IV. PECO ELECTRIC DIVISION DEPRECIATION CLAIMS	6
V. CONCLUSION.....	11

**DIRECT TESTIMONY
OF
CAROLINE FULGINITI**

I. INTRODUCTION AND PURPOSE OF TESTIMONY

1. Q. Please state your name and business address.

A. My name is Caroline Fulginiti. My business address is PECO Energy Company, 2301 Market Street, Philadelphia, Pennsylvania 19103.

2. Q. By whom are you employed and in what capacity?

A. I am employed by Exelon as Vice President and Assistant Controller. In that capacity, I am responsible for maintaining PECO Energy Company's ("PECO's" or the "Company's") accounting books and records under United States Generally Accepted Accounting Principles ("GAAP") and the Federal Energy Regulatory Commission's ("FERC") *Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of the Federal Power Act* ("Uniform System of Accounts"). In addition, I am responsible for PECO's financial reporting to the U.S. Securities and Exchange Commission ("SEC"), the FERC, and the Pennsylvania Public Utility Commission ("PUC" or "Commission").

3. Q. Please describe your educational background.

A. I received a Bachelor of Business Administration from James Madison University and a Master of Professional Accountancy from Indiana University.

4. Q. Please describe your professional experience.

A. Upon graduation, I was hired as an audit associate for PricewaterhouseCoopers,

1 LLP in Chicago. After seven years at PricewaterhouseCoopers, I began
2 employment with Exelon Corporation in 2007. I held various roles at Exelon,
3 including Manager of Accounting Policy & Research, Manager of Power Team
4 Accounting, and Manager of PECO Accounting prior to being promoted to
5 Director of Property Accounting and Project Controls in 2014. In 2016, I became
6 Director of Financial Operations for PECO, overseeing the Company's capital
7 and operations and maintenance budgeting process. In January 2020, I became
8 Director of Accounting at PECO. I assumed my current responsibilities as Vice
9 President and Assistant Controller for Exelon in February 2024.

10 **5. Q. What is the purpose of your testimony?**

11 A. I will provide a general overview of PECO's accounting processes. I will then
12 describe how PECO allocates common costs between its electric and natural gas
13 operations. Finally, I will present and explain PECO's claims for accrued and
14 annual depreciation related to the utility plant in service of PECO's Electric
15 Division as of the end of the historic test year (December 31, 2023) ("HTY"),
16 future test year (December 31, 2024) ("FTY"), and the fully projected future test
17 year (December 31, 2025) ("FPFTY").

18 **6. Q. Please identify the exhibits you are sponsoring.**

19 A. I am sponsoring PECO Exhibits CF-1, CF-2, and CF-3, which include,
20 respectively, the results of the depreciation studies related to the original cost of
21 PECO's electric and common plant in service at December 31, 2023, and
22 estimated to be in service at December 31, 2024 and December 31, 2025. I am
23 also sponsoring PECO Exhibit CF-4, which is a service-life study performed by

Gannett Fleming, Inc. (“Gannet Fleming”) based upon plant balances at December 31, 2018.

II. OVERVIEW OF PECO’S ACCOUNTING PROCESSES

7. Q. How are PECO’s accounting records maintained?

A. The Company’s accounting records are kept in accordance with GAAP and FERC’s Uniform System of Accounts, as required by the PUC’s regulations at 52 Pa. Code § 57.42(a). In addition, PECO maintains a continuing property records system in accordance with PUC and FERC requirements.

8. Q. Do PECO’s continuing property records accurately reflect the original cost of the property in question?

A. Yes, they do. A determination of the original cost of PECO’s electric plant was made in the 1940s with the approval of the PUC. Subsequent plant additions, retirements, and adjustments have been recorded on an original cost basis in accordance with GAAP, the PUC’s regulations, and the Uniform System of Accounts.

10. Q. Are PECO’s books and records audited?

A. Yes, PECO’s books and records are audited. Exelon Corporation maintains Exelon Audit Services (“EAS”), which routinely audits various aspects of PECO’s operations. In addition, PECO’s books and records are audited annually by its outside auditors.

In 2022, the PUC completed a Management and Operations Audit of PECO that

1 included a review of the Company's internal audit process.¹ The PUC's review of
2 the internal audit process resulted in no recommendations.

3 **11. Q. How can you be sure that all property reflected in PECO's plant accounts is,**
4 **in fact, used and useful?**

5 A. As explained in the testimony of Company witness Nicole L. LeVine in PECO
6 Statement No. 1, the assets included in PECO's rate base in this case are, or by
7 the end of the FTY and the FPFTY will be, in service and used by PECO to
8 provide electric service to its customers. Moreover, PECO has a process in place
9 requiring that: (1) a record be made in the field at the time any property unit is
10 added to service or permanently removed from service; and (2) based on the
11 records made in the field, appropriate accounting entries be made to the
12 Company's property accounts to add or remove, respectively, the original cost of
13 any property unit that was added or retired. Individuals with appropriate authority
14 must review and approve the entries that are made to record the addition and
15 removal of property units from the Company's plant accounts. Additionally, EAS
16 performed an audit of the controls surrounding PECO's fixed asset process in
17 2015, which included review of fixed asset accounting records. EAS concluded
18 that the processes and general control environment – which includes those
19 activities necessary to provide reasonable assurance that risks are being managed
20 and objectives met – are effective.

¹ See Management and Operations Audit of PECO Energy Company, Docket No. D-2021-3023906 (Issued July 2022).

1 **III. ALLOCATION OF COSTS BETWEEN**
2 **ELECTRIC AND GAS OPERATIONS**

3 **12. Q. Does PECO maintain separate books and records for its electric and natural**
4 **gas operations?**

5 A. Yes. Under applicable PUC and FERC regulations, PECO is required to
6 maintain, separately, certain income statement accounts and to maintain,
7 separately, certain balance sheet accounts for its electric and natural gas
8 operations.

9 **13. Q. How does the Company allocate “common plant” assets between its two**
10 **divisions?**

11 A. “Common plant” assets (i.e., facilities, such as PECO’s headquarters office
12 building in Philadelphia, that are used to provide both electric and gas service) are
13 allocated on the basis of a three-part formula, with equal weight given to relative
14 plant investment, total revenue, and number of customers. The allocation factors
15 utilized for purposes of this rate filing are set forth in the applicable schedules of
16 PECO Exhibits MJT-1, MJT-2, and MJT-3.

17 **14. Q. Are operating expenses handled in the same fashion?**

18 A. No, a different method is used to allocate operating expenses. The Company
19 develops factors to allocate between electric and gas operations those operating
20 expenses that are not directly assigned. PECO reviews these factors annually and
21 updates them as necessary to reflect the forces driving the costs to which they
22 apply.

1 **15. Q. Please explain the method used to allocate non-assignable Administrative**
2 **and General (“A&G”) expense.**

3 A. Expenses in this category consist of the labor and other resources of the
4 Company’s A&G departments, such as Finance, Marketing, and Accounting, that
5 provide service to both the electric and gas divisions. Non-assignable expenses in
6 these areas are allocated to electric operations based upon a percentage calculated
7 by dividing: (1) the previous year’s Operating & Maintenance (“O&M”)
8 expenses that were directly assigned to electric operations, by (2) the total of all
9 the previous year’s O&M expenses that were directly assigned to electric and gas
10 operations.

11 **16. Q. Please explain the method used to allocate non-assignable bad debt expense.**

12 A. Bad debt expense associated with customer accounts receivable is allocated to
13 electric operations based on the historical ratio of accounts receivable charged off.
14 Although bad debt expense is allocated for accounting purposes, uncollectible
15 accounts expense included in PECO’s revenue requirement for ratemaking
16 purposes is calculated based on the net uncollectible accounts charged off,
17 expressed as a percentage of total tariff revenue, as explained by Company
18 witness Michael J. Trzaska in PECO Statement No. 3.

19 **IV. PECO ELECTRIC DIVISION DEPRECIATION CLAIMS**

20 **17. Q. Has a service-life study of PECO’s electric utility plant in service been**
21 **performed?**

22 A. Yes. With the assistance of Gannett Fleming, a service-life study was performed
23 based on PECO’s plant balances at December 31, 2018, which is provided as

1 PECO Exhibit CF-4. The study was filed with the PUC in April 2020 at Docket
2 No. M-2020-3020569. Prior to the Company's 2018 service-life study, a service-
3 life study was performed in 2014 based on PECO's plant balances at December
4 31, 2013.

5 **18. Q. Have you prepared exhibits presenting the results of PECO's depreciation**
6 **studies?**

7 A. Yes. PECO Exhibits CF-1, CF-2, and CF-3 reflect PECO's electric and common
8 plant in service as of December 31, 2023, 2024, and 2025 respectively. Exhibits
9 CF-1, CF-2, and CF-3 rely upon the service lives and depreciation rates developed
10 in the Company's 2018 service-life study.

11 **19. Q. What is the purpose of the depreciation study?**

12 A. PECO is relying principally on data for a FPFTY ending December 31, 2025 to
13 support its proposed increase in revenue requirement in this case. Accordingly,
14 the purpose of the depreciation study is to provide the basis to calculate the
15 estimated 2025 annual depreciation accruals related to plant in service for
16 ratemaking purposes and, using procedures approved by the PUC, to estimate
17 PECO's book reserve at December 31, 2025.

18 PECO uses the remaining-life method of depreciation, which calculates
19 depreciation accruals designed to recover the original cost less accrued
20 depreciation of utility plant over the estimated remaining life of that plant, by
21 depreciable group.

1 **20. Q. Please describe PECO Exhibits CF-1, CF-2, and CF-3.**

2 A. PECO Exhibit CF-1 is titled “Annual Depreciation Accruals Related to Utility
3 Plant in Service for 2023.” This exhibit includes the results of the depreciation
4 study related to the original cost of PECO’s plant in service at December 31,
5 2023. The exhibit also includes the detailed depreciation calculations used to
6 determine 2024 depreciation rates, which are used in calculating the estimated
7 2024 Annual Depreciation Accruals shown in PECO Exhibit CF-2.

8 PECO Exhibit CF-2 is titled “Estimated Annual Depreciation Accruals Related to
9 Utility Plant in Service for 2024.” This exhibit includes the results of the
10 depreciation study related to the estimated original cost of PECO’s plant in
11 service at December 31, 2024. PECO Exhibit CF-2 includes PECO’s FTY plant
12 additions for electric and allocated common plant assets claimed in rate base in
13 this case and reflects the depreciation accruals related to those additions in the
14 column titled “2024 Estimated Annual Depreciation Accrual.”

15 PECO Exhibit CF-3 is titled “Estimated Annual Depreciation Accruals Related to
16 Utility Plant in Service for 2025.” This exhibit includes the results of the
17 depreciation study related to the estimated original cost of PECO’s plant in
18 service at December 31, 2025. PECO Exhibit CF-3 includes PECO's FPFTY
19 plant additions for electric and allocated common plant assets claimed in rate base
20 in this case and reflects the depreciation accruals related to those additions in the
21 column titled “2025 Estimated Annual Depreciation Accrual.”

1 **21. Q. Has the Commission previously approved PECO’s use of the remaining-life**
2 **method of depreciation?**

3 A. Yes. In 1984, the Commission approved PECO’s use of the remaining-life
4 method in PECO’s rate proceeding at Docket No. R-842590, and also approved
5 PECO’s adjusted book reserve as the measure of accrued depreciation for
6 ratemaking. PECO has employed the remaining-life method in each of the
7 Annual Depreciation Reports filed with the Commission since it adopted the
8 remaining-life method.

9 **22. Q. How was the accumulated depreciation recorded in the Company’s book**
10 **reserve (“accumulated depreciation”) used in the calculation of annual**
11 **depreciation?**

12 A. The accumulated depreciation, by account, at December 31, 2023, is one of the
13 factors used in calculating the annual depreciation accruals. The methodology
14 used to calculate the annual depreciation accrual is consistent with the
15 methodology described in the 2018 Depreciation Study (PECO Exhibit CF-4).

16 **23. Q. How was the estimated accumulated depreciation at December 31, 2024**
17 **determined?**

18 A. As shown in PECO Exhibit CF-2, the December 31, 2024 estimated accumulated
19 depreciation was developed by: (1) adding the 2024 estimated annual depreciation
20 accruals to the actual accumulated depreciation by account as of January 1, 2024;
21 (2) subtracting the estimated 2024 plant retirements by account; and (3) adding
22 2024 estimated salvage and subtracting estimated removal costs that are closed to
23 the book reserve, by account. The 2024 annual depreciation accruals are

1 estimated by adding the following three items: (1) the estimated net book value of
2 depreciable plant by account as of December 31, 2023, multiplied by the
3 depreciation rates shown in PECO Exhibit CF-2; (2) the 2024 estimated plant
4 additions multiplied by the depreciation rate (using a half-year convention) for the
5 appropriate accounts; and (3) the 2024 estimated salvage or cost of removal
6 multiplied by the depreciation rate (using a half-year convention) for the
7 appropriate account.

8 **24. Q. How was the estimated accumulated depreciation at December 31, 2025**
9 **determined?**

10 A. As shown in PECO Exhibit CF-3, the December 31, 2025 estimated accumulated
11 depreciation was developed by: (1) adding the 2025 estimated annual depreciation
12 accruals to the estimated accumulated depreciation by account as of January 1,
13 2025; (2) subtracting the 2025 estimated plant retirements by account; and (3)
14 adding 2025 estimated salvage and subtracting estimated removal costs that are
15 closed to the book reserve, by account. The 2025 annual depreciation accruals are
16 estimated by adding the following three items: (1) the estimated net book value
17 balance of depreciable plant by account as of December 31, 2024, multiplied by
18 the depreciation rates shown in PECO Exhibit CF-3; (2) the 2025 estimated plant
19 additions multiplied by the depreciation rate (using a half-year convention) for the
20 appropriate account; and (3) the 2025 estimated salvage or cost of removal
21 multiplied by the depreciation rate (using a half-year convention) for the
22 appropriate account.

25. Q. Have you prepared schedules that summarize the development of the original cost of gross plant, estimated accumulated depreciation, estimated net book value of depreciable plant, and estimated annual depreciation accruals, by property account, for utility plant in service at December 31, 2025?

A. Yes. PECO Exhibit CF-3 provides this information. The original cost of gross plant in service at December 31, 2025 was calculated by adding the estimated plant additions by account for 2025 to, and subtracting the estimated plant retirements for 2025 from, the estimated original cost of gross plant as of December 31, 2024. The estimated net book value of depreciable plant at December 31, 2025 was calculated by subtracting the estimated accumulated depreciation at December 31, 2025 from the estimated original cost of gross plant at December 31, 2025. The 2025 annual depreciation accruals were estimated by adding the following three items: (1) the estimated net book value balance of depreciable plant by account as of December 31, 2024, multiplied by the depreciation rates shown in PECO Exhibit CF-3; (2) the 2025 estimated plant additions multiplied by the depreciation rate (using a half-year convention) for the appropriate accounts; and (3) the 2025 estimated salvage or cost of removal multiplied by the depreciation rate (using a half-year convention) for the appropriate accounts.

V. CONCLUSION

26. Q. Does this complete your direct testimony at this time?

A. Yes, it does.

PECO Exhibit CF-1:

Annual Depreciation Accruals Related to Utility Plant in Service for 2023

**Annual Depreciation Accruals Related to
Utility Plant in Service for 2023**

Summary –

This exhibit is based on the results of the 2018 Depreciation Study and updated to reflect the original cost of PECO's electric and common plant in service at December 31, 2023. The report also includes the detailed depreciation calculations used to determine 2024 depreciation rates, which are used in calculating the estimated 2024 Annual Depreciation Accruals shown in PECO Exhibit CF-2.

Note:

The system generated reports show the date for each utility account as of January 1, 2024. The balances as of December 31, 2023 are the same as the balances as of January 1, 2024.

Regulatory Assets (Note H)	(393,204)
Adjusted 2024 estimated annual depreciation accrual	
	282,149,520
	Note I

Notes:

Note A: Utility Account 371.1 was not included in the 2018 study and will continue to depreciate over the 2013 average service life.

Note B: Asset Retirement Costs (ARC) are depreciable plant, but the ARC depreciation expense is not included in the revenue requirements calculation and not included in the claim for the current proceeding.

Note C: The Intangible Plant allocated to Electric Distribution is individually depreciated based on the service lives estimated at the time the plant is placed into service. The amortization rates for Intangible Plant are weighted based on the relative amount of underlying plant booked to the Intangible Plant accounts.

Note D: The General Plant allocated to Electric Distribution relates to various General Plant utility accounts identified in the 2018 Depreciation Study; the depreciation rates are calculated the same as Electric Distribution Plant. The General Plant amounts are allocated to Electric Distribution plant based on a labor allocation methodology as explained in Mr. Trzaska's testimony (PECO Statement No. 3).

Note E: The Common Plant allocated to Electric Distribution relates to various Common Plant utility accounts identified in the 2018 Depreciation Study; the depreciation rates are calculated the same as Electric Distribution Plant. The Common Plant amounts are allocated to Electric plant based on the Common Allocation Factor determined each year and further allocated to Electric Distribution plant based on a labor allocation methodology.

Note F: Included in the 2024 Estimated Annual Depreciation Accrual column for the Common Plant allocated to Distribution row is \$10.5 million relating to PECO Fleet depreciation. PECO Fleet depreciation is reversed from depreciation expense and redistributed to both capital and expense accounts/projects. As a result, a \$10.5 million credit is shown for Fleet depreciation expense. The amount of Fleet depreciation that is capitalized to Electric Distribution capital projects is included in the 2024 Estimated Plant Additions column and related depreciation is in the 2024 Estimated Annual Depreciation Accrual column.

Note G: ACT 129 costs for Direct Load Control (DLC) switches were fully recovered in 2013 and are not included in the claim for the current proceeding.

Note H: Included in the 2024 Estimated Annual Depreciation Accrual is \$0.4 million relating to PECO Regulatory Asset amortization. Regulatory Asset amortization expense is charged to a Regulatory Asset.

Note I: Agrees to Electric Distribution depreciation expense included in the revenue requirements calculation in Exhibit MJT-2, Schedule D-17, Column 13 Depr on Existing Assets + Adds (Function), Row 143

PECO Exhibit CF-3:

Estimated Annual Depreciation Accruals Related to Utility Plant in Service for 2025

**Estimated Annual Depreciation Accruals Related to
Utility Plant in Service for 2025**

Summary –

This exhibit is based on the results of the 2018 Depreciation Study and updated to reflect the estimated original cost of PECO's electric and common plant in service at December 31, 2025.

Note I	

Notes:

Note A: Utility Account 371.1 was not included in the 2018 study and will continue to depreciate over the 2013 average service life.

Note B: Asset Retirement Costs (ARC) are depreciable plant, but the ARC depreciation expense is not included in the revenue requirements calculation and not included in the claim for the current proceeding.

Note C: The Intangible Plant allocated to Electric Distribution is individually depreciated based on the service lives estimated at the time the plant is placed into service. The amortization rates for Intangible Plant are weighted based on the relative amount of underlying plant booked to the Intangible Plant accounts.

Note D: The General Plant allocated to Electric Distribution relates to various General Plant utility accounts identified in the 2018 Depreciation Study; the depreciation rates are calculated the same as Electric Distribution Plant. The General Plant amounts are allocated to Electric Distribution plant based on a labor allocation methodology as explained in Mr. Trzaska's testimony (PECO Statement No. 3).

Note E: The Common Plant allocated to Electric Distribution relates to various Common Plant utility accounts identified in the 2018 Depreciation Study; the depreciation rates are calculated the same as Electric Distribution Plant. The Common Plant amounts are allocated to Electric plant based on the Common Allocation Factor determined each year and further allocated to Electric Distribution plant based on a labor allocation methodology.

Note F: Included in the 2025 Estimated Annual Depreciation Accrual column for the Common Plant allocated to Distribution row is \$12.2 million relating to PECO Fleet depreciation. PECO Fleet depreciation is reversed from depreciation expense and redistributed to both capital and expense accounts/projects. As a result, a \$12.2 million credit is shown for Fleet depreciation expense. The amount of Fleet depreciation that is capitalized to Electric Distribution capital projects is included in the 2025 Estimated Plant Additions column and related depreciation is in the 2025 Estimated Annual Depreciation Accrual column.

Note G: ACT 129 costs for Direct Load Control (DLC) switches were fully recovered in 2013 and are not included in the claim for the current proceeding.

Note H: Included in the 2025 Estimated Annual Depreciation Accrual is \$.9 million relating to PECO Regulatory Asset amortization. Regulatory Asset amortization expense is charged to a Regulatory Asset.

Note I: Agrees to Electric Distribution depreciation expense included in the revenue requirements calculation in Exhibit MJT-1, Schedule D-17, Column 13 Depr on Existing Assets + Adds (Function), Row 132

Attention Mr. Scott Bailey
Vice President and Controller

Ladies and Gentlemen:

Pursuant to your request, we have conducted a depreciation study related to the electric distribution, general and common plant of PECO Energy Company (PECO) as of December 31, 2018. The attached report presents a description of the methods used in the estimation of depreciation, the summary of annual depreciation accrual rates, the statistical support for the service life estimates and the detailed tabulations of annual depreciation.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PECO ENERGY COMPANY

DEPRECIATION STUDY

EXECUTIVE SUMMARY

Pursuant to PECO Energy Company's ("PECO" or "Company") request, Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") conducted a depreciation study related to PECO's electric and common plant as of December 31, 2018. The purpose of this study was to determine the annual depreciation accrual rates and amounts for book and ratemaking purposes.

The depreciation rates are based on the straight line method using the average service life ("ASL") procedure and were applied on a remaining life basis. The calculations were based on attained ages and estimated average service life for each depreciable group of assets.

The most significant change since the previous depreciation study as of December 31, 2013 is related to increased service lives for several major accounts which resulted in a decrease in depreciation expense.

The two largest Electric Distribution Plant accounts with increased service lives were Accounts 362, Station Equipment and 366, Underground Conduit. The service life estimates were lengthened from 50 to 53 years for Station Equipment and 65 to 70 years for Underground Conduit. There were no Electric Distribution and General Plant accounts where the proposed service life estimates decreased in this report.

The Common Plant account almost entirely responsible for the decrease in depreciation expense was Account 390, Structures and Improvements. The service

life estimate for Structures and Improvements was lengthened from 50 to 55 years.

PECO's current depreciation rates are based on service life estimates approved in the most recent service life study filed in March 2015.

Gannett Fleming recommends the calculated annual depreciation accrual rates set forth herein apply specifically to electric and common plant in service as of December 31, 2018 as summarized by Tables 1 and 2, respectively, of the study. Supporting analysis and calculations are provided within the study.

The study results set forth an annual depreciation expense for electric and common plant of \$176.581 million when applied to depreciable plant balances as of December 31, 2018. The results are summarized at the functional level as follows:

SUMMARY OF ORIGINAL COST, PROPOSED ACCRUAL RATES AND AMOUNTS

FUNCTION	ORIGINAL COST AS OF DECEMBER 31, 2018	ACCRUAL RATE	ACCRUAL AMOUNT
(1)	(2)	(3)=(4)/(2)	(4)
<u>ELECTRIC PLANT</u>			
Distribution Plant	6,261,786,689	2.14	134,235,486
General Plant	272,701,859	6.72	18,334,531
Total Electric Plant	6,534,488,548	2.33	152,570,017
<u>COMMON PLANT</u>			
General Plant	512,723,577	4.68	24,011,209
Total Common Plant	512,723,577	4.68	24,011,209
Total	7,047,212,125	2.51	176,581,226

PART I. INTRODUCTION

PECO ENERGY COMPANY

DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study for PECO Energy Company (“PECO”), to determine the annual depreciation accrual rates and amounts for book purposes applicable to the original cost of electric and common plant as of December 31, 2018. The rates and amounts are based on the straight line remaining life method of depreciation. This report also describes the concepts, methods and judgments which underlie the recommended annual depreciation accrual rates related to electric and common plant in service as of December 31, 2018.

The service life estimates resulting from the study were based on informed judgment which incorporated analyses of historical plant retirement data as recorded through 2018, a review of Company practice and outlook as they relate to plant operation and retirement, and consideration of current practice in the electric industry, including knowledge of service life estimates used for other electric companies.

PLAN OF REPORT

Part I, Introduction, contains statements with respect to the plan of the report, and the basis of the study. Part II, Estimation of Survivor Curves, presents descriptions of the considerations and the methods used in the service life studies. Part III, Service Life Considerations, presents the factors and judgment utilized in the average service life analysis. Part IV, Net Salvage Considerations, presents a discussion of the method used by PECO for the recovery of net salvage. Part V, Calculation of Annual and Accrued Depreciation, describes the procedures used in the calculation of group depreciation. Part VI, Results of Study, presents summaries by depreciable group of

annual depreciation accrual rates and amounts, as well as composite remaining lives. Part VII, Service Life Statistics presents the statistical analysis of service life estimates, and Part VIII, Detailed Depreciation Calculations presents the detailed tabulations of annual and accrued depreciation.

BASIS OF THE STUDY

Depreciation

Depreciation, in public utility regulation, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among causes to be given consideration are wear and tear, deterioration, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and the requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight-line method of depreciation.

For most accounts, the annual depreciation was calculated by the straight line method using the average service life procedure and the remaining life basis. For certain General Plant accounts, the annual depreciation is based on amortization

accounting. Both types of calculations were based on original cost, attained ages, and estimates of service lives.

The straight line method, average service life procedure is a commonly used depreciation calculation procedure that has been widely accepted in jurisdictions throughout North America. Gannett Fleming recommends its continued use in this study. Amortization accounting is used for certain General Plant accounts because of the disproportionate plant accounting effort required when compared to the minimal original cost of the large number of items in these accounts. An explanation of the calculation of annual and accrued amortization is presented beginning on page V-4 of the report.

Service Life Estimates

The service life estimates used in the depreciation and amortization calculations were based on informed judgment which incorporated a review of management's plans, policies and outlook, a general knowledge of the electric utility industry, and comparisons of the service life estimates from our studies of other electric utilities. The use of survivor curves to reflect the expected dispersion of retirement provides a consistent method of estimating depreciation for utility plant. Iowa type survivor curves were used to depict the estimated survivor curves for the plant accounts not subject to amortization accounting.

The procedure for estimating service lives consisted of compiling historical data for the plant accounts or depreciable groups, analyzing this history through the use of widely accepted techniques, and forecasting the survivor characteristics for each depreciable group on the basis of interpretations of the historical data analyses and the probable future. The combination of the historical experience and estimates of future experience yielded estimated survivor curves from which the average service lives were derived.

A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirement was obtained through discussions with operating and management personnel and was incorporated in the interpretation and extrapolation of the statistical analyses.

PART II. ESTIMATION OF SURVIVOR CURVES

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units, or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves,

Figure 1. A Typical Survivor Curve and Derived Curves

Figure 2. Left Modal or "L" Iowa Type Survivor Curves

Figure 3. Symmetrical or "S" Iowa Type Survivor Curves

Figure 4. Right Modal or "R" Iowa Type Survivor Curves

Figure 5. Origin Modal or "O" Iowa Type Survivor Curves

which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125. These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."¹ In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text, and is also explained in several publications, including "Statistical Analyses of Industrial Property Retirements,"² "Engineering Valuation and Depreciation,"³ and "Depreciation Systems."⁴

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band, and the band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes

¹Marston, Anson, Robley Winfrey and Jean C. Hempstead. Engineering Valuation and Depreciation, 2nd Edition. New York, McGraw-Hill Book Company. 1953.

²Winfrey, Robley, Supra Note 1.

⁴Wolf, Frank K. and W. Chester Fitch. Depreciation Systems. Iowa State University Press. 1994.

schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

A hypothetical property group is used to illustrate the retirement rate method. This property group is observed for the experience band 2009-2018 during which there were placements during the years 2004-2018. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, \$10,000 of the dollars invested in 2004 were retired in 2009. The \$10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of \$143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2009 retirements of 2004 installations and ending with the 2018 retirements of the 2013 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

$$10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.$$

^a Transfer Affecting Exposures at Beginning of Year

^b Transfer Affecting Exposures at End of Year

^c Sale with Continued Use

Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2009 through 2018 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2014 are calculated in the following manner:

Exposures at age 0	= amount of addition	= \$750,000
Exposures at age ½	= \$750,000 - \$ 8,000	= \$742,000
Exposures at age 1½	= \$742,000 - \$18,000	= \$724,000
Exposures at age 2½	= \$724,000 - \$20,000 - \$19,000	= \$685,000
Exposures at age 3½	= \$685,000 - \$22,000	= \$663,000

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2009-2018
SUMMARIZED BY AGE INTERVAL

Experience Band 2009-2018										Placement Band 2004-2018			
Year	Exposures, Thousands of Dollars										Total at		
	Annual Survivors at the Beginning of the Year										Beginning of Age Interval	Age Interval	
	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018			
Placed	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780		

^aAdditions during the year

For the entire experience band 2009-2018, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

$$255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.$$

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15	
Exposures at age 4½	=	3,789,000	
Retirements from age 4½ to 5½	=	143,000	
Retirement Ratio	=	143,000 ÷ 3,789,000	= 0.0377
Survivor Ratio	=	1.000 - 0.0377	= 0.9623
Percent surviving at age 5½	=	(88.15) x (0.9623)	= 84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2009-2018

Placement Band 2004-2018

(Exposure and Retirement Amounts are in Thousands of Dollars)

Age at Beginning of Interval	Exposures at Beginning of Age Interval	Retirements During Age Interval	Retirement Ratio	Survivor Ratio	Percent Surviving at Beginning of Age Interval

13.5	<u>167</u>	<u>26</u>	0.1557	0.8443	42.24
					35.66
Total	<u>44,780</u>	<u>1,606</u>			

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.

Column 3 from Schedule 1, Column 12, Retirements for Each Year.

Column 4 = Column 3 Divided by Column 2.

Column 5 = 1.0000 Minus Column 4.

Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Table 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

FIELD TRIPS

In order to be familiar with the operation of the Company and observe representative portions of the plant, a field trip was conducted for the study. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

The following is a list of the locations visited during the most recent field trips.

September 30, 2019

Berwyn Service Center
Howell Distribution Substation
Creamery Distribution Substation
Wentz Distribution Substation

September 24, 2014

Plymouth Service Center
Plymouth Transmission Substation
Plymouth Distribution Substation

September 26, 2014

PECO Energy Headquarters Building – 2301 Market Street

LIFE ANALYSIS

The retirement rate method of life analysis is an actuarial method of developing survivor curves using the average rates at which property is retired from each depreciable group. The method involves the analysis of historical retirements of property of various ages, in relation to the property units exposed to retirement at those same ages. Application of this method requires an extensive compilation of historical aged retirement data as well as related plant accounting data including additions,

acquisitions, sales and transfers. Plant accounting data for the years 1975 through 2018 were available to study. The life analyses were performed using Gannett Fleming's depreciation software programs. The actuarial data may or may not produce a complete life cycle of experience. A complete life cycle is indicated by the life table reaching zero percent surviving for the last age interval shown on the life table. The curve-fitting portion of Gannett Fleming's depreciation software program matches the stub survivor curves (i.e., from the original life tables) with each member of the Iowa curve family. The curve-fitting results are based on a least squares solution of the differences between the stub curve and the Iowa curve. Survivor data developed by the actuarial analysis and set forth on the original life table are graphed and compared visually and statistically with the Iowa curves. There are two distinct steps in the estimation of service lives and retirement dispersions which must be recognized in the interpretation of the service life analysis results. The first step, life analysis, refers to the application of statistical procedures to determine life and dispersion indications based solely on past experience. The second step, life estimation, refers to the exercise of informed judgment in making sound estimates of service lives and retirement dispersions. Life estimation incorporates known historical experience, estimated historical trends and estimated future trends or events in order to define complete patterns of estimated service life characteristics. The results of the life analyses, performed as the first step, are only one of the relevant factors to be considered during the decision making process of life estimation.

LIFE ESTIMATION

The service life estimates were based on informed judgment which considered a number of factors. The primary factors were the statistical analyses of PECO's property accounting data; current Company policies and outlook as determined during conversations with engineering management and other technical subject matters

experts from the company's operations, facilities and IT departments; and the survivor curve estimates from previous studies of this company and other electric companies.

For many of the plant accounts and subaccounts for which survivor curves were estimated, the statistical analyses using the retirement rate method resulted in reasonable indications of the survivor patterns experienced. These accounts represent 60 percent of depreciable plant including Common Plant. Generally, the information external to the statistics led to no significant departure from the indicated survivor curves for the accounts listed below. The statistical support for the service life estimates is presented in the section beginning on page VII-2.

<u>Account No.</u>	<u>Account Description</u>
<u>ELECTRIC PLANT</u>	
DISTRIBUTION	
364	Poles, Towers and Fixtures
365	Overhead Conductors and Devices
367	Underground Conductors and Devices
368	Line Transformers
371	Installations on Customers' Premises
<u>COMMON PLANT</u>	
GENERAL	
390	Structures and Improvements
392.1	Transportation Equipment – Automobiles
392.2	Transportation Equipment – Light Trucks
392.3	Transportation Equipment – Heavy Trucks
392.4	Transportation Equipment – Tractors
392.5	Transportation Equipment – Trailers
392.6	Transportation Equipment – Other Vehicles

Account 364, Poles, Towers and Fixtures is used to illustrate the manner in which the study was conducted for the accounts in the preceding list. Aged plant accounting data have been compiled for most accounts for the years 1975 through 2018. These data have been coded according to account or property group, type of transaction, year in which the transaction took place and year in which the utility plant

was placed in service. The retirements, other plant transactions and plant additions were analyzed by the retirement rate method.

The survivor curve estimate for this account is the 53-R2 and is based on the statistical indications for the period 1975-2018. Discussions with Engineering management focused on topics such as retirement causes, maintenance practices, company plans and service life outlook for the assets included in this account. Account 364 is comprised of poles, anchors, guy wires, crossarms, etc. Of the approximate 410,000 poles owned by PECO, the vast majority are wood poles. The existing survivor curve estimate for this account is the 53-R2. The company has a pole inspection program in which poles are inspected on a ten-year cycle. The pole inspection includes a test and treat program. Poles are sonically tested and borings are inspected to quantify the condition of the poles. Poles showing signs of advanced rot and decay are removed while other poles in fair condition can be treated before the pole is significantly weakened. The current pole inspection program at PECO has been in place since 2001. Some mitigation techniques are used for rot and decay particularly at the groundline. These techniques include the use of a preservative paste and fiberglass wrap around the base of the pole after the decay has been chipped away. Other techniques include the installation of a steel reinforcement rod at the base of the pole known as a C-truss. C-trusses are installed on poles that are starting to deteriorate at the base but are, otherwise, in relatively good condition. The addition of a C-truss is to provide the pole with additional support which will enhance reliability and is expected provide poles with an additional service life of 15 to 20 years. Visual inspections also are performed as part of the pole inspection program and these inspections provide

information on other problems such as damaged hardware, woodpecker holes, cracks, splits and decayed pole tops. The mitigation techniques employed by PECO can impact the service life of poles; however, the test and treat program also identifies poles for proactive replacement. Increased annual replacements are also expected in the near future as PECO works toward removing poles older than 60 years from the population. Retirements for poles typically occur due to decay, relocations, the test and treat program, vehicle accidents, storm damage, upgrades, woodpecker damage and clearance requirements. Some of these causes of retirements such as vehicle accidents, relocations, clearance requirements necessitating a taller pole, affect poles of all vintages equally while other retirement causes such as decay and inadequacy are more common to older poles.

The 53-R2 survivor curve estimate for this account takes into consideration the statistical indications for the overall experience band, 1975-2018. More recent experience bands such as the most recent 30 and 20 year band also are supportive of the 53-R2 survivor curve. The 53-R2 represents a good fit of the historical data through the representative data points, as shown on page VII-10; is consistent with management outlook for a continuation of the historical experience; is the same survivor curve as the existing, PA PUC approved estimate and is within the typical range of service lives experienced for Account 364, Poles, Towers and Fixtures by other electric companies in the mid-Atlantic and Northeast regions. Based on a consideration of these factors, a continuation of the 53-R2 survivor curve estimate is appropriate.

Similar studies were performed for the remaining plant accounts. Each of the judgments represented a consideration of statistical analyses of aged plant activity,

management's outlook for the future, and the typical range of lives used by other electric companies.

The selected amortization periods for certain other General Plant accounts are described in the section "Calculated Annual and Accrued Amortization."

Generally, the survivor curve estimates for the remainder of the accounts were based on judgments which considered the nature of the plant and equipment, a review of available historical retirement data and a general knowledge of the service lives for similar equipment in other electric companies.

For Account 362, Station Equipment, the historical data indicated service lives of 70 years or more for the overall experience band 1975-2018. More recent experience bands indicated service lives of 80 years or more. These results were well beyond what is typically experienced for this account and well beyond the expectations of the company's engineering management. This account includes equipment and devices typically found in a substation yard. Some of the assets in this account include power transformers, circuit breakers, relays, busbar and supporting structures, etc. Based on discussions with engineering conducted during our management meeting and field review, a range of service lives were determined for the major equipment types within this account as follows: 45 to 55 years for power transformers; 40 to 50 years for circuit breakers; 50 years for electromechanical relays, 25 years for solid state relays; 50 years or more for busbar, and supporting structures. The survivor curve estimate for Account 362, Station Equipment is the 53-R3 and is based primarily on informed judgment with consideration of all relevant factors.

PART IV. NET SALVAGE CONSIDERATIONS

PART IV. NET SALVAGE CONSIDERATIONS

Net Salvage Considerations

Inasmuch as this report relates primarily to Pennsylvania rate regulation practices, under which experienced costs of negative net salvage (i.e., primarily removal costs) are amortized after their occurrence, no adjustments for expected salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for individual accounts. The annual provision for recovering negative net salvage in Pennsylvania typically is based on the amortization of experienced net salvage over a five year period. However, PECO had requested in their 1989 rate case (Docket R-891364) to amortize experienced negative net salvage over the account's remaining life. The Pennsylvania Public Utility Commission (PA PUC) granted PECO's request and the company has been utilizing this method since 1989.

PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

GROUP DEPRECIATION PROCEDURES

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally the items within a group do not have identical service lives, but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group. In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

Single Unit of Property

The calculation of straight line depreciation for a single unit of property is straightforward. For example, if a \$1,000 unit of property attains an age of four years and has a life expectancy of six years, the annual accrual over the total life is:

$$\frac{\$1,000}{(4 + 6)} = \$100 \text{ per year.}$$

The accrued depreciation is:

$$\$1,000 \left(1 - \frac{6}{10} \right) = \$400.$$

Remaining Life Annual Accruals

For the purpose of calculating remaining life accruals as of December 31, 2018, the depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation follow. The detailed calculations as of December 31, 2018, are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$\text{Ratio} = 1 - \frac{\text{Average Remaining Life}}{\text{Average Service Life}}.$$

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization period and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is proposed for a number of accounts that represent numerous units of property, but a very small portion of depreciable utility plant in service. The accounts and their amortization periods are as follows:

<u>ACCT</u>	<u>TITLE</u>	<u>AMORTIZATION PERIOD, YEARS</u>
<u>Electric</u>		
391,	Office Furniture and Equipment	
391.1	Office Machines	10
391.2	Furniture and Fixtures	15
391.3	Computers	5
391.4	Smart Meter Computer Equipment	5
393,	Stores Equipment	15
394,	Tools, Shop and Garage Equipment	15
395.1,	Laboratory Equipment - Testing	20
395.2,	Laboratory Equipment - Meters	15
398,	Miscellaneous Equipment	15

<u>ACCT</u>	<u>TITLE</u>	AMORTIZATION PERIOD, <u>YEARS</u>
<u>Common</u>		
391,	Office Furniture and Equipment	
391.1	Office Machines	10
391.2	Furniture and Fixtures	15
391.3	Computers	5
393,	Stores Equipment	15
394,	Tools, Shop and Garage Equipment	
394.1,	Construction Tools	15
394.2,	Common Tools	15
394.3,	Garage Equipment	20
398,	Miscellaneous Equipment	15

For the purpose of calculating annual amortization amounts as of December 31, 2018, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

PART VI. RESULTS OF STUDY

PART VI. RESULTS OF STUDY

QUALIFICATION OF RESULTS

The calculated annual accrual rates and amounts resulting from an updated service life study are the principal results of this report. The annual accrual rates were calculated in accordance with the straight line remaining life method of depreciation, using the average service life procedure based on estimates which reflect considerations of current historical evidence and expected future conditions. The annual depreciation accrual rates are applicable specifically to the electric and common plant in service as of December 31, 2018.

DESCRIPTION OF DETAILED TABULATIONS

Tables 1 and 2 present summary results of the study as applied to the original cost of electric and common plant respectively, at December 31, 2018. The summary schedules for each business division are presented on pages VI-4 and VI-5 of this report.

The service life estimates were based on judgment that incorporated statistical analysis of retirement data, discussions with management and consideration of estimates made for other electric utilities. The results of the statistical analysis of service life are presented in the section beginning on page VII-2, within the supporting documents of this report.

For each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. The survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth

survivor curve is denoted by a numeral followed by the curve type designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. The titles of the chart indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The tables of the calculated annual depreciation applicable to depreciable assets as of December 31, 2018 are presented in account sequence starting on page VIII-2 of the supporting documents. The tables indicate the estimated survivor curve for the account and set forth, for each installation year, the original cost, the calculated accrued depreciation, the allocated book reserve, future accruals, the remaining life, and the calculated annual accrual amount.

GLOSSARY OF ACRONYMS AND DEFINED TERMS	
ACRONYM	DEFINED TERM
AFUDC	Allowance for Funds Used During Construction
β	Beta
b	Represents the retention rate that consists of the fraction of earnings that are not paid out as dividends
b x r	Represents internal growth
CAPM	Capital Asset Pricing Model
CCR	Corporate Credit Rating
CE	Comparable Earnings Approach
Commission	Pennsylvania Public Utility Commission
Company	PECO Energy Company
CWIP	Construction Work in Progress
DCF	Discounted Cash Flow
FOMC	Federal Open Market Committee
g	Growth rate
IGF	Internally Generated Funds
LDC	Local Distribution Company
Lev	Leverage modification
LT	Long Term
M&M	Modigliani & Miller
OCI	Other Comprehensive Income
PECO	PECO Energy Company
PUHCA	Public Utility Holding Company Act
r	Represents the expected rate of return on common equity
Rf	Risk-free rate of return
Rm	Return on the market
RP	Risk Premium
s	Represents the new common shares expected to be issued by a firm
s x v	Represents external growth

GLOSSARY OF ACRONYMS AND DEFINED TERMS	
ACRONYM	DEFINED TERM
S&P	Standard & Poor's
v	Represents the value that accrues to existing shareholders from selling stock at a price different from book value

1 **DIRECT TESTIMONY**

2 **OF**

3 **PAUL R. MOUL**

4 **I. INTRODUCTION AND SUMMARY OF RECOMMENDATIONS**

5 **1. Q. Please state your name, occupation and business address.**

6 A. My name is Paul Ronald Moul. My business address is 251 Hopkins Road,
7 Haddonfield, New Jersey 08033-3062. I am Managing Consultant at the firm P.
8 Moul & Associates, an independent financial and regulatory consulting firm. My
9 educational background, business experience and qualifications are provided in
10 Appendix A, which follows my direct testimony.

11 **2. Q. What is the purpose of your direct testimony?**

12 A. My testimony presents evidence, analysis, and a recommendation concerning the
13 appropriate cost of common equity and overall rate of return that the Pennsylvania
14 Public Utility Commission ("Commission") should recognize in determining the
15 revenues that the Electric Division of PECO Energy Company ("PECO" or the
16 "Company") will be authorized to realize at the conclusion of this proceeding.
17 My analysis and recommendation are supported by the detailed financial data
18 contained in PECO Exhibit PRM-1, which is a multi-page document divided into
19 fourteen (14) schedules. My testimony is based upon my first-hand knowledge of
20 PECO, consisting of information obtained from meetings with the Company's
21 management and Company-specific data that is widely disseminated within the
22 financial community.

1 **3. Q. Based upon your analysis, what is your conclusion concerning the**
2 **appropriate rate of return for the Company in this case?**

3 A. My conclusion is that the Company should be afforded an opportunity to earn a
4 rate of return on common equity of 10.95%. The 10.95% rate of return on
5 common equity is composed of a 10.80% cost of equity determined from the
6 results of my proxy group analysis and 0.15% in recognition of the exemplary
7 performance of the Company's management. The 10.80% cost of equity is a
8 blended rate for this case that would apply to both the Electric Division and Gas
9 Division rate cases being filed simultaneously. This blended rate reflects the risk
10 reducing benefits that arise from PECO being a combination utility that has a
11 diversified portfolio of utility investments. The cost of equity for the Electric
12 Division does not include an adjustment I make in my testimony in the
13 accompanying Gas Division rate case to recognize the additional risks of the Gas
14 Division.

15 My analysis of the Company and its superior performance is based upon the direct
16 testimony of Nicole L. LeVine, the Company's Senior Vice President and Chief
17 Operating Officer, and the direct testimony of other Company witnesses. As
18 shown on page 1 of Schedule 1, I have calculated an 7.98% overall cost of capital
19 for the Company's fully projected future test year ("FPFTY") estimated at
20 December 31, 2025. This return, which is the product of weighting the individual
21 capital costs by the proportion of each respective type of capital, should establish
22 a compensatory level of return for the use of capital and provide the Company
23 with the ability to attract capital on reasonable terms.

1 **4. Q. What background information have you considered in reaching a conclusion**
2 **concerning the Company’s cost of capital?**

3 A. The Company is a wholly owned subsidiary of Exelon Corporation (“Exelon”).
4 The common stock of Exelon is traded on the Nasdaq Global Select Market.
5 Exelon is a component of the S&P 500 Composite Index. PECO provides electric
6 delivery service to approximately 1.7 million electric customers in both the City
7 of Philadelphia and the surrounding counties. Natural gas distribution service is
8 also provided to over half a million customers located in the suburban counties
9 surrounding the City of Philadelphia. Deliveries of electricity to the Company’s
10 customers in 2023 were comprised of approximately 38% to residential
11 customers, approximately 21% to commercial customers, approximately 39% to
12 industrial customers, and approximately 2% to street lighting, railroads, and sales
13 for resale. With industrial customers representing 39% of sales, the energy needs
14 of just those customers can have a significant impact on the Company’s
15 operations. Indeed, the Company’s top ten customers represent 3,466 GWh, or
16 10% of total sales. PECO obtains all of its electric energy for default service from
17 third parties.

18 **5. Q. How have you determined the cost of common equity in this case?**

19 A. The cost of common equity is established using capital-market and financial data
20 that investors rely upon to assess the relative risk, and hence the cost of equity for
21 an electric utility. In this regard, I employed four well-recognized measures of
22 the cost of equity: (1) the Discounted Cash Flow (“DCF”) model; (2) the Risk

Premium (“RP”) analysis; (3) the Capital Asset Pricing Model (“CAPM”); and (4) the Comparable Earnings (“CE”) approach.

6. Q. In your opinion, what factors should the Commission consider when determining the Company’s cost of capital in this proceeding?

A. The Commission’s rate of return allowance must be set to cover the Company’s interest and dividend payments, provide a reasonable level of earnings retention, produce an adequate level of internally generated funds to meet capital requirements, be commensurate with the risk to which the Company’s capital is exposed, assure confidence in the financial integrity of the Company, support reasonable credit quality, and allow the Company to raise capital on reasonable terms. The return that I propose fulfills these established standards of a fair rate of return set forth by the landmark *Bluefield* and *Hope* cases.¹ That is to say, my proposed rate of return is commensurate with returns available on investments having corresponding risks.

7. Q. How have you measured the cost of equity in this case?

A. The models that I used to measure the cost of common equity for the Company were applied with market and financial data developed for my proxy group of ten (10) electric companies. The proxy group consists of electric companies that: (i) have publicly-traded common stock, (ii) are contained in The Value Line Investment Survey and are classified in the Electric Utility East group, (iii) are not currently the target of an announced merger or acquisition, (iv) are not engaged in

¹ *Bluefield Water Works & Improvement Co. v. P.S.C. of West Virginia*, 262 U.S. 679 (1923) (“*Bluefield*”) and *F.P.C. v. Hope Natural Gas Co.*, 320 U.S. 591 (1944) (“*Hope*”).

1 the construction of a nuclear generating plant, and (v) have not reduced their
2 common dividend in 2023. The companies in the proxy group are identified on
3 page 2 of Schedule 3. I will refer to these companies as the “Electric Group”
4 throughout my testimony.

5 **8. Q. How have you performed your cost of equity analysis with the market data**
6 **for the Electric Group?**

7 A. I have applied the models/methods for estimating the cost of equity using the
8 average data for the Electric Group. I have not measured separately the cost of
9 equity for the individual companies within the Electric Group because the
10 determination of the cost of equity for an individual company has become
11 increasingly problematic. By employing group average data, I have helped to
12 reduce the effect of extraneous influences on the market data for an individual
13 company.

14 **9. Q. What noteworthy factors have influenced your cost of equity analysis?**

15 A. My cost of equity analysis reflects the impact of high levels of inflation, which
16 have not been seen for four decades. Indeed, the rate of inflation spiked upward
17 to 9.1% in June 2022, and by February 2024 it had fallen to 3.2%. High levels of
18 inflation, i.e., those above the Federal Open Market Committee (“FOMC”) policy
19 goal of 2%, have an impact on the level of economic activity, the cost of capital –
20 particularly the interest cost of debt, and the need for more cautious financial
21 practices, such as a prudent level of borrowing. While short-term interest rates
22 were at historically low levels during much of the Pandemic, longer-term interest
23 rates began to rise in February 2021 and have continued at higher levels

1 throughout 2022 and 2023. Following the Pandemic, the accommodative policy
2 by the FOMC has ended, and higher interest rates have occurred. The FOMC
3 uses its open market operations to control the Fed Funds rate as a means of
4 implementing its dual mandate of healthy employment and price stability. This
5 was revealed by the Fed Funds rate, which increased 525 basis points since the
6 beginning of 2022 through 11 increases in 21 months. The FOMC paused its rate
7 increases and held rates steady at its meeting on June 14, 2023. Thereafter,
8 another rate increase occurred on July 26, 2023. The FOMC paused again at its
9 meetings on September 20, November 1, and December 13, 2023, and January 31,
10 2024. It appears that we are at the end of the current interest rate tightening cycle.
11 Modest reductions in the future would not reduce the Fed Funds rate to Pandemic
12 or pre-Pandemic levels, which were very low after the financial crisis of 2007-08.

13 **10. Q. Please summarize your cost of equity analysis.**

14 A. My cost of equity determination was derived from the results of the
15 methods/models identified above. In general, the use of more than one method
16 provides a superior foundation to arrive at the cost of equity. At any point in
17 time, any single method can provide an incomplete measure of the cost of equity
18 depending upon extraneous factors that may influence market sentiment. The
19 specific application of these methods/models will be described later in my
20 testimony. The following table provides a summary of the indicated costs of
21 equity using each of these approaches.

	<u>Electric Group</u>
DCF	11.37%
Risk Premium	11.50%
CAPM	12.51%
Comparable Earnings	13.25%

To arrive at my recommended equity return, I have incorporated the risk reducing benefits of the combination characteristics of both the Company's electric and gas operations.

11. Q. How have you implemented this risk reduction in your cost of equity recommendation?

A. I accomplished this by focusing on the lower end of the results of my market-based measures of the cost of equity and by removing the leverage adjustment in my DCF calculation. In this regard, I selected as the low end of the range the DCF result for the Electric Group without regard to the leverage adjustment, i.e., 10.40%, and the DCF stated on the same basis in the Company's Gas Division rate case, i.e., 10.74%. By doing so I have reduced the equity return in recognition of the combined utility operations of the Company. That is not to say that diversification in any way changes the fact that the market value leverage and the book value leverage is altered through diversification, but rather it is a convenient way to reduce the return for a combined utility, rather than a stand-alone utility. In this case, the DCF return provides an average of 10.57% ($10.40\% + 10.74\% = 21.14\% \div 2$). The Risk Premium result is 11.50% in both cases. The

1 baseline 10.80% cost of equity for PECO is within this range of returns, i.e.,
2 10.57% and 11.50%. On that basis together with 15 basis points for superior
3 management performance, I recommend that the Commission allow the Company
4 the opportunity to earn a rate of return on common equity of 10.95%. While my
5 recommendation is well within the range of results shown above, there is always
6 the potential that the Company may not actually achieve its allowed rate of return
7 due in the current economic environment. Uncertainty in this regard is related to
8 unanticipated increases in operating and maintenance expenses and the
9 uncertainty associated with commercial and industrial sales. My recommendation
10 should be viewed as the minimum necessary to satisfy investors' expectations. It
11 is important that the Company will have a reasonable opportunity to earn its cost
12 of capital and, in that way, sustain its ability to attract, including maintaining its
13 credit ratings, and retain capital at the level needed to support the increased
14 demand for capital investment that I discuss in more detail in Section II, below.

15 II. ELECTRIC UTILITY RISK FACTORS

16 **12. Q. Please identify some of the factors that make the electric utility industry**
17 **generally different today than it was in the past.**

18 A. Electric utilities generally are faced with a variety of challenges that affect their
19 operations, while retaining the obligation to serve under cost of service pricing
20 that continues to dominate their business risk profile.

21 PECO is part of the PJM Interconnection, L.L.C. ("PJM"). Aside from its
22 traditional responsibility to maintain reliability and comply with the mandates of

1 PJM, PECO primarily provides delivery service at regulated prices, along with its
2 responsibility for default service.

3 The risk associated with distributed generation is a major concern for the business
4 of electric delivery utilities. With technological advances in micro-turbines,
5 potential commercialization of fuel cells, development of wind and solar power,
6 and the creation of micro-grids, utilities face the potential for bypass and the
7 resulting declines in transmission and distribution revenues. That is to say, the
8 development of distributed generation and local alternative energy has the
9 potential to displace delivery revenue that can impact the incumbent utility's
10 financial profile. This risk is exacerbated by net metering rules that require
11 offsets against distribution rates even though distribution costs may not be
12 reduced as a result of the installation of distributed generation.

13 The cost to replace aging infrastructure also adds to the risk of electric delivery
14 utilities, such as PECO, because these expenditures increase costs without any
15 concomitant increase in revenues, except through regulatory approved rate
16 increases, such as the Distribution System Improvement Charge ("DSIC"). The
17 Company continues to make substantial investments to harden its system and
18 expand its vegetation management practices to reduce the number and duration of
19 storm-related outages experienced by customers. The DSIC contains a variety of
20 limitations that will not eliminate the need for periodic rate cases to cover the
21 significant new investment that is being made by PECO. Similarly, the Company
22 is also seeking approval in this case for a Storm Reserve Account. If approved, it
23 would formalize rate recovery of costs over which the Company has no control.

1 While this clause would alleviate additional regulatory costs and provide
2 customers and the Company with a streamlined, well-defined process that would
3 continue proper regulatory oversight, it would not eliminate the need for rate
4 relief.

5 PECO has been engaged in an energy efficiency and conservation (“EE&C”)
6 programs mandated by Act 129 of 2008, P.L. 1592 (“Act 129”). Costs to the
7 Company from demand response programs such as the Company’s EE&C program,
8 which can result in the loss of sales between rate cases.

9 **13. Q. What are the primary risk factors facing the electric delivery utilities**
10 **industry?**

11 A. A pricing structure restricted by regulation diminishes management’s ability to
12 adjust its business strategy quickly to changing market conditions to respond to
13 broadening competition and the potential for bypass arising from self-generation
14 or distributed-generation. The financial structure of the electric business is
15 uncertain due to the adequacy of capital recovery, counter-party risk, potential for
16 financial penalties associated with operational problems, and growth in the
17 utilization of the transmission and distribution network by non-affiliated
18 generators and marketers. Regulatory risks include the overall framework of
19 ratesetting, cost allocation, and rate design issues, and the level of return that will
20 be allowed.

1 **14. Q. Please indicate how the Company’s risk profile is affected by its construction**
2 **program.**

3 A. The Company is faced with the requirement to undertake investment to maintain
4 and upgrade existing facilities in its service territory and to meet growth. Over
5 the next five years, the Company’s total capital expenditures (transmission and
6 distribution), as shown in the table below, are expected to be \$9.260 million:

<u>Year</u>	<u>Construction</u>
2024	\$1,691,000
2025	\$1,829,000
2026	\$1,930,000
2027	\$1,905,000
2028	\$1,905,000
Total	<u>\$9,260,000</u>

7 These expenditures represent approximately 71% (\$9,260 million ÷ \$13,128
8 million) of the Company’s total net utility plant at December 31, 2023. Of the
9 construction expenditures shown above, \$6,451,000 million relates to the
10 Company’s electric division. A reasonable opportunity to experience a fair rate of
11 return represents the key to a financial profile that will provide the Company with
12 the ability to raise capital in all market conditions to meet its needs, and to satisfy
13 investor requirements in an evolving industry.

14 **15. Q. How should the Commission respond to the evolving business environment**
15 **facing the Company?**

16 A. In the situation where additional capital is required, as shown by the projected
17 construction expenditures indicated above, the regulatory process must establish a

1 return on equity that provides a reasonable opportunity for the Company to
2 actually achieve its cost of capital. Where ongoing capital investment is required
3 to meet the high quality of service that customers demand, supportive regulation
4 is essential.

5 III. FUNDAMENTAL RISK ANALYSIS

6 **16. Q. Is it necessary to conduct a fundamental risk analysis to provide a**
7 **framework for the determination of the cost of equity?**

8 A. Yes. It is necessary to establish a company's relative risk position within its
9 industry through a fundamental analysis of various quantitative and qualitative
10 factors which bear upon investors' assessment of overall risk. The qualitative
11 factors that bear upon the Company's risk have already been discussed. The
12 quantitative risk analysis follows. For this purpose, I have compared PECO to the
13 S&P Public Utilities, an industry-wide proxy consisting of all types of public
14 utility endeavors, and the Electric Group.

15 **17. Q. What are the components of the S&P Public Utilities?**

16 A. The S&P Public Utilities is a widely recognized index comprised of electric
17 power and natural gas companies. These companies are identified on page 3 of
18 Schedule 4. I have used this group as a broad-based measure of all types of
19 regulated public utility endeavors.

20 **18. Q. What companies comprise your Electric Group?**

21 A. My Electric Group obtained from the Value Line publication consists of the
22 following companies: AVANGRID, Inc., Consolidated Edison, Dominion

Energy, Duke Energy, Eversource Energy, Exelon Corp., FirstEnergy Corp.,
NextEra Energy, PPL Corp., and Public Service Enterprise Group.

19. Q. Is knowledge of a utility's bond rating an important factor in assessing its risk and cost of capital?

A. Yes. Knowledge of a company's credit quality rating is an important determinant in analyzing a company's cost of equity because the cost of each type of capital is directly related to the associated risk of the firm. So, while a company's credit quality risk is directly shown by the rating and yield on its bonds, these relative risk assessments also bear upon the cost of equity. This is because a firm's cost of equity is represented by its borrowing cost plus a premium to recognize the higher risk of an equity investment compared to debt.

20. Q. How do the bond ratings compare for PECO, the Electric Group, and the S&P Public Utilities?

A. Presently, the issuer credit rating for PECO is BBB+ (A on First Mortgage Bonds) from Standard and Poor's Corporation ("S&P") and the Long Term ("LT") issuer rating is A2 (Aa3 on First Mortgage Bonds) from Moody's Investors Services ("Moody's"). The issuer credit rating designation by S&P and LT issuer rating by Moody's focus upon the credit quality of the issuer of the debt, rather than upon the debt obligation itself. The Company's credit quality is similar to that of the Electric Group, which has an average A2 and BBB+ credit rating from Moody's and S&P, respectively. For the S&P Public Utilities, the average composite credit rating is A3 by Moody's and A- by S&P. Many of the

1 financial indicators which I will subsequently discuss are considered during the
2 rating process.

3 **21. Q. How do the financial data compare for the Company, PECO, the Electric**
4 **Group, and the S&P Public Utilities?**

5 A. The broad categories of financial data that I will discuss are shown on Schedules
6 2, 3, and 4. The data cover the five-year period 2018-2022. I will highlight the
7 important categories of relative risk may be summarized as follows:

8 Size. In terms of capitalization, PECO is smaller than the average size
9 of the Electric Group. All other things being equal, a smaller company is riskier
10 than a larger company, because a given change in revenue and expense has a
11 proportionately greater impact on a small firm.

12 Market Ratios. Historical market-based financial ratios, such as price-
13 earnings multiples and dividend yields, provide a partial measure of the investor-
14 required cost of equity. If all other factors are equal, investors will require a
15 higher rate of return for companies which exhibit greater risk, in order to
16 compensate for that risk. That is to say, a firm that investors perceive to have
17 higher risks will experience a lower price per share in relation to expected
18 earnings.

19 Since PECO's stock is not traded, there are no market ratios for the Company.
20 The five-year average price-earnings multiple was fairly similar for the Electric
21 Group and the S&P Public Utilities. The five-year average dividend yield for the
22 Electric Group was somewhat higher than the S&P Public Utilities. The average

1 market-to-book ratios were somewhat lower for the Electric Group than the S&P
2 Public Utilities.

3 Common Equity Ratio. The level of financial risk is measured by the
4 proportion of long-term debt and other senior capital that is contained in a
5 company's capitalization. Financial risk is also analyzed by comparing common
6 equity ratios (the complement of the ratio of debt and other senior capital). That
7 is to say, a firm with a high common equity ratio has low financial risk, while a
8 firm with a low common equity ratio has high financial risk. The following
9 common equity ratios are computed from balance sheet values that represent book
10 value. The five-year average common equity ratios, based on permanent capital
11 book value, were 53.8% for PECO, 45.1% for the Electric Group, and 40.5% for
12 the S&P Public Utilities. This shows that the financial risk of PECO historically
13 was somewhat less than that of the Electric Group.

14 Return on Book Equity. Greater variability (i.e., uncertainty) of a firm's
15 earned returns signifies relative levels of risk, as shown by the coefficient of
16 variation (standard deviation ÷ mean) of the rate of return on book common
17 equity. The higher the coefficient of variation, the greater degree of variability.
18 During the five-year period, the coefficients of variation were 0.114 (1.3% ÷
19 11.4%) for PECO, 0.173 (1.4% ÷ 8.1%) for the Electric Group, and 0.040 (0.4% ÷
20 10.0%) for the S&P Public Utilities. These comparisons show that earnings
21 variability for the Company was between the Electric Group and the S&P Public
22 Utilities, albeit much closer to the Electric Group. As a further observation, the
23 direct testimony of Ms. Humphrey has calculated that the equity return in the
24 FPFTY will be 4.31% for the Electric Division. Such return is below the rates of

1 return generally afforded to public utilities and completely inadequate based upon
2 the Company's historical performance, my cost of equity analysis, and
3 maintenance of its current credit quality ratings.

4 Operating Ratios. I have also compared operating ratios (the percentage
5 of revenues consumed by operating expense, depreciation, and taxes other than
6 income). The five-year average operating ratios were 79.8% for PECO, 80.8%
7 for the Electric Group, and 81.0% for the S&P Public Utilities. The operating
8 ratio for PECO was similar to the Electric Group and the S&P Public Utilities.

9 Coverage. The level of fixed charge coverage (i.e., the multiple by
10 which available earnings cover fixed charges, such as interest expense) provides
11 an indication of the earnings protection for creditors. Higher levels of coverage,
12 and hence earnings protection for fixed charges, are usually associated with
13 superior grades of creditworthiness. The five-year average pre-tax interest
14 coverage (excluding AFUDC) was 4.35 times for PECO, 3.02 times for the
15 Electric Group, and 2.94 times for the S&P Public Utilities. The higher interest
16 coverage for PECO suggests lower credit risk.

17 Quality of Earnings. Measures of earnings quality are usually revealed
18 by the percentage of AFUDC related to income available for common equity, the
19 effective income tax rate, and other cost deferrals. These measures of earnings
20 quality usually influence a firm's internally generated funds. Quality of earnings
21 has not been a significant concern for PECO, the Electric Group, and the S&P
22 Public Utilities.

23 Internally Generated Funds. Internally generated funds ("IGF") provide
24 an important source of new investment capital for a utility and represent a key

1 measure of credit strength. Historically, the five-year average percentage of IGF
2 to construction expenditures was 49.9% for PECO, 65.2% for the Electric Group,
3 and 62.3% for the S&P Public Utilities. The IGF for PECO was considerably
4 weaker than the reference groups, indicating more risk.

5 Betas. The financial data that I have been discussing relate primarily to
6 company-specific risks. Market risk for firms with publicly-traded stock is
7 measured by beta coefficients. Beta coefficients attempt to identify systematic
8 risk, i.e., the risk associated with changes in the overall market for common
9 equities. Value Line publishes such a statistical measure of a stock's relative
10 historical volatility to the rest of the market. A comparison of market risk is
11 shown by the Value Line betas of .88 as the average for the Electric Group
12 provided on page 2 of Schedule 3 and .90 as the average for the S&P Public
13 Utilities provided on page 3 of Schedule 4. The systematic risk was similar for
14 the Electric Group and the S&P Public Utilities.

15 **22. Q. Please summarize your risk evaluation of PECO and the Electric Group.**

16 A. The investment risk of PECO parallels that of the Electric Group in several
17 respects. In certain regards, principally related to its weaker IGF to construction,
18 PECO has higher risk traits. PECO has lower risk as shown by its higher
19 common equity operating ratio, lower earnings variability, and higher interest
20 coverages. Operating ratios and quality earnings indicate comparable risk to the
21 Electric Group. On balance, the cost of equity for the Electric Group would fairly
22 represent the Company's cost of equity for this case.

1 **IV. RECOMMENDED CAPITAL STRUCTURE RATIOS**

2 **23. Q. Please explain the selection of capital structure ratios for PECO.**

3 A. The capital structure ratios of PECO should be employed for rate of return
4 purposes. If the operating public utility raises its own debt directly in the capital
5 markets, as PECO does, the operating public utility's own capital structure ratios
6 should be used to determine its overall rate of return. Additionally, if the
7 Company's actual capital structure ratios are used, as they should be, then
8 consistency requires that the embedded cost rates associated with the senior
9 securities reflected in those capital structure ratios should also be employed.

10 **24. Q. Does Schedule 5 provide the Company's capitalization and capital structure**
11 **ratios?**

12 A. Yes. The capitalization and capital structure ratios at December 31, 2023, 2024,
13 and 2025 correspond with the end of the historic test year ("HTY"), future test
14 year ("FTY"), and fully projected future test year ("FPFTY"), respectively, in this
15 case. The capitalization and capital structure ratios for the FTY and FPFTY
16 reflect the Company's plan to issue \$575 million of new long-term debt in 2024
17 and \$975 million in 2025. There is a \$350 million debt maturity in the FPFTY.
18 Future equity financings include \$580 million in the FTY and \$472 million in the
19 FPFTY. The build-up of retained earnings is also reflected. In presenting the
20 Company's capital structure on Schedule 5, I have removed the call premiums on
21 the early redemption of high-cost long-term debt and preferred stock.

1 **25. Q. Please describe the adjustment for the call premiums paid to redeem high-**
2 **cost debt and preferred stock.**

3 A. I have adjusted the principal amounts of long-term debt to exclude the amounts
4 used to finance premiums paid for the early redemption of long-term debt and
5 preferred stock previously redeemed. To do otherwise would deny PECO the
6 opportunity to recover the costs (i.e., a return on and of the money used to fund
7 the call premiums) it incurred solely to redeem high-cost capital. The additional
8 debt PECO issued to finance the call premiums does not increase the Company's
9 rate base. That is to say, no additional rate base was created as a consequence of
10 issuing additional debt and preferred stock to finance the redemptions. Therefore,
11 an adjustment to the capitalization is required to provide the return necessary to
12 service the additional capital PECO issued to fund the call premiums. Thus,
13 while rate base does not change, the return component of the overall cost of
14 capital reflects an adjustment that, when applied to the rate base, furnishes the
15 return necessary to pay the cost of the incremental capitalization that supported
16 the call premiums paid by PECO.

17 The adjustment for call premiums is appropriate because customers receive all of
18 the cost savings, in the form of a lower overall rate of return, produced by
19 refinancing higher-cost debt and preferred stock, while PECO is simply made
20 whole by recovering the actual costs it incurred to provide these benefits to its
21 customers. In order to produce the savings that resulted from redeeming higher-
22 cost debt and preferred stock, the Company paid to the holders of that debt and
23 preferred stock a premium to surrender their securities prior to maturity. Those

1 premiums represented an investment made by PECO to reduce its overall cost of
2 capital. Because the reduced interest costs and preferred stock dividends are
3 reflected in the lower cost of capital to customers, it is proper that the Company
4 recover the costs incurred to produce these savings, which consist of a return of
5 and a return on the unamortized premiums. Adjusting the principal amounts in
6 the capital structure provides for the appropriate cost recovery by providing a
7 return on the funds used to pay the premiums, which is reflected as an increment
8 included in the embedded cost rates of PECO's total capital.

