As we eliminate these announcements from the narrative, we are left with an analyst day and the primary driver of relative performance is likely a function of the extension and executability of the company's growth outlook (likely through 2027). We also expect an expanded discussion on how management expects to drive additional efficiencies out of its cost structure as well as an update on the timing and costs related to its 2018 IRP projects and an update on its 2021 IRP and associated renewable projects. Given the company's low-double-digit organic rate base growth, modest rate lag, and continued financing needs beyond 2024, we expect management to lay out a 6-8% long-term EPS growth rate. We also expect management to initiate its 2023 outlook which we expect to be in the $1.51-1.57/share range or consistent with management's 5-7% guidance off 2021 actual EPS. Finally, we also expect management to address the impact of the Inflation Reduction Act compared to its previous commentary that it does not expect any material near-term impact to its plan and the earnings thresholds. **In short, although expectations are extremely low, we believe the key to the company's successful re-rating from here is management's ability to lay out a highly executable growth outlook with visible growth drivers and one that is economically financeable.**

Refreshing 2022-2024 Forecast for Rate Case Timing and Preferred Interest

We are lowering our 2022 estimate modestly to $1.44 to reflect the delay in the implementation of the company's OH rate case. Our 2023 remains unchanged at $1.54 as slightly higher preferred interest costs are offset by the full-year impact of the company's OH rate cases. Finally, we lower our 2024 estimate to $1.69 due to higher preferred interest expense and timing of the annualized impact of the company's NIPSCO rate case. Our revised forecast suggests an EPS CAGR through 2024 of 7.4%, which is in line with the bottom end of the company's 7-9% current guidance.

Benchmarking Organic Plan Against Strategic Opportunities Likely Leads to Status Quo

We do not see any material changes from our 2Q22 note in our expectations for what key items management will provide updates to at its analyst day next week. Specifically, we anticipate management to address the following:

- **Present the outcome of its strategic review including "definitive announcements" of where management and the board of directors are taking the business.** To this latter point, CEO Lloyd Yates has been clear that the scope of the review included all strategic alternatives, including options at both the enterprise and asset level and other opportunities to optimize the existing business in terms of growth, cost structure, profile, and safety. In recent discussions management has been clear it remains confident in the company's standalone prospects and

sees opportunities to enhance an already robust opportunity set. However, the company also has a duty to "benchmark" its organic plan against various strategic scenarios to maximize shareholder value. Although we believe the company is likely to have gone through an in-depth review of all its strategic options, given its organic 10% rate base growth and favorable recovery mechanisms, we believe it is very unlikely there is an announcement of a process that would lead to the sale of the company. We however see a non-zero probability for management to leave open the option to sell one of its smaller gas LDCs give the continued private demand for infrastructure assets to more efficiently finance any future equity needs. **With smaller, subscale LDC OpCos including VA (~$1bn), MD (~$500mm), and KY (~$500mm) in the portfolio, we could see management rationalize one or more of these assets (especially if not performing) to meet forward equity needs or even retire higher coupon debt including calling its 2018 perpetual preferreds ($900mm in aggregate) which have a coupon reset (5YR Ts + 3.6%/2.8% spread) in June 2023/March 2024.**

- **An extension and the drivers behind its five-year growth outlook.** Given management's history we would anticipate a three-year extension of its financial expectations out to the 2027 timeframe. Outside of some potential supply chain-related changes in its renewable investment timing (2023), management is expected to update its long-term capital spending outlook, which has averaged $1.9-2.3bn over the last several years outside its renewable spend and has helped underpin low-double-digit rate base growth. **We expect to see a modest uptick in this cadence as the company extends its outlook, which should continue to support rate base in the 10% range (Exhibit 3).** With its financing plan in place through 2024 and covering its equity needs for its 2018 IRP projects, we expect the company's annual equity needs to be in the $300-350mm range before any financing associated with its 2021 IRP plan. This represents ~2.5% annual dilution, which when combined with some modest rate lag of 25-30 b/p, would suggest EPS growth in the 7% range before the addition of the impact of the company's 2021 IRP, which was ~$750mm when last updated to meet the Michigan City plant retirement in the 2026-2028 timeframe. **At this investment level we see the IRP adding roughly 1% to EPS on a fully financed, run rate basis in the ~2027 timeframe, which would support the high end of a 6-8% CAGR using 2023 as the base year.** Finally, management should also provide a comprehensive update on how it looks at driving additional O&M and other cost efficiencies out of the business in addition to its NI NEXT program. We would expect a comprehensive set of best practice initiatives to drive down A&G expenses including information technology-driven solutions to streamline its shared services model.

- **An update on the timing and costs related to its 2018 IRP projects as well as mitigation efforts and an update on the results of its 2021 IRP RFP.** On the 2Q22 call, management discussed that the DOC's delay on solar panel tariffs gave management more confidence and clarity on the revised project timelines. At that time the company believed its 2021-2024 capital program remains on track at the $10bn level and it continues to expect diluted NOEPS CAGR of 7-9% through 2024. With the analyst day we expect the company to provide investors with its updated thoughts on both the cost and timing of the ~$2bn in renewable investment related to the 2018 IRP, of which ~$1bn is expected in-service by 2023 and the other ~$1bn in-service in "2024+." Management's mitigation plan is to utilize various electric rate case options to provide flexibility that helps ensure the timely recovery of these investments as they come into service. It also includes other previously announced mitigation measures that management believes will help keep it on track to meet its 2024 outlook. Specifically, management sees ~9-10c of delay-related 2024 EPS offset by 4-5c of pulled forward capex, 3-4c of O&M offsets, and 1-2c of lower financing cost (Exhibit 1).

Exhibit 1: NiSource Initial 2024 Mitigation Plan

Delayed Renewable Investments • ~$1.0B in-service by 2023 • ~$1.0B in-service 2024+	($0.09 - $0.10)
Pulling Forward Tracked/Other Investments • ~$400-$500M Pulled into 2022/2023	+$0.04 - $0.05
O&M • Accelerating NiNEXT and operational excellence opportunities	+$0.03 - $0.04
Financing Cost • Less financing need with delayed projects	+$0.01 - $0.02
Total 2024 EPS Impact	$0.00

Source: BMO Capital Markets, Company Filings

Supporting the company's extension of its longer-term growth outlook are the investments identified in NIPSCO's all sources RFP of capacity resources including renewable generation projects and a targeted RFP for gas peaking units which was filed in August. The refresh of the company's recent RFP results is expected to provide a better market perspective on pricing and availability of resources in line with the preferred pathway outlined in the 2021 NIPSCO IRP. Plans to retire existing coal-fired generation were unchanged with the Schahfer Generation stations remaining two coal units expected to retire by the end of 2025 and the Michigan City Generation Station retiring between 2026 and 2028. As discussed above the preferred path outlines new generation investment that was last estimated to be up to $750mm. Given the RFP solicitation was to be concluded in the 3Q22 we expect some more definition around the technology solution, updated associated cost, and finally timing of the proposed investments.

Regulatory Updates. After many delays, earlier this week, CGOH filed a settlement in the company's Ohio gas rate case with numerous parties including the Staff of the Public Utilities Commission of Ohio, the Office of the Ohio Consumers' Counsel (OCC), Northeast Ohio Public Energy Council (NOPEC), Industrial Energy Users – Ohio (IEUO), Ohio Manufacturers' Association Energy Group (OMAEG), Kroger Co. (Kroger), the Ohio Schools Council (OSC), Interstate Gas Supply, Inc. (IGS), and the Retail Energy Supply Association (RESA). Overall the terms of the proposed settlement were roughly in line with our own modeling assumptions including a $68.1mm revenue deficiency based on a $3.505mm rate base, 50.6% equity layer, and 9.6% ROE. Overall the settlement is a modest improvement to the April Staff recommendation of a $46.3mm revenue deficiency and a $3.463mm rate base, 9.55% ROE, and 50.6% equity layer. Given the company had expected implementation of rates earlier in the year, our modest tweaks to our 2022 and 2023 estimates reflect this timing shift.

IMPORTANT DISCLOSURES

Analyst's Certification

I, James M. Thalacker, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA. These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company Specific Disclosures

Disclosure 9B: BMO Capital Markets makes a market in NiSource Inc in United States.

Methodology and Risks to Target Price/Valuation for NiSource Inc (NI-NYSE)

Methodology: Our target price is the product of a P/E-based sum-of-the-parts (SOTP) analysis of the company's primary regulated operating companies. We utilize a regulated-group average multiple based on 2024E EPS as our initial basis for valuation and then make adjustments specific to each jurisdiction to reflect our current view of the fundamental outlook.

Risks: NI's regulated profile exposes the company to business risk including but not limited to federal and state regulatory risk, federal and state political risk, environmental policy, interest rate risk, access to capital markets, construction risk, changes in customer demand trends, changes in customer affordability, extreme weather, natural disaster, and equipment failure.

Ratings Key (as of October 2016)

We use the following ratings system definitions:
OP = Outperform - Forecast to outperform the analyst's coverage universe on a total return basis;
Mkt = Market Perform - Forecast to perform roughly in line with the analyst's coverage universe on a total return basis;
Und = Underperform - Forecast to underperform the analyst's coverage universe on a total return basis;
(S) = Speculative investment;
Spd = Suspended - Coverage and rating suspended until coverage is reinstated;
NR = No Rated - No rating at this time; and
R = Restricted - Dissemination of research is currently restricted.

The total return potential, target price and the associated time horizon is 12 months unless otherwise stated in each report. BMO Capital Markets' seven Top 15 lists guide investors to our best ideas according to different objectives (CDN Large Cap, CDN Small Cap, US Large Cap, US Small Cap, Income, CDN Quant, and US Quant have replaced the Top Pick rating).

Additional Matters

This report is directed only at entities or persons in jurisdictions or countries where access to and use of the information is not contrary to local laws or regulations. Its contents have not been reviewed by any regulatory authority. BMO Capital Markets does not represent that this report may be lawfully distributed or that any financial products may be lawfully offered or dealt with, in compliance with regulatory requirements in other jurisdictions, or pursuant to an exemption available thereunder.

To Australian residents: BMO Capital Markets Limited and Bank of Montreal are exempt from the requirement to hold an Australian financial services licence under the Corporations Act in respect of financial services they provide to wholesale investors (as defined in the Corporations Act). BMO Capital Markets Limited is regulated by the UK Financial Conduct Authority under UK laws, and Bank of Montreal in Hong Kong is regulated by the Hong Kong Monetary Authority and the Securities and Futures Commission, which differ from Australia laws. This document is only intended for wholesale clients (as defined in the Corporations Act 2001), Eligible Counterparties or Professional Clients (as defined in Annex II to MiFID II) and Professional Investors (as defined in the Securities and Futures Ordinance and the Securities and Futures (Professional Investor) Rules under the Securities and Futures Ordinance of Hong Kong).

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Colin Hamilton, Alexander Pearce or Raj Ray:

This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and distributed by BMO Capital Markets Limited or Bank of Montreal Europe Plc and is subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom and the Central Bank of Ireland (CBI) in Ireland. FCA and CBI regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore each of BMO Capital Markets Limited and Bank of Montreal Europe Plc will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To E.U. Residents: In an E.U. Member State this document is issued and distributed by Bank of Montreal Europe plc which is authorised and regulated in Ireland and operates in the E.U. on a passported basis. This document is only intended for Eligible Counterparties or Professional Clients, as defined in Annex II to "Markets in Financial Instruments Directive" 2014/65/EU ("MiFID II").

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

To Hong Kong Residents: In Hong Kong, this report is published and distributed by Bank of Montreal. Bank of Montreal (incorporated in Canada with limited liability) is an authorized institution under the Banking Ordinance and a registered institution with the Securities and Futures Commission (CE No. AAK809) to carry on Type 1 (dealing in securities) and Type 4 (advising in securities) regulated activities under the Securities and Futures Ordinance (Cap 571 of the Laws of Hong Kong). This report has not been reviewed or approved by any regulatory authority in Hong Kong. Accordingly this report must not be issued, circulated or distributed in Hong Kong other than (a) to professional investors as defined in the Securities and Futures Ordinance and the Securities and Futures (Professional Investor) Rules under the Securities and Futures Ordinance of Hong Kong, or (b) in circumstances which do not result in or constitute an offer to the public in Hong Kong.

To Korean Residents: This report has been provided to you without charge for your convenience only. All information contained in this report is factual information and does not reflect any opinion or judgement of BMO Capital Markets. The information contained in this report should not be construed as offer, marketing, solicitation or investment advice with respect to financial investment products in this report.

To Japan Residents: This report has not been reviewed by any regulatory authority in Japan. This report is provided for information purposes only and it should not be construed as an offer to sell, a solicitation to buy, or a recommendation for any security, or as an offer to provide investment management or advisory or other services in Japan. Securities may not be offered or sold in Japan by means of this report or any other document other than to Qualified Financial Institutions within the meaning of item (i) of Article 17-3 of the Government Ordinance to enforce the Financial Instruments and Exchange Act (Kinyu Shohin Torihiki Ho Sekou Rei). Unless specified otherwise, the securities that may be offered to you are not and will not be registered in Japan pursuant to the Financial Instruments and Exchange Acts.

To Taiwanese Residents: This report is not intended to constitute investment advice nor a public offer for any investment products to investors in Taiwan. This report should only be accessed by investors in Taiwan that are qualified to invest in investment products pursuant to relevant Taiwanese laws and regulations, and subject to sales restrictions as set forth in the relevant Taiwanese laws and regulations. BMO Capital Markets has not and will not secure the required licenses in Taiwan for the offer of securities and investment services. Baby With the Bath Water - Derisking Growth Via Affordability & B/S Strength

Bottom Line:

NiSource announced the long-awaited outcome of its strategic review. We see the primary objective of the announcements today as alleviating stress on the balance sheet to support and derisk the long runway of investment opportunities, while aiming to reduce customer bill pressure by optimizing the company's cost structure. **NI now expects 8-10% annual rate base growth in an effort to preserve customer affordability and mitigate regulatory risk in their proposed plan, which will support long-term and sustainable, above average annual EPS growth of 6-8%. We maintain our Outperform rating.**

Key Points

Despite very low expectations and nearly an 8% underperformance from its June peak, we believe NI's 4% relative underperformance today was overdone. While we understand investors currently have an extremely low tolerance for even the smallest changes in growth expectations this earnings season, we believe the level of consternation around a modest 1.7% change in the company's implied 2024 EPS outlook, despite a material derisking of the foundation of the company's 6-8% growth outlook is likely missing the forest through the trees.

During 3Q earnings season it has been clear that the market is searching for derisked stories as macroeconomic, inflationary, and interest rate headwinds materialize. **Today's analyst day updates materially mitigated risk in the story** by right-sizing the company's rate base growth to better manage customer affordability, likely eliminating equity needs through the forecast period, and after completing the sale of the minority stake, the company will have at least 300 bps of cushion to their downgrade threshold, creating one of the strongest balance sheets in the group.

Even with these risk-mitigating efforts, NI is still committing to above average 6-8% annual EPS growth and 8-10% annual rate base growth. Despite the above average growth, NI trades at a meaningful discount of 8-9% to the electric group and ~10% to their gas LDC peers.

We maintain our Outperform rating on NI shares and our $28/share target price is unchanged as current MTM of our peer group utility multiples used in our SOTP valuation framework is offset by our estimate tweaks.

We have updated our 2022 EPS estimate to $1.45 from $1.44 and our 2024 EPS estimate to $1.67 from $1.69, but our 2023 estimate remains unchanged at $1.54.

Key Changes			
	Estimates	**2022E**	**2023E**
	EPS	$1.45	
	Previous	*$1.44*	
	EBIT	$1,323	$1,488
	Previous	*$1,318*	*$1,483*

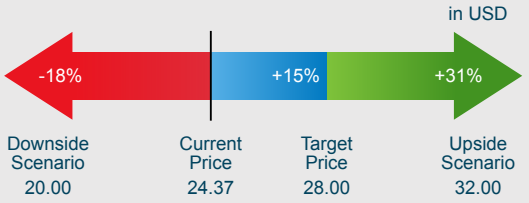
Scenarios

Valuation



Our target price is the product of a P/E-based sum of the parts. We utilize a regulated-group average multiple using 2024E EPS as base valuation and then make specific adjustments to reflect our current view of the fundamental outlook.

Upside Scenario $32.00

Our upside scenario reflects continued multiple expansion associated with the company's premium and above-average earnings and dividend growth profile.

Downside Scenario $20.00

Our downside scenario reflects a tightening monetary policy and a deceleration of the company's rate base growth.

Key Catalysts

Use of proceeds from CMA sale. Potential for further asset rotation.

Company Description

NiSource, Inc. is a regulated utility holding company, serving approximately 3.5 million natural gas customers and 500,000 electric customers across seven states. Through its Columbia Gas and NIPSCO brands, it provides natural gas, electricity, and other products and services. The company was founded in 1987 and is headquartered in Merrillville, Indiana.

Baby With the Bath Water: Derisking Growth Rate Via Customer Affordability/Cost-Effective Financing

Bottom Line: Despite very low expectations and nearly an 8% underperformance from its June peak, we believe NI's 4% relative underperformance today was overdone. While we understand investors currently have an extremely low tolerance for even the smallest changes in growth expectations this earnings season, we believe the level of consternation around a modest 1.7% change in the company's implied 2024 EPS outlook, despite a material derisking of the foundation of the company's 6-8% growth outlook is likely missing the forest through the trees.

During 3Q earnings season, it has been clear that the market is searching for derisked stories as macroeconomic, inflationary, and interest rate headwinds materialize. Today's investor day updates materially mitigated risk in the company's growth story by right-sizing its rate base growth to better manage customer affordability, likely eliminating all equity needs through 2027, and after completing the sale of a minority stake in NIPSCO, the company will have at least 300 bps of cushion to their downgrade threshold, creating one of the strongest balance sheets in the group. **Even with these risk-mitigating efforts, NI is still committing to above average 6-8% annual EPS growth, but still trades at a meaningful discount of 8-9% to the electric group and ~10% to gas LDC peers.**

We maintain our Outperform rating on NI shares. Our $28/share target price is unchanged as current MTM of our peer group utility multiples used in our SOTP valuation framework is offset by our modest estimate tweaks. **We have updated our 2022 EPS estimate to $1.45 from $1.44 and our 2024 EPS estimate to $1.67 from $1.69 (~1%). Our 2023 estimate remains unchanged at $1.54.**

A November to Remember – Thank You Mr. Volatility

NiSource announced the long-awaited outcome of its strategic review at investor day today. The strategic review identified the primary weaknesses facing the company as a constrained balance sheet, elevated cost profile, and older technology systems and management presented a path forward to addressing the weaknesses while preserving the company's regulatory strengths. **We see the primary objective of today's announcements: 1) as providing significant financial flexibility that can support and derisk the company's long runway of visible investment opportunities; and 2) importantly, modestly slowing the investment cadence and optimizing the company's cost structure to reduce customer bill pressure**.

To enhance the balance sheet, NiSource is planning to monetize up to a 19.9% minority stake in its NIPSCO subsidiary in a transaction similar to that announced by Duke Energy (DUK-NYSE, $92.23, Outperform) in January 2021. Management believes that given precedent transactions, a minority sale should be highly executable in Indiana and provide an economically attractive and tax-efficient financing alternative. Operationally, the minority stake sale will enable the company to maintain full operational control and retain the benefits of diversification and scale across the business, as opposed to a full subsidiary sale (i.e., LDC sale). **Furthermore, unlike the potential sale of an individual operating company, a minority stake sale should not have any dissynergies**. Historically management has relied on external capital markets financing to execute their growth plan, however, with current volatility and an elevated interest rate environment, **management believes the minority stake sale will minimize their cost of capital and future external capital markets needs which ultimately derisks future growth**. During Q&A, management reiterated that the strategic review covered all strategic outcomes including the potential sale of the company. Although management spoke with a significant number of parties, they indicated that to the extent they received an offer, none were more compelling relative to their organic plan.

On a Path to Create One of the Stronger Balance Sheets in the Sector

After the completion of the NIPSCO minority sale (2H23/YE23) which will be used to strengthen the balance sheet through debt paydown, NI believes it will be at the high end of its new 14-16% FFO/Debt target, which is above its previous 14-15% target and nearly 300 bps above its 13% downgrade threshold. **Management also expects that the minority stake sale would satisfy all equity needs through 2025 and all discrete equity needs through 2027.** Depending on the ultimate sale price, a modest ATM program may be required in 2025 and beyond to maintain the capital structure. Finally, depending on where the 5-year treasury rate is at the end of 2023, management could use the $865mm in proceeds from the remarketing of the convertible preferred stapled to the company's 2021 equity unit structure to retire the $900mn of variable-rate perpetual preferreds. Not only would this reduce the company's variable rate exposure, but it would also further strengthen the balance sheet as shares issued upon conversion would replace the 50% credit ascribed to the two outstanding perpetual preferred issuances.

The strengthened balance sheet underpins the new ~$15bn capital investment program through 2023-2027 as well as the ~$30bn of opportunities 2023-2032. The updated 2023-2027 capital plan showed a smoother trajectory of capital deployment compared to the 2021-2024 plan. 2023 capital expenditures declined to $2.8-3.1bn from $3.4-3.7bn and 2024 increased to $3.0-3.3bn from $1.9-2.3bn. 2025-2027 ranges were introduced at $3.1-3.4bn, $2.7-3bn, and $2.7-3bn, respectively, with the earlier years reflecting a significantly higher capex level due to the company's renewable investments. A portion of the change in the shape of the capital plan was previously telegraphed with expected renewable project delays, however, management also made an intentional choice to slow down their rate base growth. **The company now expects 8-10% annual rate base growth (10-12% previously) which should not only enhance customer affordability but also further mitigate regulatory risk in their proposed plan.**

Making Energy More Affordable

In terms of specific numbers for customer affordability, over the forecast period, the company expects total bills to increase less than 3% annually, on average with the distribution charge, specifically increasing less than 5% annually on average. On the commodity side, NI expects to continue to benefit from advantageous geography that provides competitive natural gas and a reduction in commodity exposure from completion of generation transition investments. **Additionally, the company plans to hold O&M flat through 2022-2027 as a key mitigant to offset inflationary pressures.** The O&M initiatives include streamlined business services as well as ~$1bn of investment in IT systems aimed at supporting field operations and improving productivity.

Derisking Capital Plan & Growth Rate Through Customer Affordability and Cost-Effective Streamlined Financing

We believe the product of the company's plan is to improve its financial flexibility and lower capital markets risk, and prioritizing customer affordability through a strategic moderation in rate base growth should lead to a more sustainable long-term annual EPS growth outlook. With today's update, management narrowed their 2022 guidance range to $1.44-1.46 compared to our $1.45 estimate and $1.45 consensus estimate, and initiated a 2023 range of $1.50-1.57 compared to $1.54 BMO/consensus estimates. At the mid-point, both ranges are consistent with the company's previous 5-7% growth outlook for 2022 and 2023. As a reminder, management's previous 7-9% growth range 2021-2024 included the sharp inflection in 2024 EPS power (~17-18c) that was driven by the contribution of the company's $2bn renewable investment associated with its 2018 IN IRP.

With today's update, management's commentary was careful to state that the company's updated long-term growth outlook is expected to be consistent with an annual 6-8% EPS growth rate using 2021 as its base. While our previous 2024 estimate of $1.69 would be largely consistent with 7% growth 2021-

2024, we believe management's commentary around an annual growth rate of 6-8% and the new cadence of capital deployment likely yields growth in 2024 in the 7-8% range, resulting in our new 2024 EPS estimate of $1.67. With both 2024 and 2025 representing above trend capital years, 2025 could be biased towards the upper half the range, but as the capital deployment settles into a steady run-rate in 2026 and beyond we would expect the company to be closer to the midpoint of their range which we view as largely consistent with the company's goal of creating sustainable long-term growth.

IRP Cost Update Highlights Supply-Chain and Inflationary Impacts on Renewables

The company remains on track with their Dunns I and Indiana Crossroads solar projects as their 2023 projects have only faced minor delays and are positioned well in the final stages of construction. The 2024 projects of Dunns II and Cavalry have both started construction and the 2025 projects of Fairbanks and Elliott are in commercial negotiations. **In the company's recent RFPs, they noted they were seeing solar bids up 25-50% on average and storage even higher at ~50-75%. These elevated prices are likely a factor of developers building additional margin into bids as well as some lingering supply chain effects.**

Company Specific Disclosures

Disclosure 9B: BMO Capital Markets makes a market in NiSource Inc in United States.

Methodology and Risks to Target Price/Valuation for NiSource Inc (NI-NYSE)

Methodology: Our target price is the product of a P/E-based sum-of-the-parts (SOTP) analysis of the company's primary regulated operating companies. We utilize a regulated-group average multiple based on 2024E EPS as our initial basis for valuation and then make adjustments specific to each jurisdiction to reflect our current view of the fundamental outlook.

Risks: NI's regulated profile exposes the company to business risk including but not limited to federal and state regulatory risk, federal and state political risk, environmental policy, interest rate risk, access to capital markets, construction risk, changes in customer demand trends, changes in customer affordability, extreme weather, natural disaster, and equipment failure.

For Important Disclosures on the stocks discussed in this report, please go to https://researchglobal0.bmocapitalmarkets.com/public-disclosure/ or write to Editorial Department, BMO Capital Markets, 3 Times Square, New York, NY 10036 or Editorial Department, BMO Capital Markets, 1 First Canadian Place, Toronto, Ontario, M5X 1H3.

Dissemination of Research

Dissemination of fundamental BMO Capital Markets Equity Research is available via our website https://researchglobal0.bmocapitalmarkets.com/. Institutional clients may also simultaneously receive our fundamental research via email and/or via services such as Refinitiv, Bloomberg, FactSet, Visible Alpha, and S&P Capital IQ.

BMO Capital Markets issues a variety of research products in addition to fundamental research. Institutional clients may request notification when additional research content is made available on our website. BMO Capital Markets may use proprietary models in the preparation of reports. Material information about such models may be obtained by contacting the research analyst directly. There is no planned frequency of model updates.

The analyst(s) named in this report may discuss trading strategies that reference a catalyst or event that may have a near or long term impact on the market price of the equity securities discussed. In some cases, the impact may directionally counter the analyst's published 12 month target price and rating. Any such trading or alternative strategies can be based on differing time horizons, methodologies, or otherwise and are distinct from and do not affect the analysts' fundamental equity rating in the report.

Research coverage of licensed cannabis producers and other cannabis-related companies is made available only to eligible approved North American, Australian, and EU-based BMO Nesbitt Burns Inc., BMO Capital Markets Limited, Bank of Montreal Europe Plc and BMO Capital Markets Corp. clients via email, our website and select third party platforms.

~ Research distribution and approval times are provided on the cover of each report. Times are approximations as system and distribution processes are not exact and can vary based on the sender and recipients' services. Unless otherwise noted, times are Eastern Standard and when two times are provided, the approval time precedes the distribution time.

General Disclaimer

"BMO Capital Markets" is a trade name used by BMO Financial Group for the wholesale banking businesses of Bank of Montreal, BMO Harris Bank N.A. (member FDIC), Bank of Montreal Europe p.l.c, and Bank of Montreal (China) Co. Ltd, the institutional broker dealer business of BMO Capital Markets Corp. (Member FINRA and SIPC) and the agency broker dealer business of Clearpool Execution Services, LLC (Member FINRA and SIPC) in the U.S., and the institutional broker dealer businesses of BMO Nesbitt Burns Inc. (Member Investment Industry Regulatory Organization of Canada and Member Canadian Investor Protection Fund) in Canada and Asia, Bank of Montreal Europe p.l.c. (authorised and regulated by the Central Bank of Ireland) in Europe and BMO Capital Markets Limited (authorised and regulated by the Financial Conduct Authority) in the UK and Australia. Bank of Montreal or its subsidiaries ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Capital Markets. The opinions, estimates and projections contained in this report are those of BMO Capital Markets as of the date of this report and are subject to change without notice. BMO Capital Markets endeavours to ensure that the contents

have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. Nothing herein constitutes any investment, legal, tax or other advice nor is it to be relied on in any investment or decision. If you are in doubt about any of the contents of this document, the reader should obtain independent professional advice. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

This report is directed only at entities or persons in jurisdictions or countries where access to and use of the information is not contrary to local laws or regulations. Its contents have not been reviewed by any regulatory authority. BMO Capital Markets does not represent that this report may be lawfully distributed or that any financial products may be lawfully offered or dealt with, in compliance with regulatory requirements in other jurisdictions, or pursuant to an exemption available thereunder.

To Australian residents: BMO Capital Markets Limited and Bank of Montreal are exempt from the requirement to hold an Australian financial services licence under the Corporations Act in respect of financial services they provide to wholesale investors (as defined in the Corporations Act). BMO Capital Markets Limited is regulated by the UK Financial Conduct Authority under UK laws, and Bank of Montreal in Hong Kong is regulated by the Hong Kong Monetary Authority and the Securities and Futures Commission, which differ from Australia laws. This document is only intended for wholesale clients (as defined in the Corporations Act 2001), Eligible Counterparties or Professional Clients (as defined in Annex II to MiFID II) and Professional Investors (as defined in the Securities and Futures Ordinance and the Securities and Futures (Professional Investor) Rules under the Securities and Futures Ordinance of Hong Kong).

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Colin Hamilton, Alexander Pearce or Raj Ray:

This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and distributed by BMO Capital Markets Limited or Bank of Montreal Europe Plc and is subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom and the Central Bank of Ireland (CBI) in Ireland. FCA and CBI regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore each of BMO Capital Markets Limited and Bank of Montreal Europe Plc will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To E.U. Residents: In an E.U. Member State this document is issued and distributed by Bank of Montreal Europe plc which is authorised and regulated in Ireland and operates in the E.U. on a passported basis. This document is only intended for Eligible Counterparties or Professional Clients, as defined in Annex II to "Markets in Financial Instruments Directive" 2014/65/EU ("MiFID II").

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

To Hong Kong Residents: In Hong Kong, this report is published and distributed by Bank of Montreal. Bank of Montreal (incorporated in Canada with limited liability) is an authorized institution under the Banking Ordinance and a registered institution with the Securities and Futures Commission (CE No. AAK809) to carry on Type 1 (dealing in securities) and Type 4 (advising in securities) regulated activities under the Securities and Futures Ordinance (Cap 571 of the Laws of Hong Kong). This report has not been reviewed or approved by any regulatory authority in Hong Kong. Accordingly this report must not be issued, circulated or distributed in Hong Kong other than (a) to professional investors as defined in the Securities and Futures Ordinance and the Securities and Futures (Professional Investor) Rules under the Securities and Futures Ordinance of Hong Kong, or (b) in circumstances which do not result in or constitute an offer to the public in Hong Kong.

To Korean Residents: This report has been provided to you without charge for your convenience only. All information contained in this report is factual information and does not reflect any opinion or judgement of BMO Capital Markets. The information contained in this report should not be construed as offer, marketing, solicitation or investment advice with respect to financial investment products in this report.

To Japan Residents: This report has not been reviewed by any regulatory authority in Japan. This report is provided for information purposes only and it should not be construed as an offer to sell, a solicitation to buy, or a recommendation for any security, or as an offer to provide investment management or advisory or other services in Japan. Securities may not be offered or sold in Japan by means of this report or any other document other than to Qualified Financial Institutions within the meaning of item (i) of Article 17-3 of the Government Ordinance to enforce the Financial Instruments and Exchange Act (Kinyu Shohin Torihiki Ho Sekou Rei). Unless specified otherwise, the securities that may be offered to you are not and will not be registered in Japan pursuant to the Financial Instruments and Exchange Acts.

To Taiwanese Residents: This report is not intended to constitute investment advice nor a public offer for any investment products to investors in Taiwan. This report should only be accessed by investors in Taiwan that are qualified to invest in investment products pursuant to relevant Taiwanese laws and regulations, and subject to sales restrictions as set forth in the relevant Taiwanese laws and regulations. BMO Capital Markets has not and will not secure the required licenses in Taiwan for the offer of securities and investment services. Any offer of securities has not been and will not be registered or filed with or approved by the Financial Commission of Taiwan and/or other regulatory authority pursuant to relevant securities laws and regulations of Taiwan, and may not be issued, offered or sold within Taiwan through a public offering or in circumstances which constitute an offer that requires a registration, filing or approval of the Financial Supervisory Commission of Taiwan and/or other regulatory authority in Taiwan under relevant securities laws and regulations of Taiwan. No person or entity in Taiwan has been authorized to offer or sell the securities in Taiwan.

To Singapore Residents: This report is intended for general circulation and does not and is not intended to constitute the provision of financial advisory services, whether directly or indirectly, to persons in Singapore. You should seek advice from a financial adviser regarding the suitability of the investment products, taking into account your specific investment objectives, financial situation or particular needs before you make a commitment to purchase the investment product. This report has not been registered as a prospectus with the Monetary Authority of Singapore. Accordingly, it should not be circulated or distributed, nor may the securities described herein be offered or sold, or be made the subject of an invitation for subscription or purchase, whether directly or indirectly, to persons in Singapore other than (a) to an institutional investor or a relevant person as defined in and pursuant to and in accordance with the conditions of the relevant provisions of the Securities and Futures Act of Singapore or (b) otherwise pursuant to and in accordance with the conditions of, any other applicable provision of the SFA.

To Israeli residents: BMO Capital Markets is not licensed under the Israeli Law for the Regulation of Investment Advice, Investment Marketing and Portfolio Management of 1995 (the "Advice Law") nor does it carry insurance as required thereunder. This document is to be distributed solely to persons that are qualified clients (as defined under the Advice Law) and qualified investors under the Israeli Securities Law of 1968. This document represents the analysis of the analyst but there is no assurance that any assumption or estimation will materialize.

These documents are provided to you on the express understanding that they must be held in complete confidence and not republished, retransmitted, distributed, disclosed, or otherwise made available, in whole or in part, directly or indirectly, in hard or soft copy, through any means, to any person, except with the prior written consent of BMO Capital Markets.

Utilities, Power & Renewables

(Utilities) Lost That Loving Feeling... but I Feel the Need, the Need for Yield

Bottom Line:

Third-quarter earnings for our Utilities, Power & Renewables coverage kicks off this week with a flurry of reports this coming Thursday (DTE, AEP, CMS, XEL, SO) and Friday (NEE/NEP). While 3Q typically is the most important quarter given many managements generally wait until now to adjust their full-year guidance, provide next year's guidance, and/or update their LT capital plans/EPS/rate base growth outlooks, this quarter is going to carry even more emphasis as investors continue to climb a wall of worry related to forward outlooks. **Add a choppy macro environment (rates & gamma-fueled risk on/risk off) that is increasingly dominating the group's direction after losing its defensive bid (YTD performance & 4%+ yields). Although we are buckling down for a more prolonged period of volatility, within the sector we see this quarter as having the ability to help de-risk individual stories and hopefully put known headwinds in context, which can drive differentiated relative performance.**

Key Points

We believe investors' attention will be squarely on companies providing initial 2023 outlooks as well as those providing a more comprehensive update including 2023 guidance, updated/roll forward of their capital plans, and rate base growth as well as long-term EPS growth. **Specifically, we would expect the following updates: 1) 2022 guidance updates: AEE, D, ETR, LNT, PEG, SO, CEG, VST, XEL; 2) 2023 guidance initiations: CMS, DTE, LNT, NRG, XEL; and 3) Capital Plan/Rate Base/Growth Rate: CNP, DTE, LNT, NI, XEL, WEC.**

Despite the recent pullback, we believe investors remain less willing to increase their exposure to the group right now given higher 4%+ yields across a flattening yield curve, increased volatility in the sector ("aren't these stable monopolies?"), and the reversal of previous tailwinds for the sector (low gas prices/low interest rates). However, we believe the group's stable EPS and DPS profiles should ultimately trump current valuation concerns as over the short to intermediate term we see the fundamentals for the group comparing favorably to other sectors, especially in a recessionary environment. **Moreover, we believe that in this inflationary environment a premium should be placed on utilities as one of the few vehicles with the ability to grow the dividend near inflationary levels, and that sustainable dividend yield creates an attractive "real yield" that other sectors and fixed income cannot offer without increased principal risk.**

While the current macro backdrop is likely to inject additional volatility into the group, on a relative performance basis near term, we see this quarter as having the ability to help de-risk individual stories as investors are able to better quantify known headwinds. This should lead to more investable relative value opportunities within the sector. Although our bias is to pay up a bit and stick with larger-cap quality (management, regulatory, balance sheets) with diversified generation portfolios (nuclear, coal and renewables) through these turbulent times, we continue to advocate for the diversification benefit of our BMO Barbell approach as a quick reversal in market risk appetite could easily cause a sell-off in the highest quality/higher profile names in the sector. **On the high quality/compounder side, we recommend NEE, CMS and XEL. On the relative value/GARP side, we like AEP, ETR, and CEG.**

3Q22 Sector Preview: This Is the Big One – Interest Rates & Inflationary Impacts on 2023 Outlooks & LT Growth in Focus

Third quarter earnings for our Utilities, Power & Renewables coverage kicks off this week with a flurry of reports this coming Thursday, including DTE, AEP, CMS, XEL, and SO as well as NEE/NEP on Friday. While 3Q typically is the most important quarter given many managements generally wait until now to adjust their full-year guidance, provide next year's guidance, and/or update their LT capital plans/EPS/rate base growth outlooks, this quarter is going to carry even more emphasis as investors continue to climb a wall of worry related to forward outlooks. The primary uncertainty is related to initial 2023 outlooks and general commentary on their growth outlooks given macro headwinds (interest rates and high gas prices) that had previously been a tailwind for the sector over the last decade and a half. **Specifically, we sense caution from investors on the 2023 outlooks for CMS, LNT, EXC and DUK, interest rate exposure at CNP, D, DUK and NI, and debates surrounding longer-term strategic updates including growth rates from NI and DTE.**

While the macro will continue dominate the group's direction, on a relative performance basis, we see this quarter as having the ability to help de-risk individual stories and hopefully put known headwinds in context. This should lead to more investable relative value opportunities within the sector. Although our bias is to pay up a bit and stick with larger-cap quality (management, regulatory, balance sheets) with diversified generation portfolios (nuclear, coal and renewables) through these turbulent times, we continue to advocate the diversification benefit of our BMO Barbell approach as a quick reversal in market risk appetite could easily cause a sell-off in the highest quality/higher profile names in the sector. **On the high quality/compounder side we recommend NEE, CMS and XEL. On the relative value/GARP side we like AEP, ETR and CEG.**

- **NextEra Energy** – *Given the regulatory visibility, high-quality management and the IRA's secular tailwind, we see NEE's growth outlook as secure in an uncertain market. Moreover, despite the potential for continued weakness in the sector we see NEE's renewable growth profile garnering sponsorship outside of traditional utility or defensive, safe haven-seeking investors.*
- **CMS Energy** – *CMS shares have de-rated over the last six months and are now only a 5% premium on our revised 2024 EPS estimate despite growing at the top of the company's 6-8% EPS CAGR. Given the potential headwinds facing the group, we see CMS as one of the best positioned names to execute against its financial outlook given its strong management, premium regulatory jurisdiction, and visible growth drivers and manageable financing needs.*
- **Xcel Energy** – *After a sharp sell-off we see XEL attractively valued as the company goes into the 3Q with the expectation of rolling forward the capital plan and growth rate and continue to execute on regulatory de-risking with additional renewables capital upside possibly to be realized throughout the first half of 2023.*
- **American Electric Power** – *We like the combination of AEP's attractive relative valuation, visible transmission & renewable growth programs, which underpins its 6-7% growth outlook and continued progress to not only economically reduce the company's external financing needs but also strengthen the balance sheet. With 2023 guidance already released we see AEP as de-risked.*
- **Entergy Corp.** – *With hurricane season subsiding and 2023 guidance already announced we see the potential for ETR to close some of the discount to peers. We continue see ETR's rate base and EPS growth as visible see the valuation discount as too steep for the growth it provides. We also see a potential positive catalyst should the company look to mitigate some or all of its forward equity needs though a minority interest sale of its non-Texas utility opco.*
- **Constellation Energy** – *CEG provides investors with a unique exposure to not only the largest carbon-free generator, but also the leverage to the expansion of this enviable position through organic and inorganic growth given its significant free cash flow and low financial leverage.*

Moreover, as one of the purest beneficiaries of the passage of the IRA legislation, CEG could continue to enjoy further multiple expansion as the inflation-adjusted PTC-related EBITDA floor garners a lower discount rate and EBITDA accelerates post 2027 as its IL CMC contracts roll off.

Prepare for Headline Noise in Quarterly Results – Focus on Outlooks

Outside of an "evolving" set of consensus estimates that could lead to some increased headline noise, we do not see a lot of quarters themselves as drivers of relative performance. In fact, our quarterly preview suggests a generally quiet setup for year-over-year quarterly comps with EPS up ~1% on average. Although we see roughly 70% of our universe as missing consensus estimates, our utility coverage is ~61%, and this is likely due to quarterly estimates continuing to be updated at our time of publishing. In fact, the interquartile range is only ~2% with 75% of the year-over-year negative comps at ~1% or less. **Places where we see our estimates still significantly different from consensus are CNP on the positive side (+5% but shoulder season) and NI (-16% another shoulder season), CMS (-11%), and SRE (-4%) on the negative side. In Exhibit 1 below, we outline our 3Q22 estimates, change in the Street's estimates over the last 4 weeks, and expected reporting date and call time.**

Exhibit 1: BMO Capital Markets and Consensus 3Q22 Estimates and Earnings Calendar

Company	BMO 3Q22 EPS	Consensus 3Q22 Estimates	Consensus Change Last 4W	Q-O-Q EPS Change	Company 2Q22 Guidance Range		3Q22 Reporting Date	Call Time
AEE	$1.73	$1.72	(1%)	+5%			11/4	10:00AM

As discussed above, we believe investors' attention will be on companies that are providing their 2023 outlooks as well as the handful of managements that provide a more comprehensive update, including 2023 full year guidance, update/roll forward their capital plans, update their underlying rate base growth as well as long-term EPS growth rates. In Exhibit 2 below, we list the primary updates we are expecting this earnings season and into the Edison Electric Institute Financial Conference in November. We discuss our outlook for each one of these events as well as any other potential fundamental updates in detail later in our preview. **Specifically, we would expect the following updates:**

- **2022 guidance updates - AEE, D, ETR, LNT, PEG, SO, CEG, VST, XEL**
- **2023 guidance initiations – CMS, DTE, LNT, NRG, XEL**
- **Capital Plan/Rate Base/Growth Rate – CNP, DTE, LNT, NI (analyst day), XEL, WEC**

Exhibit 2: Expected Updates for 3Q22 and at the Edison Electric Institute Financial Conference

Company	2022 Guidance Update	BMO Expectation	2023 Guidance Initiation/Update	BMO Expectation	Capital Plan/Rate Base Refresh	Growth Rate Update
AEE	✓	$4.00-4.10				
AEP						
CMS			✓	$3.07-3.11	✓	✓
CNP					✓	✓
D	✓	$4.00-4.20

VST	✓	$2,938-3,182				
XEL	✓	$3.14-3.18	✓	$3.32-3.42	✓	✓
WEC					✓	✓

Source: BMO Capital Markets, Bloomberg, Company Filings

Although we do not expect any material changes in full-year outlooks with this reporting season, we do expect some companies to tighten their full-year outlooks. As such we have taken the opportunity to refresh our models post our quarterly walks to update our estimates for a subsection of our coverage universe. **Although most are modest tweaks to our current forecasts, we would highlight that we have raised estimates for NEP, SRE, CEG, SO, ETR, and WEC. On the other side, we have lowered our numbers for CMS, CNP, XEL, and VST.**

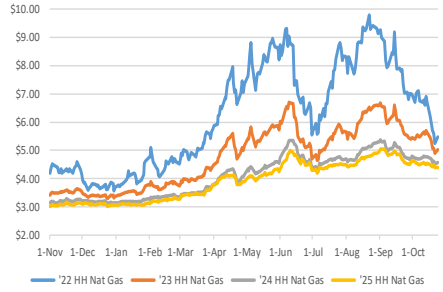

Exhibit 3: BMO Capital Markets FY Estimate Changes

	New Estimates				Previous Estimate				Percent Change			
Company	2022E	2023E	2024E	2025E	2022E	2023E	2024E	2025E	2022E	2023E	2024E	2025E
CNP	$1.38	$1.48	$1.60		$1.39	$1.49	$1.61		(1%)	(1%)	(1%)

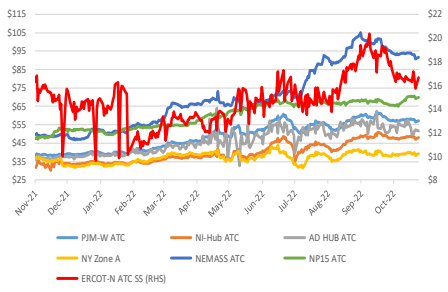
Independent Power – Hedging, Curves, and M&A in Focus

Exhibit 4: HH Forward Natural Gas



Source: BMO Capital Markets, Bloomberg

Exhibit 5: 2024 Forward ATC Power

Source: BMO Capital Markets, Bloomberg

Exhibit 6: 2025 Forward ATC Power

Source: BMO Capital Markets, Bloomberg

While 2023 power prices have moderated with the pullback in natural gas (Exhibit 4), 2024 and 2025 power prices have held in relatively well across most zones outside of New England given its higher sensitivity to gas (Exhibits 5 & 6). Moreover, management's ratable hedging programs should dampen the higher chop in 2023 while still allowing managements to further add financial or customer-related hedges opportunistically in 2024 and 2025 providing incremental stability to their cash flow outlooks and visibility to their capital return programs. For IPCs including VST and NRG, the pullback in commodities is not only beneficial to the cost to serve their mass market customers, but also should reduce their collateral posting requirements and their reliance on now higher cost liquidity facilities (outside of those that are commodity-linked). Between its investment-grade balance sheet and positive exposure to the Inflation Reduction Act of 2022 (PTC floor on its EBITDA/FCF), CEG continues differentiate itself from other merchant generators and should drive further multiple expansion outside of commodity trends. For NRG and VST, despite the moderation in forward gas prices we see the continued resiliency in power prices (Exhibits 5 & 6) as beneficial to the retail and wholesale businesses adding visibility to their capital return programs, which should lead to multiple expansion given their attractive mid-20% FCFY's. Although we expect the quarter to be quieter in nature, we would expect managements to update us on their hedging programs and VST to initiate its 2023 financial outlook. We would also expect an update on liquidity given the volatility in commodity prices as well as higher overall hedging levels in the 2022-2024 timeframes.

- **Constellation Energy (CEG, Outperform) – Overall, we expect the upcoming 3Q22 call to be mostly quiet; however, we do see the potential the company could point to the upper end of its 2022 range when incorporating our $611mm EBITDA 3Q22 estimate in our pro forma trailing-twelve month forecast.** As such, we are raising our 2022 EBITDA estimates to $2,700mm. We are also raising our 2023-2025 EBITDA estimates as we mark out commodity price assumptions to market. **On average, our 2023-2025 estimates move up ~5% to $3,304mm, $3,730mm and $4,211mm, respectively.**

  Despite its significant YTD outperformance, we continue to see in CEG shares as one of our top ideas and an anchor on the value/GAAP side of our BMO Barbell strategy. While we do not expect the company to provide its 2023 financial outlook until the 4Q22 call, management could provide its capital allocation strategy by as early as the end of the year. The company has outlined a wide range of capital allocation avenues providing it with significant flexibility to maximize shareholder value. These include: 1) preservation of its strong investment grade metrics, which provides it with a competitive advantage over its peers (collateral and financial flexibility); 2) continued dividend growth – 10% on a nominal cash basis; 3) the return of excess cash flow to shareholders including both stock buybacks and special dividends to retain maximum return flexibility; and 4) organic (repowering/life extensions, C&I green products and green hydrogen) and inorganic growth (nuclear acquisitions) that is consistent with the promotion of the company's clean profile.

While investor attention is largely focused on the potential acquisition of two discrete merchant nuclear packages including the Susquehanna Nuclear facility that is part of the Talen Energy bankruptcy as well as publicly traded Energy Harbor (ENGH, Not Rated), we believe the company still has significant potential to continue to re-rate even without a positive capital allocation announcement given the EBITDA and cash flow floor that the nuclear PTC provision of the recently passed IRA legislation. Given the visibility of roughly a $2,950mm EBITDA floor that not only escalates with inflation over the next 9 years (and is likely to be extended for another decade per precedent with other renewable tax credits), we believe investors will be able to bifurcate this stable cash flow stream and place a lower discount rate on these cash flows relative to the residual cyclical component of the company's EBITDA profile, which will be managed through the company's ratable hedging program or other economic hedging alternatives. Moreover, as the now below-market CMC hedges roll off in June of 2027 and are replaced by the IRA's PTC construct, CEGs EBITDA could expand by another $650mm ($12/MWh) on an annualized basis. **As such, we are raising our target price to $109 (26% total return potential) to reflect a lower discount rate on our PTC-related floor EBITDA.** Our SOTP framework continues to place an equally weighted on both our EV/EBITDA valuation and an our FCFY valuation methodologies. Our framework now ascribes a 10x/5.5x multiple to our PTC/Cyclical EBITDA and an 8%/20% FCFY to our PTC/Cyclical FCF per share estimates.

- **Vistra (VST, Outperform) - We are ~11% below the Street for 3Q22 at $990mm of EBITDA; however, like many consensus estimates across our coverage universe this quarter we believe there remains older/unadjusted forecasts in the mean outlook.** In addition to the absence of Winter Storm Uri self-help benefits (~$195mm) weather was milder overall for the quarter. July's warmer weather drove some incremental volumes and higher margins due to scarcity pricing, but August and September proved to be lackluster. This reduces the probability of the company hitting the top end of its $2,810-3,310mm financial guidance and management will likely narrow the full year guidance. That said, we believe the company will once again suggest the full-year results are tracking above the midpoint of the range ($3.060mm), which is in line with our own $3,140mm and consensus mean of $3,145mm. **While we expect the 3Q call to be relatively quiet in terms of new disclosures, we would expect management to initiate its 2023 outlook, which should remain consistent with its 2Q22 expectations that it sees an "ongoing operations adjusted EBITDA midpoint opportunity in the $3,500-3,700mm range 2023-2025."** Our own $3,528mm estimate is consistent with this range and is supported by the company's significant hedged position (~75%) in 2023. As of 2Q22 management saw its average hedge position 2023-2025 at ~60%, which is consistent with its ratable hedging program and implies a lower hedge percentage in 2024 and 2025. **Combined with the backwardation in natural gas in 2024 and 2025 and the associated impact on power prices, as we mark to market our estimates to the forward curves, we are lowering our 2024 estimate to $3,450mm. Our target price moves to $32 to reflect the revision in our 2024 EBITDA and FCF.** Given VST had already extended a significant component of its asset allocation strategy into 2023 with the August authorization of another $1,250mm share repurchase program through the end of 2023 we would not expect a meaningful update on its asset allocation outlook. **However, we would not be surprised to see the presentation of its asset allocation framework move to a per share basis to emphasize the impact a shrinking denominator has on its capital return program and further illustrate the cash return relative to its current stock price.** As of August 2, VST had bought back ~$1,600mm of its $2,000mm program authorized in 2021, and we anticipate management will provide an update on where its repurchase program stands as of the November 4 call.

- **NRG (NRG, Market Perform) – Our $440mm 3Q22 EBITDA estimate is roughly 17% below the current consensus estimate given what looks like a handful of stale estimates in the Street aggregate expectations. Even with this lower outlook we expect management to continue to**

point to the bottom end of its $1,950-2,250mm EBITDA and $1,140-1,440mm FCFbG guidance's. On its 2Q22 call management laid out several factors that it believes should allow the company to achieve a result that is within full-year 2022 financial objectives range including: 1) upside to synergies from Direct Energy; 2) pull forward of business interruption insurance proceeds; 3) strong operational performance from its fleet due to expanded spring outage maintenance plan and opportunistic maintenance outages to perform through these extreme and extended summer conditions; and 4) balanced hedging strategy that uses both own generation and third-party contracts to reduce supply costs. **Our 2022-2024 EBITDA/FCFbG forecast remains unchanged at $2.000bn/$1.22bn, $2.351mm/$1.598bn and $2.411bn/$1.690bn.** While 2022 was always characterized as a "staging year" due to due lingering to coal supply challenges, the residual impact of the Limestone outage, and the absence of contributions from its divested generation assets, 2022 found incremental challenges due to impact of the forced outage at the Parish 7 & 8 coal unit and the higher cost of the company's out-of-the money hedges. However, as the company prepares to provide investors with its 2023 financial guidance we see over a $350mm (~20%) improvement in cash flow generation driven by: 1) $100-125mm improvement at Direct Energy as COVID-related impacts reverse, the company achieves its $300mm run-rate synergy targets and growth investments begin to cash flow; 2) $135-150mm due to the absence of the Parish Unit 7 & 8 units partially offset by PJM-related divestitures; 3) the absence of $40-50mm coal-related impacts; and 4) moderation in ERCOT ancillary service costs and modest growth in retail margin growth. **In addition, while we expect a fairly quiet call including a higher-level asset allocation refresh, we continue to expect management's message to be consistent with its 15-20% FCFbG growth target and the company's previous capital return programs, which allocates at least 50% of its excess cash towards share repurchases and its commitment to grow the dividend at 7-9% annually on a per share basis. The remaining 50% will continue to be "opportunistic" but given the company current double digit FCFY yield, we would expect the company to be more aggressive in its buyback activity.**

Normal Weather for the Quarter

Cooling degree days for the second quarter showed a 1% increase year over year and were also 1% higher than normal though there was a wide dispersion across the various regions. While normally 3Q is one of the more impactful quarters for weather given the cooling load, comparable cooling degree days versus normal as well as year-over-year should make the effect relatively muted.

Exhibit 7: 3Q22 Regional Degree Days

Region	3Q 2021 Actual	3Q 2022 Actual	3Q Normal	3Q YoY	3Q vs Normal

Marking To Market Our Coverage Target Prices

As per usual, with our quarterly preview we have updated our target prices for our coverage universe to reflect the change in sector and subsector P/E multiples since our last updates in August and September. In Exhibit 8 below, we outline our revised target prices which reflect a 15.3x electric group multiple, 15.6x gas distribution group multiple, and a base power EV/EBITDA multiple of 5.0x, which we have maintained to reflect the strong commodity pricing environment (our best approximation of a mid-cycle multiple).

Exhibit 8: Mark-to-Market Target Price for BMO Utilities, Power & Renewables Universe

Interest Rates – So Hot Right Now – Interest Rates

As we look ahead into the end of the year and into 2023, we see the effects of rising interest rates becoming increasing impactful. **In an attempt to assess the impacts to our utilities coverage universe we looked at variable rate exposure as well as upcoming fixed coupon maturities.** In the table below (Exhibit 9), we summarize the impact of a 100 bps increase in variable rate coupons on 2023 EPS. **On average, we see the impact as creating a ~1% headwind in 2023 EPS.** However, notably this includes both HoldCo/unregulated and OpCo variable debt. To the extent that a utility is in a rate case or has annual true ups via a formula rate plan, the effect would be negligible, both of which should bias the impact downward. Furthermore, this exercise does not account for any interest rate hedging, which also would provide an offset. **Lastly, we find that directionally it provides a starting point for identifying who may have some obstacles to navigate in 2023 but note that the companies should have other mitigation**

tools at their disposal.

Exhibit 9: Variable Debt Interest Rate Exposure for BMO Utilities Universe

	Variable Debt Percentage		Effect of Interest Rate Change 100bps	
Ticker	Total Debt	Parent & Unregulated	% 23 EPS	EPS
LNT	7.9%	34.1%	0.7%	0.02

Source: BMO Capital Markets, FactSet, Company Filings

Looking out at the medium term, we also see interest rate risk associated with upcoming maturities. We note that the actual impact of interest is ultimately where interest rates are compared to what is embedded in the companies' plans. To attempt to quantify the potential impact we first look at the upcoming maturities through 2023. We then assume that debt is reissued between a 5.5% and 6.5% coupon and we calculate the incremental interest expense relative to the debt that is being returned. The summary table (Exhibit 10) below shows the cumulative EPS impact through 2026 assuming a 6% coupon. However, we note our analysis does account for the tenor of the new issuance, which given the shape of the yield curve at the time would affect the ultimate impact. We also note that the quantified EPS impact does include any mitigation efforts that should bias the actual impact downward, but as we stated with our variable rate analysis, we believe it highlights which companies will have to work a little bit harder in the face of rising rates. **In the back of the document behind our quarterly walks (Exhibits 104-145) we have pasted two charts for each company showing the break down between HoldCo and OpCo maturities through 2026 as well as the cumulative EPS impact assuming a refinancing rate between a 5.5% and 6.5% coupon.**

Exhibit 10: Cumulative EPS Impact of Refinancing Fixed Maturities at 6% Coupon

	2023E	2024E	2025E	2026E
AEE	$0.06	$0.11	$0.26	$0.35

Significant Industry-Specific Topics & Company Updates

1) **Alliant Energy (LNT, Market Perform)** – Though we are expecting an in-line quarter for the company, LNT has one of the more comprehensive and positive updates coming into 3Q and the EEI conference. First, with stronger than expected weather-normalized sales and qualitative guidance the company provided on the 2Q22 call that they are tracking towards the upper half of the range, we would expect the company to narrow their 2022 guidance range and also raise the midpoint to be around the top of the original $2.67-2.81 range, possibly with a new range of $2.76-2.83. We also expect the company to introduce 2023 guidance. Normally we would expect a ~6% growth over the original 2022 guidance midpoint of $2.74, which would imply a midpoint of ~$2.90 for 2023. However, we believe that the early accretion from the additional capital expected to be deployed from eliminating tax equity partnerships for their solar projects could nudge that midpoint into the upper half of its LT 5-7% and see a range of $2.75-2.99, though it will ultimately depend on the timing of projects placed into service and the ultimate financing mix. The call also is likely to include the company's capital plan rolled forward to include 2026. As we discussed in our note, LNT has at least ~$1.3bn to add to its capital plan from the elimination of their tax equity partnerships. While the entirety of that amount may not be incremental to the plan, it still should provide a sizeable increase over the current $6.1bn 2022-2025 capital plan. Despite the upward pressure to capital spend we do not expect the company to alter its long-term 5-7% EPS growth rate, though we estimate the incremental capital could be up to ~4% accretive to 2025 EPS. The call should provide an update to the financing plan where we estimate the incremental ~$1.3bn of capital will need between ~$250mm and $550mm of incremental equity over the entirety of the program. In conjunction with the release of its factbook ahead of the EEI conference, we also expect the company to update its 13-month weighted average rate base estimates using 2021 as a base and extending through 2026. Our aforementioned note and scenario analysis suggested the incremental capital could drive ~6-7% rate base growth over the 2021-2025 time period.

2) **NextEra Energy (NEE, Outperform) –** Our $0.80 estimate is in line with the current consensus estimate and our 2022-2025 estimates remain unchanged. With the company's comprehensive longer-term update at its June analyst day and a positive September outlook for renewable cost and repowering opportunities post the passage of the Inflation Reduction act of 2022 (IRA), we would expect NEE's 3Q22 call to focus on the impact from Hurricane Ian including the total cost, impact to its infrastructure, and recovery provisions. The combination of the company's reserve amortization balance ($1.375bn at 2Q22), storm cost deferral mechanisms, and ability to recovery some costs via a real-time storm cost mechanism ($4/mo/household) will allow the company to earn its target 11.6% ROE through August with a step up to 11.8% in September per a recent FPSC order. Give the company's significant capital budget and a significantly higher interest rate environment we would anticipate questions on the company's forward interest rate exposure. As of 2Q22 its 2022 exposure at Corporate & Other and NEER was $0.005/share and $0.005-0.01/share for each 100 b/p change in the yield curve, respectively. We also expect investors to look to be updated on any UFLPA-related equipment delays and if there are any anticipated impacts on its forward development outlook. We continue to expect the White House's 24-month AD/CVD exemption to provide ample time for a ramp in domestic content, which should limit any material delays to the 2023 timeframe. Finally, given the passage of the IRA we would look for any new commentary from management on the cadence of contract announcements beyond 2023 including those associated with green hydrogen applications given the legislations $3/kg PTC.

3) **NextEra Energy Partners (NEP, Outperform)** – Although our 3Q22 EBITDA of $415mm is below the current consensus of $456mm, we are raising our 2022 EBITDA to $1,735mm (~1%) to reflect some modest tweaks to our forecast including the annualized impact of the company's 2021 acquisitions of over 2,300MW of new renewable projects. Overall, we expect a fairly quiet 3Q22 call given the company's June analyst day and the announcement of a flattening of its IDRs at $157mm beginning in 4Q22. However, per the company's September conference update we would expect investors' to look for some commentary on: 1) the company's outlook for future acquisition opportunities given the interplay between higher interest rates and improved cash flow given the provisions contained in the IRA; and 2) repowering opportunities related to the company's current 6.6GW wind (extension of and higher PTC through 2031) and 1.5GW solar (PTCs in lieu of previous ITCs post any tax-equity flips) portfolios including the ability to add storage prospectively.

4) **CenterPoint Energy (CNP, Outperform)** – Our $0.32 3Q22 estimate suggests CNP's full-year 2022 EPS coming in at the midpoint of its 2022 range of $1.37-1.39 after adjusting our 4Q22 outlook for slightly higher floating rate interest costs. As of 6/30/22, CNP had ~$2.8bn of floating rate debt of which $1.7bn of floating rate notes ($1.0bn 2023/$700mm 2024) that carry an indexed coupon of Libor/SOFR +50/65 b/p, respectively and $1.1bn of commercial paper relating to Winter Storm Uri. We assume with upcoming $1.186bn securitization order in Texas that the company will pay down its outstanding CP balance, but this could leave some pressure on 2023 and 2024 EPS due to the residual floating rate debt exposure before our expectation of any management mitigation. On the upside, management is set to discuss the incremental capital opportunity associated with its Houston "Resilient Now" plan, which is additive to its current 5-year/10-year plans of $19.3bn/$40bn+ programs. We believe consensus expectations have come in somewhat over the last several months and are now at the lower end of a $1-1.5bn range. While the company continues to expect to file its updated IN IRP in mid-2023, we do not expect the 3Q22 capital update to include any discrete capital for this upcoming filing. While we the gross impact of the company's floating rate exposure relative to its original guidance range would be in excess of 5% of our 2024 EPS, the company raised its 2022 EPS in August, which provides the base for its also reiterated 8% EPS growth

through 2024. We believe the exposure will likely be mitigated through a combination of cost control and higher capital opportunities. As such we have only modestly lowered our 2022-2024 EPS estimates to $1.38, $1.48 and $1.60, respectively or ~1% overall revision. We continue to see CNP's growth rate at ~8% level through 2024 with some upward pressure to its "upper end" of 6-8% beyond 2024 given the Resilient Now and IRP capital opportunities.

5) **Xcel Energy (XEL, Outperform)** – Based on our quarterly estimate and the progress made year-to-date, we see XEL at the very least narrowing its guidance range around the midpoint of their original $3.10-3.20 range. Furthermore, we expect the company to initiate 2023 guidance in the range of $3.32-3.42 compared to consensus estimates of $3.39. However, investors will likely be more focused on the capital plan refresh, long-term guidance reaffirmation, and rate base growth rates. First, we expect XEL to extend its 5-7% EPS annual growth rate another year through 2027. For the capital plan, XEL had already identified ~$1.5-2.5bn of incremental capital opportunities in the 2024-2026 timeframe beyond its current $26bn 2022-2026 base capital plan. We expect that the $0.5-1bn of incremental opportunities associated with transmission will be folded into the new plan. Not included in that total are the ~$1.2bn of Tranche 1 MISO opportunities. To the extent that the early portion of that spend falls in the 2023-2027 timeframe, we would expect it to be included in the plan. The other ~$1-1.5bn of identified incremental opportunities are associated with renewable investment associated with the Upper Midwest resource plans where the company is targeting a 50% ownership. Based on the timing of the RFPs we would not expect the renewables capital to be included in the base plan. Furthermore, despite the recent passage of the IRA, we do not expect management to formally change their target of owning 50% the incremental resources. However, we continue to see the benefits from the IRA having the potential to bias the ultimate ownership percentage upward in the finalized resource mix. Consistent with past practice, we would expect the company to provide a base case rate base CAGR 2022-2027 as well as an incremental case which should be approximately consistent with the current ~6.5% and ~7.3% respectively. We also are modestly tweaking our 2022-2024 estimates to $3.16, $3.39, and $3.62 from $3.18, $3.39, and $3.66 respectively. Our 2025 estimate remains unchanged at $3.87.

6) **Southern Company (SO, Market Perform) –** With extremely strong year-to-date results on a trailing twelve-month basis we see SO's 2022 EPS tracking towards $3.73 compared to the current $3.50-3.60 guidance range. We believe management will use the year-to-date cushion to de-risk 2023 EPS by pulling forward O&M spending. We expect SO to update its 2022 guidance on the 3Q call, consistent with its past practice. Management will likely point to being above the top end of their guidance range and provide a point estimate for the year. We estimate that the new point estimate will be ~$3.65. Our 2023-2025 estimates are unchanged at $3.80, $4.24, and $4.41 respectively. In conjunction with this expectation we are raising our 2022 EPS estimate to $3.65 from $3.55. In terms of other items for the call, we expect the updates to be relatively quiet with Vogtle Unit 3 having just started fuel load and staff testimony having just been provided in the GA Power rate case. SO's 2023 guidance and capital plan roll forward typically comes on the 4Q call.

7) **Entergy (ETR, Outperform)** – Similar to SO, ETR has been tracking well on the year and last quarter the company disclosed it was tracking towards the upper half of its $6.15-6.45 range. On a trailing twelve-month basis including our 3Q estimate we see EPS of $6.51. We expect the company to continue de-risking 2023 earning having already identify ~$0.35 of pulled forward O&M flex spending and it should be able to narrow and raise the midpoint of its guidance range. We believe that it could look to center a $0.20 range around a ~$6.40 midpoint for a new range of $6.30-6.50. We have nudged up our 2022 EPS accordingly to $6.40 from $6.36. Our 2023-2025 estimates remain unchanged at $6.72, $7.23, and $7.74

respectively. After the company's comprehensive analyst day in June we are not expecting any material updates on the 3Q call or at EEI, though at EEI the company will likely provide their preliminary look at 2023 drivers. We expect investors to be focused on any regulatory updates the company provides including the status of its LA resiliency filing and the pending SERI settlement with MS to the extent there are any developments.

8) **WEC Energy Group (WEC, Market Perform)** – Having already raised guidance twice this year, WEC appears well positioned yet again with our quarterly estimate tracking a few cents above the $0.82-0.84 guidance range. On a trailing twelve-month basis when adjusting for the $0.09 debt refinancing costs in 4Q22 and applying ~$0.08 for the run rate of the 2022 accounting order we see an EPS of $4.44. With another above trend quarter, we would expect management to continue taking advantage to pull forward costs and de-risk 2023. Management already pointed to the top end of the second upwardly revised range. If they do decide to adjust guidance, they could look to narrow and raise the midpoint of an already tight $0.04 range or simply provide a point estimate at the top of the range. As is customary with the company's 3Q call, WEC should provide investors with its initial look at the 2023-2027 capital plan. WEC's 2022-2026 capital plan totals $17.7bn, which was a $1.6bn over the prior plan. We would expect a similar increase on the roll-forward to continue underpinning 7% asset base growth and an extension of the 6-7% per year EPS growth rate. Other topics for the call will likely include the WI rate case settlement, supply chain updates for the company's battery storage projects, and any updated takeaways on the IRA. **WEC will likely initiate 2023 guidance in December with its dividend declaration as it has in past years. We have nudged our 2022 EPS estimate up to $4.40 from $4.38.**

9) **CMS Energy (CMS, Outperform) –** On the call we expect investors to be focused on the initial 2023 guidance range from the company. Consistent with past practice we expect CMS to base its range off the 2022 guidance midpoint of $2.87. Based on management expectations of being above the midpoint of the 6-8% EPS growth rate, we would expect the midpoint of the new guidance range to be approximately 7-8% above the $2.87 guidance midpoint, which results in a midpoint of approximately $3.09. Applying CMS's typical $0.04 guidance range results in our expectation of $3.07-3.11. While such a midpoint and range appear low compared to consensus estimates of $3.13, we emphasize that we see this as only the initial look. CMS has a history of rebasing off actuals on the year-end call, and with the company tracking to the upper end it should nudge up the range another penny or two. We also note that the Covert acquisition is part of the rate case request and while we continue to see Covert as additive to the 6-8% growth rate, we expect the company to make a fairly conservative assumption on the rate case outcome for the initial 2023 guidance range. **That being said, after reevaluating the finalized terms of the settlement and ultimate financing mix on the IRP we have tweaked our 2023-2025 estimates to $3.11, $3.37, and $3.63 from $3.16, $3.45, and $3.70 respectively.** On the 4Q call CMS is expected to roll forward its capital plan and include the associated IRP capital as well as extending its growth rate and rebasing 2023 guidance.

10) **Exelon Corporation (EXC, Outperform)** - We expect EXC to narrow and update its 2022 guidance range on the 3Q call consistent with practices though we do not expect a material change in the $2.25 midpoint. Investors will likely be more focused on any clarity the company can provide around 2023 guidance and the general shape of earnings throughout the forecast period. While some of the headwinds around 2023 (i.e., significant rate back-up in 2022, flattish y/y contribution at PECO, AMT-related mitigation and inflationary pressures) have been known for a while, in recent weeks investor concern around a weak 2023 guide have picked up. We believe the company is aware of these concerns and may look to address some of them on the call. While we do not expect them to give formal 2023 guidance, we do believe they could look to provide qualitative drivers to help investors better understand the growth

path. Furthermore, though the we see 2023 as the primary focus with some of the key factors for 2024 and 2025 taking shape such as the ComEd MYRP, BGE/PHI MYPs, and new rates at PECO the company may also look to provide some early drivers for the out years underpinning their LT growth objectives.

11) **Sempra Energy (SRE, Market Perform)** – Given our $1.75 3Q22 estimate and revised drivers into 4Q22, we are raising our 2022 estimate to $8.67 (+1.5%), which is consistent with the company's 2Q22 commentary that it would expect to be at the high end of its $8.10-8.70 guidance range. We would also expect management to reaffirm its 2023 outlook of $8.60-9.20 (Street & BMO at $9.05) with an update to the range coming on its 4Q22 call early next year. After a flurry of MOU and HOA announcements related to its LNG development program over the last several months, we expect the call to be relatively quiet in terms of significant updates. However, we would expect investors' attention to focus on several discrete areas of the story including: 1) any update to the conversion of its various non-binding agreements to SPA's and the related timing of an FID for Port Arthur 1 in 2023 given the announcement of a revised EPC contract with Bechtel last week; 2) contract progress on Port Arthur 2 given its increased origination activity; 3) confirmation of FID for Cameron Phase 2 in 2023 post the mid-2023 conclusion of the ongoing competitive EPC process; 4) thoughts on the staff recommendation in the Oncor GRC and the potential for settlement in the case. As per normal we should also get Oncor's normal Fall capital update; 5) an update on the company's share repurchase program, which as of 2Q22 stood at $476mn. While management continues to believe their stock is undervalued, we would expect management's capital allocation strategy to focus less on significant incremental repurchases especially as additional growth and regulated capital opportunities become more visible; and 6) active management of the company's exposure to LNG development and non-regulated growth to maintain credit quality, drive consistent EPS growth at the SIP and consolidated levels, and grow and diversify its SIP business to preserve strategic alternatives for the business over the next several years. We believe between the conditional % ownerships of each project and the 70% of SIP alone the company can mitigate this risk but also has the offramp of allowing its partners to take a bigger equity stake in each project, selling down an incremental portion of its 70% stake in SIP, and/or spinning out or IPO'ing a de-risked and larger/more diversified business.

12) **NiSource Inc. (NI, Outperform) –** Our $0.09 3Q22 "shoulder season" EPS estimate is roughly 16% below the current consensus estimate given what looks like an upward skew from a few stale estimates in the Street aggregate expectations. Even with this lower outlook we expect management to reiterate its full year 2022 guidance range of $1.42-1.48/share (BMO Research/Street at $1.46/$1.45). **We expect the quarter to be a non-event as investors focus on its Analyst Day later in the day on November 7. Over the last six months we have seen a significant change in investor's expectations into the event, which we believe has improved the risk/return in NI shares. NI shares not only trade at a 7-9% discount to the electric sector (and 14% to the high quality/high growth subsector) but also a 9% discount to its gas LDC peers. We believe expectations for not only the outright sale of the company are significantly lower, but we have also witnessed a material dampening in the expectation for a significant asset rotation program as well as extension of the "high end" of its 7-9% growth rate**.

While the company will need to outline not only an above average growth outlook (we believe 6-8%) given its current 7-9% outlook through 2024, management will also need to articulate a plan that is deemed to be executable on the financing, regulatory and cost management side. As we do a quick preview of the upcoming analyst day, we would highlight several key topics we expect management to address: 1) present the outcome of its strategic review including "definitive announcements" of where management and the board of directors is taking the business. This could still include a smaller asset rotation

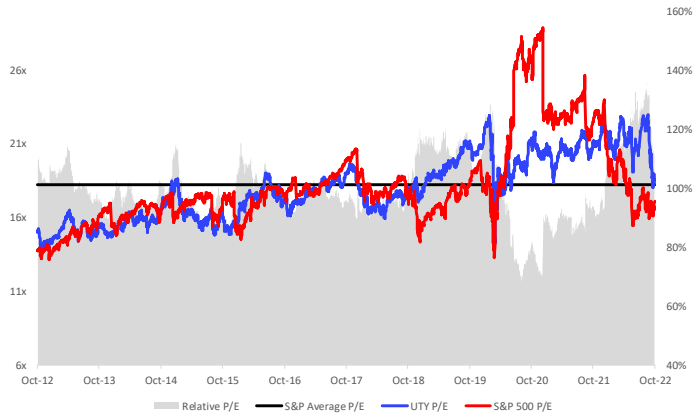
announcement to help finance its growth beyond 2024; 2) Provide capital and rate base growth visibility out towards the 2028 timeframe as well as a higher-level financing plan to facilitate this growth. We expect a post 2024 growth rate in the 6-8% range, which is still in line with sector-leading outlooks; 3) introduction of the 2023 full-year guidance, which will be the new prompt year for the LT growth rate. We expect an initial range of $1.49-1.55/share; 4) driving incremental cost savings and synergies above its current NI NEXT program; and 5) regulatory updates on the results of its 2021 IRP RFP for all sources of capacity resources including renewable generation projects and a targeted RFP for gas peaking units as well as its OH gas rate case. **Our 2022-2024 estimates remain unchanged at $1.46, $1.54 and $1.72, respectively, but our target price moves to $28/share to reflect the current mark to market utility segment valuation multiples used in our sum-of-the-parts valuation framework.**

13) **DTE Energy (DTE, Market Perform) – Our $1.55 Operating EPS estimate for 3Q22 is slightly below the current consensus estimate of $1.58. However, based on our trailing-twelve month forecast we see DTE FY22 at the top end of its full year guidance range of $5.90-6.10 and would expect management to point to the upper end**. As part of our recent model refresh we have updated our full year 2022-2025 EPS estimates for DTE with our estimates moving up modestly to $6.06, $6.25, $6.68, and $7.15, respectively. We expect the 3Q22 call to be fairly straightforward with minimal updates as management is expected to provide its usual set of updates now at the annual EEI conference in mid-November. This will likely include: 1) a shift in its long-term growth rate from the current 5-7% to either 6-7% or potentially 6-8%. However, at only a 5% premium to the group and a history of hitting 7% EPS growth consistently we are not sure the headline matters; 2) initiation of its 2023 "early outlook" with an expected guidance range to be $6.13-6.38, implying a 7% growth off its original 2022 guidance midpoint of $5.84; 3) its 3-year financing plan – we expect the plan to include minimal equity issuances over the 2023-2025 period with about $150-300mn using ATM-like programs and to reiterate its FFO/Debt target of 16%; 4) roll forward its updated 5-year capex plan, which we expect to increase from its current $19.5bn over 2022-2026 to ~$21bn over 2023-2027. This would imply ~7% growth over the current capex plan with an upward bias from the November IRP; 4) details from the IRP filing in early November, which should encompass the benefits from the Inflation Reduction Act. We believe the Belle River plant whose retirement has already been accelerated to 2028 from 2030 could be converted to natural gas given the need to maintain dispatchable capacity. We also see the evaluation of an accelerated retirement of at least one of the Monroe Power Coal Plant units. Given the baseload reliability associated with the plant, we believe the acceleration of its retirement will likely come in waves and will include the addition of dispatchable natural as well as continuing to burn some coal to maintain voltage support. With this, management may also bring forward its goal to achieve net zero. As we marked-to-market our group average multiples used in our SOTP framework, our target price moves to $114. Our valuation implies an 11% premium reflecting the company's primarily regulated profile (96% in 2023), favorable single-state jurisdiction in Michigan, and above-average growth rate. Our target price continues to be based on a relative value framework that marks to market our base utility and non-utility segment valuation multiples incorporated in our sum-of-the-parts valuation.

14) **Duke Energy – (DUK, Outperform) - After nearly 8% underperformance from mid-July through early October, DUK shares which now yield over 4.5%, have been in relative holding pattern as investors await the company's 2023 outlook which will provide the new base that investors will use to project its 5-7% "regulated" EPS growth off of going forward**. While it is unclear if the company will provide this guidance on its upcoming 3Q call ahead of its normal more robust 4Q update, we believe an earlier quantification of what the cumulative impact of its commercial renewables sale, higher interest costs and inflationary pressures on 2023 and beyond "could" provide a de-risking event for the stock. What we would expect on the 3Q22

call is an update on the progress of its pending sale of its commercial renewable business and potentially an in increase in the company's $200mm in cost savings that it earmarked on the 2Q22 call as it looked to offset both interest rate and inflationary headwinds into 2023. Given the disposition of its Commercial Renewables business will be treated as discontinued operations and as result be removed from any 2023 outlook, this creates roughly a $0.20/share headwind that will likely only be partially mitigated by the proceeds of the sale given they are earmarked towards debt reduction. **We believe the building consensus estimate is for the net dilutive impact of the sale to be in the $0.10-0.15/share range. Importantly using the higher end of dilution expectations relative to our current forecast ($5.77-$0.15 = $5.62) and given the company has committed to its 5-7% regulated growth, we see DUK trading at ~2% discount to the group on 2024 & 2025 P/E**. Although the growth rate at the mid-point would be 6% per the new 2023 base, using the company's original 2021 midpoint of $5.15 as a base, the 5-year CAGR through 2026 would be in the 5.5% at the midpoint and 6% should management be able to reach the top end of its 5-7% EPS CAGR. Although on this lower growth rate we could see some arguing for a deeper discount (vs the 2% illustrative example above), we believe there is limited downside DUK shares at its current price especially given its 4.5% yield (5th highest in the group). Moreover, as the quantification of the net impact is revealed, we believe these likely de-risks the story moving forward which can allow investors to focus on its decarbonization-led growth. Furthermore, we do not see the need for any incremental equity to fund the company's current 5-year plan which when combined with reduced rate lag in North Carolina we believe provides a more visible path to company's growth outlook and improving carbon profile. **We have lowered our 2023-2025 EPS to $5.40, $5.72, $6.10 and $6.50, respectively to account for the impact of higher interest rates and inflationary pressures but we have not yet included pro-forma estimate for the net impact of the sale of the Commercial Renewables portfolio. As we marked-to-market our group average multiples used in our SOTP framework, our target price moves to $98/share**.

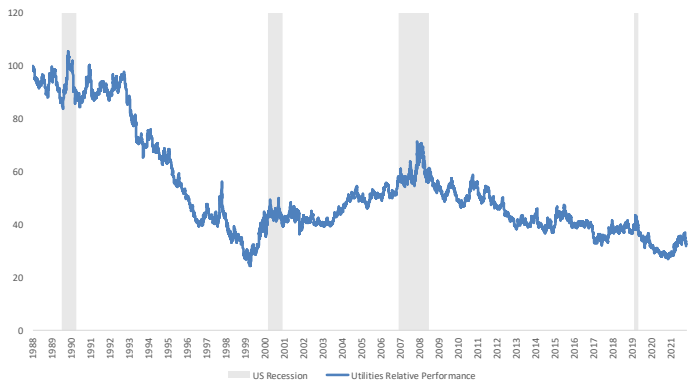
15) **Dominion Energy (D, Outperform)** – We expect Dominion to print a quarter in-line with its guidance range and with one quarter left in the year should allow management to narrow its guidance range. However, investors are likely to be focused on any incremental details heading into the fall. First, we note that recent industry reports stated that the company is considering a sale in part or all of the remaining 50% stake in Cove Point. With private market valuations still elevated and demand for LNG robust we would consider this a prudent move that could help the company alleviate their modest equity needs. Second, investors will also be looking for any updates on the timing for a decision on the CVOW re-hearing as well as an early look at upcoming legislative session and Senate elections.



16) **Atlantic Yield (AY, Market Perform) -** We see a 3Q estimate of $226mm compared to $235mm at consensus. Our estimate drives a year-over-year reduction of ~2% where the primary contributor continues to be an FX headwind with the Euro. AY's typical practice is to not comment on or adjust its EBITDA guidance and as such we would not expect anything different; however, we note that the significant FX headwinds to date likely bias results downward. That being said, as a reminder AY is almost fully hedged from FX cash flow perspective and as such, its CAFD should not be affected, it is only an income statement item for the EBITDA. On the call, we do not expect any significant updates other than any progress AY has made on their development and acquisition equity investment goals.

Utilities, Power & Renewables: Still the Best Game in Town for Inflation-Resistant Growth & Income, but the Macro Is Now in Full Control

Despite what is likely to be a positive fundamental set up for the sector relative to the broader market with a flattish overall comp year over year and a more resilient growth outlook as we head into the economic and policy uncertainties into 2023, the group's overall direction remains uncertain. As yields continue to breach what some have called the psychological 4% mark across a now very flat yield curve, investors both dedicated and non-dedicated have struggled with the sector's investability especially in the near-term. After outperforming the broader index by nearly 23% relative through early September (10% of this coming after the introduction of the IRA legislation in late July alone), the sector has quickly retraced nearly 12% relative. We have seen similar booms and busts in the sector including but not limited to that witness in 2007-2008 around the great financial crisis, the early 2020 COVID rise and fall, and now the most recent roller coaster. In most instances the sector's performance is a direct function of investors seeking defensive exposure and in the most recent example the group likely "over earned" as there were fewer investment alternatives (TINA principal) as tight credit spreads and the Fed's normalization policy increased the principal risk in allocations to fixed income and utilities staples, healthcare and A&D were the only remaining outlets.



Despite the recent pullback, we believe investors remain less willing to increase their exposure to the group right now given higher 4%+ yields across a flattening yield curve, increased volatility in the sector ("aren't these stable monopolies?"), and the reversal of previous tailwinds for the sector (low gas prices/low interest rates). However, we believe the group's stable EPS and DPS profiles should ultimately trump current valuation concerns as over the short to intermediate term we see the fundamentals for the group comparing favorably to other sectors, especially in a recessionary environment (Exhibit 12). Simply put, utilities are well positioned to manage the higher costs and also still deliver steady earnings growth while other sectors will face a contracting earnings profile.

Exhibit 11: Relative Forward P/E – UTY vs S&P 500

Source: BMO Capital Markets, FactSet

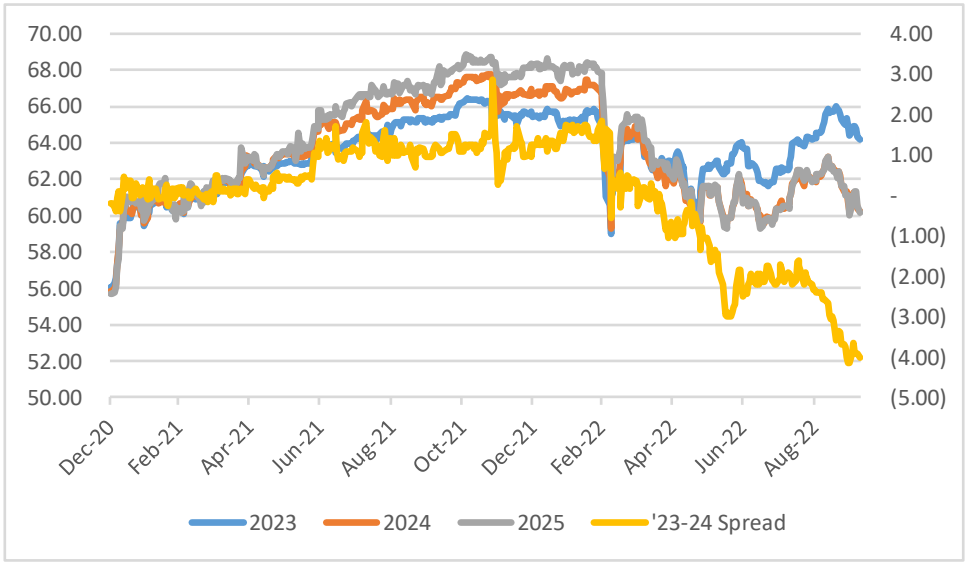


Exhibit 12: Utility Performance Around Recessionary Periods

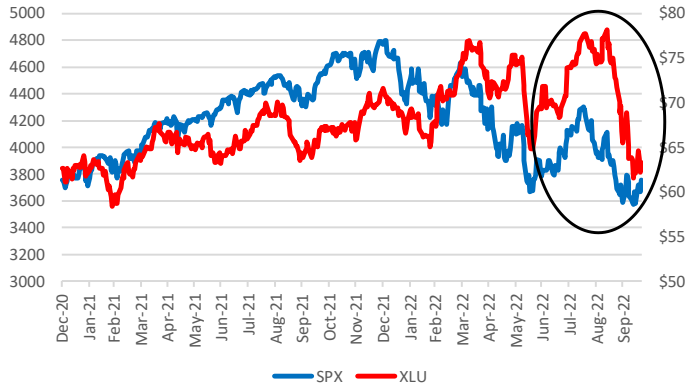
Source: BMO Capital Markets, FactSet

As evidenced by Exhibit 13 below, S&P dividend futures suggesting 2024 DPS will be lower than 2023 (yellow line). We see this having negative implications as a leading indicator for both S&P earnings and the current P/E. Specifically it would suggest that EPS expectations are lower than the current consensus EPS (consensus still has 8% growth into 2023 and 9% into 2024), but it also suggests expectations are for the recession to show up until later in 2023 or into 2024. **And once again we believe this highlights the value of US utility dividends which we continue to expect to grow at 5-7% on average. This makes the group's 3.8% dividend yield look even more attractive on a longer-term basis as you are receiving a "real yield" of 3.8% which when coupled with the stability of its earnings growth we believe makes the group unique. We believe that in this inflationary environment a premium should be placed on utilities' ability to continue to grow the dividend and that sustainable dividend yield creates an attractive real yield opportunity that other sectors and fixed income cannot offer.**

Exhibit 13: S&P 500 Dividend Futures

Source: BMO Capital Markets, Bloomberg

In our 2022 outlook, we outlined our positive outlook on the utility sector. Our view was predicated on three primary fundamental drivers: 1) As we entered a period of normalization, investors' asset allocations were too narrow in breadth, the broader market was expensive at 21x next year's earnings and rising interest rates were likely to have a larger impact on the broader market relative to traditionally "interest rate sensitive" sectors including utilities. Moreover, we also thought the bond market no longer served as a safe harbor for investors and had principal risk given the Fed's policy normalization and historically tight credit spreads (Exhibit 18); 2) After over a cumulative 35% relative underperformance in 2022 and 2021, the sector was historically inexpensive on a price-to-earnings and yield spread basis (Exhibits 16 & 17); and 3) the utility sector's fundamentals continued to improve and offered investors an attractive 9-10% total return with 6.0% EPS growth and a growing 3.2% current yield which provided investors with an equity market return at only ~50% of the systematic risk.



With the most recent pull back, year-to-date the sector has still outperformed the broader market by ~9%. As fears of a more pronounced hawkish pivot by the Federal Reserve and slowing growth/recession fears deepen, however, the relative outperformance is down materially from prior highs as broader macroeconomic fears likely drove investors out of their equities allocations. Outside of the inflation and war-related rally in commodities, which has driven the energy complex's solid outperformance, sector performance has been decidedly defensive within equities with utilities leading the way followed by Staples, A&D, Gold and Healthcare (Exhibit 14).

Exhibit 14: YTD 2022 Top & Bottom Sector Performance

Sector	YTD % Chg.	Sector	YTD % Chg.
E&P	+54%	HY Bonds	(17%)
Nat Gas	+50%	Financials	(18%)
MLPs	+33%	Materials	(20%)
WTI	+23%	Airlines	(21%)
Dollar	+17%	SPX	(21%)
A&D	(1%)	IG Bonds	(25%)
Insurers	(4%)	Transports	(26%)
Gold	(10%)	Large Growth	(29%)
Healthcare	(10%)	REITs	(30%)
Staples	(11%)	Retail	(35%)
Utilities	(12%)	Telco iShares	(35%)
Low Vol Portfolio	(14%)	ARKK	(62%)

Source: BMO Capital Markets, Bloomberg

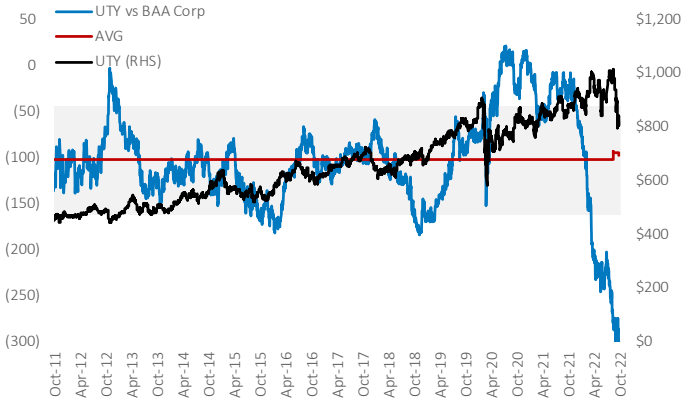


Exhibit 15: S&P 500 & XLU Price Performance

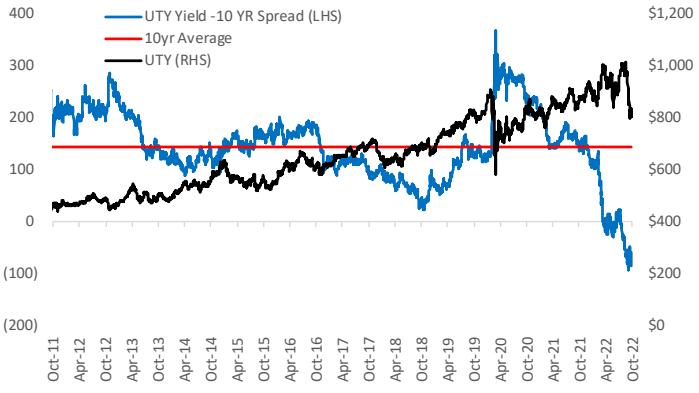
Source: BMO Capital Markets, Bloomberg



So what has changed in the last nine months? Actually, quite a lot. Earlier in the year we noted that after nearly a 20% pull back from the peak on a price basis, the market was trading more in line with its historic average P/E of ~16-17x due primarily by ~20% contraction in forward multiples. Both investment grade and high yield fixed income products have had one of the worst price performance periods in well over 100 years and credit spreads have significantly retreated from all time highs with high yield out 194 bps and investment grade wider by 74 bps. With the Fed's primary objective aimed at breaking the back of inflation (Exhibit 20) regardless of the impact on the economy we have seen a significant back-up in interest rates across the curve with 10-year breaching 4% and ever-increasing recessionary fears (Exhibits 21). With persistently higher natural gas prices, investment grade bond yields and now 30D and 90D commercial paper approaching the 4% market (Exhibit 17) many of the past tailwinds for the utility sector over the last decade and half have reversed and are now headwinds which has raised growth concerns for the sector.

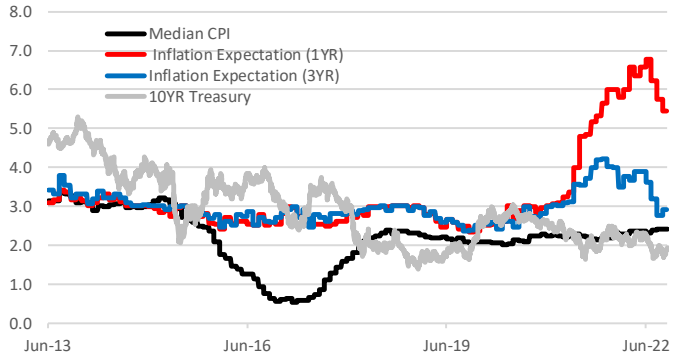
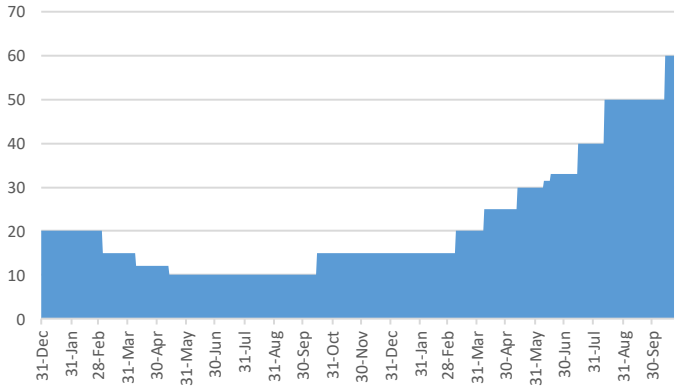
Remain Positive on Sector but Expect More Gradual Relative Outperformance



So how are we thinking about the sector now? We continue to be positive on the sector and see it as a core holding in investors' portfolios, especially over the medium and long term. Furthermore, after some of the more persistent near-term macroeconomic headwinds subside, we would expect the sector to continue to regain some of its relative outperformance to the broader market experienced earlier in the year as eventually we believe the positive secular tailwinds in absolute terms and relative terms against other sectors will be realized by investors.

Specifically, we believe the broader utility sector is well positioned to provide investors with a defensive safe harbor with a significantly better "rate of change" growth profile should the U.S. fall into a recession given their capital program is underpinned by the need to upgrade aging infrastructure, improve reliability, ensure energy security and advance state-mandated decarbonization goals. As can be seen in Exhibit 12, the sector has history of not only outperforming into recessionary periods, but the relative performance can continue for several months during the recession. Moreover, given the continued risk in fixed income outside of shorter-term duration offerings including U.S. Government bills, 2-3-year notes or inflation protected bonds we see the sector's "inflation-resistant income" (3.6% average yield growing at 5-7% annually) as unique relative to other income products and durable given the sector's mid-60% payout. Finally, we see the sector as one of the best and most stable ways to gain access to accretive decarbonization-related growth and one of the few sectors positioned to benefit from a growing awareness of the need for domestic energy security.

So where could we be wrong? Despite our own positive view on the sector's visible secular growth prospects, attractive and growing income stream and leading-edge decarbonization profile, the sector has clearly benefited this year from the "TINA" effect (there are no other alternatives). Given the risk in fixed income, the inflows year-to-date have primarily favored a very narrow defensive group including heath care, staples, utilities, and diversified dividend products. Should we see a moderation in core inflation measures and at the same time investors feel we are over the hump on the Fed's tightening cycle this could begin to thaw active managers' investment processes which have been frozen due to economic, policy and overall market volatility. Investors' willingness to look through this normalization cycle and begin to position for the other side of this tightening cycle and economic slowdown (which most liken to the 1990 recession) would likely cause utilities to be one of the primary sources of funds



inside this rotation. While this is not our base case as we expect to see broader earnings revision over the one to two quarters and fixed income still remains at risk as the Fed's policy rate approaches 4% and recession risk pressures spreads, we acknowledge how quickly sentiment could turn. **Ultimately, we saw some pull back in the group during 3Q and it manifested in the highest quality and year-to-date winners becoming the primary underperformers, which only further emphasizes the importance of our BMO Barbell Portfolio Construction.**

Exhibit 20: Federal Reserve Inflation Outlook & Median CPI (%)

Source: BMO Capital Markets, Bloomberg

Exhibit 21: U.S. Recession Probability Forecast (%)

Source: BMO Capital Markets, Bloomberg

BMO Barbell Portfolio Construction & Updated Pecking Order

What are our updated ideas on positioning within the sector? Given the very abrupt snap back in relative valuation, a shrinking "inventory" of differentiated relative value within the sector, and increased macro risks, we believe investors must be increasingly selective in what they own in the space. As idiosyncratic risks grow within the sector due to macro factors (commodity inflation, supply chain constraints, interest rate risk) we continue to advocate our BMO Barbell approach to portfolio construction with a refreshed pecking that reflects both our near-term and intermediate term profile preferences.

While the current macro backdrop is likely to inject additional volatility in the group, on a relative performance basis near-term, we see this quarter as having the ability to help derisk individual stories as investors are able to better quantify known headwinds. This should lead to more investable relative value opportunities within the sector. Although our bias is to pay up a bit and stick with larger-cap quality (management, regulatory, balance sheets) with diversified generation portfolios (nuclear, coal and renewables) through these turbulent times, we continue to advocate for the diversification benefit of our BMO Barbell approach as a quick reversal in market risk appetite could easily cause a selloff in the highest quality/higher profile names in the sector.

- **On the "Quality/Compounder" side we recommend NEE, CMS, and XEL.**
- **On the "Value/GARP" side we continue to favor AEP, CEG and ETR.**

Ratings Key (as of October 2016)

We use the following ratings system definitions:
OP = Outperform - Forecast to outperform the analyst's coverage universe on a total return basis;
Mkt = Market Perform - Forecast to perform roughly in line with the analyst's coverage universe on a total return basis;
Und = Underperform - Forecast to underperform the analyst's coverage universe on a total return basis;
(S) = Speculative investment;
Spd = Suspended - Coverage and rating suspended until coverage is reinstated;
NR = No Rated - No rating at this time; and
R = Restricted - Dissemination of research is currently restricted.

The total return potential, target price and the associated time horizon is 12 months unless otherwise stated in each report. BMO Capital Markets' seven Top 15 lists guide investors to our best ideas according to different objectives (CDN Large Cap, CDN Small Cap, US Large Cap, US Small Cap, Income, CDN Quant, and US Quant have replaced the Top Pick rating).

For Important Disclosures on the stocks discussed in this report, please go to https://researchglobal0.bmocapitalmarkets.com/public-disclosure/ or write to Editorial Department, BMO Capital Markets, 3 Times Square, New York, NY 10036 or Editorial Department, BMO Capital Markets, 1 First Canadian Place, Toronto, Ontario, M5X 1H3.

Dissemination of Research

Dissemination of fundamental BMO Capital Markets Equity Research is available via our website https://researchglobal0.bmocapitalmarkets.com/. Institutional clients may also simultaneously receive our fundamental research via email and/or via services such as Refinitiv, Bloomberg, FactSet, Visible Alpha, and S&P Capital IQ.

BMO Capital Markets issues a variety of research products in addition to fundamental research. Institutional clients may request notification when additional research content is made available on our website. BMO Capital Markets may use proprietary models in the preparation of reports. Material information about such models may be obtained by contacting the research analyst directly. There is no planned frequency of model updates.

The analyst(s) named in this report may discuss trading strategies that reference a catalyst or event that may have a near or long term impact on the market price of the equity securities discussed. In some cases, the impact may directionally counter the analyst's published 12 month target price and rating. Any such trading or alternative strategies can be based on differing time horizons, methodologies, or otherwise and are distinct from and do not affect the analysts' fundamental equity rating in the report.

Research coverage of licensed cannabis producers and other cannabis-related companies is made available only to eligible approved North American, Australian, and EU-based BMO Nesbitt Burns Inc., BMO Capital Markets Limited, Bank of Montreal Europe Plc and BMO Capital Markets Corp. clients via email, our website and select third party platforms.

~ Research distribution and approval times are provided on the cover of each report. Times are approximations as system and distribution processes are not exact and can vary based on the sender and recipients' services. Unless otherwise noted, times are Eastern Standard and when two times are provided, the approval time precedes the distribution time.

General Disclaimer

"BMO Capital Markets" is a trade name used by BMO Financial Group for the wholesale banking businesses of Bank of Montreal, BMO Harris Bank N.A. (member FDIC), Bank of Montreal Europe p.l.c, and Bank of Montreal (China) Co. Ltd, the institutional broker dealer business of BMO Capital Markets Corp. (Member FINRA and SIPC) and the agency broker dealer business of Clearpool Execution Services, LLC (Member FINRA and SIPC) in the U.S., and the institutional broker dealer businesses of BMO Nesbitt Burns Inc. (Member Investment Industry Regulatory Organization of Canada and Member Canadian Investor Protection Fund) in Canada and Asia, Bank of Montreal Europe p.l.c. (authorised and regulated by the Central Bank of Ireland) in Europe and BMO Capital Markets Limited (authorised and regulated by the Financial Conduct Authority) in the UK and Australia. Bank of Montreal or its subsidiaries ("BMO Financial Group") has lending arrangements with, or provide other remunerated services to, many issuers covered by BMO Capital Markets. The opinions, estimates and projections contained in this report are those of BMO Capital Markets as of the date of this report and are subject to change without notice. BMO Capital Markets endeavours to ensure that the contents have been compiled or derived from sources that we believe are reliable and contain information and opinions that are accurate and complete. However, BMO Capital Markets makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions contained herein and accepts no liability whatsoever for any loss arising from any use of, or reliance on, this report or its contents. Information may be available to BMO Capital Markets or its affiliates that is not reflected in this report. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. Nothing herein constitutes any investment, legal, tax or other advice nor is it to be relied on in any investment or decision. If you are in doubt about any of the contents of this document, the reader should obtain independent professional advice. This material is for information purposes only and is not an offer to sell or the solicitation of an offer to buy any security. BMO Capital Markets or its affiliates will buy from or sell to customers the securities of issuers mentioned in this report on a principal basis. BMO Capital Markets or its affiliates, officers, directors or employees have a long or short position in many of the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. The reader should assume that BMO Capital Markets or its affiliates may have a conflict of interest and should not rely solely on this report in evaluating whether or not to buy or sell securities of issuers discussed herein.

Additional Matters

This report is directed only at entities or persons in jurisdictions or countries where access to and use of the information is not contrary to local laws or regulations. Its contents have not been reviewed by any regulatory authority. BMO Capital Markets does not represent that this report may be lawfully distributed or that any financial products may be lawfully offered or dealt with, in compliance with regulatory requirements in other jurisdictions, or pursuant to an exemption available thereunder.

To Australian residents: BMO Capital Markets Limited and Bank of Montreal are exempt from the requirement to hold an Australian financial services licence under the Corporations Act in respect of financial services they provide to wholesale investors (as defined in the Corporations Act). BMO Capital Markets Limited is regulated by the UK Financial Conduct Authority under UK laws, and Bank of Montreal in Hong Kong is regulated by the Hong Kong Monetary Authority and the Securities and Futures Commission, which differ from Australia laws. This document is only intended for wholesale clients (as defined in the Corporations Act 2001), Eligible Counterparties or Professional Clients (as defined in Annex

II to MiFID II) and Professional Investors (as defined in the Securities and Futures Ordinance and the Securities and Futures (Professional Investor) Rules under the Securities and Futures Ordinance of Hong Kong).

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Colin Hamilton, Alexander Pearce or Raj Ray:

This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and distributed by BMO Capital Markets Limited or Bank of Montreal Europe Plc and is subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom and the Central Bank of Ireland (CBI) in Ireland. FCA and CBI regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore each of BMO Capital Markets Limited and Bank of Montreal Europe Plc will disclose its and its affiliates' ownership interest in the subject issuer only if such ownership exceeds 5% of the equity of the issuer.

To E.U. Residents: In an E.U. Member State this document is issued and distributed by Bank of Montreal Europe plc which is authorised and regulated in Ireland and operates in the E.U. on a passported basis. This document is only intended for Eligible Counterparties or Professional Clients, as defined in Annex II to "Markets in Financial Instruments Directive" 2014/65/EU ("MiFID II").

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on to retail clients.

To Hong Kong Residents: In Hong Kong, this report is published and distributed by Bank of Montreal. Bank of Montreal (incorporated in Canada with limited liability) is an authorized institution under the Banking Ordinance and a registered institution with the Securities and Futures Commission (CE No. AAK809) to carry on Type 1 (dealing in securities) and Type 4 (advising in securities) regulated activities under the Securities and Futures Ordinance (Cap 571 of the Laws of Hong Kong). This report has not been reviewed or approved by any regulatory authority in Hong Kong. Accordingly this report must not be issued, circulated or distributed in Hong Kong other than (a) to professional investors as defined in the Securities and Futures Ordinance and the Securities and Futures (Professional Investor) Rules under the Securities and Futures Ordinance of Hong Kong, or (b) in circumstances which do not result in or constitute an offer to the public in Hong Kong.

To Korean Residents: This report has been provided to you without charge for your convenience only. All information contained in this report is factual information and does not reflect any opinion or judgement of BMO Capital Markets. The information contained in this report should not be construed as offer, marketing, solicitation or investment advice with respect to financial investment products in this report.

To Japan Residents: This report has not been reviewed by any regulatory authority in Japan. This report is provided for information purposes only and it should not be construed as an offer to sell, a solicitation to buy, or a recommendation for any security, or as an offer to provide investment management or advisory or other services in Japan. Securities may not be offered or sold in Japan by means of this report or any other document other than to Qualified Financial Institutions within the meaning of item (i) of Article 17-3 of the Government Ordinance to enforce the Financial Instruments and Exchange Act (Kinyu Shohin Torihiki Ho Sekou Rei). Unless specified otherwise, the securities that may be offered to you are not and will not be registered in Japan pursuant to the Financial Instruments and Exchange Acts.

To Taiwanese Residents: This report is not intended to constitute investment advice nor a public offer for any investment products to investors in Taiwan. This report should only be accessed by investors in Taiwan that are qualified to invest in investment products pursuant to relevant Taiwanese laws and regulations, and subject to sales restrictions as set forth in the relevant Taiwanese laws and regulations. BMO Capital Markets has not and will not secure the required licenses in Taiwan for the offer of securities and investment services. Any offer of securities has not been and will not be registered or filed with or approved by the Financial Commission of Taiwan and/or other regulatory authority pursuant to relevant securities laws and regulations of Taiwan, and may not be issued, offered or sold within Taiwan through a public offering or in circumstances which constitute an offer that requires a registration, filing or approval of the Financial Supervisory Commission of Taiwan and/or other regulatory authority in Taiwan under relevant securities laws and regulations of Taiwan. No person or entity in Taiwan has been authorized to offer or sell the securities in Taiwan.

To Singapore Residents: This report is intended for general circulation and does not and is not intended to constitute the provision of financial advisory services, whether directly or indirectly, to persons in Singapore. You should seek advice from a financial adviser regarding the suitability of the investment products, taking into account your specific investment objectives, financial situation or particular needs before you make a commitment to purchase the investment product. This report has not been registered as a prospectus with the Monetary Authority of Singapore. Accordingly, it should not be circulated or distributed, nor may the securities described herein be offered or sold, or be made the subject of an invitation for subscription or purchase, whether directly or indirectly, to persons in Singapore other than (a) to an institutional investor or a

relevant person as defined in and pursuant to and in accordance with the conditions of the relevant provisions of the Securities and Futures Act of Singapore or (b) otherwise pursuant to and in accordance with the conditions of, any other applicable provision of the SFA.

To Israeli residents: BMO Capital Markets is not licensed under the Israeli Law for the Regulation of Investment Advice, Investment Marketing and Portfolio Management of 1995 (the "Advice Law") nor does it carry insurance as required thereunder. This document is to be distributed solely to persons that are qualified clients (as defined under the Advice Law) and qualified investors under the Israeli Securities Law of 1968. This document represents the analysis of the analyst but there is no assurance that any assumption or estimation will materialize.

These documents are provided to you on the express understanding that they must be held in complete confidence and not republished, retransmitted, distributed, disclosed, or otherwise made available, in whole or in part, directly or indirectly, in hard or soft copy, through any means, to any person, except with the prior written consent of BMO Capital Markets.

California: CPUC approves unchanged 2022 Cost of Capital

The California Public Utilities Commission (CPUC) voted to adopted the alternative PD, approving an *unchanged* 2022 cost of capital which will keep 2022 return on equity (ROE) consistent with prior levels - 10.25% ROE for Pacific Gas and Electric (PGE – PG&E Corp [PCG] subsidiary), 10.30% ROE for Southern California Edison (SCE – Edison International [EIX] subsidiary), and 10.20% ROE for San Diego Gas and Electric (SDG&E – Sempra [SRE] subsidiary). California is one of the few states that separates the cost of capital from rate cases. The cost of capital mechanism (CCM) resets CA regulated utility ROEs if trailing average benchmark interest rates are +/-100bps a certain band level. Given low treasury rates in 2021 and 1H22, the CCM 'triggered' and warranted a downward revision in CA ROEs. However, the California utilities - PGE, SCE and SDG&E – filed with the CPUC to request a departure from CCM. The utilities argued the COVID-19 impacted CA utilities differently as compared to the proxy utilities group and overall financial markets, warranting a departure from CCM. See our latest recap on the CCM decision and the CA regulatory backdrop: US Utilities & IPPs: CA Regulatory: CPUC sides with utilities on initial 2022 CoC decision, 2023+ in focus 05 October 2022.

This update highlights the improving CA regulatory environment and represents a favorable leading indicator as the CPUC continues to work toward a solution to the 2023-2026 Cost of Capital proceedings for CA utilities. We see the decision to leave ROE's unchanged as most beneficial to PCG and EIX, given CA concentration. *We reiterate Buy on shares of PCG with the updates* over the past month solidifying *the company's above average earnings growth outlook, underpinned by 10%+ rate base growth which is enabled by the PCG's ambitious undergrounding plan. The more favorable CA regulatory backdrop is key for PCG as the company approaches resolution on its '23-'26 General Rate Case (GRC) after recently increasing GRC capex requests for inflation (details here: PG&E: Early stages of the re-rating, despite wildfire season. Constructive updates 14 September 2022). We maintain Underperform on shares of EIX. Despite the improving CA backdrop, we see the company's* adverse *exposure to* interest rates on wildfire-related and corporate borrowings. For example, last week SCE offered $1.5Bn debt at **~5.9%. This is higher than the 5.3% refinancing rate that management disclosed with 3Q22** and 3.99% weighted average commercial paper that will be repaid with the 2022G Series bonds. Details on rate exposure here: One Step Forward, Two Steps Back: Legacy Liabilities Increase Once Again 02 November 2022. *We reiterate Buy on shares of SRE. While this CA regulatory update is a positive catalyst, updates on LNG progress at Sempra Infrastructure Partners (SIP – SRE subsidiary) are the key driver of shares; the company's 3Q22 update further accelerated progress on LNG development.*

See ETR regulatory update on page 2.

ETR: ROEs in focus w/ intervenors & Staff testimony in TX

Intervenors have filed recommendations with the Public Utilities Commission of Texas (PUCT) for Entergy Corp (ETR) ongoing electric rate case in Texas. Recall, Entergy Texas Inc (ETI – ETR subsidiary) originally requested **10.8% return on equity** (ROE), which includes 30bps management performance premium, and **51.21% equity ratio**. This would result in $131.4Mn rate increase, +11.2% rate increase versus current levels. The ROE requested by ETI is materially higher than 9.35% average ROE approved in cases decided in the first nine months of 2022 for regulated utilities across the US. We note that the cost of debt reflected in ETI's request, 3.47% or ETI's 'actual cost of debt', is now below US 30Y treasuries.

We detail select intervenors' and PUCT Staff's recommendations below. The PUCT Staff recommendation is for a **9.45% ROE**, -135bps lower than ETI's request including +30bps performance adder, or -105bps lower than ETI's base request (10.5% ROE exc. the performance adder). *We view the ROE as the most controversial element of ETR TX's request, as suggested by Intervenor recommendations. The 9.45% Staff recommendation is a reasonable level and we continue to believe that a constructive outcome can be reached between the parties.* ***The recent El Paso Electric rate case decision in Texas had a 9.35% ROE with the latest Staff slightly higher. The 30bps performance-based adder requested by ETI remains a key factor to monitor, with all intervenors opposing the request.***

Exhibit 1: Summary of Intervenor Recommendations
We summarize the intervenor recommendations below, highlighting the PUCT Staff's recent proposal

	ETI Request	PUCT Staff	Cities	TIEC
Rate Increase ($Mn)	$131.40	$76.80	($9.90)	N/A
ROE (inc. any performance adders)	10.80%	9.45%	9%	9.40%
Equity Ratio	51.21%	51.21%	51.21	
Performance Based ROE adder?	Yes - 30bps	No	No	No

Source: BofA Global Research, S&P Capital IQ

BofA GLOBAL RESEARCH

A final decision is expected in May 2023, although the timeline may change depending on whether a settlement is reached. We reiterate Buy on shares of ETR given the company's favorable exposure to tax credits introduced in the Inflation Reduction Act (IRA), and commercial and industrial growth outlook driving earnings growth across ETR's service jurisdictions.

Further detailing PUCT Staff's recommendation

PUCT Staff's filing states that ETI's ROE request '*substantially exceeds the current market cost of capital for companies with investment risk similar to ETI*'. Additionally, Staff opposed the performance premium included in ETI's request, stating that the PUCT should reject ETI's '*extraordinary and uncommon*' request for a basis point adder to ROE. However, Staff suggests that the PUCT approve ETI's 'ring-fencing' request, consistent with recent intervenor recommendations and final PUC orders which approved 'ring-fencing' in TX rate cases, including Centerpoint Energy's (CNP) Houston Electric rate case, Sempra (SRE) Oncor electric rate case, and AEP Corp (AEP) Texas electric rate case. Lastly, Staff opposed ETI's proposed tariffs – the Transportation Electrification and Charging Infrastructure (TECI) rider and the Transportation Electrification and Charging Demand Adjustment (TECDA) rider - related to electric vehicles (EVs). Staff's recommendation cited that it was not appropriate for a vertically integrated utilities to own EV charging infrastructure, and the ownership of such facilities should be left to competitive providers.

NI: Joint stipulation filed in OH rate case; Revenue recommendation well-below request

NiSource (NI)'s Columbia Gas of Ohio subsidiary filed a joint stipulation before the Public Utilities Commission of Ohio (PUCO) in its first rate case in the jurisdiction in 13 years. The stipulation was submitted in agreement with Commission staff, the Ohio Consumers' Counsel, and a number of industrial, manufacturing, energy and commercial interest groups. While NI requested a revenue increase of $221M, the stipulation recommends a far lower sum of $68M, 30% of NI's initial request. The parties agreed to an equity ratio of 50.6%, in-line with NI's request, and recommend to the Committee a return on equity (ROE) of 9.6%. This ROE is lower than NI's request at 10.95%, and lower than the Committee's authorization in NI's previous Ohio rate case of 10.39% in 2008. The stipulation recommends a rate base of $3.51B vs NI's request of $3.56B.

While we do not view Ohio as an especially constructive jurisdiction versus other states, we are pleased by the agreement of the broad group of parties involved in the stipulation. We see the recommended ROEs as in-line with other rate cases, and while lower than NI's request, we view the figure as sufficient. That said, we flag the wide, negative gap between NI's requested revenue increase and the stipulation's recommendation as concerning. We note the settlement discussions have been ongoing for ~6+ months hence leading to a relatively lower rev vs the ask. Look for commentary on how this fits into what seems a still subdued EPS growth into '23 (lower end of 6-8%) prior to wider recovery in Indiana.

Edison International (EIX)

Our $52 PO is based on sum of the parts analysis with a peer 16.2x 2024 P/E grossed-up 5% for group growth. A -3x P/E discount is applied to the CPUC, as well as the Parent/Other segment, and -1x P/E discount to FERC jurisdictional utilities. The discount reflects below-average growth and regulatory considerations, albeit FERC risk profile is

less challenging than the CPUC. The negative wildfire adjustments are netted-out to reflect a probabilistic approach to the risk of shareholder funded wildfires and the ongoing contribution to the CA fund on an NPV basis.

Positive and negative risks are changes in: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) Edison Energy returns, 7) ability to deploy capital, 8) environmental, social, & governance [ESG] profile, and 9) wildfire liabilities for shareholders.

Entergy (ETR)
Our $135 Price Objective (PO) is based on a sum-of-the-parts analysis. The 2024E electric utilities average P/E of 17.8x (vs 17.3x previously) is grossed-up +5%, to 18.7x, to reflect capital appreciation across the sector. We apply in-line P/E multiples to the subsidiaries except for +2x Texas to reflect the constructive regulation environment and -1x New Orleans based upon historical contentious proceedings. We net out 50% of the parent HoldCo long-term debt and apply a P/E multiple to 50% of the interest expense.

Risks to achievement of our Price Objective is 1) changing rate-making mechanisms or unexpected regulatory outcomes, 2) earned return on equities by jurisdiction, 3) hurricanes and other weather events, 4) nuclear accidents, safety events, or other incidents, 5) interest rates fluctuations, 6) equity issuances relative to management's forecast and access to capital markets, 7) ability to deploy regulated capital expenditures, 8) pension fund performance and 9) costs and operational volumes at the wholesale commodity subsidiary.

NiSource Inc (NI)
Our $34 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2024 forward P/E multiples that are marked-to-market to the latest peer utility multiples of 16.9x for gas and 18.2x for electric with a 1.0x premium for the gas utilities and a 2.0x premium for the electric gas utilities given strong growth rates and incremental renewable buildout, with capex potentially beginning in '24-'26, but acknowledge industrial gen load migration risk. While there still could be some near-term headwinds for solar, we are confident in mgmt. ability to manage and mitigate the impacts.

We note that electric / gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We subtract the value of excess holding company debt at the parent not supporting the utility opcos.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, higher natural gas prices, and inability to execute on renewables additions.

PG&E Corporation (PCG)
Our PO of $16 reflects an in-line P/E versus the respective electric (15.4x) and gas (14.9x) peer P/E groups with both grossed-up by 5% to reflect capital appreciation across the sector) based on 2024E. The acute wildfire risk is incorporated separately via a scenario probability weighted at 100% assuming PCG hits the cap in 3-year increments. Lastly, we net out 50% weighting of HoldCo debt and add back 50% weighting of interest expense to derive our Price Objective.

Risks to achievement to estimates and Price Objective include: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) Fire Victim Trust moneitizations, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

Sempra Energy (SRE)
Our $160 PO is based on a sum of the parts valuation of 2024E earnings. The US utilities are valued using the electric (15.4x) and gas (14.9x) average P/E that we grossed-up +5% to account for sector growth. We apply a -2x discounted valuation to the California gas utility (SoCal Gas) for concerns about long-term use of natural gas. We apply a -1x discounted valuation to the California electric utility (SDG&E) to reflect the wildfire risk exposure. We apply a +2x premium to the TX utility (Oncor) for above average growth and high visibility into rider recovery. The Infrastructure segment (SIP) is valued at 12x EV/EBITDA, an implied premium to the Mexican market (5.5x) and select premium US midstream comparable (Williams and TC Energy at approximately 11x) on EV/EBITDA due to its long duration contracted cash flows. The parent drag is treated on a balanced blend of P/E and HoldCo debt and cash netting.

Risks to achievement to estimates and Price Objective include: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) LNG development, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

Analyst Certification

We, Julien Dumoulin-Smith and Paul Zimbardo, hereby certify that the views each of us has expressed in this research report accurately reflect each of our respective personal views about the subject securities and issuers. We also certify that no part of our respective compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	77	53.47%	Buy	54	70.13%
Hold	33	22.92%	Hold	26	78.79%
Sell	34	23.61%	Sell	22	64.71%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	1839	53.46%	Buy	1071	58.24%
Hold	800	23.26%	Hold	498	62.25%
Sell	801	23.28%	Sell	379	47.32%

[R1] Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of both a stock's: absolute total return potential as well as its attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster[R2]
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

[R2] Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the Price Charts website, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Edison Intl, Entergy Corp., NiSource Inc, PG&E Corp., Sempra Energy.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: NiSource Inc, Sempra Energy.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: Edison Intl, Entergy, NiSource Inc, PG&E Corp., Sempra Energy.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Edison Intl, Entergy, NiSource Inc, PG&E Corp., Sempra Energy.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: Edison Intl, Entergy, NiSource Inc, PG&E Corp., Sempra Energy.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Edison Intl, Entergy, NiSource Inc, PG&E Corp., Sempra Energy.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Edison Intl, Entergy, NiSource Inc, PG&E Corp., Sempra Energy.
BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the

ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: Entergy, NiSource Inc, Sempra Energy.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Edison Intl, Entergy Corp., NiSource Inc, PG&E Corp., Sempra Energy.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Edison Intl, Entergy, NiSource Inc, PG&E Corp., Sempra Energy.
BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
Refer to BofA Global Research policies relating to conflicts of interest.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any

decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.
BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.
BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

BofA ESGMeter Methodology:

ESGMeter is a proprietary metric based on quantitative analysis and fundamental analyst inputs that reflects our assessment of a company's Environmental, Social and Governance-related attributes. The ESGMeter is intended to indicate a company's likelihood of experiencing stronger financial stability (higher return on equity and lower earnings and price volatility) over the next three years relative to peer group. There are three ESGMeter levels - Low, Medium, and High - which indicate whether a company has attributes most likely to translate into superior financial stability (in the case of a High level) or weaker financial stability (in the case of a Low level) over the next three years relative to its peer group. A Medium level suggests that a company exhibits ESG characteristics that are likely associated with financial stability results in line with its peer group over the next three years. Full details of our methodology, financial stability definition and disclaimers are available at BofA ESGMeter methodology. ESGMeter is not indicative of a company's future stock price performance and is not an investment recommendation or rating. ESGMeter is independent of the BofA Global Research fundamental equity analyst's investment rating, volatility risk rating, income rating or price objective for that company.

NI: Trimming medium term CAGR – 6-8% throughout

NiSource (NI) announced that results from its business review which results in a moderation of the EPS CAGR to 6-8% annually 2021-2027, a slowing of the near-term from 7-9% 2021-2024 previously. The refreshed outlook includes an assumption of a tax efficient minority sale of its NIPSCO Indiana business, which is mix electric/gas (19.9% max). This would imply ~$2Bn+ equity value. Key is limited IURC input on stake sale process (vs earlier expectations of gas focus for sale in smaller states). The asset sale is designed to improve the balance sheet and guidance is designed to eliminate equity through 2025 with a "modest" at-the-market (ATM) plan in 2026+ as become a cash tax payer (sale displaces ~$750 Mn equity otherwise contemplated thru '25, likely <$200Mn in our view post '25). The balance sheet repair/strengthening is designed to improve FFO/Debt targets to 14-16% from 14-15%. No mgmt. changes; flat O&M is key too.

