**Re: Completed Restoration of Momentary and Sustained Interruptions –
FirstEnergy Pennsylvania Electric Company; Docket No. M-2021-3023564**

Dear Secretary Chiavetta:

Pursuant to 52 Pa. Code § 67.1, FirstEnergy Pennsylvania Electric Company on behalf of Metropolitan Edison Rate District (“Met-Ed”) submits written notification of completed restoration efforts following storm conditions that began on February 13, 2024 that caused multiple service interruptions in the Met-Ed service territory.

Attached please find the details relative to the impact of this recent outage event and the restoration activities that took place. It should be noted that the review and approval process of this outage information is still in progress at the time of filing this report and as such, all outage information contained in this report should be considered preliminary.

If you have any questions, please contact me at (610) 212-8331.

Sincerely,

Darsh Singh

- (e) A listing of each outage case exceeding 6 or more hours in duration:
See Attachment A.

Reason for the interruption or outages: Beginning Tuesday morning, February 13, 2024, a weather system moved through Pennsylvania, including the Met-Ed service territory. The system produced heavy, wet snow through the morning hours of Tuesday, February 13, 2024. The wind gusts associated with the system were approximately 26 miles per hour with some areas experiencing winds of up to 31 miles per hour on Tuesday; snow totals were from six to twelve inches throughout the service territory. See Attachment B for the maximum wind gusts for February 13-15, 2024 and the 24-hour total precipitation and snowfall totals for February 13, 2024.

Damage as a result of the weather system included downed trees and wires, damaged or broken poles and crossarms, and damaged transformers. Crews experienced unsafe road conditions due to heavy wet snow accumulations during the initial onset of the storm. The Easton, Hamburg, Lebanon, and York districts were the hardest hit areas. Approximately 60% of the total outages that occurred were tree related.

Preliminary data indicates the reliability impact of the storm was 43.6 minutes of SAIDI, 0.08 of SAIFI frequency, and an overall storm CAIDI of 524.3 minutes.

(g) Projected time of restoration: It was initially estimated that the majority of customers affected would be restored by 2300 on February 14, 2024. However, high winds continued through the afternoon of February 14, 2024, resulting in additional outages. See Attachment C for the restoration curve and Attachment D for the order restoration graphs.

New Issuance:

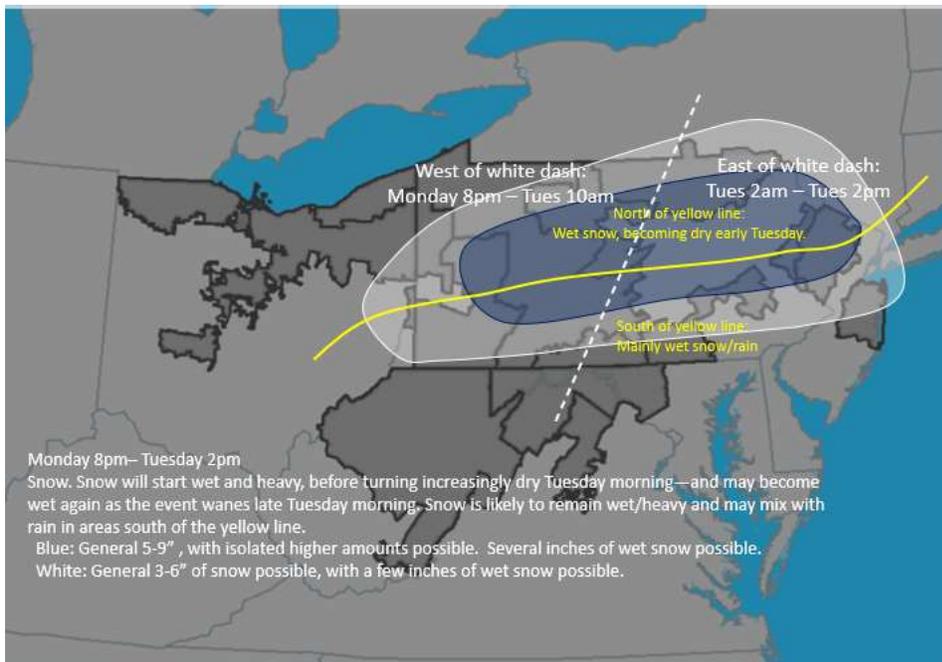

A storm system is expected to bring notable snow to areas of central and eastern FE, beginning late Monday and lasting into the day on Tuesday. Key notes:

- The initial wave of snow is expected to be wet and heavy as it arrives overnight Monday and early Tuesday, with several inches of wet snow possible.
- Areas of northern PA and far northern NJ are currently expected to get cold enough early Tuesday for snow accumulations to become dry and lighter.
- Warmer temperatures after sunrise Tuesday could lead to an additional round of wet snow accumulations, mainly across eastern FE.
- Wind is not expected to be factor during the main snowfall period, but breezy conditions across eastern FE will be possible during the day Tuesday.

Update:

- Slight adjustment north of heaviest snow band. Axis of heaviest snow is expected to occur across northern PA and NJ, although slight changes in placement and timing may still occur.
- Wet snow remains a concern. Several inches of wet snow are possible across all alerted areas at the beginning of the event, especially in areas of northern PA and northern NJ.
- Temperatures across northern PA and northern NJ are expected to dip below freezing for a period Tuesday morning, which will lead to higher snowfall accumulations, but a period lighter/drier snow. However, the temperature forecast remains a bit uncertain, and small changes in the temperature forecast could lead to higher wet snowfall amounts.
- Slight changes to timing of snowfall arrival/departure.
