Re: Pennsylvania-American Water Company ("PAWC")
2023 Water Annual Asset Optimization Plan
Docket No. M-2024-_____

Dear Secretary Chiavetta:

Enclosed for filing is Pennsylvania-American Water Company's 2023 Water Annual Asset Optimization Plan ("AAOP") in compliance with 66 Pa.C.S. § 1356.

A copy of the AAOP has been served upon the parties listed on the enclosed Certificate of Service. Should you have any questions, please do not hesitate to contact me.

Sincerely,

A handwritten signature in blue ink that reads "Elizabeth Rose Triscari".

Elizabeth Rose Triscari

Certificate of Service

Pennsylvania-American Water Company 2023 Water Annual Asset Optimization Plan

Introduction:

Pennsylvania-American Water Company (“PAWC” or “Company”) files this Annual Asset Optimization Plan (“AAO Plan”) for its Water Operations in compliance with 66 Pa C.S. § 1356. This section requires a utility with an approved distribution system improvement charge (“DSIC”) and a long-term infrastructure improvement plan (“LTIIIP”) to file an AAO Plan.

PAWC filed its Petition seeking Commission approval of its initial Water Long-Term Infrastructure Improvement Plan for the calendar years 2017 – 2021. PAWC received approval for its 2017-2021 Water LTIIIP from the Pennsylvania Public Utility Commission in an Order dated May 18, 2017 at Docket No. P-2017-2585707. PAWC received approval for its second Water LTIIIP for the years 2022-2026 from the Pennsylvania Public Utility Commission in an Order dated December 16, 2021 at Docket No. P-2021-3028300.

The AAO Plan contained herein has the following elements:

