

1 **Q. Please describe the Annualization Adjustment for Foster Wastewater in Schedule 2n.**

2 A. In October 2022, the Company began providing wastewater service to Foster Township  
3 customers. The revenue adjustment for the HTY period annualizes revenues to reflect a  
4 full 12 months of billing. The revenue adjustment for the FTY period reflects the approved  
5 rates in Docket No. R-2022-3013673, which took effect in January of 2023. The revenue  
6 adjustment for the HTY period is \$364,529. The revenue adjustment for the FTY period  
7 is \$232,268.

8 **Q. Please describe the Annualization Adjustment for York Wastewater in Schedule 2o.**

9 A. In May 2022, the Company began providing wastewater service to the City of York. The  
10 revenue adjustment for the FTY period is to recognize the revenue associated with  
11 authorized rates that will take effect after the current rate freeze for York ends on May 27,  
12 2025. The revenue adjustment for the FTY period is \$10,507,182.

13 **Q. Please describe the Annualization Adjustment for Upper Pottsgrove Wastewater in  
14 Schedule 2p.**

15 A. In July 2022, the Company began providing wastewater service to Upper Pottsgrove. The  
16 revenue adjustment for the HTY period annualizes revenues to reflect a full 12 months of  
17 billing. The revenue adjustment for the FTY period is \$172,272.

18 **Q. Please describe the IPP Adjustment in Schedule 2q.**

19 A. The IPP Surcharge wastewater revenue adjustment is made to account for the change in  
20 the Company's IPP surcharge and to reflect all IPP revenues in the Other WW Revenue  
21 account. The revenue adjustments by customer class for the HTY period are as follows.

<b>TABLE 17 IPP Adjustments</b>	<b>SSS Wastewater</b>	<b>CSS Wastewater</b>
Residential	\$133	\$747
Commercial	-\$196,322	-\$72,555
Industrial	-\$337,932	-\$119,925
Municipal	-\$368	\$0
Miscellaneous / Bulk	-\$509,478	\$0
Other WW Revenue	\$1,776,143	\$189,674
<b>Total</b>	<b>\$732,176</b>	<b>-\$2,060</b>

1 **Q. Please describe the Rental Income Adjustment in Schedule 2r.**

2 A. The Company receives money from cellular phone providers for the lease of space on top  
3 of its water towers for the placement of antennas. An adjustment is being made, which  
4 represents the difference between revenues that were recorded for the HTY period for cell  
5 tower rental income and revenues expected to be recorded as cell tower rental income for  
6 the FTY and FPFTY periods. These adjustments are -\$71,977 and \$7,148, respectively.  
7 Additionally, the Company receives money for the rights to land that it owns for tree  
8 harvesting. This revenue income is expected to end in 2023. This income adjustment  
9 related to timber rights income is -\$325,393. The total combined adjustments for the FTY  
10 and FPFTY periods are -\$397,369 and \$7,148, respectively. These adjustments are made  
11 only to revenue for water operations.

12 **Q. Please describe the Intercompany Rental Adjustment in Schedule 2s.**

13 A. PAWC charges the AWWSC for Service Company employees that work in PAWC's  
14 Stafford Avenue and Mechanicsburg offices. An adjustment is being made, which  
15 represents the difference between revenues that were recorded for the HTY period and the  
16 revenue that is expected to be recorded as intercompany office rental income in 2024 and

1 2025 from this agreement. The reduction in revenue is expected to be \$228,104. This  
2 adjustment is made only to revenue for water operations.

3 **Q. Please describe the Usage Data Revenue Adjustment in Schedule 2t.**

4 A. The Company supplies water usage data to certain municipalities so that these  
5 municipalities can bill their residents for sewer service. The Company made an adjustment  
6 to 2023 book revenues for the provision of usage data to eliminate revenues from localities  
7 no longer using the service. This adjustment for 2023 was to reduce usage data revenue  
8 by \$4,439. The Company increases these fees annually based on changes in the Consumer  
9 Price Index (“CPI”). An adjustment is being made for 2024 and 2025 revenues to reflect  
10 a CPI change of 3.81% in those years, which is based on a historical average change in the  
11 CPI from June 2017 through June 2023. The adjustment amount for the FTY period is to  
12 increase usage data revenue by \$16,325. The adjustment amount for the FPFTY period is  
13 to increase usage data revenue by \$16,947. This adjustment is made only to revenue for  
14 water operations.

15 **Q. Please describe the Customer Adjustments in Schedule 2u.**

16 A. The adjustments to revenues in Schedule 2u are for specific and individual Industrial  
17 Standby and Resale Standby water customers to account for changes in rates and terms per  
18 specific contract agreements and to reflect a full 12 months of billing data of one of the  
19 resale contract customers. The total adjustments for the HTY, FTY, and FPFTY periods  
20 for water customers are \$176,541, \$205,121, and \$269,192, respectively. The SSS  
21 wastewater adjustment for the HTY period is \$33,245.

1 **Q. Please describe the Adjustment for Strattanville Borough in Schedule 2v.**

2 A. During the HTY period, the Strattanville Borough customer only received 11 bills. This  
3 adjustment is to account for the missing bill, which was billed and posted outside of the  
4 HTY period. The total revenue adjustment is \$6,200.

5 **Q. Please describe the Annualization Adjustment for Findlay Township in Schedule 2w.**

6 A. Beginning in August 2023, the Company began Sales for Resale service to Findlay  
7 Township. The revenue adjustment for the FTY period is to annualize sales from Findlay  
8 Township. The adjustment for the FPFTY period is to annualize revenue from the expected  
9 rate change that will take place in August 2024 and to also consider the impact of the  
10 change in minimum take or pay requirements from a 366-day leap year to a normal 365-  
11 day year. The total adjustments for the HTY, FTY, and FPFTY periods are \$535,275 and  
12 \$19,113, respectively.

13 **Q. Please describe the Acquisition Adjustment for Audubon Water in Schedule 2x.**

14 A. In April 2024, the Company anticipates it will close on the acquisition of the water utility  
15 property of the Audubon Water System and begin providing service to these customers.  
16 This adjustment is based on the Company's estimate of the annualized revenues that will  
17 be produced following the closing of this acquisition. Since the Company will be serving  
18 Audubon premises directly, no revenue associated with Sales for Resale revenues will be  
19 expected from Audubon Water Company. The net adjustment for revenues for the FTY  
20 period is \$2,965,024.

21 **Q. Please describe the Acquisition Adjustment for Farmington Water in Schedule 2y.**

22 A. In April 2024, the Company anticipates it will close on the acquisition of the water utility  
23 property of the Farmington Township Water System and will begin providing service to

1 these customers. This adjustment is based on the Company's estimate of the annualized  
2 revenues that will be produced following the closing of this acquisition. Since the  
3 Company will be serving Farmington Township premises directly, no revenue associated  
4 with Sales for Resale revenues will be expected from the Farmington Township Water  
5 Company. The net adjustment for revenues for the FTY period is \$266,371.

6 **Q. Please describe the Acquisition Adjustment for Farmington Wastewater in Schedule**  
7 **2z.**

8 A. In April 2024, the Company anticipates it will close on the acquisition of the wastewater  
9 utility property of the Farmington Township Wastewater System and begin providing  
10 service to these customers. This adjustment is based on the Company's estimate of the  
11 annualized revenues that will be produced following the closing of this acquisition. The  
12 adjustment for revenues for the FTY period is \$322,926.

13 **Q. Please describe the Acquisition Adjustment for Sadsbury Wastewater in Schedule**  
14 **2za.**

15 A. In April 2024, the Company anticipates it will close on the acquisition of the wastewater  
16 utility property of the Sadsbury Municipal Township Wastewater System and begin  
17 providing service to these customers. This adjustment is based on the Company's estimate  
18 of the annualized revenues that will be produced following the closing of this acquisition.  
19 The adjustment for revenues for the FTY period is \$471,228.

20 **Q. Please describe the Acquisition Adjustment for BASA Wastewater in Schedule 2zb.**

21 A. In December 2023, the Company anticipates it will close on the acquisition of the  
22 wastewater utility property of the Butler Area Sewer Authority System and begin providing  
23 service to these customers. This adjustment is based on the Company's estimate of the

1 annualized revenues that will be produced following the closing of this acquisition and  
2 annualized DSIC revenues. The adjustment for revenues for the FTY period is  
3 \$11,720,905. The adjustment for revenues for the FPFTY period is \$125,861.

4 **Q. Please describe the Acquisition Adjustment for Brentwood Wastewater in Schedule**  
5 **2zc.**

6 A. In April 2024, the Company anticipates it will close on the acquisition of the wastewater  
7 utility property of the Brentwood Wastewater System and begin providing service to these  
8 customers. This adjustment is based on the Company's estimate of the annualized revenues  
9 that will be produced following the closing of this acquisition. The adjustment for revenues  
10 for the FTY period is \$1,824,191.

## 11 **REVENUE DECOUPLING MECHANISM**

### 12 **Introduction**

13 **Q. Is the Company offering a proposal for a revenue decoupling mechanism in this case?**

14 A. Yes. The Company is proposing an RDM for both water and wastewater service.

15 **Q. What is the purpose of the RDM?**

16 A. The RDM is an alternative rate design mechanism whose purpose is to more reliably  
17 recover the revenue requirement and associated fixed costs approved by the Commission  
18 in this case.

19 **Q. Is recovery of fixed costs a concern for the Company?**

20 A. Yes. Approximately 81% of the Company's water and wastewater service revenues will  
21 be collected under volumetric rates under the Company's proposed rate structure in this  
22 case, which means that revenues will vary up or down depending on how much water our  
23 customers use. At the same time, over 95% of the Company's costs are fixed costs, which

1 do not vary depending on how much water our customers use. If water sales are less than  
2 the levels used to set the Company's water service rates in this proceeding, the Company's  
3 revenues will be less than the authorized level in this proceeding and, as a result, the  
4 Company's ability to recover the costs that the Commission determines to be prudent will  
5 be diminished. Likewise, if revenues exceed the authorized level in this proceeding due to  
6 higher than anticipated water sales, the Company will recover more than the authorized  
7 level in this proceeding. Given the nature of the Company's fixed costs, the RDM will  
8 provide the Company with a better opportunity to recover the revenue requirement and  
9 fixed cost authorized in this case as the difference between those amounts and actual  
10 revenues will be charged or credited back to customers in the subsequent year.

11 **Q. What are some of the factors that jeopardize the Company's ability to recover its**  
12 **fixed costs of providing service?**

13 A. There are two primary factors that cause revenue volatility and the associated risk in  
14 recovering fixed costs from year to year – seasonal weather conditions and the ongoing  
15 trend of declining use for residential, commercial, and municipal customers.