9 **26. Q. Should short-term debt be included in the capital structure for rate of return**
10 **purposes?**

11 A. There is no need to consider short-term debt in the capital structure because the
12 amount of short-term debt is well below the construction work in progress
13 ("CWIP") at the end of the FTY and the FPFTY. Exclusion of short-term debt is
14 required because it finances CWIP and hence the cost of short-term debt is
15 reflected in the AFUDC rate. To avoid double-counting, short-term debt must be
16 excluded from the capital structure ratios when setting base rates.

17 **27. Q. What capital structure ratios do you recommend for determining PECO's**
18 **overall cost of capital in this proceeding?**

19 A. Because rate-setting is prospective, the rate of return should, at a minimum,
20 reflect known or reasonably foreseeable changes which will occur during the
21 course of the test year. As a result, I will adopt the Company's FPFTY capital
22 structure ratios of 46.60% long-term debt and 53.40% common equity. These

ratios are consistent with the Company's current investment grade credit ratings of A2/BBB+.

V. COSTS OF SENIOR CAPITAL

28. Q. What cost rate have you assigned to the debt portion of PECO's capital structure?

A. The determination of the long-term debt cost rate is essentially an arithmetic exercise. This is because the Company has contracted for the use of this capital for a specific period of time at a specified cost rate. As shown on Schedule 6, pages 1, 2, and 3, I have computed the weighted average embedded cost rates of long-term debt as of the end of the HTY, FTY, and FPFTY, respectively. For the planned new issues of debt, the Company has budgeted 5.46% as the coupon rate for the two debt issues in each of the years 2024 and 2025. The development of the individual effective cost rates for each series of long-term debt, using the cost rate to maturity technique, is shown on Schedule 6, page 4. The cost rate, or yield to maturity ("ytm"), is the rate of discount that equates the present value of all future interest and principal payments with the net proceeds of the bond. In my calculation of the embedded cost of long-term debt, I have recognized the costs associated with the Company's early redemption of high cost debt. As previously explained, it is necessary to compensate PECO for the costs incurred to lower the embedded debt cost rate, which reduces the cost of capital charged to customers.

29. Q. What cost rate have you determined for the Company's long-term debt?

1 A. I will adopt the 4.58% embedded cost of long-term debt at December 31, 2025, as
2 shown on Schedule 6, page 3. This rate is related to the amount of long-term debt
3 shown in the last three columns of Schedule 5, which provides the basis for the
4 46.60% long-term debt ratio.

5 **VI. COST OF EQUITY – GENERAL APPROACH**

6 **30. Q. Please describe how you determined the cost of equity for the Company.**

7 A. Although my fundamental financial analysis provides the required framework to
8 establish the risk relationships among PECO, the Electric Group, and the S&P
9 Public Utilities, the cost of equity must be measured by standard financial models
10 that I identified above. Differences in risk traits, such as size, business
11 diversification, geographical diversity, regulatory policy, financial leverage, and
12 bond ratings also must be considered when analyzing the cost of equity.

13 It is also important to reiterate that no one method or model of the cost of equity
14 can be applied in an isolated manner. Rather, informed judgment must be used to
15 take into consideration the relative risk traits of the firm. It is for this reason that I
16 have used more than one method to measure the Company's cost of equity. As I
17 describe below, each of the methods used to measure the cost of equity contains
18 certain incomplete and/or overly restrictive assumptions and constraints that are
19 not optimal. Therefore, I favor considering the results from a variety of methods.
20 In this regard, I applied each of the methods with data taken from the Electric
21 Group and arrived at a cost of equity of 10.95% for PECO, which includes an
22 increment for exemplary management performance.

VII. DISCOUNTED CASH FLOW

31. Q. Please describe the DCF model.

A. The DCF model seeks to explain the value of an asset as the present value of future expected cash flows discounted at the appropriate risk-adjusted rate of return. In its simplest form, the DCF-determined return on common stock consists of a current cash (dividend) yield and future price appreciation (growth) of the investment. The dividend discount equation is the familiar DCF valuation model, which assumes that future dividends are systematically related to one another by a constant growth rate. The DCF formula is derived from the standard valuation model: $P = D/(k-g)$, where P = price, D = dividend, k = the cost of equity, and g = growth in cash flows. By rearranging the terms, we obtain the familiar DCF equation: $k = D/P + g$. All of the terms in the DCF equation represent investors' assessment of expected future cash flows that they will receive in relation to the value that they set for a share of stock (P). The DCF equation is sometimes referred to as the "Gordon" model.² My DCF results are provided on Schedule 1, page 2, for the Electric Group. The DCF return is 11.78% with the leverage adjustment and 10.40% without the leverage adjustment for the Electric Group. The leverage adjustment is discussed more fully below.

Among the limitations of the model, there is a certain element of circularity in the DCF method when applied in rate cases. This is because investors' expectations

² Although the popular application of the DCF model is often attributed to the work of Myron J. Gordon in the mid-1950s, J.B. Williams expounded the DCF model in its present form nearly two decades earlier.

1 for the future depend upon regulatory decisions. In turn, when regulators depend
2 upon the DCF model to set the cost of equity, they rely upon investor expectations
3 that include an assessment of how regulators will decide rate cases. Due to this
4 circularity, the DCF model may not fully reflect the true risk of a utility. Other
5 limitations of the DCF include the constant P-E multiple assertion that does not
6 conform with actual stock market performance. And, indeed, the Federal Energy
7 Regulatory Commission has moved to using multiple methods for measuring the
8 cost of equity due to the limitations of the DCF. Further, the DCF method is slow
9 to reflect changes in interest rates. Hence, the DCF should always be used along
10 with other methods that are more responsive to changes in interest rates.

11 While the results of a DCF analysis should certainly be given weight, the use of
12 more than one method provides a superior foundation for the cost of equity
13 determination. Since all cost of equity methods contain certain unrealistic and
14 overly restrictive assumptions, the use of more than one method will capture the
15 multiplicity of factors that motivate investors to commit capital to an enterprise
16 (i.e., current income, capital appreciation, preservation of capital, level of risk
17 bearing). I am aware that the Commission usually expresses its cost of equity
18 determination in the context of the DCF model. But the Commission also
19 considers other methods as well. In its order entered on December 28, 2012, in
20 Docket No. R-2012-2290597, the Commission stated:

21 Sole reliance on one methodology without checking the
22 validity of the results of that methodology with other cost of
23 equity analyses does not always lend itself to responsible
24 ratemaking. We conclude that methodologies other than the
25 DCF can be used as a check upon the reasonableness of the

1 DCF derived equity return calculation.³

2 Similarly, in the later Aqua Pennsylvania decision, the Commission observed:

3 In the 2012 PPL Order, the Commission considered PPL's
4 CAPM and RP methods, tempered by informed judgment,
5 instead of DCF-only results. We conclude that methodologies
6 other than the DCF can be used as a check upon the
7 reasonableness of the DCF derived ROE calculation.
8 Historically, we have relied primarily upon the DCF
9 methodology in arriving at ROE determinations and have
10 utilized the results of the CAPM as a check upon the
11 reasonableness of the DCF derived equity return. As such,
12 where evidence based on other methods suggests that the
13 DCF-only results may understate the utility's ROE, we will
14 consider those other methods, to some degree, in determining
15 the appropriate range of reasonableness for our equity return
16 determination.⁴

17
18 Again, the Commission recognized the need for additional methods in its decision
19 for Columbia Water.

20 In *Aqua 2022*, the Commission determined the ROE by
21 using informed judgement based on I&E's DCF and CAPM
22 methodologies. We conclude that methodologies other than
23 the DCF can be used as a check upon the reasonableness of
24 the DCF derived ROE calculation. We historically have
25 primarily relied upon the DCF methodology in arriving at
26 ROE determinations and utilized the results of the CAPM,
27 as a check upon the reasonableness of the DCF derived
28 equity return. As such, where evidence based on other
29 methods suggests that the DCF-only results may understate
30 the utility's ROE, we will consider those other methods, to
31 some degree, in determining the appropriate range of
32 reasonableness for our ROE determination.⁵
33

³ *Pennsylvania Public Utility Commission v. PPL Electric Utilities*, R-2012-2290597, meeting held December 5, 2012, at 80.

⁴ *Pennsylvania Public Utility Commission v. Aqua Pennsylvania, Inc.*, R-2021-3027385, order entered May 16, 2022, at 154-55.

⁵ *Pennsylvania Public Utility Commission v. Columbia Water Company*, R-2023-3040258, order entered January 18, 2024, at 108.

1 The Commission has acknowledged the usefulness of other methods as a means
2 of establishing a range of reasonable returns. Indeed, it is clear that the
3 Commission has been guided by the results of other models and other factors
4 aside from DCF when setting the DSIC return. The Commission's selection of
5 the rate of return on equity for use in the DSIC is usually set well above the cost
6 of equity indicated by the DCF model alone.

7 **32. Q. What is the dividend yield component of a DCF analysis?**

8 A. The dividend yield reveals the portion of investors' cash flow that is generated by
9 the return provided by the dividends an investor receives. It is measured by the
10 dividends per share relative to the price per share. The DCF methodology
11 requires the use of an expected dividend yield to establish the investor-required
12 cost of equity. For the twelve months ended December 2023, the monthly
13 dividend yields are shown on Schedule 7. The month-end prices were adjusted to
14 reflect the buildup of the dividend in the price that has occurred since the last ex-
15 dividend date (i.e., the date by which a shareholder must own the shares to be
16 entitled to the dividend payment – usually about two to three weeks prior to the
17 actual payment).

18 For the twelve months ended December 2023, the average dividend yield was
19 4.03% for the Electric Group based upon a calculation using annualized dividend
20 payments and adjusted month-end stock prices. The dividend yields for the more
21 recent six-month and three-month periods were 4.26% and 4.36%, respectively.
22 For applying the DCF model, I have used the six-month average dividend yield of

1 4.26% for the Electric Group. The use of this dividend yield will reflect current
2 capital costs while avoiding spot yields. For the purpose of a DCF calculation,
3 the average dividend yield must be adjusted to reflect the prospective nature of
4 the dividend payments, i.e., the higher expected dividends for the future. Recall
5 that the DCF is an expectational model that must reflect investors' anticipated
6 cash flows. I have adjusted the six-month average dividend yield in three
7 different but generally accepted manners and used the average of the three
8 adjusted values as calculated in the lower panel of data presented on Schedule 7.⁶
9 This adjustment adds fourteen basis points to the six-month average historical
10 yield, thus producing the 4.40% adjusted dividend yield for the Electric Group.

11 **33. Q. What factors influence investors' growth expectations?**

12 A. As noted previously, investors are interested principally in the dividend yield and
13 future growth of their investment (i.e., the price per share of the stock). Future
14 growth in earnings per share is the DCF model's primary focus because, under the
15 model's assumption that the P-E multiple remains constant, the price per share of
16 stock will grow at the same rate as earnings per share. A growth rate analysis
17 considers a variety of variables to reach a consensus of prospective growth,

⁶ These adjustments are the 1/2 growth approach, the discrete approach, and the quarterly approach. Under the 1/2 approach, the procedure to adjust the average dividend yield for the expectation of a dividend increase during the initial investment period will be at a rate of one-half the growth component, which assumes that half of the dividend payments will be at the expected higher rate during the initial investment period. Under the discrete approach, the "g" in the DCF model reflects the discrete growth in the quarterly dividend, which is required for the periodic form of the DCF to properly recognize that dividends are expected to grow on a discrete basis. The quarterly approach takes into account that investors have the opportunity to reinvest quarterly dividend receipts. Recognizing the compounding of the periodic quarterly dividend payments (D_0) results in this third DCF formulation. This DCF equation provides no further recognition of growth in the quarterly dividend. A compounding of the quarterly dividend yield recognizes the necessity for an adjusted dividend yield.

1 including historical data and widely available analysts' forecasts of earnings,
2 dividends, book value, and cash flow (all stated on a per-share basis). A
3 fundamental growth rate analysis is frequently based upon internal growth ($b \times r$),
4 where "r" is the expected rate of return on common equity and "b" is the retention
5 rate (a fraction representing the proportion of earnings not paid out as dividends).
6 To be complete, the internal growth rate should be modified to account for sales
7 of new common stock (external growth), which is represented by the formula $s \times v$,
8 where "s" is the number of new common shares that the firm expects to issue
9 and "v" is the value that accrues to existing shareholders from selling stock at a
10 price above book value. Fundamental growth, which combines internal and
11 external growth, encompasses the factors that cause book value per share to grow
12 over time.

13 Growth also can be expressed in multiple stages. This expression of growth
14 consists of an initial "growth" stage during which a firm enjoys rapidly expanding
15 markets, high profit margins, and abnormally high growth in earnings per share.
16 Thereafter, a firm enters a "transition" stage during which fewer technological
17 advances and increased product saturation begin to reduce the growth rate and
18 profit margins come under pressure. During the "transition" stage, investment
19 opportunities begin to mature, capital requirements decline, and a firm begins to
20 pay out a larger percentage of earnings to shareholders. Finally, the mature or
21 "steady-state" stage is reached when a firm's earnings growth, payout ratio, and
22 return on equity stabilize at levels where they remain for the life of a firm. The
23 three stages of growth assume a step-down of high initial growth to lower

sustainable growth. Even if these three stages of growth can be envisioned for a firm, the third “steady-state” growth stage, which is assumed to remain fixed in perpetuity, represents an unrealistic expectation because the three stages of growth can be repeated. That is to say, the stages can be repeated where growth for a firm ramps up and ramps down in cycles over time. For these reasons, there is no need to analyze growth rates individually for each cycle, but rather to rely upon analysts’ growth forecasts that are used by investors when pricing common stocks.

34. Q. What factor should be considered in the determination of an appropriate growth rate?

A. The growth rate used in a DCF calculation should measure investor expectations. Investors consider both company-specific variables and overall market sentiment (i.e., level of inflation rates, interest rates, economic conditions, etc.) when balancing their capital gains expectations with their dividend yield requirements. Investors are not influenced solely by a single set of company-specific variables weighted in a formulaic manner. Therefore, all relevant growth rate indicators should be evaluated using a variety of techniques when formulating a judgment of investor-expected growth.

35. Q. What data for the Electric Group have you considered in your growth rate analysis?

A. I considered the growth in the financial variables shown on Schedules 8 and 9, which reflect historical (Schedule 8) and projected (Schedule 9) rates of growth in earnings per share, dividends per share, book value per share, and cash flow per

1 share for the Electric Group. While analysts will review all measures of growth,
2 as I have done, earnings per share growth directly influences the expectations of
3 investors for the future performance of utility stocks. Forecasts of earnings
4 growth are required because the DCF model is forward-looking, and, with the
5 constant P-E multiple and constant payout ratio that the DCF model assumes, all
6 other measures of growth will mirror earnings growth. The historical growth
7 rates, which were also reviewed to gain a perspective on the industry, were
8 obtained from the Value Line publication that provides this data. While historical
9 data cannot be ignored, they are much less significant when applying the DCF
10 model than projections of future growth. Investors cannot purchase the past
11 earnings of a utility. To the contrary, they are only entitled to future earnings,
12 which are the focus of growth projections. Furthermore, if significant weight is
13 assigned to historical performance, the historical data are double-counted because
14 they are already factored into analysts' forecasts of earnings growth.

15 **36. Q. Is a five-year investment horizon associated with the analysts' forecasts**
16 **consistent with the traditional DCF model?**

17 A. Yes, it is. Although the constant form of the DCF model assumes an infinite
18 stream of cash flows, investors do not expect to hold an investment indefinitely.
19 Rather than viewing the DCF in the context of an endless stream of growing
20 dividends (e.g., a century of cash flows), the growth in the share value (i.e.,
21 capital appreciation, or capital gains yield) is most relevant to investors' total
22 return expectations. Hence, the sale price of a stock can be viewed as a
23 liquidating dividend that can be discounted along with the annual dividend

1 receipts during the investment-holding period to arrive at the investors' expected
2 return. The growth in the price per share will equal the growth in earnings per
3 share if, as the DCF model assumes, there is no change in the price-earnings ("P-
4 E") multiple. As such, my company-specific growth analysis, which focuses
5 principally upon five-year forecasts of earnings per share growth, conforms with
6 the type of analysis that influences investors' expectations of their actual total
7 return. Moreover, academic research also focuses on five-year growth rates
8 specifically because market outcomes occurring over that investment horizon are
9 what influence stock prices. Indeed, if investors required forecasts beyond five
10 years in order to properly value common stocks, then it would be reasonable to
11 expect that some investment advisory service would begin publishing that
12 information for individual stocks in order to meet the demands of the
13 marketplace. The absence of such a publication suggests that there is no market
14 for this information because investors do not require forecasts for an infinite
15 series of future data points in order to make informed decisions to purchase and
16 sell stocks.

17 **37. Q. What are the analysts' forecasts of future growth that you considered?**

18 A. Schedule 9 provides projected earnings per share growth rates taken from
19 analysts' five-year forecasts compiled by IBES/First Call, Zacks, and Value Line.
20 These are all reliable authorities of projected growth that investors use to make
21 buy, sell, and hold decisions. The IBES/First Call and Zacks estimates are
22 obtained from the Internet and are widely available to investors. The growth rates
23 reported by IBES/First Call and Zacks are consensus forecasts taken from a

1 survey of analysts that make growth projections for these companies. Notably,
2 First Call's earnings forecasts are frequently quoted in the financial press. The
3 Value Line forecasts also are widely available to investors and can be obtained by
4 subscription or free of charge at most public and collegiate libraries. The
5 IBES/First Call and Zacks forecasts are limited to earnings per share growth,
6 while Value Line makes projections of other financial variables. The Value Line
7 forecasts of dividends per share, book value per share, and cash flow per share for
8 the Electric Group are also included on Schedule 9.

9 **38. Q. What are the projected growth rates published by the sources you discussed?**

10 A. Schedule 9 shows the prospective five-year earnings per share growth rates
11 projected for the Electric Group by IBES/First Call (7.18%), Zacks (5.28%), and
12 Value Line (5.33%).

13 **39. Q. Are certain growth rate forecasts entitled to greater weight in developing a**
14 **growth rate for use in the DCF model?**

15 A. Yes. While a variety of factors should be examined to reach a reasonable
16 conclusion on the DCF growth rate, growth in earnings per share should receive
17 the greatest emphasis. Growth in earnings per share is the primary determinant of
18 investors' expectations of the total returns they will obtain from stocks because
19 the capital gains yield (i.e., price appreciation) will track earnings growth if the P-
20 E multiple remains constant, as the DCF model assumes. Moreover, earnings per
21 share (derived from net income) are the source of dividend payments and are the
22 primary driver of retention growth and its surrogate, i.e., book value per share
23 growth. As such, under these circumstances, greater emphasis must be placed

1 upon projected earnings per share growth. In fact, Professor Gordon, the
2 foremost proponent of the use of the DCF model in setting utility rates, concluded
3 that the best measure of growth for use in the DCF model is a forecast of earnings
4 per-share growth.⁷ Consistent with Professor Gordon's findings, projections of
5 earnings per share growth, such as those published by IBES/First Call, Zacks, and
6 Value Line, provide the best indication of investor expectations.

7 **40. Q. What growth rate do you use in your DCF model?**

8 A. The forecasts shown on Schedule 9 for the Electric Group exhibit a range of
9 average earnings per share growth rates from 5.28% to 7.18%. DCF growth rates
10 should not be established by mathematical formulation, and I have not done so.
11 In my opinion, a growth rate of 6.00% is a reasonable estimate of investor-
12 expected growth for the Electric Group. This value is within the array of
13 analysts' forecasts of five-year earnings per share growth rates. The
14 reasonableness of this growth rate is also supported by the expected continuation
15 of electric utility infrastructure spending.

16 **41. Q. Are the dividend yield and growth components of the DCF adequate to**
17 **accurately depict the rate of return on common equity when it is used to**
18 **calculate a utility's weighted average overall cost of capital?**

19 A. The components of the DCF model are adequate for that purpose only if the
20 capital structure ratios are measured by the market value of debt and equity. In
21 the case of the Electric Group, average capital structure ratios are 37.91% long-

⁷ Gordon, Gordon & Gould, "Choice Among Methods of Estimating Share Yield," The Journal of Portfolio Management (Spring 1989).

term debt, 0.36% preferred stock, and 61.74% common equity, as shown on Schedule 10. These ratios are calculated from market values based on the fair value of debt and preferred stock, if any, and the price of each company's common stock. Hence, all values here related to the investors' valuation of debt and equity in the capital markets. If book values are used to compute the capital structure ratios, then a leverage adjustment is required in the case where the capital structure ratios vary from market values.

42. Q. What is a leverage adjustment?

A. If a firm's capitalization, as measured by its stock price, diverges from its capitalization, measured at book value, the potential exists for a financial risk difference. Such a risk difference arises because a market-valued capitalization contains more equity and less debt than a book-value capitalization and, therefore, has less risk than the book-value capitalization. A leverage adjustment properly accounts for the risk differential between market-value and book-value capital structures.

43. Q. Why is a leverage adjustment appropriate?

A. In order to make the DCF results relevant to the capitalization measured at book value (as is done for rate setting purposes), the market-derived cost rate must be adjusted to account for this difference in financial risk. The only perspective that is important to investors is the return that they can realize on the market value of their investment. As I have measured the DCF, the simple yield (D/P) plus growth (g) provides a return applicable strictly to the price (P) that an investor is willing to pay for a share of stock. The need for the leverage adjustment arises

1 when the results of the DCF model (k) are to be applied to a capital structure that
2 is different from the capital structure indicated by the market price (P). From the
3 market perspective, the financial risk of the Electric Group is accurately measured
4 by the capital structure ratios calculated from the market-valued capitalization of
5 a firm. If the ratemaking process utilized the market capitalization ratios, then no
6 additional analysis or adjustment would be required, and the simple yield (D/P)
7 plus growth (g) components of the DCF would satisfy the financial risk associated
8 with the market value of the equity capitalization. Because the ratemaking
9 process uses ratios calculated from a firm's book value capitalization, further
10 analysis is required to synchronize the financial risk of the book capitalization
11 with the required return on the book value of the firm's equity. This adjustment is
12 developed through precise mathematical calculations, using well-recognized
13 analytical procedures that are widely accepted in the financial literature. To
14 arrive at that return, the rate of return on common equity is the unleveraged cost
15 of capital (or equity return at 100% equity) plus one or more terms reflecting the
16 increase in financial risk resulting from the use of leverage in the capital structure.
17 The calculations presented in the lower panel of data shown on Schedule 10,
18 under the heading "M&M,"⁸ provide a return of 9.07% when applicable to a
19 capital structure with 100% common equity.

20 **44. Q. Are there specific factors that influence market-to-book ratios that**
21 **determine whether the leverage adjustment should be made?**

⁸ Franco Modigliani and Merton H. Miller, "The Cost of Capital, Corporation Finance, and the Theory of Investments," American Economic Review, June 1958, at 261-97. Franco Modigliani and Merton H. Miller, "Taxes and the Cost of Capital: A Correction," American Economic Review, June 1963, at 433-43.

1 A. No. The leverage adjustment is not intended, nor was it designed, to address the
2 reasons that stock prices vary from book value. Hence, any observations
3 concerning market prices relative to book value are not on point. The leverage
4 adjustment deals with the issue of financial risk and does not transform the DCF
5 result to a book value return through a market-to-book adjustment. Again, the
6 leverage adjustment that I propose is based on the fundamental financial precept
7 that the cost of equity is equal to the rate of return for an unleveraged firm (i.e.,
8 where the overall rate of return equates to the cost of equity with a capital
9 structure that contains 100% equity) plus the additional return required for
10 introducing debt and/or preferred stock leverage into the capital structure.

11 Further, as noted previously, the relatively high market prices of utility stocks
12 cannot be attributed solely to the notion that these companies are expected to earn
13 a return on the book value of equity that differs from their cost of equity
14 determined from stock market prices. Stock prices above book value are common
15 for utility stocks, and indeed the stock prices of non-regulated companies exceed
16 book values by even greater margins. It is difficult to accept that the vast majority
17 of all firms operating in our economy are generating returns far in excess of their
18 cost of capital. Certainly, in our free-market economy, competition should
19 contain such “excesses” if they actually exist.

20 Finally, the leverage adjustment adds stability to the final DCF cost rate. That is
21 to say, as the market capitalization increases relative to its book value, the
22 leverage adjustment increases while the simple yield (D/P) plus growth (g) result
23 declines. The reverse is also true: when the market capitalization declines, the

leverage adjustment also declines as the simple yield (D/P) plus growth (g) result increases.

45. Q. Is the leverage adjustment that you propose designed to transform the market return into one that is designed to produce a particular market-to-book ratio?

A. No, it is not. What I label a “leverage adjustment” is merely a convenient way of showing the amount that must be added to (or subtracted from) the result of the simple DCF model (i.e., $D/P + g$) when the DCF return applies to a capital structure used for ratemaking that is computed with book-value weighting rather than market-value weighting. Although I specify a separate factor, which I call the leverage adjustment, there is no need to do so other than to identify this factor. If I were to express my return solely in the context of the book value weighting that we use to calculate the weighted average cost of capital and ignore the familiar $D/P + g$ expression entirely, then a separate element in the DCF cost of equity determination would not be needed to reflect the differential in financial leverage between a market-value and book-value capitalization. As shown in the bottom panel of data on Schedule 10, the equity return applicable to the book value common equity ratio is equal to 9.07%, which is the return for the Electric Group appropriate for a capital structure with no debt (i.e., a 100% equity ratio) plus 2.67% to compensate investors for the risk of a 55.23% debt ratio and 0.04% for a 0.46% preferred stock ratio. These are the book-value ratios that differ markedly from the market-value based ratios I discussed previously. Under this approach, the parts add up to 11.78% ($9.07\% + 2.67\% + 0.04\%$), and there is no

1 need to even address the cost of equity in terms of $D/P + g$. To express this same
2 return in the context of the familiar DCF model, I added the 4.40% dividend
3 yield, the 6.00% growth rate, and 1.38% for the leverage adjustment in order to
4 arrive at the same 11.78% ($4.40\% + 6.00\% + 1.38\%$) return. I know of no means
5 to mathematically solve for the 1.38% leverage adjustment by expressing it in the
6 terms of any particular relationship of market price to book value. The 1.38%
7 adjustment is merely a convenient way to compare the 11.78% return computed
8 using the Modigliani & Miller formulas to the 10.40% return generated by the
9 DCF model (i.e., $D_1/P_0 + g$, or the traditional form of the DCF shown on Schedule
10 1, page 2) based on a market-value capital structure. A 10.40% return assigned to
11 anything other than the market value of equity cannot equate to a reasonable
12 return on book value that has higher financial risk. My point is that when we use
13 a market-determined cost of equity developed from the DCF model, it reflects a
14 level of financial risk that is different (in this case, lower) from the capital
15 structure stated at book value. This process has nothing to do with targeting any
16 particular market-to-book ratio.

17 **46. Q. Please provide the DCF return based upon your preceding discussion of**
18 **dividend yield, growth, and leverage.**

19 A. As explained previously, I have utilized a six-month average dividend yield
20 (D_1/P_0) adjusted in a forward-looking manner for my DCF calculation. This
21 dividend yield is used in conjunction with the growth rate (g) previously
22 developed. The DCF also includes the leverage modification (Lev.) required
23 when the book value equity ratio is used in determining the weighted average cost

of capital in the ratemaking process rather than the market value equity ratio related to the price of stock. The resulting DCF cost rate is 11.78%, computed as follows:

$$\begin{array}{rccccccccc} & D_1/P_0 & + & g & + & lev. & = & K \\ \text{Electric Group} & 4.40\% & + & 6.00\% & + & 1.38\% & = & 11.78\% \end{array}$$

The DCF result shown above represents the simplified (i.e., Gordon) form of the model that contains a constant-growth assumption. I should reiterate, however, that the DCF-indicated cost rate provides an explanation of the rate of return on common stock market prices without regard to the prospect of a change in the P-E multiple. An assumption that there will be no change in the P-E multiple is not supported by the realities of the equity market because P-E multiples do not remain constant. This is one of the constraints of this model that makes it important to consider the results of other models when determining a company's cost of equity.

VIII. RISK PREMIUM ANALYSIS

47. Q. Please describe your use of the Risk Premium approach to determine the cost of equity.

A. With the Risk Premium approach, the cost of equity capital is determined by corporate bond yields plus a premium to account for the fact that common equity is exposed to greater investment risk than debt capital. The result of my Risk Premium study is shown on Schedule 1, page 2. That result is 11.50%.

1 **48. Q. What long-term public utility debt cost rate did you use in your Risk**
2 **Premium analysis?**

3 A. In my opinion, and as I will explain in more detail further in my testimony, a
4 5.00% yield represents a reasonable estimate of the prospective yield on long-
5 term, public utility bonds. The 5.00% public utility bond yield I used in the Risk
6 Premium method is very conservative given current interest rates.

7 **49. Q. What historical data are shown by the Moody's data?**

8 A. I have analyzed the historical yields on the Moody's index of long-term public
9 utility debt as shown on Schedule 11, page 1. For the 12 months ended December
10 2023 the average monthly yield on Moody's index public utility bonds was
11 5.54%. For the six- and three-month periods ended December 2023, the yields
12 were 5.78% and 5.91%, respectively. During the 12 months ended December
13 2023, the range of the yields on public utility bonds were 5.13% to 6.34%. Page 2
14 of Schedule 11 shows the long-run spread in yields between A-rated public utility
15 bonds and long-term Treasury bonds. As shown on page 3 of Schedule 11, the
16 yields on A-rated public utility bonds have exceeded those on Treasury bonds by
17 1.45% on a twelve-month average basis, 1.37% on a six-month average basis, and
18 1.32% on a three-month average basis. With these data, 1.25% represents a
19 reasonable, albeit conservative, spread for the yield on A-rated public utility
20 bonds over Treasury bonds.

21 **50. Q. What forecasts of interest rates have you considered in your analysis?**

22 A. I have determined the prospective yield on A-rated public utility debt by using the
23 Blue Chip Financial Forecasts ("Blue Chip") along with the spread in the yields

1 that I describe above. Blue Chip is a reliable authority and contains consensus
2 forecasts of various interest rates compiled from a panel of banking, brokerage,
3 and investment advisory services. In early 1999, Blue Chip stopped publishing
4 forecasts of yields on A-rated public utility bonds because the Federal Reserve
5 deleted these yields from its Statistical Release H.15. To independently project a
6 forecast of the yields on A-rated public utility bonds, I have combined the forecast
7 yields on long-term Treasury bonds published on December 28, 2023, and a yield
8 spread of 1.25%, derived from recent historical data.

9 **51. Q. How have you used these data to project the yield on A-rated public utility**
10 **bonds for the purpose of your Risk Premium analyses?**

11 A. Shown below is my calculation of the prospective yield on A-rated public utility
12 bonds using the building blocks discussed above, i.e., the Blue Chip forecast of
13 Treasury bond yields and the public utility bond yield spread. For comparative
14 purposes, I have also shown the Blue Chip forecasts of Aaa-rated and Baa-rated
15 corporate bonds. These forecasts are:

		Blue Chip Financial Forecasts				
		Corporate		30-Year	A-rated Public Utility	
Year	Quarter	Aaa-rated	Baa-rated	Treasury	Spread	Yield
2024	First	5.1%	6.1%	4.3%	1.25%	5.55%
2024	Second	5.0%	6.0%	4.3%	1.25%	5.55%
2024	Third	4.9%	6.0%	4.2%	1.25%	5.45%
2024	Fourth	4.8%	5.9%	4.1%	1.25%	5.35%
2025	First	4.8%	5.8%	4.0%	1.25%	5.25%
2025	Second	4.7%	5.8%	4.0%	1.25%	5.25%

16 **52. Q. Are there additional forecasts of interest rates that extend beyond those**
17 **shown above?**

18 A. Yes. Twice yearly, Blue Chip provides long-term forecasts of interest rates. In

1 its December 1, 2023 publication, Blue Chip published longer-term forecasts of
2 interest rates, which were reported to be:

<u>Averages</u>	<u>Blue Chip Financial Forecasts</u>		
	<u>Corporate</u>		<u>30-Year</u>
	<u>Aaa-rated</u>	<u>Baa-rated</u>	<u>Treasury</u>
2025-2029	4.9%	6.0%	4.1%
2030-2034	5.0%	6.0%	4.2%

3 The longer-term forecasts by Blue Chip suggest that interest rates will continue to
4 be above pre-Pandemic levels. A 5.00% yield on A-rated public utility bonds
5 represents a reasonably conservative benchmark for measuring the cost of equity
6 in this case. All the data I used to formulate my conclusion as to a prospective
7 yield on A-rated public utility debt are based on forecasts available to investors,
8 who regularly rely upon such data to make investment decisions. In this case, I
9 have taken a conservative approach in selecting a 5.00% yield on A-rated public
10 utility bonds, because current rates and forecasts would support a higher rate. My
11 rate will accommodate reductions that may occur later in 2024.

12 **53. Q. What equity risk premium have you determined for public utilities?**

13 A. To develop an appropriate equity risk premium, I analyzed the results from 2022
14 SBBI Yearbook, Stocks, Bonds, Bills, and Inflation. My investigation reveals
15 that the equity risk premium varies according to the level of interest rates. That is
16 to say, the equity risk premium increases as interest rates decline, and it declines
17 as interest rates increase. This inverse relationship is revealed by the summary
18 data presented below and shown on Schedule 12, page 1.

Common Equity Risk Premiums

Low Interest Rates	7.13%
Average Across All Interest Rates	5.96%
High Interest Rates	4.76%

Based on my analysis of the historical data, the equity risk premium was 7.13% when the marginal cost of long-term government bonds was low (i.e., 2.83%, which was the average yield during periods of low rates). Conversely, when the yield on long-term government bonds was high (i.e., 7.03% on average during periods of high interest rates), the spread narrowed to 4.76%. Over the entire spectrum of interest rates, the equity risk premium was 5.96% when the average government bond yield was 4.91%. From these data, I have utilized a 6.50% equity risk premium. The equity risk premium of 6.50% is between the premiums associated with low interest rates (i.e., 7.13%) and average for the entire historical period interest rates (i.e., 5.96%).

54. Q. What common equity cost rate did you determine based on your Risk Premium analysis?

A. The cost of equity (i.e., “k”) is represented by the sum of the prospective yield for long-term public utility debt (i.e., “i”) and the equity risk premium (i.e., “RP”).

The Risk Premium approach provides a cost of equity of:

$$i + RP = k$$

$$\text{Electric Group } 5.00\% + 6.50\% = 11.50\%$$

IX. CAPITAL ASSET PRICING MODEL

55. Q. How is the CAPM used to measure the cost of equity?

A. The CAPM uses the yield on a risk-free interest-bearing obligation plus a rate of return premium that is proportional to the systematic risk of an investment. As shown on page 2 of Schedule 1, the result of the CAPM is 13.25% for the Electric Group with the leverage adjustment. Without the leverage adjustment, the CAPM result is 11.02% ($13.25\% - (0.27 \times 8.26\%)$) through use of the Value Line beta excluding the leverage adjustment (i.e., $1.15 - 0.88 = 0.27$). To compute the cost of equity with the CAPM, three components are necessary: a risk-free rate of return ("Rf"), the beta measure of systematic risk (" β "), and the market risk premium ("Rm-Rf") derived from the total return on the market of equities reduced by the risk-free rate of return. The CAPM specifically accounts for differences in systematic risk (i.e., market risk as measured by the beta) between an individual firm or group of firms and the entire market of equities.

56. Q. What betas have you considered in the CAPM?

A. For my CAPM analysis, I initially considered the Value Line betas. As shown on page 2 of Schedule 3, the average beta is 0.88 for the Electric Group.

57. Q. Did you use the Value Line betas in the CAPM determined cost of equity?

A. I used the Value Line betas as a foundation for the leverage adjusted betas that I used in the CAPM. The Value Line betas are measured over a five-year period. The betas must be reflective of the financial risk associated with the ratemaking capital structure that is measured at book value. Therefore, Value Line betas

cannot be used directly in the CAPM, unless the cost rate developed using those betas is applied to a capital structure measured with market values. Since we used book values in this case, the Value Line betas must be adjusted for the higher financial risk associated with the book value capital structure. To develop a CAPM cost rate applicable to a book-value capital structure, the Value Line (market value) betas have been unleveraged and re-leveraged for the book value common equity ratios using the Hamada formula,⁹ as follows:

$$\beta_l = \beta_u [1 + (1 - t) D/E + P/E]$$

β_l = the leveraged beta, β_u = the unleveraged beta, t = income tax rate, D = debt ratio, P = preferred stock ratio, and E = common equity ratio. The betas published by Value Line have been calculated with the market price of stock and are related to the market value capitalization. By using the formula shown above and the capital structure ratios measured at market value, the beta would become 0.63 for the Electric Group if it employed no leverage and was 100% equity financed. Those calculations are shown on Schedule 10 under the section labeled “Hamada,” who is credited with developing those formulas. With the unleveraged beta as a base, I calculated the leveraged beta of 1.15 for the book value capital structure of the Electric Group.

58. Q. What risk-free rate have you used in the CAPM?

⁹ Robert S. Hamada, “The Effects of the Firm’s Capital Structure on the Systematic Risk of Common Stocks,” The Journal of Finance, Vol. 27, No. 2; Papers and Proceedings of the Thirtieth Annual Meeting of the American Finance Association, New Orleans, Louisiana, Dec. 27-29, 1971. (May 1972), pp. 435-52.

1 A. As shown on page 1 of Schedule 13, I provided the historical yields on Treasury
2 notes and bonds. For the twelve months ended December 2023, the average yield
3 on 30-year Treasury bonds was 4.09%. For the six- and three-months ended
4 December 2023, the yields on 30-year Treasury bonds were 4.41% and 4.58%,
5 respectively. During the twelve months ended December 2023, the range of the
6 yields on 30-year Treasury bonds was 3.66% to 4.95%. The low yields that
7 existed during 2020 can be traced to extraordinary events associated with the
8 Pandemic that jolted the capital markets. Due to high inflation rates above the
9 policy goal of the FOMC, the accommodative policy was ended by the FOMC in
10 the first quarter of 2022. A tighter monetary policy was put in place and resulted
11 in higher interest rates that have already occurred. After the FOMC ended its
12 bond-buying program (i.e., quantitative easing) in March 2022, it is in the process
13 of running off its \$9 trillion asset portfolio, which will keep interest rates at
14 elevated levels.

15 High interest rates clearly point to high capital costs, as indicated by recent bond
16 yields. The yield on 10-year Treasury bonds moved above the 3% level on May
17 2, 2022, for the first time since late 2018. By December 2023, the yield on 30-
18 year Treasury bonds moved to 4.14%, or an increase of 2.47% (or 148%) since
19 December 2020.

20 As shown on page 2 of Schedule 13, forecasts published by Blue Chip on
21 December 28, 2023, indicate that the yields on long-term Treasury bonds are
22 expected to be in the range of 4.0% to 4.3% during the next six quarters. This
23 means that elevated interest rates will continue near current levels. The longer-

term forecasts show that the yields on 30-year Treasury bonds will average 4.1% from 2025 through 2029 and 4.2% from 2030 to 2034. Hence, I have used a conservative 3.75% risk-free rate of return for CAPM purposes, which considers the possibility of some moderation of rates prospectively.

59. Q. What market premium have you used in the CAPM?

A. As shown in the lower panel of data presented on page 2 of Schedule 13, the market premium is derived from historical data and the forecast returns. For the historically based market premium, I have used the arithmetic mean obtained from the data presented on page 1 of Schedule 12. On that schedule, the market return was 12.21% ($12.40\% + 12.02\% = 24.42\% \div 2$) as the midpoint of the “low” and “average” interest rate environments. During those periods, the yield on long-term government bonds was 3.87% ($2.83\% + 4.91\% = 7.74\% \div 2$). The resulting market premium is 8.34% ($12.21\% - 3.87\%$) based on historical data, as shown on page 2 of Schedule 13. As also shown on page 2 of Schedule 13, I calculated the forecast returns, which show a 11.93% total market return based on the Value Line forecasts. With these data, I calculated a market premium of 8.18% ($11.93\% - 3.75\%$) using the forecast data by Value Line. The resulting market premium applicable to the CAPM derived from these sources equals 8.26% ($8.18\% + 8.34\% = 16.52\% \div 2$).

60. Q. What does your CAPM analysis show?

A. Using the 3.75% risk-free rate of return, the leverage adjusted beta of 1.15 for the Electric Group, and the 8.26% market premium, the following result is indicated.

$$R_f + \beta \times (R_m - R_f) = k$$

$$\text{Electric Group } 3.75\% + 1.15 \times (8.26\%) = 13.25\%$$

The CAPM results shown here should receive more weight in an environment of rising interest rates, because the DCF will provide an understated result. Indeed, the Commission has used the results of the CAPM when the DCF is producing atypical results as noted previously regarding the Aqua Pennsylvania order.

X. COMPARABLE EARNINGS APPROACH

61. Q. What is the Comparable Earnings approach?

A. The Comparable Earnings approach estimates a fair return on equity by comparing returns realized by non-regulated companies to returns that a public utility with similar risk characteristics would need to realize in order to compete for capital. Because regulation is a substitute for competitively determined prices, the returns realized by non-regulated firms with comparable risks to a public utility provide useful insight into investor expectations for public utility returns. The firms selected for the Comparable Earnings approach should be companies whose prices are not subject to cost-based price ceilings (i.e., non-regulated firms) so that circularity is avoided.

There are two avenues available to implement the Comparable Earnings approach. One method involves the selection of another industry (or industries) with comparable risks to the public utility in question, and the results for all companies within that industry serve as a benchmark. The second approach requires the selection of parameters that represent similar risk traits for the public

1 utility and the comparable risk companies. Using this approach, the business lines
2 of the comparable companies become unimportant. The latter approach is
3 preferable with the further qualification that the comparable risk companies
4 exclude regulated firms in order to avoid the circular reasoning implicit in the use
5 of the achieved earnings/book ratios of other regulated firms. The United States
6 Supreme Court has held that:

7 A public utility is entitled to such rates as will permit it to
8 earn a return on the value of the property which it
9 employs for the convenience of the public equal to that
10 generally being made at the same time and in the same
11 general part of the country on investments in other
12 business undertakings which are attended by
13 corresponding risks and uncertainties. The return should
14 be reasonably sufficient to assure confidence in the
15 financial soundness of the utility and should be adequate,
16 under efficient and economical management, to maintain
17 and support its credit and enable it to raise the money
18 necessary for the proper discharge of its public duties.¹⁰

19 It is important to identify the returns earned by firms that compete for capital with
20 a public utility. This can be accomplished by analyzing the returns of non-regulated
21 firms that are subject to the competitive forces of the marketplace.

22 **62. Q. Did you compare the results of your DCF and CAPM analyses to the results**
23 **indicated by a Comparable Earnings approach?**

24 A. Yes. I selected companies from The Value Line Investment Survey for Windows
25 that have six categories of comparability designed to reflect the risk of the
26 Electric Group. These screening criteria were based upon the range as defined by

¹⁰ *Bluefield* at 668.

1 the rankings of the companies in the Electric Group. The items considered were
2 Timeliness Rank, Safety Rank, Financial Strength, Price Stability, Value Line
3 betas, and Technical Rank. The definition for these parameters is provided on
4 Schedule 14, page 3. The identities of the companies comprising the Comparable
5 Earnings group and their associated rankings within the ranges are identified on
6 Schedule 14, page 1.

7 I relied upon Value Line data because it provides a comprehensive basis for
8 evaluating the risks of the comparable firms. As to the returns calculated by
9 Value Line for these companies, there is some downward bias in the figures
10 shown on Schedule 14, page 2, because Value Line computes the returns on year-
11 end rather than average book value. If average book values had been employed,
12 the rates of return would have been slightly higher. Nevertheless, these are the
13 returns considered by investors when taking positions in these stocks. Because
14 many of the comparability factors, as well as the published returns, are used by
15 investors in selecting stocks, and the fact that investors rely on the Value Line
16 service to gauge returns, it is an appropriate database for measuring comparable
17 return opportunities.

18 **63. Q. What data did you consider in your Comparable Earnings analysis?**

19 A. I used both historical realized returns and forecasted returns for non-utility
20 companies. As noted previously, I have not used returns for utility companies in
21 order to avoid the circularity that arises from using regulatory-influenced returns
22 to determine a regulated return. It is appropriate to consider a relatively long
23 measurement period in the Comparable Earnings approach in order to cover

1 conditions over an entire business cycle. A ten-year period (five historical years
2 and five projected years) is sufficient to cover an average business cycle. Unlike
3 the DCF and CAPM, the results of the Comparable Earnings method can be
4 applied directly to the book value capitalization. In other words, the Comparable
5 Earnings approach does not contain the potential misspecification contained in
6 market models when the market capitalization and book value capitalization
7 diverge significantly. A point of demarcation was chosen to eliminate the results
8 of highly profitable enterprises, which the *Bluefield* case stated were not the type
9 of returns that a utility was entitled to earn. For this purpose, I used 20% as the
10 point where those returns could be viewed as highly profitable and should be
11 excluded from the Comparable Earnings approach. The average historical rate of
12 return on book common equity was 13.1% using only the returns that were less
13 than 20%, as shown on Schedule 14, page 2. The average forecasted rate of
14 return as published by Value Line is 13.4% also using values less than 20%, as
15 provided on Schedule 14, page 2. Using the average of these data, my
16 Comparable Earnings result is 13.25%, as shown on Schedule 1, page 2.

17 XI. CONCLUSION ON COST OF EQUITY

18 **64. Q. What is your conclusion regarding the Company's cost of common equity?**

19 A. Based upon the application of a variety of methods and models described
20 previously, it is my opinion that a reasonable rate of return on common equity is
21 10.95% for PECO, which includes fifteen basis points (or 0.15%) for recognition
22 of the Company's strong management performance. My cost of equity
23 recommendation is within the range of results and should be considered in the

1 context of the Company's risk characteristics relative to the Electric Group
2 companies. The additional 15 basis points is well within the range of
3 management performance provisions that the Commission has recognized
4 previously, which has been between 5 basis points and 25 basis points.

5 It is essential that the Commission employ a variety of techniques to measure the
6 Company's cost of equity because of the limitations/infirmities that are inherent in
7 each method. In summary, the Company should be provided an opportunity to
8 realize an 10.95% rate of return on common equity so that it can compete in the
9 capital markets, attain reasonable credit quality, sustain its cash flow in the context
10 of its high levels of capital expenditures, and receive recognition of the significant
11 accomplishments that management has achieved.

12 **65. Q. Does this complete your direct testimony?**

13 A. Yes it does.

APPENDIX A

TO DIRECT TESTIMONY OF PAUL R. MOUL

Educational Background, Business Experience and Qualifications

I was awarded a degree of Bachelor of Science in Business Administration by Drexel University in 1971. While at Drexel, I participated in the Cooperative Education Program which included employment, for one year, with American Water Works Service Company, Inc., as an internal auditor, where I was involved in the audits of several operating water companies of the American Water Works System and participated in the preparation of annual reports to regulatory agencies and assisted in other general accounting matters.

Upon graduation from Drexel University, I was employed by American Water Works Service Company, Inc., in the Eastern Regional Treasury Department where my duties included preparation of rate case exhibits for submission to regulatory agencies, as well as responsibility for various treasury functions of the thirteen New England operating subsidiaries.

In 1973, I joined the Municipal Financial Services Department of Betz Environmental Engineers, a consulting engineering firm, where I specialized in financial studies for municipal water and wastewater systems.

In 1974, I joined Associated Utility Services, Inc., now known as AUS Consultants. I held various positions with the Utility Services Group of AUS Consultants, concluding my employment there as a Senior Vice President.

In 1994, I formed P. Moul & Associates, an independent financial and regulatory consulting firm. In my capacity as Managing Consultant and for the past twenty-nine years, I have continuously studied the rate of return requirements for cost of service-regulated firms. In this regard, I have supervised the preparation of rate of return studies, which were employed, in

connection with my testimony and in the past for other individuals. I have presented direct testimony on the subject of fair rate of return, evaluated rate of return testimony of other witnesses, and presented rebuttal testimony.

My studies and prepared direct testimony have been presented before thirty-seven (37) federal, state and municipal regulatory commissions, consisting of: the Federal Energy Regulatory Commission; state public utility commissions in Alabama, Alaska, California, Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Virginia, West Virginia, Wisconsin, and the Philadelphia Gas Commission, and the Texas Commission on Environmental Quality. My testimony has been offered in over 200 rate cases involving electric power, natural gas distribution and transmission, resource recovery, solid waste collection and disposal, telephone, wastewater, and water service utility companies. While my testimony has involved principally fair rate of return and financial matters, I have also testified on capital allocations, capital recovery, cash working capital, income taxes, factoring of accounts receivable, and take-or-pay expense recovery. My testimony has been offered on behalf of municipal and investor-owned public utilities and for the staff of a regulatory commission. I have also testified at an Executive Session of the State of New Jersey Commission of Investigation concerning the BPU regulation of solid waste collection and disposal.

I was a co-author of a verified statement submitted to the Interstate Commerce Commission concerning the 1983 Railroad Cost of Capital (Ex Parte No. 452). I was also co-author of comments submitted to the Federal Energy Regulatory Commission regarding the Generic Determination of Rate of Return on Common Equity for Public Utilities in 1985, 1986 and 1987

(Docket Nos. RM85-19-000, RM86-12-000, RM87-35-000 and RM88-25-000). Further, I have been the consultant to the New York Chapter of the National Association of Water Companies, which represented the water utility group in the Proceeding on Motion of the Commission to Consider Financial Regulatory Policies for New York Utilities (Case 91-M-0509). I have also submitted comments to the Federal Energy Regulatory Commission in its Notice of Proposed Rulemaking (Docket No. RM99-2-000) concerning Regional Transmission Organizations and on behalf of the Edison Electric Institute in its intervention in the case of Southern California Edison Company (Docket No. ER97-2355-000). Also, I was a member of the panel of participants at the Technical Conference in Docket No. PL07-2 on the Composition of Proxy Groups for Determining Gas and Oil Pipeline Return on Equity.

In late 1978, I arranged for the private placement of bonds on behalf of an investor-owned public utility. I have assisted in the preparation of a report to the Delaware Public Service Commission relative to the operations of the Lincoln and Ellendale Electric Company. I was also engaged by the Delaware P.S.C. to review and report on the proposed financing and disposition of certain assets of Sussex Shores Water Company (P.S.C. Docket Nos. 24-79 and 47-79). I was a co-author of a Report on Proposed Mandatory Solid Waste Collection Ordinance prepared for the Board of County Commissioners of Collier County, Florida.

I have been a consultant to the Bucks County Water and Sewer Authority concerning rates and charges for wholesale contract service with the City of Philadelphia. My municipal consulting experience also included an assignment for Baltimore County, Maryland, regarding the City/County Water Agreement for Metropolitan District customers (Circuit Court for Baltimore County in Case 34/153/87-CSP-2636).

PECO Energy Company
Proposed Rate of Return
Estimated at December 31, 2025

<u>Type of Capital</u>	<u>Ratios</u>	<u>Cost Rate</u>	<u>Weighted Cost Rate</u>
Long-Term Debt	46.60%	4.58%	2.13%
Common Equity	<u>53.40%</u>	10.95%	<u>5.85%</u>
Total	<u>100.00%</u>		<u>7.98%</u>

Indicated levels of fixed charge coverage assuming that
the Company could actually achieve its proposed rate of return:

Pre-tax coverage of interest expense based upon a 29.3121% composite federal and state income tax rate (10.41% ÷ 2.13%)	4.89 x
Post-tax coverage of interest expense (7.98% ÷ 2.13%)	3.75 x

PECO - Electric

Cost of Equity

Electric Group
Capitalization and Financial Statistics
2018-2022, Inclusive

Notes:

- (1) All capitalization and financial statistics for the group are the arithmetic average of the achieved results for each individual company in the group.
- (2) Excluding Accumulated Other Comprehensive Income ("OCI") from the equity account.
- (3) Total operating expenses, maintenance, depreciation and taxes other than income taxes as a percent of operating revenues.
- (4) Coverage calculations represent the number of times available earnings, both including and excluding AFUDC (allowance for funds used during construction) as reported in its entirety, cover fixed charges.
- (5) Internal cash generation/gross construction is the percentage of gross construction expenditures provided by internally-generated funds from operations after payment of all cash dividends divided by gross construction expenditures.
- (6) Gross Cash Flow (sum of net income, depreciation, amortization, net deferred income taxes and investment tax credits, less total AFUDC) plus interest charges, divided by interest charges.
- (7) Gross Cash Flow plus interest charges divided by interest charges.
- (8) Common dividend coverage is the relationship of internally-generated funds from operations after payment of preferred stock dividends to common dividends paid.

Basis of Selection:

The Electric Group includes companies that: (i) have publicly-traded common stock, (ii) are contained in The Value Line Investment Survey and are classified in the Electric Utility East group, (iii) are not currently the target of an announced merger or acquisition, (iv) are not engaged in the construction of a nuclear generating plant or have not recently cancelled the construction of a nuclear generating plant, and (v) have not recently reduced its common dividend.

Notes:

⁽¹⁾ Includes current portion of long-term debt.

⁽²⁾ Reflects change in long-term debt consisting of:

New issue(s)	\$ 575,000	\$ 975,000
Maturity		\$ (350,000)
Change in Adjustment for Tenders and Calls	\$ 278	\$ 68

⁽³⁾ Excludes Accumulated Other Comprehensive Income

⁽⁴⁾ Equity Infusions

	\$ 580,000	472,000

⁽⁵⁾ Reflects change in retained earnings consisting of:

Net income	\$ 570,000	\$ 763,000
Common Dividends	\$ (400,000)	\$ (534,000)
Tax Sharing Benefit	\$ 8,000	\$ 16,000

Notes: ⁽¹⁾ Determined by taking into account the effect of the annual sinking fund requirements which are met by the retirement of bonds which reduce the term of each issue.

⁽²⁾ The effective cost for each issue is the yield to maturity using as inputs the average term of issue, coupon rate, and net proceeds ratio.

⁽³⁾ Estimated.

⁽⁴⁾ Variable rate at Prime Rate of 4.75% plus two-percentage points.

Comparable Earnings Approach

Screening Parameters

Timeliness Rank

The rank for a stock's probable relative market performance in the year ahead. Stocks ranked 1 (Highest) or 2 (Above Average) are likely to outpace the year-ahead market. Those ranked 4 (Below Average) or 5 (Lowest) are not expected to outperform most stocks over the next 12 months. Stocks ranked 3 (Average) will probably advance or decline with the market in the year ahead. Investors should try to limit purchases to stocks ranked 1 (Highest) or 2 (Above Average) for Timeliness.

Safety Rank

A measure of potential risk associated with individual common stocks rather than large diversified portfolios (for which Beta is good risk measure). Safety is based on the stability of price, which includes sensitivity to the market (see Beta) as well as the stock's inherent volatility, adjusted for trend and other factors including company size, the penetration of its markets, product market volatility, the degree of financial leverage, the earnings quality, and the overall condition of the balance sheet. Safety Ranks range from 1 (Highest) to 5 (Lowest). Conservative investors should try to limit purchases to equities ranked 1 (Highest) or 2 (Above Average) for Safety.

Financial Strength

The financial strength of each of the more than 1,600 companies in the VS II data base is rated relative to all the others. The ratings range from A++ to C in nine steps. (For screening purposes, think of an A rating as "greater than" a B). Companies that have the best relative financial strength are given an A++ rating, indicating ability to weather hard times better than the vast majority of other companies. Those who don't quite merit the top rating are given an A+ grade, and so on. A rating as low as C++ is considered satisfactory. A rating of C+ is well below average, and C is reserved for companies with very serious financial problems. The ratings are based upon a computer analysis of a number of key variables that determine (a) financial leverage, (b) business risk, and (c) company size, plus the judgment of Value Line's analysts and senior editors regarding factors that cannot be quantified across-the-board for companies. The primary variables that are indexed and studied include equity coverage of debt, equity coverage of intangibles, "quick ratio", accounting methods, variability of return, fixed charge coverage, stock price stability, and company size.

Price Stability Index

An index based upon a ranking of the weekly percent changes in the price of the stock over the last five years. The lower the standard deviation of the changes, the more stable the stock. Stocks ranking in the top 5% (lowest standard deviations) carry a Price Stability Index of 100; the next 5%, 95; and so on down to 5. One standard deviation is the range around the average weekly percent change in the price that encompasses about two thirds of all the weekly percent change figures over the last five years. When the range is wide, the standard deviation is high and the stock's Price Stability Index is low.

Beta

A measure of the sensitivity of the stock's price to overall fluctuations in the New York Stock Exchange Composite Average. A Beta of 1.50 indicates that a stock tends to rise (or fall) 50% more than the New York Stock Exchange Composite Average. Use Beta to measure the stock market risk inherent in any diversified portfolio of, say, 15 or more companies. Otherwise, use the Safety Rank, which measures total risk inherent in an equity, including that portion attributable to market fluctuations. Beta is derived from a least squares regression analysis between weekly percent changes in the price of a stock and weekly percent changes in the NYSE Average over a period of five years. In the case of shorter price histories, a smaller time period is used, but two years is the minimum. The Betas are periodically adjusted for their long-term tendency to regress toward 1.00.

Technical Rank

A prediction of relative price movement, primarily over the next three to six months. It is a function of price action relative to all stocks followed by Value Line. Stocks ranked 1 (Highest) or 2 (Above Average) are likely to outpace the market. Those ranked 4 (Below Average) or 5 (Lowest) are not expected to outperform most stocks over the next six months. Stocks ranked 3 (Average) will probably advance or decline with the market. Investors should use the Technical and Timeliness Ranks as complements to one another.

PECO Statement No. 6:

Direct Testimony of Tamara J. Jamison

**PECO ENERGY COMPANY
STATEMENT NO. 6**

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION
v.
PECO ENERGY COMPANY – ELECTRIC DIVISION

DOCKET NO. R-2024-3046931

DIRECT TESTIMONY

WITNESS: TAMARA J. JAMISON

SUBJECT: CLASS COST-OF-SERVICE STUDY

DATED: MARCH 28, 2024

TABLE OF CONTENTS

	Page
I. INTRODUCTION AND PURPOSE OF TESTIMONY	2
II. BACKGROUND INFORMATION AND SUMMARY OF COST-OF-SERVICE STUDY RESULTS.....	4
III. PECO’S CLASS COST-OF-SERVICE STUDY	7
IV. DEVELOPMENT OF RATE CLASS REVENUE REQUIREMENT	29
V. RESULTS OF THE PECO COST-OF-SERVICE STUDY	31
VI. CONCLUSION.....	40

1 **DIRECT TESTIMONY**
2 **OF**
3 **TAMARA J. JAMISON**

4 **I. INTRODUCTION AND PURPOSE OF TESTIMONY**

5 **1. Q. Please state your full name and business address.**

6 A. My name is Tamara J. Jamison. My business address is PECO Energy Company,
7 2301 Market Street, Philadelphia, Pennsylvania 19103.

8 **2. Q. By whom are you employed and in what capacity?**

9 A. I am employed by PECO Energy Company (“PECO” or the “Company”) as
10 Senior Manager, Revenue Policy.

11 **3. Q. Please describe your educational background.**

12 A. I received a Bachelor’s degree in Business Administration with a concentration in
13 Accounting from Georgetown University. I am also a Certified Public
14 Accountant in Pennsylvania.

15 **4. Q. Please describe your work experience with the energy industry.**

16 A. Upon graduation from Georgetown University, I worked in Deloitte’s Assurance
17 and Advisory practice. I was hired by PECO as a Senior Accountant in 2006. I
18 was promoted to a Principal Revenue Accountant in 2008. In 2013, I was
19 promoted to a Senior Manager in Finance. I was appointed Senior Manager of
20 Revenue Policy in PECO’s Regulatory Strategy and Revenue Policy Division in
21 2020. In that capacity, I am responsible for managing certain regulatory filings,

audits, and specific segments of larger regulatory proceedings, including evaluating, analyzing and supporting the Company's requests for changes in revenue related to its regulated electric distribution and transmission businesses and its gas distribution business. I am also responsible for providing expert testimony and coordinating the preparation of testimony by other witnesses on behalf of the Company with respect to various regulatory issues.

5. Q. Please describe the purpose of your testimony.

A. I will explain the cost-of-service principles underlying the unbundled, fully allocated class cost-of-service study ("COSS") that I performed, the methods and procedures employed to perform such study, and the results produced by the COSS.

6. Q. Have you prepared any exhibits to accompany your testimony?

A. Yes. PECO Exhibits TJJ-1 to TJJ-9 were prepared and are described in detail in my testimony.

7. Q. How is your testimony organized?

A. My testimony is divided into four parts. First, I provide some background information, identify the exhibits that I am sponsoring, and summarize the results of the COSS. Second, I introduce and discuss the COSS methodology. Third, I explain the development of the revenue requirement for each rate class. Fourth, I present the results of the COSS in detail and discuss the contents of the exhibits.

1 **8. Q. Please identify the exhibits that are included with your direct testimony.**

2 A. The following exhibits are included with my testimony. They are discussed in
3 greater detail in Section IV of my testimony.

4

PECO Exhibit TJJ-1	Summary of Results
PECO Exhibit TJJ-2	Total Class Allocation - Revenue Requirement by Rate Class
PECO Exhibit TJJ-3	Revenue Requirement by Functional Classification
PECO Exhibit TJJ-4	Unitized Functionally Classified Revenue Requirement
PECO Exhibit TJJ-5	Customer-Related Revenue Requirement and Customer Charge
PECO Exhibit TJJ-6	Night Service Rider-Related Costs
PECO Exhibit TJJ-7	Development of External Allocation Factors
PECO Exhibit TJJ-8	Development of Unbundled Cash Working Capital Rate for the Generation Supply Adjustment
PECO Exhibit TJJ-9	Development of Unbundled Cash Working Capital Rate for the Transmission Service Charge

5

6 **II. BACKGROUND INFORMATION AND SUMMARY OF**
7 **COST-OF-SERVICE STUDY RESULTS**

8 **9. Q. What is the total revenue requirement you used to prepare PECO's COSS?**

9 A. I used the total distribution revenue requirement for the fully projected future test
10 year ("FPFTY") developed in PECO Exhibit MJT-1, which is sponsored by
11 PECO witness Michael J. Trzaska and discussed in Mr. Trzaska's direct
12 testimony (PECO Statement No. 3). The total distribution revenue requirement
13 for the FPFTY is \$2.102 billion (PECO Exhibit TJJ-1, line 64) excluding costs

recovered under PECO's Generation Supply Adjustment ("GSA")¹ and Transmission Service Charge ("TSC")² and \$3.373 billion (PECO Exhibit TJJ-1, line 114) including costs recovered under the GSA and TSC. The total distribution revenues and distribution revenues by customer class for the FPFTY under existing rates that are used in the COSS were also obtained from PECO Exhibit MJT-1.

10. Q. Please summarize the results of the COSS as they pertain to changes in rates proposed in PECO's filing.

A. The results of the COSS and my conclusions based on those results are as follows:

1. The current tariff rates produce the net income by rate class shown on line 16 of PECO Exhibit TJJ-1,³ which yields the rates of return on rate base shown on line 25 of that exhibit. The table below summarizes these results.

Rate Class	ROR	Ratio to Average ROR
R	5.14%	1.16
RH	2.58%	0.59
GS	4.08%	0.92
PD	3.36%	0.76

¹ The GSA is the reconcilable rate adjustment that recovers, on a bypassable basis, the costs PECO incurs to provide default service to customers that do not obtain generation from an electric generation supplier.

² The TSC is the reconcilable rate adjustment that recovers charges for network transmission service incurred by PECO on a bypassable basis from PECO's default service customers. PJM Interconnection, L.L.C. ("PJM") furnishes network transmission service to PECO pursuant to the PJM Open Access Transmission Tariff.

³ Please note that the line numbering is continuous across pages 1-3 of PECO Exhibit TJJ-1. I will refer to the line numbers in PECO Exhibit TJJ-1 without page references.

HT	3.93%	0.89
EP	2.51%	0.57
Lighting	5.86%	1.33
Average	4.41%	

2. PECO's total distribution revenue requirement for the FPFTY has been allocated or assigned among the rate classes based on the results of the COSS. The results of the COSS are summarized on pages 1-3 of PECO Exhibit TJJ-1, which show the total distribution revenue requirement separately for distribution, transmission, and purchased power costs.
3. The increases or (decreases) in revenue by rate class needed to produce rates of return by class equal to the Company's proposed overall rate of return are shown on line 120 of page 3 of PECO Exhibit TJJ-1. The increases or (decreases) in revenue shown on line 120 are shown separately for distribution base rates (line 70) and the working capital revenue requirement recovered in the TSC (line 95) and in the GSA (line 83) on page 2 of PECO Exhibit TJJ-1. While the summary on pages 1-3 of PECO Exhibit TJJ-1 shows the rate increases or (decreases) necessary to move each class to the system average rate of return, the Company is not proposing rates that will take all classes to their indicated cost of service at this time, as explained in the direct testimony of Joseph A. Bisti in PECO Statement No. 7.

1 **III. PECO’S CLASS COST-OF-SERVICE STUDY**

2 **11. Q. Briefly describe the purpose of a class COSS.**

3 A. The purpose of a COSS is to determine the cost to serve, expressed as revenue
4 requirement, for each rate class served by a utility. The revenue requirement for a
5 rate class is that portion of a utility’s total cost of service attributed to that rate
6 class in accordance with principles of cost causation. In a COSS, all of the
7 utility’s costs of providing service must be analyzed and assigned or allocated
8 among the rate classes. The COSS is used, along with other factors, as discussed
9 in more detail by Mr. Bisti, to design rates that fully recover the utility’s costs.

10 **12. Q. What are the guiding principles for performing a class COSS?**

11 A. The central element in performing a COSS is the determination of allocation
12 factors based on causal relationships between, on the one hand, customer
13 demands, load profiles, and usage characteristics, and, on the other hand, the costs
14 incurred by the Company to meet customers’ service requirements imposed by
15 those demands, load profiles, and usage characteristics. The primary goals in
16 selecting allocation factors are: (1) the appropriate recognition of cost causality;
17 (2) the stability of study methods and their consistent application over time, so that
18 trends in the direction of class revenues relative to cost of service can be discerned
19 properly from case to case; and (3) completeness, such that the COSS captures all
20 the costs that each class imposes on the distribution system.

1 **13. Q. What rate classes are included in the PECO COSS?**

2 A. The rate classes included in the PECO COSS are Residential (rate R), Residential
3 Heating (rate RH), General Service (rate GS), Primary Distribution (rate PD),
4 High Tension (rate HT), Electric Propulsion (rate EP), and Lighting. In the
5 COSS, all the Lighting rate schedules in PECO's current tariff are combined into
6 a single Lighting class, because their cost and usage characteristics are very
7 similar. The separate classes consist of Private Outdoor Lighting (POL), Street
8 Lighting-Suburban (SL-S), Street Lighting-Customer-Owned (SL-E), Traffic
9 Lighting Constant Load Service (TLCL), Alley Lighting (AL), and Smart
10 Lighting Control (SL-C).

11 For customers participating in PECO's Customer Assistance Program ("CAP"),
12 the current CAP Residential (CAP-R) rate class is combined with the Residential
13 class, because their usage characteristics are the same, and CAP-R rates are
14 designed with reference to Residential rates. For the same reasons, the current
15 CAP Residential Heating (CAP-RH) rate class is combined with the Residential
16 Heating class.

17 **14. Q. Have you considered combining rate R and rate RH for purposes of the**
18 **COSS?**

19 A. No, because it leads to inappropriate cross subsidization between the two
20 residential rate classes and the other rate classes. Customers served on rate RH
21 and those served only on rate R are not evenly situated throughout PECO's
22 service territory. There are many developments served on PECO's distribution

1 system that were built entirely with, and retain, electric home heating. In those
2 instances, and others, rate RH customers are concentrated on specific localized
3 distribution facilities. The non-coincident peak (“NCP”) demands of those rate
4 RH customers reflect the peaks they impose on the localized facilities that serve
5 them, and those winter peaks are driving the need for capacity in those localized
6 areas. Combining rate R and rate RH into a single customer class for a cost-of-
7 service analysis effectively ignores the rate RH winter peaks. Doing so also
8 ignores the cost causation factor that is driving capacity needs in those localized
9 areas where rate RH customers receive service and results in the subsidization of
10 rate RH.