The slower pace of growth in the near-term is disappointing relative to our original expectations and we attribute the pivot to increasing bill affordability concerns. We anticipated a slow-down after 2024 with a 2021-2027 6-8% CAGR so the 'terminal' EPS is in-line with our expectations but the 2023-2024 are now notably slower than previous plans. Among investors we spoke to ahead of the Investor Day the general Consensus was that the growth profile would slow-down post-2024 but some anticipated an extension of the 7-9%, supported by a capital expenditure boost in the long-term post IRA. Despite the negative update, we maintain Buy on NI which is trading at a discount to comparable companies, particularly with its attractive mix of assets and above-average growth rate.

NRG: 3Q22 beats low bar & FY23 initiated above Street

NRG Energy (NRG) reported $452Mn 3Q22 adjusted EBITDA, sharply lower from $767Mn 3Q21 which management attributed 40% ($125Mn) to negative drivers since guidance was originally prepared. The quarter surpassed low expectations with Consensus -30% in the past month to $421Mn, consistent with $424Mn BofAe. As expected NRG narrowed the FY22 adjusted EBITDA guidance to $1,950-$2,050Mn which is based in part on non-recurring "opportunistic natural gas and power earnings". This is largely in-line with $1,982Mn Consensus and $1,955Mn BofAe. 2022 FCF before growth was cut to $950-$1,050Mn from $1,140-$1,440Mn due to higher working capital/collateral requirements, despite the new $221Mn Astoria sale. There is still $286Mn FCF to allocate for 2022 while $190Mn working capital was shifted to 2023 from 2022. ~$200Mn of share repurchases were executed since the 2Q22 update with $603Mn through 10/31/22.

NRG's 3Q22 update was mixed with 3Q better than our low expectations but FY22 FCF was cut. FY23 guidance was initiated better than expected which did not appear to have the contribution from growth investments. Customer count declined and we continue to be worried about attrition/margin erosion in NRG's business model of being less integrated than peers. Maintain Underperform on shares of NRG where we see better risk/return profiles from other independent power producers with market length. **See full report for more on NI OH settlement, NRG earnings, HE earnings, ETR capex upside, Offshore Wind, and CMS/DTE storm outages.**

NRG: FY23 guidance above Street/BofA. Watch growth

FY23 guidance was initiated at $2,270-$2,470Mn adjusted EBITDA and $1,520-$1,720Mn FCF which management described as in-line with its 2021 Investor Day plan. Guidance midpoint is +2% above $2,321Mn BofA/$2,320Mn Consensus. The primary drivers are $220Mn recovery of 2022 "transitory items" and Direct Energy synergies/recovery of COVID. Despite $150Mn of growth/acquisitions in 2022 and another $240Mn planned in 2023, growth was not shown as a driver in FY23 adjusted EBITDA. FY23 capital available for allocation is $1.9Bn with a $600Mn repurchase plan, $300Mn dividend, and $330Mn growth with $628Mn currently uncommitted. Management described its retail performance as strong and supply performance as mixed. Home customer count declined ~2% QoQ to 5.5Mn as management 'balanced earnings with customer count'.

Customer count is a critical metric for NRG and other integrated power companies. Attrition could be elevated given the increasing power price backdrop. Peer Vistra noted that its Texas customer count increased in 3Q22 but overall customer count declined due to voluntary 'value accretive' market exits in certain regions.

HE: Strong bank performance offsets sluggish utility growth

Hawaiian Electric Industries (HE) reported 3Q22 EPS of $0.57 vs $0.54 BofAe and Street $0.56. The slight beat was driven in large part by higher than expected rate increases contributing +$0.06 to EPS vs. +$0.04 BofAe. The gains were offset by elevated O&M expense of -$0.02, increased interest expense of -$0.01, and higher D&A expense of -$0.01, each in-line with BofAe. American Savings Bank (ASB) reported higher net interest income of +$0.04, in-line with BofAe, while increases to credit loss provisions were negligible vs -$0.02 BofAe. Noninterest income was flat, vs. -$0.02 BofAe, while noninterest expense presented a -$0.02 drag vs. -$0.03 BofAe on increased compensation and benefit expense. Loan growth (9.3%) and deposit growth (1.1%) have each been strong YTD, resulting in a 3Q22 ROE of 15.1% vs 12.2% in 3Q21. *We maintain our Underperform rating on regulatory risk in the jurisdiction given that HE utility bills are already the highest in the US and we have less visibility into earnings growth. That said, given strong performance at ASB, we expect management to reaffirm its guidance range on the 3Q call, and feel confident in their ability to deliver on the target.*

ETR: Expect another strong capex update at EEI

Entergy Corp (ETR) is expected to update its 2023-2025 capex plans during Edison Electric Institute (EEI). We point to the company's 3Q22 10Q capex disclosure as a leading indicator of the EEI capex update. The 10Q cites '*Entergy is developing its capital investment plan for 2023 through 2025 and currently anticipates that the Utility will make approximately* ***$15.5 billion*** *in capital investments during that period.*' This compares with ~$15.135Bn implied by the company's June 2022 Analyst Day; Entergy cites $19Bn cumulative capex invested 2022 – 2025 and $13.355Bn invested 2022 - 2024. We outline the potential 2025 capex update below assuming 2023 and 2024 capex is unchanged from the prior capex update at ETR's Analyst Day. We note that the 2025 capex may be lower if ETR further increases 2023 and 2024 capex levels.

Exhibit 1: ETR Implied Capex Update
ETR's 3Q22 10Q cites approximately $15.5Bn capex spend 2023-2025 vs $15.135Bn implied at Analyst Day.

	Analyst Day	3Q22 10Q
2022	3,865	
2023	4,090	4,090
2024	5,400	5,400
2025	5,645	6,010
2022-2025	~19,000	
2023-2025	~15,135	15,500

Source: Company Filings, Bloomberg, & BofA Global Research

BofA GLOBAL RESEARCH

The 10Q disclosure suggests ETR will further hike capex spend from $15.135Bn to $15.5Bn 2023-2025, implying another solid capex update after ETR already increased 2022-2024 capex during the June 2022 Analyst Day. This further strengthens ETR's growth outlook and represents a positive near-term catalyst for shares. *We maintain Buy on ETR with shares trading at a discount to the group despite the strong earnings growth outlook. ETR's growth outlook is further supported by commercial and industrial (C&I) growth across ETR's service regions and Inflation Reduction Act (IRA) incentives which enable capex growth without material impacts to customer bills.*

Offshore Wind: Cautionary data points continue to pile up

Inflationary equipment cost and financing cost pressures have continued to weigh on the economic viability and projected returns for offshore wind projects, prompting concerns over whether offshore wind development plans will ultimately materialize. While we have closely monitored Avangrid's (AGR) recent efforts to renegotiate the power purchase agreements (PPAs) for its offshore wind projects Park City Wind and Commonwealth Wind (details here: US Utilities & IPPs: PowerPoints: AGR Offshore Wind 31 October 2022), we note that Eversource (ES) stated that it does not plan to request higher compensation. The recent Orsted (Eversource partner) third quarter earnings call focused on project returns in a rising rate environment and uncertainties over the US project pipeline, specifically Orsted's ability to renegotiate PPAs. Orsted cited inflationary pressures have resulted in at least 300bps impact to the spread between internal rates of return (IRRs) and weighted average cost of capital (WACC) on already awarded and not yet final investment decision (FID) projects. Management indicated that the company continues to 'turn every stone' to preserve project economics, including 'securing more robust top lines' for pre-FID projects (i.e. renegotiating PPAs). Additionally, the company said that it will only proceed with FID on projects that are 'defensible'. In other words, management suggested that project FID may be contingent on successful PPA renegotiations or execution on mitigation efforts that strengthen project returns amid rising costs. This is similar to AGR management commentary that the company is unlikely to continue offshore wind project construction for Commonwealth and Park City Wind projects unless PPAs are renegotiated. *Orsted is among the largest and most experienced global offshore wind developer. Therefore, Orsted management's commentary on the challenges impacting offshore wind returns clearly indicates the severity of the inflationary impact to US offshore wind project returns.*

However, efforts to renegotiate PPAs have been met with skepticism from other offshore wind industry players. **Specifically, Eversource management recently said that it does not expect Avangrid will be successful on repricing its PPAs**. Management also said during its 3Q22 earnings call that the company does not plan to pursue PPA renegotiations for any of its offshore wind projects. We once again reiterate our cautionary view around successful PPA renegotiations. We note that political actors, including candidate for Massachusetts upcoming gubernatorial election, Attorney General Maura Healey, have publically stated that they do not support PPA renegotiations (details here: US Utilities & IPPs: 2022 Midterm Elections: What the changes mean for key utilities 02 November 2022). Additionally, regulatory counterparties have recommended approval of the existing AGR offshore wind PPAs, and we believe AGR efforts to further revise these PPAs will likely result in contentious and drawn out regulatory processes.

We maintain Underperform on shares of AGR where we forecast below-average EPS growth with above-average large project risk. The company is acutely exposed to inflationary headwinds given existing customer affordability concerns across AGR's service jurisdictions. We continue to forecast de-minimis value creation from AGR's offshore wind projects at current PPA levels will pressure AGR's long-term earnings growth outlook.

DTE/CMS: Windstorms spur latest outages; MPSC reliability compliance filings

Overnight windstorms in Michigan on November 5th downed almost 2,000 power lines and left over 100,000 customers without power, according to media reports. As of Sunday afternoon, Consumers Energy (CMS) reported almost 90,000 customers without power while DTE Energy (DTE) had approx. 20,000 customers without power. These numbers decreased to ~43,500 CMS customers and ~6,000 DTE customers without power as of Monday morning. Michigan storms have continued to impact DTE and CMS utility operations, with the most recent August 2022 storms in Michigan unfortunately resulting in loss of life and injury when minors came into contact with a downed utility wire.

As a result of system reliability issues prompted by severe storm activity in Michigan, the Michigan Public Service Commission (MPSC) ordered CMS and DTE to submit reports detailing compliance with the Commission's previous system reliability orders. DTE and CMS filed these compliance reports with the MPSC on November 4th and November 5th. The reports detail the challenges causing system reliability issues and outages, and address corrective actions each utility is taking in response to these issues. For example, DTE cites that it forecasts spending $239.5Mn on tree trimming O&M spend versus only $179.8Mn in 2021. Additionally, DTE cites $145Mn spend on the 4.8kV Hardening Program versus $69.3Mn spend in 2021, and $45Mn spend the Customer Excellence program. In 2022 versus $30Mn spend in 2021. We believe DTE's strong earnings year-to-date and relatively lower severe storm activity in 2022 versus 2021 has enabled elevated O&M spend. Similarly, CMS cites $94.4Mn forecasted line clearing (vegetation management) expense versus $73.9Mn in 2021. We continue to monitor MPSC's response to ongoing DTE and CMS reliability and mitigation efforts, and we note that the MPSC plans to hire an independent auditor to audit and oversee MI utility compliance with regulatory orders. *We maintain Buy on shares of DTE with the company trading at a discount to premium peers despite the improving earnings growth outlook. We maintain Neutral on shares of CMS with the company trading in-line with fair value considering lack of visibility into incremental positive share catalysts through year-end 2022.*

US Utilities & IPPs: Michigan Utilities 3Q22 Preview: Where do we stand ahead of 2023 updates? 19 October 2022

WTRG: 3Q beat indeed

3Q Adj EPS came in at $0.26 per share, a solid beat vs. BofAe estimate of $0.22 and the Street's $0.21. Beat was driven by recovery of higher purchased gas costs and customer growth/volume from its regulated water segment, but was partly offset by higher opex driven by inflationary pressures. Company reaffirms EPS guidance of $1.75-$1.80 for the year and we are the midpoint of the range ($1.77) as we think company continues to face political challenges in the states in which it operates. LT EPS growth of 5-7% reaffirmed in which we also remain at the midpoint of. We maintain Neutral rating.

In October, WTRG also entered into an at-the-market (ATM) equity sales agreement with an option to enter into forward equity sales worth up to $500mn of equity in which they plan to use for acquisitions and capex, although no shares have been sold by WTRG yet. Aqua Pennsylvania, a subsidiary, closed its acquisition East Whiteland Township, Chester County, adding approximately $54.4mn in rate base and 8,200 customer connections. Company states it remains on track to increase customers by 2-3% per year from acquisitions and organic customer growth.

Look for commentary on status of various acquisition efforts as key to signaling going forward view after solid continuation in year.

BofA GLOBAL RESEARCH

Price objective basis & risk

Avangrid (AGR)

Our $38 PO is based on an 2024E sum of the parts analysis. The core utilities are valued on by applying discounts to the base sector P/E of 15.7x/14.5x for electric/gas due to below average growth and regulatory jurisdictions. We apply an in-line multiple to the PNM Resources assets with the transaction pending. Both electric and gas peer P/Es are grossed up +5% to reflect capital appreciation across the sector. The renewables are valued at approximately 11x EV/EBITDA, consistent with peers while offshore wind is valued using discounted cash flows at a 12% discount rate. Future potential value

creation from the renewable development 'DevCo' is provided as well. Lastly parent/HoldCo financing negatives are ascribed.

Up/downside risks to achievement of the PO and estimates are 1) earned ROEs at the utilities, 2) utility capital expenditure forecasts, 3) regulatory/political/legislative outcomes, 4) equity needs, 5) offshore wind construction, 6) Iberdrola owns over 80% of AGR common stock, limiting float and presenting a potential for governance conflicts, despite the BoD being majority unaffiliated with Iberdrola. 7) natural disasters, 8) commodity and interest rate fluctuations, and 9) management changes.

CMS Energy (CMS)
Our PO of $58 is based on a SotP relying on 2024E forward P/E multiples for the utility business and a 2024E forward EV/EBITDA multiple for CMS' IPP assets. For the utility seg we apply a 2.0x prem to the avg 24E regulated multiple P/E of 15.4x for the electric seg and of 14.9x for the gas seg, with the 10-yr capex update providing clear sight on ratebase growth and further upside, as well as cont'd favorable regulatory environment, and finally historically proven ability to consistently perform at the high end of guidance range.

Both electric and gas peer P/E multiples are grossed up to 2022 by 5% to reflect capital appreciation across the sector.

For CMS' merchant business we apply a 4x EV/EBITDA multiple, in line with current market value of CMS' power plants. We value Dearborn Industrial Generation (DIG) on a DCF basis given the plant is expected to be sold to Consumers at the end of 2025, with our valuation reflecting the remaining cash flows.

Risks are: 1) earned ROEs declining which reduce CMS utility earnings 2) execution risk on capex and cost cutting which would primarily affect the utility earnings, 3) negatives changes to market energy prices which could affect the DIG plant's ability to re-contract at the assumed prices.

DTE Energy (DTE)
We value DTE Energy at $120 using an SOTP approach. We value the utility segment on a 2024E forward P/E multiple basis and the non-utility segment on a 2024E forward EV/EBITDA multiple basis. For the utility segment we apply a 2x premium to both our regulated electric and gas utility peer multiples (of 15.4x and 14.9x, respectively). Both electric and gas peer P/E multiples are grossed up for a year to 2023 by 5% to reflect capital appreciation across the sector. We value the DTE Vantage segment on a multiple of 2024 EPS - the grossed-up electric multiple of 16.2x to account for the renewable natural gas (RNG) business. We assign an equity value of zero to the Equity Trading segment given potential for earnings volatility and opacity of the segment. We also reduce the equity value for estimated unallocated parent debt by applying a 15.9x multiple to both the interest expense and corporate overhead expenses at the parent. Risks to Price Objective: regulatory/political/legislative actions, realized returns from the unregulated Vantage segment, changes in equity needs, load growth/class mix, equity needs, weather/natural disasters, and interest rate fluctuations.

Entergy (ETR)
Our $135 Price Objective (PO) is based on a sum-of-the-parts analysis. The 2024E electric utilities average P/E of 17.8x (vs 17.3x previously) is grossed-up +5%, to 18.7x, to reflect capital appreciation across the sector. We apply in-line P/E multiples to the subsidiaries except for +2x Texas to reflect the constructive regulation environment and -1x New Orleans based upon historical contentious proceedings. We net out 50% of the parent HoldCo long-term debt and apply a P/E multiple to 50% of the interest expense.

Risks to achievement of our Price Objective is 1) changing rate-making mechanisms or

unexpected regulatory outcomes, 2) earned return on equities by jurisdiction, 3) hurricanes and other weather events, 4) nuclear accidents, safety events, or other incidents, 5) interest rates fluctuations, 6) equity issuances relative to management's forecast and access to capital markets, 7) ability to deploy regulated capital expenditures, 8) pension fund performance and 9) costs and operational volumes at the wholesale commodity subsidiary.

Hawaiian Electric Industries (HE)
Our PO of $33 for Hawaiian Electric Industries is based on a sum of the parts approach. We apply:

1) a 2025E forward P/E multiple which reflects a 1.0x discount to the electric utility peer multiple of 14.9x. We see this as justified given NT challenges, historical execution, and below average growth.

2) a 2023E forward price to book value of 1.32x in-line with SMID bank peers.

We then take into account parent drag.

Downside risks are reduced capital expenditures, inability to control costs leading to lower earned ROE, higher bank loss reserves, and reduced bank interest margin.

Upside risks are additional capital expenditures, ability to control O&M and earn a higher ROE, reduced bank loss reserves, and higher bank interest margin.

NiSource Inc (NI)
Our $34 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2024 forward P/E multiples that are marked-to-market to the latest peer utility multiples of 16.9x for gas and 18.2x for electric with a 1.0x premium for the gas utilities and a 2.0x premium for the electric gas utilities given strong growth rates and incremental renewable buildout, with capex potentially beginning in '24-'26, but acknowledge industrial gen load migration risk. While there still could be some near-term headwinds for solar, we are confident in mgmt. ability to manage and mitigate the impacts.

We note that electric / gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We subtract the value of excess holding company debt at the parent not supporting the utility opcos.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, higher natural gas prices, and inability to execute on renewables additions.

NRG Energy (NRG)
Our $38 Price Objective is based on 2024E sum-of-the-parts analysis. We apply a premium/discount to our 7.0x base EV/FCF multiple, which is premised on long-term historical industry trends, to each segment based on our views of the specific asset type and region. We discount the Generation segment to approximately 5x EV/EBITDA due to operational challenges experienced of late. Within Generation, we apply a 6x disc to ERCOT coal given supply chain challenges. We apply an approximate 6x multiple to Retail, at a premium to the base IPP multiple reflecting the opportunity set and challenges. The potential for additional cross-selling revenue is mitigated by concerns of core margin erosion and customer count declines. We assume approximately $2Bn share repurchases by YE-23.

Upside/Downside risks to the price objective are changes in: 1) commodities including gas, coal, nuclear fuel & power, 2) operating costs, 3) environmental costs and

regulation, 4) retail margins and customer counts, 5) natural disasters, 6) generation volume, 7) regulatory, legislative, and political changes, 8) customer acquisition costs, 9) retail competition, 10) pension and nuclear decommissioning trust assets/liabilities, and 11) interest rates.

Analyst Certification

We, Julien Dumoulin-Smith and Paul Zimbardo, hereby certify that the views each of us has expressed in this research report accurately reflect each of our respective personal views about the subject securities and issuers. We also certify that no part of our respective compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

Disclosures

Important Disclosures

Equity Investment Rating Distribution: Energy Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	77	61.11%	Buy	63	81.82%
Hold	28	22.22%	Hold	21	75.00%
Sell	21	16.67%	Sell	11	52.38%

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	77	53.47%	Buy	54	70.13%
Hold	33	22.92%	Hold	26	78.79%
Sell	34	23.61%	Sell	22	64.71%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	1839	53.46%	Buy	1071	58.24%
Hold	800	23.26%	Hold	498	62.25%
Sell	801	23.28%	Sell	379	47.32%

[R1] Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of both a stock's: absolute total return potential as well as its attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster[R2]
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

[R2]Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the Price Charts website, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Avangrid, CMS Energy, DTE Energy, Entergy Corp., Hawaiian Electric, NiSource Inc, NRG Energy.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: NiSource Inc.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: Avangrid, CMS Energy, DTE Energy, Entergy, NiSource Inc, NRG Energy, Inc.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Avangrid, CMS Energy, DTE Energy, Entergy, Hawaiian Electric, NiSource Inc, NRG Energy, Inc.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: Avangrid, CMS Energy, DTE Energy, Entergy, Hawaiian Electric, NiSource Inc, NRG Energy, Inc.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Avangrid, CMS Energy, DTE Energy, Entergy, NiSource Inc, NRG Energy, Inc.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Avangrid, CMS Energy, DTE Energy, Entergy, NiSource Inc, NRG Energy, Inc.
BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: CMS Energy, DTE Energy, Entergy, NiSource Inc.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Avangrid, CMS Energy, DTE Energy, Entergy Corp., Hawaiian Electric, NiSource Inc, NRG Energy.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Avangrid, CMS Energy, DTE Energy, Entergy, Hawaiian Electric, NiSource Inc, NRG Energy, Inc.
BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

BofAS together with its affiliates beneficially owns a net short position of 0.5% or more of the total issued share capital of this issuer. Ownership positions speak as of a date no more than three trading days prior to the date of this report: CMS Energy.
From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
Refer to BofA Global Research policies relating to conflicts of interest.
"BofA Securities" includes BofA Securities, Inc. ("BofAS") and its affiliates. Investors should contact their BofA Securities representative or Merrill Global Wealth Management financial advisor if they have questions concerning this report or concerning the appropriateness of any investment idea described herein for such investor. "BofA Securities" is a global brand for BofA Global Research.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.

This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

BofA ESGMeter Methodology:

ESGMeter is a proprietary metric based on quantitative analysis and fundamental analyst inputs that reflects our assessment of a company's Environmental, Social and Governance-related attributes. The ESGMeter is intended to indicate a company's likelihood of experiencing stronger financial stability (higher return on equity and lower earnings and price volatility) over the next three years relative to peer group. There are three ESGMeter levels - Low, Medium, and High - which indicate whether a company has attributes most likely to translate into superior financial stability (in the case of a High level) or weaker financial stability (in the case of a Low level) over the next three years relative to its peer group. A Medium level suggests that a company exhibits ESG characteristics that are likely associated with financial stability results in line with its peer group over the next three years. Full details of our methodology, financial stability definition and disclaimers are available at BofA ESGMeter methodology. ESGMeter is not indicative of a company's future stock price performance and is not an investment recommendation or rating. ESGMeter is independent of the BofA Global Research fundamental equity analyst's investment rating, volatility risk rating, income rating or price objective for that company.

Long awaited Analyst Day did disappoint a bit: we agree

NiSource's (NI) Investor Day was technically in-line with what we previewed: a full extension of 6-8% EPS CAGR off unchanged 2021 baseline through 2027. Embedded assumptions on equity/asset sale are front-end loaded which dampens previous plans for accelerated short-term growth through 2024, leading to a disappointing reaction. We appreciate caution in believing the 6-8% EPS CAGR when it is so back-weighted but that is to be expected with the equity 'prefunded' into 2023 nearly entirely. Mgmt failed to clearly communicate that 2024 remains on track to be within the 6-8% EPS CAGR at $1.63-1.73 ($1.68 midpoint vs earlier confusion of $1.63-1.66 depending on version of mgmt comments interpreted). We reduce our 2024 EPS to $1.67, down -8% but stress our 2027 EPS is largely unchanged implying a 7.8% EPS CAGR indeed at the high end of the overall range). We believe the pullback does represent an attractive entry point. We anticipate added volatility in the near-term as minority sale kicks off. We assume only $0.2Bn/yr of equity in 2026-2027. The cautious reaction to the Investor Day also arose from disappointment on strategic review. Macro factors played a large role but the near-term growth guidance is now slower than when the review initiated. Regardless, we see standalone plan as intact, coherent and offering sizable de-risking of inflationary narrative as cost cuts totaling $40-50mn/yr (-3%) offer flat O&M at $1.5Bn/yr

But our updated EPS and SOTP still yields a Buy case

We reduce our PO to $29 from $34 reflecting a roll forward to 2025E SOTP along with a 14.4x & 14.8x Gas/Electric multiple. *We still see a quite compelling Buy case even on our reduced estimates, seeing the affirmation of a 6-8% annual EPS growth of a 2021 base as uniquely positive*. Execution of the plan does indeed assume execution of a minority sale (~20%), which could yet take some time to materialize (we assume a ~20x multiple premised on slides or ~$2Bn). There is still modest risk on execution with customer bill pressures and we watch for regulatory/political (ex IURC) reactions to plans ahead. We stress low risk execution on the sale given peers AES & DUK have undertaken similar actions, with limited opposition. We anticipate interest rate moves will have outsized impact going forward given the knock-on effect to potential sale multiple to financial buyer. We reduce relative premiums: just +1x to NIPSCO Gas/Electric given sale & reduce other biz units to in-line.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

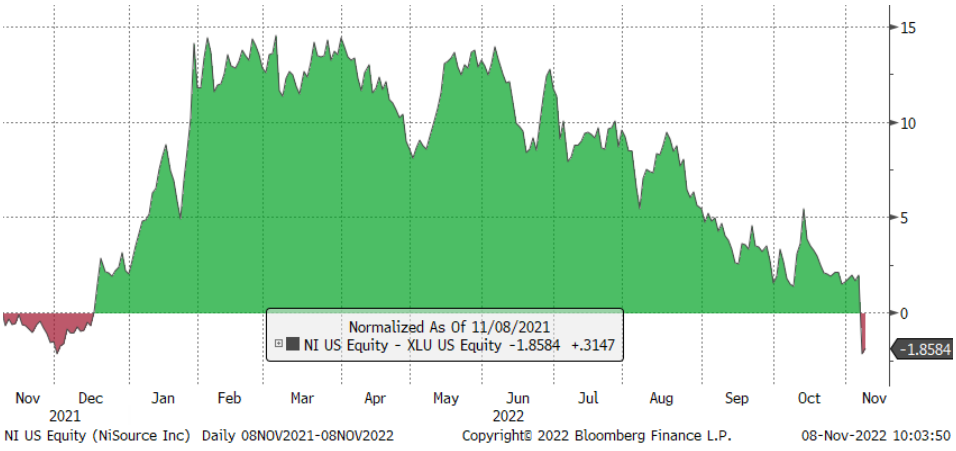
NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

We are Buy rated on NiSource (NI) which is premised on an above-average 6-8% EPS CAGR, improving balance sheet, opportunity for accretive asset sales, and decarbonization investment opportunity. The company's 2022 Investor Day update detailed annual growth within the 6-8% range (i.e. not only a CAGR) with a relatively smooth growth profile an advantage vs some peers with non-linear growth.

Stock Data

Average Daily Volume	5,464,975



Quarterly Earnings Estimates

	2021	2022
Q1	0.77A	0.75A
Q2	0.13A	0.12E
Q3	0.11A	0.10E
Q4	1.10A	0.47E

What were the key debates today?

We provide our view on a few of the key debates raised around the November 7th New York Investor Day. We remain on balance overall positive on shares after the pullback. We appreciate it may yet take some time for investors to give credit for the new guidance given the softer growth at the front end of the plan. 2021-2022 and 2022-2023 are at the lower end of the annual trajectory which management readily acknowledges. We see shares as likely to be a bit more volatile than in the past given the need to find a minority buyer for its NIPSCO electric/gas business.

Exhibit 1: NiSource Equity (NI) Relative Performance vs Utility Peers (XLU)
NI has lagged TTM, giving back meaningful outperformance from earlier this year

Source: Bloomberg

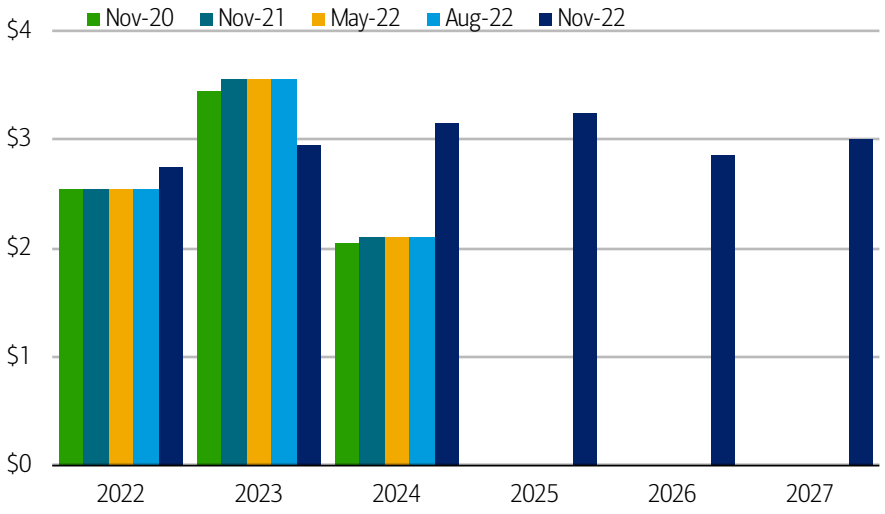
BofA GLOBAL RESEARCH

- **Earnings:** Yes, the EPS CAGR vs annual growth debate was a bit opaque. Management seems to have intended to emphasize the growth rate implied off of 2021 through later periods in the plan, implying that 2024 was indeed a range of $1.63-1.73 rather than implying that the growth was directly off the 2023 baseline (1.65 - 7% off the $1.54 baseline). The guidance misss vs consensus EPS is principally on 2024 and 2025, unfortunate as they are the key valuation years employed by investors. The deviation vs our estimates is quite minimal in 2026-2027. Watch investors once again utilize a particular forward-looking valuation methodology here. Watch for clues on rate case cadence and capex cadence in these later periods to help affirm this six year 6-8% EPS growth outlook. *Inability to achieve the EPS growth in the early years adds to pressures on achieving guidance in the longer-term.*

- **Asset sale:** We see a 20x multiple as seemingly implied from the slides in the deck. We see that as an appropriate rough placeholder for the acquisition multiple of one of the highest growth electric/gas utilities across the utilities sector. This contrasts with the ~14x shares the combined entity trades off 2024 today, but reflects an appropriate starting point where other transactions have ranged into the ~30x ballpark. **On balance, we see more of an upside skew than downside skew to our initial placeholder.** While we read ~$200Mn/yr in further equity to enable the new higher balance sheet metrics, we stress that the sale outcome will dictate and back into 2026 and 2027 equity needs ($200 Mn is below the earlier placeholder assumption of $200-300Mn/yr in guide articulated). Moreover, tax planning and assumptions of becoming a fuller taxpayer in 2025+ also are a critical input assumption to watch.

- **Under-earning:** We have tweaked our expectations on 2024-2025 to reflect *less* lag than we had previously as management is likely to drive rate case and renewed O&M control to minimize lag further in relative 'best year' as new rates are in place. We assume some resumption of lag in future periods including ~100bp under-

earning at NIPSCO electric. This assumption remains essential to achieving the midpoint of 2024 implied EPS range. We could see lower end of the 2024 EPS range if management is less capable in rolling out cost framework or suffers from further delays that could shift timeline of the rate case within 2024. Watch under-earning piece in tandem with execution on cost savings effort – in both key OH & IN jurisdictions. Management appears confident can manage near-term plan in Ohio (just ~30% of total ask) to reasonable place. Low relative award and protracted settlement conversations would suggest likely greater pressures on achieving '23 EPS but that was not message conveyed with 2023 EPS guidance largely inline with what was expected.



- **Reduction in ratebase:** We stress that NiSource's decision to pull-back on ratebase growth to minimize the impact on customers in the near-term (seemingly driving the reduction in outlook to 6-8% from prior, higher 7-9% EPS growth outlook) is potentially among the first of others who could very well pursue a similar action. To date we have not seen companies meaningful reduce or otherwise curtail spending in the short-term but we believe that stakeholder concerns could make this more of a trends.

- **Management:** After the extensive business review we do not expect further changes in the near-term. Mr Yates has moved to Columbus, OH and intends to stay on to lead the company despite earlier perceptions his tenure might be short-lived given the strategic transitions underway.

Changes in Capex Guidance: tracking the shift

Below we include changes in capex guidance midpoint since November 2020. Latest guidance reflets a sizable decrease in 2023 capex, but a significant jump in 2024 capex. The guidance also reflects slightly higher capex in 2022. Notably, NiSource was 1st of potentially multiple companies to cut rate base/capex growth due to bill considerations.

Exhibit 2: Changes in Capex Guidance ($Bn) = framing the evolution
Latest guidance lowered '23 expectation, increased '24 spending... spending trend moderated in near-term to help customers.. still elevated in the longer-term to enable 10%+ RAB growth.

Source: BofA Global Research, Company report

EPS Estimates

We maintain our 2022/2023 estimates, but reduce our 2024 EPS (to $1.67, down -8%). The embedded assumptions on equity raise and the previously front-end loaded growth in 2024 were muted. NiSource seems to have intended to emphasize the growth rate implied off a comparable 2021 base through later periods in the plan, implying that 2024 was indeed a range of $1.63-1.73 rather than implying that the growth was directly off the 2023 baseline (1.65 - 7% off the $1.54 baseline).

Note equity needs were seemingly described as being just $200 Mn/yr in 2026 and 2027 however total financing *implied and measured* in the slides would suggest closer to ~$800 Mn as its placeholder. We look for clarity on what is assumed: this is a key assumption that swings our estimates around the higher end of the EPS CAGR through 2027.

Exhibit 3: NiSource Adjusted EPS Estimates and Financial Snapshot
We maintain our '22/'23, but reduce our '24/'25 EPS

BofA GLOBAL RESEARCH

Valuation: NI Valuation

We roll ahead our valuation by one year to a baseline of 2025E EPS. We MtM latest gas utility FY25E P/E multiple of 14.4x (previously 16.9x) and electric multiple of 14.8x (previously 18.2x). We reduce relative premiums: just +1x to NIPSCO Gas/Electric given sale & reduce other biz units to in-line with base peer P/E multiple. As a result, our SOTP PO now moved to $29 from $34. However, we still see a quite compelling Buy case even on our reduced EPS estimates, seeing the affirmation of a 6-8% EPS CAGR off a '21 base as a uniquely positive fact pattern.

Exhibit 4: NI SOTP Analysis
PO moved to $29 from $34 on roll forward, MTM, and reduce premium to peer multiple

Price objective basis & risk

NiSource Inc (NI)
Our $29 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2025 forward P/E multiples that are marked-to-market to the latest peer utility multiples of 14.4x for gas and 14.8x for electric. We reduce relative premiums to +1x to NIPSCO Gas/Electric given sale & reduce other biz units to in-line with base peer P/E multiple. Latest capex guidance lowered '23 expectations, but moved up '24 spending. We highlight incremental renewable buildout opportunities, but acknowledge industrial gen load migration risk. While there still could be some near-term headwinds for solar, we are confident in mgmt. ability to manage and mitigate the impacts.

Consistent across our coverage universe, the base electric & gas peer P/E multiples are grossed up by +5% to reflect capital appreciation across the sector. We subtract the value of excess holding company debt at the parent not supporting the utility subsidiaries.

Risks to our Price Objective are changes in 1) regulatory, political, and legislative outcomes, 2) customer count and load growth, 3) interest rates, 4) commodities, 5) natural disasters, 6) capital expenditures, 7) equity and asset sale needs.

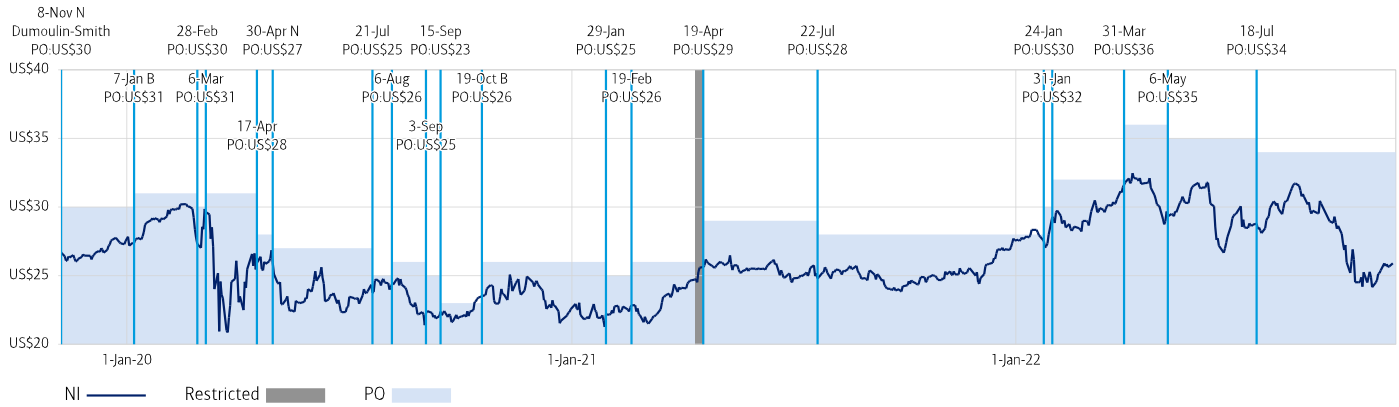
Enterprise Value / Sales	EV = Current Share Price × Current Shares + Minority Equity + Net Debt + Other LT Liabilities	Sales
EV / EBITDA	Enterprise Value	Basic EBIT + Depreciation + Amortization

iQmethod℠ is the set of BofA Global Research standard measures that serve to maintain global consistency under three broad headings: Business Performance, Quality of Earnings, and validations. The key features of iQmethod are: A consistently structured, detailed, and transparent methodology. Guidelines to maximize the effectiveness of the comparative valuation process, and to identify some common pitfalls.



iQdatabase® is our real-time global research database that is sourced directly from our equity analysts' earnings models and includes forecasted as well as historical data for income statements, balance sheets, and cash flow statements for companies covered by BofA Global Research.

iQprofile℠, *iQmethod*℠ are service marks of Bank of America Corporation. *iQdatabase*® is a registered service mark of Bank of America Corporation.

NiSource Inc (NI) Price Chart

B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of a date no more than one trading day prior to the date of the report.

Equity Investment Rating Distribution: Energy Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	77	61.11%	Buy	63	81.82%
Hold	28	22.22%	Hold	21	75.00%
Sell	21	16.67%	Sell	11	52.38%

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	77	53.47%	Buy	54	70.13%
Hold	33	22.92%	Hold	26	78.79%
Sell	34	23.61%	Sell	22	64.71%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	1839	53.46%	Buy	1071	58.24%
Hold	800	23.26%	Hold	498	62.25%
Sell	801	23.28%	Sell	379	47.32%

[R1] Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of both a stock's: absolute total return potential as well as its attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster[R2]
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

[R2] Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the Price Charts website, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: NiSource Inc.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: NiSource Inc.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: NiSource Inc.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: NiSource Inc.

The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: NiSource Inc.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: NiSource Inc.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: NiSource Inc.
BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: NiSource Inc.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: NiSource Inc.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: NiSource Inc.
BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
Refer to BofA Global Research policies relating to conflicts of interest.
"BofA Securities" includes BofA Securities, Inc. ("BofAS") and its affiliates. Investors should contact their BofA Securities representative or Merrill Global Wealth Management financial advisor if they have questions concerning this report or concerning the appropriateness of any investment idea described herein for such investor. "BofA Securities" is a global brand for BofA Global Research.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to

constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

BofA ESGMeter Methodology:

ESGMeter is a proprietary metric based on quantitative analysis and fundamental analyst inputs that reflects our assessment of a company's Environmental, Social and Governance-related attributes. The ESGMeter is intended to indicate a company's likelihood of experiencing stronger financial stability (higher return on equity and lower earnings and price volatility) over the next three years relative to peer group. There are three ESGMeter levels - Low, Medium, and High - which indicate whether a company has attributes most likely to translate into superior financial stability (in the case of a High level) or weaker financial stability (in the case of a Low level) over the next three years relative to its peer group. A Medium level suggests that a company exhibits ESG characteristics that are likely associated with financial stability results in line with its peer group over the next three years. Full details of our methodology, financial stability definition and disclaimers are available at BofA ESGMeter methodology. ESGMeter is not indicative of a company's future stock price performance and is not an investment recommendation or rating. ESGMeter is independent of the BofA Global Research fundamental equity analyst's investment rating, volatility risk rating, income rating or price objective for that company.

Any unauthorized use or disclosure is prohibited. Receipt and review of this information constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion, or information contained herein (including any investment recommendations, estimates or price targets) without first obtaining express permission from an authorized officer of BofA Securities.

Materials prepared by BofA Global Research personnel are based on public information. Facts and views presented in this material have not been reviewed by, and may not reflect information known to, professionals in other business areas of BofA Securities, including investment banking personnel. BofA Securities has established information barriers between BofA Global Research and certain business groups. As a result, BofA Securities does not disclose certain client relationships with, or compensation received from, such issuers. To the extent this material discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this material. BofA Global Research personnel's knowledge of legal proceedings in which any BofA Securities entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this material is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Securities in connection with the legal proceedings or matters relevant to such proceedings.

This information has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of BofAS any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Securities and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This information may contain links to third-party websites. BofA Securities is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this information and is not incorporated by reference. The inclusion of a link does not imply any endorsement by or any affiliation with BofA Securities. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Securities is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Securities is under no obligation to update this information and BofA Securities ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Securities will not update any fact, circumstance or opinion contained herein.

Subject to the quiet period applicable under laws of the various jurisdictions in which we distribute research reports and other legal and BofA Securities policy-related restrictions on the publication of research reports, fundamental equity reports are produced on a regular basis as necessary to keep the investment recommendation current.

Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Securities nor any officer or employee of BofA Securities accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this information.

The California Public Utilities Commission (CPUC) voted to adopted the alternative PD, approving an *unchanged* 2022 cost of capital which will keep 2022 return on equity (ROE) consistent with prior levels - 10.25% ROE for Pacific Gas and Electric (PGE – PG&E Corp [PCG] subsidiary), 10.30% ROE for Southern California Edison (SCE – Edison International [EIX] subsidiary), and 10.20% ROE for San Diego Gas and Electric (SDG&E – Sempra [SRE] subsidiary). California is one of the few states that separates the cost of capital from rate cases. The cost of capital mechanism (CCM) resets CA regulated utility ROEs if trailing average benchmark interest rates are +/-100bps a certain band level. Given low treasury rates in 2021 and 1H22, the CCM 'triggered' and warranted a downward revision in CA ROEs. However, the California utilities - PGE, SCE and SDG&E – filed with the CPUC to request a departure from CCM. The utilities argued the COVID-19 impacted CA utilities differently as compared to the proxy utilities group and overall financial markets, warranting a departure from CCM. See our latest recap on the CCM decision and the CA regulatory backdrop: US Utilities & IPPs: CA Regulatory: CPUC sides with utilities on initial 2022 CoC decision, 2023+ in focus 05 October 2022.

This update highlights the improving CA regulatory environment and represents a favorable leading indicator as the CPUC continues to work toward a solution to the 2023-2026 Cost of Capital proceedings for CA utilities. We see the decision to leave ROE's unchanged as most beneficial to PCG and EIX, given CA concentration. *We reiterate Buy on shares of PCG with the updates* over the past month solidifying *the company's above average earnings growth outlook, underpinned by 10%+ rate base growth which is enabled by the PCG's ambitious undergrounding plan. The more favorable CA regulatory backdrop is key for PCG as the company approaches resolution on its '23-'26 General Rate Case (GRC) after recently increasing GRC capex requests for inflation (details here: PG&E: Early stages of the re-rating, despite wildfire season. Constructive updates 14 September 2022). We maintain Underperform on shares of EIX. Despite the improving CA backdrop, we see the company's* adverse *exposure to* interest rates on wildfire-related and corporate borrowings. For example, last week SCE offered $1.5Bn debt at **~5.9%. This is higher than the 5.3% refinancing rate that management disclosed with 3Q22** and 3.99% weighted average commercial paper that will be repaid with the 2022G Series bonds. Details on rate exposure here: One Step Forward, Two Steps Back: Legacy Liabilities Increase Once Again 02 November 2022. *We reiterate Buy on shares of SRE. While this CA regulatory update is a positive catalyst, updates on LNG progress at Sempra Infrastructure Partners (SIP – SRE subsidiary) are the key driver of shares; the company's 3Q22 update further accelerated progress on LNG development.*

See ETR regulatory update on page 2.

PD: Proposed Decision

ETR: ROEs in focus w/ intervenors & Staff testimony in TX

Intervenors have filed recommendations with the Public Utilities Commission of Texas (PUCT) for Entergy Corp (ETR) ongoing electric rate case in Texas. Recall, Entergy Texas Inc (ETI – ETR subsidiary) originally requested **10.8% return on equity** (ROE), which includes 30bps management performance premium, and **51.21% equity ratio**. This would result in $131.4Mn rate increase, +11.2% rate increase versus current levels. The ROE requested by ETI is materially higher than 9.35% average ROE approved in cases decided in the first nine months of 2022 for regulated utilities across the US. We note that the cost of debt reflected in ETI's request, 3.47% or ETI's 'actual cost of debt', is now below US 30Y treasuries.

We detail select intervenors' and PUCT Staff's recommendations below. The PUCT Staff recommendation is for a **9.45% ROE**, -135bps lower than ETI's request including +30bps performance adder, or -105bps lower than ETI's base request (10.5% ROE exc. the performance adder). *We view the ROE as the most controversial element of ETR TX's request, as suggested by Intervenor recommendations. The 9.45% Staff recommendation is a reasonable level and we continue to believe that a constructive outcome can be reached between the parties.* ***The recent El Paso Electric rate case decision in Texas had a 9.35% ROE with the latest Staff slightly higher. The 30bps performance-based adder requested by ETI remains a key factor to monitor, with all intervenors opposing the request.***

Exhibit 1: Summary of Intervenor Recommendations
We summarize the intervenor recommendations below, highlighting the PUCT Staff's recent proposal

	ETI Request	PUCT Staff	Cities	TIEC
Rate Increase ($Mn)	$131.40	$76.80	($9.90)	N/A
ROE (inc. any performance adders)	10.80%	9.45%	9%	9.40%
Equity Ratio	51.21%	51.21%	51.21	
Performance Based ROE adder?	Yes - 30bps	No	No	No

Source: BofA Global Research, S&P Capital IQ

BofA GLOBAL RESEARCH

A final decision is expected in May 2023, although the timeline may change depending on whether a settlement is reached. We reiterate Buy on shares of ETR given the company's favorable exposure to tax credits introduced in the Inflation Reduction Act (IRA), and commercial and industrial growth outlook driving earnings growth across ETR's service jurisdictions.

Further detailing PUCT Staff's recommendation

PUCT Staff's filing states that ETI's ROE request '*substantially exceeds the current market cost of capital for companies with investment risk similar to ETI*'. Additionally, Staff opposed the performance premium included in ETI's request, stating that the PUCT should reject ETI's '*extraordinary and uncommon*' request for a basis point adder to ROE. However, Staff suggests that the PUCT approve ETI's 'ring-fencing' request, consistent with recent intervenor recommendations and final PUC orders which approved 'ring-fencing' in TX rate cases, including Centerpoint Energy's (CNP) Houston Electric rate case, Sempra (SRE) Oncor electric rate case, and AEP Corp (AEP) Texas electric rate case. Lastly, Staff opposed ETI's proposed tariffs – the Transportation Electrification and Charging Infrastructure (TECI) rider and the Transportation Electrification and Charging Demand Adjustment (TECDA) rider - related to electric vehicles (EVs). Staff's recommendation cited that it was not appropriate for a vertically integrated utilities to own EV charging infrastructure, and the ownership of such facilities should be left to competitive providers.

NI: Joint stipulation filed in OH rate case; Revenue recommendation well-below request

NiSource (NI)'s Columbia Gas of Ohio subsidiary filed a joint stipulation before the Public Utilities Commission of Ohio (PUCO) in its first rate case in the jurisdiction in 13 years. The stipulation was submitted in agreement with Commission staff, the Ohio Consumers' Counsel, and a number of industrial, manufacturing, energy and commercial interest groups. While NI requested a revenue increase of $221M, the stipulation recommends a far lower sum of $68M, 30% of NI's initial request. The parties agreed to an equity ratio of 50.6%, in-line with NI's request, and recommend to the Committee a return on equity (ROE) of 9.6%. This ROE is lower than NI's request at 10.95%, and lower than the Committee's authorization in NI's previous Ohio rate case of 10.39% in 2008. The stipulation recommends a rate base of $3.51B vs NI's request of $3.56B.

While we do not view Ohio as an especially constructive jurisdiction versus other states, we are pleased by the agreement of the broad group of parties involved in the stipulation. We see the recommended ROEs as in-line with other rate cases, and while lower than NI's request, we view the figure as sufficient. That said, we flag the wide, negative gap between NI's requested revenue increase and the stipulation's recommendation as concerning. We note the settlement discussions have been ongoing for ~6+ months hence leading to a relatively lower rev vs the ask. Look for commentary on how this fits into what seems a still subdued EPS growth into '23 (lower end of 6-8%) prior to wider recovery in Indiana.

Price objective basis & risk

Edison International (EIX)

Our $52 PO is based on sum of the parts analysis with a peer 16.2x 2024 P/E grossed-up 5% for group growth. A -3x P/E discount is applied to the CPUC, as well as the Parent/Other segment, and -1x P/E discount to FERC jurisdictional utilities. The discount reflects below-average growth and regulatory considerations, albeit FERC risk profile is

less challenging than the CPUC. The negative wildfire adjustments are netted-out to reflect a probabilistic approach to the risk of shareholder funded wildfires and the ongoing contribution to the CA fund on an NPV basis.

Positive and negative risks are changes in: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) Edison Energy returns, 7) ability to deploy capital, 8) environmental, social, & governance [ESG] profile, and 9) wildfire liabilities for shareholders.

Entergy (ETR)
Our $135 Price Objective (PO) is based on a sum-of-the-parts analysis. The 2024E electric utilities average P/E of 17.8x (vs 17.3x previously) is grossed-up +5%, to 18.7x, to reflect capital appreciation across the sector. We apply in-line P/E multiples to the subsidiaries except for +2x Texas to reflect the constructive regulation environment and -1x New Orleans based upon historical contentious proceedings. We net out 50% of the parent HoldCo long-term debt and apply a P/E multiple to 50% of the interest expense.

Risks to achievement of our Price Objective is 1) changing rate-making mechanisms or unexpected regulatory outcomes, 2) earned return on equities by jurisdiction, 3) hurricanes and other weather events, 4) nuclear accidents, safety events, or other incidents, 5) interest rates fluctuations, 6) equity issuances relative to management's forecast and access to capital markets, 7) ability to deploy regulated capital expenditures, 8) pension fund performance and 9) costs and operational volumes at the wholesale commodity subsidiary.

NiSource Inc (NI)
Our $34 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2024 forward P/E multiples that are marked-to-market to the latest peer utility multiples of 16.9x for gas and 18.2x for electric with a 1.0x premium for the gas utilities and a 2.0x premium for the electric gas utilities given strong growth rates and incremental renewable buildout, with capex potentially beginning in '24-'26, but acknowledge industrial gen load migration risk. While there still could be some near-term headwinds for solar, we are confident in mgmt. ability to manage and mitigate the impacts.

We note that electric / gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We subtract the value of excess holding company debt at the parent not supporting the utility opcos.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, higher natural gas prices, and inability to execute on renewables additions.

PG&E Corporation (PCG)
Our PO of $16 reflects an in-line P/E versus the respective electric (15.4x) and gas (14.9x) peer P/E groups with both grossed-up by 5% to reflect capital appreciation across the sector) based on 2024E. The acute wildfire risk is incorporated separately via a scenario probability weighted at 100% assuming PCG hits the cap in 3-year increments. Lastly, we net out 50% weighting of HoldCo debt and add back 50% weighting of interest expense to derive our Price Objective.

Risks to achievement to estimates and Price Objective include: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) Fire Victim Trust moneitizations, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

Sempra Energy (SRE)
Our $160 PO is based on a sum of the parts valuation of 2024E earnings. The US utilities are valued using the electric (15.4x) and gas (14.9x) average P/E that we grossed-up +5% to account for sector growth. We apply a -2x discounted valuation to the California gas utility (SoCal Gas) for concerns about long-term use of natural gas. We apply a -1x discounted valuation to the California electric utility (SDG&E) to reflect the wildfire risk exposure. We apply a +2x premium to the TX utility (Oncor) for above average growth and high visibility into rider recovery. The Infrastructure segment (SIP) is valued at 12x EV/EBITDA, an implied premium to the Mexican market (5.5x) and select premium US midstream comparable (Williams and TC Energy at approximately 11x) on EV/EBITDA due to its long duration contracted cash flows. The parent drag is treated on a balanced blend of P/E and HoldCo debt and cash netting.

Risks to achievement to estimates and Price Objective include: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) LNG development, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

[R1] Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of both a stock's: absolute total return potential as well as its attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster[R2]
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

[R2] Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the Price Charts website, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Edison Intl, Entergy Corp., NiSource Inc, PG&E Corp., Sempra Energy.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: NiSource Inc, Sempra Energy.

The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Edison Intl, Entergy, NiSource Inc, PG&E Corp., Sempra Energy.
BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
Refer to BofA Global Research policies relating to conflicts of interest.
"BofA Securities" includes BofA Securities, Inc. ("BofAS") and its affiliates. Investors should contact their BofA Securities representative or Merrill Global Wealth Management financial advisor if they have questions concerning this report or concerning the appropriateness of any investment idea described herein for such investor. "BofA Securities" is a global brand for BofA Global Research.

This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any

decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.
BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.
BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

BofA ESGMeter Methodology:

ESGMeter is a proprietary metric based on quantitative analysis and fundamental analyst inputs that reflects our assessment of a company's Environmental, Social and Governance-related attributes. The ESGMeter is intended to indicate a company's likelihood of experiencing stronger financial stability (higher return on equity and lower earnings and price volatility) over the next three years relative to peer group. There are three ESGMeter levels - Low, Medium, and High - which indicate whether a company has attributes most likely to translate into superior financial stability (in the case of a High level) or weaker financial stability (in the case of a Low level) over the next three years relative to its peer group. A Medium level suggests that a company exhibits ESG characteristics that are likely associated with financial stability results in line with its peer group over the next three years. Full details of our methodology, financial stability definition and disclaimers are available at BofA ESGMeter methodology. ESGMeter is not indicative of a company's future stock price performance and is not an investment recommendation or rating. ESGMeter is independent of the BofA Global Research fundamental equity analyst's investment rating, volatility risk rating, income rating or price objective for that company.

Price Objective Change | 20 October 2022 | Equity | United States | Utilities

Key takeaways

- Utility sector has materially de-rated and Consensus 2023/2024 are intact, despite interest and inflationary headwinds.
- We examine the key debates on a name-by-name basis. Intense debates on names including DUK, CNP, PCG, ES, EXC, OGE, NEE, & NI
- Best positioned are ETR, PPL, DTE, NWE, NI, SRE, and CEG. More difficult setups for AWK, ES, and EIX. BKH FY23 flattish.

PO Changes:
AWK to $134 from $158
ALE to $53 from $63
EVRG to $64 from $68
WTRG to $44 from $52
ES to $76 from $88
PNW to $56 from $64
SO to $63 from $77
Details On Page 2.

IRA: Inflation Reduction Act
O&M: Operations and Maintenance

A unique earnings preview as we focus on debates

We provide our comprehensive thoughts on a company-by-company basis. Most utilities we cover are well positioned for FY22 despite growing cost pressures, but the key uncertainty is FY23+ guidance refreshes. For utilities, quarterly EPS generally is an afterthought, but we cannot recall a quarter in recent memory where the print is of as little consequence. As a result, we dedicate our preview to detailing the key investor debates. Critically, with so much uncertainty into earnings profiles, we provide our view of sentiment/positioning from our extensive investor calls, while caveating that this is a small sample size and may not be statistically significant or representative of all.

Who has 2023 risks? Who is 'safe'? The name of the game

The utilities sector is unique in having above-average earnings visibility for three-plus years due to well defined capital expenditures and rate base investment plans, but the crystal ball is the cloudiest as it has been in a decade. A myriad of factors have introduced certainty in 2022, but the breaking point for many has been the sharp rise in financing costs that were unlikely to be accounted for long-term guidances. This is in sharp contrast to the enactment of the Inflation Reduction Act, which should be net positive for the electric utilities sector, particularly the integrated utilities with renewable transformation stories. **Best positioned include ETR, PPL, DTE, NWE, NI, SRE, and CEG. Conversely, we see more challenging updates for AWK, ES, and EIX plus BKH, although we see BKH trading near fair value.**

LNT stands out with the company's FY23 EPS expectations subdued given lack of rate increases and a moderation of robust load growth in 2022. We interpret that the lower end of the 5-7% range in FY23 as likely before an upward inflection later in the cycle as solar rate base investments come on-line. See our full preview here. (https://rsch.baml.com/r?q=EgwYLWRBghCdZ4SUPMg4CA) Our investor conversations also point to sentiment around **XEL** becoming more cautious with some concern that Street estimates are too high on 2023, principally given a lower y/y step up in MN interim rates and limited latitude to control O&M as demonstrated so far in '22. We expect an initial guidance range of $3.30-3.40 in '23, see a breakdown of the trajectory here (https://rsch.baml.com/r?q=Uh2fORCSTBwnoCTxa9nM1g). Expect a relatively quiet update from **PNW** (no '23 guide), with its rate case filing in AZ likely dominating discussion; with few data points (highest regional CP) shares could be volatile around the early Nov election with 2 of 5 commission seats up for a vote, with a Republican sweep likely the best outcome for shares though the outcome is very much up in the air based on latest FiveThirtyEight polling as of Oct 19.

We have more confidence in companies that have 2023 guidance or provided recent financial refreshes such as AEP, PPL, and PCG. **WEC** remains a go-to defensive name. we expect another strong beat in Q3 which will allow mgmt. to pull ahead O&M and de-risk '23 rather than raise '22 guidance for a third time - recent de-rating only makes the entry point more attractive here: see details here (https://rsch.baml.com/r?q=syTtEWjygLO-Ad5TnQH08g).

Other key trends include IRA winners/losers, interest rates, pensions, equity needs/asset sales, fuel costs, rate cases, premium/value spreads, short interest, and overall EPS revisions.

Please see full report for details on bull/bear debates, themes, & much more.

Breaking down key changes. We update valuations of select companies to reflect the latest 15.4x electric, 14.9x natural gas, and 23.7x water. Overall the utilities sector has materially de-rated which we reflect in our latest suite of mark-to-market changes.

Source: Company Filings, Bloomberg, & BofA Global Research

BofA GLOBAL RESEARCH

Important Names to Watch

In our view the best positioned companies for 3Q and EEI are Entergy (ETR), PPL Corp (PPL), DTE Energy (DTE), Northwestern Corp (NWE), NiSource (NI), Sempra (SRE), and Constellation Energy (CEG). *We maintain Buy ratings based on each company's attractive risk-adjusted return profiles, which we elaborate on in the full company sections.*

Entergy is a BofA quarterly top pick where we see a strong quarter with a FY22 guidance increase followed by EEI Conference discussion of how the company is an IRA and reshoring beneficiary. There are media articles daily discussing industrial energy demand destruction and corporate reshoring/decarbonization trends where Entergy's Gulf Coast footprint should take share. We preliminarily estimate that ETR has +5% capex upside from IRA through 2024 with greater upside in future years when Entergy has more renewables in the plan.

PPL released LT guidance in June 2022, so has a more realistic set of assumptions for interest rates, inflation, and other macro factors than many companies who have not refreshed in the past year. The IRA is set to accelerate Kentucky generation transformation capital investments sooner than we or management likely anticipated just a few months ago.

DTE Energy has previewed an accelerating growth profile for countless months, but the great reveal is finally upon us. Shares have lagged due to the highly telegraphed positive update from the integrated resource plan (IRP) and LT guidance but this management team has consistently outperformed even lofty expectations. The IRA benefit to rate base, industrial demand tailwinds, and continued large C&I interest in renewables are all incremental positives since DTE started discussing the upside to the long-term plan. Lastly the public datapoints for the value of renewable natural gas (RNG) investments is supportive of the Vantage profile too.

NorthWestern was recently double-upgraded to Buy based on the improving Montana regulatory backdrop which is both earnings and multiple accretive. It is unclear if management will address the favorable impacts of interim rates on FY22 at this point but expect management to be on the offensive with the narrative on how Montana has favorably evolved.

For **NiSource** we ultimately believe that the 2021+ EPS CAGR is extended and moderated to 6-8% from 7-9%. This reflects an existing profile intact (i.e. not calling for a negative reset in the interim) but simply a moderation from the 'hockey stick' growth into 2024. The entire strategic review and activism processes have been messy, and the November Analyst Day should be a clearing event to allow shares to return to trading more on the fundamental drivers and reflect the above-average profile.

Sempra 3Q is weak versus Consensus, but we anticipate a FY22 guidance increase and FY23 guidance should be comfortably maintained. The true upside for shares is further progress on the LNG development efforts and management strongly committed to providing a 3Q update.

Lastly, **Constellation Energy** is set to increase FY22 guidance and discuss the significant positive attributes from the IRA on the only large cap US pure-play nuclear power company. The more material capital allocation and FY23 guidance initiation positive updates are likely late calendar 2022 or 4Q22 call events but we still see a

favorable 3Q call ahead.

Conversely, we remain cautious on Eversource (ES), Edison International (EIX), and American Water (AWK). We maintain Underperform ratings based on the companies' weaker risk-adjusted total potential return, which are below average for the our coverage return, as we elaborate on in the full company sections.

Eversource has a 3Q miss and we lower our estimates to reflect reduced expectations on offshore wind proceeds as well as higher debt/equity financing costs in the plan. The more protracted asset sale timeline further dampens upside to FY23 redeployment of capital.

Edison International similarly has a 3Q miss and among the most downside to FY23 Consensus in our coverage universe. While many investors have focused on potential 1-2% 2023 misses across the sector, we are 6% below FY23 EIX Consensus, which would further call into question the achievability of the long-term guidance. There historically has been a seasonal preference of investors to buy California utilities after wildfire season (November).

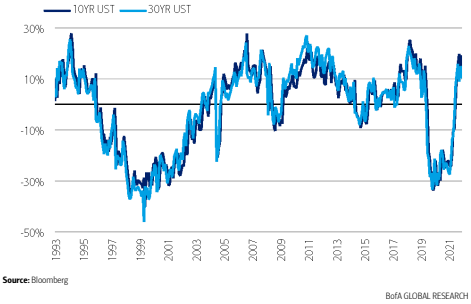
American Water has a 3Q miss and we preliminarily see a 2023 guidance miss with BofA -2% below Consensus. AWK's 7-9% EPS growth profile includes 150-250bp of regulated acquisitions which could be less accretive than before with higher financing costs. Here AWK is uniquely adversely exposed. The previously highlighted pension negative earnings exposure for FY23 should largely be addressed but overall increasing O&M that is starting to manifest in 2H22 could further ding the outlook.

Neutral-rated Black Hills (BKH) was recently downgraded to Neutral due to projected minimal growth YoY in FY23 which could lead to an EPS CAGR rebasing or overall deterioration. The challenges of O&M and financing costs are most acute for small companies where we see potential for a myriad of firms to be impacted.

Two companies where we have positive long-term outlooks could have more challenging updates include PSEG (PEG) and Exelon (EXC).
PEG's 3Q update will leave clarity to be desired as management still has not quantified FY23 pension headwind and the company's 2022 has net pressures from higher financing costs without an offsetting benefit of warm weather.

We still see value in EXC and while FY23 is set to be a less robust growth year, we still anticipate growth with a stress tested +4% YoY improvement better than some bears who fear there is no growth YoY. Look for management to provide the building blocks to clear the overhang here. Finally, AMT (alternative minimum tax) and credit has been topical so we look for management to more forcefully state that it does not need incremental equity and sees path for a *de minimis* AMT cash flow impact

Key Themes



Inflation Reduction Act (IRA): Minimum tax bites and more
Exelon was one of the only utilities to quantify material minimum tax headwinds, but we expect other transmission & distribution (T&D) companies have similar challenges. For example we look for updates from FirstEnergy (FE), Edison International (EIX), and other potentially exposed companies. For EIX, the answer appears to be that management assumes that it can have customer recovery and defer impacts via regulatory memorandum accounts but overall the sector needs to provide more clarity.

On the positive side, almost every company owes the investment community a comprehensive update on capex, ratebase, and financing considerations from the Inflation Reduction Act renewables, nuclear, and hydro tax credits. This ranges from the small to substantial for companies, but expect this to be prominently on display for all companies. *Companies that are not prepared to provide crisp quantification could see underperformance based upon our investor conversations of expectations.*

Interest Rates - #1 Inbound Query in Recent Weeks (By Far)
The utility sector has sold off sharply since September 12 as investors have rapidly reassessed relative valuations, with the sector now trading at a ~20% premium to the 10Y and a ~10% premium to the 30Y UST based on our historical expected linear regression. While on its face this is a cautious data point, we highlight that relative over-valuation based on this metric has persisted for extended periods over the past two decades, including 2005-08, 2009-14, and 2017-2020, making this a far from unprecedented situation both directionally and in terms of magnitude. Relative valuation of the sector to rates has been the single most common topic of inbound queries in recent weeks as investors weigh the defensive characteristics off utilities in an increasingly risk-off market vs. relative valuation that suggests shares have further to fall to maintain historical relationships with rates. *Our preference for high-quality defensive utility shares recognizes near-term volatility as a driver, thus our preference for high-visibility stories with healthy balance sheets.*

Pensions: Still lingering and seemingly getting *worse*

Pensions: Still lingering and seemingly getting worse

The companies with the most acute adverse exposure to pension expense include FirstEnergy, PSE&G, Pinnacle West, Eversource, and to a far lesser degree American Water. To our understanding these companies do not use an average of year-end asset balances (i.e. smoothing multiple years) in their calculations but rather take a point estimate of year end.

We present the latest snapshots of unmitigated pension expense for PEG and FE. PEG has filed for an accounting order in New Jersey which could dampen the exposure by ~33%.

Exhibit 3: PEG Pension Analysis

Equity Needs: Utilities now "on sale" but not good for equity issuers

We expect LNT to provide a refreshed outlook for equity financing. Near-term we see need for an additional issuance of $178m in 2023, representing 40% of the portion that was previously allocated to tax equity investors - note we expect the equity funding portion to track with the 40-45% equity portion at the parent rather than at the utilities. Beyond 2023 we embed a baseline assumption that LNT will fund a similar proportion of incremental capital that had previously been allocated to tax equity with block equity for an additional incremental funding need of ~$270m across '24-25.

Portland General Electric (POR) is another company to watch due to the magnitude of equity needs, which now have a more negative impact on earnings due a lower assumed equity issuance price.

Conversely the companies that could execute buybacks, such as Consolidated Edison or Sempra, now have the opportunity to repurchase shares more accretively. To be clear we do not incorporate repurchase assumptions for either, but the weaker share prices could influence management decisions.

Asset Sales: Clearly value is declining from rates pressure.

Increasing debt and equity costs of capital are likely to negatively impact announced asset sale processes and could influence companies' plans to pursue similar avenues in the near future. The Consolidated Edison renewables asset sale datapoint at 11x was not that robust when considering it included a development company platform (i.e. value but no or negative EBITDA). Companies that have announced asset sales or strategic review plans include Avangrid, American Electric Power, Duke

Energy, Eversource Energy, NiSource, Southwest Gas Holdings, FirstEnergy Corp, PG&E Corp, MDU Resources, and AES Corp.

Another group of companies have either historically engaged in M&A or indicated that divestitures could be an avenue to raise capital. These include CenterPoint Energy, Dominion Energy, NextEra Energy, Southern Company, UGI Corp, and Sempra Energy.

Alternatively some management teams have stated an opportunistic focus on acquisitions as part of their capital allocation framework including Avangrid, Exelon, Vistra, NextEra/NextEra Energy Partners, American Water, Essential Utilities, MDU Resources, and PPL Corp.

We note that above is not intended to be a comprehensive list, but rather to capture the more relevant contours of a company's strategy or philosophy.

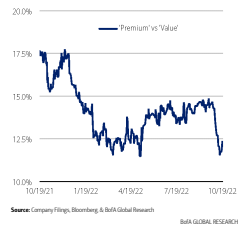
Fuel Costs & Recovery

The acutest of the acute customer bill inflationary pressures are purchased power & fuel costs. We have seen elevated regulatory scrutiny and delayed/extended corporate recovery in states such as Virginia, West Virginia, and Oklahoma, but we still believe this is the early days of scrutiny.

Rate Cases

PNW - We expect PNW to file its next Arizona rate case in late October. This will likely be one of the more closely watched rate case proceedings in 2023 given the highly punitive outcome of the last case and PNW's relative exposure in the state. In addition to a renewable investment rider, we expect PNW to request recovery of higher levels of pension expense, which will be a downside driver in '23 (our est -11c). Watch in-state peer Tucson Electric's case, which was filed several months earlier, as a key leading indicator, given similar outlines to both filings (ROE, renewable rider, consolidation of other mechanisms).

EVRG - EVRG has not made a Kansas rate case filing post-merger, though stakeholders have had the opportunity to articulate their positions in several dockets including Evergy's updated Capital Investment Plan (CIP) filing and annual Integrated Resource Plan (IRP) filings which saw annual updates earlier this year. On balance we expect that key interveners will remain focused on average retail rates in that state, though we note that the relative gap for industrial customers in the state has moderated of late given the sharp upward move in natural gas and Kansas' coal and renewables-heavy fuel mix. IRP and capital plan updates filed earlier this year saw staff and interveners express concern about EVRG's successive capex plans growing by $1B in each of the past two roll forwards. Specifically interveners and staff have called out Kansas-based transmission spending as potentially problematic, linking it to Kansas' significant levels of energy exports and thus not directly providing benefits to state ratepayers. We expect intervener pushback in the coming rate case to generally follow this line of reasoning as regional competitiveness has long been cited as an area where the state lags, driven in part by relatively high rates.



ED - Expect the latest Con Edison Company of New York (CECONY) rate case to be resolved later this fall, in line with the historical pattern of rate cases receiving a joint proposal late in the year with new rates effective Jan 1. We continue to see risks associated with the company incurring a haircut to the requested capital expenditure related to state decarbonization goals (see grid stability spend as less risky) as pressuring the long run CAGR, particularly as there are limited levers to rely on for cost reductions.

LNT - Management flagged a potential rate case filing in Iowa in 2023 which is earlier than previously planned - though Interstate Power & Light (IPL) has historically garnered constructive regulatory outcomes with the last rate case (2019) resulting in a 10% authorized ROE and 51% equity layer, nonetheless we flag this as a regulatory risk worth monitoring as LNT contemplates coming capital plan updates.

Premium vs Value vs Gas

Below we show the latest sub-sector trends where the high quality 'premium' utilities have de-rated to among their lowest premiums versus lower P/E 'value' utilities. Similarly gas utilities have sharply improved versus electrics. This dynamic is surprising as natural gas utilities have fewer incremental investment opportunities relative to electric generation companies. While natural gas bills are generally lower than electrics, the rate shock is more acute in colder climates, posing a risk of regulatory recovery.

Exhibit 5: High P/E vs Low P/E Regulated Utilities 2024 P/E Spread
Premium has de-rated. Will this continue? Defensive environment could lend some support to avoiding compression.

Source: Company Filings, Bloomberg, & BofA Global Research

Short interest: Trending lower

Fundamental short interest in the utilities sector has moderately declined to an average of 2.27% from 2.37% with a median of 1.70%, down from 1.87%. The most concentrated shorts are PCG, ATO, and AGR versus the least concentrated are DUK, SRE, and NEE. The largest increases in short concentration are for Dominion +53% although still one of the lowest followed by FirstEnergy, New Jersey Resources, and Algonquin. The largest declines are for Portland General, NiSource, Fortis, American Electric Power, and Southern Company.

2023 & 2024 Estimates: Consensus Shockingly intact

Surprisingly the overall utility industry 2023 and 2024 estimates are unchanged since June 30th despite the growing headwinds from inflation and interest expense. Notably four of the five companies with the most positive 2024 estimate revisions are all underperform rated: AGR +3%, AQN +2%, HE +2%, and EIX +2%. In contrast, the two companies with the most negative FY24 estimate revisions are OGE and NWE, each -2.2%.

BofA GLOBAL RESEARCH

Format:

On a company-by-company basis we provide (1) provide BofA views on the equity and key debates; (2) investor bull arguments; (3) investor bear arguments; and (4) view on sentiment and positioning with any nuances. *The bull/bear and sentiment thoughts are based on our extensive conversations with diverse investors including long-onlys and hedge funds with a variety of communities such as utility/power dedicated, generalist, energy, clean tech, energy transition, and more. We caveat that inherently these are based on a sampling approach and are not intended to be representative of all investors.*

Premium Utilities

The premium vs value spread has compressed, not surprising with the rise in interest rates which reduces the valuation for growth; however, we believe this is overly simplistic. Many of the premium utilities have long track records of meeting or exceeding their guidance ranges with relatively low-risk business plans. As a result, we see justification for the premia of these high-quality companies expanding relative to the broad utility index.

Ameren Corp. (AEE)

Ameren continues to screen well as an attractively valued premium utility stock with upside yet to be incorporated in the company's formal capital plan. We expect the Q3 update to be relatively modest with formal EPS and capex roll-forward traditionally coming on the Q4 call. Mgmt. has historically discussed next-year drivers at the Q3 update with O&M commentary in particular key to affirming confidence in the trajectory - note this is an area where Ameren's disclosure has lagged peers as mgmt. guides directionally lower with no additional detail, indicating little or no latitude, a contrast with other premium peers. Reiterate Buy on attractive valuation as shares have pulled back along with the rest of the premium utility group.

Bull Case: Long-run capital investment opportunity will be further crystallized over coming updates including 1) addition of MISO transmission capex into the latter portion of the coming plan (will roll to 2027) and 2) Missouri renewables likely on a subsequent update after permitting is secured. Improving visibility into 6-8% EPS trajectory makes this a premium name with upside.

Bear Case: Slow rollout of MISO transmission capex and uncertain timing of when MO renewables will be added to plan driven investors to seek opportunities with more near-term upside catalysts.

Sentiment/positioning: Generally owned and liked by investors as preferred way to gain exposure to MISO transmission theme. Less obvious consensus on regulatory setup (rate proceedings in MO and IL flagged as main risks in recent investor poll). Rush Island legal challenge and accelerated retirement date an open question mark

while legacy Callaway performance issues occasionally flagged as execution question marks.

US Electric Utilities & IPPs: Midwest Coal Generation: Parsing a series of resource updates (AEE, LNT, WEC) 24 June 2022 (https://rsch.baml.com/r?q=9hJymzYeL-jJr0SByCtXIA)

Alliant Energy Corp (LNT)

We continue to like the stock as a relative winner with renewable tailwinds and one of the more intact outlooks. Expect that mgmt. will address near-term challenges directly when setting next year's guidance range with sequential FY23 growth at just +2-3% on our updated estimate of $2.88 for 2023. The valuation premium has contracted to the lowest in 2022 (+4% vs the group) but LNT is a key Inflation Reduction Act (IRA) long-term beneficiary with the current FY23 turbulence just noise.

Bull Case: As the smallest capitalization premium utility ($12Bn vs $21Bn average ex-NextEra) with one of the greenest portfolios, LNT should trade at one of the largest premiums to peers. The profile strengthened with IRA

Bear Case: LNT's long-term EPS guidance of 5-7% with a target around the midpoint lags many utilities and requires extreme cost discipline to achieve.

Sentiment/positioning: Positioning has been very dynamic throughout 2022. Initially investors were justifiable concerned about the short-term outlook related to solar capex in the challenging macro backdrop (supply chain, investigations, etc.) which ultimately eased. Excitement returned after IRA which has given way to renewed questions about 2023 EPS due to cost pressures. Overall we would characterize LNT as a battleground stock.

Alliant Energy Corporation: 2023 and Q3 EPS preview: Long run intact but near-term pressures are real 13 October 2022 (https://rsch.baml.com/r?q=EgwYLWRBghCdZ4SUPMg4CA)

CenterPoint Energy Inc (CNP)

CenterPoint remains one of our preferred regulated utilities due to its leading growth rate (ex-PCG) and fairly conservative plan. We acknowledge that the outlook has diminished with CNP having one of the highest interest rate exposures in the sector due to the reliance on floating/variable rate borrowings. As a result we see new pressures on short- and long-term guidance but believe they are manageable with the growth profile largely intact. The incremental capital opportunities in Houston helps to firm up the profile.

Bull Case: Leading growth, upside to capital expenditures, no equity needs, mostly constructive regulatory jurisdictions, and beneficiary from IRA in Indiana. Although higher interest expense is a challenge, outlook is still solid and is a contrast to many peers.

Bear Case: The new management team only has short track record of performing here, albeit a strong one. The possibility and valuation for further asset sales has diminished while investor preference for natural gas utilities has eroded after the IRA added more investment opportunities for electric utilities. Modest downside to guidance/Consensus from interest rate headwinds

Sentiment/positioning: Mostly positive but less of a consensus long. Some investors have positioned short for a less constructive 3Q update.

CenterPoint Energy: Houston, We Have An Interest Rate Problem. Can Management Offset? 11 October 2022 (https://rsch.baml.com/r?q=GpDULpZgrsQnyQX6IAatYA)

CMS Energy Corporation (CMS)

CMS has underperformed the broader utilities sector since 2Q22 earnings where the company maintained FY22 earnings guidance despite 1H22 earnings outperformance. Nevertheless we reiterate Neutral with shares trading in-line with other premium names despite recent share weakness. While CMS is well positioned ahead for FY23 earnings guidance update expected during 3Q earnings, we do not see other positive catalysts through 2H22.

Bull Case: CMS is largely de-risked into FY23 with line-of-sight to 2023 earnings at the top-end of management's LT CAGR guide, CMS 2023 gas rate case settled, CMS electric rate case in late stages, and the Integrated Resource Plan already announced. This is favorable given investor shift to risk-off, defensive names.

Bear Case: The revival of MPSC reliability efforts following August 2022 storms increases regulatory risk ahead of key CMS electric rate cases. With CMS earnings almost entirely regulated by the MPSC, any signs of deterioration in the MI regulatory backdrop represents a risk to company LT growth outlook. Plus, recent share underperformance augments near-term equity dilution associated with the 1H23 Covert acquisition.

Sentiment/positioning: CMS has had been an investor favorite for multiple years as among the highest quality company given the track record. That halo that shares have enjoyed has dimmed following the decision to not reaffirm guidance early in covid, Enerbank surprise dilution, and overall lower visibility into earnings growth trajectory than prior years. This has manifested in the premium shrinking but CMS is still a +1x premium versus the overall group.

US Utilities & IPPs: Michigan Utilities 3Q22 Preview: Where do we stand ahead of 2023 updates? 19 October 2022 (https://rsch.baml.com/r?q=fwKsipC6hQPZ8RaiGnJ7DA)

DTE Energy Co. (DTE)

It is firmly consensus that DTE will increase its long-term EPS CAGR this Fall, either with EEI or 3Q earnings. This view is based on management commentary, upside from the forthcoming integrated resource plan (IRP), and the fact that DTE has grown 8%+ since 2020. A growing debate is whether management will rebase off the $5.84 original guidance midpoint or the $6.00 revised guidance midpoint. Historical precedent would support the former.

Bull Case: Among the strongest track records of EPS growth on a leading jurisdiction. While the EPS CAGR increases is a consensus expectation, bulls point out the favorable developments that have come in 2022 that could lead to further upside: IRA reducing the need for tax equity.

Bear Case: The core bear argument is that DTE should not trade at a large premium as earnings includes a fairly large amount of unregulated exposure (~10% of 2023 net income guidance ex-corporate/other). The value of the RNG business has eroded with increasing interest rates.

Sentiment/positioning: DTE has been a consensus long for most of 2022 which likely explains why the stock is -4% TTM. Positioning has skewed less long in recent weeks due to concerns about convertible hedging pressure but many we have spoken to plan to increase exposure ahead of EEI.

Eversource Energy (ES)

Reiterate underperform on Eversource despite the -10% underperformed YTD as we still believe that shares are trading at a premium valuation to the fundamentals. We believe that the three core legs of the bull argument are overly optimistic.

Bull Case: The optimistic view is that Eversource can sell its offshore wind business for a favorable valuation, deliver the full $3.0Bn of incremental capital that management has previewed, and have minimal/no equity financing needs. Success on these metrics can lead to ES offering an above-average EPS growth rate and returning to its historical premium to the group.

Bear Case: The combination of declining value for offshore assets (leases & development), equity needs for balance sheet improvement, and regulatory struggles in executing $3Bn of capex leads to a ~6% EPS CAGR, below average for the sector.

Sentiment/positioning: Eversource is a battleground name with dug-in bulls and bears. Sentiment has been deteriorating along with the macro backdrop as the rise in interest rates/decline in stock prices leads to a more challenged outlook.

Eversource Energy: Remain Cautious on Prospects Post-IRA: How much capex can the team deliver? 19 September 2022 (https://rsch.baml.com/r?q=nEfA6XFAVH4yRIAQA2BnXQ)

WEC Energy Group Inc. (WEC)

Reiterate Buy on shares of WEC as among our preferred defensive utility plays. Even after reducing our relative premiums applied to most of the company's WI-based utilities to 3.0x from 4.0x shares remain attractive following sell-off in premium names vs the rest of the group. Continue to prefer quality execution in supportive jurisdictions with shares of WEC screening as among the best in class.

Bull Case: WI outlook was de-risked following a settlement in rate case across all three electric and gas distribution utilities earlier this month with constructive outcome on revenue requirement and incrementally higher equity layer. Cost controls remain a key de-risking lever as well as we see '22 earnings strength likely creating additional latitude to pull ahead expenses where possible in Q4. Energy Infra segment still ahead of plan, could see additional solar generation opportunities identified following IRA legislation passage given historical preference for wind.

Bear Case: Natural gas distribution in Chicago (People's Gas) has rider rolling off at the end of 2023, leaving a question as to how mgmt. will manage lag - either via serial rate cases, or potentially multi-year plans though this would require legislation similar to that passed for electric utilities. Energy Infrastructure earnings growth likely set to moderate as the segment reaches 10% of consolidated earnings.

Sentiment/positioning: Feedback from our conversations with investors screens consistently positive on shares of WEC with the general theme being that now remains the time to 'pay up' for the highest-quality names. Intriguingly our latest survey suggests the buyside might be assuming a faster EPS inflection through 2025 than both our and Street estimates reflect ($5.22).

WEC Energy Group Inc: Among the best beats of Q2 with tax legislation upside 03 August 2022 (https://rsch.baml.com/r?q=ZiCud5dI4HxzalG5xbugsA)

Xcel Energy Inc. (XEL)

Reiterate Buy on shares of XEL given attractive valuation and our forecast for EPS growth compounding near the upper end of mgmt.'s 5-7% target range. We like the recent de-risk with testimony in the MN electric case pointing to ROE upside vs. XEL's allowed of 9.06%, among the lower authorized returns across premium utility names. Execution vs. regulatory priorities has been consistent through 2022 with key resource plan filings in both CO and MN with expectation for greater clarity on renewable opportunities in MN in particular yet to come, likely in the first half of 2023.

Bull Case: XEL remains a defensive premium utility with a strong track record of execution and constructive relationships in its key jurisdictions including MN, CO, and NM. Valuation is not demanding following the recent market volatility which saw XEL and other premiums underperform the broader utility group by several hundred basis points. With major rate cases largely resolved the regulatory outlook for 2023 is less challenging and offers good visibility. MISO tranche 1 upside should manifest in the latter part of the rolled-forward forecast too, with further runway ahead.

Bear Case: O&M latitude is limited with mgmt. increasing its 2022 expectations to point to 2% higher levels on a y/y basis, with expectations for further increases driven principally by inflationary factors. Investors view this with some caution as an indicator that XEL has comparatively less latitude to offset pressures than other premium utilities such as WEC or DTE.

Sentiment/positioning: Sentiment has deteriorated of late, though XEL remains a preferred long among investors. Offsetting its premium defensive characteristics is the concerns about O&M increases outlined in the bear case and ramifications for the company to compound growth at its target 5-7% long-run CAGR.

Xcel Energy Inc: 2023 and Q3 EPS preview: Trajectory on track for one of our favorite defensives 07 October 2022 (https://rsch.baml.com/r?q=Uh2fORCSTBwnoCTxa9nM1g)

Value Utilities

Value has positively re-rated versus premium by 200-300bp recently, not surprising given the rising rate dynamics which mathematically reduces the value of above average growth. While we generally still prefer the premium segment, we still see a robust opportunity set within the lower P/E class. Specifically, we highlight Entergy and PPL as two companies where we see strong FY22s and believe the long-term outlook has strengthened post-Inflation Reduction Act. The fairly conservative guidance plans have upside, a contrast to many companies in our coverage universe as well as the broad market.

American Electric Power, Inc (AEP)

Reiterate Buy on shares of AEP. Attractive valuation at present levels with an outlook that is de-risked at the margins given recent mgmt. refresh of long-run CAGR and 2023 guidance. We are closely watching the West Virginia and Virginia regulatory dynamics that pose risks but neither are likely large enough to derail the company's profile.

Bull Case: Contracted renewables sale comes in at attractive valuation despite largely wind portfolio and no DevCo (negative comps vs. ED at 11x EBITDA). AEP is comparably de-risked vs. peers who have not updated long-run CAGR or capital since 2021 having recently hosted an Analyst Day and refreshed the outlook in light of the current inflationary and higher rate environment.

Bear Case: Lack of tangible upside following the refresh, particularly as mgmt. talked down the opportunity to inflect beyond the 6-7% CAGR. Regulated renewables capital was a disappointment with just a modest step up despite presumed upside from IRA legislation.

Sentiment/positioning: Analyst Day was taken as a generally positive update although on the margins, and in the context of relatively low expectations. Shares are neither well owned nor shorted as reflected by valuation which has generally trended near the group average.

American Electric Power: Analyst Day Takeaways: Few surprises, but an increasingly de-risked outlook 05 October 2022 (https://rsch.baml.com/r?q=bcSIh1wN0BxavXWoht2ZVA)

Consolidated Edison (ED)

Reiterate Underperform on shares of ED. The contracted renewables sale announcement at 11x on 2023 EBITDA was a modest upside surprise vs. our and investor expectations for $6.3B enterprise value, with the final deal announcement at $6.8B. Nonetheless with the transaction now priced in attention shifts back to core fundamentals including the tough regulatory setup for the Con Ed Company of New York (CECONY) rate case which remains in settlement talks with commission staff and key parties. While a joint settlement proposal is not likely before early November, we continue to view the magnitude of the ask as challenging given the macro backdrop and inflationary pressures on ratepayers in particular.

Bull Case: A constructive CECONY rate case joint proposal delivers authorized ROE upside without reducing requested rate increase substantially. Use of proceeds for a stock buyback would also be well-received by investors after the company removed its 2022 equity issuance and pulled '23-24 guidance pending a formal update.

Bear Case: Rate case outcome that applies a haircut to the revenue requirement increase would be cautiously received - we see this as the more likely scenario given existing rate pressures on customers from increased fuel costs and potential need to socialize elevated levels of customer arrears. Unlike other utility peers ED has consistently messaged that the company has little slack to cut O&M substantially, thus we see inflationary pressures as directly impacting earned ROE.

Sentiment/positioning: Sentiment remains mixed with bulls seeing upside to EPS growth with renewables proceeds used to reduce equity needs, de-risking the long-run EPS CAGR. Bears remain focused on near-term risks around the rate case outcome given a) historical difficulty of the NY jurisdiction and b) current macro environment and rate pressures. Shares are one of the better performers YTD as investors have thus far shown enthusiasm for the business simplification strategy thought pending rate case outcome is now the next catalyst for shares in our view.

Dominion Energy (D)

Dominion is one of the worst performing companies recently due to the adverse updates around the offshore wind performance guarantee and Virginia Department of Energy's 2022 Energy Plan published. While Dominion has made progress working with stakeholders, Virginia remains an above-average risk for the company. Dominion has materially de-rated and we do not believe now is the time to capitulate but we now struggle to see shares trading at a premium to the group given average growth, large unregulated earnings mix, Virginia overearnings overhang, and emerging financing pressures. With that in mind, Dominion now trades at a 10% discount to the utility sector and we maintain Buy at this valuation. After our latest management meetings, we remain optimistic that management can find ways to revitalize consolidated growth to compensate shareholders for the above-average risk. Virginia is the clear investor focus between the DOE Energy Plan and Offshore Wind performance guarantee order but the opportunities to create shareholder value from the unregulated merchant business ('contracted assets') is underappreciated. The mark-to-market EPS from merchant Millstone earnings can help to mitigate higher financing costs in the long-term, a unique characteristic versus peers. We acknowledge that these are lower quality unregulated earnings but they would be offsetting similarly valued parent company financing expenses. If Dominion can find a way to raise capital in a more efficient way such as asset sales there is a path to improving the below average 6.5% EPS CAGR. In summary, the path ahead through 3Q/EEI Financial Conference, and January 2022 legislative session is rocky but we see more of the headwinds as priced in after the weakness.

Bull Case: Average growth with visible earnings growth via riders/trackers at a discounted valuation sums up the pitch.

Bear Case: The cautious case for shares relates to adverse legislation being enacted that restores the biennial rate reviews, returns the full extent of prudency determinations to the Virginia State Corporation Commission, and eliminates the overearnings offset mechanism with customer credit reinvestment offsets, etc.

Sentiment/positioning: Dominion has generally been viewed more cautiously by dedicated investors due to the historical Virginia earnings above allowed and guidance resets. Long only (and other) investors still discuss the dividend cut as well as less regulated earnings mix. As a consequence few investors we have spoken to have a high degree of conviction in a positive Dominion position.

Duke Energy (DUK)

Reiterate Buy on DUK following a particularly busy period during which the company hosted an ESG-oriented investor update as well as met with us for a conversation with management. We continue to see shares as attractively priced given the outlook and pending company simplification upon the sale of its contracted renewables business, with the recent 10-year capital plan increase on the margins serving to affirm the outlook for 5-7% regulated EPS growth at the RemainCo.

Bull Case: Given current valuation (0.5x discount to peers) bulls see shares as appropriately de-risked to compensate for a number of uncertainties including 1) coming EPS reset to account for the sale of the renewables business, 2) renewables valuation and ability to pay down holdco debt / reduce interest expense, 3) ability to execute on ambitious $200m O&M reduction plan in 2023+, 4) pending outcomes of North Carolina Carbon Plan proceedings as well as recently-filed NC rate case. While the story today includes an above-average number of moving pieces, prospectively the outlook is for a lower-volatility largely regulated business in generally supportive

jurisdictions with de-levering at the parent under way.

Bear Case: Bears remain focused on the unclear messaging around the renewables sale leading to yet another earnings CAGR reset as fundamentally undermining the case for DUK to compound EPS growth at its target CAGR. Commercial renewable assets are generally seen as lower-quality than ED's portfolio and therefore likely to garner a lower multiple (investors generally see 10-11x), with the sale ultimately dilutive even when accounting for parent de-levering as the principal use of proceeds. Updated capex plan at the ESG Day suggests limited upside from IRA as existing base capex plan had already assumed a carbon value.

Sentiment/positioning: In our investor conversations, Duke is one of the least preferred equities due to the expectation of downside to Street. On balance the most recent round of investor communications has addressed some lingering questions while leaving others - most notably deal proceeds and dilution - still open pending resolution likely in the first half of 2023.

Duke Energy: Meetings Recap: Yes, the Utility Outlook is Intact. Consolidated Set to "Reset"? 10 October 2022 (https://rsch.baml.com/r?q=v85bVrDsCqKUSR559sWSvA)

Entergy Corp. (ETR)

Shares have positively inflected in recent weeks and now trade at ~10% discount to the group versus approx. 12-14% throughout the summer. We attribute the recent rerating to a relatively quiet hurricane season in ETR's service regions, which peels back the storm overhang on shares.

Bull Case: ETR is at the precipice of earnings acceleration with C&I renewables growth augmented by Inflation Reduction Act (IRA) incentives and load growth in the Southeast. IRA tax credits, expected to accrue to customer in the regulated model, will improve customer affordability. Expect momentum coming out of a relatively quiet storm season, with a new CEO at the helm.

Bear Case: ETR's regulatory relationships remain subpar given ongoing System Energy Resources Inc (SERI) litigation and elevated customer affordability pressures augmenting regulatory risk in jurisdictions such as New Orleans. Elevated balance sheet risk given 2022-2024 equity need amid depressed share prices, and limited ability to flex debt given the already pressured FFO/debt ratio.

Sentiment/positioning: Entergy has been a hedge fund favorite for years but the support has weakened over the past year due to growing concerns about the balance sheet and storm exposure. The decline in ownership concentration is favorable as a common bear argument was that it was a crowded long.

Entergy: IRA augments LT growth as near-term storm risk alleviates. Reit. Buy, $135 PO. 20 September 2022 (https://rsch.baml.com/r?q=32HMKJQwNVDrQOSI7UpD!g)

FirstEnergy Corp. (FE)

First Energy shares have inflected from August lows following CEO, Steve Strah, retirement effective September 16th. Parallel to the announcement, the company signaled a potential EPS accretive minority transmission and distribution (T&D) divesture. The dual announcement surprised investors as our discussions from earlier this year indicated the majority did not expect changes to the executive team or additional FE M&A. We remain Neutral on shares of FE given the pension headwinds weighing on earnings growth and elevated uncertainty to the business outlook. With various updates including the new CEO, the potential T&D sale, and forthcoming Ohio rate cases still unknown, and pension headwinds representing a material overhang to long-term EPS CAGR, we see shares trading in line with fair value given the risk profile. We watch carefully the net accretion or dilution from the pending asset sale considering use of proceeds to paydown debt.

Bull Case: The CEO transition and potential divesture catalyzes a revival of company culture, with the decision to hire an external CEO another large step away from legacy HB6 litigation. While FY23 remains challenged, negative pension earnings impact is already appreciated by investors and incorporated in Consensus estimates, and therefore is imbedded in current valuation with any incremental offsets a positive catalyst. We look specifically towards the Nov 9th update at the NYSE as another potential date for a management update.

Bear Case: FE's 2024 Ohio rate case represents a risk to LT earnings with FE overearning in the jurisdiction. Combined with pension headwinds and IRA minimum tax provision, material risk to FY23+ earnings and balance sheet strength.

Sentiment/positioning: Sentiment is improving among investors who believe the CEO turnaround story and who increasingly view FE consolidation more likely than in the past with the company discussing asset sales. FE's transparency into the pension problem has been received favorably against other company's lack of quantifiable guidance on the pension earnings headwind (i.e. PEG).

FirstEnergy: Looking External For New Leadership: Is This an Inflection Point in the Outlook? 16 September 2022 (https://rsch.baml.com/r?q=RB932-msXzY6iGkMj4a3nQ)

Evergy, Inc (EVRG)

The current mgmt. team has assembled a strong track record since the current CEO David Campbell took over in January 2021. In the ensuing quarters EVRG has beaten Street expectations for EPS, reaffirmed and rolled forward its 6-8% long run growth CAGR, and achieved a partial settlement in its Missouri rate cases. Nonetheless we see tangible headwinds ahead as the coming Kansas rate proceeding appears to have a more challenging setup despite commission staff that we view as even-handed and not philosophically aligned with any specific outcome. Despite a strong run in the past 18 months we see the company as more likely to be playing defense with what promises to be a contentious Kansas rate case proceeding, customer rate pressures, and a gap between rate base growth targeted at 6% and EPS growth at 6-8%. Reiterate Neutral on balanced valuation.

Bull Case: Bulls point to a strong track record of execution as indicative that the company will continue to deliver both regulatory wins and strong earnings growth. EVRG could emerge a short-term relative winner as the company is not expected to issue EPS guidance until Q4 and could benefit from investors selling shares perceived to have disappointed in their 2023 outlooks presented at EEI.

Bear Case: It remains difficult to see a case for the stock re-rating in the near term ahead of its second major rate case filing expected in Kansas in early 2023. Street consensus, like BofA estimates, remains biased to the lower end of mgmt.'s 6-8% target range and it is difficult to see a path to the midpoint or upper end absent an inflection in capex, which we see as particularly challenged given vocal opposition from Kansas interveners and increasing scrutiny from the Kansas commission.

Sentiment/positioning: Sentiment has occulated with many investors staying away from the company without conviction into long-term earnings power given one of the

largest deltas between EPS and rate base guidances.

Evergy, Inc: Framing the latest regulatory debates in Kansas and beyond 28 Sept 2022 (https://rsch.baml.com/r?q=8EvoqAt2hMuR3aG7P5apDA)

Exelon Corp. (EXC)

*In our investor conversations recent months, it **was** nearly unanimous that many had lost conviction in management and the lack of a publicly articulated succession plan was an overhang. In fact both the bulls and bears had call Exelon "a 2023 story". A series of negatives have caused 10-15% underperformance from the June highs including minimum tax headwinds, unexpected block equity issuance, and seeming 2023 guidance headwinds. Despite all of this we maintain Buy as we still believe EXC can deliver 7-8% long-term EPS CAGR with a lower risk profile from reliance on riders/trackers, multi-year plans, and forward test years that reduce lag with the backdrop of better than average affordability.*

Bull Case: Premium assets in premium jurisdictions with premium growth should command a premium valuation. The only missing ingredient is premium stewardship to deliver the plan. Estimates are intact and could be conservative if Illinois earned returns are robust and the IRA headwind is lower than guided. Shares can return to the premium they briefly reached earlier in 2022.

Bear Case: T&D utilities are disadvantaged after the IRA enactment due to fewer investment opportunities which should lead to a de-rating. The bears vehemently believe that Exelon's management team justifies a discounted valuation based on historical challenges in achieving guidance and at times a confusing message. With apparent pressures 2023 and long-term guidance, it will be difficult for shares to materially re-rate positive. Lastly, EXC has a history of engaging in acquisitions. With this mix and track record of missing utility earnings guidance justifies a greater discount than the mid-single digit level that it trades at, plus risk to EPS.

Sentiment/positioning: Sentiment has steadily improved and EXC became a consensus long before the events of 2Q and Fall conference messaging that caused many to capitulate. Now we characterize the outlook as somewhat apathetic with low conviction amongst both bulls and bears.

US Utilities & IPPs: PowerPoints: EXC Management Transition 18 October 2022 (https://rsch.baml.com/r?q=0ViaGxlET3qqL8q-XBz5XA)

NiSource Inc. (NI)

The November Analyst Day detailing the outcome of the strategic review and pro-forma growth rate where the debate is whether the comparable growth rate (2021 base) will be extended at 7-9% or moderate lower. 2025+ annual capex would have to increase from $1.9-$2.3Bn in 2024 to $2.7-$3.0Bn to support an 8% EPS CAGR midpoint. This is not unrealistic given $2.6Bn 2022 and $3.6Bn 2023 in elevated generation spending years but we believe a YoY step increase in 2025 could be challenging given affordability considerations. Further increasing debt & equity financing costs add to uncertainty here. With that backdrop we see 7%+ EPS growth even a modest annual capex scenario of $2.3-$2.6Bn that should comfortably support 6-8% growth, one of the highest in the sector. Combined with a discounted valuation, we reiterate Buy. See both a nice long-term view with a catalyst rich outlook.

Bull Case: NI is cheap at ~1x P/E discount to electric peers in 2024-2025 while offering a premium growth rate. Expectations for the strategic review have moderated.

Bear Case: Without a concrete positive update from the strategic review and potentially slowing growth, shares deserve to trade at a larger discount.

Sentiment/positioning: NI was a clear consensus long around the initiation of the strategic review, but sentiment has clearly deteriorated in recent months and weeks. Still there is a vocal contingent of bullish investors. Short interest has declined to a one-year low although is still ~3% of float.

OGE Energy Corp (OGE)

We keep expectations appropriately subdued for a long-term EPS CAGR refresh so recently after the 4Q21 increase and with growing regulatory & affordability uncertainty. The upside for capital expenditures is clear and well known but we would not be surprised to see management dial-back distribution spending to tamp-down on bill inflation. 3Q call should deliver a strong FY22 guidance increase with management already pointing to the top-end of the range on the 2Q call before well above average weather occurred. Reiterate Buy with these favorable short- and long-term dynamics ahead.

Bull Case: While OGE may appear to be more expensive than peers on Consensus estimates for 2024, that does not capture the benefit of

Bear Case: OGE trades at a +2% premium on 2024 Consensus when the company has historically been a discounted valuation with below-average growth.

Sentiment/positioning: OGE has been an investor favorite from late 2021 through most of 2022 on the acceleration of growth but has seen a deterioration in sentiment when the stock reached a premium on 2024 Consensus estimates. Now the stock has turned into a debate name.

Pinnacle West Capital Co. (PNW)

Reiterate Underperform on shares of PNW. Shares continue to trade at only a modest discount to the broader utility group following the latest bout of volatility in the sector. We continue to see PNW as exposed to a consistent and elevated regulatory risk profile, particularly with a coming rate case filing. While concerns about the pension impact on earnings have subsided after reaching a peak during Q2, we continue to expect a drag on 2023 earnings though mgmt. is not likely to offer full-year EPS guidance given the pending rate case filing.

Bull Case: Near-term the stock could see short-term relief if Arizona Corporation Commission (ACC) elections skew favorably for Republicans, though we note that long-term outcomes at the commission are not necessarily dictated along party lines. One potential scenario for outperformance in the short term is linked to the fact that mgmt. is not likely to provide 2023 EPS guidance due to the upcoming rate case filing. With some investors expressing concern that companies offering 2023 guidance could disappoint expectations and underperform, PNW could emerge as a relative winner by not providing guidance.

Bear Case: Expect rate case data points to be limited for the balance of 2022 beyond the initial filing, which is expected in late October or early November. Overall outline of the filing is expected to follow in-state peer Fortis including a renewable generation rider and consolidation of existing rider mechanisms. With lack of intervener or staff testimony until later in '23 we do not see obvious upside catalysts for shares in the near term, outside of a potential short-term election-related move depending on the outcome.

Sentiment/positioning: Investors continue to view shares cautiously heading into a critical election cycle and ahead of another major rate case filing - the stock remains a consensus short.

Pinnacle West: Pension overhang outlook improves, but O&M a near-term drag 04 August 2022 (https://rsch.baml.com/r?q=-ElmJm!SuAADEqyemlLC6g)

PPL Corporation (PPL)

Our conviction in PPL has grown since our August upgrade with management appearing to have made fairly conservative assumptions and the ability to offset operating and financing cost pressures that are negatively impacting many in the industry. It is true that there are floating rate interest expense pressures in 2H22/23+ but it represents only $0.01-$0.02 (~1%), a magnitude that is able to offset. PPL provided its long-awaited multi-year guidance refresh in June when the 10Yr was 3.0-3.25%, approximately 100bp lower than current levels but far above the 1.5% when many peers set long-term guidance in November 2021.

Bull Case: Best-in-class track record of controlling O&M in Pennsylvania core utility can be applied in Kentucky during the planned stay-out and for the newly acquired Rhode Island businesses. De minimis regulatory proceedings conversely keeps shares out of the headlines and the crosshairs of potentially adversarial proceedings.

Bear Case: The 6-8% EPS growth profile is not sustainable with 3-4% rate base growth which is based upon one of the more aggressive O&M reduction trajectories in the sector. PPL also has floating rate interest rate exposure and without plans for a rate case, any inflationary pressures will be the responsibility of shareholders.

Sentiment/positioning: We observed initial minimal traction to our August upgrade but investors have become more receptive in recent weeks

PPL Corporation: Sun set to shine in Kentucky; upgrade to Buy after underperformance & IRA beneficiary 15 August 2022 (https://rsch.baml.com/r?q=MsZD4ItqkVERoLpnyLfUyQ)

Public Service Enterprise Group (PEG)

PEG shares have traded at a steep discount to the group (~10%) since the Street became aware of the 2023 pension earnings headwind in May 2022. Management's reluctance to quantify the earnings headwind or potential cost offsets exacerbated the pension overhang, leaving investors to assume the worst and sending shares lower. Investor concern over PEG's exposure to interest rates and inflationary O&M pressures have compounded pension-related FY23 earnings concerns of late, overshadowing positive macro updates including PEG's eligibility for lucrative IRA production tax credits (PTCs) on its existing nuclear portfolio. Nevertheless, we reiterate our Buy rating on shares of PEG, with the company continuing to trade at 'utility-only' value ($55/sh). We do not believe unregulated Power value is appropriately reflect in shares despite the most attractive backdrop for nuclear operations in years.

Bull Case: Valuation driven. PEG trades at steep discount to group given 2023 earnings risks, yet these risks are already well appreciated by investors and baked into expectations. At these levels, investors are getting an increasingly attractive nuclear profile essentially for 'free'. Additionally, PEG is a lead contender for the offshore wind transmission contract from the NJ BPU. This represents $1Bn+ incremental capex spend, a positive NT catalyst. Bulls acknowledge that a simplification transaction involving nuclear is unlikely to be near-term event but there is the upside optionality.

Bear Case: Shares are essentially 'stuck in the mud' until management addresses FY23 earnings guide or quantifies pension impact, and management has consistently reiterated that PEG will refrain from quantifying the magnitude of pension impact until after year-end 2022. This extends near-term uncertainty on FY23+ earnings outlook while continued market deterioration likely augments PEG's pension issue.

Sentiment/positioning: Investors still mostly on the sidelines until FY23 guidance given pension dynamic. Nevertheless, expect a relatively quiet 3Q / EEI update with the company unlikely to deliver 'bad news' during the new CEO Mr. Ralph LaRossa's inaugural earnings call.

Public Service Enterprise Group: Pension problem goes unsolved, but shares attractive w/ long-term upside. Reit Buy. 03 August 2022 (https://rsch.baml.com/r?q=hwDs9PbEWRU3Qqp6Z2wtkw)

Southern Company (SO)

Reiterate Neutral on Southern. Shares have held up well during the recent market volatility and have outperformed the XLU by ~5% YTD on constructive data points around Vogtle as well as the perceived 'flight to safety' for the defensive company. Fuel load was a critical milestone and investor attention is turning to ability to execute on the remaining deliverables for the upcoming months.

Bull Case: Bull case revolves around execution at Vogtle and lack of further delays, particularly with Unit 3 largely de-risked at present and focus now shifting to the construction schedule for Unit 4. Recent push back of the U4 schedule in particular represents a de-risk vs. previous relatively aggressive timeline. SO has traded at one of the largest premiums in the sector before Kemper and Vogtle large projects with bulls arguing that shares can return to that level.

Bear Case: Stock now screens as overvalued based on forecast growth rate following outperformance thus far in 2022. Core utility growth in the 4-5% range with Vogtle in-servicing step up in 2024 representing a one-time step change, otherwise growth is below peers.

Sentiment/positioning: Investors generally cautious on shares at the current valuation, generally reluctant to step in given large project execution risk and a meaningful level of regulatory risk given the pending Georgia Power rate case. Affordability and regulatory/political considerations are growing, a key debate point with delayed Public Service Commission election.

Southern Company: Trending Positively on Vogtle, ITAACs Filed; IRA Presents Upside; Succession? 01 August 2022 (https://rsch.baml.com/r?q=k9qtgdgFuMivi6DJLmDpRQ)

California Utilities

We preview the 3Q updates for the three large California investor-owned utilities: Edison International (EIX), PG&E Corp (PCG), and Sempra (SRE). It has been a volatile period for the companies. Since July 15 the California names have had robust relative performance which was led by the blistering pace of PCG +46% followed by solid strength in SRE +5% SRE with EIX roughly flat during the period. *We reiterate Buy on PCG/SRE and Underperform on EIX despite the relative performance with growth profile bifurcations.*

The outlook for all California investor-owned utilities has undoubtedly improved recently and in recent months. The California Public Utilities Commission 2022 cost of capital update was favorable for the utilities, see details: CPUC sides with utilities on initial 2022 CoC decision, 2023+ in focus.

US Utilities & IPPs: California 3Q22: Dawn of a New Day for PCG and California Outlooks 18 October 2022 (https://rsch.baml.com/r?q=54G!ScZ5b2F4TUvxd117RA)

Edison International (EIX)

We remain less constructive on EIX due to its relatively high adverse exposure to interest rates at the parent and utility for wildfire expenses. Compared with our July 14th downgrade report we estimate an incremental approximate 125bp increase in BofAe pro-forma financing costs to ~5.9% from ~4.6%. EIX stated it assumes 3.75% interest rates in its long-term plan. This drives (1) +$28Mn [$0.07 EPS] pro-forma parent company and (2) $21Mn [$0.05] wildfire claim utility after-tax interest expense by 2027.

We have focused primarily on debt but there is additional pressure from the parent preferred stock issued in 2021 which resets in 2026/2027. EIX has $1,250Mn Series A 5.375% and $750Bn Series B 5.0% preferred which resets to 5Yr US Treasury + 4.698% in 1H26 and +3.901% in 1H27, respectively. Based on current treasuries this implies a hefty 8-9% preferred and incremental $69Mn pre-tax interest expense. This is a $0.12 $0.13 further headwind by 2027 that notably begins just after the EPS guidance period which runs through 2025. Expect investor attention to shift to FY23 guidance where we are -8% below Consensus with only +2% YoY growth.

Bull Case: EIX now trades within 0.5x 2025 P/E of PCG using Consensus which is too tight of a spread due to PCG's higher risk profile. Potential recovery of legacy wildfire/mudslide charges would remove interest rate risk and improve the earnings outlook. The entire California complex is improving from utility investments and a more supportive CPUC backdrop.

Bear Case: EIX's LT guidance is unachievable due to interest rate exposure which is a substantial overhang on the stock. 3Q quarterly miss followed by FY23 headwinds will lead to rotation out of the name.

Sentiment/positioning: EIX has been a consensus short for some time but sentiment has improved as PCG re-rated and the company began to trade more at parity with PCG on Consensus. Many investors are still not comfortable owning the California utilities but more are willing to assume the above-average risk profile.

PG&E Corporation (PCG)

PCG has had among the most favorable set of updates in 2022: S&P 500 inclusion, general rate case rate base increase, undergrounding/nuclear legislation enactment, non-nuclear generation asset sale plans, wildfire mitigation plan draft approval, 2022 cost of capital support, and self-insurance settlement to name just a few. Despite the outperformance PCG still trades at a 30-35% discount to the utilities group. We agree that PCG has above average risk, but we believe that investors are being compensated for the risk profile with a 9-10% EPS CAGR, well above peers at ~6.6%. In contrast to many utilities and nearly all companies we see upside to long-term guidance, a counterintuitive defensive attribute for PCG.

Bull Case: The forthcoming end of wildfire season is another catalyst for shares which is already gathering momentum and interest from a broad pool of investors. Execution of the non-nuclear asset sale will give a positive valuation mark versus where shares trade and address tail concerns on equity needs.

Bear Case: Can the stock continue to outperform after surging +23% vs peers in the past month? Potential Fire Victim Trust (FVT) sales could limit further re-rating potential

Sentiment/positioning: PCG has been relatively thinly followed since the utility emerged from bankruptcy. Surprisingly non-dedicated investors have been buying throughout 2022 and the latest rally has been from traditional utility investors not wanting to miss out on the potential re-rating.

Sempra Energy (SRE)

After outperforming +20% YTD and ~7% from the July lows, there is certainly less relative upside but we still reiterate Buy with favorable catalysts ahead. 3Q22 should be a strong update as we expect FY22 guidance to increase and critically, an update on LNG development progress. Given the global gas shortage and the energy crisis in Europe, and with winter looming, we expect the LNG development and contracting environment will continue to support longer-dated LNG contracts at attractive project returns despite inflationary pressures.

Bull Case: LNG development tailwinds support (1) long-duration contracts with strong returns that are not yet reflected in current valuation (2) attractive valuation for any further LNG project equity sell-down. Plus, improving CA regulatory backdrop and load growth at Texas utility, Oncor, drives further upside to the earnings outlook.

Bear Case: Should SRE trade near a group multiple (14.6x 2024 vs peers at 14.9x) given the unregulated (Mexico & LNG) and California (SoCal Gas & San Diego Gas & Electric) exposure? Plus, recent outperformance suggests Street expectations largely baking in execution on timely LNG development. This is a potential risky position considering inflationary / supply chain pressures delaying energy projects to date.

Sentiment/positioning: SRE has evolved into a consensus long with short interest below 1% on average since 2Q22 earnings. Our conversations with investors indicate overwhelming focus on the LNG development platform over SRE's utilities businesses, with SRE key value proposition as a way to benefit from LNG tailwinds.

Diversified Utilities

Avangrid Inc. (AGR)

Shares have underperformed the broader utilities group -5% since the 2022 Investor Day in September. Thus, the potential $1.9Bn equity raise outlined during the Investor Day now represents 10-15% of AGR market cap given share declines. This is likely higher than that originally imbedded in management's plan, with shares trading ~$50 prior to the Investor Day. Yet despite recent underperformance, AGR continues to trade at ~5% premium to the broader utilities group (16.7x 2024E vs 15.8x). We reiterate Underperform based on our view that shares instead deserve to trade at a discount given AGR's larger unregulated mix, outstanding rate cases in historically challenged regulatory jurisdictions, legacy inability to achieve long-term guidance, and, critically, AGR's near-term equity need. While 3Q22 earnings should be relatively quiet following the Investor Day, rate cases across AGR's New York, Maine, and Connecticut subsidiaries, New England Clean Energy Connect (NECEC) litigation and PNM Resources (PNM) acquisition remain critical share catalysts to monitor.

Bull Case: More favorable regulatory outcomes, specifically in NY and Maine, may drive earnings growth beyond that embedded in management's 6-7% CAGR 2022-

2025 update. Additionally, upside to the company's renewable development activity, including Inflation Reduction Act (IRA) incentives and elevated power prices, is not reflected in Street forecasts.

Bear Case: Risks to 6-7% EPS CAGR which relies on timely renewable deployments, steady offshore returns, NECEC execution and PNM acquisition. The macro backdrop of rising rates and inflationary pressures elevates operational risk for the company's renewables development efforts. To date, inflationary headwinds have delayed AGR renewable deployments and pressured project returns, specifically offshore wind returns. Additionally, utilities in the Northeast are more exposed to 3Q/4Q affordability concerns given elevated natural gas prices in the region. This is particularly cautionary given AGR's outstanding rate cases across its largest utility subsidiaries in NY, CT and ME, and represents fundamental risk to earnings outlook.

Sentiment/positioning: Our discussions with investors suggest the majority remain cautious on shares of AGR following the '22 Investor Day. However, with the Investor day now in the rearview, we do not see clear NT share catalysts until regulatory outcomes or any meaningful update on NECEC or PNM materialize. We find most investors expect PNM acquisition to close, although many are more cautious on NECEC project execution.

Avangrid: Dissecting Investor Day EPS outlook: Identifying upside and pressure points 03 October 2022 (https://rsch.baml.com/r?q=L5b1WNXb250hHcnvW5cK7g)

Allete Inc. (ALE)

Reiterate our Neutral view on shares of Allete. We view risk reward as balanced given the low multiple vs. peers at which the stock trades along with ALE's unique risk profile. Rate base growth at the Minnesota utility along with exposure to a small number of industrial customers continue to screen cautiously, particularly with lack of staff and intervener support for a stabilization mechanism - see incremental ROE improvement upon resolution of the current case but still a substantial amount of lag in the 100-200 bps range as has historically been the pattern. New Energy solar platform critical to extending the ALLETE Clean Energy (ACE) growth rate but early days still in integrating the business, and we do not see the value creation as part of ALE just yet.

Bull Case: Bulls point to relative valuation which admittedly is stretched to the downside. While utility ROE certainly remains exposed to demand fluctuations from a core group of industrial customers, the underlying industries (taconite production and pulp & paper) have been resilient long-term and have served as reliable customers, if not fast-growing ones. Expect ROE fluctuations to smooth over time at the utility. Solar platform should be well-positioned to capture incremental benefits from IRA legislation as the deal was closed shortly before the bill was announced.

Bear Case: Despite a discounted valuation, it is not obvious where the upward inflection for shares will come in a generally defensive tape. Company guidance already reflects a healthy 15%+ growth rate for the renewables business plus corporate & other, making a further upward inflection unlikely. Despite large and growing renewables business, legacy businesses including a coal mine and carbon-intensive industrial customers keep ALE from consideration as an ESG name.

Sentiment/positioning: Investors have taken note of depressed valuation, though generally we do not consider ALE a consensus long. Sentiment still cautious reflecting view that now is not the time for a utility with outsized macro/recession risk as could manifest in a prolonged downturn for the steel/taconite industry.

Allete Inc: Utility uncertainty keeps a lid on positive renewables story 12 September 2022 (https://rsch.baml.com/r?q=bAcqsgfDbUOfaOLJBPNW!A)

NextEra Energy (NEE)

NEE is one of the clearest IRA beneficiaries as a leading renewables developer and its refreshed guidance is premised on a pre-IRA outlook where there is the potential for more material positive revisions. At a minimum there is visibility to maintaining a leading EPS CAGR for a longer duration. Consensus remains broadly below management's guidance already despite the company pointing to the top-end of the trajectory.

Bull Case: NEE is still -10% YTD versus the utilities index YTD, albeit it well off the lows, but with the material positive from IRA the stock should be outperforming the group. Potential for 4Q22 guidance update.

Bear Case: The more cautious stance of investors relates to macroeconomic considerations rather than company specifics with uncertainty about how the company's stock can perform as a growth equity in a higher rate environment. There are still lingering concerns around the Florida regulatory environment with negative media headlines related to political involvement.

Sentiment/positioning: After years of being a consensus long, positioning has dispersed with broad based bear and bull camps. Dedicated utility investors have been more positive recently with earnings visibility in a challenging economic backdrop and increasing opportunity set of renewables. More clean tech oriented investors have preferred higher beta pure play renewable companies than NEE.

MDU Resources Group Inc (MDU)

Maintain Neutral on shares of MDU given modestly positive total return implied by our sum of the parts valuation. The outlook remains relatively opaque for the stock as we continue to see inflationary pressures impacting margins, particularly in the macro-sensitive construction businesses - the key question remains whether mgmt. successfully reset investor expectations following a disappointing Q2 print. Expect the update on the pending spin of Knife River to be relatively limited too given relatively early days in that process as well.

Bull Case: Mgmt. of MDU has been touting higher-priced construction materials orders in the backlog as likely to start being realized in sales starting in the Q2-Q3 period, and with weather delaying some work earlier in the year the third quarter could provide an upside surprise. Activist involvement as announced in a filing after the company's Q2 report shows that investors remain interested in the sum of the parts story, and could sustain momentum in shares seen since the August announcement - MDU has outperformed the XLU by 16% since market close on Aug 3.

Bear Case: Bearish feedback has generally focused on remaining upside in the stock following outperformance, with sum of the parts starting to look expensive given mark to market for the latest peer multiples for gas, electric, pipeline, and construction. Execution has been a weak spot in recent quarters with mgmt. missing EPS for the past five quarters, with margins at the materials business the most commonly-cited factor. Given macro indicators including CPI prints and fuel prices it is not obvious that the pressures that have weighed on results in recent quarters have abated, though higher pricing should provide incremental relief.

Sentiment/positioning: Short interest in the stock remains modest compared to SMID peers at 1.6% of float. While the announcement of the Knife River spin and activist involvement following the Q2 print were well received by the market, we sense investor skepticism about further upside, particularly in an environment that has rapidly shifted to a macro focus and playing defense.

Southwest Gas Corp (SWX)

We maintain Buy on SWX where we still see a compelling sum-of-the-parts valuation which does not require overly optimistic assumptions to see a path for upside. The path to value creation has certainly become less clear in a rising interest rate environment but we believe that is appropriately reflected in shares.

Bull Case: The assets that are subject to strategic review should garner attractive premium valuations, particularly Centuri for a strategic acquirer. The incremental opportunity investment set for Mountain West is underappreciated and there are potential avenues to enhance earnings.

Bear Case: The valuation for the unregulated midstream (Mountain West) and construction services (Centuri) has declined with the rise in interest rates. Further many are now questioning the willingness of a strategic or private buyer to undertake such a large free cash flow negative acquisition. SWX's reliance on variable rate debt is a material negative in a rising rate environment

Sentiment/positioning: Short interest has steadily increased as the headwinds have mounted and candidly few investors we have spoken with agree with our Buy case.

Southwest Gas Holdings: Finding solace in the desert: valuation attractive, eyes on AZ & asset sales 22 September 2022 (https://rsch.baml.com/r?q=y!5QlD4p-Afn37nmaoMq3A)

Independent Power Producers (IPPs)

AES Corporation

Reiterate Buy as one of the best value opportunities and a key equity for clean energy exposure. Well on track to deliver on FY22, longer term tailwinds with AES an outsized beneficiary of IRA & numerous EPS upside angles. Some investors have questioned the adverse F/X and commodity headwinds but those are poised to flip to be a material positive in FY24+ based on the underlying fundamentals.

Bull Case: 'Mini NextEra' trading at a much lower valuation. IRA a significant positive for long-term earnings and there are still robust green blend-and-extend 2.0 potential avenues. While the non-US businesses of course do not benefit from IRA, the global footprint offers US investors are relatively lower risk avenue to invest in global renewables under a disciplined management team. AES' relationships with large industrials in key geographies gives it an advantage in decarbonization investments.

Bear Case: Fluence remains a drag on EPS, Dayton Power & Light has struggled and its credit metrics remain stubbornly weak, and there is still large project risk for many of the ventures. The company has had challenges in achieving its financial targets historically which limits the degree of investor confidence in the outlook.

Sentiment/positioning: Generally a consensus long among the dedicated investor community although there are many who shy away from the story given the complexity and overall difficulty to model the fragmented company. AES requires tracking of emerging markets, currencies, commodities, and other macro factors that are simply not in many investors' fields of expertise.

AES: 3Q22 preview: Limited pressures here; Why we're getting quite constructive 05 October 2022 (https://rsch.baml.com/r?q=zzqnmKeGfPTmV14dp1qYnw)

Constellation Energy (CEG)

We reiterate Buy on Constellation Energy (CEG) despite the outperformance and positive re-rating versus the broad market. The upcoming 3Q call will be relatively subdued with 2023 guidance initiation expected on the 4Q call and capital allocation likely late 2022 at the earliest. On the 3Q call we expect a FY22 guidance increase with $2.8Bn BofAe above the top-end of $2.35-$2.75Bn guidance range and $2.64Bn Consensus. Investors are eagerly watching for nuclear consolidation opportunities with particular attention on Talen Energy (TLN - Private) bankruptcy confirmation hearing set for December 15th.

Bull Case: Numerous angles but simply stated shares have upside to Consensus, opportunities to deliver share repurchases, and are unique exposed to the nuclear/hydrogen themes that support re-rating post Inflation Reduction Act.

Bear Case: Expectations are elevated for CEG and hydrogen opportunities are years away at the earliest. The immediate attention will be on CEG's plans to acquire other nuclear plants which could be a 'sell the news' event with attention turning to lack of buybacks (a contrast to NRG/VST), regulatory uncertainty, and execution issues.

Sentiment/positioning: Even before its official spin-off from Exelon in February 2022, Constellation has been a consensus long and investor favorite. After the latest spurt of outperformance some investors we have spoken to took further profits but most are still positive on shares. We have experienced the diversification of the shareholder base to include more generalist and retail investors who may be more willing to provide a premium valuation to the unique nuclear company.