16 Seasonal weather conditions can cause water sales to either increase or decrease  
17 from expected going-forward levels, which, in turn, causes revenues to increase or decrease  
18 from expected going-forward levels. Cold winters and hot, dry summers tend to increase  
19 water sales, and warmer winters and cooler, wetter summers tend to decrease water sales.  
20 Weather volatility in either direction causes volatility in revenues.

21 Continuing trends in declining use per customer in the residential, commercial, and  
22 municipal classes also cause volatility in revenues. I have previously testified to both the  
23 impact of weather conditions on annual water sales and on the continuing trends in

1 declining use and the associated impact of declining use on water sales. The Company  
2 expects that water consumption per customer will continue to decline over the next several  
3 years. Both of these conditions cause declines in revenues and both total consumption on  
4 a per customer basis and revenue on a per customer basis are expected to continue to  
5 decline well beyond the period of time for which rates are set in this case.

6 **Q. Does the Company have any control over either seasonal weather conditions or the**  
7 **drivers that are causing declining usage?**

8 A. No, it does not.

9 **Q. Are there other factors that can cause the Company's revenue to deviate from**  
10 **expected levels?**

11 A. Yes. The recent COVID-19 pandemic situation is a prime example of an external event  
12 that can cause the Company's revenues to vary from expected or approved levels. During  
13 the pandemic, the Company saw increased sales volumes for residential customers beyond  
14 expected levels due to the COVID-19 pandemic as more people were staying home from  
15 work and schools. Over the same period, the Company saw decreases in sales volumes  
16 from expected levels in the commercial and municipal classes. These changes in volumes,  
17 whether temporary or permanent, cause changes in revenues from expected or authorized  
18 levels and increase the Company's revenue volatility. Implementation of a well-structured  
19 RDM can stabilize customer bills over time and help avoid over-recovery or under-  
20 recovery of fixed costs because of revenue volatility resulting from uncontrollable  
21 circumstances.

22 **Q. Does the Company have the ability to significantly change its cost structure in order**  
23 **to compensate for changes in revenues?**

1 A. To some extent, the Company experiences a reduction in variable costs associated with the  
2 reduced cost of treating and pumping less water and wastewater. For the most part,  
3 however, the Company’s ability to reduce its fixed costs during periods when water sales  
4 are lower is limited, and it is generally not in the long-term best interests of our customers  
5 for the Company to do so. One simple example of this is the number of Company  
6 employees. The Company can hardly hire and fire its well-trained workforce based on  
7 short-term trends in weather or economic conditions simply to keep expenses in line with  
8 revenues. Similarly, although some maintenance may be deferred when revenues are  
9 lower, such deferrals merely forestall necessary repairs and could degrade the quality of  
10 service provided to PAWC’s customers, as well as increase the cost of service over time.

11 **Q. How is a volatile and degrading long-term revenue stream not in the long-term best**  
12 **interests of the Company’s customers?**

13 A. The Company is committed to helping customers use water efficiently and providing  
14 quality water and wastewater service that is affordable. As I explain below, the Company’s  
15 ability to reliably recover its revenue requirement and recover its fixed cost of providing  
16 service over the long term through rates is an important part of the Company’s ability to  
17 continue to properly operate, maintain, and invest in its water and wastewater system at a  
18 reasonable cost. This ability to prudently manage the PAWC system at a reasonable cost  
19 is in the long-term best interests of our customers.

20 **Description of Proposal**

21 **Q. Please describe the Company’s proposed Revenue Decoupling Mechanism.**

22 A. The Company’s proposed RDM is an alternative rate design mechanism that couples  
23 traditional rate design with elements of Straight Fixed Variable (“SFV”) Pricing. This

1 mechanism couples the benefits of traditional rate design that I have previously described  
2 in my Direct Testimony (including cost causation, affordability, gradualism, and efficiency  
3 of use) with the increased revenue stability available to the Company through an SFV rate  
4 design. This mechanism compares the revenues collected under the actual Commission-  
5 approved rates customers pay with the revenues that would have been collected through an  
6 SFV rate design on a forward-looking basis and accrues the differences, which are either  
7 credited to customers or collected from customers at a later time. The proposed RDM  
8 identifies three cost components as the basis for revenues that would be collected through  
9 the SFV rate design that form the basis of the revenue comparisons going forward. These  
10 three cost components are:

- 11 • **Volumetric Charge (VC)**: A charge in dollars per hundred gallons that applies to  
12 all water volumes sold to customers.
- 13 • **Residential Fixed Charge (RC)**: A flat dollar charge per month that applies to all  
14 residential customers.
- 15 • **Non-Residential Fixed Charge (NC)**: A flat dollar amount that applies to all non-  
16 residential customers.

17 **Q. What is SFV Pricing?**

18 A. Generally, SFV pricing is a rate design that collects a utility's fixed costs through fixed  
19 charges and a utility's variable costs through volumetric charges. For utilities where nearly  
20 all of the revenue requirement is fixed cost, SFV pricing can result in monthly charges to  
21 customers that are relatively high and volumetric rates that are relatively low. SFV pricing  
22 aligns cost recovery with the nature of the costs being recovered, provides a stable and  
23 reliable revenue stream for the utility, and satisfies the revenue stability principle of rate

1 design. On the other hand, SFV pricing is arguably not consistent with generally accepted  
2 cost-causation principles at a customer class level because fixed costs between classes vary  
3 more than may be reflected in SFV rate components. On its own, SFV pricing also has the  
4 potential to reduce incentives to use utility service efficiently and can disadvantage lower-  
5 income customers from an affordability perspective if fixed charges are set too high.

6 **Q. How is the Company proposing to determine the cost components of its proposed**  
7 **RDM?**

8 A. The three different cost components are calculated based on the allocated revenue  
9 requirements to customer class, the level of production costs identified in the class cost of  
10 service studies sponsored by Ms. Heppenstall, and the total volumes of water and  
11 wastewater approved in this proceeding that form the basis of the billing determinants for  
12 water and wastewater service. The calculation for the different cost components is as  
13 follows:

- 14 • **Volumetric Charge (VC):** Total Production Costs allocated to eligible customers  
15 divided by total volumetric sales associated with eligible customers.
- 16 • **Residential Fixed Charge (RC):** Total revenue requirement allocated to  
17 residential customers for rate design purposes less the Volumetric Charge  
18 multiplied by total volumetric sales associated with residential customers divided  
19 by the total number of residential customers in the case.
- 20 • **Non-Residential Fixed Charge (NC):** Total revenue requirement allocated to  
21 eligible non-residential customers for rate design purposes less the Volumetric  
22 Charge multiplied by total volumetric sales associated with eligible non-residential

1 eligible customers divided by the total number of non-residential customers in the  
2 case.

3 **Q. Do you have an exhibit that shows the calculation of these cost components?**

4 A. Yes. Exhibit CBR-8 provides a calculation of the three RDM cost components based on  
5 the cost of service studies supported by Company witness Heppenstall.

**TABLE 18**

**Water Service**

<b>RDM Cost Components</b>	<b>Amount</b>	<b>Description</b>
Residential Fixed Charge	\$83.18	\$ per residential customer per month
Nonresidential Fixed Charge	\$515.94	\$ per nonresidential customer per month
Volumetric Charge	\$0.1033	\$ per hundred gallons sold

**TABLE 19**

**Wastewater Service**

<b>RDM Cost Components</b>	<b>Amount</b>	<b>Description</b>
Residential Fixed Charge	\$87.87	\$ per residential customer per month
Nonresidential Fixed Charge	\$504.66	\$ per nonresidential customer per month
Volumetric Charge	\$0.1548	\$ per hundred gallons sold

6 **Q. Can you provide an example of how the RDM would work on a forward-looking**  
7 **basis?**

8 A. The proposed RDM works by comparing actual revenues recovered from eligible  
9 customers in a given month or year to the revenues that would result from applying the  
10 RDM cost-components that I described above. If actual revenues are higher than would  
11 have been collected under the RDM formula, the difference is credited to customers in the  
12 following year. If actual revenues are lower than would have been collected under the  
13 RDM formula, the difference is collected from customers in the following year. As I have  
14 previously described, the RDM cost components are developed based on Commission-

1 approved customer counts, sales, production costs, and total revenue requirements. On a  
2 monthly basis, the RDM is calculated as follows:

$$3 \quad \text{RES Acc} = \text{RESREV} - (\text{VC} * \text{RESUSE}) - (\text{RC} * \text{RESCUST})$$

4 Where: RES Acc = amount of residential revenue to be accrued

5 RESREV = Total revenue in the month from residential customers,  
6 excluding revenues from adjustments

7 VC = Volumetric Charge

8 RESUSE = Number of 100-gallon units sold to residential customers

9 RC = Residential Fixed Charge

10 RESCUST = Average number of residential customers for the month

$$11 \quad \text{NON Acc} = \text{NONREV} - (\text{VC} * \text{NONUSE}) - (\text{NC} * \text{NRCUST})$$

12 Where: NON Acc = amount of non-residential revenue to be accrued

13 NONREV = Total revenue in the month from non-residential  
14 customers, excluding revenues from adjustments

15 VC = Volumetric Charge

16 NONUSE = Number of 100-gallon units sold to non-residential  
17 customers

18 NC = Non-Residential Fixed Charge

19 NRCUST = Average number of non-residential customers for the  
20 month

21 **Q. Please describe how the Company proposes to implement the RDM.**

22 A. The Company's proposed RDM will apply to both water and wastewater service, with  
23 separate tariffs and separate recovery/credit mechanisms for each service. The

1 recovery/credit mechanisms are proposed to be volumetric and apply separately for each  
2 customer class. Amounts accrued over the course of the year that will be credited to or  
3 collected from customers will be applied in the following year to forecasted sales volumes  
4 and a volumetric credit or surcharge, as applicable, will be calculated on a dollars per  
5 hundred gallons basis.

6 **Q. Are the cost components of the RDM calculation themselves fixed or do they change**  
7 **over time depending on changes in revenue requirements?**

8 A. The cost components of the RDM shown above in Tables 18 and 19 are fixed and will not  
9 change until a future rate case with a different set of revenue requirements and calculations  
10 for cost components.

11 **Q. What customer classes are included in the Company's proposed RDM?**

12 A. The RDM will apply to all customers in the residential, commercial, industrial, municipal,  
13 and sales for resale classes except for those customers taking service under contract rates.

14 **Q. Please describe the specific accounting treatment to be used for the RDM.**

15 A. Each month the Company will compare the actual metered revenues for the applicable  
16 customer classes to the calculated authorized revenues under the RDM cost component  
17 structure. If actual revenues fall short of the RDM calculation, the difference in revenue  
18 will be temporarily deferred to a regulatory asset account. If actual revenues are greater  
19 than the RDM calculation, the difference would be temporarily deferred to a regulatory  
20 liability account.