11 **15. Q. Please summarize the approach you used in preparing PECO’s COSS.**

12 A. As I previously explained, the most critical task in performing any COSS is
13 establishing relationships between customer demands, load profiles, and usage
14 characteristics, and the costs incurred to meet those customer requirements. This
15 requires an understanding of the design of the utility’s distribution system and
16 how that design relates to the characteristics of the customers it is designed to
17 serve.

18 PECO, like most electric utilities, designs its electric distribution system to meet
19 three primary objectives:

- 20 1. Connect all customers to the grid;

2. Deliver sufficient electricity to meet the aggregate peak demand for electricity of all delivery customers whenever those peaks occur; and
3. Ensure that electricity is delivered to customers safely and reliably throughout the year.

The allocation methods used in a COSS must take into account the objectives that the distribution system is designed to achieve so that the allocation of plant investment and operating expenses properly aligns with cost-causation factors such as the need to connect all customers to the distribution system and to meet class peak demands whenever they occur. Other factors, such as incentives to influence customer behavior (e.g., conservation or demand reduction) or to temper the impact on customers of rate changes, are more appropriately considered in the revenue allocation and rate design phase.

The PECO COSS I prepared was performed using the proprietary Electric Cost of Service Model (“Model”) developed by Management Applications Consulting, Inc., which employs a Microsoft Excel platform. The Model facilitates the preparation of the COSS, accelerates computations, and develops appropriate documentation. The Model uses a three-step process to allocate or assign costs to rate classes, in accordance with general cost of service principles. These three steps consist of: (1) functionalizing rate base and costs to determine the particular rate schedules that should share responsibility for each of those assets and costs; (2) classifying functionalized costs into demand-related, energy-related, and customer-related cost categories to facilitate allocating such costs to rate

schedules in accordance with identifiable characteristics; and (3) allocating the functionalized, classified costs among rate classes. The Model provides functionalized, classified cost information by rate class, develops unbundled revenue requirements by functional classification and in total for each rate class, and calculates unit costs.

16. Q. Please describe the functions included in the COSS.

A. The COSS includes the following functions:

Energy: This function includes purchased power and related default service costs incurred by the Company that are recovered under its GSA, which applies to default service.

Transmission: This function includes costs associated with the Company's bulk transmission system, which is designed to move power from generation sources to the primary distribution system and operates at voltages of 69 kV and above. These costs are generally recovered in the TSC and the Non-Bypassable Transmission Rider ("NBT").⁴ The working capital included in this function only applies to the bypassable portion of the TSC cost.

Primary Distribution High Tension ("Primary HT"): This function includes costs associated with moving power from the transmission system to the Primary Distribution system, including substations that transform power from 69 kV to 34

⁴ The NBT is the reconcilable rate adjustment that recovers PJM charges for Regional Transmission Expansion Plan ("RTEP"), Expansion Cost Recovery, and certain Generation Deactivation / Reliability Must Run charges on a non-bypassable basis from all of PECO's distribution customers.

kV or 13 kV and from 34 kV to 13 kV, conductors operating primarily at voltages between 13 kV and 34 kV, and related assets. This includes some facilities operating at voltages of 69 kV and above that are distribution facilities.

Primary Distribution (“Primary”): This function includes costs associated with moving power from the Primary HT system to the primary distribution system, including transformers that reduce voltage from 13 kV to 4 kV or 2.4 kV, conductors operating at voltages between 2.4 kV and 4 kV, and related assets.

Secondary Distribution Customer and Demand (“Secondary Distribution”): This function includes costs associated with moving power from the Primary system to customers’ premises, including costs related to conductors operating at secondary voltage.

Distribution Transformers: This function includes the secondary transformers that reduce the voltage from primary power levels to levels at which secondary voltage customers receive service.

Meters: This function includes the cost to meter customers’ usage and demand.

Services: This function includes the investment in, and operating and maintenance expenses related to, the service lines from the Company’s distribution conductors to customer locations.

Customer Accounts: This function includes the cost of customer billing and records, the call center, collection of customer accounts, and uncollectible accounts.

Customer Service: This function includes costs incurred to provide energy efficiency education, educational advertising, and conservation-related service.

Customer Other: This function includes costs not included elsewhere, such as street lighting and customer deposits.

17. Q. Please describe the classification step of a COSS.

A. In the classification step, the previously functionalized assets and costs are separated into customer, energy, or demand classifications according to the system design or operating characteristics that cause those costs to be incurred.

Customer-related costs are the expenditures made to attach a customer to the distribution system, to meter usage, and to maintain the customer's account.

Customer costs are a function of the number of customers served and continue to be incurred whether or not a customer uses any electricity. This classification includes capital costs associated with poles, wires, services, and meters and operating expenses incurred for customer service, field service, billing, and accounting and related activities.

Energy-related costs are those that vary with the quantity of electricity sold to, or transported for, customers. These costs include purchased power costs and related costs.

Demand-related or capacity-related costs are those expenditures associated with plant that is designed, installed, and operated to meet peak usage. Distribution assets are designed to meet the peak loads of the customers they serve at a

1 localized level. Such localized loads exhibit far less diversity than the
2 aggregation of such localized loads that occurs at the bulk transmission and
3 generation levels. Accordingly, the costs of demand-related distribution assets are
4 allocated among the rate classes based upon their respective class NCP demands
5 (i.e., the peak electricity demand of each rate class, not necessarily coincident
6 with each other or with the system peak).

7 **18. Q. Do all expenses fit neatly into one of these three classifications?**

8 A. Many costs do fit neatly into one of the three classifications, but some costs must
9 be assigned between two classifications based upon special studies or based upon
10 how related costs have been classified. Special studies, such as a minimum size
11 study, are sometimes used to classify poles, conductors, and transformers between
12 customer-related and demand-related investment. A special study was not
13 performed in this case because investment related to such plant operating at
14 secondary voltage was considered to be customer-related and investment in plant
15 operating at primary voltage was considered to be demand-related and, therefore,
16 such plant was classified as customer and demand, respectively.

17 **19. Q. Please describe the class allocation step of a COSS.**

18 A. In the class allocation step, costs that have been functionalized and classified are
19 allocated among the rate classes based on appropriate causal relationships. The
20 allocation phase takes into account the design of the utility system and how it is
21 operated, cost data derived from the utility's accounting records, and usage and
22 load data both for the system overall and for specific customer classes. Based on

analyses of the relationship between costs and the factors driving the need to incur such costs, each component of the revenue requirement is either directly assigned to a rate class or an allocator is selected to apportion that component among rate classes.

20. Q. Please explain the term “direct assignment.”

A. The term “direct assignment” means identifying specific plant investments or specific expenses incurred exclusively to serve a specific customer or group of customers. Direct assignments reflect a direct causal connection between costs to serve and the customers being served. Therefore, if data are available to make a direct assignment, it is generally the preferred approach.

21. Q. Can significant portions of a utility’s assets and expenses generally be directly assigned in a COSS?

A. No, most costs must be allocated. Utility service is generally provided to customers by facilities that are used, and expenses that are incurred, in common by all, or many, classes of customers. In addition, even in instances where it might be possible to associate specific physical facilities with particular customers, the detailed cost information needed to make a direct assignment may not be reasonably available.

22. Q. Please explain how allocation factors are determined.

A. External and internal allocation factors are typically used to perform a COSS and, consequently, were employed in the Model. External allocators distribute costs in

1 proportion to customers' use of plant and services represented by functionalized
2 and classified costs. Examples of external allocators are kWh deliveries (for
3 energy-related costs), number of customers (for customer-related costs), and class
4 NCP demands (distribution demand-related costs). PECO Exhibit TJJ-7 shows
5 the development of the main external allocators. Internal allocators are based on
6 some combination of external allocators, directly assigned costs, and other
7 internal allocators. For example, property insurance costs are allocated in
8 proportion to the plant investment allocated or assigned to each rate class, while
9 plant investment itself is allocated on the basis of one or more external allocation
10 factors (e.g., NCP demand for demand-related plant costs or customer counts for
11 customer-related plant costs).

12 **23. Q. What is the source of the total rate base amount being allocated or assigned**
13 **to customer classes in the PECO COSS?**

14 A. The total rate base amount employed in the PECO COSS is \$8.856 billion (PECO
15 Exhibit TJJ-1, line 103) and is derived from PECO Exhibit MJT-1, page 1.

16 **24. Q. What are the major components of PECO's rate base?**

17 A. For purposes of discussing how I functionalized, classified, and allocated rate
18 base in the PECO COSS, I will refer to the following components of rate base:

- 19 • Intangible plant
- 20 • Distribution plant
- 21 • General plant

- Depreciation reserve
- Other rate base items

25. Q. How did you functionalize, classify, and allocate each component of the rate base among the rate classes?

A. The principal allocators for each component of the rate base are discussed below:

Intangible plant represents the costs of franchises and consents and other intangible assets. It was functionalized, classified, and allocated in proportion to distribution plant (i.e., excluding plant serving the Energy and Transmission functions) with the exception of a portion of the total that is associated with Advanced Meter Infrastructure (“AMI”). Intangible AMI system costs, which consist of the software necessary to operate the AMI system and to interface with other systems such as billing, were classified as customer-related and allocated based on the cost of meters.

Distribution plant allocators were developed for specific subcategories of distribution plant, as follows:

- Land and land rights, stations, and structures and improvements were functionalized to Primary HT, classified as demand, and allocated among the rate classes based on their respective class NCP demands at the Primary HT level.
- Poles, towers and fixtures, overhead conductors and devices, underground conduit, and underground conductors and devices were

functionalized between Primary HT/Primary, on one hand, and Secondary Distribution, on the other, based on a detailed study of the respective costs, as shown in PECO Exhibit TJJ-7 at page 4. The Primary HT/Primary portion was split between Primary HT and Primary based on a study of the respective wire miles of conductors in each function (*see* PECO Exhibit TJJ-7, p. 5). Costs identified as Primary HT and Primary were classified as demand-related and allocated among the rate classes based on their respective NCP demands at the Primary HT and Primary voltage levels, respectively (*see* PECO Exhibit TJJ-7, p. 15). Costs identified as Secondary Distribution were classified as customer-related and allocated based on the number of customer locations served.

- Line transformers were functionalized to Secondary Distribution and allocated among the rate classes based on NCP demands at secondary voltage (*see* PECO Exhibit TJJ-7, p. 15).
- Services connect individual customers to the system and, therefore, were functionalized to their own category, classified as customer-related, and allocated based on the estimated total replacement cost of all services in each rate class (*see* PECO Exhibit TJJ-7, p. 6). The total replacement cost of services for a rate class was estimated by multiplying the estimated replacement cost of a single service for a member of the class by the number of customer locations in the class.

- Meters were functionalized to their own category, classified as customer-related, and directly assigned based on the cost of new AMI meters installed pursuant to PECO's Smart Meter Universal Deployment Plan, which was approved by the Pennsylvania Public Utility Commission ("Commission") on August 15, 2013 at Docket No. M-2009-2173944 (*see* PECO Exhibit TJJ-7, p. 7).
- Street lighting and signal systems were functionalized to Customer Other, classified as customer-related, and directly assigned to Lighting.

General plant includes primarily structures and improvements relating to administrative activities, tools, and communications equipment, as well as other miscellaneous assets. These assets were functionalized, classified, and allocated among rate classes based on the direct labor component of operating expenses, which reflects the nature of the assets and common cost-of-service practices for this type of property.

Depreciation reserve was provided by PECO by each asset account. Each component of the depreciation reserve was functionalized, classified, and allocated among rate classes in the same ratio as the related assets.

Other rate base items include primarily materials and supplies, accumulated deferred income taxes, customer deposits, common plant, customer advances for construction, and working capital, as discussed below:

- 1 • Materials and supplies were functionalized, classified, and allocated
2 among rate classes in proportion to plant in service.
- 3 • Accumulated deferred income taxes were primarily functionalized,
4 classified, and allocated among rate classes in proportion to plant in
5 service.
- 6 • Customer deposits were directly assigned to rate classes based on
7 information provided by Mr. Trzaska (included in PECO Exhibit TJJ-7,
8 p. 8).
- 9 • Common plant consists of assets similar to those customarily found in
10 General Plant and, therefore, was functionalized, classified, and
11 allocated among rate classes based on the direct labor component of
12 operating expenses.
- 13 • Customer advances were functionalized to Distribution and Secondary
14 Distribution, classified as demand and customer-related, and allocated
15 among the rate classes in the same proportion as Distribution and
16 Secondary Distribution assets.
- 17 • Working capital represents PECO's need for cash to keep the business
18 running until revenues are collected to pay the costs of providing
19 service. Working capital was calculated based on the results of the
20 lead-lag study prepared by Mr. Trzaska and described in PECO
21 Statement No. 3. Also, working capital was directly assigned to
22 Energy and Transmission based on the results of that lead-lag study.
23 The balance of working capital was functionalized, classified, and

1 allocated to each rate class using methodologies consistent with the
2 nature of the underlying cost.

3 **26. Q. What are the major categories of PECO's expenses?**

4 A. The major expense categories in PECO's cost of service are:

- 5 • Distribution operating and maintenance expenses;
- 6 • Customer accounts and customer service expenses;
- 7 • Administrative and general expenses;
- 8 • Depreciation expense;
- 9 • Taxes other than income taxes; and
- 10 • Income taxes

11 **27. Q. In determining how to treat these expenses in the COSS, was there another**
12 **important grouping of expenses that had to be considered?**

13 A. Yes, there was. Labor costs affect each of the first three categories identified
14 above. Consequently, certain cost categories are allocated based on direct labor
15 costs. For example, Account 920 – Administrative and General Salaries is
16 allocated among rate classes based on the composite allocation of direct labor
17 costs included in all operating expense accounts. Likewise, employee benefits are
18 allocated using a labor allocator. In order to develop such allocators, the direct
19 labor costs included in each expense account were obtained from data assembled
20 by Mr. Trzaska.

28. Q. What do PECO's distribution operating and maintenance expenses include and how were these expenses functionalized, classified, and allocated among rate classes?

A. PECO's distribution system consists principally of substations; poles, towers and fixtures; overhead and underground conductors and related equipment; meters; line transformers; outdoor lighting plant; and other miscellaneous assets. Operating and maintenance expenses were analyzed to determine the assets they were incurred to operate or maintain and, therefore, were functionalized, classified, and allocated among rate classes in the same manner as the assets to which they relate. The COSS also includes costs of purchased power and transmission costs paid to PJM that are recovered through the GSA, TSC, and NBT charges. Purchased power costs were functionalized as Energy, classified as energy-related, and allocated based on projected default service prices and MWh of generation energy revenue in the budget. Transmission-related costs were functionalized as Transmission and assigned among rate classes based on their contributions to the single coincident peak. In addition to the expenses of operating and maintaining PECO's distribution system, distribution expenses include the following:

- **Customer-installation expenses:** These expenses relate to field investigations, high-bill complaints, and potential and actual energy theft, and were allocated based on number of customers.
- **Miscellaneous distribution expenses and rents:** These expenses relate to information technology (“IT”) and other expenses associated

1 with all distribution assets. Accordingly, they were functionalized,
2 classified, and allocated among rate classes in proportion to total
3 distribution plant.

4 **29. Q. What do PECO's customer accounts and customer service expenses include**
5 **and how were those expenses functionalized, classified, and allocated among**
6 **the rate classes?**

7 A. Customer accounts and customer service expenses primarily include meter-
8 reading expenses, customer records and collection expenses, uncollectible
9 accounts expense, miscellaneous customer accounts expense, customer-assistance
10 expense, and sales expense. These costs were functionalized to Customer
11 Accounts, classified as customer-related, and allocated as follows:

- 12 • **Meter reading expenses** have been supplanted by the new AMI
13 system expenses except for some minor expenses. Costs are allocated
14 based on the cost of meters.
- 15 • **Customer records and collection expenses** relate to billing, call
16 center operations, payment processing, arrearage recoveries, support
17 for administration of PECO's CAP program, and termination and
18 restoration of service. The account was analyzed in detail, discrete
19 functions were identified, and expenses related to each function were
20 allocated among rate classes using an appropriate allocation factor (*see*
21 PECO Exhibit TJJ-7, p. 9). For example, expenses incurred for billing
22 activities were allocated based on number of bills, and call center costs

1 were allocated based on number of customers. A single customer
2 allocation could not be used because some costs are specific to
3 residential customers while others are specific to commercial and
4 industrial customers; therefore, a weighted allocator, based upon the
5 analysis discussed above, was used for this account.

- 6 • **Uncollectible accounts expense**, or bad debt expense, was allocated
7 among rate classes based on the Company's experience over a historic
8 three-year period (2021-2023) (*see* PECO Exhibit TJJ-7, p. 12).
- 9 • **Miscellaneous customer accounts expense** includes IT support for the
10 other customer account functions and was allocated among rate classes
11 based on number of customers.
- 12 • **Customer assistance expense** includes expenses incurred for the Low-
13 Income Usage Reduction Program and marketing. Costs specific to
14 the residential class were allocated to rates R and RH based on number
15 of customers. Costs specific to the C&I classes were allocated to rates
16 GS, PD and HT based on number of customers on the applicable rates.
17 General marketing costs were allocated based on number of customers
18 (*see* PECO Exhibit TJJ-7, p. 10).
- 19 • **Informational advertising expense** includes the cost of activities that
20 primarily convey information as to what the utility suggests customers
21 should do in utilizing electric service to protect health and safety, to
22 encourage environmental protection, to utilize their electric equipment

1 safely and economically, or to conserve electric energy, and was
2 allocated to customer classes based on number of customers.

- 3 • **Sales expenses** include expenses incurred in activities, which promote
4 or retain the use of utility distribution services by present and
5 prospective customers, and was allocated to rates GS, PD, and HT
6 customers based on customer energy consumption.

7 **30. Q. How were administrative and general expenses functionalized, classified, and**
8 **allocated among rate classes?**

9 A. Administrative and general expenses include administrative and general salaries,
10 office supplies and expenses, outside services, property insurance costs, injuries
11 and damages, employee benefits, regulatory commission expenses, miscellaneous
12 general expenses, and maintenance of general plant.

13 Except for items discussed below, administrative and general expenses are related
14 to labor costs and, therefore, were functionalized, classified, and allocated among
15 rate classes in the same ratio as direct labor expenses.

- 16 • **Property insurance costs** were functionalized, classified, and allocated
17 among rate classes in the same ratio as distribution and general plant in
18 service.

- 19 • **Regulatory commission expenses** and miscellaneous general expenses
20 were functionalized, classified, and allocated among rate classes in
21 proportion to revenue.

- **Certain costs related to electric vehicle incentives**, as described more fully in the testimony of Company witness Steven J. DeMott, were functionalized, classified and allocated among rate classes based on the number of Commercial and Industrial customers.

- **Costs related to the reallocation of transit charging costs**, as described more fully in the testimony of Mr. DeMott and at PECO Exhibit TJJ-7, page 17, were functionalized, classified and allocated among rate classes based on the difference between the allocation in PECO's prior rate case and Commercial and Industrial customers in the current case.

- Maintenance of general plant expenses** were functionalized, classified, and allocated among rate classes in the same ratio as general plant in service.

31. Q. How were depreciation expense and depreciation reserve functionalized, classified, and allocated among the rate classes?

A. Depreciation expense was derived from PECO Exhibit CF-3, which is sponsored by PECO witness Caroline Fulginiti, as well as PECO Exhibit MJT-1, which show depreciation expense by plant account. The depreciation reserve was obtained from the same sources. Both the depreciation expense and the depreciation reserve were functionalized, classified, and allocated among rate classes in the same ratio as the plant account to which they relate.

1 **32. Q. How were taxes other than gross receipts tax and income taxes**
2 **functionalized, classified, and allocated among the rate classes?**

3 A. Taxes, other than gross receipts tax and income taxes, include Public Utility
4 Realty Tax (“PURTA”), payroll-related taxes, local use taxes, and real estate
5 taxes. Payroll-related taxes were functionalized, classified, and allocated among
6 rate classes in proportion to direct labor expenses. PURTA taxes were allocated
7 based on the allocation of land, local use taxes were allocated based on revenue,
8 and real estate taxes were allocated based on total plant.

9 **33. Q. How was gross receipts tax functionalized, classified, and allocated among**
10 **the rate classes?**

11 A. Gross receipts tax is based on transmission and distribution revenue, purchased
12 power revenue, and forfeited discounts (i.e., late payment charges). Accordingly,
13 gross receipts tax was calculated separately by function and was classified and
14 allocated among rate classes based on taxable revenue.

15 **34. Q. How was income tax expense functionalized, classified, and allocated among**
16 **rate classes?**

17 A. Income tax expense was calculated based on revenue at present rates using the
18 same methodology employed by Mr. Trzaska in PECO Exhibit MJT-1, Schedule
19 D-18. Income tax expense was primarily functionalized, classified, and allocated
20 among rate classes based on total plant.

1 **35. Q. How was revenue at present rates computed for each rate class?**

2 A. Distribution revenue at present rates is shown in the proof of revenues set forth in
3 PECO Exhibit JAB-4. The total was assigned to the rate classes based on the
4 proof of revenues. Distribution revenue at present rates for each rate class is
5 shown on line 4 of PECO Exhibit TJJ-1.

6 Supply charge revenue, which consists of revenue collected under the GSA tariffs
7 for energy, administrative costs, and cash working capital, was assigned to rate
8 classes based on projected default service prices and MWh of generation. For
9 each rate class, and in total, supply charge revenue equals the sum of the supply
10 cost (including administrative costs), gross receipts tax, and the revenue
11 requirement for cash working capital.

12 Transmission charge revenue under the TSC was functionalized to Transmission
13 and allocated among the rate classes in proportion to costs that are allocated based
14 on contributions to the single coincident peak. Revenue equals the sum of the
15 cost plus the revenue requirement for associated cash working capital.

16 Forfeited discount revenue was functionalized, classified, and allocated in the
17 same ratio as the uncollectible accounts expense.

18 Rent for electric property represents rental revenue for poles and other property
19 and was functionalized, classified, and allocated in the same ratio as total plant.

20 Decommissioning payments in the FPFTY represent PECO's transfer to Exelon
21 Generation Company of amounts that PECO collects from customers for nuclear

1 decommissioning expense. Both PECO's recovery of these costs and the transfer
2 of such funds to Exelon Generation Company, LLC were approved in the
3 Commission's Order approving the Settlement of PECO's restructuring
4 proceeding.⁵ This amount was allocated among the rate classes in the same ratio
5 as the revenue was collected, which is in proportion to each class' billed kWh.

6 Other electric revenue was allocated among the rate classes based on distribution
7 plant, except for connection charges and returned check fees, which were
8 allocated based on number of customers.

9 **IV. DEVELOPMENT OF RATE CLASS REVENUE REQUIREMENT**

10 **36. Q. How did you develop the revenue requirements for each class?**

11 A. The revenue requirements for each rate class were calculated using the same
12 method employed by Company witness Mr. Trzaska to compute the overall
13 revenue requirement for the FPFTY. Thus, the revenue requirements for each rate
14 class are the sum of that class's allocated operating expenses, depreciation
15 expense, general taxes, return on rate base, and income tax expense. Return on
16 rate base for each rate class was computed by multiplying the rate class's rate
17 base by the proposed system average rate of return. Income taxes included in the

⁵ *Application of PECO Energy Co. for Approval of its Restructuring Plan Under Section 2806 of the Public Utility Code and Joint Petition for Partial Settlement; Petition of Enron Energy Services Power, Inc. for Approval of an Electric Competition and Choice Plan and for Authority Pursuant to Section 2807(E)(C) of the Public Utility Code to Serve as the Provider of Last Resort in the Service Territory of PECO Energy Co.*, Docket Nos. R-00973953 and P-00971265, 1997 Pa. PUC LEXIS 51 at *120 (Dec. 23, 1997). On June 9, 2009, the Commission initiated an investigation at Docket No. I-2009-2101331 to determine whether it would be appropriate for PECO to continue the collection of nuclear decommissioning costs from retail customers after the expiration of PECO's rate caps on December 31, 2010 and reaffirmed its earlier holding in PECO's restructuring proceeding. *Investigation into PECO Energy Company's Electric Service Tariff PA P.U.C. No. 4*, 2010 Pa. PUC LEXIS 299 (Order entered July 22, 2010).

1 revenue requirement for each rate class were computed directly by grossing up the
2 required non-debt return on rate base for the class at the applicable statutory income tax
3 rates. PECO Exhibit TJJ-1, line 64, shows the total revenue requirements by rate
4 class reflecting the fully allocated distribution cost of service at the proposed
5 system average rate of return. PECO Exhibit TJJ-1, line 69, shows the portion of
6 the total revenue requirements PECO proposes to collect in distribution rates.

7 **37. Q. How did you determine the increase or decrease in revenue needed for each**
8 **class to produce the system average rate of return?**

9 A. The increase or decrease needed for each rate class was calculated by comparing
10 the revenue requirements for each rate class to the forecasted revenue at present
11 rates for that class for the FPFTY. This is the same method used by Mr. Trzaska
12 in PECO Exhibit MJT-1, Schedule A-1, with respect to the overall revenue
13 requirement and revenue deficiency. The increases in rate class revenue needed
14 to produce a rate of return equal to the Company's proposed overall rate of return
15 are shown in PECO Exhibit TJJ-1 at line 120, which total \$463.6 million. The
16 increases in class distribution revenue are shown on line 70, which total \$463.4
17 million. The decrease in transmission revenue under the TSC are shown on line
18 95, which total (\$0.1) million on a net basis, and the increase in purchased power
19 revenue under the GSA of \$0.3 million is shown on line 83. In addition, forfeited
20 discounts are expected to increase by \$1.4 million as a result of the increase in
21 distribution rates.

1 **V. RESULTS OF THE PECO COST-OF-SERVICE STUDY**

2 **38. Q. Please describe what is shown on PECO Exhibit TJJ-1.**

3 A. PECO Exhibit TJJ-1, which sets forth the substance of the COSS, compares the
4 revenue at current rates by rate class to the revenue requirement allocated on a
5 cost-of-service basis to each rate class. Net income at present rates, shown on line
6 16, is computed by subtracting operating expenses, depreciation and amortization,
7 taxes other than income taxes, and income taxes (lines 10 to 14, respectively)
8 from revenue at present rates (line 7). The return on rate base at present rates for
9 each rate class is shown on line 25, and the relative rates of return are shown on
10 line 26.

11 Line 114 shows each rate class's revenue requirement (including revenue from
12 distribution charges, transmission charges, purchased power, forfeited discounts,
13 and other revenue) at the proposed overall rate of return. Line 107 shows
14 operating expenses, line 108 shows depreciation and amortization expense, line
15 109 shows taxes other than income taxes excluding the gross receipts tax, line 110
16 shows gross receipts tax, and line 111 shows income tax expense. Line 104
17 shows operating income assuming each rate class pays its full cost of service.
18 Line 120 shows the increase (decrease) in revenue needed for each rate class to
19 produce revenues equal to its revenue requirement at full cost of service and
20 produce the system average rate of return (excluding forfeited discounts on the
21 increased revenue). Line 70 shows the increase (decrease) in distribution revenue
22 for each rate class to produce revenue from distribution charges equal to its
23 distribution revenue requirement at full cost of service. Line 83 shows the

1 increase (decrease) in purchased power revenue for each rate class to produce
2 revenue from purchased power charges equal to its purchased power revenue
3 requirement at full cost of service. Line 95 shows the increase (decrease) in
4 transmission revenue for each rate class to produce revenue from transmission
5 charges equal to its transmission revenue requirement at full cost of service.

6 **39. Q. What information is shown on PECO Exhibit TJJ-2?**

7 A. PECO Exhibit TJJ-2, as noted above, is the rate class cost of service and shows
8 the allocation of each element of measures of value also known as rate base (RB
9 schedules), operating expenses (E schedules), depreciation expense (D schedules),
10 and taxes (TO and TI schedules) among the rate classes. This information is
11 contained on the first 16 pages of the exhibit.

12 Also included in this exhibit are the external and internal allocators used for the
13 rate class allocations, which are shown on pages 17 to 31 of the exhibit.

14 **40. Q. Please describe the information contained in PECO Exhibit TJJ-3.**

15 A. PECO Exhibit TJJ-3 contains the COSS by functional category and classification.
16 The summary appears on pages 1 to 6 and the account-by-account allocation to
17 functional category and classification is provided on pages 7 to 32. Pages 33 to
18 62 of this exhibit provide the external and internal allocators used for the exhibit.

1 **41. Q. Please describe what is shown in PECO Exhibit TJJ-4.**

2 A. PECO Exhibit TJJ-4 presents unitized revenue requirement for each rate class.
3 The unitized revenue requirements are the functionalized and classified revenue
4 requirements allocated to each class of service divided by the appropriate units.
5 For example, demand-related cost is divided by kW of demand, energy-related
6 cost is divided by kWh, and customer-related cost is divided by number of
7 customers. The unit cost is provided by classification and functional area.

8 **42. Q. Which costs were considered in developing the proposed customer charges?**

9 A. The proposed customer charges are based on the specific customer-classified
10 costs in the PECO COSS that are approved for recovery in customer charges.
11 Customer related costs include all costs incurred to attach a customer to the
12 distribution system, to meter usage, and to maintain the customer's account. They
13 include: (1) capital costs associated with portions of the distribution system,
14 services and meters, and general plant supporting the functions identified above;
15 and (2) operating and maintenance expenses related to those assets described in
16 (1), associated administrative and general expense, metering and billing expense,
17 and customer service and account expenses. Total customer costs by rate class for
18 the FPFTY are shown on PECO Exhibit TJJ-4, in the unit cost analysis.

19 In Pennsylvania, the costs typically considered in developing residential customer
20 charges exclude allocated portions of the distribution system. Therefore, PECO
21 Exhibit TJJ-5 excludes the component shown on PECO Exhibit TJJ-4 associated
22 with the distribution system. The residential customer charge includes the costs

1 of the service and meter, meter reading-related expense, billing expense, and
2 customer accounting expense together with appropriate pensions and benefits and
3 payroll taxes that are part of the applicable labor expenses. Also included are
4 other supporting administrative and general costs and associated general and
5 common plant and working capital.

6 **43. Q. Please briefly describe the Night Service Rider (“NSR”).**

7 A. The NSR applies to distribution service provided to eligible commercial and
8 industrial customers for demand registered in off-peak hours that exceeds their
9 demand during on-peak hours (i.e., 8:00 a.m. to 8:00 p.m. daily (Friday it is 4:00
10 p.m.), except Saturdays and Sundays). For example, if a customer has an off-peak
11 maximum demand of 200 kW and an on-peak maximum demand of 190 kW, the
12 10-kW excess of the maximum off-peak demand over the on-peak demand would
13 be billed at the NSR rate, not the standard tariff rate.

14 **44. Q. What costs were included in developing the NSR rate?**

15 A. In developing the NSR rate, I included the cost of overhead and underground
16 conductors, transformers, and the maintenance expenses associated with those
17 conductors and transformers as well as an allocable portion of administrative and
18 general expenses and the cost of common and general plant. These costs are
19 properly included in the NSR rate because off-peak usage affects the size of
20 conductors and transformers.

1 Those facilities serve load at the localized level and, therefore, do not benefit from
2 load diversity as does other plant, such as substations.

3 I excluded from the NSR rate the cost of substations, poles, and underground
4 conduit because of the location of substations on the system. The size of
5 substations is affected by on-peak demand. The cost of poles and conduit were
6 also excluded because off-peak demand in excess of on-peak demand is unlikely
7 to affect the size of those facilities (PECO Exhibit TJJ-6).

8 Mr. Bisti uses these costs to determine the appropriate charge for the NSR as
9 discussed in PECO Statement No. 7.

10 **45. Q. Please describe the information shown on PECO Exhibit TJJ-7.**

11 A. PECO Exhibit TJJ-7 shows the development of the external allocators, which are
12 described below and are used in the COSS. Except where noted, all data are for
13 the FPFTY.

14 **Index (page 1) - Table of External Allocators**

15 **Summary of External Allocator Values (page 2) - Class Allocation**

16 **Summary of External Allocator Values (page 3) - Functionalization**

17 **Conductors-Functional Splits (page 4) - Allocates the cost of Overhead**

18 Conductors and Underground Conductors between Primary HT/Primary and
19 Secondary based on a study that the Company previously prepared to separate
20 costs by voltage levels. The functional split for poles follows the overhead

conductor split, and the functional split for underground conduit follows underground conductor split.

Conductors-Primary Splits (page 5) - Allocates the cost of Overhead Conductors operating at primary voltage between Primary HT and Primary based on the wire miles of those conductors as of December 31, 2023. The same approach was used for Underground Conductors. The functional split for poles follows the overhead conductor split, and the functional split for underground conduit follows underground conductor split.

Service Costs (page 6) - Computes investment in services for each rate class at average replacement cost for the period 2020-2023. PECO does not account for services separately and, therefore, has used estimated replacement cost to allocate the account to the classes of service.

Meter Costs (page 7) - Meter costs were allocated among rate classes based on the average cost of meters of each type for each rate class, as determined from the Company's records as of December 2023. Meter costs include both materials and labor.

Customer Deposits (page 8) - Allocates FPFTY customer deposits based on the 13-month average customer deposit balances for each class for the period from December 2022 through December 2023.

Account 903 Allocator (page 9) - Allocates costs associated with each activity recorded in Account 903 – Customer Records and Collection Expense for 2022

1 using an appropriate external allocator. Each activity, the cost of the activity, and
2 the allocator assigned to each is shown in a separate row. Row 12 summarizes
3 the costs by rate class. The weighted allocators are shown on row 13. The
4 separate allocations are necessary because some costs are only applicable to
5 specific rate classes.

6 **Account 908 Allocator (page 10)** - Allocates the costs of each activity recorded
7 in Account 908 – Customer Assistance for 2022 using an appropriate external
8 allocator. Rows 1-5 list each activity, the cost of the activity and the allocator
9 assigned to it. Row 6 summarizes the costs by rate class. The allocators are on
10 row 7.

11 **Account 912 and 916 Allocator (page 11)** - Allocates the cost of each activity
12 recorded in Accounts 912 – Demonstrating and Selling Expense and 916 –
13 Miscellaneous Sales Expense for 2022 using an appropriate external allocator.
14 Each activity, the costs of the activity, and the allocator assigned to each is shown
15 in a separate row. Row 2 summarizes the costs by rate class. The weighted
16 allocators are shown on row 3.

17 **Write-Offs (page 12)** - Computes the Write-Off allocators using net charge-offs
18 for 2021 through 2023.

19 **Over 60-Day (page 13)** - Computes the Over 60-Day allocators. The column
20 “Over 60-Day Allocator” shows the percentage of PECO’s total electric accounts
21 receivable outstanding for more than two months for each rate class at each
22 month-end from January 2022 through December 2022.

Purchase of Receivables (page 14) - Computes the allocator used in the COSS to allocate the POR portion of cash working capital.

Demand Allocators (page 15) - Computes the demand allocators used in the COSS based on data from October 2022 through September 2023.

MWh Deliveries at Generation (page 16) - Computes MWh at the different rate classes based on projected 2025 sales at the meter and appropriate loss factors for each rate class. The class loss factors are the same as those set forth in the Company's Electric Generation Supplier Coordination Tariff.

Transit Charging Allocator (page 17) – Computes the allocator used to reallocate \$1.0 million of transit charging funds received in the prior rate case to the customer classes that will benefit from the intended use of the funds as described in the direct testimony of Mr. DeMott (PECO Statement No. 10).

Customer and Location-Based Allocators (page 2) - The demand-based, customer-based and location-based allocators are shown on page 2 at lines 8-15. The location-based allocator (Location Secondary) shown on line 15 was modified for street lighting to reflect 25% of each of the total locations for the Lighting class. This adjustment was made to more accurately reflect cost causation. Street lights are generally located where there are existing Company facilities serving other load. In some cases, street lights were installed after the grid was in place and, therefore, did not contribute to the need for poles, conductors, or conduit to be installed. However, that is not always the case and, in some instances, the system was built out for the lights, for example, as on some

1 bridges and roads. Counting each location as a separate customer would allocate
2 too much cost to street lighting. On the other hand, not counting any lighting
3 locations as customers would understate the costs allocated to street lighting.
4 Even where the system was in place before street lights were installed, it is
5 appropriate to allocate some cost to the Lighting class because the service is
6 benefiting from the poles, conductors, and conduit. I have, therefore, applied a
7 25% factor to the number of locations to allocate a reasonable level of cost to the
8 Lighting class.

9 **46. Q. Please explain how the purchased power and transmission sections of the**
10 **COSS are used?**

11 A. In the cost-of-service summary there is a section for purchased power and a
12 section for transmission. These sections are used to derive the unbundled cash
13 working capital requirement that is recovered in the GSA and the TSC. The
14 revenue requirement associated with cash working capital is used to develop a
15 rate for the GSA and TSC. The total revenue requirement used to develop the
16 rate is the operating income consisting of return, income taxes, and the associated
17 gross receipts tax. I am providing PECO Exhibit TJJ-8 to show the calculation of
18 the unbundled cash working capital rate for the GSA. PECO Exhibit TJJ-9
19 provides the calculation of the unbundled cash working capital rate for the TSC.
20 The rate developed in PECO Exhibit TJJ-8 of \$0.00035 per kWh will replace the
21 rate of \$0.00021 per kWh currently in the GSA. The rate developed in PECO
22 Exhibit TJJ-9 of \$274 per MW-year will replace the current rate of \$278 per MW-
23 year in the TSC.

1 **VI. CONCLUSION**

2 **47. Q. Please summarize your conclusion with respect to the COSS.**

3 A. The Company's COSS was prepared using an appropriate and well-accepted cost
4 of service method. The results of the Company's COSS provide a reasonable
5 allocation of PECO's cost of service among its rate classes and are an appropriate
6 guide for use in designing PECO's proposed rates.

7 **48. Q. Does this complete your direct testimony at this time?**

8 A. Yes, it does.

PECO Exhibit TJJ-1:

Summary of Cost-of-Service Study Results

PECO Energy Company
Electric Class Cost of Service Study (\$000)

Direct Testimony of Joseph A. Bisti

**PECO ENERGY COMPANY
STATEMENT NO. 7**

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION
v.
PECO ENERGY COMPANY – ELECTRIC DIVISION

DOCKET NO. R-2024-3046931

DIRECT TESTIMONY

WITNESS: JOSEPH A. BISTI

SUBJECT: REVENUE ALLOCATION; RATE DESIGN;
AND DEVELOPMENT OF PROPOSED NEW
RATES

DATED: MARCH 28, 2024

TABLE OF CONTENTS

	Page
I. INTRODUCTION AND PURPOSE OF TESTIMONY	1
II. REVENUE ALLOCATION	2
III. RATE DESIGN	5
IV. CUSTOMER ASSISTANCE PROGRAM (“CAP”) COST RECOVERY	10
V. REVENUE EFFECT BY RATE SCHEDULE, PROOF OF REVENUES, AND SCALE-BACK.....	12
VI. CONCLUSION.....	13

1 **DIRECT TESTIMONY**
2 **OF**
3 **JOSEPH A. BISTI**

4 **I. INTRODUCTION AND PURPOSE OF TESTIMONY**

5 **1. Q. Please state your full name and business address.**

6 A. My name is Joseph A. Bisti. My business address is PECO Energy Company,
7 2301 Market Street, Philadelphia, Pennsylvania 19103.

8 **2. Q. By whom are you employed and in what capacity?**

9 A. I am employed by PECO Energy Company (“PECO” or the “Company”) as a
10 Manager of Rate Analysts. I am responsible for retail tariff administration,
11 project management, and regulatory affairs relating to PECO’s gas and electric
12 operations.

13 **3. Q. Please describe your educational background and professional experience.**

14 A. I received a Bachelor of Science in Economics from The College of New Jersey
15 in 2000, a Master of Science in Training and Organizational Development from
16 Saint Joseph’s University in 2009, and a Graduate Certificate in Utility
17 Management from Willamette University in 2012. In 2015, I earned a
18 certification as a Project Management Institute Professional in Business Analysis.
19 In September of 2022, I was promoted to my current position. My professional
20 experience includes various roles involving business analysis, project leadership,
21 and regulatory compliance within PECO’s Retail Rates, Energy Acquisition, and
22 Information Technology departments.

23 **4. Q. What is the purpose of your testimony?**

1 A. The purpose of my testimony is to describe: (1) how PECO proposes to allocate
2 its claimed revenue increase among rate classes and explain the principles that
3 guided PECO in developing its proposed revenue allocation; and (2) the changes
4 PECO is proposing in the rate design for certain rate classes, why PECO is
5 proposing these changes, and how the proposed new rates were developed.

6 **5. Q. Please identify the exhibits you are sponsoring.**

7 A. I am sponsoring the following exhibits:

8 Exhibit JAB-1	Proposed Revenue Allocation, Proposed Increases by Class
9	and Class Rates of Return and Relative Rates of Return
10	under Proposed Rates
11	
12 Exhibit JAB-2	Relevant Electric Service Tariff Pages (Blacklined to Show
13	Changes)
14	
15 Exhibit JAB-3	Comparison of Residential Customer Charges for
16	Pennsylvania Electric Distribution Utilities
17	
18 Exhibit JAB-4	Proof of Revenues at Present and Proposed Rates
19	
20 Exhibit JAB-5	Modified Base Rate Recovery of CAP Revenues in USFC
21	

22 **II. REVENUE ALLOCATION**

23 **6. Q. Please state the principles that guided PECO in developing its proposed**
24 **revenue allocation.**

25 A. The proposed revenue allocation reflects a reasonable balance of accepted
26 principles for designing utility rates. Specifically, PECO considered the
27 following principles in developing its proposed revenue allocation:

28 1. The results of the class cost-of-service study (“COSS”) prepared by
29 Company witness Tamara J. Jamison and discussed in PECO Statement No.
30 6 should be used as a guide in allocating the proposed revenue increase
31 among rate classes;
32

- 1 2. The overall proposed revenue allocation should produce reasonable
2 movement toward the cost of service indicated by the COSS; and
3
4 3. Customer impacts should be considered, and PECO should attempt to avoid
5 increases in revenue for major rate classes that, on a percentage basis,
6 exceed two times the proposed system average increase.

7 **7. Q. Has an exhibit been prepared showing the cost of service by rate class?**

8 A. Yes, a summary of class cost-of-service data is provided in PECO Exhibit TJJ-1,
9 sponsored by Ms. Jamison, and accompanies her direct testimony (PECO
10 Statement No. 6). PECO Exhibit TJJ-1 shows, at page 1, line 25, the overall and
11 class rates of return produced by the Company's current electric distribution base
12 rates based on its supporting data for the twelve months ending December 31,
13 2025, which is the Fully Projected Future Test Year ("FPFTY") in this case.
14 PECO Exhibit TJJ-1 also shows, at page 3, line 120, the increase or decrease in
15 dollars that each rate class would have to receive for its revenues to equal its
16 indicated class cost of service. As indicated by the guiding principles I
17 summarized above, while the results of the Company's COSS are an important
18 guide in evaluating its proposed revenue allocation, they are not the only factor
19 that must be considered.

20 **8. Q. Please discuss the principle of gradualism and how it influenced PECO's**
21 **proposed revenue allocation.**

22 A. The ratemaking principle of gradualism, as traditionally applied in Pennsylvania,
23 guides utilities to avoid abruptly increasing rates in favor of slower adjustments
24 that incrementally move rates toward the actual cost of service over time.
25 PECO's proposed revenue allocation in this case attempts to balance gradualism

and other ratemaking principles, while limiting the degree to which rates for other classes diverge from their indicated cost of service. Under PECO's proposed revenue allocation and rate structure, the maximum increase for any rate class is 2.0 times the system average increase to prevent rate shock.

9. Q. What is the revenue allocation that PECO determined to be appropriate in this case?

A. PECO's proposed revenue allocation is presented in PECO Exhibit JAB-1.

10. Q. Why is the proposed revenue allocation reasonable?

A. The proposed revenue allocation in PECO Exhibit JAB-1 is reasonable because it appropriately reflects the principles I discussed previously. Using the COSS discussed by Ms. Jamison as a guide, the Company developed the proposed rates to make meaningful movement toward each class's cost of service, as evidenced by the relative rates of return. The class rates of return and relative rates of return¹ at present and proposed rates in PECO Exhibit JAB-1 are provided in Table 1 below.

Table 1, Relative Rates of Return Under Company's Proposal

Rate Class	Under Present Rates	Under Proposed Rates
R	1.16	1.07
RH	0.59	0.82
GS	0.92	0.96
PD	0.76	0.90
HT	0.89	0.98
EP	0.57	0.73
Lighting	1.33	0.98

¹ A relative rate of return is the ratio of the rate of return for a rate class to the system average rate of return.

1 **11. Q. Please explain the significance of the relative rates of return shown in PECO**
2 **Exhibit JAB-1 to which you previously referred.**

3 A. The relative rate of return is the ratio of the rate of return for a rate class to the
4 system average rate of return. Relative rates of return are commonly used to test
5 whether a proposed revenue allocation moves each rate class closer to, or at least
6 no further from, the system average rate of return. A relative rate of return of
7 1.00 would mean the class rate of return equals the system average rate of return
8 and, therefore, class revenues equal the class cost of service. Conversely, relative
9 rates of return that depart from 1.00 indicate that the class rates of return are
10 higher or lower than the system average rate of return and, therefore, the classes
11 are providing revenues higher or lower than their indicated cost of service.

12 **III. RATE DESIGN**

13 **12. Q. Explain in general how PECO proposes to change the charges within each**
14 **rate schedule to recover the revenue allocated to each rate class.**

15 A. PECO proposes to increase or decrease each of the charges within each rate
16 schedule in proportion to the revenue increase or decrease allocated to that rate
17 class, subject to certain rate design changes, discussed below. PECO Exhibit
18 JAB-2 is a copy of the Company's Tariff Electric-Pa. P.U.C. No. 8 ("Tariff No.
19 8") that shows, by strike-out and blacklining, the proposed rate changes I discuss
20 below, as well as the proposed changes in rules, regulations, rate schedules, and
21 riders discussed by Megan A. McDevitt in PECO Statement No. 8. Tariff No. 8 is

1 being filed with the Secretary of the Pennsylvania Public Utility Commission
2 (“PUC” or the “Commission”) as part of PECO’s base rate filing.

3 Currently, service is provided under the Company’s Tariff Electric-Pa. P.U.C. No.
4 7 (“Tariff No. 7”) and associated supplements. It is anticipated that Tariff No. 8,
5 which was filed as part of this case on 60 days’ notice, will be suspended by
6 operation of Section 1308(d) of the Public Utility Code pending an investigation
7 by the Commission. Because it is possible and, in fact, likely, that changes will
8 be made, via subsequently filed supplements, to Tariff No. 7 during the period
9 Tariff No. 8 is suspended, any provisions of the current tariff that will continue
10 beyond the end of the suspension period and have not already been incorporated
11 in Tariff No. 8 will be merged into the tariff that will be filed as part of PECO’s
12 compliance filing at the conclusion of this proceeding.

13 **13. Q. Why is PECO proposing to increase customer charges for the residential**
14 **class by a greater percentage than the proposed overall revenue increase for**
15 **the class?**

16 A. PECO is proposing to increase the customer charges in this manner to reduce the
17 disparity between its current customer charge and the customer-related costs that
18 should properly be recovered by that charge as reflected by Ms. Jamison in PECO
19 Exhibit TJJ-4. The change is intended to align this charge more closely with the
20 Company’s customer-classified costs. As noted in PECO Exhibit JAB-3, the
21 Company’s current customer charge is lower than those of most other major
22 electric distribution utilities in Pennsylvania.

A summary of the proposed customer charge increases for 2025 is shown in Table 2 below. These changes are intended to align customer charges more closely with the Company's customer-classified costs. In most cases, the proposed modified customer charges will be closer to, but still less than, the customer charges warranted by the customer-related costs identified by Ms. Jamison in PECO Exhibit TJJ-4, at page 4, line 37.

Table 2, Proposed Customer Charge Increases

Rate Class	Present Customer Charge	Customer-Related COSS \$/Month/Customer (PECO Exhibit TJJ-4)	Proposed Customer Charge	Proposed % Increase
R and RH	\$10.50	\$33.28 and \$33.58	\$14.28	36%
GS – Single Phase – No Demand	\$18.99	\$39.71	\$24.47	29%
GS – Single Phase – With Demand	\$24.21		\$31.20	29%
GS - Polyphase	\$57.94		\$74.66	29%
PD	\$295.94	\$297.61	\$297.61	0.5%
HT	\$353.84	\$371.67	\$371.67	5%

PECO's Service Location charges for certain Lighting class rates are also intended to recover a portion of the Company's customer-classified costs. Since the results of PECO's COSS indicating an increase in customer-related costs for Lighting (PECO Exhibit TJJ-4 at page 3, line 16), PECO also proposes to increase Service Location charges for the applicable Lighting class rates as shown in Table 3 below.

Table 3, Proposed Service Location Charge Increases

Lighting Rate	Present Location Charge	Proposed Location Charge	Proposed % Increase
SL-E – Street Lighting Customer-Owned Facilities	\$6.65	\$7.65	15%

SL-C – Street Lighting Control Customer-Owned Facilities	\$5.63	\$6.48	15%
TLCL – Traffic Lighting Constant Load Service	\$3.67	\$4.22	15%
AL – Alley Lighting in City of Philadelphia	\$2.33	\$2.68	15%

14. Q. Why is it important to increase customer charges and service location charges so those charges are closer to customer-classified costs?

A. Customer-classified costs are, by definition, costs that vary based on the number of customers, not usage. Such costs include, principally, but not exclusively, the cost of meters, customer service lines, billing and meter reading. Consequently, customer-classified costs are, on average, the same amount for each customer within a rate class. Accordingly, customer-classified costs are appropriately recovered in the customer charge, which is the same for each customer served under a given rate schedule. A utility should, to the extent practicable, avoid including customer-classified costs in variable distribution charges because to do so would make the recovery of customer-related costs a function of customers' usage, which they are not.

Misplacing customer costs in variable distribution charges has adverse consequences. First, it can create inappropriate intra-class subsidies because some customers will pay more than their share of customer-classified costs and others less, based on their relative levels of usage each month. Second, because customer costs, which are a fixed amount per customer, would be recovered in a charge that applies to usage, which varies, the Company could recover either too

1 little or too much of its customer-related costs because of variations in customer
2 usage.

3 In summary, putting customer costs in the wrong element of a rate can be unfair
4 to both customers and the utility. For these reasons, among others, customer-
5 related costs in a utility's cost of service should be charged to customers in a
6 manner that appropriately reflects the nature of the costs incurred, subject to
7 consideration of the principle of gradualism.

8 **15. Q. What residential customer charge is PECO proposing?**

9 PECO is proposing a residential base customer charge of \$14.28 per month
10 (excluding consumer education surcharges). This customer charge will be closer
11 to, but still less than, the customer charge warranted by the customer-related costs
12 identified by Ms. Jamison in PECO Exhibit TJJ-4. The revenue to be recovered
13 from this customer charge was deducted from the total revenue target for the
14 residential class to determine the revenue to be recovered in the variable
15 distribution service charge. The variable distribution service charge was changed
16 to recover the balance of the residential class revenue not recovered by the
17 customer charge.

18 **16. Q. Is PECO proposing changes to customer charges for other rate classes?**

19 A. Yes, PECO is also proposing increases to customer charges as shown in Table 2
20 above and in PECO Exhibit JAB-4. As discussed above, customer charges are
21 designed to recover the customer-related fixed costs of providing service and
22 therefore should be established to align with actual customer-related costs of
23 providing those services as evidenced by Ms. Jamison in PECO Exhibit TJJ-4.

1 **IV. CUSTOMER ASSISTANCE PROGRAM (“CAP”) COST RECOVERY**

2 **17. Q. Mr. Bisti, please provide an overview of PECO’s existing Universal Service**
3 **Fund Charge (“USFC”).**

4 A. The USFC is PECO’s Commission-approved rate mechanism for recovery of the
5 costs of PECO’s universal service programs that are not included in base rates.
6 The USFC is an automatically adjusted surcharge created pursuant to Section
7 1307(a) of the Pennsylvania Public Utility Code.

8 USFC costs are reconciled on an annual basis using actual costs for a historic
9 twelve-month period (“E-Factor”) and projected costs for the future twelve-month
10 period (“C-Factor”). Interest accrues from the month in which over/under
11 collection of USFC costs occurs to the midpoint of the collection period, the sum
12 of which results in a credit or charge to customers if costs are over- or under-
13 collected, respectively. The cumulative amount (either positive or negative) at the
14 end of the reconciliation period determines the E-Factor to be included in
15 calculation of the next USFC for the subsequent period. PECO normally files its
16 USFC reconciliation and annual rate adjustment in October of each year, with the
17 new USFC rate becoming effective on the following January 1.

18 **18. Q. Please describe the CAP “shortfall.”**

19 A. As explained by Company witness Jacqueline F. Golden in PECO Statement No.
20 10, PECO’s CAP uses a percentage-of-income-based approach to provide bill
21 credits to qualifying low-income residential customers. A portion of the cost of
22 the aggregate benefits provided through PECO’s electric CAP rider is recovered
23 through base rates paid by residential distribution service customers.

1 As explained by Ms. Golden, the CAP “shortfall” refers to the amount of
2 aggregate bill credits (in dollars) provided to CAP customers each year that is not
3 included in base rates. This shortfall is recovered from or refunded to PECO’s
4 residential customers on an ongoing basis through the USFC, with annual
5 reconciliation of any over/under collections as described above. The USFC is
6 currently adjusted so that residential customers pay 73% of the total CAP shortfall
7 amount. The remaining 27% of the CAP shortfall is absorbed by PECO to
8 account for the estimated impact to bad debt expense and working capital.

9 **19. Q. Is PECO proposing to increase the amount of electric CAP bill credits**
10 **included in its base rates in this proceeding?**

11 A. Yes. As explained by Ms. Golden, PECO is proposing to increase the aggregate
12 value of bill credits provided to electric CAP customers currently included in its
13 base rates from \$86 million to \$145.2 million and to change the offset factor
14 applied to reconcilable CAP costs reflected in the USFC formula from 27% to
15 10.5%. PECO Exhibit JAB-5 illustrates the impact of these changes on the C-
16 Factor and E-Factor calculations for PECO’s USFC.

1 **V. REVENUE EFFECT BY RATE SCHEDULE,**
2 **PROOF OF REVENUES, AND SCALE-BACK**

3 **20. Q. Have you prepared a summary of distribution revenues at present and**
4 **proposed rates for each rate class?**

5 A. Yes. PECO Exhibit JAB-1 shows revenue at both present rates and proposed
6 rates, as well as the percentage increases each class will receive on an overall
7 basis.

8 **21. Q. Have you prepared proofs of revenue with respect to PECO's present and**
9 **proposed rates?**

10 A. Yes. PECO Exhibit JAB-4 is a proof of revenue with respect to PECO's present
11 and proposed rates, based on pro forma billing determinants for the FPPTY. This
12 exhibit is tied to the portion of PECO Exhibit JAB-1 that addresses the increased
13 revenue that would be required.

14 **22. Q. Please explain the adjustment made to the proof of revenues at present rates**
15 **for the Company's Distribution System Improvement Charge ("DSIC").**

16 A. The DSIC is a rate adjustment mechanism that permits PECO to recover the fixed
17 costs of DSIC-eligible property between base rate cases through a separate,
18 reconcilable charge established pursuant to Section 1353 of the Public Utility
19 Code. The Commission approved PECO's establishment of a DSIC by its final
20 order entered October 22, 2015, at Docket No. P-2015-2471423. PECO began to
21 charge a DSIC effective with bills rendered on or after April 1, 2018. The
22 Company is currently charging a DSIC of 1.01%, which the Company will adjust

1 to 1.29% effective with bills rendered on or after April 1, 2024.²

2 As required by the terms of the DSIC, the DSIC charge will be reduced to zero on
3 the effective date of new rates established through this proceeding. The fixed
4 costs of DSIC-eligible property that PECO will continue to recover through the
5 effective date of its new base rates have been included in the Company's claimed
6 rate base and reflected in the revenue requirement used to establish its proposed
7 rates. Consequently, to properly compare PECO's revenues at present rates to
8 revenues at its proposed base rates, PECO's proof of revenue at present rates has
9 been adjusted by customer class to include the revenues billed under its DSIC.

10 **23. Q. How does PECO propose to scale-back the proposed rates if it is granted less**
11 **than the revenue increase it requested?**

12 A. In the event PECO is granted less than its requested increase, PECO proposes
13 that:

- 14 (1) the revenue increases proposed for all rate classes will be reduced in
15 proportion to the proposed increase for each class; and
16 (2) the customer charges for all rate classes remain as proposed, and all other
17 rates and charges for all rate schedules be reduced proportionately to
18 produce the revenue target for each rate class.

19 VI. CONCLUSION

20 **24. Q. Please summarize your conclusions.**

21 A. PECO's proposed rates reflect a reasonable allocation of the Company's proposed
22 revenue increase and a reasonable rate design for each rate schedule. The

² PECO's second Long Term Infrastructure Improvement Plan, a precondition for continuing recovery of eligible property through the DSIC, was approved by the Commission in an Order issued November 19, 2020, in Docket No. P-2020-3020974.

1 proposed rate design changes are consistent with the results of the COSS
2 identified by Ms. Jamison and applicable principles of rate structure and rate
3 design, including gradualism. In addition, the proposed customer charge for the
4 residential class is in line with those of other major Pennsylvania electric
5 distribution utilities.

6 **25. Q. Does this conclude your direct testimony?**

7 A. Yes, it does.

PECO Exhibit JAB-1:

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 5

HOW TO USE LOOSE-LEAF TARIFF

1. This Tariff is issued on the loose-leaf plan. Each page will be issued as "original page," consecutively numbered, commencing with the title page, which in all cases will be considered as Page No. 1. For example: "Original Page No. 2", "Original Page No. 3," etc.
2. All changes in, additions to, or eliminations from, original pages, will be made by the issue of consecutively numbered supplements to this Tariff and by reprinting the page or pages affected by such change, addition, or elimination. Such supplements will indicate the changes which they effect and will carry a statement of the make-up of the Tariff, as revised. The Table of Contents will be reissued with each supplement.
3. When a page is reprinted the first time, it will be designated under the P.U.C. number as "First Revised Page No....," the second time as "Second Revised Page No....," etc. First revised pages will supersede original pages; second revised pages will supersede first revised pages, etc.
4. When changes or additions to be made require more space than is available, one or more pages will be added to the Tariff, to which the same number will be given with letter affix. For example, if changes were to be made in Original Page No. 2 and, to show the changed matter, more than one page should be required, the new page would be issued as "First Revised Page No. 2, superseding Original Page No. 2"; and the added page would be issued as "Original Page No. 2A." If a second added page should be required, it would be issued as "Original Page No. 2B." Subsequent reprints will be consecutively designated as "First Revised....," "Second Revised....," etc.
5. On receipt of a revised page it will be placed in the Tariff immediately following the page which it supersedes, and the page which is to be superseded thereby plainly marked "See following page for pending revision." On the date when such revised page becomes Effective the page superseded should be removed from the Tariff.

-----Section Break (Next Page)-----

PECO Energy Company

Tariff Electric Pa. P.U.C. No. **8**
Original Page No. **6****DEFINITION OF TERMS AND EXPLANATION OF ABBREVIATIONS**

a.c. - alternating current

Advanced Meter - Advanced Meter shall have the meaning set forth in the Electric Generation Supplier Coordination Tariff.

Advanced Meter Services - Advanced Meter Services shall have the meaning set forth in the Electric Generation Supplier Coordination Tariff.

Advanced Meter Service Provider or AMSP - The Company or an EGS that provides Advanced Meter Services.

AEPS – Alternative Energy Portfolio Standard – statute that requires electric distribution companies and electric generation suppliers to acquire a certain percentage of their energy from alternative energy sources.

Available rate - A rate which may be obtained by a customer if the use of service conforms to the character of service contemplated in the rate, and the location is such that this service can be supplied from existing facilities of the Company.

Bad credit - A customer shall be deemed by the Company to have bad credit if the customer has been delinquent on payment of two consecutive bills or three or more bills in the last twelve billing cycles or tendered two or more checks that are subsequently dishonored by a payee according to 13 Pa.C.S. §3502, within the last twelve billing cycles. Industrial and commercial customers also shall be deemed by the Company to have bad credit if the customer is insolvent, (as evidenced by a credit report prepared by a reputable credit bureau or credit reporting agency or public financial data, liabilities exceeding assets or generally failing to pay debts as they become due) or has a class of publicly-traded debt outstanding that is rated to be below investment grade, or tendered two or more checks that are subsequently dishonored by a payee according to 13 Pa.C.S. §3502, within the last twelve billing cycles.

Base Rate (or rate) - The Base Rates are Rates R, R-H, RS-2, GS, PD, HT, POL, SL-S, SL-E, SL-C, TLCL, EP, and AL.

Billing demand - The calculated or measured demand after correction, if any, for power factor; except that the billing demand may be limited to a minimum figure.

Btu - British thermal unit.

Capacity charge - A charge based upon demand, either with or without power factor correction.

Competition Act - The Electricity Generation Customer Choice and Competition Act, 66 Pa.C.S. §2801, et seq.

Competitive Energy Supply - unbundled energy and capacity provided by an Electric Generation Supplier.

Consolidated EDC Billing - Billing provided by the Company as provided for in the Electric Generation Supplier Coordination Tariff.

Consolidated EGS Billing - Billing provided by an EGS as provided for in Electric Generation Supplier Coordination Tariff.

Continuous service – Service which the Company endeavors to keep available at all times.

Creditworthy - A creditworthy customer pays the Company's charges as and when due and otherwise complies with the Rules and Regulations of this Tariff or the PaPUC. To determine whether a customer is creditworthy with respect to a particular account, the Company will evaluate the customer's record of paying Company charges for all of the customer's other Company accounts, and may also take into consideration the customer's general credit.

Customer - Any person, partnership, association, or corporation, lawfully receiving service at a single meter location from the Company. For purposes of billing for an Electric Generation Supplier (as defined below), the term customer may include all meter locations for which a summary bill is provided. In addition, unless explicitly prohibited by the Public Utility Code or the Commission's Rules and Regulations, an EGS may act as agent for an end use customer upon written authorization to PECO Energy which may be part of the notice of EGS selection.

Customer's service extension - The facilities extending from the customer's service-receiving equipment to the Company's service supply lines.

Default Service (DS) - The provision of energy or energy and capacity by PECO Energy as Default Service Provider to customers that are: (1) not eligible to obtain Competitive Energy Supply, (2) choose not to obtain Competitive Energy Supply, (3) return to default service after having obtained Competitive Energy Supply or Competitive Default Service, or (4) who contract for Competitive Energy Supply from an EGS (as defined below) that fails to deliver such energy or energy and capacity.

Default Service Provider (DSP) – The incumbent EDC within a certificated service territory or a Commission approved alternative supplier of electric generation.

Demand - The maximum rate-of-use of energy during a specified time interval, expressed in kilowatts.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 7**DEFINITION OF TERMS AND EXPLANATION OF ABBREVIATIONS (continued)**

Direct Access - Direct Access shall have the meaning set forth in the Competition Act.

Electric Distribution Company (EDC) - Electric Distribution Company (EDC) shall have the meaning set forth in the Competition Act.

Electric Generation Supplier (EGS) - Electric Generation Supplier (EGS) shall have the meaning set forth in the Competition Act.

Electric Generation Supplier Coordination Tariff (or Supplier Tariff)- PECO Energy's Electric Generation Supplier Coordination Tariff, provides procedures for EGS & PECO EDC interaction to make arrangements necessary to implement Direct Access for retail customers.

Energy Supply Charge (Generation Charge) - PECO Energy's charge for energy or energy and capacity to customers that receive Default Service.

Energy charge - a charge based upon kilowatt-hours of use.

FERC - the Federal Energy Regulatory Commission.

Fixed Distribution Service Charge (Customer Charge) – A charge to recover costs caused by the presence of the customer on the system other than the costs associated with the customer's demand or energy consumption.

Holidays - New Year's Day, Martin Luther King, Jr.'s Birthday, Presidents' Day, Good Friday, Memorial Day, Juneteenth, Independence Day, Labor Day, Columbus Day, Veterans Day, Thanksgiving Day, Friday after Thanksgiving, Christmas Day and Sundays.

Hp, horsepower - As used herein, horsepower shall be computed as the equivalent of 750 watts.

Initial Contract Term - An initial contract term for a service location shall be 1) the customer's first Term of Contract for service to the location or 2) the first Term of Contract after the customer changes service for a location to a different Rate.

Interest Index – An annual interest rate determined by the average of one-year Treasury Bills for September, October and November of the previous year.

KV, kilovolts - 1000 volts.

KVA, kilovoltampere - Unit of measurement of rate-of-use, which determines electrical capacity, required; it is obtained by multiplying the voltage of a circuit by its amperage.

KW, kilowatt - Unit of measurement of useful power.

KWh, kilowatt-hour - Unit of measurement of energy; an amount equivalent to the use of one kilowatt for one hour.

Lumen - Unit of measurement of quantity of light.

Measured Demand - A customer's highest demand during a 30-minute time interval in a billing period.

Month - A month under this Tariff means 1/12 of a year, or the period of approximately 30 days between two regular consecutive readings of the Company's meter or meters installed on the customer's premises.

PaPUC or Commission - The Pennsylvania Public Utility Commission.

PECO Energy or the Company - PECO Energy Company.

Point of Delivery - The single service point at which the service-supply lines of the Company terminate and the customer's facilities for receiving the service begin.

PJM - PJM shall mean the PJM Interconnection, L.L.C.

PJM System - PJM System shall mean the transmission facilities located in the Mid-Atlantic Region that are controlled by PJM.

Power Factor - As used herein, power factor is, in a single-phase circuit, the ratio of the watts to the voltamperes, and in a polyphase circuit, is the ratio of the total watts to the vector sum of the volt-amperes in the several phases.

Principal Office – The Company's Main Office Building is located at 2301 Market Street, Philadelphia, Pa. 19103.

Property Line - The division line between land held in or for private use, and land in which the public or the Company has a right of use; or, the division line between separately owned or occupied land.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 8**DEFINITION OF TERMS AND EXPLANATION OF ABBREVIATIONS (continued)**

Separate EDC Billing - Billing provided by the Company as provided for in the Electric Generation Supplier Coordination Tariff.

Separate EGS Billing - Billing provided by an EGS as provided for in the Electric Generation Supplier Coordination Tariff.

Service - The distribution of energy for use by the customer, including all things done by the Company in connection with such distribution. (The Company must approve the installation of parallel generation via an Interconnection Agreement before the customer operates that generation in parallel with the Company's distribution system.)

- standard single-phase secondary: alternating current, 60 hertz, in accordance with Tariff Rule 2.5 (Single-Phase Up To 150 kVA:
 - (a) nominally 120/240 volts, 3 wires;
 - (b) nominally 120 volts, 2 wires to installations consisting of not more than two 15-ampere branch circuits;
 - (c) nominally 120/208 volts, 3 wires, for residential service, where available in conjunction with standard polyphase secondary 120/208 volts, 3-phase, 4 wires.
- standard polyphase secondary: alternating current, 60 hertz. Only one service is available to a building. However, the Company will provide standard service to customer premises containing multiple buildings in accordance with Tariff Rule 2.2 (Single-Point Delivery). For purposes of determining service capacity and parallel-generating capacity limits, a building is defined as a structure, separated from other structures, or a portion of a contiguous structure separated from the remainder of the structure by approved firewalls. When demand or service voltage requires the installation of transformation equipment on the owner's premises, the transformation shall consist of a pad mounted transformer installed at a location provided by the owner and approved by the Company outside the building or a transformer bank installed inside the building in a vault located on the ground floor or one story below grade, meeting National Electrical Code requirements. The Company will not install, own or maintain any conductors inside or beneath a building nor install indoor transformation in areas supplied by or designated to be supplied at 33,000 volts or greater.
 - (a) nominally 120/240 volts, 2-phase, 5 wires; only available in areas supplied by 2-phase distribution facilities located along public highways or private rights-of-way and limited to service capacities of 100 kVA or less;
 - (b) nominally 240 volts, 3-phase, 3 wires; a fourth wire neutral will be extended for the supply of 120/240 volt single-phase equipment in combination with the service where neither the service capacity required nor the parallel-generating capacity required exceeds 15 kVA on any one of the phases. Where the demand to a single premises exceeds 100 kVA, transformers will be installed on the premises at a suitable location provided by the owner. The service capacity and the parallel-generating capacity are both limited to 300 kVA for transformers located inside the building and 500 kVA for transformers located outside the building.
 - (c) nominally 120/208 volts, 3-phase, 4 wires, (where 3-phase distribution is available) for the exclusive supply of secondary service to a building or group of contiguous buildings occupied by one or more than one customer, with transformers and secondaries installed on the premises at suitable locations provided by the owner. The service capacity and the parallel-generating capacity are both limited to 750 kVA for transformers located either inside or outside the building. When either exceeds 750 kVA for transformers located inside the building the only rate option available to the customer will be Rate HT. When either exceeds 750 kVA but remains at or below 1,500 kVA for transformers located outside of the building, the customer can request service at 277/480 volts, 3-phase 4-wires from transformers located outside of the building. Otherwise, the only rate option available to the customer will be Rate HT. When a suitable transformer location is not reasonably available on the premises and the demand does not exceed 100 kVA, service may be supplied at the Company's discretion from aerial distribution facilities located along public highways.
 - (d) nominally 277/480 volts, 3-phase, 4 wires (where 3-phase distribution is available) for the exclusive supply of secondary service to a building occupied by one or more than one customer with transformers and secondaries installed on the premises at suitable locations provided by the owner. The service capacity and the parallel-generating capacity are both limited to 750 kVA for transformers located inside the building and 1,500 kVA for transformers located outside the building. If either exceeds these limits the only rate option available to the customer will be Rate HT.
- standard primary - unregulated alternating current, 60 hertz, nominally 2,400 volts, 2-phase, 3 wires, or nominally 4,160 volts, 3-phase, 3 or 4 wires. Availability of these voltages is limited to those locations served at these voltages as of July 6, 1987.
- standard high tension - unregulated alternating current, 60 hertz, nominally 13,200, 33,000, 69,000, 138,000, or 230,000 volts, 3-phase, 3 or 4 wires (4-wire, 13 kV service is available in areas that have been converted to 13 kV distribution):

Where two or more such standard voltages are present in a given area, the Company will select the service voltage at which the required service can be supplied most economically. Nominally 13,200, 33,000, 69,000, 138,000 or 230,000 volts as available in the various sections of the Company's service territory for loads of such character as to require supply at one of such voltages in order not to impose unsatisfactory service conditions on the Company's supply system, or for loads of such character that supply at one of such voltages is desired both by the Company and the customer. For service at 13,200 or 33,000 volts, where the customer's demand exceeds 7,000 kW, the owner may be required to provide a suitable location on the premises for the installation of Company's transformation equipment.