Constellation Energy Corp: 3Q Preview: Setting the Stage For a Big 4Q Refresh. CEG Party Continues. 17 October 2022 (https://rsch.baml.com/r?q=RyMTbqnPmrjqnB!b2e1M-g)

NRG Energy Inc.

We acknowledge the bull case on shares that the 2023 guidance is intact (see link below) but we still struggle to see a long-term case to prefer NRG over Vistra or Constellation. NRG is challenged in this elevated power price environment as its power plants are generally older than Texas peers which introduced operational risks. The long-term plan is premised on an unproven retail growth strategy premised in part on cross-selling discretionary purchases into a weakening economy. The sharp rise in power prices could either pressure margins or volumes and management has stated it is willing to sacrifice returns to maintain customer relationships. We see 3Q as likely substantively weaker than expected, however '23 outlook framing in tandem will be key. Outlier datapoints on further monetization of generation assets remains a key element to watch: likely more fossil sales, albeit unclear if meaningfully accretive to the SOTP. Still don't see discussion on corporate strategy evolution as quite ripe yet towards consumer product direction.

Bull Case: The argument here relates to the short-term dynamics with even most of the bulls we speak to recognizing structural risks for the company. After a tumultuous period, management appears confident that it can return to its Analyst Day trajectory of free cash flow per share growth. NRG has one of the highest short interest (7% of float) that has remained elevated since May 2022 which is likely a large reason why the stock has performed so well. NRG still offers one of the higher FCF yields in the S&P 500 plus share repurchases which

Bear Case: At its core, most investors we speak to are cautious on NRG because it is 'short power' in the long-term. 2023 guidance has underappreciated risks around coal pricing, bad debts, inflation, and extended operational outages. Even if the guidance is in-line with Consensus, bears expect shorts to return to this name.

Sentiment/positioning: As mentioned above, NRG is one of the most shorted equities we track. In the past month conversations have gravitated to investor short covering and some shifting to net long to avoid a potential repeat squeeze on earnings.

NRG Energy: What's Next for 2023 & Beyond: Getting Back 'On Track' 30 September 2022 (https://rsch.baml.com/r?q=cGscJRcYOd4Rn3DJudJaAQ)

Vistra (VST)

We reiterate Buy with Vistra one of our top picks with the improving visibility into multiple years of premium free cash flow unique in the market. VST now has the potential to generate the majority of its market cap in FCF the next few years while also creating the Vistra Zero platform with no/minimal equity contributions.

Bull Case: The positive thesis involves some simplistic math that has resonated with many. Assuming VST can deliver ~$3.8Bn adjusted EBITDA over the next few years and a historical ~65% FCF conversion, that implies ~$2.5Bn FCF on a ~$9Bn market cap. This is a ~28% FCF yield before incorporating the benefits of the accrued cash flow. The second angle is Vistra Zero where management is targeting $500Mn EBITDA from $5Bn capital. The new IRA investment tax credits (ITCs) could lead to 40% savings with the remaining 60% potentially covered by project debt. As a result VST can generate an incremental $500Mn EBITDA or $250Mn FCF of premium solar/storage assets that are not reflected in the outlook. Assuming an 11x EBITDA multiple or 10% FCF yield would drive ~$2.5Bn value.

Bear Case: Vistra has traded at elevated free cash flow yields in the past because of questions about the terminal value and reliance on fossil assets that are viewed as ESG negative. Without a path to broadening the shareholder base, the stock lacks a positive re-rating catalyst and it is a well-owned, high beta name among hedge funds. The new CEO & CFO have been in their positions for less than six months and are lesser known to the financial community. VST has a history of acquisitions so there is a possibility that the free cash flow is dedicated to M&A rather than shareholder returns.

Sentiment/positioning: VST has been a staple long position for many hedge funds in recent years due to its attractive valuation and share repurchases but we have observed weakening of sentiment, despite improving fundamentals.

US Electric Utilities & IPPs: Texas Power Tour Takeaways 22 September 2022 (https://rsch.baml.com/r?q=R7CTDXshyMihOPd1O6UbWA)

Water Utilities

As an asset class the water utilities are in relatively decent position with both pros and cons. On the favorable side, water bills are subject to far less inflation compared to gas/electric due to a more stable commodity profile. The average water bill is lower as well which should lead to less contentious regulatory proceedings. The negatives are that ***(1)*** water utilities do not have material new investment opportunities following IRA like integrated electric utilities; and ***(2)*** a reliance on acquisitions for growth is a far more difficult proposition with the increase in cost of capital.

American Water (AWK)

Despite the -18% relative underperformance in 2022 we reiterate Underperform with the weaker FY23 projected and expected deterioration in the long-term growth profile. The accretion from the regulated acquisitions which are 150-250bp of the 7-9% EPS growth profile is diminished. Higher financing costs are particularly damaging to the profile for American Water due to the above-average rate base growth that leads to equity and debt issuances. The decline in the stock price from $150-$160 to $130-$135 leads to incremental dilution in 2023+. This contributes to a forecasted -2% miss on FY23 guidance forthcoming, along with overall higher O&M. While AWK has one of the best bond ladders in the sector with annual only one maturity per year across its entire curve; however, higher prospective assumed parent debt issuances dampens EPS across the sector and AWK is not immune from the trend.

Bull Case: Water utilities have far less commodity inflation than electric/gas with more visible earnings growth. The decline in relative premiums is overdone and the dependable growth rate company is as attractive as ever. Further the clean debt maturity profile leaves AWK among the best setup for a rising rate environment with no cliff refinancings to manage.

Bear Case: The value of pro-ESG companies has diminished with more and more companies offering robust ESG disclosures and metrics. As a high growth utility the rising interest rate environment is more negative for the premium growth companies like AWK at 7-9%. The operating and financing cost pressures are more negative for AWK whose growth profile is reliant on acquisitions.

Sentiment/positioning: Investor sentiment has steadily deteriorated but we have seen a decrease in the quantum of bearish calls as shares have meaningfully underperformed.

American Water Works: Diving deeper through the macro risks & water opportunity set ahead 09 August 2022 (https://rsch.baml.com/r?q=DMhIvpMvwCgIvEV6ruDOQw)

Essential Utilities (WTRG)

We maintain Neutral on shares of WTRG that are trading approximately at fair value. We recently downgraded following the company's hiccups in executing on regulated acquisitions but the profile is balance currently.

Bull Case: Sum of the parts valuation is attractive when including high quality water and gas comparable companies which represents a unique construct. The potential for strategic considerations to highlight value are latent too.

Bear Case: The flip side of the positive case is that some investors ascribe discounted conglomerate valuations for the utilities. Without a natural shareholder base the view is that shares can derate versus comparables.

Sentiment/positioning: We have observed little interest in shares with many believing that shares are trading close to fair value. Investors who are more negatively positioned on American Water often prefer Essential Utilities on the relative valuations. Overall investors tend to prefer either natural gas utilities at lower valuations or 'pay up' for the water exposure that AWK offers.

Essential Utilities: Waiting for the big acquisition splash: Downgrade to Neutral, upside less clear 09 September 2022 (https://rsch.baml.com/r?q=46Fi!cWmd3-yuuF3S9tbIw)

BofA GLOBAL RESEARCH

We present select valuation and estimate refreshes below.

Eversource Energy (ES)

FY22 Drivers: 2H22 declining YoY

We project 3Q22 EPS is flat YoY with 2H22 slightly declining due largely to incremental financing costs. In 1H22 ES adjusted EPS was +$0.22 to $2.16 versus FY22 guidance of +$0.21 growth at the midpoint. Consensus still models growth in the second half of the year which we believe is a bit overly optimistic due to the normal seasonality of the business. If not for higher financing costs, we believe that ES would have been at the top of the tightened FY22 $4.04-$4.14 guidance range although we are still in-line with Street ($4.12 BofA vs $4.11 Consensus)

Exhibit 11: Eversource (ES) FY22 Earnings Drivers

Adjusted EPS Estimates

We moderate FY23+ estimates to reflect reduced sale proceeds for the offshore wind development assets/latter proceeds but more so to incorporate higher cost of capital for financing growth. Visibility into long-term capex has slightly improved with the Massachusetts Department of Public Utilities (DPU) 2022-2025 Grid Modernization Plan approval of $163Mn, although there are other key pieces needed to bridge the full +$3Bn incremental capex that management has discussed.

Valuation: Reduce on MtM and earnings degradation

Our Eversource valuation is based on a 2024 sum-of-the-parts valuation. We lower our PO to $76 from $88 primarily to reflect the decline in the electric/gas/water peer multiples. We now apply 15.4x electric/14.9x natural gas/23.7x water which is down from 17.8x/16.3x/26.1x previously. The base P/E multiples are grossed-up +5% to reflect capital appreciation throughout the sector, consistent methodology in our coverage. We apply discounted valuations to the Connecticut utilities (CL&P and Yankee Gas) and premiums to the Massachusetts utilities to reflect the fundamental regulatory and growth differentiations of the jurisdictions. Approximately $1/sh of the decline is due to our reduced 2024 adjusted EPS forecast with the balance from the mark-to-market.

American Water (AWK)

Adjusted EPS: FY22 intact but long-term moderated

1H22 adjusted EPS increased +$0.20 versus FY22 guidance midpoint forecasted growth of +$0.19 ($4.25 FY21 adjusted versus $4.39-$4.49 guidance). As a result 2H22 is expected to be approximately flat based upon disclosed headwinds. For example the divested assets, higher financing costs, and elevated O&M. We model a -4% miss in 3Q22 $1.47 vs $1.53 Consensus but a +5% beat in 4Q22 ($0.89 vs $0.84 Consensus) with the cadence of Street reversed.

BofA GLOBAL RESEARCH

We have favorably reversed out most of the assumed $0.15-$0.20 adverse earnings headwind from pension due to enhanced visibility to recovery in key states of New Jersey and Pennsylvania.

Higher financing costs are particularly damaging to the profile for American Water due to the above-average rate base growth that leads to equity and debt issuances. The decline in the stock price from $150-$160 to $130-$135 leads to incremental dilution in 2023+. While AWK has one of the best bond ladders in the sector with

annual only one maturity per year across its entire curve; however, higher prospective assumed parent debt issuances dampens EPS across the sector and AWK is not immune from the trend.

Valuation: Reduction on the MtM but other moderation too

Our American Water valuation is based on a 2024 sum-of-the-parts valuation. We lower our PO to $134 from $158 primarily to reflect the decline in the water peer multiple to 23.7x from 26.9x. The base P/E multiples are grossed-up +7% to reflect above-average water capital appreciation throughout the sector, consistent methodology in our coverage. We reduce our P/E multiple to 1x from 2x for the largest utilities to capture the decline in the overall group base multiple and now the fact that growth has declined with the aforementioned financing pressures. Said differently, the accretion from the regulated acquisitions which are 150-250bp of the 7-9% EPS growth profile is diminished.

The +1x premium applied to the military segment has also been flattened to reflect a more normalized cadence of growth (5-6% BofAe growth rate)

Changes to the Price Objective are approximately:

- -$17/sh: Sector P/E contraction to 23.7x from 26.9x
- -$4/sh: Removing the 1x premium for NJ/PA/IL/MO/IN
- -$3/sh: Lowering 2024 EPS -1%, removing military 1x premium, and other

Our Essential Utilities valuation is based on a 2024 sum-of-the-parts valuation. We lower our PO to $44 from $52 primarily to reflect the decline in the water peer multiple to 23.7x from 26.9x. The base P/E multiples are grossed-up +7% to reflect above-average water capital appreciation throughout the sector, consistent methodology in our coverage. We remove the premium multiple we previously applied to the water utilities to reflect a growth profile that is similar to peers.

Evergy (EVRG)

Our forecast incorporates the latest reported actuals as well as our latest views following resolution of the majority of issues in the MO rate case and ahead of next year's Kansas filing. While the final ROE and equity from the MO case were not disclosed, we generally expect a continuation of a mid/high 9s ROE with our forecast embedding an earned ROE in the mid-9s to reflect some residual drag, though the property tax rider should reduce the levels of historical drag to some extent. We likewise expect that EVRG will close the under-earning gap in KS following the resolution of its next rate case filing in 2023 with some residual drag in future years.

Overall we see the low end of EVRG's 6-8% CAGR as achievable through 2025, with our $4.22 estimate in line with Street consensus and reflecting low 6s from the 2020 baseline. Given the solid track record that EVRG has put together of meeting quarterly numbers and reaffirming the long-run 6-8% target, we see a further affirmation and potential extension of this trajectory as critical to affirming the outlook, though these updates are likely not forthcoming until the Q4 call at the earliest.

BofA GLOBAL RESEARCH

We mark-to-market our valuation to reflect the latest 24E peer multiple of 15.7x (previously 18.1). Applied to our updated 2024 EPS estimate, our PO moves to $64 from $68 and we reiterate our Neutral rating given balanced risk/reward at current levels. While there is a modestly positive level of upside on shares at this level we remain on the sidelines at this point given uncertain path to above the upper end of mgmt.'s long run EPS CAGR and coming Kansas rate case process. Reiterate Neutral given modest implied total return at this level.

Pinnacle West Capital (PNW)

Our updated estimates remain below Street consensus, and were last moved higher across the 2023-25 period following Q2 reflecting less punitive pension expense (from -36c in '23 previously to -11c) with further offsets beyond 2023 once the latest rate case provides incremental relief given the mid-year test year.

The ability to offset these impacts via cost cuts appears limited as PNW acknowledged on the earnings call that inflation is driving costs higher, and note that the forecast already embeds a declining O&M per MWh trajectory along with robust sales growth discussed above, making the setup all the more risky in our view from an execution standpoint. Upside risks to our estimates include potential for substantial weather-related earnings swings in the third quarter - note that PNW used this to capture significant O&M pull-ahead benefits in 2020.

Exhibit 20: PNW estimates
EPS growth rate is below 5% through 2025 reflecting pension weakness and lack of rate case recovery

Southern Co (SO)

Our FY22 EPS estimate of $3.74 is modestly above Street estimates of $3.56 based on known and measurables to date. We forecast a large beat vs street for FY22 as we embed robust 1H22 actuals, known rate increases for FY22, and our view on O&M increasing through the back-half of the year as mgmt. pulls forward work. Additionally, we see O&M increasing based on inflation and a poor comparable YoY as SO moves toward more normal business operations post-pandemic and travel, workplace, and other expenses return. We include the convert in our '22 EPS estimates, but no equity thereafter as we do not assume incremental Vogtle costs above what mgmt. has guided to and reserved at this point. To the extent there are additional cost overruns for Vogtle, we would expect potentially more non-core asset sales rather than traditional equity.

Exhibit 22: SO EPS Estimates

We outline our EPS estimates below which remain relatively unchanged through the forecast period

EPS by Business

Subsidiary	2020A	2021E	2022E	2023E	2024E	2025E	2026E

BofA GLOBAL RESEARCH

Our PO moves to $63 (from $77) based on a 2024E Sum-of-the-Parts with peer utility P/E multiples of 15.4x for electric (from 17.2x) and gas of 17.5x (from 16.7x). Across our coverage universe, we gross up the base multiple +5% to reflect forecasted capital appreciation across the sector. We continue to use an in-line multiple for Georgia Power given the risks with the rate case and election that could add some additional focus on costs. We continue to look for more details on the pending climate legislation's impact on Georgia Power's ability to own solar assets. Remember, we value Vogtle earnings at a 4x discount given the risks to costs and recovery.

Exhibit 23: SO Simplified SOTP
Our PO moves to $63 (from $77) based on our MtM

SO Simplified SOTP	EPS	P/E	Prem/Disc	$/Sh	Prior

BofA Securities does and seeks to do business with issuers covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Click for important disclosures. Analyst Certification. Price Objective Basis & Risk.

Price Objective Basis & Risk

AES (AES)
Our price objective is $28 and is based on a sum of the parts analysis applying a blended valuation approach, the summation of 1) EV/EBITDA approach across global generation assets. We use an 8.0x base for US peer IPPs and apply a +6x premium for US distributed generation for further growth expectations, valuing them at 14x 24E EV/EBITDA. Meanwhile, we value the DevCo using a 10% discount on 4.5GW+ of annual renewables beyond '22 given market dynamics. In Asia, we apply various multiples based upon jurisdiction risk across the rest of the portfolio and overall investor appetite as reflected in local peer multiples. We use mark-to-market value of publicly listed LATAM subs as well as apply a P/E methodology for US regulated utilities using the peer multiple of 16.1x 24E. We also credit the company with Vietnam and its investment in Uplight.

Risks to our price objective and rating are: 1) regulatory, legislative, and political changes, 2) international currencies devaluing against the US dollar, 3) changes in value of Fluence (FLNC) subsidiary stock, 4) overall inability to execute on the renewables plan, 5) ability to control costs, 6) financing needs, and 7) tax policies.

Allete Inc (ALE)
Our $53 is based on a sum of the parts analysis

For regulated utilities (Minnesota Power, Superior Water Light & Power, and American Transmission Co) we apply an electric peer multiple of 15.4x grossed up by 5% to account for capital appreciation across the sector. For MP and SWL&P we apply a -2.0x discount to account for below-peer rate base growth of 5% and an elevated risk profile given exposure to large industrial electric customers. For ATC we apply a +4x premium consistent with other owners of ATC (LNT, MGEE, WEC) given upside potential and federal equity layer and ROE.

We value contracted wind on a DCF basis with WACC of 5.75%, for an implied EV/EBITDA valuation of 11.8x 2024E.

We value the wind development company (devco) based on estimated weighted avg MWs in development and assuming a 2.0x EBITDA development spread.

We value the New Energy solar devco using a 50-50 blended development multiple and 8x 2021 trailing EBITDA. We use this methodology as the asset was recently acquired by ALE, and we view the acquisition price as the appropriate latest mark of valuation.

We value the BNI coal mine asset at 7.0x 2024E EPS, in line with publicly-traded peers. We value the Corporate & Other segments at 7.0x 2024 EPS, reflecting modest visibility.

Risks: regulatory/legislative outcomes, capital expenditures vs guidance, taconite/industrial sales changes, returns on unregulated projects, interest rates and commodity price volatility, weather, and natural disasters.

Alliant Energy Corporation (LNT)
Our $57 PO is based on a sum of the parts analysis employing relative premium and discounts to the large cap regulated peer multiple of 14.9x 2024E P/E. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. We apply a 2.0x P/E premium on IPL as we see the rate case overhang being resolved. We apply a 4.0x P/E premium on Wisconsin Power & Light Company reflecting 1) low risk investment nature of the state, 2) above average ROEs, 3) higher than average growth runway for investments, and 4) potential risks around solar deployment in both WI and IA. At ATC, we reflect a 4.0 x P/E premium on LNT's 16% share in the transmission company. Growth expectations for this segment are high, paired with above average ROEs that we believe face less downward pressure vs. regulated state distribution ROEs. We apply an in line multiple at the parent to account for the blend of numerous businesses some which benefit from long term stable PPAs via intercompany generation.

Risks to our Price Objective and rating are 1) Rate case outcomes, 2) further equity dilution beyond our estimates, 3) interest rate fluctuations, 4) natural disasters, and 5) inflation and ability to earn the allowed rate of return.

Ameren Corporation (AEE)
Our $96 price objective is predicated on a P/E based sum of the parts, valuing each business subsidiary relative to the 2024E ratebase weighted peer multiple of 17.3x for electric. We apply a 2.0x premium to peers at AEE Missouri to account for the improving prospects of capital spend, supplemented by a regulatory jurisdiction becoming more favorable - but lack of decoupling. We apply a 2.0x premium to peers at AEE Illinois to account for decoupling on the distribution business which aids in earnings predictability. The overall business is expected to grow at a more meaningful clip than that of peers - we see a 10% EPS CAGR at IL 2020-2024. At ATXI, we apply a 4.0x premium to peers to reflect the FERC ROEs. At the Parent, we assume 2.0x multiple premium reflecting average of the subs and given the healthy debt metrics with FFO/Debt at 17%+. Electric peer P/E multiple is grossed up for a year to 2022 by 5% to reflect capital appreciation across the sector.

The risks to our price objective are the utilities earning their allowed returns or worse, a significant change in 30-year U.S. Treasury bond yields, and adverse regulatory outcomes that could impact mgmt's ability to earn its allowed return.

American Electric Power (AEP)

Our price objective of $102 is based on SOTP analysis. We ascribe a peer forward FY24E P/E multiple (16.5x) with a 1.0x premium for its transmission and distribution utilities and transmission-only utilities segments and a 0x premium (in-line multiple) for all of the vertically integrated utilities. For the unregulated portion, we apply a 3.5x discount to the legacy energy supply and marketing business and an 8x premium to the contracted renewables business to reflect sale aspirations.Our valuation reflects that the Kentucky Power sale pending appears to be nearing close. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector.

Risks to achievement of the price objective are: 1) regulatory outcomes are less favorable than expected, which could result in reduced ROE, 2) large capital intensive projects are subject to delays or cost overruns, which can change the return profile, 3) natural disasters or catastrophic events can affect system reliability and are subject to regulatory cost recovery risk, 4) utilities are subject to interest rate risk to fund their business, which affects cost of capital, 5) uncertainty around announced asset divestitures versus guidance expectations, 6) volatility in volume of electric sales, 7) other adverse regulatory, political, or similar actions.

American Water Works (AWK)

Our PO for American Water Works is $134. We apply the water sector average 23.7x to American Water's 2024E earnings based on the water peer multiple and a 8.1% group EPS CAGR for '18-'23E. We think this multiple is justified as in our view AWK largely drives the peer multiple as the largest publicly traded water utility. We ascribe a 2x premium for NJ, PA, and IL given scope of acquisition opportunities. Also a -1x P/E for Cali utility.

Risks to achievement of the Price Objective (PO) and rating: 1) ability to execute capital and operating expenditures forecasts, 2) equity needs, 3) regulatory outcomes, 4) state and Federal legislative changes, 5) interest rate fluctuations, and 6) military operations.

Avangrid (AGR)

Our $38 PO is based on an 2024E sum of the parts analysis. The core utilities are valued on by applying discounts to the base sector P/E of 15.7x/14.5x for electric/gas due to below average growth and regulatory jurisdictions. We apply an in-line multiple to the PNM Resources assets with the transaction pending. Both electric and gas peer P/Es are grossed up +5% to reflect capital appreciation across the sector. The renewables are valued at approximately 11x EV/EBITDA, consistent with peers while offshore wind is valued using discounted cash flows at a 12% discount rate. Future potential value creation from the renewable development 'DevCo' is provided as well. Lastly parent/HoldCo financing negatives are ascribed.

Up/downside risks to achievement of the PO and estimates are 1) earned ROEs at the utilities, 2) utility capital expenditure forecasts, 3) regulatory/political/legislative outcomes, 4) equity needs, 5) offshore wind construction, 6) Iberdrola owns over 80% of AGR common stock, limiting float and presenting a potential for governance conflicts, despite the BoD being majority unaffiliated with Iberdrola. 7) natural disasters, 8) commodity and interest rate fluctuations, and 9) management changes.

Black Hills Corporation (BKH)

Our $66 valuation is based on a sum-of-the-parts analysis. We apply the peer average electric (14.8x) and natural gas (14.5x) 2024E P/E multiples. We gross-up +5% the base multiples across the coverage universe to reflect capital appreciation in the sector. We apply an in-line P/E multiple with neither a premium nor discount. Coal Mine: We apply an 8x peer EV/EBITDA multiple, which is in line with other PRB coal producers. Based on our view of the strength/maintainability of different coal plant output contracts, we apply a discount/prem multiple to that portion of the mine. IPP Assets: We use the recent sale price and '23 EV/EBITDA multiple for Pueblo Airport and Wygen I assets, respectively. Parent Expense, Debt, and Eliminations: We apply an average regulatory P/E multiple to this segments income. This captures some Interco revenues that are double counted as well as parent SG&A drag and debt.

Downside risks: inability to earn the authorized rate of return, unfavorable regulatory outcomes, reductions in capital expenditures forecasts, higher operating and financing costs, lower sales volumes, unfavorable political and legislative changes , higher interest rates, and natural disasters.

Upside risks: ability to earn above the authorized rate of return, favorable regulatory outcomes, higher capex deployment, lower operating and financing costs, higher sales volumes, favorable political and legislative changes , decrease in interest rates.

CenterPoint Energy (CNP)

Our CenterPoint Energy PO is $30 using a 2024E sum-of-the-parts methodology. We apply the 14.4x electric and 13.5x gas base multiples which we gross-up +5% across our coverage to reflect sector growth. We apply a 20% (3.0x) premium due to above-average growth and constructive jurisdictions.

Previously we utilizes a 2024E P/E sum-of-the-parts with 17.3x electric and 16.8x gas P/Es and a 25% (4.0x) premium.

Risks are 1) ability to deploy capital expenditures and earn the regulatory allowed rate of return, 2) regulatory/political/legislative actions, 3) changes in equity needs, 4) interest rates, 6) natural disasters, and 7) management changes.

CMS Energy (CMS)

Our PO of $58 is based on a SotP relying on 2024E forward P/E multiples for the utility business and a 2024E forward EV/EBITDA multiple for CMS' IPP assets. For the utility seg we apply a 2.0x prem to the avg 24E regulated multiple P/E of 15.4x for the electric seg and of 14.9x for the gas seg, with the 10-yr capex update providing clear sight on ratebase growth and further upside, as well as cont'd favorable regulatory environment, and finally historically proven ability to consistently perform at the high end of guidance range.

Both electric and gas peer P/E multiples are grossed up to 2022 by 5% to reflect capital appreciation across the sector.

For CMS' merchant business we apply a 4x EV/EBITDA multiple, in line with current market value of CMS' power plants. We value Dearborn Industrial Generation (DIG) on a DCF basis given the plant is expected to be sold to Consumers at the end of 2025, with our valuation reflecting the remaining cash flows.

Risks are: 1) earned ROEs declining which reduce CMS utility earnings 2) execution risk on capex and cost cutting which would primarily affect the utility earnings, 3) negatives changes to market energy prices which could affect the DIG plant's ability to re-contract at the assumed prices.

Consolidated Edison (ED)

Our $84 PO is based on a sum-of-the-parts analysis applying premiums and discounts to the regulated group multiples 17.1x/16.7x for electric/gas respectively with a -2.0x disc. to Electric, Steam, & Gas to reflect Covid recovery overhang and Steam for lack of decoupling. Both electric and gas peer 2024 P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We further apply an EV/EBITDA approach on 2024E EBITDA to the CEB (renewables) business using a 12.0x multiple for both the legacy portfolio and the renewables portfolio seeing it as having higher quality returns.

Upside/Downside risks to achievement of the Price Objective and Rating are 1) earned regulatory returns, 2) capital expenditures, 3) regulatory/political/legislative changes, 4) interest rates, 5) natural disasters, 6) execution on unregulated projects, 7) Covid, 8) ability to complete the Mountain Valley Pipeline, and 9) raw materials costs and supply-chain delivery timelines.

Constellation Energy Corp (CEG)
Our $109 Price Objective is based on a 11.8% 2024E equity Free Cash Flow yield (FCF yield) on an unhedged/'open' basis. The 11.8% FCF yield represents the median of energy comparable peers.

Risks to achievement of the Price Objective and rating are: 1) changes in energy & capacity prices, 2) retail margins, renewals, win rate, & overall market share, 3) operating and capital costs, 4) capital allocation decisions including M&A, 5) nuclear incidents or accidents, 6) legislative and regulatory changes, 7) nuclear fuel costs & availability, 8) change in environmental standards for generation assets, 9) management turnover, 10) pension & nuclear decommissioning trust returns, 11) credit rating agency requirements, and 12) interest rates.

Dominion Energy (D)
We value Dominion Energy at $94 using a 2024E sum-of-the-parts analysis. For the utilities we apply the comparable electric (18.3x) and gas (16.9x) peer multiples which we gross-up by 5% to reflect capital appreciation across the sector. We apply premiums of 2x for Virginia and 2x for South Carolina electric utilities and +3x to the gas utilities in Ohio, Utah, North Carolina, and South Carolina. We apply discount adjustments to lower value utility sources in South Carolina (NND) and Utah (Wexpro) as well as the South Carolina bill credits.
Contracted assets are valued based on a 12.7x EV/EBITDA for renewables and discounted cash flow analyses for Cove Point and Millstone at the prevailing discount rates reflecting the risk characteristics. For remaining debt beyond that allocated to state utilities, we include a 50% weight towards a straight netting of leverage, with the remaining 50% using a P/E multiple on associated interest expense, in line with the methodology employed for diversified utilities with relatively higher levers of leverage

Risk to achievement of the Price Objective and Rating are 1) regulatory, legislative, and political actions, 2) ability to earn the regulatory allowed ROE, 3) capital markets and equity requirements, 4) changes to the capital expenditure forecast for both regulated & unregulated segments, 5) volatility in interest rates and pension returns, 6) changes in commodity prices, and 6) natural disasters.

DTE Energy (DTE)
We value DTE Energy at $120 using an SOTP approach. We value the utility segment on a 2024E forward P/E multiple basis and the non-utility segment on a 2024E forward EV/EBITDA multiple basis. For the utility segment we apply a 2x premium to both our regulated electric and gas utility peer multiples (of 15.4x and 14.9x, respectively). Both electric and gas peer P/E multiples are grossed up for a year to 2023 by 5% to reflect capital appreciation across the sector. We value the DTE Vantage segment on a multiple of 2024 EPS - the grossed-up electric multiple of 16.2x to account for the renewable natural gas (RNG) business. We assign an equity value of zero to the Equity Trading segment given potential for earnings volatility and opacity of the segment. We also reduce the equity value for estimated unallocated parent debt by applying a 15.9x multiple to both the interest expense and corporate overhead expenses at the parent. Risks to Price Objective: regulatory/political/legislative actions, realized returns from the unregulated Vantage segment, changes in equity needs, load growth/class mix, equity needs, weather/natural disasters, and interest rate fluctuations.

Duke Energy (DUK)
Our $110 PO is derived from a sum-of-the-parts valuation. We value the Electric and Gas utilities using peer 2024E P/E multiples. We apply a 4x multiple premium to Duke's operations in FL and 3x in IN to reflect more favorable regulatory environments (and potential generation opps in IN). We apply a 3x multiple to the Carolinas given upside to spending in improving regulatory construct combined with latest IRP & wider legislative reforms into 2021. We value the other regulated electric utilities at 15.7x and the gas utilities at peer group multiples of 14.5x 2024E P/E, respectively. Both electric and gas peer P/E multiples are grossed up by 5% for the groups CAGR to reflect capital appreciation across the sector. The commercial midstream, and transmission are valued on a 2024E EV/EBITDA basis. We use 9.0x multiples for midstream and transmission segments. We add the net present value of renewable segment using an 8% discount rate. We subtract out the impact of commercial debt, and add back for the renewable debt. Upside risks: constructive rate case results, higher capital expenditure additions vs our assumptions, lower interest rates. Downside risks: poor rate case results, operating errors, and negative changes in the regulatory environment, Macro risks: Increases in interest rates and decreases in equity market valuations.

Edison International (EIX)
Our $50 PO is based on sum of the parts analysis with a peer 15.4x 2024 P/E grossed-up 5% for group growth. A -3x P/E discount is applied to the CPUC, as well as the Parent/Other segment, and -1x P/E discount to FERC jurisdictional utilities. The discount reflects below-average growth and regulatory considerations, albeit FERC risk profile is less challenging than the CPUC. The negative wildfire adjustments are netted-out to reflect a probabilistic approach to the risk of shareholder funded wildfires and the ongoing contribution to the CA fund on an NPV basis.

Risks include changes in: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) Edison Energy returns, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

Entergy (ETR)
Our $135 Price Objective (PO) is based on a sum-of-the-parts analysis. The 2024E electric utilities average P/E of 17.8x (vs 17.3x previously) is grossed-up +5%, to 18.7x, to reflect capital appreciation across the sector. We apply in-line P/E multiples to the subsidiaries except for +2x Texas to reflect the constructive regulation environment and -1x New Orleans based upon historical contentious proceedings. We net out 50% of the parent HoldCo long-term debt and apply a P/E multiple to 50% of the interest expense.

Risks to achievement of our Price Objective is 1) changing rate-making mechanisms or unexpected regulatory outcomes, 2) earned return on equities by jurisdiction, 3) hurricanes and other weather events, 4) nuclear accidents, safety events, or other incidents, 5) interest rates fluctuations, 6) equity issuances relative to management's forecast and access to capital markets, 7) ability to deploy regulated capital expenditures, 8) pension fund performance and 9) costs and operational volumes at the wholesale commodity subsidiary.

Essential Utilities (WTRG)
Our price objective is $44 based on our sum of the parts methodology applying a 24E peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. These peer multiples are 23.7x and 14.9x. We apply a 1.0x premium to Peoples Gas given the organic growth opportunities. We net out parent drag with a blended multiple.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Risks to the upside are accretive acquisitions, constructive regulatory outcomes, and upward rerating of gas multiples

Evergy, Inc (EVRG)
Our $64 price objective for Evergy (EVRG) is based on sum of the parts valuation, applying an in-line utility peer 2024E P/E of 15.4x. The electric peer P/E multiple is grossed up for by one year by 5% to reflect capital appreciation across the sector. We further apply a -1.0x turn discount across the Kansas Central subsidiary based on our perception of a slightly more challenging regulation compared with the average utility due to concerns about bill pressure.

Downside risks to our price objective include adverse regulatory outcomes, inability to deploy capital expenditures consistent with guidance, operational performance issues including at the nuclear facility, and earning below the authorized rate of return.

Upside risks to our price objective include favorable regulatory outcomes in important proceedings, accretively deploying additional capital expenditures above guidance, higher than anticipated O&M benefits and merger synergies leading to a higher earned return on equity, and the ability to recover capital invested in retired coal assets.

Eversource Energy (ES)
Our sum of the parts based price objective of $76 uses P/E multiples on 2024E earnings. For electric utilities, we attribute a 1x premium NSTAR,in line multiple to PSNH, and a 2x discount for CL&P to peer 15.4x multiple 2024E, reflecting future potential positive revisions to capex and earnings and the latest challenges in CT. For gas, we apply a 1x premium to the peer 14.9x 2024E multiple, given capex upside particularly in MA and a 2x for Columbia Gas. We apply a 2x discount to Yankee Gas given the less favorable jurisdiction. Both electric and gas peer P/E multiples are grossed up by 5% to reflect 2024E capital appreciation across the sector. We value Aquarion at the 23.7x water multiple. We reflect ES's 50% ownership in Revolution and South Fork offshore wind sites on an NPV basis.

Upside and downside risks to our Price Objective are 1) regulatory/political/legislative changes, 2) capital expenditures forecasts, 3) ability to earn the regulatory allowed ROE, 4) offshore wind development, 5) natural disasters, 6) operational performance and gas incidents, and 7) recent M&A integration.

Exelon (EXC)
Our $55 PO is based on an sum of the parts valuation. Our base electric peer 2024 P/E multiple of 18.0x is grossed up for a year by 5% to reflect capital appreciation across the sector. We apply a 2x premium across EXC utilities ComEd, PECO, BGE, PHI given increasing comfort around the consolidated profile, above-average growth prospects and below average risks.

Risks to achievement of the rating and price objective include: 1) Adverse regulatory, political, and legislative outcomes, 2) inability to deploy the guided capital expenditures, 3) equity needs that differ from guidance, 4) storms and other natural disasters, 5) inability to control operating costs, 6) changes in effective tax rates, and 7) changes in credit rating agency metric requirements.

FirstEnergy (FE)
Our PO of $41 is based on a sum-of-the-parts valuation. Our multiples are driven by relative P/E premiums/discounts to the 2024E regulated peer multiple (17.4x). Electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. As for premiums/discounts, we apply -2x discount to the distribution utilities to reflect rate review risk and the below-average balance sheet. We apply a +1x P/E premium to peers 2024E multiple to the Transmission business given potential for sale of a non-controlling stake. We subtract out the holding co debt given the high parent leverage.

Upside/downside risks are 1) unexpected regulatory outcomes, 2) ability to earn the allowed ROEs and/or other changes in regulatory earnings, 3) pension liabilities, 4) investigation revelations, 5) equity needs versus forecasts, 6) capital expenditures, 7) pension plan returns, discount rate changes, and interest/service costs associated with the plan.

MDU Resources Group, Inc. (MDU)
Our $30 PO is derived from SOTP. At the regulated electric and gas utilities, we use a P/E approach on our 2024 estimates and use peer multiples of 17.5x for electric and 16.8x for gas, respectively with a -1.0x discount for each reflecting the latest management capex guidance, we then gross this multiple by +5% to account for sectorwide EPS growth to derive a 12-month forward PO.
We value the Construction Materials business using a '23 EV/EBITDA estimate, applying a multiple of 9.0x based on an average of several publicly-traded peers in the cement, asphalt, and aggregates business.
We value the Construction Services business using a '23 EV/EBITDA estimate, applying a multiple of 9.4x based on an average of several publicly-traded specialty construction services peers. We also apply a -1.0x valuation discount reflecting the high level of competition in the space.
We value the Pipeline business using a '23 EV/EBITDA est., applying a multiple of 10.0x based on an average of several publicly-traded midstream peers. We also apply a -1.0x valuation discount reflecting uncertainty about growth at projects including North Bakken. We net out total parent drag and back out remaining non-regulated debt.
Upside risks are higher utility capex, improving margins at the construction business, and infrastructure stimulus.
Downside risks are a macro downturn pressuring construction margins, and rate case outcomes.

NextEra Energy (NEE)
Our $94 PO is derived using an SOTP approach, with the utilities and parent segment valued on a 2024E P/E basis, and the generation segment valued on a 2024E EV/EBITDA basis. In addition, we include NEE's ownership stake in NextEra Energy Partners (NEP) as well as the value of fixed fee IDR (DCF, at 6.7% disc rate). We assign 24E peer multiple of 18.0x for electric and 25.9x for water (grossed up by 5% and 7%, respectively, to reflect capital appreciation) with discount/premium to reflect the growth/risk profile of the businesses. We apply a 4x premium for FPL and Gulf. For NEER, we apply a

peer EV/EBITDA multiple of 12.2x, which we adjust depending on asset type. Give contracted renewables 4x premium given fuel type and contracted nature. We utilize a DCF of new renewable for projects beyond 2022. We value contracted nuclear on a DCF approach using a 7.5% discount rate. We apply a 1x premium multiple to pipelines, 1x discount to gas infrastructure and 1x discount for supply and trading given lower asset quality, a 1x premium for contracted gas peakers and 1x discount for merchant peakers (other), again based on asset quality.
Risks to achievement of PO and Rating are 1) regulatory outcomes, 2) weather & natural disasters, 3) commodity price changes, 4) fluctuations in stock prices for YieldCo NextEra Energy Partners, 5) renewable development margins.

NiSource Inc (NI)
Our $34 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2024 forward P/E multiples that are marked-to-market to the latest peer utility multiples of 16.9x for gas and 18.2x for electric with a 1.0x premium for the gas utilities and a 2.0x premium for the electric gas utilities given strong growth rates and incremental renewable buildout, with capex potentially beginning in '24-'26, but acknowledge industrial gen load migration risk. While there still could be some near-term headwinds for solar, we are confident in mgmt. ability to manage and mitigate the impacts.

We note that electric / gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We subtract the value of excess holding company debt at the parent not supporting the utility opcos.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, higher natural gas prices, and inability to execute on renewables additions.

NorthWestern Corporation (NWE)
Our $56 price objective is based 2024E price/earnings (P/E) methodology. We apply the electric utility sector P/E of 16.8x as a base then gross-up +5% to reflect capital appreciation across the sector. We apply a -2x discounted multiple to the 2024E peer multiple to historically challenged regulation, below-average rate base (4-5%) / EPS (3-6%) growth, and inflationary concerns.

Risks to our price objective are uncertainty from: 1) regulatory, political, and legislative outcomes, 2) ability to recover costs and earn the regulatory allowed return on equity [ROE], 3) differences in future equity needs, 4) capital expenditure forecasts, 5) commodity and interest rate changes, 6) natural disasters and wildfires, and 7) management changes.

NRG Energy (NRG)
Our $38 Price Objective is based on 2024E sum-of-the-parts analysis. We apply a premium/discount to our 7.0x base EV/FCF multiple, which is premised on long-term historical industry trends, to each segment based on our views of the specific asset type and region. We discount the Generation segment to approximately 5x EV/EBITDA due to operational challenges experienced of late. Within Generation, we apply a 6x disc to ERCOT coal given supply chain challenges. We apply an approximate 6x multiple to Retail, at a premium to the base IPP multiple reflecting the opportunity set and challenges. The potential for additional cross-selling revenue is mitigated by concerns of core margin erosion and customer count declines. We assume approximately $2Bn share repurchases by YE-23.

Upside/Downside risks to the price objective are changes in: 1) commodities including gas, coal, nuclear fuel & power, 2) operating costs, 3) environmental costs and regulation, 4) retail margins and customer counts, 5) natural disasters, 6) generation volume, 7) regulatory, legislative, and political changes, 8) customer acquisition costs, 9) retail competition, 10) pension and nuclear decommissioning trust assets/liabilities, and 11) interest rates.

OGE Energy Corp (OGE)
Our OGE PO is $44/share based on a sum of the parts. For the utility and holdco we apply the FY24 peer multiple of 18.0x. Electric peer P/E multiple is grossed up for a year to 2021 by 5% (based on average annual growth) to reflect capital appreciation across the sector. We apply a 1x premium for incremental growth not yet embedded in plan.

Downside risks are further declines in the regulatory environment possibly resulting in lower ROEs or other hurdles hindering OGE's ability to earn its authorized return. While not as exposed due to low parent interest, we see interest rate hikes as another potential downside risk. Finally, execution risk on existing capex schedule could put further pressure on earnings growth. Declines in value of ET share could also provide downside to our valuation.

Upside risks are shifts towards a more favorable Oklahoma regulatory environment, which could ease OGEs ability to earn its authorized return in the jurisdiction and possibly increase capex plan as management views prospects in the state more positively. Improvements in value of ET share.

PG&E Corporation (PCG)
Our PO of $16 reflects an in-line P/E versus the respective electric (15.4x) and gas (14.9x) peer P/E groups with both grossed-up by 5% to reflect capital appreciation across the sector) based on 2024E. The acute wildfire risk is incorporated separately via a scenario probability weighted at 100% assuming PCG hits the cap in 3-year increments. Lastly, we net out 50% weighting of HoldCo debt and add back 50% weighting of interest expense to derive our Price Objective.

Risks to achievement to estimates and Price Objective include: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) Fire Victim Trust moneitizations, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

Pinnacle West (PNW)
Our price objective of $56 is based on a peer utility P/E multiple of 15.4x on our 2024E EPS of $4.32 with a -3.5x discount to account for future rate case risk, uncertain recovery of clean generation spend, resource adequacy concerns in the state, and general below-average regulatory environment in Arizona, PNW's sole jurisdiction. Electric and gas peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector.
Risks to the Price Objective and estimates are: 1) Regulatory relationships/outcomes, 2) load growth in territory vs expectations, 3) Riders and capital trackers implementation 4) weather and natural disasters, 5) interest rate risk changes cost of capital, 6) pension liabilities and asset returns, 7) equity needs relative to forecasts, 8) capital expenditures.

Portland General Electric Company (POR)

Our $54 price objective is based on our 2024E EPS estimate. We value shares based on a 2024E P/E methodology applying a 1x discount to the 2024 regulated utility PE multiple of 18.0x. Electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. While our PO is a 12-month forward projection, we use a 2024 multiple, which is reflective of a discount back to today.

Risks to estimates and the Price Objective are 1) regulatory decisions, 2) power costs in the Power Cost Adjustment Mechanism [PCAM], 3) wildfires and other natural disasters, 4) ability to deploy capital, 5) ability to control operation expenses, 6) interest rates, 7) load growth/contraction, 8) request for proposals, and 9) trading losses.

PPL Corporation (PPL)
Our $33 price objective is based on a sum of the parts methodology applying respective premium/discounts to the 2024E peer group multiple of 18.5x. Electric peer P/E multiple is grossed up by 5% to a target multiple of 19.4x to reflect capital appreciation across the sector.

Risks to the achievement of our Rating and Price Objective include: 1) Integration of Rhode Island assets, 2) regulatory/political/legislative changes, 3) capital markets, 4) ability to earn at or above the regulatory allowed return on equity, 5) cost control, 6) capital expenditures forecasts, 7) natural disasters/weather, 8) equity issuance/repurchase plans, and 9) corporate taxes.

Public Service Enterprise Group (PEG)
Our $69 PO is derived from our SOTP valuation. For the regulated utilities we utilize the electric (18.3x) and gas (17.6x) 2024E sector P/E multiples, which we then gross-up by 5% to reflect capital appreciation across the sector. We continue to apply a company-specific +1x premium to the group multiples thus derived to reflect the above-average growth and low-risk transmission & distribution (T&D) nature of PEG's operations.

Positive or negative risks to achievement of the Price Objective and Rating are: 1) regulatory/political/legislative outcomes, 2) changes in capital expenditures relative to forecasts, 3) nuclear incidents and natural disasters, 4) equity and capital markets needs, cost and timing adjustments for offshore wind developments, 5) ability to earn the regulated rate of return, and 6) interest rates.

Sempra Energy (SRE)
Our $160 PO is based on a sum of the parts valuation of 2024E earnings. The US utilities are valued using the electric (15.4x) and gas (14.9x) average P/E that we grossed-up +5% to account for sector growth. We apply a -2x discounted valuation to the California gas utility (SoCal Gas) for concerns about long-term use of natural gas. We apply a -1x discounted valuation to the California electric utility (SDG&E) to reflect the wildfire risk exposure. We apply a +2x premium to the TX utility (Oncor) for above average growth and high visibility into rider recovery. The Infrastructure segment (SIP) is valued at 12x EV/EBITDA, an implied premium to the Mexican market (5.5x) and select premium US midstream comparable (Williams and TC Energy at approximately 11x) on EV/EBITDA due to its long duration contracted cash flows. The parent drag is treated on a balanced blend of P/E and HoldCo debt and cash netting.

Risks to achievement to estimates and Price Objective include: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) LNG development, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

Southern Company (SO)
Our $63 PO is derived from a sum-of-the-parts analysis (SOTP). We use a P/E valuation approach on 2024 and use peer multiples of 15.4x for electric and 14.9x for gas, respectively (with dis/prem applied per asset depending on growth/risk): we then gross up these multiples by +5% to account for sector wide EPS growth to derive a 12-month forward PO. We subtract 50% of the 2024 parent interest expense multiple by an electric P/E peer multiple to reflect parent lev supporting the utilities. We net out total parent drag and add back the remaining parent interest expense with a 50% weighting.

Upside and downside risks are 1) Vogtle construction timing and costs, 2) regulatory and legislative outcomes, 3) ability to earn the allowed rate of return, 4) changes to the capital expenditure forecast, 5) nuclear incidents, weather, and natural disasters, 6) rate of customer growth, 7) O&M trends, 8) interest rates, 9) environmental policies and regulations.

Southwest Gas Holdings (SWX)
Our $87 PO is based on our 2024E Sum-of-the-parts (SOTP) analysis. We apply a 16.6x our 24E peer Gas LDC utility P/E to the utility EPS across the company's three major jurisdictions, which include Arizona, Nevada and California. We gross this peer multiple up by 5% to reflect capital appreciation across the sector.

For all of the utilities, we apply a 3x discount on Arizona and a 2x discount on California and Nevada. Additionally, we value the FERC regulated MountainWest and Great Basin Pipeline separately on a midstream peer group average FY24E EV/EBITDA multiple of 9.2x and net out associated debt. We apply a 1x discount on MountainWest to reflect lower growth opportunities vs peers. For the infrastructure services segment, we apply 8.8x FY24E EV/EBITDA multiple (based on peer consensus multiples), which is a 0.5x premium to the business' closest industrial comps given higher margins and a more stable customer base. Lastly, for parent debt in the Corp & Other segment, we net out 50/50 weighting for re-capitalization and add back 50% of parent interest expense.

Risks to achieving the Price Objective are 1) M&A, 2) activist shareholders, 3) infrastructure services performance, 4) construction margins, 5) regulatory outcomes, 6) ability to earn regulatory rates of return, 7) capital markets access, 8) rating agency actions.

Vistra Energy (VST)
Our $30 price objective is based on a 2024E SOTP valuation. We assign a discount/premium to the peer group EV/FCF multiple of 7.0x for each fuel within each geography, depending on our specific views for the asset type and market: We include the full $275mn of margin-enhancing initiatives as well as $200mn optimization benefits and the $275mn of synergies related to the DYN acquisition. We further capitalize our estimated income tax for the combined entity to reflect the higher tax burden than peers, and we include a $50mn NPV of TRA payments. We reflect Vistra Zero accretion at 12x EV/EBITDA, with '26 FCF discounted at 12% back to '23. We also reflect $500mn of ERCOT securitization proceeds (implied in net debt balance). Our average implied 24E EV/FCF multiple for the overall business is 4.8x based on our latest Mtm of commodities. We include impact from future bill credits from Uri storm & NPV of ERCOT uplifts, exclude Koch litigation.

Downside risks: 1) declining wholesale power & capacity prices, 2) competitive & regulatory change to retail businesses, principally in Texas, 3)

operational issues pertaining to running power assets including Nuclear asset in Texas.

Upside risks: 1) VST may improve its retail margins and retain customers, 2) VST may beat its margin enhancements initiatives, 3) VST may see a decrease in the price of key inputs such as natural gas and coal, and 4) VST may see an increase in wholesale power prices.

WEC Energy Group Inc (WEC)
Our $90 PO is based on 2024E SoTP, with a large cap electric group multiple of 15.1x and gas regulated multiple of 14.6x. Electric and gas peer P/E multiples are grossed up for a year to reflect capital appreciation across the sector. We apply a 3.0x premium to WEC's WI electric & gas subs for surety in earnings growth for the next two years following the Commission's recent settlement on above avg ROEs of 10%+. We apply a 3.0x premium to the gas utilities, except IL's Peoples Gas which is 2.0x, and North Shore Gas with the Gas System Modernization Program (GSMP) and capex forecasts de-risked following the ICC order. We ascribe a 4x premium vs. the group at ATC to account for steady earnings growth as well as above avg Federal ROE's. We give Power the Future (PTF) a 3.0x P/E premium as the ROE is set indefinitely on historical and new investments. We ascribe an in line multiple for the parent accounting for the interest expense which finances overall utility operations. We value Energy Infrastructure on a net present value basis using a WACC of 5.6%, in line with other renewable assets. We net out 50% of HoldCo debt from equity valuation and adjust to add back the parent drag on interest exp.

Risks to our PO are positive or negative changes in: 1) earned regulatory returns, 2) capital expenditures, 3) regulatory/political/legislative changes, 4) interest rates, 5) natural disasters, and 6) execution on unregulated projects.

Xcel Energy Inc (XEL)
Our PO is $69. We value Xcel Energy using a sum of the parts (SOTP) approach. Given the difference in geography, earnings strength, growth opportunity and risk profile, we divide the segments by subsidiary. We use 2024E forward P/E multiple of 15.5x to derive a value for the different business segments, including the parent segment. Electric peer P/E multiple is grossed up for a year to reflect capital appreciation across the sector. We apply a 3x premium to XEL subsidiaries in MN, CO, NM, and WI as both utilities present solid or improving regulatory treatment with tangible investment upside. We see this multiple as appropriate as the company has growth opportunities, resolving regulatory drag and resolving uncertainty around rate cases. We also add a discrete item reflecting upside from potential Direct Pay legislation, estimating the equity savings from 75-100 bps improvement in credit metrics and applying a probability weight of 50% to account for uncertainty. We also net back 50% of the parent interest expense and instead subtract out 50% of parent debt to more accurately reflect HoldCo leverage.

Risks to achievement of the Price Objective are interest rate changes, regulatory risk, such as lower authorized ROEs or less favorable riders/trackers for renewables and transmission, inability to deploy capital at guided levels, adverse legislation, execution delays, and weather/natural disasters.

Analyst Certification

We, Julien Dumoulin-Smith, Dariusz Lozny, CFA and Paul Zimbardo, hereby certify that the views each of us has expressed in this research report accurately reflect each of our respective personal views about the subject securities and issuers. We also certify that no part of our respective compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

Disclosures

Special Disclosures

BofA Securities is currently acting as a financial advisor to Qatar Investment Authority in connection with its capital injection into RWE AG to support RWE AG's proposed acquisition of Con Edison Clean Energy Businesses Inc from Consolidated Edison Inc, which was announced on October 1, 2022.

Important Disclosures

Equity Investment Rating Distribution: Energy Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships[R1]	Count	Percent
Buy	77	61.11%	Buy	63	81.82%
Hold	28	22.22%	Hold	21	75.00%
Sell	21	16.67%	Sell	11	52.38%

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships[R1]	Count	Percent

Buy	77	53.47%	Buy	54	70.13%
Hold	33	22.92%	Hold	26	78.79%
Sell	34	23.61%	Sell	22	64.71%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	1839	53.46%	Buy	1071	58.24%
Hold	800	23.26%	Hold	498	62.25%
Sell	801	23.28%	Sell	379	47.32%

R1 Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of both a stock's: absolute total return potential as well as its attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm 's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst 's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster [R2]
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

R2 Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock 's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the Price Charts website (https://pricecharts.baml.com/), or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: AES Corp, Allete Inc, Alliant Energy Corp, Ameren Corp, American Elec Power, American Water, Avangrid, Black Hills, CenterPoint Energy, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy Corp., Essential Utilities, Evergy, Eversource Energy, Exelon Corp, FirstEnergy, MDU Resources, NextEra Energy, NiSource Inc, NorthWestern Corp, NRG Energy, OGE Energy Corp, PG&E Corp., Pinnacle West Capit, Portland General, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Allete Inc, Amer Elec Power, Dominion Energy, Duke Energy, Essential Utilities, Exelon Corp., NiSource Inc, Northwestern Corpora, Sempra Energy, Southern Company, Southwest Gas, Xcel Energy Inc.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, MDU Resources, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., PG&E Corp., Pinnacle West Capita, Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, MDU Resources, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., OGE Energy Corp, PG&E Corp., Pinnacle West Capita, Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, MDU Resources, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., OGE Energy Corp, PG&E Corp., Pinnacle West Capita, Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, MDU Resources, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., PG&E Corp., Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, WEC Energy Group Inc, Xcel Energy Inc.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: AES Corporation, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., PG&E Corp., Pinnacle West Capita, PPL Corp., Sempra Energy, Southern Company, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: Amer Elec Power, American Water Works, Black Hills Corporat, CMS Energy, Dominion Energy, DTE Energy, Duke Energy, Entergy, NextEra Energy, NiSource Inc, Northwestern Corpora, Portland Genl Elec, Sempra Energy, Southern Company, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: AES Corp, Allete Inc, Alliant Energy Corp, Ameren Corp, American Elec Power, American Water, Avangrid, Black Hills, CenterPoint Energy, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy Corp., Essential Utilities, Evergy, Eversource Energy, Exelon Corp, FirstEnergy, MDU Resources, NextEra Energy, NiSource Inc, NorthWestern Corp, NRG Energy, OGE Energy Corp, PG&E Corp., Pinnacle West Capit, Portland General, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., PG&E Corp., Pinnacle West Capita, Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

BofAS together with its affiliates beneficially owns a net short position of 0.5% or more of the total issued share capital of this issuer. Ownership positions speak as of a date no more than three trading days prior to the date of this report: CMS Energy.
From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources

including BofA Securities trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
Refer to BofA Global Research policies relating to conflicts of interest (https://rsch.baml.com/coi).
"BofA Securities" includes BofA Securities, Inc. ("BofAS") and its affiliates. Investors should contact their BofA Securities representative or Merrill Global Wealth Management financial advisor if they have questions concerning this report or concerning the appropriateness of any investment idea described herein for such investor. "BofA Securities" is a global brand for BofA Global Research.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

BofA ESGMeter Methodology:
ESGMeter is a proprietary metric based on quantitative analysis and fundamental analyst inputs that reflects our assessment of a company's Environmental, Social and Governance-related attributes. The ESGMeter is intended to indicate a company's likelihood of experiencing stronger financial stability (higher return on equity and lower earnings and price volatility) over the next three years relative to peer group. There are three ESGMeter levels - Low, Medium, and High - which indicate whether a company has attributes most likely to translate into superior financial stability (in the case of a High level) or weaker financial stability (in the case of a Low level) over the next three years relative to its peer group. A Medium level suggests that a company exhibits ESG characteristics that are likely associated with financial stability results in line with its peer group over the next three years. Full details of our methodology, financial stability definition and disclaimers are available at BofA ESGMeter methodology (https://rsch.baml.com/BofA_ESGMeter). ESGMeter is not indicative of a company's future stock price performance and is not an investment recommendation or rating. ESGMeter is independent of the BofA Global Research fundamental equity analyst's investment rating, volatility risk rating, income rating or price objective for that company.

Utilities have pushed the envelope on growth

Following multiple long-term financial refreshes in 2022, we provide the latest snapshot of utility EPS and rate base growth guidances. We take the multi-year growth guidances provided by companies, noting that some companies use different starting points (2020-2022) and ending points (2024+). *We utilize company's guidance rather than BofA estimates to enhance comparability*. Over the long-term for regulated utilities, net income growth should align with the underlying rate base trajectory with positive and negative performance deltas related to whether a company is earning its allowed rate of return. Companies can grow consolidated EPS faster or slower than what core rate base would ordinarily predict due to financing costs and/or unregulated operations.

Can utilities outrun gravity? EPS Growth > RB Growth

PPL Corp (PPL) has the largest unfavorable delta between rate base growth (3-4%) and adjusted EPS (6-8%) which is a risk factor for the company. We expect PPL's growth to slow in the long-term but recently upgraded shares to Buy based on the view that there is an ability to add and pull-forward renewables capex in Kentucky. See details here: PPL: Sun set to shine in Kentucky: upgrade to Buy after underperf. & IRA beneficiary. Evergy (EVRG) is another company where 6-8% EPS growth outpaces rate base growth (5-6%). In fact EVRG's below-average pace of rate base growth versus peers is a point that the company emphasis with regulators to support its pursuit of additional rate base investments, albeit unsure if it improves meaningfully stil. *The average large cap US utility targets ~6.6% EPS and 7.2% rate base growth, excluding PCG and NEE.*

Financing drags presents an opportunity – and a risk

EPS growth lagging rate base growth presents an opportunity for companies who can find more efficient, lower-cost financing to minimize or otherwise 'close the gap'. Conversely, higher costs of capital in 2022 could lead to additional financing pressures for companies with outsized reliance on parent equity & debt financing. The utilities equity sector (XLU) has declined -8% YTD while the Moody's BAA Utility interest rate has climbed to 5.9% from 3.3%. Some companies have prudently entered interest rate and equity hedges to dampen the near-term impacts of higher weighted average cost of capital but this is an important factor to watch.

Companies where rate base growth outpaces EPS most significantly are CNP/NI (3pp), D (2.5pp), and EIX (2pp). In particular we highlight CNP, NI, and D who each have historically engaged in asset sales to address equity and other financing needs. We see an opportunity Dominion to engage in unregulated asset sales (Millstone or Cove Point) which could accelerate long-term EPS growth. Just last week Kinder Morgan (KMI) divested a 25.5% stake in its 20Yr contracted Elba LNG export facility at a guided 13x 2022 EV/EBITDA. Even without a monetization, Dominion's underappreciated interest rate hedging and upside to Millstone earnings should strengthen the long-term ~6.5% EPS CAGR versus peers. *We reiterate Buy on shares of D which offer a favorable risk/reward.*

Please see the full report for exhibits of rate base and EPS growth guidances.

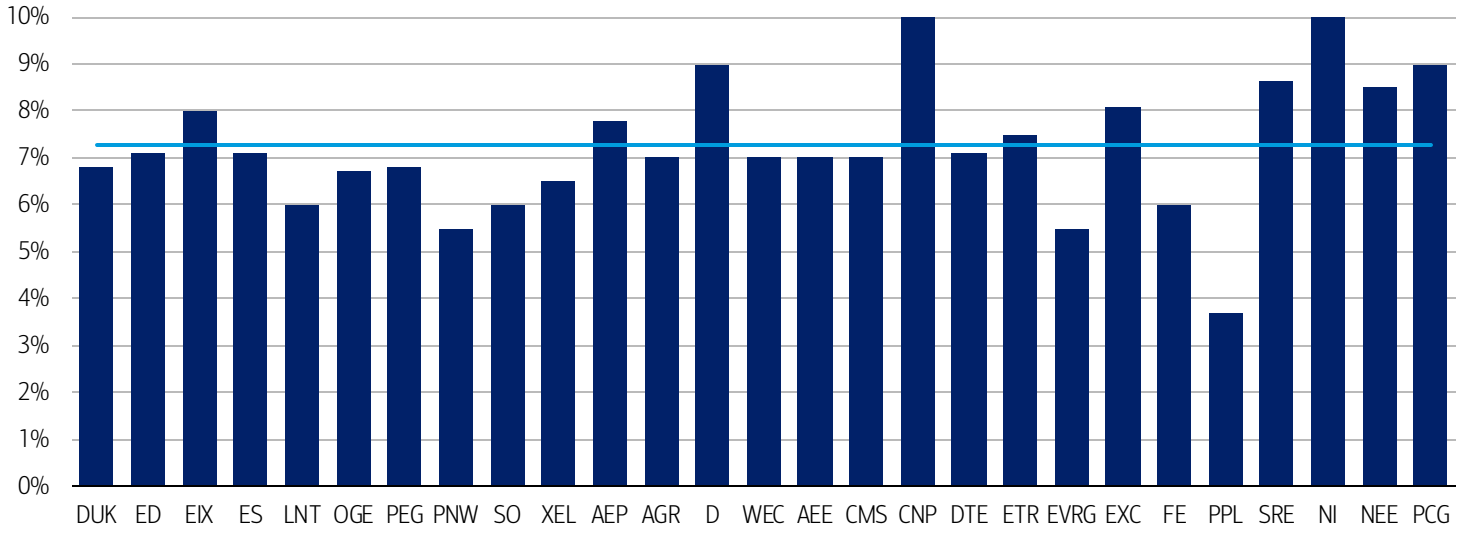
RB: Rate base
LNG: Liquefied Natural Gas

Unauthorized redistribution of this report is prohibited. This report is intended for 3510B92243ED11EDA3168B5AB42E1589 F

The exhibits below are derived from company filings of EPS and rate base trajectories rather than BofA estimates to enhance comparability between earnings and rate base. Companies have revised their guidances and every effort was made to reflect the latest disclosures.

Of the 27 companies examined, 10 target EPS growth of 6% at the midpoint, 4 target 6.5% midpoint, 10 target 7%, and 3 aim to deliver 8% or higher.

Exhibit 1: Large Cap Electric Utility Adjusted EPS CAGR Guidances Midpoints*
The average large cap US utility guides to ~6.6% EPS CAGR, excluding NEE & PCG or 6.8% with those two companies.

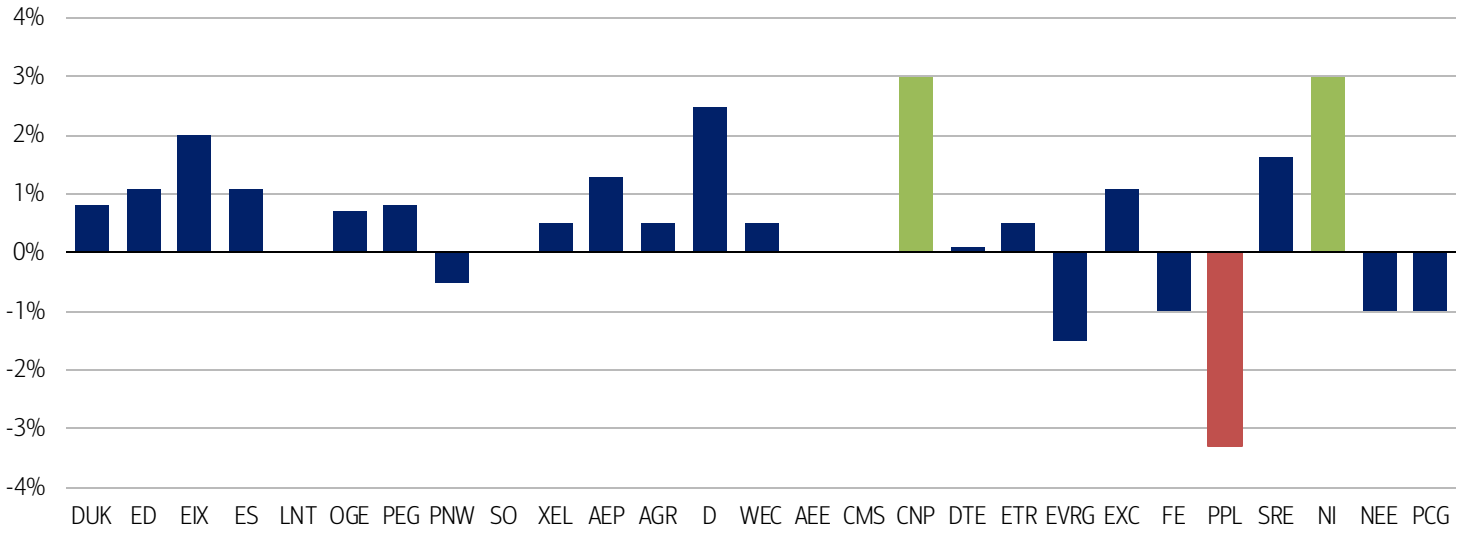


Source: Company Filings, Evergy, & BofA Global Research. *Note that companies provide different starting and ending years

BofA GLOBAL RESEARCH

There is a much wider dispersion in rate base growth profiles with the average at 7.3% for the industry. While most utilities target EPS growth of 6-7%, rate base growth guidances range is clustered around 5-8% with more dispersion. CNP stands out constructively between below and above charts.

Exhibit 2: Large Cap Electric Utility Adjusted Rate Base CAGR Guidances Midpoints*
There is a wider spread between rate base growth profiles for companies



Source: Company Filings, Evergy, & BofA Global Research. *Note that companies provide different starting and ending years

BofA GLOBAL RESEARCH

The next exhibit calculates the difference between rate base growth and EPS growth: positive numbers indicate rate base growth above EPS while negative represents EPS growing ahead of rate base.

Exhibit 3: Large Cap Electric Utility Adjusted Rate Base CAGR Less EPS CAGR Midpoint Guidances*
Deltas between earnings and rate base growth are key to focus on

Source: Company Filings, Evergy, & BofA Global Research. *Note that companies provide different starting and ending years

BofA GLOBAL RESEARCH

Companies that have publicly stated they would evaluate asset sales include AEP, AGR, DUK, ES, FE, PCG, PEG are key to watch for implications on the long-term earnings profile. MDU Resources and Southwest Gas are two companies with more economically sensitive unregulated businesses that are undergoing broader reviews where value could differ widely. Similarly we pay closer attention to companies that have expressed that equity issuances are a financing source for the plan including but not limited to AGR, AVA, ES, D, EIX, EXC, ETR, and PCG.

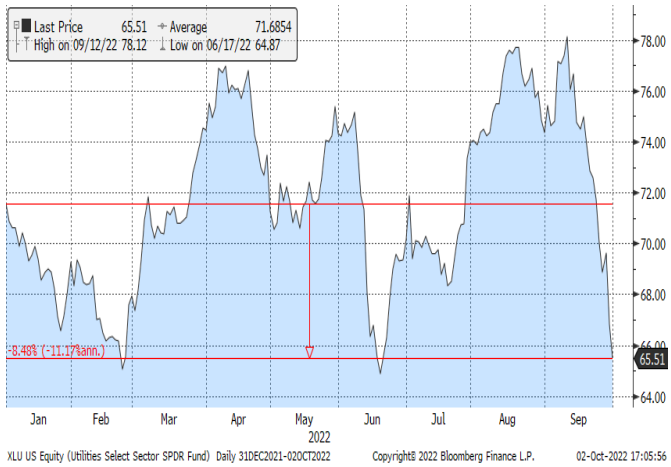


Exhibit 4: Moody's Bond Utility Baa Yield (%) YTD
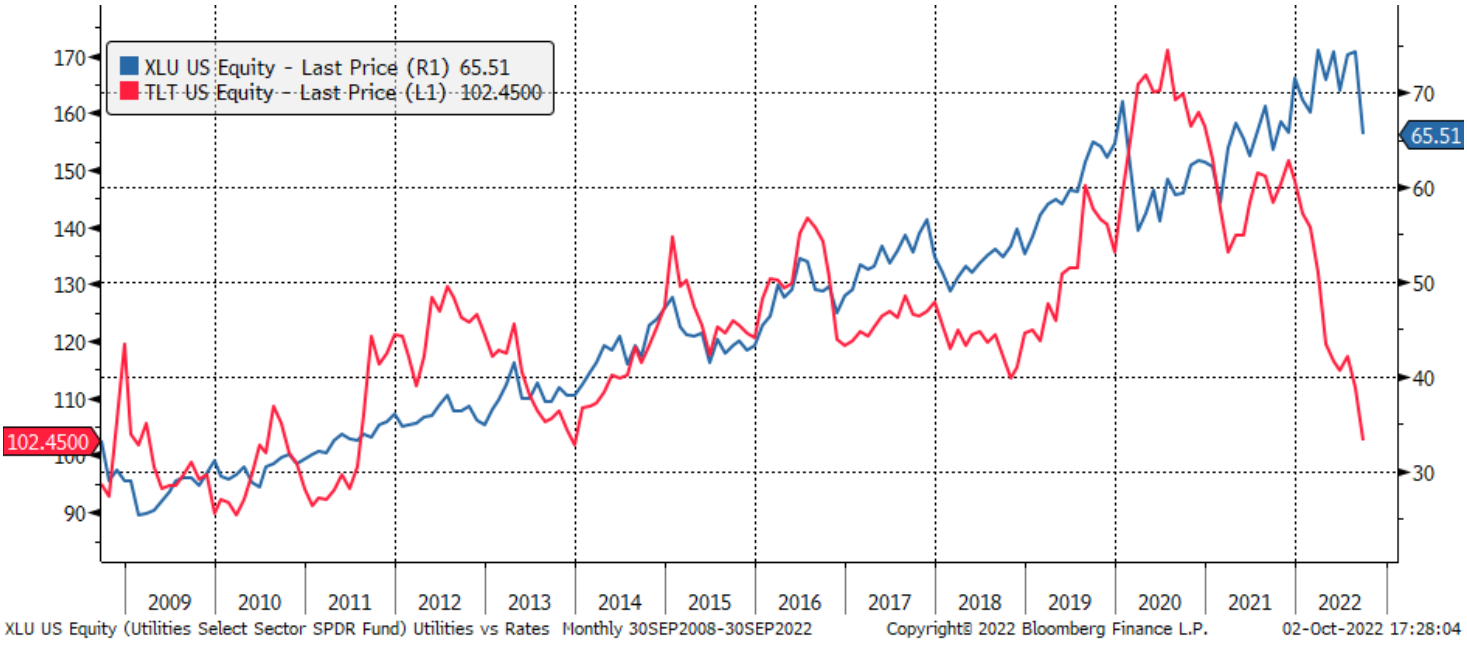
Interest rates have materially increased in 2022 for all sectors

Source: Bloomberg

BofA GLOBAL RESEARCH

Exhibit 5: Utilities Sector ETF Performance (XLU) YTD
Utilities have outperformed the broad S&P 500 but are still down YTD



Source: Bloomberg

BofA GLOBAL RESEARCH

Over a long period of time utilities generally performed in-line with high duration US government bonds but the relationship has broken down recently.

Exhibit 6: Utilities Sector ETF (XLU) & iShares 20+ Year Treasury Bond ETF (TLT) Performance
Utilities largely tracked bond performance (effectively inverse of interest rates) with some volatility from September 2008 until 2022.

BofA GLOBAL RESEARCH

Price objective basis & risk

Dominion Energy (D)

We value Dominion Energy at $94 using a 2024E sum-of-the-parts analysis. For the utilities we apply the comparable electric (18.3x) and gas (16.9x) peer multiples which we gross-up by 5% to reflect capital appreciation across the sector. We apply premiums of 2x for Virginia and 2x for South Carolina electric utilities and +3x to the gas utilities in Ohio, Utah, North Carolina, and South Carolina. We apply discount adjustments to lower value utility sources in South Carolina (NND) and Utah (Wexpro) as well as the South Carolina bill credits.

Contracted assets are valued based on a 12.7x EV/EBITDA for renewables and discounted cash flow analyses for Cove Point and Millstone at the prevailing discount rates reflecting the risk characteristics. For remaining debt beyond that allocated to state utilities, we include a 50% weight towards a straight netting of leverage, with the remaining 50% using a P/E multiple on associated interest expense, in line with the methodology employed for diversified utilities with relatively higher levers of leverage

Risk to achievement of the Price Objective and Rating are 1) regulatory, legislative, and political actions, 2) ability to earn the regulatory allowed ROE, 3) capital markets and equity requirements, 4) changes to the capital expenditure forecast for both regulated & unregulated segments, 5) volatility in interest rates and pension returns, 6) changes in commodity prices, and 6) natural disasters.

PPL Corporation (PPL)

Our $33 price objective is based on a sum of the parts methodology applying respective premium/discounts to the 2024E peer group multiple of 18.5x. Electric peer P/E multiple is grossed up by 5% to a target multiple of 19.4x to reflect capital appreciation across the sector.

Risks to the achievement of our Rating and Price Objective include: 1) Integration of Rhode Island assets, 2) regulatory/political/legislative changes, 3) capital markets, 4) ability to earn at or above the regulatory allowed return on equity, 5) cost control, 6) capital expenditures forecasts, 7) natural disasters/weather, 8) equity issuance/repurchase plans, and 9) corporate taxes.

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	77	53.47%	Buy	54	70.13%
Hold	33	22.92%	Hold	26	78.79%
Sell	34	23.61%	Sell	22	64.71%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2022)

Coverage Universe	Count	Percent	Inv. Banking Relationships [R1]	Count	Percent
Buy	1839	53.46%	Buy	1071	58.24%
Hold	800	23.26%	Hold	498	62.25%
Sell	801	23.28%	Sell	379	47.32%

[R1] Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of both a stock's: absolute total return potential as well as its attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster [R2]
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

[R2] Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the Price Charts website, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Dominion Energy, PPL Corp.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Dominion Energy.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: Dominion Energy, PPL Corp.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Dominion Energy, PPL Corp.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: Dominion Energy, PPL Corp.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Dominion Energy, PPL Corp.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Dominion Energy, PPL Corp.
BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: Dominion Energy.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Dominion Energy, PPL Corp.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Dominion Energy, PPL Corp.
BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and

basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.
BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.
BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

BofA ESGMeter Methodology:

ESGMeter is a proprietary metric based on quantitative analysis and fundamental analyst inputs that reflects our assessment of a company's Environmental, Social and Governance-related attributes. The ESGMeter is intended to indicate a company's likelihood of experiencing stronger financial stability (higher return on equity and lower earnings and price volatility) over the next three years relative to peer group. There are three ESGMeter levels - Low, Medium, and High - which indicate whether a company has attributes most likely to translate into superior financial stability (in the case of a High level) or weaker financial stability (in the case of a Low level) over the next three years relative to its peer group. A Medium level suggests that a company exhibits ESG characteristics that are likely associated with financial stability results in line with its peer group over the next three years. Full details of our methodology, financial stability definition and disclaimers are available at BofA ESGMeter methodology. ESGMeter is not indicative of a company's future stock price performance and is not an investment recommendation or rating. ESGMeter is independent of the BofA Global Research fundamental equity analyst's investment rating, volatility risk rating, income rating or price objective for that company.

A unique earnings preview as we focus on debates

We provide our comprehensive thoughts on a company-by-company basis. Most utilities we cover are well positioned for FY22 despite growing cost pressures, but the key uncertainty is FY23+ guidance refreshes. For utilities, quarterly EPS generally is an afterthought, but we cannot recall a quarter in recent memory where the print is of as little consequence. As a result, we dedicate our preview to detailing the key investor debates. Critically, with so much uncertainty into earnings profiles, we provide our view of sentiment/positioning from our extensive investor calls, while caveating that this is a small sample size and may not be statistically significant or representative of all.

Who has 2023 risks? Who is 'safe'? The name of the game

The utilities sector is unique in having above-average earnings visibility for three-plus years due to well defined capital expenditures and rate base investment plans, but the crystal ball is the cloudiest as it has been in a decade. A myriad of factors have introduced certainty in 2022, but the breaking point for many has been the sharp rise in financing costs that were unlikely to be accounted for long-term guidances. This is in sharp contrast to the enactment of the Inflation Reduction Act, which should be net positive for the electric utilities sector, particularly the integrated utilities with renewable transformation stories. **Best positioned include ETR, PPL, DTE, NWE, NI, SRE, and CEG. Conversely, we see more challenging updates for AWK, ES, and EIX plus BKH, although we see BKH trading near fair value.**

LNT stands out with the company's FY23 EPS expectations subdued given lack of rate increases and a moderation of robust load growth in 2022. We interpret that the lower end of the 5-7% range in FY23 as likely before an upward inflection later in the cycle as solar rate base investments come on-line. See our full preview here. Our investor conversations also point to sentiment around **XEL** becoming more cautious with some concern that Street estimates are too high on 2023, principally given a lower y/y step up in MN interim rates and limited latitude to control O&M as demonstrated so far in '22. We expect an initial guidance range of $3.30-3.40 in '23, see a breakdown of the trajectory here. Expect a relatively quiet update from **PNW** (no '23 guide), with its rate case filing in AZ likely dominating discussion; with few data points (highest regional CP) shares could be volatile around the early Nov election with 2 of 5 commission seats up for a vote, with a Republican sweep likely the best outcome for shares though the outcome is very much up in the air based on latest FiveThirtyEight polling as of Oct 19.

We have more confidence in companies that have 2023 guidance or provided recent financial refreshes such as AEP, PPL, and PCG. **WEC** remains a go-to defensive name. we expect another strong beat in Q3 which will allow mgmt. to pull ahead O&M and de-risk '23 rather than raise '22 guidance for a third time – recent de-rating only makes the entry point more attractive here: see details here.
Other key trends include IRA winners/losers, interest rates, pensions, equity needs/asset sales, fuel costs, rate cases, premium/value spreads, short interest, and overall EPS revisions.

Please see full report for details on bull/bear debates, themes, & much more.

Breaking down key changes. We update valuations of select companies to reflect the latest 15.4x electric, 14.9x natural gas, and 23.7x water. Overall the utilities sector has materially de-rated which we reflect in our latest suite of mark-to-market changes.

BofA GLOBAL RESEARCH

Important Names to Watch

In our view the best positioned companies for 3Q and EEI are Entergy (ETR), PPL Corp (PPL), DTE Energy (DTE), Northwestern Corp (NWE), NiSource (NI), Sempra (SRE), and Constellation Energy (CEG). ***We maintain Buy ratings based on each company's attractive risk-adjusted return profiles, which we elaborate on in the full company sections.***

Entergy is a BofA quarterly top pick where we see a strong quarter with a FY22 guidance increase followed by EEI Conference discussion of how the company is an IRA and reshoring beneficiary. There are media articles daily discussing industrial energy demand destruction and corporate reshoring/decarbonization trends where Entergy's Gulf Coast footprint should take share. We preliminarily estimate that ETR has +5% capex upside from IRA through 2024 with greater upside in future years when Entergy has more renewables in the plan.

PPL released LT guidance in June 2022, so has a more realistic set of assumptions for interest rates, inflation, and other macro factors than many companies who have not refreshed in the past year. The IRA is set to accelerate Kentucky generation transformation capital investments sooner than we or management likely anticipated just a few months ago.

DTE Energy has previewed an accelerating growth profile for countless months, but the great reveal is finally upon us. Shares have lagged due to the highly telegraphed positive update from the integrated resource plan (IRP) and LT guidance but this management team has consistently outperformed even lofty expectations. The IRA benefit to rate base, industrial demand tailwinds, and continued large C&I interest in renewables are all incremental positives since DTE started discussing the upside to the long-term plan. Lastly the public datapoints for the value of renewable natural gas (RNG) investments is supportive of the Vantage profile too.

NorthWestern was recently double-upgraded to Buy based on the improving Montana regulatory backdrop which is both earnings and multiple accretive. It is unclear if management will address the favorable impacts of interim rates on FY22 at this point but expect management to be on the offensive with the narrative on how Montana has favorably evolved.

For **NiSource** we ultimately believe that the 2021+ EPS CAGR is extended and moderated to 6-8% from 7-9%. This reflects an existing profile intact (i.e. not calling for a negative reset in the interim) but simply a moderation from the 'hockey stick' growth into 2024. The entire strategic review and activism processes have been messy, and the November Analyst Day should be a clearing event to allow shares to return to trading more on the fundamental drivers and reflect the above-average profile.

Sempra 3Q is weak versus Consensus, but we anticipate a FY22 guidance increase and FY23 guidance should be comfortably maintained. The true upside for shares is further progress on the LNG development efforts and management strongly committed to providing a 3Q update.

Lastly, **Constellation Energy** is set to increase FY22 guidance and discuss the significant positive attributes from the IRA on the only large cap US pure-play nuclear power company. The more material capital allocation and FY23 guidance initiation positive updates are likely late calendar 2022 or 4Q22 call events but we still see a favorable 3Q call ahead.

Conversely, we remain cautious on Eversource (ES), Edison International (EIX), and American Water (AWK). We maintain Underperform ratings based on the companies' weaker risk-adjusted total potential return, which are below average for the our coverage return, as we elaborate on in the full company sections.
Eversource has a 3Q miss and we lower our estimates to reflect reduced expectations on offshore wind proceeds as well as higher debt/equity financing costs in the plan. The more protracted asset sale timeline further dampens upside to FY23 redeployment of capital.

Edison International similarly has a 3Q miss and among the most downside to FY23 Consensus in our coverage universe. While many investors have focused on potential 1-2% 2023 misses across the sector, we are 6% below FY23 EIX Consensus, which would further call into question the achievability of the long-term guidance. There historically has been a seasonal preference of investors to buy California utilities after wildfire season (November).

American Water has a 3Q miss and we preliminarily see a 2023 guidance miss with BofA -2% below Consensus. AWK's 7-9% EPS growth profile includes 150-250bp of regulated acquisitions which could be less accretive than before with higher financing costs. Here AWK is uniquely adversely exposed. The previously highlighted pension negative earnings exposure for FY23 should largely be addressed but overall increasing O&M that is starting to manifest in 2H22 could further ding the outlook.

Neutral-rated **Black Hills (BKH)** was recently downgraded to Neutral due to projected minimal growth YoY in FY23 which could lead to an EPS CAGR rebasing or overall deterioration. The challenges of O&M and financing costs are most acute for small companies where we see potential for a myriad of firms to be impacted.

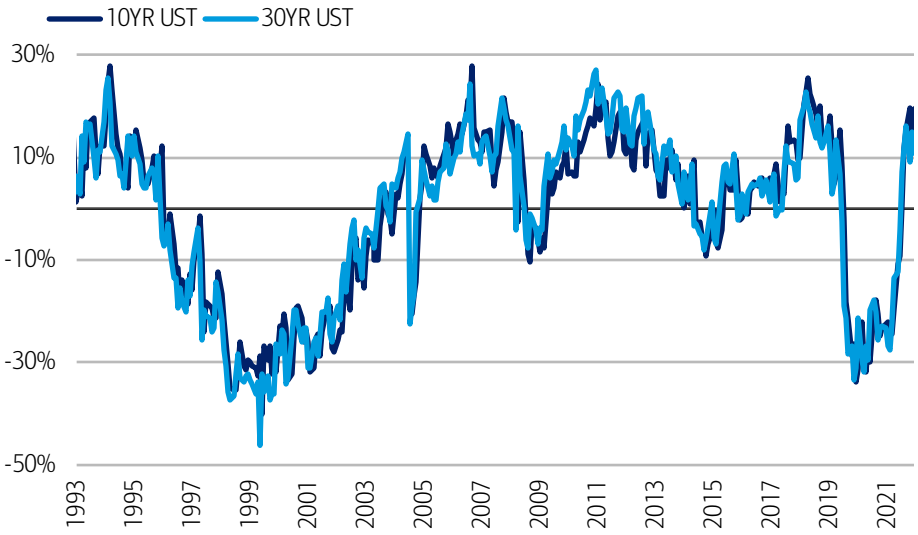
Two companies where we have positive long-term outlooks could have more challenging updates include PSEG (PEG) and Exelon (EXC).
PEG's 3Q update will leave clarity to be desired as management still has not quantified FY23 pension headwind and the company's 2022 has net pressures from higher financing costs without an offsetting benefit of warm weather.

We still see value in EXC and while FY23 is set to be a less robust growth year, we still anticipate growth with a stress tested +4% YoY improvement better than some bears who fear there is no growth YoY. Look for management to provide the building blocks to clear the overhang here. Finally, AMT (alternative minimum tax) and credit has been topical so we look for management to more forcefully state that it does not need incremental equity and sees path for a *de minimis* AMT cash flow impact

Key Themes

Inflation Reduction Act (IRA): Minimum tax bites and more

Exelon was one of the only utilities to quantify material minimum tax headwinds, but we expect other transmission & distribution (T&D) companies have similar challenges. For example we look for updates from FirstEnergy (FE), Edison International (EIX), and other potentially exposed companies. For EIX, the answer appears to be that management assumes that it can have customer recovery and defer impacts via regulatory memorandum accounts but overall the sector needs to provide more clarity.



On the positive side, almost every company owes the investment community a comprehensive update on capex, ratebase, and financing considerations from the Inflation Reduction Act renewables, nuclear, and hydro tax credits. This ranges from the small to substantial for companies, but expect this to be prominently on display for all companies. *Companies that are not prepared to provide crisp quantification could see underperformance based upon our investor conversations of expectations.*

Interest Rates – #1 Inbound Query in Recent Weeks (By Far)

The utility sector has sold off sharply since September 12 as investors have rapidly reassessed relative valuations, with the sector now trading at a ~20% premium to the 10Y and a ~10% premium to the 30Y UST based on our historical expected linear regression. While on its face this is a cautious data point, we highlight that relative over-valuation based on this metric has persisted for extended periods over the past two decades, including 2005-08, 2009-14, and 2017-2020, making this a far from unprecedented situation both directionally and in terms of magnitude. Relative valuation of the sector to rates has been the single most common topic of inbound queries in recent weeks as investors weigh the defensive characteristics off utilities in an increasingly risk-off market vs. relative valuation that suggests shares have further to fall to maintain historical relationships with rates. *Our preference for high-quality defensive utility shares recognizes near-term volatility as a driver, thus our preference for high-visibility stories with healthy balance sheets.*

See our latest analysis: Inflation & Utilities: Two Sides of the Same Coin? Utility Yields

Exhibit 2: Historical valuation based on regression relationship
Utilities screen as overvalued on both metrics, relationship has persisted in the past

US Utilities & IPPs: California 3Q22: Dawn of a New Day for PCG and California Outlooks	Julien Dumoulin-Smith	18 October 2022

Pensions: Still lingering and seemingly getting *worse*

The companies with the most acute adverse exposure to pension expense include FirstEnergy, PSE&G, Pinnacle West, Eversource, and to a far lesser degree American Water. To our understanding these companies do not use an average of year-end asset balances (i.e. smoothing multiple years) in their calculations but rather take a point estimate of year end.

We present the latest snapshots of unmitigated pension expense for PEG and FE. PEG has filed for an accounting order in New Jersey which could dampen the exposure by ~33%.

Exhibit 3: PEG Pension Analysis
Reiterate $0.18 impact to '23, excluding amortized benefit roll-off

BofA GLOBAL RESEARCH

Equity Needs: Utilities now "on sale" but not good for equity issuers

We expect **LNT** to provide a refreshed outlook for equity financing. Near-term we see need for an additional issuance of $178m in 2023, representing 40% of the portion that was previously allocated to tax equity investors – note we expect the equity funding portion to track with the 40-45% equity portion at the parent rather than at the utilities. Beyond 2023 we embed a baseline assumption that LNT will fund a similar proportion of incremental capital that had previously been allocated to tax equity with block equity for an additional incremental funding need of ~$270m across '24-25.

Portland General Electric (POR) is another company to watch due to the magnitude of equity needs, which now have a more negative impact on earnings due a lower assumed equity issuance price.

Conversely the companies that could execute buybacks, such as Consolidated Edison or Sempra, now have the opportunity to repurchase shares more accretively. To be clear we do not incorporate repurchase assumptions for either, but the weaker share prices could influence management decisions.

Asset Sales: Clearly value is declining from rates pressure.

Increasing debt and equity costs of capital are likely to negatively impact announced asset sale processes and could influence companies' plans to pursue similar avenues in the near future. The Consolidated Edison renewables asset sale datapoint at 11x was not that robust when considering it included a development company platform (i.e. value but no or negative EBITDA). Companies that have announced asset sales or strategic review plans include Avangrid, American Electric Power, Duke Energy, Eversource Energy, NiSource, Southwest Gas Holdings, FirstEnergy Corp, PG&E Corp, MDU Resources, and AES Corp.

Another group of companies have either historically engaged in M&A or indicated that divestitures could be an avenue to raise capital. These include CenterPoint Energy, Dominion Energy, NextEra Energy, Southern Company, UGI Corp, and Sempra Energy.

Alternatively some management teams have stated an opportunistic focus on acquisitions as part of their capital allocation framework including Avangrid, Exelon, Vistra, NextEra/NextEra Energy Partners, American Water, Essential Utilities, MDU Resources, and PPL Corp.

We note that above is not intended to be a comprehensive list, but rather to capture the more relevant contours of a company's strategy or philosophy.

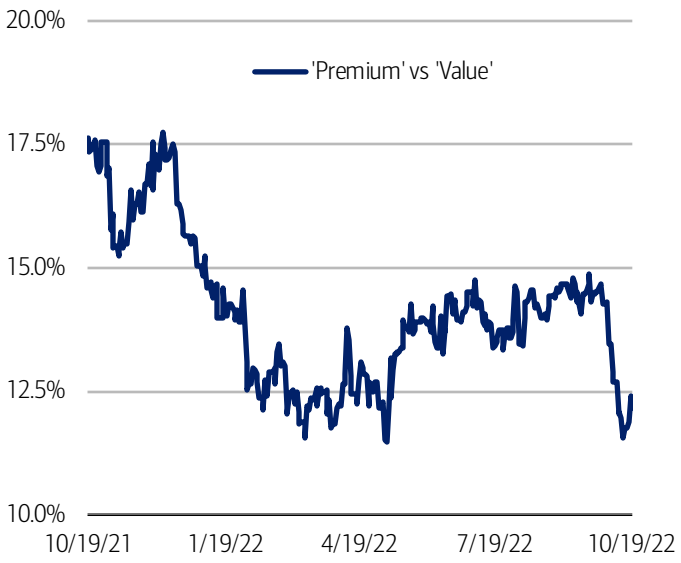
Fuel Costs & Recovery

The acutest of the acute customer bill inflationary pressures are purchased power & fuel costs. We have seen elevated regulatory scrutiny and delayed/extended corporate recovery in states such as Virginia, West Virginia, and Oklahoma, but we still believe this is the early days of scrutiny.

Rate Cases

PNW – We expect PNW to file its next Arizona rate case in late October. This will likely be one of the more closely watched rate case proceedings in 2023 given the highly punitive outcome of the last case and PNW's relative exposure in the state. In addition to a renewable investment rider, we expect PNW to request recovery of higher levels of pension expense, which will be a downside driver in '23 (our est -11c). Watch in-state peer Tucson Electric's case, which was filed several months earlier, as a key leading indicator, given similar outlines to both filings (ROE, renewable rider, consolidation of other mechanisms).

EVRG - EVRG has not made a Kansas rate case filing post-merger, though stakeholders have had the opportunity to articulate their positions in several dockets including Evergy's updated Capital Investment Plan (CIP) filing and annual Integrated Resource Plan (IRP) filings which saw annual updates earlier this year. On balance we expect that key interveners will remain focused on average retail rates in that state, though we note that the relative gap for industrial customers in the state has moderated of late given the sharp upward move in natural gas and Kansas' coal and renewables-heavy fuel mix. IRP and capital plan updates filed earlier this year saw staff and interveners express concern about EVRG's successive capex plans growing by $1B in each of the past two roll forwards. Specifically interveners and staff have called out Kansas-based transmission spending as potentially problematic, linking it to Kansas' significant levels of energy exports and thus not directly providing benefits to state ratepayers. We expect intervener pushback in the coming rate case to generally follow this line of reasoning as regional competitiveness has long been cited as an area where the state lags, driven in part by relatively high rates.



ED – Expect the latest Con Edison Company of New York (CECONY) rate case to be resolved later this fall, in line with the historical pattern of rate cases receiving a joint proposal late in the year with new rates effective Jan 1. We continue to see risks associated with the company incurring a haircut to the requested capital expenditure related to state decarbonization goals (see grid stability spend as less risky) as pressuring the long run CAGR, particularly as there are limited levers to rely on for cost reductions.

LNT - Management flagged a potential rate case filing in Iowa in 2023 which is earlier than previously planned – though Interstate Power & Light (IPL) has historically garnered constructive regulatory outcomes with the last rate case (2019) resulting in a 10% authorized ROE and 51% equity layer, nonetheless we flag this as a regulatory risk worth monitoring as LNT contemplates coming capital plan updates.

Premium vs Value vs Gas

Below we show the latest sub-sector trends where the high quality 'premium' utilities have de-rated to among their lowest premiums versus lower P/E 'value' utilities. Similarly gas utilities have sharply improved versus electrics. This dynamic is surprising as natural gas utilities have fewer incremental investment opportunities relative to electric generation companies. While natural gas bills are generally lower than electrics, the rate shock is more acute in colder climates, posing a risk of regulatory recovery.

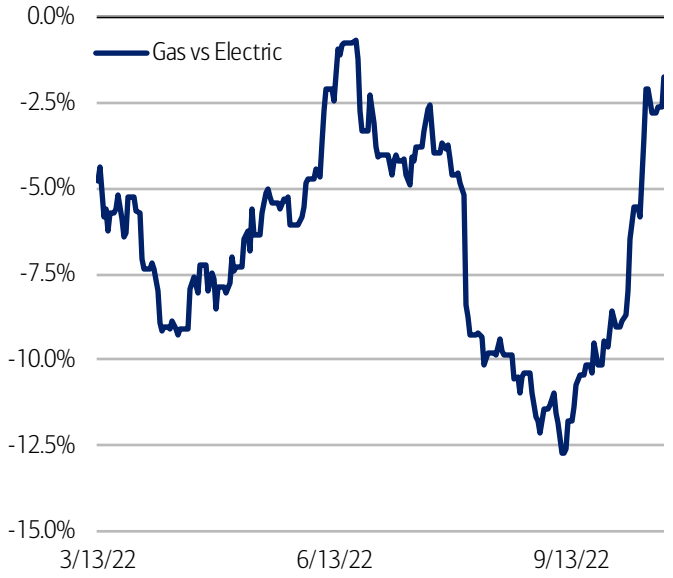


Exhibit 5: High P/E vs Low P/E Regulated Utilities 2024 P/E Spread
Premium has de-rated. Will this continue? Defensive environment could lend some support to avoiding compression.

Short interest: Trending lower

Fundamental short interest in the utilities sector has moderately declined to an average of 2.27% from 2.37% with a median of 1.70%, down from 1.87%. The most concentrated shorts are PCG, ATO, and AGR versus the least concentrated are DUK, SRE, and NEE. The largest increases in short concentration are for Dominion +53% although still one of the lowest followed by FirstEnergy, New Jersey Resources, and Algonquin. The largest declines are for Portland General, NiSource, Fortis, American Electric Power, and Southern Company.

BofA GLOBAL RESEARCH

2023 & 2024 Estimates: Consensus Shockingly intact

Surprisingly the overall utility industry 2023 and 2024 estimates are unchanged since June 30th despite the growing headwinds from inflation and interest expense. Notably four of the five companies with the most positive 2024 estimate revisions are all underperform rated: AGR +3%, AQN +2%, HE +2%, and EIX +2%. In contrast, the two companies with the most negative FY24 estimate revisions are OGE and NWE, each -2.2%.

BofA GLOBAL RESEARCH

Format:

On a company-by-company basis we provide (1) provide BofA views on the equity and key debates; (2) investor bull arguments; (3) investor bear arguments; and (4) view on sentiment and positioning with any nuances. *The bull/bear and sentiment thoughts are based on our extensive conversations with diverse investors including long-onlys and hedge funds with a variety of communities such as utility/power dedicated, generalist, energy, clean tech, energy transition, and more. We caveat that inherently these are based on a sampling approach and are not intended to be representative of all investors.*

Premium Utilities

The premium vs value spread has compressed, not surprising with the rise in interest rates which reduces the valuation for growth; however, we believe this is overly simplistic. Many of the premium utilities have long track records of meeting or exceeding their guidance ranges with relatively low-risk business plans. As a result, we see justification for the premia of these high-quality companies expanding relative to the broad utility index.

Ameren Corp. (AEE)

Ameren continues to screen well as an attractively valued premium utility stock with upside yet to be incorporated in the company's formal capital plan. We expect the Q3 update to be relatively modest with formal EPS and capex roll-forward traditionally coming on the Q4 call. Mgmt. has historically discussed next-year drivers at the Q3 update with O&M commentary in particular key to affirming confidence in the trajectory – note this is an area where Ameren's disclosure has lagged peers as mgmt. guides directionally lower with no additional detail, indicating little or no latitude, a contrast with other premium peers. Reiterate Buy on attractive valuation as shares have pulled back along with the rest of the premium utility group.

Bull Case: Long-run capital investment opportunity will be further crystallized over coming updates including 1) addition of MISO transmission capex into the latter portion of the coming plan (will roll to 2027) and 2) Missouri renewables likely on a subsequent update after permitting is secured. Improving visibility into 6-8% EPS trajectory makes this a premium name with upside.

Bear Case: Slow rollout of MISO transmission capex and uncertain timing of when MO renewables will be added to plan driven investors to seek opportunities with more near-term upside catalysts.

Sentiment/positioning: Generally owned and liked by investors as preferred way to gain exposure to MISO transmission theme. Less obvious consensus on regulatory setup (rate proceedings in MO and IL flagged as main risks in recent investor poll). Rush Island legal challenge and accelerated retirement date an open question mark while legacy Callaway performance issues occasionally flagged as execution question marks.

US Electric Utilities & IPPs: Midwest Coal Generation: Parsing a series of resource updates (AEE, LNT, WEC) 24 June 2022

Alliant Energy Corp (LNT)

We continue to like the stock as a relative winner with renewable tailwinds and one of the more intact outlooks. Expect that mgmt. will address near-term challenges directly when setting next year's guidance range with sequential FY23 growth at just +2-3% on our updated estimate of $2.88 for 2023. The valuation premium has contracted to the lowest in 2022 (+4% vs the group) but LNT is a key Inflation Reduction Act (IRA) long-term beneficiary with the current FY23 turbulence just noise.

Bull Case: As the smallest capitalization premium utility ($12Bn vs $21Bn average ex-NextEra) with one of the greenest portfolios, LNT should trade at one of the largest premiums to peers. The profile strengthened with IRA

Bear Case: LNT's long-term EPS guidance of 5-7% with a target around the midpoint lags many utilities and requires extreme cost discipline to achieve.

Sentiment/positioning: Positioning has been very dynamic throughout 2022. Initially investors were justifiable concerned about the short-term outlook related to solar capex in the challenging macro backdrop (supply chain, investigations, etc.) which ultimately eased. Excitement returned after IRA which has given way to renewed questions about 2023 EPS due to cost pressures. Overall we would characterize LNT as a battleground stock.

Alliant Energy Corporation: 2023 and Q3 EPS preview: Long run intact but near-term pressures are real 13 October 2022

CenterPoint Energy Inc (CNP)

CenterPoint remains one of our preferred regulated utilities due to its leading growth rate (ex-PCG) and fairly conservative plan. We acknowledge that the outlook has diminished with CNP having one of the highest interest rate exposures in the sector due to the reliance on floating/variable rate borrowings. As a result we see new pressures on short- and long-term guidance but believe they are manageable with the growth profile largely intact. The incremental capital opportunities in Houston helps to firm up the profile.

Bull Case: Leading growth, upside to capital expenditures, no equity needs, mostly constructive regulatory jurisdictions, and beneficiary from IRA in Indiana. Although higher interest expense is a challenge, outlook is still solid and is a contrast to many peers.

Bear Case: The new management team only has short track record of performing here, albeit a strong one. The possibility and valuation for further asset sales has diminished while investor preference for natural gas utilities has eroded after the IRA added more investment opportunities for electric utilities. Modest downside to guidance/Consensus from interest rate headwinds

Sentiment/positioning: Mostly positive but less of a consensus long. Some investors have positioned short for a less constructive 3Q update.

CenterPoint Energy: Houston, We Have An Interest Rate Problem. Can Management Offset? 11 October 2022

CMS Energy Corporation (CMS)

CMS has underperformed the broader utilities sector since 2Q22 earnings where the company maintained FY22 earnings guidance despite 1H22 earnings outperformance. Nevertheless we reiterate Neutral with shares trading in-line with other premium names despite recent share weakness. While CMS is well positioned ahead for FY23 earnings guidance update expected during 3Q earnings, we do not see other positive catalysts through 2H22.

Bull Case: CMS is largely de-risked into FY23 with line-of-sight to 2023 earnings at the top-end of management's LT CAGR guide, CMS 2023 gas rate case settled, CMS electric rate case in late stages, and the Integrated Resource Plan already announced. This is favorable given investor shift to risk-off, defensive names.

Bear Case: The revival of MPSC reliability efforts following August 2022 storms increases regulatory risk ahead of key CMS electric rate cases. With CMS earnings almost entirely regulated by the MPSC, any signs of deterioration in the MI regulatory backdrop represents a risk to company LT growth outlook. Plus, recent share underperformance augments near-term equity dilution associated with the 1H23 Covert acquisition.

Sentiment/positioning: CMS has had been an investor favorite for multiple years as among the highest quality company given the track record. That halo that shares have enjoyed has dimmed following the decision to not reaffirm guidance early in covid,

Enerbank surprise dilution, and overall lower visibility into earnings growth trajectory than prior years. This has manifested in the premium shrinking but CMS is still a +1x premium versus the overall group.

US Utilities & IPPs: Michigan Utilities 3Q22 Preview: Where do we stand ahead of 2023 updates? 19 October 2022

DTE Energy Co. (DTE)

It is firmly consensus that DTE will increase its long-term EPS CAGR this Fall, either with EEI or 3Q earnings. This view is based on management commentary, upside from the forthcoming integrated resource plan (IRP), and the fact that DTE has grown 8%+ since 2020. A growing debate is whether management will rebase off the $5.84 original guidance midpoint or the $6.00 revised guidance midpoint. Historical precedent would support the former.

Bull Case: Among the strongest track records of EPS growth on a leading jurisdiction. While the EPS CAGR increases is a consensus expectation, bulls point out the favorable developments that have come in 2022 that could lead to further upside: IRA reducing the need for tax equity.

Bear Case: The core bear argument is that DTE should not trade at a large premium as earnings includes a fairly large amount of unregulated exposure (~10% of 2023 net income guidance ex-corporate/other). The value of the RNG business has eroded with increasing interest rates.

Sentiment/positioning: DTE has been a consensus long for most of 2022 which likely explains why the stock is -4% TTM. Positioning has skewed less long in recent weeks due to concerns about convertible hedging pressure but many we have spoken to plan to increase exposure ahead of EEI.

Eversource Energy (ES)

Reiterate underperform on Eversource despite the -10% underperformed YTD as we still believe that shares are trading at a premium valuation to the fundamentals. We believe that the three core legs of the bull argument are overly optimistic.

Bull Case: The optimistic view is that Eversource can sell its offshore wind business for a favorable valuation, deliver the full $3.0Bn of incremental capital that management has previewed, and have minimal/no equity financing needs. Success on these metrics can lead to ES offering an above-average EPS growth rate and returning to its historical premium to the group.

Bear Case: The combination of declining value for offshore assets (leases & development), equity needs for balance sheet improvement, and regulatory struggles in executing $3Bn of capex leads to a ~6% EPS CAGR, below average for the sector.

Sentiment/positioning: Eversource is a battleground name with dug-in bulls and bears. Sentiment has been deteriorating along with the macro backdrop as the rise in interest rates/decline in stock prices leads to a more challenged outlook.

Eversource Energy: Remain Cautious on Prospects Post-IRA: How much capex can the team deliver? 19 September 2022

WEC Energy Group Inc. (WEC)

Reiterate Buy on shares of WEC as among our preferred defensive utility plays. Even after reducing our relative premiums applied to most of the company's WI-based utilities to 3.0x from 4.0x shares remain attractive following sell-off in premium names vs the rest of the group. Continue to prefer quality execution in supportive jurisdictions with shares of WEC screening as among the best in class.

Bull Case: WI outlook was de-risked following a settlement in rate case across all three electric and gas distribution utilities earlier this month with constructive outcome on

revenue requirement and incrementally higher equity layer. Cost controls remain a key de-risking lever as well as we see '22 earnings strength likely creating additional latitude to pull ahead expenses where possible in Q4. Energy Infra segment still ahead of plan, could see additional solar generation opportunities identified following IRA legislation passage given historical preference for wind.

Bear Case: Natural gas distribution in Chicago (People's Gas) has rider rolling off at the end of 2023, leaving a question as to how mgmt. will manage lag – either via serial rate cases, or potentially multi-year plans though this would require legislation similar to that passed for electric utilities. Energy Infrastructure earnings growth likely set to moderate as the segment reaches 10% of consolidated earnings.

Sentiment/positioning: Feedback from our conversations with investors screens consistently positive on shares of WEC with the general theme being that now remains the time to 'pay up' for the highest-quality names. Intriguingly our latest survey suggests the buyside might be assuming a faster EPS inflection through 2025 than both our and Street estimates reflect ($5.22).

WEC Energy Group Inc: Among the best beats of Q2 with tax legislation upside 03 August 2022

Xcel Energy Inc. (XEL)

Reiterate Buy on shares of XEL given attractive valuation and our forecast for EPS growth compounding near the upper end of mgmt.'s 5-7% target range. We like the recent de-risk with testimony in the MN electric case pointing to ROE upside vs. XEL's allowed of 9.06%, among the lower authorized returns across premium utility names. Execution vs. regulatory priorities has been consistent through 2022 with key resource plan filings in both CO and MN with expectation for greater clarity on renewable opportunities in MN in particular yet to come, likely in the first half of 2023.

Bull Case: XEL remains a defensive premium utility with a strong track record of execution and constructive relationships in its key jurisdictions including MN, CO, and NM. Valuation is not demanding following the recent market volatility which saw XEL and other premiums underperform the broader utility group by several hundred basis points. With major rate cases largely resolved the regulatory outlook for 2023 is less challenging and offers good visibility. MISO tranche 1 upside should manifest in the latter part of the rolled-forward forecast too, with further runway ahead.

Bear Case: O&M latitude is limited with mgmt. increasing its 2022 expectations to point to 2% higher levels on a y/y basis, with expectations for further increases driven principally by inflationary factors. Investors view this with some caution as an indicator that XEL has comparatively less latitude to offset pressures than other premium utilities such as WEC or DTE.

Sentiment/positioning: Sentiment has deteriorated of late, though XEL remains a preferred long among investors. Offsetting its premium defensive characteristics is the concerns about O&M increases outlined in the bear case and ramifications for the company to compound growth at its target 5-7% long-run CAGR.

Xcel Energy Inc: 2023 and Q3 EPS preview: Trajectory on track for one of our favorite defensives 07 October 2022

Value Utilities

Value has positively re-rated versus premium by 200-300bp recently, not surprising given the rising rate dynamics which mathematically reduces the value of above average growth. While we generally still prefer the premium segment, we still see a robust opportunity set within the lower P/E class. Specifically, we highlight Entergy and PPL as two companies where we see strong FY22s and believe the long-term outlook has strengthened post-Inflation Reduction Act. The fairly conservative guidance plans have upside, a contrast to many companies in our coverage universe as well as the broad market.

American Electric Power, Inc (AEP)

Reiterate Buy on shares of AEP. Attractive valuation at present levels with an outlook that is de-risked at the margins given recent mgmt. refresh of long-run CAGR and 2023 guidance. We are closely watching the West Virginia and Virginia regulatory dynamics that pose risks but neither are likely large enough to derail the company's profile.

Bull Case: Contracted renewables sale comes in at attractive valuation despite largely wind portfolio and no DevCo (negative comps vs. ED at 11x EBITDA). AEP is comparably de-risked vs. peers who have not updated long-run CAGR or capital since 2021 having recently hosted an Analyst Day and refreshed the outlook in light of the current inflationary and higher rate environment.

Bear Case: Lack of tangible upside following the refresh, particularly as mgmt. talked down the opportunity to inflect beyond the 6-7% CAGR. Regulated renewables capital was a disappointment with just a modest step up despite presumed upside from IRA legislation.

Sentiment/positioning: Analyst Day was taken as a generally positive update although on the margins, and in the context of relatively low expectations. Shares are neither well owned nor shorted as reflected by valuation which has generally trended near the group average.

American Electric Power: Analyst Day Takeaways: Few surprises, but an increasingly de-risked outlook 05 October 2022

Consolidated Edison (ED)

Reiterate Underperform on shares of ED. The contracted renewables sale announcement at 11x on 2023 EBITDA was a modest upside surprise vs. our and investor expectations for $6.3B enterprise value, with the final deal announcement at $6.8B. Nonetheless with the transaction now priced in attention shifts back to core fundamentals including the tough regulatory setup for the Con Ed Company of New York (CECONY) rate case which remains in settlement talks with commission staff and key parties. While a joint settlement proposal is not likely before early November, we continue to view the magnitude of the ask as challenging given the macro backdrop and inflationary pressures on ratepayers in particular.

Bull Case: A constructive CECONY rate case joint proposal delivers authorized ROE upside without reducing requested rate increase substantially. Use of proceeds for a stock buyback would also be well-received by investors after the company removed its 2022 equity issuance and pulled '23-24 guidance pending a formal update.

Bear Case: Rate case outcome that applies a haircut to the revenue requirement increase would be cautiously received – we see this as the more likely scenario given existing rate pressures on customers from increased fuel costs and potential need to socialize elevated levels of customer arrears. Unlike other utility peers ED has consistently messaged that the company has little slack to cut O&M substantially, thus we see inflationary pressures as directly impacting earned ROE.

Sentiment/positioning: Sentiment remains mixed with bulls seeing upside to EPS growth with renewables proceeds used to reduce equity needs, de-risking the long-run

EPS CAGR. Bears remain focused on near-term risks around the rate case outcome given a) historical difficulty of the NY jurisdiction and b) current macro environment and rate pressures. Shares are one of the better performers YTD as investors have thus far shown enthusiasm for the business simplification strategy thought pending rate case outcome is now the next catalyst for shares in our view.

Dominion Energy (D)

Dominion is one of the worst performing companies recently due to the adverse updates around the offshore wind performance guarantee and Virginia Department of Energy's 2022 Energy Plan published. While Dominion has made progress working with stakeholders, Virginia remains an above-average risk for the company. Dominion has materially de-rated and we do not believe now is the time to capitulate but we now struggle to see shares trading at a premium to the group given average growth, large unregulated earnings mix, Virginia overearnings overhang, and emerging financing pressures. With that in mind, Dominion now trades at a 10% discount to the utility sector and we maintain Buy at this valuation. After our latest management meetings, we remain optimistic that management can find ways to revitalize consolidated growth to compensate shareholders for the above-average risk. Virginia is the clear investor focus between the DOE Energy Plan and Offshore Wind performance guarantee order but the opportunities to create shareholder value from the unregulated merchant business ('contracted assets') is underappreciated. The mark-to-market EPS from merchant Millstone earnings can help to mitigate higher financing costs in the long-term, a unique characteristic versus peers. We acknowledge that these are lower quality unregulated earnings but they would be offsetting similarly valued parent company financing expenses. If Dominion can find a way to raise capital in a more efficient way such as asset sales there is a path to improving the below average 6.5% EPS CAGR. In summary, the path ahead through 3Q/EEI Financial Conference, and January 2022 legislative session is rocky but we see more of the headwinds as priced in after the weakness.

Bull Case: Average growth with visible earnings growth via riders/trackers at a discounted valuation sums up the pitch.

Bear Case: The cautious case for shares relates to adverse legislation being enacted that restores the biennial rate reviews, returns the full extent of prudency determinations to the Virginia State Corporation Commission, and eliminates the overearnings offset mechanism with customer credit reinvestment offsets, etc.

Sentiment/positioning: Dominion has generally been viewed more cautiously by dedicated investors due to the historical Virginia earnings above allowed and guidance resets. Long only (and other) investors still discuss the dividend cut as well as less regulated earnings mix. As a consequence few investors we have spoken to have a high degree of conviction in a positive Dominion position.

Duke Energy (DUK)

Reiterate Buy on DUK following a particularly busy period during which the company hosted an ESG-oriented investor update as well as met with us for a conversation with management. We continue to see shares as attractively priced given the outlook and pending company simplification upon the sale of its contracted renewables business, with the recent 10-year capital plan increase on the margins serving to affirm the outlook for 5-7% regulated EPS growth at the RemainCo.

Bull Case: Given current valuation (0.5x discount to peers) bulls see shares as appropriately de-risked to compensate for a number of uncertainties including 1) coming EPS reset to account for the sale of the renewables business, 2) renewables valuation and ability to pay down holdco debt / reduce interest expense, 3) ability to execute on ambitious $200m O&M reduction plan in 2023+, 4) pending outcomes of North Carolina Carbon Plan proceedings as well as recently-filed NC rate case. While the story today includes an above-average number of moving pieces, prospectively the outlook is for a lower-volatility largely regulated business in generally supportive jurisdictions with de-levering at the parent under way.

Bear Case: Bears remain focused on the unclear messaging around the renewables sale leading to yet another earnings CAGR reset as fundamentally undermining the case for DUK to compound EPS growth at its target CAGR. Commercial renewable assets are generally seen as lower-quality than ED's portfolio and therefore likely to garner a lower multiple (investors generally see 10-11x), with the sale ultimately dilutive even when accounting for parent de-levering as the principal use of proceeds. Updated capex plan at the ESG Day suggests limited upside from IRA as existing base capex plan had already assumed a carbon value.

Sentiment/positioning: In our investor conversations, Duke is one of the least preferred equities due to the expectation of downside to Street. On balance the most recent round of investor communications has addressed some lingering questions while leaving others – most notably deal proceeds and dilution – still open pending resolution likely in the first half of 2023.

Duke Energy: Meetings Recap: Yes, the Utility Outlook is Intact. Consolidated Set to "Reset"? 10 October 2022

Entergy Corp. (ETR)

Shares have positively inflected in recent weeks and now trade at ~10% discount to the group versus approx. 12-14% throughout the summer. We attribute the recent rerating to a relatively quiet hurricane season in ETR's service regions, which peels back the storm overhang on shares.

Bull Case: ETR is at the precipice of earnings acceleration with C&I renewables growth augmented by Inflation Reduction Act (IRA) incentives and load growth in the Southeast. IRA tax credits, expected to accrue to customer in the regulated model, will improve customer affordability. Expect momentum coming out of a relatively quiet storm season, with a new CEO at the helm.

Bear Case: ETR's regulatory relationships remain subpar given ongoing System Energy Resources Inc (SERI) litigation and elevated customer affordability pressures augmenting regulatory risk in jurisdictions such as New Orleans. Elevated balance sheet risk given 2022-2024 equity need amid depressed share prices, and limited ability to flex debt given the already pressured FFO/debt ratio.

Sentiment/positioning: Entergy has been a hedge fund favorite for years but the support has weakened over the past year due to growing concerns about the balance sheet and storm exposure. The decline in ownership concentration is favorable as a common bear argument was that it was a crowded long.

Entergy: IRA augments LT growth as near-term storm risk alleviates. Reit. Buy, $135 PO. 20 September 2022

FirstEnergy Corp. (FE)

First Energy shares have inflected from August lows following CEO, Steve Strah, retirement effective September 16th. Parallel to the announcement, the company signaled a potential EPS accretive minority transmission and distribution (T&D) divesture. The dual announcement surprised investors as our discussions from earlier this year indicated the majority did not expect changes to the executive team or additional FE M&A. We remain Neutral on shares of FE given the pension headwinds weighing on earnings growth and elevated uncertainty to the business outlook. With various updates including the new CEO, the potential T&D sale, and forthcoming Ohio rate cases still unknown, and pension headwinds representing a material overhang to long-term EPS CAGR, we see shares trading in line with fair value given the risk profile. We watch carefully the net accretion or dilution from the pending asset sale considering use of proceeds to paydown debt.

Bull Case: The CEO transition and potential divesture catalyzes a revival of company culture, with the decision to hire an external CEO another large step away from legacy HB6 litigation. While FY23 remains challenged, negative pension earnings impact is already appreciated by investors and incorporated in Consensus estimates, and therefore is imbedded in current valuation with any incremental offsets a positive catalyst. We look specifically towards the Nov 9th update at the NYSE as another potential date for a management update.

Bear Case: FE's 2024 Ohio rate case represents a risk to LT earnings with FE overearning in the jurisdiction. Combined with pension headwinds and IRA minimum tax provision, material risk to FY23+ earnings and balance sheet strength.

Sentiment/positioning: Sentiment is improving among investors who believe the CEO turnaround story and who increasingly view FE consolidation more likely than in the past with the company discussing asset sales. FE's transparency into the pension problem has been received favorably against other company's lack of quantifiable guidance on the pension earnings headwind (i.e. PEG).

FirstEnergy: Looking External For New Leadership: Is This an Inflection Point in the Outlook? 16 September 2022

Evergy, Inc (EVRG)

The current mgmt. team has assembled a strong track record since the current CEO David Campbell took over in January 2021. In the ensuing quarters EVRG has beaten Street expectations for EPS, reaffirmed and rolled forward its 6-8% long run growth CAGR, and achieved a partial settlement in its Missouri rate cases. Nonetheless we see tangible headwinds ahead as the coming Kansas rate proceeding appears to have a more challenging setup despite commission staff that we view as even-handed and not philosophically aligned with any specific outcome. Despite a strong run in the past 18 months we see the company as more likely to be playing defense with what promises to be a contentious Kansas rate case proceeding, customer rate pressures, and a gap between rate base growth targeted at 6% and EPS growth at 6-8%. Reiterate Neutral on balanced valuation.

Bull Case: Bulls point to a strong track record of execution as indicative that the company will continue to deliver both regulatory wins and strong earnings growth. EVRG could emerge a short-term relative winner as the company is not expected to issue EPS guidance until Q4 and could benefit from investors selling shares perceived to have disappointed in their 2023 outlooks presented at EEI.

Bear Case: It remains difficult to see a case for the stock re-rating in the near term ahead of its second major rate case filing expected in Kansas in early 2023. Street consensus, like BofA estimates, remains biased to the lower end of mgmt.'s 6-8% target range and it is difficult to see a path to the midpoint or upper end absent an inflection in capex, which we see as particularly challenged given vocal opposition from Kansas interveners and increasing scrutiny from the Kansas commission.

Sentiment/positioning: Sentiment has occulated with many investors staying away from the company without conviction into long-term earnings power given one of the largest deltas between EPS and rate base guidances.

Evergy, Inc: Framing the latest regulatory debates in Kansas and beyond 28 Sept 2022

Exelon Corp. (EXC)

*In our investor conversations recent months, it **was** nearly unanimous that many had lost conviction in management and the lack of a publicly articulated succession plan was an overhang. In fact both the bulls and bears had call Exelon "a 2023 story". A series of negatives have caused 10-15% underperformance from the June highs including minimum tax headwinds, unexpected block equity issuance, and seeming 2023 guidance headwinds. Despite all of this we maintain Buy as we still believe EXC can deliver 7-8% long-term EPS*

CAGR with a lower risk profile from reliance on riders/trackers, multi-year plans, and forward test years that reduce lag with the backdrop of better than average affordability.

Bull Case: Premium assets in premium jurisdictions with premium growth should command a premium valuation. The only missing ingredient is premium stewardship to deliver the plan. Estimates are intact and could be conservative if Illinois earned returns are robust and the IRA headwind is lower than guided. Shares can return to the premium they briefly reached earlier in 2022.

Bear Case: T&D utilities are disadvantaged after the IRA enactment due to fewer investment opportunities which should lead to a de-rating. The bears vehemently believe that Exelon's management team justifies a discounted valuation based on historical challenges in achieving guidance and at times a confusing message. With apparent pressures 2023 and long-term guidance, it will be difficult for shares to materially re-rate positive. Lastly, EXC has a history of engaging in acquisitions. With this mix and track record of missing utility earnings guidance justifies a greater discount than the mid-single digit level that it trades at, plus risk to EPS.

Sentiment/positioning: Sentiment has steadily improved and EXC became a consensus long before the events of 2Q and Fall conference messaging that caused many to capitulate. Now we characterize the outlook as somewhat apathetic with low conviction amongst both bulls and bears.

US Utilities & IPPs: PowerPoints: EXC Management Transition 18 October 2022

NiSource Inc. (NI)

The November Analyst Day detailing the outcome of the strategic review and pro-forma growth rate where the debate is whether the comparable growth rate (2021 base) will be extended at 7-9% or moderate lower. 2025+ annual capex would have to increase from $1.9-$2.3Bn in 2024 to $2.7-$3.0Bn to support an 8% EPS CAGR midpoint. This is not unrealistic given $2.6Bn 2022 and $3.6Bn 2023 in elevated generation spending years but we believe a YoY step increase in 2025 could be challenging given affordability considerations. Further increasing debt & equity financing costs add to uncertainty here. With that backdrop we see 7%+ EPS growth even a modest annual capex scenario of $2.3-$2.6Bn that should comfortably support 6-8% growth, one of the highest in the sector. Combined with a discounted valuation, we reiterate Buy. See both a nice long-term view with a catalyst rich outlook.

Bull Case: NI is cheap at ~1x P/E discount to electric peers in 2024-2025 while offering a premium growth rate. Expectations for the strategic review have moderated.

Bear Case: Without a concrete positive update from the strategic review and potentially slowing growth, shares deserve to trade at a larger discount.

Sentiment/positioning: NI was a clear consensus long around the initiation of the strategic review, but sentiment has clearly deteriorated in recent months and weeks. Still there is a vocal contingent of bullish investors. Short interest has declined to a one-year low although is still ~3% of float.

OGE Energy Corp (OGE)

We keep expectations appropriately subdued for a long-term EPS CAGR refresh so recently after the 4Q21 increase and with growing regulatory & affordability uncertainty. The upside for capital expenditures is clear and well known but we would not be surprised to see management dial-back distribution spending to tamp-down on bill inflation. 3Q call should deliver a strong FY22 guidance increase with management already pointing to the top-end of the range on the 2Q call before well above average weather occurred. Reiterate Buy with these favorable short- and long-term dynamics ahead.

Bull Case: While OGE may appear to be more expensive than peers on Consensus estimates for 2024, that does not capture the benefit of

Bear Case: OGE trades at a +2% premium on 2024 Consensus when the company has historically been a discounted valuation with below-average growth.