1 **Q. Please describe the Company’s proposed method for RDM reporting and**  
2 **reconciliation filings with the Commission**

3 A. The Company proposes to make a filing with the Commission on or before January 31 of  
4 each year that includes the RDM calculation and support for any annual adjustments to be  
5 effective under the RDM tariff. The Commission Staff and other interested parties would  
6 have 60 days to review the Company’s filing. If either a charge or a credit is in order, the  
7 reconciliation amount would be charged from April 1 through December 31 for that  
8 calendar year.

9 **Q. How does the Company propose to treat customer growth through acquisitions in the**  
10 **RDM process?**

11 A. Any acquisitions that are completed by the Company that are not already included in this  
12 proceeding will not be included in the proposed RDM until such time that they are included  
13 in rate base and revenue requirement calculations in a future rate proceeding. For any  
14 acquisitions that may occur that are not already included in this case, sales and revenues  
15 will be tracked separately and excluded from the calculations used to support charges or  
16 credits under the Company’s proposed RDM.

17 **Q. How does the Company’s RDM design address the concerns you identified earlier**  
18 **regarding cost causation, efficiency, and possible effects on affordability?**

19 A. The RDM, as a modified version of SFV pricing that preserves the traditional elements of  
20 rate design that I describe above, lessens the concerns regarding cost causation, efficiency,  
21 and affordability that are typically present when applying pure SFV pricing. The RDM  
22 cost components continue to reflect cost of service allocation as determined by Company  
23 witness Heppenstall, and as discussed below, customers will continue to be incentivized to

1 reduce usage and increase efficiency, and service will remain affordable with the added  
2 benefit of greater stability.

3 **Q. Does the Company's proposed RDM address the same uncertainty regarding**  
4 **volatility production expense cost as the Company's production expense deferral**  
5 **mechanism described by Company witness J. Cas Swiz?**

6 A. No. The RDM and the production expense deferral mechanism solve for different and  
7 distinct problems. As described by Mr. Swiz in PAWC Statement No. 8, there is significant  
8 volatility in the per unit cost of the Company's production expenses. The Company  
9 responsibly manages and mitigates the volatility of these expenses to the extent possible  
10 but, ultimately, the per unit costs of the Company's production expenses are subject to  
11 market forces beyond the Company's control. Separately, as I describe in my testimony,  
12 the Company's ability to fully recover the revenue requirement approved by the  
13 Commission will be diminished if water sales are less than the levels used to set the  
14 Company's water service rates in this proceeding. Conversely, the Company could  
15 potentially recover more than the revenue requirement approved by the Commission if  
16 water sales are greater than the levels used to set the Company's water services rates in this  
17 proceeding. The production expense deferral mechanism addresses the volatility  
18 associated in the per unit cost of production expenses. The RDM addresses the risk, to  
19 both the Company and customers, associated with volatility in water sales.

20 The Company's proposed RDM accounts for changes in the cost of production  
21 expenses (i.e., the Total Production Cost) resulting from changes in volumes sold, but does  
22 not account for changes in production cost resulting from higher or lower cost of materials  
23 on a per unit basis. Therefore, as volumes sold increase or decrease, the RDM will address

1 changes in Total Production Cost associated with unanticipated volatility in customer  
2 usage, but not volatility in the per unit cost of production expenses.

3 In contrast, the production expense deferral mechanism will consider changes in  
4 production cost on a per unit basis but not changes in volumes sold. As Mr. Swiz explains  
5 in his Direct Testimony, unitized production costs going forward will be compared to the  
6 production cost per unit approved by the Commission in this case and any differences in  
7 unitized production cost multiplied by volumes sold are recorded in the deferral accounts.  
8 If volumes sold change but the production cost on a per unit basis does not change, nothing  
9 will be recorded in the production expense deferral account described by Mr. Swiz. If  
10 production costs do change on a per unit basis, those changes will be accounted for in the  
11 production expense deferral accounting.

### 12 **Comparisons to Revenue Stabilization Mechanisms**

13 **Q. Did the Company propose a decoupling mechanism in its last base rate case (Docket**  
14 **No. R-2022-3031672)?**

15 A. Yes. The Company filed a proposal for a revenue stabilization mechanism (“RSM”) that  
16 was not included in the settlement agreement between the parties that was approved by the  
17 Commission in that case. I sponsored the proposed RSM in that proceeding.

18 **Q. Are there significant differences between the Company’s proposed RDM in this case**  
19 **and the RSM?**

20 A. There are two significant differences between the proposed RDM in this case and the RSM.  
21 These differences are listed below:

- 22 • The proposed RSM was primarily an accounting tool designed to align the  
23 Company’s revenues going forward (i.e., beyond the conclusion of that proceeding)

1 with the level of authorized revenue ultimately approved by the Commission in that  
2 proceeding. The RDM is more of a rate design tool than an accounting tool,  
3 coupling traditional rate design principles with the revenue stability afforded  
4 through SFV pricing. The reliance on rate components in the Company's proposed  
5 RDM sets it apart from the RSM.

- 6 • The proposed RSM was based on a static revenue requirement to be approved in  
7 that case. Under the RSM, revenues would have been compared going forward to  
8 that approved static revenue requirement. The proposed RDM in this case is not  
9 based on a static revenue requirement. If volumes sold going forward fluctuate up  
10 or down, the revenue calculations under the RDM will go up or down accordingly,  
11 but only to the extent that changes in volumes sold cause changes in short-term  
12 variable costs. Similarly, if there is customer growth or a reduction in customers  
13 (exclusive of acquisitions), the revenue calculations under the RDM will increase  
14 or decrease accordingly based on the approved level of fixed cost per customer.

### 15 **Customer Impacts**

16 **Q. Do you have an exhibit that shows expected future trends in total water usage and**  
17 **revenues by customer class?**

18 A. Yes. Exhibit CBR-9 shows an analysis of future trends in water revenues at the Company's  
19 proposed rates if current trends in declining usage continue. This analysis shows that at  
20 proposed rates, water service revenues will be expected to decline by approximately \$5.8  
21 million per year assuming no changes in base rates given the current trends in declining  
22 usage and customer counts for the residential, commercial, municipal, and industrial  
23 classes.

1 **Q. What variability do you expect to see in annual water revenues in the future?**

2 A. An analysis of the historical data shows that in any given year water revenues at the  
3 Company's proposed rates in this proceeding can swing from the projected amount by as  
4 much as plus or minus approximately \$11.1 million. A statistical analysis of the data shows  
5 that an 80% confidence upper and lower bound around projected annual water revenues is  
6 plus or minus \$14.3 million. This means that 80% of the time revenues are expected to be  
7 within plus or minus \$14.3 million of the forecast, but there is a 10% chance that revenues  
8 will be more than \$14.3 million above the forecast and a 10% chance that revenues will be  
9 less than \$14.3 million below the forecast.

10 **Q. Based on this, what do you expect the impact to be of the Company's proposed RDM**  
11 **on customers?**

12 A. If current trends in customer counts and usage continues, the Company expects there to be  
13 a gap for residential water service customers of approximately \$6.5 million per year  
14 between revenues generated under proposed rates and revenues calculated through the  
15 RDM calculation and a gap of approximately \$3.3 million per year for nonresidential  
16 customers. This translates to an expected recovery factor for residential customers of  
17 \$0.0266 per hundred gallons, or approximately \$1.06 per month for 4,000 gallons of usage,  
18 and an expected recovery factor of \$0.0181 per hundred gallons for commercial customers.

19 **Q. If a customer takes actions to use less water in an attempt to reduce their bill, will the**  
20 **RDM simply take those savings away from customers?**

21 A. No. A customer who takes specific actions to reduce their water consumption will still  
22 enjoy the benefits of a lower bill even with implementation of the RDM. If a customer  
23 takes actions to reduce their water consumption by 5% per month (4,000 gallons to 3,800

1 gallons for example), the resulting bill savings for an average use customer without the  
2 RDM would be \$4.16 per month, well above the amount that the Company estimates an  
3 average use customer bill would increase due to implementation of the RDM.

#### 4 **Public Interest**

5 **Q. Does Pennsylvania law allow for consideration of alternative ratemaking mechanisms**  
6 **like the RDM?**

7 A. Yes. Section 1330 of the Public Utility Code allows the Commission to approve an  
8 application by PAWC to establish various forms of alternative ratemaking mechanisms.  
9 One such form of alternative ratemaking, as identified in section 1330(b)(i), is a decoupling  
10 mechanism. Section 1330(f) specifically defines a Decoupling Mechanism as follows: “In  
11 the case of water and wastewater, a rate mechanism that adjusts or reconciles authorized  
12 rates or revenues for differences between sales used to set rates and actual sales, which  
13 may include, but not be limited to, adjustments resulting from fluctuations in the number  
14 of customers served and other adjustments deemed appropriate by the commission.”<sup>7</sup>

15 **Q. Is the Company’s proposed RDM consistent with Pennsylvania law?**

16 A. Yes. The Company’s proposed RDM is an alternative ratemaking mechanism under  
17 Section 1330(b)(i) and specifically considers and addresses differences between sales used  
18 to set rates and actual realized sales in the future, and also specifically considers and  
19 addresses fluctuations in the numbers of customers served.

20 **Q. What public policy objectives did the Legislature identify when authorizing the**  
21 **Commission to approve the adoption of alternative ratemaking proposals such as the**  
22 **RDM?**

---

<sup>7</sup> 66 Pa.C.S. § 1330(f).

1 A. The Legislature stated that “It is the policy of the Commonwealth that utility ratemaking  
2 should encourage and sustain investment through appropriate cost-recovery mechanisms  
3 to enhance the safety, security, reliability or availability of utility infrastructure and be  
4 consistent with the efficient consumption of utility service.”<sup>8</sup>

5 **Q. In Docket No. M-2015-2518883, the Commission developed a Policy Statement on**  
6 **alternative ratemaking mechanisms that lists a number of factors that may be**  
7 **considered when evaluating an alternative ratemaking mechanism such as an RDM.**  
8 **Do you have an exhibit that contains an analysis of how the specific factors laid out**  
9 **by the Commission at Docket No. M-2015-2518883 apply to the Company’s proposed**  
10 **RDM?**

11 A. Yes. To assist the Commission in its review of the RDM, Exhibit CBR-10 contains the  
12 Company’s detailed analysis of how the specific factors laid out by the Commission at  
13 Docket No. M-2015-2518883 apply to the Company’s proposed RDM.

14 **Q. How does a properly structured RDM meet these policy objectives and benefit**  
15 **PAWC’s customers?**

16 A. It is in the long-term best interests of customers for the Company to be able to reliably  
17 recover its fixed costs on an ongoing basis. The authorized water and wastewater revenue  
18 requirements approved by the Commission in this case represent the amount of revenue  
19 the Commission determines that the Company needs to operate, maintain, and invest in its  
20 water and wastewater system in a prudent and efficient manner, the vast majority of which  
21 are fixed in the short term. The ability to reliably recover the Company’s fixed cost of  
22 providing service to customers improves the Company’s ability to plan, manage, maintain,

---

<sup>8</sup> *Id.* § 1330(a)(2).