The Company's charges for service, which are comprised of the Fixed Distribution Service Charge and Variable Distribution Service Charge, are non-bypassable and must be paid by any customer regardless of the voltage level at which the customer is served.

Service-supply lines - The facilities (conductors, cables, conduits, etc.) extending from the Company's facilities in the highway or other trunk line location to the facilities owned and maintained by the customer.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 9

DEFINITION OF TERMS AND EXPLANATION OF ABBREVIATIONS (continued)

Summary Billing Account - An aggregate bill prepared for two or more meter locations owned or legally controlled by the same partnership, association, corporation, or governmental agency etc. for: (1) the Company's charges for service; and/or (2) an EGS's charges for Competitive Energy Supply, as permitted by Rule 2.2.

Tariff - this Electric Service Tariff comprising the Base Rates, rules and regulations which in conjunction with Pennsylvania Public Utility Law and Pennsylvania Public Utility Commission Regulations govern the distribution of electric energy including all things done by the Company in connection with such distribution, and/or the supply of electric energy under Default Service, and other PaPUC jurisdictional services.

Variable Distribution Service Charge (Distribution Charge) - the variable supply charges for the provision of unbundled distribution service, including all things done by the Company in connection with such distribution service.

RULES AND REGULATIONS**1. THE TARIFF**

1.1 FILING AND POSTING. A copy of this Tariff, which comprises the Rates, Rules and Regulations under which service and Default Service will be provided to its customers by PECO Energy, is on file with the Commission and is posted and open to

inspection at the Principal Office of the Company. A copy of this tariff is also available on the Company's website at <http://www.peco.com>.

1.2 REVISIONS. This Tariff may be revised, amended, supplemented or otherwise changed from time to time in accordance with the Pennsylvania "Public Utility Law", and such changes, when effective, shall have the same force as the present Tariff.

1.3 APPLICATION. The Tariff provisions apply to everyone lawfully receiving service from the Company, under the rates therein, and the recipient of service, whether service is based upon contract, agreement, accepted signed application, or otherwise, shall be subject to the terms of the Tariff. In addition, the rates therein shall apply to everyone receiving service unlawfully or otherwise, including unauthorized use as referred to in Rule 4.7 of this Tariff. A customer will receive service under the rates and riders of this tariff effective with their first scheduled billing cycle after the effective date of the tariff or as otherwise indicated in this tariff.

1.4 BASIS OF CHARGE. Time elapsed is a factor in the supply of service and the rates and minimum charges named in this Tariff, while predicated on periods of supply of not less than one year, are stated in values for direct application only to monthly periods of service supply and will be adjusted for application to service supplied during other time intervals.

1.5 RULES AND REGULATIONS. The Rules and Regulations, filed as part of this Tariff, are a part of every contract for service made by the Company and govern all classes of service where applicable, unless specifically modified by a rate or rider provisions. The obligations imposed on customers in the Rules and Regulations apply as well to everyone receiving service unlawfully and to unauthorized use of service.

1.6 USE OF RIDERS. The terms governing the supply of service under a particular Base Rate may be modified or amended only by the application of those standard riders, filed as part of this Tariff, which are specifically mentioned as applicable to that rate in the Applicability Index of Riders.

1.7 STATEMENT BY AGENTS. No representative has authority to modify a Tariff rule or provision, or to bind the Company by any promise or representation contrary thereto.

2. SERVICE LIMITATIONS

2.1 CHARACTER. This Tariff applies only to the distribution and/or supply of electric energy of the standard characteristics available in the locality in which the premises to be served are situated. The Company does not offer to distribute and/or supply electric energy of nonstandard characteristics.

2.2 SINGLE-POINT DELIVERY The Company will provide standard distribution and/or supply through a single delivery and metering point for the total requirements at each separate premises of any person, partnership, association, or corporation, lawfully receiving service, except where, in the Company's sole judgment, special conditions warrant the installation of additional facilities. Unless otherwise stated herein, the Base Rates in this Tariff for each class of service are based upon that standard. Separate distribution and/or supply for the same customer at other points of consumption shall be separately metered and billed, except that: (1) when the Company is providing Consolidated EDC Billing, the Company will provide summary billing of its charges for and/or an EGS' charges (if requested by the EGS) for Competitive Energy Supply; and (2) when the Company is providing Separate EDC Billing, the Company will provide summary billing of its charges.

2.3 SINGLE-POINT AVAILABILITY. Service delivered at a single point is available to one or more buildings or units devoted essentially to a single purpose, provided and so long as:

- (a) Such buildings or units are:
 - (1) held, possessed, and either utilized or operated as a single establishment by a single responsible entity, and
 - (2) unified on the basis of family, business, industry, enterprise, or governmental agency or through conveniences and services, such as heat, elevator, janitor, care of halls, walks and lawns, etc., furnished by such entity, and
 - (3) situated on a single or on contiguous land parcels except where such buildings or units constitute interdependent parts of a single industrial enterprise. In determining "contiguity" hereunder of parcels abutting opposite sides of public or private ways, the boundaries of such parcels shall be considered as extending to the center of such ways.
- (b) There is granted and maintained to the Company easement or other rights, adequate in the Company's reasonable judgment to supply service direct to any such buildings or units if, as and when a cessation of any one or more of the conditions stated in paragraph lettered "a" above should occur, or there should arise in any manner a Company duty of such direct supply.

PECO Energy Company

~~Tariff Electric Pa. P.U.C. No. 8~~
~~Original Page No. 11~~

RULES AND REGULATIONS (continued)

- (c) The transforming, receiving and distribution facilities on the customer's side of the delivery point, are:
 - (1) furnished, installed and maintained at the expense of the customer, and
 - (2) owned or leased by the customer, and
 - (3) operated and controlled by or at the expense of the customer.
- (d) The Company is under no legal obligation of direct supply to any portion of said building or units or their appurtenances.
- (e) A guarantee by deposit or otherwise is given and maintained to the Company sufficient in its reasonable judgment to insure it against loss in primary, secondary and/or distribution investment in the event of change in the nature of holding and possession of such buildings or units, or in the occupancy thereof, or in the type of service delivered thereto.
- (f) All utilization equipment on the customer's side of the Company delivery point is furnished, installed, operated and maintained by the operator of the building or units supplied or by the tenants of such operator whose use of electricity is dependent upon the single-point delivery and metering of service.
- (g) Any use of public highways by such operator for the latter's distribution facilities does not conflict or interfere with the franchise rights of the company.

2.4 COMPLIANCE WITH AVAILABILITY. The use of the Company's service shall not be for any purpose other than that covered by the availability provisions of the applicable Base Rate and/or riders.

2.5 SINGLE-PHASE UP TO 150 KVA. Single-phase secondary service is available for customer equipment with demand of or parallel-generation facilities having an aggregate nameplate rating up to 150 kVA. Any customer demand or generation equipment in excess of this amount will be supplied polyphase service. (The Company must approve the installation of parallel generation via an Interconnection Agreement before the customer operates that generation in parallel with the Company's distribution system.)

2.6 POLYPHASE LOADS AGGREGATING LESS THAN 7-1/2 HP. Polyphase service is not available for installations aggregating less than 7-1/2 horsepower, unless the excess cost of supplying polyphase rather a single-phase service is borne by the customer.

2.7 MOTORS. Service is not available to motors which do not meet the Company's standard requirements.

2.8 COMPLIANCE WITH BUILDING ENERGY CONSERVATION ACT STANDARDS. Before receiving any electric service to or for new or renovated residential buildings or additions thereto, as defined by Pennsylvania Building Energy Conservation Act (BECA) as amended by Act 98 of 1985, applicants for service must provide the Company with the compliance certification copy of the Pennsylvania Department of Community Affairs (DCA) "Notice of Intent to Construct" form as processed by DCA. A compliance certification copy of "Notice of Intent to Construct" will not be required by the Company if the new or renovated residential building is located in a municipality which has elected to administer the BECA and requires that a notice of intent to construct be filed with the municipality before or at the time that application is made for a building permit and the notice has, in fact, been filed.

3. CUSTOMER INSTALLATION

3.1 INFORMATION FROM THE CUSTOMER. The Company should be advised by the customer or applicant for service, in writing, preferably on a form supplied by the Company, of premises to be equipped for service, giving exact location, and details of all current consuming devices to be installed.

The customer shall supply the Company any and all information in its possession regarding potential or actual contamination, waste or hazardous materials or other adverse environmental conditions on the customers' premises on or near where the Company facilities are to be located. The customer has a continuing obligation to provide the Company with such information relating to the premises as the customer receives it. The Company also has a continuing right to inspect the customers' premises for the purposes of performing an environmental assessment.

3.2 METER LOCATION. There shall be provided, free of expenses to the Company, at a location outdoors, unless otherwise designated by the Company or another AMSP, which the Company or another AMSP will designate in writing upon request, a suitable place for the meter or meters and any other supply, protective or control equipment of the Company or another AMSP which may be required in the provision of service. The customer shall provide access and space, in an amount deemed necessary by the Company, to install and maintain its meter(s) and equipment. This location shall be convenient, unimpeded and easily accessible to the Company's employees, contractors and agents. The Customer shall also minimize any risk for damage and/or harm to the Company's employees, contractors, agents and equipment at the meter location. There also must not be any impediment or obstruction of the Company's ability to receive, an adequate communication signal from its meter(s) for remote reading purposes. The meter(s) location shall also be situated so that the meter(s) are not concealed but shall be situated in a fashion acceptable to the Company.

3.3 POINT OF DELIVERY. The Company will designate in writing, upon request, a satisfactory point of delivery where the customer shall terminate the wiring and facilities for connection to the distribution lines of the Company. The failure to request and obtain such location may result in refusal of service pending rearrangement of customer's facilities, but the designation of a point of delivery does not constitute an agreement or obligation on the part of the Company to furnish service.

In establishing a point of delivery, the Company has the right to avoid areas known or suspected to contain contamination, waste or hazardous materials or other adverse environmental conditions. The customer will have the option of extending its own facilities to the

Company's point of service delivery.

The Company may waive this right of avoidance upon agreement by the customer or applicant to indemnify, defend, and hold harmless the Company (its successors, assigns, trustees, officers, employees and agents) from and against all actions, causes of action, claims and demands whatsoever, and from all costs, damages, expenses, losses, charges, debts and liabilities whatsoever

(including attorney's fees), whether known or unknown, present or future, that arise from such conditions. This indemnification provision shall survive the termination or expiration of said agreement and the termination of the business relationship of the parties thereto.

3.4 SERVICE ENTRANCE EQUIPMENT. All equipment beyond the point of delivery, except the meter, shall be installed by the customer. Installation shall be in conformity with the National Electrical Code and the Company's published "Electric Service Requirements", and shall include, where necessary, an approved sealable device for mounting a meter. The meter will be supplied, owned and sealed by the Company or another AMSP.

3.5 SECONDARY SERVICE CONNECTION. (a) Wiring of any premises for connection to overhead lines must be brought outside of the building wall to a location designated or approved by the Company, at which point the house wiring must extend at least 3 feet for attachment to the Company's service-supply lines. (b) Service connections to the Company's underground facilities shall terminate on the customer's premises in an approved connection box from which customer's wiring shall extend to the other service entrance equipment.

3.6 UNDERGROUND SERVICE. Customers desiring an underground service from overhead wires must bear the excess cost incident thereto. Specifications and terms for such construction will be furnished by the Company on request.

3.7 NONSTANDARD SERVICE. The customer or applicant for service shall pay the cost of any special installation necessary to meet the unusual requirements of the customer or applicant for service, including but not limited to: (1) service at other than standard voltages, (2) service for loads that will be intermittent and which, in the Company's sole judgment, would not generate sufficient revenue to recover the installation costs of the required facilities, (3) service for loads that will be continuous but that will generate minimal usage, and which, in the Company's sole judgment, would not generate sufficient revenue to recover the installation costs of the required facilities, (4) service for loads that will require provision of closer voltage regulation than required by standard service, and (5) situations for which, in the Company's sole judgment, extenuating circumstances exist whereby the Company agrees to provide multiple services, which are not normally offered in other sections of the Tariff, to one customer located on a premises.

The customer or applicant shall pay all costs to the Company of performing environmental assessments, including, but not limited to, the cost of consultants utilized by the Company, the cost of removal and disposal of contamination, waste or hazardous materials or dealing with other adverse environmental conditions associated with either the initial installation, modification, repair, maintenance or removal of service facilities.

3.8 RELAY PROTECTION. The customer must install at the customer's own expense a reverse-phase relay of approved type on all alternating current motors for passenger and freight elevators, hoists, and cranes, and a reverse-power relay for parallel operation.

4. APPLICATION FOR SERVICE

4.1 PLACE OF APPLICATION. Customers may apply for service at the Company's Principle Office or, in some cases, over the telephone.

4.2 SERVICE CONTRACT. Every applicant for service may be required to sign a contract, agreement, or other form then in use by the Company, covering the special circumstances of the use of service, and shall abide by these Rules and Regulations and the standard requirements of the Company including but not limited to those in PECO's Electric Service Requirements Manual ("Blue Book") Builder's Handbook, Interconnection Guidelines and other additional requirements that PECO will provide upon request.

4.3 CONTRACT DATA. The application shall contain a statement of the premises to be served, the rate under which service is desired, and such conditions or riders as are applicable to the special circumstances of the case.

4.4 RIGHT TO REJECT. The Company may place limitations on the amount and character of service it will supply or may reject applications for service: not available under a standard rate; which might affect service to other customers; which is to be delivered at a location or at a standard voltage that involves excessive cost; for bad credit; for the applicant's failure to provide identifying documentation; when an applicant's self-identification cannot be verified; or for other good and sufficient reasons. Customers cannot be denied Default Service or new service for failure to pay an EGS's charges.

The Company has the right to restrict service to only those locations which will not expose the Company to liability for known or suspected contamination, waste or hazardous materials or other adverse environmental conditions.

4.5 ACCEPTANCE. Before the Company affirmatively accepts an application, the Company will consider the application to be "pending". When an application is accepted, it constitutes the contract between the customer and the Company, subject to the Rules and Regulations. A customer or other recipient of service also becomes contractually obliged to the Company when service is provided according to the application either with or without modification, or when the customer otherwise receives service.

4.6 SPECIAL CONTRACTS. Standard contracts shall be for terms as specified in the statement of the rate, but where large or special investment is necessary for the supply of service, or where service is to be used for an emergency or temporary replacement of another method of operation, contracts of longer term than specified in the rate, or with special guarantees of revenue, or both, may be required.

4.7 UNAUTHORIZED USE. Unauthorized connection to the Company's facilities, and/or the use of service obtained from the Company without authority, or by any false pretense, may be terminated by the Company. The use of service without notifying the Company or the AMSP and enabling them to read its meter will render the user liable for any amount due for service provided to the premises from the time of the last reading of the meter, immediately preceding the customer's occupancy, as shown by the Company's books.

4.8 WITHDRAWAL OF APPLICATION. In the event the customer (or potential customer) withdraws an application for either new or modified service, the customer will reimburse the Company for all reasonable costs incurred by the Company in anticipation of providing the new or modified service.

5. CREDIT

5.1 PAYMENT OBLIGATION. For customers for whom the Company provides Consolidated EDC Billing or Separate EDC Billing, the provision of service for any purpose, at any location, is contingent upon payment of all charges provided for in this Tariff (and, for the same class of service (residential or non-residential) under the Company's Gas Service Tariff, if the customer also receives gas service at the same premises) as applicable to the location and the character of service.

The Company may, at its discretion, determine liability for a past due balance by:

- 1) Use of Company records that contain information previously provided to the Company;
- 2) Information contained on a valid mortgage, lease, deed or renter's license;
- 3) Use of commercially available public records databases;
- 4) Government and property ownership records.

5.2 PRIOR DEBTS. Service will not be furnished to former customers until any indebtedness to the Company for previous service of the same or similar classification has been satisfied or a payment arrangement has been made on the debt. This rule does not apply to the disputed portion of disputed bills under investigation. The Company will apply this rule to the disputed portion of disputed bills, if, and only if: (1) the Company has made diligent and reasonable efforts to investigate and resolve the dispute; (2) the result of the investigation is that the Company determines that the customer's claims are unwarranted or invalid; (3) the Commission and/or the Bureau of Consumer Services has decided a formal or informal complaint in the Company's favor and no timely appeal is filed; and (4) the customer nevertheless continues to dispute the same matter in bad faith.

5.3 GUARANTEE OF PAYMENTS. The Company may charge a security deposit before it will render service to an applicant or before the Company will continue to render service to a customer for whom the Company provides Consolidated EDC Billing or Separate EDC Billing. The Company may charge deposits to applicants and customers if they have bad credit, lack creditworthiness or as otherwise permitted by Commission statutes, rules, regulations, and as required by Federal Bankruptcy Law. The applicant or customer may be required to provide a cash deposit, letter of credit, surety bond, or other guarantee, satisfactory to the Company. The Company will hold the deposit as security for the payment of final bills and in compliance with the Company's Rules and Regulations. In addition, the Company may require industrial and commercial customers for which it may provide Consolidated EDC Billing or Separate EDC Billing to post a deposit at any time if the Company determines that the customer is no longer creditworthy or has bad credit or as otherwise permitted by Commission statutes, rules, regulations and as required by Federal Bankruptcy Law. The Company retains the right to charge customers additional deposits based upon continued bad credit or lack of creditworthiness and increased usage.

5.4 AMOUNT OF DEPOSIT. For residential customers, the deposit will be equal to one-sixth of the applicant's or customer's estimated annual bill for Company charges, based on applicable rates. A deposit from a residential customer shall conform to the requirements of 66 Pa. C.S. 1404(c) and applicable Pennsylvania Public Utility Commission regulations. For industrial and commercial accounts, the amount of the deposit shall be the Company's projection of the sum of the Company charges in the customer's two highest monthly bills in the 12 months following the deposit. The provisions of 11 U.S.C. §366(b) of the Federal Bankruptcy Code, or any successor statute or provision, shall, if inconsistent, supersede the provisions of this rule.

RULES AND REGULATIONS (continued)

5.5 RETURN OF DEPOSIT. Deposits secured from a residential customer shall either be applied with interest to the customer's account or returned to the customer with interest in accordance with 66 Pa. C.S. §1404(C) and applicable Pennsylvania Public Utility Commission regulations. In cases of discontinuance or termination of service, deposits will be returned with accrued interest upon payment of all service charges and guarantees or with deduction of unpaid accounts. Deposits secured from a residential customer, plus accrued interest, which may be held until a timely payment history is established, are refunded when a ratepayer is not currently delinquent and has made on time and in full payments for service provided by the Company for 12 consecutive months. Deposits secured from a non-residential customer, plus accrued interest, which may be held until a timely payment history is established, are refunded when a ratepayer is not currently delinquent and has made on time and in full payments for service provided by the Company for 24 consecutive months. Any residential or commercial customer having secured the return of the deposit may be required to make another deposit in accordance with Commission statutes, regulations or Federal Bankruptcy Law if the Customer demonstrates bad credit or lacks creditworthiness subsequent to the return of the initial deposit.

5.6 INTEREST ON DEPOSIT. The Company will allow simple interest on cash deposits calculated as follows:

- (A) with respect to residential accounts, interest, will be computed at the simple annual rate determined by the Secretary of Revenue for interest on the underpayment of tax under Section 806 of the Act of April 19, 1929 (P.L. 343, No. 176), known as the Fiscal Code
- (B) with respect to commercial and industrial accounts, at the lower of the Interest Index or six percent;

Deposits shall cease to bear interest upon discontinuance of service (or, if earlier, when the Company closes the account).

5.7 CREDIT INFORMATION.

CUSTOMERS: In addition to information required otherwise hereunder, customers for whom the Company provides Consolidated EDC Billing or Separate EDC Billing shall be required to provide to the Company with such credit information, as the Company requires. The Company may report to a national credit bureau on credit history associated with past due amounts.

APPLICANTS: The Company's credit and application procedures for applicants are as follows: (1) positive identification of applicant obtained from previous customer record or through one of the major credit reporting bureaus or through in-person identification; (2) determination of liability for a past due balance; (3) determination if a deposit is required based upon applicant's previous account history if available or through third party credit scoring of applicant.

The Company's credit scoring methodology and standards are as follows: The Company uses a commercially recognized credit scoring methodology that is within the range of generally accepted industry practice. The applicant's or customer's utility payment history determines the credit score. The Company uses this customer-specific credit score to either request or waive a security deposit.

5.8 APPLICABILITY TO CUSTOMERS RESIDING AT PLACE OF BUSINESS. For purposes of all of the provisions of this Rule 5, when a customer resides at a place of business or commercial establishment, legitimately served pursuant to a commercial or industrial rate schedule, that is not a residential dwelling unit attached thereto, the customer is not thereby entitled to any of the protections in the Pennsylvania Public Utility Code or the Commission's regulations implementing the Pennsylvania Public Utility Code, or to any of the provisions of these rules or this Tariff, that apply exclusively to deposits for residential customers.

6. PRIVATE PROPERTY CONSTRUCTION

6.1 COMPANY'S SERVICE LINES. Where the Company has distribution facilities of adequate capacity on the highway or in other trunk line location adjacent to the premises to be served, it will provide, own and maintain standard service-supply lines as follows:

(a) UNDERGROUND:

Underground cable construction to a point of delivery approximately 18 inches inside the property line of the customer, except:

- (1) For secondary service to new residences or new apartment buildings, underground cable construction will be extended to a meter location or connection box located at the building or buildings, as designated by the Company and in accordance with Rule 7.3.
- (2) The Company will make necessary repairs to customer-owned extensions of primary and secondary underground service-supply lines for residential customers at no charge. If such customer-owned extension requires replacement, the Company will make the replacement and assume ownership of the service-supply line with the Company bearing the cost up to 200 feet in length and the customer bearing the cost for all additional length.

(b) AERIAL:

A single span of aerial open wire or cable construction to the first suitable support of the customer, nominally 100 feet inside the property line of the customer. This customer support shall establish the point of delivery for the customer. The customer's support shall be so located that the service span will be free of obstruction and adequately supported as required by the size and weight of the conductors.

6.2 SERVICE - SUPPLY ALTERATIONS. Changes related to a service-supply line or a meter owned by the Company, including the installation of protective devices or visual markers to denote safe operating distance from the Company's facilities, for the accommodation of the customer, shall be at the expense of the customer. If the alteration to the Company's facilities is temporary in nature and the materials used in that alteration can later be re-used by the Company, as for example the installation of protective "hard cover" to allow a customer, developer, or contractor to work safely in close proximity to the Company's facilities, then at the Company's discretion it may charge a refundable deposit in lieu of charging the customer for the cost of the re-usable materials.

6.3 CUSTOMER'S SERVICE EXTENSION. The customer shall provide, own, inspect and maintain the service extension from the Company's service-supply lines to the point of delivery and receiving equipment. PECO may install a Company-owned meter, transformer (which transformer may serve one or more customers), or other required equipment, of its choice, on customer-owned property or facilities; Such installation does not alter the responsibility of the customer to provide, own, inspect, and maintain the required customer service extension to which such Company-owned facilities may be attached.

6.4 METERS AND TRANSFORMERS. The Company will provide, own and maintain any meter or meters, and also the transformer or transformers (both potential and current type transformers), required in the supply of service of the current characteristics specified by the Base Rate or rider under which the service is provided, unless the customer receives Advanced Meter Services from an AMSP in that case such AMSP will install, provide, own, and/or maintain the Customer's meter or meters while the Company will continue to own the potential and current type transformers. The supply of transformers by the Company shall be limited to those required for a single standard transformation.

RULES AND REGULATIONS (continued)

6.5 TRAILER PARKS. Where it is established by plans, development, use or other facts that the operation of a trailer park is predominantly to provide rental locations for non-transient trailers, with not less than two nor more than four such locations, the Company, upon written application of the trailer park operator and upon the receipt of an enabling agreement and of adequate rights-of-way, will construct, own and operate within the trailer park specified aerial electric energy, the trailer park operator being liable for payment of service to trailer park tenants not contracting in writing for service in their own names. The Company's obligation to install or extend such distribution facilities within the trailer park is limited to the investment warranted by the anticipated revenue. Alterations of such distribution facilities at the request of the park operator when not for the purpose of serving additional trailer rental locations will be at the cost of the trailer park operator. A trailer park operator desiring underground distribution facilities within a trailer park consisting of less than five locations must bear the excess cost incident thereto. Specifications and terms for such underground construction will be furnished by the Company on request. In new trailer parks consisting of five or more locations, underground distribution facilities will be extended in accordance with Rule 7.3.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 16**RULES AND REGULATIONS (continued)****7. EXTENSIONS**

7.1 TRUNK LINE CONSTRUCTION. The Company will construct, own and maintain overhead or underground distribution facilities, either secondary, primary, or high tension, located on the highway or on rights-of-way acquired by the Company and used or usable as part of the Company's general distribution system.

7.2 LINE EXTENSIONS FOR STANDARD SERVICE.

A. **DEFINITIONS.** For the purposes of this rule, when capitalized herein, the below terms shall have the following meanings:

- (1) Line Extension -- A single-phase or polyphase addition to the public utility electric supply line for the purpose of supplying standard service (as described under Rule 2 above, but not including Line Extensions for nonstandard service as described in Rule 3.7 above) to and connected with the customer's point of delivery which addition is so located that it cannot be supplied by means of a service line from the existing electric supply line.
- (2) Contractor Cost -- The amount paid by the Company to a contractor for work performed on a Line Extension.
- (3) Customer -- End use customer of the Company, or a developer.
- (4) Direct Labor Cost -- The pay and expenses of the Company employees directly attributable to work performed on Line Extensions, but not including construction overheads or payroll taxes, workmen's compensation expenses or similar indirect expenses.
- (5) Direct Material Cost -- The purchase price of materials used for a Line Extension, but not including related storage expenses. In computing Direct Material Costs, proper allowance shall be made for unused materials, materials recovered from temporary structures, and discounts allowed and realized in the purchase of materials.
- (6) Total Construction Cost -- For single-phase Line Extensions, the estimated total cost to the Company for the construction of the Line Extension, which cost shall include: Contractor Cost, Direct Labor Cost, and Direct Material Cost. For polyphase Line Extensions, the estimated total cost to the Company for the construction of the Line Extension, which cost shall include: Contractor Cost, Direct Labor Cost, Direct Material Cost and allocated overheads. For projects requiring significant design work, the Company will provide a preliminary cost estimate and charge customers a non-refundable deposit of 10% of the total estimated costs to fund the detailed design work. The detailed design work cost will not be included in the Total Construction Cost of the Line Extension used to determine contribution in aid of construction ("CIAC").
- (7) Capacity Adjusted Cost -- For polyphase Line Extensions, the Total Construction Cost of a Line Extension multiplied by the percentage of that Line Extension's capacity installed to serve the Customer's capacity needs.
- (8) Revenue Guarantee Contribution -- The estimated Variable Distribution Service Charges, as defined in the "Definitions of Terms and Explanation of Abbreviations" Section of this tariff, to be received by the Company from the Customer for a twelve (12) month period commencing with the first month after the Line Extension is completed.

B. **SINGLE-PHASE LINE EXTENSIONS FOR STANDARD SERVICE.** For a Customer whose use of the Line Extension is not speculative, the Company will construct a single-phase Line Extension as follows. The Company will construct a Line Extension up to 2,500 feet without a charge to the Customer. For Line Extensions over 2,500 feet, a Customer shall pay the Company a contribution in aid of construction ("CIAC") equal to the amount by which the Total Construction Cost of the Line Extension beyond 2,500 feet exceeds the Customer's Revenue Guarantee Contribution for the first three (3) year period after the Line Extension is completed. A Customer who is not a developer must pay the CIAC in full prior to the construction of the single-phase Line Extension.

C. **POLYPHASE LINE EXTENSIONS FOR STANDARD SERVICE.** For a Customer whose use of the Line Extension is not speculative, the Company will construct a polyphase Line Extension, as follows. A Customer must pay the Company a CIAC equal to the amount by which the Capacity Adjusted Cost of the Line Extension exceeds the Customer's Revenue Guarantee Contribution for the first five (5) year period after the Line Extension is completed. A Customer who is not a developer must pay the CIAC in full prior to the construction of the polyphase Line Extension.

D. **DEVELOPERS.** Prior to the construction of any Line Extension, a developer may, in lieu of paying the full CIAC, pay a minimum of 35 percent (35%) of the CIAC and, for the remaining amount, post a surety bond in a form reasonably acceptable to the Company. The unpaid portion of the CIAC is subject to interest at the then applicable prime rate and is payable no later than twelve (12) months from the date of the initial payment.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 17**RULES AND REGULATIONS (continued)**

E. SPECULATIVE LINE EXTENSIONS. A Line Extension is speculative when, in the Company's reasonable opinion there is doubt: (1) as to the continued use, or the level of use, of the new Line Extension by the Customer; or (2) as to the Company's recovery of the Total Construction Cost for a polyphase Line Extension if a Capacity Adjusted Cost is applied.

Under the first scenario of a speculative Line Extension, the Company will construct the Line Extension for a Customer, as follows: pursuant to an individual contract between the Customer and the Company, in addition to any CIAC, the Customer may be required to provide the Company a customer advance in the form of an up-front payment, or, if mutually agreed to by the Customer and the Company, a surety bond in the amount of the Customer's Revenue Guarantee Contribution used in the CIAC calculation as set forth in Part B or C above, as applicable ("Customer Advance"). If, after three (3) years for a single-phase Line Extension, or five (5) years for a polyphase Line Extension, the Customer's Variable Distribution Service Charges have met or exceeded the Customer Advance, the Company will either: (1) return the Customer Advance to the Customer if an up-front payment has been made; or (2) terminate the Customer's obligation to maintain the surety bond.

Under the second scenario of a speculative Line Extension, the Company will construct a polyphase Line Extension for a Customer, as follows: the Customer must pay the Company a CIAC equal to the amount by which the Total Construction Cost of the polyphase Line Extension exceeds the Customer's Revenue Guarantee Contribution for the first five (5) year period after the Line Extension is completed. The Customer may receive a refund of all or part of the CIAC paid if, during that five (5) year period, additional Customers have connected to the Line Extension for which the Customer paid the CIAC. The refund, if any, will be calculated based on the load of the connecting Customers.

7.3 UNDERGROUND SERVICE IN NEW RESIDENTIAL DEVELOPMENTS.

A. For the purposes of this rule, and in accordance with 52 Pa. Code § 57.81, the following words and terms shall have the following meanings, unless the context clearly indicates otherwise:

1. Applicant For Electric Service - The developer of: a recorded plot plan consisting of five or more lots; or one or more five-unit apartment houses.
2. Developer - The party responsible for construction and providing improvements in a development; that is, streets, sidewalks, and utility-ready lots.
3. Development - A planned project which is developed by a developer/applicant for electric service set out in a recorded plot plan of five or more adjoining unoccupied lots for the construction of single-family residences, detached or otherwise, mobile homes, or apartment houses, all of which are intended for year-around occupancy, if electric service to such lots necessitates extending the Company's existing distribution lines.
4. Distribution Line - An electric supply line of untransformed voltage from which energy is delivered to one or more service lines.
5. Service Line - An electric supply line of transformed voltage from which service is delivered to the residence.
6. Subdivision - A tract of land divided by a subdivider into five or more adjoining unoccupied lots for the construction of single-family residences, detached or otherwise, or apartment houses, all of which are intended for year-around occupancy, if electric service to such lots necessitates extending the Company's existing distribution lines.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 18**RULES AND REGULATIONS (continued)**

B. INSTALLATION OF DISTRIBUTION AND SERVICE LINES. All distribution and service lines installed pursuant to an application for electric service within a development will be installed underground, and will be owned and maintained by the Company. Pad-mounted transformers may be installed at the option of the Company. Excavating and backfilling will be performed by the developer of the project or by such other agent as the developer may authorize. The developer or its agent may also for the purpose of reducing civil work costs, install conduit for the Company's use in installing electrical service, if the conduit and associated excavation work meets PECO's requirements. The Company will then assume ownership of such conduit. Installation of service-related facilities will be performed by the Company or by such other agent as the Company may also be installed underground, upon terms and conditions prescribed elsewhere in this tariff. The Company will not be liable for injury or damage occasioned by the willful or negligent excavation breakage, or other interference with its underground lines occasioned by anyone other than its own employees or agents.

Nothing in this section shall prohibit the Company from performing its own excavating and backfilling for greater system design flexibility. However, no charges other than those specified in Section 57.83(4) of Title 52 shall be permitted.

C. APPLICANTS FOR SERVICE. The applicant for service to a development shall conform with the following:

- (1) At its own cost, provide the Company with a copy of the recorded development plot plan identifying property boundaries, and with easements satisfactory to the Company for occupancy by distribution, service and street-lighting lines and related facilities.
- (2) At its own cost, clear the ground in which the lines and related facilities are to be laid of trees, stumps and other obstructions, provide the excavating and backfilling subject to the inspection and approval of the Company, and rough grade it to within six inches of final grade, so that the Company's part of the installation will consist only of laying of the lines and installing other service-related facilities. Excavating and backfilling performed or provided by the applicant will follow the Company's underground construction standards and specifications set forth by the Company in written form and presented to the applicant at the time of application for service and presentation of the recorded plot plan to the Company. If the Company's specifications have not been met by the applicant's excavating and backfilling, such excavating and backfilling will be corrected or redone by the applicant or its authorized agent. Failure to comply with the Company's construction standards and specifications permits the Company to refuse utility service until such standards and specifications are met.
- (3) Request service at such time that the lines may be installed before curbs, pavements and sidewalks are laid; carefully coordinate scheduling of the Company's line and facility installation with the general project construction schedule, including coordination with any other utility sharing the same trench; keep the route of lines clear of machinery and other obstructions when the line installation crew is scheduled to appear; and otherwise cooperate with the Company to avoid unnecessary costs and delay.
- (4) Pay to the Company any necessary and additional costs incurred by the Company as a result of the following:
 - a) Installation of underground facilities that deviate from the Company's underground construction standards and specifications if such deviation is requested by the applicant for electric service and is acceptable to the Company.
 - b) A change in the plot plan by the applicant for electric service after the Company has completed engineering for the project and/or has commenced installation of its facilities.
 - c) Physical characteristics such as oversized lots or lots with extreme set-back where under the Company's line extension policy contained in this tariff a change is mandated for overhead service.
- (5) No charges other than those described in paragraph (4) of this subsection shall be borne by the applicant for electric service or by any other utility sharing the same trench, even if the Company elects to perform its own excavating and backfilling.

D. APPLICABILITY. The provisions of this rule will apply to all applications for service to developments, herein before defined, which are filed after the effective date of this tariff.

E. SUBDIVISIONS. Underground facilities in new residential developments are only required by Sections 57.81 through 57.87 of Title 52 when a bona fide developer exists, i.e., only when utility-ready lots are provided by the developer. A mere subdivision is not required to have underground service. However, should the lot owner or owners in a subdivision desire underground service, such service shall be provided by the Company if such lot owner or owners, at their option, either comply with Section 57.83 of title 52, or pay to the Company such charges as are contained in the Company's tariff for service not required by Title 52.

7.4 TAX ACCOUNTING OF CONTRIBUTIONS IN AID OF CONSTRUCTION AND CUSTOMER ADVANCES. All contributions in aid of construction (CIAC), customer advances or other like payments received by the Company shall constitute taxable income as defined by the Internal Revenue Service. The income taxes on such CIAC or customer advances will be segregated in a deferred account for inclusion in rate base in a future rate case proceeding. Such income taxes associated with CIAC or customer advances will not be charged to the specific contributor of the capital.

8. RIGHTS-OF-WAY

8.1 TERM AND RENTALS. When the premises of a customer is so located that the customer can be served only by facilities extending over the property of another, the customer shall accept service for such term as is provided in a permit or other applicable agreement covering the location and the maintenance of service equipment, and shall reimburse the Company for any and all special or rental charges that may be made for such rights by said permit or agreement.

Effective January 1, 2022

Section Break (Next Page)

Deleted: 7

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 19**RULES AND REGULATIONS (continued)**

8.2 PROCUREMENT BY CUSTOMER. Customers applying for the construction of an extension may be required to secure to, and for, the Company, all necessary and convenient rights-of-way and to pay any associated costs.

8.3 DELAYS. Applications for service from an extension to be constructed where a right-of-way is not owned by the Company will only be accepted subject to delays incident to obtaining a satisfactory right-of-way.

9. INTRODUCTION OF SERVICE

9.1 WIRING IN PROGRESS. Service-supply lines will not be installed before the time that the customer's wiring of the premises is actually in progress.

9.2 INSPECTION. The Company reserves the right to refuse the introduction of service unless a written certificate of approval, satisfactory to the Company, has been received from a competent inspection agency authorized to perform this service in the specific locality in which service is to be provided.

9.3 COMPANY'S RIGHT TO INSPECT. The Company shall have the right, but shall not be obliged to inspect, any installation before it begins to deliver electricity or at any later time, and reserves the right to reject any wiring or appliances not in accordance with the Company's standard requirements; but such inspection, or failure to inspect, or to reject, shall not render the Company liable or responsible for any loss or damage, resulting from defects in the installation, wiring, or appliances, or from violation of Company rules, or from accidents which may occur upon the premises of the customer.

9.4 DEFECTIVE INSTALLATION. The Company may refuse to connect if, in its judgment, the customer's installation is defective, or does not comply with such reasonable requirements as may be necessary for safety, or is in violation of the Company's standard requirements.

9.5 UNSATISFACTORY INSTALLATION. The Company may refuse to connect if, in its judgment, the customer's equipment, or use thereof, might injuriously affect the equipment of the Company, or the Company's service to other customers.

9.6 FINAL CONNECTION. The final connection between the customer's installation and the Company's service lines shall be made by or under the supervision of a representative of the Company, except for standard single-phase secondary aerial service, in which case the customer may make the final connection in accordance with the Company's standard requirements.

9.7 NEW OR TRANSFER CUSTOMER CHARGE. When a customer's account for service is initiated or when a customer's account is transferred from one address to another address, there will be a charge of \$6.00 to cover the clerical expenses incurred by the

Company. The State Tax Adjustment Clause applies to this charge.

10. COMPANY EQUIPMENT

10.1 COMPANY MAINTENANCE. The Company shall keep in repair and maintain its own property installed on the premises of the customer.

10.2 CUSTOMER'S RESPONSIBILITY. The customer shall be responsible for safekeeping of the Company's property while on the customer's premises. In the event of injury or destruction of any such property the customer shall pay the costs of repairs and replacement. Any changes made to the Customer's premises after the Company completes its service and meter installation that, in the opinion of the Company, creates an unsafe condition, shall be the Customer's responsibility to pay any costs associated with remedying the unsafe condition including, but not limited to, any required protective measures and/or relocations of Company property.

Customers with privately owned or operated underground utility facilities on their premises may have obligations as facility owners under the Underground Utility Line Protection Act, 73 P.S. Section 176 et. seq. These include becoming a member of Pennsylvania One Call, maintaining said facilities, and providing approximate locations of said facilities with temporary markings within the required time period in response to Pennsylvania One Call notifications. Customers should create and retain as-built drawings reflecting the locations of said facilities on the premises and revise these drawings as necessary to reflect any changes made following installation. If said facilities are insufficiently marked prior to the lawful start date of any Company excavation or construction work, the Company has the right to require the associated customer to bear all incremental costs necessary to ensure safe digging by the Company, including but not limited to subsurface utility excavation and engineering, materials, supplies, transportation, labor, and overhead. If 1) said facilities are insufficiently marked prior to the lawful start date of any Company excavation or construction work or 2) the Company is unable to notify a facility owner of its intent for excavation or similar work covered under the Act because the facility owner is not a member of the Pennsylvania One Call system, the Company shall not be liable to customers or any other third parties for any damages, including property damage, economic damages, costs, associated consequential damages or personal injuries.

10.3 PROTECTION BY CUSTOMER. The customer shall protect the equipment of the Company on the premises, and shall not permit any person, except a Company employee having standard badge of the Company or other Company identification, to break any seals upon, or do any work on, any meter or other apparatus of the Company located on the customer's premises.

10.4 TAMPERING. In the event of the Company's meters or other property being tampered or interfered with, the customer being supplied through such equipment shall pay the amount which the Company may estimate is due for service used but not registered on the Company's meter, and for any repairs or replacements required, as well as for costs of inspections, investigations, and protective installations.

RULES AND REGULATIONS (continued)

10.5 RIGHT OF ACCESS. The Company's identified employees shall have access to the premises of the customer at all reasonable times for the purpose of reading meters, and for installing, testing, inspecting, repairing, removing or changing any or all equipment belonging to the Company. In the event of an emergency, the Company shall have the right to access customer owned facilities and equipment for the purpose of restoring electric service, for the purpose of rendering the electric facilities safe and reliable, or for the purpose of reducing the likelihood of damage to the Company's facilities and equipment.

10.6 OWNERSHIP AND REMOVAL. All equipment supplied by the Company shall remain its exclusive property, and the Company shall have the right to remove the same from the premises of the customer at any time after the termination of service from whatever cause.

10.7 POLE REMOVAL OR RELOCATION REQUESTED BY RESIDENTIAL PROPERTY OWNERS. The cost for removal or relocation of distribution line poles and their associated attachments made pursuant to the request of a residential property owner who is not entitled to receive condemnation damages to cover the cost of such work shall be borne by the property owner and shall be limited to contractor, direct labor, and direct material costs incurred less maintenance expenses avoided as a result of the pole removal or relocation. The calculation of such cost for removal or relocation shall be in accordance with the Public Utility Commission Regulations - Title 52, Section 57.27.

10.8 RELOCATION OF COMPANY FACILITIES REQUESTED BY NON-RESIDENTIAL PROPERTY OWNERS. Except as otherwise provided by law (e.g., 66 Pa.C.S. Section 2704, et seq.), a non-residential property owner, such as a builder, developer or contractor (Owner), shall pay to the Company the costs of relocation of Company facilities or equipment, made for the accommodation of the Owner or in fulfillment of the Owner's obligation to any public authority. If the facility relocation is made to accommodate the Owner's project or in fulfillment of the Owner's obligation to any public authority, then the Owner shall be responsible to pay PECO for the relocation costs even if the relocation request is made by an entity other than the Owner. A request for relocation of Company facilities shall be in writing. The relocation cost shall include labor (including overhead), materials, storeroom expense and transportation, less the depreciated value of any equipment replaced. Where the relocation is done in conjunction with construction of a supply line to a development, the Company shall include in the relocation cost only those costs caused by the Owner's request. The Company will notify the Owner in writing of the relocation cost. Advance payment of relocation costs will be required before the Company will commence the work, except, at the sole discretion of the Company, under special circumstances.

Where the relocation relates to a development that will generate additional revenue for the Company, the Company will give the Owner an initial credit against the relocation costs in an amount not to exceed 5% of the estimated annual revenue recovered through the Company's tariffed Variable Distribution Service Charges from the portion of the development under construction at the time of the relocation request. The Company will give the Owner an additional credit against relocation costs not to exceed 5% of the estimated additional revenue recovered through the Company's tariffed Variable Distribution Service Charges realized from new load on the PECO Energy system due to buildings not under construction at the time of the initial relocation but that are under roof within a five (5) year period from the date of completion of the relocation work. Credits will be held by the Company and distributed to the owner, on a pro-rated basis, as additional loads from the development are connected to PECO Energy's distribution system. No credits will be given for loads connected after the five year period from the date of completion of the relocation work. When the relocation is done in conjunction with extension of a line in accordance with §7.2 of the Tariff, the Company will include in the credit calculation only such estimated annual revenue that exceeds the minimum revenue guarantee required by §7.2. The cost and expense of project changes which require a second relocation of the same Company facilities shall be borne solely by the party requesting the change without offset or credit.

10.9 AERIAL LINE CLEARANCE. In accordance with the requirements set forth in the National Electrical Safety Code, the Company shall have the right to trim, remove, or separate trees, vegetation or any structures therein which, in the opinion of the Company, interfere with its aerial conductors, such that they may pose a threat to public safety or to system reliability.

10.10 ADVANCED METER SERVICES PERFORMED BY AMSPs. The provisions of this Rule 10 are subject to the terms of the Electric Generation Supplier Coordination Tariff.

10.11 RECOVERY FOR PROPERTY DAMAGE. If Company equipment is damaged through the negligence or intentional act(s) of any individual(s) or entity(s), the one(s) responsible for causing the damage shall reimburse the Company for all aspects of the resulting damages. The reimbursement shall include costs related to: labor, material, transportation and tools. "Labor" shall include benefit and administrative overheads based on the Company's current standard schedule, including third party contract repairs or modifications. Additionally, "Labor" may be calculated using a "blended" or average pay rate consistent with the above referenced standards. "Materials" may include an added stores expense calculated using the above referenced standards.

11. TARIFF AND CONTRACT OPTIONS

11.1 CHOICE OF RATE. When the class of service-supply or conditions of use are such that two or more Base Rates are available, a customer shall select the Base Rate on which the customer will be billed.

11.2 COMPANY ASSISTANCE. The Company upon request will, to a reasonable extent, assist customers in selecting the most advantageous Base Rate or rate application (i.e., Base rate together with applicable riders).

11.3 RATE CHANGES. A customer may not change Base Rates during the "initial contract term" as defined in the "Definition of Terms and Explanation of Abbreviations" section above unless the Company agrees to permit the change. At any other time, a customer may change to a firm rate for which the customer qualifies upon 30 days notice to the Company. Customer ownership and obligation to maintain customer owned transformation facilities and equipment, as well as the point of delivery, will be unaffected by any Base Rate change initiated by the customer.

A customer may request that the Company modify the terms of its contract, other than the customer's Base Rate, but the Company will only allow such modification when, in the Company's sole judgment, the modification does not conflict with the Company's Tariff and is not detrimental to the Company.

The Company will not make any Base Rate change retroactive, unless, in the Company's sole judgment, the Company failed to adequately respond to a customer's request for assistance or modification at the time of such request.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 22**RULES AND REGULATIONS (continued)****12. SERVICE CONTINUITY**

12.1 LIMITATION ON LIABILITY FOR SERVICE INTERRUPTIONS AND VARIATIONS. The Company does not guarantee continuous, regular and uninterrupted supply of service. The Company may, without liability, interrupt or limit the supply of service for the purpose of making repairs, changes, or improvements in any part of its system for the general good of the service or the safety of the public or for the purpose of preventing or limiting any actual or threatened instability or disturbance of the system. The Company is also not liable for any damages due to accident, strike, storm, riot, fire, flood, legal process, state or municipal interference, or any other cause beyond the Company's control.

In all other circumstances, the liability of the Company to customers or other persons for damages, direct or consequential, including damage to computers and other electronic equipment and appliances, loss of business, or loss of production caused by any interruption, reversal, spike, surge or variation in supply or voltage, transient voltage, or any other failure in the supply of electricity shall in no event, unless caused by the willful and/or wanton misconduct of the Company, exceed an amount in liquidated damages equivalent to the greater of \$1000 or two times the charge to the customer for the service affected during the period in which such interruption, reversal, spike, surge or variation in supply or voltage, transient voltage, or any other failure in the supply of electricity occurs. In addition, no charge will be made to the customer for the affected service during the period in which such interruption, reversal, spike, surge or variation in supply or voltage, transient voltage, or any other failure in the supply of electricity occurs. A variety of protective devices and alternate power supplies that may prevent or limit such damage are available for purchase by the customer from third parties.

The Company makes no warranty as to merchantability or fitness for a particular purpose, express or implied, by operation of law or otherwise. To the extent applicable under the Uniform Commercial Code or on any theory of contract or products liability, the Company limits its liability in accordance with the previous paragraph to any Customer or third party for claims involving and including, but not limited to, strict products liability, breach of contract, and breach of actual or implied warranties of merchantability or fitness for an intended purpose.

12.2 ADDITIONAL LIMITATIONS ON LIABILITY IN CONNECTION WITH DIRECT ACCESS. Other than its duty to deliver electric energy and capacity, the Company shall have no duty or liability to a customer receiving Competitive Energy Supply arising out of or related to a contract or other relationship between such a customer and an EGS.

The Company shall implement customer selection of an EGS consistent with applicable rules of the Commission and shall have no liability to a customer receiving Competitive Energy Supply arising out of or related to switching EGSs, unless the Company is negligent in switching or failing to switch a customer.

The Company shall have no duty or liability with respect to electric energy before it is delivered by an EGS to a point of delivery on the PECO Energy distribution system. After its receipt of electric energy and capacity at the point of delivery, the Company shall have the same duty and liability for distribution service to customers receiving Competitive Energy Supply as to those receiving electric energy and capacity from the Company.

12.3 EMERGENCY LOAD CONTROL. Pursuant to order of Pennsylvania Public Utility Commission, the following provision is incorporated in this Tariff:

Whenever the demands for power on all or part of the Company's system exceed or threaten to exceed the capacity than actually and lawfully available to supply such demands, or whenever system instability or cascading outages could result from actual or expected transmission overloads or other contingencies, or whenever such conditions exist in the system of another public utility or power pool with which the Company's system is interconnected and cause a reduction in the capacity available to the Company from that source or threaten the integrity of the Company's system, a load emergency situation exists. In such case, the Company shall take such reasonable steps as the time available permits to bring the demands within the then-available capacity or otherwise control load. Such steps shall include but shall not be limited to reduction or interruption of service to one or more customers, in accordance with the Company's procedures for controlling load.

The Company shall establish procedures for controlling load including schedules of load shedding priorities to be followed in compliance with the foregoing paragraph, may revise such procedures from time to time, and shall revise them if so required by Pennsylvania Public Utility Commission. A copy of such procedures or of the revision thereof currently in effect shall be kept available for public inspection at the Company's Principle Office, and another such copy shall be kept on file with the Pennsylvania Public Utility Commission.

12.4 EMERGENCY ENERGY CONSERVATION. Pursuant to order of the Pennsylvania Public Utility Commission, the following provision is incorporated in this Tariff:

Whenever events occur which are actually resulting, or in the judgment of the Company threaten to result, in a restriction of the fuel supplies available to the Company or its energy suppliers, such that the amount of electric energy which the Company is able to supply is or will be adversely affected, an emergency energy situation exists.

In the event of an emergency energy conservation situation, the Company shall take such reasonable measures as it believes necessary and proper to conserve available fuel supplies. Such measures may include, but shall not be limited to reduction, interruption, or suspension of service to one or more of its customers or classes of customers in accordance with the Company's procedure for emergency energy conservation.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. **8**
Original Page No. 23

RULES AND REGULATIONS (continued)

The Company shall establish procedures for emergency energy conservation, including, if it deems necessary, schedules of service interruption and suspension priorities to be followed as prescribed by the foregoing paragraph.

The Company may revise such procedure from time to time, and shall revise them if so required by the Pennsylvania Public Utility Commission. A copy of such procedures or of the revision thereof currently in effect shall be kept available for public inspection at each office at which the Company maintains a copy of its Tariff for public inspection, and another such copy shall be kept on file with the Pennsylvania Public Utility Commission.

12.5 NOTICE OF TROUBLE. The customer must immediately notify the Company if service is interrupted or is otherwise unsatisfactory due to defects, trouble, or accident, affecting the supply of service.

12.6 RELOCATION OF DELIVERY POINT. In the event that the Company shall be required by any public authority to place underground any portion of its mains, wires, or service-supply lines, or relocate any poles or feeders, the customer, at the customer's own expense, shall change the location of his point of delivery to a point readily accessible to the new location.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 24**RULES AND REGULATIONS (continued)****13. CUSTOMER'S USE OF SERVICE**

13.1 RESALE OF SERVICE. Pursuant to Section 1313 of the Public Utility Code, 66 Pa. C.S. § 1313, a customer may resell Energy and Capacity and/or service provided by PECO Energy under its default service plan if: (1) the Company provides such service under a single contract at one application of an available Base Rate and for the total requirements of the premises served, and (2) the location and use of the service conforms to the availability requirements of this Tariff for provision to the customer for the customer's own account.

All residential units connected after May 10, 1980, except those dwelling units under construction or under written contract for construction as of that date must be individually metered by either the Company, the AMSP or the landlord for their basic electric service supply. Centrally supplied master metered heating, cooling or water heating service may be provided if such supply will result in energy conservation. The bill rendered by the reseller to any consumer shall not exceed the amount which PECO Energy would bill its own residential customers for the same quantity of service under the applicable tariffed residential rate.

The requirements for individually metered dwelling units in new construction may be waived at the sole discretion of the Company. Such waiver will only be granted when the owner can demonstrate to the Company that there are valid reasons for such waiver and that there will not be a significant impact on the consumption of an individual customer.

In accordance with the Commission's Policy Statement at Docket No. M-2017-2604382, the electricity sales by a person, corporation or other entity, not a public utility, owning and operating an electric vehicle charging facility for the sole purpose of recharging an electric vehicle battery for compensation shall not be construed to be sales to residential consumers and therefore do not fall under the pricing requirements of 66 Pa.C.S. § 1313. Such sales are therefore not considered a resale of service as defined in this tariff rule, Rule 13.1.

Electric Vehicle charging stations shall be constructed in accordance with the Company's service installation policies contained in its Electric Service Requirements Manual ("Blue Book"), a copy of which may be found at www.peco.com. The customer, who may be either the owner or the host of a third-party owned charging station, shall notify the Company at least one hundred twenty (120) days in advance of the planned installation date and may be required to install metering for the station as determined by the Company.

13.2 FLUCTUATIONS. Electric service must not be used in such a manner as to cause unusual fluctuations or disturbances in the Company's supply system, and, in the case of violation of this rule, the Company may discontinue service, or require the customer to modify the installation and/or equip it with approved controlling devices.

13.3 TYPE OF INSTALLATIONS. Motor and other installations connected to the Company's lines must be of a type to use minimum starting current and must conform to the requirements of the Company as to wiring, character of equipment, and control devices.

13.4 UNBALANCED LOAD. The customer shall at all times take, and use, energy in such manner that the load will be balanced between phases to within nominally 10%. In the event of unbalanced polyphase loads, the Company reserves the right to require the customer to make the necessary changes at the customer's expense to correct the unsatisfactory condition, or to compute the demand used for billing purposes on the assumption that the load on each phase is equal to that on the greatest phase.

13.5 ADDITIONAL LOAD. The service connection, transformers, meters and equipment supplied by the Company for each customer, have definite capacity, and no additions to the equipment or load connected thereto will be allowed except by consent of the Company.

13.6 CHANGE OF INSTALLATION. The customer shall give immediate written notice to the Company of any proposed increase or decrease in, or change of purpose or location of, the installation.

13.7 FAILURE TO GIVE NOTICE. Failure to give notice of additions or changes in load or location shall render the customer liable for any damage to the meters or their auxiliary apparatus, or the transformers, or wires, of the Company, caused by the additional or changed installation.

14. METERING

14.1 SUPPLY OF METERS. An EGS that is also an AMSP may provide Advanced Meter Services in accordance with the Electric Generation Supplier Coordination Tariff. Otherwise, subject to Rules 14.3 and 14.9, the measurement of service for billing purposes shall be by meters furnished and installed by the Company. The Company will select the type and make of metering equipment to be used for meters supplied by the Company, and may, from time to time, change or alter the equipment, its sole obligation being to supply meters that will accurately and adequately furnish records for billing purposes. In fulfilling its obligations with respect to metering and meter reading, and with respect to AMSPs that provide Advanced Meter Services, the Company will comply with Electric Generation Supplier Coordination Tariff.

14.2 SPECIAL MEASUREMENTS. The Company shall have the right, at its option and its own expense, to place demand meters, reactive-component meters, or other instruments, on the premises of any customer except for any customer for whom an AMSP is providing Advanced Meter Services, for the purpose of measuring the demand and/or the power factor, or for other tests of all, or any part, of the customer's load.

14.3 CUSTOMER REQUEST FOR SPECIAL METER. If a customer for whom the Company is providing either metering and meter reading wishes to replace its billing metering equipment, to the extent technically possible, the Company may offer, provide and support a selection of qualified meters and may perform installation within a reasonable amount of time and at the expense of the customer. The customer must pay for any such metering equipment based on the net incremental cost of purchasing and installing the new metering equipment as approved by the Commission. The Company will own and maintain all such new metering equipment.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 25**RULES AND REGULATIONS (continued)**

14.4 POWER FACTOR MEASUREMENT. For customers for whom the Company is providing metering and meter reading or Advanced Meter Services, the Company reserves the right to measure the power factor of the customer's load, either by test or by permanently installed instruments. For customers for whom an AMSP is providing Advanced Meter Services, the Company reserves the right to require such AMSP to measure the power factor of the load of the customer on the same basis the Company measures the power factor of customers for which the Company provides metering and meter reading or Advanced Meter Services.

14.5 REVERSE REGISTRATION. The Company may, by ratchet or other device, control its meters to prevent reverse registration.

14.6 ESTIMATED USAGE. The kilowatt-hours and billing demands to be paid for may be determined by computation instead of by measurement in the case of installations having a fixed load or demand value controlled to operate for a definite number of hours each day.

14.7 METER READING INTERVALS. The Company will read its meters in accordance with Appendix C to the Joint Petition for Full Settlement and at scheduled regular intervals of one month. Monthly customer usage will not be prorated for seasonality. For customers for whom it provides Consolidated EDC Billing or Separate EDC Billing, the Company will render standard bills for the recorded use of service based upon the time interval between meter readings. EGS & EDC charges shall be based on the EDC defined meter reading route schedules. Only those bills which cover a period of service of less than 26 days or more than 35 days will be prorated. The Company will reflect multiple supplier switches within a single monthly bill to ensure a customer can switch their electric service in accordance with the accelerated switching process final omitted rulemaking order that amends 52 Pa. Code, Ch. 57.172 – 57.179. See Dockets No. L-2014-2409383 and P-2014-2446292.

14.8 ESTIMATED USAGE. For customers for whom the Company provides meter reading or Advanced Meter Reading Services, the Company shall estimate the amount of service supplied to premises where access to the meter is not available or if such estimate is necessary, and to installations at remote locations when warranted by the type of installation, regularity of usage, or other circumstances. For customers for whom it provides Consolidated EDC Billing or Separate EDC Billing, the Company will render bills in standard form based on such estimate and so marked, for the customer's acceptance. Meter readings will be secured from time to time and billing will be revised when they disclose that the estimate failed to approximate the actual usage. For residential customers, an actual meter reading will be obtained at least every six months in accordance with Commission regulations.

14.9 CUSTOMER SELECTED ADVANCED METERS. A customer may request either PECO Energy or an AMSP to have an Advanced Meter installed and have Advanced Meter Services provided pursuant to Appendix C of the Joint Petition for Full Settlement and any applicable rules adopted by the Commission. For an advanced meter to be deployed in the PECO Energy service territory, it must be included in the Commission's Advanced Meter Catalog, and indicated as eligible for deployment in the PECO Energy territory.

14.10 MANUAL METER READING FEE Upon customer request, the Company will secure an in-person meter reading to confirm the accuracy of an automatic meter reading when a customer disconnects service or a new service request is received. The fee is \$45 and the Company will include this fee on the customer's or applicant's bill.

15. DEMAND DETERMINATION

15.1 MEASURED DEMANDS. Measured demands may be quantified by recording or indicating instruments showing, unless otherwise specified, the greatest 30-minute rate-of-use of energy, provided that in the case of hoists, elevators, welding machine, electric furnaces, or other installations where the use of electricity is intermittent or subject to violent fluctuation the demand may be fixed by special determination.

15.2 DEMAND DETERMINATION.

- (a) Special Determination. Where charges specified in this Tariff are based upon the customer's demand, it is intended that such demand shall fairly represent the customer's actual demand that the Company must stand ready to serve. In the case of installations where the customer's regular use of service in the ordinary course of the customer's business is such that measurement over a thirty-minute interval does not result in a fair or equitable measure of the customer's demand, then the demand may be estimated from the known character of use and the rating data of the equipment connected, or from special tests. The intent of this provision is that the demand so determined shall fairly represent the demand that the Company must stand ready to serve.
- (b) Demand Waiver. When a customer wishes to conduct a test of equipment or process that is not part of the customer's normal operations, the customer may request that the Company waive the demand caused by that test, if that demand is the highest measured demand in the billing month. The Company will agree to such a waiver if the following conditions are met:
 1. The Company's metering is of a type which allows for the determination of 30-minute demands; and
 2. The customer's request is in writing, and is received by the Company at least 15 business days before the date of the commencement of the proposed test. The request must specify the nature of the test, the size of the loads to be tested and the starting and ending times; and
 3. The Company determines that the tests are not a part of the customer's normal operations; and
 4. The test will not last for more than twelve (12) consecutive hours; and
 5. The customer has not conducted a test and received a demand waiver for a test pursuant to this rule within one year of the proposed test.

Upon receipt of a request for a demand waiver, the Company will inform the customer in writing within fifteen (15) days of receipt of the customer's request whether it will grant the proposed waiver

PECO Energy Company

Tariff Electric Pa. P.U.C. No. **8**
Original Page No. **26****RULES AND REGULATIONS (continued)****15.3 POWER FACTOR ADJUSTMENT.****A. Standard Power Factor Values** (based on measured demands)

<u>Measured Demands (Kw)</u>	<u>Standard Power Factor</u>
0 -185	80%
186 - 2,500	90%
Over 2,500	95%

B. Adjustment to Measured Demand. When a customer's measured power factor is less than the standard power factor values above, the Company shall increase the customer's measured demand by the ratio of the standard power factor to the measured power factor. The Company will then use this adjusted demand as a basis for calculating the customer's billing demand in accordance with the applicable rate schedule.

C. Determining Measured Power Factor:

- 1) For customers with measured demands of 750 kW or greater in three consecutive months:
 - (a) Until metering equipment capable of continuous power factor measurement is installed, the Company shall determine measured power factor based C3 below.
 - (b) Once capable metering is installed, the Company shall continuously measure power factor.
 - i. The customer's measured power factor shall coincide with the customer's maximum measured demand.
 - ii. The Company in its sole judgment may discontinue continuous power factor measurement if: (1) the customer's measured demand is less than 750 kW for twelve consecutive months, or: (2) the Company determines that changes to the customer's load characteristics will result in that customer permanently reducing measured demand to less than 750 kW.
- 2) For customers with measured demands of less than 185 kW:
 - (a) If the Company in its sole judgment deems that that the power factor is likely to be less than this standard based on the customer's load, the Company shall determine measured power factor based on C3 below.
 - (b) Otherwise, the Company shall assume the customer's measured power factor to be the standard noted above
- 3) For all other customers, including those with measured demands between 185 kW and 750 kW, the Company shall determine measured power factor in one of the following ways:
 - (a) By test, at a time when the customer's load is at least two-thirds of the customer's maximum measured demand in the preceding eleven months.
 - (b) At the option of either the customer or the Company, by measurement as determined from meters installed by the Company, ratcheted to prevent reverse registration.
 - i. Customers requesting measurement of power factor shall be subject to a monthly meter charge determined in accordance with the cost of the meter installation. Such installation shall not be for less than one year.
 - ii. When meters are installed, the measured power factor shall be the power factor that is coincident with customer's maximum measured demand.
- 4) A customer that receives Advanced Meter Services from an AMSP is subject to these rules regarding determination of measured power factor.

16. METER TESTS

16.1 METER TESTS. The Company at its expense, will make periodic tests and inspections of its meters in order to maintain them at a high standard of accuracy.

16.2 REQUEST TESTS. The Company will make additional tests or inspections of its meters at the request of a customer or an EGS providing Competitive Energy Supply to a customer, but reserves the right to make the charge provided for in the Electric Regulations of the Pennsylvania Public Utility Commission, under conditions therein specified.

16.3 ADJUSTMENT FOR ERROR. Should any of the Company's meters become defective or fail to register correctly, the use of electricity shall be determined by a test of any such meter, or by the registration of a meter set in its place during the period next following, or by averaging the amount registered for the preceding billing period and the amount registered during not less than one week immediately subsequent to the repairs to, or change of, the meter, taking into consideration the character of use by the customer.

16.4 RESIDENCE METER ERRORS. Meter errors in the Company's meters in residence service may be determined on the basis of the registration of the corresponding period during the preceding year, if records are available and conditions of use remain the same.

16.5 ADMINISTRATION TESTS. The Company, at its own expense, will make only such tests of the Company's meters as it deems necessary for the proper administration of its rates, or as are required by law.

16.6. TESTING SERVICE. The Company will, upon request by the customer, make tests of the Company's meters to supply special information regarding the customer's use of service, provided that the estimated cost of such special tests shall be paid by the customer to the Company at the Company's discretion.

PECO Energy Company

Tariff Electric PA. P.U.C. No. 8
Original Page No. 27**RULES AND REGULATIONS (continued)****17. BILLING AND STANDARD PAYMENT OPTIONS**

17.1 BILLING PERIOD. Billing for service will be based upon the amount of use and the time interval of its delivery. The customer will be billed in accordance with rule 14.7. Rate values stated for direct application to monthly billing periods will be adjusted when time elapsed between readings is substantially greater or less than a month.

17.2 BILLING OPTIONS. A customer may select one of the following three billing options as communicated to PECO by the customer's supplier: (1) Consolidated EDC Billing; (2) Consolidated EGS Billing; and (3) Separate EDC/EGS Billing, as those terms are defined herein. If a customer does not make a selection, the customer shall receive Consolidated EDC Billing. When the Company provides Consolidated EDC Billing or Separate EDC Billing, it will comply with the terms and conditions of the Electric Generation Supplier Coordination Tariff. For customers who receive both electric and gas service from the Company, the Company will issue a bill that contains charges for both of these services.

17.3 PAYMENT.

- (a) The Company's bills to customers are payable upon presentation. Payment for service received must be made on or before the due date shown on the bill. The due date shall be determined by the Company and shall be not less than twenty days from the date of transmittal of the bill for Rates R, R-H, RS-2, POL and GS (excluding Summary Billing Accounts). The due date shall be not less than 15 days from the date of transmittal of the bill for all other rates, including Summary Billing Accounts. Notwithstanding the foregoing, the due date may be up to thirty days for accounts (including Summary Billing Accounts) with the United States of America, the Commonwealth of Pennsylvania, or any of their departments, political subdivisions, or instrumentalities. The Company may allow a reasonable amount of additional time for payment of bills on industrial and commercial accounts of creditworthy customers. If the due date that appears on a customer's bill falls on a Saturday, Sunday, bank holiday, or any other day when the offices of the Company which regularly receive payments are not open to the general public, the due date shall be extended to the next business day. The payment period will not be extended because of the customer's failure to receive a bill unless said failure is due to the fault of the Company.
- (b) Payment may be made at any commercial office of the Company or at any authorized payment agency. The customer bears the risk of delivery of payment tendered on or after the date contained in any termination notice sent to the customer.
- (c) The Company may require that a customer that is not creditworthy tender payment by means of a certified, cashier's, teller's, or bank check, or by wire transfer, or in cash or other immediately available funds.
- (d) A customer must pay the undisputed portion of disputed bills under investigation. The Company will apply this rule to the disputed portion of disputed bills, if, and only if: (1) the Company has made diligent and reasonable efforts to investigate and resolve the dispute; (2) the result of the investigation is that the customer's claims are unwarranted or invalid; (3) the Commission and/or the Bureau of Consumer Services has decided a formal or informal complaint in the Company's favor and no timely appeal is filed, and (4) the customer nevertheless continues to dispute the same manner in bad faith.