Sentiment/positioning: OGE has been an investor favorite from late 2021 through most of 2022 on the acceleration of growth but has seen a deterioration in sentiment when the stock reached a premium on 2024 Consensus estimates. Now the stock has turned into a debate name.

Pinnacle West Capital Co. (PNW)

Reiterate Underperform on shares of PNW. Shares continue to trade at only a modest discount to the broader utility group following the latest bout of volatility in the sector. We continue to see PNW as exposed to a consistent and elevated regulatory risk profile, particularly with a coming rate case filing. While concerns about the pension impact on earnings have subsided after reaching a peak during Q2, we continue to expect a drag on 2023 earnings though mgmt. is not likely to offer full-year EPS guidance given the pending rate case filing.

Bull Case: Near-term the stock could see short-term relief if Arizona Corporation Commission (ACC) elections skew favorably for Republicans, though we note that long-term outcomes at the commission are not necessarily dictated along party lines. One potential scenario for outperformance in the short term is linked to the fact that mgmt. is not likely to provide 2023 EPS guidance due to the upcoming rate case filing. With some investors expressing concern that companies offering 2023 guidance could disappoint expectations and underperform, PNW could emerge as a relative winner by not providing guidance.

Bear Case: Expect rate case data points to be limited for the balance of 2022 beyond the initial filing, which is expected in late October or early November. Overall outline of the filing is expected to follow in-state peer Fortis including a renewable generation rider and consolidation of existing rider mechanisms. With lack of intervener or staff testimony until later in '23 we do not see obvious upside catalysts for shares in the near term, outside of a potential short-term election-related move depending on the outcome.

Sentiment/positioning: Investors continue to view shares cautiously heading into a critical election cycle and ahead of another major rate case filing – the stock remains a consensus short.

Pinnacle West: Pension overhang outlook improves, but O&M a near-term drag 04 August 2022

PPL Corporation (PPL)

Our conviction in PPL has grown since our August upgrade with management appearing to have made fairly conservative assumptions and the ability to offset operating and financing cost pressures that are negatively impacting many in the industry. It is true that there are floating rate interest expense pressures in 2H22/23+ but it represents only $0.01-$0.02 (~1%), a magnitude that is able to offset. PPL provided its long-awaited multi-year guidance refresh in June when the 10Yr was 3.0-3.25%, approximately 100bp lower than current levels but far above the 1.5% when many peers set long-term guidance in November 2021.

Bull Case: Best-in-class track record of controlling O&M in Pennsylvania core utility can be applied in Kentucky during the planned stay-out and for the newly acquired Rhode Island businesses. De minimis regulatory proceedings conversely keeps shares out of the headlines and the crosshairs of potentially adversarial proceedings.

Bear Case: The 6-8% EPS growth profile is not sustainable with 3-4% rate base growth which is based upon one of the more aggressive O&M reduction trajectories in the sector. PPL also has floating rate interest rate exposure and without plans for a rate case, any inflationary pressures will be the responsibility of shareholders.

Sentiment/positioning: We observed initial minimal traction to our August upgrade but investors have become more receptive in recent weeks

PPL Corporation: Sun set to shine in Kentucky: upgrade to Buy after underperformance & IRA beneficiary 15 August 2022

Public Service Enterprise Group (PEG)

PEG shares have traded at a steep discount to the group (~10%) since the Street became aware of the 2023 pension earnings headwind in May 2022. Management's reluctance to quantify the earnings headwind or potential cost offsets exacerbated the pension overhang, leaving investors to assume the worst and sending shares lower. Investor concern over PEG's exposure to interest rates and inflationary O&M pressures have compounded pension-related FY23 earnings concerns of late, overshadowing positive macro updates including PEG's eligibility for lucrative IRA production tax credits (PTCs) on its existing nuclear portfolio. Nevertheless, we reiterate our Buy rating on shares of PEG, with the company continuing to trade at 'utility-only' value ($55/sh). We do not believe unregulated Power value is appropriately reflect in shares despite the most attractive backdrop for nuclear operations in years.

Bull Case: Valuation driven. PEG trades at steep discount to group given 2023 earnings risks, yet these risks are already well appreciated by investors and baked into expectations. At these levels, investors are getting an increasingly attractive nuclear profile essentially for 'free'. Additionally, PEG is a lead contender for the offshore wind transmission contract from the NJ BPU. This represents $1Bn+ incremental capex spend, a positive NT catalyst. Bulls acknowledge that a simplification transaction involving nuclear is unlikely to be near-term event but there is the upside optionality.

Bear Case: Shares are essentially 'stuck in the mud' until management addresses FY23 earnings guide or quantifies pension impact, and management has consistently reiterated that PEG will refrain from quantifying the magnitude of pension impact until after year-end 2022. This extends near-term uncertainty on FY23+ earnings outlook while continued market deterioration likely augments PEG's pension issue.

Sentiment/positioning: Investors still mostly on the sidelines until FY23 guidance given pension dynamic. Nevertheless, expect a relatively quiet 3Q / EEI update with the company unlikely to deliver 'bad news' during the new CEO Mr. Ralph LaRossa's inaugural earnings call.

Public Service Enterprise Group: Pension problem goes unsolved, but shares attractive w/ long-term upside. Reit Buy. 03 August 2022

Southern Company (SO)

Reiterate Neutral on Southern. Shares have held up well during the recent market volatility and have outperformed the XLU by ~5% YTD on constructive data points around Vogtle as well as the perceived 'flight to safety' for the defensive company. Fuel load was a critical milestone and investor attention is turning to ability to execute on the remaining deliverables for the upcoming months.

Bull Case: Bull case revolves around execution at Vogtle and lack of further delays, particularly with Unit 3 largely de-risked at present and focus now shifting to the construction schedule for Unit 4. Recent push back of the U4 schedule in particular represents a de-risk vs. previous relatively aggressive timeline. SO has traded at one of the largest premiums in the sector before Kemper and Vogtle large projects with bulls arguing that shares can return to that level.

Bear Case: Stock now screens as overvalued based on forecast growth rate following outperformance thus far in 2022. Core utility growth in the 4-5% range with Vogtle in-servicing step up in 2024 representing a one-time step change, otherwise growth is below peers.

Sentiment/positioning: Investors generally cautious on shares at the current valuation, generally reluctant to step in given large project execution risk and a meaningful level of regulatory risk given the pending Georgia Power rate case. Affordability and regulatory/political considerations are growing, a key debate point with delayed Public Service Commission election.

Southern Company: Trending Positively on Vogtle, ITAACs Filed; IRA Presents Upside; Succession? 01 August 2022

California Utilities

We preview the 3Q updates for the three large California investor-owned utilities: Edison International (EIX), PG&E Corp (PCG), and Sempra (SRE). It has been a volatile period for the companies. Since July 15 the California names have had robust relative performance which was led by the blistering pace of PCG +46% followed by solid strength in SRE +5% SRE with EIX roughly flat during the period. *We reiterate Buy on PCG/SRE and Underperform on EIX despite the relative performance with growth profile bifurcations.*

The outlook for all California investor-owned utilities has undoubtedly improved recently and in recent months. The California Public Utilities Commission 2022 cost of capital update was favorable for the utilities, see details: CPUC sides with utilities on initial 2022 CoC decision, 2023+ in focus.

US Utilities & IPPs: California 3Q22: Dawn of a New Day for PCG and California Outlooks 18 October 2022

Edison International (EIX)

We remain less constructive on EIX due to its relatively high adverse exposure to interest rates at the parent and utility for wildfire expenses. Compared with our July 14th downgrade report we estimate an incremental approximate 125bp increase in BofAe pro-forma financing costs to ~5.9% from ~4.6%. EIX stated it assumes 3.75% interest rates in its long-term plan. This drives (1) +$28Mn [$0.07 EPS] pro-forma parent company and (2) $21Mn [$0.05] wildfire claim utility after-tax interest expense by 2027.

We have focused primarily on debt but there is additional pressure from the parent preferred stock issued in 2021 which resets in 2026/2027. EIX has $1,250Mn Series A 5.375% and $750Bn Series B 5.0% preferred which resets to 5Yr US Treasury + 4.698% in 1H26 and +3.901% in 1H27, respectively. Based on current treasuries this implies a hefty 8-9% preferred and incremental $69Mn pre-tax interest expense. This is a $0.12 $0.13 further headwind by 2027 that notably begins just after the EPS guidance period which runs through 2025. Expect investor attention to shift to FY23 guidance where we are -8% below Consensus with only +2% YoY growth.

Bull Case: EIX now trades within 0.5x 2025 P/E of PCG using Consensus which is too tight of a spread due to PCG's higher risk profile. Potential recovery of legacy wildfire/mudslide charges would remove interest rate risk and improve the earnings outlook. The entire California complex is improving from utility investments and a more supportive CPUC backdrop.

Bear Case: EIX's LT guidance is unachievable due to interest rate exposure which is a substantial overhang on the stock. 3Q quarterly miss followed by FY23 headwinds will lead to rotation out of the name.

Sentiment/positioning: EIX has been a consensus short for some time but sentiment has improved as PCG re-rated and the company began to trade more at parity with PCG on Consensus. Many investors are still not comfortable owning the California utilities but more are willing to assume the above-average risk profile.

PG&E Corporation (PCG)

PCG has had among the most favorable set of updates in 2022: S&P 500 inclusion, general rate case rate base increase, undergrounding/nuclear legislation enactment, non-nuclear

generation asset sale plans, wildfire mitigation plan draft approval, 2022 cost of capital support, and self-insurance settlement to name just a few. Despite the outperformance PCG still trades at a 30-35% discount to the utilities group. We agree that PCG has above average risk, but we believe that investors are being compensated for the risk profile with a 9-10% EPS CAGR, well above peers at ~6.6%. In contrast to many utilities and nearly all companies we see upside to long-term guidance, a counterintuitive defensive attribute for PCG.

Bull Case: The forthcoming end of wildfire season is another catalyst for shares which is already gathering momentum and interest from a broad pool of investors. Execution of the non-nuclear asset sale will give a positive valuation mark versus where shares trade and address tail concerns on equity needs.

Bear Case: Can the stock continue to outperform after surging +23% vs peers in the past month? Potential Fire Victim Trust (FVT) sales could limit further re-rating potential

Sentiment/positioning: PCG has been relatively thinly followed since the utility emerged from bankruptcy. Surprisingly non-dedicated investors have been buying throughout 2022 and the latest rally has been from traditional utility investors not wanting to miss out on the potential re-rating.

Sempra Energy (SRE)

After outperforming +20% YTD and ~7% from the July lows, there is certainly less relative upside but we still reiterate Buy with favorable catalysts ahead. 3Q22 should be a strong update as we expect FY22 guidance to increase and critically, an update on LNG development progress. Given the global gas shortage and the energy crisis in Europe, and with winter looming, we expect the LNG development and contracting environment will continue to support longer-dated LNG contracts at attractive project returns despite inflationary pressures.

Bull Case: LNG development tailwinds support (1) long-duration contracts with strong returns that are not yet reflected in current valuation (2) attractive valuation for any further LNG project equity sell-down. Plus, improving CA regulatory backdrop and load growth at Texas utility, Oncor, drives further upside to the earnings outlook.

Bear Case: Should SRE trade near a group multiple (14.6x 2024 vs peers at 14.9x) given the unregulated (Mexico & LNG) and California (SoCal Gas & San Diego Gas & Electric) exposure? Plus, recent outperformance suggests Street expectations largely baking in execution on timely LNG development. This is a potential risky position considering inflationary / supply chain pressures delaying energy projects to date.

Sentiment/positioning: SRE has evolved into a consensus long with short interest below 1% on average since 2Q22 earnings. Our conversations with investors indicate overwhelming focus on the LNG development platform over SRE's utilities businesses, with SRE key value proposition as a way to benefit from LNG tailwinds.

Diversified Utilities

Avangrid Inc. (AGR)

Shares have underperformed the broader utilities group -5% since the 2022 Investor Day in September. Thus, the potential $1.9Bn equity raise outlined during the Investor Day now represents 10-15% of AGR market cap given share declines. This is likely higher than that originally imbedded in management's plan, with shares trading ~$50 prior to the Investor Day. Yet despite recent underperformance, AGR continues to trade at ~5% premium to the broader utilities group (16.7x 2024E vs 15.8x). We reiterate Underperform based on our view that shares instead deserve to trade at a discount given AGR's larger unregulated mix, outstanding rate cases in historically challenged regulatory jurisdictions, legacy inability to achieve long-term guidance, and, critically, AGR's near-term equity need. While 3Q22 earnings should be relatively quiet following the Investor Day, rate cases across AGR's New

York, Maine, and Connecticut subsidiaries, New England Clean Energy Connect (NECEC) litigation and PNM Resources (PNM) acquisition remain critical share catalysts to monitor.

Bull Case: More favorable regulatory outcomes, specifically in NY and Maine, may drive earnings growth beyond that embedded in management's 6-7% CAGR 2022-2025 update. Additionally, upside to the company's renewable development activity, including Inflation Reduction Act (IRA) incentives and elevated power prices, is not reflected in Street forecasts.

Bear Case: Risks to 6-7% EPS CAGR which relies on timely renewable deployments, steady offshore returns, NECEC execution and PNM acquisition. The macro backdrop of rising rates and inflationary pressures elevates operational risk for the company's renewables development efforts. To date, inflationary headwinds have delayed AGR renewable deployments and pressured project returns, specifically offshore wind returns. Additionally, utilities in the Northeast are more exposed to 3Q/4Q affordability concerns given elevated natural gas prices in the region. This is particularly cautionary given AGR's outstanding rate cases across its largest utility subsidiaries in NY, CT and ME, and represents fundamental risk to earnings outlook.

Sentiment/positioning: Our discussions with investors suggest the majority remain cautious on shares of AGR following the '22 Investor Day. However, with the Investor day now in the rearview, we do not see clear NT share catalysts until regulatory outcomes or any meaningful update on NECEC or PNM materialize. We find most investors expect PNM acquisition to close, although many are more cautious on NECEC project execution.

Avangrid: Dissecting Investor Day EPS outlook: Identifying upside and pressure points 03 October 2022

Allete Inc. (ALE)

Reiterate our Neutral view on shares of Allete. We view risk reward as balanced given the low multiple vs. peers at which the stock trades along with ALE's unique risk profile. Rate base growth at the Minnesota utility along with exposure to a small number of industrial customers continue to screen cautiously, particularly with lack of staff and intervener support for a stabilization mechanism – see incremental ROE improvement upon resolution of the current case but still a substantial amount of lag in the 100-200 bps range as has historically been the pattern. New Energy solar platform critical to extending the ALLETE Clean Energy (ACE) growth rate but early days still in integrating the business, and we do not see the value creation as part of ALE just yet.

Bull Case: Bulls point to relative valuation which admittedly is stretched to the downside. While utility ROE certainly remains exposed to demand fluctuations from a core group of industrial customers, the underlying industries (taconite production and pulp & paper) have been resilient long-term and have served as reliable customers, if not fast-growing ones. Expect ROE fluctuations to smooth over time at the utility. Solar platform should be well-positioned to capture incremental benefits from IRA legislation as the deal was closed shortly before the bill was announced.

Bear Case: Despite a discounted valuation, it is not obvious where the upward inflection for shares will come in a generally defensive tape. Company guidance already reflects a healthy 15%+ growth rate for the renewables business plus corporate & other, making a further upward inflection unlikely. Despite large and growing renewables business, legacy businesses including a coal mine and carbon-intensive industrial customers keep ALE from consideration as an ESG name.

Sentiment/positioning: Investors have taken note of depressed valuation, though generally we do not consider ALE a consensus long. Sentiment still cautious reflecting view that now is not the time for a utility with outsized macro/recession risk as could manifest in a prolonged downturn for the steel/taconite industry.

Allete Inc: Utility uncertainty keeps a lid on positive renewables story 12 September 2022

NextEra Energy (NEE)

NEE is one of the clearest IRA beneficiaries as a leading renewables developer and its refreshed guidance is premised on a pre-IRA outlook where there is the potential for more material positive revisions. At a minimum there is visibility to maintaining a leading EPS CAGR for a longer duration. Consensus remains broadly below management's guidance already despite the company pointing to the top-end of the trajectory.

Bull Case: NEE is still -10% YTD versus the utilities index YTD, albeit it well off the lows, but with the material positive from IRA the stock should be outperforming the group. Potential for 4Q22 guidance update.

Bear Case: The more cautious stance of investors relates to macroeconomic considerations rather than company specifics with uncertainty about how the company's stock can perform as a growth equity in a higher rate environment. There are still lingering concerns around the Florida regulatory environment with negative media headlines related to political involvement.

Sentiment/positioning: After years of being a consensus long, positioning has dispersed with broad based bear and bull camps. Dedicated utility investors have been more positive recently with earnings visibility in a challenging economic backdrop and increasing opportunity set of renewables. More clean tech oriented investors have preferred higher beta pure play renewable companies than NEE.

MDU Resources Group Inc (MDU)

Maintain Neutral on shares of MDU given modestly positive total return implied by our sum of the parts valuation. The outlook remains relatively opaque for the stock as we continue to see inflationary pressures impacting margins, particularly in the macro-sensitive construction businesses – the key question remains whether mgmt. successfully reset investor expectations following a disappointing Q2 print. Expect the update on the pending spin of Knife River to be relatively limited too given relatively early days in that process as well.

Bull Case: Mgmt. of MDU has been touting higher-priced construction materials orders in the backlog as likely to start being realized in sales starting in the Q2-Q3 period, and with weather delaying some work earlier in the year the third quarter could provide an upside surprise. Activist involvement as announced in a filing after the company's Q2 report shows that investors remain interested in the sum of the parts story, and could sustain momentum in shares seen since the August announcement – MDU has outperformed the XLU by 16% since market close on Aug 3.

Bear Case: Bearish feedback has generally focused on remaining upside in the stock following outperformance, with sum of the parts starting to look expensive given mark to market for the latest peer multiples for gas, electric, pipeline, and construction. Execution has been a weak spot in recent quarters with mgmt. missing EPS for the past five quarters, with margins at the materials business the most commonly-cited factor. Given macro indicators including CPI prints and fuel prices it is not obvious that the pressures that have weighed on results in recent quarters have abated, though higher pricing should provide incremental relief.

Sentiment/positioning: Short interest in the stock remains modest compared to SMID peers at 1.6% of float. While the announcement of the Knife River spin and activist involvement following the Q2 print were well received by the market, we sense investor skepticism about further upside, particularly in an environment that has rapidly shifted to a macro focus and playing defense.

Southwest Gas Corp (SWX)

We maintain Buy on SWX where we still see a compelling sum-of-the-parts valuation which does not require overly optimistic assumptions to see a path for upside. The path to value creation has certainly become less clear in a rising interest rate environment but we believe that is appropriately reflected in shares.

Bull Case: The assets that are subject to strategic review should garner attractive premium valuations, particularly Centuri for a strategic acquirer. The incremental opportunity investment set for Mountain West is underappreciated and there are potential avenues to enhance earnings.

Bear Case: The valuation for the unregulated midstream (Mountain West) and construction services (Centuri) has declined with the rise in interest rates. Further many are now questioning the willingness of a strategic or private buyer to undertake such a large free cash flow negative acquisition. SWX's reliance on variable rate debt is a material negative in a rising rate environment

Sentiment/positioning: Short interest has steadily increased as the headwinds have mounted and candidly few investors we have spoken with agree with our Buy case.

Southwest Gas Holdings: Finding solace in the desert: valuation attractive, eyes on AZ & asset sales 22 September 2022

Independent Power Producers (IPPs)

AES Corporation

Reiterate Buy as one of the best value opportunities and a key equity for clean energy exposure. Well on track to deliver on FY22, longer term tailwinds with AES an outsized beneficiary of IRA & numerous EPS upside angles. Some investors have questioned the adverse F/X and commodity headwinds but those are poised to flip to be a material positive in FY24+ based on the underlying fundamentals.

Bull Case: 'Mini NextEra' trading at a much lower valuation. IRA a significant positive for long-term earnings and there are still robust green blend-and-extend 2.0 potential avenues. While the non-US businesses of course do not benefit from IRA, the global footprint offers US investors are relatively lower risk avenue to invest in global renewables under a disciplined management team. AES' relationships with large industrials in key geographies gives it an advantage in decarbonization investments.

Bear Case: Fluence remains a drag on EPS, Dayton Power & Light has struggled and its credit metrics remain stubbornly weak, and there is still large project risk for many of the ventures. The company has had challenges in achieving its financial targets historically which limits the degree of investor confidence in the outlook.

Sentiment/positioning: Generally a consensus long among the dedicated investor community although there are many who shy away from the story given the complexity and overall difficulty to model the fragmented company. AES requires tracking of emerging markets, currencies, commodities, and other macro factors that are simply not in many investors' fields of expertise.

AES: 3Q22 preview: Limited pressures here; Why we're getting quite constructive 05 October 2022

Constellation Energy (CEG)

We reiterate Buy on Constellation Energy (CEG) despite the outperformance and positive re-rating versus the broad market. The upcoming 3Q call will be relatively subdued with 2023 guidance initiation expected on the 4Q call and capital allocation likely late 2022 at the earliest. On the 3Q call we expect a FY22 guidance increase with $2.8Bn BofAe above the top-end of $2.35-$2.75Bn guidance range and $2.64Bn Consensus. Investors are eagerly

watching for nuclear consolidation opportunities with particular attention on Talen Energy (TLN – Private) bankruptcy confirmation hearing set for December 15th.

Bull Case: Numerous angles but simply stated shares have upside to Consensus, opportunities to deliver share repurchases, and are unique exposed to the nuclear/hydrogen themes that support re-rating post Inflation Reduction Act.

Bear Case: Expectations are elevated for CEG and hydrogen opportunities are years away at the earliest. The immediate attention will be on CEG's plans to acquire other nuclear plants which could be a 'sell the news' event with attention turning to lack of buybacks (a contrast to NRG/VST), regulatory uncertainty, and execution issues.

Sentiment/positioning: Even before its official spin-off from Exelon in February 2022, Constellation has been a consensus long and investor favorite. After the latest spurt of outperformance some investors we have spoken to took further profits but most are still positive on shares. We have experienced the diversification of the shareholder base to include more generalist and retail investors who may be more willing to provide a premium valuation to the unique nuclear company.

Constellation Energy Corp: 3Q Preview: Setting the Stage For a Big 4Q Refresh. CEG Party Continues. 17 October 2022

NRG Energy Inc.

We acknowledge the bull case on shares that the 2023 guidance is intact (see link below) but we still struggle to see a long-term case to prefer NRG over Vistra or Constellation. NRG is challenged in this elevated power price environment as its power plants are generally older than Texas peers which introduced operational risks. The long-term plan is premised on an unproven retail growth strategy premised in part on cross-selling discretionary purchases into a weakening economy. The sharp rise in power prices could either pressure margins or volumes and management has stated it is willing to sacrifice returns to maintain customer relationships. We see 3Q as likely substantively weaker than expected, however '23 outlook framing in tandem will be key. Outlier datapoints on further monetization of generation assets remains a key element to watch: likely more fossil sales, albeit unclear if meaningfully accretive to the SOTP. Still don't see discussion on corporate strategy evolution as quite ripe yet towards consumer product direction.

Bull Case: The argument here relates to the short-term dynamics with even most of the bulls we speak to recognizing structural risks for the company. After a tumultuous period, management appears confident that it can return to its Analyst Day trajectory of free cash flow per share growth. NRG has one of the highest short interest (7% of float) that has remained elevated since May 2022 which is likely a large reason why the stock has performed so well. NRG still offers one of the higher FCF yields in the S&P 500 plus share repurchases which

Bear Case: At its core, most investors we speak to are cautious on NRG because it is 'short power' in the long-term. 2023 guidance has underappreciated risks around coal pricing, bad debts, inflation, and extended operational outages. Even if the guidance is in-line with Consensus, bears expect shorts to return to this name.

Sentiment/positioning: As mentioned above, NRG is one of the most shorted equities we track. In the past month conversations have gravitated to investor short covering and some shifting to net long to avoid a potential repeat squeeze on earnings.

NRG Energy: What's Next for 2023 & Beyond: Getting Back 'On Track' 30 September 2022

Vistra (VST)

We reiterate Buy with Vistra one of our top picks with the improving visibility into multiple years of premium free cash flow unique in the market. VST now has the potential to generate the majority of its market cap in FCF the next few years while also creating the Vistra Zero platform with no/minimal equity contributions.

Bull Case: The positive thesis involves some simplistic math that has resonated with many. Assuming VST can deliver ~$3.8Bn adjusted EBITDA over the next few years and a historical ~65% FCF conversion, that implies ~$2.5Bn FCF on a ~$9Bn market cap. This is a ~28% FCF yield before incorporating the benefits of the accrued cash flow. The second angle is Vistra Zero where management is targeting $500Mn EBITDA from $5Bn capital. The new IRA investment tax credits (ITCs) could lead to 40% savings with the remaining 60% potentially covered by project debt. As a result VST can generate an incremental $500Mn EBITDA or $250Mn FCF of premium solar/storage assets that are not reflected in the outlook. Assuming an 11x EBITDA multiple or 10% FCF yield would drive ~$2.5Bn value.

Bear Case: Vistra has traded at elevated free cash flow yields in the past because of questions about the terminal value and reliance on fossil assets that are viewed as ESG negative. Without a path to broadening the shareholder base, the stock lacks a positive re-rating catalyst and it is a well-owned, high beta name among hedge funds. The new CEO & CFO have been in their positions for less than six months and are lesser known to the financial community. VST has a history of acquisitions so there is a possibility that the free cash flow is dedicated to M&A rather than shareholder returns.

Sentiment/positioning: VST has been a staple long position for many hedge funds in recent years due to its attractive valuation and share repurchases but we have observed weakening of sentiment, despite improving fundamentals.

US Electric Utilities & IPPs: Texas Power Tour Takeaways 22 September 2022

Water Utilities

As an asset class the water utilities are in relatively decent position with both pros and cons. On the favorable side, water bills are subject to far less inflation compared to gas/electric due to a more stable commodity profile. The average water bill is lower as well which should lead to less contentious regulatory proceedings. The negatives are that ***(1)*** water utilities do not have material new investment opportunities following IRA like integrated electric utilities; and ***(2)*** a reliance on acquisitions for growth is a far more difficult proposition with the increase in cost of capital.

American Water (AWK)

Despite the -18% relative underperformance in 2022 we reiterate Underperform with the weaker FY23 projected and expected deterioration in the long-term growth profile. The accretion from the regulated acquisitions which are 150-250bp of the 7-9% EPS growth profile is diminished. Higher financing costs are particularly damaging to the profile for American Water due to the above-average rate base growth that leads to equity and debt issuances. The decline in the stock price from $150-$160 to $130-$135 leads to incremental dilution in 2023+. This contributes to a forecasted -2% miss on FY23 guidance forthcoming, along with overall higher O&M. While AWK has one of the best bond ladders in the sector with annual only one maturity per year across its entire curve; however, higher prospective assumed parent debt issuances dampens EPS across the sector and AWK is not immune from the trend.

Bull Case: Water utilities have far less commodity inflation than electric/gas with more visible earnings growth. The decline in relative premiums is overdone and the dependable growth rate company is as attractive as ever. Further the clean debt maturity profile leaves AWK among the best setup for a rising rate environment with no cliff refinancings to manage.

Bear Case: The value of pro-ESG companies has diminished with more and more companies offering robust ESG disclosures and metrics. As a high growth utility the rising interest rate environment is more negative for the premium growth companies like AWK at 7-9%. The operating and financing cost pressures are more negative for AWK whose growth profile is reliant on acquisitions.

Sentiment/positioning: Investor sentiment has steadily deteriorated but we have seen a decrease in the quantum of bearish calls as shares have meaningfully underperformed.

American Water Works: Diving deeper through the macro risks & water opportunity set ahead 09 August 2022

Essential Utilities (WTRG)

We maintain Neutral on shares of WTRG that are trading approximately at fair value. We recently downgraded following the company's hiccups in executing on regulated acquisitions but the profile is balance currently.

Bull Case: Sum of the parts valuation is attractive when including high quality water and gas comparable companies which represents a unique construct. The potential for strategic considerations to highlight value are latent too.

Bear Case: The flip side of the positive case is that some investors ascribe discounted conglomerate valuations for the utilities. Without a natural shareholder base the view is that shares can derate versus comparables.

Sentiment/positioning: We have observed little interest in shares with many believing that shares are trading close to fair value. Investors who are more negatively positioned on American Water often prefer Essential Utilities on the relative valuations. Overall investors tend to prefer either natural gas utilities at lower valuations or 'pay up' for the water exposure that AWK offers.

Essential Utilities: Waiting for the big acquisition splash: Downgrade to Neutral, upside less clear 09 September 2022

We present select valuation and estimate refreshes below.

Eversource Energy (ES)

FY22 Drivers: 2H22 declining YoY

We project 3Q22 EPS is flat YoY with 2H22 slightly declining due largely to incremental financing costs. In 1H22 ES adjusted EPS was +$0.22 to $2.16 versus FY22 guidance of +$0.21 growth at the midpoint. Consensus still models growth in the second half of the year which we believe is a bit overly optimistic due to the normal seasonality of the business. If not for higher financing costs, we believe that ES would have been at the top of the tightened FY22 $4.04-$4.14 guidance range although we are still in-line with Street ($4.12 BofA vs $4.11 Consensus)

Exhibit 11: Eversource (ES) FY22 Earnings Drivers

Adjusted EPS Estimates

We moderate FY23+ estimates to reflect reduced sale proceeds for the offshore wind development assets/latter proceeds but more so to incorporate higher cost of capital for financing growth. Visibility into long-term capex has slightly improved with the Massachusetts Department of Public Utilities (DPU) 2022-2025 Grid Modernization Plan approval of $163Mn, although there are other key pieces needed to bridge the full +$3Bn incremental capex that management has discussed.

Valuation: Reduce on MtM and earnings degradation

Our Eversource valuation is based on a 2024 sum-of-the-parts valuation. We lower our PO to $76 from $88 primarily to reflect the decline in the electric/gas/water peer multiples. We now apply 15.4x electric/14.9x natural gas/23.7x water which is down from 17.8x/16.3x/26.1x previously. The base P/E multiples are grossed-up +5% to reflect capital appreciation throughout the sector, consistent methodology in our coverage. We apply discounted valuations to the Connecticut utilities (CL&P and Yankee Gas) and premiums to the Massachusetts utilities to reflect the fundamental regulatory and growth differentiations of the jurisdictions. Approximately $1/sh of the decline is due to our reduced 2024 adjusted EPS forecast with the balance from the mark-to-market.

Eversource Energy: Remain Cautious on Prospects Post-IRA: How much capex can the team deliver? 19 September 2022

American Water (AWK)

Adjusted EPS: FY22 intact but long-term moderated

1H22 adjusted EPS increased +$0.20 versus FY22 guidance midpoint forecasted growth of +$0.19 ($4.25 FY21 adjusted versus $4.39-$4.49 guidance). As a result 2H22 is expected to be approximately flat based upon disclosed headwinds. For example the divested assets, higher financing costs, and elevated O&M. We model a -4% miss in 3Q22 $1.47 vs $1.53 Consensus but a +5% beat in 4Q22 ($0.89 vs $0.84 Consensus) with the cadence of Street reversed.

Source: Company Filings, Bloomberg, & BofA Global Research

BofA GLOBAL RESEARCH

We have favorably reversed out most of the assumed $0.15-$0.20 adverse earnings headwind from pension due to enhanced visibility to recovery in key states of New Jersey and Pennsylvania.

Higher financing costs are particularly damaging to the profile for American Water due to the above-average rate base growth that leads to equity and debt issuances. The decline in the stock price from $150-$160 to $130-$135 leads to incremental dilution in 2023+. While AWK has one of the best bond ladders in the sector with annual only one maturity per year across its entire curve; however, higher prospective assumed parent debt issuances dampens EPS across the sector and AWK is not immune from the trend.

Valuation: Reduction on the MtM but other moderation too

Our American Water valuation is based on a 2024 sum-of-the-parts valuation. We lower our PO to $134 from $158 primarily to reflect the decline in the water peer multiple to 23.7x from 26.9x. The base P/E multiples are grossed-up +7% to reflect above-average water capital appreciation throughout the sector, consistent methodology in our coverage. We reduce our P/E multiple to 1x from 2x for the largest utilities to capture the decline in the overall group base multiple and now the fact that growth has declined with the aforementioned financing pressures. Said differently, the accretion from the regulated acquisitions which are 150-250bp of the 7-9% EPS growth profile is diminished.

The +1x premium applied to the military segment has also been flattened to reflect a more normalized cadence of growth (5-6% BofAe growth rate)

Changes to the Price Objective are approximately:

- -$17/sh: Sector P/E contraction to 23.7x from 26.9x
- -$4/sh: Removing the 1x premium for NJ/PA/IL/MO/IN
- -$3/sh: Lowering 2024 EPS -1%, removing military 1x premium, and other

Our Essential Utilities valuation is based on a 2024 sum-of-the-parts valuation. We lower our PO to $44 from $52 primarily to reflect the decline in the water peer multiple to 23.7x from 26.9x. The base P/E multiples are grossed-up +7% to reflect above-average water capital appreciation throughout the sector, consistent methodology in our coverage. We remove the premium multiple we previously applied to the water utilities to reflect a growth profile that is similar to peers.

Exhibit 17: Essential Utilities Valuation
PO moves to $44 from $52 primarily on MTM

Evergy (EVRG)

Our forecast incorporates the latest reported actuals as well as our latest views following resolution of the majority of issues in the MO rate case and ahead of next year's Kansas filing. While the final ROE and equity from the MO case were not disclosed, we generally expect a continuation of a mid/high 9s ROE with our forecast embedding an earned ROE in the mid-9s to reflect some residual drag, though the property tax rider should reduce the levels of historical drag to some extent. We likewise expect that EVRG will close the under-earning gap in KS following the resolution of its next rate case filing in 2023 with some residual drag in future years.

Overall we see the low end of EVRG's 6-8% CAGR as achievable through 2025, with our $4.22 estimate in line with Street consensus and reflecting low 6s from the 2020 baseline. Given the solid track record that EVRG has put together of meeting quarterly numbers and reaffirming the long-run 6-8% target, we see a further affirmation and potential extension of this trajectory as critical to affirming the outlook, though these updates are likely not forthcoming until the Q4 call at the earliest.

We mark-to-market our valuation to reflect the latest 24E peer multiple of 15.7x (previously 18.1). Applied to our updated 2024 EPS estimate, our PO moves to $64 from $68 and we reiterate our Neutral rating given balanced risk/reward at current levels. While there is a modestly positive level of upside on shares at this level we remain on the sidelines at this point given uncertain path to above the upper end of mgmt.'s long run EPS CAGR and coming Kansas rate case process. Reiterate Neutral given modest implied total return at this level.

Pinnacle West Capital (PNW)

Our updated estimates remain below Street consensus, and were last moved higher across the 2023-25 period following Q2 reflecting less punitive pension expense (from -

36c in '23 previously to -11c) with further offsets beyond 2023 once the latest rate case provides incremental relief given the mid-year test year.

The ability to offset these impacts via cost cuts appears limited as PNW acknowledged on the earnings call that inflation is driving costs higher, and note that the forecast already embeds a declining O&M per MWh trajectory along with robust sales growth discussed above, making the setup all the more risky in our view from an execution standpoint. Upside risks to our estimates include potential for substantial weather-related earnings swings in the third quarter - note that PNW used this to capture significant O&M pull-ahead benefits in 2020.

Exhibit 20: PNW estimates
EPS growth rate is below 5% through 2025 reflecting pension weakness and lack of rate case recovery

BofA GLOBAL RESEARCH

We mark to market our model applying a peer multiple of 15.7x (prev 17.5x) to our new higher EPS forecast. Our PO moves to $56 from $64 as a result of the update. We reiterate our Underperform rating given negative implied total return - the reduction in our EPS forecast driven by pension impact is just the latest cautious data point, and we continue to see an elevated risk profile from PNW's coming rate case despite potential for partial rate relief on the pension side

Exhibit 21: PNW valuation
Reiterate Underperform with challenged outlook

Southern Co (SO)

Our FY22 EPS estimate of $3.74 is modestly above Street estimates of $3.56 based on known and measurables to date. We forecast a large beat vs street for FY22 as we embed robust 1H22 actuals, known rate increases for FY22, and our view on O&M increasing through the back-half of the year as mgmt. pulls forward work. Additionally, we see O&M increasing based on inflation and a poor comparable YoY as SO moves toward more normal business operations post-pandemic and travel, workplace, and other expenses return. We include the convert in our '22 EPS estimates, but no equity thereafter as we do not assume incremental Vogtle costs above what mgmt. has guided to and reserved at this point. To the extent there are additional cost overruns for Vogtle, we would expect potentially more non-core asset sales rather than traditional equity.

Exhibit 22: SO EPS Estimates
We outline our EPS estimates below which remain relatively unchanged through the forecast period

BofA GLOBAL RESEARCH

Our PO moves to $63 (from $77) based on a 2024E Sum-of-the-Parts with peer utility P/E multiples of 15.4x for electric (from 17.2x) and gas of 17.5x (from 16.7x). Across our coverage universe, we gross up the base multiple +5% to reflect forecasted capital appreciation across the sector. We continue to use an in-line multiple for Georgia Power given the risks with the rate case and election that could add some additional focus on costs. We continue to look for more details on the pending climate legislation's impact

on Georgia Power's ability to own solar assets. Remember, we value Vogtle earnings at a 4x discount given the risks to costs and recovery.

Exhibit 23: SO Simplified SOTP

Price objective basis & risk

AES (AES)
Our price objective is $28 and is based on a sum of the parts analysis applying a blended valuation approach, the summation of 1) EV/EBITDA approach across global generation assets. We use an 8.0x base for US peer IPPs and apply a +6x premium for US distributed generation for further growth expectations, valuing them at 14x 24E EV/EBITDA. Meanwhile, we value the DevCo using a 10% discount on 4.5GW+ of annual renewables beyond '22 given market dynamics. In Asia, we apply various multiples based upon jurisdiction risk across the rest of the portfolio and overall investor appetite as reflected in local peer multiples. We use mark-to-market value of publicly listed LATAM subs as well as apply a P/E methodology for US regulated utilities using the peer multiple of 16.1x 24E. We also credit the company with Vietnam and its investment in Uplight.

Risks to our price objective and rating are: 1) regulatory, legislative, and political changes, 2) international currencies devaluing against the US dollar, 3) changes in value of Fluence (FLNC) subsidiary stock, 4) overall inability to execute on the renewables plan, 5) ability to control costs, 6) financing needs, and 7) tax policies.

Allete Inc (ALE)
Our $53 is based on a sum of the parts analysis

For regulated utilities (Minnesota Power, Superior Water Light & Power, and American Transmission Co) we apply an electric peer multiple of 15.4x grossed up by 5% to account for capital appreciation across the sector. For MP and SWL&P we apply a -2.0x discount to account for below-peer rate base growth of 5% and an elevated risk profile given exposure to large industrial electric customers. For ATC we apply a +4x premium consistent with other owners of ATC (LNT, MGEE, WEC) given upside potential and federal equity layer and ROE.

We value contracted wind on a DCF basis with WACC of 5.75%, for an implied EV/EBITDA valuation of 11.8x 2024E.

We value the wind development company (devco) based on estimated weighted avg MWs in development and assuming a 2.0x EBITDA development spread.

We value the New Energy solar devco using a 50-50 blended development multiple and 8x 2021 trailing EBITDA. We use this methodology as the asset was recently acquired by ALE, and we view the acquisition price as the appropriate latest mark of valuation.

We value the BNI coal mine asset at 7.0x 2024E EPS, in line with publicly-traded peers. We value the Corporate & Other segments at 7.0x 2024 EPS, reflecting modest visibility.

Risks: regulatory/legislative outcomes, capital expenditures vs guidance, taconite/industrial sales changes, returns on unregulated projects, interest rates and commodity price volatility, weather, and natural disasters.

Alliant Energy Corporation (LNT)
Our $57 PO is based on a sum of the parts analysis employing relative premium and discounts to the large cap regulated peer multiple of 14.9x 2024E P/E. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. We apply a 2.0x P/E premium on IPL as we see the rate case overhang being resolved. We apply a 4.0x P/E premium on Wisconsin Power & Light Company reflecting 1) low risk investment nature of the state, 2) above average ROEs, 3) higher than average growth runway for investments, and 4) potential risks around solar deployment in both WI and IA. At ATC, we reflect a 4.0 x P/E premium on LNT's 16%

share in the transmission company. Growth expectations for this segment are high, paired with above average ROEs that we believe face less downward pressure vs. regulated state distribution ROEs. We apply an in line multiple at the parent to account for the blend of numerous businesses some which benefit from long term stable PPAs via intercompany generation.

Risks to our Price Objective and rating are 1) Rate case outcomes, 2) further equity dilution beyond our estimates, 3) interest rate fluctuations, 4) natural disasters, and 5) inflation and ability to earn the allowed rate of return.

Ameren Corporation (AEE)
Our $96 price objective is predicated on a P/E based sum of the parts, valuing each business subsidiary relative to the 2024E ratebase weighted peer multiple of 17.3x for electric. We apply a 2.0x premium to peers at AEE Missouri to account for the improving prospects of capital spend, supplemented by a regulatory jurisdiction becoming more favorable - but lack of decoupling. We apply a 2.0x premium to peers at AEE Illinois to account for decoupling on the distribution business which aids in earnings predictability. The overall business is expected to grow at a more meaningful clip than that of peers - we see a 10% EPS CAGR at IL 2020-2024. At ATXI, we apply a 4.0x premium to peers to reflect the FERC ROEs. At the Parent, we assume 2.0x multiple premium reflecting average of the subs and given the healthy debt metrics with FFO/Debt at 17%+. Electric peer P/E multiple is grossed up for a year to 2022 by 5% to reflect capital appreciation across the sector.

The risks to our price objective are the utilities earning their allowed returns or worse, a significant change in 30-year U.S. Treasury bond yields, and adverse regulatory outcomes that could impact mgmt's ability to earn its allowed return.

American Electric Power (AEP)
Our price objective of $102 is based on SOTP analysis. We ascribe a peer forward FY24E P/E multiple (16.5x) with a 1.0x premium for its transmission and distribution utilities and transmission-only utilities segments and a 0x premium (in-line multiple) for all of the vertically integrated utilities. For the unregulated portion, we apply a 3.5x discount to the legacy energy supply and marketing business and an 8x premium to the contracted renewables business to reflect sale aspirations.Our valuation reflects that the Kentucky Power sale pending appears to be nearing close. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector.

Risks to achievement of the price objective are: 1) regulatory outcomes are less favorable than expected, which could result in reduced ROE, 2) large capital intensive projects are subject to delays or cost overruns, which can change the return profile, 3) natural disasters or catastrophic events can affect system reliability and are subject to regulatory cost recovery risk, 4) utilities are subject to interest rate risk to fund their business, which affects cost of capital, 5) uncertainty around announced asset divestitures versus guidance expectations, 6) volatility in volume of electric sales, 7) other adverse regulatory, political, or similar actions.

American Water Works (AWK)
Our PO for American Water Works is $134. We apply the water sector average 23.7x to American Water's 2024E earnings based on the water peer multiple and a 8.1% group EPS CAGR for '18-'23E. We think this multiple is justified as in our view AWK largely drives the peer multiple as the largest publicly traded water utility. We ascribe a 2x premium for NJ, PA, and IL given scope of acquisition opportunities. Also a -1x P/E for Cali utility.

Risks to achievement of the Price Objective (PO) and rating: 1) ability to execute capital

and operating expenditures forecasts, 2) equity needs, 3) regulatory outcomes, 4) state and Federal legislative changes, 5) interest rate fluctuations, and 6) military operations.

Avangrid (AGR)
Our $38 PO is based on an 2024E sum of the parts analysis. The core utilities are valued on by applying discounts to the base sector P/E of 15.7x/14.5x for electric/gas due to below average growth and regulatory jurisdictions. We apply an in-line multiple to the PNM Resources assets with the transaction pending. Both electric and gas peer P/Es are grossed up +5% to reflect capital appreciation across the sector. The renewables are valued at approximately 11x EV/EBITDA, consistent with peers while offshore wind is valued using discounted cash flows at a 12% discount rate. Future potential value creation from the renewable development 'DevCo' is provided as well. Lastly parent/HoldCo financing negatives are ascribed.

Up/downside risks to achievement of the PO and estimates are 1) earned ROEs at the utilities, 2) utility capital expenditure forecasts, 3) regulatory/political/legislative outcomes, 4) equity needs, 5) offshore wind construction, 6) Iberdrola owns over 80% of AGR common stock, limiting float and presenting a potential for governance conflicts, despite the BoD being majority unaffiliated with Iberdrola. 7) natural disasters, 8) commodity and interest rate fluctuations, and 9) management changes.

Black Hills Corporation (BKH)
Our $66 valuation is based on a sum-of-the-parts analysis. We apply the peer average electric (14.8x) and natural gas (14.5x) 2024E P/E multiples. We gross-up +5% the base multiples across the coverage universe to reflect capital appreciation in the sector. We apply an in-line P/E multiple with neither a premium nor discount. Coal Mine: We apply an 8x peer EV/EBITDA multiple, which is in line with other PRB coal producers. Based on our view of the strength/maintainability of different coal plant output contracts, we apply a discount/prem multiple to that portion of the mine. IPP Assets: We use the recent sale price and '23 EV/EBITDA multiple for Pueblo Airport and Wygen I assets, respectively. Parent Expense, Debt, and Eliminations: We apply an average regulatory P/E multiple to this segments income. This captures some Interco revenues that are double counted as well as parent SG&A drag and debt.

Downside risks: inability to earn the authorized rate of return, unfavorable regulatory outcomes, reductions in capital expenditures forecasts, higher operating and financing costs, lower sales volumes, unfavorable political and legislative changes , higher interest rates, and natural disasters.

Upside risks: ability to earn above the authorized rate of return, favorable regulatory outcomes, higher capex deployment, lower operating and financing costs, higher sales volumes, favorable political and legislative changes , decrease in interest rates.

CenterPoint Energy (CNP)
Our CenterPoint Energy PO is $30 using a 2024E sum-of-the-parts methodology. We apply the 14.4x electric and 13.5x gas base multiples which we gross-up +5% across our coverage to reflect sector growth. We apply a 20% (3.0x) premium due to above-average growth and constructive jurisdictions.

Previously we utilizes a 2024E P/E sum-of-the-parts with 17.3x electric and 16.8x gas P/Es and a 25% (4.0x) premium.

Risks are 1) ability to deploy capital expenditures and earn the regulatory allowed rate of return, 2) regulatory/political/legislative actions, 3) changes in equity needs, 4) interest rates, 6) natural disasters, and 7) management changes.

CMS Energy (CMS)
Our PO of $58 is based on a SotP relying on 2024E forward P/E multiples for the utility business and a 2024E forward EV/EBITDA multiple for CMS' IPP assets. For the utility seg we apply a 2.0x prem to the avg 24E regulated multiple P/E of 15.4x for the electric seg and of 14.9x for the gas seg, with the 10-yr capex update providing clear sight on ratebase growth and further upside, as well as cont'd favorable regulatory environment, and finally historically proven ability to consistently perform at the high end of guidance range.

Both electric and gas peer P/E multiples are grossed up to 2022 by 5% to reflect capital appreciation across the sector.

For CMS' merchant business we apply a 4x EV/EBITDA multiple, in line with current market value of CMS' power plants. We value Dearborn Industrial Generation (DIG) on a DCF basis given the plant is expected to be sold to Consumers at the end of 2025, with our valuation reflecting the remaining cash flows.

Risks are: 1) earned ROEs declining which reduce CMS utility earnings 2) execution risk on capex and cost cutting which would primarily affect the utility earnings, 3) negatives changes to market energy prices which could affect the DIG plant's ability to re-contract at the assumed prices.

Consolidated Edison (ED)
Our $84 PO is based on a sum-of-the-parts analysis applying premiums and discounts to the regulated group multiples 17.1x/16.7x for electric/gas respectively with a -2.0x disc. to Electric, Steam, & Gas to reflect Covid recovery overhang and Steam for lack of decoupling. Both electric and gas peer 2024 P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We further apply an EV/EBITDA approach on 2024E EBITDA to the CEB (renewables) business using a 12.0x multiple for both the legacy portfolio and the renewables portfolio seeing it as having higher quality returns.

Upside/Downside risks to achievement of the Price Objective and Rating are 1) earned regulatory returns, 2) capital expenditures, 3) regulatory/political/legislative changes, 4) interest rates, 5) natural disasters, 6) execution on unregulated projects, 7) Covid, 8) ability to complete the Mountain Valley Pipeline, and 9) raw materials costs and supply-chain delivery timelines.

Constellation Energy Corp (CEG)
Our $109 Price Objective is based on a 11.8% 2024E equity Free Cash Flow yield (FCF yield) on an unhedged/'open' basis. The 11.8% FCF yield represents the median of energy comparable peers.

Risks to achievement of the Price Objective and rating are: 1) changes in energy & capacity prices, 2) retail margins, renewals, win rate, & overall market share, 3) operating and capital costs, 4) capital allocation decisions including M&A, 5) nuclear incidents or accidents, 6) legislative and regulatory changes, 7) nuclear fuel costs & availability, 8) change in environmental standards for generation assets, 9) management turnover, 10) pension & nuclear decommissioning trust returns, 11) credit rating agency requirements, and 12) interest rates.

Dominion Energy (D)
We value Dominion Energy at $94 using a 2024E sum-of-the-parts analysis. For the utilities we apply the comparable electric (18.3x) and gas (16.9x) peer multiples which we gross-up by 5% to reflect capital appreciation across the sector. We apply premiums of 2x for Virginia and 2x for South Carolina electric utilities and +3x to the gas utilities in Ohio, Utah, North Carolina, and South Carolina. We apply discount adjustments to lower value utility sources in South Carolina (NND) and Utah (Wexpro) as well as the South Carolina bill credits.

Contracted assets are valued based on a 12.7x EV/EBITDA for renewables and discounted cash flow analyses for Cove Point and Millstone at the prevailing discount rates reflecting the risk characteristics. For remaining debt beyond that allocated to state utilities, we include a 50% weight towards a straight netting of leverage, with the remaining 50% using a P/E multiple on associated interest expense, in line with the methodology employed for diversified utilities with relatively higher levers of leverage

Risk to achievement of the Price Objective and Rating are 1) regulatory, legislative, and political actions, 2) ability to earn the regulatory allowed ROE, 3) capital markets and equity requirements, 4) changes to the capital expenditure forecast for both regulated & unregulated segments, 5) volatility in interest rates and pension returns, 6) changes in commodity prices, and 6) natural disasters.

DTE Energy (DTE)

We value DTE Energy at $120 using an SOTP approach. We value the utility segment on a 2024E forward P/E multiple basis and the non-utility segment on a 2024E forward EV/EBITDA multiple basis. For the utility segment we apply a 2x premium to both our regulated electric and gas utility peer multiples (of 15.4x and 14.9x, respectively). Both electric and gas peer P/E multiples are grossed up for a year to 2023 by 5% to reflect capital appreciation across the sector. We value the DTE Vantage segment on a multiple of 2024 EPS - the grossed-up electric multiple of 16.2x to account for the renewable natural gas (RNG) business. We assign an equity value of zero to the Equity Trading segment given potential for earnings volatility and opacity of the segment. We also reduce the equity value for estimated unallocated parent debt by applying a 15.9x multiple to both the interest expense and corporate overhead expenses at the parent. Risks to Price Objective: regulatory/political/legislative actions, realized returns from the unregulated Vantage segment, changes in equity needs, load growth/class mix, equity needs, weather/natural disasters, and interest rate fluctuations.

Duke Energy (DUK)

Our $110 PO is derived from a sum-of-the-parts valuation. We value the Electric and Gas utilities using peer 2024E P/E multiples. We apply a 4x multiple premium to Duke's operations in FL and 3x in IN to reflect more favorable regulatory environments (and potential generation opps in IN). We apply a 3x multiple to the Carolinas given upside to spending in improving regulatory construct combined with latest IRP & wider legislative reforms into 2021. We value the other regulated electric utilities at 15.7x and the gas utilities at peer group multiples of 14.5x 2024E P/E, respectively. Both electric and gas peer P/E multiples are grossed up by 5% for the groups CAGR to reflect capital appreciation across the sector. The commercial midstream, and transmission are valued on a 2024E EV/EBITDA basis. We use 9.0x multiples for midstream and transmission segments. We add the net present value of renewable segment using an 8% discount rate. We subtract out the impact of commercial debt, and add back for the renewable debt.
Upside risks: constructive rate case results, higher capital expenditure additions vs our assumptions, lower interest rates. Downside risks: poor rate case results, operating errors, and negative changes in the regulatory environment, Macro risks: Increases in interest rates and decreases in equity market valuations.

Edison International (EIX)

Our $50 PO is based on sum of the parts analysis with a peer 15.4x 2024 P/E grossed-up 5% for group growth. A -3x P/E discount is applied to the CPUC, as well as the Parent/Other segment, and -1x P/E discount to FERC jurisdictional utilities. The discount reflects below-average growth and regulatory considerations, albeit FERC risk profile is less challenging than the CPUC. The negative wildfire adjustments are netted-out to reflect a probabilistic approach to the risk of shareholder funded wildfires and the ongoing contribution to the CA fund on an NPV basis.

Risks include changes in: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) Edison Energy returns, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

Entergy (ETR)
Our $135 Price Objective (PO) is based on a sum-of-the-parts analysis. The 2024E electric utilities average P/E of 17.8x (vs 17.3x previously) is grossed-up +5%, to 18.7x, to reflect capital appreciation across the sector. We apply in-line P/E multiples to the subsidiaries except for +2x Texas to reflect the constructive regulation environment and -1x New Orleans based upon historical contentious proceedings. We net out 50% of the parent HoldCo long-term debt and apply a P/E multiple to 50% of the interest expense.

Risks to achievement of our Price Objective is 1) changing rate-making mechanisms or unexpected regulatory outcomes, 2) earned return on equities by jurisdiction, 3) hurricanes and other weather events, 4) nuclear accidents, safety events, or other incidents, 5) interest rates fluctuations, 6) equity issuances relative to management's forecast and access to capital markets, 7) ability to deploy regulated capital expenditures, 8) pension fund performance and 9) costs and operational volumes at the wholesale commodity subsidiary.

Essential Utilities (WTRG)
Our price objective is $44 based on our sum of the parts methodology applying a 24E peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. These peer multiples are 23.7x and 14.9x. We apply a 1.0x premium to Peoples Gas given the organic growth opportunities. We net out parent drag with a blended multiple.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Risks to the upside are accretive acquisitions, constructive regulatory outcomes, and upward rerating of gas multiples

Evergy, Inc (EVRG)
Our $64 price objective for Evergy (EVRG) is based on sum of the parts valuation, applying an in-line utility peer 2024E P/E of 15.4x. The electric peer P/E multiple is grossed up for by one year by 5% to reflect capital appreciation across the sector. We further apply a -1.0x turn discount across the Kansas Central subsidiary based on our perception of a slightly more challenging regulation compared with the average utility due to concerns about bill pressure.

Downside risks to our price objective include adverse regulatory outcomes, inability to deploy capital expenditures consistent with guidance, operational performance issues including at the nuclear facility, and earning below the authorized rate of return.

Upside risks to our price objective include favorable regulatory outcomes in important proceedings, accretively deploying additional capital expenditures above guidance, higher than anticipated O&M benefits and merger synergies leading to a higher earned return on equity, and the ability to recover capital invested in retired coal assets.

Eversource Energy (ES)
Our sum of the parts based price objective of $76 uses P/E multiples on 2024E earnings. For electric utilities, we attribute a 1x premium NSTAR,in line multiple to PSNH, and a 2x discount for CL&P to peer 15.4x multiple 2024E, reflecting future potential positive revisions to capex and earnings and the latest challenges in CT. For gas, we apply a 1x premium to the peer 14.9x 2024E multiple, given capex upside particularly in MA and a

2x for Columbia Gas. We apply a 2x discount to Yankee Gas given the less favorable jurisdiction. Both electric and gas peer P/E multiples are grossed up by 5% to reflect 2024E capital appreciation across the sector. We value Aquarion at the 23.7x water multiple. We reflect ES's 50% ownership in Revolution and South Fork offshore wind sites on an NPV basis.

Upside and downside risks to our Price Objective are 1) regulatory/political/legislative changes, 2) capital expenditures forecasts, 3) ability to earn the regulatory allowed ROE, 4) offshore wind development, 5) natural disasters, 6) operational performance and gas incidents, and 7) recent M&A integration.

Exelon (EXC)
Our $55 PO is based on an sum of the parts valuation. Our base electric peer 2024 P/E multiple of 18.0x is grossed up for a year by 5% to reflect capital appreciation across the sector. We apply a 2x premium across EXC utilities ComEd, PECO, BGE, PHI given increasing comfort around the consolidated profile, above-average growth prospects and below average risks.

Risks to achievement of the rating and price objective include: 1) Adverse regulatory, political, and legislative outcomes, 2) inability to deploy the guided capital expenditures, 3) equity needs that differ from guidance, 4) storms and other natural disasters, 5) inability to control operating costs, 6) changes in effective tax rates, and 7) changes in credit rating agency metric requirements.

FirstEnergy (FE)
Our PO of $41 is based on a sum-of-the-parts valuation. Our multiples are driven by relative P/E premiums/discounts to the 2024E regulated peer multiple (17.4x). Electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. As for premiums/discounts, we apply -2x discount to the distribution utilities to reflect rate review risk and the below-average balance sheet. We apply a +1x P/E premium to peers 2024E multiple to the Transmission business given potential for sale of a non-controlling stake. We subtract out the holding co debt given the high parent leverage.

Upside/downside risks are 1) unexpected regulatory outcomes, 2) ability to earn the allowed ROEs and/or other changes in regulatory earnings, 3) pension liabilities, 4) investigation revelations, 5) equity needs versus forecasts, 6) capital expenditures, 7) pension plan returns, discount rate changes, and interest/service costs associated with the plan.

MDU Resources Group, Inc. (MDU)
Our $30 PO is derived from SOTP. At the regulated electric and gas utilities, we use a P/E approach on our 2024 estimates and use peer multiples of 17.5x for electric and 16.8x for gas, respectively with a -1.0x discount for each reflecting the latest management capex guidance, we then gross this multiple by +5% to account for sectorwide EPS growth to derive a 12-month forward PO.
We value the Construction Materials business using a '23 EV/EBITDA estimate, applying a multiple of 9.0x based on an average of several publicly-traded peers in the cement, asphalt, and aggregates business.
We value the Construction Services business using a '23 EV/EBITDA estimate, applying a multiple of 9.4x based on an average of several publicly-traded specialty construction services peers. We also apply a -1.0x valuation discount reflecting the high level of competition in the space.
We value the Pipeline business using a '23 EV/EBITDA est., applying a multiple of 10.0x based on an average of several publicly-traded midstream peers. We also apply a -1.0x valuation discount reflecting uncertainty about growth at projects including North Bakken. We net out total parent drag and back out remaining non-regulated debt.

Upside risks are higher utility capex, improving margins at the construction business, and infrastructure stimulus.
Downside risks are a macro downturn pressuring construction margins, and rate case outcomes.

NextEra Energy (NEE)
Our $94 PO is derived using an SOTP approach, with the utilities and parent segment valued on a 2024E P/E basis, and the generation segment valued on a 2024E EV/EBITDA basis. In addition, we include NEE's ownership stake in NextEra Energy Partners (NEP) as well as the value of fixed fee IDR (DCF, at 6.7% disc rate). We assign 24E peer multiple of 18.0x for electric and 25.9x for water (grossed up by 5% and 7%, respectively, to reflect capital appreciation) with discount/premium to reflect the growth/risk profile of the businesses. We apply a 4x premium for FPL and Gulf. For NEER, we apply a peer EV/EBITDA multiple of 12.2x, which we adjust depending on asset type. Give contracted renewables 4x premium given fuel type and contracted nature. We utilize a DCF of new renewable for projects beyond 2022. We value contracted nuclear on a DCF approach using a 7.5% discount rate. We apply a 1x premium multiple to pipelines, 1x discount to gas infrastructure and 1x discount for supply and trading given lower asset quality, a 1x premium for contracted gas peakers and 1x discount for merchant peakers (other), again based on asset quality.
Risks to achievement of PO and Rating are 1) regulatory outcomes, 2) weather & natural disasters, 3) commodity price changes, 4) fluctuations in stock prices for YieldCo NextEra Energy Partners, 5) renewable development margins.

NiSource Inc (NI)
Our $34 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2024 forward P/E multiples that are marked-to-market to the latest peer utility multiples of 16.9x for gas and 18.2x for electric with a 1.0x premium for the gas utilities and a 2.0x premium for the electric gas utilities given strong growth rates and incremental renewable buildout, with capex potentially beginning in '24-'26, but acknowledge industrial gen load migration risk. While there still could be some near-term headwinds for solar, we are confident in mgmt. ability to manage and mitigate the impacts.

We note that electric / gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We subtract the value of excess holding company debt at the parent not supporting the utility opcos.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, higher natural gas prices, and inability to execute on renewables additions.

NorthWestern Corporation (NWE)
Our $56 price objective is based 2024E price/earnings (P/E) methodology. We apply the electric utility sector P/E of 16.8x as a base then gross-up +5% to reflect capital appreciation across the sector. We apply a -2x discounted multiple to the 2024E peer multiple to historically challenged regulation, below-average rate base (4-5%) / EPS (3-6%) growth, and inflationary concerns.

Risks to our price objective are uncertainty from: 1) regulatory, political, and legislative outcomes, 2) ability to recover costs and earn the regulatory allowed return on equity [ROE], 3) differences in future equity needs, 4) capital expenditure forecasts, 5) commodity and interest rate changes, 6) natural disasters and wildfires, and 7) management changes.

NRG Energy (NRG)
Our $38 Price Objective is based on 2024E sum-of-the-parts analysis. We apply a premium/discount to our 7.0x base EV/FCF multiple, which is premised on long-term historical industry trends, to each segment based on our views of the specific asset type and region. We discount the Generation segment to approximately 5x EV/EBITDA due to operational challenges experienced of late. Within Generation, we apply a 6x disc to ERCOT coal given supply chain challenges. We apply an approximate 6x multiple to Retail, at a premium to the base IPP multiple reflecting the opportunity set and challenges. The potential for additional cross-selling revenue is mitigated by concerns of core margin erosion and customer count declines. We assume approximately $2Bn share repurchases by YE-23.

Upside/Downside risks to the price objective are changes in: 1) commodities including gas, coal, nuclear fuel & power, 2) operating costs, 3) environmental costs and regulation, 4) retail margins and customer counts, 5) natural disasters, 6) generation volume, 7) regulatory, legislative, and political changes, 8) customer acquisition costs, 9) retail competition, 10) pension and nuclear decommissioning trust assets/liabilities, and 11) interest rates.

OGE Energy Corp (OGE)
Our OGE PO is $44/share based on a sum of the parts. For the utility and holdco we apply the FY24 peer multiple of 18.0x. Electric peer P/E multiple is grossed up for a year to 2021 by 5% (based on average annual growth) to reflect capital appreciation across the sector. We apply a 1x premium for incremental growth not yet embedded in plan.

Downside risks are further declines in the regulatory environment possibly resulting in lower ROEs or other hurdles hindering OGE's ability to earn its authorized return. While not as exposed due to low parent interest, we see interest rate hikes as another potential downside risk. Finally, execution risk on existing capex schedule could put further pressure on earnings growth. Declines in value of ET share could also provide downside to our valuation.

Upside risks are shifts towards a more favorable Oklahoma regulatory environment, which could ease OGEs ability to earn its authorized return in the jurisdiction and possibly increase capex plan as management views prospects in the state more positively. Improvements in value of ET share.

PG&E Corporation (PCG)
Our PO of $16 reflects an in-line P/E versus the respective electric (15.4x) and gas (14.9x) peer P/E groups with both grossed-up by 5% to reflect capital appreciation across the sector) based on 2024E. The acute wildfire risk is incorporated separately via a scenario probability weighted at 100% assuming PCG hits the cap in 3-year increments. Lastly, we net out 50% weighting of HoldCo debt and add back 50% weighting of interest expense to derive our Price Objective.

Risks to achievement to estimates and Price Objective include: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity needs, 5) earned returns and operating costs, 6) Fire Victim Trust moneitizations, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

Pinnacle West (PNW)
Our price objective of $56 is based on a peer utility P/E multiple of 15.4x on our 2024E EPS of $4.32 with a -3.5x discount to account for future rate case risk, uncertain recovery of clean generation spend, resource adequacy concerns in the state, and general below-average regulatory environment in Arizona, PNW's sole jurisdiction. Electric and gas peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector.

Risks to the Price Objective and estimates are: 1) Regulatory relationships/outcomes, 2) load growth in territory vs expectations, 3) Riders and capital trackers implementation 4) weather and natural disasters, 5) interest rate risk changes cost of capital, 6) pension liabilities and asset returns, 7) equity needs relative to forecasts, 8) capital expenditures.

Portland General Electric Company (POR)
Our $54 price objective is based on our 2024E EPS estimate. We value shares based on a 2024E P/E methodology applying a 1x discount to the 2024 regulated utility PE multiple of 18.0x. Electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. While our PO is a 12-month forward projection, we use a 2024 multiple, which is reflective of a discount back to today.

Risks to estimates and the Price Objective are 1) regulatory decisions, 2) power costs in the Power Cost Adjustment Mechanism [PCAM], 3) wildfires and other natural disasters, 4) ability to deploy capital, 5) ability to control operation expenses, 6) interest rates, 7) load growth/contraction, 8) request for proposals, and 9) trading losses.

PPL Corporation (PPL)
Our $33 price objective is based on a sum of the parts methodology applying respective premium/discounts to the 2024E peer group multiple of 18.5x. Electric peer P/E multiple is grossed up by 5% to a target multiple of 19.4x to reflect capital appreciation across the sector.

Risks to the achievement of our Rating and Price Objective include: 1) Integration of Rhode Island assets, 2) regulatory/political/legislative changes, 3) capital markets, 4) ability to earn at or above the regulatory allowed return on equity, 5) cost control, 6) capital expenditures forecasts, 7) natural disasters/weather, 8) equity issuance/repurchase plans, and 9) corporate taxes.

Public Service Enterprise Group (PEG)
Our $69 PO is derived from our SOTP valuation. For the regulated utilities we utilize the electric (18.3x) and gas (17.6x) 2024E sector P/E multiples, which we then gross-up by 5% to reflect capital appreciation across the sector. We continue to apply a company-specific +1x premium to the group multiples thus derived to reflect the above-average growth and low-risk transmission & distribution (T&D) nature of PEG's operations.

Positive or negative risks to achievement of the Price Objective and Rating are: 1) regulatory/political/legislative outcomes, 2) changes in capital expenditures relative to forecasts, 3) nuclear incidents and natural disasters, 4) equity and capital markets needs, cost and timing adjustments for offshore wind developments, 5) ability to earn the regulated rate of return, and 6) interest rates.

Sempra Energy (SRE)
Our $160 PO is based on a sum of the parts valuation of 2024E earnings. The US utilities are valued using the electric (15.4x) and gas (14.9x) average P/E that we grossed-up +5% to account for sector growth. We apply a -2x discounted valuation to the California gas utility (SoCal Gas) for concerns about long-term use of natural gas. We apply a -1x discounted valuation to the California electric utility (SDG&E) to reflect the wildfire risk exposure. We apply a +2x premium to the TX utility (Oncor) for above average growth and high visibility into rider recovery. The Infrastructure segment (SIP) is valued at 12x EV/EBITDA, an implied premium to the Mexican market (5.5x) and select premium US midstream comparable (Williams and TC Energy at approximately 11x) on EV/EBITDA due to its long duration contracted cash flows. The parent drag is treated on a balanced blend of P/E and HoldCo debt and cash netting.

Risks to achievement to estimates and Price Objective include: 1) Wildfire and other natural disasters/catastrophic events, 2) regulatory outcomes, 3) interest rates, 4) equity

needs, 5) earned returns and operating costs, 6) LNG development, 7) ability to deploy capital, and 8) environmental, social, & governance [ESG] profile.

Southern Company (SO)
Our $63 PO is derived from a sum-of-the-parts analysis (SOTP). We use a P/E valuation approach on 2024 and use peer multiples of 15.4x for electric and 14.9x for gas, respectively (with dis/prem applied per asset depending on growth/risk): we then gross up these multiples by +5% to account for sector wide EPS growth to derive a 12-month forward PO. We subtract 50% of the 2024 parent interest expense multiple by an electric P/E peer multiple to reflect parent lev supporting the utilities. We net out total parent drag and add back the remaining parent interest expense with a 50% weighting.

Upside and downside risks are 1) Vogtle construction timing and costs, 2) regulatory and legislative outcomes, 3) ability to earn the allowed rate of return, 4) changes to the capital expenditure forecast, 5) nuclear incidents, weather, and natural disasters, 6) rate of customer growth, 7) O&M trends, 8) interest rates, 9) environmental policies and regulations.

Southwest Gas Holdings (SWX)
Our $87 PO is based on our 2024E Sum-of-the-parts (SOTP) analysis. We apply a 16.6x our 24E peer Gas LDC utility P/E to the utility EPS across the company's three major jurisdictions, which include Arizona, Nevada and California. We gross this peer multiple up by 5% to reflect capital appreciation across the sector.

For all of the utilities, we apply a 3x discount on Arizona and a 2x discount on California and Nevada. Additionally, we value the FERC regulated MountainWest and Great Basin Pipeline separately on a midstream peer group average FY24E EV/EBITDA multiple of 9.2x and net out associated debt. We apply a 1x discount on MountainWest to reflect lower growth opportunities vs peers. For the infrastructure services segment, we apply 8.8x FY24E EV/EBITDA multiple (based on peer consensus multiples), which is a 0.5x premium to the business' closest industrial comps given higher margins and a more stable customer base. Lastly, for parent debt in the Corp & Other segment, we net out 50/50 weighting for re-capitalization and add back 50% of parent interest expense.

Risks to achieving the Price Objective are 1) M&A, 2) activist shareholders, 3) infrastructure services performance, 4) construction margins, 5) regulatory outcomes, 6) ability to earn regulatory rates of return, 7) capital markets access, 8) rating agency actions.

Vistra Energy (VST)
Our $30 price objective is based on a 2024E SOTP valuation. We assign a discount/premium to the peer group EV/FCF multiple of 7.0x for each fuel within each geography, depending on our specific views for the asset type and market: We include the full $275mn of margin-enhancing initiatives as well as $200mn optimization benefits and the $275mn of synergies related to the DYN acquisition. We further capitalize our estimated income tax for the combined entity to reflect the higher tax burden than peers, and we include a $50mn NPV of TRA payments. We reflect Vistra Zero accretion at 12x EV/EBITDA, with '26 FCF discounted at 12% back to '23. We also reflect $500mn of ERCOT securitization proceeds (implied in net debt balance). Our average implied 24E EV/FCF multiple for the overall business is 4.8x based on our latest Mtm of commodities. We include impact from future bill credits from Uri storm & NPV of ERCOT uplifts, exclude Koch litigation.

Downside risks: 1) declining wholesale power & capacity prices, 2) competitive & regulatory change to retail businesses, principally in Texas, 3) operational issues pertaining to running power assets including Nuclear asset in Texas.

Upside risks: 1) VST may improve its retail margins and retain customers, 2) VST may beat its margin enhancements initiatives, 3) VST may see a decrease in the price of key inputs such as natural gas and coal, and 4) VST may see an increase in wholesale power prices.

WEC Energy Group Inc (WEC)
Our $90 PO is based on 2024E SoTP, with a large cap electric group multiple of 15.1x and gas regulated multiple of 14.6x. Electric and gas peer P/E multiples are grossed up for a year to reflect capital appreciation across the sector. We apply a 3.0x premium to WEC's WI electric & gas subs for surety in earnings growth for the next two years following the Commission's recent settlement on above avg ROEs of 10%+. We apply a 3.0x premium to the gas utilities, except IL's Peoples Gas which is 2.0x, and North Shore Gas with the Gas System Modernization Program (GSMP) and capex forecasts de-risked following the ICC order. We ascribe a 4x premium vs. the group at ATC to account for steady earnings growth as well as above avg Federal ROE's. We give Power the Future (PTF) a 3.0x P/E premium as the ROE is set indefinitely on historical and new investments. We ascribe an in line multiple for the parent accounting for the interest expense which finances overall utility operations. We value Energy Infrastructure on a net present value basis using a WACC of 5.6%, in line with other renewable assets. We net out 50% of HoldCo debt from equity valuation and adjust to add back the parent drag on interest exp.

Risks to our PO are positive or negative changes in: 1) earned regulatory returns, 2) capital expenditures, 3) regulatory/political/legislative changes, 4) interest rates, 5) natural disasters, and 6) execution on unregulated projects.

Xcel Energy Inc (XEL)
Our PO is $69. We value Xcel Energy using a sum of the parts (SOTP) approach. Given the difference in geography, earnings strength, growth opportunity and risk profile, we divide the segments by subsidiary. We use 2024E forward P/E multiple of 15.5x to derive a value for the different business segments, including the parent segment. Electric peer P/E multiple is grossed up for a year to reflect capital appreciation across the sector. We apply a 3x premium to XEL subsidiaries in MN, CO, NM, and WI as both utilities present solid or improving regulatory treatment with tangible investment upside. We see this multiple as appropriate as the company has growth opportunities, resolving regulatory drag and resolving uncertainty around rate cases. We also add a discrete item reflecting upside from potential Direct Pay legislation, estimating the equity savings from 75-100 bps improvement in credit metrics and applying a probability weight of 50% to account for uncertainty. We also net back 50% of the parent interest expense and instead subtract out 50% of parent debt to more accurately reflect HoldCo leverage.

Risks to achievement of the Price Objective are interest rate changes, regulatory risk, such as lower authorized ROEs or less favorable riders/trackers for renewables and transmission, inability to deploy capital at guided levels, adverse legislation, execution delays, and weather/natural disasters.

Analyst Certification

We, Julien Dumoulin-Smith, Dariusz Lozny, CFA and Paul Zimbardo, hereby certify that the views each of us has expressed in this research report accurately reflect each of our respective personal views about the subject securities and issuers. We also certify that no part of our respective compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

Special Disclosures

BofA Securities is currently acting as a financial advisor to Qatar Investment Authority in connection with its capital injection into RWE AG to support RWE AG's proposed acquisition of Con Edison Clean Energy Businesses Inc from Consolidated Edison Inc, which was announced on October 1, 2022.

[R1] Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of both a stock's: absolute total return potential as well as its attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster[R2]
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

[R2]Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the Price Charts website, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: AES Corp, Allete Inc, Alliant Energy Corp, Ameren Corp, American Elec Power, American Water, Avangrid, Black Hills, CenterPoint Energy, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy Corp., Essential Utilities, Evergy, Eversource Energy, Exelon Corp, FirstEnergy, MDU Resources, NextEra Energy, NiSource Inc, NorthWestern Corp, NRG Energy, OGE Energy Corp, PG&E Corp., Pinnacle West Capit, Portland General, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Allete Inc, Amer Elec Power, Dominion Energy, Duke Energy, Essential Utilities, Exelon Corp., NiSource Inc, Northwestern Corpora, Sempra Energy, Southern Company, Southwest Gas, Xcel Energy Inc.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, MDU Resources, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., PG&E Corp., Pinnacle West Capita, Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, MDU Resources, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., OGE Energy Corp, PG&E Corp., Pinnacle West Capita, Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, MDU Resources, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., OGE Energy Corp, PG&E Corp., Pinnacle West Capita, Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, MDU Resources, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., PG&E Corp., Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, WEC Energy Group Inc, Xcel Energy Inc.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: AES Corporation, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., FirstEnergy Corp, NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., PG&E Corp., Pinnacle West Capita, PPL Corp., Sempra Energy, Southern Company, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: Amer Elec Power, American Water Works, Black Hills Corporat, CMS Energy, Dominion Energy, DTE Energy, Duke Energy, Entergy, NextEra Energy, NiSource Inc, Northwestern Corpora, Portland Genl Elec, Sempra Energy, Southern Company, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: AES Corp, Allete Inc, Alliant Energy Corp, Ameren Corp, American Elec Power, American Water, Avangrid, Black Hills, CenterPoint Energy, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy Corp., Essential Utilities, Evergy, Eversource Energy, Exelon Corp, FirstEnergy, MDU Resources, NextEra Energy, NiSource Inc, NorthWestern Corp, NRG Energy, OGE Energy Corp, PG&E Corp., Pinnacle West Capit, Portland General, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: AES Corporation, Allete Inc, Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Avangrid, Black Hills Corporat, CenterPoint, CMS Energy, Consolidated Edison, Constellation Energy, Dominion Energy, DTE Energy, Duke Energy, Edison Intl, Entergy, Essential Utilities, Evergy, Eversource Energy, Exelon Corp., NextEra Energy, NiSource Inc, Northwestern Corpora, NRG Energy, Inc., PG&E Corp., Pinnacle West Capita, Portland Genl Elec, PPL Corp., Public Service, Sempra Energy, Southern Company, Southwest Gas, Vistra Energy, WEC Energy Group Inc, Xcel Energy Inc.
BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

BofAS together with its affiliates beneficially owns a net short position of 0.5% or more of the total issued share capital of this issuer. Ownership positions speak as of a date no more than three trading days prior to the date of this report: CMS Energy.
From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.
BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time,

hold a trading position (long or short) in the securities and financial instruments discussed in this report.
BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

BofA ESGMeter Methodology:

ESGMeter is a proprietary metric based on quantitative analysis and fundamental analyst inputs that reflects our assessment of a company's Environmental, Social and Governance-related attributes. The ESGMeter is intended to indicate a company's likelihood of experiencing stronger financial stability (higher return on equity and lower earnings and price volatility) over the next three years relative to peer group. There are three ESGMeter levels - Low, Medium, and High - which indicate whether a company has attributes most likely to translate into superior financial stability (in the case of a High level) or weaker financial stability (in the case of a Low level) over the next three years relative to its peer group. A Medium level suggests that a company exhibits ESG characteristics that are likely associated with financial stability results in line with its peer group over the next three years. Full details of our methodology, financial stability definition and disclaimers are available at BofA ESGMeter methodology. ESGMeter is not indicative of a company's future stock price performance and is not an investment recommendation or rating. ESGMeter is independent of the BofA Global Research fundamental equity analyst's investment rating, volatility risk rating, income rating or price objective for that company.

- **What we expect week of 10/31: NI:** The Columbia Gas of OH rate case is set for hearings Nov 1, and it appears Columbia expects a Stipulation to be filed by Nov 1 (I.e., today) which we generally view as a positive for **NI** given the OH rate case for long has been an overhang on shares. We also flag hearings on **OGE's** fuel filing is 11/3, which will be watched closely by investors given the $9.74 average increase to customer rates.
- **Key focus items for earnings this week:** The following companies are reporting earnings this week: **CNP / WEC / EIX** (11/1), **ETR** (11/2), **ES / OGE / EXC / PNW / SRE** (11/3), **DUK / EVRG / AES / AEE / D** (11/4). At **CNP** & **EIX**, we're watching commentary on interest expense headwind exposure. At **ES**, we watch for updates on the NSTAR electric GRC / OSW strategic review. At **SRE**, investors will be focused on Oncor given the pending rate case and Port Arthur given the recent EPC contract with Bechtel. At **EXC**, we're watching for improved messaging from management and confidence in the 6-8% LT EPS CAGR. At **D**, we see the update as especially timely given the recent OSW performance guarantee settlement struck with the AG and other parties into the weekend. See our 3Q 2022 Earnings Preview Slide Deck for key focus items by company.
- **Week in review:** The UTY outperformed the S&P 500 this past week, seeing a 660bp gain vs. a 400bp gain for the SPX. 10YR/30YR USTs ended the week -21bps/-20bps narrower. Large Caps (5.5%), Small Caps (5.6%), Diversified (6.1%) and LDCs (5.3%) all saw gains this past week. **Top performers:** NEE, EIX, AES, CEG, XEL, SRE, CNP, EVRG, PNW, CMS. **Bottom performers:** ATO, LNT, PCG, FE, AEP, ED, POR, AGR, PPL, SO. The last week was somewhat of a relief rally with treasuries tightening and Utilities seeing sharp underperformance through October. We flag **NEE** / **XEL** relative outperformance due to better-than-expected earnings prints; We further flag **CEG** reached a new all-time-high this past week.
- **D: OSW Performance Guarantee Settlement is Positive:** Late Friday (10/28) VEPCO, the AG, Appalachian Voices, Sierra Club & Walmart filed a second proposed stipulation and recommendation addressing the imposition of an operating performance guarantee. The settlement sets cost sharing percentages above $9.8Bn for the project including 100% customer funded at $9.8-10.3Bn, 50/50 Customers / Company at $10.3-11.3Bn and 100% Company at $11.3-13.7Bn. Shareholders essentially are funding a $2.9Bn increase in project costs if the OSW project were to exceed $13.7Bn, before D would return to the SCC for a regulatory determination (nothing prevents any party from arguing that construction costs in excess of $13.7 billion are reasonable and prudent). Recall 90% of the project costs will be fixed by 1Q23 vs. 75% today with current installed costs sitting at ~$10Bn as of 2Q22. D has underperformed significantly through the 3rd quarter due to the performance guarantee as well as the Governors VA Energy Plan. The recent settlement we're viewing positively as it addresses some of the more binary negatives to the stock (i.e. forgoing the OSW projects impact to D's financial plan). There is no statutory timeline for the docket but we expect an order by YE22.
- **PCG: CPUC announces fine for Zogg Wildfire:** On Oct. 26th the CPUC proposed fines of $155.4Mn for PCG for violations related to the '20 Zogg Wildfire. The company is currently reviewing the proposed order, and has 30 days to either agree to pay the fine upon CPUC adoption of a Final Order and complete corrective actions within 45 days of that, or to request a hearing. We would view any fine assoicated with the fire as manageable to PCG. It also represents a step forward in getting fire liability and associated payments behind the company as it invests in wildfire mitigation tactics such as increased vegetation management. PCG has until Nov. 25th to decide on next steps.
- **PPL: Transmission agreement to connect OSW in NE:** On Oct. 24th PPL and Elia Group, through their subsidiaries PPL Translink and WindGrid, announced an agreement to develop transmission to connect future New England OSW capacity to the onshore grid in the area. The two companies signed a memorandum of understanding, and plan to jointly respond to a request for information (RFI) issued by five states in the region (MA, CT, RI, ME and NH) related to transmission upgrades and changes needed to fully utilize the up to 30k MWof NE offshore capacity expected to be deployed by 2050. We view this as a positive for PPL given the increased capex opportunity presented by this project, with Elia Group having a strong track record for building-out OSW transmission across Europe. PPL has already invested over $9Bn in transmission in the US over the last decade.
- **PCG: Victims Fire Trust sells shares:** On Oct. 28th PCG's Victims Fire Trust sold 35Mn shares of PCG stock, following a sale of 35Mn shares in Oct. of this year. The Trust was put in place as a mechanism to compensate wildfire victims from incidences from 2015 to 2018. As of Oct. 28th the Trust has issued determination notices to 86% of claimants and has paid out over $5.36Bn. The selling shareholder dynamic for PCG is likely to remain absent of a wider coordinated deal with the FVT which we still see as low probability. We note at current stock price levels the risk of FVT blocks are elevated, though we note our investor dialogues on PCG have increased dramatically in the last 2 months. See our takeaway from 3Q PCG Earnings.
- **EXC: Pennsylvania PUC authorized PECO's rate increase:** On Oct. 11, ALJ recommended the PA PUC to adopt a settlement that would authorize PECO a $54.8 Mn, or 6.0%, gas rate increase. PECO initially requested an $82.1 Mn, or 9.1%, rate increase, premised upon a 10.95% ROE, 53.41% of equity layer on a $2.9 Bn rate base. An additional $7 Mn transfer to its rate base, which will be collected through PECO's DSIC, will see authorized base rate revenues to increase by $61.8 Mn, resetting the DSIC rider. The agreement called for PECO to refrain from further filing gas base rate case and a DSIC adjustment before Mar '24. The company will also accelerate its gas mapping program, revising its completion by 2032, and fund energy efficiency-related rebate programs for low-income customers. The rate outcome is consistent with our expectation and represents a larger portion of EXC's '22 rate filing execution. We look for more color regarding Delmarva's rate outcome during the 3Q call (Nov 3rd).
- **AES: IPL reached settlement with intervenors:** The unanimous settlement was reached on Oct. 25 regarding the unplanned outage of Eagle Valley CCGT that occurred between Apr '21 and Mar '22. The settlement resolved all issues related to fuel adjustment charge and all outage related costs. IPL also agreed not to recover $21 Mn of the $42 Mn in previously deferred costs and to credit an additional $7 Mn to customers in future rates. As a result, AES Indiana recorded a $27.8 Mn expense for the period ended Sep. 30th, 2022. The settlement agreement is subject to approval by the IN Utility Regulatory Commission. On regulatory execution, we are still waiting for OH (DPL) rate outcome by end of year and expect rate filing for IN (Jun '23).
- **PNW: APS filed rate case requesting $460 Mn revenue increase:** APS filed the long-waited rate case on Oct 28 and expect new rate to become effective by YE '23 (company assumes at least one year before final rate outcome). APS is filing for 10.25% ROE, 51.93% equity layer, with Jun '22 test year (including 12 months of post-Test Year plant to reflect used and useful projects that will be placed into service prior to Jul '23) and $10.5 Bn rate base. Recall APS's current rate structure that became effective Nov '21 includes punitive 8.7% ROE, 54.67% equity layer, $8.6 Bn rate base with test year ended Jun '19. We look for more color on rate filing strategy during the 3Q call (Nov 3rd) regarding cost recovery on new renewable, Palo Verde upgrades, rate affordability and potential pension offset. Overall, we're not surprised by the large increase given the adverse ruling APS experienced in 2021. The difference in equity layer is especially notable which we think could pressure wider expectations on earnings power.
- **ES: Request for Biden to declare emergency for fuel shortage in New England this winter:** ES CEO Joseph Nolan wrote a letter to President Biden on Oct 28, to start preparing emergency measures to prevent a potential wintertime natural gas shortage. FERC has warned that fuel availability in New England could be a primary concern given soaring demand in US gas globally and limited pipeline capacity in the region. ES also asked the White House to consider measurements under such emergency, including use of the Defense Production Act, and potentially waive of the Jones Act to help reduce shipping costs. We think the recent letter from management speaks to the wider pressures Northeast utilities (AGR, ED, ES) may face in fuel lines this coming winter.
- **CMS: MI retired nuclear plant faces potential restart:** Although very early-stage discussion, it is reported that Holtec was expected to decide by Jan '23 whether to reopen Michigan's Palisades plant (used to be owned by ETR) that shut down in May '22 due to economic viability reasons. We note that no US nuclear site has ever been restarted after shutting down, but flag MI governor Gretchen Whitmer's support for such initiative. To achieve the restart, sufficient labor and a new company to run this plant needs to be found, while FERC approval is also required. We continue to monitor any development on this front. Note on the CMS 3Q call mgmt. said they would be open to a new PPA, but it has to be much more competitive and more market-based than it has been historically, including a financial compensation mechanism on any PPA.
- **PEG / NEE / FE: NJBPU announced offshore transmission award:** We note that option 1A and 1B are adopted under the PJM SAA framework and approved capex opportunities are focused on onshore upgrades. FE's JCPL is the biggest winner, along with development partner MAOD, were awarded about $720 Mn capital investment to facilitate building this shared connection point for transmission from offshore to the mainland. Other utilities (EXC - $22 Mn, PEG - $40 Mn, PPL - $0.38 Mn) are also awarded for related system upgrade capex. FE see the award driving a capital investment opportunity and should start later half of the decade, which is a surprise positive. We currently don't see a regulatory agenda to move forward with offshore transmission wet award but note that the BPU order is in favor for a competitive process for generation owners to bid into the process to be eligible for ITC.

- We provide a brief update on the NI settlement, ETR quarter, and AEP CFO announcement

- **NI: Settlement filed in OH for Columbia Gas rate case:** On Oct 31st parties in NI's OH rate case filed a settlement with a $3.5 Bn rate base, 9.6% ROE and 50.6% equity layer. Recall staff recommended $3.5 Bn rate base, 9.55% ROE and 50.6% equity, while the company originally asked for 10.95% ROE with similar equity layer and rate base. We notice that the large rev req difference between company asked ($220 Mn) vs. settlement ($68 Mn), is driven partially by the different view on current operating income (company view of $104 Mn vs. settlement's $194 Mn). We also note potential for a rate design change could be a driver for the diff as well, i.e. moving more recovery on to trackers and deferrals in the future. This rate case has been an overhang for shares since filed back in Jun '21. We have been modelling slightly higher equity layer (52%) and underearning (9.6%/9.3%, '22/'23 respectively) so we still see the outcome as overall in-line with our expectations, positively removing an overhang. Hearings are in ~two weeks and we're expecting new rates to be implemented in a timely manner. We believe the settlement is still within management's expectations for 2023 at the implied midpoint fir the current guidance plan (5-7% off $1.37 in 2021A). Recall mgmt is subject to update investors this coming Monday at the Analyst Day where we expect a 6-8% long term EPS CAGR. Overall, we view the settlement as positive for NI.

- **ETR (Small Pos):** ETR narrowed the 2022 EPS guidance range to $6.35 (CSe $6.25, Cons $6.38), and posted 3Q EPS of $2.84 vs. Cons $2.65 / CSe $2.60. The beat reflects higher weather driven sales volumes (+10c impact) partially offset by O&M, D&A and interest expense. ETR utilized flex spending in the quarter which helps de-risk FY23. ETR updated investors on balance sheet and credit impact from IRA in the slides, noting a neutral to slightly positive expectation to cash and credit. Slides note ETR does not expect to be subject to the CAMT until 2026. Solar PTC could also increase utility owned project potential where we're looking for more updates on ETR's refreshed capital plan coming at EEI. ETR further de-risked equity needs through 2024 with only $130Mn remaining to be sourced. Long term guidance metrics including the 6-8% LT EPS CAGR and guidance ranges for 2023-2025 were all reaffirmed. Overall, we view the update as slightly positive.

- **AEP CFO Update (Neutral):** AEP named Ann Kelly EVP and CFO: Kelly is currently VP of finance and CFO for AmeriGas Propane, a UGI subsidiary. The appointment is effective Nov 30th. Current CFO Julie Sloat will become CEO Jan 1st, '23. This largely addresses the leadership transition plan as current CEO Nick Akin is retiring by year end and Sloat will move out of the CFO seat. Kelly is not new to the industry with experience at UGI utilities, as well as EXC (PECO, GenCo). Overall, we see the update as Neutral to AEP.

DISCLOSURE APPENDIX AT THE BACK OF THIS REPORT CONTAINS IMPORTANT DISCLOSURES, ANALYST CERTIFICATIONS, LEGAL ENTITY DISCLOSURE AND THE STATUS OF NON-US ANALYSTS. US Disclosure: Credit Suisse does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Valuation Methodology and Risks

Target Price and Rating
Valuation Methodology and Risks: (12 months) for AEP Inc (AEP.OQ)

Method: We value AEP using an SOTP methodology and our target price is $87. We apply the electric group's 16.4x P/E multiple to all subsidiaries while applying a 15% and 5% multiple premium to AEP TransCo and AEP Texas, reflecting formulaic/timely recovery in FERC jurisdictions and the relative constructive regulatory environment in Texas. For the unregulated power generation business, we apply a -15% discount given there's less earnings visibility and AEP is transitioning to a more regulated growth strategy. We currently have zero EPS contribution from Kentucky Power under a base-case assumption of a timely close of its sales transaction. We rate AEP Outperform as we expect the stock's total return to outperform peers over the next 12 months.

Risk: Risks to our Outperform rating and $87 target price include: (1) any non-constructive regulatory decision for renewable capital spending recovery; (2) untimely execution of the Kentucky sale or unfavorable valuation applied to contracted renewable sales; (3) aggressive coal retirement programs could increase stranded asset risk given AEP's vision to retire an additional 5GW of coal generation by 2028.

Target Price and Rating
Valuation Methodology and Risks: (12 months) for Entergy Corporation (ETR.N)

Method: Our target price Is $108: We value ETR on a P/E approach using the 2024E multiple of 14.9x on our 2024E EPS. This reflects a -3% discount to the electric utility peer multiple of 15.4x. We think ETR offers in above-average jurisdictions for growth, but ongoing hurricane costs can stress ETR's balance sheet. We see the currently constructive regulatory environment in ETR's service territories partially offsetting this negative. We do not ascribe any value to the stock for potential upside capex, or potential value accretive events such as an NCI sale. Overall, we still see ETR as attractive on this base-case discount approach. We rate ETR Outperform as we expect the stock's total return to outperform peers over the next 12 months.

Risk: Risks to achieving our Outperform rating and $108 target price include: Failure to obtain constructive outcomes in regulatory proceedings, failure to execute on the company's proposed securitizations, natural disasters, labor/inflationary pressures above management's current O&M trajectory. Climate change is a risk to the extent federal or state legislatures implement more restrictions on GHG emissions than expected, or if there are increased hurricanes in the Gulf Coast this season. A worse-than-contemplated hurricane season could inhibit ETR from reaching our target price.

Target Price and Rating
Valuation Methodology and Risks: (12 months) for NiSource (NI.N)

Method: We value NI on a P/E approach that yields a $27 target price. Our base-case multiple of 16.1x is derived by taking the regulated electric and regulated gas group multiples and applying a weighted-average approach based on NI's rate base mix. We apply a 5% premium to this number to account for: (1) numerous tracking mechanisms in place to realize real-time return on capital; (2) new management, which is taking a refreshed view of the company's operating segments and pushing forward with a strategic review with the goal of creating value; and (3) potential upside to capex that isn't contemplated in our current EPS estimates. Our target price implied P/E multiple is in line to electrics and a premium to gas LDCs. We rate NI Neutral as we expect the stock's total return to be in line with peers over the next 12 months.

Risk: Risks to our Neutral rating and $27 target price include: Increased inflation above NI's cost-control ability, as well as headwinds delaying solar development via supply chain issues. Gas is a combustible molecule, and NI has a history of two separate high-profile explosions in the last 10 years, which could negatively affect the share price. Management also discussed buying and selling assets as part of its new strategy, and we think buying assets could weigh on NI's multiple. Climate change and increased scrutiny on GhG emissions is also a risk given ~70% of NI's rate base is coming from the gas distribution utility.

Companies Mentioned *(Price as of 01-Nov-2022)*

AEP Inc (AEP.OQ, $88.53)

Entergy Corporation (ETR.N, $108.32, OUTPERFORM, TP $108.0)

Effective July 3, 2016, NC denotes termination of coverage.

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.

Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.

Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European (excluding Turkey) ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin America, Turkey and Asia (excluding Japan and Australia), stock ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark (India - S&P*

Document is intended for the sole use of customer with the tracking ID of 10111678

BSE Sensex Index); for China A share the relevant index is the Shanghai Shenzhen CSI 300 (CSI300); prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	53%	(27% banking clients)
Neutral/Hold*	35%	(21% banking clients)
Underperform/Sell*	10%	(21% banking clients)
Restricted	1%	

Please click here to view the MAR quarterly recommendations and investment services report for fundamental research recommendations.

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

In addition, Credit Suisse declares that: Credit Suisse has provided, and/or may in the future provide investment banking, brokerage, asset management, commercial banking and other financial services to the subject company/companies or its affiliates, for which they have received or may receive customary fees and commissions, and which constituted or may constitute relevant financial or commercial interests in relation to the subject company/companies or the subject securities.

This research report is authored by:

Credit Suisse Securities (USA) LLC	Nicholas Campanella ; Fei She, CFA ; Nathan Richardson

There is currently no universal definition or exhaustive list defining the issues or factors that are covered by the concept of "ESG" (Environmental, Social, Governance). If not indicated otherwise, 'ESG' is used interchangeably with the terms 'sustainable' and 'sustainability'. Unless indicated otherwise, the views expressed herein are based on CS' own assumptions and interpretation of ESG at the time of drafting. CS' views on ESG may evolve over time and are subject to change.

Where a sustainability assessment is identified as including elements which track environmental, social or governance (ESG) objectives, CS is, wholly or in part, reliant on third-party sources of information (including, but not limited to, such information produced by the issuing/manufacturing company itself) and external guidance. These sources of information may be limited in terms of accuracy, availability and timeliness. It is possible that the data from ESG data providers may be incorrect, unavailable (e.g., not existing, or absence of look-through), or not fully updated. CS has not sought to independently verify information obtained from public and third-party sources and makes no representations or warranties as to accuracy, completeness or reliability of such information. Additionally, as global laws, guidelines and regulations in relation to the tracking and provision of such data are evolving, all such disclosures are made on a non-reliance basis and are subject to change. Unless required by applicable law, CS is not obliged to provide updates on sustainability assessments. Any updates might be subject to a time lag, due to e.g. lack of available data.

An ESG assessment reflects the opinion of the assessing party (CS or external parties such as rating agencies or other financial institutions). In the absence of a standardized ESG assessment system, each assessing party has its own research and analysis framework/methodology. Therefore, ESG assessment or risk levels given by different assessing parties to the same company can vary. Further, ESG assessment is limited to considering company performance against certain ESG criteria only and does not take into account the other factors needed to assess the value of a company.

Important disclosures regarding companies that are the subject of this report are available by calling +1 (877) 291-2683. The same important disclosures, with the exception of valuation methodology and risk discussions, are also available on Credit Suisse's disclosure website at https://rave.credit-suisse.com/disclosures. For valuation methodology and risks associated with any recommendation, price target, or rating referenced in this report, please refer to the disclosures section of the most recent report regarding the subject company.

CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. Please note in particular that the bases and levels of taxation may change.

Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. UPGRADE RATING

NI: AD: Extending Premium Growth Path to '27; Upgrading to Outperform

NOVEMBER 9, 2022
EQUITY RESEARCH
AMERICAS | UNITED STATES
GAS UTILITIES

Document Link

We are upgrading NI to Outperform post the AD which we see as a de-risking catalyst for shares, removing uncertainties surrounding the strategic review, with a clearer path on asset sale and ultimately LT EPS growth rate execution. While NI's EPS and RAB growth rate are slightly lower than the prior plan, we view the renewed EPS growth rate (6-8% annual growth), 8-10% RAB growth, pair with projected BBB+ credit rating with 14-16% FFO/debt, as a reasonable proposal to get NI back to a premium utility multiple over time. NI has an inflation adjusted outlook extended through from '24 to '27 with a top quartile EPS growth trajectory that we view as more sustainable with more certainty than before. NI announced a minority sale of NIPSCO (up to 19.9%) to help cure balance sheet weakness, which we also view positively. This addresses block equity needs in the plan with only a limited ATM program assumed. Shares underperformed 369bps relative to XLU on the AD and are ~15% off relative YTD highs, which we see creating a favorable entry point as this transformation appears undervalued.

- **Moving forward to become a premium utility:** NI provided '23 guidance with a range of $1.50 - 1.57, consistent with previous 5-7% annual growth commitment. Mgmt. is shifting to YoY growth as opposed to CAGR when guiding EPS growth, providing similar midpoint for each year within the guidance horizon, while narrowing the upside/downside corridor in the near years. We acknowledge execution will be needed for NI to re-rate closer to premium utilities, but the plan appears quite achievable to us as we think NI's plan is conservative with CSe at the high end of the LT growth rate in '25 (CSe $1.85). NI's proposed top quartile EPS growth rate, de-risked RAB growth path, catalyst towards better quality balance sheet through NIPSCO transaction, along with current valuation dynamic (~10%/ 6% P/E discount to electrics/ gas, based on '25 EPS) warrants the OP.
- **Valuation, EPS Ests & Risks:** $27 TP is unchanged, reflecting similar peer group multiple compared to previous. Our 5% multiple premium assigned to NI remains in place, reflecting constructive cost recovery. EPS is revised for -3c/sh on '24 to $1.65, driven by higher capex offset by EPS dilution from NIPSCO sale. Risks: strategy execution, inflation, regulatory risk.
- **EPS LT growth rate update:** We noted prior to the AD, it was likely that company would target at least 6-8% EPS CAGR. Mgmt. guided down growth during AD, from previously 7-9% CAGR ('21-'24), to 6-8% annual growth rate ('21-'27), both based off '21 midpoint. Mgmt. indicated that customer affordability is front and center, and 6-8% seems like a more sustainable LT growth plan given higher interest rate and commodities price. We tend to agree with this seeing the plan as executable at the 7-9% EPS CAGR, but it unlikely the stock will trade much differently given 6-8% is already top quartile. What comes with the lower EPS growth rate is lower RAB growth, cut from 10-12% to 8-10%. NI's new guidance is a YoY approach, which is causing consensus to recalibrate slightly. However, we believe NI could be below the 7% midpoint in '24 while being above in '25 given dynamics of the NIPSCO renewable additions. Nonetheless we see this plan as highly achievable.
- **Capital plan update:** Mgmt. believes the generation investment that backs the previously guided 7-9% EPS CAGR is still in place, providing runway to hit the bottom of the 7-9% range, which can be applied to the new 6-8% and potentially putting earning at the high end of the updated range. Additionally, this acts as a counter to lost earning due to NIPSCO sale. Previous $10.1 Bn capital plan from '21-'24 is now extended to $15 Bn identified for '23-'27. Over the next decade, we can expect about $30 Bn investment opportunities at NI. Specifically, about $2.2 Bn is focusing on renewable generation through '25 (2 projects in service, 2/2 projects in service by 1H23/24, and two projects under negotiation), with additional $1 Bn in capacity focused capital expenditures. Our assumption on constructive recovery mechanisms in place remains the same.
- **Minority stake sale at NIPSCO to strengthen balance sheet:** Mgmt. thinks it's critical to strengthen the balance sheet given it's been historically drag to EPS, and the benefit from minor earning's dilution from minority sales outweighs dilution; we tend to agree. At current trading levels, we see asset sales as materially more accretive than issuing common equity, especially as NI trades close to 1.1x Rate Base on outyear metrics. With 19.9% minority sale proceeds of about $2.1 Bn in place, mgmt. sees no equity issuance until '25 and only ATM to maintain capital structure through '27. Redemption of $900 Mn of preferred equity is also baked into the current plan. We see NIPSCO contributing about 47% of operating earnings (37% from electric and 10% from gas), which equals to about '24 CSe EPS of $0.81, with implied ~27x P/E of for the minority sale. Some investors expressed disappointing surrounding the NIPSCO sale vs. LDC sales given NIPSCO is a high growth asset. We stress this is relatively in-line with rhetoric of late on gas LDC sale appetite which we believe is wanning. We believe there will be relatively high demand for the NIPSCO minority stake with a playbook already in place at the Indiana regulator to execute such a transaction.
- **Forecasting flat O&M amidst commodities inflation**: The company forecasts less than 3% annual average customer bill impact, partially due to O&M cost reduction initiative, which is supposed to keep O&M flat over the forecasting period ('22-'27). Mgmt is leaning on synergies from operations across six states and accelerating NINext, and operational excellence opportunities. To quantify the cost saving, it should be around $40-50 Mn per year, as guided by mgmt. and its already part of the forecast. Mgmt. also sees current NI's 3rd/4th quartile O&M efficiency could be moved up to 2nd/1st over the 5yr period. On commodities exposure, we note that company budgeted for $4.5-5.5/mmbtu gas price running forecast and any additional rise in gas price will need to be addressed.
- **Considerations of different scenarios going through portfolio optimization:** Mgmt. indicated they have explored numerous scenarios and every option on the table and decided it's better to have scale and not lose synergies they already possess. Although NIPSCO is the largest earning's driver for NI, mgmt. believes moving a multi-jurisdiction transaction across finish line would create higher regulatory risk, while benefit on balance sheet would be similar to minority sale of NIPSCO. In terms of selling the company outright, mgmt. doesn't think any offer would recognize the value of the company properly, thus didn't act on it. Another consideration is it's more tax efficient to run 19.9% minority sales process, compared to other asset targets or transaction percentages. Investors have raised question on why not sell LDC – we see DUK's DEI sale to GIC as a playbook, selling 19.9% at 1.5 EV/RAB and implied ~30x P/E.
- **Credit profile enhancement**: Mgmt. is now expecting 14-16% FFO/debt range post, pointing to high end post NIPSCO transaction. Recall previous target was 14-15% and S&P currently forecasts 13-14% throughout its outlook period.
- **Activist Angle**: While there have been several vocal activists on shares calling for a take-private and other value creative strategies for NI, we do see the recent analyst day clearing consensus on the range of outcomes surrounding the strategic review. We believe activist involvement likely remains as management executes on the plan; but this is not necessarily negative for the stock, rather provides a floor for further execution on the new 6-8% EPS CAGR.

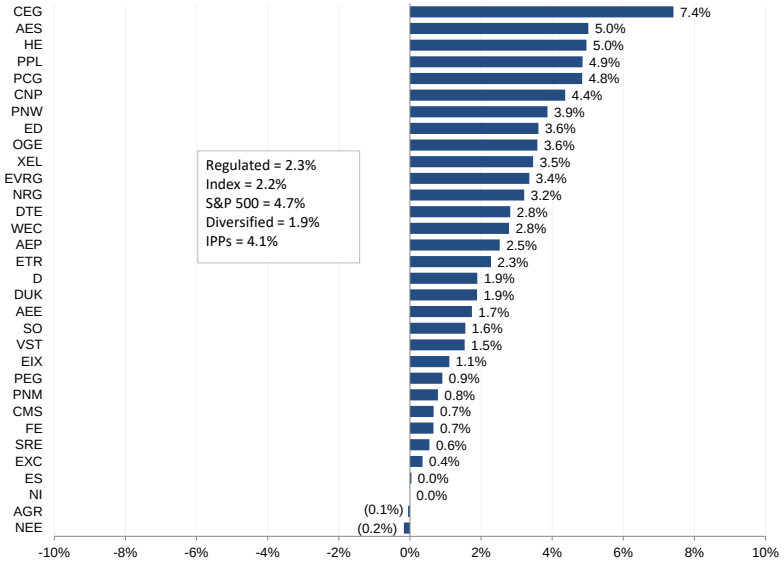
Gearing Up For Earnings Next Week

Utilities underperformed this past week. Regulated utilities under our coverage moved +2.3% higher, underperforming the S&P500 which was up +4.7%. Diversifieds finished 1.9% higher on the week, while IPPs were up +4.1%. In terms of specific stocks, CEG was the best performer, up +7.4%, while NEE was the worst within our coverage, down -0.2%. The group is now trading in line with the 15-year average multiple of 17x (NTM) and 24% below the 12-month pre-COVID recession levels (pg. 8). NTM P/E relative to S&P 500 is also now near the historical average and 14% below the 12-month pre-COVID recession levels (pg.9). Versus Bond Yields, group valuation remains elevated near 08/09 pre-recession peak (pg.10). Recession and geopolitical risks have increased the appeal for defensive characteristics of the group vs the market as evidenced by material outperformance YTD (pg. 2). As we have stated in our Recession read-through for Utilities deep dive note published in late March **here** (Utes/S&P500 -15%/-19% since Mar. 30th), we continue to see limited upside absolutely but expect the group to outperform **relatively** in the near term. Strong balance sheets supporting a ~4% dividend yield on average along with near term earnings predictability bode well for utilities stocks relative to the market as investors debate the odds of a recession.

Stock Selection. We prefer value over quality: AEP (top pick), D, ETR, FE, EXC, NI, PPL and SRE are Outperform-rated names within the regulated value bucket. Within diversified names, we view AES (top pick) as best risk/reward and are Outperform-rated on PEG. We are also Outperform-rated on AEE, CNP, DTE and XEL within quality.



Weekly Feature: Q3 Preview – We expect roughly half of companies to meet or exceed consensus third quarter 2022 estimates, more importantly most should reaffirm FY 2022 EPS projections. Based on National Oceanic and Atmospheric Administration (NOAA) cooling degree day data, the weather in 3Q22 drove 2% higher degree days versus last year and 18% above normal, on average across the US. With favorable weather as a tailwind, we expect companies to continue to address rising interest costs, inflation concerns, supply chain constraints and how they are mitigating risks to costs and the timeline of large projects. In our preview note, we show parent/total, 2022-2023 debt maturities, and fixed/variable debt by company to help directionally gauge sensitivity to rising rates. Pension expense is a likely headwind for the majority of companies next year with most material implications for FE, PEG and PNW in our coverage universe. Based on our dialogue with company executives, customer bill increases going into winter months could range anywhere between high single digits to 30% driven by higher fuel costs, with gas utilities expected to be closer to the high end of that range. We see DTE, EVRG, OGE and SRE strongly positioned to deliver vs FY 22 expectations and/or de-risk '23. On the flip side we could see DUK and PEG pointing to lower half of the 2022 EPS guidance range.

Please see the analyst certification and important disclosures on page 16 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Weekly Feature: Q3 Estimates vs. Consensus and Positioning for Quarter

- **Q3 Preview – We expect roughly half of companies to meet or exceed consensus third quarter 2022 estimates, more importantly most should reaffirm FY 2022 EPS projections.** Based on National Oceanic and Atmospheric Administration (NOAA) cooling degree day data, the weather in 3Q22 drove 2% higher degree days versus last year and 18% above normal, on average across the US. With favorable weather as a tailwind, we expect companies to continue to address rising interest costs, inflation concerns, supply chain constraints and how they are mitigating risks to costs and the timeline of large projects. In our preview note, we show parent/total, 2022-2023 debt maturities, and fixed/variable debt by company to help directionally gauge sensitivity to rising rates. Pension expense is a likely headwind for majority of the companies next year with most material implications for FE, PEG and PNW in our coverage universe. Based on our dialogue with company executives, customer bill increases going into winter months could range anywhere between high single digits to 30% driven by higher fuel costs, with gas utilities expected to be closer to the high end of that range. We see DTE, EVRG, OGE and SRE strongly positioned to deliver vs FY 22 expectations and/or de-risk '23. On the flip side we could see DUK and PEG pointing to lower half of the 2022 EPS guidance range.

Utilities are trading below our Case 1. Post COVID valuations should diverge towards Case 2 longer term.

- Our historic base case ("case 1") assumed an orderly transition to higher interest rates, with authorized ROEs falling to 9.25% from 9.75%, and 10- year Treasury yields rising over the next several years, resulting at the end in a **2.50%** spread between the return on equity and the calculated cost of equity.
  - When you look at the current valuation of 15.4x '24, below our "case 1" scenario of 17.5x, as described above it implies moderation in authorized ROEs and gradual increase in treasury yields.
- The perceived "best in class" earnings compounders and COVID-19 immune names (WEC, NEE, ES, XEL, CMS) trade a multiple that discounts both a more or less status quo authorized ROE regime and a longer runway for sustained rate base growth. That is "case 3".
- In our "case 4" scenario we assume authorized ROEs moderate and interest rates rise more rapidly, resulting in a more meaningful near-term reduction in profitability, along with a steeper decline in rate base growth, which drives utilities back to a P/E multiple that is closer to long-term historic averages.
- We set our target prices on "market-agnostic" basis using an anchor P/E multiple of ~18x '24 EPS so investors can better see where we see good relative value. Near term we could see some pressure on multiples if spreads widen, long term we see multiples diverging back towards Case 2 as the economy recovers.

	Case 1	Case 2	Case 3	Case 4

Absolute valuation below pre-COVID recession levels & below peak

- Utes are trading 24% below 12-month pre COVID recession levels on an absolute basis and 35% below the valuation peak.
- On an absolute basis, NTM PEs for Utes averaged ~15x 12mths leading up to the 08/09 recession peaking at ~17x, in line with where the group is trading currently.
- In the COVID recession however, absolute P/E for Utes averaged ~21x 12mths prior and peaked at 23x, which would be 35% upside from current levels at ~17x.

Group's NTM P/E relative to S&P 500 is below Pre COVID recession levels & below peak

- NTM P/E relative to S&P 500 is 14% below the 12-month pre COVID recession levels and 21% below the valuation peak.
- NTM relative PEs for Utes averaged 1.07x 12mths leading up to the 08/09 recession peaking at 1.13x, 6% above the 1.07x where the group is trading currently
- In the COVID recession, relative P/E for Utes averaged 1.22x 12mth prior and peaked at 1.30x, which would be ~21% upside from current levels at 1.07x assuming S&P500 stays flat

The Spread Between Corporates And Treasuries Is Above The Historical Average

- The spread between corporates and Treasuries has averaged 223bp since 1970.
- At the beginning of 2015, the 10-year was ~2.2% and corporates were 4.7%, a spread of 250bp.
- The wide spread between US Treasuries and corporates was the key factor that made utilities look fully priced in our bond model from October 2015 through early April 2016.
- Prior to COVID, that spread peaked last at 363bp on 2/16/16, with the 10-year yield at 1.74% and corporate bond yield average at 5.37%. On 3/23/20 during COVID, the spread peaked at ~431bp.
- The spread was 156bp on 1/31/18 and is currently at 226 bp.

Utilities vs. Inflation

- We plot the utilities relative performance to S&P 500 vs change in consumer price index (CPI) going back to 2007. The top five inflationary periods in our analysis saw an average of 3.5% increase in CPI and a 2.7% average underperformance by utilities. Three of the top five inflationary periods saw meaningful underperformance by utilities but two (first half of 2022 and first half of 2008) saw outperformance.

Top 5 inflationary periods				
	CPI % change	Uts Relative performance	Baa yield % change	10yr Treasury % Change
First half 2022	4.8%	19.0%	42.2%	69.7%

Weekly Economic Chart: Inflation Likely To Slow Significantly

- **Our Evercore ISI economist Ed Hyman publishing a note last week discussing Financial Shock/Crisis Watch.** Ed said that a number of prices have already declined significantly, eg, container freight rates and used car prices. Housing is likely to weaken significantly from here in response to the surge in mortgage rates to over 7%. The economy is likely to be much weaker next year than this year (see the LEI). Money growth, after surging last year, is plunging this year. Money growth matters at extremes.

M2

A little over a year ago, money growth was approaching +30% y/y. Now it's approaching +1.5%.

LEADING INDICATOR

A year ago, the LEI was going up. Now it's going down.

ANALYST CERTIFICATION

The analysts, Durgesh Chopra, Michael Lonegan, Sharon Wang, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

IMPORTANT DISCLOSURES

This report is approved and/or distributed by Evercore Group L.L.C. ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and Evercore ISI International Limited ("ISI UK"), which is authorized and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Inc. ("Evercore "). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore's Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI: 55 East 52nd Street, New York, NY 10055, and at the following site: https://evercoreisi.mediasterling.com/disclosure.

Evercore and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage sector.
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's coverage sector.
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's coverage sector.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%

This report is prepared solely for the use of Michael Weisenburger

Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Evercore ISI rating (as of 10/23/2022)

Coverage Universe			**Investment Banking Services I Past 12 Months**		
Ratings	**Count**	**Pct.**	**Ratings**	**Count**	**Pct.**

GENERAL DISCLOSURES

This report is approved and/or distributed by Evercore Group L.L.C. (“Evercore Group”), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority (“FINRA”) and by International Strategy & Investment Group (UK) Limited (“ISI UK”), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Inc. ("Evercore"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Inc.

This report is provided for informational purposes only. It is not to be construed as an offer to buy or sell or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy in any jurisdiction. The information and opinions in this report were prepared by employees of affiliates of Evercore. The information herein is believed by Evercore ISI to be reliable and has been obtained from public sources believed to be reliable, but Evercore ISI makes no representation as to the accuracy or completeness of such information. Opinions, estimates and projections in this report constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Evercore or its affiliates and are subject to change without notice. In addition, opinions, estimates and projections in this report may differ from or be contrary to those expressed by other business areas or groups of Evercore and its affiliates. Evercore ISI has no obligation to update, modify or amend this report or to otherwise notify a reader thereof in the event that any matter stated herein, or any opinion, projection, forecast or estimate set forth herein, changes or subsequently becomes inaccurate. Facts and views in Evercore ISI research reports and notes have not been reviewed by, and may not reflect information known to, professionals in other Evercore affiliates or business areas, including investment banking personnel.

Evercore ISI does not provide individually tailored investment advice in research reports. This report has been prepared without regard to the particular investments and circumstances of the recipient. The financial instruments discussed in this report may not suitable for all investors and investors must make their own investment decisions using their own independent advisors as they believe necessary and based upon their specific financial situations and investment objectives. Securities and other financial instruments discussed in this report, or recommended or offered by Evercore ISI, are not insured by the Federal Deposit Insurance Corporation and are not deposits of or other obligations of any insured depository institution. If a financial instrument is denominated in a currency other than an investor’s currency, a change in exchange rates may adversely affect the price or value of, or the income derived from the financial instrument, and such investor effectively assumes such currency risk. In addition, income from an investment may fluctuate and the price or value of financial instruments described in this report, either directly or indirectly, may rise or fall. Estimates of future performance are based on assumptions that may not be realized. Furthermore, past performance is not necessarily indicative of future performance.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.

Evercore ISI salespeople, traders and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed in this research. Our asset management affiliates and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

Electronic research is simultaneously available to all clients. This report is provided to Evercore ISI clients and may not be redistributed, retransmitted or disclosed, in whole or in part, or in any form or manner, without the express written consent of Evercore ISI. Receipt and review of this research report constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion or information contained in this report (including any investment recommendations, estimates or target prices) without first obtaining express permission from Evercore ISI.

This report is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation.

For investors in the UK: In making this report available, Evercore makes no recommendation to buy, sell or otherwise deal in any securities or investments whatsoever and you should neither rely or act upon, directly or indirectly, any of the information contained in this report in respect of any such investment activity. This report is being directed at or distributed to, (a) persons who fall within the definition of Investment Professionals (set out in Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the “Order”)); (b) persons falling within the definition of high net worth companies, unincorporated associations, etc. (set out in Article 49(2) of the Order); (c) other persons to whom it may otherwise lawfully be communicated (all such persons together being referred to as “relevant persons”). This report must not be acted on or relied on by persons who are not relevant persons.

Evercore does not have an Australian Financial Services License ("AFSL"). This report is only to be distributed to persons who fall within the definition of "wholesale" investors under section 761G of the Corporations Act 2001 (Cth). This report must not be acted on or relied on by persons who are not wholesale investors. Evercore relies on the relief provided under ASIC Corporations (Foreign Financial Services Providers—Limited Connection) Instrument 2017/182 to provide this report to wholesale investors in Australia without an AFSL.

The distribution of these materials to persons or entities in Switzerland is not intended to, and does not, constitute a financial service under the Swiss Financial Services Act (FinSA). In particular, the distribution of these materials does not constitute the provision of personal recommendations on transactions with financial instruments (investment advice) within the meaning of Article 3(c)(4) of FinSA.

This material has been prepared by Evercore Group L.L.C. for distribution in New Zealand to financial advisers and wholesale clients only and has not been prepared by Evercore for retail clients in New Zealand (as those terms are defined in the Financial Markets Conduct Act 2013 (‘FMCA’)). Evercore Group L.L.C. is not, and is not required to be, registered or licensed under the FMCA, and unless otherwise stated any financial products referred to in this material are generally only available in New Zealand for issue to those satisfying the wholesale investor criteria in the FMCA.

Highlights of 2022 Investor Day

Key Points:

- **NiSource's Q3 adjusted EPS was more/less in line with expectations**
- **2022 EPS guidance range was narrowed to $1.44-$1.46 from $1.42-$1.48**
- **The company initiated 2023 EPS guidance of $1.50-1.57, mid-pt in line with consensus of $1.54**
- **They now target 6-8% annual EPS growth from 2021-2027 versus 7-9% CAGR previously from 2021-2024**
    - **Implied 2024 EPS of $1.65 using 7% growth from 2023 guidance mid-pt was below our estimate/consensus of $1.73/$1.71 respectively**
- **Announced minority interest sale of NIPSCO (up to 19.9%) in a tax efficient transaction to strengthen the balance sheet, which is expected to be completed in second half of 2023.**
    - We estimate up to $2B in proceeds which is in line with company projections. We get to our ~$2B estimate using DUK Energy Indiana's 28x transaction multiple applied to our estimated 2022 earnings of ~$70M for NIPSCO (19.9% share of earnings).
    - Sale proceeds are projected to eliminated equity needs through 2025. In 2025+, expect modest ATM program to maintain credit metrics for growth investments (15% Equity + 85% Debt)
- **Issued $15B 2023-2027 capex plan vs prior plan of $10B from 2021-2024**
- **Targeting higher long-term FFO to debt of 14-16% post sale vs 14-15% previously**
- **Settlement filed in OH Rate Case**

Our Take: Near-term earnings outlook disappointing, long-term targets In Line with expectations. NiSource's implied 2024 EPS came in below street projections. The company however is taking steps to strengthen its balance sheet by pursuing a minority sale of NIPSCO and targeting a higher 14-16% FFO/Debt pro forma vs 14-15% previously. NI also extended its LT EPS growth target to 6-8% through 2027 which was in line with our expectations. Accounting for today's 6% move lower in the stock absolutely and 4% relatively, NI shares now trade at 8% discount vs peers and close to our bear case valuation. We remain outperform but are lowering our TP to $27 from $33 (now based on 16x target electric utility multiple vs 19x previously). See SOTP on page 3.

Please see the analyst certification and important disclosures on page 5 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.
© 2022. Evercore Group L.L.C. All rights reserved.

Additional Details:

- **Q3 adjusted EPS was slightly below consensus and above our estimate**
  - 3Q22 adjusted EPS of $0.10
  - Consensus was $0.11 and our estimate also $0.09
  - 3Q21 was $0.11
- **2022 EPS guidance narrowed to $1.44-$1.46 from $1.42-$1.48**
  - Midpoint unchanged at $1.45, in line with consensus
- **Initiated 2023 EPS guidance of $1.50-1.57, in line with consensus of $1.54**
  - 2023 guidance incorporates OH rate case effective in early 2023 and NIPSCO minority sale in second half of 2023
- **Long-term EPS guidance updated**
  - NiSource expects to deliver annual NOEPS growth of 6-8% from 2021 through 2027, vs 7-9% CAGR from 2021 through 2024 previously off of 2021 actual of $1.37
  - O&M is expected to be flat from 2023 to 2027
- **Capex program updated**
  - $15B 2023-2027 capex plan vs prior plan of $10B from 2021-2024, with recovery programs such that 75% of investments begin earning in less than 18 months
  - $30B capex plan from 2023-2032, of which the largest share is to replace and modernize infrastructure in the gas side of the business
  - 2022 program remains $2.4B-$2.7B
  - 2023 plan decreases to $2.8B-$3.1B from $3.4B-3.7B
  - 2024 program increases to $3.0B-$3.3B from $1.9B-2.3B
- **2023-2027 financing plan issued**
  - Dividends and capital investments of $18B funded through cash from operations, minority interest sale, $4.5-$5.5B new debt and ATM in 2025+.
  - Targeting higher long-term FFO to debt of 14-16% vs 14-15% previously
- **Strategic Review**: NI announced minority interest sale of NIPSCO (up to 19.9%) in a tax efficient transaction to strengthen the balance sheet, which is expected to be completed in second half of 2023. We estimate up to $2B in cash proceeds. In addition to proposed minority interest sale, the review also identified opportunities to optimize NiSource's cost profile and approach to work. These opportunities will increase productivity through improved processes and technology while enhancing safety, customer service, employee experience, and will reduce the company's overall cost profile.
- **OH Rate Case Update**: On Oct 31st, 2022, Columbia Gas of Ohio filed a settlement representing a $68.2M revenue increase with 9.6% ROE, rates are expected to be implemented in early 2023. The company originally requested $221MM with ROE of 10.9%. The equity ratio request of ~51% was not disputed. NI currently has an allowed ROE of 10.4% and equity ratio of 51% in Ohio. Hearings are scheduled for Nov. 16, 2022 with a final order expected early next year.
- **IRA Implications**: Company noted that the 15% minimum tax provision in the Inflation reduction act will not impact them through 2025 as they won't reach the $1B pre-tax earnings threshold until the second half of the decade. Management is evaluating implications of the AMT beyond 2025.