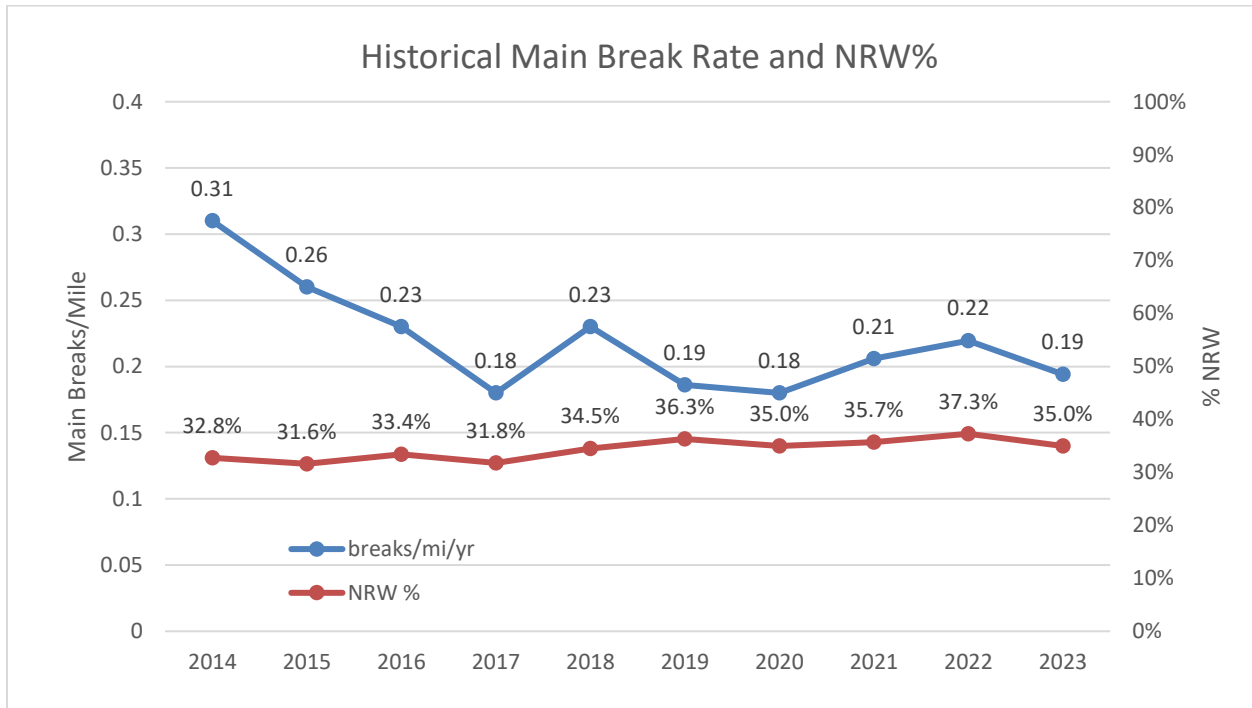

- 1) Report of non-revenue water and main break rates;
- 2) A description of all eligible property repaired, improved, and replaced in the preceding 12 months, pursuant to the utility’s long-term infrastructure improvement plan and the prior year’s asset optimization plan;
- 3) A detailed description of all facilities to be improved in the upcoming 12 months; and
- 4) A detailed description of the Company’s lead service line replacement program.

Non-Revenue Water and Main Break Rates

In accordance with requirements within Docket No. P-2021-3028300, Exhibit 1, below, is a graph showing both non-revenue water (“NRW”) and main break rates since 2014. Please note that non-revenue water is an imprecise indicator of success or failure of a main replacement program. An event that helps point out the lack of correlation between non-revenue water and success of a main replacement program is the Agnew Street main break in September of 2019. This main was not significantly old, as it was ductile iron

main installed in the mid-1980s. Road salt had migrated to the area below the pipe and contributed to corrosion from the outside of the main. Due to the location and size of the main this one event drained the bulk of the storage in the Pittsburgh area. Changes in water regulation also contributed to an approximate 3.5% uptick in NRW beginning in 2018 and 2019. The residual rule requires additional hydrant flushing to maintain an increased disinfectant residual concentration.

Exhibit 1: Historical Main Break Rates and Non-Revenue Water Percentage

Description of PAWC’s Water Systems (DSIC-eligible)

PAWC owns and operates 67 water systems across Pennsylvania, providing potable water service to approximately 680,000 active water customers, or a population of 2.4 million people in 418 communities located in 37 counties in Pennsylvania. PAWC’s distribution facilities consist of approximately 278 water storage tanks, 284 booster pump stations and approximately 10,344 miles of finished water pipe. The following tables summarize DSIC-eligible property at the end of 2023 for each water district.

Table 1: PAWC Water Districts – 2023 Summary

Long Term Infrastructure Plan Summary

PAWC has continuously invested in its water infrastructure to maintain safe, reliable service to its customers. PAWC has accelerated DSIC-eligible investment over the last 20 years from approximately \$30 million in 2001 to the current investment level of \$217 million annually, based on a rolling four-year average. As shown in Table 4, the Company proposes to sustain this previously accelerated rate of infrastructure investment and replacement and continue making necessary improvements to maintain safe, reliable service to its customers. The increase is to overcome recent inflation in the price of material and to account for increased costs of restoration as more municipalities require full street width repaving. For example, an unforeseeable pipe cost increase of 25% followed by 50% was experienced in the last two years. This table compares the actual to projected expenditures during the 2012-to-2023-time frame and projects annual expenditures through 2026 based on PAWC’s approved LTIP. Actual annual expenditures exceeded projected expenditures in 2023. The Company increased the level of investment in main replacement during 2023 in response to stagnant or slightly increasing main break rates and NRW % in 2021 and 2022. This additional main replacement brought the 2023 level of investment close to the ideal 1% investment level. A resultant reduction of both main breaks and NRW % was seen in 2023 and both metrics ended 2023 at or near their 5-year low values. The Company expects an easing of the level of investment in 2024 to manage the 4-year average expenditures.