17.4 PAYMENT PROCESSING. When the Company is providing Consolidated EDC Billing, Default Service or Separate EDC Billing, and the customer remits a partial payment to the Company, the payment will be applied as follows:

- Any past due balances including those for prior PECO basic service charges, for prior EGS receivables purchased by the Company, for prior installment amounts on payment agreements, and also for any reconnection charges.
- Any current charges including those for PECO basic service charges, for current EGS receivables purchased by the Company, and for current installment amounts on payment agreements.
- Non-basic service charges.

17.5 LATE FEES AND COLLECTION COSTS. If payment is made at a Company office or authorized payment agency after the due date shown on the bill, a late fee will be added to the unpaid balance until the entire bill is paid. If payment is made by mail, the late fee will be added if the payment is received by the Company more than five days after the due date shown on the bill. For Rates R, R-H, RS-2, POL and GS this late fee will be 1-1/2 % per month; for all other rates the late fee will be 2% per month. The Company will not apply late fees to Final Bills as defined in Tariff Rule 20.2. If the Company files suit to collect a delinquent balance on an account (whether active or inactive) or to ensure payment of current bills, the customer will be required to pay the Company's out of pocket court costs (including filing, service, and witness fees) as ordered by the court and such costs will be added to commercial and industrial accounts.

17.6 BUDGET BILLING.

(a) At the option of a customer receiving residential service under Rates R, R-H, RS-2, and GS, an estimated total bill for all service to be received by the customer over a twelve month period may be budgeted over the period and an average bill rendered monthly for payment each month. Any difference between the budgeted amounts so paid and the actual charges for a twelve month budget period will at the customer's option, either be amortized over the next twelve months or incorporated into the 12th month bill. Absent an indication of preference from the customer, the debit or credit will be amortized. Budget billing may be discontinued upon the customer's request at which time any difference between budget billing amounts and actual charges becomes due and payable. If a monthly budget bill is not paid, a late fee will be added to the unpaid balance of actual charges on the next billing date in accordance with Rule 17.3 and 17.5. Any such late fee will be calculated based on the lesser of budget billing arrears and actual charged arrears. The Company may also arrange budget billing for creditworthy commercial and industrial customers.

(b) When the Company provides Consolidated EDC Billing, the EGS's charges will be included in the customer's Budget Billing Plan.

RULES AND REGULATIONS (continued)

17.7 CALCULATION OF LATE FEE. Where a late fee is applicable, the amount of the late fee to be added to the unpaid balance shall be calculated by multiplying the unpaid past due balance, exclusive of any previous unpaid late fees, by the appropriate late fee rate.

17.8 TAX EXEMPTION. If a customer is tax exempt, the customer must provide a tax exempt form to PECO Energy and to its EGS, regardless of which billing option the customer chooses.

17.9 BILLING ERRORS. When the Company provides Consolidated EDC Billing, PECO Energy shall not be responsible for billing errors resulting from incorrect price information received from an EGS.

17.10 RETURNED PAYMENT CHARGE. If a check (electronic or paper) received in payment of a customer's account is returned to the Company unpaid or if upon a second attempt by the Company or its agent for payment the check is again returned unpaid, then the Company will add a returned payment charge to the customer's account in the amount of **\$20.00**.

17.11 APPLICABILITY TO CUSTOMERS RESIDING AT PLACE OF BUSINESS. For purposes of all of the provisions of Rule 17, when a customer resides at a place of business or commercial establishment legitimately served pursuant to a commercial or industrial Base Rate, that is not a residential dwelling unit attached thereto, the customer is not thereby entitled to any of the protections in the Public Utility Code or the Commission's regulations implementing the Pennsylvania Public Utility Code, or to any of the provisions of these rules or this Tariff, that apply exclusively to payment terms for residential customers.

18. PAYMENT TERMS & TERMINATION OF SERVICE

18.1 NON-PAYMENT TERMINATION. When the Company is providing either Consolidated EDC Billing or Separate EDC Billing, the customer is subject to collection action, including termination of service (in accordance with the Pennsylvania Public Utility Code or the Commission's regulations, on the portion of the past due amount attributable to the Company's charges for: (1) service, (2) Energy and Capacity and (3) to Customer EGS Receivables purchased by the Company. Upon termination of service, the Company may also remove its equipment. Notice that complies with applicable Commission regulations shall conclusively be considered to be "reasonable" hereunder

18.1.1 WINTER TERMINATIONS FOR NON-PAYMENT. Consistent with 52 PA Code §56.100, The Company will take the following steps for terminations for non-payment during the winter period, defined as December 1-March 31:

A. **Low-Income Eligibility:** The Company will use financial information provided by the Customer to determine if the Customer's income is at or below 250% of the Federal Poverty Level. The Company may elect to send to the Customer an income verification form for completion and return. The Company will also accept income verification provided by Community-Based Organizations that enter into a contract with PECO to provide such income verification services.

1. Annual income may be established using verified income information for a recent one-month (nominally 30-day) period, annualized to establish an estimated annual income.
2. The Company shall not require any customers who have established income eligibility for winter termination protections within the 12 months preceding the start of the winter period to re-certify or re-verify their income for that winter period. This Company may also use this information to determine deposit requirements, payment arrangements, and eligibility for any other income-specific program.

B. **Verified Low-Income Customers:** If the Company has received verified proof that a customer's household has income at or below 250% of the Federal Poverty Level, the Company will not pursue termination of that customer for non-payment during the winter period UNLESS (A) the Company receives Commission approval to do so via a petition filed pursuant to 52 Pa. Code §56.100(g), or (B) the customer has informed the Company after submitting this verification that the household no longer has income at or below 250% of the Federal Poverty Level.

For purposes of this section, the Company will accept the following as verified proof that the household has income at or below 250% of the Federal Poverty Level:

1. Enrollment in PECO's CAP program at any time within four years prior to the issuance of the winter termination notice;
2. Receipt of a LIHEAP grant at any time within four years prior to the issuance of the winter termination notice;
3. Receipt of a MEAF grant at any time within four years prior to the issuance of the winter termination notice;
4. Income verification provided by a CBO that has contracted with PECO to provide income verification information, as long as such documentation was received within four years prior to the issuance of the winter termination notice;
5. Other verified documentation that the household's income is at or below 250% of the Federal Poverty Level, as long as such documentation was received within four years prior to the issuance of the winter termination notice;
6. Receipt of verified documentation of low-income status in response to an Income Inquiry Letter, as described in Rule D.1 below.

C. **Verified Non-Low-Income Customers:** If the Company has received verified proof that a customer's household has income of greater than 250% of the Federal Poverty Level, the Company will pursue termination for non-payment during the winter period utilizing the termination notices and procedures that would be followed outside of the winter period.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 29**RULES AND REGULATIONS (continued)**

D. **Customers with Non-Verified Income Levels:** For all other customers, prior to proceeding with termination for non-payment, the Company will send the customer a letter (the "Income Inquiry Letter") informing the customer that the Company does not have verified income information for the customer and that the customer is subject to termination for non-payment during the winter period.

1. If the customer responds with verified income information demonstrating that the household income is at or below 250% of the Federal Poverty Level, the Company will treat that household as Verified Low-Income for purposes of winter termination;
2. If the customer responds with verified income information demonstrating that the household income is greater than 250% of the Federal Poverty Level, the Company will pursue termination for non-payment during the winter period utilizing the termination notices and procedures that would be followed outside of the winter period.
3. If the customer fails to respond to the Income Inquiry Letter or responds without providing verified income information, the Company will attempt to contact the customer via telephone to inform the customer of their duty to provide verified income information. If contact is made and verified income information is not provided by the customer, or if contact is not made, the Company will pursue termination for non-payment during the winter period utilizing the termination notices and procedures that would be followed outside of the winter period.

18.2 PAYMENT TERMS. When the Company is providing either Consolidated EDC Billing or Separate EDC Billing, the Company will in accordance with Pennsylvania Public Utility Law and applicable Pennsylvania Public Utility Commission Regulations and Orders, negotiate payment arrangements on the portion of the past due amount attributable to its charges for: (1) service (2) Energy and Capacity and (3) to Customer EGS Receivables purchased by the Company. However, the Company will not negotiate payment arrangements on behalf of an EGS.

18.3 TERMINATION FOR CAUSE. The Company may terminate on reasonable notice if entry to the meter or meters is refused or if access thereto is obstructed or hazardous; or if utility service is taken without the knowledge or approval of the Company; or for other violation of these Rules and Regulations and/or applicable Commission rules, including those found at Pennsylvania Public Utility Code or the Commission's regulations.

18.4 SAFETY TERMINATION. The Company may terminate without notice if the customer's installation has become hazardous or defective.

18.5 DEFECTIVE EQUIPMENT TERMINATION. The Company may terminate without notice if the customer's equipment or use thereof might injuriously affect the equipment of the Company, or the Company's service to other customers; or if a certificate of approval is refused after a re-examination of the customer's installation by a competent inspection agency authorized to perform this service in the specific locality where service is provided.

18.6 TERMINATION FOR FRAUD. The Company may terminate without notice for abuse, fraud, material misrepresentation of the customer's identity, or tampering with the connections, the Company's meters, or other equipment of the Company.

RULES AND REGULATIONS (continued)

18.7 RECONNECTION CHARGE. If service is terminated or discontinued by reason or act of the customer, the same customer, whether an applicant or a customer as defined at 66 Pa. C.S. § 1403, shall pay a reconnection charge prior to restoration of service at the same address within twelve months after discontinuance or termination. The reconnection charges, listed below, are based on the Company's current standard schedule of reconnection fees, which include direct labor costs, contractor costs, and material/transportation costs. All theft reconnections will be completed at the premise and will not be performed remotely.

	Reconnect Fees
Electric Reconnect at the Meter	\$ 75.00
Electric Reconnect at Tap	\$ 260.00
Electric Reconnect - Underground dig	\$ 1,650.00
Electric with dual meters	\$ 100.00
Electric Remote Reconnect (one or dual meters)	\$ 20.00

18.8 THEFT INVESTIGATION CHARGE. If the Company establishes that there has been confirmed active theft resulting from tampering with the Company meter on the customer's premises, and the customer is or was a customer as defined at Pa. C.S. § 1403 the customer shall pay a theft investigation charge in addition to any amount that the Company establishes is due for service used, but not registered on the Company's meter. The Company reserves the right to assess theft investigation charges as a precedent to reconnection of service as well as the right to assess a separate reconnection charge as described in Rule 18.7.

	Theft Investigation Fees
Electric Theft at Meter	\$400.00

RULES AND REGULATIONS (continued)

19. UNFULFILLED CONTRACTS

19.1 NOTICE OF DISCONTINUANCE BY CUSTOMER. Notice to discontinue service before the expiration of a contract term will not relieve a customer from any minimum, or guaranteed, payment under any contract or rate. In the case of residential customers this Rule only applies if the customer has signed an express written contract that clearly sets forth such a term and condition of service.

19.2 COMPLETION OF TERM. If, by reason of any act, neglect or default of a customer, the Company's service is suspended, or the Company is prevented from providing service in accordance with the terms of any contract it may have entered into with the customer, the minimum charge for the unexpired portion of the initial contract term shall become due and payable immediately as liquidated damages. These liquidated damages may, at the option of the Company, be offset by estimated revenues from a succeeding customer at the same location, if such exists.

20. CANCELLATION BY CUSTOMER

20.1 TERMINATION NOTICE. Customers who have fulfilled their initial contract term and wish to discontinue service from the Company must give the Company at least 7 days' written notice to that effect.

20.2 FINAL BILL. The customer is liable for service taken after notice to terminate the contract, until the meter is read and/or disconnected. The final bill for service is then due.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 32**RULES AND REGULATIONS (continued)****21. GENERAL**

21.1 OFFICE OF THE COMPANY. Wherever, in this Tariff, it is provided that notice be given or sent to the Company, or the office of the Company, such notice, delivered or mailed, postage prepaid to any commercial office, shall be deemed sufficient, unless the Principal Office of the Company at 2301 Market Street, Philadelphia, is expressly mentioned.

21.2 NO PREJUDICE OF RIGHTS. The failure by the Company to enforce any of the terms of this Tariff shall not be deemed a waiver of its right to do so.

21.3 GRATUITIES TO EMPLOYEES. The Company's employees are strictly forbidden to demand or accept any personal compensation, or gifts, for service rendered by them while working for the Company on the Company's time.

21.4 BILLING CHANGES. Where billing changes are made as the result of an investigation made at customer's request or by routine inspection, the change of billing may be applied to the bill for the regular meter reading period preceding such investigation, and will, in any event apply to the bill for the period during which the investigation is made.

21.5 EXCEPTIONAL CASES. The usual supply of electric service shall be subject to the provisions of this Tariff, but where special service-supply conditions or problems arise for which provision is not otherwise made, the Company may modify or adapt its supply terms to meet the peculiar requirements of such case, provided that such modified terms are a rational expansion of standard tariff provisions.

21.6 ASSIGNMENT. Subject to the Rules and Regulations, all contracts made by the Company shall be binding upon, and oblige and inure to the benefit of, the successors and assigns, heirs, executors and administrators of the parties thereto.

21.7 OTHER CHARGES. The Company may, if feasible, provide and charge for services, other than those provided for in this Tariff, when requested by the customer. The Company is not obligated to provide such services. The Company will, if possible, give the customer an advance written estimate of the costs to provide the service. Costs shall include, but not be limited to, materials, supplies, labor, transportation and overhead.

21.8 TAX INDEMNIFICATION. If PECO Energy becomes liable under Section 2806(g) or 2809(c) of the Public Utility Code, 66 C.S. §§ 2806(g) and 2809(c), for Pennsylvania state taxes not paid by an Electric Generation Supplier (EGS), the non-compliant EGS shall indemnify PECO Energy for the amount of additional state tax liability imposed upon PECO Energy by the Pennsylvania Department of Revenue due to the failure of the EGS to pay or remit to the Commonwealth the tax imposed on its gross receipts under Section 1101 of the Tax Reform Code of 1971 or Chapter 28 of Title 66.

22. RULES FOR DESIGNATION OF PROCUREMENT CLASS**22.1 DESIGNATION OF PROCUREMENT CLASS**

- a) Annually, in November the Company shall notify the customer of their procurement group class designation which shall be effective the following June 1.
- b) The procurement class designation shall be used to determine the appropriate Generation Supply Adjustment to apply to the customer.
- c) For non-residential customers, the procurement class shall be determined based upon the customers peak measured demand in the prior June-May period.
- d) There shall be three procurement class designations. They are:
 - 1) Residential
 - 2) Small Commercial and Industrial up to and including 100 kW
 - 3) Large Commercial and Industrial greater than 100 kW
- e) Procurement class designation shall only change once per year on the date established in rule 22.1a
- f) A new customer in a new facility shall be assigned to a procurement class based upon an engineering estimate of the customer's diversified peak demand.
- g) A new customer in an existing facility shall be assigned to the same procurement class as the last customer in that facility unless the new customer will use the existing facility in a substantially different manner.

RULES AND REGULATIONS (continued)

23. EGS SWITCHING

23.1 PECO Energy will accommodate requests by customers to switch EGSs on active accounts and pending active (Instant Connect) accounts in accordance with this Rule 23, Commission Order M-2014-2401085, and other applicable Commission Orders.

23.2 To switch to a new EGS, a customer must inform the new EGS. Customers that wish to switch are not required to contact PECO Energy to initiate a switch; PECO Energy will only switch a customer in accordance with Rule 23.

23.3 To enable a new EGS to complete a switch, a customer must provide to the new EGS the customer's PECO Energy Electric Choice ID number as it appears on the customer's PECO Energy monthly bill.

23.4 If a Customer contacts the Company to discontinue electric service and indicates that the Customer will be relocating outside of the Company's service territory, the Company will notify the current EGS of the Customer's discontinuance of service for the account at the Customer's location. If relocating within the Company's service territory the Company will seamlessly move the current EGS to the new location if all qualifications are met in accordance with PUC Order M-2014-2401085.

23.5 A switch to an EGS will be effective 3 business days after the enrollment request is processed, provided the enrollment request includes valid customer information as required by the controlling provisions of the Supplier Tariff. Upon receiving valid notice to switch an EGS, the Company shall notify the customer's existing EGS that such a request has been made.

23.6 If and when a customer's EGS discontinues its supply in the event of bankruptcy, loss of license, or similar occurrence, or if a Customer is dropped by its EGS for non-payment or other reason then the customer may select a new EGS. The customer will receive its energy supply from PECO Energy until the switch becomes effective.

23.7 Nothing in this Rule 23 shall be interpreted to preclude EGSs from entering into agreements for supply with a term of service of one month. EGSs may enter into agreements for longer.

23.8 The Company will send Release of Information packets to all new customers (except for customer with demands greater than 500kW), which information will provide customers the opportunity to authorize the release of their confidential account information. PECO annually notifies customers that they can change this authorization. Every three years, in accordance with PUC Docket No. M-2010-2183412, PECO will re-solicit its entire customer base (except for customer with demands greater than 500kW) for the purpose of opting out of disclosing information.

24. LOAD DATA EXCHANGE

24.1 PECO Energy will provide to a customer or the customer's designated EGS or authorized consultant, all available data from the meter once each calendar year for no fee. The exchange of data among PECO Energy, EGSs, and customers shall be in accordance with the Supplier Tariff and the Final Consensus Plan for Electronic Data Exchange Standards for Electric Deregulation in the Commonwealth of Pennsylvania, as approved by the Commission.

STATE TAX ADJUSTMENT CLAUSE

In addition to the net charges provided for in this tariff, a credit value of 0.04% will apply to all PaPUC jurisdictional distribution charges in the Base Rates and Riders, effective January 1, 2024.

Whenever any of the tax rates used in the calculation of the surcharge are changed, or recoveries are authorized under Sections 2806, 2809 or 2810 of the Competition Act, the surcharge will be recomputed as prescribed by the Commission. The recalculation will be submitted to the Commission within ten days after the change occurs and the effective date shall be ten days after filing.

In addition, if a recalculation is submitted as a result of a tax rate change (including the Revenue Neutral Reconciliation rate) the Company will thereafter file each year by December 21 annual updates or revisions with the Commission which will reflect only this tax change. These annual updates will be effective ten days after filing and will continue until such time as the effect of the change in tax rates has been included in base rates.

INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE EXPENSE (ICUS)

Purpose: The purpose of this surcharge is to refund to customers amounts of incremental COVID-19 related uncollectible accounts embedded in PECO's current rates.

Applicability: The surcharge shall be calculated to the nearest one-hundredth of a cent for billing purposes for all R and RH customers, for customers on all other rates it shall be the nearest one cent. The ICUS will become effective upon the effective date of rates for the electric distribution base rate case at Docket No. R-2024-3046931 for a period of one year. The ICUS shall be credited to each rate schedule as follows:

Rate R	\$(0.00313)/kWh
Rate RH	\$(0.00274)/kWh
Rate GS	\$(0.13)/billed kW
Rate PD	\$(0.08)/billed kW
Rate HT	\$(0.05)/billed kW
Rate EP	\$0.00/billed kW
Rate SL-E	\$0.00/location
Rate SL-C	\$0.00/location
Rate TLCL	\$(0.01)/location
Rate AL	\$0.00/location
Rate POL	\$(0.28)/lamp
Rate SL-S	\$(0.41)/lamp

The Variable Distribution charges, for the above rate schedules shall include the above listed ICUS credits. For the lighting rate schedules, the applicable location or fixed distribution service charges shall include the ICUS credit.

Calculation of ICUS:

Billing Provisions: The credit was calculated by rate schedule using the following formula:

$$\frac{ICUS = R(n)}{BU(n)}$$

R(n) - The total amount to be refunded to customers by rate class.

BU(n) - The total estimated annual Billing Units for the rate class during the projected period when rates will be in effect.

Filing and Reconciliations: The ICUS will be reconciled at the end of the recovery period above. A final reconciliation statement will be filed within 30 days after completion of the final over/under collection refund/recovery. The Company may file interim rate adjustments to eliminate any over or under recovery of the surcharge. Such adjustments would be filed on at least 10 days' notice. The ICUS revenues and reconciliation will be subject to audit by the Commission's Bureau of Audits.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8

Deleted: 5

FIBER AFFILIATE REVENUE SURCHARGE (FARS)

Purpose: The purpose of this surcharge is to refund to customers amounts for network fees that the Company collected from former affiliates for use of its fiber network.

Applicability: The surcharge shall be calculated to the nearest one-hundredth of a cent for billing purposes for all R and RH customers, for customers on all other rates it shall be the nearest one cent. The FARS will become effective upon the effective date of rates for the electric distribution base rate case at Docket No. R-2024-3046931 for a period of one year. The FARS shall be credited to each rate schedule as follows:

Rate R	\$(0.00072)/kWh
Rate RH	\$(0.00074)/kWh
Rate GS	\$(0.13)/billed kW
Rate PD	\$(0.12)/billed kW
Rate HT	\$(0.07)/billed kW
Rate EP	\$(0.07)/billed kW
Rate SL-E	\$(0.08)/location
Rate SL-C	\$(0.07)/location
Rate TLCL	\$(0.13)/location
Rate AL	\$(0.03)/location
Rate POL	\$(5.22)/lamp
Rate SL-S	\$(7.67)/lamp

The Variable Distribution charges, for the above rate schedules shall include the above listed FARS credits. For the lighting rate schedules, the applicable location or fixed distribution service charges shall include the FARS credit.

Calculation of FARS:

Billing Provisions: The credit was calculated by rate schedule using the following formula:

$$FARS = \frac{R(n)}{BU(n)}$$

R(n) - The total amount to be refunded to customers by rate class.

BU(n) - The total estimated annual Billing Units for the rate class during the projected period when rates will be in effect.

Filing and Reconciliations: The FARS will be reconciled at the end of the recovery period above. A final reconciliation statement will be filed within 30 days after completion of the final over/under collection refund/recovery. The Company may file interim rate adjustments to eliminate any over or under recovery of the surcharge. Such adjustments would be filed on at least 10 days' notice. The FARS credits and reconciliation will be subject to audit by the Commission's Bureau of Audits.

Deleted: FEDERAL TAX ADJUSTMENT CREDIT (FTAC)

To pass the 2018 effects of the Tax Cuts and Jobs Act ("TCJA") to customers, the FTAC will apply a negative surcharge to all PaPUC jurisdictional distribution charges, on a bills-rendered basis beginning on January 1, 2019. This FTAC will be provided through a separate mechanism showing a line item on customer bills (e.g., Federal Tax Adjustment Credit - "FTAC").

The FTAC will be based on the difference in total annual revenue requirement before and after implementing the 2018 effects of the TCJA and the calculation will reflect the reduction in required revenues. The reduction in required revenues will be divided by estimated annual applicable base revenues to develop the total amount of 2018 benefits to be refunded to customers. The amount being refunded will include interest accrued in 2018 using the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.). No interest will be paid to customers on any amount of TCJA savings held by the Company in 2019 and refunded to customers.

PECO will calculate the FTAC as follows, subject to reconciliation of revenues credited under the FTAC and the Company's actual 2018 TCJA savings after the end of the refund period:

For residential, small commercial, and streetlighting customers (Rates R, RH, GS, SL-S, POL, AL, TLCL, SLE), PECO refunded the 2018 TCJA savings by applying the negative surcharge to bills rendered over a one-month period in January of 2019.

As of January 1, 2021, the FTAC will be set to:

Rates R,		
RH:	0.00%	
Rates GS,		
POL:	0.00%	
Rates AL, TLCL, SLE, SLC,		
SL-S:	0.00%	

For large commercial and industrial customers (Rates HT, PD, EP), PECO refunded the 2018 TCJA savings by applying the negative surcharge to bills rendered over a one-year period, effective January 1, 2019 through December 31, 2019. As of

January 1, 2021, the FTAC will be set to:

Rates HT, PD, EP:		
	0.00%	

The FTAC will be reconciled at the end of the recovery periods above. The Company may file interim rate adjustments to eliminate any over or under recovery of the surcharges outside of their respective filing periods. Such adjustments would be filed on at least 10 days' notice. A final reconciliation statement will be filed within 30 days after completion of the final over/under collection refund/recovery. The FTAC revenues and reconciliation will be subject to audit by the Commission's Bureau of Audits. The FTAC will not be included in the calculation of the Distribution System Improvement Charge (DSIC).

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 37**GENERATION SUPPLY ADJUSTMENT FOR PROCUREMENT CLASSES 1 AND 2
LOADS UP TO 100KW**

Applicability: June 1, 2021 this adjustment shall apply to all customers taking default service from the Company with demands up to 100 kW. The rate contained herein shall be calculated to the nearest one thousandth of a cent. The GSA shall contain the cost of generation supply for each tariff rate. The Company will apply Standard Pricing unless customers voluntarily request and are eligible to participate in the Time-Of-Use Pricing Option as detailed below.

Standard Pricing: Standard Pricing provides default service to customers who have not selected or are not eligible for PECO's Time-Of-Use Pricing Option. The rates below shall include the cost of procuring power to serve the default service customers including the cost of complying with the Alternative Energy Portfolio Standards Act ("AEPS" or the "Act") plus associated administrative expenses incurred in acquiring power and gaining regulatory approval of any procurement strategy and plan. The standard pricing for default service will represent the estimate of the cost to serve the specific tariff rate for the next quarterly period beginning with the three months ended August 31, 2021. The rates in this tariff shall be updated quarterly on June 1, September 1, December 1 and March 1 commencing June 1, 2021 and are not prorated. If the balance of over/(under) recovery gets too large, the Company can file a reconciliation that will mitigate the subsequent impact. The standard generation service charge shall be calculated using the following formula:

Standard GSA(n) = (C-E+A)/S*1/(1-T)* (1-ALL)/(1-LL) +AEPS/S*1/(1 - T) + WC where;

C = The sum of the amounts paid to the full requirements suppliers providing the power for the quarterly period, the spot market purchases for the quarterly period, plus the cost of any other energy acquired for the quarterly period. Cost shall include energy, capacity and ancillary services, distribution line losses, cost of complying with the Alternative Energy Portfolio Standards, and any other load serving entity charges other than network transmission service and costs assigned under the Regional Transmission Expansion Plan. Ancillary services shall include any allocation by PJM to PECO default service associated with the failure of a PJM member to pay its bill from PJM as well as the load serving entity charges listed in the Supply Master Agreement Exhibit D as the responsibility of the supplier. This component shall include the proceeds and costs from the exercise of Auction Revenue Rights granted to PECO by PJM.

AEPS = The projected total cost of complying with the Alternative Energy Portfolio Standards Act ("AEPS" or the "Act") not included in the C component above for the quarterly period for each procurement class. Costs include the amount paid for Alternative Energy and/or Alternative Energy Credits ("AEC's") purchased for compliance with the Act, the cost of administering and conducting any procurement of Alternative Energy and/or AEC's, payments to the AEC program administrator for its costs of administering an alternative energy credits program, payments to a third party for its costs in operating an AEC registry, any charge levied by PECO's regional transmission operator to ensure that alternative energy sources are reliable, a credit for the sale of any AEC's sold during the calculation period, and the cost of Alternative Compliance Payments that are deemed recoverable by the Commission, plus any other direct or indirect cost of acquiring Alternative Energy and/or AEC's and complying with the AEPS statute.

E = Experienced over or under-collection calculated under the reconciliation provision of the tariff to be effective semiannually with recovery during the periods March 1 through August 31 of the current year and September 1 of the current year through February 28 (29) of the following year.

A = Administrative Cost - This includes the cost of the Independent Evaluator, consultants providing guidance on the development of the procurement plan, legal fees incurred gaining approval of the plan and any other costs associated with designing and implementing a procurement plan including the cost of the pricing forecast necessary for estimating cost recoverable under this tariff. Also included in this component shall be the cost to implement real time pricing or other time sensitive pricing such as dynamic pricing that is required of the Company or is approved in its Act 129 filing. Administrative Costs also includes any other costs incurred to implement retail market enhancements directed by the Commission in its Retail Market Investigation at Docket No. I-2011-2237952 or any other applicable docket that are not recovered from EGSs or through another rate.

S = Estimated sales for the period the rate is in effect for the classes to which the rate is applicable. Six month sales are used for the E factor with effective periods March 1 through August 31 of the current year and September 1 of the current year through February 28 (29) of the following year.

T = The currently effective gross receipts tax rate.

n = The procurement class for which the GSA is being calculated.

ALL = Average line losses for the procurement class.

LL = Line losses for the specific rate class provided in the Company's Electric Generation Supplier Coordination Tariff rule 6.6.

WC = \$0.00021/kWh to represent the cash working capital for power purchases.

Auction Revenue Rights (ARR) = Allocated annually by PJM to Firm transmission customers, the ARR's allow a Company to select rights to specific transmission paths in order to avoid congestion charges. In general, the line loss adjustment is applicable to Procurement Class 2 only as those classes contain rate classes with three different line loss factors: Current Charges:

Standard Rate		Standard GSA Price
R	GSA (1)	\$0.08568
RH	GSA (1)	\$0.08568
GS	GSA (2)	\$0.07800

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 38**GENERATION SUPPLY ADJUSTMENT FOR PROCUREMENT CLASSES 1 AND 2
LOADS UP TO 100KW (CONTINUED)**

PD	GSA (2)	\$0.07665
HT	GSA (2)	\$0.07351
POL*	GSA (2)	\$0.07316
SL-S*	GSA (2)	\$0.07316
TLCL	GSA (2)	\$0.07800
SL-E*	GSA (2)	\$0.07316
AL*	GSA (2)	\$0.07316
SL-C*, **	GSA (2)	\$0.07316

* Prices shall exclude capacity from the Procurement Class 2 RFP results.

** Rate SL-C was effective July 1, 2019 pursuant to the Order at Docket No. R-2018-3000164

Procedure: For Procurement Classes 1 and 2 the GSA shall be filed 45 days before the effective dates of June 1, September 1, December 1 and March 1 in conjunction with the Reconciliation Schedule.

Time-Of-Use (TOU) Pricing Option: The TOU Pricing Option provides eligible customers with an opportunity to shift energy usage away from peak periods, when wholesale electricity demand and prices are high, to off-peak periods, when demands and prices are lower. Customers may voluntarily request this option in lieu of Standard Pricing described above and must meet the TOU Eligibility Requirements below. (Customers electing this option are billed based on interval-metered consumption of usage within each TOU Pricing Period. Beginning and ending reads are not applicable TOU billing determinants.) Commencing September 1, 2021, TOU Pricing Option rates will be updated quarterly in concurrence with the Standard GSA on June 1, September 1, December 1 and March 1 and are not prorated.

The year-round TOU Pricing Periods, TOU Period Allocators ["PA-GSA(n)"], and TOU Pricing Multipliers ["PM-GSA(n)"] from June 1, 2023 through May 31, 2024 are as follows:

TOU Pricing Period	Days/Hours Included	TOU Period Allocator PA-GSA(1)	TOU Period Allocator PA-GSA(2)	TOU Pricing Multiplier PM-GSA(1) (Ratio to Super Off-Peak)	TOU Pricing Multiplier PM-GSA(2) (Ratio to Super Off-Peak)
Peak ("PP")	2:00 – 6:00 p.m. Monday through Friday, excluding PJM holidays	12%	14%	7.21-to-1	5.56-to-1
Super Off-Peak ("SOPP")	Midnight (12 a.m.) – 6 a.m. Every day	20%	20%	1-to-1	1-to-1
Off-Peak ("OPP")	All other hours	68%	66%	1.46-to-1	1.55-to-1

Commencing with the GSA and TOU rates effective June 1, 2022, PECO may update the TOU Pricing Multipliers in the above table annually, using a rolling five years of historical PJM Day-Ahead Spot Market Pricing energy data and Reliability Pricing Model capacity pricing data for the PECO zone. PECO will only update the applicable TOU Pricing Multipliers if the use of such data would result in no more than a 10% change from the prior-year's TOU Pricing Multipliers. If these updates would exceed 10%, the applicable TOU Pricing Multipliers will be changed by exactly 10%.

To calculate the quarterly TOU Pricing Option rates, the Company will first calculate the quarterly TOU Super Off-Peak Price ("SOPP") in accordance with the formula set forth below:

TOU SOPP GSA(n) = Standard GSA(n) * [1 / SOPP-F(n)] where;

Standard GSA(n) = Defined as above for Standard Pricing.

SOPP-F(n) = Super Off-Peak Price Factor representing the ratio of the Standard GSA(n) to the Super Off-Peak Price, calculated as follows:

TOU SOPP PA-GSA(n) + [(TOU OPP PM-GSA(n) * TOU OPP PA-GSA(n)) + [(TOU PP PM-GSA(n) * TOU PP PA-GSA(n))]

The Company will then calculate the quarterly TOU Peak ("PP") and Off-Peak ("OPP") prices as follows:

TOU PP GSA(n) = TOU SOPP GSA(n) * TOU PP PM-GSA and;

TOU OPP GSA(n) = TOU SOPP (GSA(n) * TOU OPP PM-GSA.

PD (GSA 2)	\$0.21300	\$0.03831	\$0.05938
HT (GSA 2)	\$0.20427	\$0.03674	\$0.05695

TOU Eligibility Requirements and Switching Rules:

The TOU Pricing Option is available to new and existing Customers in Procurement Classes 1 or 2 with a smart meter configured to measure energy consumption in watt-hours. This includes Customers in the above referenced Procurement Classes taking default service from the Company and who also participate in the Company's RS-2 (Net Metering) tariff, except for virtual net metered Customers. Residential Customers enrolled in the Company's Customer Assistance Program (CAP) are not eligible for the TOU Pricing Option.

As a prerequisite for enrollment, the Customer must have a valid e-mail address to ensure the Company is able to provide the enrolled TOU Pricing Option Customer with timely and meaningful communications regarding their bill savings performance.

Participating Customers will remain on the TOU Pricing Option rate until they affirmatively elect to return to PECO's Standard GSA rate, switch to an EGS, or otherwise become ineligible.

Customers who select the TOU Pricing Option may leave at any time without incurring related penalties or fees. However, Customers who select and subsequently leave the TOU Pricing Option for any reason may not re-enroll on the TOU Pricing Option rate for twelve billing months after switching off the TOU Pricing Option rate.

Effective May 27, 2024

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 40**GENERATION SUPPLY ADJUSTMENT FOR PROCUREMENT CLASS 3/4
LOADS GREATER THAN 100KW**

Applicability: June 1, 2021 this adjustment shall apply to all customers taking default service from the Company with demands greater than 100 kw.

Hourly Pricing Service

Pricing: The rates below shall include the cost of procuring power to serve the default service customers plus associated administrative expenses incurred in acquiring power and gaining regulatory approval of any procurement strategy and plan. The rates for the GSA 3/4 Hourly Pricing Adder* shall be updated quarterly on June 1, September 1, December 1 and March 1 commencing June 1, 2021 and are not prorated. If the balance of over/(under) recovery gets too large due to billing lag, the Company can file a reconciliation that will mitigate the subsequent impact. The cost for this hourly service rate shall be as follows:

Generation Supply Cost (GSC) = (C+R+AS+AC-E)/(1-T)+WCA where;

C = The PJM day ahead hourly price multiplied by the customers usage in the hour summed up for all hours in the month

$$\Sigma \text{PJM}_{DA} \times \text{usage} / (1-\text{LL})$$

PJM_{DA} – PJM on day ahead hourly price.

Usage – Electricity used by an end use customer.

R = The PJM reliability pricing model (RPM) charge for month for the customer. The RPM charge shall be the customers peak load contribution as established for PJM purposes multiplied by the current RPM monthly charge and the PJM established reserve margin adjustment.

PLC x (1+ RM) x P_{RPM} x Bill Days

PLC = Peak load contribution

RM = Reserve margin adjustment per PJM

P_{RPM} = Capacity price per MW-day

AC = Administrative Cost - This includes an allocation of the cost of the Independent Evaluator, consultants providing guidance on the development of the procurement strategy, legal fees incurred gaining approval of the plan, and any other costs associated with designing and implementing a procurement plan divided by the total default service sales and then multiplied by the customers usage for the month. Administrative Costs also includes any other costs incurred to implement retail market enhancements directed by the Commission in its Retail Market Investigation at Docket No. I-2011-2237952 or any other applicable docket that are not recovered from EGSs or through another rate.

A / S x Usage

A = Administrative cost

S = Default service sales

AS = The cost, on a \$/MWH basis, of acquiring ancillary services from PJM and of complying with the Alternative Energy Portfolio Standard, multiplied by the customers usage for the month and divided by (1-LL). Congestion charges including the proceeds and costs from the exercise of

Auction Revenue Rights shall be included in this component. Ancillary services shall be those included in the Supply Master Agreement as being the responsibility of the supplier.

$$((\text{PJM}_{AS} \times \text{Usage} \times 1 / (1-\text{LL}) + \text{AEPS} / \text{S}_{\text{AEPS}} \times \text{Usage})$$

PJM_{AS} = \$/MWH charged by PJM for ancillary services

AEPS = Cost of complying with the alternative energy portfolio standard

S_{AEPS} = Sales for which AEPS cost is incurred

If the supplier provides the ancillary services and AEPS cost then the customer shall be charged the supplier's rate for these services times usage and divided by (1-LL).

Auction Revenue Rights (ARR) = Allocated annually by PJM to Firm transmission customers, the ARR's allow a Company to select rights to specific transmission paths in order to avoid congestion charges

LL = Line loss factor as provided in the Company's Electric Generation Supplier Coordination Tariff Rule 6.6 based upon the customers distribution rate class adjusted to remove losses included in the PJM LMP

T = The currently effective gross receipts tax rate

E = $\Sigma O / (U) / S_{3/4} \times \text{usage}$ where

E (Purchased Generation Adj.) = Over/under recovery as calculated in the reconciliation

S_{3/4} = Procurement class 3/4 sales

WC = \$0.00021 kWh for working capital associated with power purchases

WCA = Individual customer sales x WC

Procedure: The "E" factor shall be updated semiannually in conjunction with the Reconciliation. The applicable above items are converted to the rates listed below.

Tariff Rate	GS	PD	HT	EP
Hourly Pricing Adder* (dollars/kWh)	\$0.00932	\$0.00916	\$0.00881	\$0.00881

* Includes administrative cost (AC), ancillary service charge (AS), E factor (E) and working capital (WC).

PECO Energy Company

Tariff Electric PA, P.U.C No. ~~8~~
Original Page No. ~~41~~**RECONCILIATION**

Applicability: June 1, 2021 this adjustment shall apply to all customers who received default service during the period the cost of which is being reconciled. Customers taking default service during the reconciliation period that leave default service prior to the assessment of the collection of the over/(under) adjustment shall still pay or receive credit for the over/(under) adjustment through the migration provision. The Company shall notify the Commission and parties to the Default Service Settlement 15 days in advance of the quarterly or monthly filing if the Migration Provision will be implemented in the filing.

This adjustment shall be calculated on a semiannual basis for Procurement Classes 1, 2 and 3/4 Hourly. The reconciliation period will include the six month period beginning January 1 and July 1 commencing with the July 1, 2020 through December 31, 2020, reconciliation period. The reconciliation shall be separate for each procurement class. Any resulting over or under recovery shall be assessed on an equal cents per kilowatt hour basis to all customers in the relevant procurement group. Any over/(under) recovery shall be collected after the occurrence of two months from the end of the reconciliation period. Recovery shall be over a six month period commencing September 1 and March 1. The initial six month period is March 1, 2021 through August 31, 2021. For purposes of this rider the reconciliation shall be calculated 45 days before the effective date of recovery. The over or under recovery shall be calculated using the formula below. The calculation of the over/(under) recovery shall be done separately for the following procurement classes – Class 1 – Residential, Class 2 – Small C&I up to and including 100 kW, and Class 3/4 – Large C&I greater than 100 kW. For Procurement Classes 1 and 2, Standard Pricing and TOU Pricing Option revenue and cost of supply will be included for the entire Procurement Class.

Reconciliation Formula

$$E_N = \Sigma O/(U) + I$$

$$\text{Migration Provision } E_M = [\Sigma O/(U) + I]/S/((1-GRT)*(1-ALL)/(1-LL))$$

Where:

E = Experienced over or under collection plus associated interest

N = Procurement class

M = Migration Rider

O/(U) = The monthly difference between revenue billed to the procurement class and the cost of supply as described below in Cost, AEPS Cost and Administrative Cost.

Revenue = Amount billed to the tariff rates applicable to the procurement class including approved Real Time Price or other time sensitive rates for the period being reconciled through the GSA.

Cost = The sum of the amounts paid to all of the full requirements suppliers providing the power for the period being reconciled, the spot market purchases for the period being reconciled, plus the cost of any other energy acquired for the period being reconciled. Cost shall include energy, capacity and ancillary services as well as the proceeds and costs of auction revenue rights for Procurement Classes 1 and 2. Ancillary services shall include any allocation by PJM to PECO default service associated with the failure of a PJM member to pay its bill from PJM as well as those costs listed in the Supply Master Agreement as the responsibility of the seller.

AEPS = The total cost of complying with the Alternative Energy Portfolio Standards Act ("AEPS" or the "Act") not included in the Cost component above for the reconciliation period for Procurement Classes 1 and 2 and not included in the ancillary services component for Procurement Class 3/4 Hourly Service. Costs include the amount paid for Alternative Energy and/or Alternative Energy Credits ("AEC's") purchased for compliance with the Act, the cost of administering and conducting any procurement of Alternative Energy and/or AEC's, payments to the AEC program administrator for its costs of administering an alternative energy credits program, payments to a third party for its costs in operating an AEC registry, any charge levied by PECO's regional transmission operator to ensure that alternative energy sources are reliable, a credit for the sale of any AEC's sold during the calculation period, and the cost of Alternative Compliance Payments that are deemed recoverable by the Commission, plus any other direct or indirect cost of acquiring Alternative Energy and/or AEC's and complying with the AEPS statute.

Administrative Cost = This includes the cost of the Independent Evaluator, consultants providing guidance on the development of the procurement strategy, legal fees incurred gaining approval of the strategy, and any other costs associated with designing and implementing a procurement plan including the cost of the pricing forecast necessary for estimating cost recoverable under this tariff. Also included in this component shall be the cost to implement real time pricing or other time sensitive pricing such as dynamic pricing that is required of the Company or approved in its Act 129 filing. Administrative Costs also includes other costs incurred to implement retail market enhancements directed by the Commission in its Retail Market Investigation at Docket No. I-2011-2237952 or any other applicable docket that are not recovered from EGS's or through another rate.

Full Requirements Supply = A product purchased by the Company that includes a fixed price for all energy consumed. The only cost added by the Company to the full requirements price is for gross receipts tax, distribution line losses, and administrative cost.

Ancillary Services = The following services in the PJM OATT- reactive support, frequency control, operating reserves, supplemental reserves, imbalance charges, PJM annual charges, any PJM assessment associated with non-payment by members, and any other load serving entity charges not listed here but contained in Exhibit D of the Supply Master Agreement. Also included shall be the proceeds and costs from the exercise of auction revenue rights for Procurement Class 3/4 Hourly Service.

Tariff Electric PA. P.U.C. No. 8
Original Page No. 42

RECONCILIATION
(CONTINUED)

Auction Revenue Rights (ARR) = Allocated annually by PJM to Firm transmission customers, the ARR's allow a Company to select rights to specific transmission paths in order to avoid congestion charges.

Capacity = The amount charged to PECO by PJM for capacity for its default service load under the reliability pricing model (RPM).

I = interest on the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month the over collection or under collection occurs, as reported in the Wall Street Journal in accordance with the Order at Docket No. L-2014-2421001.

S = Estimated default service retail sales in kWh for the period the cost of which is being reconciled.

ALL = The average line losses in a procurement class as a percent of generation.

LL = The average line losses for a particular rate (e.g. HT, PD, GS) as provided in the Electric Generation Supplier Coordination Tariff rule 6.6.

GRT = The current gross receipts tax rate.

Procurement Class - Set of customers for which the company has a common procurement plan.

Procedural Schedule

The Company shall file the calculation of the over/under collection for the period being reconciled and the proposed adjustment to the GSA 45 days before the effective date as described below. The over/under collection adjustment shall be effective no earlier than the first day of the month such that the commencement of recovery shall lag by two months. The GSA will be effective June 1, September 1, December 1 and March 1 commencing June 1, 2021 with over/under collection recovery occurring over the six month period beginning September 1 and March 1. The data provided in the reconciliation shall be audited on an annual basis by the PaPUC Bureau of Audits.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 43**NUCLEAR DECOMMISSIONING COST ADJUSTMENT CLAUSE (NDCA)**

The NDCA provides for the recovery of nuclear of decommissioning costs related to the Company's Ownership interest in Nuclear Generation as of 12/31/99. The NDCA shall be charged to all customers taking service under this Tariff. The adjustment shall be a cents per kWh charge calculated to the nearest one hundredth of one cent.

The Company's Ownership interest in nuclear generation as of December 31, 1999 consists of the following:

Peach Bottom 1	100%
Peach Bottom 2	42.49%
Peach Bottom 3	42.49%
Salem 1	42.59%
Salem 2	42.59%
Limerick 1	100%
Limerick 2	100%

Formula

The following formula shall be used to determine the NDCA.

$$\text{NDCA} = \frac{\text{PaPUC Authorized Decommissioning Expense Adjustment}}{\text{Total Pennsylvania Jurisdictional Sales for Calculation Year}}$$

Where:

PaPUC Authorized Decommissioning Expense Adjustment (Adjusted Annual Accrual - Base Accrual) x .95 = the Adjusted Annual Accrual in the Calculation Year less the Base Accrual. As of January 1, 2023, the NDCA shall be a credit value of (\$0.0006)/kWh and will be added to the Variable Distribution Charge for all rates except for rates POL, SL-S and AL which will have a credit value of (\$0.04)/location added to the Distribution Charge.

Total Pennsylvania Retail Jurisdictional Sales = total kWh sales under this Tariff for the calculation year including sales for distribution.

Calculation Year = year in which the Company proposes a change to the NDCA. To the extent a new cost study, performed every five years, indicates the Company requires an adjustment in the rate, the Company shall change the NDCA to reflect such new expense level. In calculating the annual expense, the Company shall use the sinking fund methodology.

Adjusted Annual Accrual = accrual necessary to fund the Adjusted Obligation.

Adjusted Obligation = Gross Decommissioning Obligation reduced by \$50 million for ratemaking purposes.

Gross Decommissioning Obligation – The total decommissioning cost obligation as approved by the Commission as expressed in escalated future dollars.

Methodology for Calculating Expense

The base period expense shall be based upon the decommissioning costs set forth in the table below. The Company shall use a sinking fund methodology to determine the appropriate level of decommissioning expense. The assumptions shall be consistent with NRC policy and requirements.

The Base Accrual shall consist of the following levels for each unit.

Peach Bottom 1	\$4,213,220
Peach Bottom 2	0
Peach Bottom 3	0
Salem 1	0
Salem 2	0
Limerick 1	0
Limerick 2	0
Total	\$4,213,220

Frequency of Calculation

The annual expense shall be recalculated every five years. The Company shall adjust the NDCA to reflect the new expense level 60 days after filing the new study and the associated rate calculation with the PaPUC. The first calculation of the NDCA shall be considered to have taken place on January 1, 1998.

Completion of Decommissioning

In the event that the actual expenditures necessary to accomplish full decommissioning of the PECO Interest are less than the full balance in the funds established for such purpose, PECO shall be entitled to a release of such funds to PECO for the purpose of sharing the amount between ratepayers and shareholders. In the event that such release is granted, PECO's shareholders shall be entitled to retain: (1) the first \$50 million of the net after-tax amount; and (2) 5 percent of the remaining net after-tax amount of the released funds.

=====Section Break (Continuous)=====

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 44**PROVISIONS FOR RECOVERY OF UNIVERSAL SERVICE FUND CHARGE (USFC)**

Variable Distribution Service Charge rates for electric service in Residential Rate Schedule R and RH of this Tariff shall include a charge of \$0.00685 per kWh for recovery of Universal Service Fund Cost (USFC), calculated in the manner set forth below pursuant to Section 2804 (8) of the Competition Act. The USFC rate for electric service shall be increased or decreased annually, to reflect changes in the level of Universal Service Fund costs, net of base rate recoveries, in the manner described below:

COMPUTATION OF USFC.

The USFC per kWh (\$0.0000), shall be computed in accordance with the formula set forth below:

$$\text{USFC} = \frac{(C+L-E-I)}{(S)}$$

The USFC, so computed, shall be included in distribution rates charged to Customers for service pursuant to the rate schedules identified above. The amount of USFC, per kWh, will vary, if appropriate, based upon annual filings by the Company.

In computing the USFC, per kWh, pursuant to the formula above, the following definitions shall apply:

Reconcilable Customer Assistance Program (CAP) Costs – The difference between discounts provided to CAP customers (CAP revenue shortfalls) recovered through base rates and total CAP discounts, net of a 10.5% offset factor.

USFC – Universal Service Fund Charge to be included in the rate for each kWh of Variable Distribution Service Charge calculated under Rate Schedules R and R-H to recover Reconcilable CAP Costs plus certain LIURP related expenditures.

C - Cost in dollars of the Reconcilable CAP Costs for the projected period.

L - Incremental LIURP related expenditures not included in base rates. This shall include expenditures for LIURP Health and Safety programming.

E - The net overcollection or (undercollection) of Universal Service Fund Charges. The net overcollection or undercollection shall be determined for the most recent period, beginning with the month following the last month which was included in the previous overcollection or undercollection calculation reflected in rates. Included in the "E" factor will be Reconcilable CAP Costs, and LIURP related expenditures.

Each overcollection or undercollection statement shall also provide for refund or recovery of amounts necessary to adjust for overrecovery or underrecovery of "E" factor amounts under the previous USFC.

I - Interest on any over or under recovery balance. Interest shall be computed monthly at a 6% annual simple interest rate from the month that the overcollection or undercollection occurs to the mid-point of the recovery period. The interest calculation will not apply to LIURP amounts.

S - projected kWh of electric service to be billed under Rate R and Rate RH (exclusive of CAP Rider) during the projected period when rates will be in effect.

FILING WITH PENNSYLVANIA PUBLIC UTILITY COMMISSION; AUDIT; RECONCILIATION.

The Company's annual USFC filing and its annual reconciliation statement shall be submitted to the Commission 120 days prior to new rates being effective January 1 of each year, or at such time as the Commission may prescribe. The USFC mechanism is subject to annual audit review by the Bureau of Audits.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 45**PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS**

Purpose: The purpose of this surcharge is to provide for full and current cost recovery of expenditures associated with the Company's proposed consumer education plan. The proposed plan shall consist of the cost of the consumer education plan approved in Docket M-2008-2032274 and P-2008-2062739.

Applicability: The surcharge shall be a per customer charge calculated to the nearest one cent, which shall be added to the fixed distribution rates for billing purposes for all customers. The rate shall be calculated separately for each customer class. The current Consumer Education Plan Cost for each Class 1 is a 2.0 cent charge per month for Rates R, RH and CAP; Class 2 and 3 is a 0.0 cent per month for Rate GS and for Class 4 is (1.0) cent credit per month for Rates HT and PD with an April 1, 2023 effective date.

Billing Provisions: The surcharge shall be calculated on an annual basis using the following formula:

$$MC(n) = \frac{(C+E+I)}{R(n)} \times \frac{1}{(1-T)}$$

C – the cost of the consumer education program includes the following:

Consumer Education Costs –The incremental cost of programs designed to educate consumers regarding the competitive market such as advertising, customer notices, informational materials cost, and any other incremental cost associated with educating consumers about the market and about available mitigation programs offered by the Company less any cost covered by the Company's Paragraph 37 Funds. Costs associated with this program shall be expensed to FERC account 910. These costs shall also include the costs of providing expanded universal service program education and outreach to low and moderate income customers to recover up to \$800,000 per year commencing on January 1, 2025.

MC(n) = consumer education cost per customer for customer class n including over/(under) recovery and associated interest.

E – The estimated over or (under) recovery from the prior year. The reconciliation period shall be the 12 months ended December 31

I – Interest on any over or (under) recovery balance. Interest shall be a rate of 6% and shall be calculated from the month of over or under collection to the mid-point of the recovery period.

N – Customer class where 1 = residential, 2 = C&I up to 100 kW, 3 = C&I from 100-500 kW, and 4 = C&I >500 kW

R – The total delivery service customers for the customer class for the application period where the application period shall be the 12-month period commencing annually on April 1 after the reconciliation period.

T – The current Pennsylvania gross receipt tax rate included in base rates.

Filing Schedule: The estimated surcharge shall be filed by February 1 of each year to be effective on the following April 1. The application period shall be the 12 months that start the April 1 effective date of the surcharge. The Bureau of Audits shall audit the data in the surcharge on an annual basis.

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 46

TRANSMISSION SERVICE CHARGE (TSC)

Purpose: The purpose of this surcharge is to provide for full and current cost recovery of all transmission service related costs incurred under the PJM open access transmission tariff on behalf of the Company's default service load.

Applicability: The surcharge shall be assessed to all default service customers. The cost shall be allocated to each rate class based upon the coincident peak used by PJM to establish the network service obligation.

Billing Provisions: The surcharge shall be calculated on a semi-annual basis using the formula below:

$$TSC(n) = \frac{(C+E+I)}{S(n)} \times \frac{1}{(1-T)}$$

TSC(n) = transmission service cost for customer class n including over or under recovery and associated interest.

C – the transmission service charges incurred by PECO under the PJM open access transmission tariff. These costs shall include the following:

Network Integration Transmission Service costs and Non-Firm Point to Point Transmission costs. Included in the cost to be recovered is a working capital (WC) component as defined below.

Charges assessed by PJM for network service within the PECO zone. Included in such charges are costs for the base network service charge for the zone as well as any load serving entity charges assessed to PECO under the PJM OATT that are listed in PECO's Supply Master Agreement Exhibit D as the responsibility of the Buyer. Included in the cost to be recovered is a working capital (WC) component as defined below.

WC – cost for working capital associated with the purchase of transmission service from PJM at a rate of \$278 per mW. WC is a component of the "C" factor

E – The estimated over or under recovery from the applicable reconciliation period.

I - interest on the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month the over collection or under collection occurs, as reported in the Wall Street Journal in accordance with the Order at Docket No. L-2014-2421001. This interest rate basis becomes effective with January 2016 over or under collections.

n – rate class where: 1 = residential, 1a = RH, 2 = small C&I, 3 = large C&I, 4 = street lighting

Residential – Rates R, RH (reconciled as a group)
Small C&I – Rate GS
Large C&I – Rates HT, PD, EP (reconciled as a group)
Street Lighting – SLE, SLC, SLS, POL, AL, TLCL (reconciled as a group)

S – Estimated default service sales for residential class and the street lighting class in the applicable application period. For the commercial and industrial class it shall be the estimated billed demand for the applicable application period. The application period will be the period when rates will be in effect.

T – The current Pennsylvania gross receipt tax rate included in base rates.

Filings and Reconciliations: The Company shall submit filings 15 days prior to the start of the application period beginning June 1, 2015. Thereafter, the Company will file a surcharge adjustment 15 days prior to June 1 and December 1 of each year. If it is apparent that such methodology would result in a significant over or under recovery before the next 6 month filing for an individual customer class, the Company may propose a rate adjustment 15 days prior to the next effective GSA rate adjustment date (Effective date of March 1, September 1). The annual reconciliation statement will be made by December 31 each year.

Current Transmission Service Rate:

R= \$.00857 per kilowatt hour
RH= \$.00857 per kilowatt hour
Small C&I = \$1.73 per billed transmission kW
Large C&I = \$1.40 per billed transmission kW
Street Lighting = \$.00064 per kilowatt hour

NON-BYPASSABLE TRANSMISSION CHARGE (NBT)

Purpose: The purpose of this surcharge is to provide for full and current cost recovery of certain transmission service related costs incurred under the PJM open access transmission tariff on behalf of the Company's distribution service load in accordance with Docket # P-2014-2409362.

Applicability: The surcharge shall be assessed to all distribution customers. The cost shall be allocated to each rate class based upon the coincident peak used by PJM to establish the network service obligation.

Billing Provisions: The NBT shall be included in distribution rates charged to customers taking service under the Residential, Small C&I and Street Lighting class rate schedules as described below.

For Rates PD, HT, and EP (Large C&I class), a PJM Peak Load Contribution (PLC) shall be determined in accordance with PJM rules and used to calculate the NBT. Customer's PLC will be computed to the nearest kilowatt. The NBT shall be recovered through a separate charge listed on customers' bills.

The surcharge shall be calculated on a semi-annual basis using the formula below:

$NBT(n) = (C+E+I)/S(n) * 1/(1-T)$ where;

NBT(n) = transmission service cost for customer class n including over or under recovery and associated interest.

C – the transmission service charges incurred by PECO under the PJM open access transmission tariff. These costs shall include the following:

Regional Transmission Expansion Plan charges, Expansion Cost Recovery charges, Generation Deactivation/Reliability Must Run charges and any costs to implement the Non-Bypassable Transmission charge in accordance with Docket # P-2014-2409362.

E – The estimated over or under recovery from the applicable reconciliation period.

I – Interest on any over or under recovery balance. Interest shall be computed monthly at a 6% annual simple interest rate from the month that the overcollection or undercollection occurs to the mid-point of the recovery period.

n – rate class where: 1 = residential, 1a = RH, 2 = small C&I, 3 = large C&I, 4 = street lighting

Residential – Rates R, RH (reconciled as a group)

Small C&I – Rate GS

Large C&I – Rates HT, PD, EP (reconciled as a group)

Street Lighting – SLE, SLC, SLS, POL, AL, TLCL (reconciled as a group)

S – Estimated distribution service sales for residential class and the street lighting class in the applicable application period. For the Small C&I class (Rate GS) it shall be the estimated billed demand for the applicable application period. For the Large C&I class (Rates PD, HT, and EP), the PJM PLC shall be used to calculate the NBT. The application period will be the period when rates will be in effect.

T – The currently effective gross receipts tax rate.

Filings and Reconciliations: The Company shall submit filings 15 days prior to the start of the application period beginning June 1, 2015. Thereafter, the Company will file a surcharge adjustment 15 days prior to June 1 and December 1 of each year. If it is apparent that such methodology would result in a significant over or under recovery before the next 6 month filing for an individual customer class, the Company may propose a rate adjustment 15 days prior to the next effective GSA rate adjustment date (Effective date of March 1, September 1). The annual reconciliation statement will be made by December 31 each year.

Current Non-Bypassable Transmission Rate:

R= \$.00375 per kilowatt hour

RH= \$.00375 per kilowatt hour

Small C&I = \$.086 per billed distribution kW

Large C&I = \$1.02 per kW based on the PJM PLC

Street Lighting = \$.00052 per kilowatt hour

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 48**PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY AND CONSERVATION PROGRAM COSTS (EEPC)**

Purpose: The purpose of this surcharge is to provide for full and current cost recovery of expenditures associated with the Company's Phase IV Energy Efficiency and Conservation Program Costs (EEPC).

Applicability: The surcharge shall be a calculated for billing purposes for all customers. The EEPC shall be charged to each rate schedule using the following units:

Phase IV

Rates R, RS, RH:	\$0.00232/kWh
Rates GS:	\$0.00458/kWh
Rate SL-E:	(\$0.08)/location
Rate SL-C:	(\$0.07)/location
Rate AL:	(\$0.02)/location
Rate TLCL:	(\$0.00081)/kWh
Rates HT, PD, EP:	\$0.53/kW based on PJM Peak Load Contribution (PLC)

The Variable Distribution Service charges, for the residential rate schedules shall include the above listed EEPC surcharge. For the municipal lighting rate schedules, the applicable variable or fixed distribution service charges shall include the EEPC surcharge.

For Rate GS, the EEPC shall be recovered through a separate variable distribution charge listed on customer's bills. For Rates PD, HT and EP, a PJM PLC shall be determined in accordance with PJM rules and used to calculate the EEPC. Customer's PLC will be computed to the nearest kilowatt. The EEPC shall be recovered through a separate variable distribution charge listed on customer bills.

Calculation of EEPC Surcharge and the Over/Under Recovery:

Billing Provisions: The surcharge and over/under recovery shall be calculated by rate schedule on an annual basis using the following formulas:

$$EEPC(n) = \frac{(C-E) + (SWE)}{(BU)} \times \frac{(PDR)}{(1-T)} \times (1)$$

C – The cost of the Energy Efficiency and Conservation Program includes: all expenditures, of the individual programs such as materials, equipment, installation, custom programs, evaluation measurement/verification, educating customers about availability to the extent not included in Consumer Education cost, not recovered through any separate recovery mechanism, and any other cost associated with implementation of the programs. Costs that relate to measures that are applicable to more than one rate class or that are shown to provide system-wide benefits, will be allocated to each class based on the ratio of class-specific projected program costs to the total projected program costs. The program costs are those approved by the PAPUC and audit costs for the Phase IV program ending May 31, 2026

E – The over or (under) recovery from the applicable reconciliation period. Interest will not be applied to any over/under collections.

SWE – The cost in dollars of the PaPUC's Statewide Evaluator. These costs will be reconciled separately and added to the EEPC and will not be subject to the 2% spending limit of the EE&C Plan.

PDR – The savings/costs from the portion of projected EE Peak Demand Resources (PDR) nominated into PJM's Forward Capacity Market (FCM). The Company will apply any proceeds/deficiencies from nominated PDR to the appropriate customer classes. These costs will be reconciled separately and added to the EEPC and will not be subject to the 2% spending limit of the EE&C Plan.

BU – The total Billing Units for the applicable recovery period.

T – The current Pennsylvania gross receipts tax rate included in base rates.

n - The rate class for which the EEPC is being calculated: 1 = Residential, 2 = Small C&I, 3 = LC&I, 4 = Street lighting

Residential - Rates R, RH
Small C&I – Rate GS
Large C&I – Rates HT, PD, EP
Street Lighting – Rates SLE, SLC, AL, TLCL

Filings and Reconciliations: The estimated EEPC shall be filed by May 1 each year to be effective through May 31.

The first surcharge, effective June 1, 2021 will contain "C" and "E" factors calculated as follows: The "C-factor" will have two components; one including Phase III costs and the other including Phase IV costs. The Phase IV component will be set using projected costs for the 12 month period from June 1, 2021 through May 31, 2022. The Phase III component will be set using any Phase III costs from projects started prior to the end of Phase III, but not yet billed as of June 1, 2021. For the "E-factor" over/under rate will include the Phase III costs for the 10 month period from June 1, 2020 through March 31, 2021.

The second EEPC, effective June 1, 2022, will be calculated as follows: the "C-factor" will include Phase IV costs for the period June 1, 2022 through May 31, 2023 and the "E-factor" will include costs for 12 months comprising Phase III costs for the 2 months of April and May 2021 and Phase IV costs for the 10 months of June 1, 2021 through March 31, 2022. Subsequent EEPC's, effective June 1 each year will be calculated using a 12 month "C factor" for the period June 1 through May 31 and an "E factor" for the period of April 1 through March 31.

A reconciliation statement filing, in accordance with C.S. Title 66 §1307(e), will be made by April 30 of each year. The last Phase III only reconciliation statement will be for the 10 month period from June 1, 2020 through March 31, 2021. Phase IV reconciliation statements will be for the 12 month period April 1 through March 31 of each plan year. The first Phase IV reconciliation statement will cover the period April 1, 2021 through March 31, 2022 and include 2 months (April and May) of Phase III revenues and expenses and 10 months of Phase IV revenues and expenses (June through March). The EEPC mechanism is subject to annual audit review by the Bureau of Audits.

PROVISION FOR THE TAX ACCOUNTING REPAIR CREDIT (TARC)

Purpose: The purpose of this credit is to provide customers a bill credit for the tax benefits gained as a result of a change in the method of tax accounting for certain expenditures. The Tax Accounting Repair Credit is as proposed in the Settlement at Docket No. R-2010-2161575 in Section II E(2) and the Settlement at Docket No. R-2015-2468981 in Section II E (20).

Applicability: The credit shall be calculated to the nearest one-hundredth of a cent for billing purposes for all customers, except for customers on Rates SLE, SLS, POL, TLCL and AL where it shall be the nearest one cent. The TARC shall be credited to each rate schedule as follows:

Rate R	\$0.00000/kWh	
Rate RH	\$0.00000/kWh	
Rate GS	\$0.00000/kWh	
Rate POL	\$0.00/lamp	
Rate SL-S	\$0.00/lamp	
Rate SL-E	\$0.00/location	
Rate SL-C	\$0.00/location	
Rate AL	\$0.00/location	
Rate TLCL	\$0.00/location	
Rates HT, PD, EP	\$0.00000/kWh	

The Variable Distribution Service charges, for the above rate schedules shall include the above listed TARC credits. For the lighting rate schedules, the applicable location or fixed distribution service charges shall include the TARC credit.

Calculation of TARC Credit:

Billing Provisions: The credit shall be calculated by rate schedule using the following formula:

$$TARC = \frac{R(n) + I}{BU(n)} \times \frac{1}{((1-T))}$$

R(n) – The amount accrued as a result of a change in the tax accounting method for electric system repairs for rate class n divided by 7.

I - Interest on the bill credit. Interest shall be at a rate of 6% simple interest and shall be calculated on the monthly unamortized balance of the tax effected catch-up deduction.

BU(n) – The total annual Billing Units for the rate class.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE
(DSIC)

In addition to the net charges provided for in this Tariff, a value of 0.00% will apply consistent with the Commission Order dated October 22, 2015 at Docket No. P-2015-2471423, approving the DSIC.

1. General Description

A. Purpose: To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Company with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

B. Eligible Property: The DSIC-eligible property will consist of the following:

- Poles and Tower (Account 364);
- Overhead conductor (Account 365) and underground conduit and conductors (Accounts 366 and 367);
- Line transformers (Account 368) and substation equipment (Account 362);
- Any fixture or device related to eligible property listed above, including insulators, circuit breakers, fuses, reclosers, grounding wires, crossarms and brackets, relays, capacitors, converters and condensers;
- Unreimbursed costs related to highway relocation projects where an electric distribution company must relocate its facilities; and
- Other related capitalized costs.

C. Effective Date: The DSIC will become effective January 1, 2016.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 50**DISTRIBUTION SYSTEM IMPROVEMENT CHARGE
(DSIC) (CONTINUED)****2. Computation of the DSIC**

A. Calculation: The initial DSIC, effective January 1, 2016, shall be calculated to recover the fixed costs of eligible plant additions that have not previously been reflected in the Company's rates or rate base and will have been placed in service between September 1, 2015 and November 30, 2015. Thereafter, the DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three-month periods ending one month prior to the effective date of each DSIC update. Billing for the DSIC will be on a bills rendered basis. Thus, changes in the DSIC rate will occur as follows:

Effective Date of Change	Date to which DSIC Eligible Plant Additions Reflected
January 1	September - November
April 1	December - February
July 1	March - May
October 1	June - August

B. Determination of Fixed Costs: The fixed costs of eligible distribution system improvements projects will consist of depreciation and pre-tax return, calculated as follows:

1. Depreciation: The depreciation expense shall be calculated by applying the annual accrual rates employed in the Company's most recent base rate case for the plant accounts in which each retirement unit of DSIC-eligible property is recorded to the original cost of DSIC-eligible property.

2. Pre-tax return: The pre-tax return shall be calculated using the statutory state and federal income tax rates, the Company's actual capital structure and actual cost rates for long-term debt and preferred stock as of the last day for the three-month period ending one month prior to the effective date of the DSIC and subsequent updates. The cost of equity will be the equity return rate approved in the Company's last fully litigated base rate proceeding for which a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years shall have elapsed between the entry of such a final order and the effective date of the DSIC, then the equity return rate used in the calculation will be the equity return rate calculated by the Commission in the most recent Quarterly Report on the Earnings of Jurisdictional Utilities released by the Commission.

C. Application of DSIC: The DSIC will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for distribution service and the State Tax Adjustment Surcharge (STAS). To calculate the DSIC, one-fourth of the annual fixed costs associated with all property eligible for cost recovery under the DSIC will be divided by the Company's projected revenue for distribution service (including all applicable clauses and riders) for the quarterly period during which the charge will be collected, exclusive of the STAS.