1 and invest in the facilities to continue providing safe, reliable, and high-quality water and  
2 wastewater service at a reasonable cost to customers, and a properly structured RDM does  
3 just that.

4 **Q. What percentage of the Company's proposed revenue requirement in this case**  
5 **represents fixed costs?**

6 A. As I stated previously, over 95% of the Company's costs are fixed costs, which do not vary  
7 depending on how much water our customers use, while approximately 81% of the  
8 Company's water and wastewater service revenues will be collected under volumetric rates  
9 under the Company's proposed rate structure in this case, which means that revenues will  
10 vary up or down depending on how much water our customers use. This means that well  
11 over half of the Company's fixed costs will be recovered through volume-based revenues  
12 which subjects the Company to significant levels of risk related to recovery of fixed costs.

13 **Q. Are there other benefits to customers from the approval of the RDM?**

14 A. Yes. The RDM will reduce the throughput incentive – the Company's financial incentive  
15 to sell more water. Under the current rate structure (without an RDM), the more water  
16 customers use, the more water the Company sells, the more revenue the Company collects,  
17 and the better the Company's financial performance. Currently, from a public policy  
18 perspective, any actions taken by the Company or the government (local, state, or Federal)  
19 to encourage conservation, no matter how beneficial to society, creates a disconnect  
20 between the public policy goal of more efficient use of water resources and the Company's  
21 legitimate financial objectives.

22 This, in turn, allows for a much higher degree of freedom to consider alternative  
23 rate designs that can improve affordability and efficiency of use for customers. Freedom

1 to implement rate designs that can improve affordability and improve price signals to  
2 different types of customers can come in the form of lower monthly service charges and  
3 higher volumetric rates, which can help lower-income customers and provide a more  
4 significant volumetric incentive to use resources more economically. Rate designs that  
5 price Basic Water Service differently from seasonal usage can be implemented that can  
6 improve affordability across the board for lower-income customers and provide price  
7 signals that better reflect cost-causation principles for customers that use more water for  
8 seasonal discretionary purposes. Implementing these beneficial alternative rate designs  
9 normally could have significant short-term and longer-term impacts on usage and revenues  
10 that may be detrimental to the Company's legitimate financial objectives without an RDM  
11 mechanism, but the associated financial risk to both the Company and its customers is  
12 reduced under the Company's proposed RDM.

13 **Q. Are there other policy concerns among public utility regulators that the RDM**  
14 **addresses?**

15 A. Yes. The National Association of Regulatory Utility Commissioners ("NARUC") has been  
16 at the forefront of this issue. At its November 2013 annual meeting, NARUC adopted a  
17 resolution that supports consideration of alternative recovery mechanisms for water and  
18 wastewater utilities, attached hereto as Exhibit CBR-11. The NARUC resolution  
19 recognizes declining use per customer, a shift to non-revenue-producing infrastructure  
20 replacement, and that the traditional cost of service model is not well adapted to this new  
21 environment. It states, in part:

22 WHEREAS, Traditional cost of service ratemaking, which has worked  
23 reasonably well in the past for water and wastewater utilities, no longer  
24 adequately addresses the challenges of today and tomorrow. Revenue,  
25 driven by declining use per customer, is flat to decreasing, while the nature

1 of investment (rate base) has shifted largely from plant needed for serving  
2 new customers to non-revenue producing infrastructure replacement and  
3 compliance with new drinking water standards; and

4 WHEREAS, The traditional cost of service model is not well adapted to a  
5 no/low growth, high investment utility environment and is unlikely to  
6 encourage the necessary future investment in infrastructure replacement;  
7 and

8 WHEREAS, Compared to the water and wastewater industry, the electric  
9 and natural gas delivery industries have in place a larger number and a  
10 greater variety of alternative regulation policies, such as multiyear rate  
11 plans and rate stabilization programs, and those set forth in the 2005  
12 Resolution; and

13 WHEREAS, The U.S. water industry is the most capital intensive sector of  
14 regulated utilities and faces critical investment needs that are expected to  
15 total \$335 billion to \$1 trillion over the next quarter century, as noted in the  
16 American Society of Civil Engineers 2013 Report Card for America's  
17 Infrastructure... .

18 The NARUC resolution goes on to recommend the adoption of alternative recovery  
19 mechanisms, such as the RDM. It states that:

20 Alternative regulatory mechanisms can enhance the efficiency and  
21 effectiveness of water and wastewater utility regulation by reducing  
22 regulatory costs, increasing rates for customers, when necessary, on a more  
23 gradual basis; and providing the predictability and regulatory certainty that  
24 supports the attraction of debt and equity capital at reasonable costs and  
25 maintains that access at all times.

26 **Q. Are alternative regulatory mechanisms such as the RDM recognized in the regulatory**  
27 **community as an effective means of addressing these policy concerns?**

28 A. Yes. Revenue decoupling mechanisms have been adopted in many states as a way to  
29 eliminate the throughput incentive, to support energy efficiency initiatives and investment,  
30 and to align actual revenue collection with authorized revenue. Clauses similar to the  
31 Company's proposal here have been successfully used for some time for water utilities in  
32 New York and California and have been more recently adopted for water utilities in

1 Connecticut, Nevada, Maine and Illinois. In addition, similar revenue stabilizing  
2 mechanisms have been approved for gas utilities in 23 states and an additional two states  
3 plus the District of Columbia have mechanisms pending, according to the December 2016  
4 report from the American Gas Association entitled “Innovative Rates, Non-Volumetric  
5 Rates, and Tracking Mechanisms: Current List.”<sup>9</sup> This report also states that Weather  
6 Normalization Adjustments are allowed in 22 states. A December 2017 report by the  
7 Institute for Electric Innovation lists 32 states and the District of Columbia that have an  
8 approved fixed cost recovery mechanism for electric utilities with an additional state  
9 pending approval.

10 **Q. Please summarize why adoption of the RDM for the Company and its customers is**  
11 **appropriate.**

12 A. Adoption of the Company’s proposed RDM is in the long-term best interest of the  
13 Company and its customers. Rate designs that tie a utility’s revenue recovery directly to  
14 sales volume have prompted concerns in modern utility regulation that because of seasonal  
15 variability and declining use per customer, volumetric rates that collect the majority of a  
16 Company’s fixed cost do not give water utilities a reasonable opportunity to recover the  
17 fixed costs associated with providing service to customers. An alternative rate design  
18 mechanism that couples elements of SFV pricing with traditional rate designs brings the  
19 best of both worlds to both the Company and its customers. Implementing this alternative  
20 rate design solution: 1) makes the Company indifferent to selling less water, 2) promotes

---

<sup>9</sup> An earlier 2013 study by the Brattle Group entitled “Alternative Regulation and Ratemaking Approaches for Water Companies: Supporting the Capital Investment Needs of the 21st Century,” prepared for the National Association of Water Companies, (September 30, 2013) found that 27 states for electricity, 30 states for natural gas delivery, and five states for water have these types of mechanisms.

1 water efficiency and conservation, 3) reduces the adverse impact of weather variability for  
2 both the utility and its customers, and 4) reasonably ensures that sufficient revenues for  
3 continued investments in the system are available. The result is a better alignment of all  
4 stakeholder interests, and the Company respectfully urges the Commission to authorize its  
5 proposed RDM.

6 **CONCLUSION**

7 **Q. Does this conclude your direct testimony at this time?**

8 A. Yes, it does.

**DOCKET NOS. R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)**

**VERIFICATION**

I, **Charles Rea**, hereby state that the facts set forth in the pre-marked Statement No. 10 and accompanying exhibits, if any, are true and correct to the best of my knowledge, information, and belief. I understand that this verification is made subject to the provisions and penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Date: November 8, 2023

**Pennsylvania-American Water Company  
Response to Distribution Rates – Statement of Policy  
Proposed Revenue Stabilization Mechanism**

**52 Pa. Code § 69.3302. Distribution rate considerations.**

(a) In determining just and reasonable alternative distribution ratemaking mechanisms and rate designs that promote the purpose and scope of this statement of policy and the objectives of 66 Pa.C.S. § 1330 (relating to alternative ratemaking for utilities), the Commission may consider, among other relevant factors, the following:

- (1) How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.

**The RDM better aligns actual revenue collection with authorized revenues for all customer classes. The RDM specifically treats fixed and variable costs separately by customer class using rate design concepts associated with Straight-Fixed Variable (“SFV”) pricing. The RDM is calculated and administered separately for residential and non-residential customer classes and treats fixed cost and variable cost separately so that fixed cost recovery is aligned with approved fixed costs (per customer) and variable cost recovery is aligned with approved variable costs (per hundred gallons of water). The recovery mechanism is on a volumetric basis.**

- (2) How the ratemaking mechanism and rate design impact the fixed utility’s capacity utilization.

**The Company’s proposed RDM is not expected to impact the fixed utility’s capacity utilization.**

- (3) Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer’s anticipated consumption levels.

**The Company’s proposed RDM directly reflects changing consumption levels in variable cost recovery. As consumption levels increase, the Company’s variable cost recovery increases, but only by the approved level of production cost per unit delivered or billed. The opposite is true whereas consumption levels decrease, the Company’s variable cost recovery decreases, but only by the approved level of production cost per unit delivered or billed.**

- (4) How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.

**The proposed RDM would apply to both water and wastewater service with separate tariffs and separate recovery/credit mechanisms for residential and**

**nonresidential customers. The proposed RDM will not affect interclass or intraclass cost shifting between residential and non-residential customer classes.**

- (5) How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.

**The proposed RDM reduces the throughput incentive, which gives the Company an incentive to collect more revenue when customers increase consumption. By connecting variable cost recovery directly to approved levels of production cost but not to fixed cost, the RDM removes this incentive from the Company and therefore eliminates any disincentives for the promotion of water efficiency efforts.**

- (6) How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.

**See response to item (5). The proposed mechanism encourages water efficiency by reducing the throughput incentive. In addition, if customers employ efficiency measures, those measures will far outweigh any surcharges that may result from the proposed RDM.**

- (7) How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.

**The proposed RDM does not have any specific impacts on low-income customers that do not apply to residential customers generally. Because the recovery mechanism is volumetric in nature, lower-use low-income customers will not be adversely impacted.**

- (8) How the ratemaking mechanism and rate design impact customer rate stability principles.

**The proposed RDM will, by definition, improve rate stability. In years where revenues are relatively low relative to SFV pricing and fixed costs are under recovered, rates would increase slightly in the next year to bring actual revenues back up. The opposite would be true in years where usage resulted in revenues that were higher than that implied by SFV pricing, which represents a scenario where fixed costs are over-recovered. In higher revenue years, the RDM will reduce rates which would offset higher revenues from the year before and “smooth out” revenues over the longer term.**

- (9) How weather impacts utility revenue under the ratemaking mechanism and rate design.