Target Price: Maintaining our Outperform rating but lowering our target price to $27 from $33/share. Our 2022-2023 EPS estimates remain $1.45 and $1.54, while we are lowering our 2024 EPS estimate to $1.65 from $1.73. See our base case SOTP valuation of $27 on Exhibit 1. We apply a conservative 5% premium to our peer target 16x multiple (vs 19x previously) for the electric business, which we estimate will grow rate base by 8-10% through 2027 versus peers at 6-7%. Our base case for the LDCs applies an in line gas multiple, now of 16.3x 2024 EPS (versus 18.5x with the last update) as we mark to market comparable trading multiples. Our bear case in Exhibit 1 below derives $25/share valuation assuming NI can grow EPS at 6% using low end of 2023 guidance range of $1.50, while our bull case is $29/share assuming the company can grow at 8% using high end of 2023 guide of $1.57.

ANALYST CERTIFICATION

The analysts, Durgesh Chopra, Sharon Wang, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

IMPORTANT DISCLOSURES

This report is approved and/or distributed by Evercore Group L.L.C. ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and Evercore ISI International Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Inc. ("Evercore "). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore's Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI: 55 East 52nd Street, New York, NY 10055, and at the following site: https://evercoreisi.mediasterling.com/disclosure.

Evercore and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage sector.
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's coverage sector.
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's coverage sector.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy- the total forecasted return is expected to be greater than 10%

Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

GENERAL DISCLOSURES

This report is approved and/or distributed by Evercore Group L.L.C. (“Evercore Group”), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority (“FINRA”) and by International Strategy & Investment Group (UK) Limited (“ISI UK”), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Inc. ("Evercore"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Inc.

This report is provided for informational purposes only. It is not to be construed as an offer to buy or sell or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy in any jurisdiction. The information and opinions in this report were prepared by employees of affiliates of Evercore. The information herein is believed by Evercore ISI to be reliable and has been obtained from public sources believed to be reliable, but Evercore ISI makes no representation as to the accuracy or completeness of such information. Opinions, estimates and projections in this report constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Evercore or its affiliates and are subject to change without notice. In addition, opinions, estimates and projections in this report may differ from or be contrary to those expressed by other business areas or groups of Evercore and its affiliates. Evercore ISI has no obligation to update, modify or amend this report or to otherwise notify a reader thereof in the event that any matter stated herein, or any opinion, projection, forecast or estimate set forth herein, changes or subsequently becomes inaccurate. Facts and views in Evercore ISI research reports and notes have not been reviewed by, and may not reflect information known to, professionals in other Evercore affiliates or business areas, including investment banking personnel.

Evercore ISI does not provide individually tailored investment advice in research reports. This report has been prepared without regard to the particular investments and circumstances of the recipient. The financial instruments discussed in this report may not suitable for all investors and investors must make their own investment decisions using their own independent advisors as they believe necessary and based upon their specific financial situations and investment objectives. Securities and other financial instruments discussed in this report, or recommended or offered by Evercore ISI, are not insured by the Federal Deposit Insurance Corporation and are not deposits of or other obligations of any insured depository institution. If a financial instrument is denominated in a currency other than an investor’s currency, a change in exchange rates may adversely affect the price or value of, or the income derived from the financial instrument, and such investor effectively assumes such currency risk. In addition, income from an investment may fluctuate and the price or value of financial instruments described in this report, either directly or indirectly, may rise or fall. Estimates of future performance are based on assumptions that may not be realized. Furthermore, past performance is not necessarily indicative of future performance.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.

Evercore ISI salespeople, traders and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions that are contrary to the opinions expressed in this research. Our asset management affiliates and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

Electronic research is simultaneously available to all clients. This report is provided to Evercore ISI clients and may not be redistributed, retransmitted or disclosed, in whole or in part, or in any form or manner, without the express written consent of Evercore ISI. Receipt and review of this research report constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion or

information contained in this report (including any investment recommendations, estimates or target prices) without first obtaining express permission from Evercore ISI.

This report is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation.

For investors in the UK: In making this report available, Evercore makes no recommendation to buy, sell or otherwise deal in any securities or investments whatsoever and you should neither rely or act upon, directly or indirectly, any of the information contained in this report in respect of any such investment activity. This report is being directed at or distributed to, (a) persons who fall within the definition of Investment Professionals (set out in Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order")); (b) persons falling within the definition of high net worth companies, unincorporated associations, etc. (set out in Article 49(2) of the Order); (c) other persons to whom it may otherwise lawfully be communicated (all such persons together being referred to as "relevant persons"). This report must not be acted on or relied on by persons who are not relevant persons.

Evercore does not have an Australian Financial Services License ("AFSL"). This report is only to be distributed to persons who fall within the definition of "wholesale" investors under section 761G of the Corporations Act 2001 (Cth). This report must not be acted on or relied on by persons who are not wholesale investors. Evercore relies on the relief provided under ASIC Corporations (Foreign Financial Services Providers—Limited Connection) Instrument 2017/182 to provide this report to wholesale investors in Australia without an AFSL.

The distribution of these materials to persons or entities in Switzerland is not intended to, and does not, constitute a financial service under the Swiss Financial Services Act (FinSA). In particular, the distribution of these materials does not constitute the provision of personal recommendations on transactions with financial instruments (investment advice) within the meaning of Article 3(c)(4) of FinSA.

This material has been prepared by Evercore Group L.L.C. for distribution in New Zealand to financial advisers and wholesale clients only and has not been prepared by Evercore for retail clients in New Zealand (as those terms are defined in the Financial Markets Conduct Act 2013 ('FMCA')). Evercore Group L.L.C. is not, and is not required to be, registered or licensed under the FMCA, and unless otherwise stated any financial products referred to in this material are generally only available in New Zealand for issue to those satisfying the wholesale investor criteria in the FMCA.

First Crack at 3Q22

We believe NiSource's 3Q22 earnings release has negative to neutral implications for the stock.

Key Takes:

- **NiSource reported Q3 adjusted EPS more or less in line with expectations**
- **2022 EPS guidance narrowed to $1.44-$1.46 from $1.42-$1.48**
- **Initiated 2023 EPS guidance of $1.50-1.57, mid-pt in line with consensus of $1.54**
- **They now target 6-8% annual EPS growth from 2021-2027 versus 7-9% CAGR previously from 2021-2024**
  - **Implied 2024 EPS of $1.66 using 7% growth from 2023 guidance mid-pt vs our estimate/consensus of $1.73/$1.71 respectively**
- **Announced minority interest sale of NIPSCO to strengthen the balance sheet**
  - Expected to minimize future external capital market needs when completed and is expected to remove all equity needs until at least 2025
  - In 2025+, expect modest ATM program to maintain credit metrics for growth investments (15% Equity + 85% Debt)
- **Issued $15B 2023-2027 capex plan vs $10B in the last 2021-2024 plan**
- **Settlement filed in OH Rate Case**
- **Announced a net zero goal with zero Scope 1 and 2 greenhouse gas emissions by 2040**

Additional Details:

- **Q3 adjusted EPS was slightly below consensus and above our estimate**
  - **3Q22 adjusted EPS of $0.10**
  - **Consensus was $0.11 and our estimate also $0.09**
  - **3Q21 was $0.11,**
- **2022 EPS guidance narrowed to $1.44-$1.46 from $1.42-$1.48**
  - **midpoint unchanged at $1.45, in line with consensus**
- **Initiated 2023 EPS guidance of $1.50-1.57, in line with consensus of $1.54**
  - 2021 through 2023 annual EPS growth expected to be 5-7%
- **Long-term EPS guidance updated**
  - **NiSource expects to deliver annual NOEPS growth 6-8% from 2021 through 2027, vs 7-9% from 2021 through 2024 previously off of 2021 actual of $1.37**
- **Capex program updated**
  - **$15B from 2023-2027 vs $10B from 2021-2024 in last plan**
  - **~75% of Capital Investments begin earning in less than 18 months**
  - **2022 program remains $2.4B-$2.7B**

Please see the analyst certification and important disclosures on page 4 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report is prepared solely for the use of Michael Weisenburger

- **2023 plan decreases to $2.8B-$3.1B from $3.4B-3.7B**
- **2024 program increases to $3.0B-$3.3B from $1.9B-2.3B**

- **2023-2027 financing plan issued**
  - **Dividends and capital investments funded through cash from operations, minority interest sale, $4.5-$5.5B new debt and ATM in 2025+.**
  - **Targeting higher long-term FFO to debt of 14-16% vs 14-15%**
- **Strategic Review**: In addition to proposed minority interest sale, the review also identified opportunities to optimize NiSource's cost profile and approach to work. These opportunities will increase productivity through improved processes and technology while enhancing safety, customer service, employee experience, and will reduce the company's overall cost profile.
- **OH Rate Case Update**: On Oct 31st, 2022, Columbia Gas of Ohio filed settlement in October representing a $68.2M revenue increase with 9.6% ROE, rates are expected to be implemented in early 2023. The company requested $221MM with ROE of 10.9%. The equity ratio request of ~51% was not disputed. NI currently has an allowed ROE of 10.4% and equity ratio of 51% in Ohio. Hearing is scheduled for Nov. 16, 2022. Company previously stated it would be tough to get the final order and new rates before the end of the year, but they expect to be able to offset the delay through O&M discipline and other needs.

The Investor Day is today at 12 pm ET. https://www.nisource.com/InvestorDay2022. We will follow the call with a detailed note.

This report is prepared solely for the use of Michael Weisenburger

VALUATION METHODOLOGY

To arrive at our price target we use a SOTP analysis.

RISKS

Risks to our thesis include an inability to deploy capital at the company's expected rate resulting in a lower rate base and regulatory pressure resulting in lower allowed ROEs

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage sector.
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's coverage sector.
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's coverage sector.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell -the total forecasted return is expected to be less than 0%

This report is prepared solely for the use of Michael Weisenburger

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Steady Eddie – Utilities Q3 2022 Preview

Utilities have significantly underperformed over the last month with our coverage universe -13% vs S&P500 -4% driven by a combination of elevated valuations (27% expensive as of 09/18 in our bond model, see page 6 of our weekly note here) and rising yields,10yr jumped from 3.45% to 4.01% over that time frame. After outperforming in the first and second quarters of this year, Utes struggled in the third quarter down -8.6% vs S&P 500 down -5.3%. As of this writing, on an absolute basis, the group is now trading in line with the 15-year average multiple of 17x (NTM) and 21% below the 12-month pre COVID recession levels (pg. 40). NTM P/E relative to S&P 500 is also now near the historical average and 9% below the 12-month pre COVID recession levels (pg. 41). Versus Bond Yields, group valuation remains elevated now at 23% expensive (pg. 39). Recession and geopolitical risks have increased the appeal for defensive characteristics of the group vs. the market as evidenced by material outperformance YTD (pg. 38). As we have stated in our Recession read through for Utilities deep dive note published in late March **here** (Utes/S&P500 -15%/-20% since Mar. 30th), we continue to see limited upside absolutely but expect the group to outperform **relatively** in the near term. Strong balance sheets supporting a ~4% dividend yield on average along with near term earnings predictability bode well for utilities stocks relative to the market as investors debate the odds of a recession. With Q3 earnings season starting next week, we expect most companies within our coverage universe to reaffirm FY 2022 EPS projections and LT growth targets.

Q3 2022 Preview (Steady Eddie) – We expect roughly half of companies to meet or exceed consensus third quarter 2022 estimates (see pg. 34), more importantly most should reaffirm FY 2022 EPS projections. Based on National Oceanic and Atmospheric Administration (NOAA) cooling degree day data, the weather in 3Q22 drove 2% higher degree days versus last year and 18% above normal, on average across the US. With favorable weather as a tailwind, we expect companies to continue to address rising interest costs, inflation concerns, supply chain constraints and how they are mitigating risks to costs and the timeline of large projects. On pages 31-33 of this report, we show parent/total, 2022-2023 debt maturities, and fixed/variable debt by company to help directionally gauge sensitivity to rising rates. Pension expense is a likely headwind for majority of the companies next year with most material implications for FE, PEG and PNW in our coverage universe. Based on our dialogue with company executive's customer bill increases going into winter months could range anywhere between high single digits to 30% driven by higher fuel costs with gas utilities expected to be closer to the high end of that range. We see, DTE, EVRG, OGE and SRE strongly positioned to deliver vs FY 22 expectations and/or de-risk '23. On the flip side we could see DUK and PEG pointing to lower half of the 2022 EPS guidance range.

Stock Selection. We prefer value over quality: AEP (top pick), D, ETR, FE, EXC, NI, PPL and SRE are Outperform-rated names within the regulated value bucket. Within diversified names, we view AES (top pick) as best risk/reward and are Outperform-rated on PEG. We are also Outperform-rated on AEE, CNP, DTE and XEL within quality.

Within, we include company-specific tear sheets with our / consensus third quarter 2022 EPS estimates along with discussion on key investor debates going into earnings.

Please see the analyst certification and important disclosures on page 43 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Outperform **TP $29**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to increase by +$0.04 to $0.54/share. Weather was likely not a factor during the quarter. In terms of positive YoY drivers, we expect AES to benefit from new renewable generation, higher LNG and utilities earnings, and AES Andes accretion. In terms of negative YoY drivers, we primarily expect lower earnings from AES Next, higher interest expense and share count dilution.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $1.55-$1.65. 2023 guidance range is expected to be announced on the year-end earnings call.
  - **Renewable PPAs**: AES has already signed or been awarded 2.1 GW (up from 1.6 GW as of the Q2 call) of new long-term contracts so far this year and continues to target 4.5-5.5 GW by year-end. Roughly 200 MW of projects that were expected to be brought online this year were moved to 2023 due to customer-driven modifications. Between 2022-2023, AES expects to bring online a total of 6.4 GW of renewable projects. The Company now has 10.9 GW (up from 10.5 GW as of Q2) under long-term PPAs through 2025. AES has also secured solar panels required for 2022 projects in-country earlier this year and despite industry-wide supply chain challenges does not anticipate any major delays to its US renewables backlog.
  - **Inflation Reduction Act legislation**: The Inflation Reduction Act could be a material tailwind for AES, with management stating it could result in EPS growth toward the high end of the targeted 7-9%. In addition to the benefits for renewables, the hydrogen components of the bill make it more attractive for AES to eventually pursue. The Company said it does not expect to reach the $1 billion pre-tax income threshold over the next few years, so the AMT would not have an impact on company financials through the planning period. AES has said it plans to update its expected impacts of the legislation on the Q4 call when it refreshes its guidance, PPA targets and capital allocation plan.
  - **Inflation and supply chain**: Addressing concerns around inflation impacting targeted returns (low teens in the US and high teens international) and demand outlook, management has pointed to their strategy of locking in prices/materials prior to negotiating a purchase price agreement such that their returns are protected. Despite seeing significant cost increases, AES said it has not seen any degradation in demand from their C&I customers, and to the contrary they see three major tailwinds: 1) More/less Inelastic C&I customer demand driven by ambitious sustainability goals, 2) Russia/Ukraine conflict emphasizing the need for local generation and 3) Higher commodity environment increasing the economic appeal of renewable assets.
  - **Ohio rate case update**. On March 4th, Staff for the Public Utilities Commission of Ohio recommended that the Commission freeze DPL's (Company's OH regulated subsidiary) rates, representing a reversal after hearings from its prior recommendation for a ~$65MM revenue increase from July 2021. The key driver of the Staff's change was an analytical investigation into DPL's costs, with the most notable item being DPL's $70MM Rate Stabilization Charge through 2024. We had been modeling $0.06-0.07 (or 3%) of EPS upside through 2024 for the rate case, an estimate that would be downside to our forecasts with a rate freeze before any cost mitigation that we see as manageable at the AES level despite a meaningful hit to the DPL utility. Recall in November 2020, AES filed for a $121MM revenue increase with a 10.5% ROE with a 53.87% equity ratio on a $796MM rate base with a May 2021 test year. The commission heard Oral arguments on the staff recommendation in May 2022 and a final commission ruling is expected soon. AES is pursuing a legal route to settle the issue and also filed a new ESP (Electric Security Plan).
  - **Asset sales**: AES currently has $500MM of asset sales proceeds in its plan for 2022 and none have been announced to date.
  - **Fixed versus floating rate debt:** Roughly 82% of AES' debt is fixed rate. Most of the floating rate debt is in Brazil, which the Company does not view as a material risk. The next debt maturities are in in 2025-2026, and they are the only maturities through the end of the decade.
  - **Customer bills**: AES' utility is 100% electric, so the higher gas prices would impact fuel & purchased power and certainly raise bills meaningfully but with a lower impact than that of a gas utility.

- **Positioning into Qtr: Neutral.**

Outperform **TP $102**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to increase +$0.08 to $1.73/share. Last year in 3Q21, weather was $0.02 favorable and this year in 3Q22 we expect it to be more modestly favorable (we estimate $0.03). In terms of positive YoY drivers in Missouri, Ameren should benefit from new Missouri electric rates effective late February 2022, plus higher investments in infrastructure and wind generation eligible for PISA and RESRAM. These benefits should be partially offset by higher O&M expense, a negative COLI impact due to lower market returns, and higher interest expense. In Ameren Transmission, the Company should see the higher earnings from increased average estimated rate base. In Illinois Electric, we expect increased contribution from higher estimated rate base and an increased 30-year Treasury rate. In Illinois Gas, AEE should benefit from higher QIP rider revenues, partially offset by increased O&M and a negative COLI impact due to lower market returns. At the parent, the Company will see some share dilution and higher interest expense.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $3.95-$4.15. Ameren typically provides forward year (2023 in this case) EPS drivers, but not numbered guidance until the Q4 call.
  - **MISO transmission planning update**: Ameren has been assigned $1.8B of the ~$10B of MISO approved Tranche 1 transmission projects and has stated that it expects to refine the scope, cost estimates and timeline for their completion over the remainder of 2022. In addition to the assigned projects, MISO approved $700MM of competitive projects that cross through AEE's Missouri territory, which provide additional potential capex opportunities for Ameren. The RFP process has begun, and the competitive bidding is expected to take 12-24 months. For projects assigned to AEE, the Company expects the capex to begin in 2025 with completion dates expected near the end of this decade (capex update expected on year-end call). Work on three additional MISO tranches has begun and MISO has indicated that an initial set of Tranche 2 projects also located at MISO North, is scheduled to be approved in the 1Q23. Projects included in Tranche 3 are expected to be located in MISO South, with approval scheduled in the 4Q24, while projects identified in Tranche 4 are expected to improve transfer capability between MISO North and MISO South, with approval scheduled for 4Q25.
  - **Missouri electric rate case filing**: On August 1st, Ameren filed a Missouri electric rate case, requesting a $316MM revenue increase with a 10.2% ROE and 51.9% equity ratio on a rate base of $11.6B with a test year ended March 31, 2022. The request asks for a continuation of the existing fuel adjustment clause (FAC) and the renewable energy standard rate adjustment mechanism (RESRAM). It also asks for recovery under a new property tax tracker in line with SB 745. Annual revenue increase drivers include higher investments made under the Smart Energy Plan, including increased cost of capital and depreciation; and higher net fuel expense due to reduced off system sales, driven by reduced operations at Rush Island. A PSC decision is expected by June 2023 for new rates effective by July 1, 2023. We estimate Missouri electric will contribute ~50% of the AEE's 2022 consolidated EPS.
  - **Inflation Reduction Act legislation:** Ameren has stated there are several moving pieces but added it was excited about the potential tax credits, especially for wind and solar, and stated that it views the AMT as having manageable cash flow impacts for the Company.
  - **Rush Island update**: In July 2022, in response to Ameren's notification to MISO of its intention to retire Rush Island, MISO issued its final attachment Y report designating the generating units at Rush Island as system support resources. MISO also concluded that certain mitigation measures, including transmission upgrades ($100-150MM), should occur to ensure reliability before the energy center is retired. Those transmission projects have been approved by MISO, and Ameren has started the design and procurement process associated with the upgrades which it expects to complete by late 2025. In the interim, until Rush Island can be retired, Ameren has proposed limiting operations at the plant which it has done since September 1st under the SSR designation. The District Court is under no obligation or deadline to issue a rule modifying its remedy order to reflect the MISO SSR designation or proposed interim operating parameters. The original March 31, 2024, compliance date remains in effect unless extended by the court. Ameren expects a decision in the near term.
  - **Illinois Performance Incentive Orders:** On September 27th, the Illinois commission granted Ameren Illinois electric distribution 24 +/- basis points (including 13 bps for reliability) for its performance-based electric distribution ROE incentives and penalties to be effective January 2024; this matched both the Staff's recommended and AEE's revised request for 24 +/- basis points, which compared to the Company's originally recommended 40 +/- basis points. The commission also adjusted the basis point allocation by category of performance. We estimate this order granting Ameren Illinois electric distribution 24 +/- basis points for its performance would contribute 2024 EPS of $0.02/share, or ~0.5% of our 2024 consolidated EPS forecast of $4.65/share. AEE has also said they have been assuming an unspecified range of outcomes in its 6-8% EPS CAGR forecast for 2022 through 2026. The Company has said that it plans to file for a Multi-Year Plan instead of a traditional rate case early next year. See our note here.

Outperform **TP $107**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to increase by $0.14 to $1.57/share. Weather is not expected to be a major YoY driver. Positive YoY drivers primarily include rate relief, higher retail C&I load, the benefit of the TCOS and DCRF riders in Texas, and a small contribution from North Central Wind. On the negative side, we expect transmission true-ups, higher depreciation and amortization, increased interest expense and higher property taxes. We also anticipate a negative impact from AEP's ownership of ChargePoint (CHPT) shares.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EPS Guidance Ranges:** The Company hosted an Analyst Day on Oct 4th and raised the low end of its 2022 operating EPS guidance range by $0.10 and now expects to deliver $4.97-5.07 versus $4.87-5.07 previously, a guidance increase that is up ~1% at the midpoint. AEP also issued 2023 operating EPS guidance of $5.19-5.39, which using the midpoint was in line with consensus/our estimate of $5.28/$5.30 respectively
  - **Quiet quarter following October 4th Analyst Day:** The Company also reaffirmed its annual operating earnings growth rate of 6-7% and its plan to grow its dividend in line with earnings with a 60-70% payout ratio. AEP rolled forward and raised its capital program to $40B for the 2023-2027 period, up roughly 5% from the prior $38B program for the 2022-2026 timeframe; this new plan is expected to drive a 7.6% rate base CAGR. With the new five-year capital program, AEP will allocate $25.8B (versus $24.8B for prior five-year period) towards transmission & distribution and $8.6B (up from previous plan for $8.2B) towards regulated renewables. 85% of the total $40B planned capex through 2027 is eligible for recovery through trackers/formula rates. Aided by strong load growth and cost management, AEP expects 4% average annual bill increase through the forecast period. The Company continues to target long-term FFO to debt of 14-15% in light of the book minimum tax beginning in 2023 under the Inflation Reduction Act and reaffirmed its 2023-2026 equity issuance plan of $100MM, $600MM, $700MM and $700MM, respectively, while introducing a 2027 planned equity issuance of an additional $700MM. AEP is also adjusted its near-term CO_2 emission reduction target from a 2000 to a 2005 baseline, upgrading its 80% reduction by 2030 target to include full Scope 1 emissions and accelerating its net-zero goal by five years to 2045. On Sept. 30th, AEP said that it expects to complete the sale of its Kentucky asset to Liberty in January 2023 pending FERC 203 approval due by Dec. 16th under a revised agreement with Algonquin (see our note for more details).
  - **Asset sales**: AEP stated that the sales process for its unregulated renewable assets began in August 2022 and is on track to close during 2Q23. In April, we had estimated the Company could fetch $1.5-2.0B in cash proceeds at a 13-15x EV/EBITDA multiple applied to $150MM of 2023 EBITDA less $375MM of debt, which could be lower now in the range of $1.2-$1.4B using ED's recent transaction announcement and peer yieldco trading multiples of 11-12x. In addition, AEP also announced that it will initiate a strategic review of its retail business as part of its ongoing strategy to de-risk the company; we estimate the Company could generate $220-$260MM in net proceeds at 7-8x our estimate for 2023 EBITDA of $32MM. We believe these planned asset sales along with incoming CEO Julie Sloat's focus on actively managing the portfolio could materially lower the Company's $2.8B in equity needs through 2027.
  - **Customer bills**: As mentioned above, AEP (which is all electric) has said that it expects 4% annual customer bill increases over its forecast period through 2027.

- **Positioning into Qtr: Neutral.**

CenterPoint Energy

Outperform **TP $33**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to decrease by -$0.01 to $0.32/share. We expect weather to contribute favorably in 3Q22 with cooling degree days 300 degrees above normal and 150 above the same period last year. In terms of other positive YoY drivers, we anticipate positive contributions from the DCRF and TCOS riders, plus increased gas rates, and higher usage. The primary negative YoY drivers are loss of midstream earnings from the sale, higher depreciation & amortization expense, and increased interest expense. Roughly $35 million of Minnesota Winter Storm Uri costs were disallowed but that may be backed out as a one-time item.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm its previously announced 2022 EPS guidance range of $1.37-$1.39. 2023 guidance range could be disclosed on the Q3 call. We note that CNP has high % of variable rate debt which could be a headwind to 2023 EPS before offsets.
  - **Master Energy Plan capex update**: CenterPoint has said it plans to update its ten-year (2021-2030) capex program of $40B+ with potential incremental capital beyond this program likely coming from the Texas "Master Energy Plan" in collaboration with the City of Houston. The Company will also likely issue an updated financing plan.
  - **Additional potential gas LDC asset sales**: CNP has said it would consider gas LDC asset sales if it needed to recycle capital into a potentially higher spending program driven by resiliency investment, update expected on the q3 call.
  - **Indiana IRP update**: CenterPoint received approval for projects totaling 460 MW gas combustion turbine, 400 MW of solar (including 100 MW of PPAs), and 335 MW of solar PPAs. The Company recently filed in July 2022 for approval of 130 MWs of owned Crosstrack solar generation; these projects will bring CenterPoint's total owned and contracted solar to over 800 MWs, which is tracking well against its IRP that calls for 700-1,000 MWs of solar and 300 MWs of wind. The Company anticipates filing for the remaining balance of generation needs later this year, which will include a project to be owned by its Indiana electric utility. Lastly, CenterPoint is planning to file its next IRP in mid-2023, which will provide guidance on CNP's remaining coal assets. As a foundation for this next IRP, the Company recently conducted an all-source RFP where it received nearly 100 proposals from several dozen participants, including wind, solar and battery storage that will help inform the process.
  - **Rate case update and Uri gas cost recovery**: The Minnesota commission recently approved a settlement in the gas rate case settlement for a $48.5MM revenue increase with an ROE of 9.39% and 51% equity ratio. That commission also recently disallowed $35MM of the total $345MM Winter Storm Uri gas costs to be recovered over the next ~4 years. CNP is disappointed in the $35MM Uri cost disallowance in Minnesota and may file for reconsideration. The Company does not plan to file any major rate cases until late 2023 across its jurisdictions. Houston Electric is required to be filed no later than 1Q24 where there could ask for a higher equity layer (vs 43% currently).
  - **Texas securitization**: In Texas, CNP anticipates the statewide securitization bonds to be issued in November 2022 (originally expected late summer 2022) after the election. The Company expects that this will provide a 100% recovery of the $1.1 billion of gas costs incurred during last year's winter storm as well as the carrying costs.
  - **Inflation Reduction Act benefits**: CenterPoint said it expects to see benefits through the acceleration of EVs in its Houston Electric and Indiana Electric service territories. The renewable tax credits will benefit the Indiana customers given that subsidiary is vertically integrated versus Houston Electric which is just a T&D utility. Regarding the alternative minimum tax, CenterPoint stated that there are unknowns but that it expects a modest cash flow headwind given that it currently pays close to 10% in cash taxes.
  - **Customer bills:** Given higher gas prices, CNP said it expects winter LDC bills to increase meaningfully and not surprisingly did not anticipate the electric business to be impacted nearly as much.
  - **Fixed versus variable debt:** We estimate CenterPoint to have a negative 2023 EPS impact from higher interest rates on variable debt of $0.06-0.07/share (~4% of consolidated EPS) before offsets. Floating rate debt is expected to total $1.7 billion post securitization proceeds from Storm Uri. The Company has a $700MM CERC maturity in March 2023 at a fixed rate of 70 basis points.

Source: Evercore ISI, FactSet as of 10/18/22

In Line **TP $69**
Analyst: Durgesh Chopra / Sharon Wang

- **Q3 EPS Bridge:** We project EPS to decrease $0.03 YoY to $0.51/share, an estimate that excludes EnerBank, which was sold to Regions Bank. Last year in 3Q21, the company saw $0.09 of favorable weather. This year in 3Q22, weather appears to be $0.01 favorable. We expect negative YoY result primarily due to increased property taxes, interest expense and D&A at the utility of $0.06, higher utility O&M of $0.04, partially offset by lower storm related costs and electric rate increase.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm its previously announced 2022 EPS guidance range of $2.85-$2.89. 2023 guidance range is expected on the third quarter call, we estimate a range of $3.08-$3.10 which is 7-8% using 2022 guidance mid-pt of $2.87.

  - **Rate Case Update.** On April 28th, 2022, Consumers Energy filed an electric rate case with rate increase request of $275 million, based on 10.25% ROE vs current 9.9%. In August, staff recommended a rate increase of $178 million predicated on an equity layer of 51.0% and a return on equity of 9.70%. ALJ recommendation is due on Dec 16, 2022, and final order is expected in Q1 2023.

  - **Financing Plan:** Given the cost in the current environment, the company is assessing alternative funding options other than hybrid securities for the acquisition of the Covert plant ($815m) in the first half of 2023, which includes using existing ATM equity issuance program. CMS pointed out that this would be accretive to the previously provided $0.03-$0.04 of EPS accretion related to the purchase of Covert, and further strengthen 6%-8% long-term adjusted EPS growth outlook. To fund the current 2022-2026 investment plan of $14.3B, CMS continues to project no equity through 2024 with up to $250MM per year in 2025 and 2026

  - **Storm Investigation:** The new storm investigation is continuation of the work last year. CMS will collaborate with the third party to be named by the commission over the next few months. They don't foresee this as punitive for CMS and/or other utilities serving the state rather Michigan regulators acknowledging climate change and extreme weather risks and monitoring progress on recommended actions last year to proactively prepare for future events.

  - **IRA Implications:** CMS is encouraged by the clean energy provisions in the Inflation Reduction Act, Solar PTCs in particular and stated that since they are below the $1B pretax earnings marker they will not be impacted by the 15% minimum tax provision.

conEdison

Underperform **TP $86**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to increase by +$0.09 to $1.50/share. The CECONY and O&R electric and gas businesses are decoupled and 3Q is not a heating season, so the impact of weather for the Steam segment is minimal. Positive YoY drivers primarily include revenue increases under the multi-year rate agreements in CECONY and O&R, as well as credit collection payments that resumed on September 1st, plus lower storm preparation costs. Negative YoY drivers include higher O&M, increased interest expense, higher depreciation & amortization, increased property taxes, loss of Stagecoach (sold) earnings, and share dilution.

- **What to look for in the earnings report (reminder that ED does not host a conference call):**
  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $4.40-$4.60. 2023 guidance range is expected to be announced on the year-end earnings call.
  - **CECONY electric and gas rate case update:** Settlement discussions in the rate case began on July 6th and are unlikely to be announced until after the November election. We believe the Staff recommendation for both electric and gas was positive on the cost of capital side with a 48% equity layer and 8.8% ROE being same as the current levels while there were concerns that the equity ratio may be reduced. Expenses are the other large drivers in the difference between the revised revenue request and Staff's recommendation, with $450 million combined for electric (with $90 million due to depreciation which will not impact earnings), so $360 million needs to be negotiated. We believe this is where the risk lies. A high-level reconciliation between request and Staff is: on electric a $738 million difference in rate increase with: 1) ~$300 million from ROE and equity ratio, 2) ~$350 million is expenses (including $50 million in depreciation which shouldn't impact earnings), 3) $50 million rate base, and 4) $38 million other items. On the gas side, there is a $237 million difference in rate increase between the request and Staff driven by: 1) ~$100 million in ROE and equity layer, 2) ~$100 million in expenses (including $40 million depreciation which should not impact earnings), and 3) $37 million other items. Recall on January 28th, Con filed this CECONY electric and gas rate case that is a one-year 2023 proposal with 2024-2025 illustrations. ED requested a revenue increase of $1,199 million for electric and $503 million for gas in 2023, with illustrations for $853 million and $234 million in 2024 plus $608 million and $218 million for 2025, respectively. The request is based on a 10.0% ROE with a 50% equity ratio on a historical test year of 12-months ended September 30, 2021 for rates to be effective on January 1, 2023.
  - **CEB asset sale**: On October 1st, Con Edison announced an agreement to sell its unregulated renewal business to RWE for $6.8 billion. Accounting for ~$2.6 billion in total debt, the transaction translates into $4.2 billion in equity value, which is in line with the top end of our previously-estimated $3-4 billion range. After-tax proceeds of $3.9 billion will eliminate ED's need to issue "up to $850" million of equity this year and could further reduce equity needs beyond 2022 and / or pay down debt, fund future capex or buy back shares. Con Ed rescinded its guidance for "up to 750" million in aggregate equity issuance for 2023-2024, an amount that is likely to be updated with its third quarter 2022 earnings release or subsequently at the EEI Conference on November 13-15th. The transaction is subject to HSR approval and is expected to close in the first half of 2023. We view this announcement as a positive step for Con Ed, as it would transition the company to a fully regulated utility, thereby improving its risk profile with the creation of more steady earnings and cash flow growth, while also reducing its equity needs through 2024. With its next update to investors, we actually anticipate that the company will eliminate its equity issuance forecast entirely. The transaction is valued is 11x our 2023 EBITDA estimate of ~$600 million, a valuation in line with current peer yieldco trading multiples of 11-12x. Assuming ED deploys $3.9 billion in proceeds towards eliminating "up to" $1.6 billion in total equity needs through 2024 and directs the remaining $2.3 billion of proceeds towards investments, we estimate a modest ~1% earnings accretion to our 2024 EPS estimate and the same amount of value accretion (see our note) to our target price of $86/share.
  - **Incremental transmission projects**: In November 2020, Con Ed proposed transmission projects that are not currently included in its three-year capex program through 2024. The projects would total $4 billion in transmission cost and $1.3 billion in related distribution spending over ten years and are intended to enable NYS to meet its clean energy goals. One of the transmission projects is the Brooklyn Clean Energy Hub, which totals $1 billion and has an expected decision date soon. There is no set timeline for final decisions on the other proposed projects.
  - **Equity issuance plans**: As mentioned, after-tax proceeds of $3.9 billion for the sale of the CEBs eliminates Con Ed's need to issue "up to $850" million of equity this year and could further reduce equity needs beyond 2022 and / or pay down debt, fund future capex or buy back shares. Con Ed rescinded its guidance for "up to 750" million in aggregate equity issuance for 2023-2024, an amount that is likely to be updated with its third quarter 2022 earnings release or subsequently at the EEI Conference on November 13-15th.
  - **Proposal for NY Transco**: Con Ed has a pending filing in collaboration with the NY Power Authority for a transmission solution to bring offshore wind off Long Island. The amount of investment is not disclosed with details expected in fourth quarter this year.
  - **Customer bills:** Con Ed issued a press release stating that gas bills will increase 32% year over year from November 2022 to March 2023. For electric, ED projects a 22% increase.

- **Positioning into Qtr: Neutral.**

Source: Evercore ISI, FactSet as of 10/18/22

Outperform **TP $79**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project full 3Q22 adjusted EBITDA of $600 million for Constellation (roughly 25% of our annual EBIDTA estimate), which spun off from Exelon on February 2, 2022.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EBITDA Guidance Ranges:** We expect management to reaffirm (or narrow) its previously announced 2022 EBITDA guidance range of $2,350M-$2,750M. 2023 guidance range is expected to be announced on the year-end earnings call.
  - **Use of free cash flow**: Free cash flow for 2022-2023 of $1.8-2.2 billion (guidance) had been expected to be utilized for unidentified growth capital and/or return of capital to shareholders in the form of buybacks and special dividends. Constellation has said it sees opportunities to deploy capex at double digit IRR's in the area of nuclear plant acquisition, repowering existing fleet, producing clean hydrogen and growing their offering of sustainability products and services for their C&I customers. CEG had said it plans to provide more clarity on use of free cash flow before year-end, but that could now be delayed with its consideration of M&A given the Talon bankruptcy (~2 GW of nuclear), as well as other industry potential nuclear asset sales.
  - **Inflation Reduction Act**: Constellation highlighted the following benefits it would receive with passage of the Inflation Reduction Act (IRA), including: 1) the benefits of the zero-emission nuclear production tax credit for the production from existing plants beginning in 2024 through 2032. The Company would qualify for the new tax nuclear tax credit up to $15/MWh as long as market revenues do not exceed $25MWh, in which case the credit is reduced. The credit can also offset CEG's tax obligation or can be monetized by transferring it to another taxpayer; and 2) the benefits of the new 10-year fully-refundable tax credit for the production of clean hydrogen. Constellation would qualify for a credit of $3.00/kg for hydrogen facilities under construction before December 31, 2032. The Company could claim both the nuclear PTC and hydrogen PTC.
  - **Hedges update:** As of the second quarter call, 95-98% of total expected generation in 2022 was hedged. For 2023, 88-91% was hedged.
  - **Addressing nuclear fuel pricing and supply risks**: CEG has previously stated that they have hedging policies to mitigate price related risks and have secured fuel to run the plants for several years. The company is also working with various stakeholders to expand domestic production capabilities.

- **Positioning into Qtr: Neutral.**

Outperform **TP $90**
Analyst: Durgesh Chopra / Sharon Wang

- **Q3 EPS Bridge:** We project year over year EPS to decrease $0.05 to $1.06 driven by share dilution, taxes, and interest expense. Degree-day data in third quarter was overall close to last year across D's service territory.

- **What to look for in the earnings call (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $3.95-$4.25. 2023 guidance range is expected to be announced on the year-end earnings call.
  - **Offshore Wind Performance Guarantee:** On Aug 5th, Rider Offshore Wind was approved by the VA Commission, while including a performance guarantee provision. The order states that customers shall be held harmless for any shortfall in energy production below an annual net capacity factor of 42% as measured on a three-year rolling average. Management stated that they are extremely disappointed in the Commission's requirement of a performance guarantee, and this significantly increases the risk profile of the project. On August 22nd, 2022, the company filed a petition for limited reconsideration. D and intervenors have filed testimony, and the company filed reply briefs on September 29th. The commission rules between 30 - 60 days after the reply briefs. D said they are working with various stakeholders on a potential settlement.
  - **Data Center related transmission constraints in Northern Virginia:** Addressing the transmission bottlenecks related to data center demand in Loudoun County, Virginia, the company on its second quarter call stated that it is working on a variety of potential solutions to serve as much of this increased demand as possible including accelerating transmission projects. For 2022, they expect no impact to sales growth as recently connected data centers are continuing to ramp-up their demand from existing facilities. Beyond 2022, the company pointed to potentially lower sales growth due to the transmission capacity constraints which they expect to overcome by accelerating transmission projects (capex updated expected on the fourth quarter call). The overall financial impact is expected to be neutral.
  - **IRA Implications**: D views it as a positive for company's Decarbonization efforts. For instance, management pointed to full PTC credit for wind lowering their offshore levelized cost of energy (LCOE) by $7 or 8%, which provides more headroom to the prudency criteria of $125/MWh. 15% AMT is not expected to have a meaningful impact on company financials as they are already paying cash taxes at a 5.25% federal cash tax rate. After offsets to the AMT including accelerated tax depreciation, they don't expect materially higher cash tax payments.
  - **Utah RC:** On May 2nd, 2022, Dominion Energy Utah filed a general rate case which is required every three years, seeking an increase of $70.5M in gas rates driven by higher forecasted gas costs, with ROE of 10.3% (vs current 10.5%) and equity layer of 53.21% (vs current 55%). The rate increase also includes costs associated with the Company's new 15M-gallon liquified natural gas (LNG) facility. Discovery and initial testimony processes are underway. Hearings are scheduled to begin in October with a final decision expected by early 2023.
  - **Customer Bill Increase**: D said they are proactive with regulators around bill increases. In Virginia, they recommended a couple options for fuel, one of which was to defer the under recovery over three years and got approval, resulting in 7% Bill increase in July. In South Carolina. D recently filed for a 14% bill increase related to fuel and filed for a 10% increase related to fuel in Utah. North Carolina is expected to file for about 10 to 12% bill increase related to fuel.
- **Positioning into Qtr: Neutral.**

DTE

Outperform **TP $140**
Analyst: Durgesh Chopra / Sharon Wang

- **Q3 EPS Bridge:** We project year-over-year EPS to decrease $0.15 to $1.57 /share. In terms of YoY drivers on electric side, DTE should see drag from a return to normal weather (-$0.08), typical D&A, property tax, and interest expense (-$0.10), partially offset by favorable weather this year ($0.03), amortization of voluntary refunds ($0.03), and tax cut jobs act amortization ($0.13). On the gas side, positive drivers include favorable weather this year ($0.01), and rate increase ($0.03). As per the company guidance, DTE should see decreased contribution from Vantage (-$0.25), lower energy trading earnings (-$0.13), and benefit of corporate segment ($0.19). DTE will provide 2023 guidance and the five-year capital plan update at EEI conference (vs Q3 call previously because of the IRP delay).

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $5.90-$6.10. 2023 guidance range is expected to be announced at the EEI conference.
  - **Clean Vision Plan (IRP).** DTE is preparing to file an updated IRP in November (vs October previously due to layering IRA into assumptions) this year, which if approved could drive higher capex through the forecast period by 5-7GW renewables deployment. Some of the IRP investment could be incremental to current capex in the back end of five-year plan. The company is evaluating cessation of coal use earlier than 2040. On June 06, 2022, DTE announced that its Blue Water Energy Center, a 1,150MW combined-cycle natural gas-fired power plant that can run 24/7 has begun commercial operation. Furthermore, the Michigan commission recently approved CMS Energy's IRP settlement, which we see as a constructive for DTE as well.
  - **Electric Rate Case:** In staff's testimony filed on May 19th, the staff recommended a rate increase of $143mm, rate base of $20.6bn, 9.60% ROE and equity ratio of 50%. This compares to DTE's request of $388mm, rate base of $21.3bn, 10.25% ROE and equity ratio of 50%. The main drivers of delta between ask vs staff's recommendation are lower ROE $85mm, disallowed incentive compensation $50mm, rate base disallowances $35mm (timing related, prudency of the projects was not challenged), lower depreciation $35mm and other items. We view the staff's position as a constructive starting point for negotiations. ALJ's Proposal for Decision in September was a rate increase of $145.7mm, rate base of $20.5bn, ROE of 9.90%, and equity ratio of 50%. A final decision is expected on November 18th.
  - **Customer Bill Increase**: DTE said they would see $8 or 6.5% bill increase versus last year at the electric company and about $13 or 20% bill increase per month at the gas company.
  - **IRA Implications**: Management views the Inflation Reduction Act is a tailwind for renewables, the 15% alternative minimum tax (AMT) is not expected to have a material impact on company's cash flows as accelerated tax depreciation and general business tax credits will serve as offsets.
  - **Storm Investigation:** The new storm investigation is continuation of the work last year. CMS will collaborate with the third party to be named by the commission over the next few months. They don't foresee this as punitive for CMS and/or other utilities serving the state rather Michigan regulators acknowledging climate change and extreme weather risks and monitoring progress on recommended actions last year to proactively prepare for future events.
- **Positioning into Qtr: Positive.** Despite our below street 3Q22 estimate we expect DTE to reaffirm its 2022 EPS guidance range. DTE has been a relative underperformer over the past month (-15.4% vs peers -13%) we see reversal of the underperformance going into earnings/EEI backed by a strong 22, de-risked 2023 and potential raise to 5-7% long term targeted growth rate. We also note that company's IRP filing in November will highlight DTE's runway of capex/rate base growth opportunities which will bolster investor sentiment.

Adj. EPS	2020A	2021A	1Q22A	2Q22A	3Q22E	2022E	2023E	2024E

% diff.					*-8%*	*0%*	*-1%*	*-3%*

Source: Evercore ISI, Factset as of 10/18/22

In Line **TP $109**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to decrease -$0.13 to $1.75. Last year in 3Q21, weather was $0.05 favorable, and this year in 3Q22 it is expected to be similarly favorable. In terms of positive YoY drivers, we expect rate cases and riders to contribute favorably, in addition to higher sales growth, an AFUDC equity benefit and a modest increase in gas utilities contribution. In terms of negative YoY drivers, we primarily anticipate increased depreciation and amortization, higher interest expense, lost earnings from Indiana minority interest sale, lower Commercial Renewables after a strong 2021, the negative impact of tax optimization, and reduced market equity returns for the executive benefit trust. We expect O&M to be relatively flat.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $5.30-$5.60, possibly pointing to the lower half. 2023 guidance range is expected to be announced on the year-end earnings call.
  - **Strategic Review of the Commercial Renewables Business**: Earlier this year, Duke announced a strategic review of its Commercial Renewables business which comprises of ~5.1 GW of wind and solar in operation (~3.5 GW net ownership, $150MM net income, $1B of project debt). We estimate DUK could fetch $3.5-4.5 billion in cash proceeds at a 13-15x EV/EBITDA multiple applied to our $360 million of EBITDA estimate less $1B of debt. Assuming $4B in debt paydown from sale proceeds at 4% we show modest EPS accretion (0.5%) when compared to our 2024E of $6.15. We note that our analysis does not incorporate tax attributes (unused tax credits) which currently carry a book equity value of ~$1B. The strategic review is expected to be completed late 2022 or early 2023.
  - **Carolinas rate cases**: On October 6th, DEP filed a rate case with the North Carolina commission that includes a Performance Based Regulation (PBR) Application which includes a Multi-Year Rate Plan (MYRP) and proposes rates for 3 years within the MYRP period. The rate case filing requests approval of a $236 million revenue increase with a 10.20% ROE and 53% equity layer and is based on a North Carolina retail rate base of $12.3 billion as of December 31, 2021, adjusted for known and measurable changes projected through April 30, 2023. The MYRP includes impacts of approximately $3.8 billion (NC retail allocation) of capital projects that are projected to go in service over the MYRP period. Hearings are expected to start in May 2023. Duke intends to implement temporary rates subject to refund June 1, 2023 for the historic base case increase and has requested the NCUC approve the requested permanent total Year 1 rates to be effective no later than October 1, 2023. Duke plans to file a DEC rate case in 1Q23.
  - **Carolinas Carbon Plan**: On May 16th, Duke filed a Carbon Plan that includes two paths to 70% carbon reduction via four portfolios that consider a mix of currently available and emerging technologies. The first path achieves the 70% target by 2030 and the second path offers three portfolios to achieve the 70% target by 2032 or 2034 through increased offshore wind and/ or small modular nuclear generation. Each portfolio has tradeoffs in the near term and long term with cost and execution considerations for regulators to consider. All four portfolios replace coal with a diverse mix of solar, storage, wind, small modular nuclear and gas. Public hearings are now complete with the North Carolina commission required to approve by December 31st. In South Carolina, Duke will file in 2023 for approval in the next comprehensive IRP. The Carbon Plan will be reviewed every two years and adjusted as needed.
  - **Inflation Reduction Act**: Management stated that clean energy tax provisions in the Inflation Reduction Act is an enabler of clean energy transition, and that the AMT could be a cash flow headwind but they would also benefit from tax credits.
  - **Indiana IRP filing**: In Indiana, following the filing of the IRP in December 2021, Duke issued a request for proposal for generation resources. A Commission Staff report is due this year, and DUK expects to file CPCNs by year-end 2022.
  - **Ohio electric rate case**: Duke filed an Ohio electric rate case in October 2021 that the Company has highlighted as a straightforward case. There are rider caps in Ohio and this case is primarily to get all the relevant capex into rates. In mid-May 2022, the Staff recommended a revenue increase range of $2-15 million (DUK requested $55 million), an ROE range of 8.84-9.85% (ask was 10.3%), and an equity ratio of 50.5% (request was also 50.5%) on a rate base of $2,036 million (ask was $2,069 million). DUK announced a settlement last month with a $22.5 million revenue required, ROE of 9.5% (current is 9.84%), and equity ratio of 50.5% (current 50.8%). A final order is expected late this year or early next year.
  - **Customer bills:** At the gas utilities, expect 30-50% higher bills. In the Carolinas increases are capped at 8-10%. Florida increases are expected to be in the 10-15% range.

- **Positioning into Qtr: Cautious.** **We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $5.30-$5.60, possibly pointing to the lower half.**

EDISON INTERNATIONAL®

In Line **TP $71**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to decline -$0.34 to $1.35/share. Note that the rate case last year in 3Q21 contributed $0.35 of EPS. In terms of negative YoY drivers, we expect higher preferred dividend expense, increased depreciation & amortization, higher interest expense, increased O&M and higher property taxes.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges:** EIX sometimes updates its current-year (2022 in this case) EPS guidance ($4.40-$4.70) on its Q3 call. The Company typically issues its forward-year (2023) EPS guidance on its Q4 call.
  - **Cost of capital filings:** SCE is still awaiting resolution of whether the cost of capital (COC) trigger mechanism will operate for 2022. In the 2023-2025 COC proceeding, the procedural schedule calls for proposed decision to be issued in mid-Nov. 2022, which allows for final decision to be made by year-end 2022. Recall in April 2022, the Company filed an application to establish the 2023-2025 COC and reset the cost of capital mechanism for a three-year term. SCE requested an ROE of 10.53% and its currently authorized equity ratio of 52%
  - **2017/2018 Wildfire / Mudslide claims:** EIX updates its best estimate of losses every quarter. As of the second quarter 2022, the Company resolved $7.0 billion of the claims for the 2017/2018 Wildfire/Mudslide Events, or 89% of the estimated potential losses to $7.9 billion. SCE plans to make a cost recovery filing by late 2023 to seek recovery for prudently-incurred actual losses in excess of insurance, assuming relevant proceedings progress as expected. Note that the statute of limitation recently expired for the Woolsey fire which could impact company's total potential losses estimate .
  - **Equity needs:** EIX has said it still plans to issue, on average, $250 million of equity per year in 2022-2025, with plans to issue a higher-than-average $300-400 million amount this year of equity content securities. The Company noted that it has flexibility to defer its equity issuance originally planned for this year into 2023 if it feels that would be a better time to go to the market.
  - **Wildfire mitigation strategy:** EIX typically provides an update each quarter on its wildfire mitigation and PSPS measures taken to reduce risk of damage from catastrophic wildfires. As of the first quarter 2022, the Company estimated that it had reduced that risk by 65-70% relative to pre-2018 levels. EIX has stated that covered conductor is one of the most effective measures to reduce these risks. The Company has also been risk-prioritizing equipment inspections and vegetation management programs and has continued its advancement of situational awareness and weather forecasting capabilities. .
  - **Customer bills:** EIX just filed a trigger mechanism for purchased power. The Company expects 5-6% increases in customer bills.
  - **Corporate debt to total debt & fixed versus variable debt**: EIX corporate debt to total debt is 14%. The Company has $800 million of variable debt and a $600 million term loan (5% of total debt).

Source: Evercore ISI, FactSet as of 10/18/22

Outperform **TP $130**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to increase by $0.20 to $2.65/share. Last year in 3Q21, weather was $0.04 unfavorable, and it is expected to be mixed for the same period this year. In terms of positive YoY drivers, we primarily expect the benefits of rate relief and riders. In terms of negative YoY drivers, we primarily anticipate higher taxes other than income, increased O&M, higher interest expense, increased D&A, and a higher effective tax rate.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges:** ETR has already guided to 2022 EPS in top half of their previously announced guidance range of $6.15-$6.45. Guidance for 2023 has already been issued ($6.55-$6.85) but will be updated with Q4 results; we could see drivers around it at the EEI Conference in November 2022.
  - **Messaging from new leadership:** On August 17th, Entergy announced that CFO Andrew Marsh has been named CEO, effective November 1st, succeeding Leo Denault, who is retiring in 2023. Denault will continue as executive chairman until his retirement. Kimberly Fontan, the company's chief accounting officer, will succeed Marsh as CFO.
  - **Storm cost recovery:** In June 2022, Entergy Louisiana filed for recovery of the remaining $1.6 billion of Ida storm costs. Next steps include rebuttal testimony on 10/24/22 and hearings on 12/19/22 through 12/23/22. The target date to complete the securitization is by year-end 2022, assuming the parties reach a settlement in time for financing. Separately, Entergy New Orleans filed for storm escrow replenishment, seeking authorization to replenish reserves to $150 million utilizing securitization financing. Advisors' finding reports was made on 8/12/22 and the hearing officer certified the record on 8/30/22. Securitization is expected to be complete in 4Q22.
  - **Credit metrics:** ETR has recently delayed its expectation to reach Moody's >14% CFO pre-working capital to debt target ratio and S&P's 14-16% FFO to debt target by one year from 2022 to 2023. The credit agencies had been predicting that timeline for those metrics to be achieved all along.
  - **SERI settlement:** Should the retail regulators for Entergy Arkansas, Entergy Louisiana, and Entergy New Orleans elect to join the settlement, it is estimated that the total amount that SERI would refund would be $588 million (including Entergy Mississippi's portion). SERI had previously recorded a provision and associated liability of $38 million for elements of the applicable litigation. In the second quarter 2022, Entergy recorded a pre-tax regulatory charge of $551 million (approximately $413 million after tax), increasing the regulatory liability to $588 million, which consists of $235 million for the settlement with the Mississippi PSC and $353 million for potential future refunds to Entergy Arkansas, Entergy New Orleans and Entergy Louisiana. A $588 million total SERI settlement would temporarily negatively affect Entergy's cash flow to debt credit metrics. The timing and magnitude of the impact to cash flow would depend on the details of the total settlement. The long-term impact of debt financing of a $588 million System Energy settlement would not be expected to move Entergy's cash flow to debt metrics outside of targeted ranges.
  - **Inflation Reduction Act legislation:** Entergy said the law is still left to interpretation but that it preliminarily expects the Alternative Minimum tax to be cash flow neutral after the first year. ETR believes it would be eligible for production tax credits for its regulated nuclear assets because it participates in the wholesale power markets though ultimately it gets netted off in rates.
  - **Customer Bill:** Entergy is 100% electric and the Company expects 3-4% customer bill increases for every $1/MMBtu of higher gas prices. ETR is assuming a gas price of $4/MMBtu in its long-term plan.

- **Positioning into Qtr: Neutral.**

EVERSOURCE

In Line **TP $91**
Analyst: Durgesh Chopra / Sharon Wang

- **Q3 EPS Bridge:** We project year-over-year EPS to increase by $0.02 to $1.04, driven by rate increase at NSTAR electric ($0.03), pension plan ($0.04), and electric transmission ($0.03), partially offset by higher depreciation and property taxes (-$0.03), debt interest expense (-$0.04), and share dilution (-$0.01).

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm its previously announced 2022 EPS guidance range of $4.04-$4.14. 2023 guidance range is expected to be announced on the year-end earnings call
  - **Offshore Wind Strategic Review:** The strategic review of the offshore wind investment portfolio is underway, which could result in a potential sale of all or part of Eversource's 50% interest in offshore wind joint venture with Ørsted. ES is working closely with potential buyers. We estimate up to $4B in proceeds from the sale of Eversource's share of the joint venture. Sale proceeds would be used to fund incremental capex opportunities (AMI, onshore transmission, etc.) and/or reduce current financing needs. Eversource continues to target the completion of the review by the end of 2022.
  - **M&A Strategy**: Management stated that they have no interest in expanding their natural gas footprint through M&A. They could consider electric assets but that has a high threshold considering rate base/capex opportunities within their existing portfolio in Massachusetts, Connecticut, and New Hampshire. Eversource will opportunistically pursue water deals in neighboring states, the focus of which has been on municipally owned water systems.
  - **$3B Incremental Capex to Offset Offshore Earnings Loss:** By 2026, incremental investments required to replace the earnings contribution of offshore wind will be approximately $3B. This aligns with company's guidance in February, where wind business was expected to contribute ~$150 million in 2026, translating to $3B capex requirement from a regulated standpoint to offset the divestiture of offshore wind using a ~50% equity layer and 10% ROE. Eversource feels confident to reach this level of investment, as capital investment in AMI and interconnections is around $1.5B in total (not in current plan), and company also sees opportunities on the distribution and transmission system to upgrade infrastructure addressing the load expansion to bring in further renewable resources and to accommodate electrification.
  - **Additional Details on Offshore Wind**: During the review process, the company will continue execution of the three offshore wind projects and lead the onshore portion of the projects during citing and construction. Despite high costs due to global supply chain issues, the company has locked in 82% of the three project costs in July, higher than 80% in May. Offshore investment to date is $1.5B in July versus $1.3B in May. Projected in-service dates for the three projects are unchanged – late 2023 for South Fork Wind (130 MW), 2025 for Revolution Wind (704 MW), and late 2025 for Sunrise Wind (924 MW). In terms of capital investment, ES still estimates spending $900MM - $1B in 2022 and $3B - $3.6B in years 2023-2026 for their ownership share in the three projects.
  - **Regulatory Update.** ES has reached the end of its five-year stay out for NSTAR Electric Company in Massachusetts, and filed a rate case on January 14, 2022, proposing rate increase of $94M (updated from $89M in Q1), reflecting a ROE of 10.5% and an equity layer of 54% (updated from 53.8% in Q1). Final order is expected around late 2022/early 2023 Aquarion Connecticut rate case was filed on August 29, 2022, which is its first rate review in roughly 10 years. Revenue deficiency is $27.5M with 10.35% ROE and 53% Equity Layer. New rates will go into effect on March 15, 2023.
  - **Advanced Meter Infrastructure (AMI).** In CT, ES targets all customers on AMI during 2022-2026 with capital investment of approximately $475 million. Decision is expected in Q4 2022. In MA, ES's capital investment plan is approximately $575 million in years 2022-2027. Decision from DPU is still expected in Q4 2022. If approved, these investments would be incremental to company's current five-year capex plan to replace the earnings contribution of offshore wind.
  - **Financing Plan:** In terms of financing plan, Eversource expects equity issuance of $1.2 billion under ATM program through 2026, of which ~$140M was issued through July.

- **Positioning into Qtr: Neutral.**

In Line **TP $72**
Analyst: Durgesh Chopra / Sharon Wang

- **Q3 EPS Bridge:** we project year-over-year EPS to decrease by -$0.03 to $1.95/share. Weather last year in 3Q21 was $0.13 favorable and this year it is similar. Key negative YoY factors are higher depreciation & amortization and a lower non-regulated business earnings.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm its previously announced 2022 EPS guidance range of $3.43-$3.63,potentially tracking in the upper half . 2023 guidance range is expected to be announced on the year-end earnings call
  - **Missouri rate case filings**: On September 22nd, The Missouri Commission issued an order approving partial settlements awarding $25 million in revenue increase for Missouri Metro and $42.5 million increase for Missouri West. The only outstanding issue now is the recoverability of fuel costs over the cap which could result in a $0.03-$0.06 annual EPS headwind for EVRG starting in December 2022. We expect a Commission decision in the coming weeks.
  - **Kansas Rate Case**: Evergy is preparing to file Kansas Central and Kansas Metro rate cases in late April 2023. The Company expects a test year ending September 30, 2022, and the true-up date around June 30, 2023, with new rates becoming effective in December 2023.
  - **IRA Implications**: Management views the Inflation Reduction Act as a tailwind for renewables and since EVRG does not expect to be at the $1B pre-tax threshold until second half of the decade the 15% AMT will not have an impact on results over the next few years.
  - **Build Transfer Agreements and PPA buy-ins**: The Company continues to target at least one PPA buy-in (100-200 MW) combined with repowering this year. Evergy has previously stated that they are planning to execute on PPA buy-ins and that could provide incremental capex opportunities and earnings upside as PTCs expire with a total of 1.2 GW to expire in the 2022-2025 timeframe; we estimate up to ~$0.10 EPS upside (or ~3% of our 2024 estimate) assuming the MWs are rate based through rate cases and ~50% financed with equity.
  - **Annual update to IRP and update on pre-determination filing:** Evergy filed its annual update to its Missouri and Kansas IRP in June. The Company's preferred plan for the next decade is consistent with the resource plan laid out in last year's triennial IRP filing and the renewables development discussed during EVRG's Investor Day last September. The minor tweaks in the plan reflect updates to the sequencing of near-term investments. Specifically, Evergy shifted the 190 MW solar edition and the Lawrence 4 coal retirements to 2024, primarily due to the dynamic market conditions facing the solar supply chain and the benefits to customers of keeping Lawrence 4 online with current high natural gas prices. In 2026, Evergy shifted a planned solar project to wind and increased the capacity assumption for the project by 100 MWs. Beyond 2026, the Company slightly reduced megawatt assumptions for its solar projects, which on a net basis offset some upward pressures on pricing. Overall, by the end of 2032, Evergy's preferred plan now includes 3,500 MWs of renewable additions while also retiring nearly 2,000 MWs of coal. A pre-determination filing is likely to be made next year to accommodate the updated IRP plans for the Lawrence 4 retirement and the delay in the solar additions. The delay from 2023 would not have a meaningful impact on earnings expectations as the structure for new solar was expected to contribute <$0.01 to annual EPS in both 2024 and 2025.

- **Positioning into Qtr: Positive.** **Our above consensus estimate positions EVRG strongly to deliver 2022 EPS in the upper half of the guidance range and/or de-risk 2023**

Adj. EPS	2020A	2021A	1Q22A	2Q22A	3Q22E	2022E	2023E	2023E

Source: Evercore ISI, Factset as of 10/18/22

Outperform **TP $50**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project 3Q22 adjusted EPS of $0.70 for Exelon (EXC has said it is historically about 32% of full-year earnings), which as a reminder is now a standalone utility that has been reporting as such for the second time since 1Q22 following its separation from GenCo in February 2022. We expect weather to be modestly favorable this year in 3Q22 and it was relatively neutral last year in 3Q21. However, weather is not a major driver of earnings for EXC given that roughly 75% of it is decoupled. In terms of the primary positive YoY drivers for the utility, we expect higher rates and the benefit in Illinois from the increased 30-year treasury rate and lower storm costs. We see the primary negative drivers for the quarter being higher O&M and increased interest expense at the parent.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $5.30-$5.60. EXC will discuss 2023 EPS drivers with official guidance expected on the year-end call.
  - **Management change**: Exelon has promoted Calvin G. Butler Jr. to the role of President and Chief Operating Officer and Jeanne Jones to Executive Vice President and CFO. Chris Crane, previously President and CEO, continues as Exelon's CEO. Jones succeeds Joe Nigro, who will serve as advisor to the CEO through March 31, 2023.
  - **Illinois Performance Incentive Order and planned rate case filling:** On September 27th, the Illinois commission granted ComEd electric distribution 32 +/- basis points for its performance-based electric distribution ROE incentives and penalties to be effective January 2024, which was lower than both the Staff's recommended 36 +/- basis points and the Company's unchanged request for 60 +/- basis points. The commission also adjusted the basis point allocation by category of performance. We estimate the order granting ComEd electric distribution 32 +/- basis points for its performance would contribute 2024 EPS of $0.03/share, or 1% of our 2024 consolidated EPS forecast of $2.57/share. EXC has said it has been assuming an unspecified range of outcomes in its 6-8% operating EPS growth forecast for 2021 through 2025. The Company has not said whether it would file for a traditional rate case or a Multi-Year Plan (note here). Specifically, Exelon has the option to establish new rates on either a traditional rate review using a future test year, or an investment and operating cost plan for a four-year period, to be submitted by January 20, 2023 to the Illinois commission for review and approval by year-end 2023 for rates effective the beginning of 2024 after the existing formula rate plan framework sunsets in 2023.
  - **Equity**: Exelon still expects to issue no more than $1B of equity through 2025 and has $425MM left to go. The Company is targeting a 2022-2024 average FFO to debt of 13-14% for S&P's current BBB rating, which has a downgrade threshold of 12%, and CFO (pre-WC) to debt of 13-14% for Moody's current Baa2 rating which has a downgrade threshold of 12%.
  - **PECO gas rate case**: PECO just filed a gas rate case on March 31st, requesting a $82MM revenue increase with a 10.95% ROE and 53.41% equity layer on a rate base of $2.9B. PECO's current allowed ROE is 10.24% and its equity ratio is 53.38%. Exelon reached a block box settlement for a $54.8MM revenue increase with a final order expected in Q4 for rates effective January 1st.
  - **Delmarva rate cases**: In Delaware, Exelon received a final order for a ~$13.4MM with a 9.6% ROE and 50% equity ratio, both in line with previously levels. In Maryland, EXC reached a partial settlement for a $29MM cumulative revenue increase over the 2023-2025 period with a 9.6% ROE (current is also 9.6%) and 50.5% equity ratio (not disclosed currently). A final decision is expected by year-end.
  - **ComEd annual distribution formula rate update**: On April 15, ComEd filed its final annual distribution formula rate update with the Illinois commission seeking a $199MM rate increase with a 7.85% ROE and 49.45% equity ratio on a rate base of $13,883MM with a January 1, 2022-December 31, 2021 test year. Commission Staff recommended a $220MM revenue increase in June 2022. Exelon is on track to have a final order by year-end 2022 for rates effective beginning 2023.
  - **Inflation Reduction Act legislation**: Exelon has said it expects a $200MM per year cash flow hit from the AMT provision in the law.

- **Positioning into Qtr: Neutral.**

FirstEnergy

Outperform **TP $47**
Analyst: Michael Lonegan / Durgesh Chopra

- **Q3 EPS Bridge:** We project year-over-year EPS to be flat at $0.82/share, which is above the top end of company guidance of $0.70-0.80/share. Weather was modestly favorable last year in 3Q21 and is also expected be modestly favorable this year in 3Q22. In terms of negative YoY drivers, we expect the primary impacts to be accounting policy changes for vegetation management and corporate support, the Ohio prospective rate reduction, higher O&M expense and share dilution from the equity financing transaction in November 2021. In terms of positive YoY divers, we anticipate FirstEnergy to benefit from higher rates from Ohio grid modernization, plus Pennsylvania and transmission rate base growth, as well as lower interest expense and higher Signal Peak earnings.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges:** On September 15th, FirstEnergy announced along with its management transition that it now expects to deliver the upper half of its 2022 EPS guidance range of $2.30-2.50/share. 2023 guidance range is expected to be announced on the year-end earnings call
  - **Pension**: As of 2Q22, FirstEnergy stated its EPS pension headwind is now expected to be $0.30 beginning 2023. The new estimate reduces the non-cash benefit from the pension, from $0.40 to an estimated $0.10 per share benefit in 2023. First Energy believes the earnings impact associated with the pension will normalize over time. The Company has identified specific steps to address the potential pension headwind, including 1) Transitioning more investments to formula rates with real-time returns, while working to lower base operating expenses; 2) Accelerating future planned maintenance work into 2022, enabled by successful completion of $1B tender of FE Corp notes, higher-than-anticipated income from legacy, commodity-based investments and continued focus on FE Forward program. 3) Accelerating additional investments, 4) Optimizing financing plan; includes delaying $1B of planned debt financings from 2023 to future years, 5) Reducing corporate costs and real estate footprint, and 6) Anticipating benefits from continued improvements in customer arrears. FE is exploring proposed changes to rate treatment for the pension to moderate impacts of market volatility between rate cases. As of 2Q22, FirstEnergy's pension funded status was 84% and it has no expected cash contribution requirements through 2024.
  - **CEO search:** We think Steve Strah did a solid job as CEO: executing on numbers, significant compliance improvements, a high-value FET asset sale and balance sheet enhancements. Under his leadership, FE now expects to deliver the upper half of its 2022 EPS guidance range of $2.30-2.50. We think FE's high pension exposure has left investors with a legacy impression of a company that has historically had bottom-quartile earnings and dividend growth, weak earnings quality, and a poor balance sheet. Based on our conversations with investors, we believe the market will appreciate FE's search for an external candidate to run the ship. Change at FirstEnergy appears to be coming soon, with a new CEO expected to be announced by late 2022 or early 2023. FE has said it is looking to hire a proven leader with utility experience.
  - **Asset sales:** Also on September 15th, FirstEnergy issued a plan to accelerate balance sheet improvements with an EPS-accretive minority interest asset sale of a transmission or distribution asset as soon as year-end or early next year, which we think could fetch as high as 35-45x and 25-35x LTM P/E valuation, respectively. FE had previously said another transmission asset sale would be unlikely given significant tax leakage that could result, but the new Inflation Reduction Act legislation likely changes that thinking given its restriction of the use of NOLs. We think the right amount of proceeds to pay down as high as 7% coupon HoldCo debt could accelerate FirstEnergy's post-2023 mid-teens FFO to debt target into next year.
  - **Inflation Reduction Act (IRA) legislation and credit metrics**: Given that FE is almost entirely a electric T&D utility, the biggest impact of the legislation relates to the alternative minimum tax, for which the company expects a 20-40 basis point hit to FFO to debt. FirstEnergy continues to expect to be at 13% FFO to debt by 2023 and potentially even at 14-15% in the timeframe with the planned asset sale.
  - **Rate cases**: FE is preparing to file rate cases in Maryland and West Virginia in 2023, and likely New Jersey that same year, followed by Ohio in 2024 and potentially Pennsylvania in 2024 or 2025.
  - **Customer bills:** FE is 100% electric, and its subsidiaries hold auctions for non-shopping customers. The Company said that as auction product terms start to roll over, non-shopping residential prices may increase in the range of 7%-25% of total bill. The auction process is to procure generation for portions of non-shopping customers loads for 12–36-month timeframes, months in advance of delivery. In West Virginia, FirstEnergy received approval in May to increase the 2022 ENEC rate, which represented a ~9% increase to the average residential bill, to address increases in power and fuel prices from the prior ENEC update. In late August, FE filed for a subsequent increase of ~10% (beginning 1/1/23), which is pending PSC approval. The National Energy Assistance Directors Association recently estimated that one in six homes in the US are behind on their utility bills; FE said its utilities are seeing lower than average impacts vs. that report.

In Line **TP $40**
Analyst: Michael Lonegan / Durgesh Chopra

- **Q3 EPS Bridge:** We project year-over-year EPS to decrease -$0.07 to $0.51/share. We expect the primary negative YoY drivers to include potentially lower bank earnings driven by positive impacts of provisioning expense after a large release during the same period last year, plus the impacts of higher interest expense, increased O&M, higher depreciation, and increased property taxes. In terms of positive drivers, 2Q22 will reflect a full quarter of all of the PBR mechanisms that were implemented as of June 2021 and notably January 2022.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 EPS guidance**: With second quarter 2022 results, Hawaiian maintained its 2022 consolidated EPS outlook of $2.00-2.20/share but is now guiding to the lower half of the expected utility contribution of $1.68-1.78/share and still the upper half of bank guidance of $0.59-0.68/share while maintaining the HoldCo outlook of $0.28-0.30/share. For the utility, adjusted O&M is now expected to be higher than Annual Revenue Adjustment (ARA) allowed levels.
  - **Utility EPS growth and regulatory lag**: Hawaiian has said it continues to expect the utilities to grow EPS by 5% per year starting in 2022 through 2024, excluding any upside from Performance Incentive Mechanisms (PIMs), which are expected to materially improve regulatory lag, a persistent problem for the Company. In the second quarter 2022, the utility earned a LTM ROE of 8.2% versus an allowed ROE of 9.5%.
  - **Performance Incentive Mechanisms (PIMs)**: Hawaiian has stated that there is the potential for a moderate net penalty from PIMs this year due to: 1) maximum fuel cost risk sharing penalty expected given high fuel prices, 2) a heat rate performance benefit that is lower than previously expected, and 3) lower expected rewards from interconnection.
  - **Utility O&M**: Hawaiian expects higher O&M to continue this year with accelerated generating unit overhauls and maintenance to maintain reliability ahead of the AES plant retirement, as well as from increased cycling to accommodate intermittent renewables. The Company also sees higher bad debt expense due to high fuel oil costs. As mentioned above, O&M is expected to be modestly above ARA levels for this year.
  - **Hawaiian economy and American Savings Bank (ASB):** The strength of the Hawaiian economy has large implications for the bank; recall the utilities are decoupled. The University of Hawaii Economic Research recently published a report highlighting a potential US recession where Hawaii itself may not experience one because of an increase of international tourism (offsetting lower from the US) which has remained low. The University stated that is expects relatively strong government spending. With second quarter 2022 results, Hawaiian stated that its outlook for the bank included a stronger net interest margin (NIM) and a healthy loan pipeline across its portfolio with modest expense headwinds. The Company now sees larger and faster rate increases compared to its original expectations that are expected to drive NIM expansion. This year, ASB should see minimal benefit from PPP fees as they are nearly all recognized, as well as lower mortgage banking income due to the higher interest rates. The Company also expects higher noninterest expense due to elevated compensation and benefits expense (higher performance pay and a competitive market for talent).
  - **Oil price impact on customer bills**: While HE has aggressive renewable and decarbonization targets to be net-zero by 2040, currently about 50% of its generation is derived from conventional oil-fired steam units. While oil prices have come down since last quarter, they remain elevated and electric bills are significantly higher than have been in recent years, which as mentioned could potentially result in higher bad debt expense as well as drive a maximum penalty from HE's fuel cost risk sharing mechanism.
  - **Stage 2 and 3 RFPs**: Hawaiian has now filed 10 PPAs for solar and storage and two self-build storage application. The state's commission has now approved six PPAs and one standalone storage ESPPA under active development. The Stage 2 RFP has the potential to add 382 MW of solar and 2 GWh of storage by the end of 2023. Draft Stage 3 RFPs have been filed totaling 1605 GWh/yr of variable renewable dispatchable energy and 540-740 MW of renewable firm capacity.
  - **Inflation and supply chain:** We believe the smaller scale of HE's utilities likely subjects them to higher inflationary pressures and more supply chain challenges than most peers, which could delay more projects (i.e. capex) than the average utility.
  - **Capital program**: HE now anticipates that 2022 capex will be at the lower end of its $350- 400 million range due to headwinds from continuing supply chain disruptions, permitting delays and resource availability constraints.
  - **Inflation Reduction Act legislation**: The renewable tax credits could help Hawaiian achieve and potentially accelerate its 100% renewable target by 2045. We estimate that HE is on track for roughly $230 million of consolidated pre-tax earnings, so it is far from qualifying for the 15% alternative minimum tax since it is well below the Act's $1 billion threshold.

- **Positioning into Qtr: Neutral.**

In Line **TP $90**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We expect year-over-year EPS to grow +$0.07 to $0.82/share. We believe the primary YoY drivers will be new rates at Florida Power & Light (FPL) and Gulf Power. We believe the utilities will utilize part of its depreciation reserve ($200mm limit for 2022 with a balance of $1.37B) to earn an 11.6% ROE, towards the top end of its 9.8-11.8% allowed ROE band on rate base growth of 9%. In the Energy Resources segment, we do not anticipate much growth from new projects this quarter as NextEra said on its Q2 call that most would come in Q4 this year. Note that wind resource was 98% late year in 3Q21, and every 1% change has a $0.005-0.010 EPS impact.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EPS Guidance Ranges**: We expect reaffirmation of EPS guidance ranges discussed below.
  - **We expect a relatively quiet quarter given the recent 2022 Investor Day**: At its June 14th Investor Day, NextEra provided the following update: 1) Raised its adjusted EPS expectations by $0.05 in each of 2022 and 2023 to $2.80-2.90 and $2.98-3.13, respectively, and by $0.10 in 2024 to $3.23-3.43, while expecting to grow 2025 at 6-8% (to $3.45-3.70 from $3.35-3.60) off the increased 2024 adjusted EPS range. The Company said it will continue to be disappointed if it does not deliver results at or near the top end of its new adjusted EPS expectations range each year through 2025. This new forecast reflects 9.8% CAGR (vs. 9.0% previously) from 2021 to the high-end of the 2025 adjusted EPS range and is based on a ~$85-95B total capital program for 2022-2025; 2) The NEER renewable development expectations are now 27,700-36,900 MW for 2022-2025 vs. 22,675-30,000 MW for 2021-2024 previously, a greater than 20% increase; 3) NEE stated it was pleased with the two-year solar panel tariff exemption announcement on June 6th which helps them with procurement through 2024, gives their suppliers time to move manufacturing away from impacted countries and develop domestic manufacturing capabilities alongside. However, the company stated that delays in projects prior to the announcement puts 2 GW of the program this year at risk but NEE said it has mitigation measure in place to offset any impact; 4) The company announced a "Real Zero" goal that would eliminate Scope 1 & 2 emissions by 2045, through use of renewables and will not require the use of carbon offsets; 5) Earnings growth at FPL is expected to be driven by a 9% CAGR in regulatory capital employed for 2021-2025 on the back of a $32-34B capital program from 2022-2025; 6) Energy Resource anticipates investing $55-59B over the next four years, driving adjusted EBITDA growth of more than a 16% CAGR from 2021-2025 and adjusted earnings of 12% CAGR from 2021-2025; 7) NEE said it is going to approach financing in an opportunistic way with a goal of minimizing cost of capital; and lastly, 8) the company continues to expect 10% annual dividend per share growth through 2024, off of the 2022 base.
  - **Higher allowed ROE approved with increase in 30-year Treasury rate**: On October 4th, the Florida commission approved a higher allowed ROE band of 9.8-11.8%, versus the 9.7-10.7% previously that existed under the settlement agreement (rates became effective January 1st this year). Recall that the agreement had an adder that stipulated if the average 30-year Treasury rate increased 50 bps or more over a 6-month period, the authorized regulatory ROE would increase to a midpoint of 10.8% with a range of 9.8-11.8%; this higher allowed ROE does not result in an incremental base rate increase but applies for all other regulatory purposes.
  - **Inflation Reduction Act legislation**: NextEra has said it anticipates providing an update related to the benefits of the IRA legislation on the Q4 call. The company said the positive impact on its renewable development is likely to show up starting in 2025.
  - **Hurricane Ian costs**: We expect NEE to provide an update on the storm costs for Hurricane Ian (category 4). Recall that Hurricane Irma (category 5) in 2017 had storm costs totaling $1.3 billion. Florida has a strong precedent for granting utilities full recovery of storm costs. NextEra will defer the cost and record it as a regulatory asset, while utilizing the depreciation reserve, if needed.
  - **Customer bills:** NEE's regulated operations are nearly 100% electric (very small Florida City Gas and water), so its customer bills will be less impacted than gas utilities. The Company made a filing in Sept. 2022 to flag 10% under-recovery in fuel costs. It is evaluating bill impacts and may adjust rates to reflect the higher costs late this year or early next.

Outperform **TP $33**
Analyst: Durgesh Chopra / Sharon Wang

- **Q3 EPS Bridge**: We project year-over-year EPS to decrease -$0.02 to $0.09. Recall that NiSource adjusts weather out of its non-GAAP EPS results. In terms of negative YoY drivers, we expect higher O&M, increased depreciation & amortization, reduced other income, and higher interest expense. We expect rate relief to be the primary positive driver.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EPS Guidance Ranges:** We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $1.42-$1.48. EXC will discuss 2023 guidance, LT growth rate and an update on the strategic review is expected on the Nov 7th Analyst Day in NYC.

  - **Strategic Review**: NiSource has said it is deep into its strategic review and will provide details (potential announcements) by its November Analyst Day. New President & CEO Lloyd Yates has been saying that the Company will evaluate its full portfolio of assets. One of Yates' key priorities is to extend the Company's EPS CAGR outlook of 7-9% beyond 2024 (potentially through 2027). The Company's comprehensive review across its asset base is focused on earned ROEs, regulatory mechanisms and relationships, legislative relationships, and investment opportunities.

  - **OH Rate Case Update**: Columbia Gas of Ohio requested to reschedule hearings in its rate case for the fourth time to November 1st to facilitate continued settlement discussions. The company received a staff recommendation in that rate case in April 2022 with a revenue recommendation of $46MM (average) versus a $221MM request with the difference driven by the disallowance of $70MM of O&M expense and the delta between the ROE request of 10.9% versus Staff's range of 9-10%. The equity ratio request of ~51% was not disputed. NI currently has an allowed ROE of 10.4% and equity ratio of 51% in Ohio. Company stated it would be tough to get the final order and new rates before the end of the year, but they expect to be able to offset the delay through O&M discipline and other needs.

  - **Rate Cases**: NiSource reached a settlement of $45MM revenue increase in its Pennsylvania gas rate case, and ALJ put out a recommendation in October that the settlement be adopted. NI requested an initial revenue increase of $82.2MM with an 11.2% ROE and 54.38% equity ratio on $3.0B forecasted rate base with a 12/22 test year. NIPSCO filed electric rate case in mid-September for a revenue increase of $291.8 with a 10.4% ROE and a 53.2% equity layer. Separately, NI got to a settlement in Maryland gas rate case for $4.8MM revenue increase vs requested $5.5MM with a 10.95% ROE and 52.8% equity ratio on $204.1MM rate base with a 5/22 test year. An order is expected in 4Q22 for rates effective December 2022. NiSource also filed a Virginia gas rate case on April 29th, requesting $40.6MM net of the SAVE infrastructure tracker ($17.7MM) with a 10.75% ROE and 39.3% equity ratio on a rate base of $1.0B with a 12/21 test year. Hearing is scheduled for December. An order is expected in 1Q23 for proposed rates to be effective October 2022.

  - **IRA Implications**: Company noted that the 15% minimum tax provision in the Inflation reduction act will not impact them over the next few years as they won't reach the $1B pre-tax earnings threshold until the second half of the decade.

- **Positioning into Qtr: Neutral.**

In Line **TP $42**
Analyst: Durgesh Chopra

- **Q3 EBITDA Bridge:** We project NRG's 3Q22 EBITDA to be $410MM, $357MM lower than 3Q21 adjusted EBITDA of $767MM. Positive YOY drivers include the Direct Energy acquisition more than offset by Parish unit outage, coal supply related headwinds, lower capacity revenues and previously announced asset sales.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EBITDA Guidance Ranges:** We expect NRG to continue to point towards the bottom end of its 2022 EBITDA guidance range of $1,950MM-$2,250MM. The 2023 guidance range is expected to be announced on the third quarter 2022 call, we project $2.3B in EBITDA next year.
  - **$1 Billion Share Repurchase Program.** In December 2021, NRG completed the previously announced 4.8GW asset sale and introduced a $1B share repurchase program through 2022. This is part of their $2.7B buyback plan through 2025 announced at their Analyst Day last year. As of the second quarter 2022 call, they had executed $405MM in share repurchases with $595MM remaining. Additional buybacks/2023 capital allocation plan is not expected until later this year following NRG's December 2022 Board meeting.
  - **Parish Unit 8 Fire.** On May 9th, a fire was reported at Unit 8 at the WA Parish coal-fired power plant in Texas. The fire tripped the 610MW unit offline as designed which translated into a $70MM headwind for the quarter and $200MM projected for the whole year. NRG is targeting to return the unit to service by the end of the second quarter of 2023.
  - **Limestone Unit 1 Outage**. On the second quarter earnings call last year, NRG reported a forced outage at their 890MW limestone Unit 1 coal plant in TX until year-end 2021 which was subsequently extended to April 2022 ($50MM EBITDA hit in 2022 included in guidance and our estimates). The plant was back online in May 2022.
  - **2022 capital allocation plan.** We will look for an update on the 2022 allocation plan. As of the second quarter 2022 call, including Storm Uri proceeds of ~$680MM, the company projected $2B in cash to be generated in 2022. $1.3B is allocated towards share buybacks and dividends. They have committed to $110MM in investments and another $100MM to increase minimal cash balance. $100M is earmarked from growth leaving $356MM yet to be assigned

- **Q3 EPS Bridge:** We project year-over-year utility (plus parent) EPS to increase +$0.11 to $1.23/share. The big positive driver year over year is weather which we estimate to be $0.10 benefit this year vs $0.03 last year. Note our full-year 2022-2023 EPS estimates of $2.29 and $2.18, respectively, include an ET contribution, while our 2Q22 forecast does not. We assume all ET ownership is sold by year-end 2023.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EPS Guidance Ranges:** On the second quarter 2022 call, OGE stated that it expects to deliver 2022 EPS in the top half of their $1.87-$1.97 guidance range. which we now think they could exceed due to strong third quarter. 2023 guidance range is expected to be announced on the year-end earnings call

  - **Oklahoma Rate Case**: Commission approved OGE's recent rate case settlement in mid-September, maintaining its ROE and capital structure at 9.5% and 53.3%, respectively, with the revenue increase of $30 million.

  - **Oklahoma Fuel Rate Case**: On Sep 29, 2022, Oklahoma Corporation Commission Staff initiated a proceeding regarding OGE's request to recover ~$450 million in higher fuel costs over 24 months. Hearings will start on Nov 3, 2022, and the commission will issue an order within seven days after the final hearing.

  - **Draft RFP for flexible resources:** OGE issued its planned RFP for flexible resources given the large capacity need over the next five years, which are defined as generation facilities with a minimum 30-year life that can start quickly and cycle multiple times per day. The minimum and maximum nameplate capacity per bid is 50 MW and 500 MW, respectively. The draft RFP requires capacity to be available no later than May 1, 2027. A copy of the 2022 flexible resource RFP can be found at this website. Next step is "Bid Due Date" on October 27, 2022. Complete Negotiations is expected on May 1, 2023.

  - **Energy Transfer unit planned exit**: OGE has been saying it plans to sell the "majority" of its Energy Transfer (ET) units this year, with a full planned exit in the near future. Starting from 95.4 million units, OGE has sold 73.3 million units or 77% of its ET units by the end of July at a 33% premium to where the units were trading at the close of the deal in Dec. 2021.

  - **Uri Proceeds**: Winter Storm Uri bond proceeds of $750MM in Oklahoma were received in July 2022. In Arkansas, the Company filed a request to recover $80MM of the Uri costs over ten years at a weighted average cost of capital. Hearings will be in early December.

- **Positioning into Qtr: Neutral.**

PINNACLE WEST CAPITAL CORPORATION

Underperform **TP $68**
Analyst: Michael Lonegan / Durgesh Chopra

- **Q3 EPS Bridge:** We project year-over-year EPS to decrease by -$0.43 to $2.57/share. Weather was unfavorable last year in 3Q21 but this year in 3Q22 we expect it to be modestly favorable. In terms of negative YoY drivers, we expect Pinnacle to see the impact of significantly lower rates, higher O&M expense, increased D&A, higher property taxes, increased interest expense, and a headwind from LFCR. In terms of positive YoY drivers, we primarily expect sales growth and higher AFUDC.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 and 2023 EPS guidance ranges:** We expect management to reaffirm (or update/narrow) its previously-announced 2022 EPS guidance range of $3.90 - $4.10. 2023 guidance range is expected to be announced after the resolution of next rate case (discussed below).
  - **Next rate case**: PNW plans to make a rate case filing by the end of October 2022. The filling will focus on investments to keep up with the strong growth story in Arizona. PNW will also look to simplify adjustor mechanisms and will request a clean energy rider again. Recall the rate case had been delayed from an original mid-year 2022 planned filing date due to requests for additional data from the Commission for the rate case, on topics that are seen as potentially supportive for the financial health of the utility. Pinnacle should also benefit now from using a June 30, 2022 test year instead of a December 31, 2021 test year.
  - **Reset story**: We expect the Company to continue to pitch a 2022 reset story for its stock after what it deems a unique rate case outcome in fall 2021. After a decline in 2022, EPS is forecasted to grow 5-7% CAGR through 2026 off 2022 levels, which we note is very dependent on the next rate case. The growth is expected to be back-end loaded with the first full expected year of new rates in 2024 from the next rate case. PNW has committed to deferring equity in its plan (now planning $400-500MM by 2024 after the next rate case) while being able to protect the balance sheet with strong load growth and flat O&M. We note the Company is now targeting a 16-18% FFO to debt metric. In November following the rate case outcome, Pinnacle West was downgraded by Moody's to Baa1 from its prior A3 rating and remains on a Negative outlook.
  - **Customer and sales growth**: the Arizona economy and its outlook have remained very strong. Quarterly customer growth was +2.0% YoY in the second quarter 2022 versus +2.2% in the first quarter and +1.5-2.5% annual guidance for this year. Weather-normalized load growth was +3.2% in the second quarter 2022 versus +4.4% in the first quarter and +1.5-2.5% annual guidance for 2022.
  - **O&M expense amid inflation**: Pinnacle West is targeting flat nominal O&M and declining O&M per kWh (with respect to 2021 levels) over its long-term plan, but inflation currently presents a significant challenge to this.
  - **Arizona rate case appeal**: PNW has an outstanding appeal for a prudency determination made on SCRs as well as reduction of ROE as penalty. Oral arguments are expected at the end of this year, with a final decision anticipated in early 2023.
  - **Positive developments with Arizona commission:** Pinnacle West's LFCR and PSA riders were approved without controversy this year, which is very different than the Company's experience last year with the Commission.
  - **Pension:** PNW does not have a pension tracker and there could be EPS headwinds in 2023. The Company's pension is currently moderately over-funded. Pinnacle has not made any voluntary contributions to its pension plan year-to-date in 2022. The minimum required contributions are zero and the Company does not expect to make any contributions in 2022, 2023 or 2024. With regard to contributions to its other postretirement benefit plan, PNW has also not made a contribution year-to-date and does not expect to make any in 2022, 2023 or 2024. We estimate a $0.33-0.53 potential EPS headwind next year based on YTD performance.

- **Positioning into Qtr: Neutral.**

Source: Evercore ISI, FactSet as of 10/18/22

Outperform **TP $32**
Analyst: Durgesh Chopra / Sharon Wang

- **Q3 EPS Bridge:** We project year-over-year ongoing EPS to increase by $0.09 from $0.36 to $0.45 driven by interest expense saving from debt retirement, new rate case in Kentucky, higher electric demand, and return on transmission investments, partially offset by higher D&A/other costs.

- **What to look for in the earnings report (Key debates/themes):**
  - 2022 & 2023 EPS Guidance Ranges: We expect management to reaffirm its previously announced 2022 EPS guidance range of $1.30-$1.45. 2023 guidance range is expected to be announced on the year-end earnings call
  - **Generation Capex Upside:** PPL's current capex plan through 2030 includes $1.5B in generation replacement capex, which may be pulled forward to the 2025-2027 timeframe. Earlier in the year, the company issued a request for proposal (RFP) to support energy and capacity needs ahead of expected 2028 coal-plant retirements (1GW) in KY. CPCN (Certificate of Public Convenience and Necessity) filling for generation replacement is expected around year end or early next year, which will likely have combined-cycle gas and renewables, mostly solar and storage, with a commission decision expected in six to nine months. EPA's Proposed "Good Neighbor" plan in February 2022 could expedite ~500MW of additional coal retirements by 2030. Combined with the onshore transmission capex upside, we estimate the $1.5B higher capex increases the company's 2021-2026 rate base CAGR from 4% to 5%, shrinking the rate base to EPS growth gap, which has been a key investor pushback. The estimated $1.5B in higher capex through 2026 would be $0.10 or 5% EPS upside to the implied 2026 EPS of $1.94. We get to our implied 2026E by applying a 7% CAGR (mid-pt. of 6-8% targeted EPS growth) on a 2022 normalized EPS starting point of $1.48.
  - **Transmission Capex Upside**: PPL sees potential to expedite transmission network upgrades primarily in RI and to some extent in PA, which could drive higher capex (amount undisclosed, we estimate up to $500m) and rate base growth over the 2024-2026 period. Furthermore, management highlighted $1B+ investment opportunities towards offshore transmission in 2026 and beyond, update to capex plans expected on the fourth quarter call.
  - **$150m Cost Savings Target**: Management expressed confidence in achieving its targeted $150m in O&M savings by 2025, which continues to be a conservative goal with only 40% ($80m) of the ~$200m attainable transmission & distribution (T&D) savings currently included in the plan.
  - **IRA Implications**: The solar PTC significantly improves project economics, and management sees it bolstering opportunities to own/rate base solar generation vs procuring through a purchase power agreement. The legislation's 15% AMT is not expected to have a significant cash flow impact on PPL's business, as the company is a cash taxpayer currently and the plan through 2025 calls for cash tax payment close to the 15% rate.
  - **Customer Bill Increase**: Just like peer utilities, PPL is facing cost pressures from elevated gas prices. Across the company's service territory, they expect customer bills to go up in the 5-30% range over the next few months. PPL is actively engaged with customer outreach on programs like flexible pay etc. In RI as part of the acquisition approval PPL committed to $50m in credits which would help offset a portion of the bill increase.

- **Positioning into Qtr: Neutral**.

PSEG
We make things work for you.

Outperform **TP $75**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year adjusted EPS to decrease by -0.19 to $0.79/share. We expect the lower EPS to be driven primarily by loss of earnings from the fossil sale, as well as by the impacts of lower transmission earnings from the FERC settlement, higher interest expense, reduced capacity revenues, and tax profiling.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EPS Guidance Ranges**: We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $3.35-$3.55, possibly pointing to the lower half. The Company has said it does not plan to issue 2023 EPS guidance until there is more clarity on its pension impact. Remeasurement of the pension each year is as of December 31st.
  - **Pension**: PEG has not provided much color on potential pension impacts (we estimate $0.25-0.42 EPS headwind for 2023), just stressing that it would be remeasured at 12/31/22. The Company made a filing in September 2022 in New Jersey related to pension treatment that would not change how it accounts for pension but would enable PEG to overlay a regulatory mechanism. If approved by the NJ commission, PEG would book a regulatory asset or liability to capture the timing difference in amortization, which could partly mitigate the potential near-term pension headwind. This would only consider the amortization of the pension net actuarial gas on loss at PSE&G. The company asked for a decision by December 31st but there is no requirement on the Commission's part to act by then. As a reminder, 80% of PEG's pension is recoverable through future rate case, which the Company plans on filing in early 2024. PEG did emphasize that its pension remains well-funded at ~95% and does not require any cash contributions for the foreseeable future.
  - **Analyst Day**: PEG will host an Investor Conference in the first quarter of 2023 and the expectation is that it will issue 2023 and update its long-term EPS growth guidance then.
  - **Inflation Reduction Act legislation**: PEG is one of the prime beneficiaries of a nuclear PTC included in the Inflation Reduction Bill. The bill enacts a nuclear PTC for existing generation. PEG qualifies for the $15/MWh PTC, based on prevailing wage rules, which will scale between 100% if gross receipts are ~$25/MWh and phases out at ~$44/MWh (cap). The initial PTC and cap are subject to annual inflation adjustments. PEG is seeking US Treasury clarification on gross receipts definition (on which the phase out is based). The legislation also equalizes the PTC rate for offshore wind with the 30% ITC rate and improves tax credit monetization with transferability and expands the carryback period from one to three years. As it relates to the corporate minimum tax, PEG said it is continuing to analyze the impact on its business including additional future guidance that the US Treasury is expected to issue. The Company anticipates that the sale of its fossil portfolio could mitigate near-term applicability of the minimum tax.
  - **Offshore wind transmission:** PSEG submitted nine bids for New Jersey offshore wind transmission in September 2021 and a decision is expected soon on October 26, 2022. PEG has said it expects it could result in $1-3B in total incremental investment over the back half of the decade. At ~$1B in offshore wind investments, we estimate ~$0.10 annual EPS upside or 2% of consolidated 2025 guidance using a 6% CAGR through the forecast period.
  - **Skipjack 1 and 2**: PEG also has the option to have an ownership stake in Orsted's Skipjack 1 and 2 offshore wind projects (combined ~1GW, ~$4B total cost by our estimate) and they are hoping to make a final determination sometime this year or early next year.
  - **Ocean 1 offshore wind**: The Ocean 1 offshore project FID is anticipated in 4Q22 or 1Q23.
  - **Customer Bills**: They are projecting 25% increase on the gas side. On the electric side the commodity rate auction will determine rates for June – May 2023 time frame.

- **Positioning into Qtr: Cautious: We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $3.35-$3.55, possibly pointing to the lower half.**

Sempra Energy®

Outperform **TP $171**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to increase +$0.10 to $1.80/share. We expect weather to be favorable this year. At SDG&E, we anticipate an increase from a step-up in FERC rate base. At SoCal gas, we expect a modest decrease due to higher interest expense. Sempra Texas should benefit from higher rate base and sales growth plus recovery under the TCOS and DCRF riders. We anticipate the Infrastructure business will contribute negatively YoY due to lower ownership share and higher O&M expense from signed contracts, plus the commodity environment, partially offset by the benefit of new projects. At the parent, we expect higher interest expense. Lastly, SRE will benefit from a lower share count due to its buybacks.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 and 2023 EPS guidance ranges**: On the second quarter 2022 call, Sempra stated that it expects to deliver the high end of its 2022 adjusted EPS guidance range of $8.10-8.70/share which we now think they could exceed due to strong third quarter. At that same time, the company maintained its 2023 EPS guidance of $8.60-9.20/share, which is likely to be updated with fourth quarter 2022 earnings.
  - **Strong momentum on various LNG projects** including: 1) Cameron LNG phase 2, which includes debottlenecking trains 1-3 for ~1Mtpa and then train 4 with projected nameplate capacity of ~6 Mtpa ($5-6B total cost by our estimate). It is expected to reach FID by summer 2023; 2) Port Arthur LNG phase 1 with long term offtake capacity of 10 Mtpa ($9- 10B total cost by our estimate). It is likely to reach FID sometime in 2023; and 3) Vista Pacífico LNG project, which is expected to be a midscale facility (~2-2.5 Mtpa) under development on Mexico's West Coast. We estimate ~$2B in total investment for likely a 2024 FID. In addition to the above, Sempra is pursuing additional LNG projects with a target total capacity of 25Mtpa. SRE will consider various alternatives to finance these projects including subsidiary and/or project level debt, selling project equity to owners and other interested parties.
  - **Texas and California rate cases**: Sempra has pending rate cases in Texas and California for new rates effective in 2023/2024 respectively. In Texas, the Hearing on the Merits concluded in early October 2022 and SRE continues to feel positive on a constructive outcome whether through a settlement or not given the strong story Oncor has to tell. In that case, Staff is recommending a net revenue increase of $21 million, a 9.3% ROE and a 40% equity layer versus Oncor's $251 million revenue increase request on a 10.3% ROE and 45% equity layer.
  - **California Cost of Capital application update**: In early October, for the 2022 COC application, the CPUC President Reynolds proposed keeping rates unchanged, while the ALJ proposed opening the proceeding up to phase 2 with a reevaluation; a final decision is expected by year-end 2022. For a 2023-2025 COC application, a final decision is also anticipated before year-end 2022.
  - **SoCal gas reaches settlement on investigation relating to Aliso Canyon gas leak**: On Oct. 11, 2022, SoCalGas reached a settlement with the Safety and Enforcement Division and California Public Advocates of the California commission to resolve the investigation regarding the Aliso Canyon gas leak. The settlement provides for financial penalties, certain costs that SoCalGas will reimburse, a violation of California Public Utilities Code section 451, and costs incurred by SoCalGas for which it will not seek recovery from ratepayers. The settlement agreement is subject to approval by the CPUC. As a result of entering into the settlement agreements with the fifth Developer Plaintiff and with SED and CalPA to resolve all aspects of the leak, Sempra expects to record a charge of $122MM, $101MM after tax, in 3Q22. As of Aug. 15, 2022, over 98% of the Individual Plaintiffs had agreed to participate and submitted releases, and SoCalGas paid $1.77B under the agreement on Aug. 30, 2022. As of Oct. 10, 2022, SoCalGas had either not received or not accepted as valid releases from approximately 390 Individual Plaintiffs, ~80% of whom had not been located or had failed to respond. The Individual Plaintiffs who do not participate in the settlement will be able to continue to pursue their claims.
  - **Customer bills**: Due to higher gas prices, Sempra's California winter bills could increase by 30%. On the electric side in both California and Texas, SRE does not expect anywhere near as high an impact from purchased power costs due to the fact that it procures mostly through fixed price PPAs.

- **Positioning into Qtr: Positive.** Strong Q3 positions SRE strong vs FY 22 expectations and/or de-risking '23. Building on the YTD momentum (SRE +12.5% vs peers -6.5%) we also expect SRE shares to benefit from continued progress on LNG projects.

Southern Company

In Line **TP $69**
Analyst: Durgesh Chopra / Michael Lonegan

- **Q3 EPS Bridge:** We project year-over-year EPS to increase +$0.09 to $1.32/share in line with company guidance of $1.32 for the quarter. Weather was modestly $0.02 unfavorable last year in 3Q21, and we expect it to be modestly favorable during the same period this year. In terms of positive YoY drivers, Southern should benefit primarily from new electric rates and higher sales growth at the utilities. For negative YoY drivers, we expect the Company to see higher O&M, increased interest expense, higher depreciation & amortization, increased taxes other than income, and share dilution.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 and 2023 EPS guidance update**: With Q2 results, Southern reaffirmed its 2022 EPS guidance of $3.50-3.60 while tracking well ahead of plan YTD; it said it plans to re-address this guidance on the Q3 call while saying it would be disappointed if it does not improve it within the range, but also signaling interest in de-risking the future and pulling forward O&M. The Company will issue 2023 EPS guidance in February 2023, along with a roll forward of capital plan and updates to its long-term EPS guidance.
  - **Vogtle:** On October 14th, Southern announced that nuclear fuel load had begun at Vogtle Unit 3 and that the unit is still projected to be in service in 1Q23. On September 29th, Georgia Power reached an agreement with the Municipal Electric Authority of Georgia (MEAG) to resolve its dispute with MEAG regarding the proper interpretation of the cost-sharing and tender provisions of the joint ownership agreements relating to Plant Vogtle Units 3 and 4. Under the terms of the agreement, MEAG will not exercise the tender option and will retain its full ownership interest in Plant Vogtle Units 3 and 4, Georgia Power will pay a portion of MEAG Power's costs of construction for Plant Vogtle Units 3 and 4 as such costs are incurred and with no further adjustment for force majeure costs, which payments will be in an aggregate amount of $76MM based on the current project capex forecast, and Georgia Power will pay 20% of MEAG's costs of construction with respect to any amounts above the current project capital cost forecast, with no further adjustment for force majeure costs. In addition, MEAG Power and Georgia Power agreed to dismiss the pending litigation described above, including Georgia Power's counterclaims. Based on the current project capex forecast, the Settlement will not require any additional charge to income by Georgia Power in 3Q22. The Settlement does not resolve the pending litigation with OPC and Dalton regarding the cost-sharing and tender provisions of the Vogtle Joint Ownership agreements. With respect to these disputes, based on the current project capex forecast, Georgia Power has remaining potential exposure of up to $165MM of further pre-tax charges to income. With Q2 results, Southern provided the update that Vogtle unit 3 is now expected to be in service in 1Q23 vs. "4Q22 through 1Q23" previously, and unit 4 is now anticipated to be in service in 4Q23 vs. "3Q23 through 4Q23" previously. Georgia Power's share of the cost estimate was increased $52MM to $10,453MM. Unit 3 and 4 remaining costs are $1,487MM. Unit 4 construction as of Q2 was 96% complete and is progressing in advance of cold hydro and hot functional testing
  - **Georgia rate case:** Southern filed a Georgia rate case on June 24th. Staff and Intervenor testimony is due on October 20th and hearings will be on November 8-10th with a final order is expected in December 2022 after the November 2022 election (terms effective Jan 2023) with the current existing commissioners to make the decision. SO has historically settled rate cases in Georgia. The Company asked for roughly $1B revenue increased based on a 11% ROE and 56% equity ratio.
  - **Incremental capex:** SO has identified up to $3B of potential incremental opportunities from Southern Power growth projects that could bring the five year capex plan to $44+ billion. Projects are primarily wind and storage-related and likely to include $250MM of spending this year, $500MM next year, and $750MM in each of 2024 through 2026.
  - **Inflation Reduction Act legislation:** Southern views the legislation as positive and pointed to the benefits of the solar PTC; the Company does not expect the 15% minimum tax provision to materially impact its results.
  - **Customer bills:** Through June 2022, Georgia Power had ~$1B of under recovered fuel. The Company will make a fuel filing in February 2023 to address this under-recovery and future rates on expectations for what fuel costs could be.

- **Positioning into Qtr: Neutral.**

Source: Evercore ISI, FactSet as of 10/18/22

Outperform **TP $31**
Analyst: Durgesh Chopra

- **Q3 EBITDA Bridge:** We project VST's Q3 EBITDA to be $1,050MM, which is ~30% of our FY 2022 EBITDA estimate of $3,200MM. VST's Q3 contribution (pre-Uri) has historically been in the 30-35% range.

- **What to look for in the earnings report (Key debates/themes):**
  - **2022 & 2023 EBITDA Guidance Ranges:** We expect VST to reaffirm its previously announced 2022 EBITDA guidance range of $2,810-$3,310MM, still tracking above the mid-pt. They have been guiding to $3.5-3.7B in 2023-2025 timeframe which we expect to be reiterated on the call as well.
  - **NOPEC related headwind.** In September 2022, citing rising electric prices Ohio's retail energy provider Northeast Ohio Public Energy Council (NOPEC) moved its 550K customers form its own platform to their utility default service provider. We estimate ~$10MM EBITDA impact per month (~$40MM for 2022) assuming VST has to procure power to serve as the default service provider to roughly 1/3rd of NOPEC customers.
  - **Capital Allocation Update**: VST has executed ~$1.6B of the authorized $2B share repurchase program as of Aug 5, 2022 and announced additional $1.25B of share repurchases to begin in 2022 and expected to be completed by year end 2023.
  - **Inflation reduction act:** The Inflation Reduction Act just as for industry peers would bolster Vistra's renewable (VST Zero) growth profile. Management stated that the 15% minimum tax will not be impactful through the planning horizon given Uri related and other book losses.
  - **VST Zero**: As of the second quarter 2022 call, Vistra restored Phases I and II of the 400-megawatt Moss Landing Energy Storage Facility in CA to service at 98% of its maximum capacity in July. VST announced its 50MW Brightside Solar Facility was online in April 2022 in TX. The Company also announced in each of May and June 2022 that its 260MW DeCordova Energy Storage Facility and its 108MW Emerald Grove Solar Facility were online in TX. With these announcements, VST has over 1GW of renewable assets in operation versus their target of ~5 GWs by year-end 2026 with the ~$5B in development capital (generation $350-500MM EBITDA) funded by project debt and other financings ($3.5B), Vistra Zero project cash flow($0.5B), and $1B preferred stock offering proceeds

WEC Energy Group

In Line **TP $103**
Analyst: Durgesh Chopra / Sharon Wang

- **Q3 EPS Bridge:** We project year-over-year EPS to decrease $0.07 to $0.85 in Q3 2022 higher than company's $0.82-$0.84 guidance range driven by favorable weather.
- **What to look for in the earnings report (Key debates/themes):**
  - **2022 and 2023 EPS guidance ranges:** On the Q2 earnings call The company raised its 2022 EPS guidance to $4.36 - $4.40 from $4.34 - $4.38, assuming normal weather for the rest of the year and expect to be at the top end. Consistent with past practice 2023 guidance will be provided in early December following WEC's board meeting.
  - **WI Rate Case**: WEC reached a settlement in Wisconsin for a base revenue increase of $507mm, with a 53% equity ratio vs current 52.5%, earnings sharing mechanism unchanged from 2022, and an authorized ROE to be decided by the commission. Requested ROE was 10.00% for Wisconsin Electric & Wisconsin Public Service and 10.20% for Wisconsin Gas. Commission staff positions are 9.8% for all. Wisconsin Electric also seeks approval to securitize $100mm of the remaining book balance of older Oak Creek coal units by 2024. Commission approval is expected in December.
  - **Inflation Reduction Act Implications:** Management stated that the Inflation Reduction Act is beneficial from a customer bill standpoint and provides WEC with future incremental renewable investment opportunities. PTCs and ITCs will create bill headroom of mainly renewables and batteries investment for regulated customer. Additionally, the ability to choose PTCs for solar projects and to transfer tax credits provides more flexibility for future renewable investments, which would apply both at utility and at the infrastructure segment. Management also said IRA update to allow for accelerated depreciation basically eliminated the previously stated 15% minimum tax cash flow headwind of roughly $20M-$30M per year, thus the legislation is going to be positive to company's credit metrics driven by higher pace of investment and monetization of tax credits amongst other things.
  - **Capex update on the third quarter call.** Consistent with past practice we will look for an update to the capex plan and targeted 6-7% EPS growth on the third quarter call in early November with spending biased higher compared to the current $17.7B projected investment from 2022 through 2026. Management pointed to three areas of addition spending 1) MISO $900MM capex investment awarded to ATC (details within); 2) $700MM 10-year grid hardening program in WI; and 3) Additional renewable investments bolstered by the Inflation Reduction Act (IRA). The company also mentioned Electric Vehicle related distribution spending (expect to increase electric demand by 20-50bps in the next five years) and faster renewable transition as longer-dated capex upsides
  - **MISO Transmission Capex:** In July 2022, MISO awarded roughly $900 million investment opportunity out of the total $10.3 billion MISO transmission capex in the first tranche of Phase 1 projects to ATC (American Transmission Company LLC), in which WEC has an approximately 60% equity ownership interest. Investment in these projects is expected to start as early as 2027. We estimate the earnings contribution of these projects to be roughly $27 million or ~2% of our 2024 EPS estimate of $4.91/share, though these projects are not expected to start going into service until at least 2028.
- **Positioning into Qtr: Neutral.**

Source: Evercore ISI, FactSet as of 10/18/22

Outperform **TP $75**
Analyst: Durgesh Chopra / Sharon Wang

- **Q3 EPS Bridge:** We project year-over-year EPS to increase $0.06 to $1.19/share. Positive YoY drivers include higher electric sales volumes, and new rates in Minnesota, Colorado, Wisconsin, Taxes, and New Mexico. In terms of negative drivers, O&M and higher depreciation, interest expense, and property taxes will be a drag.

- **What to look for in the earnings report (Key debates/themes):**

  - **2022 & 2023 EPS Guidance Ranges**: We expect management to reaffirm (or narrow) its previously announced 2022 EPS guidance range of $3.10-$3.20. 2023 guidance range is expected on the third quarter call, we estimate a range of $3.31-$3.37 which is 5-7% using 2022 guidance mid-pt of $3.15.
  - **MISO:** XEL estimates ~$1.2 billion investment opportunity out of the total $10.3 billion MISO transmission capex in the first tranche of Phase 1 projects awarded by MISO in July 2022, which could bolster LT earnings profile (2025+). There is also ~$1B spending that could be added through a competitive process. Certificates of need are required for the projects, and the process would be around 12 months. The total $30B spending in all of Phase 1 should be awarded over the next few years, which could mean potential for up to $5-$6 billion incremental investment for XEL, ~$0.25 annual EPS upside or 7% of our 24E.
  - **IRA Implications**: Management stated that the energy provisions included in the Inflation Reduction Act of 2022 would provide substantial customer benefits and help enable their clean energy transition. Furthermore, they can more than offset the cash flow drag from 15% minimum tax using renewable/other tax credits.
  - **Minnesota RC:** XEL recently reached a constructive settlement in the gas rate case for a $20.5MM revenue increase with an ROE of 9.57% and 52.5% equity ratio. The Minnesota commission decision is expected in the first quarter of 2023. XEL got first round of testimony in the electric case, which they feel is a good starting point, the company thinks they have a decent chance to reach a settlement.
  - **Colorado gas RC**. The company filed Colorado gas RC in January, with a decision expected later in October and rates effective in November 2022. Staff position was at 55% equity ratio/ 9% ROE, and UCA (Utility Customer Advocate) was at 51.5% equity layer/ 9% ROE, versus the current authorized ROE of 9.3% and equity layer of 55.5%. Both of interveners were using a historical test year while the company filed for forward test year. The Commission started the deliberations in September.
  - **ND gas case**. In September 2021, XEL filed an ND gas case requesting the rate increase of ~$7 million. The settlement on $5MM dollars rate increase has been reached with a 9.8% ROE and a 52.54% equity ratio. Final decision is expected in the 2022 Q3.
  - **Colorado Resource Plan:** In June 2022, Colorado Public Utilities Commission verbally approved a revised settlement, which will accelerate the retirement of the Comanche 3 (500 MW) coal unit by January 2031 (was 2070), with an expected carbon reduction of 85% and an 80% renewable mix by 2030. The CPUC deferred a decision on the method of cost recovery for the retiring coal units to a separate docket, which will consider accelerated depreciation, creation of regulatory assets and securitization. PSCo expects to file a recovery method docket in the fall. XEL is going to issue RFPs later this year, submit their recommended portfolios by mid-2023, and receive commission decisions in the second half of 2023.
  - **Customer Bill Increase**: Gas bills could be up around 25% vs prior year. XEL doesn't expect a material fuel driven increase on the electric side given their higher renewable generation mix.

- **Positioning into Qtr: Neutral.**

US weather in 3Q 2022 was favorable for utilities versus the same period last year and as compared to normal.

- **US weather in 3Q 2022 was favorable for utilities versus the same period last year and as compared to normal**. Based on National Oceanic and Atmospheric Administration (NOAA) cooling degree day data, the weather in 3Q22 drove 2% higher degree days versus last year and 18% above normal, on average across the US. All regions except NE Central, NW Central, and South Atlantic were higher when compared to 3Q21 and all regions were above normal. The weather was the most favorable in the SW Central, SE Central, and South Atlantic regions. Based on our Q3 preview conversations with several companies to date, weather has also been communicated as favorable versus guidance (normal weather), but the impact does vary on a company-by-company basis versus the prior year.

US Electricity Demand In Q3 2022 Was Up +0.5% YoY versus Q3 2021

- Based on EEI data, actual electric demand (not weather-normalized) was up +0.5% YoY on average across the US in the third quarter 2022. Regions were mixed, specifically, the South Central (+6.0%) was up the most, followed by Pacific region (+2.1%). Southeast (0.0%) was flat YoY. New England (-0.8%), West Central (-0.9%), Rocky Mountain (-1.0%), Mid-Atlantic (-2.5%), and Central Industrial (-3.1%) regions were in negative territory compared to the same period last year. Electricity demand could be a benefit or a headwind for pure-play electric utilities that have direct exposure to load (i.e. no decoupling mechanism).

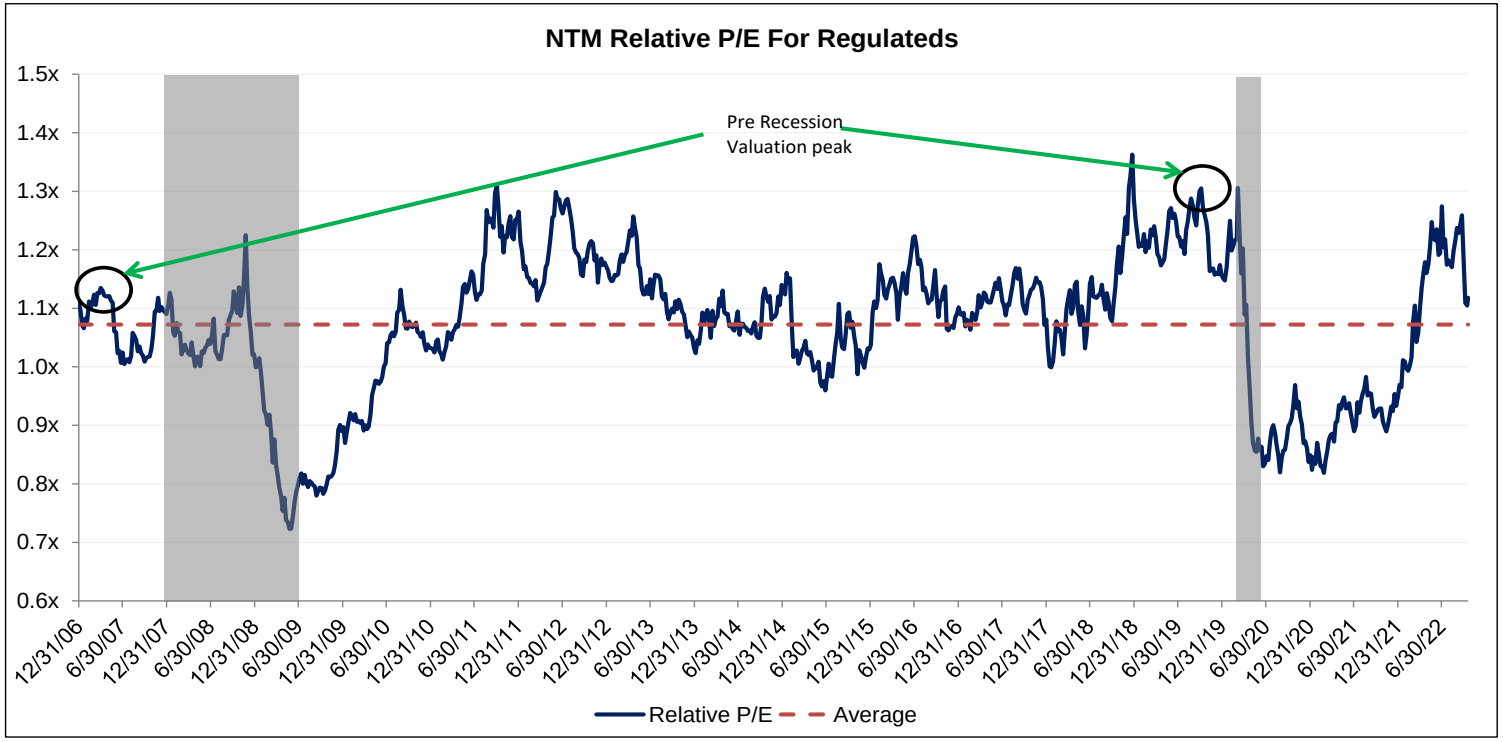
Absolute Valuation below pre-COVID recession levels & below peak

- Utes are trading 21% below 12-month pre COVID recession levels on an absolute basis and 32% below the valuation peak.
- On an absolute basis, NTM PEs for Utes averaged ~15x 12mths leading up to the 08/09 recession peaking at ~17x, in line with where the group is trading currently.
- In the COVID recession however, absolute P/E for Utes averaged ~21x 12mths prior and peaked at 23x, which would be 32% upside from current levels at ~17.4x.



Updated as of 10/18/22

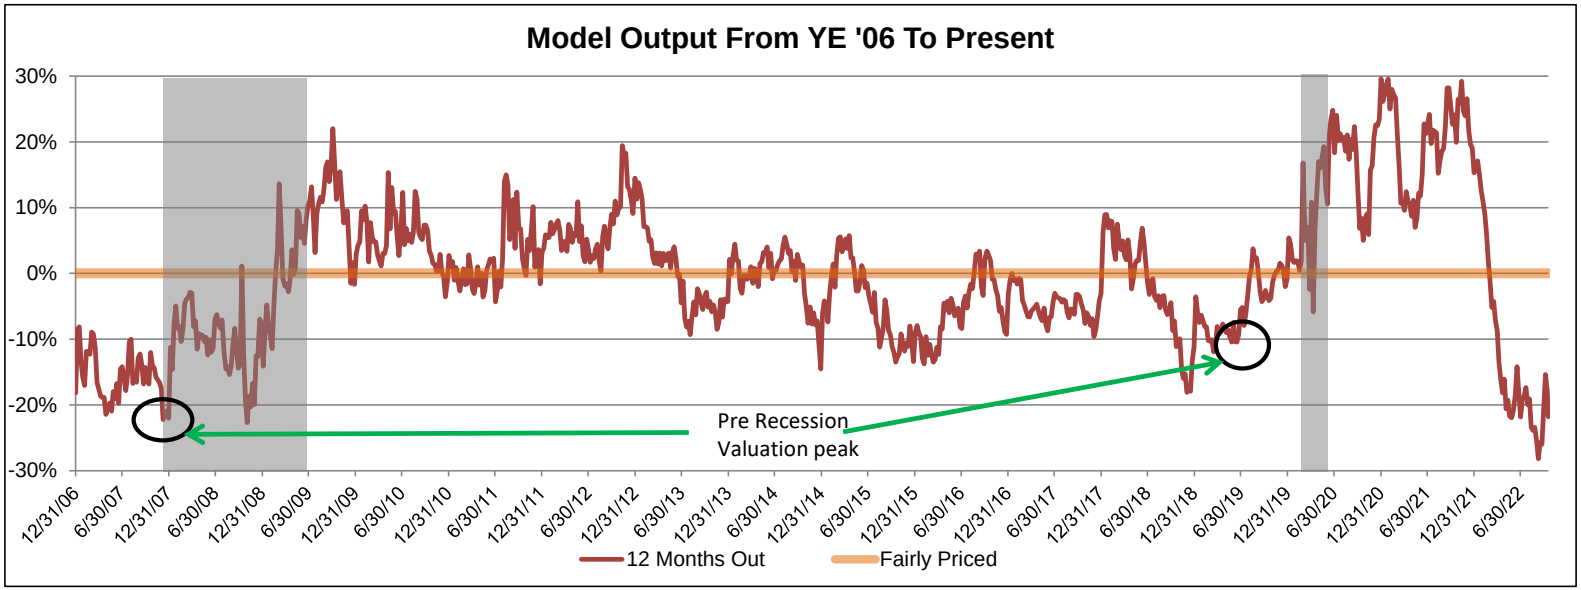
Group's NTM P/E relative to S&P 500 is below Pre COVID recession levels & below peak

- NTM P/E relative to S&P 500 is 9% below the 12-month pre COVID recession levels and 16% below the valuation peak.
- NTM relative PEs for Utes averaged 1.07x 12mths leading up to the 08/09 recession peaking at 1.13x, in line with 1.12x where the group is trading currently
- In the COVID recession, relative P/E for Utes averaged 1.22x 12mth prior and peaked at 1.30x, which would be ~16% upside from current levels at 1.12x assuming S&P500 stays flat



Updated as of 10/18/22

Source: FactSet, Evercore ISI Research

Bond regression model output close to 08/09 pre-recession peak

- The group was 16% expensive on average when compared to Moody's Baa yield in our bond regression model 12mths prior to the 08/09 recession with group valuation peaking at 24%.
- Utes were 4% expensive on average in our bond regression model 12mths leading up to the COVID recession peaking at 12%.
- Prior peak suggests ~1% multiple expansion (assuming yields stay flat) considering bond model readings in 08 recession.