D. Formula: The formula for calculation of the DSIC is as follows:

$$DSIC = \frac{(DSI * PTRR) + STFT + Dep + e}{PQR} \times 1 / (1 - T)$$

Where:

DSI = Original cost of eligible distribution system improvement projects net of accrued depreciation and associated accumulated deferred income taxes pertaining to property-related book/tax depreciation timing differences resulting from the use of accelerated depreciation per Internal Revenue Code, 26 U.S. Code § 168.

PTRR = Pre-tax return rate applicable to DSIC eligible property.

STFT = (State Tax Flow Through) Pre-tax flow through calculated on book-tax timing differences between accelerated tax depreciation and book depreciation net of federal tax. [NOTE: UTILITY MAY ELECT TO INCLUDE STFT CALCULATION IN THE PTRR COMPONENT].

Dep = Depreciation expense related to DSIC-eligible property.

e = Amount calculated (+/-) under the annual reconciliation feature or Commission audit, as described below.

T = If applicable, Pennsylvania Gross Receipts Tax rate in effect during the billing month, expressed in decimal form.

PQR = Projected quarterly revenues for distribution service (including all applicable clauses and riders) from applicable customers.

Revenue shall be based on three-month period of projected annual revenues.

[NOTE: THE DSIC CALCULATION DOES NOT FACTOR IN THE PLANT OF ACQUIRED TROUBLED COMPANIES OR THE REVENUE OF CUSTOMERS ACQUIRED FROM TROUBLED COMPANIES UNTIL SUCH PLANT AND CUSTOMER RATES HAVE BEEN PART OF A BASE RATE CASE BY THE ACQUIRING UTILITY].

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE
(DSIC) (CONTINUED)

3. Quarterly Updates: Supporting data for each quarterly update will be filed with the Commission and served upon the Commission's Bureau of Investigation and Enforcement, the Office of Consumer Advocate, Bureau of Audits and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the update.

4. Customer Safeguards

A. Cap: The DSIC is capped at 5.0% of the amount billed to customers for distribution service (including all applicable clauses and riders) as determined on an annualized basis.

B. Audit/Reconciliation: The DSIC is subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. §§ 1350, *et seq.*, shall be credited to customer accounts. The DSIC is subject to annual reconciliation based on a reconciliation period consisting of the twelve months ending December 31 of each year or the Company may elect to subject the DSIC to quarterly reconciliation but only upon request and approval by the Commission. The revenue received under the DSIC for the reconciliation period will be compared to the Company's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one-year period commencing on April 1 of each year or in the next quarter if permitted by the Commission. If DSIC revenues exceed DSIC-eligible costs, such over-collections will be refunded with interest. Interest on over-collections and credits will be calculated at the residential mortgage lending specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, *et seq.*) and will be refunded in the same manner as an over-collection. The Company is not permitted to accrue interest on under collections.

C. New Base Rates: The DSIC will be reset at zero upon application of new base rates to customer billings that provide for prospective recovery of the annual costs that had previously been recovered under the DSIC. Thereafter, only the fixed costs of new eligible plant additions that have not previously been reflected in the Company's rates or rate base will be reflected in the quarterly updates of the DSIC.

D. Customer Notice: Customers shall be notified of changes in the DSIC by including appropriate information on the first bill they receive following any change or through an explanatory bill insert included with the first billing.

E. All customer classes: The DSIC shall be applied equally to all customer classes.

F. Earning Reports: The DSIC will also be reset at zero if, in any quarter, data filed with the Commission in the Company's then most recent Annual or Quarterly Earnings reports show that the Company would earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the DSIC as described in the pre-tax return section. The Company shall file a tariff supplement implementing the reset to zero due to overearning on one-day's notice and such supplement shall be filed simultaneously with the filing of the most recent Annual or Quarterly Earnings reports indicating that the Company has earned a rate of return that would exceed the allowable rate of return used to calculate its fixed costs.

G. Residual E-Factor Recovery Upon Reset To Zero: The Company shall file with the Commission interim rate revisions to resolve the residual over/under collection or E-factor amount after the DSIC rate has been reset to zero. The Company can collect or credit the residual over/under collection balance when the DSIC rate is reset to zero. The Company shall refund any overcollection to customers and is entitled to recover any undercollections as set forth in Section 4.B. Once the Company determines the specific amount of the residual over or under collection amount after the DSIC rate is reset to zero, the Company shall file a tariff supplement with supporting data to address that residual amount. The tariff supplement shall be served upon the Commission's Bureau of Investigation and Enforcement, the Bureau of Audits, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the supplement.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 52**RATE R RESIDENCE SERVICE****AVAILABILITY.**

Single phase service in the entire territory of the Company to the dwelling and appurtenances of a single private family (or to a multiple dwelling unit building consisting of two to five dwelling units, whether occupied or not), for the domestic requirements of its members when such service is supplied through one meter. Service is also available for related farm purposes when such service is supplied through one meter in conjunction with the farmhouse domestic requirements.

Each dwelling unit connected after May 10, 1980 except those dwelling units under construction or under written contract for construction as of that date must be individually metered for their basic service supply. Centrally supplied master metered heating, cooling or water heating service may be provided if such supply will result in energy conservation.

The term "residence service" includes service to: (a) the separate dwelling unit in an apartment house or condominium, but not the halls, basement, or other portions of such building common to more than one such unit; (b) the premises occupied as the living quarters of five persons or less who unite to establish a common dwelling place for their own personal comfort and convenience on a cost sharing basis; (c) the premises owned by a church, and primarily designated or set aside for, and actually occupied and used as, the dwelling place of a priest, rabbi, pastor, rector, nun or other functioning Church Divine, and the resident associates; (d) private dwellings in which a portion of the space is used for the conduct of business by a person residing therein; (e) A detached garage, located on the same premises as the customer's dwelling unit, that is utilized solely for the domestic requirements of the dwelling unit's members and is served through the same meter as the dwelling unit; (g) A detached garage, located on the same premises as the customer's dwelling unit, that is utilized solely for the domestic requirements of the dwelling unit's members and requires separate metering service as a result of wiring restrictions or legal requirements.

The term does NOT include service to: (a) Premises institutional in character including Clubs, Fraternities, Orphanages or Homes; (b) premises defined as a rooming house or boarding house in the Municipal Code for Cities of the First Class enacted by Act of General Assembly; (c) a premises containing a residence unit but primarily devoted to a professional or other office, studio, or other gainful pursuit; (d) electric furnaces or welding apparatus other than a transformer type "limited input" arc welder with an input not to exceed 37 1/2 amperes at 240 volts.

CURRENT CHARACTERISTICS. Standard single phase secondary service.

MONTHLY RATE TABLE.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 53**RATE RH RESIDENTIAL HEATING SERVICE****AVAILABILITY.**

Single phase service to the dwelling and appurtenances of a single private family (or to a multiple dwelling unit building consisting of two to five dwelling units, whether occupied or not), for domestic requirements when such service is provided through one meter and where the dwelling is heated by specified types of electric space heating systems. The systems eligible for this rate are (a) permanently connected electric resistance heaters where such heaters supply all of the heating requirements of the dwelling, (b) heat pump installations where the heat pump serves as the heating system for the dwelling and all of the supplementary heating required is supplied by electric resistance heaters, and (c) heat pump installations where the heat pump serves as the heating system for the dwelling and all of the supplementary heating required is supplied by non electric energy sources. All space heating installations must meet Company requirements. This rate schedule is not available for commercial, institutional or industrial establishments.

Each dwelling unit connected after May 10, 1980 except those dwelling units under construction or under written contract for construction as of that date, must be individually metered

CURRENT CHARACTERISTICS. Standard single phase secondary service.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 54**RATE RS-2 NET METERING****PURPOSE.**

This Rate sets forth the eligibility, terms and conditions applicable to Customers with installed qualifying renewable customer-owned generation using a net metering system.

APPLICABILITY.

This Rate applies to renewable customer-generators served under Rates R, RH, CAP, GS, HT, PD and EP who install a device or devices which are, in the Company's judgment, subject to Commission review, a bona fide technology for use in generating electricity from qualifying Tier I or Tier II alternative energy sources pursuant to Alternative Energy Portfolio Standards Act No. 2004-213 (Act 213) or Commission regulations and which will be operated in parallel with the Company's system. A renewable customer-generator is a non-utility owner or operator of a net metered generation system with a nameplate capacity of not greater than 50 kilowatts if installed at a residential service (Rate R, RH, or CAP) or not larger than 3,000 kilowatts at other customer service locations (Rate GS, HT, PD and EP), except for Customers whose systems are above 3 megawatts and up to 5 megawatts who make their systems available to operate in parallel with the Company during grid emergencies as defined by the regional transmission organization or where a microgrid is in place for the purpose of maintaining critical infrastructure such as homeland security assignments, emergency services facilities, hospitals, traffic signals, wastewater treatment plants or telecommunications facilities provided that technical rules for operating generators interconnected with facilities of the Company have been promulgated by the Institute of Electrical and Electronic Engineers "IEEE" and the Commission.

Qualifying renewable energy installations are limited to Tier I and Tier II alternative energy sources as defined by Act 213 and Commission Regulations. The Customer's equipment must conform to the Commission's Interconnection Standards and Regulations pursuant to Act 213. This Rate is not applicable when the source of supply is service purchased from a neighboring electric utility under Borderline Service.

Service under this Rate is available upon request to renewable customer-generators on a first come, first served basis so long as the total rated generating capacity installed by renewable customer-generator facilities does not adversely impact service to other Customers and does not compromise the protection scheme(s) employed on the Company's electric distribution system.

METERING PROVISIONS.

A Customer may select one of the following metering options in conjunction with service under applicable Rate Schedule R, RH, CAP, GS, HT, PD or EP.

1. A customer-generator facility used for net metering shall be equipped with a single bi-directional meter that can measure and record the flow of electricity in both directions at the same rate. A dual meter arrangement may be substituted for a single bi-directional meter at the Company's expense.
2. If the customer-generator's existing electric metering equipment does not meet the requirements under option (1) above, the Company shall install new metering equipment for the customer-generator at the Company's expense. Any subsequent metering equipment change necessitated by the customer-generator shall be paid for by the customer-generator. The customer-generator has the option of utilizing a qualified meter service provider to install metering equipment for the measurement of generation at the customer-generator's expense.

Additional metering equipment for the purpose of qualifying alternative energy credits owned by the customer-generator shall be paid for by the customer-generator. The Company shall take title to the alternative energy credits produced by a customer-generator where the customer-generator has expressly rejected title to the credits. In the event that the Company takes title to the alternative energy credits, the Company will pay for and install the necessary metering equipment to qualify the alternative energy credits. The Company shall, prior to taking title to any alternative energy credits, fully inform the customer-generator of the potential value of those credits and options available to the customer-generator for their disposition.

3. Meter aggregation on properties owned or leased and operated by a customer-generator shall be allowed for purposes of net metering. Meter aggregation shall be limited to meters located on properties within two (2) miles of the boundaries of the customer-generator's property. Meter aggregation shall only be available for properties located within the Company's service territory. Physical meter aggregation shall be at the customer-generator's expense. The Company shall provide the necessary equipment to complete physical aggregation. If the customer-generator requests virtual meter aggregation, it shall be provided by the Company at the customer-generator's expense. The customer-generator shall be responsible only for any incremental expense entailed in processing his account on a virtual meter aggregation basis. Customer generators involved in virtual metering programs are not eligible for the company's default service TOU Pricing Option commencing September 1, 2021.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 55**RATE RS-2 NET METERING (continued)****BILLING PROVISIONS.**

The following billing provisions apply to default service customer-generators in conjunction with service under applicable Rates R, RH, CAP, GS, HT, PD, EP.

1. The customer-generator will receive a credit for each kilowatt-hour received by the Company up to the total amount of electricity delivered to the Customer during the billing period at the full retail rate consistent with Commission regulations. If a customer-generator supplies more electricity to the Company than the Company delivers to the customer-generator in a given billing period, the excess kilowatt hours shall be carried forward and credited against the customer-generator's usage in subsequent billing periods at the full retail rate. Any excess kilowatt hours will continue to accumulate until the end of the PJM planning period ending May 31 of each year. On an annual basis, the Company will compensate the customer-generator for kilowatt-hours received from the customer-generator in excess of the kilowatt hours delivered by Company to the customer-generator during the preceding year at the "full retail value for all energy produced" consistent with Commission regulations. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

Commencing September 1, 2021, for default service Time-Of-Use ("TOU") customer-generators only: The Company will record excess generation supplied by TOU Pricing Period, maintaining an active record of kilowatt hours produced and consumed at the customer-generator's premise. If, in a subsequent default service TOU billing period, a customer consumes more electricity than produced within a given TOU Pricing Period, the Company will pull kilowatt hours for the excess generation from the customer's banked kilowatt-hours for that TOU Pricing Period. Any excess kilowatt hours remaining in that TOU Pricing Period will continue to accumulate until the end of the PJM planning period ending May 31 of each year. On an annual basis, the Company will compensate the TOU customer generator for accumulated excess generation at the full retail value based on the applicable TOU Pricing Option rate and TSC rate in effect at the time the excess electricity was generated.

If the Company supplies more kilowatt-hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the appropriate rate schedule shall be applied to the net kilowatt-hours of electricity that the Company supplied. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.
2. For customer-generators involved in virtual meter aggregation programs, any excess credit shall be applied first to the account containing the meter through which the generating facility supplies electricity to the distribution system, also known as the "host account". If the host account's usage has been fully offset by this credit and additional excess credit still remains, PECO will divide that remaining credit into equal parts based on the number of additional virtually metered accounts under the customer-generator's name, also known as "satellite accounts", and apply one part to each satellite account in a "waterfall"-like fashion at each account's designated rate. This process continues as PECO bills each subsequent satellite account, with any additional excess credits from each divided equally among the remaining satellite accounts. Virtual meter aggregation is the combination of readings and billing for all meters regardless of rate class on properties owned or leased and operated by a customer-generator by means of the Company's billing process, rather than through physical rewiring of the customer-generator's property for a physical, single point of contact. The customer-generators are responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.
3. Procurement Class 3/4 customer-generators will receive a generation credit, at the PJM Day Ahead hourly energy rate, for each kilowatt hour received by the Company during each hour of the billing period up to the total amount of electricity delivered to the customer during each hour of the billing period. If a Procurement Class 3/4 customer-generator supplies more electricity to the Company than the Company delivers to the customer-generator during any hour in the billing period, the excess kilowatt hours shall not be carried forward to a subsequent billing period but will be credited in the current month toward generation charges based on the PJM Day Ahead hourly rate. Any excess kilowatt hours at the end of the PJM planning period will not carry over to the next year.
4. Procurement Class 3/4 customer-generators will also receive a variable distribution credit for each kilowatt hour received by the Company during the monthly billing period up to the total amount of electricity delivered to the Customer during the monthly billing period at the applicable distribution rate.

If a Procurement Class 3/4 customer-generator supplies more electricity to the Company than the Company delivers to the customer-generator, the variable distribution charges will be reduced by the excess kilowatt hours, which will be carried forward and credited against the customer-generator's distribution kilowatt hours in subsequent billing periods until the end of the PJM planning period, ending May 31 of each year.

Procurement Class 3/4 customer-generators are responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

Any excess kilowatt hours at the end of the PJM planning period will not carry over to the next year and reduce distribution charges.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Supersedes First Revised Page No. 56**RATE RS-2 NET METERING (continued)****NET METERING FOR SHOPPING CUSTOMERS.**

1. Customer-generators may take net metering services from EGSs that offer such services.
2. If a net-metering customer takes service from an EGS, the Company will credit the customer for distribution charges for each kilowatt hour produced by a Tier I or Tier II resource installed on the customer-generator's side of the electric revenue meter, up to the total amount of kilowatt hours delivered to the customer by the Company during the billing period. If a customer-generator supplies more electricity to the electric distribution system than the EDC delivers to the customer-generator in a given billing period, the excess kilowatt hours shall be carried forward and credited against the customer-generator's usage in subsequent billing periods at the Company's distribution rates. Any excess kilowatt hours at the end of the PJM planning period will not carry over to the next year and reduce distribution charges. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rates Schedule.
3. If the Company delivers more kilowatt hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the applicable rate schedule shall be applied to the net kilowatt hours of electricity that the Company delivered. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.
4. Pursuant to Commission regulations, the credit or compensation terms for excess electricity produced by customer-generators who are customers of EGSs shall be stated in the service agreement between the customer-generator and the EGS.
5. If a customer-generator switches electricity suppliers, the Company shall treat the end of the service as if it were the end of the PJM planning period.

APPLICATION.

Customer-generators seeking to receive service under the provisions of this Rate must submit a written application online to the Company demonstrating compliance with the Net Metering Rate provisions and quantifying the total rated generating capacity of the customer-generator facility. The link to the online application can be found on the Green Power Connection pages on peco.com.

INTERCONNECTION EXPIRATION.

Interconnection applications will be reviewed and processed in accordance with the timeframes designated by PECO in Act 213 and Title 52 of the Pa Code Chapter 75. A customer-generator (or authorized designee) must submit a completed certificate of completion ("COC") for residential level 1 and 2 interconnection applications to PECO within 180 calendar days from the date that PECO approves the interconnection application. If a COC is not received within 180 calendar days from the date that PECO approves the interconnection application then the residential level 1 and level 2 interconnection applications shall expire. A customer-generator may request an extension of a residential level 1 or level 2 application expiration date for good cause shown (i.e., that significant progress in construction of the interconnection has been or will be made). Upon a showing of good cause, the application expiration date will be extended. The length of the extension may be extended up to but no more than 180 calendar days. A customer-generator must make such extension requests in writing or via e-mail no less than 30 calendar days prior to an application's original expiration date. PECO will provide notice to developers of distributed generation at least 45 calendar days ahead of the original expiration date.

Any interconnection application in (a) Conditionally Approved or (b) Engineering Study status will expire in 6 months unless a customer-generator takes steps to (a) satisfy the conditions of the Conditional Approval or (b) pays for and moves forward with the Engineering Study. A customer-generator will be notified of the upcoming interconnection application expiration 45 calendar days ahead of the expiration date. Prior to the expiration of the 6-month period, a customer-generator may request an extension to resolve the outstanding issues surrounding their interconnection application. Upon a showing of good cause, the interconnection application expiration date will be extended up to but no more than 180 calendar days.

MINIMUM CHARGE.

The Minimum Charges under Rate Schedule R, RH, CAP, GS, PD, HT and EP apply for installations under this Rate.

RIDERS.

Bills rendered by the Company under this Rate shall be subject to charges stated in any other applicable Rate.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 57**RATE-GS GENERAL SERVICE****AVAILABILITY.**

Service for offices, professional, commercial or industrial establishments, governmental agencies, farms and other applications outside the scope of the Residence Service rate schedules.

Transformed service from the Company's distribution system where the company installs, owns, and maintains any transforming, switching and other receiving equipment required.

For service configurations that are nominally 120/208 volts, 3 phase, 4 wires – If either the service capacity or the parallel-generating capacity exceeds 750 kVA for transformers located inside the building, the only rate option available to the customer will be Rate HT. If either the service capacity or the parallel-generating capacity exceeds 750 kVA but remains at or below 1,500 kVA for transformers outside the building, the customer may request service at 277/480 volts, 3-phase 4-wires from transformers located outside the building. Otherwise the only rate option available to the customer will be Rate HT.

For service configurations that are nominally 277/480 volts, 3 phase, 4 wires - If either the service capacity or the parallel-generating capacity exceeds either 750 kVA for transformers located inside the building or 1,500 kVA for transformers located outside the building, the only rate option available to the customer will be Rate HT.

CURRENT CHARACTERISTICS.

Standard single-phase or polyphase secondary service.

MONTHLY RATE TABLE.**FIXED DISTRIBUTION SERVICE CHARGE:**

\$ ~~24.47~~ for single-phase service without demand measurement, or
\$ ~~31.20~~ for single-phase service with demand measurement, or
\$ ~~74.66~~ for polyphase service.

VARIABLE DISTRIBUTION SERVICE CHARGE:

\$ ~~12.10~~ per kW of billed demand

(\$0.0006) per kWh for all kWh

ENERGY EFFICIENCY CHARGE: \$0.00458 per kWh

ENERGY SUPPLY CHARGE: Refer to the Generation Supply Adjustment Procurement Classes 2 and 3.

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: The Transmission Service Charge shall apply.

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), NUCLEAR DECOMMISSIONING COST ADJUSTMENT, NON-BYPASSABLE TRANSMISSION CHARGE, PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY AND CONSERVATION PROGRAM COSTS, FIBER AFFILIATE REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE, AND PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS APPLY TO THIS RATE.

DETERMINATION OF BILLING DEMAND.

The billing demand may be measured where consumption exceeds 1,100 kilowatt-hours per month for three consecutive months; or where load tests indicate a demand of five or more kilowatts; or where the customer requests demand measurement. Measured demands will be determined to the nearest 0.1 of a kilowatt but will not be less than 1.2 kilowatts, and will be adjusted for power factor in accordance with the Rules and Regulations.

For those customers with demand measurement the billing demand will be determined as follows:

- For customers with demand up to 500 kW, the billing demand shall be the measured demand, with a minimum billing demand of 1.2 kW.
- For customers with measured demand or maximum demand greater than 500 kW, the billing demand shall be the greater of (i) the measured demand, (ii) 40% of the maximum contract demand; or (iii) the maximum measured demand from the prior year.

If a measured demand customer has less than 1,100 monthly kilowatt-hours of use, the monthly billing demand will be the measured demand or the metered monthly kilowatt-hours divided by 175 hours, whichever is less, but not less than 1.2 kilowatts.

For those customers without demand measurement, the monthly billing demand will be computed by dividing the metered monthly kilowatt-hours by 175 hours. The computed demand will be determined to the nearest 0.1 of a kilowatt, but will not be less than 1.2 kilowatts.

MINIMUM CHARGE.

The monthly minimum charge for customers with out demand measurement will be the Fixed Distribution Service Charge, plus the Variable Distribution Service Charge per KW of minimum billing demand as described above. The monthly minimum charge for customers with demand measurement will be the Fixed Distribution Service Charge, plus per KW of billing demand. In addition to the above, for customers in Procurement Class 3 charges will be assessed on PJM's reliability pricing model.

RATE-GS GENERAL SERVICE (continued)**SPECIAL PROVISION.**

In accordance with Section 1511, Title 66 Public Utilities, a volunteer fire company, non-profit rescue squad, non-profit ambulance service or a non-profit senior citizen center meeting the requirements set forth below, may, upon application, elect to have its electric service billed at any of the following rate schedules: Rate R Residential Service or Rate R-H Residential Heating Service, as appropriate for the application. The execution of an electric service contract for a minimum term of one year at the chosen rate will be required of any entity electing service pursuant to the options provided by this provision.

For the purposes of this provision, the following words and terms shall have the following meanings, unless the context clearly indicates otherwise:

VOLUNTEER FIRE COMPANY. A separately metered service location consisting of a building, sirens, a garage for housing vehicular firefighting equipment, or a facility certified by the Pennsylvania Emergency Management Agency (PEMA) for fire fighter training. The use of electric service at this location shall be to support the activities of the volunteer fire company. Any fund raising activities at this service location must be used solely to support volunteer fire fighting operations.

The customer of record at this service location must be a predominantly volunteer fire company recognized by the local municipality or PEMA as a provider of firefighting services.

NON PROFIT SENIOR CITIZEN CENTER. A separately metered service location consisting of a facility for the use of senior citizens coming together as individuals or groups and where access to a wide range of services to senior citizens is provided. The customer of record at this service location must be an organization recognized by the Internal Revenue Service (IRS) or the Commonwealth as a non-profit entity and recognized by the Pennsylvania Department of Aging as an operator of a senior citizen center.

NON-PROFIT RESCUE SQUAD. A separately metered service location consisting of a building, sirens, a garage for housing vehicular rescue equipment; and qualified by the Commonwealth as a non-profit entity; and a facility recognized by the Pennsylvania Emergency Management Agency (PEMA) or the Pennsylvania Department of Health as a provider of rescue services. The use of electric service at this location shall be to support the activities of the non-profit rescue squad. Any fund raising activities at this service location must be used solely to support the non-profit rescue squad operations.

NON-PROFIT AMBULANCE SERVICE. A separately metered service location consisting of a building, sirens, a garage for housing vehicular rescue equipment; and qualified by the Commonwealth as a non-profit entity; and a facility licensed by the Pennsylvania Department of Health as a provider of ambulance services. The use of electric service at this location shall be to support the activities of the non-profit ambulance service. Any fund raising activities at this service location must be used solely to support the non-profit ambulance service operations.

TERM OF CONTRACT.

The initial contract term shall be for at least one year.

PAYMENT TERMS.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 59**RATE-PD PRIMARY DISTRIBUTION POWER****AVAILABILITY.**

Untransformed service from the primary supply lines of the Company's distribution system where the customer installs, owns, and maintains any transforming, switching and other receiving equipment required. However, standard primary service is not available in areas where the distribution voltage has been changed to either 13 kV or 33 kV unless the customer was served with standard primary service before the conversion of the area to either 13 kV or 33 kV. This rate is available only for service locations served on this rate on July 6, 1987 as long as the original primary service has not been removed. PECO Energy may refuse to increase the load supplied to a customer served under this rate when, in PECO Energy's sole judgment, any transmission or distribution capacity limitations exist. If a customer changes the billing rate of a location being served on this rate, PECO Energy may refuse to change that location back to Rate PD when, in PECO Energy's sole judgment, any transmission or distribution capacity limitations exist.

CURRENT CHARACTERISTICS.

Standard primary service.

MONTHLY RATE TABLE.

FIXED DISTRIBUTION SERVICE CHARGE: \$29~~7.61~~

VARIABLE DISTRIBUTION SERVICE CHARGE:

~~\$12.16~~ per kW of billing demand
(\$0.0006) per kWh for all kWh

ENERGY EFFICIENCY CHARGE: \$0.53 per kW of Peak Load Contribution

ENERGY SUPPLY CHARGE: Refer to the Generation Supply Adjustment Procurement Classes 2 and 3/4.

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: The Transmission Service Charge shall apply.

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), NUCLEAR
DECOMMISSIONING COST ADJUSTMENT PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY, ~~FIBER AFFILIATE
REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE~~ AND CONSERVATION
PROGRAM COSTS, NON-BYPASSABLE TRANSMISSION CHARGE, AND PROVISION FOR THE RECOVERY OF CONSUMER
EDUCATION PLAN COSTS APPLY TO THIS RATE.

DETERMINATION OF BILLING DEMAND.

The billing demand will be computed to the nearest kilowatt and will never be less than the measured demand, adjusted for power factor in accordance with the Rules and Regulations, nor less than 25 kilowatts. The 25kW minimum shall apply to the Energy Supply Charge and the Transmission Supply Charge. Additionally, the billing demand will not be less than 40% of the maximum demand specified in the contract.

MINIMUM CHARGE.

The monthly minimum charge shall be the Fixed Distribution Service Charge, plus the charge per kW component of the Variable Distribution Service Charge, plus in the case of Procurement Class 3/4 customers, charges assessed under PJM's reliability pricing model.

TERM OF CONTRACT.

The initial contract term shall be for at least three years.

Original Page No. 60**RATE-HT HIGH TENSION POWER****AVAILABILITY.**

Untransformed service from the Company's standard high tension lines, where the customer installs, owns, and maintains, any transforming, switching and other receiving equipment required.

CURRENT CHARACTERISTICS.

Standard high tension service.

MONTHLY RATE TABLE.

FIXED DISTRIBUTION SERVICE CHARGE: \$~~71.67~~

VARIABLE DISTRIBUTION SERVICE CHARGE:

\$~~7.83~~ per kW of billing demand
(\$0.0006) per kWh for all kWh

HIGH VOLTAGE DISTRIBUTION DISCOUNT:

For customers supplied at 33,000 volts: \$~~0.26~~ per kW of measured demand.

For customers supplied at 69,000 volts: \$~~2.43~~ per kW of measured demand.

For customers supplied over 69,000 volts: \$~~2.43~~ per kW of measured demand.

ENERGY EFFICIENCY CHARGE: \$0.53 per kW of Peak Load Contribution

ENERGY SUPPLY CHARGE: Refer to the Generation Supply Adjustment Procurement Classes 2 and 3/4.

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: The Transmission Service Charge shall apply.

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS, NON-BYPASSABLE TRANSMISSION CHARGE, PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY, ~~FIBER AFFILIATE REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE~~ AND CONSERVATION PROGRAM, AND NUCLEAR DECOMMISSIONING COST ADJUSTMENT APPLY TO THIS RATE.

DETERMINATION OF BILLING DEMAND.

The billing demand will be computed to the nearest kilowatt and will never be less than the measured demand, adjusted for power factor in accordance with the Rules and Regulations, nor less than 25 kilowatts. Additionally, the billing demand will not be less than 40% of the maximum demand specified in the contract. The 25 kW minimum shall apply to the Energy Supply Charge and the Transmission Supply Charge.

CONJUNCTIVE BILLING OF MULTIPLE DELIVERY POINTS.

If the load of a customer located at a delivery point becomes greater than the capacity of the standard circuit or circuits established by the Company to supply the customer at that delivery point, upon the written request of the customer, the Company will establish a new delivery point and bill the customer as if it were delivering and metering the two services at a single point, as long as installation of the new service is, in the Company's opinion, less costly for the Company than upgrading the service to the first delivery point and provided that such multi-point delivery is not disadvantageous to the Company.

MINIMUM CHARGE.

The monthly minimum charge shall be the Fixed Distribution Service Charge, plus the charge per kW component of the Variable Distribution Service Charge, and modify less the high voltage discount where applicable plus in the case of Procurement Class 3/4 customers, charges assessed on PJM's reliability pricing model.

TERM OF CONTRACT.

The initial contract term shall be for at least three years.

PAYMENT TERMS.

Standard.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 61**RATE EP ELECTRIC PROPULSION****AVAILABILITY.**

This rate is available only to the National Rail Passenger Corporation (AMTRAK) and to the Southeastern Pennsylvania Transportation Authority (SEPTA) for untransformed service from the Company's standard high tension lines, where the customer installs, owns, and maintains any transforming, switching and other receiving equipment required and where the service is provided for the operation of electrified transit and railroad systems and appurtenances. Rate EP is also available to legacy transformed service that is receiving service pursuant to Rate EP as of January 1, 2020; Rate EP or successor rates shall remain available for such legacy transformed service until at least December 31, 2040.

CURRENT CHARACTERISTICS.

Standard sixty hertz (60 Hz) high tension service.

MONTHLY RATE TABLE.

FIXED DISTRIBUTION SERVICE CHARGE: \$1,292.35 per delivery point

VARIABLE DISTRIBUTION SERVICE CHARGE:

~~\$6.79~~ per kW of billing demand
(\$.0006) per kWh for all kWh

HIGH VOLTAGE DISTRIBUTION DISCOUNT:

For delivery points supplied at 33,000 volts: ~~\$0.27~~ per kW.

For delivery points supplied at 69,000 volts: ~~\$2.47~~ per kW for first 10,000 kW of measured demand.

For delivery points supplied over 69,000 volts ~~\$2.47~~ per kW for first 100,000 kW of measured demand.

ENERGY SUPPLY CHARGE: Refer to the Generation Supply Adjustment Procurement Class %.

ENERGY EFFICIENCY CHARGE: \$0.53 per kW of Peak Load Contribution

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: The Transmission Service Charge shall apply.

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), ~~PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS, NON-BYPASSABLE TRANSMISSION CHARGE, PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY AND CONSERVATION PROGRAM COSTS, FIBER AFFILIATE REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE,~~ AND NUCLEAR DECOMMISSIONING COST ADJUSTMENT APPLY TO THIS RATE.

DETERMINATION OF BILLING DEMAND.

The billing demand will be computed to the nearest kilowatt and will never be less than the measured demand, adjusted for power factor in accordance with the Rules and Regulations, nor less than 5,000 kilowatts. Additionally, the billing demand will not be less than 40% of the maximum demand specified in the contract.

CONJUNCTIVE BILLING OF MULTIPLE DELIVERY POINTS.

If the load of a customer located at a delivery point becomes greater than the capacity of the standard circuit or circuits established by the Company to supply the customer at that delivery point, upon the written request of the customer, the Company will establish a new delivery point and bill the customer as if it were delivering and metering the two services at a single point, as long as installation of the new service is, in the Company's opinion, less costly for the Company than upgrading the service to the first delivery point and provided that such multi-point delivery is not disadvantageous to the Company. Conjunctive billing under this section is available regardless of whether the conjunctively-billed sites take generation service from one or more generation suppliers and/or PECO default service.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 62**RATE POL PRIVATE OUTDOOR LIGHTING****AVAILABILITY.**

To any residential or commercial customer with outdoor lighting of sidewalks, driveways, yards, lots and similar places, outside the scope of service under Rates SL-S and SL-E.

MONTHLY RATE TABLE.

A Standard Lighting Unit shall be a Cobra Head or Floodlight comprised of a bracket, the lead wires, and a luminaire, including lamp, reactor, and control. The wattage is composed of manufacturer's rating of its lamps, ballasts, transformers, individual controls, and other load components required for its operation

MERCURY-VAPOR LAMPS

100 Watts (nominally 4,000 Lumens)
175 Watts (nominally 8,000 Lumens)
250 Watts (nominally 12,000 Lumens)
400 Watts (nominally 20,000 Lumens)
400 Watts Floodlight (nominally 22,000 Lumens)

SODIUM-VAPOR LAMPS

70 Watts (nominally 5,800 Lumens)
250 Watts (nominally 25,000 Lumens)
400 Watts (nominally 50,000 Lumens)
400 Watts Floodlight (nominally 50,000 Lumens)

Service to the above listed Mercury-Vapor Lamps and Sodium-Vapor Lamps is not available as of January 1, 2016 to new Customers or existing customers for new or replacement luminaires. The Company will not replace defective or broken mercury vapor or sodium vapor luminaires, including ballasts. In such cases, the customer must take service under one of the current lighting unit options as set forth below.

METAL HALIDE LAMPS

100 Watts (nominally 7,800 Lumens)
175 Watts (nominally 13,000 Lumens)
250 Watts (nominally 20,500 Lumens)
400 Watts (nominally 36,000 Lumens)
1000 Watts (nominally 110,000 Lumens)

HIGH PRESSURE SODIUM VAPOR LAMPS

50 Watts (nominally 4,000 Lumens)
70 Watts (nominally 5,800 Lumens)
100 Watts (nominally 9,500 Lumens)
150 Watts (nominally 16,000 Lumens)
250 Watts (nominally 25,000 Lumens)
400 Watts (nominally 50,000 Lumens)
1,000 Watts (nominally 130,000 Lumens)

LIGHT-EMITTING DIODE LAMPS

35 Watts (nominally 3,300 Lumens)
53 Watts (nominally 5,000 Lumens)
87 Watts (nominally 8,300 Lumens)
163 Watts (nominally 15,800 Lumens)
215 Watts (nominally 20,000 Lumens)

ENERGY SUPPLY CHARGE. Refer to the Generation Supply Adjustment Procurement Class 2.

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: The Transmission Service Charge shall apply.

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS, PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY, FIBER AFFILIATE REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE, NON-BYPASSABLE TRANSMISSION CHARGE, CONSERVATION PROGRAM COSTS, AND NUCLEAR DECOMMISSIONING COST ADJUSTMENT APPLY TO THIS RATE.

RATE POL PRIVATE OUTDOOR LIGHTING (continued)**TERMS AND CONDITIONS.**

1. Service. Lighting service shall be supplied from distribution facilities and equipment installed, owned, and maintained by the Company. Each lighting installation must be separately connected to a Point of Delivery on the Company's secondary distribution system. Lighting service will be operated on an all-night, every-night lighting schedule under which lights are turned on after sunset and off before sunrise with approximately 4,100 operating hours (average monthly burning hours = 341.11 hours). Each lamp shall be controlled by a photoelectric cell which shall operate to energize the lamp during periods of darkness and de-energize it during other periods. The service includes the supply of lamps and their renewal when burned out or broken. Renewal of lamps will be made only during regular daytime working hours after notification by the customer of the necessity.

2. Standard Installations. In connection with the standard service provided herein, the Company will install, own and maintain all facilities within highway limits, all standard service-supply lines, and all Lighting Units. The customer will install, own and maintain all poles on the customer's property and all service extensions on the customer's property from the Company's standard service-supply lines.

Investment by the Company under standard conditions of supply will be limited to that warranted by three times the prospective revenue recovered through the Company's tariffed Variable Distribution Service Charge. Any additional investment will be assumed by the customer.

Title to all lighting installations of a type approved by the Company shall be vested in the Company and all necessary maintenance, repair and replacement of equipment in such installations will be made by the Company.

Standard supply to lighting installations will be from aerial wires, except that, at the option of the Company, in areas where its other distribution facilities are underground, supply may be underground.

3. Non-Standard installations. For underground supply furnished at the request of the customer where aerial supply would be normal, or for other than standard installations made at the request of the customer and of a type approved by the Company, the Company will assume the cost up to the amount it would normally have invested and will require the customer to contribute all excess costs.

The Company may offer non-standard Lighting Units and installations in addition to those listed above in the Monthly Rate Table. For customers requesting such service, there will be an additional charge, as specified in the customer's contract based on the incremental cost over that listed in the Monthly Rate Table. Maintenance, repair and replacement of nonstandard equipment shall be at the expense of the customer.

- (A) Location Authorization and Protection. The location of lamps to be supplied is to be approved by the properly designated authorized representative of the customer. The customer shall furnish any requisite authority for the erection and maintenance of poles, wires, luminaires and other equipment necessary to operate the lamps at the approved locations.

Lighting Units shall be installed at locations and upon structures approved by the Company and in positions permitting servicing from a ladder truck.

At the expense of the customer, the Company will relocate a lamp to a new location after receiving a written request from the customer.

The customer shall protect the Company from malicious damage to the lighting system.

Customer construction shall meet the Company's standards which are based upon the National Electrical Code. Designs of proposed construction deviating from such standards shall be submitted to the Company for approval before proceeding with any work. The customer shall obtain and submit any permits or other authority requisite to the installation and operation of the Lighting Units served hereunder.

5. Equipment Removal. If the customer requests that the Company remove or replace any existing Private Outdoor Lighting installation, the Company will charge for removal or replacement of the installations and the associated poles and conductors used exclusively for the street lighting installation. The Company's charge will include the cost of removal or replacement plus the estimated remaining book value of the removed or replaced equipment less salvage.

6. Outage Allowances. Written notice to the Company prior to 4:00 pm of the failure of any light to burn on the previous night shall entitle the customer to a pro rata reduction in the charges under this rate for the hours of failure if such failure continues for a period in excess of 24 hours after the notice is received. Allowances will not be made for outages resulting from the customer's failure to protect the lighting system or from riot, fire, storm, flood, interference by civil or military authorities, or any other cause beyond the Company's control.

- (B) Customer Responsibility. The customer shall be solely responsible for determining the amount, location and sufficiency of illumination, including conducting all studies of luminosity, lighting location, and traffic.

TERM OF CONTRACT.

The initial contract term for each lighting unit shall be for at least three years.

PAYMENT TERMS.

Standard.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 64**RATE SL-S STREET LIGHTING-SUBURBAN COUNTIES****AVAILABILITY.**

To any municipal entity for outdoor lighting of streets, highways, bridges, parks and similar places located outside the city and county of Philadelphia, including directional highway signs at locations where other outdoor lighting service is established hereunder, only if all of the distribution facilities and equipment are installed, owned, and maintained by the Company.

ANNUAL RATE TABLE

The prices in the Rate Table apply to all Company-approved installations for (a) federal, state, county and municipal authorities and community associations entering into a contract for lighting service; and (b) building operation developers for lighting, during the development period, of streets that are to be dedicated, where the municipality has approved the lighting and agreed to subsequently assume the charges for it under a standard contract.

The wattage is composed of manufacturer's rating of its lamps, ballasts, transformers, individual controls, and other load components required for its operation.

Incandescent Filament Lamps

Size of Lamp (Nominal)	Billing Watts	Distribution
320 Lumens	32	\$123.88
600 Lumens	58	\$176.87
1,000 Lumens	103	\$249.56
2,500 Lumens	202	\$345.98
6,000 Lumens	448	\$394.03
10,000 Lumens	690	\$477.96

Mercury Vapor Lamps

Size of Lamp (Nominal)	Billing Watts	Distribution
4,000 Lumens	115	\$295.18
8,000 Lumens	191	\$311.62
12,000 Lumens	275	\$332.18
20,000 Lumens	429	\$390.73
42,000 Lumens	768	\$558.71
59,000 Lumens	1,090	\$628.89

Service to the above listed Incandescent Filament Lamps and Mercury-Vapor Lamps is not available after January 1, 2016 to new Customers or existing customers for new or replacement luminaires. The Company will not replace defective or broken incandescent filament or mercury vapor luminaires, including ballasts. In such cases, the customer must take service under one of the current lighting unit options as set forth below.

High Pressure Sodium-Vapor Lamps

Size of Lamp (Nominal)	Billing Watts	Distribution
5,800 Lumens	94	\$293.08
9,500 Lumens	131	\$319.14
16,000 Lumens	192	\$359.05
25,000 Lumens	294	\$408.40
50,000 Lumens	450	\$487.30

Light-Emitting Diode

Lamps Size of Lamp (Nominal)	Billing Watts	Distribution
3,300 Lumens	35	\$522.79
5,000 Lumens	53	\$535.98
8300 Lumens	87	\$553.45
15,800 Lumens	163	\$602.63
20,000 Lumens	215	\$632.09

ENERGY SUPPLY CHARGE: Refer to the Generation Supply Adjustment, Procurement Class 2.

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: The Transmission Service Charge shall apply.

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS, PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY AND CONSERVATION PROGRAM COSTS, NON-BYPASSABLE TRANSMISSION CHARGE, FIBER AFFILIATE REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE AND NUCLEAR DECOMMISSIONING COST ADJUSTMENT, APPLY TO THIS RATE.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 66**RATE SL-E STREET LIGHTING CUSTOMER OWNED FACILITIES****AVAILABILITY.**

To any governmental agency for outdoor lighting provided for the safety and convenience of the public of streets, highways, bridges, parks or similar places, including directional highway signs at locations where other outdoor lighting service is established hereunder only if all of the Utilization Facilities, as defined in Terms and Conditions in this Base Rate, are installed, owned and maintained by a governmental agency.

This rate is also available to community associations of residential property owners both inside and outside the City of Philadelphia for the lighting of streets that are not dedicated. This rate is not available to commercial or industrial customers. All facilities and their installation shall be approved by the Company.

MONTHLY RATE TABLE.

SERVICE LOCATION DISTRIBUTION CHARGE: ~~\$7.49~~ per Service Location (as defined below) *
VARIABLE DISTRIBUTION CHARGE: ~~\$0.02412~~ per kWh

ENERGY SUPPLY CHARGE: Refer to the Generation Supply Adjustment Procurement Class 2*.

* The service location charge includes an Energy Efficiency Program Surcharge (\$0.08) per location.

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: The Transmission Service charge shall apply.

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), ~~PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS, PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY AND CONSERVATION PROGRAM COSTS, NON-BYPASSABLE TRANSMISSION CHARGE, FIBER AFFILIATE REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE,~~ AND NUCLEAR DECOMMISSIONING COST ADJUSTMENT APPLY TO THIS RATE.

SERVICE LOCATION.

A Service Location is the Point of Delivery on the Company's secondary circuit. That connects to one or more Utilization Facilities. A customer may connect multiple Utilization Facilities to a single Service Location in accordance with Paragraph 2c and approval by the Company.

DETERMINATION OF ENERGY BILLED.

The energy use for a month of a Service Location shall be computed to the nearest kilowatt hour as the product of one thousandth of its wattage and the effective hours of use of such wattage during the calendar month under the established operation schedules as set forth under Terms and Conditions, Paragraph 1 Service. The wattage, expressed to the nearest tenth of a watt, of a Service Location shall be composed of manufacturer's rating of its lamps, ballasts, transformers, individual controls and other load components required for its operation. The aggregate of the kilowatt hours thus computed for all Active Service Locations shall constitute the energy billed for the month.

TERMS AND CONDITIONS.

1. Service. Lighting service will be operated on all-night, every-night lighting schedules, under which lights normally are turned on after sunset and off before sunrise with approximately 4,100 annual operating hours (average monthly burning hours = 341.11 hours). Extended lighting service during all daylight hours will be supplied for lamps specified by the customer

2. Ownership of Utilization Facilities.

a. Service Locations Supplied from Aerial Circuits: customer shall provide, own and maintain the Utilization Facilities defined as the brackets, hangers, luminaires, lamps/LED array(s), ballasts/drivers, transformers, individual controls, conductors, molding and supporting insulators between the lamp receptacles and line wires of the Company's distribution facilities and any other components as required for the operation of each Service Location.

The Company shall provide the supporting pole or post for such aerially supplied Service Location and will issue authorization to permit the customer to install thereon the said Utilization Facilities. If the Company sells aerially supplied streetlighting facilities to a government agency in order to qualify for SL-E, such sale will include the supporting pole or post.

b. Service Locations Supplied from Underground Circuits: customer shall provide, own and maintain the Utilization Facilities defined as brackets or hangers, luminaires, lamps/LED array(s), ballasts/drivers, transformers, individual controls, and conductors and shall assume all costs of installing such Utilization Facilities. Customer shall also provide, own, and maintain the supporting pole or post foundation with 90 degree pipe bend, and conduits from the luminaires to sidewalk level, or in special cases, such as Federally and State financed limited access highways, to a Service Location designated by the Company on its secondary voltage circuit.

Except as provided in Paragraph 5 Supply Facilities, the Company shall own conduit from the distribution circuit to the 90 degree pipe bend, shall own conductors from its distribution system to the designated Service Location and shall provide sufficient length of conductors for splicing at the designated Service Location or in the post base where sidewalk level access is provided.

- c. Service to Group of Utilization Facilities:

AERIAL SUPPLY

When the customer requests service to a group of Utilization Facilities supplied from aerial distribution facilities, the customer is responsible for providing the support poles or posts for the Utilization Facilities. The Company will provide a service, nominally 100 feet, to the customer's first supporting structure. The customer is responsible for installing supply conductors from the first supporting structure to all Utilization Facilities.

UNDERGROUND SUPPLY

When groups of Utilization Facilities are supplied from underground distribution facilities, the customer is responsible for the supporting poles or posts and the supply conductors to each Utilization Facility from the designated Service Location. If the customer requests an underground supply to a group of Utilization Facilities and the designated Service Location is a secondary terminal pole, the customer will install, own, maintain all cable, including the cable on the pole.

3. Standards of Construction for Utilization Facilities. Customer construction shall meet the Company's standards which are based upon the National Electrical Safety Code. Designs of proposed construction deviating from such standards shall be submitted to the Company for approval before proceeding with any work.

RATE SL-E STREET LIGHTING CUSTOMER-OWNED FACILITIES (continued)

4. Power Factor. The Utilization Facilities provided by the customer shall be of such a nature as to maintain the power factor of each Lighting Unit at not less than 85%.

5. Supply Facilities. Lighting service shall be supplied from distribution facilities and equipment installed, owned and maintained by the Company. A customer contribution for new, additional or relocated lighting service may be required as described in Paragraph 11.

Where Company ownership of conduit, manholes or vaults may not be practical for reasons beyond its control (such as bridges, overpasses, underpasses and limited access highways), the customer shall make available at no expense to the Company, space for the Company's distribution facilities required in rendering service under this rate.

6. Connection of Service Location. For new, additional or relocated Service Locations and for any modernization or maintenance work involving connections to the Company's distribution circuits, the customer will provide sufficient length of conductors to permit the Company to make taps at the top of the pole for aerial circuits, or for splices to underground circuits at the designated delivery point on the Company's secondary voltage circuit. All work done by the customer that may involve Company street lighting, control, and other distribution circuits shall be performed under Company permit and blocking procedures.

7. Service. Lighting service will be operated on all-night, every-night lighting schedules, under which lights normally are turned on after sunset and off before sunrise with approximately 4,100 annual operating hours (average monthly burning hours = 341.11 hours). Extended lighting service during all daylight hours will be supplied for lamps specified by the customer.

8. Change in Size and Type of Service Locations. Written notice of any planned change in size or type of any components of Service Locations shall be furnished by the customer to the Company not less than 10 days prior to the effective date of such change. The customer shall be responsible for notification to the Company of any changes made in manufacturer's wattage ratings at any Service Location.

9. Service Maintenance. Upon receipt of report of a Service Location not receiving power, the Company will determine the cause of power failure and will restore service to the distribution circuit and control equipment, disconnecting, if necessary, any faulty Service Location from the circuit. Customer will make necessary repairs between the luminaires of the faulty utilization facilities and the point of connection to the Company's distribution circuit. In the event the fault is located in the Company owned facilities, the customer will bill the Company for this portion of the replaced facilities.

10. Authorization and Protection. The customer shall, to the extent of one's ability, furnish any requisite authority for the erection and maintenance of poles, wires, fixtures and other equipment necessary to operate the lights at the locations and under the conditions designated, and shall protect the Company from malicious damage to the lighting system.

11. New, Additional or Relocated Lighting. The total costs to provide lighting service for new, additional or relocated lamps installed by the customer shall be subject to a revenue test. If the costs exceed the estimated revenue recovered through the Company's tariffed Variable Distribution Service Charges for four years, a customer contribution for all excess costs will be required.

12. Relocation of Service Locations. Where a pole is replaced by the Company at its own option, it shall be the customer's responsibility to have the Utilization Facilities transferred from the old to the new pole.

13. Customer Responsibility. The customer shall be solely responsible for determining the amount, location and sufficiency of illumination, including conducting all studies of luminosity, lighting location, and traffic.

TERM OF CONTRACT.

The initial contract term for each Service Location shall be for at least one year.

PAYMENT TERMS.

Bills will be rendered monthly.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 68**RATE SL-C SMART LIGHTING CONTROL LIGHTING CUSTOMER OWNED FACILITIES****AVAILABILITY.**

Any governmental agency for outdoor lighting, provided for the safety and convenience of the public of streets, highways, bridges, parks or similar places, that complies with each of the following conditions:

- (A) Installs a Smart Lighting Control Module approved by the Company that has capabilities including but not necessarily limited to:
- Measurement of energy usage at the individual Utilization Facility level.
 - Customer control of the lamp's burning hours.
 - Data showing failure of the lamp to burn, such as customer notification, that customer can provide to Company upon request.
 - Ability of customer to dim the lights (LED only).
- (B) Provides energy usage to the Company as described below under Data Requirements.
- (C) Installs, owns, and maintains all Utilization Facilities, as defined in the Terms and Conditions of this Base Rate. (All facilities and their installation shall be approved by the Company.)

This rate is also available to community associations of residential property owners both inside and outside the City of Philadelphia for the lighting of streets that are not dedicated. This rate is not available to commercial or industrial customers.

Customers may take service under the rate beginning on July 1, 2019. The below listed pricing will be revised, as needed, based on applicable surcharge adjustments prior to the SL-C effective service date of July 1, 2019.

MONTHLY RATE TABLE.

SERVICE LOCATION DISTRIBUTION CHARGE: ~~\$6.34~~ per Service Location (as defined below)*
VARIABLE DISTRIBUTION CHARGE: ~~\$0.4524~~ per kWh

ENERGY SUPPLY CHARGE: Refer to the Generation Supply Adjustment Procurement Class 2*.

* The service location charge includes an Energy Efficiency Program Surcharge of (\$0.07) per location.

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: The Transmission Service charge shall apply.

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS, PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY AND CONSERVATION PROGRAM COSTS, NON-BYPASSABLE TRANSMISSION CHARGE, FIBER AFFILIATE REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE, AND NUCLEAR DECOMMISSIONING COST ADJUSTMENT APPLY TO THIS RATE.

SERVICE LOCATION.

A Service Location is the Point of Delivery on the Company's secondary circuit that connects to one or more Utilization Facilities. A customer may connect multiple Utilization Facilities to a single Service Location in accordance with Paragraph 2c and approval by the Company

DATA REQUIREMENTS.

The customer must notify the Company of its intent to enroll or modify lights under this rate at least 30 days prior to the start of the regularly scheduled billing cycle during which the enrollment or modification will become effective.

The customer must provide the following data to the Company from its Company-approved Smart Lighting Control Module for each light added or modified:

- Manufacturer-rated wattage
- Annual burning hours, if different than the standard 4,100 burning hours as defined below under paragraph 1 Service of Terms and Conditions
- Dimming percentage/factor

The Company also requires the customer to provide the Global Positioning System (GPS) coordinates for each light.

DETERMINATION OF ENERGY BILLED.

Upon acceptance of the required data, the Company shall modify the energy billed going forward for a period of up to twelve months or at another frequency as required by the Company. The energy use for a month of a Service Location shall be computed to the nearest kilowatt hour as the product of one thousandth of its wattage, adjusted based on the provided dimming percentage/factor, and the provided burning hours during the calendar month.

The Company may, at any time and without prior notice, request that the customer provide updates to the above data or provide actual energy consumption data and burning hours for each light, by calendar month, for up to the past 12 months to verify the continued accuracy of Company billing.

For any regularly scheduled billing cycle in which the customer has not provided acceptable information from its Company-approved Smart Lighting Control Module, the Company shall modify the energy billed going forward by changing the burning hours used to the standard 4,100 burning hours as defined below under Paragraph 1 Service of Terms and Conditions.

The Company reserves the right to modify the customer's rate to SL-E in the continued absence of required data from the customer.

TERMS AND CONDITIONS.

1. **Service.** For any regularly scheduled billing cycle in which the customer has not provided acceptable information from its Company-approved Smart Lighting Control Module, lighting service will be operated on all-night, every-night lighting schedules, under which lights normally are turned on after sunset and off before sunrise with approximately 4,100 annual operating hours (average monthly burning hours = 341.11 hours). Extended lighting service during all daylight hours will be supplied for lamps specified by the customer. If the customer provides information from the Smart Lighting Control Module as described above to justify a different billing usage, the burning hours provided by the customer will be used instead of the standard 4,100 annual operating hours.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 74**RATE TLCL TRAFFIC LIGHTING CONSTANT LOAD SERVICE****AVAILABILITY.**

To any municipality using the Company's standard service for (a) electric traffic signal lights installed, owned and maintained by the municipality, and/or (b) unmetered traffic control cameras or other small constant load electronic devices with a demand of less than 1.2 kW, owned and maintained by the municipality.

To any non-municipal non-residential customer using the Company's standard service for unmetered small constant load electronic devices with a demand of less than 1.2 kW, owned and maintained by the non-municipal customer, which are electrically separate from any other facilities, whether municipally-owned or non-municipally-owned, that are receiving service from PECO as a separate account.

To any non-municipal non-residential customer using the Company's standard service for unmetered small constant load electronic devices with a demand of less than 1.2 kW, owned and maintained by the non-municipal customer, which are electrically integrated with any other facilities, whether municipally-owned or non-municipally-owned, that are receiving service from PECO as a separate account, but only if the non-municipal customer meets the conditions of the Special Termination Rights provision of this Rate.

CURRENT CHARACTERISTICS.

Standard single phase secondary service.

RATE TABLE.

SERVICE LOCATION CHARGE: \$4.08 PER LOCATION

VARIABLE DISTRIBUTION SERVICE CHARGE: \$0.02144 per kWh (as defined below)*

*The Variable Distribution charge includes an Energy Efficiency Program Surcharge of (\$0.00081) per kWh

ENERGY SUPPLY CHARGE: Refer to the Generation Supply Adjustment Procurement Class 2.

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: Transmission Service Charge shall apply.

STATE TAX ADJUSTMENT CLAUSE. DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC). PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS, PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY, NON-BYPASSABLE TRANSMISSION CHARGE, CONSERVATION PROGRAM COSTS, FIBER AFFILIATE REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE, AND NUCLEAR DECOMMISSIONING COST ADJUSTMENT APPLY TO THIS RATE.

SPECIAL RULES AND REGULATIONS.

The use of energy will be estimated by the Company on the basis of the size of lamps and controlling apparatus and the burning hours. The customer shall immediately notify the Company whenever any change is made in the equipment or the burning hours or constant load devices, so that the Company may forthwith revise its estimate of the energy used.

The Company shall not be liable for damage to person or property arising, accruing or resulting from the attachment of the signal equipment to its poles, wires, or fixtures. The customer shall be responsible to determine the amount, location and sufficiency of illumination, including conducting all studies of luminosity, lighting location, and traffic.

SPECIAL TERMINATION RIGHTS

Some facilities that receive service under Rate TLCL may be electrically configured such that it is not possible to terminate service to the Rate TLCL facility without also terminating service to a facility that is receiving service under a separate account, Rate or Rider. In the event of non-payment of bills for service to such a Rate TLCL facility, PECO will provide a termination notice to the customer. The customer may then, at its discretion, notify PECO that it intends to engage in self-termination by removing its facilities from the PECO system within 30 days. If the customer has not removed its facilities within 30 days, then PECO may, at its sole discretion and upon 72-hour notice, physically remove the customer facility as a means of terminating service to that facility. Taking service under Rate TLCL constitutes full customer permission for PECO to engage in such removals. Notwithstanding any removal of such facilities by either the customer of PECO, the customer shall remain fully obligated to PECO for payment of all charges incurred under Rate TLCL. In addition, the customer shall pay to PECO its full cost of removing the facilities, including direct and indirect labor costs, use of truck or other equipment, fuel costs, and costs of storing the customer equipment, all at PECO's normal rates for such work at such time as it may perform such removals. PECO shall not be liable for damage, if any, to the customer equipment that occurs during removal or storage.

TERM OF CONTRACT.

The initial contract term for each signal light installation and constant load device shall be for at least one year.

PAYMENT TERMS.

RATE BLI BORDERLINE INTERCHANGE SERVICE

AVAILABILITY.

Electric service supplied under reciprocal agreements, to neighboring electric utilities for resale in their adjacent territory at delivery points where the Company in its judgment can provide capacity in excess of the requirements of present and prospective customers in its own territory and for periods fixed by contract and terminable after the expiration of the initial term if capacity is no longer available.

CURRENT CHARACTERISTICS.

Standard primary or secondary service.

MONTHLY RATE TABLE.

For contracts newly entered on or after January 1, 2019, the Company will provide borderline interchange service under the Variable Distribution Service Charge of the appropriate Base Rate, plus an amount equal to 1% per month on the additional investment in facilities required by the Company to deliver and meter the service supplied. The appropriate Base Rate is the rate under which the Customer would be served if located within the Company's franchised service territory.

The Company will not apply this rate to contracts entered prior to January 1, 2019 unless the Company and the customer mutually agree to do so

MEASUREMENT.

The energy delivered may be metered or may be estimated from the purchaser's resales plus an agreed-upon correction to cover transformation and distribution losses.

TERM OF CONTRACT.

The initial contract term shall be for at least five years, and thereafter from year to year until terminated by 60 days' notice from either party, unless the Company and the customer mutually agree to a different term in the contract for service.

PAYMENT TERMS.

Payment of amounts billed shall be made within 15 days from date of bill.

RATE AL – ALLEY LIGHTING IN CITY OF PHILADELPHIA

APPLICABILITY. To multiple, unmetered lighting service supplied the City of Philadelphia to operate lamps and appurtenances for all night outdoor lighting of alleys and courts that are installed, owned and maintained by the City, which assumes the cost involved in making the connections to the Company's facilities. This rate shall no longer be available to new lighting installations effective January 1, 2011.

LIGHTING DISTRIBUTION SERVICE DEFINED. All night outdoor lighting of alleys and courts by lights installed on poles or supports supplied by the City.

NOTICE TO COMPANY. The City shall give advance notice to the Company of all proposed new installations or of the replacement, removal or reconstruction of existing installations. The City shall advise the Company as to each new installation or change in the equipment or connected load of an existing installation, including any change in burning hours and the date on which such new or changed operation took effect.

MONTHLY RATE TABLE.

SERVICE LOCATION CHARGE: \$2.63 Per Location (as defined below)*

*The service location charge includes an Energy Efficiency Program Surcharge of (\$0.02)

ENERGY SUPPLY CHARGE: Refer to the Generation Supply Adjustment Procurement Class 2.

TRANSMISSION SERVICE FOR CUSTOMERS RECEIVING DEFAULT SERVICE: The Transmission Service Charge shall apply.

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), PROVISION FOR THE RECOVERY OF CONSUMER EDUCATION PLAN COSTS PROVISION FOR THE RECOVERY OF ENERGY EFFICIENCY AND CONSERVATION PROGRAM COSTS, NON-BYPASSABLE TRANSMISSION CHARGE, FIBER AFFILIATE REVENUE SURCHARGE, INCREMENTAL COVID-19 RELATED UNCOLLECTIBLE SURCHARGE AND NUCLEAR DECOMMISSIONING COST ADJUSTMENT CLAUSE APPLY TO THIS RATE.

PLAN OF MONTHLY BILLING.

Bills may be rendered in equal monthly installments, computed from the calculated annual use of energy, adjusted each month to give effect to any new or changed rate of annual use, by reason of changes in the City's installation, with charge or credit for fractional parts of the month during which a change occurred.

LIABILITY PROVISION.

The Company shall not be liable for damage, or for claims for damage, to persons or property, arising, accruing or resulting from, installation, location or use of lamps, wires, fixtures and appurtenances; or resulting from failure of any light, or lights, to burn for any cause whatsoever. The customer shall be responsible to determine the amount, location and sufficiency of illumination, including conducting all studies of luminosity, lighting location, and traffic.

APPLICABILITY INDEX OF RIDERS
Introductory Statement

Customers under different rates of this Tariff frequently desire services or present situations and conditions of supply which require special supply terms, charges or guarantees or which warrant modification of the amount or method of charge from the prices set forth in the Base Rate under which they are provided service. Modifications for such conditions are defined by rider provisions included as a part of this Tariff. Riders may be employed when applicable, with or without signed agreement between the customer and the Company as the case may require, notwithstanding anything to the contrary contained in the Base Rate to which the rider is applied.

PILOT CAPACITY RESERVATION RIDER (CRR)**PURPOSE.**

This Rider sets forth the eligibility, terms and conditions applicable to Customers who operate generation in parallel with the Company distribution system and for whom the Company needs to reserve electric capacity to serve their load when the customer's generation is offline.

This Rider also sets forth the eligibility, terms and conditions applicable to Customers who want to reserve capacity in excess of their present demand from the PECO distribution system for new business growth or expansion.

DEFINITIONS.

Demand and billing demand are defined in tariff sections "Definitions of Terms and Explanation of Abbreviations" and Section 15 of "Rules and Regulations".

- (1) Ability to Shed Load – The capability of the customer to reduce or interrupt its total connected load as a means of offsetting some or all of the loss of its Parallel Generation, in the event that its Parallel Generation goes offline or is not operating to full capacity.
- (2) Capacity Reservation – The contracted amount of firm electrical distribution capacity, expressed in kW, reserved by the Company solely to meet the capacity requirement for which a customer has contracted under the CRR.
- (3) CRR Level –
 - a. For customers with Parallel Generation, the portion of their Capacity Reservation equal to the contracted percentage of the Generator Nameplate Capacity of their customer-owned Parallel Generation, determined pursuant to the provisions of the section of this Rider titled "Capacity Reservation vs. CRR Level Designation."
 - b. For customers seeking to reserve capacity for new business growth or expansion, the portion of their Capacity Reservation for which they have contracted under the CRR for that purpose.
- (4) "Failure To Shed Load" Penalty – A charge assessed to a customer with a Capacity Reservation, CRR Level, or both that were set in whole or part based upon Ability to Shed Load when that customer's generator goes offline and the customer does not shed load as agreed upon.
- (5) Generator Nameplate Capacity – The maximum rated output of a generator under specific conditions designated by the manufacturer.
- (6) Operational Flexibility in Operation of Generation – The capability of the customer to flexibly operate multiple generating facilities as a means of offsetting some or all of the loss of its Parallel Generation, in the event that its Parallel Generation goes offline or is not operating to full capacity.
- (7) Parasitic Load – The power consumed by the equipment supporting the operation of a customer's generation.
- (8) Parallel Generation – Non-utility generating facility(s) approved for Parallel Operation.
- (9) Parallel Operation – Occurs when a non-utility generating facility(s) interconnected with and operates while connected to PECO's distribution system, where the potential exists for electricity to flow from said generating facility(s) into PECO's electric distribution system.
- (10) Uncovered Demand – The difference between the customer's CRR Level and the customer's Capacity Reservation

APPLICABILITY/AVAILABILITY.

Applicable to customers, with customer generating facilities that have generating capacity of 100 kW or greater and are first placed online, or are granted approval for Parallel Operation, after January 1, 2016. This includes but is not limited to Qualifying Facilities or Small Power Producers and cogenerators as defined in the Public Utility Regulatory Policies Act, whose electrical requirements are partially or wholly provided by facilities not owned by the Company and when such facilities operate in parallel with the Company's distribution system. All such customers will be supplied under the provisions of this rider, the customer's applicable Base Rate, and other applicable riders. Customers who wish to reserve available electrical capacity in excess of their present demand for new business growth or expansion may do so under this rider.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. ~~8~~
 Original Page No. ~~76~~

PILOT CAPACITY RESERVATION RIDER (CRR) continued

NOTICE BEFORE COMMENCEMENT OF CRR SERVICE.

The customer shall not commence initial operation of any other source of supply in parallel with the Company's distribution lines until written permission is given by the Company for such parallel operation. Before a customer is placed on the CRR, the Company must provide written notice to the customer that includes the Capacity Reservation under the CRR and informs the customer that, upon receiving service under the CRR, capacity beyond this amount may not be available to serve the customer. The Company shall have the right to inspect the customer's installation prior to providing such written permission, and at any reasonable time thereafter in accordance with Tariff Rule 9.3.

CAPACITY RESERVATION VS. CRR LEVEL DESIGNATION.

The maximum firm capacity available to be reserved will be determined by the Company based upon its review of capacity available on its system at the time that a request for Capacity Reservation is made.

In all cases, if the requested electric capacity is not available the customer shall pay all cost to the Company of any construction necessary to meet the customer's Capacity Reservation requirement. To the extent that the requested capacity is needed for new business growth or expansion, the standard revenue test will apply when calculating the cost to be paid by the customer.

The Company must reserve capacity for a customer based upon an amount that the Company and customer agree accurately reflects the maximum demand that the Company must stand ready to serve to that customer.

For customers generating in parallel with the Company's distribution system:

For billing purposes, PECO will set the associated CRR Level as designated below:

For customers who have Generator Nameplate Capacity of greater than 100 kW but less than or equal to 5,000 kW, the CRR Level will be 60% of the Generator Nameplate Capacity.

For customers who have Generator Nameplate Capacity of greater than 5,000 kW but less than or equal to 10,000 kW, the CRR Level will be 50% of the Generator Nameplate Capacity.

Any customer, regardless of size of load or generation, may initiate negotiation as set forth below to designate the CRR at a level other than these levels.

Batteries and other electrical storage shall not be deemed to be generators for purpose of the CRR, and the nameplate capacity of storage or battery equipment shall not be included as, or treated as equivalent to, Parallel Generation for purposes of determining a customer's Capacity Reservation or CRR Level.

For customers who want to reserve capacity for new business growth or expansion, both the Capacity Reservation and the associated CRR Level will be determined by negotiation.

PILOT CAPACITY RESERVATION RIDER (CRR) continued**NEGOTIATIONS FOR OPERATION OF CUSTOMER GENERATION.**

If the CRR Level is set through negotiations for customers generating in parallel with the Company's distribution system, the following will apply:

The customer and PECO will meet to discuss customer operations. After such discussions, the customer may designate a CRR level other than as set forth above, based upon one or more of the following factors as defined above:

1. Parasitic Load: This will be subtracted from the customer's Generation Nameplate Capacity prior to determining the CRR Level.
2. Operational Flexibility in Operation of Generation: A customer with multiple generating units may commit to operate its facilities as a means of offsetting some or all of the loss of its Parallel Generation in a manner that reduces its Capacity Reservation requirement and consequently its CRR Level
3. Ability to Shed Load: A customer may commit to shed some portion of its total connected load to offset some or all of the loss of its Parallel Generation in a manner that reduces its Capacity Reservation requirement and consequently its CRR Level.

If PECO accepts the customer's designated Capacity Reservation and CRR Level then both amounts shall be set at the customer-designated level.

If PECO does not accept the customer's designated Capacity Reservation and or CRR Level then PECO may file a complaint with the PUC (to be referred to the Office of Mediation). Pending resolution of the complaint the Capacity Reservation and CRR Level shall be set at: as follows (subject to retrospective revision upon completion of the mediation/litigation):

- For customer designations based upon Parasitic Load, Operational Flexibility, or both, the Capacity Reservation and the CRR Level will be set at the customer-designated levels.
- For customer designations based in whole or part on Ability to Shed Load, the Capacity Reservation and CRR Level will be set at PECO-designated levels,

PROCEDURES TO CONFIRM MODE OF CUSTOMER GENERATION OPERATION

If a customer's CRR Level is set by negotiation based upon Parasitic Load or Operational Flexibility of Generation, or both, then:

- The customer shall inform PECO in writing if its generation operations differ materially from the mode of operations used to set the CRR Level;
- The customer shall verify to PECO once each calendar year that its generator operations in the prior year did not differ materially from the mode of operations used to set the CRR Level; and
- PECO shall have the right to conduct an audit of customer operations to determine whether generator operations differed materially from the mode of operations used to set the CRR Level.