**Weather will still have an impact on revenues but only to the extent that variable costs are impacted. Under the proposed RDM, volatility of utility revenue and**

**customer bills would be reduced over the long term. Increases in fixed cost recovery revenue due to abnormal weather variations (e.g., drought conditions) would be returned to customers in the following year, and reductions in fixed cost recovery due to abnormal weather variations (e.g., excessive rainfall) would be collected from customers in the following year.**

- (10) How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.

**To the extent that future rate cases are driven by lower-than-expected usage, the RDM likely would result in fewer rate cases, or at least rate cases seeking lower rate increases. However, the RDM does not affect future revenue requirements and does not recover fixed costs that are incurred after a rate case that are over and above those approved by the Commission. Therefore, if future rate cases are driven by future investment needs and associated cost recovery, the RDM would not reduce the need for such cases.**

- (11) If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).

**The Company's proposed RDM does not interact with other revenue sources.**

- (12) Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.

**The RDM proposal includes consumer protections through the formal reconciliation process which includes audits and external stakeholder review. Tariff administration of the mechanism will contain consumer protections to make sure that the appropriate levels of revenue are being collected. Customers still can control their bill through controlling usage because the standard rate design still applies.**

- (13) Whether the alternative ratemaking mechanism and rate design are understandable to consumers.

**The Company does not anticipate that there would be any issues related to customer confusion over the proposed RDM. Revenue reconciliation riders are not new to the utility industry. There is no reason to think that customers would be more confused about an RDM surcharge or credit on their bill than they would be for any other rate design element that makes up a part of the customer's bill.**

- (14) How the ratemaking mechanism and rate design will support improvements in utility reliability.

**The proposed RDM will support improvements in utility reliability by permitting the Company to more reliably recover fixed costs that can't be avoided by customers using less water, and will therefore enhance the Company's ability to prudently invest in and manage the business.**

***Resolution Endorsing Consideration of Alternative Regulation that Supports Capital Investment in the 21<sup>st</sup> Century for Water and Wastewater Utilities***

**WHEREAS**, Through the *Resolution Supporting Consideration of Regulatory Policies Deemed as “Best Practices”* (2005), the National Association of Regulatory Utility Commissioners (NARUC) has previously recognized the important role of innovative regulatory policies and mechanisms in facilitating the efforts of water and wastewater utilities to address their significant infrastructure investment challenges; *and*

**WHEREAS**, Traditional cost of service ratemaking, which has worked reasonably well in the past for water and wastewater utilities, no longer adequately addresses the challenges of today and tomorrow. Revenue, driven by declining use per customer, is flat to decreasing, while the nature of investment (rate base) has shifted largely from plant needed for serving new customers to non-revenue producing infrastructure replacement and compliance with new drinking water standards; *and*

**WHEREAS**, The traditional cost of service model is not well adapted to a no/low growth, high investment utility environment and is unlikely to encourage the necessary future investment in infrastructure replacement; *and*

**WHEREAS**, Compared to the water and wastewater industry, the electric and natural gas delivery industries have in place a larger number and a greater variety of alternative regulation policies, such as multiyear rate plans and rate stabilization programs, and those set forth in the 2005 Resolution; *and*

**WHEREAS**, The U.S. water industry is the most capital intensive sector of regulated utilities and faces critical investment needs that are expected to total \$335 billion to \$1 trillion over the next quarter century, as noted in the *American Society of Civil Engineers 2013 Report Card for America’s Infrastructure*; *and*

**WHEREAS**, Tap water is physically ingested and the quality of the service must be maintained to protect the health and economic well-being of communities across our Nation and comply with current and future regulations covering the control of a number of contaminants from nitrosamines to chromium, at a cost estimated at \$42 billion by the EPA as part of their April 2013 Report to Congress; *and*

**WHEREAS**, Alternative regulatory mechanisms can enhance the efficiency and effectiveness of water and wastewater utility regulation by reducing regulatory costs, increasing rates for customers, when necessary, on a more gradual basis; and providing the predictability and regulatory certainty that supports the attraction of debt and equity capital at reasonable costs and maintains that access at all times; *now, therefore be it*

**RESOLVED**, That the National Association of Regulatory Utility Commissioners, convened at its 125<sup>th</sup> Annual Meeting in Orlando, Florida, supports consideration of alternative regulation plans and mechanisms along with and in addition to the policies and mechanisms outlined in the

*Resolution Supporting Consideration of Regulatory Policies Deemed as “Best Practices”*  
adopted by the NARUC Board of Directors on July 27, 2005; *and be it further*

**RESOLVED**, That the Committee on Water stands ready to assist economic regulators with implementation of alternative regulatory approaches that support water companies’ capital investment needs of the 21<sup>st</sup> century.

---

*Sponsored by the Committee on Water*

*Recommended by the NARUC Board of Directors November 19, 2013*

*Adopted by the NARUC Committee of the Whole November 20, 2013.*

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**2023 GENERAL BASE RATE CASE  
R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)**

**STATEMENT NO. 11 - DIRECT TESTIMONY OF JOHN J. SPANOS**

**EXHIBIT NO. 11-A - DEPRECIATION STUDY  
WATER OPERATIONS  
AS OF JUNE 30, 2023**

BEFORE THE  
PENNSYLVANIA PUBLIC UTILITY COMMISSION

DIRECT TESTIMONY OF  
JOHN J. SPANOS

ON BEHALF OF  
PENNSYLVANIA-AMERICAN WATER COMPANY

DEPRECIATION

DOCKET NOS.  
R-2023-3043189 (WATER)  
R-2023-3043190 (WASTEWATER)

November 8, 2023

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

RE: PENNSYLVANIA-AMERICAN WATER COMPANY

DIRECT TESTIMONY OF JOHN J. SPANOS

1 **Q. Please state your name and address.**

2 A. My name is John J. Spanos. My business address is 207 Senate Avenue,  
3 Camp Hill, Pennsylvania 17011.

4 **Q. With what firm are you associated?**

5 A. I am associated with the firm of Gannett Fleming Valuation and Rate  
6 Consultants, LLC ("Gannett Fleming").

7 **Q. How long have you been associated with Gannett Fleming?**

8 A. I have been associated with the firm since June 1986.

9 **Q. What is your position in the firm?**

10 A. I am President.

11 **Q. What is your educational background?**

12 A. I have Bachelor of Science degrees in Industrial Management and  
13 Mathematics from Carnegie Mellon University and a Master of Business  
14 Administration degree from York College of Pennsylvania.

15 **Q. Are you a member of any professional societies?**

16 A. Yes. I am a member and past President of the Society of Depreciation  
17 Professionals. I am also a member of the American Gas Association/Edison  
18 Electric Institute Industry Accounting Committee.

1 **Q. Do you hold any special certification as a depreciation expert?**

2 A. Yes. The Society of Depreciation Professionals has established national  
3 standards for depreciation professionals. The Society administers an  
4 examination to become certified in this field. I passed the certification exam  
5 in September 1997 and was recertified in August 2003, February 2008,  
6 January 2013, February 2018 and February 2023.

7 **Q. Please outline your experience in the field of depreciation.**

8 A. I have over 37 years of depreciation experience, which includes giving expert  
9 testimony in more than 430 cases before 46 regulatory commissions,  
10 including the Pennsylvania Public Utility Commission (“Commission”). My  
11 participation in the cases where I appeared as an expert witness has included  
12 conducting and analyzing depreciation studies for companies, government-  
13 owned utilities and other service providers in the electric, gas, water,  
14 wastewater and pipeline industries. In addition to the cases in which I  
15 submitted testimony, I have supervised over 800 other depreciation or  
16 valuation assignments. Please refer to Appendix A for additional information  
17 on my qualifications, work history, case experience, and my leadership in the  
18 Society of Depreciation Professionals.

19 **Q. What is the purpose of your testimony?**

20 A. I was asked by Pennsylvania-American Water Company (“PAWC” or the  
21 “Company”) to prepare depreciation studies of the Company’s water and  
22 wastewater plant in service as of June 30, 2023 and its water and wastewater  
23 plant projected to be in service as of June 30, 2024, and June 30, 2025. The

1 depreciation studies are presented for the total water operations and  
2 separately for the four wastewater operations, consisting of the following:

- 3 (1) Water Operations
- 4 (2) Wastewater Sanitary Sewer System (“SSS”) General Operations
- 5 (3) Butler Area Sewer Authority (“BASA”) Wastewater Operations
- 6 (4) Brentwood Wastewater Operations
- 7 (5) Wastewater Combined Sewer System (“CSS”) Operations

8 **Q. Have you prepared exhibits presenting the results of your studies?**

9 A. Yes, I have prepared a total of thirteen exhibits, consisting of the following:

- 10 • **Exhibit Nos. 11-A, 11-D and 11-K** present the results of the  
11 depreciation studies for each water and wastewater operation as of  
12 June 30, 2023, except BASA Wastewater Operations and Brentwood  
13 Wastewater Operations because PAWC will acquire those systems  
14 during the future test year ending June 30, 2024, as explained by  
15 E. Christopher Abruzzo Esq. in PAWC Statement No.6.
- 16 • **Exhibit Nos. 11-B, 11-E, 11-G, 11-I and 11-L** present the results of  
17 the depreciation study for each water and wastewater operation as of  
18 June 30, 2024.
- 19 • **Exhibit Nos. 11-C, 11-F, 11-H, 11-J and 11-M** present the results of  
20 the depreciation study for each water and wastewater operation as of  
21 June 30, 2025.

22 In addition, I am responsible for the responses to Depreciation Data Filing  
23 Requirements FR VI.1, FR VI.2, FR VI.3, FR VI.4, FR VI.5 and FR VI.6 that  
24 are presented as Appendix B to my testimony.

1 **Q. Please describe what is set forth in each of Exhibit Nos. 11-A through**  
2 **11-M.**

3 **A. Exhibit No. 11-A**, titled "2023 Depreciation Study - Calculated Annual  
4 Depreciation Accruals Related to Water Plant as of June 30, 2023," includes  
5 the results of the depreciation study related to the assets of the Water  
6 Operations as of June 30, 2023. The report also includes the detailed  
7 depreciation calculations.

8 **Exhibit No. 11-B**, titled "2024 Depreciation Study - Calculated Annual  
9 Depreciation Accruals Related to Water Plant as of June 30, 2024," includes  
10 the results of the depreciation study related to the assets of Water Operations  
11 estimated as of June 30, 2024. The report also includes explanatory text,  
12 statistics related to the estimation of service life, and the detailed depreciation  
13 calculations.

14 **Exhibit No. 11-C** titled "2025 Depreciation Study – Calculated Annual  
15 Depreciation Accruals Related to Water Plant as of June 30, 2025," includes  
16 the results of the depreciation study related to the assets of Water Operations  
17 estimated as of June 30, 2025.

