- (d) Approximate number of outage cases exceeding 6 or more hours in duration: 261
- (e) A listing of each outage case exceeding 6 or more hours in duration:  
See Attachment A.

Reason for the interruption or outages: Beginning Tuesday April 2, 2024, a weather system began moving through the Met-Ed service territory. The system produced wind and heavy precipitation with rain totals of approximately three inches. The maximum wind gusts associated with the system were approximately 47 miles per hour on Wednesday, April 3, 2024, and approximately 39 miles per hour on Thursday, April 4, 2024. See Attachment B for the maximum wind gusts for April 3 and 4, 2024 and the 24-hour total precipitation for April 2, 3, and 4, 2024.

Damage as a result of the weather system included downed trees and wires, damaged or broken poles and crossarms, and damaged transformers. High winds affected restoration efforts as crews cannot safely handle materials if winds exceed 30 mph or operate bucket trucks if winds exceed 40 mph. The Reading, Boyertown, and Easton districts were the hardest hit areas. Approximately 68.2% of the total outages that occurred were tree related.

Preliminary data indicates the reliability impact of the storm was 16.3 minutes of SAIDI, 0.0461 of SAIFI frequency, and an overall storm CAIDI of 354.9 minutes.

(f) Projected time of restoration: It was estimated that the majority of customers affected would be restored by April 4, 2024 at 2300. See Attachment C for the restoration curve and Attachment D for the order restoration graphs.