NOTICE OF OPERATION CONTRARY TO A NEGOTIATED CRR LEVEL AND RESET PROVISION.

If, in its determination, PECO believes that a customer has operated its distributed generation units in a manner contrary to the mode of operations used to set the CRR Level, PECO may issue a written violation notice to the customer.

A customer shall not be deemed to have operated its distributed generation units in a manner contrary to the mode of operation used to set its CRR Level if both of the following are true:

- The customer was required to alter its mode of operations in response to a directive from PECO or because of conditions existing on PECO's distribution system.
- The customer's actual demand does not exceed its Capacity Reservation at any time.

PILOT CAPACITY RESERVATION RIDER (CRR) continued

PECO will rescind a violation notice if, within 30 calendar days of receiving the violation notice, a customer furnishes evidence showing that it operated its distributed generation units consistent with the mode of operations used to set the CRR during the period in question. If PECO is not satisfied that the information provided by the customer demonstrates that operated its distributed generation units consistent with the mode operations used to set the CRR Level, PECO may file a complaint with the Commission and the Commission's determination shall prevail on whether the notice of violation will be deemed to be confirmed. If a customer does not furnish such evidence within 30 calendar days of receiving the violation notice, the violation notice is confirmed.

If a customer receives two confirmed violation notices within a 24-month period; the customer's going-forward CRR for the next 12 months shall be set at levels based upon the actual operations that led to the violation notice. Thereafter, the CRR may be reset to a lower levels only upon the customer demonstrating that it has made material changes to its mode of operations to allow it to operate in the then-described manner.

PENALTY AND RESET FOR FAILURE TO SHED LOAD.

For customers with a Capacity Reservation CRR Level or both that were set in whole or part based upon Ability to Shed Load, the following penalty and reset provisions shall apply:

- **Penalty:** If the customer's generator goes offline and the customer does not shed load as agreed upon the customer will be assessed a "Failure to Shed Load" Penalty" calculated by determining the amount of load that the customer agreed to shed, but did not shed, and applying a penalty charge equal to 125% of the full demand charge in the prevailing rate to that amount of load on the first such occurrence, and 150% of the full demand charge in the prevailing rate to that amount of load for the second and subsequent occurrences, for the month in which the load shedding did not occur.
- **Reset:** The customer's going-forward Capacity Reservation and CRR Level for the next 12 months shall be set at a level based upon the actual operations that occurred during the failure to shed load. Alternatively, the customer can opt to pay PECO for the actual cost of the required upgrades to PECO's distribution facilities to allow the customer to use delivery service at the higher operating level during outages in accordance with PECO's line extension policy (Tariff Rule 7.2). Thereafter, these amounts may be reset to a lower level only upon the customer demonstrating that it has made material changes to its mode of operations to allow it to operate in the then-described manner.

TEMPORARY DISCONNECTION OF CUSTOMER SERVICE.

PECO shall have the right to temporarily disconnect the customer on an emergency basis if, in PECO's opinion, the customer's failure to shed load as agreed creates a risk to PECO's distribution system or service to other customers.

BINDING LEGAL DUTY.

A CRR customer whose CRR Level is set at negotiated level based in whole or part upon the customer's representation that it has an Ability to Shed Load will be deemed to have a binding legal duty to shed such load.

RATE AND BILLING.

Subject to the Minimum Charge Provisions below, the demand charges under the customer's underlying applicable Base Rate of GS, HT, PD, and EP apply to the billing demand determined under the CRR.

Customers will be billed monthly their CRR Level plus actual electric demand and usage except as follow below:

For customers who reserve capacity due only to Parallel Generation, if such customer's actual registered demand is greater than the customer's Uncovered Demand for a given month, then, for that month only, the CRR Level used to calculate the customer's bill will be reduced by an amount equal to such difference, but in no event will the CRR Level be less than zero.

For customers who reserve capacity for business growth or expansion, if the customer's actual registered demand in a given month includes any portion of the CRR Level contracted for expansion for that month, then, for that month only, the CRR Level used to calculate the customer's bill will be reduced by an amount equal to said portion, but in no event will the CRR Level be less than zero.

Effective May 27, 2024

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 79PILOT CAPACITY RESERVATION RIDER (CRR) continued**MINIMUM CHARGE.**

Subject to the Rate And Billing provisions above the monthly minimum charge under the customer's underlying applicable Base Rate of GS, HT, PD, and EP will be calculated based on the minimum demand determined in accordance with the CRR. .

The monthly minimum demand charge for a customer reserving capacity due only to Parallel Generation will be the greater of:

1. The demand as registered by the customer's meter;
2. An amount equal to the customer's CRR Level, plus 40% of the customer's Uncovered Demand or
3. Any designated contract minimum.

The monthly minimum demand for a customer reserving capacity due only to new business growth or expansion will be an amount equal to the customer's CRR Level, plus 40% of the customer's Uncovered Demand

The monthly minimum customer charge will be determined by applying the minimum demand to the applicable demand charge for the Customer's underlying applicable Base Rate.

TERM OF CONTRACT.

The term of a CRR contract shall be three years for all non-negotiated CRR applications. For negotiated CRR Levels, the contract term shall be negotiated. There is no right to automatic renewal of a CRR; upon the expiration of the contract term, the Company will review available capacity on its system and, if such capacity is available, the parties will enter into a new CRR contract using the procedures set forth above.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. ~~8~~
Original Page No. ~~80~~**CUSTOMER ASSISTANCE PROGRAM (CAP) RIDER****AVAILABILITY.**

To payment-troubled customers who are currently served under or otherwise qualify for Rate R or RH (excluding multiple dwelling unit buildings consisting of two to five dwelling units). Customers must apply for the rates contained in this rider and must demonstrate annual household gross income at or below 150% of the Federal Poverty guidelines. Customers will be subject to a \$20 monthly bill minimum (\$10 for non-heating customers) and will not be eligible to obtain Competitive Electric Supply or participate in budget billing. Commencing September 1, 2021 these customers will not be eligible to select the Time-Of-Use default service option.

Based on the applicable level of income and number of household members, CAP customers will receive a monthly fixed bill or Percentage of Income Payment Plan ("PIPP") based upon that individual household's need. The details of the PIPP calculation can be found in the PECO Universal Service and Energy Conservation Plan at Docket No. M-2018-3005795.

CERTIFICATION/VERIFICATION.

Prior to enrollment in the CAP Rider, customers must verify, to PECO's satisfaction, that their household income level meets the "Availability" standards set forth in this Rider. Customers being considered for the CAP Rider will be required to:

- Provide information sufficient to demonstrate to PECO their household income level.
- Waive certain privacy rights to enable PECO to effectively conduct the above certification process.
- Participate in various energy education and conservation programs offered by PECO if identified as high-usage.

PECO may, at its sole discretion, supplement this verification process by using data from Commonwealth or federal government programs which demonstrate the income eligibility of its customers. Such data may come from a customer's participation in, or receipt of benefits from, the Low Income Home Energy Assistance Program, Temporary Assistance for Needy Families, Food Stamps, Supplemental Security Income, and Medicaid. Information available from the Pennsylvania Department of Revenue may also be used where appropriate to expedite the process.

MINIMUM CHARGE.

The minimum charge per month will be \$10 for Residential customers or \$20 for Residential Heating customers.

ARREARAGE.

Customers who qualify and are enrolled in CAP for the first time will have their pre-program arrearage ("PPA") forgiven if the customer pays his / her new, discounted CAP bill on time and in full each month. With every full and on-time monthly payment, one-twelfth of the PPA will be forgiven. PECO allows for customers who may have missed PPA "forgiveness" due to late or missed payments to "catch-up" on missed PPA forgiveness; whenever a customer brings their bill current, PECO will forgive any missed forgiveness the customer did not receive during that time. If the customer develops any in-program arrearage while on the CAP Rate—that is, if the customer does not pay the entire outstanding balance – then preprogram arrearage forgiveness will not resume until the first month in which the full outstanding balance is paid.

CASUALTY RIDER

AVAILABILITY/APPLICABILITY.

To service provided during a period when a customer is prevented for a length of time in excess of 48 hours from using all or a substantial part of the amount contracted for by reason of strike, riot, fire, storm, flood, drought, interference by civil or military authorities, or any other cause beyond the customer's control ("Period of Interruption").

NOTICE REQUIRED.

Written request shall be made to the Company for the application of this rider with advice as to the extent of the interruption, its date, cause and probable duration. Written requests must be submitted to the Company within 30 calendar days after the end of the Period of interruption.

RATE IMPACT.

During Periods of Interruption, PECO Energy will not apply guarantees of revenue (power factor adjustment, minimum billing demand, and contract minimum) as contained in the customer's Contract, but will apply the actual registered demand. If the customer receives Default Service, the terms of this rider shall not apply to the Energy Supply Charge.

BILLS PRORATED.

Bills supplied shall be prorated, based upon the actual level of operation during the Period of Interruption.

RETURN TO NORMAL USE.

The customer shall use reasonable diligence in resuming the use of service as provided in the Contract.

TERM OF CONTRACT.

The initial contract term shall be extended for a period equal to the Period of Interruption so that the Company shall secure a working term at full connected load equal to the term of the Contract.

CONSTRUCTION RIDER**AVAILABILITY/APPLICABILITY.**

To service provided during or immediately following a major construction or expansion period or during a receding load period, after the expiration of the initial contract term, while a business is in process of dissolution. A major construction or expansion period is defined as a construction or expansion project undertaken by the customer which upon completion will require an upward modification of the customer's contract limits.

RATE IMPACT.

During the expanding load period preceding the operation within the load limits provided in the contract or the receding load period subsequent to the fulfillment of the initial contract term, PECO Energy will not apply the following guarantees of revenue: power factor adjustment, minimum billing demand, and contract minimum. If the customer receives Default Service, the terms of this rider shall not apply to the Energy Supply Charge.

RIDER TERM.

The total term of application of this rider during the preliminary or construction period shall be 6 months subject to the option of the Company to grant not more than three successive renewals of the rider term on major construction projects. Its application during a receding load period subsequent to the completion of an initial contract term shall be for not more than one year.

TERM OF CONTRACT.

The initial contract term for service to expanding locations to which this rider is applied shall be extended for a period corresponding to the total number of months this rider is applied to the customer's bill during construction or expansion of the customer's facility.

OTHER RIDERS.

This rider, when applied to service to temporary installations to which the Temporary Service Rider is also applied, shall not operate as a waiver of the requirement that monthly minimum charges be paid for a period of not less than 6 months.

For customers taking service under PECO's Capacity Reservation Rider (CRR), the terms of the Construction Rider shall only apply to actual demand for load behind the meter that is not covered by the CRR Level, as defined within the terms and conditions of the CRR.

AVAILABILITY/APPLICABILITY. This rider is available to customers taking distribution service under Rate HT, PD, or GS. For new services, the customer must have a projected load of at least 350 kW and must apply for the rider prior to the service being energized. For existing services, the customer must have a peak load of at least 350 kW and apply for the rider before the load growth occurs. The Company will not begin to apply the rider until at least 30 days after the customer provides to the Company written notice of its desire to be placed on the rider. Customers can qualify for this rider through provisions of either I-A, I-B, or II below. This Rider shall be available to customers regardless of whether the energy is purchased under default service rates or through an EGS.

~~Deleted:~~ 7~~Deleted:~~ 2~~Deleted:~~ , IC

- I. EMPLOYMENT & LOAD GROWTH:** designed to encourage growth in all sectors of the industrial and commercial group, customers can qualify by meeting the appropriate requirements below.

A. QUALIFICATIONS.**1. Manufacturing Customers**

- The New Manufacturing Customer or existing manufacturing customer files with the Company, before the effective date of the rider for the Service Location, a Manufacturing Sales Tax Exemption Certificate, as defined below, for the Service Location. This condition is waived for Stevedoring Operations located within a Port Enterprise Development Area as defined in Title 12, Chapter 121 of the Pennsylvania Code.
- The existing manufacturing customer files with the Company copies of the Base Period Employment Reports as defined below, for the Service Location.
- For existing locations has already demonstrated a minimum 10 new jobs and a sustained increase in usage (minimum of 100 kW for at least 3 months) over the Base Period, as defined below. The Company reserves the right to request documentation to demonstrate that employment levels have been maintained over the course of eligibility for this rider.

2. Brownfield Redevelopment

- A new or existing customer who develops a site designated as a Brownfield Site (defined below) and demonstrates a minimum of 100 kW of new or incremental load.

3. Large Load Growth

- A new or existing customer who adds an additional 100MW or more of new load and adds a minimum of 10 new jobs.

4. Hydrogen Production

- A new or existing customer who develops on-site hydrogen production.

~~Deleted:~~~~Deleted:~~ .~~Deleted:~~**B. RATE REDUCTION.** The rate reduction will be applicable to the customer's base bill for the Qualifying Service Location before the application of the State Tax Adjustment, Federal Tax Adjustment Credit and Nuclear Decommissioning Cost Adjustment.

Any customer will not be eligible for the rate reduction in any month in which the customer has an unpaid balance which includes late payment charges.

- Monthly Eligibility – The Company reserves the right to require updated documentation in order for the customer to remain eligible for the rider.
- A credit equivalent to 15% of the customer's Variable Distribution Service Charge ("VDC"). For New Manufacturing locations or Brownfield Redevelopment the credit will apply to all kW of the VDC. For all existing customers the credit will apply to all incremental kW of the VDC. For hydrogen producers, the credit will apply to the portion of the customer's billed kW of the VDC associated with their hydrogen production equipment nameplate.

~~Deleted:~~ H~~Deleted:~~ P~~Deleted:~~ energy usage of the VDC

- I. COMPETITIVE ALTERNATIVE:** any manufacturing or non-manufacturing customer with a viable competitive alternative to service from PECO may be eligible for benefits as outlined below.

A. QUALIFICATIONS.

- Provide documentation of a viable, currently available competitive alternative to service from PECO. The customer must provide a written description of the competitive alternative and any further information that the Company requires in order to document the cost and demonstrate the viability of the customer's competitive alternative, and
- Demonstrate a sustained increase in load (1MW minimum month over month for 3 months) as measured on PECO's meter, or a demonstrated retention of at least 1MW of load and,
- Demonstrate increasing employment of 10 jobs/MW as reported out on PA Form UC-2, or demonstrated retention of at least 10 jobs/MW of load retained for the same period as #2.

B. RATE REDUCTION. The rate reduction will be applicable to the customer's base bill for the Qualifying Service Location before the application of the State Tax Adjustment and Nuclear Decommissioning Cost Adjustment.

- Any customer will not be eligible for the rate reduction in any month in which the customer has an unpaid balance which includes late payment charges. The Company shall be the sole judge of any customer's eligibility for any rate negotiated rate reduction.
- Any qualifying existing or new customer may qualify for a negotiated decrease in VDC charges of up to 15% to meet the customer's documented competitive alternative. The rate reduction and payment terms for service may be negotiated and specified in the applicable service agreement. Unless the service agreement provides specific terms governing the billing of charges, Section 17. Billing and Standard Payment Options of the Rules and Regulations of the Tariff shall apply. The Company reserves the right to require updated documentation in order for the customer to remain eligible for the rider.

Issued March 28, 2024

Effective May 27, 2024

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 84**ECONOMIC DEVELOPMENT RIDER (continued)****DEFINITIONS.**

1. Service Location. A single or contiguous premises having one or more delivery points for distribution service billed by the Company under a single account
2. New Manufacturing Customer. The Company has not previously provided service to the Service Location, or the service previously provided by the Company to the Service Location was not used for substantially the same type of operation or was terminated at least twelve (12) months before the customer's contractually specified effective date for service under this rider. This condition is waived for existing service locations where an entity has assumed operation of a service location from a customer which has ceased operations as a result of dissolution, so long as the formation of the entity did not occur as a result of merger, joint venture, acquisition and/or any other variation of combined business structures with the former customer at the service location. In any event, the completed application for the rider must be made within 6 months from the later of the date: (1) the customer first received service from the Company; or (2) the date the customer received its sales tax exemption certificate from the Commonwealth of Pennsylvania
3. Manufacturing Sales Tax Exemption Certificate. Pennsylvania Sales Tax Blanket Exemption Certificate filed by the customer with the Company showing the address of the Service Location and certifying that more than fifty (50) percent (on an annual basis) of the service purchased by the customer for the Service Location is exempt from sales tax because it is used in manufacturing operations, shipbuilding operations, or ship cleaning operations.
4. Employment Report. The "Employer's Report for Unemployment Compensation" (PA Form UC-2) as filed by the customer with the Office of Employment Security, Department of Labor and Industry, Commonwealth of Pennsylvania.
5. Base Period. The twelve (12) month period immediately preceding the billing month in which the customer provides the Company written notice of its desire to be placed on the rider. If the customer does not then qualify for the rider within 60 days of the written notice, then the base period will be the twelve month period immediately preceding the billing period for which this rider is first applied to the customer's bills.
6. Base Period Employment Reports. The Employment Reports for all quarterly reporting periods, as defined by 43 P.S. 753 [d], in the Base Period
7. Base Period Employees. The arithmetic mean of the number of employees each month as reported on the applicable Base Period Employment Report. An adjustment will be made to normalize Base Period Employees in quarters during which either the Casualty or Construction Rider was in effect for the Service Location.
8. Base Period Energy. The number of kilowatt-hours used by the customer for service to the Qualifying Service Location during each month of the Base Period. An adjustment will be made to normalize usage in months during which the Construction or Casualty rider was in effect.
9. Current Employment Report. The Employment Report covering the calendar month immediately following the Base Period as defined by 43 P.S. 753 [d]. The customer may submit an updated Employment Report at any time to reflect increases in Current Period Employees replacing and superseding the original report. The Company reserves the right to request an updated Employment Report at any time which may reflect increases or decreases in Current Period Employees replacing and superseding the original report.
10. Current Period Employees. The arithmetic mean of the number of employees each month as reported on the Current Employment Report.
11. Brownfield Site. Refers to real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Requires documentation either by providing a copy of the pertinent sections of the ASTM E1903-97 Phase II Site Assessment documenting the site contamination or by providing a letter from a local, state or federal regulatory agency confirming the site is classified as a Brownfield by that agency.

TERM OF CONTRACT. This rider shall be in effect for either a period of five years provided that the customer maintains qualification for the duration of that time.

RENEWAL. A customer may renew the rider at any time in accordance with the terms and provisions of the rider as it applies to Qualifying Existing Service Locations. For renewal customers, the Base Period Energy for any month of the new Base Period shall not be less than the Base Period Energy of the corresponding month of the customer's previous Base Period. The Term of Contract for the renewal shall begin on the date on which the renewal of the rider is first applied based on the new Base Period.

TRANSFER OF OWNERSHIP. The Company will only apply the rider to the customer's bills for the term of contract. If, during the term of contract, the ownership of the service location changes, the Company may continue to apply the rider to the new owner's bills for the Service Location. If the Company continues to apply the rider in such circumstances, the Company shall apply the rider to the new owner's bills for the Service Location as if the new owner had been on the rider for the Service Location for the same period of time as was the previous owner.

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 85**ELECTRIC VEHICLE DCFC PILOT RIDER (EV-FC)**

(Effective July 1, 2019 through December 31, 2025)

AVAILABILITY/APPLICABILITY.

Applicable to a service that includes at least one permanently connected and publicly available (workplace fleet and public transit) Public Direct Current Fast Charger ("DCFC") served under Rate GS, PD, or HT installed on or after July 1st, 2019. The Company may apply this rider to either a stand-alone metered DCFC or to a DCFC served as part of an existing service.

The pilot began on July 1, 2019 and expires on December 31, 2025.

The pilot will be modified and extended beginning on January 1, 2026 through December 31, 2030 (Docket No. R-2024-3046932).

The owner of the DCFC shall be responsible for all applicable Tariff rates, fees and charges. The Electric Vehicle owner using the DCFC shall be responsible for all fees imposed by the owner of the station for charging the electric vehicle.

The DCFC is exempt from resale provisions as outlined in Tariff Rule 13.1 and in accordance with the Commission's Policy Statement at Docket No. M-2017-2604382.

DEFINITIONS.

Electric Vehicle (EV) – Any vehicle licensed to operate on public roadways that is propelled in whole or in part by electrical energy stored on-board for the purpose of propulsion. Types of electric vehicles include, but are not limited to, plug-in hybrid electric vehicles and battery electric vehicles.

Electric Vehicle Supply Equipment (EVSE) – A device which permits the transfer of electric energy (by conductive or inductive means) to a battery or other energy storage device in an EV.

Public Direct Current Fast Charger (DCFC) – A high powered, publicly available (including workplace fleet and public transit) EVSE solely dedicated to recharging an EV's battery via the use of direct current, inductive charging, or other EV charging technology with equivalent capabilities. To be considered publicly available, the DCFC must be located along a public roadway corridor, at a public charging location, at a multi-dwelling unit (MDU) residential building at a public transit charging location, or at a workplace for fleet or customer charging.

INSTALLATION AND ENROLLMENT.

The Company shall provide service based on the DCFC's nameplate capacity rating when the Company has available distribution facilities with sufficient capacity, and if the provision of service will not in any way interfere with service to other customers.

Electric Vehicle charging stations shall be constructed in accordance with the Company's service installation policies contained in its Electric Service Requirements Manual ("Blue Book"), a copy of which may be found at www.peco.com. The customer, who may be either the owner or the host of a third-party owned DCFC, shall notify the Company at least one hundred twenty (120) days in advance of the planned installation date and may be required to install metering for the station as determined by the Company.

The station must be designed to protect for back flow of electricity to the Company's electrical distribution circuit. The owner of the DCFC is responsible for maintaining a safe operating environment for the device(s). The Company shall not be liable for any damage or injury, including any consequential damage, resulting from the operation of the DCFC.

The Customer may be responsible to submit an application and documentation of the completed DCFC installation to the Company in order to become eligible for the rider.

TRANSFER OF OWNERSHIP

If, during the term of contract, the ownership of the service location changes, the Company may continue to apply the rider to the new owner's bills for the Service Location. If the Company continues to apply the rider in such circumstances, the Company shall apply the rider to the new owner's bills for the Service Location as if the new owner had been on the rider for the Service Location for the same period of time as was the previous owner.

MISCELLANEOUS GENERAL PROVISIONS.

If the owner requests that service to the DCFC be permanently disconnected, the Company reserves the right to charge that owner for the removal of any required facilities and equipment previously required to furnish service to the DCFC. Such payment by the owner shall not confer upon, nor entitle the customer to any title to, or right of property in, said facilities and equipment.

Pilot participants will be required to provide data for all DCFCs connected to the PECO system and not separately metered in order to allow PECO to investigate the development of future DCFC rates. This data will include, for each DCFC: the number installed, the number of charging ports, the nameplate capacity (in kW), hourly and monthly usage (kWh), and the hourly and monthly demand (kW).

ELECTRIC VEHICLE DCFC PILOT RIDER (EV-FC)
(Effective January 1, 2026 through December 31, 2030)**AVAILABILITY/APPLICABILITY.**

Applicable to a service that is dedicated to Electric Vehicle Supply Equipment (EVSE) and includes at least one permanently connected Direct Current Fast Charger ("DCFC") served under Rate GS, PD, or HT installed on or after July 1st, 2019. The Company may apply this rider to either a stand-alone metered DCFC or to a DCFC served as part of an existing service. The Company may, at its sole discretion, apply this rider to a service that has both DCFC and other forms of EV charging so long as the combined maximum nameplate capacity rating for all DCFCs connected to the service is equal to at least 80% of the combined maximum nameplate capacity rating for all EVSE connected to the service. The Company may, at its sole discretion, apply this rider to a service that has other loads ancillary to EV charging such as signage, lighting, and communication equipment so long as the maximum combined demand of such loads does not exceed one percent of the combined maximum nameplate capacity rating for all EVSE connected to the service.

Deleted: ¶

The pilot extension begins on January 1, 2026 and expires on December 31, 2030.

The owner of the DCFC shall be responsible for all applicable Tariff rates, fees and charges. The Electric Vehicle owner using the DCFC shall be responsible for all fees imposed by the owner of the station for charging the electric vehicle.

The DCFC is exempt from resale provisions as outlined in Tariff Rule 13.1 and in accordance with the Commission's Policy Statement at Docket No. M-2017-2604382.

DEFINITIONS.

Electric Vehicle (EV) – Any vehicle licensed to operate on public roadways that is propelled in whole or in part by electrical energy stored on-board for the purpose of propulsion. Types of electric vehicles include, but are not limited to, plug-in hybrid electric vehicles and battery electric vehicles.

Electric Vehicle Supply Equipment (EVSE) – A device which permits the transfer of electric energy (by conductive or inductive means) to a battery or other energy storage device in an EV.

Direct Current Fast Charger (DCFC) – A high powered EVSE solely dedicated to recharging an EV's battery via the use of direct current, inductive charging, or other EV charging technology with equivalent capabilities. To be considered high-powered, the DCFC must have a nameplate charging capacity of at least 50 kilowatts per charging port.

INSTALLATION AND ENROLLMENT.

The Company shall provide service based on the DCFC's nameplate capacity rating when the Company has available distribution facilities with sufficient capacity, and if the provision of service will not in any way interfere with service to other customers.

Electric Vehicle charging stations shall be constructed in accordance with the Company's service installation policies contained in its Electric Service Requirements Manual ("Blue Book"), a copy of which may be found at www.peco.com. The customer, who may be either the owner or the host of a third-party owned DCFC, shall notify the Company at least one hundred twenty (120) days in advance of the planned installation date and may be required to install metering for the station as determined by the Company.

The station must be designed to protect for back flow of electricity to the Company's electrical distribution circuit. The owner of the DCFC is responsible for maintaining a safe operating environment for the device(s). The Company shall not be liable for any damage or injury, including any consequential damage, resulting from the operation of the DCFC.

The Customer may be responsible to submit an application and documentation of the completed DCFC installation to the Company in order to become eligible for the rider.

TRANSFER OF OWNERSHIP

If, during the term of contract, the ownership of the service location changes, the Company may continue to apply the rider to the new owner's bills for the Service Location. If the Company continues to apply the rider in such circumstances, the Company shall apply the rider to the new owner's bills for the Service Location as if the new owner had been on the rider for the Service Location for the same period of time as was the previous owner.

MISCELLANEOUS GENERAL PROVISIONS.

If the owner requests that service to the DCFC be permanently disconnected, the Company reserves the right to charge that owner for the removal of any required facilities and equipment previously required to furnish service to the DCFC. Such payment by the owner shall not confer upon, nor entitle the customer to any title to, or right of property in, said facilities and equipment.

Pilot participants will be required to provide data for all DCFCs connected to the PECO system in order to allow PECO to investigate the development of future DCFC rates. This data will include, for each DCFC: the number installed, the number of charging ports, and the nameplate capacity (in kW).

ELECTRIC VEHICLE DCFC PILOT RIDER (EV-FC) (continued)
(Effective July 1, 2019 through December 31, 2025)

RATE IMPACT.

All terms and guarantees of the applicable Base Rate are applicable. The Company shall calculate and apply a fixed demand (kW) credit, initially equal to 50% of the combined maximum nameplate capacity rating for all DCFCs connected to the service, to the customer's billed distribution demand. At no time will the billing demand be less than the minimum demand applicable under the provisions of the applicable Base Rate. The Company reserves the right to reduce the demand credit based on a comparison of the customer's peak demands before and after installation of the DCFC.

Deleted: ¶
¶

If the customer receives Default PLR Service, the terms of this rider shall not also apply to the Energy Supply Charge.

OTHER RIDERS.

This rider, when applied to temporary service installations to which the Temporary Service Rider is also applied, shall not operate as a waiver of the requirement that monthly minimum charges be paid for a period of not less than 6 months.

When this rider is applied to a service to which the Night Service GS Rider, Night Service HT Rider, or Night Service PD Rider is also applied, the variable demand credit shall apply to the Off-Peak Billing demand.

This rider will not be applied in conjunction with the Economic Development Rider.

TERM OF CONTRACT.

The Company shall provide this credit for no more than 36 months from the date of enrollment or until the conclusion date of the pilot, whichever comes first. There is no right to automatic renewal. Extended participation may be possible and could be predicated on future regulatory directives as yet to be determined.

ELECTRIC VEHICLE DCFC PILOT RIDER (EV-FC) (continued)
(Effective January 1, 2026 through December 31, 2030)

RATE IMPACT.
All terms and guarantees of the applicable Base Rate are applicable. The Company shall calculate and apply a variable demand (kW) credit, equal to 20% of the measured demand to the customer's billed distribution demand. For services where the minimum demand would be calculated under the applicable base as 40% of the maximum contract demand, the Company shall instead calculate minimum demand as 30% of the maximum contract demand. Otherwise, the minimum demand shall be 15 kW.

If the customer receives Default PLR Service, the terms of this rider shall not also apply to the Energy Supply Charge.

OTHER RIDERS.
This rider, when applied to temporary service installations to which the Temporary Service Rider is also applied, shall not operate as a waiver of the requirement that monthly minimum charges be paid for a period of not less than 6 months.

When this rider is applied to a service to which the Night Service GS Rider, Night Service HT Rider, or Night Service PD Rider is also applied, the variable demand credit shall apply to the Off-Peak Billing demand.

This rider will not be applied in conjunction with the Economic Development Rider.

TERM OF CONTRACT.
The Company shall provide this credit for no more than 36 months from the date of enrollment or until the conclusion date of the pilot, whichever comes first. There is no right to automatic renewal.

PECO Energy Company

Tariff Electric Pa. P.U.C. No. 8
Original Page No. 87**EMERGENCY ENERGY CONSERVATION RIDER****AVAILABILITY/APPLICABILITY.**

This rider is applicable in conjunction with Tariff Rule 12.3 relating to mandatory emergency energy conservation. It provides for modifications to the charges and practices otherwise applicable to certain customers as a result of compliance with or non-compliance with energy conservation curtailment levels as mandated by the appropriate governmental authority under emergency energy conservation conditions resulting from actual or potential shortage of fuel for electric generation. This rider is applicable to individual electric customer accounts served under Rates EP and HT, with a billing demand of 2,000 kilowatts or higher, in a recent twelve-month period prior to the emergency conservation condition. Customers designated by the procedures of Tariff Rule 12.3 and by the Pennsylvania Public Utility Commission, will be exempt from the provisions of this rider.

BASE PERIOD ENERGY USE.

The base energy use for a weekly period shall be determined by the Company for each applicable customer account based upon a consideration of the customer's actual past or current electric consumption and the customer's existing operations.

MANDATORY CURTAILMENT ENERGY USE LEVEL TARGET.

The mandatory curtailment energy use level target for each applicable customer shall be that percentage of base period energy use ordered pursuant to the emergency energy conservation procedures provided by Tariff Rule 12.3 or other percentage as a result of the order of appropriate governmental authority.

COMPLIANCE.

When the energy consumption in any weekly period during the period of mandatory curtailment exceeds the mandatory curtailment energy use level target, the customer will be deemed to be in non-compliance. Customers deemed to be in non-compliance will not receive the billing modifications as set forth in this rider. In the event of continued non-compliance, the Company, upon notice to the Commission, may discontinue service.

BILLING FOR CUSTOMERS IN COMPLIANCE.

During the period of emergency energy conservation condition, billing will be based on special meter readings made to identify the demand established and energy using during the current energy use period. Customers in compliance with conservation orders will be excused from minimum bills and historical or contract demand or ratchet provisions and will be billed instead on the basis of current consumption and demand whenever the normal calculation method would produce a greater bill. If the customer receives Default Service, the terms of this rider shall not apply to the Energy Supply Charge.

These customers will be individually notified of this special billing provision before the implementation of the emergency energy conservation procedure.

INVESTMENT RETURN GUARANTEE RIDER

AVAILABILITY/APPLICABILITY.

To contracts which require investment in supply facilities greater than warranted by the incremental revenue recovered through the Company's tariffed Variable Distribution Service Charges of the Base Rate under which PECO Energy provides service.

COST OF EXTENSION.

The cost of the extension of supply facilities, including the cost of the service connection, shall be set forth in each agreement for the application of this rider.

MINIMUM GUARANTEE.

The minimum monthly payment shall be the amount set forth in the rider agreement or, in the event of later increases of the customer's load, the minimum of the rate at which service is rendered, whichever minimum obligation is the greater.

CONSTRUCTION ADVANCES.

Where the service desired is of a special character or doubtful permanency, the Company will require payment of a sum equal to the cost of the extension as an advance for construction. A credit of 20% of the net amount of the customer's revenue recovered through the Company's tariffed Variable Distribution Service Charges will be allowed by the Company up to an aggregate refund of 100% of such sum, with the right to retain such portion of the advance as needed to guarantee the payment of subsequent bills.

FULFILLMENT OF CONTRACT TERM.

In the event of the discontinuance for any reason of the distribution of energy before the expiration of the term of the contract with which this rider is applied, the customer shall pay the Company immediately thereon a pro rata share of the cost of the extension for the unexpired portion of the contract term.

OWNERSHIP OF DISTRIBUTION SUPPLY FACILITIES.

The provisions of this rider shall not under any circumstances be considered as conferring upon the customer any title to, or right of property in, the distribution supply facilities.

CONTRACT TERM.

Contract terms in excess of one year may be arranged with the customer to assure the return required by the investment in distribution supply facilities.

NIGHT SERVICE GS RIDER

(The number of customers served under this rider may be limited
by the availability of the required demand meters.)

AVAILABILITY/APPLICABILITY.

To distribution service provided during Off-Peak Hours for demands in excess of those supplied during On-Peak Hours. The demand specified for Off-Peak Hours may be limited to an amount determined by the Company which shall be dependent upon the capacity of the generation, transmission and distribution facilities available for such supply.

DEFINITION OF PEAK HOURS.

On-Peak Hours are defined as the hours between 8:00 am and 8:00 pm, Eastern Standard Time or Daylight Savings Time, whichever is in common use, daily except Saturdays, Sundays and holidays; except that the On-Peak

Hours will end at 4:00 pm on Fridays. Off-Peak Hours are defined as the hours other than those specified as On-Peak Hours.

RATE IMPACT.

Rate GS (with demand measurement), including all terms and guarantees, is applicable during On-Peak Hours. If the customer receives Default PLR Service, the terms of this rider shall not also apply to the Energy Supply Charge.

MONTHLY RATE TABLE.

Night Service billing and metering charge: ~~\$24.56~~

Deleted: 19.06

Charge per kW of Off-Peak billing demand per month: ~~\$4.17~~

Deleted: 2.94

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), AND FEDERAL TAX ADJUSTMENT CREDIT APPLIES TO THIS RIDER.

DETERMINATION OF OFF-PEAK BILLING DEMAND.

The Off-Peak billing demand shall be the amount by which the greatest demand during Off-Peak Hours, as determined by measurement, exceeds the billing demand for On-Peak Hours, whether the latter is a minimum or an actual demand. The measured power factor used for power factor adjustment in accordance with Rule 15.3 shall be the power factor coincident with the customer's maximum measured demand during On-Peak hours.

OTHER RIDERS.

This rider will not be applied in conjunction with the Temporary Service Rider.

TERM OF CONTRACT.

The initial contract term shall be for at least one year.

NIGHT SERVICE PD RIDER

AVAILABILITY/APPLICABILITY.

To distribution service provided during Off-Peak Hours for demands in excess of those supplied during On-Peak Hours. The demand specified for Off-Peak Hours shall be limited to an amount determined by the Company which shall be dependent upon the capacity of the generation, trademark and distribution facilities available for such supply.

DEFINITION OF PEAK HOURS.

On-Peak Hours are defined as the hours between 8:00 am and 8:00 pm, Eastern Standard Time or Daylight Savings Time, whichever is in common use, daily except Saturdays, Sundays and holidays; except that the On-Peak Hours will end at 4:00 pm on Fridays. Off-Peak Hours are defined as the hours other than those specified as On-Peak Hours.

RATE IMPACT.

Rate PD, including all terms and guarantees, is applicable during On-Peak Hours. If the customer receives Default PLR Service, the terms of this rider shall not also apply to the Energy Supply Charge.

MONTHLY RATE TABLE.

Night Service billing and metering charge: \$11 ~~45~~
Charge per kW of Off-Peak billing demand per month: ~~\$4.53~~

STATE TAX ADJUSTMENT CLAUSE, DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC), APPLIES TO THIS RIDER.

DETERMINATION OF OFF-PEAK BILLING DEMAND.

The Off-Peak billing demand shall be the amount by which the greatest demand during Off-Peak Hours, as determined by measurement, exceeds the billing demand for On-Peak Hours, whether the latter is a minimum or an actual demand, except that, when said greatest demand during Off-Peak Hours exceeds the demand specified for Off-Peak Hours, said greatest Off-Peak demand shall be reduced by the amount of the excess in determining the Off-Peak billing demand. The measured power factor used for power factor adjustment in accordance with Rule 15.3 shall be the power factor coincident with the customer's maximum measured demand during On-Peak hours.

OTHER RIDERS.

This rider will not be applied in conjunction with the Temporary Service Rider.

RECEIVERSHIP RIDER

AVAILABILITY/APPLICABILITY.

To service provided to a Receiver-Trustee for the continued operation of a property formerly under contract for its electric service requirements.

AUTHORITY FOR OPERATION.

The Receiver-Trustee shall possess the authority under appointment by Court, through an order duly entered, to operate premises recited in a contract for electric service under which the Company has been providing service.

ACCEPTANCE.

The Receiver-Trustee shall accept and adopt for the continuation of service the contract theretofore in effect, including all of its provisions, and agree to pay the Company for all charges levied during the receivership-trusteeship at the rate specified therein.

BILLING.

The Company reserves the right to render bills on a biweekly basis. To provide for biweekly billing under this rider, the provisions of the applicable rate and rider, if any, will be modified as follows:

- (a) Where applicable, all references to monthly or month will be changed to biweekly or biweek.
- (b) Where applicable, capacity charges will first be determined from the pricing in the monthly rate table and such sum will then be multiplied by 14/30ths (0.4667) to determine the capacity charges for the billing period.
- (c) The energy charges will be determined by using the prices in the monthly rate table; however, the limit of the kilowatt-hours to be billed in each price block will be determined by multiplying the hours' use of billing demand for each price block or the kilowatt-hour limits of a given price block by 0.4667.
- (d) The high voltage discount applicable to Rate HT will be determined by using the pricing in the monthly rate table and such sum will then be multiplied by 0.4667 to determine the discount for the billing period.
- (e) The minimum charge will be determined on a monthly basis and such sum will then be multiplied by 0.4667 to determine the minimum charge for the billing period.
- (f) A discount of 0.4% will be applied to the total bill.
- (g) A bill will be rendered biweekly covering the charges for the preceding billing period and such bill shall be paid within fifteen (15) days after receipt thereof.

If the customer receives Default Service, the terms of this rider shall also apply to the Energy Supply Charge.

TERM OF CONTRACT.

The completion of the term of the contract taken over, or as terminated by the discharge of the Receiver-Trustee, or as arranged with the Receiver-Trustee for the continuation of service under the standard terms of this Tariff.

TEMPORARY SERVICE RIDER

APPLICABILITY.

To the provision of service, including builders construction service, when the Company must install temporary facilities that will be used for a limited period or for a service that is of doubtful permanency.

AVAILABILITY.

Temporary service will be provided only when the Company has available distribution facilities with sufficient capacity, and if the provision of service will not in any way interfere with service to other customers.

INVESTMENT IN DISTRIBUTION FACILITIES.

The cost of the extension and removal of facilities required to furnish the temporary service under the applicable rate shall be paid by the customer, but such payment shall not confer upon, nor entitle the customer to any title to, or right of property in, said facilities and equipment.

MINIMUM TERM.

Application of this rider to Rates R, R-H and GS shall not, for billing purposes, be considered to be for a period of less than one month.

Application of this rider to Rates PD and HT shall require payment of the minimum provisions of the contract for each month of the temporary service period, but in no case shall such period be considered, with respect to the guarantee of the monthly minimum charges, as of less duration than 6 months.

RATE IMPACT.

Billing shall be under the provisions of the applicable base rate and riders.

TERM OF CONTRACT.

Short term arrangements as agreed upon.

PECO Statement No. 8:

Direct Testimony of Megan A. McDevitt

**PECO ENERGY COMPANY
STATEMENT NO. 8**

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION
v.
PECO ENERGY COMPANY – ELECTRIC DIVISION

DOCKET NO. R-2024-3046931

DIRECT TESTIMONY

WITNESS: MEGAN A. MCDEVITT

SUBJECT: PROPOSED SURCHARGE CREDITS TO
CUSTOMERS IN 2025 AND PROPOSED
CHANGES TO PECO ENERGY COMPANY'S
ELECTRIC DIVISION TARIFF

DATED: MARCH 28, 2024

TABLE OF CONTENTS

	Page
I. INTRODUCTION AND PURPOSE OF TESTIMONY	1
II. PECO’S PROPOSED SURCHARGE CREDITS FOR 2025.....	3
III. PROPOSED CHANGES TO EXISTING TERMS AND DEFINITIONS	5
IV. RATE SCHEDULES	5
V. REVISIONS TO TARIFF RIDERS	5
VI. SECTION 1307 SURCHARGE MECHANISMS.....	8
VII. MISCELLANEOUS	13
VIII. CONCLUSION.....	14

1 **DIRECT TESTIMONY**
2 **OF**
3 **MEGAN A. MCDEVITT**

4 **I. INTRODUCTION AND PURPOSE OF TESTIMONY**

5 **1. Q. Please state your name and business address.**

6 A. My name is Megan A. McDevitt. My business address is PECO Energy
7 Company, 2301 Market Street, Philadelphia, Pennsylvania 19103.

8 **2. Q. By whom are you employed and in what capacity?**

9 A. I am employed by PECO Energy Company (“PECO” or the “Company”) as
10 Senior Manager, Retail Rates. In that capacity, I am responsible for the
11 management and oversight of PECO’s electric and gas retail and supplier service
12 tariffs and oversee numerous filings with the Pennsylvania Public Utility
13 Commission (the “Commission”).

14 **3. Q. Please describe your educational background and professional experience.**

15 A. I earned a Bachelor of Science Degree in Accounting from DeSales University.
16 In 2006, I became a Certified Public Accountant in Pennsylvania. In March of
17 2022, I was promoted to my current position in PECO’s Regulatory Policy and
18 Strategy department, following roles of increasing responsibility within
19 Accounting, Finance, Energy Acquisition, and Gas Supply and Transportation
20 since joining PECO in September of 2004.

1 **4. Q. What is the purpose of your testimony?**

2 A. My testimony will address proposed changes to PECO's Tariff Electric-Pa.
3 P.U.C. No. 7 ("Tariff No. 7") that have been incorporated in the Company's
4 proposed Tariff Electric-Pa. P.U.C. No. 8 ("Electric Tariff No. 8") filed in this
5 case. My testimony is divided into several parts. First, I will explain PECO's
6 proposed Fiber Affiliate Revenue Surcharge ("FARS") and Incremental COVID-
7 19 Uncollectible Surcharge ("ICUS"), which will provide rate credits to
8 customers in 2025 for (1) amounts PECO received for past use of its fiber
9 network and (2) the amount of PECO's regulatory asset for incremental COVID-
10 19-related uncollectible expense (the "COVID-19 Regulatory Asset") that is
11 reflected in PECO's current rates. These rate credits total approximately \$64
12 million and are described by Company witness Michael J. Trzaska in PECO
13 Statement No. 3. The changes to Tariff No. 7 consist of revisions to: (1) terms
14 and definitions; (2) rate schedules; (3) riders; (4) existing Section 1307 surcharge
15 mechanisms; and (5) various miscellaneous provisions.

16 **5. Q. Are you sponsoring any exhibits in this case?**

17 A. No. However, as explained by Company witness Joseph A. Bisti in PECO
18 Statement No. 7, the various tariff changes that I am identifying and explaining
19 are reflected in blacklining of the relevant pages of the Company's proposed
20 Electric Tariff No. 8 that Mr. Bisti is sponsoring as PECO Exhibit JAB-2.
21 Accordingly, I will refer to PECO Exhibit JAB-2 in certain points in my
22 testimony.

1 **II. PECO’S PROPOSED SURCHARGE CREDITS FOR 2025**

2 **6. Q. Why is PECO proposing rate credits in 2025 in this case?**

3 A. PECO is proposing two new reconcilable surcharge mechanisms – the FARS and
4 ICUS – to expeditiously refund to customers (1) fiber network fees the Company
5 collected from its former affiliate Exelon Generation Company, LLC and Exelon
6 Business Service Company in November 2021 and (2) amounts of incremental
7 COVID-19-related uncollectible expense embedded in PECO’s current rates.
8 These amounts will be credited to customers during the one-year period of 2025.
9 In PECO Statement No. 3, Mr. Trzaska discusses the Company’s proposed one-
10 time credits in more detail and describes the revenue requirement effect of the
11 amounts that will be refunded to customers in 2025.

12 **7. Q. Please describe PECO’s proposed new surcharges.**

13 A. The FARS and ICUS are reconcilable Section 1307 adjustment clauses that will
14 function similarly. Both surcharges will be computed annually.

15 The FARS and ICUS will reflect the reduction in required revenues in 2025
16 arising from the fiber network fees and the COVID-19 Regulatory Asset
17 (approximately \$16 million and \$48 million, respectively). PECO will allocate
18 the \$16 million credit for the fiber network fees to each customer class using the
19 “Total Electric Plant In Service” allocators employed in PECO’s cost-of-service
20 study (“COSS”) prepared by Company witness Tamara J. Jamison for the fully
21 projected future test year (“FPFTY”) (Exhibit TJJ-2, Page 26, Line 109).

22 Similarly, PECO will allocate the \$48 million credit for the COVID-19
23 Regulatory Asset to each customer class using the uncollectible “Account 904”

1 allocators from PECO's COSS presented in PECO's 2021 electric rate case
2 (Exhibit TJJ-2, Page 28, Line 207). Then, for both surcharges, PECO will
3 calculate 2025 rates by dividing the portions allocated to each class by that class's
4 projected FPFTY sales. The reduction in required revenues will be divided by the
5 estimated annual applicable base revenues that will be applied to customers' bills
6 for service rendered during the twelve months ending December 31, 2025. The
7 difference between the allocated and actual reductions in required revenues by
8 class will be subject to refund or recovery in each surcharge's respective annual
9 reconciliation. For any over/under credit balance that remains after the 2025
10 refund period the Company may propose additional FARS and ICUS adjustments
11 to ensure that the balance is eliminated.

12 An annual reconciliation statement will be submitted to the Commission each
13 year, and a final reconciliation statement will be filed within 30 days after the
14 final over/under balance has been eliminated. The FARS and ICUS credits and
15 reconciliation will be subject to audit by the Commission's Bureau of Audits.
16 The FARS and ICUS have been included in the Company's proposed Electric
17 Tariff No. 8 (see Exhibit JAB-2) and references to the application of the FARS
18 and ICUS have been included in the rate schedules to which they are proposed to
19 apply.

1 **III. PROPOSED CHANGES TO EXISTING TERMS AND DEFINITIONS**

2 **8. Q. Please describe the revisions that PECO is proposing to the definition of**
3 **“Holidays.”**

4 A. PECO proposes to revise the definition of Holidays to include the new Federal
5 holiday of Juneteenth.

6 **IV. RATE SCHEDULES**

7 **9. Q. Please describe the revision PECO is proposing to Rate Schedule GS –**
8 **General Service (“Rate GS”).**

9 A. The current availability provision of Rate GS states that service is provided to
10 customers through a single metering installation. PECO proposes a revision to
11 clarify that PECO does have some unmetered Rate GS accounts, including
12 electronic billboards and bus shelters. This clarification is consistent with
13 PECO’s current practice. Per Section 14.6 of the Rules and Regulations,
14 Estimated Usage, the customer’s usage and billing demand may be determined by
15 computation instead of by measurement in the case of installations having a fixed
16 load or demand value controlled to operate for a definite number of hours each
17 day.

18 **V. REVISIONS TO TARIFF RIDERS**

19 **10. Q. Is PECO proposing revisions to any existing tariff riders that you will**
20 **address?**

21 A. Yes. I will address proposed revisions to PECO’s Electric Vehicle DCFC Pilot
22 Rider (“EV-FC Pilot Rider”) and Economic Development Rider.

1 **11. Q. What is the EV-FC Pilot Rider?**

2 A. The EV-FC Pilot Rider is a pilot program designed to support transportation
3 electrification by encouraging the build out of publicly available (or workplace
4 fleet) fast charging through reduced demand charges. Under the EV-FC Pilot
5 Rider, PECO applies a demand (kilowatts or “kW”) credit initially equal to 50%
6 of a Direct Current Fast Charger’s (“DCFC’s”) nameplate capacity rate for
7 customers installing a qualifying public DCFC served under Rates GS, PD, or
8 HT. The demand credit is available for a 36-month term or until the pilot
9 concludes on December 31, 2025, whichever comes first.

10 **12. Q. Is PECO proposing any changes to the EV-FC Pilot Rider?**

11 A. Yes. As described in more detail in the testimony of Company witness Steven
12 DeMott (PECO Statement No. 9), PECO proposes to extend the EV-FC Pilot
13 Rider by five years through December 31, 2030, and proposes tariff changes that
14 will become effective on January 1, 2026, related to the EV-FC Pilot Rider’s
15 eligibility criteria, minimum demand requirements, and the calculation of the
16 demand credit.¹

17 **13. Q. What is PECO’s Economic Development Rider (“EDR”)?**

18 A. The EDR provides for discounts in the Variable Distribution Charge (“VDC”) of
19 up to 15% to eligible customers served on Rates GS, PD, or HT. Eligible
20 customers must demonstrate employment and load growth or a competitive
21 alternative to PECO electric distribution service and a sustained increase in load
22 and an increase in employment as detailed in the terms of the EDR.

¹ EV-FC Pilot Rider-related changes to the Company’s Night Service Rider will become effective on January 1, 2025.

1 **14. Q. Please describe the revisions PECO is proposing to the EDR.**

2 A. To support and encourage growth in all sectors of PECO's industrial and
3 commercial customer group, and based on experience gained from applying the
4 EDR, PECO is proposing to expand the availability of the EDR for both new and
5 existing customers. First, new or existing customers who add an additional 100
6 megawatts or more of new load and at least 10 new jobs in PECO's service area
7 will now qualify for the EDR.

8 Second, PECO is proposing to expand the scope of the EDR so that it will be
9 available to new or existing customers who add hydrogen production capabilities
10 to their facilities. A credit equivalent to 15% will only apply to the portion of the
11 customer's VDC related to the hydrogen production equipment nameplate
12 capacity. These enhancements, which provide additional opportunities for
13 customers to qualify for the EDR, will incentivize the innovation of hydrogen
14 production and encourage job creation and load growth within PECO's service
15 area.

16 **15. Q. What is the Capacity Reservation Rider ("CRR")?**

17 A. The CRR is a rider setting forth the terms and conditions of service that apply to
18 customers who operate their own generation in parallel with the Company's
19 distribution system and, therefore, need to reserve capacity on PECO's
20 distribution system to serve their load when their generators are off-line. The
21 CRR also applies to customers who want to reserve capacity in excess of their
22 present demand from the PECO distribution system for new business growth or
23 expansion.

1 The CRR set forth in the Company's tariff was the product of the settlement of
2 PECO's 2015 base rate case (Docket No. R-2015-2468981). By its terms, the
3 CRR was grandfathered so that it did not apply to customers whose generating
4 facilities were online prior to January 1, 2016. In the settlement of its 2018
5 electric base rate case at Docket R-2018-3000164 ("2018 Settlement"), the
6 Company agreed to collect data regarding each CRR customer added (class,
7 usage, billing details, and revenue) and the cost of the capacity being reserved,
8 including the basis for determining the cost as either a system average or specific
9 costs to serve each customer.

10 **16. Q. Is PECO proposing any changes to the CRR in this case?**

11 A. No. At this time, PECO has no customers with generation operating in parallel
12 with the Company's distribution system being served under the CRR. While
13 PECO is not proposing any changes to its existing CRR at this time, the Company
14 will continue to analyze the usage and billing data and the cost of capacity
15 reserved for any customers served under the CRR and provide such data in its
16 next electric base rate proceeding.

17 VI. SECTION 1307 SURCHARGE MECHANISMS

18 **17. Q. What is a Section 1307 surcharge mechanism?**

19 A. Section 1307 of the Public Utility Code, 66 Pa. C.S. § 1307, authorizes utilities to
20 establish automatic adjustment clauses that allow them to recover, outside of a
21 base rate proceeding, specific, designated categories of costs. Cost recovery is
22 subject to annual review and reconciliation, such that over or under-recoveries of
23 actual costs are refunded to customers or recouped, as applicable. The operation

1 of Section 1307 clauses is also subject to annual public hearings and periodic
2 audits by the Commission.

3 **18. Q. You have described the two new Section 1307 surcharges PECO is proposing**
4 **in this proceeding to provide credits to customers associated with PECO's**
5 **COVID-19 regulatory asset and fiber network fees. Is PECO proposing**
6 **changes to any of its existing Section 1307 surcharge mechanisms?**

7 A. Yes, the Company is proposing to revise its Universal Service Fund Charge
8 ("USFC"), Distribution System Improvement Charge ("DSIC") and the Consumer
9 Education Charge ("CEC").

10 **19. Q. Please describe the changes PECO is proposing to the USFC.**

11 A. The USFC, among other things, is a mechanism by which the Company reflects
12 the aggregate bill credits (in dollars) provided to low-income customers through
13 PECO's electric Customer Assistance Program ("CAP") each year that are not
14 included in base rates (the "CAP shortfall"). The current USFC is adjusted so that
15 residential customers pay 73% of the total CAP shortfall amount. The remaining
16 27% of the CAP shortfall is absorbed by PECO to account for the estimated
17 impact to uncollectible expense and cash working capital arising from incremental
18 changes to the level of CAP bill credits reflected in base rates.

19 In this proceeding, as explained by Company witness Jacqueline F. Golden in
20 PECO Statement No. 10, the Company is proposing to increase the aggregate
21 value of bill credits provided to electric CAP customers included in its base rates
22 and to change the offset factor applied to reconcilable CAP costs in the USFC

1 formula from 27% to 10.5%. To implement this change to the offset factor, the
2 electric USFC must be revised.

3 **20. Q. Please describe the revision that PECO is proposing to its DSIC in**
4 **conjunction with this electric distribution rate case.**

5 A. In accordance with the “New Base Rate” section of PECO’s DSIC, which was
6 approved by the Commission’s Order entered on October 22, 2015 at Docket No.
7 P-2015-2471423, PECO is required to reset the DSIC to 0% upon the effective
8 date of Commission-approved base rates. Accordingly, the DSIC will be set to
9 0%, effective January 1, 2025, as shown in PECO Exhibit JAB-2.

10 **21. Q. Please describe the updates PECO is proposing to the CEC.**

11 A. PECO is proposing to revise the CEC formula to remove the “S factor,” which
12 represents the cost of implementing the supplier-oriented bill (as approved in
13 Docket M-2014-2401345) and is no longer applicable. PECO is also proposing
14 several revisions to remove obsolete language that refers to “the coming transition
15 to a competitive market” in the CEC. The Company is also proposing to replace
16 the term “procurement class” with “customer class” to ensure consistency with
17 other sections of the Electric Service Tariff.

18 Finally, PECO is proposing to revise the CEC to include costs associated with
19 additional education and outreach directed to low- and moderate-income
20 customers about PECO’s universal service programs described by Ms. Golden.
21 Commencing on January 1, 2025, PECO proposes to recover up to \$800,000 per
22 year in incremental costs associated with this expanded outreach proposal through
23 the CEC.

1 **22. Q. Are there any other matters related to Section 1307 mechanisms in PECO’s**
2 **Electric Service Tariff that you wish to address?**

3 A. Yes, I would like to address PECO’s Tax Accounting Repair Credit (“TARC”)
4 and Federal Tax Adjustment Credit (“FTAC”).

5 The TARC is a rate adjustment mechanism that became effective January 1, 2013
6 pursuant to the terms of the Joint Petition for Settlement of Rate Investigation in
7 the Company’s 2010 electric rate case at Docket No. R-2010-2161575 (“2010
8 Settlement”). As I will explain, PECO has fully complied with the terms of the
9 2010 Settlement pertaining to the TARC, where PECO committed to take several
10 actions if PECO subsequently decided to change its method of tax accounting so
11 that property-related expenditures PECO capitalizes for book purposes may be
12 treated for income tax purposes as repair expenses that are deductible in the year
13 incurred.

14 In particular, PECO agreed to notify the Commission if it elected to make such a
15 change and to pass-through to customers, by a seven-year amortization, the
16 revenue requirement effect of a retrospective, one-time “catch-up” deduction
17 permitted under Section 481(a) of the Internal Revenue Code when a tax
18 accounting change like the “repairs” election is made. Following the 2010
19 Settlement, PECO changed its method of tax accounting to expense electric utility
20 “repair” costs for income tax purposes. Therefore, consistent with the terms of
21 the 2010 Settlement, PECO notified the Commission of its decision and
22 established the TARC to provide bill credits designed to return \$177,882,711 of

1 tax benefits attributable to the “catch-up” repair deduction to customers over the
2 seven-year period from January 1, 2012 through December 31, 2018.

3 The total tax benefit of the “catch-up” deduction was returned to customers one
4 year earlier than anticipated, but this action resulted in a small over-recovery
5 balance of about \$62,000 as of December 31, 2022. Approximately \$36,000 of
6 the over-recovery was owed to the residential customer class and was returned
7 through the TARC. About \$26,000 of the over-recovery is owed to the
8 commercial customer class. As explained by Mr. Trzaska in PECO Statement
9 No. 3, the Company proposes to return this small over-recovery balance to
10 commercial customers through a distribution revenue requirement reduction.
11 Accordingly, the Company has fully satisfied the requirement of the 2010
12 Settlement regarding the TARC.

13 PECO is also proposing to remove references in Electric Tariff No. 8 to the FTAC
14 and TARC because those mechanisms are no longer part of PECO’s electric
15 service tariff.

16 **23. Q. Has PECO fully complied with the terms of the 2018 Settlement regarding**
17 **the FTAC?**

18 A. Yes. The FTAC is a rate adjustment mechanism to refund the 2018 estimated Tax
19 Cuts and Jobs Act (“TCJA”) savings to customers. Under the 2018 Settlement,
20 the FTAC for residential, small commercial and streetlighting customers was
21 established to refund the TCJA savings over the one-month period of January
22 2019, subject to reconciliation, while the FTAC for large commercial and

1 industrial customers was established to refund the TCJA savings over the one-
2 year period of 2019.

3 During 2019 and 2020, PECO made several additional FTAC filings to continue
4 to reconcile the final balances for residential, small commercial, streetlighting and
5 large commercial and industrial customers, eventually resetting the FTAC to 0%
6 for all rate classes effective January 1, 2021. The remaining balance as of
7 December 31, 2022, is a credit of \$23,464. As explained by Mr. Trzaska, PECO
8 proposes to return the small over-recovery balance to customers through a
9 distribution revenue requirement reduction. Accordingly, the Company has fully
10 satisfied the requirement of the 2018 Settlement regarding the FTAC.

11 VII. MISCELLANEOUS

12 **24. Q. What are the miscellaneous revisions that are being proposed by PECO and**
13 **reflected in Electric Tariff No. 8?**

14 A. PECO is proposing four miscellaneous revisions:

15 First, PECO is proposing to revise the formula in the USFC to remove the “F”
16 Correction Factor of the In-Program Arrearage Forgiveness Program (“F-
17 Factor”), which was a result of the Settlement at Docket R-2015-2468981. PECO
18 has not included the F-Factor in its USFC rate calculations since 2018 and as of
19 2023, PECO is refunding any over-collected balances to customers through the
20 USFC. PECO is also proposing to revise the “L” Factor to remove the De Facto
21 Heating Pilot that ended on December 31, 2023. Also, for consistency with its

1 Gas Service Tariff, PECO is proposing to revise the “I” Factor to add the
2 statement “The interest calculation will not apply to LIURP amounts.”

3 Second, PECO is proposing to revise the Availability/Applicability section of the
4 Economic Development Rider to remove the reference to provision IC, which
5 does not exist in the subsequent Employment & Load Growth section.

6 Third, PECO is proposing to revise the List of Communities Served section in
7 order to correctly reflect Narberth Borough and Lower Merion Township as
8 Montgomery County. The Township of Whitemarsh was also incorrectly
9 categorized as a First-Class Township.

10 Finally, PECO is proposing to correct a misstatement in the Minimum Charge
11 language in Rate GS. The first sentence should read “The monthly minimum
12 charge for customers without demand measurement will be the Fixed Distribution
13 Service Charge, plus the Variable Distribution Service Charge per kW of
14 minimum billing demand as described above.”

15 **VIII. CONCLUSION**

16 **25. Q. Does this complete your direct testimony at this time?**

17 **A.** Yes, it does.

PECO Statement No. 9:

Direct Testimony of Steven J. DeMott

**PECO ENERGY COMPANY
STATEMENT NO. 9**

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION
v.
PECO ENERGY COMPANY – ELECTRIC DIVISION

DOCKET NO. R-2024-3046931

DIRECT TESTIMONY

WITNESS: STEVEN J. DEMOTT

SUBJECTS: ELECTRIC VEHICLE CHARGING PILOT
AND ELECTRIC VEHICLE FAST
CHARGING PILOT RIDER

DATED: MARCH 28, 2024

TABLE OF CONTENTS

	Page
I. INTRODUCTION AND PURPOSE OF TESTIMONY	1
II. EV CHARGING PILOT	3
A. PECO’s Existing Pilot.....	3
B. PECO’s Proposed Pilot Revisions	11
III. ELECTRIC VEHICLE FAST CHARGING PILOT RIDER	19
IV. REPORTING REQUIREMENTS	31
V. CONCLUSION.....	33

1 **DIRECT TESTIMONY**
2 **OF**
3 **STEVEN J. DEMOTT**

4 **I. INTRODUCTION AND PURPOSE OF TESTIMONY**

5 **1. Q. Please state your name and business address.**

6 A. My name is Steven J. DeMott. My business address is PECO Energy Company
7 ("PECO" or the "Company"), 2301 Market Street, Philadelphia, Pennsylvania
8 19103.

9 **2. Q. By whom are you employed and in what capacity?**

10 A. I am employed by PECO as Senior Manager of Strategic Planning. In that
11 capacity, I am responsible for managing and directing activities necessary to
12 support executive leadership and business stakeholders with developing strategic
13 business initiatives that will provide value for our customers.

14 **3. Q. Please describe your educational background.**

15 A. I have a Bachelor of Science in Economics from the University of Pennsylvania
16 Wharton School of Business and a Master of Business Administration from the
17 University of Pittsburgh Katz Graduate School of Business.

18 **4. Q. Please describe your professional experience.**

19 A. I began my career with PECO in 1999 as a senior financial analyst. Between
20 2002 and 2014, I held management roles in several departments in the areas of
21 marketing, revenue management, and eChannels (digital customer service).

22 In July 2014, I was promoted to senior manager of customer projects and system
23 support where I led a team of professionals in developing analytical and

technology strategy for PECO customer operations while providing project management, change management/business integration, and application maintenance support for all customer service technology platforms.

In December 2019, I became Senior Manager of Strategic Planning for PECO and am now responsible for working closely with our organization and stakeholders to lead strategic planning, opportunity assessments, and the development and execution of strategic initiatives that will provide value to our customers.

5. Q. What is the purpose of your testimony?

A. The purpose of my testimony is to describe: (1) PECO’s proposal to extend its pilot incentive programs for electric vehicle (“EV”) charging (the “EV Charging Pilot”) and (2) PECO’s proposal to extend and modify its Electric Vehicle Fast Charging Pilot Rider (the “EV-FC Rider”). The following chart summarizes these changes.

	<u>Subject</u>	<u>Current state</u>	<u>Proposed change</u>
EV Charging Pilot	Duration	Ends 12/31/2024	Extend through 12/31/2029
	Budget	\$1,625,000 over three years	\$1,000,000 per year
	L2 Program rebate amount	Percentage of actual make-ready costs with per-port caps	Fixed rebate amounts per-port
	Rebate limits per customer	L2 Program limit of 20 ports; overall limit of \$60,000 (\$500,000 for transit authorities)	Annual limit of \$60,000 (\$200,000 for transit authorities)
	Data requirement	Applies only to chargers receiving rebates	Applies to all chargers at the site

	<u>Subject</u>	<u>Current state</u>	<u>Proposed change</u>
EV-FC Rider	Duration	Expires 12/31/2025	Extend through 12/31/2030
	Definition	“high-powered” DCFC is undefined	Add definition for “high-powered”
	Meter Eligibility	No metering requirement, but DCFC must be “publicly available”	Require DCFCs to be separately metered, no requirement that DCFC be “publicly available”
	Demand Credit	50% of nameplate charging capacity	20% of measured demand
	Minimum demand	Rules of customer’s applicable base rate apply; typically, 40% of contract maximum demand	30% of contract maximum demand or 15 kilowatts if there is no contract maximum
	Other riders	Not addressed	Address interaction with Night Service Riders and ineligibility for Economic Development Rider

6. **Q. Are you sponsoring any exhibits to accompany your direct testimony?**

A. Yes, I am sponsoring Exhibit SJD-1, which includes forecast information about EVs and Direct Current Fast Charger (“DCFC”) charging stations in PECO’s service territory.

II. EV CHARGING PILOT

A. **PECO’s Existing Pilot**

7. **Q. Please describe PECO’s EV Charging Pilot.**

A. The EV Charging Pilot is designed to incentivize the development of EV charging sites in the Company’s electric service territory, educate customers about transportation electrification (“TE”), and gather important EV charging data to inform the Company’s future distribution system planning and rate design. The EV Charging Pilot was originally established as part of a comprehensive

1 settlement (the “2021 Settlement”) approved by the Pennsylvania Public Utility
2 Commission (the “Commission”) in the Company’s most recent electric base rate
3 proceeding in 2021.¹ On April 27, 2023, PECO filed a petition requesting
4 Commission approval of certain modifications to the EV Charging Pilot,
5 including replacing the Transit Charging Program with the Public Benefit
6 Charging Program (the “Pilot Modification Petition”). On September 21, 2023,
7 the Commission approved PECO’s proposed modifications to the EV Charging
8 Pilot.² As modified, the EV Charging Pilot has three components: (1) the
9 Commercial and Industrial Level 2 Charging Program (the “L2 Program”); (2) the
10 Public Benefit Charging Program; and (3) the Electric Vehicle Education and
11 Outreach Program.

12 **8. Q. Please describe the EV Charging Pilot’s L2 Program.**

13 A. PECO launched the L2 Program in April 2022. The program is designed to address
14 the upfront costs of developing charging sites and help the Company understand the
15 load profile and other implications of commercial and industrial Level 2 (“L2”) EV
16 charging. Qualifying customers can receive an L2 Program incentive in exchange
17 for providing detailed information for each participating installed charger over a
18 two-year period, including interval data (kW and kWh) covering charging event
19 duration, site-specific charging load management strategies, and equipment
20 utilization rates. This “real world” data on charging installations will inform future
21 rate design and distribution system planning for the load impacts of TE.

¹ See Docket No. R-2021-3024601 (Order entered, Nov. 18, 2021) (the “2021 ERC Proceeding”).

² See Docket No. P-2023-3040238 (Order entered Sept. 21, 2023) (the “Pilot Modification Order”).

1 The incentive level varies depending upon the location of the charging site as
2 follows:

- 3 • The lesser of \$3,000 per charging port or 75% of make ready costs
4 incurred for sites in an Environmental Justice Area (“EJA”) (as
5 designated by the Pennsylvania Department of Environmental Protection
6 (“PA DEP”) at the time of application) within PECO’s electric service
7 territory.
- 8 • The lesser of \$2,000 per charging port or 50% of make ready costs
9 incurred for sites at any other location within PECO’s electric service
10 territory.

11 The L2 Program is subject to the following requirements and limitations:

- 12 • The incentives are available to all applicable classes of commercial and
13 industrial customers (for example, Rates GS, HT, and PD) for
14 applications including, but not limited to, public charging, fleet
15 charging, bus charging, multi-unit dwelling charging, and workplace
16 charging.
- 17 • Each customer is eligible to receive the make-ready incentive for a
18 maximum of 20 ports over the duration of the Pilot.
- 19 • Incentives are paid on a first-come first-served basis upon placement of
20 the charging station(s) into service during the years 2022 through 2024.
- 21 • If a customer site receives a governmental grant or tax incentive toward
22 the construction of and equipment purchases for a charging station, the
23 incentive from PECO shall not exceed the total cost of equipment,
24 installation, and make ready less the value of the governmental grant or
25 tax incentive.