Table 4: Projected Annual DSIC-Eligible Expenditures (\$ Million) 2012 to 2026

Year	Projected Annual Expenditures	Projected Rolling 4 Year Average Expenditures	Actual Annual Expenditures	Actual Rolling 4 Year Average Expenditures
2012	\$136.31	\$119.74	\$136.31	\$119.74

Lead Service Lines

The Company is in the process of replacing customer-owned lead service lines pursuant to its Lead Service Line Replacement Program (“LSLRP”). In 2023 the Company began to accelerate customer-owned lead service line replacements. Table 8 identifies the customer side lead or galvanized service lines replaced between December 2022 and November 2023, which coincides with our 2023 DSIC filing periods. In total, 302 customer side lead service lines were replaced during this period, an increase from the 186 customer side lead service lines reported in the 2022 AAOP proceeding. The overall cost of these lead service line replacements increased from approximately \$1.6 million in 2022 to \$2.7 million in 2023. While this is below our target 2024 spend of \$6 million, the discrepancy can be attributed to several factors including the lack of a mature lead service line inventory and a continued weaker than anticipated Part 2 participation rate. In 2023, a total of 146 customer side Part 1 replacements were completed and 156 customer side Part 2 replacements were completed. Table 9 is a detailed list of customer lead service lines replaced as either Part 1 or Part 2 replacements, including the geographic location and cost per line replacement.

With the Lead and Copper Rule Revisions becoming effective in December of 2021, more resources were allocated towards the service line material inventory project. PAWC continues to survey potential lead and galvanized services and is reaching out to customers through mailers, door hangers, in-home visits, and other communications with links to a customer survey.

In addition, PAWC educated customers about its LSLRP during its paid media customer education campaign, which included TV/cable, Hulu, YouTube, digital audio and social media geotargeted to customers in the Company's service territory. This campaign included a 30-second video about the LSLRP program (watch at <https://youtu.be/cvJzK-45Oo>). Through this paid campaign, which ran during Q3 and Q4 2022, the LSLRP video received more than 1.5 million views. The Company also revised its website in 2023 and modified its landing page for all things related to lead: <https://www.amwater.com/paaw/water-quality/Lead-and-Drinking-Water/>. The site includes FAQs about the LSLRP, information about service line material and the inventory project, information about lead in drinking water, a link to the customer service line material map, and more. These outreach initiatives provided information to our customers and stakeholders and are anticipated to help accelerate participation in Part 2 above the 2022 level of 36 Part 2 lead service line replacements.

The Company updates its website regularly with relevant information about the LSLRP including a public facing web-based map showing company and customer service line materials: <https://paaw.maps.arcgis.com/apps/webappviewer/index.html?id=f8933d006e16455f938e62d60f5e955e>. As information is gathered during the survey, it is used to update the public-facing web-based map and the Company's internal GIS mapping.

With lead service inventories becoming more mature and increased customer participation as a result of outreach efforts, PAWC anticipates replacing \$6,000,000 in lead and galvanized service lines in 2024. We are targeting more areas with potential lead services as a part of our scheduled main replacement and expect to complete \$15,000,000 in total lead service replacement costs as the LSL survey nears completion.

Table 8: Summary of Customer Lead Service Lines Replaced from December 2022 through November 2023 by District

Detailed Project Listing of Water DSIC-Eligible projects – Calendar Year 2024 Projected

The project listing envisioned for the upcoming 12 months consists of a mixture of water main, valve, hydrant, and service replacement activity. The project summary information with the estimated costs is presented in the following Table 10. These estimated costs are preliminary in nature and will change as project development progresses. A detailed listing of projected 2024 expenditures is provided in Attachment B.

Summary:

PAWC's AAO Plan demonstrates that PAWC has maintained acceleration of DSIC-eligible water capital investment and the actual expenditures, as previously shown on Table 4, are consistent with or higher than planned budgetary levels included in the LTIIP. Table 6 also reveals that both the actual miles of water main replaced and the investment in 2023 were above the 2023 target levels in the LTIIP. There were several drivers for the increases, including increased costs of material and construction due to inflation, a continued increased cost of restoration across the state, and an acceleration of quantity of main installed to approach the 1% replacement target in order to mitigate against increasing NRW and main break rates. In addition, many municipalities are requiring full curb to curb replacement of pavement during main installation thereby raising the cost of main replacement. The proposed 2024 capital investment levels and miles of main scheduled to be replaced are also above the 2024 target levels in the LTIIP due largely to the anticipation of the same drivers that increased costs in 2023 will increase costs in 2024.