18 **Exhibit Nos. 11-D through 11-M** pertain to the Company's wastewater  
19 operations and are organized in the same fashion described above for  
20 PAWC's Water Operations except, as I noted before, there is no exhibit  
21 presenting the results of a depreciation study for the BASA Wastewater  
22 Operations and Brentwood Wastewater Operations as of June 30, 2023  
23 because PAWC will acquire these systems during the future test year ending  
24 June 30, 2024.

1 **Q. What was the purpose of your depreciation studies?**

2 A. The purpose of the depreciation studies is to estimate the annual depreciation  
3 accruals related to water and wastewater plant in service for ratemaking  
4 purposes and, using Commission-approved procedures, to estimate the  
5 Company's book reserve as of June 30, 2023, June 30, 2024 and June 30,  
6 2025.

7 **Q. Is the Company's claim for annual depreciation in the current  
8 proceeding based on the same method of depreciation used in its most  
9 recent rate proceeding in Docket Nos. R-2022-3031672 and R-2022-  
10 3031673?**

11 A. Yes, it is. For most plant accounts, the current claim for annual depreciation  
12 is based on the straight-line remaining life method of depreciation, which has  
13 been used for over thirty-seven years. For Accounts 340.00, 342.00, 343.00,  
14 344.00, 346.00, 347.00 and 348.00 for water assets and Accounts 390, 392,  
15 393.00, 394.00, 396.00, 397.00 and 398.00 for wastewater assets, the claim  
16 for annual depreciation is based on the straight- line remaining life method of  
17 amortization. That method employs amortization accounting to distribute the  
18 unrecovered cost of fixed capital assets over the remaining amortization  
19 period selected for each account.

20 **Q. What group procedure is being used in this proceeding for depreciable  
21 accounts?**

22 A. The equal life group procedure is used in the current studies for all  
23 depreciable accounts and installation years of water and wastewater plant,  
24 which is the same procedure that has been used by the Company for many

1 years with the Commission's approval and, in fact, was used most recently in  
2 the Company's last base rate case (Docket Nos. R-2022-3031672 and  
3 R-2022-3031673).

4 **Q. Is the Company's claim for accrued depreciation in the current**  
5 **proceeding made on the same basis that has been used for over thirty-**  
6 **eight years?**

7 A. Yes. The current claim for accrued depreciation for water assets is the book  
8 reserve brought forward from the book reserves approved by the Commission  
9 at Dockets No. R-842621, R-842675 and R-842755. Similarly, for  
10 wastewater assets, accrued depreciation is brought forward from a starting  
11 point previously approved by the Commission in prior rate proceedings and  
12 at the time of each acquisition.

13 **Q. How was the book reserve used in the calculation of annual**  
14 **depreciation?**

15 A. The book reserve was allocated to vintages, by account, to determine original  
16 cost less accrued depreciation by vintage. The total annual accrual is the  
17 sum of the results of dividing the original costs less accrued depreciation by  
18 the vintage composite remaining lives.

19 **Q. How was the book reserve as of June 30, 2024 and June 30, 2025**  
20 **estimated?**

21 A. The book reserve as of June 30, 2024 and June 30, 2025, by account, was  
22 projected by adding estimated accruals, salvage and the amortization of net  
23 salvage and subtracting estimated retirements and cost of removal from the  
24 book reserve as of June 30, 2023. Annual accruals were calculated based  
25 on average yearly or monthly plant balances. For most accounts, salvage

1 and cost of removal were estimated by: (1) expressing actual salvage and  
2 cost of removal as a percent of retirements, by account, for the most recent  
3 five-year period; and (2) applying those percentages to the projected  
4 retirements by account. The projected book reserve, by account, was  
5 allocated to vintages for the purpose of the annual accrual calculation based  
6 on calculated accrued depreciation as of June 30, 2024 and June 30, 2025.

7 **Q. Has a service life study of the Company's water and wastewater utility**  
8 **property been performed?**

9 A. Yes. Service life studies were most recently performed in 2022 (based on  
10 plant data through 2021) for the Company's water assets and 2020 (based  
11 on plant data through 2019) for its wastewater assets. The service life studies  
12 were the basis for the service lives and survivor curves I used to calculate  
13 annual accruals.

14 **Q. Briefly outline the procedure used in performing the service life studies.**

15 A. The service life studies consisted of assembling and compiling historical data  
16 from the records related to the water and wastewater plant of the Company  
17 and its predecessors; statistically analyzing such data to obtain historical  
18 trends of survivor characteristics; obtaining supplementary information from  
19 management and operating personnel concerning Company practices and  
20 plans as they relate to plant operations; and interpreting the above data to  
21 form judgments of service life characteristics.

22 lowa-type survivor curves were used to describe the estimated survivor  
23 characteristics of the mass property groups. Individual service lives were  
24 used for major individual units of plant, such as reservoirs and buildings  
25 housing treatment plants, pump stations, offices and shops. The life span

1 concept was recognized by coordinating the lives of associated plant installed  
2 in subsequent years with the probable retirement date defined by the life  
3 estimated for the major unit.

4 **Q. What statistical data were employed in the historical analyses**  
5 **performed for the purpose of estimating service life characteristics?**

6 A. The data consisted of the entries made to record retirements and other  
7 transactions related to the water plant during the period 1960-2021 and the  
8 wastewater plant during the period 2000-2019. These entries were classified  
9 by depreciable group, type of transaction, the year in which the transaction  
10 took place, and the year in which the plant was installed. The types of  
11 transactions included in the data were plant additions, retirements, transfers,  
12 and balances.

13 **Q. What was the source of these data?**

14 A. The data were assembled from Company records related to its utility plant in  
15 service.

16 **Q. Were the methods used in the service life study the same as those used**  
17 **in other depreciation studies for water and wastewater plant presented**  
18 **before the Commission?**

19 A. Yes. The methods are the same ones that have been presented previously  
20 for the Company and for other water and wastewater companies before the  
21 Commission, which have been accepted by the Commission in its past orders  
22 for water and wastewater utilities, including PAWC.

1 **Q. Are the factors considered in your estimates of service life presented in**  
2 **Exhibit Nos. 11-B, 11-E, 11-G, 11-I and 11-L?**

3 A. Yes. A discussion of the factors considered in the estimation of service lives  
4 is presented in Part III of each of these exhibits.

5 **Q. Please outline the contents of Exhibit Nos. 11-B, 11-E, 11-G, 11-I and**  
6 **11-L, which include the results of your service life studies for water and**  
7 **wastewater plant.**

8 A. Exhibit No. 11-B is presented in eight parts. Part I, Introduction, discusses  
9 the plan of the report and the basis of the study. Part II, Estimation of Survivor  
10 Curves, presents descriptions of the considerations and the methods used in  
11 the service life studies. Part III, Service Life Considerations, presents the  
12 factors and judgments utilized in the average service-life analysis. Part IV,  
13 Calculation of Annual and Accrued Depreciation, describes the procedures  
14 used in the calculation of group depreciation. Part V, Results of Study,  
15 presents a summary by depreciable group of annual depreciation accrual  
16 rates and amounts. Part VI, Service Life Statistics, presents the statistical  
17 analysis of service life estimates. Part VII, Detailed Depreciation  
18 Calculations, presents the detailed tabulations of annual depreciation.  
19 Finally, Part VIII, Experienced and Estimated Net Salvage, presents the cost  
20 of removal and gross salvage recorded for the period 2019-2023.

21 Table 1, pages V-5 and V-6, presents the book cost of Water Plant as  
22 of June 30, 2024, Customers' Advances for Construction, Contributions in Aid  
23 of Construction, and the resulting net original cost used in the depreciation  
24 study. Table 2, pages V-7 through V-9, presents the estimated survivor

1 curve, the net original cost as of June 30, 2024, and the book reserve and  
2 calculated annual depreciation for each account or subaccount of Water  
3 Plant. Table 3, pages V-10 through V-12, presents the bring-forward to  
4 June 30, 2024, of the book depreciation reserve as of June 30, 2023.  
5 Table 4, pages V-13 through V-15, sets forth the calculation of the annual  
6 accruals used in the bring-forward. Table 5, page V-16, presents the  
7 experienced and estimated net salvage during the five-year period, 2019  
8 through 2023.

9 The section beginning on page VI-2 presents the results of the  
10 retirement rate analyses prepared as the historical bases for the service life  
11 estimates. The section beginning on page VII-2 presents the depreciation  
12 calculations related to original cost. The tabulation on pages VII-3 through  
13 VII-6 presents the cumulative depreciated original cost by year installed. The  
14 tabulations on pages VII-8 through VII-137 present the calculation of annual  
15 depreciation by vintage by account for each depreciable group of water plant.  
16 The tabulation on pages VIII-2 through VIII-6 presents the retirements,  
17 salvage, and cost of removal by account for each year during the period 2019  
18 through 2023.

19 Exhibit Nos. 11-E, 11-G, 11-I and 11-L are presented in the same  
20 fashion described above for all of the Company's wastewater plant by  
21 operating system.

1 **Q. Please outline the contents of Exhibit Nos. 11-C, 11-F, 11-H, 11-J and**  
2 **11-M.**

3 A. Exhibit No. 11-C includes a description of the results, summaries of the  
4 depreciation calculations, and the detailed depreciation calculations as of  
5 June 30, 2025. The descriptions and explanations presented in Exhibit No.  
6 11-B are also applicable to the depreciation calculations presented in Exhibit  
7 No. 11-C. The graphs and tables related to service lives presented in Exhibit  
8 No. 11-B also support the service life estimates used in Exhibit No. 11-C,  
9 inasmuch as the estimates are the same for both test years. The summary  
10 tables and detailed depreciation calculations as of June 30, 2025, are  
11 organized and presented in the same manner as those as of June 30, 2024.  
12 Exhibit Nos. 11-F, 11-H, 11-J and 11-M present data and information for all  
13 of PAWC's wastewater plant, by operating system, in the same fashion  
14 described above.

15 **Q. Please outline the contents of Exhibit Nos. 11-A, 11-D and 11-K.**

16 A. Exhibit No. 11-A includes a description of the results, summaries of the  
17 depreciation calculations, and the detailed depreciation calculations as of  
18 June 30, 2023. The descriptions and explanations presented in Exhibit No.  
19 11-B are also applicable to the depreciation calculations presented in Exhibit  
20 No. 11-A. The graphs and tables related to service lives presented in Exhibit  
21 No. 11-B also support the service life estimates used in Exhibit No. 11-A,  
22 inasmuch as the estimates are the same for both test years. The summary  
23 tables and detailed depreciation calculations as of June 30, 2023 are  
24 organized and presented in the same manner as those as of June 30, 2024.

1 Exhibit Nos. 11-D and 11-K are presented in the same fashion as the Water  
2 Operations assets and use the same format for all wastewater plant by  
3 operating system, except the BASA Wastewater Operations and Brentwood  
4 Wastewater Operations (for the reasons previously explained).