ANALYST CERTIFICATION

The analysts, Durgesh Chopra, Michael Lonegan, Sharon Wang, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

IMPORTANT DISCLOSURES

This report is approved and/or distributed by Evercore Group L.L.C. ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and Evercore ISI International Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Inc. ("Evercore "). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore's Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI: 55 East 52nd Street, New York, NY 10055, and at the following site: https://evercoreisi.mediasterling.com/disclosure.

Evercore and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage sector.
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's coverage sector.
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's coverage sector.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%

Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Evercore ISI rating (as of 10/20/2022)

Coverage Universe			**Investment Banking Services I Past 12 Months**		
Ratings	**Count**	**Pct.**	**Ratings**	**Count**	**Pct.**
Buy	519	63	Buy	75	14

It has been an eventful week for the Energy macro, particularly for Oil, with one of the more consequential OPEC+ meetings in modern history, providing support to both the commodity and equities. The pressure on Utilities has also been top of mind, with the 16% pullback in the XLU in the past month (or 10% vs. the S&P in a defensive tape), one of the larger draw downs in recent memory, as well. That said, investor conversations are shifting real-time from the macro back to the micro across Natural Resources, with earnings upon us. This week, each senior analyst team identifies a large cap and small/mid cap stock where we believe the earnings results/call will be important – and discuss why. Companies that come up included:

E&P (Mehta/Choudhary):

- **What is a LARGE CAP stock where earnings will likely be important and why? What do investors expect?** Following OPEC+ decision to cut production and resulting improvement in oil price sentiment, we expect the key area of focus for investors heading to 3Q earnings would be on 2023 outlook including production/capex guidance from producers. Among large cap E&Ps, investor focus would be likely on PXD's earnings given concerns around declining productivity and on inflationary pressures on capex. In particular, on declining productivity, PXD noted that due to its shift to full stack development (driving more wells targeting the Spraberry zone in the mix) has resulted in lower initial rates but also lower decline rates. Investors will look for PXD to meet/exceed consensus production outlook in 2022, and commentary around growth plans for 2023 while mitigating inflationary impact (a key headwind for US E&Ps) from tight services/labor markets. Lastly, investors will look for continued execution towards PXD's shareholder returns framework which calls for ~75% of FCF post base dividend to deployed towards variable dividends which implies high-single digit dividend yield.
- **What is a SMALL/MID CAP stock where earnings will likely be important and why? What do investors expect?** Among SMID E&Ps, we expect more investor focus on PDCE as the company has noted lower production guidance in 2H to reflect downtime in upstream/midstream operations in the DJ and delays in the Delaware. Updates on the easing of operation constraint would be in focus as the company has noted expectations for production to recover in exiting this year, and given PDCE's plans to grow production by 5%

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

in 2023. Lastly, investor focus will be on the company's ability to mitigate inflationary pressure which is tracking 10%-20% higher yoy in 2023. Further updates on Colorado permitting and updates on public comment/commission hearing on Guanella Comprehensive Area Plan (CAP) will also remain a key focus for investors as it could further derisk the company's CO undeveloped inventory.

Energy Services (Mehta/Modak):

- **What is a LARGE CAP stock where earnings will likely be important and why? What do investors expect?** We view HAL earnings as likely important for 3Q22 to reset investor expectations around the strength in the company's US revenue and free cash flow potential as well as the exposure to the international markets rate of change. In particular given the current macro uncertainty around the next source of supply barrels for oil, HAL is best positioned to benefit. If international activity continues for spare capacity building and a revision towards a softer production cut as OPEC has expressed flexibility for, HAL's shares should benefit as we believe current prices do not reflect the value of international. On the other hand, if US activity ramps up to fill the gap, HAL should be the primary beneficiary. Investor expectations on HAL however have softened given the second derivative of the rig count change in the US has slowed down materially compared to 1H22.
- **What is a SMALL/MID CAP stock where earnings will likely be important and why? What do investors expect?** We view MTZ earnings as important given that the stock has meaningfully underperformed more recently following execution challenges. During 3Q22 earnings, we expec investor focus to be on margin progressions, supply chain and labor challenges, ability to pass costs to customers, re-contracting risk for better inflation protection terms and project execution risk. Investors will also be focused on guidance for 4Q22 and 2023, capital spending expectations from customers following IRA developments, and color around integration progress following several acquisitions made more recently.

Majors & Refining (Mehta/Davenport):

- **What is a LARGE CAP stock where earnings will likely be important and why? What do investors expect?** Among the large caps, investors have been highly focused on the quarter for Phillips 66, both as it relates to earnings execution as well as capital returns and the proposed DCP transaction. On earnings execution, investors seem to be constructive on the refining/marketing pieces of the business, but still concerned on Chemicals weakness. That said, capital returns remain top of mind. When the company announced the proposed DCP transaction, some investors queried if it would negatively impact the company's ability to return capital to shareholders, particularly after 2Q buybacks were essentially non-existent versus peers that repurchased significant amounts of stock during the quarter. Investors are also looking towards the November 9 Analyst Day for an update by the company on the DCP transaction.
- **What is a SMALL/MID CAP stock where earnings will likely be important and why? What do investors expect?**

For the exclusive use of MWEISENBURGER@NISOURCE.COM

KOS reports earnings early November - where investors will be looking towards further updates around Tortue Phase 1 and particularly the sailaway date for the FPSO (previously anticipated by the end of this year). Certain investors see reduced risk to the timeline for Phase 1 since the FPSO vessel was returned to the quayside late September and no significant damage was identified. Additionally, we expect investors to be focused on any updates around Tortue Phase 2 during earnings, where a development decision for the project is expected before year-end and could provide further insight into contract pricing for the project (Tortue Phase 1 at ~9.5% slope to Brent), as well as project capacity (Tortue Phase 1 at 2.5 mtpa).

Metals & Mining (Chieng):

- **What is a LARGE CAP stock where earnings will likely be important and why? What do investors expect?** While the Q3 print itself will be less relevant (as the company pre-guided in mid-September), we expect focus on NUE will be high, given the company is the largest steel producer in the US, and investors are increasingly concerned around the demand outlook for steel across a broad range of end markets and the read-across for the broader steel equities. Expectations broadly are that non-residential construction demand remains strong (but that the second derivative may be softening at the edges), while we may be seeing early signs of improving autos demand. We believe investors expect to see cost pressure relief into the Q4 as high cost inventory is worked through, although margin pressure will likely persist as price realizations have already further eased from Q3 levels in the first week of the October.
- **What is a SMALL/MID CAP stock where earnings will likely be important and why? What do investors expect?** Investor interest in the downstream aluminum processors have picked up recent weeks, following ARNC's 2022 EBITDA guidance downgrade (on idiosyncratic operational issues and European exposure) and importantly, the read-across for CSTM. While CSTM has not provided guidance updates, given the company has substantial exposure to Europe (more than 40% of sales), investors have taken a more cautious approach to the stock into the quarterly result, reflecting uncertainty around European demand and power exposure. Those who remain optimistic view the lack of guidance update and robust power hedging strategy as reasons to lean more positively into the stock (although note some risk to volumes), particularly following a 30% pullback in the past 6 months.

Utilities (Lapides/Kim):

- **What is a LARGE CAP stock where earnings will likely be important and why? What do investors expect?** Among large cap stocks, investor focus will likely turn to Dominion Energy (D) given an initial order by its state regulator requiring performance guarantees – which D opposes – for its $10bn regulated offshore wind project. D already requested that its regulator reconsider this part of the order – but if a final ruling does not occur by 3Q2022 earnings, investors will likely await updates on how D plans to proceed if the performance guarantee remained in place. Some query whether D would consider delaying or cancelling this project given the performance guarantee would potentially create financial risk for D;

For the exclusive use of MWEISENBURGER@NISOURCE.COM

others inquire about potential ways D could appeal this state utility regulation in either state or federal courts if a reversal does not happen – and what the timeline or process for this would look like.

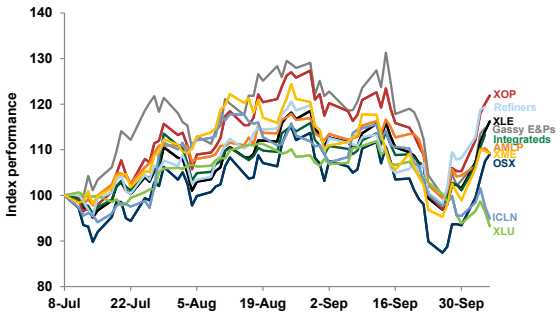
- **What is a SMALL/MID CAP stock where earnings will likely be important and why? What do investors expect?** NiSource (NI) remains a big focus for investors ahead of its 3Q earnings/Analyst Day, as management plans to provide revised long-term earnings growth guidance as well as results of its strategic review process. Some expect the event to underwhelm with no material announcements, and some queried if a potential sale of one of its gas utilities would be announced (which NI stated as part of its considerations). Others see low expectations as already priced in given the stock's underperformance since June, and believe a combination of robust 5-year growth plan and intention to fund investments through future asset sales could re-energize shares from here.

Midstream (Lapides/Mackay):

- **What is a LARGE CAP stock where earnings will likely be important and why? What do investors expect?** With the macro backdrop softening, investor questions are increasing around more defensive stocks in midstream. MPLX is top of mind for many given its strong contract mix, clean balance sheet, improved counterpart risk (vs. 2020), and high distribution yield. That said, following mixed communication around capital returns on prior earnings calls this year has raised the importance of execution on 3Q22. Initial disclosures from MPLX suggest the buyback could be twice as high as we expected in the quarter, but forward messaging will be watched more. In our view, investors are generally positively inclined – particularly as a defensive play – but the capital return debate needs to be solidified for them.
- **What is a SMALL/MID CAP stock where earnings will likely be important and why? What do investors expect?** At 3Q2022, investors will look hard for detail on capital allocation potential – with a lot of focus on PAA here given asset sales that have driven an improvement in the balance sheet metrics. If 2023 guidance comes in near or above consensus views, and if PAA does not announce material new projects that would drive capital spend higher, investors may begin asking on this one whether an acceleration in unit buybacks could occur in 2023. Deleveraging remains key and some investors would rather PAA focus its cash deployment towards further debt paydown and a lower net debt/EBITDA target – others we talk to hope to get more of a balance in terms of debt paydown and unit buybacks ahead.

Clean Tech (Lee):

- **What is a LARGE CAP stock where earnings will likely be important and why? What do investors expect?** Investor focus on ENPH remains high as this bellwether is set to report first and has set the tone for the broader group in multiple instances over the past few earnings seasons. Importantly, the company has also executed quite well in recent times and expectations for another beat-and-raise appear to be running high into this print, though some concerns around growing EU exposure, and thus impact from FX headwinds, has crept into discussions of late while the recent pushout in



For the exclusive use of MWEISENBURGER@NISOURCE.COM

CA's NEM 3.0 timing has been viewed as leaving an outstanding overhang on resi-exposed stocks through the next few months. Net/net, sentiment on the name still skews positive with the most meaningful pushback being around valuation and more difficult risk-reward in a high-multiple name in the current market backdrop.

- **What is a SMALL/MID CAP stock where earnings will likely be important and why? What do investors expect?** Investor inbounds on ARRY ahead of earnings have picked up as this remains one of the more highly debated names across our SMID-cap coverage. On the bear side, focus on FCF generation (or lack thereof) and an unproven margin recovery story remains high, though it wouldn't appear that expectations for a miss are all that high, based on our conversations. On the flipside, bulls continue to see more upside given somewhat improved execution and the potential for IRA tailwinds, as well as just generally less headwinds from policy and other macro factors that have weighed throughout 2022.

Conversations we are having with investors

E&P – Neil Mehta & Umang Choudhary

Energy stocks are up this week — XLE up ~14% WTD (vs. +1% for S&P 500) — following OPEC+ decision to cut production by 2 mn bpd starting November (effective cut of ~1.2 mn bpd) owing to heightened macro concerns and to incentivize appropriate investment in oil and gas industry. This has driven bullish view on the oil equities as the oil market's buffers (stocks and spare capacity) remains low which will drive the need for higher oil prices to incentivize further spending towards supply growth or further demand destruction. Investor focus has been around how US E&Ps growth/spending outlook for 2023 – producers have highlighted service market constraints, uncertain macro environment (especially on demand), and lack of infrastructure (Permian pipeline constraints) as key considerations driving lower capital allocation towards growth. Another area of focus will be on capital spending for 2023, with the potential for further consensus capex increases due to inflationary pressure. Among large-caps, investors remain positive on execution for FANG/EOG, and are concerned on oil productivity for PXD. Among SMIDs, execution has been a concern for APA/PDCE following negative updates with 2Q results though upside from JKM linked LNG contract for APA, and derisking of CO inventory for PDCE. For MUR, investors are positive on debt reduction, and the potential for increased FCF towards capital returns though resource depth (outside the Montney) remains an area of concern. Sentiment around gassy E&Ps is weak given potential for negative commodity price revisions with higher gas supply and lack of material LNG export additions in 2023/24, however there remains upside risks heading into winter given coal inventories are low. Gas producers are now discounting low-$3/MMBtu Henry Hub gas price, well below the current gas futures. A key focus for investors will be on capital allocation towards growth from gas producers with 3Q earnings. NGLs prices have recently derated due to lower demand, however investors believe the sentiment for AR/RRC have bottomed which has driven relative outperformance vs. non-NGLs levered gas peers this week.

Majors/Refining – Neil Mehta & Carly Davenport

Canada. This week, we hosted our annual Canada Energy Symposium in New York. During the event and in subsequent investor conversations, key focus areas from investors included (1) outlook for 2023 capital spending, (2) views on WTI-WCS differentials and pipeline egress, (3) trajectory for the Pathways project, and (4) company specific updates. On 2023 capital spending, the outlook for companies like SU, MEG.TO, and CVE surprised investors to the upside, though were more in line with our estimates. On WTI-WCS, the consensus view was that spreads will remain around the $20/bbl level until TransMountain expansion comes online, which most companies still viewed as a late 2023 event. On Pathways, MEG noted that more updates around the project should come following the October elections in Alberta. Finally on company specific updates, investors were focused on the CEO search at Suncor as well as the strategic review at retail, any updates on timing to restart the Toledo refinery at Cenovus and potential impacts on the proposed transaction with BP due to the fire, and the path forward to capital returns at IMO including if/when the company would consider another SIB or a dividend increase after the NCIB is exhausted. In our recent conversations, investor sentiment has been more constructive on SU and CNQ, more neutral on IMO.TO and MEG.TO, and more negative on CVE.

Early views on 3Q earnings. Investors conversations this week on refining have started to focus on the outlook for 3Q earnings. Broadly, investors still are constructive on the potential earnings and FCF power of the refiners given strength in 3Q margins, though we note that the narrative around demand concerns continues to play a significant role in conversations about willingness to own the equities here. PSX outperformed this week as consensus estimates start to move higher into the quarter, and investors have gotten more confident that refining and marketing strength could be an offset to weakness in the chemicals business. A key focus area will likely be the buyback level, based on our conversations, where investors have queried if the announced DCP transaction could prevent the company from leaning into repurchases this quarter. XOM's 8-K trading update largely surprised us and investors to the upside. As we have written in previous Pulse reports, many investors had turned tactically more positive on CVX vs. XOM given concerns around the near-term impact of weaker Chemicals and Refining margins. While those businesses came in broadly in line to slightly above our estimates in the 8K, positive impacts from the strong gas price environment more than offset it.

Energy Services – Neil Mehta

BKR. Ahead of earnings, investors continue to express an interest in BKR, but are looking for improved earnings performance in Q3. While investors appreciate where BKR is positioned in the LNG market, they continue to be cautious given the company's past earnings misses which have affected investor confidence. Margin compression in BKR's Digital Solutions segment continues to be a theme of investor conversations given ongoing supply chain challenges. Following their Russia exit, OFS margins are also top of mind for investors as they evaluate their position in BKR going into earnings.

PWR. Amongst investors, there continues to be an appetite for exposure to energy transition following the IRA, and PWR continues to capture investor interest. Recent conversations have also highlighted the exposure PWR has to regulated utilities given more than 70% of their revenue is from utility customers. As such, investors have begun inquiring about expected capex spending from utility companies in the coming years. In the inflationary environment, investors also appreciate PWR's ability to pass through costs to customers given their shorter contract duration.

MLPs/Pipelines – Michael Lapides & John Mackay

We are getting increasing inbounds from investors on NGL exposed stocks – ones like EPD, ET, TRGP and OKE especially – given softness in the NGL markets and weakness seen among chemicals companies, many of whom are customers of these midstream operators, that pre-released negatively in the past few weeks. Investors appear most concerned about OKE – given these trends and their ongoing outage of a MidCon fractionation facility – followed closely by EPD, with TRGP benefitting from the recently acquired Permian business that may partially offset NGL price headwinds and ET simply being more diversified given its large natural gas/oil pipeline segment. Most worry more on 3Q2022 results than on 2023 guidance — but recognize the broader commodity price pullback may hinder upside to 2023 consensus views.

Utilities/IPPs - Michael Lapides & Insoo Kim, CFA

Do utilities now screen attractive? After another week of underperformance versus the S&P500, utility valuations garnered the most attention from investors with many querying whether this earnings resilient sector screens attractive heading into 3Q2022 earnings. Some investors do believe at least a modest overweight position is warranted given their view that downward estimate revisions are inevitable for the broader market, which would imply utilities screening more attractively than the current ~10% premium on consensus estimates. However, others remain wary of the near-4% 10-year treasury yields, which historically stands as a major roadblock to utilities achieving and sustaining premium valuation status.

PCG recent outperformance has investors asking what catalysts remain. PCG got added to the S&P500 and also made a state regulatory filing to seek approval regarding creating a separate subsidiary to own its non-nuclear generation assets - with, if the structure gets state approval, plans to seek minority stake investors in this subsidiary - a potential source of capital to fund future, higher rate base growth per the filing. Some bearish investors we talked to believe PCG now lacks catalysts and relative valuation appears less attractive here - and still warrants a discount given wildfire related risk remains. Others see PCG as trading at still an almost 30pct discount to peers - and that higher rate base growth could mean upside to EPS.

Clean Technology – Brian Lee, CFA

We received numerous investor inbounds this week focused on the recent weakness in solar stocks, with investors particularly focused on weakness in residential solar stocks including RUN, NOVA, SPWR, ENPH and SEDG. Conversations with investors suggested that sentiment on the group is being negatively impacted by macro concerns on rates as well as weakness in the tech sector. In addition, we have seen heightened investor worry regarding the ongoing NEM 3.0 proceeding in California, especially as the CPUC lapsed a procedural deadline to issue an updated proposed decision last week. We expect regulatory uncertainty in California to be somewhat of an overhang on the group until more clarity is provided by the CPUC on the timing of an updated proposed decision. Among our coverage, we received the highest number of inbounds on ENPH, with questions focused on the company's high valuation relative to peers, residential solar growth both in the US and Europe, market share gain, and chip availability.

Metals/Mining - Emily Chieng, CFA

Steel note and STLD upgrade/RS downgrade feedback: This week, we updated our steel price outlook into 2023 and while most investors agreed with the lowered steel price trajectory, we received more mixed feedback on the STLD upgrade. Investors who were positioned more positively on the name agreed with the strength of the Fabrication business and potential relative defensiveness of the stock given the increased level of integration. Those more negative however expected a faster collapse in margins towards normalized levels by end-2023, and therefore viewed the stock as fairly priced at current price levels. On RS, while most investors did not disagree with the downgrade, those positioned more positively viewed the stock as still being the most defensive in a steel downcycle.

Industrial metals back in focus ahead of earnings. By now, investors have accepted that Q3 earnings will be weak for the industrial metals complex, on the back of lower commodity prices, still-elevated energy and raw material costs and impacts to production. That said, we have recently fielded more inbounds on copper, following news on the ban of warranting of copper produced by UMMC (Ural Mining Metallurgical Company). While we note this is a logistical bottleneck and not an absolute supply loss, we see the likelihood of short-term dislocations that will ultimately resolve as trade flows are rerouted elsewhere. Among the equities, we still see modest preference for TECK over FCX, although note investors are more cautious around recent coal operational issues and QB2 ramp profile given recent readacross from Antofagasta and Anglo American.

Disclosure Appendix

Reg AC

We, Neil Mehta, Michael Lapides, Brian Lee, CFA, Insoo Kim, CFA, John Mackay, Emily Chieng, CFA, Umang Choudhary, Carly Davenport and Ati Modak, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Disclosures

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	50%	35%	15%	65%	58%	45%

As of July 1, 2022, Goldman Sachs Global Investment Research had investment ratings on 3,132 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage universe and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other

For the exclusive use of MWEISENBURGER@NISOURCE.COM

ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) have been suspended pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Public Communication Channel Goldman Sachs Brazil: 0800 727 5764 and / or contatogoldmanbrasil@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou contatogoldmanbrasil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Effective from the date of the United Kingdom's departure from the European Union and the European Economic Area ("Brexit Day") the following information with respect to distributing entities will apply:

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: GSI, authorised by the PRA and regulated by the FCA and the PRA, disseminates research in the following jurisdictions within the European Economic Area: the Grand Duchy of Luxembourg, Italy, the Kingdom of Belgium, the Kingdom of Denmark, the Kingdom of Norway, the Republic of Finland, the Republic of Cyprus and the Republic of Ireland; GS -Succursale de Paris (Paris branch) which, from Brexit Day, will be authorised by the French Autorité de contrôle prudentiel et de resolution ("ACPR") and regulated by the Autorité de contrôle prudentiel et de resolution and the Autorité des marches financiers ("AMF") disseminates research in France; GSI - Sucursal en España (Madrid branch) authorized in Spain by the Comisión Nacional del Mercado de Valores disseminates research in the Kingdom of Spain; GSI - Sweden Bankfilial (Stockholm branch) is authorized by the SFSA as a "third country branch" in accordance with Chapter 4, Section 4 of the Swedish Securities and Market Act (Sw. lag (2007:528) om värdepappersmarknaden) disseminates research in the Kingdom of Sweden; Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research in the Federal Republic of Germany and those jurisdictions within the European Economic Area where GSI is not authorised to disseminate research and additionally, GSBE, Copenhagen Branch filial af GSBE, Tyskland, supervised by the Danish Financial Authority disseminates research in the Kingdom of Denmark; GSBE - Sucursal en España (Madrid branch) subject (to a limited extent) to local supervision by the Bank of Spain disseminates research in the Kingdom of Spain; GSBE - Succursale Italia (Milan branch) to the relevant applicable extent, subject to local supervision by the Bank of Italy (Banca d'Italia) and the Italian Companies and Exchange Commission (Commissione Nazionale per le Società e la Borsa "Consob") disseminates research in Italy; GSBE - Succursale de Paris (Paris branch), supervised by the AMF and by the ACPR disseminates research in France; and GSBE - Sweden Bankfilial (Stockholm branch), to a limited extent, subject to local supervision by the Swedish Financial Supervisory Authority (Finansinpektionen) disseminates research in the Kingdom of Sweden.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or

For the exclusive use of MWEISENBURGER@NISOURCE.COM

views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

Goldman Sachs & Co. LLC

NiSource (NI, Buy) reported 3Q22 operating EPS of $0.10, largely in-line with FactSet consensus of $0.11 but below GSe $0.15, and in-line with 3Q2021 EPS of $0.11. NI narrowed 2022 guidance to $1.44-$1.46 keeping the midpoint the same at $1.45 from an earlier range of $1.42-$1.48, in-line with GSe/consensus of $1.45/$1.45. NI initiated FY23 guidance of $1.50-$1.57 ($1.54 midpoint) in-line with the previous 5-7% growth commitment through 2023; this compares to consensus at $1.54 while the top-end is in-line with GS at $1.57. Also, with the results of its strategic review, NI issued new long-term operating EPS growth guidance of 6-8% from 2021 through 2027, versus 7-9% through 2021-2024, while announcing a minority sale of its Indiana utility NIPSCO that eliminates any equity needs through 2025.

Key takeaway: While 2022 and 2023 guidance screen in-line, we see the revised longer-term EPS growth rate as the key focus ahead of today's Analyst Day. We look for additional details on this outlook, including whether management still expects to achieve 7-9% growth through 2024 per prior plan and assumptions embedded (including NIPSCO minority sale plans).

Takeaways from the 3Q2022 release and supplemental slides include:

- **NI's 3Q22 miss versus GSe was largely driven by lower gross margin with weather being a headwind of $10.4mn versus normal.** On the electric side, 3Q22 weather-adjusted sales decreased 1.7% YoY, driven by 6.8% decrease in residential load and slight 0.22% decrease in industrial load. On the gas side, weather adjusted sales were mostly flat on YoY basis.
- **Regulatory updates -** On the electric side, NIPSCO recently filed a rate case requesting a ~$292mn rate increase to support renewable generation and transmission with new rates to take effect in September 2023. On the gas distribution segment, NI reported filing a settlement at Ohio for rate increase of $68.2mn and RoE of 9.6%, while proposing a settlement at the PA gas utility for a rate increase of $44.5mn.
- **NI extended growth plan to $15bn capex for 2021-2027 (from $10.6bn for 2021-2024) -** supporting 6-8% long term EPS growth. With plans to sell a minority stake in NIPSCO, the company sees no equity needs through 2025, then potential for a modest ATM program beyond to partially finance future

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

For the exclusive use of MWEISENBURGER@NISOURCE.COM

growth.

Key topics to monitor on NI's earnings call and Analyst Day (12pm ET) include: 1) additional details on the revised and extended growth rate, including assumptions embedded in the new outlook, 2) timeline and magnitude of the minority stake sale at NIPSCO, 3) color on YTD decline in weather-normal electric demand growth, especially in the industrial customer base, and 4) update on the Ohio/PA gas rate case proposed settlement and what's embedded in the company's EPS growth guidance.

Our 12-month price target of $32 embeds assigned electric/gas utility P/E multiples (on 2024E) of 19x/18x, which represent ~10%/5% premiums to our 17x industry base multiple for regulated utilities. Key downside risks include: 1) NI continues to face additional solar development delays, which potentially pressure earnings power, 2) unfavorable outcome in the outstanding and upcoming rate cases, which lowers allowed returns (especially in OH), 3) NI fails to realize rate base additions and instead has more PPA generation, and 4) NI announces strategic initiatives that are dilutive to EPS.

Reg AC

We, Insoo Kim, CFA, Michael Lapides, John Miller, Shriya Dargan, Jaskaran Jaiya and Shuaib Joomun, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at:

https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) have been suspended pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Public Communication Channel Goldman Sachs Brazil: 0800 727 5764 and / or contatogoldmanbrasil@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou contatogoldmanbrasil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Effective from the date of the United Kingdom's departure from the European Union and the European Economic Area ("Brexit Day") the following information with respect to distributing entities will apply:

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: GSI, authorised by the PRA and regulated by the FCA and the PRA, disseminates research in the following jurisdictions within the European Economic Area: the Grand Duchy of Luxembourg, Italy, the Kingdom of Belgium, the Kingdom of Denmark, the Kingdom of Norway, the Republic of Finland, the Republic of Cyprus and the Republic of Ireland; GS -Succursale de Paris (Paris branch) which, from Brexit Day, will be authorised by the French Autorité de contrôle prudentiel et de resolution ("ACPR") and regulated by the Autorité de contrôle prudentiel et de resolution and the Autorité des marches financiers ("AMF") disseminates research in France; GSI - Sucursal en España (Madrid branch) authorized in Spain by the Comisión Nacional del Mercado de Valores disseminates research in the Kingdom of Spain; GSI - Sweden Bankfilial (Stockholm branch) is authorized by the SFSA as a "third country branch" in accordance with Chapter 4, Section 4 of the Swedish Securities and Market Act (Sw. lag (2007:528) om värdepappersmarknaden) disseminates research in the Kingdom of Sweden; Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research in the Federal Republic of Germany and those jurisdictions within the European Economic Area

For the exclusive use of MWEISENBURGER@NISOURCE.COM

where GSI is not authorised to disseminate research and additionally, GSBE, Copenhagen Branch filial af GSBE, Tyskland, supervised by the Danish Financial Authority disseminates research in the Kingdom of Denmark; GSBE - Sucursal en España (Madrid branch) subject (to a limited extent) to local supervision by the Bank of Spain disseminates research in the Kingdom of Spain; GSBE - Succursale Italia (Milan branch) to the relevant applicable extent, subject to local supervision by the Bank of Italy (Banca d'Italia) and the Italian Companies and Exchange Commission (Commissione Nazionale per le Società e la Borsa "Consob") disseminates research in Italy; GSBE - Succursale de Paris (Paris branch), supervised by the AMF and by the ACPR disseminates research in France; and GSBE - Sweden Bankfilial (Stockholm branch), to a limited extent, subject to local supervision by the Swedish Financial Supervisory Authority (Finansinpektionen) disseminates research in the Kingdom of Sweden.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

Ahead of 3Q2022 earnings season, we adjust estimates for a handful of US utilities including: CMS Energy (CMS, Buy), DTE Energy (DTE, CL-Buy), Ameren Corp (AEE, Neutral), Eversource Energy (ES, Neutral), OGE Energy (OGE, Neutral), and Dominion Energy (D, Sell) - and highlight items to focus on going into earnings. Of the stocks mentioned in this report, we now expect 3Q2022 results for OGE to beat FactSet consensus, while our CMS and DTE estimates screen below expectations. Key topics to focus on this earnings season for US utilities include: 1) updated thoughts on impact from the Inflation Reduction Act (IRA), including on capital opportunities and balance sheet, 2) interest rate/refinancing exposure for holding company debt, 3) electric/gas demand growth trends including any signs of demand weakness given the current macro-economic backdrop and 4) key project execution and key regulatory events ahead.

As detailed in our prior note, we become more constructive on US utility valuations after recent underperformance, with an average of 19% total return potential across our coverage universe. We continue to recommend a balanced approach to investing in utilities - Buy-rated AES and NEP (on CL) for clean energy exposure, DTE (on CL) among defensive utilities, and FE, PEG, PCG and PPL for value oriented opportunities.

Exhibit 1: Our 3Q2022 D EPS estimate screens slightly above consensus, while CMS and DTE screen well below
EPS New vs Old vs Consensus, 3Q2022

	3Q22				
	GS New	GS Old	Cons	vs Old	GS vs Cons
AEE	$1.70	$1.75	$1.74	(3%)	(2%)
CMS	$0.55	$0.67	$0.66	(18%)	(17%)
D	$1.13	$1.29	$1.11	(12%)	2%
DTE	$1.60	$1.86	$1.70	(14%)	(6%)
ES	$1.07	$1.16	$1.08	(8%)	(1%)
OGE	$1.17	$1.13	$1.10	4%	6%

Source: FactSet, Goldman Sachs Global Investment Research

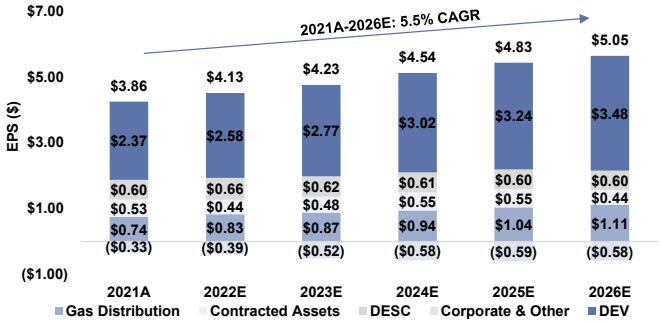
- **Ameren Corp (AEE, Neutral, $93 PT) - 3Q2022 EPS: $1.70 GSe vs $1.74 FactSet consensus** and 3Q2021 of $1.65. We adjust down our 3Q2022 EPS estimate from $1.75 to $1.70, reflecting higher expenses YoY partly from its surrender value of company-owned life insurance (COLI) - levered to equity market returns, and higher interest expense partially offset by higher ROE at the Ameren Illinois utility (given formula rates tied to 30-year treasury yields) and moderately positive weather versus normal. We also adjust our 2022-2024 EPS estimates to $4.04/$4.33/$4.63 from $4.10/$4.36/$4.64 prior, with the modest 2022-2024 changes also driven by higher operating costs assumptions partially offset by higher Illinois ROEs and modestly higher revenue increase estimate for the current MO electric rate case. Our 12-month price target of $93 remains unchanged. **Topics/items to monitor:** 1) updated thoughts on cash flow/balance sheet impact from the IRA law, 2) latest forecast of O&M growth CAGR expectations over next 2-3 years, and 3) net earnings sensitivity to equity market fluctuations from pension and company owned life insurance (COLI), higher financing costs, and higher Illinois ROEs.
- **CMS Energy (CMS, Buy, $75 PT) - 3Q2022 EPS: $0.55 GSe vs $0.63 FactSet consensus** and 3Q2021 of $0.54. We adjust down our 3Q2022 EPS estimate from $0.67 to $0.55, largely reflecting intra-year allocation of O&M expenses and revenue increase from the Michigan gas rate case. Our 2022/2023 EPS estimates remains unchanged at $2.88/$3.13, while we slightly lower our 2024/2025 estimates to $3.40/$3.68 from $3.41/$3.69 prior, primarily reflecting slightly higher financing cost assumptions and lower equity share price for our assumed 2025 equity issuance estimate of $250mn. **Topics/items to monitor:** 1) thoughts on the Michigan commission docket on storm response and reliability, including potential range of outcomes and impact to Consumers Energy, 2) latest update on electric rate case, including potential for reaching a settlement, and 3) updated view on longer-term EPS growth CAGR amidst the current operational/financing cost inflation environment.
- **DTE Energy (DTE, CL-Buy, $142 PT) - 3Q2022 EPS: $1.60 GSe vs $1.70 FactSet consensus** and 3Q2021 of $1.72. We adjust down our 3Q2022 EPS estimate from $1.86 to $1.60, largely reflecting intra-year timing of O&M expenses as well as timing of reversal of certain 2021 one-time tax items that impact 3Q and 4Q results

For the exclusive use of MWEISENBURGER@NISOURCE.COM

(but largely neutral to annual earnings). Our 2022-2024 EPS estimates change modestly to $6.04/$6.27/$6.77 from $6.03/$6.28/$6.79 prior, with the slightly lower 2023/2024 estimates primarily driven by lower assumed share price for its modest annual equity program. Our 12-month price target of $142 (from $143 prior) is driven by our 2024 estimate change. **Topics/items to monitor (primarily at the November Edison Electric Institute conference):** 1) updated multi-year utility capital plan, including items from the updated Integrated Resource Plan (IRP) filing (expected early November), 2) updated EPS growth rate forecast (currently at 5-7%) based on updated capital plan, and 3) latest strategic thoughts on DTE Vantage segment, especially the renewable natural gas (RNG) assets.



- **Eversource Energy (ES, Neutral, $90 PT) - 3Q2022 EPS: $1.07 GSe vs $1.08 FactSet consensus** and 3Q2021 of $1.02. We adjust down our 3Q2022 EPS estimate from $1.16 to $1.07, reflecting higher O&M expenses, intra-year rate increase allocation, and updated debt financing cost assumptions. We also adjust our 2022-2024 EPS estimates to $4.10/$4.40/$4.71 from $4.15/$4.43/$4.74 prior, with our 2022 estimate slightly above the mid-point of ES's $4.04-$4.14 guidance range. Our lower estimates reflect a combination of modestly higher O&M expenses, financing costs, and lower equity share prices for future equity issuance assumptions. Our 12-month price target of $90 remains unchanged. **Topics/items to monitor:** 1) latest expected timing of its strategic review completion process for its offshore wind ownership, 2) updated thoughts on utility capital upside opportunities, and 3) commentary on elevated operating and financing costs, and options to offset the impact.
- **Dominion Energy (D, Sell, $75/sh price target) - with 3Q2022 EPS forecast at $1.13 compared to FactSet consensus at $1.11** and company guidance at a range of $0.98 to $1.13. We revise estimates modestly to reflect changes in tax timing, O&M costs, commodity price expectations for D's Millstone nuclear plant and other items. We lower our 12 month target price from $75/sh to $72/sh to reflect a lower applied P/E multiple to D's regulated segment in Virginia - given the potential risk outstanding tied to the ongoing offshore wind related proceeding. We still include this $10bn project in our capital spend, rate base and earnings forecast going forward, as we believe recent clean energy legislation likely requires or mandates D to move forward with this - and for the state utility regulator to grant, as with all regulated major utility projects, cost recovery in addition to the return on capital. While we do not revise our forecasts related to the offshore wind project in Virginia, we reflect this ongoing risk in our applied P/E multiple on this segment. We see less upside potential to D's shares relative to peers and especially to Buy-rated stocks - but we note the recent relative underperformance, and risk / reward here appears a bit more compelling. However, we maintain our Sell rating as relative valuation still comes in below our sector average levels. We see a total return potential of 12% including a 4.0% dividend yield which compares to 19% average total return potential for our coverage. Key topics to monitor at 3Q2022 earnings include (1) the offshore wind related proceeding in Virginia and potential for resolution, (2) financing costs given higher interest rates and higher cost of capital, although we note D maintains material amounts of interest rate hedges that reduce the risk of higher

For the exclusive use of MWEISENBURGER@NISOURCE.COM

interest expenses, (3) cost management efforts, and (4) the potential for upsizing renewable development plans given the Inflation Reduction Act.

- **OGE Energy (OGE, Neutral, $40 PT) - 3Q2022 EPS: $1.17 GSe vs $1.10 FactSet consensus** and 3Q2021 (utility/parent) of $1.12. We increase our 3Q2022 EPS estimate from $1.13 to $1.17 primarily to reflect very warm weather versus normal. Our 2022 EPS estimate increases to $1.99, modestly above management's guidance range of $1.87-$1.97 (noting OGE had already pointed to the upper half of the range as of 2Q2022 earnings). Our 2023/2024 EPS estimates remain unchanged, with modestly higher cost assumptions offset by pull-forward of O&M into 2022 given favorable weather. **Topics/items to monitor:** 1) latest thoughts on utility capital upside from the Oklahoma IRP/RFP process for clean generation, 2) update on the Arkansas fuel recovery and formula rate proceedings, and 3) commentary on electric demand trends in Oklahoma.

Exhibit 3: For D, we expect a 5.5% EPS CAGR from 2021-2026
EPS by segment

Source: Company data, Goldman Sachs Global Investment Research

For the exclusive use of MWEISENBURGER@NISOURCE.COM

Exhibit 4: We lower our target multiple by 1x on DEV earnings to reflect potential risk related to offshore wind project and revise our PT to $72/sh.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Disclosures

Financial advisory disclosure

Goldman Sachs and/or one of its affiliates is acting as a financial advisor in connection with an announced strategic matter involving the following company or one of its affiliates: Eversource Energy

The rating(s) for Ameren Corp., CMS Energy Corp., DTE Energy Co., Dominion Energy Inc., Eversource Energy and OGE Energy Corp. is/are relative to the other companies in its/their coverage universe: Ameren Corp., American Electric Power, American Water Works, Atmos Energy Corp., Avangrid Inc., CMS Energy Corp., Centerpoint Energy Inc., Clearway Energy Inc., Consolidated Edison Inc., Constellation Energy Corp., DTE Energy Co., Dominion Energy Inc., Duke Energy Corp., Edison International, Entergy Corp., Essential Utilities Inc., Evergy Inc., Eversource Energy, Exelon Corp., FirstEnergy Corp., NRG Energy Inc., NextEra Energy Inc., NextEra Energy Partners, NiSource Inc., OGE Energy Corp., PG&E Corp., PPL Corp., Pinnacle West Capital Corp., Portland General Electric Co., Public Service Enterprise Group, Sempra Energy, Southern Co., The AES Corp., WEC Energy Group, Xcel Energy Inc.

Company-specific regulatory disclosures

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	48%	36%	16%	64%	59%	50%

As of October 1, 2022, Goldman Sachs Global Investment Research had investment ratings on 3,100 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage universe and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) have been suspended pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Public Communication Channel Goldman Sachs Brazil: 0800 727 5764 and / or contatogoldmanbrasil@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou contatogoldmanbrasil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Effective from the date of the United Kingdom's departure from the European Union and the European Economic Area ("Brexit Day") the following information with respect to distributing entities will apply:

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: GSI, authorised by the PRA and regulated by the FCA and the PRA, disseminates research in the following jurisdictions within the European Economic Area: the Grand Duchy of Luxembourg, Italy, the Kingdom of Belgium, the Kingdom of Denmark, the Kingdom of Norway, the Republic of Finland, the Republic of Cyprus and the Republic of Ireland; GS -Succursale de Paris (Paris branch) which, from Brexit Day, will be authorised by the French Autorité de contrôle prudentiel et de resolution ("ACPR") and regulated by the Autorité de contrôle prudentiel et de resolution and the Autorité des marches financiers ("AMF") disseminates research in France; GSI - Sucursal en España (Madrid branch) authorized in Spain by the Comisión Nacional del Mercado de Valores disseminates research in the Kingdom of Spain; GSI - Sweden Bankfilial (Stockholm branch) is authorized by the SFSA as a "third country branch" in accordance with Chapter 4, Section 4 of the Swedish Securities and Market Act (Sw. lag (2007:528) om värdepappersmarknaden) disseminates research in the Kingdom of Sweden; Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research in the Federal Republic of Germany and those jurisdictions within the European Economic Area where GSI is not authorised to disseminate research and additionally, GSBE, Copenhagen Branch filial af GSBE, Tyskland, supervised by the Danish Financial Authority disseminates research in the Kingdom of Denmark; GSBE - Sucursal en España (Madrid branch) subject (to a limited extent) to local supervision by the Bank of Spain disseminates research in the Kingdom of Spain; GSBE - Succursale Italia (Milan branch) to the relevant applicable extent, subject to local supervision by the Bank of Italy (Banca d'Italia) and the Italian Companies and Exchange Commission (Commissione Nazionale per le Società e la Borsa "Consob") disseminates research in Italy; GSBE - Succursale de Paris (Paris branch), supervised by the AMF and by the ACPR disseminates research in France; and GSBE - Sweden Bankfilial (Stockholm branch), to a limited extent, subject to local supervision by the Swedish Financial Supervisory Authority (Finansinpektionen) disseminates research in the Kingdom of Sweden.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

For the exclusive use of MWEISENBURGER@NISOURCE.COM

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

2022 LCOE Analysis – LCOE Update Shows Rising Costs, But IRA Further Improves Solar/Wind Competitiveness; Gas Dominance Continues to Fade

Key Message: We are updating our thoughts on the levelized cost of energy (LCOE) for a variety of generation technologies. Most importantly, we see solar/wind LCOEs trending lower due to ITC/PTC extension now included in our scenarios, while increased fuel costs create a step up for combined cycle gas turbine (CCGT) and other fossil-based technologies; i.e., ***solar/wind technologies have become more competitive on a relative basis vs. CCGT/fossil alternatives. For 2022, we see utility-scale solar being 33% cheaper than CCGT alternatives and onshore wind being 44% cheaper than CCGT***. Solar and wind now present a deflationary opportunity for electric supply costs given the discount vs. CCGT LCOE, which supports the case for economic deployment of renewables across the US, especially with the backing of the IRA law. **We note that utilities, suppliers and consumers increasingly make commitments to procure a fixed cost renewable energy supply.** Coal generation continues to decline due to asset end of life, but existing nuclear assets have renewed stability under IRA, although **new build remains a low-probability event outside of small modular reactors (SMRs), which we now include in our analysis**. Companies with business mix incorporating renewables development (NEE, NEP, ALE) stand to benefit, but we also note that companies able to throttle regulated renewables capex (AEE, AEP, CMS, D, DTE, DUK, ETR, LNT, NI, POR, SO, and WEC) will likely see accretion to growth rates post an IRA world. Many other utilities find themselves in transition and beneficiaries of asset sales (i.e., renewables asset sales – AEP, DUK, ES, PCG, PEG), with a few sector constituents being slowed down by regional and policy limitations (NWE, PNW, PPL, OGE) as well as T&D Utilities with no generation exposure (**AWK, ED (post sale), EIX, ES (post sale), EXC, FE, HE, PCG, SRE, PEG (post sale)**.

Executive summary: We are updating our thoughts on the levelized cost of energy (LCOE) for a variety of generation technologies, which in aggregate reinforces our thoughts on the competitive position for renewables relative to conventional electric generation, despite an overall inflation in supply costs. While we do see some cost decrease for renewables (in favorable scenarios), the deflationary benefit in the median case shows solar/wind at a 30-40% discount relative to the CCGT LCOE.

Key takeaways are:

1. **Wind and solar are now at parity or better with conventional generation in both the low-cost and median scenarios, with a range of $21-72/MWh for wind and $23-69/MWh for solar.** Gas is no longer the lowest-cost option on average (with a $50-76/MWh LCOE range) due to a steep escalation in gas commodity costs in the near and long term as technology improvements have stagnated.
2. **Coal and nuclear continue to be challenged; SMR could be a long-term decarbonization option**. New coal and large-scale nuclear generation would struggle regardless of the political atmosphere and the existing coal fleet would feel pressure from highly competitive renewables and even gas, in our view. **New nuclear remains a challenging concept in the US, but SMRs show some long-term promise for decarbonization** as other baseload alternatives move to the wayside with several utilities seemingly more willing to adopt some type of SMR technology over longer-range capacity procurement plans as witnessed by several IRPs (i.e., DUK, AEE, SO).
3. **It's not all about economics!** Aggressive State policies remain a key support lever, and Federal policy consolidating around IRA will accelerate total deployment, in our view, building on the continued strength of industrial and residential election for renewable supply as well as supplier decarbonization commitments.
4. **Stock Implications:** The key utility sector **constituents standing to** benefit **in the current environment are those with renewables development businesses (i.e.,**

See pages 79 - 80 for analyst certification and important disclosures.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

NEE, NEP, ALE), vertically integrated utilities that have flexibility to spend on renewable resources, and a few with generation assets up for sale (AEP, DUK, ES, PCG, PEG). We also refresh our list of "transitioners" – companies that have started the clean energy transition and decarbonization for which the deflationary aspects of renewables and IRA policy create further justification for transition, such as AEE, AEP, CMS, D, DTE, DUK, ETR, LNT, NI, POR, SO, and WEC. **Utilities with no generation ownership** (**AWK, ED (post sale), EIX, ES (post sale), EXC, FE, HE, PCG, SRE, PEG (post sale)**), **facing policy / capacity reserve constraints would not stand to see incremental capex acceleration beyond current plans** (includes AVA, CNP, EVRG, NWE, PNW, PPL, and OGE).

5. **We now assume ITC/PTC in our renewables modeling including solar, wind and energy storage in perpetuity.** We also provide multiple special scenarios and sensitivities around solar and wind, including unsubsidized scenarios, energy storage scenarios and continued cost inflation scenarios. We additionally provide some thoughts on IRA related inputs and rules.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

PM SUMMARY

We see average renewable LCOE decreasing 15-25% vs. our prior analysis, making wind/solar competitive in more places across the US (31-44% cheaper than CCGT)

OUR KEY TAKEAWAYS

We are updating our thoughts on the levelized cost of energy (LCOE) for a variety of generation technologies, showing average LCOE increases in most fossil-fuel cases, and decreases in headline renewable (wind/solar) scenarios despite cost inflation and supply chain constraints. Renewable LCOEs now present a more compelling relative cost vs. CCGT compared our prior published LCOE update with a 30-40% discount in our median cases. The overall trend we are seeing is that wind/solar are getting cheaper while fossil fuel-driven resources become more expensive, while coal and nuclear remain uneconomical.

(1) Our biggest takeaway is that gas/fossil commodity increases have pushed CCGT LCOEs out of the definitive lowest-cost option (with a $50-76/MWh LCOE range), especially if LT curves hold firm or continue backwardation, **Wind and solar LCOEs have decreased in large part, driven by tax credit inclusion ($22-27/MWh LCOE improvement on median scenario). Solar/wind LCOEs are now above parity with CCGT at the base scenario level ($33/MWh for wind, $41/MWh for solar) vs. a parity in the lower half of the LCOE range in our prior analysis.**

Figure 1: 2022 LCOE Analysis Summary of Changes

Summary LCOE Changes (Median Case)				Renewables Advantage Vs. CCGT	
	2022 Guggenheim Median (Base) LCOE ($/MWh)	Prior (2020) Guggenheim Median (Base) LCOE ($/MWh)	Change (%)	2022 Advantage vs. Fossil CCGT	Prior (2020)
CCGT	$59	$41	43%		
Gas peaker	$104	$71	46%		
Coal	$103	$95	8%	-76%	
Coal Existing	$64	$45	42%	-9%	
Coal CCS	$182	$140	30%	-211%	
Nuclear	$107	$118	-9%	-83%	
SMR	$69			-18%	
Geothermal	$55	$33	69%	6%	20%
Wind (on-shore)	$33	$40	-18%	44%	2%
Wind (on-shore) + Storage	$47	$62	-25%	20%	
Wind (off-shore)	$102	$126	-19%	-74%	-207%
Solar PV	$41	$48	-15%	31%	-16%
Solar PV + Storage	$60	$76	-22%	-2%	-85%
Rooftop Solar	$128	$118	8%	-118%	-188%
CHP	$78	$120	-35%	-34%	-193%
Energy Storage	$104	$104	0%	-77%	-153%

Additionally, we provide some sensitivities below on the unsubsidized median LCOE for wind and solar. Wind PTCs provide a $27/MWh reduction to LCOE, with a potential repowering mid-lifecycle providing an incremental $8/MWh benefit to lower LCOE. A 20% capital cost inflation above our median scenario would result in a $10/MWh increase to LCOE and the Energy Storage adder is ~$14/MWh. Solar ITC provides a $22/MWh reduction to LCOE. A 20% capital cost inflation above our median scenario would result in a $7/MWh increase to LCOE and the Energy Storage adder is ~$19/MWh. ***See table below.***

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

Figure 2: Wind/Solar LCOE Sensitivities

2022 Base scenario sensitivities	
	2022 Guggenheim LCOE / impact ($/MWh)
Wind	
Wind (on-shore) (unsubsidized)	$60
PTC impact under IRA	-$27
Benefits of repowering (10 yr)	-$8
Impact of 20% capital cost inflation	$10
Energy Storage Adder	$14
Solar	
Solar PV (unsibsidized)	$63
ITC impact under IRA	-$22
Impact of 20% capital cost inflation	$7
Energy Storage Adder	$19

Source: Guggenheim Securities LLC estimates

Reliability needs will require dispatchable resources in some cases. Overall, improving economics should be a net positive for wind/solar demand.

That said, we acknowledge the lack of capacity credit comparability between technologies, which could drive significant divergence in LT resource planning as renewables penetration rises. The change of wind and solar LCOE is also a function of an increase in overnight capital costs (wind), fixed and variable O&M updates, offset by inclusion of tax credit extensions as a result of IRA. **Based on this analysis, we continue to see a growing economically competitive position for renewables as a deflationary tool for developer and utility customers, but not all demand growth will be able to be addressed by solar/wind. While costs have increased in many instances (or haven't seen previously projected declines), energy storage combinations are likewise more competitive relative to gas plant economics** and, with the addition of ITCs, economics become even more compelling.

Existing coal still on decline, existing nuclear has support/extension from IRA, SMR remains unproven, but headline economics show opportunity.

(2) Coal and nuclear remain challenged, small modular reactors could be a LT decarbonization option; our economic analysis shows new coal generation would continue to struggle regardless of the political atmosphere and the existing coal fleet would feel pressure from competitive gas and renewables, leaving only fully depreciated assets viable on the margin. Coal costs have created uncertainty (no pricing on bilateral market, and marginal buyers likely represent export coal) for existing plants and potentially push assets to the end of life. **Economics wouldn't justify construction of new nuclear plants either;** however, unlike coal, existing nuclear generation enjoys policy support with the IRA nuclear PTC construct effectively setting a price floor support. New nuclear projects carry an expensive price tag, both from a capital and an O&M standpoint ($6,000+/kW capital and $100-130/MWh LCOE), in our view, making new nuclear commitments in the US prohibitively expensive. **An unproven but promising alternative is small modular nuclear reactors (now included in our analysis)**, although we note a lack of demonstrable and commercial projects creating a wide range of outcomes. For more SMR thoughts, see our notes here. **Finally, we likewise acknowledge the impact of capacity credit allocation being favorable for existing coal and nuclear plants, which could delay retirement or incentivize license extension.**

Policy and regional constraints will continue skewing wind/solar deployment, in our view.

(3) Renewable economics continue to improve, but we acknowledge that local policy, regulatory constructs, and corporate commitments still play major roles. Renewable economics vary regionally, and in many cases accelerated development is a function of policy and regulatory support in resource planning but is also now driven by voluntary commitments from utilities, large energy consumers, and even voluntary commitments from residential consumers (**i.e., green tariffs playing a major role in energy supply for utilities like ETR, with up to 17GW of solar deployment**). Regionally, South and Southwest US solar irradiation should enable further solar

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

development, Rockies and Plains wind availability will likely continue to support on-shore wind, and coastal states (Eastern US and potentially the Pacific Shelf) will likely slowly push policy on off-shore wind despite unfavorable near-term economics such as in NE, NJ, and VA (but likely to improve with scale).

(4) Stock Implications: The key utility sector constituents standing to benefit from more compelling renewable economics are companies that have competitive renewables, which after the assets sales coming from AEP, DUK, etc, is essentially last of a kind within our +45 names under coverage outside of NEE/NEP, ALE, etc. Another beneficiary group is those that have embraced clean energy transition in a regulated construct or are able to toggle renewables capex for replacement energy needs (AEE, AEP, CMS, D, DTE, DUK, ETR, LNT, POR, NI, SO, WEC), which now covers a more material part of our coverage. On the flip side, we see less potential upside for utilities with inflexible capex plans or limited renewables exposure (AVA, CNP, EVRG, NWE, PNW, PPL and OGE) and T&D-only utilities (AWK, ED (post sale), EIX, ES (post sale), EXC, FE, HE, PCG, PEG (post sale), SRE). For more see the Leaders, Laggards and Transitioners section of this report.

STOCK TAKE 1 – NEE/NEP AND ALE BENEFIT FROM RENEWABLE DEVCOS

Stock Impacts: NEE/NEP could see gains on development activity pickup.

- **NEE/NEP is the top levered name in the IRA construct and a standout in our coverage in terms of leverage to renewable development,** which has planned and deployed regulated renewables in the FPL and Gulf Power utilities, as well as having a long-term contracted renewables generation business (NEER), supported by one of the best developer platforms among peers. **NEER has potential upsides from both IRA and increasingly attractive renewable economics, which include development queue expansion and repowering** (17GW existing resources; 20GW of backlog if ITC/PTC extends; similarly with NEP). **NEP will maintain optionality for NEER dropdowns, repowering, and third-party M&A and financing.** There is some debate with NEE investors on the cadence of demand due to tax credit expiration (i.e., safe harbor and prior in-service deadlines no longer apply and could shift near-term demand into outer years; we still see a net positive for demand LT). **FPL will also look at a more aggressive solar deployment target for 10 years (potentially double).** See more on the renewables-driven potential upsides and NEE thesis in our NDR note HERE.

- **ALE** invests in regulated and unregulated renewables across its various subsidiaries, with the **most immediate beneficiaries of LCOE improvements its unregulated subs ALLETE Clean Energy and New Energy Equity**. The former primarily invests in utility scale wind developments while the latter, acquired in 2Q22, has a ~2GW backlog of solar C&I projects across the US. Growth at the combination of these two segments is a key component of ALE's overall consolidated 5-7% growth, given slower growth at the core utility (4-5%). **ALE's primary regulated subsidiary, Minnesota Power, is currently engaged in a long-running IRP process that could see the company add ~400 MW of new wind and solar energy resources,** alongside a retirement of its Boswell Unit 3 (by 2030) and a potential repowering of Boswell Unit 4 by 2035. Clarity on the IRP process and the potential scale of the incremental clean generation need is not expected until later this year (per mgmt.).

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

STOCK TAKE 2 – TRANSITION NAMES, LEVERED TO REGULATED RENEWABLES AND ABLE TO FLEX RENEWABLES CAPEX

Transitioning "cleaner": Companies starting to pivot more renewable: AEE, AEP, CMS, D, DTE, DUK, ETR, LNT, NI, SO, WEC.

There is also a wide list of names in the sector that are transitioning "cleaner," where renewable generation investments are becoming more pronounced in the business mix: AEE, AEP, CMS, D, DTE, DUK, ETR, LNT, NI, SO, and WEC. The key with this group is that now they can compete much better in terms of economics in their own RFPs vs. third-party developers, given passage of the IRA, which now includes transferability of tax credits, PTCs for solar, standalone tax credits for storage, etc.

- **AEE** invests in regulated solar and wind at its core MO subsidiary, with the utility releasing an updated IRP plan just a month before the IRA's passage. The plan details significant incremental additions of renewables and storage, including 2.8GW of renewables by 2030 ($4.3bn allocation as of June), alongside significant longer-dated additions across renewables, storage, and other generation. **See our note HERE for more specifics of the IRP update.** In our view, **AEE also remains an indirect beneficiary of the IRA and potential permitting reforms,** thanks to its geographic location in the heart of MISO, to the extent that improvements in project economics foster a concurrent need for incremental transmission.

- **AEP** targets an 80% reduction in carbon emissions (and a 47% reduction in coal capacity as a percent of total capacity) by 2030, and net zero carbon emissions by 2050. In support of its likelihood of achieving these ambitious goals, the company highlights that its long-term executive compensation includes ties to clean energy transition targets. For operational/capacity context, despite being only 13.1% of the 2021 rate base, coal-fired generation makes up 41% of AEP's net maximum capacity in 2022, while the company projects that only 19% of its capacity will come from coal by 2030. Achieving these targets would **reduce AEP's coal fleet from ~11,850 MW at the end of 2021 to ~6,500 MW by 2028 from existing planned retirements**. In contrast, hydro, wind, solar, and pumped storage constitute **23% of 2022 capacity, and management expects that figure to rise to 52% by 2030**. The company specifically stated in its slides that "*AEP's capital plan is based on current tax credit law. Any potential PTC/ITC extension could present upside to current plan.*" (**August 2022 slides**). Additionally, AEP is in the process of strategic review for the commercial renewables business, noted below in this report.

- **CMS has $2.8B of capital allocated to renewables in the current 5-year capex plan ($14.3B total), with a variety of potential upsides from the current IRP and IRA (like increased solar rate base in lieu of third-party tax equity), and management noted that outside of the current IRP, the company is continuously looking for opportunities around renewables cost curves.** The near-term step up from renewables and the IRP was well communicated since 1Q (step up for the Covert plant purchase; Voluntary Renewables Plan approval for resources not in plan).

- **D** invests in renewables across its regulated utility and its nonregulated subsidiaries, with a significant weighting to the former. Its current 5-year plan includes $2.9bn of contracted solar investment, alongside ~$19bn in regulated generation/storage. Importantly, D's regulated utilities *already* have significant ongoing wind and solar buildouts underway, thanks primarily to supportive state policies (e.g., the VCEA in VA). In our view, this means the latest changes under the IRA should be seen as *supportive* of customer bills vs. a step-change. For example, the company's ~2.6GW off-shore wind project's LCOE could see a $7 improvement under the IRA, per management. To that end the company already has a line of sight to another ~$41bn

See pages 79 - 80 for analyst certification and important disclosures.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

in decarbonizing spend through 2035, including a strong blend of storage, solar, and wind. We expect the IRA could impact the timing of some of this spend to the extent that it provides additional bill headroom in the company's modeling – allowing for potential pull-forwards.

- **DTE has a $3bn cleaner generation capex allocation (which stands to increase due to IRA impacts alone) and the company has already maxed out the voluntary renewables subscriptions (include a recent 650 MW commitment with Ford, ticker: F)**, **pointing to a sizeable step up with the upcoming October IRP.** DTE management is working on major decarbonization spending (including IRP and coal retirements) beyond the current forecast horizon; but potential **upsides will get layered in the medium term as well, in our view. Management noted that not all prospective IRP actions would be long term, as some items will roll in with the next planning cycle.**

- **DUK has ~$15bn (24%) of its current $63bn 5-year (2022–26) capital plan allocated to zero-carbon emission generation, in support of the company's proposed near-term resource additions; however, we expect higher capex ranges to be provided at the company's Oct. 4 ESG Day.** The current plan includes 3,100 MW of new solar (with 600 MW of paired storage), 1,000 MW of stand-alone battery storage, 600 MW of on-shore wind, 2,000 MW of hydrogen-capable natural gas, grid enhancements to support interconnection of new renewables and storage, and early development work for long lead-time resources for deployment in the early 2030s. **The company's long-awaited, legislatively mandated Carbon Plan is currently being ironed out with the NCUC, which must complete its rulemaking process by December 31, 2022**. In South Carolina, the company plans to provide updated planning assumptions with its 2023 comprehensive IRP. Three of DUK's proposed portfolios contain off-shore wind; for more on off-shore wind and the Carolina Long Bay lease area, **see our note HERE**. See additional thoughts on DUK's renewables sale below in this report.

- **ETR** invests in regulated solar generation deployment across its service territories with RFPs in TX, AR, and MS. **In terms of renewables deployment, management anticipates 7GW out of the larger 17GW target (recently increased from 11GW) to be completed by 2026**, with roughly half being ETR self-build (more in our analyst day note here). Out of the 7GW, 1500 MW are RFPs under negotiation, 2500 MW are RFPs announced but incomplete, with another 900 MW of unannounced RFPs, so there is strong visibility to the pipeline. **ETR also noted that the targets are conservative, both on total volume and ownership; as electrification takes off even more, the addressable market becomes bigger and sooner.**

- **LNT** stands to **benefit directly from transferability of credits under the IRA, with the company engaged in significant ongoing solar buildouts across its two jurisdictions (IA/WI).** As a result of the IRA, the company **recently filed to eliminate its use of tax equity in WI** in favor of a transition to full ownership (and full rate basing of the former tax equity financing). **While the company has not yet updated its capital plans to reflect IRA impacts, we expect it to do so this fall with EEI/3Q results.** The current Clean Energy Blueprints for the two jurisdictions are currently working to add 1.5GW of solar and ~375 of capacity/storage. **We expect these figures could be revised upward with the forthcoming roll-forward, with management currently targeting $7-9bn of spend in the 2026-30 window.** LNT has added significant clean energy resources in recent years, with the ongoing coal transition presenting potential incremental capacity addition opportunities, in our view. **See our recent NDR HERE for more**.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

- **NI continues to target a 90% reduction in Scope 1 GHG by 2030, inclusive of a 50% reduction in methane emissions by 2025, and expects to have retired 100% of its coal-fired generation assets by 2026–28 and replaced it primarily with renewable generation.** NI launched its two 2022 RFPS in Q3: **1) an all-source RFP for 300–600+ MW** of MISO Local Resource Zone 6 capacity resources; **2) a 370–450 MW gas peaking** resource to be constructed by an EPC/development partner at the current Schahfer site, and which **must be owned by NIPSCO** (consistent with the MISO generator replacement protocols). The utility expects to have definitive agreements signed with winning bidders of **both RFPs in 4Q22**. NI's **post-2024 plans** have not yet been provided and will be a key focus of its **November 2022 Analyst Day,** according to management. The company has cited uncertainties and disruptions caused by the U.S. Department of Commerce's AD/CVD investigation as resulting in the delay of ~$1.0bn of renewable generation projects in its current capital plan (through 2024) by 6-18 months, although the company also said that the current pause on tariffs adds more confidence/clarity to management's revised timelines.

- **POR** is under a state mandate to procure 100% clean energy by 2040, including interim targets of an 80% reduction by 2030 and 90% by 2035. To that end, the company has worked in recent years to pivot towards cleaner procurements, with its 2019 IRP yielding the first in what we expect to be a series of ongoing energy + capacity RFPs through the next decade. The 2021 RFP is approaching final selection, with management releasing the shortlist alongside 1Q22 results. The list features a large combination of PPA'd and hybrid PPA/company owned projects intended to serve both energy and capacity needs. **The company has the potential to own up to 350 MW of company-owned wind and 125 MW of company-owned storage across the shortlist,** including as a part of hybrid projects with third-party owned solar. Importantly, the company is already hard at work on its next IRP (2023), with the intention to tighten the IRP-RFP cycle in the coming years as it seeks to meet the aforementioned mandates. These opportunities are all completely incremental to the company's current capex plan and growth rate.

- **SO**'s investors should recall Georgia Power's long-term plan to add a total of 6,000 MW of additional renewable resources by 2035, effectively doubling its existing approved renewable portfolio. Meanwhile, based on its target reserve margins (TRM), and taking into account the resources approved by the APSC in Docket No. 32953 and Docket No. 33182, **Alabama Power projects sufficient long-term reserves to meet its obligations until the late 2020s**. **In July 2022, the GA PSC approved Georgia Power's 2022 IRP and delayed deciding on the timing of the retirement of Bowen 3 & 4's 1,760 MW of coal-fired generation to the utility's next triennial IRP in 2025.** While we aren't fully convinced that we will see a shutdown date be set even in the next IRP filing, current delay provides more time for SO to plan ahead for additional capacity, including, as **C-Suite highlighted during our July Georgia Road Trip**, a possible conversion to natural gas where they are seeing potential firm transmission opportunities for natural gas supplies. While the PSC supports open bidding processes as a general rule, some members of the commission have made clear their preference for utility-owned capacity for both utility-scale solar and in the case of more experimental technologies like energy storage where **reliability is of heightened concern**. Management's messaging prior to passage of the IRA was that it was simply not economically possible for Georgia Power to compete against non-regulated entities, and particularly with regards to solar projects. **The approved 2022 IRP calls for 2,100 MWac of new renewable energy resources**, to be procured via two separate RFPs. The first RFP is expected to be launched in 2023 and will target 1,050 MWac of renewable resources with proposed commercial

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

operation dates in 2026/27. The second RFP is expected to be issued in 2025 (per mgmt.) and would seek an additional 1,050 MWac with targeted COD in 2028/29. For more, see our Georgia Road Trip recap note HERE, as well as our Georgia IRP post-decision flash note HERE. ***More detailed thoughts on SO's generation needs and plans are in the company section of this report.***

- **WEC**'s tight energy supply conditions in MISO, as well as supply chain issues that the company expects will likely delay commercial operation of the renewable energy projects intended to replace retiring coal-fired generation, led to WEC's previously announced delays to the planned retirements of its Oak Creek and Columbia units. Despite this, we still see WEC as a beneficiary of the extensions of zero emission tax credits and **expect ongoing renewables investments to feature in the company's 3Q22 5-year capital plan roll (with full details to be released at EEI, as usual)**. In particular, we note that even pre-IRA, WEC's 2022–26 5-year plan included $3.5bn of investment in **regulated renewables** in the form of 1,475 MW of solar, 816 MW of battery storage, and 82 MW of wind, resulting in a grand total of **2,373 MW of renewable resource additions** during the planning period.

STOCK TAKE 3 – UTILITY SELLERS OF GENERATION ASSETS – RENEWABLES, OFF-SHORE ASSETS, NUCLEAR, AND REGULATED ASSETS

Several utilities could see impacts in value of strategic transactions: AEP, DUK, ED, ES, and PEG.

There are multiple utilities seeking to sell unregulated renewable assets (including wind, solar and off-shore leases) which could see a constructive valuation outcome given private/infrastructure investors' desire to establish a renewable platform as well as improve development/repowering platforms, and nuclear assets becoming attractive for public and private sellers (AEP, DUK, ES, PEG and PCG). ED's recent sale surpassed our prior valuation estimates and sets a most recent marker for constructive asset valuations despite a turbulent debt/equity market. CED thoughts included in our note here.

- **AEP's Contracted Renewables auction kicked off in September, with up to 1,200 MW of wind and 165 MW of solar up for sale; a smaller portfolio transaction than peers but demand for renewables and IRA impacts could drive up value. Even pre-IRA, we estimated that the portfolio could attract a valuation in the range of $1,800-2,200/kW and could net AEP ~$1.1–1.6bn pretax**, with the after-tax proceeds likely not too different, given the company's expectation of being able to offset most of the applicable taxes with existing credits. Originally 1,600 MW in total, the company's 235 MW (50% stake) in the Flat Ridge 2 wind farm was removed in order to enhance the overall quality of the portfolio in hopes of attracting a better valuation. Flat Ridge 2 had been experiencing weak performance due to equipment issues and transmission congestion, with management deciding that repowering it wasn't worth the construction phase risk, and that doing so would have unnecessarily complicated the sale process. For more, see our note HERE.

- **DUK's Commercial Renewables sale is underway with potential bidders so far reportedly including pension funds, private equity, and infrastructure investors,** although some parties have apparently said that the portfolio size would keep them on the sidelines (see our Daily write-up HERE). We assume that the portfolio fetches ~$1,600/kW, or $4,579m after accounting for project-level debt, and assume no tax leakage as per management's comments on the 2Q22 call. Combined with an assumed weighted average avoided cost of HoldCo financing drag of ~3.5%, **we estimate $0.08/share of full-year EPS dilution from the sale (for more, see our note HERE).**

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

- **ES is currently engaged in a sale process for its off-shore wind business, with an announcement due by year end…** The sale process for ES's interest in a JV for 3 projects and lease acreage (not a devco) **could see a halo benefit from the IRA in our view,** and become a readthrough to post-2025 OSW economics (e.g., accreting to the acreage value). **See our recent upgrade note HERE for more details on the process,** which we believe could result in proceeds of $2.6bn or more, before netting any debt on the projects. Using the recent NY Bight auction as a valuation midpoint, we believe the leases alone could be worth ~$650mm after full tax leakage. This process remains ongoing, with a YE closure target.

- **PEG stands to benefit from a nuclear and off-shore wind strategic alternative standpoint, as noted here and here.** PEG is contemplating FID on an equity joint venture for NJ's first off-shore project (Ocean Wind 1,100 MW backed by legislated renewable credits set at $98.10/MWh). Additionally, PEG continues to hold a similarly sized land interest in off-shore areas able to support projects in NJ and the Mid-Atlantic (DE/MD), with NJ recently signing an executive order increasing the current off-shore wind target to 11,000 MW by 2040. **Strategic alternatives for nuclear and off-shore wind (OSW) remain on the table with federal policy and competing OSW land lease and asset sales providing datapoints for consideration.** Management now has LT visibility on nuclear (IRA) to either recognize a higher value in the stock price or prompt a strategic review (per management). Additionally, as we noted in our reports linked above, private owners of nuclear assets (i.e., Energy Harbor, Talen) are also in the market to sell; we value PEG's nuclear assets on an NPV of ~$6.5B in EV. On the off-shore wind side of the CFIO business, PEG remains committed to working on Ocean Wind I and the transmission interconnection projects but acknowledged the similar process by ES as a valuation marker for the assets that could trigger a strategic process. The remaining land leases that PEG owns could likewise provide value upside, given the growing interest in OSW development either through the existing partnerships or another form of monetization.

- **PCG recently announced the formation and subsequent equity stake sale of non-nuclear assets. The Pacific Generation (new subsidiary) will hold largely hydro, pumped storage, energy storage, and solar assets in a regulated construct.** While California's deregulated market status limits value upside potential from these assets, we recognize the scarcity of the regulated assets and opportunities for PacGen to act as a backstop for state policy goals (energy storage in particular), i.e., renewables push makes assets valuable.

STOCK TAKE 4 – UTILITIES WITH NON-FLEXIBLE CAPEX PLANS, LIMITED EXPOSURE TO RENEWABLES OR LACK OF GENERATION (I.E., T&D) DO NOT STAND TO BENEFIT)

NWE, PNW, PPL, OGE don't see regulatory support or flexibility for clean energy investment; other T&D names don't have material generation ownership.

Utilities with less flexibility on renewables investments (driven by either needs for capacity vs. energy, state policy support, etc.) include NWE, PNW, PPL, and OGE and **to a lesser degree AVA, CNP, and EVRG**. In our view, these names are not currently positioned to see incremental investment opportunities on the same scale and pace as the names above, for reasons we detail below. Additionally, **we note several companies in our coverage that are primarily T&D utilities and/or do not have meaningful generation ownership** in either competitive or regulated constructs; these include AWK, ED (post sale), EIX, ES (post sale), EXC, FE, HE, PCG, SRE, and PEG (post sale).

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

- **AVA** filed its IRP in Washington and Idaho on April 1, 2021, projecting adequate resources to meet customer demand through October 2026. The company's first long-term capacity deficit, net of energy efficiency, begins in October 2026 and grows to 247 MW by January 2027. Well before the proposal of the IRA, AVA's plan already consisted of new renewable energy, energy storage, demand response, energy efficiency, and upgrades to existing hydropower and biomass plants. **Given the well-defined IRP, there may be limited upside changes in the near term.**

- **AWK** is not an electric utility and as such is not a direct beneficiary of the key provisions of the IRA. **However, we see it as a tangential laggard in the overall group as a result of the legislation.** In our view, based on many of our investor conversations, AWK's premium to the group is in part built on its ESG credentials, and to the extent that the IRA catalyzes and accelerates decarbonization, we believe the ESG spread between the two may compress.

- **CNP's** Vectren Indiana subsidiary proposed up to **~1,000 MW of renewable generation in the IN IRP.** There have been some scheduling and scope changes to optimize around supply chain and cost issues, with few changes to the overall investment profile for CNP (~$1B of renewables capex allocation in the current 5-year plan). In TX, CNP remains just a wires business. **Strategically, management focus is more skewed to the traditional T&D utilities and LDCs that comprise a majority of the earning assets.**

- **EVRG** has historically procured renewables via PPAs, a strategy the current management team has sought to reverse in its latest IRP filings and via exploration of PPA buy-ins. **The company's latest update to the plan will see significant additions of solar from 2028 to 2032 (~450 MW/year), alongside ~1.25GW of wind additions from 2024 to 2027.** While most of this spend remains outside of the current planning window, it is driven by underlying asset fundamentals – namely a runway of coal plant retirements across MO and KS. As a result of this dynamic, **we do not expect significant changes in EVRG's NT generation capex plans; however, the company has shown in recent quarters that it is open to revisions around the margins (e.g., tweaks to the timing and scale of solar deployments).**

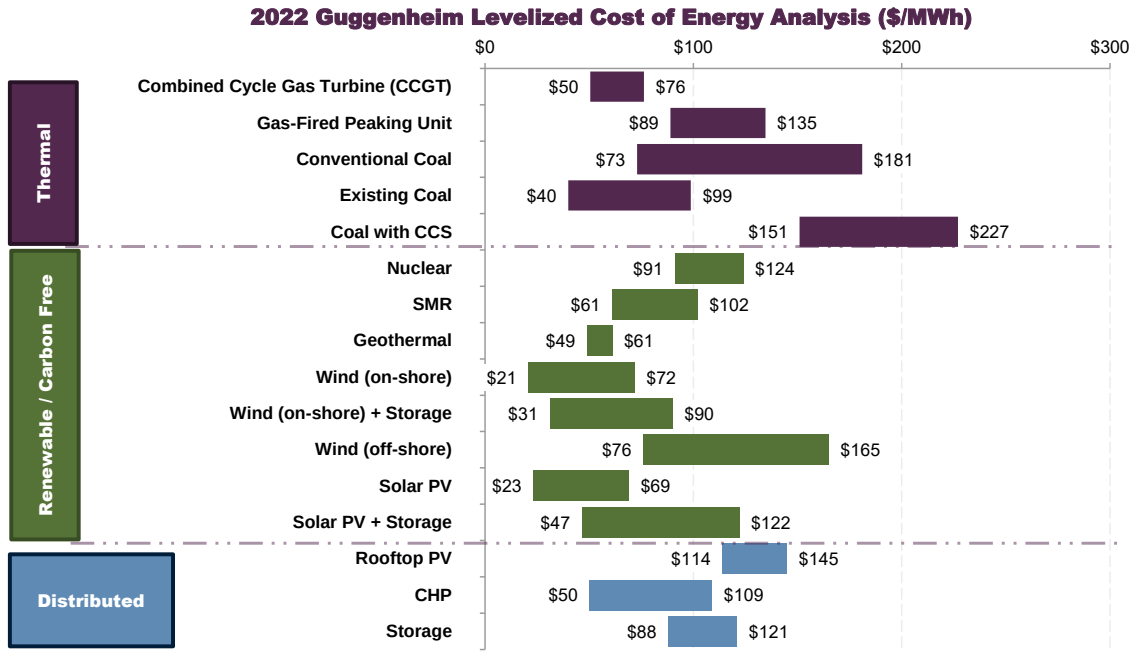
- **FE** received conditional approval in April 2022, from the West Virginia PSC for its plan to build 50 MW of utility-scale solar generation, so long as 85% of the output has been subscribed in advance of the start of construction. The company said on its 2Q22 call that it expects the first solar generation site to be in-service by year-end 2023, with the remaining four sites in-service by year-end 2025. **FE is otherwise a distribution and transmission business that lags peers as far as renewables upside potential.**

- **NWE's** existing fleet consists predominantly of 490 MW of hydro and 454 MW of wind, then 309 MW of "coal & other" (mostly Colstrip), 202 MW of natural gas-fired generation, and 17 MW of solar. However, the amount of **accredited capacity** (a resource's contribution to meet demand during peak energy usage by customers) varies significantly from these levels, with more than 90% of coal/natural gas megawatts counting as accredited capacity, while hydro gets credit for 60% of the total owned/PPA'd capacity, but **while only 13% of wind and 5% of solar megawatts are deemed to be accredited capacity** and are therefore able to be counted against NWE's overall capacity deficit in Montana.

- **PNW** projects that coal exits and expiring purchase contracts will create a **6,000 MW supply-demand gap by 2035** as peak capacity needs grow from ~8,000 MW in 2020

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

closer to ~12,000 MW by 2035 and owned/LT PPA'ed capacity falls from more than 8,000 MW in 2020 to less than 6,000 MW by 2035. The company's existing plan is to reduce coal's weight in the utility's resource mix from 16% as of December 31, 2021, down to 0% by 2035.



- **PPL** operates 2 T&D utilities (PA/RI) alongside one integrated utility **(KY), partially limiting the proportion of capex allocated to generation, and the associated optionality around renewables/storage**. The most recent IRP for the KY had a base case of ~2.3GW of renewables by 2036, which in our view may be conservative in light of the current gas price backdrop. The next IRP is scheduled to be filed in 2024, and we expect there could be a further expansion and pull-forward of the current plans. As the eventual retirement of coal capacity in KY will require firm capacity, management continues to explore potential CCGT additions (with hydrogen firing capability); see our **recent NDR note HERE** for more on the sequencing and opportunity set. Also, we note that the region has seen substantial interest in CCUS and 45Q harvesting (see our note HERE), which could augment planned CCGT additions in lieu of pure renewables/storage investment. For now, exposure to KY puts PPL at somewhat of a disadvantage as we think about renewables in the context of this analysis.

- **OGE is lagging peers in adding renewables, at least in part driven by near-term economics and need for capacity additions to address reserve margin needs (i.e., not a wind/solar solution).** OGE Integrated Resource Plan and associated RFPs could present a multi-track opportunity for potential upside to plan, but **renewables alternatives are only a small piece**. The 2 base RFPs resulting from the IRP were the 450 MW of solar for delivery in 2025/26 (i.e., 2024 capex start) and the flexible resource (i.e., CT) RFP for 500 MW by 2027 (2026 capex start).

PM SUMMARY TABLES AND CHARTS

Figure 3 2022 LCOE model result ranges

Source: Guggenheim Securities, LLC estimates, EIA, company filings.

Fossil LCOE increases with gas/coal curves; solar/wind see benefits of IRA becoming more competitive.

From a high level, we see increases in median LCOE for fossil resources and decreases for solar/wind alternatives; IRA becomes a significant benefit for wind/solar from ITC/PTC extension and an increasingly competitive position for renewables vs. CCGT. The scenario ranges shown in the summary and comparison tables represent different geographies, developers, and operators. Major drivers for YoY changes include higher capital costs, higher fossil fuel costs, and O&M escalation, detailed below in this report. The major offsets for wind and solar technology scenarios are the implementation of ITC/PTC extensions, which result in a $22-27/MWh LCOE improvement in the median scenario.

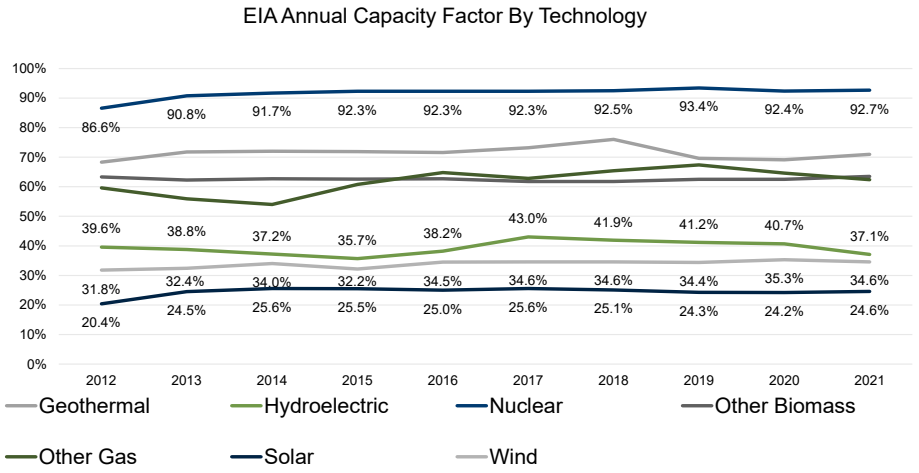
LCOE DEEP DIVE – RISING COSTS WEIGH ON ALL TECHNOLOGIES, BUT SOLAR/WIND ADVANTAGE GROWS

Source: Guggenheim Securities, LLC estimates, EIA, company filings.

LCOE ANALYSIS BY THE NUMBERS - IRA PUSHES THE LOW END LOWER FOR SOLAR/WIND, BUT EVEN MEDIAN CASES SHOW STRONG RELATIVE ECONOMICS

We see on-shore wind and solar reaching LCOE parity or even better economic vs. CCGT in the median scenarios.

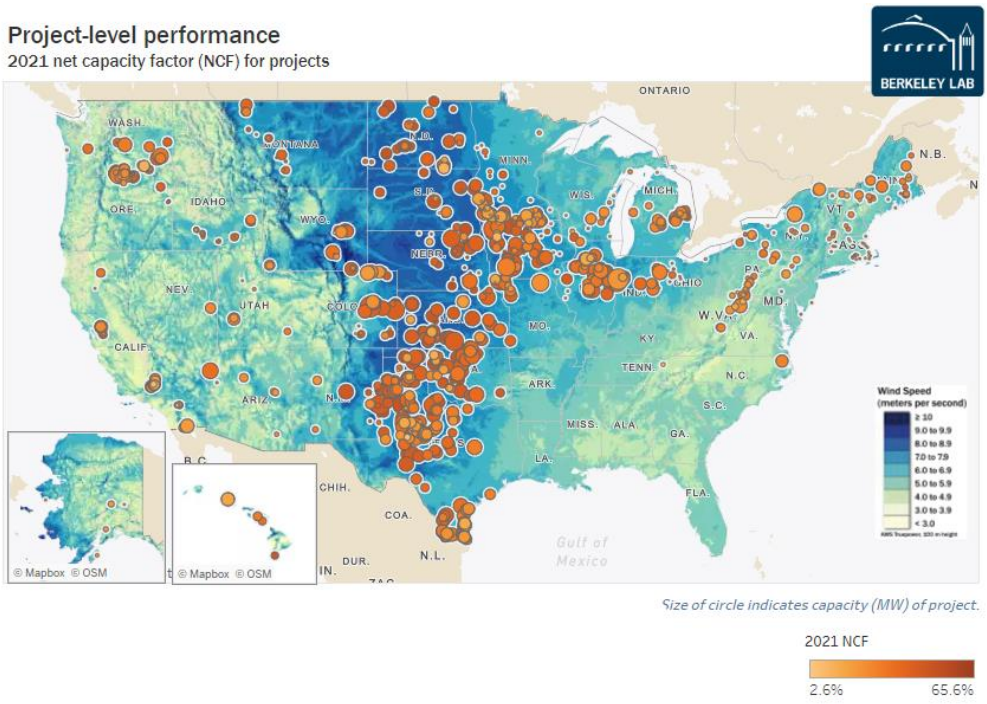
The Number 1 takeaway for our LCOE refresh is that relative economics continue to improve for solar/wind. In our prior iteration, the technologies were near parity only in a low-cost scenario, but have now improved to being competitive around the median case. In our current view, states, energy buyers, and vertically integrated utilities with wind/solar resources can make an economic case for renewable transition and deflationary investments in renewables (new generation offsetting fuel costs and fossil investment).



On median (base) scenario outcomes: On-shore wind ($33/MWh) and Utility Scale Solar ($41/MWh) are competitive vs. Existing Coal ($64/MWh) and CCGT ($59/MWh), especially in light of the IRA tax credit extension, which we now model as part of our base scenario (more on our assumptions later in this report). We remain cognizant of the regional variability of resources, which could skew relative economics significantly, as captured in our LCOE ranges. **The lowest solar and wind costs are achieved when individual projects capture the highest generation capacity factor with capital cost efficiencies** – i.e., high solar irradiation areas (the southern US) and high-wind areas (Rocky Mountain states and plains) and improved capital costs vs. most recent inflationary and median cost inputs. Historically, a key piece of the puzzle for energy transition in the absence of strong legislated policy was solar and wind resource abundance, which we see at a turning point as cost inflation and volatility hit the fossil part of the electric supply stack; **we see resource availability constraints easing vs. our prior views in 2020 (i.e., with tax credits, solar/wind is competitive in more places). The** northern Midwest (i.e., the Dakotas, Rocky Mountain states, Oklahoma, Kansas, and west Texas) leads with north of 40% CF on newer vintage projects. In solar, California, Nevada, New Mexico,

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

Arizona, and west Texas lead on resource availability with capacity factors of ~30%, with the rest of the Southeast US in the high 20s.



Capacity factors remains steady for wind/solar.

Figure 6 EIA Reported Average Annual Capacity Factor (US)

Best wind resource availability is located along Rocky Mountain states (in the 40%s).

Figure 8 US Solar irradiance

Best solar resource availability is located in Southwest US states (in the 30%s).

Source: NREL

EIA capital costs and fixed and variable O&M projections see inflation: ~10%+ for fossil.

Capital costs are another major contributor to LCOE across all technologies and this time to the inflationary side. While we anticipated a steady path down the cost curves for most technologies (excluding coal and nuclear), commodity and input cost inflation as well as geopolitical events have resulted in delays and increased overnight capital costs (and we note EIA assumed costs have risen likewise). **We have seen escalation for renewables and fossil capital costs** (EIA estimates for 2022 are 30% up for wind, ~11-12% CCGT, coal, GT, and other fossil technologies). Notable standouts were solar with tracking (0% increase), despite supply chain issues and materials inflation (although the EIA numbers were released before major new datapoints were being recorded). **We see the increase in capital costs as somewhat expected, but overall note that the GT option remains the cheapest cost capacity at ~$785/kW**, potentially suitable for reliability applications and addressing capacity credit considerations. Lastly, **O&M** saw broadly similar cost inflation for renewables and fossil generation (up ~5% across the board for wind, solar, CCGT, and other fossil generation). See the next page for capital and O&M cost comparisons.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

Cost inflation, commodities, and new inputs drive LCOEs $8-20/MWh higher, but ITC/PTC for wind/solar offset impacts fully.

Cost inflation hits all scenarios, but IRA tax credits provide offsets; CCGT dominance continues to fade on the steep rise in gas costs. The majority of our assumption changes (detailed later in this report) are focused on our capital cost expectations, fixed and variable O&M – all of which have driven LCOE outcomes higher across all technologies ($8-20/MWh higher, excluding ITC/PTC inclusion). **The net increase also includes a price deck update for fossil generation, and we note a ~100% or higher gas price increase on 2023-25 commodity strips.** In aggregate these changes materially improve solar and wind competitiveness vs. CCGT economics. ***See 2025 commodity curve highlights below and 2023-25 strip commentary below.***

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

Commodity curve escalation shows steep increases (~100% higher YTD).

Bilateral coal markets flash steep cost inflation, but market remains opaque.

Some color on coal commodity prices: Coal price surveys are mixed – PRB coal remains cheap (excluding transport); CAPP coal surveys continue to show inflation (potentially due to on-the-margin international sales). Our view is that coal remains a bilateral market domestically (i.e., no price transparency), and we don't anticipate for marginal coal power to be burning ~$8/mmbtu coal (i.e., $80/MWh coal cost + other variable non-fuel costs would imply coal plants are bleeding money).

Figure 11 Coal Price Survey History

CCGT costs could remain competitive for geographies with gas access, while on-shore wind and solar are constrained by geographies and dispatchability even at the median in terms of economics, but many states and utilities have shown preference for the technology given the modular design, commoditized equipment, deployment and service contracts (i.e., low-risk option). That said, the emerging trend that has been highlighted through the industry has been the increased preference for "renewables +

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

storage" in recent solicitations. **In our solar and wind plus storage scenarios, we see a ~$14-19/MWh incremental cost at the median scenario**, **which may be competitive with CCGT generation on the margin (i.e., whee there are no resiliency issues).**

Intermittent attributes of wind/solar present a comparability challenge.

Nuance of intermittency could distort near-term economic arguments; recent electric supply stress makes case for resiliency through CT/CCGT, but policy seeks solutions – we see a case for increased energy storage, hydrogen, and even SMR applications. There is an industry argument being made for reliability and resilience of conventional generation for sustaining peak loads on a multi-day basis and tail-risk scenarios such as widespread outages (i.e., the capacity credit issue highlighted earlier in this report). Several of the resiliency cases have played out nationally since our 2020 analysis, including extreme winter weather, prolonged heat waves, and other system-wide stress scenarios. **These scenarios and the resiliency argument defend our belief that the transition towards 100% national RPS (or a level in the 90%s) will be gradual and the 75% carbon reduction contemplated by the IRA will extend tax credits well beyond the 10-year minimum timeframe (i.e., reductions could take 20 years instead of 10), in our view.** NREL, among other research agencies, has highlighted that an 80% RPS by 2050 is feasible under assumptions of increased grid storage, new transmission, more responsive loads, and changes in power system operations supplemented by dispatchable resources (RE Futures). Under 2050 target RPS date assumptions, regulated dispatchable resources will still have a ~30-year life without becoming stranded assets.

ITC/PTC inclusion results in $22-27/MWh LCOE reduction; energy storage adds $14-19/MWh.

Expanding renewables scenarios – we analyze headline LCOE impacts of tax credits, stress test cost inflation, and energy storage; adding SMR as a baseload alternative. In the 2022 update, we are explicitly breaking out several important scenarios in solar and wind LCOE, including repowering for wind after 10 years, non-tax credit scenarios, energy storage combinations, and capex inflation sensitivity. We note the impacts of ITC/PTCs as the major driver for wind/solar competitive economics ($22-27/MWh reduction in LCOE), with a further benefit of wind repowering after 10 years, creating a strong case for deployment. Energy storage adders continue to create a debatable case for capacity firming vs. dispatchable resource, but that is currently the preferred way to firm up decarbonization (cost curves have been slow to come down due to Li and associated metals supply chains as well as demand pull from less price-sensitive end uses such as EVs).

Figure 12 2022 LCOE Analysis Sensitivities for Solar and Wind

We are also adding an early-stage approximation for the SMR technology with an LCOE range outcome of $61-102/MWh). While the technology is not commercially applied domestically, the NRC has authorized its use and there are longer-term opportunities for deployment, i.e., while most technologies are based on 12-24 month deliverability, SMR would enter the fray in the 2029-30+ timeframe (more assumptions later in this report, more thoughts on our SMR Launch HERE).

INFLATION REDUCTION ACT (IRA) SUMMARY – FEDERAL POLICY BRINGS LOTS OF NUANCE ON ACHIEVABLE

IRA Summary: ITC/PTC rules, credit transferability, longevity could extend beyond 10-year period.

The IRA contains clean energy tax provisions introduced by Senator Manchin and Majority Leader Schumer, which set out to reduce greenhouse gas emissions in line with the goal of reducing greenhouse gas emissions 50-52% below 2005 levels by 2030, achieving a carbon pollution-free electricity sector by 2035, and achieving net-zero emissions by no later than 2050. Specific to renewable electricity generation, the IRA provides the potential for zero-emission projects to earn 100% ITC/PTCs through the later of 2032 or when greenhouse gas emissions for U.S. electric generation are reduced by 75% vs. 2022 levels. For example, this will allow new projects ***or repowerings*** to qualify for 10-year PTCs at the full inflation-adjusted rate through ***at least 2042***. Energy storage projects (including thermal) can now qualify for the ITC independent of connected generation facilities, as can several technologies which previously were not ITC-eligible. **Beginning in 2023, tax credits will now be able to be transferred to another party, reducing previous dependence on tax equity.** Tax-exempt entities are now eligible for "direct pay," allowing them to receive the tax credits despite the amounts naturally exceeding the amounts of federal taxes otherwise owing. Taxpaying entities will also be eligible for direct pay in the following, limited, specific circumstances: Section 45Q (credit for carbon capture and sequestration), Section 45V (clean hydrogen production credit), and Section 45X (advanced manufacturing production credit) for certain initial time periods.

Once Treasury guidance relating to the IRA's clean energy tax credits is issued (no timeline provided), projects beginning construction 60 days or more thereafter will be required to meet prevailing wage and apprenticeship requirements to qualify for the full ITC/PTC rate. For facilities placed in service beginning in 2025, to claim the full ITC/PTC rate, prevailing wage and apprenticeship requirements must be met. This means that laborers, mechanics, contractors, and subcontractors must be paid wages at least at prevailing rates (to be determined by the Secretary of Labor) during the construction, alteration, and repair of the facility and for either 5 years (ITC) or 10 years (PTC) thereafter. For projects beginning construction on or before December 31, 2022, 10% of the **total labor hours** must be performed by qualified apprentices, increasing to 12.5% in 2023 and finally 15% from January 1, 2024 onwards.

Additionally, projects that meet domestic content (e.g., steel, iron, manufactured products, etc.) requirements will become eligible for 10% ITC/PTC adders, meaning that an eligible project that meets prevailing wage and domestic content requirements would qualify for a 40% ITC, for example.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

Figure 13 Apprenticeship and Domestic Content Requirements

Apprenticeship Requirements	2022	2023	2024	2025	2026	2027	2028+
Total labor hours applicable to a project	10.0%	12.5%	15.0%	15%	15%	15%	15%

Domestic Content % for Construction Begi	2022	2023	2024	2025	2026	2027	2028+
All projects other than offshore wind		40%	40%	45%	50%	55%	55%
Offshore wind		20%	20%	27.5%	35%	45%	45%

Note: Domestic content refers to the % of a project attributable to components which are mined, produced, or manufactured in the United States.

Source: H.R. 5376 and Guggenheim Securities, LLC analysis

Finally, an incremental 10% PTC and up to 20% ITC adder will be available for qualifying projects in both low-income communities and "energy communities," including communities in which, after December 31, 1999, a coal mine or **after December 31, 2009, a coal-fired electric generating unit has been closed**.

SECTION 48: INVESTMENT TAX CREDIT (ITC)

Prevailing wage and apprenticeship attributes matter for full ITC credit.

The ITC was extended for projects that begin construction through 2024, with a base credit of 6% or a bonus credit of 30% of capital invested in qualified energy property being provided. To claim the higher 30% ITC rate, prevailing wage and apprenticeship requirements must be met (as described above). In addition to solar, wind, and combined heat and power (CHP) technologies, the credit is now available to energy storage projects (including thermal storage) of 5 kWh or greater, independent of associated generation facilities, as well as several previously unsupported technologies including linear generators (more HERE), microgrid controllers (more HERE), dynamic glass (more HERE), and biogas property (more HERE). Geothermal projects which begin construction through 2034 are eligible to claim the ITC as well.

Beginning in 2025, Section 48E, the Clean Electricity Investment Credit replaces the current ITC and is technology-neutral, provided that the project being placed in service generates greenhouse gas emissions of not more than zero.

Figure 14 Current ITC (assuming 75% GHG reduction by 2032) vs. pre-IRA ITC

Section 48 Investment Tax Credit	2022	2023	→	2032	2033	2034	2035	2036

*Note: Domestic content is defined beginning in 2023 as 100% American iron/steel and at least 40% American solar modules, inverters and electrical gear.

Source: H.R. 5376 and Guggenheim Securities, LLC analysis

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

SECTION 45: PRODUCTION TAX CREDIT (PTC)

The PTC was extended through 2024 for existing qualifying technologies, reinstated for solar energy through 2024 (the ITC can still be claimed in lieu), and new PTCs were created through 2032 for hydrogen (section 45V) and existing nuclear energy (section 45U). Beginning in 2025, a new technology-neutral credit, "Clean Energy Production Tax Credit" (Section 45Y) will be available. Projects placed in service on or after January 1, 2022 may now qualify for the full credit amount, rather than a reduced phaseout amount; however, projects placed in service prior to January 1, 2022 will retain their historical phaseout-adjusted PTC amounts.

PTCs provide value for wind and big boost for hydrogen.

The base PTC of 0.3¢/kWh and full 100% PTC of 1.5¢/kWh (5x the base PTC) are subject to an IRS-determined Inflation Adjustment Factor which in 2022 stood at 1.7593x, resulting in a PTC of 2.6¢/kWh (the credit is rounded to the nearest multiple of 0.1 cent, or 0.05 cents in the case of the 0.3¢/kWh base PTC). **For hydrogen projects, the base PTC is set at $0.60/kg and bonus PTC of $3.00/kg, both indexed to inflation**, multiplied by the volume (in kilograms) of clean hydrogen produced by the taxpayer at a qualified facility during the taxable year. Any facility that meets the description of qualifying property under the clean electricity production credit shall be treated as five-year property under the General Depreciation System for purposes of Section 168 of the IRS Code.

Beginning in 2025, Section 45Y, the Clean Energy Production Tax Credit, replaces the current PTC and is technology-neutral, provided that the project being placed in service generates greenhouse gas emissions of not more than zero.

Figure 15 PTC under IRA (phaseout timing assumes 75% GHG reduction by 2032)

Section 45 Production Tax Credit	2022	2023	2032	2033	2034	2035	2036
Inflation Adjustment Factor (IRS-provided)	1.7593x	1.7945x	2.1446x	2.1875x	2.2312x	2.2758x	2.3214x
YoY change	4.2%	2.0%	2.0%	2.0%	2.0%	2.0%	2.0%
PTC under the IRA (¢/kWh)							
Phaseout (assuming 75% GHG reduction by 2032)				*100%*	*75%*	*50%*	*–*
Base PTC	0.5	0.5	0.6	0.7	0.5	0.4	–
+ Adder if Labor Requirements met	2.1	2.2	2.6	2.6	2.0	1.4	–

+ Bonus if Domestic Content* satisfied		0.3	0.3	0.3	0.2	0.2	–
+ Bonus if "Energy Community" site		0.3	0.3	0.3	0.2	0.2	–
= Maximum PTC (ex-offshore wind)**		3.3	3.8	3.9	3.0	2.0	–

*Note: Domestic content is defined beginning in 2023 as 100% American iron/steel and at least 40% American solar modules, inverters and electrical gear.
**Note: Offshore wind qualifies for an additional 10% bonus.

Source: H.R. 5376 and Guggenheim Securities, LLC analysis

SECTION 6418: TRANSFER OF CREDITS

Tax credit transferability is a major boost for regulated utilities; BOT becomes more competitive, but the overall pie is also growing.

The IRA allows for some or all of the ITC, PTC, Section 45Y credit, and Section 48E credit to be transferred to another taxpayer under the newly created Section 6418. The election to transfer the credit must be made no later than the applicable filing date of the entity's tax return for that tax year, and once made is irrevocable. The transferee must pay for the credit in case, and the buyer may not deduct the amount paid for the credit or subsequently transfer it to another party. The cash payment received by the original generator of the credit will not be included in gross income, as it is intended to replace what otherwise would have been a reduction to the taxpayer's federal tax obligation.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

ENERGY STORAGE COST IMPROVEMENTS REMAIN SLOW; ITC CREATES SOME OPPORTUNITY – IN OUR VIEW, COMPETITIVE WITHIN THE DECADE

Energy storage is becoming a major factor in renewables development; we see costs at $14-19/MWh.

Storage – one of the puzzle pieces to fix renewables intermittency is progressing slower than anticipated down the cost curve. Our resulting scenarios show that storage is becoming increasingly competitive with dispatchable resources, as incremental capital costs are generally offset with lower O&M costs as compared to fossil resources (i.e., no moving pieces with energy storage). **We maintain a fairly conservative view of energy storage costs, as progress down the cost curve has been slow.** Most notably, energy storage costs remain elevated due to supply chain issues for lithium and associated metals, including headwinds from problem countries and labor issues. The majority of the marginal cost benefits have been chipped away by demand from the EV sector with less price elasticity (i.e., driving prices back up).

The solar/wind + storage "median cost" (base) scenario results in a $14-19/MWh impact on LCOE for wind and solar applications (i.e., energy storage adder).

From an absolute standpoint – the wind + storage low scenario results in a $47/MWh LCOE, while solar + storage results in a $60/MWh LCOE, both competitive with a CCGTs median scenario of ~$59/MWh. In many practical applications, renewables projects can reach efficient scale in the 100 MW range, while CCGTs require a more sizeable investment (manufacturer packages in the ~400 MW capacity range) and carry a commodity risk with exposure to fuel prices. We also point out the $14-19/MWh "low-cost" scenario energy storage adder is comparable to prior expectations from NEE, which previously saw the ES adder being $8-14/MWh, especially as potential cost curve declines have not materialized yet.

We assume a 4-hour battery for our analysis.

How much storage do renewables need to "firm up"? 4-8 hours remains the bogey, but not a panacea. It is difficult to pinpoint the duration of storage necessary to transition intermittent renewables into "near-firm" resources for each specific business case, but **we've found that many proposals are focused on a 4- to 8-hour duration; confirmed with the working assumptions for research institutions such as NREL and developers such as NEE that assume a base storage duration of 4 hours, but we acknowledge this will not resolve the capacity credit issue.** Our storage analysis assumes a 4-hour battery system coupled with solar and wind capacity, implemented as an increased capital cost (aligned with EIA assumptions).

While for the purposes of this report we take a rather static view of energy storage, we admit that the landscape is changing rapidly (before more recent challenges, storage saw 3–4 year halving of costs) on both raw material costs and developer efficiency, which is due to make energy storage paired projects more competitive as time goes on, relative to the limited cost improvements that have been seen with conventional fossil resources. Additionally, alternative chemistry developments continue to target the utility-scale space, although few can claim economic parity yet.

NUCLEAR, COAL - SCREENS EXPENSIVE; DISTRIBUTED GENERATION AND OFF-SHORE WIND COULD FIND USE CASES AND POLICY SUPPORT

Nuclear, off-shore wind remain expensive, but see policy support.

What about the rest of the generation resources field? Distributed resources, nuclear, coal, and off-shore wind screen expensive, but policy pushes hard on off-shore wind and existing nuclear. The distributed technologies such as rooftop solar and combined heat and power (CHP) can make sense despite their relatively high levelized cost, as those resources would be located directly at the point of consumption (i.e., benefit vs. fully costed retail electric rate). Off-shore wind costs have come down, although not as dramatically as other emerging technologies, but overall **the current proposition is not economic but rather policy-oriented.** We see economic costs (ex-subsidies) around $76-165/MWh, vs. eastern US state solicitations coming in below $100, and as low as ~$60/MWh for the winning bid in the Mayflower project, which we suspect was bid below economics for strategic purposes (gain market share, platform buildout, future scale, learning curve, etc.). Lastly, looking at the conventional technologies with the least economic prospects – nuclear, coal, coal with CCS (carbon capture) – most technologies are unlikely to screen economically for any future projects with median costs north of $100/MWh and a risk profile that involves fuel costs, project deliverability, and environmental risks.

KEY INPUTS

Key cost of capital inputs: 10% equity return, 40/60 equity/debt capitalization.

Key common inputs are ROE, capital structure, and tax incentives extension; project specifics are dominated by capacity factor and capital cost. The underlying project capital structures in our analysis are ~10% equity IRR, 6% cost of debt, 40% equity/60% debt structure and tax incentive extension under the IRA (we see this as the median consensus return expectation, conservative project level financing and the tax credit extension effectively being perpetual). The biggest variables that change from project to project are capacity factor, total capital costs ($/kW), variable O&M ($/MWh), and fixed O&M ($/kW-year) as shown in Figure 16. Capacity factors are based on a range of sources for existing fossil utilization, irradiation levels for solar, wind analysis for wind speeds, etc. **Total capital costs are sensitized around adjusted 2022 EIA published overnight capital costs (2021 dollars), in most cases directly aligned.** Variable and fixed O&M is taken from the range of anticipated costs from EIA, as well as actual reported costs from S&P Global SNL, which is also sensitized using actual ranges. **Outside of commodity costs, impact on fossil generation, the changes to LCOE are driven by capital costs, fixed and variable O&M as shown below (delta vs. 2020 Guggenheim assumptions).**

Figure 16 Guggenheim assumptions comparison

COMMODITIES INFLATION IS MAKING A RELATIVE CASE FOR A STRONGER RENEWABLES DEPLOYMENT TRAJECTORY

Commodities inflation shows steep inflation from our prior analysis; 100%+ increase vs. our prior analysis.

Highlighting a prior point – inflation and volatility in the commodity markets make perhaps the most compelling argument for solar/wind deployment. Our prior LCOE report used midyear commodity marks from 6/30/2020 that were emblematic of what now seems like historic lows for power and gas; **we are now updating to 8/30/2022 commodity curves.** While 2021 commodity markets remained depressed due to the COVID-19 pandemic, supply/demand-driven suppression, geopolitical conflicts of 2022, macroeconomic resurgence, and a recent history of underinvestment in production, the supply/demand equation has shifted drastically. On a regional basis, power and gas prices have become extremely dispersed. Gas prices for 2024 ranged from $5 to $6/mmbtu, while New England is reaching above $12/mmbtu, with power being similarly spread out, ranging from $55/MWh to $99/MWh. ***See figures below for additional details on current market prices and relative change since our prior LCOE analysis curves (6/30/2022).***

We anticipate further inflation in fuel, purchase power, and generation costs for the sector; continuation from 2021 winter costs.

Fuel and purchase power for our Utilities coverage shows potential for significant escalation as commodity costs start getting layered into customer bills. Looking at the sweep of companies under our coverage, we note that the early stages of commodity cost impacts on fuel and purchased power were felt in 2021 due to extreme winter weather events, which broke the generally declining trend in cost of generation. The “Cost of Electricity” is the combined FERC reported fuel, purchased power and generation cost line items, which seeks to improve comparability between different integrated/nonintegrated utilities, but the composition for each individual OpCo can vary greatly depending on generation ownership, generation type, purchase power/PPA strategy, and other non-fuel generation costs. This is not a direct comparable to an LCOE, as it does not fully include items such as cost of capital (interest, returns) and asset depreciation, which may only be partially reflected in the total cost of electricity (i.e., no data on composition of purchased power). The discrepancy in reporting is most evident with deregulated market utilities with what we see as higher levels of pure market purchased power, with AEP, FE, and PPL in PJM states scoring in the $30s/MWh while integrated SPP and MISO states score in the $60-90/MWh range.

Overall, the trend over the last decade-plus has been downward, but 2021 extreme winter weather and gas costs show the beginning of an inflationary trend. **What this signifies in the grand scheme of things is an increasing need for deflationary investments for utilities and energy suppliers; as we have outlined in this report, given solar/wind fuel independence, renewables can provide a natural energy supply cost hedge.** ***See figure on the next page for a more granular view.***

DEEP DIVE INTO SOLAR AND WIND: GEOGRAPHIES, FACTORS, AND COST TRENDS

WIND

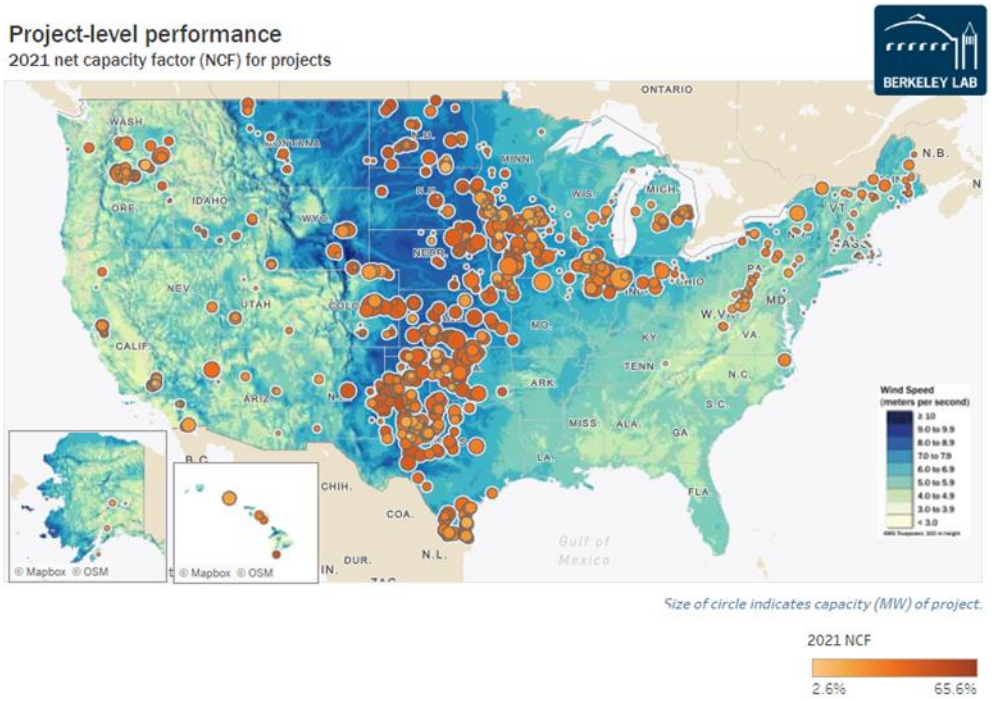
Capital Costs and O&M

Wind costs downward trend on pause; bigger turbines, better structures, turnkey contracts offset by inflation and NT supply chain issues.

We see a modest decline in the wind LCOE estimate range, largely due to implementation of tax credit extensions (IRA impact on ITC/PTC), offset with updates on current construction and equipment pricing as well as updated utilization and opex assumptions. In our updated model, rather than using backward looking statistics that do not reflect existing cost structures in the rapidly evolving renewable energy landscape, we use current cost estimates data points available from various industry participants (SNL, EIA, etc.).

While the cost of construction wind farms has been rising modestly, especially in light of supply chain and inflationary pressures, the efficiency gains have been slow, resulting in higher LCOE vs. our prior estimate excluding PTC extensions.

Our LCOE range of $21-72/MWh is competitive with efficient CCGTs on an energy only basis.



- **Despite prior efficiency gains, capital costs have risen noticeably.** We model a base $/kw of $1,718, an increase of $418 vs. our prior analysis and aligned with the 2021 EIA Energy Outlook.
- **As with solar, future gains will likely stem from removal of supply chain and commodity inflation overhangs (i.e., steel, copper, etc.).** Bigger turbines will likely allow for lower balance of plant. Lighter, longer blades will likely contribute to increased capacity. **O&M cost declines have been driven by innovation, but some general inflationary pressures have entered the fray.** Increased reliability of turbines has been the main contributor to decreased O&M costs in the long run, but advances in recent years are limited. Better data management and logistics have also allowed for lower maintenance costs. That said, general inflationary pressures have crept up and we have raised our input assumptions accordingly.

Capacity Factor

The Midwest remains the ideal location for new wind in terms of capacity factor, given wind factors in those states. The increase in efficiency of turbines has allowed for wind installations outside of the traditional states, but wind is still not as suitable as solar across the country.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

Figure 21 Wind Speed and Reported Capacity Factor (2021)

SOLAR

Capital Cost and O&M

We see a modest decline in the solar LCOE estimate range as we update our estimate to incorporate ITC extensions as a result of the IRA, offset by current module and equipment pricing as well as updated utilization and opex assumptions. In our updated model, rather than using backward-looking statistics that do not reflect existing cost structures in the rapidly evolving renewable energy landscape, we use current cost estimates and data points available from various industry participants including SNL, EIA, etc.

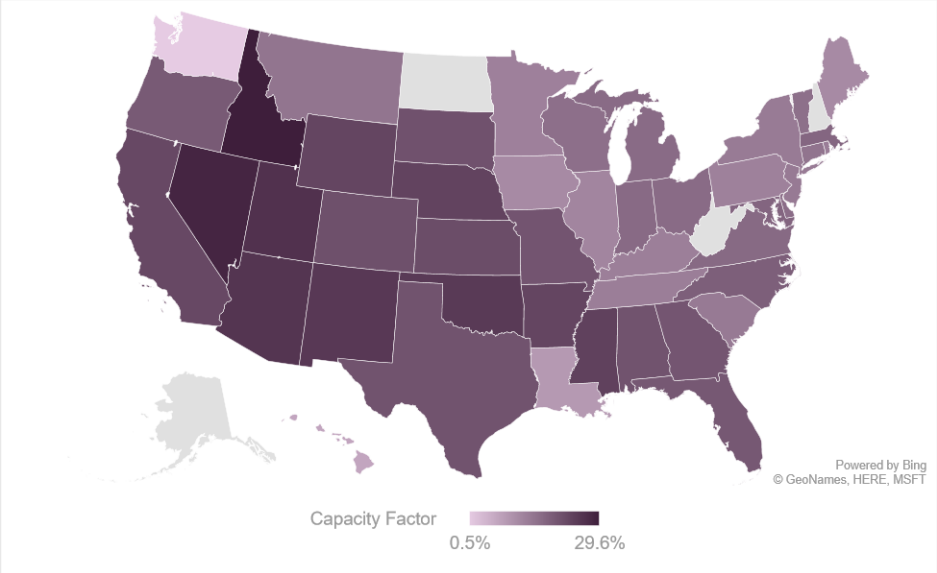
Our analysis shows that the lower end of the $23-69/MWh LCOE range is competitive with efficient gas plants (CCGTs). The most significant factor that is driving our solar LCOE down is the ITC inclusion, but equipment costs and supply chain delays are creating uncertainty in the overall overnight capital costs.

Cost declines take a pause, but supply chain issues and tariff issues still unknown.

While directionally this is a departure from the long-term trend of decreasing capital costs, we anticipate normalization as suppliers work through diversification across multiple territories. We do not anticipate the US to be a material producer of solar panels in the medium term. The industry ramp-up could take 5-7 years and developers still need to debate the on-shore assembly for domestic content treatment (i.e., it could take some time for price normalization).

- **Capital costs have stayed near flat in the most recent updates from EIA.** We model a base $/kw of $1,327.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.



- **Future decreases in LCOE will likely be driven mainly by lower BOS costs.** While efficiency will likely continue to see modest gains, lower BOS costs will likely be the focus. Module producers are looking to increase wattage to decrease the total cost for inverters and balance of plant.
- **O&M cost declines have been driven by innovation, but our new assumption shows modest inflationary pressure.** Increased reliability of modules and inverters has been the main contributor to decreased O&M costs historically, but inflationary pressures are being included in most recent industry updates, and we align our inputs accordingly. Better data management and logistics have also allowed for lower maintenance costs.

Capacity Factor

Capacity factors are highest in the Southwest, given irradiation.

As stated above, capacity factor has the greatest impact to LCOE. The Southwest continues to be the leader in capacity factor as irradiation is higher in those states. Greater efficiency in panels has allowed for better capacity factor across geographies. Decreased costs of other innovations to the balance of the plant, such as single-axis and multi-axis tracking, are making solar more viable in higher-latitude areas. We are adjusting our median capacity factor to match the most recently disclosed net capacity factor nationally (i.e., capturing projects at all ends of the spectrum).

LEADERS, LAGGARDS, AND TRANSITIONERS… HOW CAN UTILITIES CAPITALIZE ON CLEAN ENERGY TRENDS?

Economic- and policy-related renewables deployment could boost utilities with development, contracted renewables businesses. NEE/NEP most levered.

We see several ways for utilities to lead on clean energy investment. With the results of our analysis, we see 3 ways to value potential upside: (1) net acceleration of renewables deployment will benefit developers (i.e., NEE/NEP), (2) vertically integrated utilities with accelerating decarbonization commitments and utilities with legacy asset retirements and load growth; in other words, utilities with the flexibility to shift more capex to renewable generation as economics become more compelling vs. prior to IRA passage when incumbent utilities had a more challenging time competing, given their tax status, etc., and (3) utilities with unregulated renewables transactions/strategic reviews.

Potential downside remains with a lack of potential upside opportunities (i.e., not necessarily a headwind). For the purposes of benefits from renewables competitive positioning, utilities with no generation ownership (i.e., pure wires ownership), LDCs and lack of policy-driven investments would see less potential upside from new capex.

(1) The key utility sector constituents standing to benefit from more compelling renewable economics are companies that have competitive renewables with NEE/NEP the clear leading beneficiary, alongside the much smaller devco at ALE.

- **NEE/NEP is a top IRA idea and a standout in our coverage in terms of leverage to renewable development** that has planned and deployed regulated renewables in the FPL and Gulf Power utilities, as well as having a long-term contracted renewables generation business (NEER), supported by one of the best developer platforms among peers. **NEER has potential upsides from IRA and increasingly attractive renewable economics, which include development queue expansion and repowering** (17GW existing resources; 20GW of backlog if ITC/PTC extends; similarly with NEP). **NEP will likely maintain growth upside options from NEER dropdowns, repowering and third-party M&A and financing.** There is some debate with NEE investors on the cadence of demand due to tax credit expiration (i.e., safe harbor and prior in-service deadlines no longer apply and could shift near-term demand into outer years; we still see a net positive for demand LT). **FPL will also look at a more aggressive solar deployment target for 10 years (potentially double).** FPL previously provided a 10-year site plan recommendation of ~9,500 MW of solar addictions and 3,200 MW of storage, largely in line with the "business as usual" planning scenario. Management noted that while the exact implications on deployment at FPL would need to get framed under new constructs, **the resource plan with tax credits and P50 winter load recommended 22,500 MW of solar and 3,100 MW of storage – more than double nameplate capacity** vs. the currently implemented recommendation. See more on the renewables-driven potential upsides and NEE thesis in our NDR note HERE.

- **ALE** invests in regulated and unregulated renewables across its various subsidiaries, with the **most immediate beneficiaries of LCOE improvements its unregulated subsidiaries ALLETE Clean Energy and New Energy Equity**. The former primarily invests in utility scale wind developments while the latter, acquired in 2Q22, has a ~2GW backlog of solar C&I projects across the US. Growth at the combination of these two segments is a key component of ALE's overall consolidated 5-7% growth, given slower growth at the core utility (4-5%). **ALE's primary regulated subsidiary, Minnesota Power, is currently engaged in a long-running IRP process that could see the company add ~400 MW of new wind and solar energy resources,** alongside a retirement of its Boswell Unit 3 (by 2030) and a potential repowering of Boswell Unit 4 by 2035. Clarity on the IRP process, and the potential scale of the incremental clean generation need, is not expected until later this year (per mgmt.).

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

Integrated Leaders: PEG, DUK, LNT, WEC, CMS, DTE, ETR.

Tough to find more upside on wind/solar: NWE, OGE, PPL, FE, CNP.

(2) There is also a wide list of names in the sector that are transitioning "cleaner," where renewable generation investments are becoming more pronounced in the business mix: AEE, AEP, CMS, D, DTE, DUK, ETR, LNT, NI, POR, SO, and WEC.

- **AEE** invests in regulated solar and wind at its core MO subsidiary, with the utility releasing an updated IRP plan just a month before the IRA's passage. The plan details significant incremental additions of renewables and storage, including 2.8GW of renewables by 2030 ($4.3bn allocation as of June), alongside significant longer-dated additions across renewables, storage, and other generation. **See our note HERE for more specifics of the IRP update.** In our view, AEE also remains an indirect beneficiary of the IRA and potential permitting reforms thanks to its geographic location in the heart of MISO, to the extent that improvements in project economics foster a concurrent need for incremental transmission.

- **AEP targets an 80% reduction in carbon emissions (and a 47% reduction in coal capacity as a percent of total capacity by 2030, and net-zero carbon emissions by 2050.** In support of its likelihood of achieving these ambitious goals, the company highlights that its long-term executive compensation includes ties to clean energy transition targets. For operational/capacity context, despite being only 13.1% of the 2021 rate base, coal-fired generation makes up 41% of AEP's net maximum capacity in 2022, while the company projects that only 19% of its capacity will come from coal by 2030. Achieving these targets would **reduce AEP's coal fleet from ~11,850 MW at the end of 2021 to ~6,500 MW by 2028 from existing planned retirements**. In contrast, hydro, wind, solar, and pumped storage constitute **23% of 2022 capacity, and management expects that to rise to 52% by 2030**. The company's 2030 hydro, wind, solar and pumped capacity guidance figures include contracted renewable assets owned by the unregulated business, which was recently announced for sale; however, excluding this capacity would not materially change the 2030 projected capacity mix. The company has $8.2bn of regulated renewables in its current 5-year (2022–26) capital plan and sees a 16 GW regulated renewable opportunity by 2030; however, investors should be aware that this figure predates the IRA and that the company specifically states in its slides that "*AEP's capital plan is based on current tax credit law. Any potential PTC/ITC extension could present upside to current plan.*" (August 2022 slides). **AEP will be hosting an analyst day on October 4**. We **do not expect** much in the way of an update on the **contracted renewables sale process**, and while it is likely much too early for AEP to have had time to fully analyze and revise its capital plans between IRA passing and October 4, we still expect investor Q&A to focus on what potential upside to the current plan could look like and how it could impact the current 6-7% EPS growth trajectory. Additionally, management openly pointed to the analyst day as being likely to contain a **2022 guidance update**, introduction of the **2023 guidance range**, and a **roll-forward of the 5-year capital and financing plan through 2027**, all of which would be coming early vs. AEP's typical practice of unveiling those items with Q3 earnings.

- **CMS has $2.8B of capital allocated to renewables in the current 5-year capex plan ($14.3B total), with a variety of potential upsides from the current IRP and IRA (such as an increased solar rate base in lieu of third-party tax equity), and management noted that outside of the current IRP, the company is continuously looking for opportunities around renewables cost curves.** The near-term step up from renewables and the IRP was well communicated since 1Q (step up for the Covert plant purchase, voluntary renewables plan approval for resources not in plan). The IRP contemplates 4.5 GW of solar by 2030, ~8.0 GW by 2040, more than 0.5 GW of batteries by 2040 (75 MW beginning in 2024), ~0.8 GW

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

pre-2025 (approved via RPS) and ~1.9G GW of customer programs such as DR, EE and CVR. In terms of advancing solar buildout as an inflation hedge, management is continuously assessing the cost curves and will look for opportunities when they are available, noting that the mechanisms for accelerated deployment are in place with the MPSC.