26 **9. Q. Please describe the EV Charging Pilot’s Public Benefit Charging Program.**

27 A. PECO launched the Public Benefit Charging Program in October 2023. Similar
28 to the L2 Program, the Public Benefit Charging Program is designed to address
29 the upfront costs of developing charging sites and to help the Company
30 understand the load profile and other implications of commercial and industrial
31 EV charging. However, this program is more focused on public transportation,
32 the non-profit sector, and local government.

Incentives are available for qualifying customer-owned L2 or fast charging equipment that is connected to a PECO meter on a non-residential account that meets at least one of the following criteria and will be used to charge EVs that are operated predominantly within the PECO electric service territory:

- charging stations dedicated primarily to battery electric passenger buses, commuter shuttles, vehicles devoted to providing shared ride/demand response services for paratransit, medical assistance, persons with disabilities, or senior citizens, school buses, taxicabs, and/or rideshare vehicles;
- charging stations dedicated primarily to vehicles owned or operated by one or more 501(c)(3) organizations;
- charging stations owned by or dedicated primarily to vehicles owned or operated by county, municipal, or regional government entities; and
- charging stations available to the general public, utilizing a non-proprietary charging standard and located in an EJA as designated by PA DEP at the time of application.

Customers receiving incentives agree to facilitate PECO's collection of data from participating chargers for two years, with one exception; if fast chargers are installed by a transit authority, PECO will collect the data for three years.

Public Benefit Charging Program incentives are capped at 50% of the cost of equipment, installation, and make ready work for the project, and consideration is given to any applicable governmental grants or tax credits.

Transit authorities installing fast chargers with a capacity of at least 250 kW per charging port are subject to a maximum incentive of \$500,000 per project site. All other eligible customers are subject to a maximum incentive of \$60,000 over the duration of the Pilot, inclusive of incentives paid through both the L2 Program and the Public Benefit Charging Program.

10. Q. Please describe the EV Charging Pilot’s Electric Vehicle Education and Outreach Program.

A. PECO conducts proactive EV education and outreach to increase customer knowledge of the Company's EV offerings including the EV Toolkit, the EV-FC Rider, the EV registration incentive, the L2 Program, and the Public Benefit Charging Program. The awareness campaign utilizes a variety of communication channels including, but not limited to, bill inserts, email, social media, website updates, and printed materials.

11. Q. Does PECO engage with stakeholders about TE and the implementation of the EV Charging Pilot?

A. Yes. Consistent with the 2021 Settlement, PECO convenes a collaborative working group meeting³ at least twice annually to discuss opportunities to support the equitable expansion of TE within PECO's service territory. Topics for discussion include: outreach and education efforts, the provision of TE programming to low income communities and other historically disadvantaged communities, and potential local impacts of electric vehicle infrastructure investment.

Based on availability, PECO will provide aggregated kWh consumption of chargers supported by the program and aggregated load profile information for participating L2 chargers at stakeholder collaboratives and will post that information to its website within ten business days after the stakeholder collaborative.

³ The enrollment form for the collaborative working group meetings and information from past proceedings are available at this link: <https://www.peco.com/DoingBusinessWithUs/Pages/TransportationElectrification.aspx>.

1 The Company further committed to brief the parties to the 2021 ERC Proceeding
2 prior to making a filing to modify or extend the EV Charging Pilot, provide
3 appropriate data support for Pilot incentives, and if publicly available: (1) include
4 an EV forecast for the future pilot period; and (2) provide data showing the public
5 and private charging that is coming online in PECO's service territory.⁴ PECO
6 conducted the prefiling briefing on March 27, 2024 during which it shared the
7 information in PECO Exhibit SJD-1 and informed the parties of the Delaware
8 Valley Regional Planning Commission's map-based EV forecast tool.⁵

9 PECO also committed that any filing to modify or extend the EV Charging Pilot
10 will include data showing a basis for the incentives and identify the data sources
11 and evaluation techniques used. This testimony addresses those commitments.

12 **12. Q. What are the reporting requirements for the EV Charging Pilot?**

13 A. Pursuant to the 2021 Settlement and the Pilot Modification Order, PECO
14 committed to develop an annual anonymized public report for submission to the
15 Commission regarding the L2 Program and the Public Benefit Charging Program
16 in 2023, 2024, and 2025. The report is to be published by PECO by April 1 of
17 each year and cover the preceding calendar year.⁶ Each report will include at
18 least the following information:

- 19 a. Number of participating charging ports, by county;
20 b. Number of participating sites, by county;

⁴ As noted earlier, PECO Exhibit SJD-1 includes several EV-related forecasts.

⁵ https://www.dvrpc.org/webmaps/electric_vehicles/.

⁶ EV Charging Pilot annual reports are available at www.peco.com/doing-business-with-us/stakeholders-collaboratives/transportation-electrification.

- c. Aggregate dollar value of incentives provided to participating customers;
- d. Aggregate annual kWh consumption of L2 chargers supported by county;
- e. Aggregated load profile information for participating L2 chargers;
- f. Number of requests received for participation;
- g. Initiated requests not funded;
- h. Anonymized reasons why initiated requests were not funded; and
- i. A description of where charging infrastructure was installed.

13. Q. What is the budget for the EV Charging Pilot?

A. The EV Charging Pilot has a budget of \$1,625,000. The budget is allocated as follows:

- \$575,000 dedicated to L2 Program incentives and administration;
- \$1,000,000 shared between the L2 Program and the Public Benefit Charging Program for incentives and administration; and
- \$50,000 for the EV Education and Outreach Program.

Pilot incentives are available for electric vehicle service equipment (“EVSE”) installed in calendar years 2022 through 2024, while program administration costs will extend into 2027 for ongoing data collection. PECO currently projects that, by the end of 2024, approximately \$1,291,000 will be spent on incentives, \$229,000 on program administration, and \$50,000 on education and outreach.

14. Q. How many customers have benefitted or are expected to benefit from the EV Charging Pilot in 2022 through 2024?

A. As of February 29, 2024:

- 32 customer accounts have received L2 Program incentives totaling \$305,756;
- 39 customer accounts have reserved L2 Program incentives totaling \$375,000 for projects currently underway;

- 10 customer accounts have reserved Public Benefit Charging Program incentives totaling \$450,950 for projects currently underway; and
- Administrative costs for the EV Charging Pilot were \$73,125 in 2022, \$56,500 in 2023, and are budgeted as \$99,000 in 2024.⁷

15. Q. How is the Company recovering these EV Charging Pilot costs?

A. The Company is recovering the EV Charging Pilot costs over 2022-2024 as follows:

- \$575,000 for the L2 Program from Commercial and Industrial (“C&I”) customers;
- \$1,000,000 for the Public Benefit Charging Program (originally dedicated to the now canceled Transit Charging Program) from Large C&I customers; and
- \$50,000 for EV Outreach and Education from all customer classes.

16. Q. In the Pilot Modification Petition, the Company committed, in its next electric distribution base rate case, to make a proposal regarding the treatment of funds initially earmarked for the Transit Charging Program and utilized instead under the expanded L2 Program and the Public Benefit Charging Program. What is the Company’s proposal for those funds?

A. The Company is proposing to shift recovery of the \$1,000,000 initially earmarked for the Transit Charging Program from Large C&I customers to all C&I customers, in proportion to customer count, in light of the Public Benefit Charging Program and L2 Program being available to all C&I customers. The Company proposes to amortize that shift in allocation over two years, 2025 and 2026. The result will be an annual credit to Large C&I customers and a corresponding annual charge to Small C&I customers of approximately \$413,000

⁷ Administrative costs have changed year-over-year with the scope of the EV Charging Pilot. 2022 costs included the initial data integration with the program administrator, L2 Program launch, and 9 months of L2 Program operation. 2023 costs included 12 months of L2 Program operation as well as the Public Benefit Charging Program launch and 3 months of Public Benefit Charging Program operation. 2024 costs include 12 months of operation for both the L2 Program and the Public Benefit Charging Program.

as demonstrated in PECO Exhibit TJJ-7, Schedule-16, sponsored by Company witness Tamara J. Jamison in PECO Statement No. 6.

B. PECO's Proposed Pilot Revisions

17. Q. What changes are PECO proposing to the EV Charging Pilot?

A. PECO is proposing to extend the term of the EV Charging Pilot by five years through 2029 (the "Extension Period"), including the stakeholder engagement and reporting requirements, and implement the following changes during the Extension Period:

- 1) Establish an annual budget of \$940,000 as a shared source of funding for the L2 Program and the Public Benefit Charging Program;
- 2) Establish an annual budget of \$60,000 for EV Outreach and Education with \$40,000 of that budget to be used to expand the Company's online EV Toolkit to include content and calculators for fleet operators;
- 3) Replace the L2 Program incentive limit of 20 charging ports per customer and the EV Charging Pilot incentive limits of \$500,000 for transit authorities and \$60,000 for all other customers with an annual incentive limit per participating customer, inclusive of both the L2 Program and the Public Benefit Charging Program. The annual incentive limit would initially be set at \$200,000 for transit authorities and \$60,000 for all other customers, but PECO would have the flexibility to adjust the incentive level for non-transit authority customers within the range of \$40,000 to \$100,000 to reflect actual demand for rebates. PECO would report any such adjustment at the next TE collaborative and in the Company's next annual EV program report to the Commission;
- 4) Simplify the L2 Program incentives to be \$3,000 per charging port for EVSE located in an EJA and \$2,000 per charging port for EVSE located anywhere else in the PECO electric service territory; and
- 5) Expand the requirement for participating customers to provide data from their EVSE to include all EVSE located at the premises for which the incentives are issued and permit PECO, in its sole discretion, to waive this requirement for pre-existing EVSE where requiring data from that pre-existing EVSE would create hardship for the customer.

1 **18. Q. Why does PECO propose to extend the EV Charging Pilot?**

2 A. Advancing TE is a policy priority of both the Biden administration⁸ and the
3 Shapiro administration⁹ because TE is a critical component in reducing
4 greenhouse gas emissions. The movement toward TE in Pennsylvania is already
5 in progress. The estimated number of plug-in EVs in operation in the PECO
6 service territory has nearly quadrupled from 12,800 at the end of 2020 to
7 approximately 47,500 at the end of 2023. See PECO Exhibit SJD-1, Schedule 1.

8 A range of forecasts also indicate a very substantial increase in EV penetration in
9 the next several years. For example, PJM forecasts that summer coincident peak
10 EV charging load, and implicitly, the number of EVs in operation, in PECO's
11 service territory will grow fivefold from 2024 to 2027 and tenfold from 2024 by
12 2030. Assuming that year-over-year growth in 2024 will match the 2023 level,
13 this implies nearly 335,000 EVs in operation by 2027 and more than 685,000 EVs
14 by 2030. This extrapolated PJM forecast represents a faster EV adoption rate than
15 PECO's internal forecast of more than 225,000 EVs in operation by 2027 and
16 more than 590,000 EVs by 2030. For the details of these forecasts, see PECO
17 Exhibit SJD-1, Schedule 3. Schedule 2 of PECO Exhibit SJD-1 displays three EV

⁸ See, e.g., Biden-Harris Administration Announces Latest Steps to Deliver a National Network of Convenient, Reliable, Made-in-America Electric Vehicle Chargers, U.S. Department of Transportation, "...President Biden [has] goals for America to lead the world in EV manufacturing and adoption." <https://www.transportation.gov/briefing-room/biden-harris-administration-announces-latest-steps-deliver-national-network>; FACT SHEET: President Biden's Economic Plan Drives America's Electric Vehicle Manufacturing Boom, The White House, "Since his first day in office, President Biden's auto vision and leadership has positioned the United States to lead the EV future..." <https://www.whitehouse.gov/briefing-room/statements-releases/2022/09/14/fact-sheet-president-bidens-economic-plan-drives-americas-electric-vehicle-manufacturing-boom/>.

1 adoption scenarios from the Electric Power Research Institute (“EPRI”). The
2 extrapolated PJM forecast and the PECO internal forecast both fall between
3 EPRI’s Medium and High adoption scenarios.

4 The continued growth in EV penetration will likely be driven by several factors,
5 including the \$7.5 billion in EV infrastructure grants¹⁰ provided under the
6 Infrastructure Investment and Jobs Act of 2021 and extended tax credit eligibility
7 for EVs¹¹ provided by the Inflation Reduction Act of 2022. In the private sector,
8 many vehicle manufacturers have announced plans to significantly expand their
9 EV offerings for both passenger and commercial vehicles, and new manufacturers
10 have also been entering the market. S&P Global projects that vehicle
11 manufacturers will offer 200 models of EVs by 2026,¹² up from 40 models in
12 2023 and 17 models in 2020. As more EVs come to market, a combination of
13 price competition and battery manufacturing advances is putting downward
14 pressure on new EV prices.¹³ Further, with the growth in
15 Environmental/Social/Governance investing, many corporate fleet operators,
16 including PECO, have made public commitments to transition some or all of their
17 fleets to EVs.¹⁴

¹⁰ See, e.g., <https://bipartisanpolicy.org/blog/a-status-update-on-ev-charging-infrastructure-investments-in-the-iiija/>.

¹³ See, e.g., Incentives and lower costs drive electric vehicle adoption in our Annual Energy Outlook, U.S. Energy Information Administration, <https://www.eia.gov/todayinenergy/detail.php?id=56480>.

¹⁴ See, e.g., How Electric Transportation Is Impacting The Trucking Industry, Forbes, <https://www.forbes.com/sites/forbestechcouncil/2023/02/01/how-electric-transportation-is-impacting-the-trucking-industry/?sh=145c46a01fa1>.

1 Supporting TE, including the growth of EVs, can present some implementation
2 challenges for PECO and PECO's customers, including the substantial upfront
3 costs to establish charging stations, the significant load changes on PECO's
4 distribution system arising from increased EV charging activity, and the need to
5 educate customers about the use and benefits of EVs. Sustaining the growth in
6 EV penetration will require that charging infrastructure keep up with or, ideally,
7 stay somewhat ahead of growth in demand to enable EV owners to have a positive
8 experience with their vehicles. Likewise, PECO needs to continue to advance its
9 understanding of EV charging loads in order to adequately plan for and
10 accommodate the rapid growth in charging loads.

11 Extending the EV Charging Pilot addresses these implementation challenges by
12 partially mitigating the upfront costs of constructing EVSE and by enabling
13 PECO to continue to build a robust data set of EV charging loads, including use
14 cases such as workplace charging and fleet charging that have been
15 underrepresented among applications to date for EV Charging incentives.
16 Additionally, extending the larger incentives offered under the Public Benefit
17 Charging Program will help local governments in our region advance their
18 environmental goals and will support the equitable advancement of TE by
19 improving the business case for constructing EVSE in EJAs.

20 **19. Q. How did PECO determine the proposed budget level for the Extension**
21 **Period of the EV Charging Pilot?**

22 A. PECO considered the Company's experience to date with the shared \$1,000,000
23 budget for the L2 Program and Public Benefit Charging Program. The
24 application window for that funding opened in October of 2023, and, in the first

1 five months, PECO received applications for \$560,000 in rebates. If that pace was
2 sustained for twelve months, the annual rebate amount requested or applied for
3 would be \$1,120,000. PECO anticipates that ongoing annual administrative costs
4 will be in the range of \$100,000 to \$140,000. Allowing for some projects to fall
5 through, PECO believes that a \$1 million annual budget will be appropriate to
6 meet the needs of our customers and will enable the EV Charging Pilot to achieve
7 its goals without unduly burdening nonparticipating customers.

8 **20. Q. Why is PECO proposing to change the EV Charging Pilot incentive limits?**

9 A. PECO's existing incentive limits apply to the total Pilot period (e.g., no more than
10 \$60,000 over the term of the Pilot) and were intended to ensure that the limited
11 program budget would be distributed across a large number of customers.
12 Because PECO is proposing a five-year expansion of the Pilot term as well as
13 increased Pilot funding, the Company believes it would be unduly restrictive to
14 apply the current incentive limits to the longer Pilot period.

15 The Company considered two alternatives to the current limits: (1) establishing an
16 incentive limit at the premises level, as is done in many utility programs;¹⁵ and (2)
17 changing the customer-level incentive limit to be an annual limit. The Company
18 believes that an annual customer-level limit will better achieve the goal of
19 equitably apportioning incentives across our customer base because a premises
20 level limit would enable a single multisite customer to monopolize a significant

¹⁵ For example, Baltimore Gas & Electric (<https://www.bge.com/smart-energy/innovation-technology/electric-vehicles/multi-family-property-rebate-program>), Delmarva Power (Maryland) (<https://www.delmarva.com/smart-energy/innovation-technology/electric-vehicle-program-md/workplace-charger-rebate-program>), PEPCO (Maryland) (<https://www.pepco.com/smart-energy/innovation-technology/md/electric-vehicle-program/workplace-charger-rebate-program>), and PSE&G (<https://nj.myaccount.pseg.com/myservicepublic/electricvehicles>) commercial EVSE incentives are capped at \$30,000 per site, and Atlantic City Electric's commercial EVSE incentives caps range from \$9,000 to \$120,000 per site (<https://www.atlanticcityelectric.com/smart-energy/innovation-technology/public-charger-rebate>).

1 portion of a given year's budget by simultaneously applying for incentives at
2 several premises.

3 The Company is also proposing to reduce the annual limit for transit authorities
4 from \$500,000 to \$200,000, beginning in 2025, to enable equitable distribution of
5 the EV Charging Pilot budget across customers. The current \$500,000 annual
6 limit in the Public Benefit Charging Program is derived from the per-site limit
7 that existed in the discontinued Transit Charging Program. Going forward, a
8 \$200,000 annual limit for transit authorities would be sufficient funding to cover
9 the local match requirement for one federally incentivized enroute charging
10 station each year. In its Zero Emission Bus Playbook,¹⁶ published in April 2022,
11 SEPTA estimates the cost of an enroute charging station as \$906,928. The U.S.
12 Department of Transportation's Congestion Mitigation and Air Quality
13 Improvement Program¹⁷ grants, for which enroute transit charging is an eligible
14 application, require a 20% local match. An incentive of \$200,000 would
15 therefore be sufficient to cover the local match requirement for one enroute
16 charging station with modest headroom for cost inflation.

17 The Company chose \$60,000 as an annual per-customer limit to be consistent
18 with the \$60,000 Public Benefit Charging Program limit that was approved by the
19 Commission in the Pilot Modification Order. PECO is seeking the flexibility to
20 adjust the annual per-customer limits (excluding transit authorities) within the
21 range of \$40,000 to \$100,000 in order to balance the risks of over and

¹⁶ <https://planning.septa.org/wp-content/uploads/2022/04/SEPTA-Forward-ZEB-Playbook-2022.04.01.pdf>, p. 101.

¹⁷ <https://www.transportation.gov/urban-e-mobility-toolkit/e-mobility-infrastructure-funding-and-financing/federal-funding-programs#>.

undersubscription.¹⁸ If demand for Pilot incentives exceeds the annual budget, reducing the per-customer limits will enable the Company to distribute the incentives more broadly across its customer base. If the Pilot is undersubscribed, increasing the per-customer incentive limits will enable the Company to ensure the entire budget is expended by offering a larger benefit to customers undertaking larger electrification projects without adversely impacting other customers. The Company is proposing a \$40,000 floor to be consistent with the amount currently available to L2 Program customers not in EJAs, i.e., 20 ports at \$2,000 per port, with \$100,000 as an upper bound (10% of the annual budget) to ensure that a single customer cannot claim an undue share of the incentive pool.

21. Q. Why does PECO propose to simplify the L2 Program incentives?

A. Over the first two years of the L2 Program, the Company has found that requiring receipts for make-ready costs creates an administrative burden for both the customer and the Company that is large relative to the size of the incentives. In some cases, the approach of limiting incentives to a percentage of make ready costs has also led to customer dissatisfaction as customers have received a smaller incentive than they had anticipated. For incentives awarded in 2022 and 2023, the reported total project cost per charging port ranged from \$729 to \$32,272 with a median of \$11,657 and a mean of \$12,847. Since the L2 Program incentives will typically cover significantly less than half of those costs, and in light of the administrative burdens discussed above, PECO believes it is appropriate to provide a flat, per charging port incentive without requiring documentation of

¹⁸ PECO will conduct this evaluation during the fourth quarter of each year, to be effective the following calendar year, on a going forward basis.

1 actual customer costs.

2 **22. Q. Why does PECO propose to extend the data provision requirement to**
3 **include all EVSE located at the premises?**

4 A. For the data collected through the EV Charging Pilot to be most useful to PECO,
5 it must be both representative and complete. When PECO aggregates or averages
6 data from many premises, e.g., to analyze load profiles, that data is most likely to
7 reflect typical EV charging behavior if it is representative of the charging
8 behavior at the sites from which it was collected. As customers add new EVSE to
9 premises with pre-existing EVSE, it is likely that the locations of newer EVSE
10 will be either more or less conveniently located for EV drivers, e.g., closer or
11 farther from the facility door. Since drivers are likely to choose to park in the
12 most convenient locations, it is reasonable to anticipate that some chargers at a
13 site will receive more usage than others, and that a sample of chargers energized
14 on a specific date may not be representative of the entire site. Additionally, as
15 technology evolves and the ability of EV batteries to charge faster increases, it is
16 likely that newer chargers will have higher average charging capacities than those
17 installed in prior years. Therefore, PECO needs to collect data from every
18 charger at a premises to have confidence that the data collected is representative
19 of the total charging load. A more robust data set will better inform PECO's
20 distribution system capacity planning efforts.

21 **23. Q. How does PECO propose to recover costs associated with the EV Charging**
22 **Pilot?**

23 A. The Company is proposing to recover Pilot costs through base distribution rates as
24 demonstrated in PECO Exhibit MJT-1, Schedule D-14, which is sponsored by

1 Company witness Michael J. Trzaska in PECO Statement No. 3. Twenty thousand
2 dollars (\$20,000) of the cost of the EV Education and Outreach would be
3 recovered from all customer classes while the \$40,000 of EV Outreach and
4 Education dedicated to calculators for EV fleet operators and the \$940,000 for the
5 L2 Program and Public Benefit Charging Program costs would be recovered from
6 C&I customer classes only.

7 **III. ELECTRIC VEHICLE FAST CHARGING PILOT RIDER**

8 **24. Q. What is the Electric Vehicle Fast Charging Pilot Rider?**

9 A. The EV-FC Rider is a pilot designed to support TE by encouraging the build out
10 of publicly available (or workplace fleet and public transit) fast charging through
11 reduced demand charges. Under the EV-FC Rider, PECO applies a demand (kW)
12 credit initially equal to 50% of a DCFC's nameplate capacity rate for customers
13 installing a qualifying public DCFC served under Rates GS, PD, or HT. The
14 demand credit is available for a 36-month term or until the pilot concludes on
15 December 31, 2025, whichever comes first. The Company reserves the right to
16 reduce the demand credit based on a comparison of the customer's peak demands
17 before and after installation of the DCFC. The Rider does not waive minimum
18 demand, which is 40% of the maximum contract demand for most DCFC
19 operators, except for customers served under Rate GS with maximum potential
20 demand of 500 kilowatts (kW) or less, for which the minimum demand is 1.2 kW.

21 The EV-FC Rider was part of a comprehensive settlement approved by the
22 Commission in the Company's 2018 electric base rate proceeding at Docket No.
23 R-201821-3000164 ("2018 Settlement") as a five-year pilot beginning on July 1,
24 2019, and ending on June 30, 2024. On September 21, 2023, the Commission

1 approved PECO's request to extend the DCFC Pilot Rider by 18 months through
2 December 31, 2025.¹⁹

3 **25. Q. What are the reporting requirements for the EV-FC Rider?**

4 A. As part of the 2018 Settlement, PECO agreed to collect the following data for
5 DCFCs connected to the PECO system from pilot participants: the number
6 installed, the number of charging ports, the nameplate capacity (kW), hourly and
7 monthly usage (kWh), and the hourly and monthly demand (kW).

8 **26. Q. How many customer accounts are enrolled in the EV-FC Rider and how**
9 **many DCFC stations are at those sites?**

10 A. As of February 29, 2024, there are 48 customer accounts enrolled in the EV-FC
11 Rider, and those 48 sites have a total of 282 DCFC stations. All of those sites are
12 publicly available.

13 **27. Q. What is the current state of DCFC build out in PECO's service territory?**

14 A. There are 53 publicly available DCFC charging sites with a total of 308 DCFC
15 stations in the PECO territory, but there are many localities in the Company's
16 territory that do not yet have convenient access to DCFCs. For example,
17 according to the PennDOT National Electric Vehicle Infrastructure ("NEVI")
18 Round 1A Funding Opportunity map,²⁰ only five of the approximately 100
19 highway interchanges in the PECO service territory have a NEVI-compliant
20 DCFC site within one mile, and seven additional interchanges have been awarded
21 NEVI projects to date. Likewise, only 39 of the 216 ZIP codes within the region

¹⁹ See Docket No. P-2023-3039439 (Order entered Sept. 21, 2023).

²⁰ <https://experience.arcgis.com/experience/6696d9749a124136b9d28a7507f300d5/>.

1 have at least one public DCFC site.

2 **28. Q. How much growth does PECO anticipate in EV-FC Rider enrollment?**

3 A. As shown in PECO Exhibit SJD-1, Schedule 4, the Company anticipates that the
4 number of accounts enrolled in EV-FC Rider will grow to a range of 71 to 206 by
5 2030. The Company believes that the actual results will likely fall toward the
6 high end of that range given that three of the four forecasts shown in the exhibit
7 land in the range of 192 to 206 accounts.

8 **29. Q. What changes is PECO proposing to the EV-FC Rider?**

9 A. PECO is proposing several changes to the Rider with some changes effective
10 January 1, 2026 and others effective January 1, 2025. The following proposed
11 changes would be effective January 1, 2026:

- 12 1) Modify the Availability/Applicability to extend the EV-FC Rider by five
13 years through December 31, 2030, to eliminate the requirement that
14 DCFCs be publicly available, and to limit the applicability to a service
15 that is dedicated exclusively to EV charging and that includes at least
16 one permanently connected DCFC served under Rates GS, PD, or HT
17 installed on or after July 1, 2019.
- 18 2) Modify the Definitions to specify that to be high-powered, the DCFC
19 must have a nameplate charging capacity of at least 50 kW per charging
20 port.
- 21 3) Modify the Miscellaneous General Provisions to remove the reference to
22 DCFCs that are not separately metered and to remove the requirement
23 for the customer to provide usage and demand data for such DCFCs.
- 24 4) Modify the Rate Impact to add an adjustment to the minimum demand
25 calculation, modify the demand credit and delete the sentence
26 referencing the Company's right to reduce the demand credit.
- 27 5) Modify the Term of Contract to delete the sentence that references
28 extended participation.

29 The additional proposed change would be effective January 1, 2025:

- 30 1) Modify the Other Riders to specify how the demand credit will be
31 applied to a service that is also served under a Night Service Rider and

1 specify that the EV-FC Rider will not be applied in conjunction with the
2 Economic Development Rider.

3 The tariff changes required to implement the revised EV-FC Rider are discussed
4 by Company witness Megan A. McDevitt in PECO Statement No. 8 and shown in
5 PECO Exhibit JAB-2, which is sponsored by Company witness Joseph A. Bisti in
6 PECO Statement No. 7.

7 **30. Q. Why does PECO believe the EV-FC Rider should be extended by five years?**

8 A. The Commission's Proposed Policy Statement for Electric Utility Rate Design for
9 Electric Vehicle Charging²¹ makes clear the value of offering ongoing EV-
10 specific tariff options. PECO is proposing a 5-year extension to the Rider, rather
11 than proposing to make the Rider permanent, because this proposal includes
12 substantive modifications to the structure of the EV-FC Rider and the Company
13 believes that it is appropriate to evaluate the effectiveness of those modifications
14 within an extended pilot before making those provisions permanent.
15 Additionally, a 5-year extension aligns with the NEVI program, which offers
16 multiple rounds of funding for DCFC sites to be constructed through 2027. By
17 extending the pilot through 2030, PECO provides NEVI applicants/recipients in
18 our service territory with confidence that the EV-FC Rider provisions will be in
19 force long enough to enable them to receive a full 36 months of benefits.

20 **31. Q. Why does PECO propose reducing minimum demand for most customers**
21 **enrolled in the EV-FC Rider?**

22 A. PECO reviewed the effectiveness of the EV-FC Rider in late 2023. That review
23 included every bill issued under the Rider from its inception through August

²¹ *Electric Utility Rate Design for Electric Vehicle Charging*, Docket No. M-2023-3040755 (Proposed Policy Statement Order entered Nov. 15, 2023).

2023. The review found that only 60% of those bills received any demand charge benefit from the Rider. For the remaining 40% of monthly bills, no demand charge benefit was received because the service account's measured demand was less than its minimum demand. In developing the proposed reduction to minimum demand, the Company adopted a design principal that every service enrolled in the Rider should, ideally, receive some benefit from the Rider. Additionally, PECO believes that services with underutilized DCFCs are likely to be the ones most in need of demand credit. By reducing the minimum demand to 30% of the maximum contract demand, the proposed modification to the Rider will ensure that a greater number of enrolled accounts will receive some benefits from the Rider.

The Company proposes a minimum demand of 15 kW for accounts that do not have a maximum contract demand for consistency with the 30% value described above. The smallest nameplate charging capacity that qualifies for the EV-FC Rider is 50 kW, and 15 kW is 30% of 50 kW.

32. Q. Why does PECO propose modifications to the calculation of the EV-FC Rider's demand credit?

A. In developing this proposal, the Company adopted a design principal that the average benefit per service participating in the EV-FC Rider should remain about the same as it is now (approximately \$617 per bill). The design goal was to more equitably distribute the benefits of the Rider, rather than to increase the average benefit per service. Because a greater number of customers are expected to receive a demand charge benefit with the reduced minimum demand of 30%, the Company is proposing to reduce the level of demand credit to achieve a

1 substantially similar per-bill benefit (approximately \$619).

2 In addition, PECO proposes changing the basis for the demand credit from the
3 combined maximum nameplate capacity rating of the DCFC to the monthly
4 measured demand to improve the administrative efficiency of the Rider. The
5 Company has found that many of the accounts enrolled in the Rider have never
6 achieved a measured demand that approaches the combined maximum nameplate
7 capacity rating of the DCFC. Therefore, under the current structure of the tariff, it
8 is necessary for the Company to periodically adjust the demand credit. The
9 process for calculating and applying that adjustment is manual, and the Company
10 has found that the adjustments are difficult to communicate to customers and can
11 lead to customer dissatisfaction. Moving to a percentage of the measured demand
12 calculation eliminates the need for manual adjustments and lessens step-changes
13 in customer bills that can result from the current adjustment process.

14 **33. Q. Why does PECO propose changes to the eligibility criteria for the EV-FC**
15 **Rider?**

16 A. The current design of the EV-FC Rider with a demand credit based on the
17 combined maximum nameplate capacity rating for all DCFCs connected to the
18 service was based on a belief that many of the accounts likely to enroll in the
19 Rider would be adding DCFCs to an existing service, e.g., for the building in
20 whose parking lot the DCFCs are installed. PECO would then adjust the credit as
21 necessary to avoid inappropriately extending the credit to pre-existing loads. In
22 practice however, only two of the 48 services to enroll in the EV-FC Rider have
23 been at pre-existing services. This is because in most cases, the service for the
24 DCFCs has been requested by the DCFC operator, rather than the site host, thus

1 necessitating a separate service. In addition, even in cases where the site host and
2 DCFC operator are the same entity, customers have often expressed a preference
3 for a separate service, usually because the DCFCs operate at a higher voltage than
4 the equipment at the pre-existing premises.

5 In order to base the demand credit on measured demand, rather than nameplate
6 capacity, and to avoid extending the credit to pre-existing loads, it is necessary to
7 limit eligibility to services that are dedicated to EV charging. PECO's experience
8 to date of having nearly all applications for the EV-FC Rider be for new services
9 gives the Company confidence that this change in eligibility criteria will not
10 unfairly impact customers. This change in eligibility requirements necessitates a
11 corresponding change to the Miscellaneous General Provisions to strike the
12 requirement for customers to provide "hourly and monthly usage (kWh), and the
13 hourly and monthly demand (kW)" for premises at which DCFCs are not
14 separately metered, as all customer accounts enrolled in the Rider will henceforth
15 be separately metered.

16 Finally, the Company proposes to eliminate the requirement that DCFCs be
17 "publicly available," because the definition of "publicly available" in the EV-FC
18 Rider is so broad as to be inclusive of every DCFC use case of which the
19 Company is aware (e.g., the Rider currently indicates that "publicly available"
20 includes "workplace fleet" and "public transit"). Eliminating this requirement
21 simplifies the tariff and eliminates uncertainty for applicants.

22 **34. Q. If a PECO C&I customer installs a DCFC at a premises with other pre-**
23 **existing loads, what if any steps can they take in order for their DCFC**
24 **installation to qualify for the EV-FC Rider?**

1 A. Upon the Commission’s approval of this proposal, PECO will deem a customer’s
2 desire to make their DCFCs eligible for the EV-FC Rider beyond 2025 to be an
3 extenuating circumstance under Tariff Rule 3.7(5) for which the Company will
4 agree to provide multiple services, if reasonable and feasible, to one customer at a
5 single premises, subject to the customer’s payment of the cost of any special
6 installations required for that second service.

7 **35. Q. What options do PECO’s C&I customers who install a DCFC at a premises**
8 **with other loads have to manage demand charges related to EV charging?**

9 A. Customers adding a DCFC to an existing premises have two options to manage
10 the impact the DCFCs have on their demand charges. First, a customer who has
11 the ability to schedule the utilization times for their chargers, e.g., the operator of
12 an EV fleet, may be able to schedule charging at times that are noncoincident with
13 the peak demand of the pre-existing facilities and/or to apply managed charging
14 principals to distribute charging throughout the facility’s off-peak period.
15 Second, in cases where the demand from the DCFCs is expected to significantly
16 exceed the demand from the pre-existing facilities, the customer may be able to
17 take advantage of the Company’s Night Service Rider that provides a discounted
18 demand charge for services that peak between 8:00 PM and 8:00 AM.²²

19 **36. Q. Why does PECO propose adding a definition of “high-powered” as having a**
20 **nameplate charging capacity of at least 50 kW per charging port?**

21 A. This clarification to the tariff is intended to codify the practice that PECO has had
22 in place since the Rider’s inception in 2019, at which time DCFCs typically had
23 nameplate capacities in the range of 50 to 150 kW. EV charging technology has

²² See PECO Electric Company Tariff Electric Pa P.U.C. No 7 Original Pages No 88-90 for details.

1 evolved since 2019 with the introduction of medium speed DC chargers with
2 capacities of 22 kW to 40 kW and of very high speed DCFCs with nameplate
3 capacities up to 400 kW. Although 50 kW DCFCs may no longer be considered
4 high-powered by some industry observers, it is PECO's intent to maintain a 50-
5 kW threshold for eligibility for the Rider.

6 **37. Q. Why does PECO propose to allow up to 20% of the EVSE at an eligible**
7 **premises to be chargers other than DCFCs?**

8 A. The Company's experience has been that some EVSE sites combine both DCFC
9 and L2 charging, and the Company does not desire to make such sites ineligible
10 for the Rider. However, as the Rider's intent is to support the installation of
11 DCFCs, the Company believes that it would be inappropriate to extend the
12 demand credits to sites at which EVSE are primarily L2. The Company believes
13 that a threshold of at least 80% of EVSE capacity being from DCFCs strikes a
14 reasonable balance of requiring a site to be primarily dedicated to DCFC while
15 accommodating secondary L2 EVSE.

16 **38. Q. Why does PECO propose to allow ancillary loads of up to one percent of the**
17 **EVSE nameplate capacity?**

18 A. The Company recognizes that EVSE sites may need to incorporate other
19 equipment such as illuminated signage, safety lighting, communication
20 equipment, and load management technologies. Wiring such ancillary equipment
21 to a separate meter from that utilized by the EVSE may cause the customer and
22 the Company to incur additional costs. The Company believes that such ancillary
23 loads will typically be significantly less than one percent of the EVSE nameplate
24 capacity and that allowing such loads up to one percent of the EVSE capacity to

be included in the demand credit calculation is reasonable.

39. Q. Please discuss the Company’s proposal to clarify concurrent application of the EVFC Rider and a Night Service rider.²³

A. In response to a customer inquiry about simultaneous enrollment in the EVFC Rider Pilot and a Night Service Rider, the Company reviewed the tariff and observed that the tariff does not discuss how the demand credit should be applied to the account in this situation., i.e., whether the credit should be applied to the On-Peak or Off-Peak demand. Given that the Night Service riders are intended for night-peaking customers, the Company intends that the demand credit be applied to the Off-Peak demand, and the proposed tariff modification makes this intent clear. As of February 29, 2024, no customers are currently enrolled in both the EVFC Rider and a Night Service Rider.

40. Q. Please discuss the Company’s proposal to prohibit concurrent application of the EVFC Rider and the Economic Development Rider.

A. After identifying that the tariff does not address concurrent application of the EVFC Rider and a Night Service Rider, the Company reviewed all other riders to determine whether any other cross-impacts of the EVFC Rider are missing from the tariff. That review resulted in the recognition that, similar to the EVFC Rider Pilot, the Economic Development Rider provides the customer a credit on their variable demand charge. Stacking both a demand credit and a rate credit on a single account would be inconsistent with cost-of-service principals, and the

²³ PECO’s tariff includes three (3) night service riders: the Night Service GS Rider, the Night Service HT Rider, and Night Service PD Rider. All three riders offer reduced demand charges for Off-Peak billing demand in excess of On-Peak billing demand, and all three define On-Peak as 8:00 AM to 8:00 PM on Monday – Thursday and 8:00 AM to 4:00 PM on Fridays, except that all hours on holidays are Off-Peak. The difference between the three riders is the base rate to which they apply and the specific charges.

1 Company therefore proposes to clarify in the tariff that a customer account cannot
2 be simultaneously enrolled in both riders. As of February 29, 2024, no customers
3 are currently enrolled in both the EVFC Rider and the Economic Development
4 Rider.

5 **41. Q. Why does PECO propose that most of the tariff changes take effect on**
6 **January 1, 2026 and that the clarification concerning other riders take effect**
7 **on January 1, 2025?**

8 A. The EV-FC Pilot Rider is currently scheduled to run through December 31, 2025,
9 and customers enrolled in the Rider have a reasonable expectation that the current
10 terms of the Rider will be in effect through that date. The proposed modifications
11 to eligibility criteria and rate impacts of the Rider will cause the Rider to be less
12 beneficial to some services than it is today and will cause customers whose
13 DCFCs are installed at premises with other loads to become ineligible for the
14 Rider. Therefore, to eliminate the risk of adverse customers impacts, PECO
15 believes it is appropriate to delay the effect of the proposed program
16 modifications to January 1, 2026 to ensure that the modifications will not cause
17 any customer to receive a lesser benefit from the Rider than what they could have
18 reasonably expected at the time of their application for service.

19 The Company proposes that, unlike all other proposed modifications to the EVFC
20 Rider, the additions to the Other Riders section shall take effect on January 1,
21 2025 because these modifications are improving the clarity of the current
22 language of the tariff.

1 **42. Q. Are PECO’s proposed modifications to the EV-FC Rider consistent with the**
2 **Commission’s Proposed Policy Statement for Electric Utility Rate Design for**
3 **Electric Vehicle Charging?**

4 A. Yes. PECO’s proposed modifications address several elements of the
5 Commission’s Proposed Policy Statement for Electric Utility Rate Design for
6 Electric Vehicle Charging.

7 Proposed Section 69.3552 of the Policy Statement encourages all electric
8 distribution companies (“EDCs”) to develop tariffs with distribution and default
9 service generation rates for the purpose of implementing rates specifically for EV
10 charging customers. Extending the EV-FC Rider would ensure that the Company
11 continues to offer this rate option that is specific to EV charging customers.

12 Proposed Section 69.3552 also states that EV charging tariffed rates should reflect
13 the actual costs of providing charging infrastructure and services. The EV-FC
14 Rider meets this principal because when PECO extends a new service, the
15 Company assesses the upfront cost of providing that service in comparison to the
16 expected first five years of revenue from that service. For customers on the EV-
17 FC Rider, that calculation takes into account the expected revenue reductions
18 from the Rider, thus ensuring that the applicant for a new DCFC service
19 appropriately pays for any infrastructure that needs to be constructed for their
20 service.

21 Proposed Section 69.3553 states that EDCs should take into consideration rates
22 for direct current fast chargers, including demand charges. By extending the EV-
23 FC Rider and retaining its usage of demand charges, the Company’s proposal
24 ensures an ongoing rate design for customers that own or operate DCFCs.

1 Finally, proposed Section 69.3554 states that EV charging rates should not
2 discriminate against certain types of electric vehicles or drivers. The Company's
3 proposed modifications to the EV-FC Rider tariff align with this proposal by
4 eliminating eligibility criteria that currently restrict the Rider's availability to
5 public, workplace fleet, and transit applications and also provide eligibility for
6 qualifying services that include both DCFC and L2 chargers.

7 IV. REPORTING REQUIREMENTS

8 **43. Q. What reporting requirements does PECO propose for the EV Charging Pilot**
9 **and the EV-FC Rider?**

10 A. PECO proposes to combine reporting for the EV Charging Pilot and the EV-FC
11 Rider Pilot in an annual anonymized public TE Programs report for submission to
12 the Commission in 2026 through 2031. The report will be published by PECO by
13 April 1 of each year and cover the preceding calendar year. PECO will post an
14 electronic copy of the report to its website within 10 business days of its
15 submission to the Commission. Each report will cover all of PECO's TE-related
16 pilots that were approved by the Commission in effect during the calendar year
17 covered by the report. The report will include a narrative summary describing the
18 status, outcomes, and findings from each pilot.

19 With respect to the EV Charging Pilot, the report will include at least the
20 following information:

- 21 a. Number of participating charging ports, by county;
- 22 b. Number of participating sites, by county;
- 23 c. Aggregate dollar value of incentives provided to participating
24 customers;

- d. Aggregate annual kWh consumption of L2 chargers supported, by county;
- e. Aggregated load profile information for participating L2 chargers;
- f. Number of requests received for participation;
- g. Initiated requests not funded;
- h. Anonymized reasons why initiated requests were not funded; and
- i. A description of where charging infrastructure was installed.

With respect to the EV-FC Rider, the report will include at least the following information:

- a. Number of participating sites;
- b. Number of participating DCFC charging ports;
- c. Cumulative number of sites installed since inception of the pilot;
- d. Cumulative number of DCFC charging ports installed since inception;
- e. Aggregate annual kWh consumption of participating sites;
- f. Aggregated hourly load profile information (kWh) for participating sites; and
- g. Aggregated monthly demand (kW) for participating sites.

44. Q. What stakeholder engagement requirements does PECO propose for the EV Charging Pilot and the EV-FC Rider?

- A. PECO proposes to continue to convene a collaborative working group meeting at least twice annually through 2030 to discuss opportunities to support the equitable expansion of TE within PECO's service territory. PECO will also maintain a means for interested parties and community stakeholders to join a contact list to receive relevant information in advance of the collaborative and will announce each collaborative to the list at least 30 days in advance of the meeting.

1

V. CONCLUSION

2

45. Q. Does this conclude your direct testimony at this time?

3

A. Yes, it does.

PECO Exhibit SJD-1:

Forecast Information about EVs and Direct Current Fast Charger Charging Stations in PECO's Service Territory

Plug-in Electric Vehicles on the Road by Year – Historical

EPRI analysis of Experian Data

	2021	2022	2023
Plug-in EVs on the road in PECO service territory (rounded)	18,700	28,100	47,500
Note: EPRI's terms of use limit PECO to sharing three rounded data points from the chart above.			

Plug-in Electric Vehicles on the Road by Year – Future Scenarios

This schedule contains passenger and commercial EV projections by the Electric Power Research Institute (EPRI) that represent all on-road transportation within the PECO service territory. The results are divided into one passenger vehicle group and four commercial EV categories:

- The Passenger EV category includes passenger cars and passenger trucks up to Class 2b, with light commercial trucks separated into the next category.
- The Light Commercial Truck category includes light-duty trucks and vans in commercial use in weight classes up to Class 2b.
- The Single Unit Truck category includes box trucks and vans that are rated Class 3 and above, as well as motor homes.
- The Bus + Refuse category includes transit buses, school buses, intercity buses and refuse trucks.
- The Tractor Trailers category includes both short-haul and long-haul big-rig trucks.

Select Data from Scenarios Below			
EV Population (000)	2024	2027	2030
Low Scenario	59	104	157
Medium Scenario	68	168	293
High Scenario	129	423	762
Note: EPRI's use terms limit PECO to sharing three data points for each scenario.

Plug-in Electric Vehicles on the Road by Year – Forecasts

	2024	2025	2026	2027	2028	2029	2030
PJM Public Forecast							
Plug-in Electric Vehicle Adjustment to Summer Peak Load for PECO Zone (MW)¹	24	50	84	120	158	201	246
EVs on Road – Extrapolation from load forecast	66,900	139,375	234,150	334,500	440,425	560,288	685,725
EVs on Road – PECO forecast	63,302	95,535	146,603	225,897	338,007	461,172	590,184
Battery EVs	43,458	66,298	106,684	174,803	275,114	386,613	504,472
Plug-in Hybrid EVs	19,844	29,237	39,919	51,094	62,893	74,559	85,712

Methodology

Extrapolation from PJM load forecast. 2024 EVs on Road are estimated by assuming year over year growth equal to that of 2023. For years beyond 2024, EVs on Road are calculated in proportion to the increase in the PJM plug-in EV adjustment to summer peak load. E.g., the summer peak load adjustment in 2025 is 108% higher than in 2024, so the EVs on Road in 2025 are also 108% higher than in 2024.

PECO internal forecast. The EVs on Road forecast is based on a Systems Dynamics model which is used for the study and analysis of dynamic feedback systems using computer simulation in the proprietary software Vensim. The main sub-modules within the EV System Dynamics model are adoption decision, charging infrastructure, manufacturer capacity and costs, and policy and regulation. Inputs to the model are EV battery price, battery capacity and range, gasoline prices, electricity prices, federal and state tax or rebate policies, charging infrastructure growth, and consumer preferences. The model incorporates the existing buildout of EV charging infrastructure in the PECO service territory as well as the impacts of the National Electric Vehicle Infrastructure (NEVI) program, the Federal Inflation Reduction Act's Clean Vehicle Credit, Pennsylvania's Alternative Fuel Vehicle Rebate, and the Company's EV Charging Pilot. The model determines light-duty electric vehicle adoption over time through an adoption decision for purchasing EV or Internal Combustion Engine (ICE) vehicles.

¹ See PJM Load Forecast Report at <https://www.pjm.com/-/media/library/reports-notice/load-forecast/2024-load-report.ashx>, p. 56.

Forecasts of Number of Accounts on EVFC Rider at Year-end 2027 and 2030

The forecasts below are based on the EPRI plug-in electric vehicle future scenarios shown in Schedule 2 and the plug-in electric vehicle forecasts shown in Schedule 3.

	2024-27	2027-30
EPRI Medium Scenario		
3-year growth in EVs on Road	100,000	125,000
# of new DCFC stations	340	425
Period-end # of DCFC accounts enrolled in EV-FC Rider	57	71
PECO EV Growth Forecast		
3-year growth in EVs on Road	162,595	364,287
# of new DCFC stations	553	1,239
Period-end # of DCFC accounts enrolled in EV-FC Rider	92	206
Extrapolation of PJM Load Forecast		
3-year growth in EVs on Road	267,600	351,225
# of new DCFC stations	910	1,194
Period-end # of DCFC accounts enrolled in EV-FC Rider	152	199
EPRI High Scenario		
3-year growth in EVs on Road	294,000	339,000
# of new DCFC stations	1,000	1,153
Period-end # of DCFC accounts enrolled in EV-FC Rider	167	192

Assumptions

- This forecast uses the ratio of 3.4 DCFC stations per 1,000 EVs developed by the National Renewable Energy Laboratory²
- The market will install enough DCFCs stations each to meet the expected growth in EVs in each 3-year period
- The typical new DCFC site will have 6 charging station, consistent with PECO's experience to date

² See NREL National Plug-In EV Infrastructure Analysis at <https://www.nrel.gov/docs/fy18osti/70779.pdf>, p. 11.

PECO Statement No. 10:

Direct Testimony of Jacqueline F. Golden

**PECO ENERGY COMPANY
STATEMENT NO. 10**

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION
v.
PECO ENERGY COMPANY – ELECTRIC DIVISION

DOCKET NO. R-2024-3046931

DIRECT TESTIMONY

WITNESS: JACQUELINE F. GOLDEN

SUBJECTS: RECOVERY OF CAP COSTS; EXISTING
UNIVERSAL SERVICE PROGRAMS;
REVISIONS TO THE MATCHING
ENERGY ASSISTANCE FUND; AND
EXPANDED CUSTOMER OUTREACH
AND EDUCATION

DATED: MARCH 28, 2024

VI. CONCLUSION.....	14

**DIRECT TESTIMONY
OF
JACQUELINE F. GOLDEN**

I. INTRODUCTION AND PURPOSE OF TESTIMONY

1. Q. Please state your name and business address.

A. My name is Jacqueline F. Golden. My business address is PECO Energy Company, 2301 Market Street, Philadelphia, Pennsylvania 19103.

2. Q. By whom are you employed and in what capacity?

A. I am employed by PECO Energy Company (“PECO” or the “Company”) as Director of Customer Financial Operations. In that capacity, I am responsible for Customer Financial Operations (Billing, Payment Processing, Revenue Management, and Universal Services).

3. Q. Please describe your educational background.

A. I have a Bachelor of Science in Business Administration from Drexel University and a Master of Business Administration from La Salle University.

4. Q. Please describe your professional experience.

A. I began my career with PECO in 1981 as a customer service representative. Between 1981 and 2000, I held positions of increasing responsibility in several departments including customer operations, large customer accounts, Gas Supply and Transportation (“GS&T”), Energy Acquisition, and Finance. My immediate past position was in Regulatory Policy and Strategy as the Director of Strategy. In September 2022, I became the Director of Customer Financial Operations at PECO.

1 **5. Q. What is the purpose of your testimony?**

2 A. The purpose of my testimony is to describe: (1) PECO’s proposal for the recovery
3 of Customer Assistance Program (“CAP”) costs; (2) PECO’s existing universal
4 service programs in addition to CAP; (3) PECO’s proposed revisions to its
5 Matching Energy Assistance Fund (“MEAF”); and (4) PECO’s proposal to
6 expand outreach and education plans to better serve and reach low-to-moderate
7 income (“LMI”) customers.

8 **II. RECOVERY OF CUSTOMER ASSISTANCE PROGRAM (“CAP”) COSTS**

9 **6. Q. Ms. Golden, please describe PECO’s current CAP for electric customers.**

10 A. In accordance with the universal service obligations set forth in the Public Utility
11 Code, PECO’s CAP assists low-income customers in its service territory through
12 discounted energy bills. PECO’s CAP is a special rate rider for customers with an
13 annual household gross income level at or below 150% of the federal poverty
14 level (“FPL”) as established by the US Department of Health and Human
15 Services. As of December 31, 2023, approximately 123,000 residential electric
16 customers in PECO’s service territory – around 8% of PECO residential electric
17 customers – were participating in CAP.

18 The structure of PECO’s CAP discount has evolved over time. Most recently, in
19 December 2022, PECO implemented a new CAP Percentage of Income Payment
20 Plan (“PIPP”), approved by the Commission in Docket No. M-2018-3005795, to

1 provide a percentage of income-based benefit to CAP customers.¹ The PIPP design
2 provides eligible customers with a fixed maximum monthly bill equal to what the
3 CAP customer can afford to pay for utility service. The fixed bill amount is
4 determined by applying an energy burden percentage² to the customer's annual
5 income. CAP bill credits are applied to reduce the customer's monthly undiscounted
6 bill to the monthly PIPP bill amount. For billing purposes, PECO applies the lesser
7 of the CAP PIPP bill or actual charges. Bills issued under the CAP PIPP are subject
8 to monthly minimum bill amounts and annual maximum credit amounts based on
9 income level and electric rate.

10 Prior to employing a PIPP design, the Company utilized a Fixed Credit Option
11 ("FCO") design (from October 2016 to December 2022) and a tiered rate discount
12 CAP structure (prior to October 2016).

13 **7. Q. What was the dollar amount of the aggregate PIPP bill credits provided to**
14 **CAP customers in 2023 and how were those costs recovered?**

15 A. The value of the CAP bill credits provided to low-income customers through
16 PECO's electric CAP was approximately \$140.7 million in 2023. These costs are
17 recovered through a combination of base rates and a surcharge mechanism under
18 Section 1307 of the Public Utility Code. In the settlement of PECO's 2010
19 electric base rate case ("2010 Settlement"), the parties agreed that PECO's base

¹ *PECO Energy Co. Universal Serv. and Energy Conservation Plan for 2019-2024 Submitted in Compliance with 52 Pa. Code §§ 54.74 and 62.4.*, Docket No. M-2018-3005795 (Opinion and Order entered June 16, 2022) ("USECP Order").

² The energy burden percentage is the target percentage of household income that may be utilized to pay for utility service. Energy burden percentages vary based on the commodity (electric, electric heat, and gas) and household income level/number of residents.

1 rates would reflect recovery of \$80.7 million for the costs of providing CAP bill
2 credits to low-income customers.³ Since that time, PECO has implemented
3 several CAP enhancements to provide more affordable monthly bills to low-
4 income customers based on the Commission’s energy burden levels set forth in its
5 CAP Policy Statement, which have caused the cost of the CAP program to
6 increase substantially.⁴

7 The CAP “shortfall” refers to the amount of aggregate bill credits (in dollars)
8 provided to CAP customers each year that is not reflected in base rates. This
9 shortfall is recovered from or refunded to PECO’s residential customers on an
10 ongoing basis through PECO’s Universal Service Fund Charge (“USFC”), with
11 annual reconciliation of any over/under collections. Pursuant to the Commission-
12 approved settlement of PECO’s first default service proceeding (the “DSP
13 Settlement”), the USFC is adjusted so that residential customers pay 73% of the total
14 CAP shortfall amount.⁵ The remaining 27% of the CAP shortfall is absorbed by
15 PECO to account for the estimated impact to PECO’s uncollectible expense (22%)
16 and cash working capital requirements (5%). At that time, the 27% factor was
17 associated with CAP program enhancements agreed to in the DSP Settlement, which

³ See *Pa. P.U.C. v. PECO Energy Co. – Elec. Div.*, Docket No. R-2010-2161575 (Order entered Dec. 21, 2010), p. 10. In subsequent base rate cases, PECO increased the negotiated amount established in the 2010 settlement by the overall percentage of distribution revenue increase approved by the Commission. As such, PECO currently recovers approximately \$86 million of CAP costs through base rates each year.

⁴ 52 Pa. Code §§ 69.261–69.267.

⁵ See *Petition of PECO Energy Co. for Approval of Its Default Serv. Program and Rate Mitigation Plan*, Docket No. P-2008-2062739 (Order entered June 2, 2009).

1 would be implemented at the same time as base rates established in PECO's 2010
2 electric rate case.

3 **8. Q. Is PECO proposing to increase the amount of electric CAP bill credits**
4 **included in its base rates in this proceeding?**

5 A. Yes. The Commission's CAP Policy Statement was amended effective March 21,
6 2020, which, among other things, established lower recommended maximum
7 energy burden targets for electric and gas CAP bills.⁶ In accordance with the
8 USECP Order, PECO's energy burdens were updated in late July 2022. As
9 previously noted, in December 2022, PECO implemented its PIPP – providing
10 eligible customers with a maximum monthly bill amount that is determined by
11 applying an energy burden percentage to the customer's annual income. These
12 two changes greatly increased the value of the bill credits provided to CAP
13 customers.

14 In the fully projected future test year ("FPFTY"), the total estimated amount of PIPP
15 bill credits for customers projected to be enrolled in CAP as of December 31, 2025
16 will be approximately \$145.2 million. As explained by Company witness Joseph A.
17 Bisti in PECO Statement No. 7, PECO proposes to update its base rate recovery to
18 reflect this amount. Annual reconciliation of any over/under collections will
19 continue to be via the USFC.

20

⁶ See *Universal Service Rulemaking*, Docket No. M-2019-3012599 (Final Policy Statement Order and Annex entered on Nov. 5, 2019); 50 Pa.B. 1652 (Mar. 21, 2020).

1 **9. Q. Ms. Golden, is PECO proposing to change the 27% offset percentage applied**
2 **to the CAP shortfall, which is recovered through the USFC?**

3 A. Yes. PECO proposes to change the offset factor applied to reconcilable CAP
4 costs recovered through the USFC from 27% to 10.5%. When additional low-
5 income customers enroll in CAP, PECO is more likely to recover at least a
6 portion of the costs attributable to those customers because those costs will be
7 collected from all residential customers through the USFC. PECO currently
8 applies a 22% offset factor to reconcilable CAP costs in the USFC formula to
9 reflect uncollectible expense increases or savings associated with incremental
10 changes in the level of CAP bill credits embedded in PECO's base rates. PECO
11 also applies a 5% USFC offset factor for cash working capital.

12 In light of the increase in value of CAP bill credits provided under the Company's
13 PIPP, PECO has evaluated its recent uncollectible trends for CAP and all residential
14 non-CAP customers to assess the remaining potential improvement in charge-offs.
15 Based on that analysis, PECO is proposing to lower the uncollectible offset
16 percentage to 5.5%.⁷

17 As explained by Company witness Michael J. Trzaska in PECO Statement No. 3,
18 PECO calculated its claim for uncollectible accounts expense using a three-year
19 historic average ratio of net charge-offs as a percentage of billed revenues. As
20 shown in the table below, the uncollectible accounts rate for CAP customers was

⁷ The Company is not proposing to change the 5% USFC offset factor applied to working capital requirements in this case.

calculated in the same manner by using the Company’s actual charge-off experience for 2021 through 2023 divided by PECO’s total billed revenues for the same three years. The offset percentage of 5.5% represents the difference between the uncollectible accounts rate for CAP customers (6.6%) and all residential non-CAP customers (1.1%).

	CAP Customer Billings vs Net Charge-Offs				All Residential Non-CAP Customer Billings vs Net Charge-Offs			
	2021	2022	2023	3-Year Average	2021	2022	2023	3-Year Average
Annual Billings (\$M)	\$109.3	\$118.7	\$94.3		\$2,387.2	\$2,861.1	\$2,868.7	
Net Charge-Offs (\$M)*	\$3.3	\$10.3	\$7.7		\$22.9	\$28.9	\$34.2	
Ratio (%)	3.0%	8.7%	8.2%		1.0%	1.0%	1.2%	

*Excludes October 2016 one-time In-Program Arrearage ("InPA") forgiveness and Pre-Program Arrearage ("PPA") forgiveness.

III. OTHER UNIVERSAL SERVICE PROGRAMS

10. Q. What other types of universal service programs does PECO offer or administer to support the Company’s low-income customers?

A. In addition to ongoing bill payment assistance through CAP, PECO provides usage reduction services via its Low-Income Usage Reduction Program (“LIURP”). LIURP is designed to complement CAP by providing usage reduction education and, if eligible, remediation measures to decrease the amount of energy used by customers, thereby reducing their bills and increasing affordability.

PECO also supports the Low-Income Home Energy Assistance Program (“LIHEAP”), a Federally-funded grant program that provides supplemental payments to eligible customers’ accounts. PECO conducts extensive outreach and education regarding LIHEAP and provides support for customers seeking LIHEAP

1 grants. The LIHEAP application is available in English and Spanish on PECO's
2 website, and the Company operates a LIHEAP hotline to assist customers with
3 LIHEAP questions. Additionally, for LIHEAP Crisis customers who have a balance
4 after the LIHEAP Crisis grant is applied to the bill, PECO offers payment
5 agreements for the remaining balance. Finally, PECO targets LIHEAP customers
6 for other assistance programs that may be available.

7 PECO has a Customer Assistance Referral and Evaluation Service ("CARES") team
8 that provides referral and information services to assist special-needs, low-income
9 customers who have financial hardships.

10 PECO also has a hardship program – MEAF – that provides customers at or below
11 200% of the FPL whose service is in threat of termination or has been terminated for
12 non-payment with a grant to cure arrears. As discussed below, PECO is proposing a
13 modification to its MEAF program as part of this filing to allow more customers to
14 qualify for these grants.⁸

15 In addition to these universal service programs, PECO offers low-income customers
16 no-cost energy assessments and direct installation of energy savings measures
17 through the Company's Act 129 Energy Efficiency and Conservation Plan.⁹

⁸ PECO notes that MEAF is a combined program for gas and electric customers. Changes to MEAF approved in this proceeding would apply to both gas and electric customers. The Company has made an identical MEAF proposal in its gas base rate filing at Docket No. R-2024-3046932.

⁹ See Docket No. M-2015-2515691.

1 **IV. REVISIONS TO THE MATCHING ENERGY ASSISTANCE FUND**

2 **11. Q. Please describe the MEAF established by PECO.**

3 A. MEAF is a hardship program funded through donations¹⁰ and matching PECO
4 shareholder contributions. The program is administered in coordination with
5 local community-based organizations (“CBOs”) in each of the counties within the
6 Company’s service territory. The maximum MEAF grant is five hundred dollars
7 (\$500) per commodity (electric or gas). If the grant amount does not bring the
8 account balance to zero, the customer will be required to make a payment and/or
9 obtain other third-party funding (e.g., LIHEAP) to satisfy the remaining total
10 amount due before being approved to receive the MEAF grant.

11 **12. Q. What are the eligibility requirements for a MEAF grant?**

12 A. PECO residential customers who apply for MEAF assistance are approved¹¹ if they:

13 • Have income at or below 200% of the FPL as defined by US Department
14 of Health and Human Services (“HHS”);

15 • Demonstrate hardship (i.e. service is in imminent danger of termination or
16 has already been terminated);

17 • Reside within the county where they are applying for a MEAF grant;

18 • Have not received a MEAF grant in the past 12 months; and

19 • Have an account balance that would be brought down to zero with the
20 MEAF distribution (note: this requirement can be met via a combination
21 of MEAF grant, customer co-payments, and/or other grants).

¹⁰ Customers or interested parties can pledge donations through bill payments or the PECO website. Donations can be either one-time or recurring, which can be charged via the customer’s bill on a monthly basis.

¹¹ MEAF funds are distributed on a first-come, first-serve basis until exhausted.

1 **13. Q. Could you please quantify the value of MEAF grants awarded in 2021-2023?**

2 A. The value of MEAF grants varied yearly and ranged from approximately \$80,000
3 to \$250,000 (including the PECO shareholder match) for this period. In
4 accordance with the Settlement in PECO’s 2022 gas base rate case, PECO
5 guaranteed to provide shareholder funding for MEAF grants of up to \$300,000
6 annually, regardless of the amount of customer donations in a given year.¹² For
7 the year of 2023, PECO matched \$90,000 and provided the remaining balance of
8 \$210,000 to the MEAF agencies as additional grant funding available for 2024.
9 PECO notes that this \$210,000 is eligible to be matched by PECO in 2024.

10 **14. Q. Is the Company proposing any modifications to its MEAF program as part**
11 **of this rate case?**

12 A. Yes. To expand the impact of MEAF and the number of customers eligible for
13 the program, PECO is proposing to change the maximum allowable MEAF grant
14 from \$500 per commodity to \$1,000 per account. This change should allow
15 additional customers to meet the MEAF eligibility criteria of bringing the
16 customer’s account balance to zero by permitting all eligible customers
17 (regardless of service type) to qualify for a MEAF grant of up to \$1,000.

¹² Consistent with the Commission-approved settlement of PECO’s 2022 gas base rate case at Docket No. R-2022-3031113 (“2022 PECO Gas Rate Case”), at the end of each program year, PECO allocates any funds for which it has not received a customer match – up to \$300,000 annually – to the MEAF agencies in proportion to the number of low-income customers in each county within PECO’s service territory.

1 **V. EXPANDED CUSTOMER OUTREACH AND EDUCATION**

2 **15. Q. Please describe PECO’s expanded customer outreach and education**
3 **proposal.**

4 A. The Company is looking to build upon existing outreach efforts and increase
5 virtual enrollment opportunities for a range of residential customer offerings
6 available to LMI customers. Specifically, the Company plans to expand its
7 communications and marketing approach to increase customer awareness of
8 universal service offerings, grant programs, and items such as budget billing,
9 payment arrangements, medical certificates, and additional protections for victims
10 of domestic violence. Actions will include expanded frequency of news releases
11 and “pitching” of news media, more frequent social media posting, soliciting and
12 working referrals from social workers and social service organizations, as well as
13 additional targeted outreach to LMI customers.

14 **16. Q. Does PECO already have an outreach budget for universal service**
15 **programs?**

16 A. Yes. As part of PECO’s Commission-approved 2018-2028 Universal Service and
17 Energy Conservation Plan¹³ (“USECP”), the Company has an annual outreach
18 and advertising budget of approximately \$290,000 (electric and gas). Further, in
19 PECO’s last electric base rate proceeding (Docket No. R-2021-3024601), the
20 Company was authorized to spend up to \$500,000 each year on universal service
21 program education and outreach. PECO tracks these incremental expenditures

¹³ See Docket No. M-2018-3005795.

1 separately from USECP spending, and the costs are recovered from residential
2 customers through the Company's existing Consumer Education Charge ("CEC").

3 **17. Q. Did PECO fully utilize its authorized outreach budgets in 2022 and 2023?**

4 A. The Company expended its entire \$290,000 annual USECP budget in both years
5 and expended \$496,000 and \$500,000 of the Company's expanded outreach
6 budget in 2022 and 2023, respectively.

7 **18. Q. Why does PECO believe that additional outreach funding is necessary?**

8 A. The key drivers of the need for additional funding are: (1) connecting more
9 eligible customers with LIHEAP funds; (2) ramping up virtual enrollment
10 activities for universal service programs; and (3) accommodating an increase in
11 customer referrals that is tied to the Company's outreach efforts.

12 Statewide, there is a substantial gap between the number of households that are
13 eligible for LIHEAP and the number of households that receive LIHEAP. In 2021,
14 for example, 1,538,208 households across the state were eligible for LIHEAP while
15 only 303,500 received LIHEAP.¹⁴ PECO primarily uses traditional channels, such
16 as radio advertisements and mailing campaigns to former LIHEAP recipients and
17 other low-income customers who should be eligible for LIHEAP grants, to
18 encourage customers to apply for LIHEAP. With additional funding, PECO would
19 increase the use of radio advertisement, social media, and other innovative means
20 (i.e., virtual enrollments) to educate low-income customers and increase their
21 awareness of LIHEAP and how to apply.

¹⁴ <https://neuac.org/wp-content/uploads/2023/07/Pennsylvania-State-Sheet-FY2024.pdf>.

1 Virtual enrollment activities can connect PECO customers in need with a range of
2 assistance, including CAP, LIHEAP, and other residential customer offerings such
3 as budget billing. The Company utilizes targeted emails, social media, and customer
4 outreach events to solicit customer participation in the sessions. PECO began to host
5 virtual enrollment sessions in 2022 and in 2023 conducted over 20 sessions assisting
6 650 customers. In addition, customers that did not attend their virtual enrollment
7 appointment received a follow up call the next business day to facilitate enrollment
8 in appropriate programs. With additional funding, PECO would increase the
9 frequency of virtual events.

10 Finally, PECO's expanding community outreach efforts are leading to individual
11 customer referrals from a variety of external partners, including hospitals. Referrals
12 are typically for universal service programs, such as CAP, LIHEAP and MEAF.
13 PECO began formally tracking referrals in 2023 and received over 1,600 referrals
14 from numerous organizations (e.g., Findhelp, Thomas Jefferson Hospital System,
15 and elected officials' offices). PECO expects that expanded outreach will drive
16 additional referrals and that additional funding will be required to appropriately
17 address an increasing number of referrals.

18 **19. Q. What level of additional funding is PECO requesting in this case and how**
19 **would costs be recovered?**

20 A. PECO is requesting a \$300,000 increase to the \$500,000 annual expanded
21 outreach budget that was approved by the Commission in PECO's 2021 electric
22 base rate proceeding, for a total of \$800,000 annually. This increased funding
23 would be recovered through the Company's existing CEC.

1

VI. CONCLUSION

2

20. Q. Does this conclude your direct testimony at this time?

3

A. Yes, it does.