5 **Q. Please use an example to illustrate the manner in which the study is**  
6 **presented in Exhibit Nos. 11-A through 11-M.**

7 A. I will use Account 331, Mains and Accessories, as my example, inasmuch as  
8 it is the largest depreciable group of water assets and represents 52 percent  
9 of the original cost of depreciable water utility plant as of June 30, 2024.

10 The retirement rate method was used to analyze the survivor  
11 characteristics of this group. The life table for the 1948-2021 experience band  
12 is presented on pages VI-112 through VI-116 of Exhibit No. 11-B. The life  
13 table, or original survivor curve, is plotted along with the estimated smooth  
14 survivor curve, the 90-R2, on page VI-111.

15 The calculation of the annual depreciation related to the original cost of  
16 water plant as of June 30, 2023 is presented on pages II-115 through II-118  
17 of Exhibit No. 11-A. The calculation is based on the 90-R2 survivor curve,  
18 the attained age, and the allocated book reserve. The calculation as of  
19 June 30, 2024 is presented on pages VII-108 through VII-110 of Exhibit  
20 No. 11-B and is based in part on the bring-forward of the book reserve. The  
21 calculation as of June 30, 2025 is presented on pages II-109 through II-111  
22 of Exhibit No. 11-C and is based in part on the bring-forward of the book  
23 reserve. The tabulations in Exhibit Nos. 11-A, 11-B and 11-C set forth the  
24 installation year, the original cost, calculated accrued depreciation, allocated

1 book reserve, future accruals, remaining life and annual accrual. The totals  
2 are brought forward to Table 2 on page I-7 in Exhibit No. 11-A, on page V-8  
3 in Exhibit No. 11-B and on page I-7 in Exhibit No. 11-C. The same process  
4 was conducted for the plant of all the wastewater systems.

5 **Q. Do the exhibits exclude the original cost of certain plant?**

6 A. Yes. Certain items of plant, as well as amounts received from customers as  
7 advances or contributions, have been excluded from the original cost used in  
8 the study. The original cost and a description of the plant excluded are set  
9 forth on page I-5 of Exhibit No. 11-B. The net original cost used in the study  
10 is developed in Table 1 on pages I-3 and I-4 of Exhibit No. 11-A, on pages  
11 V-5 and V-6 of Exhibit No. 11-B and on pages I-3 and I-4 of Exhibit No. 11-C.  
12 The same description pertains to all the studies for the Company's  
13 wastewater operations.

14 **Q. In what manner is net salvage incorporated in the depreciation  
15 calculations?**

16 A. As stated on page IV-7 of Exhibit No. 11-B, no adjustment for net salvage  
17 was made to the calculated annual depreciation amounts. The total  
18 calculated annual depreciation set forth on page I-7 of Exhibit No. 11-A, on  
19 page V-9 of Exhibit No. 11-B and on page I-7 of Exhibit No. 11-C reflects an  
20 addition for the amortization of negative net salvage in accordance with the  
21 practice of the Commission. The amortization is based on: (1) experience  
22 during the period 2018 through 2022 for the calculation as of June 30, 2023;  
23 (2) experience during the period 2019 through June 30, 2023, plus estimates  
24 for the last six months of year 2023, for the calculation as of June 30, 2024;

1 and (3) experience during the period 2020 through June 30, 2023, plus  
2 estimates for the last six months of 2023 and year 2024, for the calculation  
3 as of June 30, 2025. The detail by plant account of regular retirements,  
4 salvage, and cost of removal for each year is presented on: (1) pages III-2  
5 through III-6 of Exhibit No. 11-A; (2) pages VIII-2 through VIII-6 of Exhibit  
6 No. 11-B; and (3) pages III-2 through III-6 of Exhibit No, 11-C. The totals are  
7 brought forward to Table 3 on page I-8 of Exhibit No. 11-A, to Table 5 on page  
8 V-16 of Exhibit No. 11-B and to Table 5 on page I-14 of Exhibit No. 11-C, in  
9 which the amounts of the five-year amortizations are calculated. The same  
10 calculations are presented in all the studies for the Company's wastewater  
11 operations.

12 **Q. Do any systems have additional calculations performed?**

13 A. Yes. The BASA Wastewater Operations and Brentwood Wastewater  
14 Operations acquisitions will be recorded at the net value of the assets in 2024  
15 determined by the Commission under Section 1329(c) of the Public Utility  
16 Code. Therefore, the service lives and survivor curves for each plant account  
17 based on the seller's original cost for the acquired property were used to  
18 calculate depreciation expense. From that analysis, I derived the accrual  
19 rates that were applied to the acquired plant at the approved ratemaking rate  
20 base, in order to determine the appropriate level of depreciation expense to  
21 include in the Company's revenue requirement.

22 **Q. Does this complete your testimony?**

23 A. Yes, it does.

## Appendix A

## **JOHN SPANOS**

### **DEPRECIATION EXPERIENCE**

**Q. Please state your name.**

A. My name is John J. Spanos.

**Q. What is your educational background?**

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College.

**Q. Do you belong to any professional societies?**

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

**Q. Do you hold any special certification as a depreciation expert?**

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

**Q. Please outline your experience in the field of depreciation.**

A. In June 1986, I was employed by Gannett Fleming Valuation and Rate Consultants, Inc. as a Depreciation Analyst. During the period from June 1986 through December 1995, I helped prepare numerous depreciation and original cost studies for utility companies in various industries. I helped perform depreciation studies for the following telephone companies: United Telephone of Pennsylvania, United Telephone of New Jersey, and Anchorage Telephone Utility. I helped perform depreciation studies for the following companies in

the railroad industry: Union Pacific Railroad, Burlington Northern Railroad, and Wisconsin Central Transportation Corporation.

I helped perform depreciation studies for the following organizations in the electric utility industry: Chugach Electric Association, The Cincinnati Gas and Electric Company (CG&E), The Union Light, Heat and Power Company (ULH&P), Northwest Territories Power Corporation, and the City of Calgary - Electric System.

I helped perform depreciation studies for the following pipeline companies: TransCanada Pipelines Limited, Trans Mountain Pipe Line Company Ltd., Interprovincial Pipe Line Inc., Nova Gas Transmission Limited and Lakehead Pipeline Company.

I helped perform depreciation studies for the following gas utility companies: Columbia Gas of Pennsylvania, Columbia Gas of Maryland, The Peoples Natural Gas Company, T. W. Phillips Gas & Oil Company, CG&E, ULH&P, Lawrenceburg Gas Company and Penn Fuel Gas, Inc.

I helped perform depreciation studies for the following water utility companies: Indiana-American Water Company, Consumers Pennsylvania Water Company and The York Water Company; and depreciation and original cost studies for Philadelphia Suburban Water Company and Pennsylvania-American Water Company.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service life and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies. I performed these studies under the general direction of William M. Stout, P.E.

In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In July 1999, I was promoted to the position of Manager, Depreciation and

Valuation Studies. In December 2000, I was promoted to the position as Vice-President of Gannett Fleming Valuation and Rate Consultants, Inc., in April 2012, I was promoted to the position as Senior Vice President of the Valuation and Rate Division of Gannett Fleming Inc. (now doing business as Gannett Fleming Valuation and Rate Consultants, LLC) and in January of 2019, I was promoted to my present position of President of Gannett Fleming Valuation and Rate Consultants, LLC. In my current position I am responsible for conducting all depreciation, valuation and original cost studies, including the preparation of final exhibits and responses to data requests for submission to the appropriate regulatory bodies.

Since January 1996, I have conducted depreciation studies similar to those previously listed including assignments for Pennsylvania-American Water Company; Aqua Pennsylvania; Kentucky-American Water Company; Virginia-American Water Company; Indiana-American Water Company; Iowa-American Water Company; New Jersey-American Water Company; Hampton Water Works Company; Omaha Public Power District; Enbridge Pipe Line Company; Inc.; Columbia Gas of Virginia, Inc.; Virginia Natural Gas Company National Fuel Gas Distribution Corporation - New York and Pennsylvania Divisions; The City of Bethlehem - Bureau of Water; The City of Coatesville Authority; The City of Lancaster - Bureau of Water; Peoples Energy Corporation; The York Water Company; Public Service Company of Colorado; Enbridge Pipelines; Enbridge Gas Distribution, Inc.; Reliant Energy-HLP; Massachusetts-American Water Company; St. Louis County Water Company; Missouri-American Water Company; Chugach Electric Association; Alliant Energy; Oklahoma Gas & Electric Company; Nevada Power Company; Dominion Virginia Power; NUI-Virginia Gas Companies; Pacific Gas & Electric Company; PSI Energy; NUI - Elizabethtown Gas Company; Cinergy Corporation – CG&E; Cinergy

Corporation – ULH&P; Columbia Gas of Kentucky; South Carolina Electric & Gas Company; Idaho Power Company; El Paso Electric Company; Aqua North Carolina; Aqua Ohio; Aqua Texas, Inc.; Aqua Illinois, Inc.; Ameren Missouri; Central Hudson Gas & Electric; Centennial Pipeline Company; CenterPoint Energy-Arkansas; CenterPoint Energy – Oklahoma; CenterPoint Energy – Entex; CenterPoint Energy - Louisiana; NSTAR – Boston Edison Company; Westar Energy, Inc.; United Water Pennsylvania; PPL Electric Utilities; PPL Gas Utilities; Wisconsin Power & Light Company; TransAlaska Pipeline; Avista Corporation; Northwest Natural Gas; Allegheny Energy Supply, Inc.; Public Service Company of North Carolina; South Jersey Gas Company; Duquesne Light Company; MidAmerican Energy Company; Laclede Gas; Duke Energy Company; E.ON U.S. Services Inc.; Elkton Gas Services; Anchorage Water and Wastewater Utility; Kansas City Power and Light; Duke Energy North Carolina; Duke Energy South Carolina; Monongahela Power Company; Potomac Edison Company; Duke Energy Ohio Gas; Duke Energy Kentucky; Duke Energy Indiana; Duke Energy Progress; Northern Indiana Public Service Company; Tennessee- American Water Company; Columbia Gas of Maryland; Maryland-American Water Company; Bonneville Power Administration; NSTAR Electric and Gas Company; EPCOR Distribution, Inc.; B. C. Gas Utility, Ltd; Entergy Arkansas; Entergy Texas; Entergy Mississippi; Entergy Louisiana; Entergy Gulf States Louisiana; the Borough of Hanover; Louisville Gas and Electric Company; Kentucky Utilities Company; Madison Gas and Electric; Central Maine Power; PEPCO; PacifiCorp; Minnesota Energy Resource Group; Jersey Central Power & Light Company; Cheyenne Light, Fuel and Power Company; United Water Arkansas; Central Vermont Public Service Corporation; Green Mountain Power; Portland General Electric Company; Atlantic City Electric; Nicor Gas Company; Black Hills Power; Black Hills Colorado Gas; Black Hills Energy Arkansas, Inc.; Black Hills Kansas

Gas; Black Hills Service Company; Black Hills Utility Holdings; Public Service Company of Oklahoma; City of Dubois; Peoples Gas Light and Coke Company; North Shore Gas Company; Connecticut Light and Power; New York State Electric and Gas Corporation; Rochester Gas and Electric Corporation; Greater Missouri Operations; Tennessee Valley Authority; Omaha Public Power District; Indianapolis Power & Light Company; Vermont Gas Systems, Inc.; Metropolitan Edison; Pennsylvania Electric; West Penn Power; Pennsylvania Power; PHI Service Company - Delmarva Power and Light; Atmos Energy Corporation; Citizens Energy Group; PSE&G Company; Berkshire Gas Company; Alabama Gas Corporation; Mid-Atlantic Interstate Transmission, LLC; SUEZ Water; WEC Energy Group; Rocky Mountain Natural Gas, LLC; Illinois-American Water Company; Northern Illinois Gas Company; Public Service of New Hampshire; FirstEnergy Service Corporation; Northeast Ohio Natural Gas Corporation; Blue Granite Water Company; Spire Missouri, Inc.; Dominion Energy South Carolina, Inc.; South FirstEnergy Operating Companies; Dayton Power and Light Company; Liberty Utilities; East Kentucky Power Cooperative; Bangor Natural Gas; Hanover Borough Municipal Water Works; West Virginia American Water Company; Evergy Metro; Evergy Missouri West; Granite State Electric; Bluegrass Water; The Borough of Ambler; Newtown Artesian Water Company and Connecticut Water Company.