- **D** invests in renewables across its regulated utility and its nonregulated subsidiaries, with a significant weighting to the former. Its current 5-year plan includes $2.9bn of contracted solar investment, alongside ~$19bn in regulated generation/storage. Importantly, D's regulated utilities *already* have significant ongoing wind and solar buildouts underway, thanks primarily to supportive state policies (e.g., the VCEA in VA). In our view, this means the latest changes under the IRA should be seen as *supportive* of customer bills vs. a step-change. For example, the company's ~2.6GW off-shore wind project's LCOE could see a $7 improvement under the IRA, per management. To that end the company already has a line of sight to another ~$41bn in decarbonizing spend through 2035, including a strong blend of storage, solar, and wind. We expect the IRA could impact the timing of some of this spend to the extent it provides additional bill headroom in the company's modeling – allowing for potential pull-forwards.

- **DTE has a $3B cleaner generation capex allocation (which stands to increase due to IRA impacts alone) and the company has already maxed out the voluntary renewables subscriptions (include a recent 650 MW commitment with Ford, ticker: F)**, **pointing to a sizeable step up with the upcoming October IRP.** DTE management is working on major decarbonization spending (including IRP, coal retirements) beyond the current forecast horizon; but potential upsides will likely get layered in the medium term as well. Management noted that not all prospective IRP actions would be long term, as some items will roll in with the next planning cycle. Early in the plan, management sees potential for incremental investments in renewables and batteries and gas conversions at Belle River (first 5 years), with baseload needs becoming more prominent in the longer term. DTE also sees no need to defer coal retirements, since all previously retired capacity has been replaced with adequate baseload generation (mostly efficient gas). There remains potential upside for incremental IRP acceleration either in the tail end of the plan or sustaining the investment trajectory beyond 2026. DTE has already started stakeholder comment processes to ensure the best alignment of interests for all parties ahead of the IRP filing in October 2022.

- **DUK's $63bn 5-year (2022–26) capital plan contains ~$15bn, (a 24% allocation) to zero-carbon emission generation, in support of the company's proposed near-term resource additions**, including **3,100 MW of new solar (with 600 MW of paired storage), 1,000 MW of stand-alone battery storage, 600 MW of on-shore wind, 2,000 MW of hydrogen-capable natural gas**, grid enhancements to support interconnection of new renewables and storage, and early development work for long lead-time resources for deployment in the early 2030s. The company's long-awaited, legislatively mandated carbon plan is currently being ironed out with the NCUC, which **must complete its rulemaking process by December 31, 2022**. In South Carolina; the company plans to provide updated planning assumptions with its 2023 comprehensive IRP. Specific to the company's carbon plan in North Carolina, its DEC/DEP utilities proposed the following four portfolios, of which any or none could end up being ultimately chosen by the NCUC. **Three of DUK's proposed portfolios contain off-shore wind**; for more on off-shore wind and the Carolina Long Bay lease area, see our note HERE.

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

- **Portfolio 1:** 70% by 2030: 800 MW off-shore wind by 2029 + new solar ramping to 1.8GW/year by year-end 2028 + 1.8GW battery storage + slightly accelerate retirement of 1.4 GW of coal.
- **Portfolio 2:** 70% by 2032: 800 MW off-shore wind by 2029 + another 800 MW off-shore wind by 2031 + slightly less aggressive solar and storage vs. Portfolio 1 + Roxboro Units 3-4 (the 1.4GW in Portfolio 1) don't have to retire until 2032. Less solar due to 2032 retirement instead of 2030 deadline for hitting 70% reduction.
- **Portfolio 3:** 70% by 2034: zero off-shore wind + 285 MW SMR deployed by 2032 + solar, on-shore wind, and pumped storage hydro + Roxboro Units 3-4 (1.4 GW move to 2034 retirement).
- **Portfolio 4:** 70% by 2034 with off-shore wind + SMRs: 285 MW SMR + 800 MW of off-shore wind added "in early 2030s" + solar, on-shore wind, battery, and pumped storage hydro capacity + Roxboro Units 3-4 (1.4 GW move to 2034 retirement).

- **ETR** invests in regulated solar generation deployment across its service territories with RFPs in TX, AR, and MS. **In terms of renewables deployment, management anticipates 7GW out of the larger 17GW target (recently increased from 11GW) to be completed by 2026**, with roughly half being ETR self-build (more in our analyst day note here). Out of the 7GW, 1500 MW are RFPs under negotiation, 2500 MW are RFPs announced but incomplete, and another 900 MW of unannounced RFPs, so there is strong visibility to the pipeline. **ETR also noted that the targets are conservative, both on total volume and ownership; as electrification takes off even more, the addressable market becomes bigger and sooner.**

- **LNT** stands to benefit directly from the transferability of credits under the IRA, with the company engaged in significant ongoing solar buildouts across its two jurisdictions (IA/WI). As a result of the IRA, the company recently filed to eliminate its use of tax equity in WI in favor of a transition to full ownership (and full rate basing of the former tax equity financing). **While the company has not yet updated its capital plans to reflect IRA impacts, we except it to do so this fall with EEI/3Q results.** The current Clean Energy Blueprints for the two jurisdictions are currently working to add 1.5GW of solar and ~375 of capacity/storage. ***We expect these figures could be revised upward with the forthcoming roll-forward, with management currently targeting $7-9bn of spend in the 2026-30 window.*** LNT has added significant clean energy resources in recent years, with the ongoing coal transition presenting potential incremental *capacity* addition opportunities, in our view. See our recent NDR HERE for more.

- **NI continues to target a 90% reduction in Scope 1 GHG by 2030, inclusive of a 50% reduction in methane emissions by 2025, and expects to have retired 100% of its coal-fired generation assets by 2026–28 and replaced it primarily with renewable generation.** The company has cited uncertainties and disruptions caused by the U.S. Department of Commerce's AD/CVD investigation as resulting in the delay of ~$1.0bn of renewable generation projects in its current capital plan (through 2024) by 6-18 months, although the company also said that the current pause on tariffs adds more confidence/clarity to management's revised timelines. NI has provided an illustrative capital plan accounting for these delays by shifting some of 2022's renewable capex and most of 2023's into 2024. Due to **~$1.0bn of projects not coming online until 2024+**, management expects an **EPS drag of ~$0.09–0.10**, for which the company has presented a **mitigation plan**. As with other utilities, NI will

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

now be keeping some of its coal plants operating longer than originally planned in order to ensure customer reliability, with Schahfer Units 17 and 18 (722 MW combined) now expected to retire in 2025 vs. 2023 previously. NI launched its two 2022 RFPS in Q3: **1) an all-source RFP for 300–600+ MW** of MISO Local Resource Zone 6 capacity resources; **2) a 370–450 MW gas peaking** resource to be constructed by an EPC/development partner at the current Schahfer site, and which **must be owned by NIPSCO** (consistent with the MISO generator replacement protocols). The utility expects to have definitive agreements signed with winning bidders of **both RFPs in 4Q22**. NI's **post-2024 plans** have not yet been provided and will be a key focus of its **November 2022 analyst day,** according to management. We expect the replacement of Michigan City (455 MW) sometime in 2026–28 to feature as part of that plan and note that to the extent that future replacement RFP proposals make use of MISO's generator interconnection replacement process, the associated replacement capacity resource would also **have to be owned by NIPSCO**. We await further details regarding 2025+ capex, including new generation construction plans, at NI's upcoming analyst day.

- **POR** is under a state mandate to procure 100% clean energy by 2040, including interim targets of an 80% reduction by 2030 and 90% by 2035. To that end, the company has worked in recent years to pivot towards cleaner procurements, with its 2019 IRP yielding the first in what we expect to be a series of ongoing energy + capacity RFPs through the next decade. The 2021 RFP is approaching final selection, with management releasing the shortlist alongside 1Q22 results. The list features a large combination of PPA'd and hybrid PPA/company owned projects intended to serve energy and capacity needs. **The company has the potential to own up to 350 MW of company-owned wind and 125 MW of company-owned storage across the shortlist,** including as a part of hybrid projects with third-party owned solar. Importantly, the company is already hard at work on its next IRP (2023), with the intention to tighten the IRP-RFP cycle through the coming years as it seeks to meet the aforementioned mandates. These opportunities are all completely *incremental* to the company's current capex plan and growth rate.

- **SO's** Georgia Power utility saw its triennial IRP approved by the GA PSC in July 2022, including the commission's decision to delay making a decision on the timing of the retirement of Bowen 3 and 4's 1,760 MW of coal-fired generation to the utility's next triennial IRP in 2025. While we aren't fully convinced that we will see a shutdown date be set even in the next IRP filing, current delay provides more time for SO to plan ahead for additional capacity, including, as **C-Suite highlighted during our July Georgia road trip**, a possible conversion to natural gas where they are seeing potential firm transmission opportunities for natural gas supplies. **While the PSC supports an open bidding process, some members of the commission have made clear their preference for utility-owned capacity, particularly in the case of more experimental technologies such as energy storage, where reliability is of heightened concern. Management's messaging prior to passage of the IRA was that it was simply not economically possible for Georgia Power or other regulated utilities in the state to compete against non-regulated entities, particularly with regards to solar projects**. The approved 2022 IRP calls for 2,100 MWac of new renewable energy resources, to be procured via two separate RFPs. The first is expected to be launched in 2023 and will target 1,050 MWac of renewable resources with proposed commercial operation dates in 2026/27. The second RFP is expected to be issued in 2025 and would seek an additional 1,050 MWac with targeted COD in 2028/2029. **Investors should recall the company's long-term plan to add a total of 6,000 MW of additional renewable resources by 2035, effectively doubling its existing approved renewable**

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

portfolio. For more, see our Georgia road trip recap note HERE, as well as our Georgia IRP post-decision flash note HERE. **Southern Power could see upside to its capital plan** as a result of the IRA's tax credit extensions, although management has yet to indicate bookends or simply how much available capital remains for Southern Power to invest in additional renewables; we expect an update on the 4Q22 call in early 2023. Alabama Power conducted its **2022 triennial IRP** (summary HERE), which included the utility's intention to cease coal combustion at **Plants Barry and Gaston by not later than December 31, 2028**. Based on its target reserve margins (TRMs) and taking into account the resources approved by the APSC in Docket No. 32953 and Docket No. 33182, **Alabama Power projects sufficient long-term reserves to meet its obligations until the late 2020s**.

- **WEC's** tight energy supply conditions in MISO, coupled with what management expects to be supply-chain driven delays to commercial operation dates of renewable energy projects, have led to (previously announced) delays to the planned retirements of its Oak Creek and Columbia units. Despite this, we still see WEC as a beneficiary of the extensions of zero emission tax credits and **expect ongoing renewables investments to feature in the company's 3Q22 5-year capital plan roll (with full details to be released at EEI as usual)**. In particular, we note that even pre-IRA, WEC's 2022–26 5-year plan included $3.5bn of investment in **regulated renewables** in the form of 1,475 MW of solar, 816 MW of battery storage, and 82 MW of wind, resulting in a grand total of **2,373 MW of renewable resource additions** during the planning period. Separately, the company's wind infrastructure investments continue to grow, with the **300 MW Thunderhead Wind Energy Center** expected to be placed **in service in 2H22**, and its **250 MW Sapphire Sky Wind Energy Center** projected to come online by **year-end 2022**. As a reminder, WEC typically rolls its five-year capital plan forward with its Q3 call, just ahead of EEI.

Renewables competitiveness/focus could make strategic transactions more valuable: AEP, DUK, ED, ES, PEG.

(3) There are multiple utilities seeking to sell unregulated renewable assets (including wind, solar and off-shore leases) which could see a constructive valuation outcome given private/infrastructure investors' desire to establish a renewable platform as well as improve development/repowering platforms and even for off-shore assets, nuclear, and regulated assets. Utilities with strategic reviews (ongoing or potential) are AEP, DUK, ES, PEG and PCG. ED's recent sale surpassed our prior valuation estimates and sets a most recent marker for constructive asset valuations despite a turbulent debt/equity market. CED thoughts included in our note here.**Net-net: IRA passage has inherently increased the value of existing assets that are available for sale.).**

- **AEP announced its intentions in February 2022 to sell all or a portion of the contracted renewables business in its competitive generation segment.** The sale process officially commenced in September 2022, on time with management's well-telegraphed messaging around timing (e.g., 2Q22 slides). Spanning 11 states, **we estimate that the portfolio could attract a valuation of $1,800–2,200/kW and could net AEP ~$1.1–1.6bn pretax**, with the after-tax proceeds likely not too different given the company's expectation of being able to offset most of the applicable taxes with existing credits. Only 1,365 MW of the segment's 1,600 MW of owned renewable generation projects are included in the sale efforts: **1,200 MW of wind and 165 MW of solar**, since the company's **235 MW (50%) stake in the Flat Ridge 2 wind farm was removed** in order to enhance overall portfolio quality in hopes of attracting a better valuation. Flat Ridge 2 had been experiencing weak performance due to equipment issues and transmission congestion, with management deciding that repowering it wasn't worth the construction phase risk,

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

and that doing so would have unnecessarily complicated the sale process. The company opted for a writeoff instead, while noting that it is in talks with an interested party about purchasing AEP's stake in the wind farm and expects the transaction to close in 2H22. **For more, see our note** HERE.

Figure 23 Contracted Renewables sales proceeds and GAAP vs. tax basis

1,365 MW ← AEP Contracted Renewables portfolio for sale (1,200 MW wind & 165 MW solar)

$1,800/kW	$2,200/kW	× assumed $/kW values
2,457	3,003	= Transaction value (US$m)
(1,400)	(1,400)	– Less: GAAP equity
$ 1,057	$ 1,603	= GAAP pre-tax figure

*While the "very low tax basis" implies a large tax obligation, AEP has credits to offset.

Note: *as per our follow-up conversation with the company after the earnings call,* ***an anticipated transaction would involve the associated debt being assumed by the acquirer, along with project-level debt and tax equity.*** *The GAAP book value is unrelated to the projects' tax basis. While that tax basis is "very low" (per mgmt. and given the organic nature of the business) and would imply nearly full capital gains on the proceeds, the reality is that AEP has credits available which would shield a substantial portion if not all of the tax obligation which it would otherwise owe.*

Source: Bloomberg, Guggenheim Securities, LLC analysis

- **DUK's Commercial Renewables sale is underway, with potential bidders so far reportedly including pension funds, private equity, and infrastructure investors,** although some parties have apparently said that the portfolio size would keep them on the sidelines (see our Daily writeup HERE). We assume that the portfolio fetches ~$1,600/kW, or $4,579m after accounting for project-level debt, and assume no tax leakage as per management's comments on the 2Q22 call. Combined with an assumed weighted average avoided cost of holdco financing drag of ~3.5%, **we estimate $0.08/share of full-year EPS dilution from the sale (for more, see our note HERE).** Also, ***see below for our sensitivity analysis table*** showing the change in accretion/dilution at different costs of avoided debt and portfolio valuations on a $/kW basis. With the IRA's passage, we expect this business to **attract a higher valuation** and greater interest than it otherwise would have, given the timeline for PTC-qualified repowerings of existing portfolio assets being extended through at least 2032. The business operates ~5,100 MW of capacity across 22 states, and **DUK's net ownership stands at 3,554 MW**, consisting of: 23 wind facilities (1,959 MW owned), 178 solar projects (1,531 MW owned), 71 fuel cell locations (44 MW owned), and two battery storage facilities (20 MW owned).

Figure 24 Accretion/Dilution Sensitivity Analysis (full year without Commercials' results)

Cost of avoided debt (%) \ Transaction multiple ($/kW)	$1,200/kW	$1,300/kW	$1,400/kW	$1,500/kW	$1,600/kW	$1,700/kW	$1,800/kW	$1,900/kW	$2,000/kW

- **ES is currently engaged in a sale process for its off-shore wind business, with an announcement due by year end…** The sale process for ES's interest in a JV for 3 projects and lease acreage (not a devco) **could see a halo benefit from the IRA in our view,** and become a readthrough to post-2025 OSW economics (e.g., accreting to the acreage value). **See our recent upgrade note HERE for more details on the process,** which we **believe could result in proceeds of $2.6bn or more, before netting any debt on the projects**. Using the recent NY Bight auction as a valuation midpoint, **we believe the leases alone could be worth ~$650mm after full tax leakage.** This process remains ongoing, with a YE closure target.

- **PCG recently announced the formation and subsequent equity stake sale of non-nuclear assets. The Pacific Generation (new subsidiary) will hold largely hydro, pumped storage, energy storage, and solar assets in a regulated construct.** While California's deregulated market status limits potential value upside from these assets, we recognize the scarcity of the regulated assets and opportunities for PacGen to act as a backstop for state policy goals (energy storage in particular), i.e., renewables push makes assets valuable. **See our thoughts here.**

- **PEG stands to benefit from a nuclear and off-shore wind strategic alternative standpoint, as noted here and here.** PEG is contemplating FID on an equity joint venture for NJ's first off-shore project (Ocean Wind 1,100 MW backed by legislated renewable credits set at $98.10/MWh). Additionally, PEG continues to hold land interest in off-shore areas able to support projects in NJ and the Mid-Atlantic (DE/MD), with NJ recently signing an executive order increasing the current off-shore wind target to 11,000 MW by 2040. **Strategic alternatives for nuclear and off-shore wind (OSW) remain on the table with federal policy and competing OSW land lease and asset sales providing datapoints for consideration.** Management now has LT visibility on nuclear (IRA) to either recognize a higher value in the stock price or prompt a strategic review (per management) – as we noted in our nuclear note above, **we value PEG nuclear assets at ~$6.5B EV on a DCF/NPV basis.** On the off-shore wind side of the CFIO business, PEG remains committed to working on Ocean Wind I and the transmission interconnection projects but acknowledged the similar process by ES as a valuation marker for the assets that could trigger a strategic process. The remaining land leases that PEG owns could likewise provide potential value upside, given the growing interest in OSW development either through the existing partnerships or another form of monetization.

Less upside flexibility on wind/solar: NWE, OGE, PPL, FE, CNP, AVA, PNW, EVRG.

Utilities with less flexibility on renewables investments (driven by either needs for capacity vs. energy, state policy support, etc.) include NWE, PPL, and OGE and **to a lesser degree AVA, CNP, PNW and EVRG**, which do not stand to see incremental investment opportunities on this front. Additionally, **we note several companies in our coverage that have no meaningful generation ownership** in competitive or regulated constructs, including: **AWK, FE, EXC, HE, EIX, PCG, SRE, ES (post sale), ED (post sale), and PEG (post sale)**. Below is a sample set of laggard utilities mentioned in this paragraph.

- **AVA** filed its IRP in Washington and Idaho on April 1, 2021, projecting adequate resources to meet customer demand through October 2026. The company's first long-term capacity deficit, net of energy efficiency, begins in October 2026 and grows to 247 MW by January 2027. AVA's inclusion with other names that stand to see little benefit is directly driven by Washington's strong clean-energy legislation (which predated the IRA), and its completed IRP processes (described below). Well before proposal of the IRA, AVA's plan already consisted of new renewable energy, energy storage, demand response, energy efficiency, and upgrades to existing hydropower

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

and biomass plants. The company's plan as currently laid out calls for new natural gas-fired peakers to meet the capacity shortfall in 2027, although there is a preference for long-term energy storage if the technology is available and cost-effective. AVA has a corporate clean electricity goal to provide customers with **100% net clean electricity by 2027**.

- **AWK** is not an electric utility and as such is not a direct beneficiary of key IRA provisions. **However, we see it as a tangential laggard in the overall group as a result of the legislation.** Based on many of our investor conversations, AWK's premium to the group is in part built on its ESG credentials, and to the extent that the IRA catalyzes and accelerates decarbonization, we believe the ESG spread between the two may compress.

- **CNP's** Vectren Indiana subsidiary proposed up to **~1,000 MW of renewable generation in the IN IRP.** There have been some scheduling and scope changes to optimize around supply chain and cost issues, with few changes to the overall investment profile for CNP (~$1B of renewables capex allocation in the current 5-year plan). In TX, CNP remains just a wires business. **Strategically, management focus is more skewed to the traditional T&D utilities and LDCs, which comprise a majority of the earning assets.**

- **EVRG** has historically procured renewables via PPAs, a strategy the current management team has sought to reverse in its latest IRP filings and via exploration of PPA buy-ins. **The company's latest update to the plan will see significant additions of solar in 2028-32 (~450 MW/year) alongside ~1.25GW of wind additions in 2024-27.** While most of this spending remains outside of the current planning window, it is driven by underlying asset fundamentals – namely a runway of coal plant retirements across MO and KS. As a result of this dynamic, **we do not expect significant changes in EVRG's NT generation capex plans; however, the company has shown in recent quarters that it is open to revisions around the margins** (e.g., tweaks to the timing and scale of solar deployments).

- **FE** has started to decarbonize, despite being an almost entirely wires-only business, as it has assets in states with coal exposure. In April 2022, the West Virginia PSC provided conditional approval for FE's plan to build 50 MW of utility-scale solar generation, so long as 85% of the output has been subscribed in advance of the start of construction. The company said on its 2Q22 call that it expects the first solar generation site to be in-service by year-end 2023, with the remaining four sites in-service by year-end 2025. **FE is otherwise a distribution and transmission business.**

- **NWE**'s existing fleet consists predominantly of 490 MW of hydro and 454 MW of wind, then 309 MW of "coal & other" (mostly Colstrip), 202 MW of natural gas-fired generation, and finally 17 MW of solar. However, the amount of **accredited capacity** (a resource's contribution to meet demand during peak energy usage by customers) varies significantly from these levels, with more than 90% of coal/natural gas megawatts counting as accredited capacity, while hydro gets credit for 60% of the total owned/PPA'ed capacity, **while only 13% of wind and 5% of solar megawatts are deemed to be accredited capacity** and therefore able to be counted against NWE's overall capacity deficit in Montana. The utility is currently constructing the Yellowstone County Reciprocating Internal Combustion Engine (RICE) generation facility for ~$275m with accredited capacity generation output of ~160 MW (more than 90%). Because of the magnitude of the reductions applied to renewable energy projects, the company estimates that building an equivalent 160 MW qualifying

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

amount of renewables would cost $2.1–4.1bn, or ~8–15x NWE's investment in the Laurel RICE facility.

- **OGE is lagging peers in adding renewables, at least in part driven by near-term economics and a need for capacity additions to address reserve margin needs (i.e., not a wind/solar solution).** The OGE Integrated Resource Plan and associated RFPs could present a multi-track opportunity for potential upside to plan, but renewables alternatives are only a small piece. The 2 base RFPs resulting from the IRP were the 450 MW of solar for delivery in 2025/26 (i.e., 2024 capex start) and the flexible resource (i.e., CT) RFP for 500 MW by 2027 (2026 capex start). On top of the 2 existing RFPs, OGE is starting to post the draft RFP for comment on up to 1,500 MW of existing resources that could be used to backfill near-term generation needs and de-risk renewables supply chain issues (management said it would be open to minority equity ownership). Beyond the IRP process, the SPP (transmission organization) is currently proposing to raise reserve margins from 12% to 15%, which would result in another 200 MW of immediate resource needs for OGE.

- **PNW** projects that coal exits and expiring purchase contracts will create a **6,000 MW supply-demand gap by 2035**, as peak capacity needs grow from ~8,000 MW in 2020 closer to ~12,000 MW by 2035 and owned/LT PPA'ed capacity falls from more than 8,000 MW in 2020 to less than 6,000 MW by 2035. The company's existing plan is to reduce coal's weight in the utility's resource mix from 16% as of December 31, 2021, down to 0% by 2035. Gas would fall from 29% to 6–17%, nuclear from 25% to 16%, purchased power would rise from 5% to 11%, and renewable/DSM's weight in the resource mix would rise from 25% at YE21 to 56–67% by 2035. **While these figures come from the company's September 2022 (post-IRA) slide deck, they are unchanged from prior presentations.**

- **PPL** operates 2 T&D utilities (PA/RI) alongside one integrated utility (KY), partially limiting the proportion of capex allocated to generation, and the associated optionality around renewables/storage. We see this business mix contributing to PPL's laggard status, alongside what remains a comparatively slow trajectory to exit coal. **The most recent IRP for the KY had a base case of ~2.3GW of renewables by 2036,** which in our view may be conservative in light of the current gas price backdrop. The next IRP is scheduled to be filed in 2024, and we expect there could be a further expansion and pull-forward of the current plans. As the eventual retirement of coal capacity in KY will require firm capacity, management continues to explore potential CCGT additions (with hydrogen firing capability); see our recent NDR note HERE for more on the sequencing and opportunity set. Also, we note that the region has seen substantial interest in CCUS and 45Q harvesting (see our note HERE), which could augment planned CCGT additions in lieu of pure renewables/storage investment.

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Combustion turbine combined with a heat recovery boiler and steam turbine used for base load power generation
- High thermal efficiency and longer starting times
- Combination of high thermal efficiency and low natural gas prices has made CCGT the benchmark technology for new capacity additions from a cost and emission perspective

Cost

- $956-$1,274 per kW installed cost
- $50 - $76 per MWh LCOE

Performance

- **Size:** 1083 MW
- **Efficiency:** Approaching 80%; temperature determines thermal efficiency and is limited by materials available
- **Emissions:** ~120 lb of CO2 per mmbtu of fuel, cooling systems allow for high combustion temperatures and low NOx emissions
- **Ramping:** Intermediate

Other considerations

- Recent announcements claim thermal efficiencies approaching 55% (~6,200 Btu per kWh HHV net)
- Dramatic efficiency gains beyond this are not likely possible without hurting economics

Provided for the exclusive use of Michael Weisenburger at NiSource on 04-Oct-2022 12:26 PM.

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Low capacity factor – Only intended to run during peak demand hours
- Low efficiency – Owners aren't likely to invest in efficiency improvements since the plants don't operate often
- Flexibility (i.e., quick ramp-up) and low natural gas prices support gas-fired combustion turbines as peaking units

Cost

- $707 - $942 per kW installed cost
- $89 - $135 per MWh LCOE

Performance

- **Size:** 237MW
- **Efficiency:** 36% - 39%
- **Emissions:** Conventional combustion turbines do not include controls for CO2, which is proportional to heat rate (inversely proportional to the efficiency); control may be accomplished through an SCR and an oxidization catalyst
- **Ramping:** Quick

Other considerations

- Low thermal efficiency but quick starting times
- Can change load quickly and back down economically during peak demand hours (highest energy prices)
- Flexibility has few substitutes but may be challenged by solar shaving peak demand or if battery storage becomes more economically feasible

Escalation	1.0%	1.0%	1.0%

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Uses a gasifier to turn coal and other carbon based fuels into synthesized gas, resulting in lower emissions – but not enough to meet pending environmental regulation
- While coal without CCS would not meet pending environmental regulation, we model this technology to demonstrate coal economics in case environmental policy were to reverse

Cost

- $2,250-$3,000 per KW installed cost
- $73 - $181 per MWh LCOE

Performance

- **Size:** 650 MW
- **Efficiency:** ~40%
- **Emissions:** Gasifying lowers emissions, although at a cost, and not sufficient to meet environmental regulation
- **Ramping:** Longer

Other considerations

- Access to coal delivery by rail, truck, or barge is required
- Our fuel (coal) price assumption is for Central Appalachian coal; however, this can be sourced elsewhere and price should be adjusted to reflect delivery costs
- We assume heat content of 11,000 MMBtu/lb – this would range based on type of coal

Escalation		1.0%	1.0%	1.0%

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Uses a gasifier to turn coal and other carbon based fuels into synthesized gas, resulting in lower emissions
- CCS reduces emissions further, to an acceptable level, although puts the technology out of the money

Cost

- $5,845-$7,794 per KW installed cost
- $151 - $227 per MWh LCOE

Performance

- **Size:** 650 MW
- **Efficiency:** 28% - 34%
- **Emissions:** Carbon capture and storage required to meet emission standards, although consumes significant power production and hurts economics
- **Ramping:** Longer

Other considerations

- Access to coal delivery is required
- When a sequestration site is not near the facility, transportation for sequestration has the potential to materially affect the capital cost estimates
- Our fuel (coal) price assumption is for Central Appalachian coal; however, this can be sourced elsewhere and price should be adjusted to reflect delivery costs
- We assume heat content of 11,000 mmbtu/lb – this would range based on type of coal

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Uses a gasifier to turn coal and other carbon based fuels into synthesized gas, resulting in lower emissions – but not enough to meet pending environmental regulation
- While coal without CCS would not meet pending environmental regulation, we model this technology to demonstrate coal economics in case environmental policy were to reverse

Cost

- $360-$480 per KW installed cost (or legacy acquisition cost)
- $40 - $99 per MWh LCOE

Performance

- **Size: 5**00 MW
- **Efficiency:** ~40%
- **Emissions:** Gasifying lowers emissions, although at a cost, and not sufficient to meet environmental regulation
- **Ramping:** Longer

Other considerations

- Access to coal delivery by rail, truck, or barge is required
- Our fuel (coal) price assumption is for Central Appalachian coal; however, this can be sourced elsewhere and price should be adjusted to reflect delivery costs
- We assume heat content of 11,000 MMBtu/lb – this would range based on type of coal

Key takeaways

- Used for base load power generation – Fission of uranium generates heat to create steam, which is directed to the steam turbine
- High capital costs and uncertainty around future costs associated with safety restrict the economics of new nuclear construction
- Our analysis does not include decommissioning costs or maintenance CapEx, both of which would materially increase LCOE

Cost

- $6,360-$7,030 per kW installed cost
- $91 - $124 per MWh LCOE

Performance

- **Size:** >2,000 MW
- **Capacity factor:** >85%
- **Emissions:** Power generation does not produce greenhouse gases, although concerns around containing spent nuclear fuel remain
- **Ramping:** Should operate continuously with planned outages for maintenance and fueling

Other considerations

- Federal and state environmental policy provide a lifeline for existing key nuclear plants
- Decommissioning costs would materially increase LCOE
- Maintenance CapEx could materially increase LCOE

Key takeaways

- Used for base load power generation – Fission of uranium generates heat to create steam, which is directed to the steam turbine
- A relatively lower cost than PWR nuclear with potential factory manufacturing and onsite assembly
- Our analysis estimates LCOE based on early indicator / industry targets despite no proof of underlying economics

Cost

- $3240-$5400 per kW installed cost
- $61 - $102 per MWh LCOE

Performance

- **Size:** 308 MW
- **Capacity factor:** >85%
- **Emissions:** Power generation does not produce greenhouse gases, although concern around containing spent nuclear fuel remain
- **Ramping:** Should operate continuously with planned outages for maintenance and fueling

Other considerations

- Decommissioning costs would materially increase LCOE
- Maintenance CapEx could materially increase LCOE

Key takeaways

- Drilled wells provide geothermal heat to create steam, which passes through a steam turbine – base load power
- Make-up well drilling costs will increase as heat recovery from original wells decrease
- High thermal efficiency and starting time similar to fossil-generating systems

Cost

- $2,768-$3,384 per KW installed cost
- $49 - $61 per MWh LCOE

Performance

- **Size:** 50 MW
- **Capacity factor:** 88%-92%
- **Emissions:** Air emissions low, only steam. Wastewater is re-injected and recycles geothermal water. Solid material/sludges must be disposed
- **Ramping:** Equivalent to existing fossil-generating systems

Other considerations

- Seismic activity risk if water is injected for geothermal fracking to access “hotter rock”
- Decreasing heat recovery over time due to geothermal heat source losses

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Wind resource assessment is more challenging than on-shore
- Electrical infrastructure challenges (estimated ~15% of total installed project costs) increases for projects further from shore

Cost

- $4350-$5316 per KW installed cost
- $76 - $165 per MWh LCOE

Performance

- **Size:** 400 MW
- **Capacity Factor:** 40-50%
- **Emissions:** NA
- **Ramping:** Difficult to objectively monitor given variability of wind speed

Other considerations

- Federal permitting hurdles high right now with many projects facing or at risk of delay
- Stronger wind speeds off-shore vs. on land may improve efficiency
- Ability to maintain off-shore facilities is challenging

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Highest capacity factor generally during non-peak hours
- Intermittent generation requires baseload generation or batteries to balance variable performance
- Opportunities to develop projects that capture ideal conditions are geographically limited, which could result in significant transmission investment requirement

Cost

- $1,546-$1,890 per KW installed cost
- $21 - $72 per MWh LCOE

Performance

- **Size:** 200 MW
- **Capacity Factor:** 30-40%
- **Emissions:** Does not produce greenhouse gases
- **Ramping:** Difficult to objectively monitor given variability of wind speed

Other considerations

- Transportation and logistics restrictions limit turbine scaling (taller towers and larger wind turbines), which can generate greater wind power in low-moderate wind-speed regions
- Greater range of wind turbines are available to generate more power in more available, low-moderate wind-speed regions

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Highest capacity factor generally during non-peak hours
- Intermittent generation requires baseload generation or batteries to balance variable performance

Cost

- $1,748-$2,193 per KW installed cost for wind + storage (4hr assumed)
- $31 - $90 per MWh LCOE

Performance

- **Size:** 200 MW
- **Capacity Factor:** 30-40%
- **Emissions:** Does not produce greenhouse gases
- **Ramping:** Difficult to objectively monitor given variability of wind speed

Other considerations

- Greater range of wind turbines are available to generate more power in more available, low-moderate wind-speed regions
- Storage costs reductions will continue to be driven by advances in EV technology

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Costs have come down substantially for solar modules, BoS, and installation
- Efficiency has increased to records closer to ~20-25%
- Solar competitive post tax credits

Cost

- $637-1,115/kW overnight capital costs (discounted by the net ITC assumption available post IRA)
- $23 - $69 per MWh LCOE

Performance

- **Size:** 150 MW
- **Project Capacity Factor:** 20% - 35%
- **Emissions:** Does not produce greenhouse gases.
- **Ramping:** N/A

Other considerations

- Concerns for a diverse generation mix will help solar growth as natural gas contribution increases
- Solar is a complement to natural gas – not a supplement

Fixed O&M ($/kW-yr)		26.94	33.67	40.40
Escalation		0.0%	0.0%	0.0%

Key takeaways

- Costs have come down substantially for solar modules, BoS, and installation
- Storage beneficial to supply load during night, non-peak hours

Cost

- $1,264-$1,896 per kW installed cost for solar (net of ITC available post IRA)
- $47 - $122 per MWh LCOE

Performance

- **Size:** 150 MW
- **Project Capacity Factor:** 20% - 35%
- **Emissions:** Does not produce greenhouse gases
- **Ramping:** N/A

Other considerations

- Some companies surveyed have noted it is advantageous and economical to pair solar and storage in some areas
- Storage costs reductions will continue to be driven by advances in EV technology

Escalation		1.0%	1.0%	1.0%

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Costs have come down substantially for solar modules and installation
- LCOE understates the competitiveness; customers would compare this to the retail rate their local utility charges, which is significantly higher than the wholesale rate

Cost

- $2,700 per KW installed cost
- $114 - $145 per MWh LCOE

Performance

- **Size:** 6 KW
- **Project Capacity Factor:** 20-25%
- **Emissions:** Does not produce greenhouse gases
- **Ramping:** N/A

Other considerations

- Not part of our analysis, but third-party leasing has become the most popular model – where the customer pays nothing upfront for their roof-top system

Source: Guggenheim Securities, LLC, company filings, EIA

Key takeaways

- Customer-sited thermal generation (often micro-turbines or reciprocating engines) where waste heat is recycled for building's heat and hot water
- Ideal for industrial, hospital, and some large commercial buildings – facilities with balanced electrical and thermal load that could utilize the system around the clock

Cost

- $1,250-$4,300 per KW installed cost (range now includes DR and on-site solutions which have varied in operational effectiveness for energy purposes)
- $95 - $150 per MWh LCOE

Performance

- **Size:** <10 MW
- **Capacity Factor:** Target >85%, but not easily achievable
- **Emissions:** Waste heat is recycled, units are usually below reporting thresholds
- **Ramping:** N/A

Other considerations

- As is the case with solar, a wholesale LCOE underestimates competitiveness as the economics are based on retail rates
- Applications are limited – balanced thermal and electrical demand profiles are necessary for economics to materialize
- Real estate managers aren't in the business of managing power plants – making it difficult to realize targeted economics

Utility-Scale Energy Storage LCOE Analysis

	Scenarios		
	Low	Base	High
Unit			
Capacity (MW)	50	50	50
Capacity factor	17%	17%	16%
Heat rate (Btu/kWh)	-	-	-
Implied efficiency 3,412	*NA*	*NA*	*NA*
Capacity factor degradation	0.3%	0.5%	0.8%
Capital investment ($/kW)			
Equipment			
Construction			
Transmission			
Other			
Total Capital Costs ($/kW)	1,184	1,316	1,448
Total Capital Investment ($mm)	59	66	72
Fuel			
Fuel price	-	-	-
Conversion to MMBtu	-	-	-
Fuel cost ($/MMBtu)	-	-	-
O&M			
Variable O&M ($/MWh)	-	-	-
Fixed O&M ($/kW-yr)	24.66	25.96	27.26
Escalation	1.0%	1.0%	1.0%

Key takeaways

- Storage beneficial to supply load during night, non-peak hours
- The energy storage scenario is more illustrative at this point for standalone applications, while we anticipate pairing wind/solar to be much more economic.

Cost

- $1,184-$1,448 per kW installed cost for storage (derived from EIA data)
- $88 - $121 per MWh LCOE

Performance

- **Size:** 50 MW
- **Project Capacity Factor:** 17%
- **Emissions:** Does not produce greenhouse gases
- **Ramping:** N/A

Other considerations

- Some companies surveyed have noted it is advantageous and economical to pair solar and storage in some areas
- Storage costs reductions will continue to be driven by advances in EV technology

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) whose name(s) appear(s) in this report have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

For the second quarter ending June 30, 2022, the Firm did not obtain from this Research Analyst (within 30 days of the end of the quarter), a certification representing that, in connection with public appearances, the views expressed were consistent with his personal views and that no part of his compensation was related to his recommendation. The certification was provided in the first half of September.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

OTHER DISCLOSURES

This research is for our clients and prospective clients only. Other than disclosures relating to Guggenheim Securities and its affiliates, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the research analyst's judgement. Guggenheim Securities conducts a full-service, integrated investment banking and brokerage business, and one or more of its affiliates conducts an investment management business. Guggenheim Securities is a member of SIPC (http://www.sipc.org). Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our employees trading for our own account that reflect opinions that are contrary to the opinions

expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

Forward Power Curves, Genco MtM, and Weekly Commentary (see our note HERE)

PCG – Environmental stakeholders push back on expedited Diablo Canyon license extension

PCG – CPUC issued PD on self-insurance settlement, approval without modification

PCG – Stakeholders file reply briefs in the PG&E 2023 GRC; PG&E modifies request narrowing the bid-ask

EIX/PCG/SRE ─ PD for CA cost of capital proceeding on voting meeting agenda and set for deliberative meeting today

ETR – Challenger wins LPSC commission seat

Nuclear/Policy ─ Senate Committee advances International Nuclear Energy Act

EVRG ─ EVRG discloses additional information ahead of workshop

POR ─ November substation attacks leave region on edge

SO ─ Post hearing briefs and proposed orders filed for GRC

PCG ─ PG&E WMP decision ratification on voting meeting agenda for December 15, 2022

PNW ─ Amending procedural orders issued

PCG – Zogg fire rehearing proceeding receives approval to stay proceeding schedule for settlement discussions

NI – Ohio Consumers' Counsel also files in support of settlement

CNP – MN PUC rejects appeal on past winter cost recovery

ETR – LPSC files settlement comments in SERI complaint proceeding at FERC

WEC – WEC and MGE receive approval to acquire Darien Solar Farm

ETR ─ ETR files settlement update in ETR TX rate case

AVA – Avista signs 145 MW hydro deal

PCG – Environmental stakeholders push back on expedited Diablo Canyon license extension

- Environmental groups against nuclear sent letters to the NRC trying to block PG7E's expedited request for license extension for Diablo Canyon.
- In particular stakeholders pushed back on reviving the prior extension process from before PG&Es decommissioning decision.
- The DOE already approved a $1.1B loan guarantee for the necessary investments to keep the plant running.

- The $1.1B loan will help offset the existing $1.4B in state funding.
- More in media here.

Guggenheim takeaway:*Not surprising given the group. NRC process kicked off for Diablo Canyon license extensions. From an earnings perspective there could be a slight tailwind for PCG, but impacts would remain in the prior range of EPS / rate base guidance outcomes (more thoughts in our SB846 note* **here***). Overall, we believe PG&E actions on extending Diablo Canyon operations provide support to the state policy objectives, provides benefits to customers from carbon free generation at reduced costs and secures good will given no need for PG&E to keep the plant running under status quo.*

PCG – CPUC issued PD on self-insurance settlement, approval without modification

- CPUC issued a proposed decision approving without modification the PG&E settlement on wildfire self-insurance.
- The joint settlement reached earlier agrees on a path for self-insurance for PG&E due to rising third party costs.
- More specifically given PG&E's $707M third party costs for $900M of insurance, the parties found it more cost efficient to self-insure.
- The initial rate recovery amount for PG&E's CPUC-jurisdictional revenue requirement in 2023 shall be $400 million for self-insurance, a reduction of approximately $307 million from PG&E's proposed revenue requirement figure in its prepared testimony.
- In each year of the 2023 GRC cycle, PG&E would have a deductible of 5% of up to $1 billion of self-insurance costs.
- There is also a provision for increasing collections based on actual claims costs and stopping collections once $1B of self-insurance funding is achieved.
- Docket: A2106021

Guggenheim takeaway: *Wildfire insurance costs have increased significantly in recent years and PG&E's proposal for self-insurance is a good way to reduce overall customer costs. The mechanisms proposed in the settlement will have an opportunity to remove the $707M third party insurance costs entirely from the customer's bill over time. Intervenors have previously been focused on specific revenue reductions, including alternative insurance proposals, reduction in operating costs, reduction in capital programs including undergrounding, etc. The timing of the approval and PD comments would make the PD eligible for vote at the January 12, 2023 CPUC meeting, ahead of the wildfire insurance marketing timing for PG&E.*

PCG – Stakeholders file reply briefs in the PG&E 2023 GRC; PG&E modifies request narrowing the bid-ask

- Stakeholders and intervenors filed opening briefs on the PG&E 2023 general rate case (GRC).

- While intervenors continue to make the case for various reductions and administrative comments, PG&E filed updates that narrow the regulatory bid-ask including reductions in undergrounding mileage over the GRC term (maintaining the LT target).
- PG&E reply briefs proposed a reduction from 3,600 miles of undergrounding to 2,000, taking down capex over the GRC term related to undergrounding by $4B (in part implying a lower per mile cost over the long run).
- While the cost per mile metrics are reiterated, the miles not covered by the GRC are pushed into a lower per mile cost run rate (i.e., net customer savings benefit).
- PG&E keeps supporting the band of recoverability around the spending of 15%.
- Docket: A2106021

Guggenheim takeaway:*The filing is a slight deviation from prior PG&E regulatory approach (i.e., working to bridge the gap and incorporating intervenors' comments in testimony vs. working behind closed doors in settlement). We caught up with mgmt. over the weekend and there have been no incremental investor disclosures, implying no deviation from prior rate base and earnings guidance. We note that the current PCG financial plan guidance remains at a wide range for capex which accounts for the changes in GRC ask, undergrounding, etc. The longer term undergrounding plan is still to be filed (after CPUC workshops, which have not been held yet), but mgmt. anticipates it will be similar to prior goals (shifting capex vs. reduction in scale). Overall, the PG&E filing goes a long way to address stakeholder concerns and work the regulatory process towards consensus, which would be a constructive development, given the financial plan is reiterated. While the risk reduction attributed to undergrounding over the course of the GRC is lower, PG&E noted that other measures, including operational, maintain the risk reduction targets. Between the broader stakeholder support for undergoing, and legislative outcomes (noted HERE), there is a clear push to do more in CA, but we acknowledge the regulatory process bid-ask and intervenor scrutiny. More on our thesis here.*

EIX/PCG/SRE – PD for CA cost of capital proceeding on voting meeting agenda and set for deliberative meeting today

- The CA cost of capital proposed decision was on the voting meeting agenda for next Thursday (December 15, 2022) and the CPUC filed a late Friday notice of a rate setting deliberative meeting scheduled for Monday, December 12, 2022.
- The RDM includes the cost of capital proceedings, as well as NEM 3.0, SCG/SRE Angeles Link memo account
- Docket: A2204008 et al

Guggenheim takeaway: FYI. The RDM mechanism has been used by the CPUC for various purposes that ranged from discussion to alternate PD proposals in the past. For the cost of capital specifically, there is now an opportunity to add and alternate PD, although there has not been any indication one way or another except several prior ex-

parte filings from stakeholders. We have previously noted the negative impacts from the PD and the potential for a December 15, 2022 CPUC vote (see note HERE).

ETR – Challenger wins LPSC commission seat

- LPSC commissioner election challenger Davante Lewis (D) won the runoff election in LA, beating an 18 year incumbent commissioner Lambert Boissiere III.
- The new commissioner is affiliated with environmental political action and noted he is "unafraid to hold Entergy utilities accountable".
- More in media here.

Guggenheim takeaway: *FYI. We see most public commentary as political rhetoric and the LPSC has been historically balanced in regulatory process. If nothing else, the incoming commissioners comments point to an accelerated renewables transition.*

Nuclear/Policy ─ Senate Committee advances International Nuclear Energy Act

- The Senate Foreign Relations Committee passed the INEA, which intends to coordinate security and export strategies for US technology across the federal government
- "The *International Nuclear Energy Act* would: Support the establishment of an office to coordinate civil nuclear exports strategy; establish financing relationships; promote regulatory harmonization; enhance safeguards and security; promote standardization of licensing framework; and create a nuclear exports working group." - press release
- More HERE

Guggenheim takeaway: *While the legislation itself is not targeted towards a specific nuclear technology; we see it as yet another confirmation of bipartisan support for the resource. The move comes alongside efforts to harness US development agencies to finance US technology exports, which we see as an important point for SMR exports.*

EVRG ─ EVRG discloses additional information ahead of workshop

- The utility disclosed retail revenue requirement forecasts through 2026
- "Evergy is changing its designation of lines 1-7 of page 1 of the document from confidential to public. Although this information is forecasted information and is appropriately designated as confidential under the Commission's rules, Evergy is changing the designation in the interest of full transparency ahead of the capital plan workshop scheduled for next week" - EVRG
- More HERE

Guggenheim takeaway: *Minor FYI ahead of tomorrow's workshop.*

POR – November substation attacks leave region on edge

- A series of substation attacks have occurred across the region, damaging infrastructure and drawing the involvement of the FBI
- More HERE

Guggenheim takeaway: *Incidents like these remain a persistent issue for the industry – heightened by the most recent disruptions in NC.*

SO – Post hearing briefs and proposed orders filed

- Staff, Georgia Power, and numerous intervenors filed post hearing briefs filed along with multiple proposed orders.
- Staff continue to recommend a 9.45% ROE (vs currently authorized 10.50%) and lower equity layer of 51% once Vogtle Unit 4 is online, compared to the company's currently authorized 56% level.
- Docket 44280

Guggenheim takeaway: *Investors should recall that an order is expected at the Georgia PSC's December 20, 2022, meeting. We continue to expect the commission to support the utility's status quo ROE and equity layer.*

PCG – PG&E WMP decision ratification on voting meeting agenda for December 15, 2022

- Draft Resolution SPD-9 will be on the agenda at the December 15, 2022 Commission meeting.
- Draft Resolution SPD-9 ratifies the decision of the Office of Energy Infrastructure Safety to approve the 2022 Wildfire Mitigation Plan Update of Pacific Gas and Electric Company.
- The Commission may then vote on this draft resolution, or it may postpone a vote until a later meeting.

Guggenheim takeaway: *FYI. Important step in satisfying the regulatory and legal requirements for wildfire safety and regulations at PG&E.*

PNW – Amending procedural orders issued

- The deadline for APS to complete mailing/emailing and publication of the public notice is extended from January 16, 2023, to January 31, 2023.
- The intervention deadline has been extended from February 16, 2023, to March 3, 2023.
- The deadline for APS to file its certification of mailing and 27 publication is extended from February 16, 2023, to March 3, 2023.
- Docket E-01345A-22-0144

Guggenheim takeaway: *With two new commissioners, this case could be an opportunity for the company in terms of a new regulatory dynamic. We will be watching how other rate cases go in the first few months of 2023, to get a sense of how APS' case will go once it ramps up towards the middle of next year.*

PCG – Zogg fire rehearing proceeding receives approval to stay proceeding schedule for settlement discussions

- CPUC approved a joint motion by PG&E and SED on staying the procedural schedule on the appeal of Zogg fire penalties.
- The appeal disputes the $155M penalty issued by the SED.
- Docket: H2211015

Guggenheim takeaway: *FYI. Discussions could limit the negative impacts of the SED proposal.*

NI – Ohio Consumers' Counsel also files in support of settlement

- The Ohio Consumers' Counsel noted that parties engaged in negotiations for over five months to reach the settlement.
- The OCC also took the position that the settlement as a package benefits consumers and the public interest.
- Docket 21-637-GA-AIR

Guggenheim takeaway: *FYI. Another indication that the October 2022 settlement appears to be broadly supported.*

CNP – MN PUC rejects appeal on past winter cost recovery

- MN PUC rejected an appeal by utility companies including CNP on a decision to reduce recoverable fuel amounts from past winter costs.
- More in media here.

Guggenheim takeaway: *FYI. Minor item for CNP as the disputed amounts are below the threshold of significance for the financial plan.*

ETR – LPSC files settlement comments in SERI complaint proceeding at FERC

- LPSC filed comments in the SERI complaint proceedings disputing prior ETR comments and urging the commission support litigated process.

- LPSC claims the agency has not been in any recent active negotiations toward settlement, claiming ETR has failed to meaningfully engage.
- ETR previously noted that the company sees a path to settle the SERI proceedings in their entirety, and requested the commission hold off on making litigation comments.
- FERC Docket ER18-1182 (available through search). MS Settlement here.
- Docket: EL20-72 / EL18-152 (through FERC search). Partial settlement found under 20-72.

Guggenheim takeaway: *FYI on continuing process at FERC for the outstanding SERI issues. Some negative commentary late last week from the LPSC indicating no interest to narrow the bid ask to the point of settlement. The incremental partial settlement from last month however shows a willingness for parties to take issues off the table, although the scope of the incremental items is relatively minor relative to the MS settlement ($18m vs. a pro rated $588M), so there is still a long way to go to address all outstanding issues. We maintain our view that ETR conservatism and flex in plan can absorb the potential EPS impacts (i.e., financing the full $588M is within the range of the improved credit metric trajectory from analyst day). More thoughts on the analyst day* here.

WEC – WEC and MGEE receive approval to acquire Darien Solar Farm

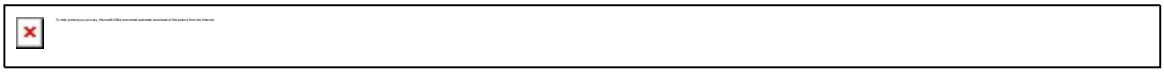
- Wisconsin regulators approved the acquisition of the 250 MW solar installation, which will also contain a 75 MW battery facility.
- Wisconsin PSC project page

Guggenheim takeaway: *Investors should recall that back in March 2022, WEC & MGEE announced intentions to acquire the Darien Solar Farm at an estimated cost of $446m. The project is scheduled to reach COD by YE24.*

ETR – ETR files settlement update in ETR TX rate case

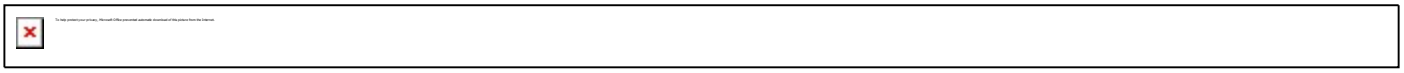
- ETR filed a settlement status comment in the TX rate case.
- The parties continue to work to reach a final settlement in this proceeding and develop settlement documents.
- The parties need additional time to complete these tasks and support continued abatement of the hearing on the merits.
- PUCT also adopted a December 16, 2022 date for intervenor briefing
- The current rate case request is $131M net of rider inclusions into base rates.
- The rate request is premised on $4.4B of rate case, 10.8% ROE and 51% Equity ratio.

- Docket: 53719.



Guggenheim takeaway: *FYI. Process continues down the litigated path. Investors should monitor for potential reads to other filings in TX with peers.*

AVA – Avista signs 145 MW hydro deal



- The 23-year supply deal supports the company's goals of providing customers with 100% carbon neutral power by 2027, and 100% clean electricity by 2045.
- Company press release

Guggenheim takeaway: *Minor FYI.*

October 24, 2022

Utility and IPP 3Q22: Valuation and Estimate Adjustments

Key Message: We are refreshing select estimates and PTs ahead of 3Q22 earnings to reflect any known and measurable year-over-year items, to adjust for seasonality, and to re-mark to the latest commodity curves. This note, which includes estimate changes, is a culmination of mgmt. calls with our covered companies over the past few weeks. In addition, our base regulated utility multiple declines from 19.5x to 16x as we rerun our underlying regression; see below.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

UPDATING OUR BASELINE UTILITY VALUATION

We are updating our baseline utility valuation from 19.5x P/E on 2024E to 16x P/E, largely driven by a steep rise in interest rates and forward yield expectations. While we have acknowledged a recent breakdown in the correlation between utility valuation and interest rates (see our note here), we are maintaining our valuation methodology presented in the 2022 Utilities Outlook (see note here). In this update we are incorporating the forward yield outlook for corporate bonds of ~5% for 2024 to derive: our "base" target multiple for regulated utilities before full-year discount factor and company-specific discounts/premiums. The current 2024 corporate bond yield curve (~5%) implies a 2024 regulated P/E multiple of ~16x P/E but we acknowledge a transitory view of forward expectations (i.e., we expect expectations to continue shifting with Fed action), and we reset our baseline (i.e., average fair value) for utilities to 16x P/E on 2024E (down from 19.5x) accordingly.

BBB Yield (%)	2024E P/E Multiple	Multiple Premium / (Discount)	Implied Upside / (Downside)
4.0%	18.0x	2.0x	-11%
4.2%	17.6x	1.6x	-9%
4.4%	17.2x	1.2x	-7%

	Company Updates	Valuation	Risks
AEE	▪ We are updating our 3Q22 estimate from $1.75 to $1.71 to account for known and measurable items year to date (through 3Q), including weather, cost run-rates, and revenue seasonality. ▪ We are maintaining our 2022-25 annual EPS estimates. ▪ We are updating our PT from $99 to $84.	▪ We are maintaining our BUY rating. ▪ We value AEE as a regulated utility, arriving at our $84 PT using our regulated group multiple of 16x, with a premium to reflect top-quartile growth opportunities, and applying to 2024 fundamentals. Our SOTP analysis for AEE essentially implies a ~19.2x multiple, in line with top-quartile growers. We value the company as a sum of the parts, and (1) we attribute a 3x premium on Ameren MO, reflecting potential upside capital opportunities, renewables, and an improving regulatory environment, (2) we assign a 1x premium to IL Electric and IL Gas, and (3) we assign a 5x premium on transmission for growth opportunities in MISO. We apply this to our 2024 EPS estimate of $4.64 and discount back to arrive at our $84 PT.	▪ Primary risks encompass traditional risk factors inherent with all utilities, including: (1) rate case risk, (2) capex outlook, and (3) interest rate changes above what we account for in our regression model. Company-specific risks include treasury yields deteriorating (IL) and further MISO congestion hampering new generation build.
AEP	▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT to $93 from $109.	▪ We are maintaining our BUY rating. ▪ We utilize our regulated electric utilities multiple of 16.0x and apply a 1.5x premium for the constructive decarbonization path with incremental investments not currently in plan. We then apply this 17.5x multiple to our $5.64 2024 EPS estimate and discount back by 1 year to arrive at our $93 PT.	▪ Downside risks include ongoing renewable supply chain disruptions, delays to transmission buildout, and traditional risk factors inherent with all electric utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.
AVA	▪ We are updating our 3Q22 estimate to $0.18 from $0.12 to account for known and measurable items year to date (through 3Q), including cost run rates and revenue seasonality. ▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT to $33 from $34.	▪ We are maintaining our SELL rating. ▪ We arrive at our $33 PT by applying our 16x regulated group target multiple (based on our regression model using the correlation between electric utility valuations and forward interest rate expectations), less a 2.5x discount for regulatory (rate case) risk to our 2024 EPS estimate of $2.59, and discount back 1 year.	▪ Upside risks include capital investments exceeding our modeling assumptions or interest rate changes below those reflected in our regression model.
ALE	▪ We are updating our 3Q22 estimate from $0.89 to $0.68 to account for known and measurable items year to date (through 3Q), including weather, cost run rates, and revenue seasonality. ▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT from $66 to $53.	▪ We are maintaining our NEUTRAL rating. ▪ We value ALE using a sum-of-the-parts valuation. To the entire business excluding ACE, we take our regulated group multiple of 16x and apply a 2-turn and a half turn discount (to reflect ongoing uncertainty regarding growth), which is applied to our 2024 EPS (ex-ACE) estimate of $3.30 for an equity value of ~$45. We then apply our 16x premium less 2 and a half turns to our 2024 ACE EPS of $0.84 for an equity value of ~$11. The discounted combination of the 2 parts equals our $53 PT.	▪ Outside of the smaller base of large industrial customers and weak industrial demand, risks to achieving our fair value/share for ALE mainly encompass traditional risk factors inherent with regulated utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

AWK	▪ We are maintaining our 2022-25 annual EPS estimates. ▪ We are updating our PT from $155 to $138.	▪ We are maintaining our NEUTRAL rating. ▪ Water utilities continue to be ascribed higher multiples vs. electric/gas utility counterparts, given higher growth prospects and less risk around capex, which haven't slowed and are not expected to anytime soon, and lower perceived risk vs. electric/gas peers. Our $138 PT for AWK is predicated on our 2024 EPS estimate of $5.23 applied to an effective ~16x P/E multiple, which we believe captures the narrowing spread at which water utilities should trade vs. electric/gas counterparts. We derive our regulated utility group target multiple of 16x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years.	▪ Risks to achieving our PT for AWK mainly encompass traditional risk factors inherent with regulated utilities, including: (1) rate case risk - a lower/higher allowed ROE can impact our earned return assumptions, (2) lower/increased capex outlook, and (3) interest rate changes above or below what we account for in our regression model.
CMS	▪ We are updating our 3Q22 estimate from $0.71 to $0.55 to account for known and measurable items year to date (through 3Q), including weather and storm costs, cost run rates, and regulatory outcomes. ▪ We are updating our 2022-25 annual EPS estimates from $2.88, $3.14, $3.41, and $3.64 to $2.88, $3.13, $3.45, and $3.69, respectively. ▪ We are updating our PT from $70 to $57.	▪ We are maintaining our NEUTRAL rating. ▪ We arrive at our valuation utilizing an SOTP analysis based on an 16x P/E base regulated multiple (down from 19.5x due to interest rate impacts on our regression) and a 2x premium (up from 1x) for CMS's constructive regulatory environment, strong organic growth, and balance sheet position. Applying our target multiple to our 2024 EPS estimate of $3.41, discounted for 1 year to achieve our 12-month forward PT, results in a $57 PT.	▪ CMS risks mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case risk, (2) lower/higher capex outlook, and (3) interest rate changes above/below what we account for in our regression model. Additional risk factors include: Executing and implementing the Michigan Energy law and commodity risk exposure through CMS' Enterprises segment - a decrease/increase in power prices and spark spreads can negatively/positively impact the merchant generation business.
CNP	▪ We are updating our 3Q22 estimate from $0.30 to $0.28 to account for known and measurable items year to date (through 3Q), including weather (above-normal CDDs), cost run rates, and timing of regulatory outcomes. ▪ We are updating our 2022-25 annual EPS estimates from $1.38, $1.49, $1.61, and $1.73 to $1.38, $1.49, 1.63, and $1.75, respectively ▪ We are updating our PT from $35 to $30.	▪ We are maintaining our BUY rating. ▪ Valuation: We arrive at our valuation utilizing an SOTP analysis comprising: we now use our base regulated multiple of 16x P/E (down from 19.5x due to interest rate impacts on our regression) and ascribe a 2x premium for CNP's constructive jurisdictions, sector-leading growth, and increasing visibility on incremental resiliency spending not in plan. This results in (1) ~$17/share (down from $20) for the regulated electric utilities; (2) ~$14/share (down from $17) for the gas utilities; and (3) -$1/share for corporate & other (we now fully allocate ET transaction proceeds, ~$3 prior). Note: segment valuations may not move due to rounding). Taking a sum of the business segments, discounted for 1 year to achieve our 12-month forward PT, we arrive at our $30 PT ($35 prior). .	▪ Outside of potential midstream volatility, risks for CNP mainly encompass traditional risk factors inherent with regulated utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

CPK	▪ We are updating our 3Q22 estimate from $0.81 to $0.75 to account for known and measurable items year to date (through 3Q), including weather, cost run rates, and revenue seasonality. ▪ We are updating our 2022-25 annual EPS estimates from $5.13, $5.55, 5.93, and $6.32 to $5.08, $5.49, 5.87, and $6.26, respectively. ▪ We are updating our PT from $136 to $120.	▪ We are maintaining our NEUTRAL rating. ▪ We value CPK as a sum of the parts. The regulated assets are largely gas T&D, with our estimated EPS contribution of $4.65 in 2024, to which we apply our 16x P/E (down from 19.5x due to interest rate impacts on our regression) target regulated P/E multiple and ascribe a 4x premium for incremental organic growth not represented in our EPS estimate (including 4-5% customer growth), resulting in an ~$93/share (down from $110/share) implied value, and 16x P/E to our 2024 parent EPS estimate, which results in an -$3/share implied value. We apply a 14.0x EV/EBITDA to the unregulated businesses' EBITDA and subtract our estimated unregulated debt allocation, which results in an ~$38/share implied value for 2024. For the parent/other segment, Taking the sum of the segments, we arrive at our $120 PT.	▪ Downside risks include: (1) unfavorable regulatory outcomes, (2) unfavorable interest rate changes, (3) delay in regulated capex deployment, and (4) unfavorable market conditions for propane and CNG services. Upside risks include: (1) additional capex opportunities, (2) higher organic growth from unregulated businesses, (3) accelerated customer natural gas conversion, and (4) favorable interest rate changes.
D	▪ We are maintaining our 2022-25 annual EPS estimates. ▪ We are updating our PT from $90 to $75.	▪ We are maintaining our BUY rating. ▪ We utilize our regulated electric utilities multiple of 16x plus a 1x premium for constructive regulatory environments and strong growth from clean energy investments and apply this multiple to our 2024 EPS estimate of $4.70 and discount back to arrive at our $75 valuation.	▪ Risks to our rating and PT mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.
ES	▪ We are updating our 3Q22 estimate from $1.11 to $1.04 to account for known and measurable items year to date (through 3Q), including weather, cost run rates, and revenue seasonality. ▪ We are maintaining our 2022-25 annual EPS estimates. ▪ We are updating our PT from $97 to $82.	▪ We are maintaining our BUY rating. ▪ We utilize our 16x regulated utility multiple, plus an additional 1-turn premium to account for incremental opportunities and our improved view of the business mix. We then apply it to our 2024 EPS estimate of $4.75 and discount back to arrive at our ~$76 12-month implied value for the regulated segment. We then use a discounted cash flow valuation for offshore wind that arrives at ~$6/share for a SOTP total PT of $82/share.	▪ Downside risks to our valuation mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model. Upside risks to our valuation include: (1) grid mod spending opportunity above what we assume, and (2) offshore wind RFP success above our expectations.
DTE	▪ We are updating our 3Q22 estimate from $1.75 to $1.61 to account for known and measurable items year to date (through 3Q), including storm costs and weather, cost run rates, and revenue seasonality. ▪ We are updating 2022-25 annual EPS estimates from $6.06, $6.29, $6.73, and $7.13 to $6.06, $6.31, $6.73, and $7.18. ▪ We are updating our PT from $145 to $122.	▪ We are maintaining our BUY rating. ▪ We arrive at our valuation utilizing an SOTP analysis based on a 16x P/E (down from 19.5x due to interest rate impacts on our regression) base regulated multiple and a 3.0x premium on the regulated utilities for incremental decarbonization investments not included in our 2024 EPS estimates. We apply the multiple to our $6.73 EPS estimate for 2024, discounted for 1 year to achieve our 12-month forward PT, resulting in a $122 PT.	▪ DTE downside risks mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case risk, (2) lower capex outlook, (3) interest rate changes above what we account for in our regression model, and (4) decline in allowed ROE.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

ED	▪ We are updating our 3Q22 estimate from $1.21 to $1.46 to account for known and measurable items year to date (through 3Q), including timing of regulatory recovery, cost run rates, and revenue seasonality. ▪ We are updating our 2022-25 annual EPS estimates from $4.51, $4.85, 5.16, and $5.47 to $4.51, $4.71, 5.18, and $5.48, respectively. ▪ We are updating our PT from $94 to $82.	▪ We are maintaining our NEUTRAL rating. ▪ We arrive at our valuation utilizing a 16x P/E (down from 19.5x due to interest rate impacts on our regression) and a 1x premium for flexibility of cash allocation after CED sale (up from 0x). We apply this multiple to our 2024E EPS, discounted for 1 year to achieve our 12-month forward PT of $82.	▪ Upside/downside risks mainly encompass traditional risk factors inherent with all electric utilities, including: (1) constructive/negative rate case and other regulatory outcomes, (2) higher/lower capex outlook, and (3) interest rate changes below/above what we account for in our regression model.
EIX	▪ We are updating our 3Q22 estimate from $1.72 to $1.46 to account for known and measurable items year to date (through 3Q), including regulatory outcomes, financing, cost run rates, and revenue seasonality. ▪ We are updating our 2022-25 annual EPS estimates from $4.64, $4.92, 5.25, and $5.6 to $4.63, $4.79, 5.18, and $5.44, respectively. ▪ We are updating our PT from $82 to $66.	▪ We are maintaining our BUY rating. ▪ We value EIX using an implied multiple based on a 16x P/E (down from 19.5x due to interest rate impacts on our regression) adjusted for our adverse view of legacy wildfire liability risk and regulatory risk with a -2.5x multiple discount (up from -3x). Applying our 13.5x all-in target multiple to 2024E EPS and discounted for 1 year to achieve our 12-month forward PT, we arrive at our $66 PT.	▪ Outside of exposure to the wildfires discussed, downside risks to our valuation mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case/regulatory risk; (2) lower capex/disallowance risk; (3) interest rate changes above what we account for in our regression model; and (4) additional wildfire liability accruals not covered in our current valuation.
ETR	▪ We are updating our 3Q22 estimate from $2.54 to $2.61 to account for known and measurable items year to date (through 3Q), including hurricane drag, weather, regulatory outcomes, and cost run rates. ▪ We are updating our 2022-25 annual EPS estimates from $6.43, $6.81, $7.21, and $7.57 to $6.43, $6.78, $7.27, and $7.74, respectively. ▪ We are updating our PT from $129 to $117.	▪ We are maintaining our BUY rating. ▪ We arrive at our valuation utilizing a 16x P/E (down from 19.5x due to interest rate impacts on our regression) and a 1x premium for ETR's incremental organic growth opportunities across multiple jurisdictions including resiliency (up from 0x). Our PT of $117 is based on the target multiple applied to our 2024 $7.27 UP&O EPS estimate, discounted for 1 year to achieve our 12-month forward PT.	▪ ETR risks center around the traditional risks inherent with all utilities, including: (1) rate case risk; (2) lower capex outlook; and (3) interest rate changes above what we account for in our regression model.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

EVRG	▪ We are updating our 3Q22 estimate from $1.77 to $1.91 to account for known and measurable items year to date (through 3Q), including weather, cost run rates, and revenue seasonality. ▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT from $77 to $64.	▪ We are maintaining our BUY rating. ▪ We apply our regulated utility group target multiple (16x) and a 1-turn premium to our 2024 estimated EPS of $4.02 and discount back a year to arrive at our $64 PT. Our 1-turn premium accounts for opportunities not embedded in our estimates (e.g., transmission) and our view that KS and MO are improving jurisdictions.	▪ The primary risks encompass traditional risk factors inherent with all utilities, including: (1) rate case risk, (2) capex outlook, and (3) interest rate changes above what we account for in our regression model. Company-specific risks include failure to execute on its share repurchase strategy and/or failure to realize merger synergies.
EXC	▪ We are updating our 3Q22 estimate from $0.73 to $0.68 to account for known and measurable items year to date (through 3Q), including weather, cost run rates, and revenue seasonality. ▪ We are updating our 2022-25 annual EPS estimates from $2.27, $2.41, $2.58, and $2.82 to $2.27, $2.34, $2.58, and $2.82, respectively. ▪ We are updating our PT from $49 to $40.	▪ We are maintaining our NEUTRAL rating. ▪ Our valuation is based on our 2024E EPS of $2.58 applied to a 16x regulated utility multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years. To this 16x multiple, we continue to apply a 1-turn premium to each of EXC's subsidiaries for favorable recovery mechanisms (riders, MYPs) and underlying growth/incremental investment opportunities, except for ComEd. This blended 16.7x multiple, applied to our 2024E EPS and discounted back 1 year, equals our $40 PT. ▪ While there is ~13% upside from our current valuation, we remain neutral on EXC ahead of additional details on the impact of tax reform and potential readthrough to the capital/financing plans.	▪ EXC comprises regulated distribution and transmission assets, which face traditional risk factors and upside drivers inherent with all utilities, including: (1) positive/negative rate case outcomes above/below our expectations, (2) higher/lower capex outlooks, and (3) interest rate changes above/below what we account for in our regression model.
FE	▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT to $34 from $43.	▪ We are maintaining our NEUTRAL rating. ▪ We use our regulated electric utilities multiple of 16x and apply a 3x discount due to FE's remaining legacy issues (i.e., ongoing audits, the SEC investigation, etc.). We then apply that 13x multiple to our $2.75 2024 EPS estimate and discount back by 1 year to arrive at our $34 TP.	▪ Beyond the potential penalties related to the ongoing audits and/or further fines stemming from the SEC's investigation, downside risks mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model. Upside risks include: (1) improved regulatory constructs; (2) higher capex outlook; (3) if interest rates fall lower.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

HE	▪ We are updating our 3Q22 estimate from $0.56 to $0.53 to account for known and measurable items year to date (through 3Q), including cost run rates and revenue seasonality as well as interest rate impacts on the ASB bank. ▪ We are updating our 2022-25 annual EPS estimates from $2.21, $2.41, $2.47, and $2.69 to $2.18, $2.43, $2.48, and $2.7, respectively. ▪ We are updating our PT from $41 to $36.	▪ We are maintaining our NEUTRAL rating. ▪ We value HE as a sum of the parts. We value the regulated assets by applying our 16x P/E (down from 19.5x due to interest rate impacts on our regression) multiple for 2024 and ascribe a -1x discount for sector-lagging growth (down from 2x due to a relatively strong balance sheet). This results in a regulated asset implied value of $28 (down from $34/share). For ASB, we attribute a 1.9x median price-to-book ratio based on $4-9B community bank peers with a 0.1x discount (due to size). This results in an implied value of $14/share for ASB (offset by higher NIM). For the parent/other segment, we apply our 16x target regulated P/E multiple and 1x discount to our -$0.22 EPS estimate in 2024, which results in a -$3/share implied value. Taking the sum of the segments and discounting by 1 year, we arrive at our 12-month PT of $36.	▪ Upside risks include: (1) additional regulated capex opportunities and growth from unregulated investments, (2) constructive regulatory outcomes, (3) accelerated performance incentive mechanisms, (4) favorable interest rate changes, and (5) strategic/acquisition growth opportunities. Downside risks mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.
LNT	▪ We are updating our 3Q22 estimate from $0.92 to $0.99 to account for known and measurable items year to date (through 3Q), including weather, cost run rates, and revenue seasonality. ▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT from $60 to $50.	▪ We are maintaining our NEUTRAL rating. ▪ We arrive at our $50 PT by applying our 16x regulated group target multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, plus a 1-and-a-half-turn premium to account for the aforementioned premium attributes, to our 2024 EPS estimate of $3.04 and discount back 1 year.	▪ Risks to our valuation for LNT mainly encompass traditional risk factors inherent with all regulated utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model. Upside risks to our PT estimate include: (1) favorable regulatory settlements; (2) opportunities around ATC; and (3) higher capex outlook.
NEE	▪ We are updating our 3Q22 estimate from $0.76 to $0.81 to account for known and measurable items year to date (through 3Q), including regulatory outcomes at FPL, weather, cost run rates, and revenue seasonality. ▪ We are updating our 2022-25 annual EPS estimates from $2.84, $3.07, $3.38, and $3.66 to $2.90, $3.12, $3.42, and $3.73, respectively ▪ We are updating our PT from $108 to $99.	▪ We are maintaining our BUY rating. Our $99 PT comprises $40 (down from $49) for FPL (now inclusive of Gulf), and other costs based on a 16x P/E (down from 19.5x due to interest rate impacts on our regression) and a 3x P/E premium for the roll-forward of earnings now included in our forecast horizon, but we continue to see incremental growth items that are not currently reflected in our estimates; and $59 (down from $63) for NEER based on an 85% payout rate and a target ~4.0% yield (up from 3.5% as we account for benchmark yields). Taking the sum of the segments, discounted for 1 year to achieve our 12-month forward PT, we arrive at our $99 PT.	▪ Risks include the Florida economy, commodity prices, and other risk factors inherent with all regulated utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

NI	▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT to $27 from $32.	▪ We are maintaining our BUY rating. ▪ We value NI as a regulated utility, arriving at our $27 PT using our regulated group multiple of 16x, with a premium to reflect top-quartile rate base growth through the forecast period, and applying to 2024 fundamentals. We value the company via SOTP, and (1) we attribute a 1.0x premium on NIPSCO, reflecting strong renewable-driven rate base growth, and (2) we assign the gas business a 3.0x premium (vs. our standard 2.0x discount applied to all LDCs broadly). Applied to our 2024 $1.70 EPS estimate and discounted back by 1 year, we arrive at our 12-month $27 PT.	▪ Risks to our valuation primarily include an underwhelming conclusion to NI's strategic review at its analyst day later this year, as well as traditional risk factors inherent with all regulated utilities, including: (1) rate case risk (albeit with heightened focus on the incorporation of renewables in 2H23), (2) potential for a lower capex outlook, and (3) interest rate changes above/below what we account for in our regression model.
NJR	▪ We are raising our FY23 estimate by $0.02 (now $2.45 vs. $2.43 prior), to reflect our expectation for the midpoint of FY23 guidance (to be announced on November 18). ▪ We are maintaining our 2022, 2024, and 2025 EPS estimates. ▪ We are updating our PT to $40 to $41.	▪ We are maintaining our NEUTRAL rating. ▪ We value NJR by applying our 16x regulated group target multiple (based on our regression model using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years).	▪ Upside risks to our valuation include weather-driven strength and faster-than-expected non-regulated growth. Downside risks for NJR mainly encompass traditional risk factors inherent with all regulated utilities, including: (1) rate case risk, (2) higher capex outlook, and (3) interest rate changes above what we account for in our regression model.
NRG	▪ We are updating our 3Q22 EBITDA estimate from $656mm to $410mm to account for known and measurable items year to date (through 3Q), including weather, cost run rates, and revenue seasonality. ▪ We are updating our 2022-25 annual EBITDA estimates from $2008, $2247, $2312, and $2276 to $1950, $2287, $2309, and $2274, respectively.	▪ We are maintaining our NEUTRAL rating. ▪ We project unlevered free cash flows based on adjusted EBITDA, subtracting environmental and maintenance capex and cash taxes. We apply an NRG-specific 4.5x terminal multiple to 2028 cash flow and we discount at NRG's estimated WACC. Our estimates utilize September 2022 curves. We also incorporate our fair value estimates for NRG's future environmental liabilities and NOLs and subtract net debt of ~$6bn to arrive at our $43 PT.	▪ Commodity price risk: NRG is still somewhat of a long natural gas call in ERCOT, with gas the marginal price setter in PJM, MISO, ERCOT, NYISO, etc. Retail margins remain somewhat levered to gas volatility and could expand further in a backwardated commodity environment (potential upside) or contract (potential downside). NRG is primarily a retail operation in the eastern RTOs. ▪ Environmental/policy risk: Environmental regulations could require increased spending; permitting and compliance associated with these regulations could require significant capital and operating expenditures. Considering timing to comply with these regulations and costs, some retirements of plants could be accelerated. Changes to these regulations could increase costs of operating these plants and/or increase competition. ▪ Operational risks: NRG's fleet could experience unforced outages or other operational issues that are inherent risks of the power generation business.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

NWE	▪ We are updating our 3Q22 estimate from $0.60 to $0.55 to account for known and measurable items year to date, including transmission throughput assumptions, cost run rates, and revenue seasonality. ▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT from $48 to $58.	▪ We are maintaining our NEUTRAL rating. ▪ We value NWE as a regulated utility, arriving at our $48 PT using our regulated group multiple of 16x, with a discount to reflect lower growth, and applying that multiple to 2024 fundamentals. We value the company as a sum of the parts and (1) attribute a 3x discount on the electric segment, reflecting a tough road ahead until the Laurel RICE unit is operational and less constructive jurisdictions and (2) utilize our regulated utility multiple of 16x, less a 2x LDC discount on the gas segment. We apply this to our 2024 EPS estimate of $3.88 to arrive at our $48 PT.	▪ Downside risks encompass traditional risk factors inherent with all utilities, including: (1) rate cases, (2) capex outlook, and (3) interest rate changes above what we account for in our regression model. Company-specific downside risks include a regression in the relationship with the MPSC and an inability to procure flexible energy supply. Upside risks include the company building more generation than we model and very constructive outcomes from regulatory proceedings.
NWN	▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT from $49 to $40.	▪ We are maintaining our NEUTRAL rating. ▪ We value NWN as a regulated gas utility, arriving at our $40 PT by applying our regulated electric target P/E multiple of 16x to our 2024 EPS estimate of $2.83. Our valuation incorporates a 1x discount to reflect slightly lower growth prospects vs. LDC peers.	▪ Downside risks include: (1) unfavorable regulatory outcomes, (2) unfavorable interest rate changes, and (3) delay in regulated capex deployment. Upside risks include: (1) additional capex opportunities, (2) accelerated customer growth and natural gas conversion, (3) favorable interest rate changes, and (4) favorable regulatory outcomes reducing regulatory lag.
OGE	▪ We are updating our 3Q22 estimate from $1.21 to $1.24 to account for known and measurable items year to date (through 3Q), including weather (above-normal CDDs), regulatory outcomes, cost run rates, and revenue seasonality. ▪ We are updating our 2022-25 annual EPS estimates from $1.99, $2.06, 2.21, and $2.30 to $1.99, $2.08, 2.22, and $2.32, respectively. ▪ We are updating our PT from $43 to $38.	▪ We are maintaining our BUY rating. ▪ We arrive at our valuation utilizing an SOTP analysis, composed of: (1) ~$43/share for the regulated electric utility, using our base regulated multiple of a 16x P/E (down from 19.5x due to interest rate impacts on our regression) and a 1x premium for incremental generation growth and strong balance sheet (up from 0x) applied to our 2024 EPS estimate of $2.22 (midstream excluded), and (2) ~$3/share for value of ET units subject to redeployment. Adding the segments and discounted for 1 year to achieve our 12-month forward PT, we arrive at our $38 PT.	▪ Outside of noise around midstream ownership, downside risks mainly encompass traditional risk factors inherent with all electric utilities, including: (1) negative rate case outcomes (i.e., regulatory risk including AR); (2) lower capex outlook and ability to deploy; and (3) interest rate changes above what we account for in our regression model.
OGS	▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT from $70 to $77.	▪ We are maintaining our NEUTRAL rating. ▪ We value OGS by applying our 16x regulated group target multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, to our 2024 EPS estimate of $4.65 and discount back 1 year, arriving at a $70 PT.	▪ Downside risks include: (1) unfavorable regulatory outcomes, (2) unfavorable interest rate changes, and (3) delay in regulated capex deployment. Upside risks include: (1) additional capex opportunities, (2) accelerated customer growth and natural gas conversion, (3) favorable interest rate changes, and (4) favorable regulatory outcomes reducing regulatory lag.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

PCG	▪ We are maintaining our 3Q22 estimate of $0.26 as we account for known and measurable items year to date (through 3Q), including legislative outcomes, cost run rates, and revenue seasonality. ▪ We are updating our 2022-25 annual EPS estimates from $1.11, $1.24, $1.34, and $1.45 to $1.11, $1.24, 1.36, and $1.49, respectively. ▪ We are maintaining our $19 PT.	▪ We are maintaining our BUY rating. ▪ We value PCG using an implied multiple based on our base regulated electric multiple of 16x P/E (down from 19.5x due to interest rate impacts on our regression) adjusted for our adverse view of regulatory outcomes and future wildfire liability risk with a 1x discount, and an incremental 1x discount for regulatory uncertainty on upcoming proceedings (GRC, WMP, etc.) and remaining FVT technical headwinds. Applying our 14x all-in target multiple (vs. 15.5x prior) to our 2024 EPS estimate, discounted for 1 year to account for our 12-month PT, we arrive at our $19 PT (unchanged due to rounding).	▪ Outside of exposure to the wildfires discussed, downside risks to our valuation mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case/regulatory risk; (2) lower capex/disallowance risk; (3) interest rate changes above what we account for in our regression model, and fines and penalties, including probation.
POR	▪ We are updating our 2022-25 annual EPS estimates from $2.83, $2.92, $3.02, and $3.18 to $2.83, $2.84, $3.02, and $3.17, respectively. ▪ We are updating our PT from $56 to $48.	▪ We are maintaining our BUY rating. ▪ We apply our electric target multiple of 16x, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations, plus a 1-turn premium to account for opportunities not embedded in our current estimates (future RFPs and potential change in CAGR) to our 2024 EPS estimate of $4.40, and discount back 1 year to arrive at our $48 12-month PT.	▪ The primary risks on the regulated utility encompass the traditional risk factors inherent with all utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.
PPL	▪ We are maintaining our 2022-25 annual EPS estimates. ▪ We are updating our PT from $33 to $27.	▪ We are maintaining our BUY rating. ▪ We apply our regulated utility group target multiple of 16x, plus a 1-turn premium to reflect incremental opportunities (KY, IIJA, etc.), to our 2024 EPS estimate of $1.70 and discount back to arrive at our $27 12-month PT.	▪ Risks to our estimates for PPL Corp mainly encompass traditional risk factors inherent with all electric and gas utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.
PEG	▪ We are updating our 3Q22 estimate from $0.92 to $0.82 to account for known and measurable items year to date (through 3Q), including cost run rates, regulatory and tax timing, commodity results net of hedges, and revenue seasonality. ▪ We are updating our 2022-25 annual EPS estimates from $3.53, $3.58, $4.06, and $4.39 to $3.50, $3.58, $4.06, and $4.39, respectively. ▪ We are updating our PT from $76 to $71.	▪ We are maintaining our BUY rating. ▪ Our $71 PT incorporates our SOTP analysis. We apply our base regulated multiple of 16x P/E (down from 19.5x due to interest rate impacts on our regression) and 2.0x premium (up from 1x) for incremental capital deployment and strong balance sheet position in light of rising interest rates. We apply the combined multiple to our 2024E utility EPS of $3.54, resulting in $64/share (down from $69), and $11 for holdco and PSEG Nuclear. PEG nuclear valuation still includes other EV adjustments including MtM. Taken in aggregate and discounted for 1 year to achieve our 12-month forward PT, we arrive at our $71 PT.	▪ Risks include: Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. In our view, PEG is inherently a long natural gas call, with gas the marginal price setter in PJM. If forward natural gas prices fall or PEG loses its basis and locational advantages, earnings could be impacted. The remaining risks center on the regulated electric and gas utility – PSE&G. Risks mainly encompass traditional risk factors inherent with all utilities, including: (1) future rate case risk, (2) lower capex outlook, (3) interest rate changes above what we account for in our regression model, and (4) decline in allowed ROE for investment programs in NJ (i.e., clean energy future).

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

PNW	▪ We are updating our 3Q22 estimate to $2.69 from $2.91 to account for known and measurable items year to date (through 3Q), including weather, cost run rates, and revenue seasonality. ▪ We are maintaining our 2022-25 annual EPS estimates. ▪ We are updating our PT from $54 from $60.	▪ We are maintaining our SELL rating. ▪ We arrive at our $54 PT by applying our 16x regulated group target multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations, less a 3.25x discount to reflect the broader deterioration of the regulatory construct in AZ vs. the peer regulated group (in our view, now the least attractive jurisdiction from an investment standpoint), to our 2024 EPS estimate of $4.50, then discounting the result back by 1 year.	▪ Upside risks primarily consist of a better-than-expected regulatory treatment by the Arizona Corporation Commission in the rate case and/or a change in the makeup of the ACC Commissioners whereby a majority of the state's utility regulators are comprised of pro-business commissioners with a more thorough knowledge of fundamental utility ratemaking.
SRE	▪ We are updating our 3Q22 estimate from $1.70 to $1.73 to account for known and measurable items year to date (through 3Q), including weather, cost run rates, and revenue seasonality, as well as unregulated benefits of commodity prices on SIP and financing changes. ▪ We are updating our 2022-25 annual EPS estimates from $8.54, $9.08, $9.58, and $10.21 to $8.70, $9.08, $9.58, and $10.21, respectively. ▪ We are updating our PT from $174 to $165.	▪ We are maintaining our BUY rating. ▪ We derive our valuation through our SOTP analysis comprising: (1) ~$47/share (down from 53/share) for SDG&E when we apply our a 16x P/E (down from 19.5x due to interest rate impacts on our regression) and a 1x premium for strong growth to our 2024E; (2) ~$39/share (down from $44/share) value for SoCalGas utilizing our 16x regulated electric P/E multiple and a 1x premium for strong growth to our 2024E; (3) ~$48/share (down from $51/share) for Oncor, applying our 16x regulated multiple plus 3.0x premium (up from 1x) for incremental capital and growth fundamentals to our 2024E; (4) ~$50/share for SRE's ownership of SIP based on a 13x EBITDA multiple applied to our 2024E, net of attributed debt; (5) $0/share for development projects as we take a conservative stance on project FIDs; and (6) ~($16)/share for parent drag. Taking a sum of the segments and discounting for 1 year to reach our 12-month PT, we arrive at our $165 PT. (Note: segments' sum may not round to SOTP exactly.)	▪ Outside of exposure to the wildfires and potential delays around Cameron, risks to our valuation mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case risk; (2) lower capex outlook; (3) interest rate changes above what we account for in our regression model, (4) LNG development risks; and (5) political risks in Mexico.
SO	▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT to $69 from $80.	▪ We are maintaining our BUY rating. ▪ We arrive at our $69 PT by applying a 1.5x premium to our 16x regulated group target multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations, to our 2024 EPS estimate of $4.15, and discounting back 1 year.	▪ Apart from nuclear construction risks, downside risks mainly encompass traditional risk factors inherent with all electric and gas utilities, including: (1) rate case risk; (2) lower capex; and (3) interest rate changes above what we account for in our regression model.

Provided for the exclusive use of Michael Weisenburger at NiSource on 24-Oct-2022 10:03 AM.

WEC	▪ We are maintaining our 2022-25 EPS estimates. ▪ We are updating our PT to $95 from $104.	▪ We are maintaining our NEUTRAL rating. ▪ We arrive at our $95 PT by applying our 16x regulated group target multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations, plus a 4.5-turn premium for WEC's superior regulatory environment and the positive economic outlook within its service territories as well as some growth opportunities not being reflected in our EPS forecasting and finally coupled with a "strong management team" adder, to our 2024 EPS estimate of $4.89, and discount back 1 year.	▪ Downside risks to our thesis mainly encompass traditional risk factors inherent with all electric utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model. Upside risks include: (1) constructive rate case outcomes (including favorable ROE/equity ratio decisions), (2) higher capex outlook (including development projects not currently in plan), and (3) interest rate changes below what we account for in our regression model.
VST	▪ We are updating our 3Q22 EBITDA estimate from $1386mm to $1025mm to account for known and measurable items year to date (through 3Q), including weather, cost run rates, revenue seasonality, and the absence of certain 2021 items (one-time storm self-help). ▪ We are updating our 2022-25 annual EBITDA estimates from $3117, $3508, $3555, and $3738 to $3126, $3505, $3608, and $3797, respectively.	▪ We are maintaining our BUY rating. ▪ We value IPPs, including VST, using an unlevered discounted cash flow methodology before accounting for growth capex from 2023 through the 2028 terminal year, at which point we apply an asset-weighted terminal multiple of 5.5x to derive a terminal value. We subtract net debt of ~$11.6bn to arrive at equity value of ~$14bn and our PT of $32/share. Our model is marked to September 2022 forward curves through our terminal year.	▪ Risks include: Commodity price risk: If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. VST is still inherently a long natural gas call, with gas the marginal price setter in ERCOT. Environmental/Policy risk: Environmental regulations could require increased spending; permitting and compliance associated with these regulations could require significant capital and operating expenditures. Considering timing to comply with these regulations and costs, some retirements of plants could be accelerated. Changes to these regulations could increase costs of operating these plants and/or increase competition. Operational risks: VST's fleet could experience unforced outages or other operational issues that are inherent risks of the power generation business.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) whose name(s) appear(s) in this report have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

For the second quarter ending June 30, 2022, the Firm did not obtain from this Research Analyst (within 30 days of the end of the quarter), a certification representing that, in connection with public appearances, the views expressed were consistent with his personal views and that no part of his compensation was related to his recommendation. The certification was provided in the first half of September.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

expressed in this research. Guggenheim Securities or certain of its affiliates conducts an investment management business, trades for its own account, and conducts an investment business, and may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research. We and our affiliates also may sell to or buy from customers on a principal basis the securities described herein. We and our affiliates also do business with, or that relates to, companies covered in Guggenheim Securities' research, and may have a position in the debt of the company or companies discussed herein.

This research is not an offer to sell or the solicitation of an offer to buy any security. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This communication does not constitute an offer of Shares to the public in the United Kingdom. No prospectus has been or will be approved in the United Kingdom in respect of the Securities. Consequently, this communication is directed only at (i) persons who are outside the United Kingdom or (ii) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"), (iii) high net worth entities falling within Article 49(2) of the Order (iv) and other persons to whom it may lawfully be communicated (all such persons together being referred to as "relevant persons"). Any investment activity to which this communication relates will only be available to, and will only be engaged with, relevant persons. Any person who is not a relevant person should not act or rely on this document or any of its contents.

J.P. Morgan Securities LLC

- **NI hosted its 2022 Investor Day on Monday.** Management shared details around its strategic business review launched in February. Notably, NI announced the sale of a minority stake in NIPSCO to strengthen its balance sheet. Long-term EPS guidance was updated to 6-8% for 2021-2027, up from 5-7%. Management also introduced a Net Zero by 2040 goal and a commitment to replace most of its retired coal plants with renewables. **The minority stake sale stands to reduce financing needs to fund its substantial capital investment. Management now targets FFO/Debt of 14-16%, up from 14-15%, a credit positive. Overall, we thought the Investor Day was modestly positive, as plenty of execution risk remains for the company to bolster its balance sheet, and there was some expectation for management to announce additional LDC sales.**
- **Announced minority stake sale in NIPSCO by YE23; Target FFO/Debt of 14-16%.** As a result of its business review, the company looks to sell up to a 19.9% minority stake in NIPSCO for a tax-efficient transaction by YE23. NI expects no equity needs until at least 2025 after the sale and will put in place an ATM equity program at that time to support current IG ratings. Notably, NI's FFO/Debt target was updated to 14-16% which should be achieved after the NIPSCO sale. For the 2023-27 period, NI expects a 15%/85% equity/debt ratio for incremental financing needs, as well as new debt issuance of ~$4.5bn-$5.5bn in the next five years.
- **New annual 6-8% NOEPS long-term growth plan and ~$15bn five-year capital plan.** Management announced a new annual 6-8% NOEPS long-term growth rate from 2021 to 2027, increased by 1% from the previous 5-7% annual target. NI identified ~$15bn of new investments for 2023-27, up from the last five-year plan of ~$10bn. ~$30bn of investment opportunities is expected over the next 10 years.
- **Narrowed FY22 and initiated FY23 guidance in-line with consensus.** FY22 adjusted EPS guidance was narrowed to $1.44-$1.46 from $1.42-$1.48, with midpoint unchanged at $1.45 matching Bloomberg consensus. Management also initiated FY23 adjusted EPS guidance of $1.50-$1.57, in-line with Bloomberg consensus of $1.54.
- **Focus on customer bills.** NiSource estimated annual customer bill increases to be <5% for 2023-27. The company aims to execute its substantial capital plan with manageable customer impact, thanks to its competitive natural gas supplies, a targeted flat annual O&M through 2027, continuing customer growth, and energy efficiency programs. During the Q&A, management noted that it could aim to improve customer affordability by slowing rate base growth.
- **Introduced Net Zero by 2040 goal.** The company announced a new Net Zero by 2040 goal and remains on track to reach 90% reduction in GHG emissions by 2030. NI expects to retire 100% of its coal plants by 2026-2028 and plans to invest ~$3bn of generation transition investments from 2018 through 2028 to replace its coal assets with renewables. ~$2.2bn was allocated to contracted projects through 2025, with ~$1bn of additional investments from 2025 to 2028.

Kevin L Kwan
(1-212) 270-9455
kevin.l.kwan@jpmorgan.com

Effective April 11, 2016, J.P. Morgan changed its Credit Research Ratings System. Please see the Explanation of Credit Research Ratings below for the new definitions. The previous rating system no longer should be relied upon. For the history prior to April 11, 2016, please call 1-800-447-0406 or e-mail research.disclosure.inquiries@jpmorgan.com.

Explanation of Credit Research Valuation Methodology, Ratings and Risk to Ratings:
J.P. Morgan uses a bond-level rating system that incorporates valuations (relative value) and our fundamental view on the security. Our fundamental credit view of an issuer is based on the company's underlying credit trends, overall creditworthiness and our opinion on whether the issuer will be able to service its debt obligations when they become due and payable. We analyze, among other things, the company's cash flow capacity and trends and standard credit ratios, such as gross and net leverage, interest coverage and liquidity ratios. We also analyze profitability, capitalization and asset quality, among other variables, when assessing financials. Analysts also rate the issuer, based on the rating of the benchmark or representative security. Unless we specify a different recommendation for the company's individual securities, an issuer recommendation applies to all of the bonds at the same level of the issuer's capital structure. We may also rate certain loans and preferred securities, as applicable. This report also sets out within it the material underlying assumptions used.

We use the following ratings for bonds (issues), issuers, loans, and preferred securities: Overweight (over the next three months, the recommended risk position is expected to outperform the relevant index, sector, or benchmark); Neutral (over the next three months, the recommended risk position is expected to perform in line with the relevant index, sector, or benchmark); and Underweight (over the next three months, the recommended risk position is expected to underperform the relevant index, sector, or benchmark). J.P. Morgan Emerging Markets Sovereign Research uses Marketweight, which is equivalent to Neutral. NR is Not Rated. In this case, J.P. Morgan has removed the rating for this particular security or issuer because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating no longer should be relied upon. An NR designation is not a recommendation or a rating. NC is Not Covered. An NC designation is not a rating or a recommendation.

For CDS, we use the following rating system: Long Risk (over the next three months, the credit return on the recommended position is expected to exceed the relevant index, sector or benchmark); Neutral (over the next three months, the credit return on the recommended position is expected to match the relevant index, sector or benchmark); and Short Risk (over the next three months, the credit return on the recommended position is expected to underperform the relevant index, sector or benchmark).

J.P. Morgan Credit Research Ratings Distribution, as of October 01, 2022

	Overweight	Neutral	Underweight
Global Credit Research Universe*	31%	54%	15%
IB clients**	58%	58%	58%

*Please note that the percentages might not add to 100% because of rounding.
**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.
The Credit Research Rating Distribution is at the issuer level. Issuers with an NR or an NC designations are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of JPMorgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

AES Corp. *(Overweight; Price Target: $33.00)*

Investment Thesis

AES has clear leverage to greater US renewables growth driven by environmental policy, tax incentives, and broader infrastructure investment. US growth-driven upside also facilitates a coal transition acceleration and re-weights AES's business mix toward target 50/50 US international split. Key takeaways from the company's last analyst day are 1) growth remains top tier and subject to greater transparency under the current five-year plan, 2) AES's business is increasingly US utilities and renewables-focused, 3) the company has significantly de-risked its overall financing plan, and 4) ESG leverage continues to improve under current coal transition and net zero targets. Overall, we remain positive on AES's underlying fundamentals and positioning within a peer group driven by secular tailwinds, and we see current plan elements, management's track record, and AES's broad renewables opportunity lending confidence to the company's long-term outlook.

Valuation

We increase our December 2023 price target to $33/share from $29/share on an equal weighting of a P/E and EV/EBITDA valuations, using a comparable group of the U.S. "hybrid" utilities and independent power producers. Our P/E valuation applies a 16.6x multiple to our 2024 EPS estimate, a discount to the hybrid peer average given the relative risk profile of AES's international exposure. The higher price target is due to increased peer average multiples.

Risks to Rating and Price Target

AES is exposed to several international business risks, including FX, changes in macroeconomic conditions, and local political risks. Any change to the underlying political and/or economic environments could cause earnings and cash flows to differ significantly from our expectations.

Regulated electric utilities and generation businesses are subject to federal and local state regulation, including determinations of allowed revenues. Positive or negative changes to regulatory environments may cause future earnings power to vary from our current expectations.

Fossil fuel-based generation assets could be subject to future emissions restrictions in any of the countries in which they operate. Any change to the regulatory framework regarding environmental compliance could require significant cash investments and/or could pressure future earnings.

Investment Thesis, Valuation and Risks

NiSource Inc. *(Overweight; Price Target: $31.00)*

Investment Thesis

NiSource recently hosted its 2022 investor day, extending its financial plan through 2027 and providing a much anticipated update on conclusions from its business review. A planned 19.9% minority stake sale of NIPSCO dominated headlines, with management identifying this route out of the review to fund growth and alleviate balance sheet constraints in a tax-efficient manner. Headline 6-8% annual EPS growth screens attractively, with strong 8-10% annual rate base growth supporting this. Additionally, themes of balance sheet cushion under the new 14-16% long-term FFO/debt target and customer bill support through targeting flat O&M align well with premium qualities in the space. Overall, we acknowledge some initial investor frustration over this NIPSCO lever versus LDC asset rotation but see NI's approach as pragmatic and thematically consistent with recent minority stake sale trends across the group. Additionally, we see near-term tradeoffs relative to the company's prior 2024 outlook as reasonable against longer-term plan line of sight and greater financial flexibility, especially given designs for a variety of commodity price backdrops and positioning for future upside capital opportunities. We remain constructive on NI's long-term outlook and relative positioning vs. LDC peers.

Valuation

We increase our December 2023 price target to $31 from $30/share. We base our price target on a sum-of-the-parts analysis using our 2024 electric and gas segment EPS forecasts. We value the gas and electric segments using 18.6x and 18.9x P/E multiples, respectively. These represent premiums to peers' on account of NI's coal generation transition, incremental renewables investment, and above-average growth as a result. The higher price target is due to increased peer average multiples.

Risks to Rating and Price Target

Gas pipeline accidents in the industry have heightened the importance of pipeline safety and integrity management. These accidents can result in significant financial strains related to pipeline replacement, accident investigations, life and property claims, regulatory fines, and disallowances.

Achievement of NiSource's long-term rate base and EPS CAGR targets is heavily dependent on robust capital investments, regulatory support, and favorable ratemaking mechanism. Any deferral of spending could put the company at risk of falling short of the LT rate base and earnings growth CAGR in any one year.

Regulated electric and gas utilities are subject to federal and state regulations, including determinations of allowed revenues. Negative changes to the regulatory environments may cause future earnings to be materially lower than current expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, https://www.jpmorganmarkets.com.

Coverage Universe: Sunderland III, Richard W: AES Corp. (AES), Algonquin Power & Utilities Corp. (AQN.TO), Allete Inc. (ALE), American Water Works Company, Inc. (AWK), Atmos Energy (ATO), Avangrid, Inc (AGR), Emera Inc. (EMA.TO), Fortis Inc. (FTS.TO), New

J.P. Morgan Equity Research Ratings Distribution, as of October 01, 2022

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	50%	37%	13%
IB clients**	50%	46%	33%
JPMS Equity Research Coverage*	50%	38%	12%
IB clients**	70%	68%	50%

***Please note that the percentages might not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes only of FINRA ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of JPMorgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

J.P. Morgan Securities LLC

This week, NiSource hosted its 2022 investor day, extending its financial plan through 2027 and providing a much anticipated update on conclusions from its business review. A planned 19.9% minority stake sale of NIPSCO dominated headlines and sparked significant debate, with management identifying this route out of the review to fund growth and alleviate balance sheet constraints in a tax-efficient manner. Headline 6-8% annual EPS growth matched expectations into the investor day, with strong 8-10% annual rate base growth supporting this. Additionally, themes of balance sheet cushion under the new 14-16% long-term FFO/debt target and customer bill support through targeting flat O&M align well with premium qualities in the space. Overall, we acknowledge some initial investor frustration over this NIPSCO lever versus LDC asset rotation but see NI's approach as pragmatic and thematically consistent with recent minority stake sale trends across the group. Pushback in the form of questioning plan aggressiveness, meaning should NI have targeted more impactful outcomes, screens as fair, as does criticism of lighter near-term growth, whether 2024 coming in below NI's prior outlook or 2023 growth below the new 6-8% target. However, we see these tradeoffs as reasonable against longer-term plan line of sight and greater financial flexibility, especially given designs for a variety of commodity price backdrops and positioning for future upside capital opportunities. When also framed against its valuation backdrop, where NI did not appear to be pricing in a more aggressive outcome, we see the initial weakness in reaction as overdone and remain positive on NI's outlook at current levels.

- **NIPSCO minority stake sale plan reignites the great debate.** Announced as a key outcome from NI's business review, the company expects to sell up to a 19.9% stake in NIPSCO, dominating headlines and sparking significant debate at the investor day. While tapping NIPSCO appears counterintuitive against a backdrop favoring gas LDC monetization for electric reinvestment (as touted by peer CNP), management outlined expected transaction multiple benefits from an electric asset skew, strategy efficiencies from a partial sale in avoiding tax leakage and corporate dis-synergies, and greater regulatory certainty around execution. We also expect a ten- or fifteen-year growth view favors this move given NIPSCO's discrete near-term generation transition investments versus a longer-term view of system investment opportunities, although electrification stands to potentially impact this. In consideration of these elements, we are unsurprised by the initial pushback NI received but expect sentiment to turn over time as the company executes its plan. Further, we suspect broader strategic questions have contributed to this initial reaction, namely the desire for a full electric/gas separation or whole company sale. Management's business review recap alluded to much of these broader questions while framing NI's analysis as supportive of the plan update offered

See page 3 for analyst certification and important disclosures.
J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Richard W Sunderland

richard.w.sunderlandiii@jpmorgan.com

this week. With NIPSCO's $6.9bn in 2021 electric and gas rate base, this sale implies a sizeable $2.1-2.7bn transaction at 1.5-2.0x rate base multiples, before considering NIPSCO's significant generation capex benefitting post-2021 growth. We expect relative deal size likely factored into the decision, in order to achieve NI's targeted balance sheet cushion post-close. The company's planned transaction launch is 1Q23, with a targeted 2H23 close.

- **A growth outlook for various environments.** In a simplification from its prior two earnings CAGRs, NI now targets 6-8% annual EPS growth (prior 7-9% CAGR; 5-7% near term) and 8-10% annual rate base growth (prior 10-12% CAGR) through 2027, emphasizing plan stability, predictability, and execution underpinning this new annual growth rate versus its prior CAGR. With 2021 remaining the growth base, this outlook implies a -2.8% reduction to 2024 earnings power relative to the prior plan, reflecting revised IN rate expectations to roll in new-generation investments. This appears to be largely timing, with prudent strategy alterations in consideration of the current commodity price backdrop plus expected NIPSCO transaction impacts. While a modest negative, we are unconcerned by these tradeoffs against longer-term plan line of sight (now 2027, through 2024 previously) and greater financial optionality, plus see flexibility around elevated commodity as a positive. Importantly on this front, NI now targets 14-16% FFO/debt, up from 14-15%, and no discrete plan equity beyond 2025+ ATM issuances to fund its ~$15bn 2023-27 capital program. We expect this balance sheet cushion will minimize perennial equity funding questions alongside NI's growth. While NI's latest disclosures imply ~$800-975mm in total ATM issuance for 2025-27, management commentary indicated ultimate needs will depend on the NIPSCO transaction, which could drive further plan upside.
- **No change to attractive generation opportunity and a long gas system investment runway.** NI's core plan remains familiar with steady gas system investments and continued execution of phase 1 and 2 of its IN generation transition to exit coal by 2026-28. In all, electric capex represents ~37% of five-year spend and should continue demanding broader company interest than a pure-play LDC. While the proposed NIPSCO transaction implies a lower electric exposure net to shareholders on a post-sale basis, we highlight the funding tradeoffs as positive to capitalize on public-private spreads and reduce plan financing risk. Ultimately, we see this plan as achievable in a variety of commodity price backdrops and positioning the company for future upside capital opportunities.
- **2023 guidance initiated in line; 2022 range narrowed.** Alongside the investor day, NI initiated 2023 EPS guidance of $1.50-1.57, consistent with the implied range under its prior 5-7% near-term growth target (although below the new 6-8%). Additionally, the company narrowed its 2022 range to $1.44-1.46, from $1.42-1.48.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, https://www.jpmorganmarkets.com.

North American Utilities Weekly

Utilities Underperform; JPM's EEI Qbank; D & AQN Down; NI Investor Day; Earnings Previews & Reviews; Weekly Comps

- **Utilities lag market rebound.** Utilities (+1.5%) trailed the S&P 500 (+5.9%) in the tail end of earnings after decelerating October inflation data (7.7% US Core CPI) boosted investor sentiment for more macro-sensitive industries, leading to relative sector underperformance. Across the group, continued **D** weakness aligned with ongoing investor questions surrounding the company's strategic review and perceived limited ability to defend the stock in the near-term at EEI. **AQN** offered a similar situation in pulling its long-term outlook in response to interest rate pressure and capital markets volatility, leading to a significant selloff. Separately, we highlight some day one complaints on **NI's** investor day around 2023-2024 earnings relative to the company's old and new EPS growth targets, although valuation appears to screen attractively to investors out of the update. Among LDC earnings, we received questions on **ATO's** outperformance and highlight broad disappointment in **SWX's** lack of strategic announcements plus challenging construction services results. Into EEI, **PEG's** new 2023 guidance range ($3.35-3.55; JPMe/Street median $3.59/$3.57) drew negative reactions, although the treatment of PEG's now-quantified 25-30c pension drag estimate in consensus appears unclear. We largely expect the tone and takeaways from PEG's Sunday meetings to drive the stock reaction on Monday.
- **3Q22 earnings mostly exceed expectations.** With earnings almost completed, our utility coverage has delivered healthy results. So far, ~55% have beaten, ~27% landed in-line and ~18% have missed, when measured as +/-2% of the Street median adj EPS. NJR and SR round out earnings this week.
- **2022 Edison Electric Institute Conference: The JPM Question Bank**. The J.P. Morgan North American Utilities Research team will host meetings with 27 companies at the annual EEI conference Sunday through Tuesday next week. In order to facilitate meeting preparation, we have compiled a list of key questions for companies that we are meeting with at the conference, including: **AEE, AEP, AES, AGR, ALE, AWK, AQN, CMS, CNP, D, DTE, DUK, ED, EIX, ES, ETR, EXC, FE, FTS, NEE, NI, PCG, PEG, SO, SRE, WEC, XEL.**

- **D: Strategic review clouds outlook; downgraded to Neutral**. In conjunction with 3Q earnings, Dominion launched a top to bottom business review that will focus on value-maximizing strategic business actions. Dominion's relative stock valuation and underperformance appear to have sparked the review, which will encompass alternatives to the current business mix and capital allocation, as well as regulatory options. On the regulatory side, D noted potential actions to assist customer bill pressures and provide greater predictability in state-regulated businesses. While a

See page 15 for analyst certification and important disclosures.
J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

strategic review that focused on divesting non-regulated and reaffirming prior long-term EPS guidance would have created more defined parameters to analyze D's future outlook, including actions to alleviate customer bill-pressure without definition clouds D's future outlook. As such, pending more clarity on the parameters and D's future outlook, we downgrade D to Neutral.

- **NI: You say you want a revolution: 2022 Investor Day plan offers evolution instead, plus a minority stake sale twist.** Last week, NiSource hosted its 2022 investor day, extending its financial plan through 2027 and providing a much anticipated update on conclusions from its business review. A planned 19.9% minority stake sale of NIPSCO dominated headlines and sparked significant debate, with management identifying this route out of the review to fund growth and alleviate balance sheet constraints in a tax-efficient manner. Headline 6-8% annual EPS growth matched expectations into the investor day, with strong 8-10% annual rate base growth supporting this. Additionally, themes of balance sheet cushion under the new 14-16% long-term FFO/debt target and customer bill support through targeting flat O&M align well with premium qualities in the space. Overall, we acknowledge some initial investor frustration over this NIPSCO lever versus LDC asset rotation but see NI's approach as pragmatic and thematically consistent with recent minority stake sale trends across the group. Pushback in the form of questioning plan aggressiveness, meaning whether should NI have targeted more impactful outcomes, screens as fair, as does criticism of lighter near-term growth, whether 2024 coming in below NI's prior outlook or 2023 growth below the new 6-8% target. However, we see these tradeoffs as reasonable against longer-term plan line of sight and greater financial flexibility, especially given designs for a variety of commodity price backdrops and positioning for future upside capital opportunities. When also framed against its valuation backdrop, where NI did not appear to be pricing in a more aggressive outcome, we see the initial weakness in reaction as overdone and remain positive on NI's outlook at current levels.
- **DTE raises LT CAGR to 6-8%, initiates 2023 guide, and increases capital plan.** Following last week's IRP filing, DTE released its EEI slide deck presentation after market close on Thursday. DTE lifted the long-term operating EPS CAGR to 6-8% from 5-7%, based off the $6.25 2023 guidance midpoint. DTE initiated its preliminary 2023 EPS outlook at 7% growth from the original 2022 guidance midpoint and also increased its 5-year capital plan by an incremental $3.5bn, now totaling $21.6bn. So far, we note positive investor feedback regarding the new CAGR, guidance, and Vantage growth, albeit largely matching previous expectations. Given the attention into this update, we sense investor relief heading into EEI with the update out.
- **News Flow: ED** reported the company expects to receive net after-tax proceeds of ~$3.6-3.8bn from its Clean Energy Business (CEB) sale to RWE. Aside from $1.05bn in debt repayments, ED intends to allocate the remaining ~$2.55-2.75bn between (1) investment in CECONY and O&R, and (2) establishing a share repurchase program. **AEP** reaffirmed 2022 guidance of $4.97-5.07 and 2023 guidance range of $5.19-5.39, after the market close on Friday heading into EEI. As part of its EEI update, AEP quantified renewables and energy storage capacity at 15,700 MW.

The Week Ahead in 3Q22 Earnings

Source: Bloomberg Finance L.P.

Published Thoughts into 3Q

- **NJR: Watching solar message and 2023-24 CEV capex while PJM and BPU processes drag on.** We continue to see NJR's solar development outlook as the primary fall/winter debate, with minimal progress on resolving PJM interconnection delays and finalizing the BPU's extended rulemaking process for NJ's solar successor program. As a result, risks include the potential to 1) further push out of CEV capex, 2) initiate a wide range to 2024 investment targets, and 3) create questions around the ability to regain near-term development momentum. While we see a path for NJR to start resolving these messaging issues once PJM addresses its current interconnection roadblocks in particular, uncertainty in FERC's process timing limits NJR's current options, in our view. Beyond solar, we anticipate a straightforward year-end update, plus new 2023 guidance and 2024 capex. On 2023, our $2.44 EPS estimate reflects 8% growth off the midpoint of NJR's original 2022 guidance (ex. Energy Services outperformance), consistent with the company 7-9% long-term growth target off a $2.20-2.30 2022 base. Among other updates, we expect NJR will address RNG and hydrogen as part of its utility capex update, winter customer rate increases for higher natural gas prices, and the timing of AMA contributions relative to NJR's growth rate.

- **SR: MO rate case stands to overshadow plan refresh**. Significant attention remains on SR's MO rate case progress and overall settlement prospects. While we anticipate no meaningful process updates at this critical juncture in the proceeding absent a settlement announcement prior to the company's earnings release, we expect case questions to loom over SR's update and plan refresh. Here, past practice indicates that SR is unlikely to offer 2023 guidance given the outstanding rate case. Instead, normal course year-end capex (2023-2027) and financing (2023-2025) refreshes should comprise the majority of SR's update. The company's $195mm storage expansion stands to increase 2023-2024 capex and financing needs, with continued ATM use remaining the likely avenue to address plan equity. Given the rate case timing and no 2023 guidance, this quarter screens as a less impactful event as a result. Separately, industry-wide customer bill pressure into this heating season has weighed on LDC sentiment and stands as a top theme across the group this earnings season. We look for SR to outline its supply and storage position and associated rate impacts, including STL Pipeline benefits (particularly in light of the ongoing FERC remand). On FY22 results, we estimate EPS of $3.91 versus SR's $3.75-3.95 guidance range.

Earnings Takeaways

- **ALE: $0.59 actual, $0.68 JPM and Street**. In a broadly positive update, ALE added ~$1bn in capex as part of its plan roll forward through 2027, significantly boosting the utility outlook with its new 8% rate base CAGR, up from prior 5%. Incremental transmission investments and baseline IRP solar and wind resource additions drove the uplift, consistent with management's recent enthusiasm for MN Power's growing grid and generation opportunities. The company's overall call message focused on multiple ways to win under the Inflation Reduction Act, contributing to both regulated and ACE/New Energy optionality. Additionally, ALE sees the IRA as cash flow and credit positive and expects financing benefits to include monetization of $45-50mm in tax credits. All in, these updates appear to be the start of a broader messaging trend at EEI and into the year-end update, where ALE could again raise capex.

- **AQN: $0.11 actual, $0.16 JPM, $0.16 Street**. In a challenging overall quarter, management outlined 3Q earnings and 2022 guidance headwinds, plus ongoing impacts from higher interest rates and capital markets volatility. As a result, AQN pulled its long term growth targets, opening up significant uncertainty until an anticipated early 2023 investor day update. We see AQN's sharp underperformance as warranted and expect concern to grow in advance of the company's intended plan update. Goals under evaluation are to reduce AQN's reliance on external equity and moderate the impact of rising interest rates, seemingly implying a meaningful pivot to asset sales after the company's long acquisition history. While the recent partial stake sale of four wind projects potentially serves as a blueprint, monetization scale must increase to fully offset external equity (JPMe ~$750mm/yr under AQN's prior long term outlook). This prospect, paired with additional interest rate-driven earnings headwinds, stands to challenge both EPS and dividend growth, which we see contributing to Friday's share price reaction.
- **ATO: $0.51 actual, $0.44 JPM and Street**. The company initiated 2023 EPS guidance of $5.90-6.10, ahead of the $5.94/$5.95 JPM/Street median estimates and representing +7% YoY growth at the midpoint off strong 2022 results. While segment net income guidance points to Pipeline & Storage upside versus our estimates, individual 2023 drivers remain largely consistent with expectations and previous ATO guidance. However, we highlight projected 4-7% O&M growth as higher than ATO's 3.0-3.5% annual inflation target and well above 2022's ~4.5% YoY O&M increase. Given broader inflation questions across the space, we expect some questions as to underlying drivers and expected medium-term trends to return to guided 3.0-3.5% annual growth, which management largely attributed to recent contractor renewals at higher levels. ATO refreshed its five-year plan for 2023-2027, offering no surprises in continued 6-8% annual EPS growth, an ~11-13% rate base CAGR, 50-60% target equity capitalization ratio, and other familiar elements that have regularly featured in the company's plans.
- **EMA: $0.76 actual, $0.74 JPM, $0.75 Street**. In its refreshed 2023-25 capital plan, EMA raised Tampa Electric/PGS capex +14% and lowered NSPI capex -37%, following through on its planned capital rotation in response to the Nova Scotia rate legislation. Total three-year spend remains at $8.4bn (both old and new plans assume a consistent $1.30 FX rate), although EMA no longer points to $1bn in incremental opportunities. Disclosures indicate that NSPI's outlook remains subject to change pending further impacts from the rate legislation. Directional changes match expectations into the update, although it remains unclear if this lower level of NSPI investment is consistent with the legislation's full impacts. EMA's projected 7.4% 2021-25 rate base CAGR is comparable to 7.9% under its prior 2020-24 outlook (both on an FX adjusted basis). We see few surprises here overall, including the removal of incremental opportunities that appeared to carry a high hurdle for advancement.
- **NI: $0.10 actual, $0.11 JPM, $0.10 Street**. NiSource hosted its 2022 investor day, extending its financial plan through 2027 and providing a much anticipated update on conclusions from its business review. A planned 19.9% minority stake sale of NIPSCO dominated headlines and sparked significant debate, with management identifying this route out of the review to fund growth and alleviate balance sheet constraints in a tax-efficient manner. Headline 6-8% annual EPS growth matched expectations into the investor day, with strong 8-10% annual rate base growth supporting this. Additionally, themes of balance sheet cushion under the new 14-16% long-term FFO/debt target and customer bill support through targeting flat O&M align well with premium qualities in the space.
- **SWX: ($0.05) actual, $0.28 JPM, $0.30 Street**. Despite investor hope for MountainWest and Centuri announcements in the lead up to earnings, SWX's report passed with no transaction announcements. Process updates were minimal, with management noting 1) SWX remains actively engaged, 2) processes are in later

stages, and 3) the company intends to make announcements upon conclusion. Progress appears slower than anticipated, and we no longer have guardrails from SWX on potential announcement timing. Significant attention remains on a Centuri sale versus spin, magnified by the current macro pressures on Centuri's business. Here, we have limited incremental insight beyond earnings datapoints and related commentary now firmly pressuring the 2023 outlook. We expect the construction debate will only grow in reaction to these developments, with arguments split between the downside risk of potentially selling at a low versus a longer path to realizing upside value under a construction spin.

Analyst Certification: The Research Analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst's personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst's analysis was made in good faith and that the views reflect the Research Analyst's own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

Company-Specific Disclosures: Important disclosures, including price charts and credit opinion history tables, are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting https://www.jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, https://www.jpmorganmarkets.com.

J.P. Morgan Equity Research Ratings Distribution, as of October 01, 2022

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	50%	37%	13%
IB clients**	50%	46%	33%
JPMS Equity Research Coverage*	50%	38%	12%
IB clients**	70%	68%	50%

*Please note that the percentages might not add to 100% because of rounding.
**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.
For purposes only of FINRA ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of JPMorgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see https://www.jpmorgan.com/disclosures/cryptoasset-disclosure.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or

Jeremy Tonet, CFA

North American Utilities

3Q22 Previews: ATO, NI, NJR, and SWX

Please find below our thoughts on ATO, NI, NJR, and SWX into the quarter.

- **ATO: Expect consistent growth and a business-as-usual plan roll-forward, although negative LDC sentiment has colored the backdrop.** ATO appears well positioned to maintain its 6-8% EPS and low-double-digit rate base growth rates, and we anticipate a business-as-usual plan roll-forward with familiar elements such as continued external equity to maintain a target 50-60% equity capitalization and recurring O&M growth. Our $5.94 2023 EPS estimate represents 7% growth from the midpoint of ATO's current $5.50-5.60 guidance range (JPMe 2022 $5.54), and we expect 2023 will benefit from ATO's YTD progress pricing forward equity to cover 2023 issuance, plus YoY interest expense tailwinds on $2.2bn of debt that ATO will retire with TX securitization proceeds. That said, overall natural gas LDC sentiment remains poor with the group facing its first heating season with elevated commodity prices flowing through customer bills. In our conversations, we have witnessed much of this negative sentiment focused on Atmos in anticipation of a materially higher customer bills outlook driving capex sustainability fears. In response to this, we expect management to emphasize the safety and reliability drivers that underpin system investment, prospective price normalization further out on the curve relative to recent spot prices, and various customer assistance efforts. As such, we highlight these dueling narratives as a key debate into ATO's quarter.
- **NI: All eyes on the analyst day update; debate is primarily around growth, with the market ascribing a lower probability to portfolio rotation or other larger moves out of the business review.** The range of potential updates at NI's upcoming analyst day remains broad given management has provided limited information on the ongoing business review. However, we see consensus coalescing around a growth-focused update across the company's current portfolio, with ~7% EPS growth representing the general base expectations in our recent investor conversations. While debates continue across an annual growth rate versus a CAGR, multi-year EPS guidance, and plan impacts from the

richard.w.sunderlandiii@jpmorgan.com

next round of IN generation investment, investor hope for portfolio rotation appears to be subsiding in acknowledgement of execution and reinvestment hurdles, plus management's stated focus on O&M opportunities. That said, we expect asset sale questions to persist, particularly around smaller jurisdictions in NI's portfolio, given favorable value commentary from CNP and prospective stake sales at a number of utilities. Our $1.54 2023 EPS estimate is consistent with NI's current 5-7% near-term earnings CAGR and compares with a $1.52-1.55 implied range under 5-7% growth from the midpoint of NI's $1.42-1.48 2022 EPS guidance (JPMe $1.45). We also estimate 3Q EPS of $0.11, flat YoY.

- **NJR: Watching solar message and 2023-24 CEV capex while PJM and BPU processes drag on.** We continue to see NJR's solar development outlook as the primary fall/winter debate, with minimal progress on resolving PJM interconnection delays and finalizing the BPU's extended rulemaking process for NJ's solar successor program. As a result, risks include the potential to 1) further push out of CEV capex, 2) initiate a wide range to 2024 investment targets, and 3) create questions around the ability to regain near-term development momentum. While we see a path for NJR to start resolving these messaging issues once PJM addresses its current interconnection roadblocks in particular, uncertainty in FERC's process timing limits NJR's current options, in our view. Beyond solar, we anticipate a straightforward year-end update, plus new 2023 guidance and 2024 capex. On 2023, our $2.44 EPS estimate reflects 8% growth off the midpoint of NJR's original 2022 guidance (ex. Energy Services outperformance), consistent with the company 7-9% long-term growth target off a $2.20-2.30 2022 base. Among other updates, we expect NJR will address RNG and hydrogen as part of its utility capex update, winter customer rate increases for higher natural gas prices, and the timing of AMA contributions relative to NJR's growth rate.
- **SWX: Process timeline implies imminent announcements on MountainWest and Centuri; earnings headwinds set to continue.** August remains the last update on SWX's ongoing MountainWest and Centuri processes, for which the company's timeline suggests about October announcements (as outlined in this August update; see our takeaways here and post-2Q earnings takeaways here). As such, a narrow window remains should these processes yield sale announcements or other updates prior to SWX's November earnings release. Broader market volatility, higher interest rates, and recent earnings challenges, particularly at Centuri, all contribute to a challenging deal environment. However, we continue to see investor interest aligned around executing these sales. On the quarter, we estimate 3Q22 EPS of $0.30, inclusive of an assumed -3c COLI drag and continued Centuri headwinds consistent with fuel cost, supply chain, and other factors that impacted 2Q results. We now apply these headwinds to our 4Q and 2023 estimates as well.

Investment Thesis, Valuation and Risks

Atmos Energy *(Overweight; Price Target: $115.00)*

Investment Thesis

ATO remains a top-tier rate base and EPS growth story versus gas and electric utility peers, with one of the most conservatively managed balance sheets among our utility coverage. The company's ability to cut costs and/or use balance sheet capacity provides dry powder, in addition to strong customer growth providing tailwinds to growth between rate cases. We view the 6-8% LT EPS CAGR guided by management as comfortably achievable.

Valuation

We lower our Dec 2023 price target to $115 from $128/share. We base our valuation on our 2024 EPS estimate and a 18.1x P/E multiple, a premium to gas utility peers due to strong rate base growth visibility and transparent, low-lag regulatory mechanisms. The lower price target is due to decreased peer average multiples.

Risks to Rating and Price Target

Regulated electric and gas utilities are subject to strict federal and state regulation, including determinations of allowed revenues. Any change to the existing ratemaking mechanisms, including a repeal of the mechanism itself, may cause future earnings to differ materially from our current expectations.

Achievement of Atmos's long-term rate base and EPS CAGR targets is heavily dependent on robust capital investments, regulatory support, and favorable ratemaking mechanism. Any deferral of spending could put the company at risk of falling short of the LT rate base and earnings growth CAGR in any one year.

Gas pipeline accidents in the industry have heightened the importance of pipeline safety and integrity management. These accidents can result in significant financial strains related to pipeline replacement, accident investigations, life and property claims, regulatory fines, and disallowances.

Atmos is in the midst of a robust capital spending program, and any change in the company's operating environment and/or project cost overruns could require greater external equity funding, exposing investors to potential dilution risk in the future.

Richard W Sunderland
(1-212) 622-2869
richard.w.sunderlandiii@jpmorgan.com

Investment Thesis, Valuation and Risks

NiSource Inc. *(Overweight; Price Target: $30.00)*

Investment Thesis

With renewables driving ~20% of the five-year capital plan, NI's "green hue" stands unique among LDCs. Additionally, the company's potential portfolio optimization efforts could accelerate a relative re-weighting toward NI's electric operations should the company divest a smaller LDC jurisdiction to fund renewables investment. We remain constructive on NI's long-term outlook given its attractive growth, subject to manageable execution risk, and relative positioning vs. LDC peers.

Valuation

We lower our December 2023 price target to $30 from $34/share. We base our price target on a sum-of-the-parts analysis using our 2024 electric and gas segment EPS forecasts. We value the gas and electric segments using 16.9x and 17.1x P/E multiples, respectively. This represents a premium to peers on account of NI's coal generation transition, incremental renewables investment, and above-average growth as a result. The lower price target is due to decreased peer average multiples.

Risks to Rating and Price Target

Gas pipeline accidents in the industry have heightened the importance of pipeline safety and integrity management. These accidents can result in significant financial strains related to pipeline replacement, accident investigations, life and property claims, regulatory fines, and disallowances.

Achievement of NiSource's long-term rate base and EPS CAGR targets is heavily dependent on robust capital investments, regulatory support, and favorable ratemaking mechanism. Any deferral of spending could put the company at risk of falling short of the LT rate base and earnings growth CAGR in any one year.

Regulated electric and gas utilities are subject to federal and state regulations, including determinations of allowed revenues. Negative changes to the regulatory environments may cause future earnings to be materially lower than current expectations.

Richard W Sunderland
(1-212) 622-2869
richard.w.sunderlandiii@jpmorgan.com

Investment Thesis, Valuation and Risks

New Jersey Resources *(Underweight; Price Target: $40.00)*

Investment Thesis

New Jersey Resources is facing a narrowing window to recapture CEV's solar development momentum in the face of PJM interconnection delays and an extended rulemaking process around the BPU's solar successor program. While SREC sales and strong performance across the company's other businesses have insulated earnings, renewables capital deployment remains critical to NJR's long-term earnings growth outlook. Here, we see risk of additional negative revisions CEV's capex and a pushout of segment spend. On this front, mounting delays also serve to further back-end load CEV's MW deployment, raising execution risk when development activity ultimately returns to prior levels. NJR's current valuation prices in little room for this execution risk, in our view, as CEV is increasingly the driver of earnings growth over NJR's plan. We maintain our Underweight rating as a result.

Valuation

We lower our Dec 2023 price target to $40/share, from $46, using a 14.8x P/E multiple on our 2024 estimate. The multiple reflects a discount to natural gas LDC peers on account of 1) ongoing solar development risk while PJM and NJ market changes remain unresolved, 2) exposure to non-utility transportation & storage and energy services earnings, and 3) NJ-specific energy transition risks. The lower price target is due to decreased peer average multiples.

Risks to Rating and Price Target

Robust capital investments, regulatory support, and favorable ratemaking mechanisms are significant drivers of NJR's long-term rate base and EPS CAGR targets. Any increases to regulated investment could raise these growth rates.

Changing state receptivity to continued natural gas system investment has the potential to meaningfully alter NJNG's capex opportunities. While we see current New Jersey policies as balanced, the state has demonstrated a commitment to clean energy that could lead to widespread electrification as a means to decarbonize its overall economy. Conversely, any NJ prioritization of RNG and hydrogen for future use of current gas infrastructure could expand both regulated and non-regulated growth opportunities.

NJR's solar projects have faced delays that are lowering near-term segment investment. These investments are a core component of the company's long-term earnings growth outlook, and an inability to boost development activity could cause NJR to miss its growth targets.

Richard W Sunderland
(1-212) 622-2869
richard.w.sunderlandiii@jpmorgan.com

Investment Thesis, Valuation and Risks

Southwest Gas Holdings Inc. *(Neutral; Price Target: $77.00)*

Investment Thesis

Southwest Gas Holdings and large shareholder Carl Icahn reached a settlement in their conflict over the company's Questar Pipelines transaction and overall SWX strategy in the face of a perceived SOTP valuation discount, among other items. The company's subsequent strategic review update indicated that SWX is no longer pursuing potential total company and utility sale processes, pointing to more incremental action around separating Centuri and MountainWest. While we see these prospective sales as a positive step in unlocking value, the path to near-term upside appears less clear at this time as the company works through operational improvements at the utility.

Valuation

We lower our Dec 2023 price target to $77/share from $84/share, based on an SOTP valuation using our 2024 segment forecasts. Our price target includes $41 of value for SWX's natural gas distribution operations (inclusive of a partial parent drag allocation), utilizing a 14.0x P/E multiple. This multiple reflects a discount to gas utility peers on account of AZ regulatory risk and below average AZ ratemaking mechanics. Additionally, we include $12/share and $22/share of value for MountainWest and Centuri, respectively, based on in-line 11.0x and 8.4x EV/EBITDA multiples. Our SOTP also includes $2/share of COLI value. We exclude COLI mark-to-market and future payouts from our 2023-25 EPS estimates. The lower price target is due to decreased peer average multiples.

Our price target remains sensitive to the assumed EV/EBITDA multiple for Centuri. Here, a +/- 1x change drives a +/- $5 impact to total value per share.

Risks to Rating and Price Target

Rates charged to the company's utility customers are set by separate state regulators in AZ, NV, and CA. Given the current elevated level of capital spending, consistent rulings and interim recovery riders remain instrumental in providing rate relief to drive earnings growth. Any meaningful positive or negative change to the regulatory framework in these jurisdictions may cause future earnings to differ materially from current expectations.

SWX has guided that a portion of its three-year capex plan will be funded by incremental equity issuances. Equity timing and ultimate funding levels may cause future earnings per share to differ from current expectations.

The company intends to separate its construction business. Potential paths include a tax-free spin and outright sale, and the ultimate method pursued could impact value to shareholders versus our assumptions and SWX's residual equity needs, as discussed above.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, https://www.jpmorganmarkets.com.

Coverage Universe: Sunderland III, Richard W: AES Corp. (AES), Algonquin Power & Utilities Corp. (AQN.TO), Allete Inc. (ALE), American Water Works Company, Inc. J.P. Morgan Equity Research Ratings Distribution, as of October 01, 2022

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	50%	37%	13%
IB clients**	50%	46%	33%
JPMS Equity Research Coverage*	50%	38%	12%
IB clients**	70%	68%	50%

***Please note that the percentages might not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes only of FINRA ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of JPMorgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see https://www.jpmorgan.com/disclosures/cryptoasset-disclosure.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or http://www.finra.org/sites/default/files/Security_Futures_Risk_Disclosure_Statement_2018.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please

NiSource Initiates Critical Electric Rate Review in Indiana

Analyst Note Travis Miller, Strategist, 30 Sep 2022

We are reaffirming our $32 fair value estimate for NiSource after the company initiated a long-anticipated electric rate review in Indiana. We are also reaffirming our narrow moat and stable moat trend ratings.

NiSource remains one of our top picks in the utilities sector in part because we think that Indiana utility rate regulation will remain constructive as the company executes its capital investment growth plan. The stock trades at a 19% discount to our fair value estimate as of Sept. 29, making it one of the cheapest U.S. utilities in our coverage. Its 3.6% dividend yield is in line with peers'.

Last week, NiSource requested a $218 million net revenue increase effective September 2023 along with other ratemaking changes that would improve cash recovery of operating and capital costs. NiSource's request includes a 10.4% allowed return on equity, which is about 100 basis points higher than other state regulators have allowed recently. We assume regulators approve $180 million of rate increases in two steps through 2024 based on NiSource's current 9.75% allowed ROE.

The outcome of this proceeding will largely determine whether NiSource hits the high end or low end of management's 7%-9% annual average earnings growth range through 2024. NiSource faces extra regulatory risk as customers face higher energy costs. This could make regulators hesitant to approve a large base rate increase.

We continue to assume NiSource invests $8 billion of capital in 2022-24, including $2 billion in renewable energy. We expect the company will be able to keep a similar level of growth investment beyond 2024, supporting our 8% average annual earnings growth forecast.

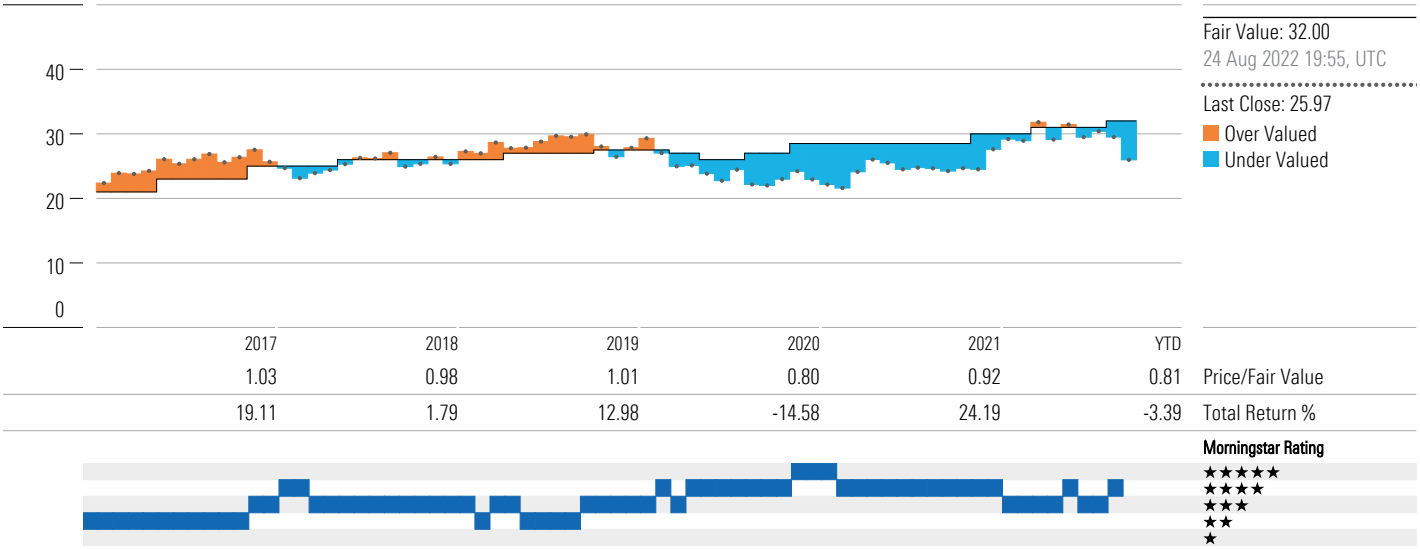
Industry

Utilities - Regulated Gas

Business Description

NiSource is one of the nation's largest natural gas distribution companies with approximately 3.5 million customers in Indiana, Kentucky, Maryland, Ohio, Pennsylvania, and Virginia. NiSource's electric utility transmits and distributes electricity in northern Indiana to about 500,000 customers. The regulated electric utility also owns more than 3,000 megawatts of generation capacity, most of which is now coal-fired but is being replaced by natural gas and renewable energy.



We also expect new CEO Lloyd Yates to announce the outcome of his strategic review, possibly at NiSource's investor day Nov. 7. The recent market drop and rise in interest rates could make it less likely that NiSource will divest its gas utilities. MI

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

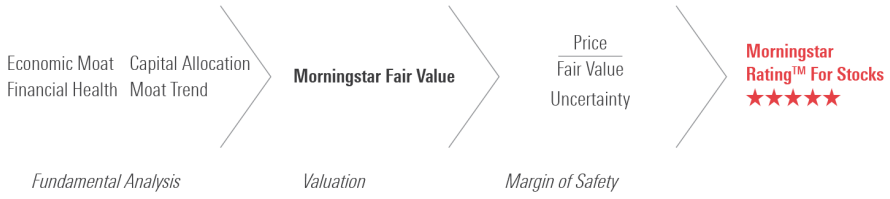
Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity



Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is

MORNINGSTAR®

Research Methodology for Valuing Companies

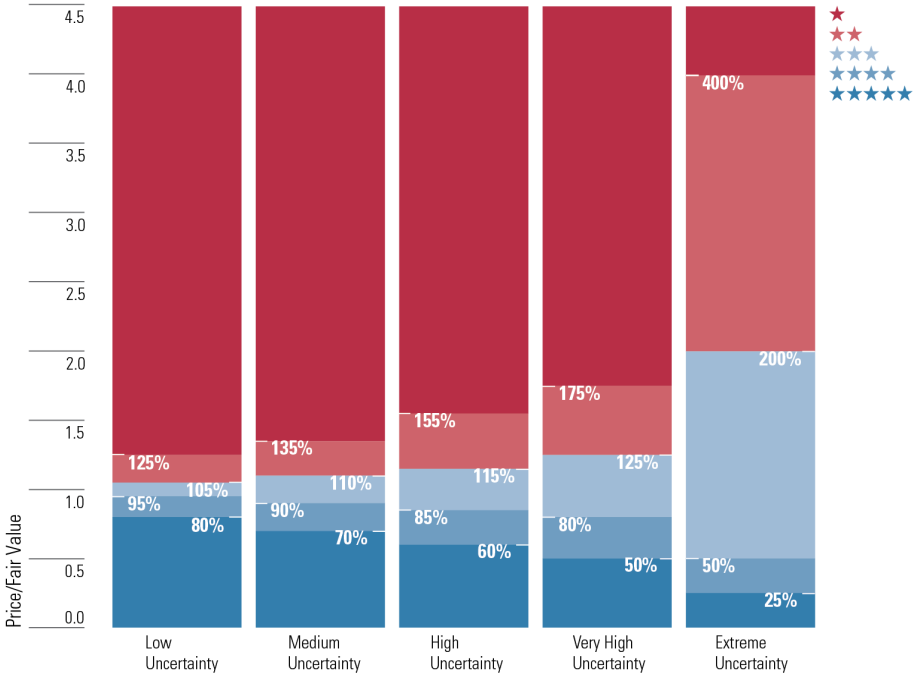
aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns.An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium



Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com.

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

MORNINGSTAR®

Research Methodology for Valuing Companies

quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

Conflicts of Interest

- No interests are held by the analyst with respect to the security subject of this investment research report.
- Morningstar, Inc. may hold a long position in the security subject of this investment research report that exceeds 0.5% of the total issued share capital of the security. To determine if such is the case, please click http://msi.morningstar.com and http://mdi.morningstar.com.
- Analysts' compensation is derived from Morningstar, Inc.'s overall earnings and consists of salary, bonus and in some cases restricted stock.
- Neither Morningstar, Inc. or the Equity Research Group receives commissions for providing research nor do they charge companies to be rated.
- Neither Morningstar, Inc. or the Equity Research Group is a market maker or a liquidity provider of the security noted within this report.
- Neither Morningstar, Inc. or the Equity Research Group has been a lead manager or co-lead manager over the previous 12-months of any publicly disclosed offer of financial instruments of the issuer.
- Morningstar, Inc.'s investment management group does have arrangements with financial institutions to provide portfolio management/investment advice some of which an analyst may issue investment research reports on. However, analysts do not have authority over Morningstar's investment management group's business arrangements nor allow employees from the investment management group to participate or influence the analysis or opinion prepared by them.
- Morningstar, Inc. is a publicly traded company (Ticker Symbol: MORN) and thus a financial institution the security of which is the subject of this report may own more than 5% of Morningstar, Inc.'s total outstanding shares. Please access Morningstar, Inc.'s proxy statement, "Security Ownership of Certain Beneficial Owners and Management" section http://investorrelations.morningstar.com/sec.cfm?doctype=Proxy&year=&x=12.
- Morningstar, Inc. may provide the product issuer or its related entities with services or products for a fee and on an arms' length basis including software products and licenses, research and consulting services, data services, licenses to republish our ratings and research in their promotional material, event sponsorship and website advertising.

Further information on Morningstar, Inc.'s conflict of interest policies is available from https://shareholders.morningstar.com. Also, please note analysts are subject to the CFA Institute's Code of Ethics and Standards of Professional Conduct.

For a list of securities which the Equity Research Group currently covers and provides written analysis on please contact your local Morningstar office. In addition, for historical analysis of securities covered, including their fair value estimate, please contact your local office.

For Recipients in Australia: This Report has been issued and distributed in Australia by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544; ASFL: 240892). Morningstar Australasia Pty Ltd is the provider of the general advice ('the Service') and takes responsibility for the production of this report. The Service is provided through the research of investment products.

To the extent the Report contains general advice it has been prepared without reference to an investor's objectives, financial situation or needs. Investors should consider the advice in light of these matters and, if applicable, the relevant Product Disclosure Statement before making any decision to invest. Refer to our Financial Services Guide (FSG) for more information at http://www.morningstar.com.au/fsg.pdf.

NiSource's Near-Term Growth Depends on Regulatory Outcomes in Ohio, Indiana

Analyst Note Travis Miller, Strategist, 20 Oct 2022

We are reaffirming our $32 fair value estimate, narrow moat, and stable moat trend ratings for NiSource after reviewing recent regulatory developments. NiSource remains one of our top utilities picks, trading at a 22% discount to our fair value estimate.

NiSource's regulatory risk will ramp up in 2023 and ultimately determine whether NiSource hits the high end or low end of management's 7%-9% annual average earnings growth range. We forecast 8% growth.

NiSource's largest utility, NIPSCO in Indiana, last month requested a $218 million electric rate increase with a decision likely next year. NiSource's second-largest utility, Columbia Gas of Ohio, last year requested a $221 million rate increase. Delayed hearings mean a decision this year is unlikely. The regulatory staff this summer proposed a rate increase between $35.2 million and $57.6 million.

Allowed returns on equity will be key in both cases. NiSource's 10.39% allowed ROE in Ohio and 9.75% allowed ROE in Indiana are above the sector average. We assume Ohio commissioners cut NiSource's allowed ROE to 10%, the high end of the regulatory staff's 9% to 10% proposed range but below NiSource's 11.5% request. We assume Indiana commissioners keep NiSource's electric allowed ROE at 9.75%, lower than its 10.4% request. Last year, Maryland regulators cut NiSource's allowed ROE to 9.65% from 10.85% and Kentucky regulators cut its allowed ROE to 9.35% from 10.3%, both in line with recent decisions for other utilities.

A critical issue in Ohio is the extension of its capital investment rate plans, which have helped NiSource avoid a

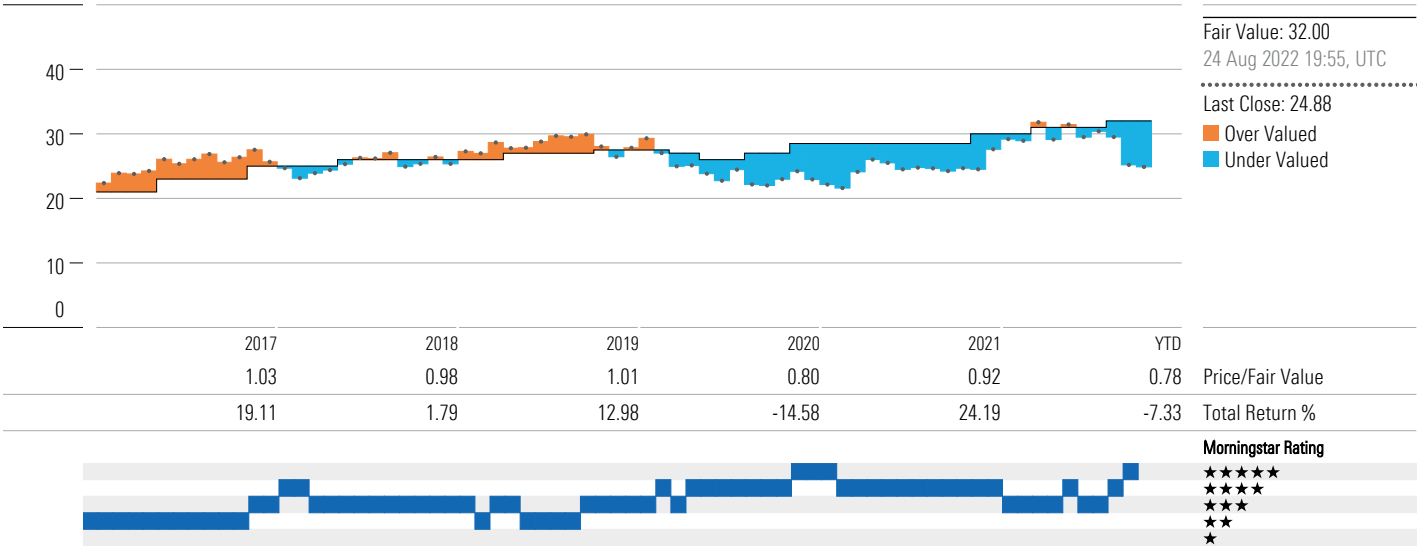
Utilities - Regulated Gas

Business Description

NiSource is one of the nation's largest natural gas distribution companies with approximately 3.5 million customers in Indiana, Kentucky, Maryland, Ohio, Pennsylvania, and Virginia. NiSource's electric utility transmits and distributes electricity in northern Indiana to about 500,000 customers. The regulated electric utility also owns more than 3,000 megawatts of generation capacity, most of which is now coal-fired but is being replaced by natural gas and renewable energy.



base rate review in Ohio since 2008. Similar rate plans at NiSource's other utilities are key to converting what we estimate will be $2 billion of annual growth investment into earnings growth beyond 2024. We think CEO Lloyd Yates will announce new growth opportunities and cost savings on Nov. 7. Gas utility divestures seem unlikely given the recent drop in utilities' valuations.

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

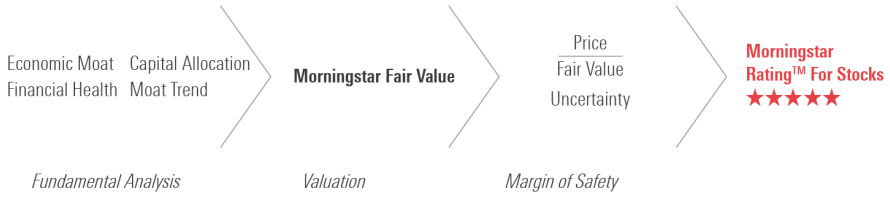
Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity



Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is

MORNINGSTAR®

Research Methodology for Valuing Companies

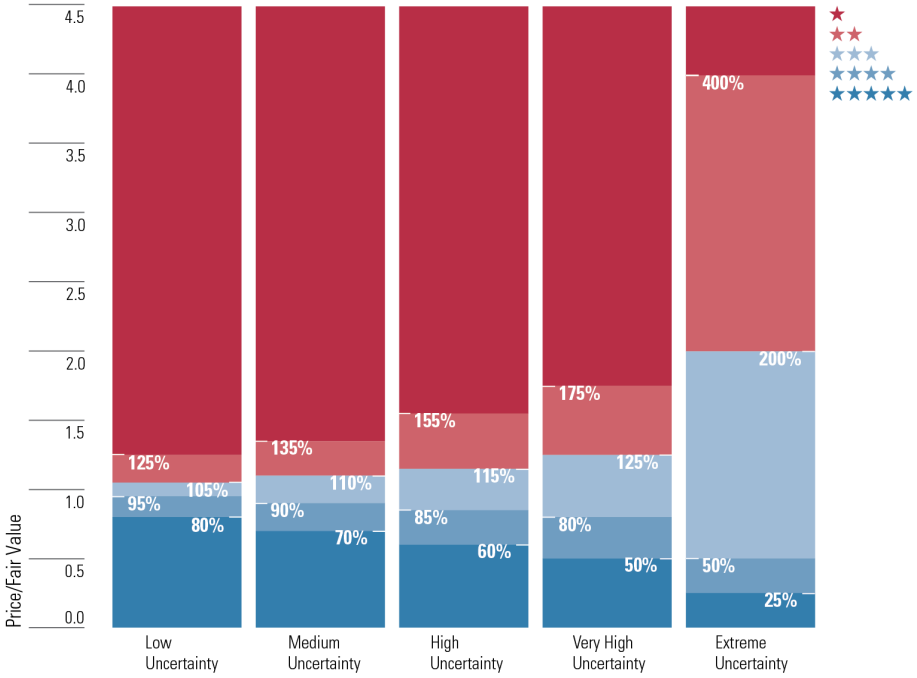
aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns.An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium



Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com.

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the

MORNINGSTAR®

Research Methodology for Valuing Companies

quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

No Surprises at NiSource's Investor Day; Still an Attractive Long-Term Investment

Analyst Note Travis Miller, Strategist, 7 Nov 2022

We are reaffirming our $32 fair value estimate after NiSource announced a strategic plan focused on strengthening the balance sheet, managing operating costs, and increasing capital investments, all in line with our expectations. We are reaffirming our narrow moat and stable moat trend ratings.

NiSource is one of our top utilities picks, trading at a 20% discount to our fair value estimate. Compared with other utilities, we think NiSource has more long-term investment opportunities relative to its size and better regulation. The stock's 3.6% dividend yield and above-average growth relative to its peers suggests total returns should top most utilities' during the next five years.

Management lowered its long-term annual earnings growth target to 6%-8% from 7%-9% but extended the timeframe to 2027 from 2024. We forecast 8% annual growth from 2021-26. We think management's extended timeframe is a net positive for investors even though it implies slightly lower 2023-24 earnings. The previous growth range largely reflected accelerated renewable energy investments and large rate increases in Indiana and Ohio in 2023-24. We think the new growth target better reflects NiSource's 10-year, $30 billion investment plan and opportunities for cost savings.

As we expected, NiSource announced no significant M&A activity. Throughout the year, CEO Lloyd Yates suggested the firm might sell one of its six gas utilities, but we thought that was unlikely as interest rates climbed and utilities' valuations sank. NiSource intends to sell 19.9% of its Indiana utility, NIPSCO, to strengthen the balance sheet and avoid large equity needs. We think NIPSCO is the most valuable part of NiSource's portfolio,

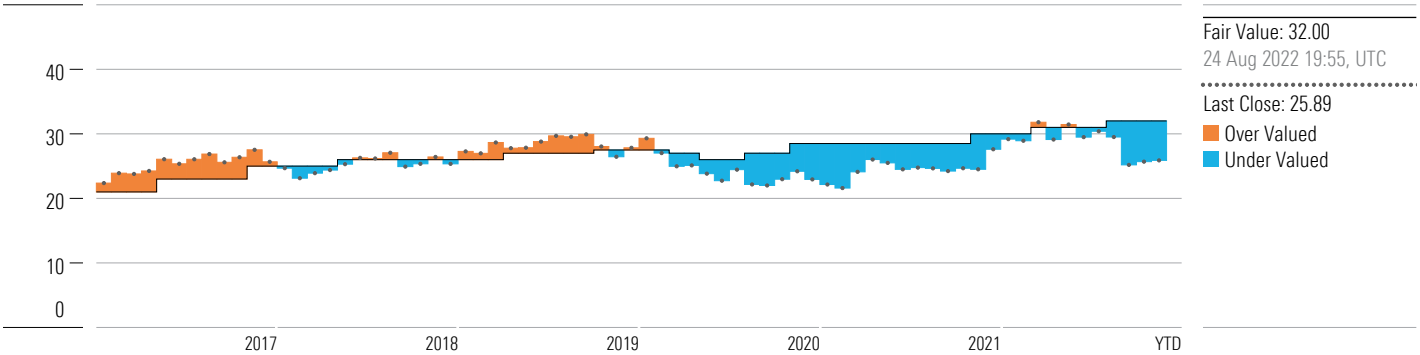
Industry

Utilities - Regulated Gas

Business Description

NiSource is one of the nation's largest natural gas distribution companies with approximately 3.5 million customers in Indiana, Kentucky, Maryland, Ohio, Pennsylvania, and Virginia. NiSource's electric utility transmits and distributes electricity in northern Indiana to about 500,000 customers. The regulated electric utility also owns more than 3,000 megawatts of generation capacity, most of which is now coal-fired but is being replaced by natural gas and renewable energy.

but we expect any transaction will be too small to impact our fair value estimate.



NiSource reported $0.10 of adjusted EPS in the third quarter and is on track to meet our full-year forecast. Our 2023 EPS estimate is in line with management's $1.50-$1.57 guidance.

MORNINGSTAR®

Research Methodology for Valuing Companies

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, indepth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss shortterm market-price movements), but we believe these negatives are mitigated by deep analysis and our longterm approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our singlepoint star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or midcycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

To assess the sustainability of excess profits, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

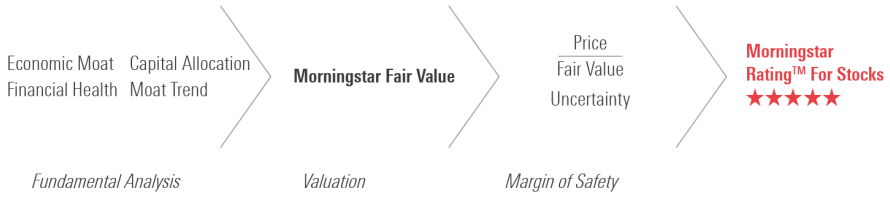
Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in workingcapital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity



Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is

MORNINGSTAR®

Research Methodology for Valuing Companies

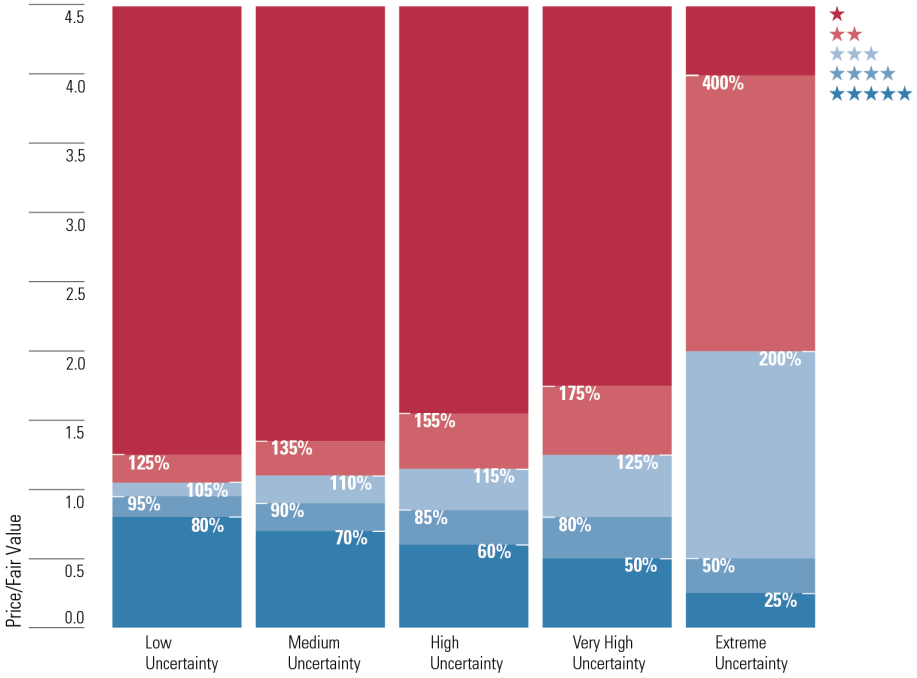
aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns.An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

	Margin of Safety	
Qualitative Analysis Uncertainty Ratings	★★★★★Rating	★Rating
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium



Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com.

Morningstar Equity Research Star Rating Methodology

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the

MORNINGSTAR®

Research Methodology for Valuing Companies

quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

What Happened?

This week, NiSource's subsidiary, Columbia Gas of Ohio, reached a settlement with parties in its natural gas distribution rate case. Signatories to the agreement include Commission Staff, Office of the Ohio Consumers' Counsel and several C&I customers and trade groups. The case was originally filed in June of 2021 and was the first general rate case for Columbia Gas of Ohio since 2008.

Details on the Settlement

The settlement calls for an 8% revenue increase or $68.2mm. This is premised on a 9.6% return on equity and a 50.6% equity ratio on rate base of 3.50bn. This compares to the company's ask of $221mm, 10.95% ROE, 50.6% equity and 3.56bn of rate base. The Staff's position had been 46.4mm of revenue increase, 9.55% ROE, 50.6% equity and 3.46bn of rate base. As part of the agreement, the company will be able to continue its Capital Expenditure Program (CEP) Rider and the Infrastructure Replacement Program (IRP) Rider with set rate caps that escalate each year. NI has preserved its right to pursue a PHMSA Capital rider. Columbia Gas of Ohio also agreed to file a rate on or before September 1, 2027 as part of the settlement. Overall, the settlement looks a bit light on revenue compared to the company's original ask, but the ROE and continuation of the riders is constructive.

What's Next?

Nisource will host an analyst day event on November 7th, where they will update investors on the outcome of its strategic review. We believe a key focus will be improving visibility for earnings growth post 2024 and whether management sees inorganic opportunities longer term that are accretive to their base plan. As a reminder, 2024 does present a higher than normal yoy of growth given the renwables projects going into service. Nisource could look to provide near term earnings guidance for the next several years while also providing a longer term growth target, similar to what many peers in the industry do. Current guidance calls for 7-9% CAGR through 2024 off of 2021.

Valuation:

We rate NiSource Neutral with a $28 target price.

This report has been prepared by UBS Securities LLC. **ANALYST CERTIFICATION AND REQUIRED DISCLOSURES, INCLUDING INFORMATION ON THE QUANTITATIVE RESEARCH REVIEW PUBLISHED BY UBS, BEGIN ON PAGE 3.** UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Forecast returns

Forecast price appreciation	+8.4%
Forecast dividend yield	3.8%
Forecast stock return	+12.2%
Market return assumption	9.6%
Forecast excess return	+2.7%

Company Description

NI is a fully regulated gas and electric utility serving customers in six states in the Midwest and Mid-Atlantic. NI is a gas distribution utility with 3.2 million customers in Indiana, Kentucky, Maryland, Ohio, Pennsylvania, and Virginia. NI is an integrated electric utility serving 0.5 million customers in Indiana. NI's mix of operating earnings is 60% gas and 40% electric.

Valuation Method and Risk Statement

Our $28 price target is an 8% premium to the Regulated Utility average multiple or 16.9x our UBSe 2024 eps of $1.66. The premium is the sum of +5% for the group's undervaluation on a 12 month basis relative to Baa corporate bonds, -2% for third quartile EPS growth and 5% for second quartile regulation.

Risks include, but are not limited to, the following: changes to the regulatory environment, ability to achieve favorable returns on investment projects, and ability to continue to reinvest in the business for growth.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 02 November 2022 12:46 PM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Investment Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	56%	26%
Neutral	FSR is between -6% and 6% of the MRA.	35%	22%
Sell	FSR is > 6% below the MRA.	9%	18%
Short-Term Rating	**Definition**	**Coverage[3]**	**IB Services[4]**
Buy	Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%
Sell	Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%

Source: UBS. Rating allocations are as of 30 September 2022.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.
3:Percentage of companies under coverage globally within the Short-Term rating category.
4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/ qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

UBS Securities LLC: Gregg Orrill, Ross Fowler, CFA, William Appicelli, CFA.

The Disclaimer relevant to Global Wealth Management clients follows the Global Disclaimer.

Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the document.

Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

In certain circumstances (including for example, if you are an academic or a member of the media) you may receive Global Research otherwise than in the capacity of a client of UBS and you understand and agree that (i) the Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of UBS Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas

within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. The information does not apply to, and should not be relied upon by, retail clients. UBS Europe SE is authorised by the European Central Bank (ECB) and regulated by the BaFin and the ECB. **Germany, Luxembourg, the Netherlands, Belgium and Ireland:** Where an analyst of UBS Europe SE has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE. Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates (**"UBS"**) with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is for your information only; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS Financial Services Inc. does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS Financial Services Inc. and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosures_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Austria: This publication is not intended to constitute a public offer under Austrian law. It is distributed only for information purposes to clients of UBS Europe SE, Niederlassung Österreich, with place of business at Wächtergasse 1, A-1010 Wien. UBS Europe SE, Niederlassung Österreich is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Austrian Financial Market Authority (Finanzmarktaufsicht, FMA), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Bahrain**: UBS is a Swiss bank not licensed, supervised or regulated in Bahrain by the Central Bank of Bahrain to undertake banking or investment business activities in Bahrain. Therefore, prospects/clients do not have any protection under local banking and investment services laws and regulations. **Brazil**: This report is only intended for Brazilian residents who are directly purchasing or selling securities in the Brazil capital market through a local authorized institution. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This report and any offering material such as term sheet, research report, other product or service documentation or any other information (the "Material") sent with this report was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the material erroneously, UBS asks that you kindly delete it and inform UBS immediately. This report is prepared by UBS Switzerland AG or its offshore subsidiary or affiliate (collectively as "UBS Offshore"). UBS Offshore is an entity incorporated out of China and is not licensed, supervised or regulated in China to carry out banking or securities business. The recipient should not contact the analysts or UBS Offshore which produced this report for advice as they are not licensed to provide securities investment advice in China. UBS Investment Bank (including Research) has its own wholly independent research and views which at times may vary from the views of UBS Global Wealth Management. The recipient should not use this document or otherwise rely on any of the information contained in this report in making investment decisions and UBS takes no responsibility in this regard. **Czech Republic**: UBS is not a licensed bank in the Czech Republic and thus is not allowed to provide regulated banking or investment services in the Czech Republic. This communication and/or material is distributed for marketing purposes and constitutes a "Commercial Message" under the laws of Czech Republic in relation to banking and/or investment services. Please notify UBS if you do not wish to receive any further correspondence. **Denmark**: This publication is not intended to constitute a public offer under Danish law. It is distributed only for information purposes to clients of UBS Europe SE, Denmark Branch, filial af UBS Europe SE, with place of business at Sankt Annae Plads 13, 1250 Copenhagen, Denmark, registered with the Danish Commerce and Companies Agency, under No. 38 17 24 33. UBS Europe SE, Denmark Branch, filial af UBS Europe SE is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Danish Financial Supervisory Authority (Finanstilsynet), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Egypt**: Securities or other investment products are not being offered or sold by UBS to the public in Egypt and they have not been and will not be registered with the Egyptian Financial Regulatory Authority (FRA). **France**: This publication is not intended to constitute a public offer under French law, it does not constitute a personal recommendation as it is distributed only for information purposes to clients of UBS (France) S.A., French "société anonyme" with share capital of € 132.975.556, at 69 boulevard Haussmann F-75008 Paris, registered with the "Registre du Commerce et des Sociétés" of Paris under N° B 421 255 670. UBS (France) S.A. is a provider of investment services duly authorized according to the terms of the "Code monétaire et financier", regulated by French banking and financial authorities as the "Autorité de contrôle prudentiel et de résolution" and "Autorité des marchés financiers", to which this publication has not been submitted for approval. **Germany**: This publication is not intended to constitute a public offer under German law. It is distributed only for information purposes to clients of UBS Europe SE, Germany, with place of business at Bockenheimer Landstrasse 2-4, 60306 Frankfurt am Main. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the European Central Bank ("ECB"), and supervised by the ECB, the German Central Bank (Deutsche Bundesbank) and the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), to which this publication has not been submitted for approval. **Hong Kong SAR**: This publication is distributed to clients of UBS AG Hong Kong Branch by UBS AG Hong Kong Branch, a licensed bank under the Hong Kong Banking Ordinance and a registered institution under the Securities and Futures Ordinance. UBS AG Hong Kong Branch is incorporated in Switzerland with limited liability. **India**: Distributed by UBS Securities India Private Ltd. UBS AG, its affiliates or subsidiaries may have debt holdings or positions in the subject Indian company/companies. UBS AG, its affiliates or subsidiaries may have financial interests (e.g. like loan/derivative products, rights to or interests in investments, etc.) in the subject Indian company/companies from time to time. Within the past 12 months, UBS AG, its affiliates or subsidiaries may have received compensation for non-investment banking securities-related services and/or non-securities services from the subject Indian company/companies. The subject company/companies may have been a client/clients of UBS AG, its affiliates or subsidiaries during the 12 months preceding the date of distribution of the research report with respect to investment banking and/or non-investment banking securities-related services and/or non-securities services. With regard to information on associates, please refer to the Annual Report at: https://www.ubs.com/global/en/about_ubs/investor_relations/annualreporting.html. **Indonesia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons

entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed without the consent of UBS. None of the Material has been registered or filed under the prevailing laws and with any financial or regulatory authority in your jurisdiction. The Material may not have been approved, disapproved or endorsed by or registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including futures contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Israel**: UBS is a premier global financial firm offering wealth management, asset management and investment banking services from its headquarters in Switzerland and its operations in over 50 countries worldwide to individual, corporate and institutional investors. In Israel, UBS Switzerland AG is registered as Foreign Dealer in cooperation with UBS Wealth Management Israel Ltd., a wholly owned UBS subsidiary. UBS Wealth Management Israel Ltd. is a Portfolio Manager licensee which engages also in Investment Marketing and is regulated by the Israel Securities Authority. This publication is intended for information only and is not intended as an offer to buy or solicitation of an offer. Furthermore, this publication is not intended as an investment advice. No action has been, or will be, taken in Israel that would permit an offering of the product(s) mentioned in this document or a distribution of this document to the public in Israel. In particular, this document has not been reviewed or approved by the Israeli Securities Authority. The product(s) mentioned in this document is/are being offered to a limited number of sophisticated investors who qualify as one of the investors listed in the first supplement to the Israeli Securities Law, 5728-1968. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Anyone who purchases the product(s) mentioned herein shall do so for its own benefit and for its own account and not with the aim or intention of distributing or offering the product(s) to other parties. Anyone who purchases the product(s) shall do so in accordance with its own understanding and discretion and after it has received any relevant financial, legal, business, tax or other advice or opinion required by it in connection with such purchase(s). The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. It is distributed only for information purposes to clients of UBS Europe SE, Succursale Italia, with place of business at Via del Vecchio Politecnico, 3-20121 Milano. UBS Europe SE, Succursale Italia is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Bank of Italy (Banca d'Italia) and the Italian Financial Markets Supervisory Authority (CONSOB - Commissione Nazionale per le Società e la Borsa), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Jersey**: UBS AG, Jersey Branch, is regulated and authorized by the Jersey Financial Services Commission for the conduct of banking, funds and investment business. Where services are provided from outside Jersey, they will not be covered by the Jersey regulatory regime. UBS AG, Jersey Branch is a branch of UBS AG a public company limited by shares, incorporated in Switzerland whose registered offices are at Aeschenvorstadt 1, CH-4051 Basel and Bahnhofstrasse 45, CH 8001 Zurich. UBS AG, Jersey Branch's principal place of business is 1, IFC Jersey, St Helier, Jersey, JE2 3BX. **Luxembourg**: This publication is not intended to constitute a public offer under Luxembourg law. It is distributed only for information purposes to clients of UBS Europe SE, Luxembourg Branch ("UBS LUX"), R.C.S. Luxembourg n° B209123, with registered office at 33A, Avenue J. F. Kennedy, L-1855 Luxembourg. UBS LUX is a branch of UBS Europe SE, a credit institution constituted under German law in the form of a Societas Europaea (HRB n° 107046), with registered office at Bockenheimer Landstrasse 2-4, D-60306 Frankfurt am Main, Germany, duly authorized by the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht – "BaFin") and subject to the joint prudential supervision of BaFin, the central bank of Germany (Deutsche Bundesbank) and the European Central Bank. UBS LUX is furthermore supervised by the Luxembourg prudential supervisory authority (Commission de Surveillance du Secteur Financier), in its role as host member state authority. This publication has not been submitted for approval to any public supervisory authority. **Malaysia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Mexico**: This information is distributed by UBS Asesores México, S.A. de C.V. ("UBS Asesores"), an affiliate of UBS Switzerland AG, incorporated as a non-independent investment advisor under the Mexican regulation due to the relation with a Foreign Bank. UBS Asesores is registered under number 30060-001-(14115)-21/06/2016 and subject to the supervision of the Mexican Banking and Securities Commission ("CNBV") exclusively regarding the rendering of (i) portfolio management services, (ii) securities investment advisory services, analysis and issuance of individual investment recommendations, and (iii) anti-money laundering and terrorism financing matters. This UBS publication or any material related thereto is addressed only to Sophisticated or Institutional Investors located in Mexico. Research reports only reflect the views of the analysts responsible for the report. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management of any entity of UBS Group to which such analyst(s) render services. **Nigeria**: The investment products mentioned in this material are not being offered or sold by UBS to the public in Nigeria and they have not been submitted for approval nor registered with the Securities and Exchange Commission of Nigeria. If you are interested in products of this nature, please let us know. The investment products mentioned in this material are not being directed to, and are not being made available for subscription by any persons within Nigeria other than the selected investors to whom the offer materials have been addressed as a private sale or domestic concern within the exemption and meaning of Section 69(2) of the Investments and Securities Act, 2007 (ISA). This material has been provided to you at your specific unsolicited request and for your information only. **Philippines:** This communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. **Portugal**: UBS Switzerland AG is not licensed to conduct banking and financial activities in Portugal nor is UBS Switzerland AG supervised by the portuguese regulators (Bank of Portugal "Banco de Portugal" and Portuguese Securities Exchange Commission "Comissão do Mercado de Valores Mobiliários"). **Qatar**: UBS Qatar LLC is authorized by the Qatar Financial Centre Regulatory Authority, with QFC no. 01169, and has its registered office at 14th Floor, Burj Alfardan Tower, Building 157, Street No. 301, Area No. 69, Al Majdami, Lusail, Qatar. UBS Qatar LLC neither offers any brokerage services nor executes any order with, for or on behalf of its clients. A client order will have to be placed with, and executed by, UBS Switzerland AG in Switzerland or an affiliate of UBS Switzerland AG, that is domiciled outside Qatar. It is in the sole discretion of UBS Switzerland AG in Switzerland or its affiliate to accept or reject an order and UBS Qatar LLC does not have authority to provide a confirmation in this respect. UBS Qatar LLC may however communicate payment orders and investment instructions to UBS Switzerland AG in Switzerland for receipt, acceptance and execution. UBS Qatar LLC is not authorized to act for and on behalf of UBS Switzerland AG or an affiliate of UBS Switzerland AG. This document and any attachments hereto are intended for eligible counterparties and business customers only. **Russia**: This document or information contained therein is for information purposes only and constitutes neither a public nor a private offering, is not an invitation to make offers, to sell, exchange or otherwise transfer any financial instruments in the Russian Federation to or for the benefit of any Russian person or entity and does not constitute an advertisement or offering of securities in the Russian Federation within the meaning of Russian securities laws. The information contained herein is not an "individual investment recommendation" as defined in Federal Law of 22 April 1996 No 39-FZ "On Securities Market" (as amended) and the financial instruments and operations specified herein may not be suitable for your investment profile or your investment goals or expectations. The determination of whether or not such financial instruments and operations are in your interests or are suitable for your investment goals, investment horizon or the acceptable risk level is your responsibility. We assume no liability for any losses connected with making any such operations or investing into any such financial instruments and we do not recommend to use such information as the only source of information for making an investment decision. **Saudi Arabia**: UBS Saudi Arabia is authorised and regulated by the Capital Market Authority to conduct securities business under licence number 08113-37. **Singapore**: Clients of UBS AG Singapore branch are asked to please contact UBS AG Singapore branch, an exempt financial adviser under

the Singapore Financial Advisers Act (Cap. 110) and a wholesale bank licensed under the Singapore Banking Act (Cap. 19) regulated by the Monetary Authority of Singapore, in respect of any matters arising from, or in connection with, the analysis or report. UBS AG is incorporated in Switzerland with limited liability. UBS AG has a branch registered in Singapore (UEN S98FC5560C). This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Spain**: This publication is not intended to constitute a public offer under Spanish law. It is distributed only for information purposes to clients of UBS Europe SE, Sucursal en España, with place of business at Calle María de Molina 4, C.P. 28006, Madrid. UBS Europe SE, Sucursal en España is subject to the joint supervision of the European Central Bank ("ECB"), the German Central bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Spanish supervisory authority (Banco de España), to which this publication has not been submitted for approval. Additionally it is authorized to provide investment services on securities and financial instruments, regarding which it is supervised by the Comisión Nacional del Mercado de Valores as well. UBS Europe SE, Sucursal en España is a branch of UBS Europe SE, a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Sweden**: This publication is not intended to constitute a public offer under Swedish law. It is distributed only for information purposes to clients of UBS Europe SE, Sweden Bankfilial, with place of business at Regeringsgatan 38, 11153 Stockholm, Sweden, registered with the Swedish Companies Registration Office under Reg. No 516406-1011. UBS Europe SE, Sweden Bankfilial is subject to the joint supervision of the European Central Bank ("ECB"), the German Central bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Swedish supervisory authority (Finansinspektionen), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Taiwan**: This material is provided by UBS AG, Taipei Branch in accordance with laws of Taiwan, in agreement with or at the request of clients/prospects. **Thailand**: This communication and any offering material, term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication were done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Turkey**: The information in this document is not provided for the purpose of offering, marketing or sale of any capital market instrument or service in the Republic of Turkey. Therefore, this document may not be considered as an offer made, or to be made, to residents of the Republic of Turkey in the Republic of Turkey. UBS Switzerland AG is not licensed by the Turkish Capital Market Board (the CMB) under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instrument/service may be utilized in connection with providing any capital market services to persons within the Republic of Turkey without the prior approval of the CMB. However, according to article 15 (d) (ii) of the Decree No. 32 residents of the Republic of Turkey are allowed to purchase or sell the financial instruments traded in financial markets outside of the Republic of Turkey. Further to this, pursuant to article 9 of the Communiqué on Principles Regarding Investment Services, Activities and Ancillary Services No. III-37.1, investment services provided abroad to residents of the Republic of Turkey based on their own initiative are not restricted. **United Arab Emirates (UAE)**: UBS is not a financial institution licensed in the UAE by the Central Bank of the UAE nor by the Emirates' Securities and Commodities Authority and does not undertake banking activities in the UAE. UBS AG Dubai Branch is licensed by the DFSA in the DIFC. This document is provided for your information only and does not constitute financial advice. **United Kingdom**: This document is issued by UBS Wealth Management, a division of UBS AG which is authorised and regulated by the Financial Market Supervisory Authority in Switzerland. In the United Kingdom, UBS AG is authorised by the Prudential Regulation Authority and is subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. Details about the extent of regulation by the Prudential Regulation Authority are available from us on request. A member of the London Stock Exchange. This publication is distributed to retail clients of UBS Wealth Management. **Ukraine**: UBS is not registered and licensed as a bank/financial institution under Ukrainian legislation and does not provide banking and other financial services in Ukraine. UBS has not made, and will not make, any offer of the mentioned products to the public in Ukraine. No action has been taken to authorize an offer of the mentioned products to the public in Ukraine and the distribution of this document shall not constitute financial services for the purposes of the Law of Ukraine "On Financial Services and State Regulation of Financial Services Markets" dated 12 July 2001. Any offer of the mentioned products shall not constitute an investment advice, public offer, circulation, transfer, safekeeping, holding or custody of securities in the territory of Ukraine. Accordingly, nothing in this document or any other document, information or communication related to the mentioned products shall be interpreted as containing an offer, a public offer or invitation to offer or to a public offer, or solicitation of securities in the territory of Ukraine or investment advice under Ukrainian law. Electronic communication must not be considered as an offer to enter into an electronic agreement or other electronic instrument within the meaning of the Law of Ukraine "On Electronic Commerce" dated 3 September 2015. This document is strictly for private use by its holder and may not be passed on to third parties or otherwise publicly distributed. **USA**:Distributed to US persons by UBS Financial Services Inc. or UBS Securities LLC, subsidiaries of UBS AG. UBS Switzerland AG, UBS Europe SE, UBS Bank, S.A., UBS Brasil Administradora de Valores Mobiliários Ltda., UBS Asesores México, S.A. de C.V., UBS SuMi TRUST Wealth Management Co., Ltd., UBS Wealth Management Israel Ltd. and UBS Menkul Degerler AS are affiliates of UBS AG. **UBS Financial Services Inc. accepts responsibility for the content of a report prepared by a non-US affiliate when it distributes reports to US persons. All transactions by a US person in the securities mentioned in this report should be effected through a US-registered broker dealer affiliated with UBS, and not through a non-US affiliate. The contents of this report have not been and will not be approved by any securities or investment authority in the United States or elsewhere. NiSource Inc.

3Q Results; Analyst Day

Q: How did the results compare vs expectations?

A: NI reported $0.10/shr for Q3'22 vs consensus of $0.11/shr. It narrowed 2022 Operating EPS to $1.44-1.46 vs prior guidance $1.42-1.48; Initiated 2023 EPS of 1.50-1.57 vs Consensus of $1.54.

Q: What were the most noteworthy areas in the results?

A: Drivers of results were better weather, non-recurring impacts related to Greater Lawrence and plant retirement costs, and higher shares outstanding.

Q: Has the company's outlook/guidance changed?

A: As part of its Analyst Day update, NiSource updated the long-term growth rate to 6-8% through 2027 off of a 2021 base year. This extends but lowers vs. the prior growth rate of 7-9% through 2024. As part of the previously announced strategic review, the company announced its intention to sell a minority stake in its NIPSCo subsidiary. This sale will remove the need to issue equity until at least 2025, after which the company expects to utilize what they describe as a modest ATM program. The revised capital plan is $15bn for 2023-2027, while targeting a 14-16% FFO/Debt target. The company has also identified ways to optimize the cost profile and approach to work. Additionally, NI announced its intention of reaching net zero Scope 1 and 2 greenhouse gas emissions by 2040.

Q: How would we expect investors to react?

A: We await further details at today's Analyst Day which will begin today at 12pm EST. We believe initial reaction will be mixed with the positives being extension of a competitive growth rate of 6-8% through 2027, but perhaps some concerns around selling an interest in the best quality asset and skewing business mix further towards natural gas.

Company Description

NI is a fully regulated gas and electric utility serving customers in six states in the Midwest and Mid-Atlantic. NI is a gas distribution utility with 3.2 million customers in Indiana, Kentucky, Maryland, Ohio, Pennsylvania, and Virginia. NI is an integrated electric utility serving 0.5 million customers in Indiana. NI's mix of operating earnings is 60% gas and 40% electric.

Valuation Method and Risk Statement

Our $28 price target is an 8% premium to the Regulated Utility average multiple or 16.9x our UBSe 2024 eps of $1.66. The premium is the sum of +5% for the group's undervaluation on a 12 month basis relative to Baa corporate bonds, -2% for third quartile EPS growth and 5% for second quartile regulation. Risks include, but are not limited to, the following: changes to the regulatory environment, ability to achieve favorable returns on investment projects, and ability to continue to reinvest
in the business for growth.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 07 November 2022 12:55 PM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Investment Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	56%	26%
Neutral	FSR is between -6% and 6% of the MRA.	35%	22%
Sell	FSR is > 6% below the MRA.	9%	18%
Short-Term Rating	**Definition**	**Coverage[3]**	**IB Services[4]**
Buy	Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%
Sell	Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%

Source: UBS. Rating allocations are as of 30 September 2022.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.
3:Percentage of companies under coverage globally within the Short-Term rating category.
4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/ qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

In certain circumstances (including for example, if you are an academic or a member of the media) you may receive Global Research otherwise than in the capacity of a client of UBS and you understand and agree that (i) the Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of UBS Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas

within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. The information does not apply to, and should not be relied upon by, retail clients. UBS Europe SE is authorised by the European Central Bank (ECB) and regulated by the BaFin and the ECB. **Germany, Luxembourg, the Netherlands, Belgium and Ireland:** Where an analyst of UBS Europe SE has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE. In all cases it is distributed by UBS Europe SE and UBS AG, London Branch. **Turkey:** Distributed by UBS AG, London Branch. No information in this document is provided for the purpose of offering, marketing and sale by any means of any capital market instruments and services in the Republic of Turkey. Therefore, this document may not be considered as an offer made or to be made to residents of the Republic of Turkey. UBS AG, London Branch is not licensed by the Turkish Capital Market Board under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instruments/services may be utilized in connection with providing any capital market services to persons within the Republic of Turkey without the prior approval of the Capital Market Board. However, according to article 15 (d) (ii) of the Decree No. 32, there is no restriction on the purchase or sale of the securities abroad by residents of the Republic of Turkey. **Poland:** Distributed by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce regulated by the Polish Financial Supervision Authority. Where an analyst of UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce. **Russia:** Prepared and distributed by UBS Bank (OOO). Should not be construed as an individual Investment Recommendation for the purpose of the Russian Law - Federal Law #39-FZ ON THE SECURITIES MARKET Articles 6.1-6.2.**Switzerland:** Distributed by UBS AG to persons who are institutional investors only. UBS AG is regulated by the Swiss Financial Market Supervisory Authority (FINMA). **Italy:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, Italy Branch. Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates (**"UBS"**) with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is for your information only; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS Financial Services Inc. does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS Financial Services Inc. and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Austria: This publication is not intended to constitute a public offer under Austrian law. It is distributed only for information purposes to clients of UBS Europe SE, Niederlassung Österreich, with place of business at Wächtergasse 1, A-1010 Wien. UBS Europe SE, Niederlassung Österreich is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Austrian Financial Market Authority (Finanzmarktaufsicht, FMA), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Bahrain**: UBS is a Swiss bank not licensed, supervised or regulated in Bahrain by the Central Bank of Bahrain to undertake banking or investment business activities in Bahrain. Therefore, prospects/clients do not have any protection under local banking and investment services laws and regulations. **Brazil**: This report is only intended for Brazilian residents who are directly purchasing or selling securities in the Brazil capital market through a local authorized institution. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This report and any offering material such as term sheet, research report, other product or service documentation or any other information (the "Material") sent with this report was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the material erroneously, UBS asks that you kindly delete it and inform UBS immediately. This report is prepared by UBS Switzerland AG or its offshore subsidiary or affiliate (collectively as "UBS Offshore"). UBS Offshore is an entity incorporated out of China and is not licensed, supervised or regulated in China to carry out banking or securities business. The recipient should not contact the analysts or UBS Offshore which produced this report for advice as they are not licensed to provide securities investment advice in China. UBS Investment Bank (including Research) has its own wholly independent research and views which at times may vary from the views of UBS Global Wealth Management. The recipient should not use this document or otherwise rely on any of the information contained in this report in making investment decisions and UBS takes no responsibility in this regard. **Czech Republic**: UBS is not a licensed bank in the Czech Republic and thus is not allowed to provide regulated banking or investment services in the Czech Republic. This communication and/or material is distributed for marketing purposes and constitutes a "Commercial Message" under the laws of Czech Republic in relation to banking and/or investment services. Please notify UBS if you do not wish to receive any further correspondence. **Denmark**: This publication is not intended to constitute a public offer under Danish law. It is distributed only for information purposes to clients of UBS Europe SE, Denmark Branch, filial af UBS Europe SE, with place of business at Sankt Annae Plads 13, 1250 Copenhagen, Denmark, registered with the Danish Commerce and Companies Agency, under No. 38 17 24 33. UBS Europe SE, Denmark Branch, filial af UBS Europe SE is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Danish Financial Supervisory Authority (Finanstilsynet), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Egypt**: Securities or other investment products are not being offered or sold by UBS to the public in Egypt and they have not been and will not be registered with the Egyptian Financial Regulatory Authority (FRA). **France**: This publication is not intended to constitute a public offer under French law, it does not constitute a personal recommendation as it is distributed only for information purposes to clients of UBS (France) S.A., French "société anonyme" with share capital of € 132.975.556, at 69 boulevard Haussmann F-75008 Paris, registered with the "Registre du Commerce et des Sociétés" of Paris under N° B 421 255 670. UBS (France) S.A. is a provider of investment services duly authorized according to the terms of the "Code monétaire et financier", regulated by French banking and financial authorities as the "Autorité de contrôle prudentiel et de résolution" and "Autorité des marchés financiers", to which this publication has not been submitted for approval. **Germany**: This publication is not intended to constitute a public offer under German law. It is distributed only for information purposes to clients of UBS Europe SE, Germany, with place of business at Bockenheimer Landstrasse 2-4, 60306 Frankfurt am Main. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the European Central Bank ("ECB"), and supervised by the ECB, the German Central Bank (Deutsche Bundesbank) and the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), to which this publication has not been submitted for approval. **Hong Kong SAR**: This publication is distributed to clients of UBS AG Hong Kong Branch by UBS AG Hong Kong Branch, a licensed bank under the Hong Kong Banking Ordinance and a registered institution under the Securities and Futures Ordinance. UBS AG Hong Kong Branch is incorporated in Switzerland with limited liability. **India**: Distributed by UBS Securities India Private Ltd. (Corporate Identity Number U67120MH1996PTC097299) 2/F, 2 North Avenue, Maker Maxity, Bandra Kurla Complex, Bandra (East), Mumbai (India) 400051. Phone: +912261556000. It provides brokerage services bearing SEBI Registration Number INZ000259830; merchant banking services bearing SEBI Registration Number: INM000010809 and Research Analyst services bearing SEBI Registration Number: INH000001204. UBS AG, its affiliates or subsidiaries may have debt holdings or positions in the subject Indian company/companies. UBS AG, its affiliates or subsidiaries may have financial interests (e.g. like loan/derivative products, rights to or interests in investments, etc.) in the subject Indian company/companies from time to time. Within the past 12 months, UBS AG, its affiliates or subsidiaries may have received compensation for non-investment banking securities-related services and/or non-securities services from the subject Indian company/companies. The subject company/companies may have been a client/clients of UBS AG, its affiliates or subsidiaries during the 12 months preceding the date of distribution of the research report with respect to investment banking and/or non-investment banking securities-related services and/or non-securities services. With regard to information on associates, please refer to the Annual Report at: https://www.ubs.com/global/en/about_ubs/investor_relations/annualreporting.html. **Indonesia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons

entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed without the consent of UBS. None of the Material has been registered or filed under the prevailing laws and with any financial or regulatory authority in your jurisdiction. The Material may not have been approved, disapproved or endorsed by or registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including futures contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Israel**: UBS is a premier global financial firm offering wealth management, asset management and investment banking services from its headquarters in Switzerland and its operations in over 50 countries worldwide to individual, corporate and institutional investors. In Israel, UBS Switzerland AG is registered as Foreign Dealer in cooperation with UBS Wealth Management Israel Ltd., a wholly owned UBS subsidiary. UBS Wealth Management Israel Ltd. is a Portfolio Manager licensee which engages also in Investment Marketing and is regulated by the Israel Securities Authority. This publication is intended for information only and is not intended as an offer to buy or solicitation of an offer. Furthermore, this publication is not intended as an investment advice. No action has been, or will be, taken in Israel that would permit an offering of the product(s) mentioned in this document or a distribution of this document to the public in Israel. In particular, this document has not been reviewed or approved by the Israeli Securities Authority. The product(s) mentioned in this document is/are being offered to a limited number of sophisticated investors who qualify as one of the investors listed in the first supplement to the Israeli Securities Law, 5728-1968. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Anyone who purchases the product(s) mentioned herein shall do so for its own benefit and for its own account and not with the aim or intention of distributing or offering the product(s) to other parties. Anyone who purchases the product(s) shall do so in accordance with its own understanding and discretion and after it has received any relevant financial, legal, business, tax or other advice or opinion required by it in connection with such purchase(s). The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. It is distributed only for information purposes to clients of UBS Europe SE, Succursale Italia, with place of business at Via del Vecchio Politecnico, 3-20121 Milano. UBS Europe SE, Succursale Italia is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Bank of Italy (Banca d'Italia) and the Italian Financial Markets Supervisory Authority (CONSOB - Commissione Nazionale per le Società e la Borsa), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Jersey**: UBS AG, Jersey Branch, is regulated and authorized by the Jersey Financial Services Commission for the conduct of banking, funds and investment business. Where services are provided from outside Jersey, they will not be covered by the Jersey regulatory regime. UBS AG, Jersey Branch is a branch of UBS AG a public company limited by shares, incorporated in Switzerland whose registered offices are at Aeschenvorstadt 1, CH-4051 Basel and Bahnhofstrasse 45, CH 8001 Zurich. UBS AG, Jersey Branch's principal place of business is 1, IFC Jersey, St Helier, Jersey, JE2 3BX. **Luxembourg**: This publication is not intended to constitute a public offer under Luxembourg law. It is distributed only for information purposes to clients of UBS Europe SE, Luxembourg Branch ("UBS LUX"), R.C.S. Luxembourg n° B209123, with registered office at 33A, Avenue J. F. Kennedy, L-1855 Luxembourg. UBS LUX is a branch of UBS Europe SE, a credit institution constituted under German law in the form of a Societas Europaea (HRB n° 107046), with registered office at Bockenheimer Landstrasse 2-4, D-60306 Frankfurt am Main, Germany, duly authorized by the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht – "BaFin") and subject to the joint prudential supervision of BaFin, the central bank of Germany (Deutsche Bundesbank) and the European Central Bank. UBS LUX is furthermore supervised by the Luxembourg prudential supervisory authority (Commission de Surveillance du Secteur Financier), in its role as host member state authority. This publication has not been submitted for approval to any public supervisory authority. **Malaysia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Mexico**: This information is distributed by UBS Asesores México, S.A. de C.V. ("UBS Asesores"), an affiliate of UBS Switzerland AG, incorporated as a non-independent investment advisor under the Mexican regulation due to the relation with a Foreign Bank. UBS Asesores is registered under number 30060-001-(14115)-21/06/2016 and subject to the supervision of the Mexican Banking and Securities Commission ("CNBV") exclusively regarding the rendering of (i) portfolio management services, (ii) securities investment advisory services, analysis and issuance of individual investment recommendations, and (iii) anti-money laundering and terrorism financing matters. This UBS publication or any material related thereto is addressed only to Sophisticated or Institutional Investors located in Mexico. Research reports only reflect the views of the analysts responsible for the report. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management of any entity of UBS Group to which such analyst(s) render services. **Nigeria**: The investment products mentioned in this material are not being offered or sold by UBS to the public in Nigeria and they have not been submitted for approval nor registered with the Securities and Exchange Commission of Nigeria. If you are interested in products of this nature, please let us know. The investment products mentioned in this material are not being directed to, and are not being made available for subscription by any persons within Nigeria other than the selected investors to whom the offer materials have been addressed as a private sale or domestic concern within the exemption and meaning of Section 69(2) of the Investments and Securities Act, 2007 (ISA). This material has been provided to you at your specific unsolicited request and for your information only. **Philippines:** This communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. **Portugal**: UBS Switzerland AG is not licensed to conduct banking and financial activities in Portugal nor is UBS Switzerland AG supervised by the portuguese regulators (Bank of Portugal "Banco de Portugal" and Portuguese Securities Exchange Commission "Comissão do Mercado de Valores Mobiliários"). **Qatar**: UBS Qatar LLC is authorized by the Qatar Financial Centre Regulatory Authority, with QFC no. 01169, and has its registered office at 14th Floor, Burj Alfardan Tower, Building 157, Street No. 301, Area No. 69, Al Majdami, Lusail, Qatar. UBS Qatar LLC neither offers any brokerage services nor executes any order with, for or on behalf of its clients. A client order will have to be placed with, and executed by, UBS Switzerland AG in Switzerland or an affiliate of UBS Switzerland AG, that is domiciled outside Qatar. It is in the sole discretion of UBS Switzerland AG in Switzerland or its affiliate to accept or reject an order and UBS Qatar LLC does not have authority to provide a confirmation in this respect. UBS Qatar LLC may however communicate payment orders and investment instructions to UBS Switzerland AG in Switzerland for receipt, acceptance and execution. UBS Qatar LLC is not authorized to act for and on behalf of UBS Switzerland AG or an affiliate of UBS Switzerland AG. This document and any attachments hereto are intended for eligible counterparties and business customers only. **Russia**: This document or information contained therein is for information purposes only and constitutes neither a public nor a private offering, is not an invitation to make offers, to sell, exchange or otherwise transfer any financial instruments in the Russian Federation to or for the benefit of any Russian person or entity and does not constitute an advertisement or offering of securities in the Russian Federation within the meaning of Russian securities laws. The information contained herein is not an "individual investment recommendation" as defined in Federal Law of 22 April 1996 No 39-FZ "On Securities Market" (as amended) and the financial instruments and operations specified herein may not be suitable for your investment profile or your investment goals or expectations. The determination of whether or not such financial instruments and operations are in your interests or are suitable for your investment goals, investment horizon or the acceptable risk level is your responsibility. We assume no liability for any losses connected with making any such operations or investing into any such financial instruments and we do not recommend to use such information as the only source of information for making an investment decision. **Saudi Arabia**: UBS Saudi Arabia is authorised and regulated by the Capital Market Authority to conduct securities business under licence number 08113-37. **Singapore**: Clients of UBS AG Singapore branch are asked to please contact UBS AG Singapore branch, an exempt financial adviser under

the Singapore Financial Advisers Act (Cap. 110) and a wholesale bank licensed under the Singapore Banking Act (Cap. 19) regulated by the Monetary Authority of Singapore, in respect of any matters arising from, or in connection with, the analysis or report. UBS AG is incorporated in Switzerland with limited liability. UBS AG has a branch registered in Singapore (UEN S98FC5560C). This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Spain**: This publication is not intended to constitute a public offer under Spanish law. It is distributed only for information purposes to clients of UBS Europe SE, Sucursal en España, with place of business at Calle María de Molina 4, C.P. 28006, Madrid. UBS Europe SE, Sucursal en España is subject to the joint supervision of the European Central Bank ("ECB"), the German Central bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Spanish supervisory authority (Banco de España), to which this publication has not been submitted for approval. Additionally it is authorized to provide investment services on securities and financial instruments, regarding which it is supervised by the Comisión Nacional del Mercado de Valores as well. UBS Europe SE, Sucursal en España is a branch of UBS Europe SE, a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Sweden**: This publication is not intended to constitute a public offer under Swedish law. It is distributed only for information purposes to clients of UBS Europe SE, Sweden Bankfilial, with place of business at Regeringsgatan 38, 11153 Stockholm, Sweden, registered with the Swedish Companies Registration Office under Reg. No 516406-1011. UBS Europe SE, Sweden Bankfilial is subject to the joint supervision of the European Central Bank ("ECB"), the German Central bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Swedish supervisory authority (Finansinspektionen), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Taiwan**: This material is provided by UBS AG, Taipei Branch in accordance with laws of Taiwan, in agreement with or at the request of clients/prospects. **Thailand**: This communication and any offering material, term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication were done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Turkey**: The information in this document is not provided for the purpose of offering, marketing or sale of any capital market instrument or service in the Republic of Turkey. Therefore, this document may not be considered as an offer made, or to be made, to residents of the Republic of Turkey in the Republic of Turkey. UBS Switzerland AG is not licensed by the Turkish Capital Market Board (the CMB) under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instrument/service may be utilized in connection with providing any capital market services to persons within the Republic of Turkey without the prior approval of the CMB. However, according to article 15 (d) (ii) of the Decree No. 32 residents of the Republic of Turkey are allowed to purchase or sell the financial instruments traded in financial markets outside of the Republic of Turkey. Further to this, pursuant to article 9 of the Communiqué on Principles Regarding Investment Services, Activities and Ancillary Services No. III-37.1, investment services provided abroad to residents of the Republic of Turkey based on their own initiative are not restricted. **United Arab Emirates (UAE)**: UBS is not a financial institution licensed in the UAE by the Central Bank of the UAE nor by the Emirates' Securities and Commodities Authority and does not undertake banking activities in the UAE. UBS AG Dubai Branch is licensed by the DFSA in the DIFC. This document is provided for your information only and does not constitute financial advice. **United Kingdom**: This document is issued by UBS Wealth Management, a division of UBS AG which is authorised and regulated by the Financial Market Supervisory Authority in Switzerland. In the United Kingdom, UBS AG is authorised by the Prudential Regulation Authority and is subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. Details about the extent of regulation by the Prudential Regulation Authority are available from us on request. A member of the London Stock Exchange. This publication is distributed to retail clients of UBS Wealth Management. **Ukraine**: UBS is not registered and licensed as a bank/financial institution under Ukrainian legislation and does not provide banking and other financial services in Ukraine. UBS has not made, and will not make, any offer of the mentioned products to the public in Ukraine. No action has been taken to authorize an offer of the mentioned products to the public in Ukraine and the distribution of this document shall not constitute financial services for the purposes of the Law of Ukraine "On Financial Services and State Regulation of Financial Services Markets" dated 12 July 2001. Any offer of the mentioned products shall not constitute an investment advice, public offer, circulation, transfer, safekeeping, holding or custody of securities in the territory of Ukraine. Accordingly, nothing in this document or any other document, information or communication related to the mentioned products shall be interpreted as containing an offer, a public offer or invitation to offer or to a public offer, or solicitation of securities in the territory of Ukraine or investment advice under Ukrainian law. Electronic communication must not be considered as an offer to enter into an electronic agreement or other electronic instrument within the meaning of the Law of Ukraine "On Electronic Commerce" dated 3 September 2015. This document is strictly for private use by its holder and may not be passed on to third parties or otherwise publicly distributed. **USA**:Distributed to US persons by UBS Financial Services Inc. or UBS Securities LLC, subsidiaries of UBS AG. UBS Switzerland AG, UBS Europe SE, UBS Bank, S.A., UBS Brasil Administradora de Valores Mobiliários Ltda., UBS Asesores México, S.A. de C.V., UBS SuMi TRUST Wealth Management Co., Ltd., UBS Wealth Management Israel Ltd. and UBS Menkul Degerler AS are affiliates of UBS AG. **UBS Financial Services Inc. accepts responsibility for the content of a report prepared by a non-US affiliate when it distributes reports to US persons. All transactions by a US person in the securities mentioned in this report should be effected through a US-registered broker dealer affiliated with UBS, and not through a non-US affiliate. The contents of this report have not been and will not be approved by any securities or investment authority in the United States or elsewhere. UBS Financial Services Inc. is not acting as a municipal advisor to any municipal entity or obligated person within the meaning of Section 15B of the Securities Exchange Act (the "Municipal Advisor Rule") and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of the Municipal Advisor Rule.**

Managing Customer Impacts Longer Term is Prudent

The key takeaway from today's NI Analyst Day is management's effort to de-risk the longer term outlook by moderating the rate base and earnings growth trajectory, reducing capital markets exposure by selling up to a 19.9% stake in NIPSCO and targeting low single digit impacts to customer bills annually. The stock underperformed the XLU by 396bps in a tough tape for utilities. While the implied earnings for 2024 came down 2-3% based on the revised earnings CAGR of 6-8% vs. prior of 7-9%, we think that management took prudent steps to reset the outlook and put a plan in place that is palatable for all key stakeholders moving forward.

Strategic Review Outcome

The company conducted an exhaustive review of strategic options including but not limited to an outright sale and divestiture of individual LDC assets. Ultimately, management decided the valuation wasn't sufficient and/or dis-synergies and tax leakage were too great to overcome. The decision to sell up to a 19.9% stake in NIPSCO represents the most efficient outcome in their view in terms of valuation, tax efficiency and limited disruption to ongoing operations. In the note, we lay out a a scenario analysis of potential sales outcomes. We believe given the growth profile for NIPSCO, it could transact at a better multiple than the 1.4x forward rate base that Duke Energy sold a slice of their Indiana utility for in early 2021 (see note on that here). NI says this minority sale will eliminate equity needs until 2025 and then modest ATM issuances, which we estimate could be $250mm/yr, thereafter. NI increased their targeted FFO/Debt range to 14-16% from 14-15% and expects to be at the high end of that coming out of the transaction.

Rate Base Slowing But Customer Impacts Look Manageable; Flat O&M outlook

The updated capex plan calls for $15.0bn over '23-'27, with a reduction upfront in '23, but higher amounts over the back-end. Overall, the rate base growth rate declined from prior guidance of 10-12% to 8-10%, in part to relieve pressure on customer bills. The total bill impact to customers over the forecast period is expected to be ~3% per year. This assumes natural gas prices in the range of $4.50-5.50/MMBtu, flat O&M (which assumes $40-50mm of cost reductions per year to offset inflation) and 50bps per year of customer growth.

Valuation:

We maintain our Neutral Rating and $28 price target.

Investors should consider this report as only a single factor in making their investment decision.

Earnings Guidance Update and NIPSCO Snapshot

In Figure 1, we show the implied earnings guidance changes from the prior guidance of 7-9% through 2024 off a 2021 base vs. the new guidance of 6-8% through 2027 off a 2021 base and shows UBS and consensus estimates. Management did indicate that 2024 could reach the low end of the previous range given the renewable generation resources that will be coming into service that year.

In Figure 2, we lay out a range of scenarios for a NIPSCO minority sale. There has been recent precedent for such transactions, including when Duke Energy sold a 19.9% stake in their Indiana utility to GIC in 2021. NiSource is targeting for the transaction to occur in 2023, with a full year impact in in 2024. All of NiSource's updated earnings and balance sheet guidance reflect the NIPSCO sale. Management believes the transaction will be tax efficient. We estimate they are targeting $1.75-$2.0bn of net proceeds in order to achieve the FFO/Debt, capex and equity plans they've put out in guidance. We think a minority stake of 19.9% is worth ~18c of EPS in 2023, before redeployment of proceeds.

Forecast returns

Forecast price appreciation	+14.9%
Forecast dividend yield	4.1%
Forecast stock return	+19.0%
Market return assumption	9.7%
Forecast excess return	+9.3%

Company Description

NI is a fully regulated gas and electric utility serving customers in six states in the Midwest and Mid-Atlantic. NI is a gas distribution utility with 3.2 million customers in Indiana, Kentucky, Maryland, Ohio, Pennsylvania, and Virginia. NI is an integrated electric utility serving 0.5 million customers in Indiana. NI's mix of operating earnings is 60% gas and 40% electric.

Valuation Method and Risk Statement

Our $28 price target is an 8% premium to the Regulated Utility average multiple or 16.9x our UBSe 2024 eps of $1.66. The premium is the sum of +5% for the group's undervaluation on a 12 month basis relative to Baa corporate bonds, -2% for third quartile EPS growth and 5% for second quartile regulation.

Risks include, but are not limited to, the following: changes to the regulatory environment, ability to achieve favorable returns on investment projects, and ability to continue to reinvest in the business for growth.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 08 November 2022 01:48 AM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Investment Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	56%	26%
Neutral	FSR is between -6% and 6% of the MRA.	35%	22%
Sell	FSR is > 6% below the MRA.	9%	18%
Short-Term Rating	**Definition**	**Coverage[3]**	**IB Services[4]**
Buy	Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%
Sell	Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%

Source: UBS. Rating allocations are as of 30 September 2022.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.
3:Percentage of companies under coverage globally within the Short-Term rating category.
4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/ qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

UBS Securities LLC: Ross Fowler, CFA, William Appicelli, CFA.

The Disclaimer relevant to Global Wealth Management clients follows the Global Disclaimer.

Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the document.

Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

In certain circumstances (including for example, if you are an academic or a member of the media) you may receive Global Research otherwise than in the capacity of a client of UBS and you understand and agree that (i) the Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of UBS Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas

within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. The information does not apply to, and should not be relied upon by, retail clients. UBS Europe SE is authorised by the European Central Bank (ECB) and regulated by the BaFin and the ECB. **Germany, Luxembourg, the Netherlands, Belgium and Ireland:** Where an analyst of UBS Europe SE has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE. Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates (**"UBS"**) with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is for your information only; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS Financial Services Inc. does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS Financial Services Inc. and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosures_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Austria: This publication is not intended to constitute a public offer under Austrian law. It is distributed only for information purposes to clients of UBS Europe SE, Niederlassung Österreich, with place of business at Wächtergasse 1, A-1010 Wien. UBS Europe SE, Niederlassung Österreich is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Austrian Financial Market Authority (Finanzmarktaufsicht, FMA), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Bahrain**: UBS is a Swiss bank not licensed, supervised or regulated in Bahrain by the Central Bank of Bahrain to undertake banking or investment business activities in Bahrain. Therefore, prospects/clients do not have any protection under local banking and investment services laws and regulations. **Brazil**: This report is only intended for Brazilian residents who are directly purchasing or selling securities in the Brazil capital market through a local authorized institution. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This report and any offering material such as term sheet, research report, other product or service documentation or any other information (the "Material") sent with this report was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the material erroneously, UBS asks that you kindly delete it and inform UBS immediately. This report is prepared by UBS Switzerland AG or its offshore subsidiary or affiliate (collectively as "UBS Offshore"). UBS Offshore is an entity incorporated out of China and is not licensed, supervised or regulated in China to carry out banking or securities business. The recipient should not contact the analysts or UBS Offshore which produced this report for advice as they are not licensed to provide securities investment advice in China. UBS Investment Bank (including Research) has its own wholly independent research and views which at times may vary from the views of UBS Global Wealth Management. The recipient should not use this document or otherwise rely on any of the information contained in this report in making investment decisions and UBS takes no responsibility in this regard. **Czech Republic**: UBS is not a licensed bank in the Czech Republic and thus is not allowed to provide regulated banking or investment services in the Czech Republic. This communication and/or material is distributed for marketing purposes and constitutes a "Commercial Message" under the laws of Czech Republic in relation to banking and/or investment services. Please notify UBS if you do not wish to receive any further correspondence. **Denmark**: This publication is not intended to constitute a public offer under Danish law. It is distributed only for information purposes to clients of UBS Europe SE, Denmark Branch, filial af UBS Europe SE, with place of business at Sankt Annae Plads 13, 1250 Copenhagen, Denmark, registered with the Danish Commerce and Companies Agency, under No. 38 17 24 33. UBS Europe SE, Denmark Branch, filial af UBS Europe SE is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Danish Financial Supervisory Authority (Finanstilsynet), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Egypt**: Securities or other investment products are not being offered or sold by UBS to the public in Egypt and they have not been and will not be registered with the Egyptian Financial Regulatory Authority (FRA). **France**: This publication is not intended to constitute a public offer under French law, it does not constitute a personal recommendation as it is distributed only for information purposes to clients of UBS (France) S.A., French "société anonyme" with share capital of € 132.975.556, at 69 boulevard Haussmann F-75008 Paris, registered with the "Registre du Commerce et des Sociétés" of Paris under N° B 421 255 670. UBS (France) S.A. is a provider of investment services duly authorized according to the terms of the "Code monétaire et financier", regulated by French banking and financial authorities as the "Autorité de contrôle prudentiel et de résolution" and "Autorité des marchés financiers", to which this publication has not been submitted for approval. **Germany**: This publication is not intended to constitute a public offer under German law. It is distributed only for information purposes to clients of UBS Europe SE, Germany, with place of business at Bockenheimer Landstrasse 2-4, 60306 Frankfurt am Main. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the European Central Bank ("ECB"), and supervised by the ECB, the German Central Bank (Deutsche Bundesbank) and the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), to which this publication has not been submitted for approval. **Hong Kong SAR**: This publication is distributed to clients of UBS AG Hong Kong Branch by UBS AG Hong Kong Branch, a licensed bank under the Hong Kong Banking Ordinance and a registered institution under the Securities and Futures Ordinance. UBS AG Hong Kong Branch is incorporated in Switzerland with limited liability. **India**: Distributed by UBS Securities India Private Ltd. UBS AG, its affiliates or subsidiaries may have debt holdings or positions in the subject Indian company/companies. UBS AG, its affiliates or subsidiaries may have financial interests (e.g. like loan/derivative products, rights to or interests in investments, etc.) in the subject Indian company/companies from time to time. Within the past 12 months, UBS AG, its affiliates or subsidiaries may have received compensation for non-investment banking securities-related services and/or non-securities services from the subject Indian company/companies. The subject company/companies may have been a client/clients of UBS AG, its affiliates or subsidiaries during the 12 months preceding the date of distribution of the research report with respect to investment banking and/or non-investment banking securities-related services and/or non-securities services. With regard to information on associates, please refer to the Annual Report at: https://www.ubs.com/global/en/about_ubs/investor_relations/annualreporting.html. **Indonesia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons

entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed without the consent of UBS. None of the Material has been registered or filed under the prevailing laws and with any financial or regulatory authority in your jurisdiction. The Material may not have been approved, disapproved or endorsed by or registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including futures contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Israel**: UBS is a premier global financial firm offering wealth management, asset management and investment banking services from its headquarters in Switzerland and its operations in over 50 countries worldwide to individual, corporate and institutional investors. In Israel, UBS Switzerland AG is registered as Foreign Dealer in cooperation with UBS Wealth Management Israel Ltd., a wholly owned UBS subsidiary. UBS Wealth Management Israel Ltd. is a Portfolio Manager licensee which engages also in Investment Marketing and is regulated by the Israel Securities Authority. This publication is intended for information only and is not intended as an offer to buy or solicitation of an offer. Furthermore, this publication is not intended as an investment advice. No action has been, or will be, taken in Israel that would permit an offering of the product(s) mentioned in this document or a distribution of this document to the public in Israel. In particular, this document has not been reviewed or approved by the Israeli Securities Authority. The product(s) mentioned in this document is/are being offered to a limited number of sophisticated investors who qualify as one of the investors listed in the first supplement to the Israeli Securities Law, 5728-1968. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Anyone who purchases the product(s) mentioned herein shall do so for its own benefit and for its own account and not with the aim or intention of distributing or offering the product(s) to other parties. Anyone who purchases the product(s) shall do so in accordance with its own understanding and discretion and after it has received any relevant financial, legal, business, tax or other advice or opinion required by it in connection with such purchase(s). The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. It is distributed only for information purposes to clients of UBS Europe SE, Succursale Italia, with place of business at Via del Vecchio Politecnico, 3-20121 Milano. UBS Europe SE, Succursale Italia is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Bank of Italy (Banca d'Italia) and the Italian Financial Markets Supervisory Authority (CONSOB - Commissione Nazionale per le Società e la Borsa), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Jersey**: UBS AG, Jersey Branch, is regulated and authorized by the Jersey Financial Services Commission for the conduct of banking, funds and investment business. Where services are provided from outside Jersey, they will not be covered by the Jersey regulatory regime. UBS AG, Jersey Branch is a branch of UBS AG a public company limited by shares, incorporated in Switzerland whose registered offices are at Aeschenvorstadt 1, CH-4051 Basel and Bahnhofstrasse 45, CH 8001 Zurich. UBS AG, Jersey Branch's principal place of business is 1, IFC Jersey, St Helier, Jersey, JE2 3BX. **Luxembourg**: This publication is not intended to constitute a public offer under Luxembourg law. It is distributed only for information purposes to clients of UBS Europe SE, Luxembourg Branch ("UBS LUX"), R.C.S. Luxembourg n° B209123, with registered office at 33A, Avenue J. F. Kennedy, L-1855 Luxembourg. UBS LUX is a branch of UBS Europe SE, a credit institution constituted under German law in the form of a Societas Europaea (HRB n° 107046), with registered office at Bockenheimer Landstrasse 2-4, D-60306 Frankfurt am Main, Germany, duly authorized by the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht – "BaFin") and subject to the joint prudential supervision of BaFin, the central bank of Germany (Deutsche Bundesbank) and the European Central Bank. UBS LUX is furthermore supervised by the Luxembourg prudential supervisory authority (Commission de Surveillance du Secteur Financier), in its role as host member state authority. This publication has not been submitted for approval to any public supervisory authority. **Malaysia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Mexico**: This information is distributed by UBS Asesores México, S.A. de C.V. ("UBS Asesores"), an affiliate of UBS Switzerland AG, incorporated as a non-independent investment advisor under the Mexican regulation due to the relation with a Foreign Bank. UBS Asesores is registered under number 30060-001-(14115)-21/06/2016 and subject to the supervision of the Mexican Banking and Securities Commission ("CNBV") exclusively regarding the rendering of (i) portfolio management services, (ii) securities investment advisory services, analysis and issuance of individual investment recommendations, and (iii) anti-money laundering and terrorism financing matters. This UBS publication or any material related thereto is addressed only to Sophisticated or Institutional Investors located in Mexico. Research reports only reflect the views of the analysts responsible for the report. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management of any entity of UBS Group to which such analyst(s) render services. **Nigeria**: The investment products mentioned in this material are not being offered or sold by UBS to the public in Nigeria and they have not been submitted for approval nor registered with the Securities and Exchange Commission of Nigeria. If you are interested in products of this nature, please let us know. The investment products mentioned in this material are not being directed to, and are not being made available for subscription by any persons within Nigeria other than the selected investors to whom the offer materials have been addressed as a private sale or domestic concern within the exemption and meaning of Section 69(2) of the Investments and Securities Act, 2007 (ISA). This material has been provided to you at your specific unsolicited request and for your information only. **Philippines:** This communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. **Portugal**: UBS Switzerland AG is not licensed to conduct banking and financial activities in Portugal nor is UBS Switzerland AG supervised by the portuguese regulators (Bank of Portugal "Banco de Portugal" and Portuguese Securities Exchange Commission "Comissão do Mercado de Valores Mobiliários"). **Qatar**: UBS Qatar LLC is authorized by the Qatar Financial Centre Regulatory Authority, with QFC no. 01169, and has its registered office at 14th Floor, Burj Alfardan Tower, Building 157, Street No. 301, Area No. 69, Al Majdami, Lusail, Qatar. UBS Qatar LLC neither offers any brokerage services nor executes any order with, for or on behalf of its clients. A client order will have to be placed with, and executed by, UBS Switzerland AG in Switzerland or an affiliate of UBS Switzerland AG, that is domiciled outside Qatar. It is in the sole discretion of UBS Switzerland AG in Switzerland or its affiliate to accept or reject an order and UBS Qatar LLC does not have authority to provide a confirmation in this respect. UBS Qatar LLC may however communicate payment orders and investment instructions to UBS Switzerland AG in Switzerland for receipt, acceptance and execution. UBS Qatar LLC is not authorized to act for and on behalf of UBS Switzerland AG or an affiliate of UBS Switzerland AG. This document and any attachments hereto are intended for eligible counterparties and business customers only. **Russia**: This document or information contained therein is for information purposes only and constitutes neither a public nor a private offering, is not an invitation to make offers, to sell, exchange or otherwise transfer any financial instruments in the Russian Federation to or for the benefit of any Russian person or entity and does not constitute an advertisement or offering of securities in the Russian Federation within the meaning of Russian securities laws. The information contained herein is not an "individual investment recommendation" as defined in Federal Law of 22 April 1996 No 39-FZ "On Securities Market" (as amended) and the financial instruments and operations specified herein may not be suitable for your investment profile or your investment goals or expectations. The determination of whether or not such financial instruments and operations are in your interests or are suitable for your investment goals, investment horizon or the acceptable risk level is your responsibility. We assume no liability for any losses connected with making any such operations or investing into any such financial instruments and we do not recommend to use such information as the only source of information for making an investment decision. **Saudi Arabia**: UBS Saudi Arabia is authorised and regulated by the Capital Market Authority to conduct securities business under licence number 08113-37. **Singapore**: Clients of UBS AG Singapore branch are asked to please contact UBS AG Singapore branch, an exempt financial adviser under

the Singapore Financial Advisers Act (Cap. 110) and a wholesale bank licensed under the Singapore Banking Act (Cap. 19) regulated by the Monetary Authority of Singapore, in respect of any matters arising from, or in connection with, the analysis or report. UBS AG is incorporated in Switzerland with limited liability. UBS AG has a branch registered in Singapore (UEN S98FC5560C). This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Spain**: This publication is not intended to constitute a public offer under Spanish law. It is distributed only for information purposes to clients of UBS Europe SE, Sucursal en España, with place of business at Calle María de Molina 4, C.P. 28006, Madrid. UBS Europe SE, Sucursal en España is subject to the joint supervision of the European Central Bank ("ECB"), the German Central bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Spanish supervisory authority (Banco de España), to which this publication has not been submitted for approval. Additionally it is authorized to provide investment services on securities and financial instruments, regarding which it is supervised by the Comisión Nacional del Mercado de Valores as well. UBS Europe SE, Sucursal en España is a branch of UBS Europe SE, a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Sweden**: This publication is not intended to constitute a public offer under Swedish law. It is distributed only for information purposes to clients of UBS Europe SE, Sweden Bankfilial, with place of business at Regeringsgatan 38, 11153 Stockholm, Sweden, registered with the Swedish Companies Registration Office under Reg. No 516406-1011. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Taiwan**: This material is provided by UBS AG, Taipei Branch in accordance with laws of Taiwan, in agreement with or at the request of clients/prospects. **Thailand**: This communication and any offering material, term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication were done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Turkey**: The information in this document is not provided for the purpose of offering, marketing or sale of any capital market instrument or service in the Republic of Turkey. Therefore, this document may not be considered as an offer made, or to be made, to residents of the Republic of Turkey in the Republic of Turkey. UBS Switzerland AG is not licensed by the Turkish Capital Market Board (the CMB) under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instrument/service may be utilized in connection with providing any capital market services to persons within the Republic of Turkey without the prior approval of the CMB. However, according to article 15 (d) (ii) of the Decree No. 32 residents of the Republic of Turkey are allowed to purchase or sell the financial instruments traded in financial markets outside of the Republic of Turkey. Further to this, pursuant to article 9 of the Communiqué on Principles Regarding Investment Services, Activities and Ancillary Services No. III-37.1, investment services provided abroad to residents of the Republic of Turkey based on their own initiative are not restricted. **United Arab Emirates (UAE)**: UBS is not a financial institution licensed in the UAE by the Central Bank of the UAE nor by the Emirates' Securities and Commodities Authority and does not undertake banking activities in the UAE. UBS AG Dubai Branch is licensed by the DFSA in the DIFC. This document is provided for your information only and does not constitute financial advice. **United Kingdom**: This document is issued by UBS Wealth Management, a division of UBS AG which is authorised and regulated by the Financial Market Supervisory Authority in Switzerland. In the United Kingdom, UBS AG is authorised by the Prudential Regulation Authority and is subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. Details about the extent of regulation by the Prudential Regulation Authority are available from us on request. A member of the London Stock Exchange. This publication is distributed to retail clients of UBS Wealth Management. **Ukraine**: UBS is not registered and licensed as a bank/financial institution under Ukrainian legislation and does not provide banking and other financial services in Ukraine. UBS has not made, and will not make, any offer of the mentioned products to the public in Ukraine. No action has been taken to authorize an offer of the mentioned products to the public in Ukraine and the distribution of this document shall not constitute financial services for the purposes of the Law of Ukraine "On Financial Services and State Regulation of Financial Services Markets" dated 12 July 2001. Any offer of the mentioned products shall not constitute an investment advice, public offer, circulation, transfer, safekeeping, holding or custody of securities in the territory of Ukraine. Accordingly, nothing in this document or any other document, information or communication related to the mentioned products shall be interpreted as containing an offer, a public offer or invitation to offer or to a public offer, or solicitation of securities in the territory of Ukraine or investment advice under Ukrainian law. Electronic communication must not be considered as an offer to enter into an electronic agreement or other electronic instrument within the meaning of the Law of Ukraine "On Electronic Commerce" dated 3 September 2015. This document is strictly for private use by its holder and may not be passed on to third parties or otherwise publicly distributed. **USA**:Distributed to US persons by UBS Financial Services Inc. or UBS Securities LLC, subsidiaries of UBS AG. UBS Switzerland AG, UBS Europe SE, UBS Bank, S.A., UBS Brasil Administradora de Valores Mobiliários Ltda., UBS Asesores México, S.A. de C.V., UBS SuMi TRUST Wealth Management Co., Ltd., UBS Wealth Management Israel Ltd. and UBS Menkul Degerler AS are affiliates of UBS AG. **UBS Financial Services Inc. accepts responsibility for the content of a report prepared by a non-US affiliate when it distributes reports to US persons. All transactions by a US person in the securities mentioned in this report should be effected through a US-registered broker dealer affiliated with UBS, and not through a non-US affiliate. The contents of this report have not been and will not be approved by any securities or investment authority in the United States or elsewhere. UBS Financial Services Inc. is not acting as a municipal advisor to any municipal entity or obligated person within the meaning of Section 15B of the Securities Exchange Act (the "Municipal Advisor Rule") and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of the Municipal Advisor Rule.**

Narrow The Focus After the Drawdown in Utilities; Price Target Updates

The UTY peaked on September 12 at 1,013.64, and since then has fallen 18.9% to closing levels on 10/17 of 822.65. This is versus the S&P 500 performance of (10.5)% over that same timeframe. We noted we believed valuations were at risk in an updated view of the sector Updated Valuation vs. Baa Corporate Bonds on September 26. Utility valuations relative to Baa Corporate Bond Yields have compressed from a peak of 24% overvalued on September 12, which is above 2 standard deviations to the mean, to ~17% overvalued, which is within 2 standard deviations to the mean. We believe overvalued conditions were maintained as the Fed raised rates from ~0% given the lack of an alternative for yield seeking capital. Further, utilities have been shown to outperform in rate hike cycles where the Fed does not hike more than ~300bps. However, with the yield curve inversion and 2-year bond yields ~4.5%, yield seeking capital has an alternative outlet. The Fed also seems poised to continue to raise interest rates beyond 300bp in total after September's CPI report. In this environment we believe there could still be near term pressure on valuations for the sector and would continue to recommend a narrow focus on secular growth or unique catalysts: CEG, NEE, and SRE, and an even greater focus on valuation and catalysts, where we like FE, PPL, and SO. Longer term the fundamentals of the sector remain positive on clean energy transition growth and relative predictability of earnings in 2023 and 2024 vis-à-vis the market generally in our view. Given the recent volatility in the sector we are updating our price targets to adjust for the lower average regulated utility multiple (detailed below).

Regulated Utilities

For regulated utilities we expect results on average to be 1.5% below consensus estimates. States with the best year on year weather were in New England and the Mid-Atlantic, with the least favorable weather in the South Atlantic and East North Central regions, although at -1% and -4% vs. 3Q 2021 we don't expect weather to be a significant drag on results anywhere. Louisiana was the least favorable weather state that impacted companies in our coverage universe, while Oklahoma had the most favorable weather for a non-decoupled utility. The largest projected beats versus consensus this quarter are EVRG, OGE, and PNW while the biggest projected misses are for CMS, DTE, EIX, ES, and XEL. Detailed drivers are discussed below.

Power

For power we expect that results will be in-line for CEG although down year on year to a clean 2Q '21 number that will be provided on the call. Drivers include inclusion of the CENG assets year on year, lower PJM capacity prices, non-recurrance of Winter Storm Uri cost saving initiative impacts from 2021, CMCs now in place in Illinois with set prices on those three nuclear units, and the shaping of retail contracts. We expect NRG and VST to both come in below current consensus estimates (NRG: $422 v. $625mln; VST: $965mln v. $1,289mln), although we expect consensus will move closer to our estimates by the time both companies report. We expect both companies to provide 2023 guidance ranges and an update for capital allocation going forward. Drivers for the lower expected results at NRG include continued coal supply constraints and Texas ancillary costs as well as the Parish Unit 8 outage. We expect 2023 guidance will be clean of most of these one-time 2022 impacts. For VST the lower than consensus results we expect are mainly driven by the timing of self-help benefits in 2021 post winter storm Uri that do not recur in 2022. We expect 2023E adjusted EBITDA guidance to be in the $2.3-$2.5Bln range for NRG and the $3.5-$3.7Bln range for VST.

This report has been prepared by UBS Securities LLC. **ANALYST CERTIFICATION AND REQUIRED DISCLOSURES, INCLUDING INFORMATION ON THE QUANTITATIVE RESEARCH REVIEW PUBLISHED BY UBS, BEGIN ON PAGE 53.** UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Regulated Utilities 3Q'22 Preview

Narrow Focus After the Utility Drawdown

The UTY peaked on September 12 at 1,013.64, and since then has fallen 18.9% to closing levels on 10/17 of 822.65. This is versus the S&P 500 performance of (10.5)% over that same timeframe. We noted we believed valuations were at risk in an updated view of sector valuation vs. Baa Corporate Bonds: Updated Valuation vs. Baa Corporate Bonds on September 26. Utility valuations relative to Baa Corporate Bond Yields have compressed from a peak of 24% overvalued on September 12, which is above 2 standard deviations to the mean, to ~17% overvalued, which is within 2 standard deviations to the mean.

Figure 5: Regulated Utility Dividend Yield vs. Moody's Baa Corporate Bond Yields

Source: FactSet, UBS Equity Research Estimates

Utilities have managed long periods above one standard deviation overvalued to corporate bond yields, however this was just the Fed rate cut cycle following the tech crash, and during and following the Fed rate cut cycle during the great financial crisis. The 2022 period has been an anomaly in that it has occurred during a Fed rate hike cycle. We believe overvalued conditions were maintainable as the Fed raised rates from ~0% given the lack of an alternative for yield seeking capital. Further, utilities have been shown to outperform in rate hike cycles where the Fed does not hike more than ~300bps. However, with the yield curve inversion and 2-year bond yields ~4.5%, yield seeking capital has an alternative outlet. The Fed also seems poised to continue to raise interest rates beyond 300bp in total after September's CPI report.

Relative performance of the DJU peaked at ~15% versus the market in August 2022, and has now come back in to a relative outperformance of ~10%. On September 12, DJU absolute performance during the current rate hike cycle peaked at +17%, and performance relative to the S&P 500 peaked on September 12 at +23%. We believe as the Fed hikes rates from the 300-325bp baseline relative performance is more likely to begin to move more in-line with that during Fed hike cycles where the Fed raises beyond these levels. However, given significantly positive long term fundamentals based on the growth from the clean energy transition, the group may not revert to the minus double digit underperformance that has occurred historically.

Figure 6: DJU vs. S&P 500 Performance During Fed Rate Hike Cycles

In this environment we believe there could still be near term pressure on valuations for the sector and would continue to recommend a narrow focus on secular growth or unique catalysts: CEG, NEE, and SRE, and an even greater focus on valuation and catalysts, where we like FE, PPL, and SO. Longer term the fundamentals of the sector remain positive on clean energy transition growth and relative predictability of earnings in 2023 and 2024 visa vie the market generally in our view.

Price Target Updates

As a result of the significant valuation compression of the utility sector overall discussed above we are updating several price targets in our coverage universe. We are adjusting our valuations for an update of the average regulated utility multiple as displayed in the table below. Full valuation methodologies and updated upside and downside methodologies are provided in a section at the back of the note after the discussion of earnings drivers for the quarter.

Figure 7: Price Target Updates for Change in Regulated Utility '24 P/E Multiple

Valuation Methodology

Our valuation methodology for the group is price-to-earnings based. The adjustments applied fall into 7 categories. These are as follows: 1) Group Valuation Bias: Flowing from our valuation work comparing Baa corporate yields to group dividend yields and RU price to earnings ratios to those for the S&P 500, we incorporate a positive or negative adjustment to our group multiple representing the gap we calculate to the nearest 5%; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%; 4) Clean Energy Transition: A potential 5% premium for a risk adjusted clean energy transition growth opportunity; 5) Earnings Consistency Adjustment: For companies that fall in the top quartile of % Time Beat/ Meet, we include +4%; 6) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% of unregulated earnings), we perform a sum-of-the-parts analysis applying business/region appropriate valuations to those diversified businesses; 7) One-off Adjustments: In special situations, we value risk on an issue-specific basis. Common areas where we apply such an adjustment include: large project construction risk, legal risk, and announced M&A completion risk. We identify the following risk factors: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.

In the context of our valuation update for the group we adjusted our 4% premium for EPS guidance reliability to the top third of performers on that metric rather than the top half, which we viewed as too inclusive. This lowered the valuation premium by 4% in the new valuation methodology versus the prior valuation methodology for CMS, LNT, NEE, and NI. We also lowered the wildfire discount for PCG to (25%) from (30%) given improved wildfire mitigation efforts.

Key Calls this Quarter

We expect that several companies will update 2022 guidance and will likely point to the high end of the range or raise 2022 guidance after 3Q results. We anticipate this premised on a significant number of companies being above their half year run rates to guidance at 2Q and having a normal to better than normal weather quarter in 3Q. To some extent companies might pull forward O&M where they can to manage their 2023 growth rates.We expect several companies to issue 2023 guidance on the quarterly calls in line with their usual timing. These include LNT, AEP, CNP, EMA, FE, NI, PNW, PEG, WEC, and XEL. Of these, 2023 guidance for FE may be delayed given the management transition and the pension mark to market on 12/31; PNW might be delayed given the ongoing Arizona rate case, and WEC will likely be delayed until the ROE is determined in the Wisconsin rate case process in mid-December.

Alliant Energy. The company typically rolls forward cap-ex and EPS guidance. We also expect guidance on the potential inclusion of $1.3 billion of tax-equity in ratebase as noted in their slide deck.

CenterPoint Energy. The company is scheduled to give a comprehensive update on its capital plan, with the focal point for incremental capex opportunities being the Houston regional master energy plan. Currently, the five year capex plan calls for $19.3bn, while the 10-year plan is $40Bn+. This capital plan supports mid-to high end earnings growth of 6-8% annually through 2030. We believe the forthcoming update will strengthen and lengthen the EPS CAGR.

CMS Energy. With the third quarter report CMS typically rolls forward the EPS guidance from the midpoint of the current year, which is $2.87, which would imply $3.07 at the midpoint of 6% to 8% EPS growth guidance. The company is entering the later stages of the electric case after testimony, although settlement is possible. Electric GRC Proceeding on Track We also expect an update on the integrated resource plan implementation, equity needs and the Michigan storm audit and investment opportunity. Michigan PSC Orders Audit of DTE and CMS.

Dominion Energy. On the call investors will likely be focused on any updates on the pending re-hearing proceeding on the offshore wind project in Virginia. The company has filed for reconsideration on a performance guarantee that was included in the State Corporation Commission's final order in August. Dominion is seeking to have the language modified in order to be able to proceed with the project. Additional topics will likely be updates on the transmission constraint issue highlighted last call as well as managing through a higher interest rate and inflationary backdrop.

Duke Energy. We expect the company will provide 2023 earnings drivers which will be a focal point on the call. Investor concern has centered around the 2023 guidance and whether the current 5-7% EPS growth rate will be reset off a potentially lower base given the upfront dilution we expect from the sale of the Commercial Renewables business. Longer term, Duke added $10bn to its capex guidance at its ESG day earlier this month and outlined 7% rate base growth over the next decade. Duke recently filed rates cases in North Carolina and South Carolina seeking double digit rate increases. We expect customer bill pressure to be a topic of conversation as well.

FirstEnergy. We expect updates on the external CEO search and the transmission and distribution minority stake sale which are expected to take 3-6 months or late 2022/early 2023. We could also get an update on the Signal Peak hedging which prices off Newcastle coal.

Fortis Inc. We expect Fortis will release their updated five year capital plan in conjunction with their third quarter earnings release. The current capital plan is for C $20Bln for 2022-2026 which leads to ~6% rate base growth from 2021 levels of C $31.1Bln to C$41.6Bln by 2026. The updated capital plan will be from 2023-2027, and will at the least drop the C$3.9Bln 2022 year and add a ~C$4.4Bln year in 2027 as well as potentially increasing capex in '24+, approximating a C$21-C$22Bln plan, although we don't anticipate that the update will significantly alter the long term rate base growth projection of ~6%/year over the forecast period.

NiSource. The Analyst Day on November 7 should reveal the outcome of the company's strategic review. The outcomes may range from the status quo to selling LDC assets; we believe a sale of the company is a low probability. We also expect management to provide a full update of the earnings and rate base growth outlook and the capital expenditure and financing plans. The current plan calls for 7-9% EPS growth from '21-'24. We expect the new plan will roll out an earnings growth rate through at least 2026.

WEC Energy Group. We expect WEC to release an updated five year capital plan for '23-'27 in conjunction with their earnings release for the quarter. As a reminder the current capital plan of $17.7Bln results in 7% long term rate base growth to a '26 forecast of $35Bln and long term EPS growth of 6%-7% per year. WEC will also will likely provide long term rate base growth and earnings growth guidance. We, however, don't expect 2023 earnings per share and dividend guidance until after the ROE is determined in the Wisconsin rate case process, which is expected by mid-December.

Xcel Energy. We expect a roll-forward of earnings guidance to 2023, a regulatory update following the NSP Minnesota gas rate case settlement, and an update on the Inflation Reduction Act implications. A roll-forward of the company's 5% to 7% EPS growth rate would result in $3.34 in 2023, which is in line with our forecast. We view it as a net positive for the company. The extension of the production tax credit provides wind repowering opportunities.

Edison Electric Conference Preview

Consolidated Edison. The company deferred an update on guidance when they announced the sale of the Clean Energy Business. Release of 3Q results and the Edison Electric conference provide opportunities for more guidance on the use of the $4 billion of net proceeds. We looked at 4 possible scenarios and the one most potentially accretive to EPS was a 2 year redeployment of the money in $1.4 billion of stock buybacks, a $2.4 billion increase in CECONY cap-ex and the avoidance of equity for 2 years. This includes repayment of $850 million of short-term debt in lieu of equity. We calculated that would be $0.06/share accretive in 2024E. Clean Energy Business Sale Announced

DTE Energy. Following the third quarter report the company will likely file its integrated resource plan, give 2023 EPS guidance and provide 5 year cap-ex guidance from 2023-2027. The integrated resource plan could include a Belle River plant conversion from coal to gas, acceleration of the Monroe coal plant retirement and an update on MIGreen Power. We also expect more detail on DTE Vantage including renewable natural gas and the steel coking business.

Entergy. The company updated the longer term financial outlook this past June at its analyst day, but plans to give a refresh on the three year capital plan and Inflation Reduction Act impacts at EEI.

Essential Utilities. The company is working to complete the PA PUC approval process for the DELCORA wastewater purchase. A closing or clarity on the transaction would likely lead to a guidance update and financing plan. The transaction is considered in the company's 5% to 7% EPS growth rate although all of the details of the $277 million transaction are not yet clear. DELCORA has had a rate case in the last few years. We calculate the transaction is neutral to WTRG if financed with 50% equity and 50% debt.

Rate Cases

Quarterly Earnings Estimate Details

Electric Utilities

AES Corp.

We expect AES will report 3Q'22E EPS of $0.52 versus the $0.52 consensus and $0.50 last year. The AES Andes ownership increased to 99% from 67%, which we estimate adds $0.015. Other drivers include -$0.03/share for interest expense which relates to $2 billion of increased debt. In general AES's earnings are weighted to the second half of the year. Increased renewable PPAs also adds to earnings and AES expects to sign 4,500-5,500 MW of PPAs this year following 5,000 MW last year. AES plans to provide 2023 EPS guidance when they report full year 2022 earnings.

Figure 12: AES 3Q'22E Earnings Drivers

Q3'21	$0.50
AES Andes 99% vs. 67% ownership	$0.02
PPAs	$0.04
LNG	$0.05
AES Next	-$0.02
Interest Expense	-$0.03

Other	$0.01
Q3'22 Estimate	$0.52

Source: Company Reports, UBS Estimates

Alliant Energy

We expect LNT will report 3Q'22E EPS of $1.04 versus the $1.02 consensus and $1.02 last year. The impact of weather year over year should be negligible. The company did experience a 1c tax timing benefit last year that is not expected to repeat. Year-over-year comparables for weather normal sales growth will get tougher in the second half of 2022 as compared to the first half, but we expect +2c this quarter. Currently, there is 200 MWs of solar in-service out of the estimated 325 MWs for 2022. The remaining 125 MWs expected to come in-service in Q4'22. AFUDC has been 2 cents per quarter and is expected to continue in Q3, tailing off in Q4 as units are put in-service. Similarly , the D&A was 1 cent drag per quarter and is expected to be the same case for Q3'22, ticking up in Q4 when assets come online. We expect +2c of incremental interest expense in the quarter.

On the call, we believe Alliant will update and likely raise the midpoint of 2022 guidance based on earlier comments about tracking to the upper-half of the $2.67-$2.81 EPS range. We believe the company will also introduce 2023 guidance which will include EPS, capex and financing. We expect the company to affirm its 5-7% EPS CAGR. A few considerations for 2023 guidance include higher debt and equity needs as the company pivots from previous plans to issue $600mm of tax equity to what we expect will be replaced with $350mm and $250mm of additional debt and equity, respectively. Pension costs may present a modest headwind for 2023, as IPL does not have a tracker for this expense, but does capitalize about 40% of the cost.

Source: Company Reports, UBS Estimates

Ameren Corp.

We expect AEE will report 3Q'22E EPS of $1.75 versus the $1.73 consensus and $1.65 last year. Higher rates in Missouri are the biggest driver year-over-year at +9c. The net effect of weather is +1c, while O&M was -3c based on our estimates. Rate base growth in Illinois and at Ameren Transmission are expected to add 8c in our estimation, which is an incremental benefit from higher 30 year Treasury rates (3.6% versus 2.1%) impacting the formula ROE at Ameren Illinois Electric Distribution. Higher corp and interest expense are estimated to be -6c .

On the call we expect the company to provide high level drivers for 2023 earnings. We also expect updates on Rush Island, where we expect the company will securitize Rush Island's remaining book value with the approval from the Missouri Public Service Commission. Ameren Missouri recently filed a general rate case on 8/1 and we expect that to be topic of discussion. Management should also address the impact of Illinois Commerce Commission's recent approval of six performance metrics on which a potential total of 24 bps ROE incentive could be achieved. AEE could file for a multi-year rate plan January 20, 2023.

American Electric Power

We expect AEP will report 3Q'22E EPS of $1.60 versus the $1.54 consensus and $1.43 last year. Weather appears to add a net 4c after with modestly more favorable weather

this year vs. last year. The quarter benefitted from rate cases and load growth at the Vertically Integrated Utilities. D&A and higher interest costs will be headwinds. The investment loss of -3c from last year should reverse and be modestly higher this quarter.

The company hosted an analyst day earlier this month so we expect new disclosures to be limited on the call. Questions will likely center around the progress on sales process for the contracted renewables assets, the search for a new CFO and load data in their service territories.

Figure 15: AEP Q3'22E Earnings Drivers

Q3'21	**$ 1.43**

Corp & Other	$0.06
Q3'22 Estimate	**$ 1.60**

Source: Company Reports, UBS Estimates

CMS Energy

We expect CMS will report 3Q'22E EPS of $0.52 versus the $0.68 consensus and $0.54 last year. With the third quarter report CMS typically rolls forward the EPS guidance from the midpoint of the current year which is $2.87, which would imply $3.07 at the midpoint of 6% to 8% EPS growth guidance.

Adjusting from last year's result we add back $0.16/share of storm impact and subtract -$0.09/share of above normal weather. The gas rate case took effect on October 1 so that would add about $0.12/share to 4Q'22. We also factor in some positive weather that was offset by late August storm impact.

Storms	$0.13
O&M and Reinvestment	-$0.03
Depreciation and other costs	-$0.07
Q3'22 Estimate	$0.52

Source: Company Reports, UBS Estimates

CenterPoint Energy

We forecast CenterPoint Energy will report 3Q '22E EPS of $0.31 versus $0.33 consensus and $0.25 in 3Q '21 for Utility & Corp only. Drivers for the quarter will likely be slight benefits from electric customer growth and TCOS rate recovery. As a reminder, the DCOS filing in Texas will impact mostly if not entirely the 4Q '22. There will be a modest benefit from weather and usage as cooling degree days were favorable year on year. We expect CNP will pull forward some future period O&M in the quarter and thus will be a modest headwind. The now dispossessed Arkansas and Oklahoma LDCs add 3c this quarter as they were a drag in 3Q'21. The company absorbed a 1x governance cost change last year that will not repeat, but we estimate the company will take a 3c hit for disallowance of $35mm of gas costs in MN related to last winter's weather event. CNP took a reserve in Q1 but did not disclose the amount and we expect them to book the difference in the reserve and actual amount this quarter following the MN regulator's decision.

On the call the company is scheduled to give a comprehensive update on its capital plan, with the focal point for incremental capex opportunities being the Houston regional master energy plan. Currently, the five year capex plan calls for $19.3bn, while the 10-year plan is $40Bn+. This capital plan supports mid-to high end earnings growth of 6-8% annually through 2030. We believe the forthcoming update will strengthen and lengthen the EPS CAGR.

Source: Company Reports, UBS Estimates

Consolidated Edison

We estimate ED will report 3Q'22E EPS of $1.48 versus the $1.47 consensus and $1.41 last year. We assume that the biggest variances are the absence of uncollectibles and write-offs at CECONY and rate base growth. We also assume this is somewhat offset by inflation and higher non-fuel operations and maintenance expenses. ED announced the sale of the Clean Energy Business after close of third quarter results so we include that. Overall, we expect a more routine and improved result for ED.

Figure 18: ED 3Q'22E Earnings Drivers

Q3'21	$1.41
Higher Electric Rate Base	$0.02
Absence Uncollectibles and write-offs at CECONY	$0.05

Healthcare	$0.01
Clean Energy Business $0.18 versus $0.18	$0.00
Con Edison Transmission $0.01 versus $0.00	$0.01
Q3'22 Estimate	$1.48

Source: Company Reports, UBS Estimates

Dominion Energy

We expect Dominion to report Q3'22E of $1.08 versus $1.12 consensus, a guidance mid-point of $1.05, and 2Q'21 results of $1.11. For the results for the quarter we expect positive drivers to be rate base and rider investment returns year over year, sales growth and modestly favorable weather. Offsetting these drivers are higher interest expense, timing related to taxes and share dilution.

On the call investors will likely be focused on any updates on the pending re-hearing proceeding on the offshore wind project in Virginia. The company has filed for reconsideration on a performance guarantee that was included in the State Corporation Commission's final order in August. Dominion is seeking to have the language modified in order to be able to proceed with the project. Additional topics will likely be updates on the transmission constraint issue highlighted last call as well as managing through a higher interest rate and inflationary backdrop.

Guidance	$0.98-$1.13	

Source: Company Reports, FactSet, UBS Estimates

DTE Energy

We expect DTE will report $1.47 in 3Q'22E versus the $1.66 consensus and $1.72 last year. DTE Electric should report slightly higher EPS due to a return to slightly above normal weather and lower corporate and other expenses based on full-year guidance. Our estimates for the remaining segments reflect a one-half impact after backing out 1H'22 results from full year guidance. Versus 3Q'21 this results in an EPS reduction for DTE Vantage and DTE Energy Trading and upside at Corporate and Other.

The company plans to file the next integrated resource plan in November after reporting third quarter earnings. We think the company will also provide an update on the 5 year plan.

Figure 20: DTE 3Q'22E Earnings Drivers

Q3'21	$1.72
DTE Electric weather to normal	-$0.08
DTE Electric weather	$0.10

DTE Gas O&M	-$0.03
DTE Vantage ($0.13 versus $0.38)	-$0.25
DTE Energy Trading (-$0.07 versus $0.07)	-$0.14
Corp & Other (-$0.15 versus -$0.33)	$0.19
Q2'22 Estimate	$1.47

Source: Company Reports, UBS Estimates

Duke Energy

We expect Duke Energy to report $1.87 in 3Q'22E vs. $1.87 consensus estimate and $1.88 last year. The positive drivers include higher sales volumes, higher rider and rate revenues, AFDUC and net positive weather. These are offset by higher D&A, interest expense, and O&M. Additionally, the minority sale to GIC and lower Commercial Renewables contribution are headwinds year-over-year.

We expect the company will provide 2023 earnings drivers that will be a focal point on the call. Investor concern has centered around the 2023 guidance and whether the current 5-7% EPS growth rate will be reset off a potentially lower base given the upfront dilution we expect from the sale of the Commercial Renewables business. Longer term, Duke added $10bn to its capex guidance at its ESG day earlier this month and outlined

7% rate base growth over the next decade. Duke has recently filed rates cases in North Carolina and South Carolina seeking double digit rate increases. We expect customer bill pressure to be a topic of conversation as well.

Edison International

We expect EIX will report 3Q'22E EPS of $1.35 versus the $1.71 consensus and $1.69 last year. Last year's quarter included a $0.35/share true-up for the electric rate case that will not recur. We expect $0.18/share of revenue for the remaining quarters of 2022 for the rate case. We also expect $0.03/share of growth from FERC transmission. Other drivers are regular and include depreciation, property taxes, financing and preferred dividends.

Emera Inc

We are expecting Emera Inc. to report 3Q '22E earnings of C$0.74 versus C$0.75 consensus estimates and 3Q'21 results of C$0.68. Drivers in the quarter will likely be the electric rate case with new rates effective for Tampa Electric on 1/1/22, slightly warmer weather year over year, and higher earnings at marketing & trading on natural

gas volatility. Offsetting these positive drivers will be share dilution related to the DRIP and ATM issuance program, lower results at other utilities given continuing recovery in the Caribbean and regulatory lag in Nova Scotia, a slight positive from FX, and slightly higher corporate expense on higher floating rate debt costs.

On the call we expect investors will be focused on management's perspective on the ongoing Nova Scotia rate case, and any developments around the Eastern Canada clean energy initiative, the potential for renewable incentives and tax credits from the Canadian Federal government, and the prospects and timing for another transmission line to mainland Canada for the import of hydroelectric power.

Entergy Corp

We expect ETR will report 3Q'22E EPS of $2.69 versus the $2.67 consensus and $2.49 last year. Adjustments to normalize last year's result total $0.04/share to reflect absence of favorable weather. We assume weather had a mildly favorable impact on this year's result. Overall, we estimate that rate actions versus last year added $0.19/share. For other drivers, the impact of Hurricane Ida last year was a ~$0.25/shr impact to revenue and that should rebound, plus weather normal sales growth. Higher O&M reflects more wear and tear on the fleet from higher sales volumes plus support for customers.

The company is in the process of making grid resiliency filings in Louisiana, Texas and New Orleans. We expect updates on that on the investor call and on the Texas rate case, plus an update on potential for additional SERI litigation settlements.