My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended depreciation rates to management for its consideration and supporting such rates before regulatory bodies.

**Q. Have you submitted testimony to any state utility commission on the subject of utility plant depreciation?**

A. Yes. I have submitted testimony to the Pennsylvania Public Utility Commission; the

Commonwealth of Kentucky Public Service Commission; the Public Utilities Commission of Ohio; the Nevada Public Utility Commission; the Public Utilities Board of New Jersey; the Missouri Public Service Commission; the Massachusetts Department of Telecommunications and Energy; the Alberta Energy & Utility Board; the Idaho Public Utility Commission; the Louisiana Public Service Commission; the State Corporation Commission of Kansas; the Oklahoma Corporate Commission; the Public Service Commission of South Carolina; Railroad Commission of Texas – Gas Services Division; the New York Public Service Commission; Illinois Commerce Commission; the Indiana Utility Regulatory Commission; the California Public Utilities Commission; the Federal Energy Regulatory Commission (“FERC”); the Arkansas Public Service Commission; the Public Utility Commission of Texas; Maryland Public Service Commission; Washington Utilities and Transportation Commission; The Tennessee Regulatory Commission; the Regulatory Commission of Alaska; Minnesota Public Utility Commission; Utah Public Service Commission; District of Columbia Public Service Commission; the Mississippi Public Service Commission; Delaware Public Service Commission; Virginia State Corporation Commission; Colorado Public Utility Commission; Oregon Public Utility Commission; South Dakota Public Utilities Commission; Wisconsin Public Service Commission; Wyoming Public Service Commission; the Public Service Commission of West Virginia; Maine Public Utility Commission; Iowa Utility Board; Connecticut Public Utilities Regulatory Authority; New Mexico Public Regulation Commission; Commonwealth of Massachusetts Department of Public Utilities; Rhode Island Public Utilities Commission and the North Carolina Utilities Commission.

**Q. Have you had any additional education relating to utility plant depreciation?**

A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.:

“Techniques of Life Analysis,” “Techniques of Salvage and Depreciation Analysis,” “Forecasting Life and Salvage,” “Modeling and Life Analysis Using Simulation,” and “Managing a Depreciation Study.” I have also completed the “Introduction to Public Utility Accounting” program conducted by the American Gas Association.

**Q. Does this conclude your qualification statement?**

A. Yes.

LIST OF CASES IN WHICH JOHN J. SPANOS SUBMITTED TESTIMONY

	<u>Year</u>	<u>Jurisdiction</u>	<u>Docket No.</u>	<u>Client Utility</u>	<u>Subject</u>
01.	1998	PA PUC	R-00984375	City of Bethlehem – Bureau of Water	Original Cost and Depreciation

## Appendix B

Pennsylvania-American Water Company  
Data Requirements of the Pennsylvania Public Utility Commission  
Depreciation Study

FR VI.1

**Pennsylvania-American Water Company**  
**VI. Depreciation**

1. Provide a description of the depreciation methods used to calculate annual depreciation amounts and depreciation reserves, together with a discussion of the factors which were considered in arriving at estimates of service life and dispersion by account. Supply a comprehensive statement of any changes made in method of depreciation. Provide dates of all field inspections and facilities visited.

**Answer:**

The depreciation methods utilized in calculating annual and accrued depreciation are discussed in Exhibit No. 11-B in Part IV of the water depreciation study. The calculation of annual and accrued depreciation are discussed in Exhibit Nos. 11-E, 11-G, 11-I and 11-L in Part IV of the wastewater depreciation studies.

Field trips and facilities visited for Pennsylvania-American Water Company water and wastewater systems are presented in Part III. Service Life Considerations, in Exhibit Nos. 11-B, 11-E, 11-G, 11-I and 11-L of those that had recent visits.

Pennsylvania-American Water Company  
Data Requirements of the Pennsylvania Public Utility Commission  
Depreciation Study

FR VI.2

**Pennsylvania-American Water Company**  
**VI. Depreciation**

2. Set forth, in exhibit form, charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized.

**Answer:**

Charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized is presented in Exhibit No. 11-B in Part VI. Service Life Statistics, of the water depreciation study. The original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized is presented in Exhibit Nos. 11-E, 11-G, 11-I and 11-L in Part VI. Service Life Statistics, for wastewater depreciation studies.

Depreciation Study

FR VI.3

**Pennsylvania-American Water Company**  
**VI. Depreciation**

3. Provide the surviving original cost at historic test year-end by vintage by account and include applicable depreciation reserves and accruals. These calculations should be provided for plant in service as well as other categories of plant, including contributions in aid of construction and customers' advances for construction.

**Answer:**

The surviving original cost at the end of the historical year June 30, 2023 by vintage by account and the applicable depreciation reserve for utility plant are presented in Exhibit No. 11-A beginning on page II-8, in Exhibit No. 11-D beginning on page II-7, and in Exhibit No. 11-K beginning on page II-6.

The surviving original cost at test year end June 30, 2024, by vintage by account and the applicable depreciation reserve for utility plant are presented in Exhibit No. 11-B beginning on page VII-8, in Exhibit No. 11-E beginning on page VII-7, in Exhibit No. 11-G beginning on page VII-6, in Exhibit No. 11-I beginning on page VII-6, and in Exhibit No. 11-L beginning on page VII-6.

The surviving original cost at test year end June 30, 2025, by vintage by account and the applicable depreciation reserve for utility plant are presented in Exhibit No. 11-C beginning on page II-7, in Exhibit No. 11-F beginning on page II-7, in Exhibit No. 11-H beginning on page II-6, in Exhibit No. 11-J beginning on page II-6, and in Exhibit No. 11-M beginning on page II-6.

Pennsylvania-American Water Company

Depreciation Study

FR VI.4

**Pennsylvania-American Water Company**  
**VI. Depreciation**

4. Provide a comparison of the calculated depreciation reserve used for ratemaking purposes v. the book reserve by account at the end of the test year, if they differ.

**Answer:**

A comparison of the calculated depreciation reserve v. book reserve by account at June 30, 2023, at June 30, 2024, and at June 30, 2025, are attached as pages FR VI.4 (2) through (20) for all water and wastewater systems by account.

Pennsylvania-American Water Company  
Data Requirements of the Pennsylvania Public Utility Commission  
Depreciation Study

FR VI.5

**Pennsylvania-American Water Company**  
**VI. Depreciation**

5. Supply a schedule by account and depreciable group showing the survivor curve and annual accrual rate estimated to be appropriate:
  - a. For the purposes of this filing.
  - b. For the purposes of the most recent rate increase filing prior to the current proceedings.

**Answer:**

- a. Refer to Table 2 in Exhibit Nos. 11-A through 11-M.
- b. Refer to pages FR VI.5 (2) to FR VI.5 (10) for survivor curves and annual accrual rates estimated to be appropriate in the most recent prior water rate filing, and pages FR VI.5 (11) to FR VI.5 (20) for survivor curves and annual accrual rates estimated to be appropriate in the most recent prior wastewater rate filing.

Depreciation Study

FR VI.6

**Pennsylvania-American Water Company**  
**VI. Depreciation**

6. Provide an exhibit showing gross salvage, cost of removal, and net salvage for the five most recent calendar or fiscal years by account.

**Answer:**

The information is presented on pages III-2 through III-6 of Exhibit No. 11-A for the historic test year, on pages VIII-2 through VIII-6 of Exhibit No. 11-B for the future test year, and on pages III-2 through III-6 of Exhibit No. 11-C for the fully forecasted test year for water assets.

The information is presented in Part III. Experienced Net Salvage of Exhibit Nos. 11-D and 11-K for the historic test year, in Part VIII, Experienced and Estimated Net Salvage of Exhibit Nos. 11-E, 11-G, 11-I and 11-L of the future test year, and in Part III. Experienced and Estimated Net Salvage of Exhibit Nos. 11-F, 11-H, 11-J and 11-M of the fully forecasted test year for wastewater assets.

Pennsylvania-American Water Company  
852 Wesley Drive  
Mechanicsburg, PA 17055

Attention Ms. Stacey Gress  
Director, Rates and Regulatory

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to water plant as of June 30, 2023. Summaries of the original cost, annual accruals and the book depreciation reserve are presented in Tables 1 through 3, beginning on page I-3 of the attached report.

A description of the methods and procedures upon which the study was based, as well as support for the service life estimates, is set forth in a companion report "2024 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of June 30, 2024".

Respectfully submitted,

GANNETT FLEMING VALUATION  
AND RATE CONSULTANTS, LLC

## **PART I. RESULTS OF STUDY**

**PENNSYLVANIA-AMERICAN WATER COMPANY**

**WATER OPERATIONS**

**DEPRECIATION STUDY**

**PART I. RESULTS OF STUDY**

**DESCRIPTION OF SUMMARY TABULATIONS**

Table 1 presents the development of net original cost used in the study. The net original cost is the original cost of water plant less advances, contributions and property to be excluded pursuant to Commission audits. The results of the depreciation study are summarized in Table 2, which sets forth the book reserve and the calculated annual depreciation related to net original cost as of June 30, 2023, and the annual amortization of net negative salvage. Table 3 presents the calculation of the amortization of experienced net salvage, by account, based on the five-year period, 2018-2022.

**DESCRIPTION OF DETAILED TABULATIONS**

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-8. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage, and cost of removal are set forth by account for the years 2018 through 2022, on pages III-2 through III-6.
